Furthermore, ASM proposes to use this measure at the TIN/NPI level. We plan to pursue additional testing and analyses to ensure measure validity at this level. To date, this measure has been validated at the TIN level in the MIPS program. Analyses have determined a certain threshold of attributed patients' needs to be met to ensure measure validity; this threshold can be challenging to achieve at the TIN/NPI level in MIPS given the wide range of specialty types that participate. Internal analyses indicate that, given the 20 EBCM episode threshold for participation of cardiologists described in section III.C.2.c.(3)(b) of this proposed rule, meeting this threshold of attributed patients in ASM would not be a significant issue or threat to measure validity. For that reason, we anticipate this measure would be valid and reliable at the TIN/NPI level for ASM participants treating heart failure.

We seek comment on the proposal to include the Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with HF (MIPS Q492) measure in ASM and to assess performance at the TIN/NPI level.

(ii) Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q008)

We propose to include Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q008) in the ASM heart failure measure set. This measure aims to promote the appropriate use of beta-blocker therapy in select patients with heart failure with reduced ejection fraction (HFrEF). It assesses the percentage of patients aged 18 years and older with a diagnosis of heart failure with a current or prior left ventricular ejection fraction (LVEF) ≤ 40 percent who were prescribed beta-blocker therapy either within a 12-month period of being seen in the outpatient setting or at each hospital discharge. Beta-blockers, especially when delivered as part of guideline-directed medical therapy, decrease the risk of major cardiovascular events, reduce mortality and hospitalization in patients with HFrEF, lessen the symptoms of heart failure, improve the clinical status of these patients, and reduce future clinical deterioration associated with heart failure.[142] These improvements are observed in all populations with heart failure of various etiologies, such as patients with or without coronary artery disease (CAD), patients with or without diabetes, older patients, as well as women and across various racial and ethnic groups.[143]

Despite its survival benefits, use of beta blockers in eligible patients remains suboptimal.[144] [145] Nonadherence to medications prescribed for heart failure, including beta-blockers, can be associated with adverse outcomes such as hospital readmission and mortality.[146] [147] By including this measure, we aim to increase the appropriate use of beta-blocker therapy in eligible patients with heart failure. This aligns with the goals of ASM to drive improvements in the quality of care delivered to heart failure patients, particularly in evidence-based pharmacotherapy. In addition, inclusion of this measure aligns with other quality programs, such as the Quality Payment Program, which includes the measure in the Advancing Care for Heart Disease MVP, and the Cardiology Core Quality Measures Collaborative (CQMC) set. We seek comment on the proposal to include Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q008) in the ASM heart failure measure set.

(iii) Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q005)

We propose to include Heart Failure (HF): Angiotensin-Converting Enzyme (ACEi) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q005) in the heart failure measure set. This measure assesses the appropriate use of the specified medicines in patients with heart failure with reduced LVEF. Adherence to this class of medications, especially as part of guideline-directed medical therapy, offers cardioprotective benefits in patients with heart failure and reduces mortality and heart failure-related hospitalizations.[148] [149] Furthermore, McMurray et al. in PARADIGM–HF showed use of angiotensin receptor–neprilysin inhibitor compared to enalapril, an ACEi, not only reduced risk for cardiovascular death and hospitalization related to heart failure, but also decreased the symptoms and physical limitations of heart failure.[150] Similar to beta blockers, optimal dosing and adherence to this group of medication in heart failure patients remains suboptimal.[151] By including this measure, we can incentivize cardiologists participating in the ASM to prescribe evidence-based pharmacotherapy for patients with HFrEF. In addition, inclusion of this measure aligns with other quality measurement efforts, such as the Advancing Care for Heart Disease MVP in the Quality Payment Program and the Cardiology Core Quality Measures Collaborative (CQMC) set. We seek

comment on the appropriateness of including this measure in the heart failure measure set.

(iv) Controlling High Blood Pressure (MIPS Q236)

We propose including Controlling High Blood Pressure (MIPS Q236) in the heart failure measure set for ASM because optimal blood pressure management is a critical part of heart failure management and uncontrolled blood pressure can contribute to complications and progression.[152] [153] For example, severe hypertension can result in pulmonary edema (more common in patients with preserved LVEF), requiring urgent treatment to reduce blood pressure.[154] Controlling blood pressure helps reduce the risk of adverse outcomes, such as hospitalizations and mortality related to heart failure.[155] [156] By including this measure, ASM incentivizes cardiologists to optimize blood pressure control, particularly given that patients with heart failure very commonly have a history of hypertension.[157] In addition, this measure complements the two other quality measures for heart failure in ASM, as the use of beta blockers and ACEi/ARB/ARNIs also have favorable effects on heart failure outcomes and lower blood pressure.[158] The complimentary emphasis on blood pressure control and medication management in this measure set may also slow disease progression and function as a form of tertiary prevention in heart failure patients. Furthermore, its inclusion in other quality measure sets, such as the CMS Universal Foundation Measure Set and the Cardiology Core Quality Measures Collaborative (CQMC) set has resulted in more widespread adoption, helping streamline reporting and reduce burden.[159] We seek comment on our inclusion of this measure in the heart failure quality measure set.

(v) Functional Status Assessments for Heart Failure (MIPS Q377)

We propose including Functional Status Assessments for Heart Failure (MIPS Q377) in the heart failure measure set in ASM because patients with heart failure often experience poor functional status and health-related quality of life, both of which tend to decline as the disease progresses. Assessing functional status is crucial for managing the complex health needs of patients who often have multiple comorbidities. Furthermore, standardized assessment of patient-reported health status using a validated questionnaire can be useful for providing incremental information related to patient functional status and prognosis. It is also an independent predictor of hospitalization and mortality.[160] The measure emphasizes the importance of collecting relevant patient-reported health status from heart failure patients, such as functional limitations, symptom burden, and quality of life. It supports the creation of a dynamic conversation between patients and providers regarding care goals and priorities, which we believe can facilitate shared decision-making, empower patients, and incentivize clinicians to incorporate patient voice and lived experience in clinical care activities. This measure is appropriate for ASM as it encourages cardiologists to regularly assess, monitor, and help improve the functional status of their heart failure patients, which are crucial for providing patient-centered care and aligning treatment plans with individual goals and priorities. In addition, this measure aligns with other quality measurement efforts, such as the Advancing Care for Heart Disease MVP in the Quality Payment Program and the Cardiology Core Quality Measures Collaborative (CQMC) set. We seek comment on our inclusion of this measure in the heart failure quality measure set.

We note that the Functional Status Assessments for Heart Failure (MIPS Q377) measure is currently a process measure. We propose that the process measure would be included for the 2027 ASM performance year, while we explore the benefit and applicability of developing a Patient—patient-reported outcome-based performance measure (PRO–PM). The current measure ensures a functional status assessment is completed. A PRO–PM would hold the ASM participant accountable for not only collecting patient-reported data but also improving or slowing progression of decline in functional status over time. We believe this would capture more meaningful changes in patient care. We seek comments on our proposal to include the Functional Status Assessments for Heart Failure (MIPS Q377) measure in ASM, the applicability of the measure as a PRO–PM, and whether the PRO–PM, if available, should be included in the heart failure measure set for future performance years of ASM.

(c) Quality Measure Set for the ASM Low Back Pain Cohort

We propose at § 512.725(c)(1) through (5) to include the following measures in the low back pain measure set. Each ASM low back pain participant must report each measure using one of the collection types specified in Table 39.

(i) Magnetic Resonance Imaging (MRI) Lumbar Spine for Low Back Pain, Respecified To Be Relevant to ASM Participants Treating Low Back Pain

We propose to include a respecified MRI Lumbar Spine for Low Back Pain measure in the low back pain measure set. We believe this administrative claims-based measure can effectively assess overuse and hopefully incentivize reductions in inappropriate MRI imaging for low back pain. Routine imaging (such as MRI) is not recommended for patients with non-specific low back pain in the absence of certain clinical indicators with concerning features.[161] However, studies have shown that a significant proportion of patients with low back pain undergo imaging, often within the first few weeks of symptom onset,

[161] North American Spine Society. Clinical Guidelines for Multidisciplinary Spine Care: Diagnosis and Treatment of Low Back Pain. North American Spine Society; 2020. *https://www.spine.org/Portals/0/assets/downloads/ResearchClinicalCare/Guidelines/LowBackPain.pdf*

despite the lack of clear indication.[162] Overuse of imaging for low back pain can lead to unnecessary health care costs and potential patient harm from incidental findings that may prompt further unnecessary testing or procedures.[163] [164] By including this measure in the low back pain measure set, ASM aims to incentivize adherence to evidence-based guidelines and a reduction of unnecessary MRIs for patients with uncomplicated low back pain, particularly in the initial stages of evaluation and management. We believe this could also have a positive impact on patient experience as it reduces time spent at medical appointments and health care costs. Furthermore, as an administrative claims measure, ASM participants would not have to report data for this measure, reducing reporting burden.

MRI Lumbar Spine for Low Back Pain measure was specified for use in Hospital Outpatient Departments at the facility level and was previously included in the Hospital Outpatient Quality Reporting Program (HOQRP) as OP–8 (73 FR 68766).[165] Part of our re-specification efforts would involve ensuring validity and reliability at the TIN/NPI level. We are also exploring the denominator criteria of the measure and potentially redefining the denominator. This potential change is pending further internal analyses to determine whether participants would be able to meet denominator minimum and specification changes and ensure the measure accurately identifies unwarranted MRI usage. We would propose the measure's specifications through notice and comment rulemaking when available and in advance of using the measure in the low back pain cohort.

We seek comment on the re-specification and inclusion of MRI Lumbar Spine for Low Back Pain measure in the low back pain measure set.

(ii) Use of High-Risk Medications in Older Adults (MIPS Q238)

We propose to include the Use of High-Risk Medications in Older Adults (MIPS Q238) measure in the low back pain quality measure set. Older adults with low back pain who receive a prescription for a high-risk medication as part of their treatment plan, may have a range of adverse events, including medication side effects, drug interactions, a prescribing cascade, or hospitalization. Individuals ages 65 and older are more likely to have multiple chronic conditions, increasing their risk for adverse drug effects associated with polypharmacy.[166] Forty percent of individuals 65 and older filled at least one prescription for a potentially inappropriate medication and 13 percent filled two or more, leading to as much as $7.2 billion spent per year on inappropriate medications in older adults[167] [168] Several of the medications included in the measure are prescribed for treatment of musculoskeletal conditions and pain, such as skeletal muscle relaxants and tricyclic antidepressants.[169] [170] [171] Skeletal muscle relaxants may be prescribed as an alternative to conventional pain medication; however, they carry considerable risk of falls and associated morbidity due to common side effects of dizziness, drowsiness, and hypotension. One study found that elderly patients who were using skeletal muscle relaxants were 2.25 times more likely to visit the emergency room for a fall or fracture than elderly patients who weren't prescribed these medications.[172] Similarly, a meta-analysis exploring the risks associated with use of tricyclic antidepressants in elderly patients found a significant increased risk of falls and fracture.[173] In addition to the morbidity and substantial costs associated with falls in the older adult population, falls in a patient with low back pain could significantly worsen their condition and functional status. We believe including this measure in the low back pain measure set could encourage ASM participants to be more cautious in their prescribing of high-risk medications to patients with low back pain and potentially prevent falls and other adverse events that may negatively impact patient outcomes. It also could align clinical practice with efforts to avoid inappropriate describing in older adults, such as the Beers criteria, and deprescribe where appropriate.[174] We believe the measure may promote positive changes in care delivery, such as incorporating regular medication review and reconciliation. This measure could be particularly impactful in ASM given the promotion of specialty and primary care integration as a goal of the model. We seek comments on our inclusion of the Use of High-Risk Medications in Older Adults (MIPS Q238) measure in the ASM low back pain measure set.

(iii) Preventive Care and Screening: Screening for Depression and Follow-Up Plan (MIPS Q134)

We propose to including Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Q134) in the low back pain measure set

because patients with chronic pain conditions, such as low back pain, are at an increased risk of developing depression.[175] Comorbid depression can negatively impact quality of life, treatment adherence, and overall health outcomes.[176] Screening for depression and providing appropriate follow-up care is an essential aspect of comprehensive care for patients with low back pain, as depression may exacerbate pain and worsen functional status.[177] Co-occurring depression has also been found to worsen low back pain outcomes and increase health care costs.[178] Effective management of low back pain often requires a multidisciplinary approach to address the physical, psychological, and emotional aspects of the condition. Including this measure in the ASM low back pain measure set would encourage ASM participants treating low back pain to prioritize mental health screening and follow-up care. We believe this would lead to better management of physical and mental health, prevent worsening of a patient's health status, and improve overall outcomes.[179] [180] We seek comment on the proposal to include the Preventive Care and Screening: Screening for Depression and Follow-Up Plan (MIPS Q134) measure in the ASM low back pain measure set.

(iv) Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (MIPS Q128)

We propose to including the Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (MIPS Q128) measure in the low back pain measure set because obesity can predispose patients to and exacerbate chronic low back pain.[181] [182] Incorporating BMI screening and related follow-up into the care of patients with low back pain can improve outcomes by reducing the severity and recurrence of low back pain. The inclusion of this measure in the ASM low back pain measure set would incentivize a more holistic approach to low back pain management, addressing both the physical and lifestyle factors contributing to the condition. We believe ASM participants treating low back pain can play a crucial role in preventing and addressing modifiable risk factors like obesity and providing appropriate follow-up plans for weight management. In addition, this measure aligns with those used in other quality programs, such as the Rehabilitative Support for Musculoskeletal Care MVP in the Quality Payment Program. We seek comments on the proposal to include Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (MIPS Q128) in the ASM low back pain measure set.

(v) Functional Status Change for Patients With Low Back Impairments (MIPS Q220)

We propose to include the Functional Status Change for Patients with Low Back Impairments (MIPS Q220) measure in the ASM low back pain measure set. This measure would encourage ASM participants to adopt a more patient-centered and holistic approach to improving functional status and quality of life in patients with low back pain. As a patient-reported outcome measure, the measure tracks changes in a patient's functional status over time, assessing changes and rewarding meaningful improvement with a better measure score for the ASM participant. We believe measuring and improving functional status could increase self-efficacy, improve financial well-being, and lower future medical costs. Measuring a change in functional status can also be used to direct and assess the success of treatment. Furthermore, the adoption of validated objective measurements may enhance the reliability and sensitivity of detecting physical deficits or monitoring posttreatment improvements of low back pain in older adults.[183] Notably, relevant professional organizations and specialty societies recommend the use of functional status surveys to assess and monitor changes in low back pain over time. The American Academy of Orthopaedic Surgeons recommends the use of the Oswestry Disability Index, which can be used to fulfill this measure, as one of its preferred tools for spine care. While AAOS also recommends the Neck Disability Index, it is less relevant to ASM.[184] [185] These functional status surveys include questions related to modifiable lifestyle factors, such as physical activity and social isolation, prompting conversation with patients that can prevent the worsening of comorbid conditions and low back pain. In addition, this measure aligns with other quality programs, such as the Rehabilitative Support for Musculoskeletal Care MVP in the Quality Payment Program and the Core Quality Measures Collaborative Orthopedics set. By holding ASM participants who treat low back pain accountable for this measure, ASM promotes a comprehensive approach to low back pain management, including appropriate assessment, treatment, and monitoring of changes. We seek comment on our proposal to include the Functional Status Change for Patients with Low Back Impairments (MIPS Q220) measure in the low back pain measure set.

(d) Other Measures Under Consideration

(i) Patient Activation Measure (PAM) (MIPS Q503)

We seek comments on whether the Patient Activation Measure (PAM) (MIPS Q503) would be appropriate to include in both the heart failure and low back pain measure sets. Chronic conditions, in general, are influenced by external factors, such as lifestyle, education, nutrition, and activity. Patient activation, which refers to a patient's knowledge, skills, and confidence in managing their health condition, is an important factor in achieving better health outcomes and

adherence to treatment plans. For chronic conditions , such as heart failure and low back pain, where self-management and active patient engagement are crucial, assessing and improving patient activation levels could help ASM participants tailor their ability to provide more patient-centered support and education. Including the PAM measure in ASM could incentivize clinicians to prioritize strategies that enhance patient activation, such as shared decision-making, goal setting, and self-management support.[186] Furthermore, higher levels of patient activation have been associated with better health behaviors, such as physical activity, and improved mental health outcomes.[187] We are concerned by the burden on participants and patients that may be introduced by: (1) adding an additional measure to the set, (2) using a patient survey measure, and (3) PAM being a proprietary measure. We seek comments on whether PAM could be applicable to the heart failure and low back pain measure sets.

(ii) Advance Care Plan (MIPS Q047)

We considered including the Advance Care Plan (MIPS Q047) measure in the heart failure measure set. Advance care planning is important for understanding and documenting a patient's wishes regarding their medical treatment, acknowledging that wishes may evolve as circumstances and health status change. Heart failure, depending on stage and other risk factors, can progress unpredictably and rapidly. According to one meta-analysis, survival rates for all patients with heart failure are 95.7 percent at one month, 86.5 percent at 1 year, and 56.7 percent at 5 years, with elderly patients having lower survival rates on average.[188] Having a documented plan in place is necessary to ensure a patient's wishes are followed should they become incapacitated and unable to make care decisions. One study of Medicare beneficiaries with severe illness found that timely advance care planning was associated with significantly less intensive end-of-life care utilization and fewer in-hospital deaths, hospital admissions, intensive care unit admissions, and emergency department visits.[189] Another study on Medicare beneficiaries with heart failure found that beneficiaries who received advance care planning visits had 19 percent lower total end-of-life expenditure compared to those who did not.[190] This measure could encourage ASM participants to have proactive discussions with their patients about end-of-life care, advance directives, and other important decisions related to their treatment plan. However, we decided not to include the measure, as we worry the measure would not result in sufficiently meaningful positive changes for patients to justify the increased burden. Also, we do not believe the cardiologist would be the most appropriate provider to oversee advance care planning in every case, and we want to avoid duplication of effort with PCPs. We seek comments on whether the Advance Care Plan measure could be meaningful if included in the heart failure measure set.

(iii) Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients With Multiple Chronic Conditions (MIPS Q484)

We considered including the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MIPS Q484) measure in the heart failure measure set. We believe evaluating potentially preventable hospital admissions could help assess the quality of ambulatory care provided by cardiologists to patients with multiple chronic conditions, including heart failure. Nearly 90 percent of adults with heart failure have two or more additional chronic conditions, and almost 60 percent have five or more chronic conditions.[191] For heart failure patients with multiple comorbidities, reducing potentially preventable hospitalizations is a key goal for improving outcomes and reducing health care costs. While incentivizing cardiologists to adopt best practices, such as improving care coordination with primary care and enhancing self-management support, is of interest to CMS, this measure is not adequately targeted to heart failure. We also do not consider this measure appropriate for the low back pain measure set, as the condition is less prone to hospital admissions and re-admissions. We seek comments on whether the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MIPS Q484) measure should be considered for inclusion in the heart failure measure set.

(iv) Cardiac Rehabilitation Patient Referral From an Outpatient Setting (MIPS Q243)

We considered including the Cardiac Rehabilitation Patient Referral from an Outpatient Setting measure in the heart failure measure set. This measure assesses the percentage of patients evaluated in an outpatient setting who have qualified for cardiac rehabilitation and were referred to an outpatient cardiac rehabilitation program. As it relates to heart failure, Medicare patients only qualify for a cardiac rehabilitation program if they have stable chronic heart failure, defined as left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks.[192] In these patients, cardiac rehabilitation is a comprehensive intervention that includes exercise training, education, and counseling to improve cardiovascular health and reduce the risk of future cardiac events. For patients with heart failure, meta-analyses on cardiac rehabilitation have shown that it improves functional capacity, exercise duration, and health-related quality of life.[193] Also, cardiac rehabilitation programs have evolved to serve other purposes, such as disease management and prevention centers that assist with medication adherence, weight loss, smoking cessation, and other contributors to heart disease.[194]

[194] Ades PA, Keteyian SJ, Wright JS, et al. Increasing Cardiac Rehabilitation Participation From 20% to 70%: A Road Map From the Million

By including this measure in the heart failure measure set, CMS could incentivize cardiologists and other clinicians to refer eligible patients with heart failure to cardiac rehabilitation programs, which can potentially improve their long-term outcomes and reduce their risk of hospitalizations. We decided not to include the measure in the heart failure measure set because access to cardiac rehabilitation programs is significantly varied based on region due to factors like limited availability, density, eligibility, or distance, and these factors could negatively affect ASM participants due to no fault of their own.[195] We seek comment on whether the Cardiac Rehabilitation Patient Referral from an Outpatient Setting measure could be meaningful if included in the heart failure measure set.

(v) Falls: Plan of Care

We considered including the Falls: Plan of Care measure in the low back pain measure set. This measure assesses the percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months. The implementation of a falls plan of care for this population could address multiple aspects of patient safety and functional improvement. Such a plan may include assessment of environmental hazards, evaluation of medication side effects, and implementation of appropriate exercise interventions to improve strength, balance, and coordination.[196] For low back pain patients specifically, the plan could incorporate targeted exercises that not only address fall prevention but also support their primary condition management, creating a comprehensive approach to their care. The Falls: Plan of Care quality measure is particularly relevant for the low back pain patient population as these patients may experience altered biomechanics, decreased mobility, and impaired balance, which may significantly increase their risk of falls. Patients with low back pain may also exhibit protective movement patterns and altered postures that, while intended to minimize pain, may compromise their stability and balance. Studies have shown that some elderly patients with a recent history of back pain are at increased risk for falls, with that risk increasing as the number of locations they experience pain in their back increases.[197] [198] Another study found that community-dwelling older adults with chronic pain generally, such as low back pain, were more likely to have fallen in the past 12 months and to fall again in the future.[199] Additionally, low back pain patients may take medications such as muscle relaxants, anti-depressants, or other medications that can affect their balance and coordination, further elevating their fall risk.[200] [201] By including this measure in the low back pain measure set, we could promote ASM participants to assess the risk a patient is at for falls and implement any needed plan or corrective actions to mitigate the issues that may be present. We decided not to include the measure in the low back pain measure set as we are concerned that beneficiaries in ASM may have falls may for reasons, such as syncope, that are less relevant to the care of the ASM participant, and that the incidence of falls is not high enough in this patient population. We seek comments on whether the Falls: Plan of Care measure could be meaningful if included in the low back pain measure set.

(e) Removal and Addition of Quality Measures

While we do not plan to add or remove measures from either cohort's measure set of the ASM test period, there may be circumstances in which it is necessary. We propose at § 512.725(d) that we would add or remove any quality measure for an ASM cohort through notice and comment rulemaking.

We may propose to add or remove measures in response to relevant public comments, recommendations from participants and their collaborators, new CMS program activities, or significant changes to the included measures. Because the quality measures currently proposed are all part of MIPS, any updates CMS applies to the measures within MIPS would be incorporated into the quality measure sets accordingly.

We seek comments on the proposed approach for removal or addition of quality measures.

(f) Maintenance of Technical Specifications for Quality Measures

We propose at § 512.725(d) to release technical specifications for the required quality measures in a form and manner determined by CMS for each ASM performance year via notice and comment rulemaking. We intend to use the most recent MIPS version of the technical specifications for all applicable measures. For non-MIPS measures, we would release the measure specifications in advance of the ASM performance year in which the specifications would be applicable via notice-and-comment rulemaking. If any changes are made to specifications for MIPS measures, and ASM chooses not to adopt these changes, we propose releasing the measure technical specifications applicable to ASM via notice and comment rulemaking before the start of each ASM performance year.

We seek comments on our proposal to use the most recent MIPS version of technical specifications of quality measures for each ASM performance year. We also seek comment on our intent to release the technical specifications of non-MIPS measures via notice and comment rulemaking, and if it allows adequate time for ASM participants to make any needed adjustments to data collections systems or practice workflows.

(g) Data Submission Criteria for the Quality ASM Performance Category

We propose at § 512.725(e)(1) that ASM participants submitting data for measures with non-administrative claims-based measures would be required to submit data for each measure using one of the measure's collection types identified for each required quality measure as detailed in Table 39. We propose at § 512.725(e)(2)

that for the applicable ASM performance year, each ASM heart failure participant would report all of the measures in the heart failure measure set as described in section III.C.2.d.(2).(b) of this proposed rule and each ASM low back pain participant would report all the measures in the low back pain measure set as described in section III.C.2.d.(2).(c) of this proposed rule.

We seek comments on the proposed form, manner, and timing of quality measures reporting at § 512.725(e).

(h) Data Completeness Requirement and Case Minimums for the Quality ASM Performance Category

(i) Data Completeness Requirement

We propose at § 512.725(f)(1) to set a data completeness requirement of at least 75 percent beginning in the 2027 ASM performance year. Data completeness is essential to ensure that data submitted on quality measures are sufficiently complete to accurately assess each ASM participant's quality performance. The data completeness requirement means that an ASM participant submitting measure data on MIPS clinical quality measures (MIPS CQMs) or eCQMs must submit data on at least a specific percent of their patients that meet the measure's denominator criteria, regardless of payer. Also, the inclusion of eCQMs in ASM measure sets more easily enables submission of data on 100 percent of the patient records in a provider's EHR, making data completeness more achievable. We believe it is important to maintain high data completeness to ensure the most accurate assessment of ASM participants. The CY 2025 PFS final rule set the CY 2025 MIPS performance period/2027 MIPS payment year MIPS data completeness requirement for the quality performance category at 75 percent (89 FR 98383 through 98387). Prior to this, the MIPS data completeness requirement had been periodically increasing from where it started, which was at least 50 percent to where it currently is (89 FR 98383 through 98387). We do not intend to continue to align with MIPS data completeness requirements and instead propose to assess changes to the ASM quality measure data completeness as needed for model-specific purposes. Since some ASM participants would not have previously reported to MIPS and, therefore, may have limited experience and capabilities with quality reporting of this type, we considered data completeness requirement lower than 75 percent for 2027 ASM performance year and then increasing to 75 percent beginning in the 2028 ASM performance year 2028.

We also propose at § 512.725(f)(2) that ASM participants would receive zero ''measure achievement points,'' which we propose at § 512.705 to mean numerical values assigned to an ASM participant's reported performance data that we use to calculate an ASM performance category score, for any required measure that does not meet the proposed data completeness requirement. Meeting the data completeness requirement ensures that the measure represents an appropriate percentage of the clinical population applicable for a given quality measure. Therefore, we believe that not meeting the proposed data completeness requirement for a given required quality measure should result in the ASM participant receiving zero achievement points for that measure.

Finally, we propose at § 512.725(f)(3) that we exclude from an ASM's participant total measure achievement points and total available measure achievement points any required measures meet the respective measure's data completeness requirement, but do not have a benchmark. As discussed later in this section of this proposed rule, we believe that it would not be appropriate to score quality measures for which we cannot determine a benchmark.

We seek comments on the proposed data completeness requirement of 75 percent at § 512.725(f)(1) and whether a different data completeness percentage that we considered would be more appropriate. We also seek comment on our proposal at § 512.725(f)(2) that ASM participants would receive zero measure achievement points for any submitted quality measure that does not meet the data completeness requirement. Finally, we seek comment on our proposal at § 512.725(f)(3) for not scoring measures that meet data completeness requirements but for which we cannot determine a benchmark.

(ii) Minimum Case Requirements

We seek to ensure that ASM participants are measured reliably, therefore, we propose at § 512.725(g)(1) to use 20 cases as the minimum case requirement for each quality measure. We propose at § 512.725(g)(2) that ASM participants that report measures with fewer cases than the case minimum for the measure and meet the data completeness requirement proposed at § 512.725(f)(1) would receive recognition for submitting the measure, but we would not include the measure in the quality ASM performance category scoring as described later in this section of this proposed rule. We believe this case minimum is appropriate as it aligns with the case minimum under MIPS as defined at § 414.1380(b)(1)(iii).

We seek comments on our proposed case minimum for quality measures at § 512.725(g).

(i) Quality Measure Achievement Points and Quality ASM Performance Category Scoring

(i) Quality Measure Achievement Points

We propose at 512.725(h)(1)(i) to assign 1 to 10 measure achievement points to each measure based on how an ASM participant performance compares to measure-specific benchmarks determined as described in section III.C.2.d.(2).(i) of this proposed rule. We propose at § 512.725(h)(1)(iii) that if an ASM participant fails to submit a measure required under the quality ASM performance category, then the ASM participant would receive zero measure achievement points for that measure. We propose at § 512.725(h)(1)(ii) and (iii) that measures reported by ASM participants must have the required case minimum as applicable for each measure, as proposed at § 512.725(g)(1), and meet the data completeness requirement, as proposed at § 512.725(f)(1), to receive a score. For example, if an ASM participant reports a measure that meets the data completeness requirement rule but does meet the required case minimum, then the ASM participant would not be scored on that measure, and that measure score would not be factored into the ASM participant's quality ASM performance category score. An ASM participant who reports a measure that does not meet the data completeness requirement but meets the required case minimum of this proposed rule would receive a score of zero for the measure. An ASM participant who does not report the measure would receive a score of zero for the measure. We propose at § 512.725(h)(1)(iv) that an ASM participant that submits data for the same measure under two different collection types, if applicable, would be scored on the data submission that leads to the greatest number of achievement points for that required measure.

The quality ASM performance category score would be the sum of all the measure achievement points assigned for the scored measures required for the quality ASM performance category divided by the sum of total possible measure achievement points.

We also propose not to score measures for which we could not

determine a benchmark for a given ASM performance year as described in section.III.C.2.d.(2)(i)(ii) of this proposed rule. In this situation, the quality ASM performance category score would not include any measure or measures for which a benchmark could not be determined. We believe that it would be unfair to penalize ASM participants due to a lack of a benchmark.

We seek comments on this proposed quality ASM performance category scoring approach as described at § 512.725(h)(1).

(ii) Benchmarking

For the quality ASM performance category, we propose at § 512.725(h)(2) that the ASM performance standard is a measure-specific benchmark. We propose at §§ 512.725(h)(2)(i)(A) through (C) to determine benchmarks for each quality measure and for each of the measure's collection types using data reported by ASM participants, to the extent feasible, during the ASM performance year, from a previous ASM performance year, or from another period determined by CMS. The benchmark determination is contingent on relevant available data for accurate calculation that is specific to ASM participants. For measures with an administrative claims-based collection type, we propose at § 512.725(h)(2)(iii) to calculate the benchmark using performance on the measure during the current ASM performance year. We believe it is important to determine separate benchmarks for each of a measure's collection types since performance varies by collection type in MIPS.[202] We considered determining one benchmark per quality measure regardless of collection type since having a single benchmark may help ASM participants more readily calibrate their performance. Given the differences in MIPS performance by collection type for measures that we propose to require in ASM,[203] we believe it would be more appropriate to calculate a benchmark for each collection type.

We propose at § 512.725(h)(2)(iv) to determine benchmarks for each measure's collection type using deciles based on the applicable period of data we use to determine the measure's benchmark. Then, we would evaluate an ASM participant's actual measure performance during the ASM performance year to determine the number of measure achievement points that should be assigned based on where the actual measure performance falls within the benchmark. We propose establishing benchmarks using a percentile distribution, separated by decile categories, because it translates measure-specific score distributions into a uniform distribution of ASM participants based on actual performance values. For each set of benchmarks, we propose to calculate the decile breaks for measure performance and assign measure achievement points for a measure based on which benchmark decile range the ASM participant's performance rate on the measure falls between. For example, an ASM participant in the top decile would receive 10 measure achievement points for the measure, and an ASM participant in the next lower decile would receive measure achievement points ranging from 9 to 9.9. We propose to assign partial measure achievement points to prevent performance cliffs for ASM participants near the decile breaks. The partial measure achievement points would be assigned based on the percentile distribution

We propose at §§ 512.725(h)(2)(ii)(A) through (C) that we only calculate benchmarks for measures that have a minimum of 20 ASM participants that report the measure: (1) meeting the data completeness requirement as proposed at §§ 512.725(f)(1) through (2) meeting the required case as proposed at §§ 512.725(g)(1) and (3) a performance rate greater than zero. We propose a minimum of 20 because our benchmarking methodology relies on assigning measure achievement points based on decile distributions with decimals. A decile distribution requires at least 10 observations. We would double the requirement to 20 so that we would be able to assign decimal measure achievement point values and minimize cliffs between deciles. Given the mandatory participation of ASM and the mandatory quality measure sets, we do not anticipate that we would encounter challenges with meeting this proposed minimum of 20 ASM participants reporting a measure to determine a benchmark.

We seek comments on our proposed benchmark determination process as proposed at § 512.725(h)(2) and all alternatives considered.

(iii) Topped-Out Quality Measures

We propose at § 512.725(h)(3) that we would identify topped out measures in the benchmarks for each ASM performance year, based on within-model performance on each measure. We considered but are not proposing an initial policy regarding topped out measures and differential benchmarking for measures with a topped-out status. MIPS defines at § 414.1305 a topped out non-process measure as a measure where the Truncated Coefficient of Variation is less than 0.10 and the 75th and 90th percentiles are within 2 standard errors; MIPS also defines at § 414.1305 a topped-out process measure as measure with a median performance rate of 95 percent or higher. We propose monitoring during initial ASM performance year(s) before designating an ASM measure with topped out status. We would propose using a definition like the definition used by MIPS and the Hospital Value-Based Purchasing (HVBP) Program: a Truncated Coefficient of Variation less than 0.10 and the 75th and 90th percentiles are within 2 standard errors as defined at § 412.164(c)(3) (88 FR 59333); or median value for a process measure that is 95 percent or greater (80 FR 49550). Topped out measures are of concern as it makes it difficult to assess relative performance to most accurately score the quality ASM performance category. However, since all ASM participants reporting one of the two measure sets would only be compared among others also reporting that measure set, and all the measures are mandatory to report, the benefit of selecting a topped-out measure is nullified. In this way, the reasoning for removing topped out measures is also nullified. Several of the measures included in our measure sets are topped out in other programs, such as MIPS, potentially because MIPS participants can select the measures on which they believe they would perform well. It is unclear whether requiring ASM participants to report a measure that is topped out in MIPS would present the same issues typically associated with topped-out measures or if the appearance of being topped out is simply due to voluntary reporting by only the highest performers in MIPS.

We seek comment on our proposal at § 512.725(3) to identify topped out measures in the benchmarks for each ASM performance year, based on within-model performance on each measure, as well as all alternatives considered.

(iv) Calculation of the Quality ASM Performance Score

We propose at § 512.725(h)(4) to sum all quality measure achievement points determined for all measure reported by an ASM participant for an applicable ASM performance year. We would then divide that total achievement points by the total available measure achievement

[202] *https://qpp.cms.gov/resources/performance-data.*

[203] *https://qpp.cms.gov/resources/performance-data.*

points for measures reported by the ASM participant that meets the case minimum requirements as defined at § 512.725(g) to determine an overall quality ASM performance category score, which could not exceed 100 percentage points.

We propose at § 512.725(h)(4)(ii) that if data used to calculate a score for a quality measure are impacted by significant changes or errors affecting the ASM performance year, such that calculating the quality measure score would lead to misleading or inaccurate results, then the affected quality measure would be based on data for 9 consecutive months of the applicable ASM performance year. We propose at § 512.725(h)(4)(ii)(A) to consider ''significant changes or errors'' regarding instances in which a quality measure score could not be calculated as changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. We further propose at § 512.735(h)(4)(ii)(A) that significant changes or errors include, but are not limited to, rapid or unprecedented changes to service utilization, the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications. We also propose at § 512.725(h)(4)(ii)(B) that we would publish a list of all measures scored in a form and manner specified by CMS. Finally, we propose at § 512.725(h)(4)(ii)(C) that if CMS determines sufficient measure data is not available, or that there is the possibility of patient harm or misleading results, a measure would be excluded from a participants score. We believe these proposed policies would appropriately adapt the proposed quality ASM performance category scoring policies so that ASM participants would not be penalized for changes or errors in the measure and associated submitted data that would be outside the control of the ASM participant.

We propose at § 512.735(h)(4)(iii) that an ASM participant would not receive a quality ASM performance category score if the ASM participant meets the quality ASM performance category data submission requirements proposed at § 512.720(a)(1)(i) but does not meet the case minimum requirements for any of the required quality measures in their applicable quality measure set. As discussed in sections III.C.2.e.(2)(b) and III.C.2.f.(4) of this proposed rule, the ASM participant in this situation would not receive a payment adjustment for the applicable ASM payment year. We believe that we should hold all ASM participants accountable to performance on quality. Accordingly, it would be inappropriate to evaluate the performance of an ASM participant that reports complete quality measure data but cannot meet the case minimums for any required measure within the applicable quality measure set since they would not have sufficient case volume by which to evaluate clinical quality.

We seek comments on our proposed approach to calculate measure achievement points for each required quality measure and determine benchmarks for quality measures in the quality ASM performance category. We also seek comment on our proposed approach to monitor for topped out measure status and future considerations for how we should approach and manage identified topped out measures in ASM. Finally, we seek comment on our proposal to calculate the quality ASM performance category score, as well as the proposed exceptions that could prevent the calculation of an individual quality measure score. or an overall performance category score.

(3) Proposed Cost ASM Performance Category

The proposed cost ASM performance category supports the model goals to improve quality care as measured through a focused measure set relevant to ASM's clinical specialties and targeted chronic conditions, while decreasing the cost of care for beneficiaries with ASM's targeted chronic conditions. The cost ASM performance category ensures that Medicare beneficiaries are receiving clinically appropriate, comprehensive, high-value care. The importance of the cost ASM performance category is reflected in the weight of the performance category contribution to the final score, discussed at section III.C.2.e.(1) of this proposed rule.

(a) Background

The cost ASM performance category is one of four ASM performance categories measuring an ASM participant's performance on the care delivered related to ASM's targeted chronic conditions. The cost ASM performance category incentivizes ASM participants to ensure Medicare beneficiaries are receiving clinically appropriate, comprehensive, high-value care. Like the cost performance category under the MVPs, ASM participants in each ASM cohort would be scored on a condition-relevant EBCM. We propose at § 512.730(b) to use two EBCMs specified for the MIPS cost performance category, the Heart Failure EBCM and the Low Back Pain EBCM. As discussed below, while we are proposing to evaluate ASM participants on their performance on these two MIPS cost measures, and are proposing to use the same MIPS cost benchmarking and scoring methodology finalized for the 2024 MIPS performance period defined at § 414.1380(b)(2)(i)(B), we are proposing to use different benchmark ranges.

(b) Performance Year for Cost ASM Performance Category

Beginning with ASM payment year 2029, we propose at § 512.730(a) that the ASM performance year for cost measures would be the full calendar year from January 1 to December 31 that occurred 2 years prior to an applicable ASM payment year. We believe that setting that setting the ASM performance year for cost measures in this way aligns with MIPS as defined at § 414.1320 and would be easily adoptable by ASM participants.

We seek comments on our proposed approach at § 512.730(a) setting the ASM performance year for cost measures.

(c) Cost Measure for the ASM Heart Failure Cohort

For the ASM heart failure cohort, we propose at § 512.730(b)(1) to utilize the heart failure EBCM, a MIPS cost measure specified by CMS through rulemaking, to determine an ASM heart failure participant's cost ASM performance category score.[204] We are proposing the heart failure EBCM, in part, because the Advancing Care for Heart Disease MVP (88 FR 80022 through 80025; 89 FR 99015 through 99019) includes it as one of the mandatory cost measures. The heart failure EBCM evaluates a participant's risk adjusted and specialty-adjusted cost to Medicare for beneficiaries receiving medical care to manage and treat heart failure.[205] We are proposing the heart failure EBCM because the measure quantifies the costs of services that are clinically related to the participant's role in managing care during a heart failure episode. We believe that the heart failure EBCM captures a targeted high-cost patient population, has robust clinician coverage, and can help lower Medicare spending. The heart failure EBCM is a complex, yet feasible, chronic condition measure that

[204] *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about.*

[205] *https://www.cms.gov/files/zip/2024-cost-measure-information-forms-zip.zip-0.*

addresses care delivered to manage heart failure. We believe holding ASM heart failure participants accountable on the heart failure EBCM represents an opportunity to measure reductions in the cost of care for beneficiaries with heart failure.

Additionally, we are proposing this measure and the focus on heart failure, generally, due to the prevalence of heart failure in the Medicare FFS population, and the high costs associated with the management of the disease and its complications. The incidence of heart failure increases with age, rising from 20 per 1,000 individuals aged 65 to 69 to more than 80 per 1,000 individuals over 80 years of age.[206] With an estimated 1 in 5 Americans 40 years and older expected to develop heart failure and 1 in 5 Americans expected to be 65 years or older by 2050, the number of Americans with heart failure is predicted to significantly increase in the future.[207] Further, heart failure was listed as the cause of death on 13.4 percent of all death certificates in the United States in 2018.[208] In addition to its prevalence, heart failure is also costly for the health care system. According to the Centers for Disease Control and Prevention (CDC), heart failure costs the United States $30.7 billion annually, including health care services, medications used to treat heart failure, and lost productivity.[209] A large contributor to heart failure-related health care costs may be inpatient admissions, with one study estimating that roughly 1 in 6 beneficiaries returned to the hospital for admission for heart failure-related reasons within 90 days of their initial discharge.[210]

We seek comments on the proposed use of the heart failure EBCM at § 512.730(b)(1) to score the cost ASM performance category for the ASM heart failure cohort.

(d) Cost Measure for ASM Low Back Pain Cohort

For the ASM low back pain cohort, we propose at § 512.730(b)(2) to utilize the low back pain EBCM to determine an ASM low back pain participant's cost ASM performance category score.[211] The low back pain EBCM evaluates a participant's risk adjusted and specialty-adjusted cost to Medicare for patients receiving medical care to manage and treat low back pain. We are proposing the low back pain EBCM, in part, to align with the Rehabilitative Support for Musculoskeletal Care MVP (88 FR 80002 through 80007; 89 FR 99050 through 990054). We also believe this chronic condition EBCM appropriately captures the costs of services that are clinically related to the participant's role in managing the longitudinal care during a low back pain episode.

We believe that use of the low back pain EBCM would help increase accountability on spending and limit low-value care related to low back pain. Low back pain is highly prevalent and a high driver of spending. For example, an estimated 20 percent of people living in the United States experience low back pain,[212] and a 2020 study found that low back and neck pain contributed the most to health care spending among 154 mutually exclusive diagnoses, at $134.5 billion in 2016.[213] Other studies have also found large increases in resource use for low backpain despite only modest increase in its prevalence and little improvement in patient outcomes,[214] [215] [216] which underscores the need for more precise measure of resource use and quality of care. Given these findings, we believe the low back pain EBCM would be an appropriate measure by which to accurately determine resource use related to low back pain and compare cost-related performance across ASM low back pain participants.

We seek comments on the proposed use of the low back pain EBCM at § 512.730(b)(2) to determine the cost ASM performance category score for the ASM low back pain cohort.

(e) Removal and Addition of Cost Measures

We intend to avoid making significant changes to the cost measure over the ASM test period. However, we propose at § 512.730(c) to add or remove measures through notice and comment rulemaking as discussed at § 512.730(c) if we believe refinements to the measure set are necessary. We may propose to add or remove measures in response to relevant public comments, recommendations from participants and their collaborators, new CMS program activities, or significant changes to the included measures. Because the cost measures currently proposed are all part of MIPS, any updates CMS applies to the measures within MIPS would be incorporated into the cost ASM measure sets accordingly.

We seek comments on our proposed approach at § 512.730(c) for adding or removing cost measures if necessary.

(f) Minimum Case Requirements

Like under MIPS, as specified in § 414.1350(c)(6) (88 FR 79346 through 79348), we propose at § 512.730(d) that an ASM participant must have at least 20 attributed episodes (that is, cases) at the TIN/NPI level during an ASM performance year for the ASM participant to receive a score on the applicable EBCM. A participant with an unscored EBCM would also remain unscored in their ASM cost performance category score, resulting in a neutral payment adjustment for the applicable ASM payment year because the participant is required to have an ASM cost performance category score to receive a final score as discussed in section III.C.2.e.(2)(b). As discussed in section III.C.2.c.(3)(b) of this proposed rule, we believe that setting a minimum volume threshold during the calendar year 2 years prior to the applicable ASM performance year for the heart failure EBCM and the low back pain EBCM as part of ASM participant eligibility criteria would mean that ASM heart failure participants and ASM low back pain participants would be likely to meet the same episode case minimum during each ASM performance year.

We seek comment on the proposed case minimum of 20 attributed episodes for all cost measures at § 512.730(d) used to score the cost ASM performance category.

(g) Cost Measure Achievement Points and Cost ASM Performance Category Scoring

(i) Cost Measure Achievement Points

We propose to follow a similar methodology for establishing and assigning measure achievement points as is used by MIPS. We propose at §§ 512.730(e)(1)(i) and 512.730(e)(1)(ii) that for each cost measure attributed to an ASM participant, CMS assigns the ASM participant 1 to 10 achievement points (including partial points) based on the ASM participant's performance on the cost measure during the ASM performance year compared to the cost measure's benchmark. Achievement points are awarded based on which benchmark range the ASM participant's performance on the measure is in.

(ii) Benchmarking

We propose at § 512.730(e)(2)(i) that CMS bases cost measure benchmarks on cost measure performance of ASM participants during the ASM performance year. To develop reliable cost measure benchmarks, we propose at § 512.730(e)(2)(i)(A) that each benchmark must have a minimum of 20 ASM participants who meet the minimum case volume specified at § 512.730(d) for CMS to determine a benchmark for the cost measure. We propose at § 512.730(e)(2)(i)(B) if a benchmark is not determined for a cost measure, then the measure would not be scored.

We propose at § 512.730(e)(2)(ii) to score each EBCM using 10 benchmark ranges based on the median (that is, 50th percentile) cost of all ASM participants attributed the relevant measure plus or minus standard deviations. We propose at § 512.730(e)(2)(ii) to center the 10 benchmarks ranges at half the measure achievement points achievable for each EBCM. Given that the measure achievement points range from 1 to 10, the ASM participant with the median cost would be assigned 6 EBCM measure achievement points. We would then determine the score ranges applicable to each of the 10 measure achievement points based on standard deviations above and below the median score. We propose to calculate these benchmark ranges separately for each EBCM.

We believe the proposed benchmark ranges, calculated using the median and centered around half of the available points for each EBCM would be dynamic and responsive to changes in average spending per episode assessed by cost measures and performance thresholds for each ASM performance year. We would update the median and standard deviations used to determine cutoffs for benchmark ranges so that they are based on performance within the ASM performance year. To determine the benchmark ranges, we would adhere to the following principles: (1) determine benchmark ranges according to the distribution of the EBCM averages; and (2) ensure distribution of measure achievement points for cost measures is reflective of overall program performance. We refer readers to Table 40 for an example of how the proposed cost scoring methodology could be implemented for a specific cost measure.

TABLE 40: EXAMPLE OF IMPLEMENTATION OF THE PROPOSED COST SCORING METHODOLOGY FOR ASSIGNMENT OF ACHIEVEMENT POINTS FOR PERFORMANCE ON THE HEART FAILURE COST MEASURE

Benchmark Range	Points	Illustrative Methodology for the Bottom of the Benchmark Range ($)
Benchmark Range 1	1 – 1.9	Median cost + (2.5 × standard deviation)
Benchmark Range 2	2 – 2.9	Median cost + (2 × standard deviation)
Benchmark Range 3	3 – 3.9	Median cost + (1.5 × standard deviation)
Benchmark Range 4	4 – 4.9	Median cost + (1 × standard deviation)
Benchmark Range 5	5 – 5.9	Median cost + (0.5 × standard deviation)
Benchmark Range 6	6 – 6.9	Median cost + (0 × standard deviation)
Benchmark Range 7	7 – 7.9	Median cost - (0.5 × standard deviation)
Benchmark Range 8	8 – 8.9	Median cost - (1 × standard deviation)
Benchmark Range 9	9 – 9.9	Median cost - (1.25 × standard deviation)
Benchmark Range 10	10	Median cost - (1.5 × standard deviation)

We propose at § 512.730(e)(2)(ii) to award up to 10 measure achievement points for each EBCM based on which benchmark range an ASM participant's EBCM average corresponds using the following formula:

EBCM Achievement Points = Benchmark Range # + [(measure score, expressed as a dollar amount − bottom of benchmark range)/(top of benchmark range − bottom of benchmark range)].

This scoring methodology for cost measures would align the assignment of measure achievement points for cost measures so that participants with costs near the measure's median (that is, 50th percentile) would not receive a disproportionately low score. Rather participants with costs near the median would receive an individual EBCM score clustered closer to the median.

We also considered using even decile benchmark ranges based on the distribution of each EBCM score. This alternative approach, however, would mean that ASM participants with EBCM averages near the 50th percentile would receive lower cost measure scores. Given the distribution of EBCM averages proposed for ASM, we believe even decile benchmark ranges would create narrow benchmark deciles that would result in a less accurate assessment of cost performance. For these reasons, we believe it would be more appropriate to use the proposed episode-based cost benchmarking and measure scoring methodologies.

We seek comments on our proposed approach for assigning measure achievement points, calculating EBCM benchmarks and scoring each cost measure, as well as all alternatives considered.

(iii) Calculation of the Cost ASM Performance Category Score

We propose at § 512.730(e)(3) that the cost ASM performance category score would be calculated as the sum of the total number of measure achievement points earned by the ASM participant from each required measure divided by the total number of available measure achievement points for each required cost measure, not to exceed 100 percent, for ASM heart failure participants or ASM low back pain participants. As discussed in section III.C.2.d.(3)(g) of this proposed rule, we propose at § 512.730(e)(3)(i) that an ASM participant who does not have 20 attributed episodes during an ASM performance year would not receive a cost ASM performance category score and would not receive a final score as discussed in section III.C.2.e.(b) of this proposed rule.

We believe that this proposed cost ASM performance category score ensures that ASM participants can be appropriately held accountable on spending related to ASM's targeted chronic conditions. This proposed cost ASM performance category scoring methodology means that the cost ASM performance category would be equivalent to the score for the heart failure EBCM for ASM heart failure participants and the low back pain EBCM for ASM low back pain participants since each participant group is only scored on one cost measure.

We propose at § 512.730(e)(3)(ii) that if data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the ASM performance year, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the ASM participant's cost performance category score and a cost performance category score is not calculated.

We propose at § 512.730(e)(3)(ii)(A) to define ''significant changes or errors'' regarding instances in which the cost measure score could not be calculated as changes or errors external to the care provided, and that CMS determines may lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance.

We propose at § 512.730(e)(3)(ii)(B) that significant changes or errors include, but are not limited to, rapid or unprecedented changes to service utilization, changes to codes (such as ICD–10, CPT or HCPCS codes), the inadvertent omission of codes or inclusion of codes, or changes to clinical guidelines or measure specifications.

We also propose at § 512.730(e)(3)(ii)(C) that we would empirically assess the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance. We believe these proposed policies would appropriately adapt the proposed cost ASM performance category scoring policies so that ASM participants would not be penalized for changes or errors in the measure and associated submitted data that would be outside the control of the ASM participant.

We seek comments on our proposed methodology for calculating the cost ASM performance category score.

(4) Proposed Improvement Activities ASM Performance Category

The proposed requirements in the improvement activities ASM performance category aim to improve care coordination, increase collaboration between specialty and primary care, and better address upstream drivers of health for patients. These activities support the model goals to improve quality care as measured through a focused measure set relevant to ASM participants. They also support prevention efforts that incentivize ASM participants to ensure that their patients have a regular source of primary care and are screened to help identify early signs of chronic conditions. The improvement activities ASM performance category would be used to determine a potential scoring adjustment to the final score. We refer readers to sections III.C.2.e.(1) and III.C.2.e.(5) of this proposed rule for details on how the scores in the improvement activities scoring adjustment would be applied to the ASM final score.

(a) Background

The improvement activities ASM performance category provides ASM participants with an opportunity to support broader improvements in health care delivery. Improvement activities originated in MIPS to improve care coordination, foster beneficiary engagement, and advance population health management as described at § 414.1355. ASM leverages this structure and proposes at § 512.705 to define ''improvement activities'' as activities relating to care coordination, integration of specialty and primary care, and addressing health-related social needs of patients.

Care coordination helps to ensure that all healthcare providers involved in a patient's care have appropriate access to relevant patient information and are working towards the same care goals. The exchange of up-to-date and detailed patient information among healthcare providers can improve patient outcomes, safety, and support clinical decision making.[217] Integration of specialty and primary care would also positively impact the patient experience. A 2022 study examining fragmentation in ambulatory care for Medicare FFS beneficiaries found that 4 in 10 beneficiaries experience highly fragmented care, with a mean of 13 ambulatory visits across seven practitioners in 1 year.[218] By providing a more seamless and coordinated approach to beneficiary care, providers reduce the need for patients to spend as much time navigating the health care system and lower any undue costs for patients that may be associated with an increased number of clinical visits and services. This approach also can prevent the worsening of disease by ensuring all parties are aware of a patient's needs, aligned with a care plan, and receiving appropriate prevention and screening services. We borrow elements from the care coordination improvement activity subcategory of MIPS to align with activities in which organizations may already be engaged.

Consistent with our model goals, we believe it is important to create a single set of achievable improvement activities that are applicable to all ASM participants. We took several steps to ensure these improvement activities are consistent with our intent to improve meaningful coordination and collaboration. We developed the measures for this ASM performance category based on our review of feedback provided in response to our RFI (89 FR 61596), interviews with interested parties, and an environmental scan of existing practice coordination activities from the Quality Payment

Program and other Innovation Center models.[219]

(b) Performance Year for Improvement Activities

Beginning with ASM payment year 2029, we propose at § 512.735(a) that the ASM performance year for improvement activities would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable ASM payment year, up to and including the full calendar year. We believe that setting the ASM performance year for improvement activities in this way aligns with MIPS as defined at § 414.1320 and would be easily adoptable by ASM participants. We seek comments on this proposal.

(c) Improvement Activities

We propose at § 512.735 the establishment of the improvement activities ASM performance category. We propose at § 512.735(c) to establish the following ASM improvement activities : (1) Improvement Activity 1 (IA–1): Connecting to Primary Care and Ensuring Completion of Health-Related Social Needs Screening and Improvement Activity 2 (IA–2): Establishing Communication and Collaboration Expectations with Primary Care using Collaborative Care Arrangements.

(i) Improvement Activity 1 (IA–1): Connecting to Primary Care and Ensuring Completion of Health-Related Social Needs Screening

In IA–1, we propose at § 512.735(c)(1) to require annual attestations by ASM participants on activities related to enhancing connections to and relationships with primary care. As the first part of IA–1, we propose at § 512.735(c)(1)(i) that ASM participants develop processes and workflows within their practices to identify patients without a PCP and assist them in finding one. Primary care is a vital resource for patients, providing an efficient and accessible level of care. We believe it is essential that the vast majority of patients have a PCP who can coordinate their overall health care needs, manage chronic conditions, and serve as the first point of contact for health concerns. However, some patients may not have a designated PCP, which can lead to fragmented care and suboptimal health outcomes. A 2022 study found that up to a third of Medicare beneficiaries don't see a PCP yearly.[220] Furthermore, we believe that connecting patients with a PCP could help reduce demand on specialists in situations where the patient could more appropriately be treated in the primary care setting. Continuity with a primary care practice or provider also has the potential to reduce costs.[221] We believe specialists can play a crucial role in ensuring that their patients have access to these high-value primary care services. As part of IA–1, we also propose at § 512.735(c)(1)(ii) to require that the ASM specialist always communicate relevant information back to the ASM beneficiary's PCP following the ASM beneficiary's visit with the ASM participant. This exchange of information is important to patient care planning and is an aspect of specialty care and primary care collaboration that has room for improvement.[222]

As the final element of IA–1, we propose at § 512.735(c)(1)(iii) that ASM participants collaborate with PCPs to ensure that their patients have received HRSN screenings. In addition to ensuring access to primary care, we also recognize the importance of addressing patients' upstream drivers of health. These factors, such as housing, food insecurity, transportation, and financial constraints, are common in the Medicare population. One study found that of approximately 68,000 Medicare Advantage patients who responded to a HRSN screening, 33 percent experienced financial strain, 18.5 percent experienced food insecurity, and 17.7 percent had poor housing quality.[223] These unmet needs can significantly impact a patient's well-being and contribute to the development or exacerbation of diseases, lead to unnecessary health care costs, and worsen overall outcomes.[224] HRSN screening also has the opportunity to open a dialogue between the patient and provider about lifestyle factors, such as diet and physical activity. This discussion with the provider and associated education can promote the adoption of a healthier lifestyle, thereby mitigating the presence of new or worsening diseases. Feedback from interested parties has indicated that PCPs are best equipped to conduct HRSN screenings and may have established relationships with community resources to address identified needs. While specialists may not have the resources to conduct HRSN screenings or be the most appropriate provider to address these concerns, we believe they should have some responsibility in ensuring HRSN screenings have been completed, considering unmet social needs can have a direct impact on the medical condition(s) they are managing. If a specialist identifies that a patient has not received an annual HRSN screening, they should communicate this information to the patient's PCP and encourage them to conduct the screening and initiate any necessary follow-up action(s). The specialist may also choose to conduct the screening themselves, as long as they communicate the results and any follow-up actions to the patient's PCP.

(ii) Improvement Activity 1 (IA–1) Specifications

IA–1 Name. Connecting to Primary Care and Ensuring Completion of Health-Related Social Needs Screening

IA–1 Specifications ASM participants must have evidence of processes, workflows, and/or technology that require the ASM participant to: (1) confirm the ASM beneficiary has access to primary care services and, if not, assist the ASM beneficiary in finding a clinician who provides primary care services, (2) communicate relevant information back to the ASM beneficiary's primary care provider following the ASM beneficiary's visit with the ASM participant, and (3) determine whether the ASM beneficiary has received an annual HRSN screening in the primary care setting and, if not, encourage the primary care services provider to conduct the screening or allow the ASM participant to conduct the HRSN screening.

Evidence can include items such as the following:

- Documented workflows or protocols outlining the process for identifying patients without a designated PCP, assisting patients in finding and establishing care with a PCP (such as practice intake forms or integrated into normal practice in the patient's visit), sharing relevant information (test results, treatment plans, follow-up recommendations) with the patient's PCP after each visit, confirming if the patient has completed an annual HRSN screening, or conducting or communicating with the PCP to conduct an annual HRSN screening if it has not been done.
- EHR system configurations or templates, or other health IT tools, that facilitate capturing and documenting the patient's PCP information, generating and sending visit summaries or reports to the PCP, or recording HRSN screening status and prompting follow-up actions.
- Staff training materials or competency assessments related to identifying patients without a PCP and assisting them in finding one, proper documentation and communication of information to the PCP, or inquiring about HRSN screening status and initiating appropriate follow-up.
- Audit trails or reports from the EHR or practice management system demonstrating patients who were identified as not having a PCP and the actions taken, visit summaries or reports sent to the PCP after each patient encounter, or patients who were confirmed to have completed an annual HRSN screening or underwent one or were referred to the PCP for one.

(iii) Improvement Activity 2 (IA–2): Establishing Communication and Collaboration Expectations With Primary Care Using Collaborative Care Arrangements

In IA–2, we propose at § 512.735(c)(2) to require annual attestations by ASM participants on activities related to establishing collaboration expectations with primary care. We believe that formalizing the collaborative relationship between ASM participants and PCPs through a collaborative care arrangement (CCA) is an important step to reduce patient fragmentation of care and ensures vital coordination activities are occurring. As discussed further below, we propose defining ''collaborative care arrangement'' to mean an arrangement that complies with all of the requirements set forth in § 512.771. We also propose to define ''ASM beneficiary'' at § 512.705 as a Medicare FFS beneficiary who is being treated by an ASM participant for a targeted chronic condition. There are several possible aspects to a CCA, but the goal of the CCA is to set forth expectations between the parties to facilitate primary care and specialty care integration for the benefit of the patient while ensuring both parties are held accountable for how they fulfill their duties.

To receive achievement points for IA–2, we propose at §§ 512.735(c)(2)(i) and (ii) that the ASM participant must enter into at least one CCA with a primary care practice that includes at least three of the following five following collaborative elements: data sharing, co-management, transitions in care planning, closed-loop connections, and care coordination integration as proposed at §§ 512.735(c)(2)(ii)(A) through (E). All of these CCA elements support an important prevention framework by promoting a seamless information ecosystem where providers collaborate to detect health risks before they occur and optimize care through communication. These elements also have properties that may overlap in their implementation with each other and IA–1, which together further the goals of the improvement activities ASM performance category.

The sharing of data back to PCPs is crucial for ensuring continuity of care for shared patients. Specialists should have clear processes in place to provide timely updates, test results, treatment plans, and follow-up recommendations to the patient's PCP, even outside the time of a referral between the parties. We also believe this exchange should be bi-directional, so that both entities have a comprehensive understanding of the patient's condition and can provide appropriate follow-up care and management.

Co-management is a collaborative approach where specialists and PCPs work together to provide coordinated care for patients with complex or chronic conditions. Generally, the different types of co-management include consultative co-management, where the specialist provides consultation and recommendations to the PCP who remains the primary manager of the patient's care; shared co-management, where both the specialist and PCP actively participate in managing the patient's care with clearly defined roles and responsibilities; and principal co-management, where the specialist takes the lead in managing the patient's condition while the PCP provides overall coordination and management of other aspects of the patient's care.[225] The benefits of co-management include shared decision-making and treatment planning, consistent monitoring and follow-up of the patient's condition, reduced duplication of tests and procedures, enhanced patient education and self-management support, and better management of comorbidities and potential drug interactions. Additionally, we believe co-management can lead to better health outcomes, improved patient satisfaction, and potentially lower health care costs by reducing fragmentation and unnecessary utilization of health care resources.

Transition in care planning refers to the processes and protocols in place for seamlessly transitioning a patient's care between specialists and PCPs, or between different care settings (for example, hospital to outpatient care).[226] Care planning can include follow-up appointments, medication reconciliation, and clear communication of the treatment plan. We believe effective transitions in care planning can help prevent gaps in care, reduce hospital readmissions, and ensure continuity of care for the patient. It may also involve defining roles and responsibilities for coordinating care, conducting warm handoffs, and ensuring timely follow-up appointments. When meaningfully implemented, it promotes a seamless and coordinated approach to care, where all providers involved have a shared understanding of the patient's needs and can work together to provide high-quality, patient-centered care.

Closed-loop communication and feedback between specialists and PCPs involve establishing a structured and coordinated process for when the patient is referred from primary care to specialty care and back. The model considers this to include elements such as structured referral templates, communication and information sharing, collaborative treatment planning, and shared monitoring of patient outcomes. By coordinating care effectively, providers can identify and address potential issues or gaps in care, reduce duplication of services or tests, and ensure that patients receive appropriate and timely care, ultimately improving quality and preventing

[225] Kuo D, Gifford DR, Stein MD. A typology of specialists' clinical roles. Arch Intern Med. 2009;169(11):1062–1068. doi:10.1001/archinternmed.2009.114.

[226] Smith, Lucia Rojas, et al. *Care Transitions Framework. www.ncbi.nlm.nih.gov,* Agency for Healthcare Research and Quality (US), 1 Mar. 2014, *www.ncbi.nlm.nih.gov/books/NBK196206/.*

unnecessary utilization of health care resources.[227]

Care coordination activities generally refer to efforts by the ASM participant to identify areas of their practice that could be improved by codified workflows or initiatives, as well as establishment of these activities collaboratively with the partnered primary care practice. These innovations support an environment of continuous improvement for practices and positive outcomes for their shared patients.

When selecting primary care practices for CCAs, ASM participants must ensure the CCA is with a primary care practice with whom they share at least one ASM beneficiary. We recommend that the ASM participant explore entering into a CCA with a primary care practice with whom the ASM participant shares a meaningful portion of their Medicare patients, to maximize the impact of the CCA activities. That is, ASM participants should seek to enter into an CCA with another primary care practice with which they share the largest number of ASM beneficiaries. If that is not feasible, then ASM participants should seek to enter into a CCA with a different primary care practice that they share a significant portion of ASM beneficiaries with.

(iv) Improvement Activity 2 (IA–2) Specifications

IA–2 Name. Establishing Communication and Collaboration Expectations with Primary Care Practices using Collaborative Care Arrangements

IA–2 Specifications. Documentation of at least one executed CCA between a primary care practice with which the ASM participant shares ASM beneficiaries, and the CCA must include collaborative efforts related to at least three of the following five elements:

- *Data Sharing.* Setting expectations for bi-directional sharing of patient information between the parties to the CCA, including but not limited to test results, treatment plans, and follow-up recommendations. This is aimed toward population health management of shared patients and is not necessarily coordinated around a specific referral episode. Elements may include: (1) evidence that the ASM participant always sends a report to the referring PCP; or (2) a process for capturing referral information that the ASM participant has a defined method for capturing reports from the primary care provider in the medical record, for example: reports transmitted between EHRs; documents that are electronically scanned and linked to the patient's EHR; or chart documentation of the relevant details of the specialist-patient interaction, such as notes written into a progress note.
- *Co-Management.* Criteria that define co-management approaches, where the parties to the CCA work together to furnish complementary care for patients with complex or chronic conditions. The criteria should clearly set forth the available co-management approaches. Examples of such co-management relationships may include: (1) consultative co-management, (2) shared co-management, or (3) principal co-management.
- *Transitions in Care.* Defined protocols for seamless transitions of care between ASM participants, the primary care practice, or different care settings. Elements may include: (1) patient-centered care transition action plans, such as documented plans from the ASM participant to the PCP, including outpatient follow-up recommendations, medication reconciliation, and any necessary post-transition support; (2) implementation of the transition plan, including documentation of staff involved in the care transition, records of real-time communication between the ASM participant and the primary care practice, and ensuring the primary care practice is included in any follow-up transition communication; or (3) care transition planning processes, which outline steps the ASM participant would take to prepare and implement the patient-centered care transition plan when transferring care to the PCP.
- *Closed-Loop Communication.* Clearly articulated processes enforcing parameters on how ASM beneficiaries may be referred between the parties to an executed CCA. These structured and enhanced referral processes would add efficiency to communications between the parties to the CCA and ensure expectations around what is needed for effective specialty consultation and collaboration. Examples of provisions that should be included are as follows: (1) expectations for the structure, elements, and flow of information and responsibilities between practices during a referral; (2) monitoring of shared ASM beneficiaries through the entire process to ensure proper follow-up, integration of information, and maintenance of beneficiary choice; and (3) integration of information from the closed-loop connection into the ASM beneficiary's plan of care.
- *Care Coordination Integration.* Structured processes to embed care coordination processes into the ASM participant's practice workflow. Such processes may include: (1) activity records documenting the implementation of care coordination activities with the primary care practice, such as meeting minutes on process improvements, workflow diagrams, training syllabi for training staff on new processes, copies of old and new processes on documenting care coordination activities; or (2) outcome measures demonstrating changes attributable to newly implemented care coordination processes.

We seek comments on the goals and specifications of the required improvement activities proposed at § 512.735(b) and (c).

(d) Improvement Activities Data Submission, Achievement Points, ASM Performance Category Scoring

We propose ASM participants must submit data on ASM improvement activities in the form of attestations meeting the submission requirements at § 512.720. We propose at § 512.735(d)(1) and (2) that ASM participants would receive 10 measure achievement points for reporting ''yes'' for each improvement activity specified at § 512.735(c) in accordance with the data submission requirements at § 512.720(a). We would sum the total achievement points for all submitted improvement activities and divide this sum by the total number of available achievement points for the required improvement activities as specified in paragraph § 512.735(c), not to exceed 100 percent.

In our proposals, both improvement activities would be weighted the same, each accounting for half of the potential improvement activities ASM performance category scoring adjustments to the final score. We considered differential weighting, with IA–1 comprising a smaller number of points for the scoring adjustment. The activities in IA–1, such as sharing patient information back to a PCP after a specialist visit, should already be occurring, whereas activities in IA–2, like the creation of a CCA, are less common and potentially more time consuming. We decided to propose to weight the improvement activities equally, each accounting for the same number of potential points in the improvement activities ASM performance category scoring adjustment, acknowledging the burden that these improvement activities may present to practices. For example, if an ASM participant is already conducting

[227] Murray M. Reducing Waits and Delays in the Referral Process. *Family Practice Management.* 2002;9(3):39–42. *https://www.aafp.org/pubs/fpm/issues/2002/0300/p39.html.*

activities that satisfy IA–1 specifications but do not satisfy IA–2 specifications in the 2027 ASM performance year, they would still be awarded 10 measure achievement points and an improvement activities ASM performance category score of 50 percent. We believe IA–1 would be achieved by the vast majority of ASM participants with limited effort, which may lessen the concern of initial improvement activity burden and impact to the ASM participant's overall score. Simultaneously, we want to promote specialty collaboration with primary care, thus if ASM participants do not achieve the expectations in IA–2, the ASM participant would only receive 10 measure achievement points. If ASM participants do not complete the requirements for IA–1 and do not complete the requirements for IA–2, they would receive zero measure achievement points and an improvement activities ASM performance category score of zero percent.

We seek comments on our improvement activities ASM performance category scoring approach at § 512.735(d)(1) and (2) and alternative improvement activity weighting and scoring options.

(5) Proposed Promoting Interoperability ASM Performance Category

Our long-term goal for the Promoting Interoperability performance category is to ensure the meaningful use of CEHRT and information exchange throughout the year, for all data, all clinicians, and all patients. We believe it is important to leverage the Promoting Interoperability ASM performance category for scoring adjustments to the final score, as discussed in section III.C.2.e. of this proposed rule.

(a) Background

This section includes proposals for the performance year for Promoting Interoperability measures, the requirement for CEHRT use and related attestations, data submission criteria and scoring for the ASM Promoting Interoperability performance category. The Promoting Interoperability performance category score would be used to determine the Promoting Interoperability performance category scoring adjustment applied to the final score.

(b) ASM Performance Year for the Promoting Interoperability ASM Performance Category

At § 512.740(a), we propose the ASM performance year for Promoting Interoperability category. Beginning with ASM payment year 2029, the performance year for Promoting Interoperability measures is the minimum of a continuous 180-day period within the calendar year that occurs 2 years prior to the applicable ASM payment year, up to and including the full calendar year.

Reporting for this period would provide ASM participants with the opportunity to continuously monitor their performance, identify gaps in reporting and identify areas that may require investigation and corrective action. Additionally, this performance period aligns with the MIPS performance period established for the MIPS Promoting Interoperability performance period established at § 414.1320(i)(1). We believe that alignment of the performance period between MIPS and the ASM model supports ASM participant's transition from MIPS to ASM.

We seek comments on our proposal at § 512.740(a) for the 180-day performance period for Promoting Interoperability measures.

(c) Reporting for the Promoting Interoperability Performance Category

We propose at § 512.740(b) to earn a performance category score for the Promoting Interoperability Performance category for inclusion in the final score, an ASM participant must be a meaningful EHR user. A meaningful EHR user means an ASM participant who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, and engages in activities related to supporting providers with the performance of CEHRT. We are proposing to not include additional provisions related to information blocking as defined at 45 CFR 171.103 in the definition of a meaningful EHR user.

The Promoting Interoperability ASM performance category would focus on the safe use and exchange of patient data. Our requirements to demonstrate meaningful CEHRT use through reporting Promoting Interoperability measures are discussed later in this section of this proposed rule.

(i) Required CEHRT Use

We propose our requirement for CEHRT use at § 512.740(b)(1) that ASM participants are required to provide evidence, in a form and manner specified by CMS, demonstrating use of CEHRT to fulfill the Promoting Interoperability measure requirements (as defined by a meaningful EHR user at § 414.1305) and receive a score greater than zero percentage points for the Promoting Interoperability ASM performance category. ASM participants must use certified health IT that meets the definition of CEHRT at § 414.1305 (which references health IT certification criteria finalized at 45 CFR 170.315) to receive a score greater than zero for the Promoting Interoperability ASM performance category. To demonstrate evidence of CEHRT use, ASM participants would be required to provide their EHR's CMS identification ID from the Certified Health IT Product List, available on *HealthIT.gov.*

We believe requiring the use of CEHRT supports the goals of ASM by helping enable: (1) meaningful EHR use, further measured by ASM's proposed Promoting Interoperability measures; (2) reporting of clinical quality measures, including eCQMs; (3) interoperability and data sharing between providers and with patients to drive better patient care, care coordination, and primary and specialty care integration; and (4) continuous practice-based quality improvement and care transformation. To promote standardization, we align with the definition of CEHRT at § 414.1305 used across CMS in other Promoting Interoperability and quality reporting programs. For example, CEHRT use is required for eligible clinicians participating in the MIPS program as stated at § 414.1375(b)(1).

In addition to requiring use of CEHRT, we are also maintaining the requirement ASM participants submit confirmation of the following to earn a score for this category:

- The Office of the National Coordinator for Health Information Technology (ONC) Direct Review attestation at 45 part 170, subpart E.
- The Security Risk Assessment Measure.
- The High Priority Practices Guide of the Safety Assurance Factors for EHR Resilience (SAFER) Guides [228] Measure.

We are proposing to not include the Actions to Limit or Restrict Compatibility or Interoperability of CEHRT attestation in ASM at this time.

We believe maintaining the ONC Direct Review process (45 CFR part 170, subpart E) in ASM increases accountability among certified health IT developers and vendors by ensuring ASM participants' Health IT Module [229] conforms to ONC's Health IT Certification Program requirements not

[228] *https://www.healthit.gov/topic/safety/safer-guides.*

[229] 45 CFR 170.102.

only during implementation of CEHRT, but also while CEHRT is being used during patient care and in care delivery.

The Security Risk Analysis and SAFER measures are designed to optimize the safety of ASM participants' EHR systems. We propose at § 512.740(b)(3)(ii) that an ASM participant must complete the activities included in the Security Risk Analysis measure within the calendar year of the ASM performance year. This aligns with a MIPS requirement for eligible clinicians in MIPS as stated at § 414.1375(b)(2)(ii)(A); ASM participants that previously participated in MIPS are likely familiar with these requirements. The security risk analysis is conducted to protect the security of individually identifiable health information and the systems that are used to create, receive, maintain, or transmit such information. An ASM participant would conduct a security risk analysi [230] in accordance with 45 CFR 164.308(a)(1)(A). As part of the security risk analysis, ASM participants would be required to address the security of electronic protected health information (ePHI) created, received, maintained, or transmitted by CEHRT, including whether it would be reasonable and appropriate in the participants' specific circumstances to encrypt ePHI in their CEHRT in accordance with requirements in 45 CFR 164.306(d)(3) and 45 CFR 164.312(a)(2)(iv), implement security updates as necessary, and correct identified security deficiencies as part of the ASM participant's risk management process.

We also propose at § 512.740(b)(3)(iii) that the ASM participant must confirm the ASM participant's completion of the annual self-assessment under the SAFER Guides measure within the calendar year of the ASM performance year. The High Priority Practices SAFER Guide[231] is used as an annual self-assessment to support consistent safety practices for all EHR users and further enable the electronic exchange of health information. This aligns with a requirement for eligible clinicians in MIPS as stated at § 414.1375(b)(2)(ii)(D).

Together, we believe these measures drive more secure, efficient, and meaningful use of CEHRT and health IT in ASM. Furthermore, given current and historical requirements in the Promoting Interoperability performance category in MIPS, these requirements are likely familiar and already implemented, or readily implementable, for many ASM participants.

We considered the alternative of allowing identified ASM participants without CEHRT to opt-out of participating in ASM. However, we would be concerned an opt-out would: (1) disincentivize the adoption of CEHRT and participation of specialists in value-based payment models, (2) be challenging for CMS to operationalize and audit, and (3) potentially result in a reduction in participant volume that would significantly affect ASM's impact and evaluability. We recognize there are underlying reasons why certain practices have yet to adopt CEHRT and that these practices currently not on CEHRT may share certain characteristics, such as smaller practice sizes with 15 or fewer clinicians, as defined at § 414.1305. To support these practices, we propose additional policies and flexibilities in ASM, such as the complex patient scoring payment adjustment described in section III.C.2.e.(3) of this proposed rule and the small practice scoring adjustment described in section III.C.2.e.(4) of this proposed rule, with the goal of not inadvertently penalizing these practices, particularly those who disproportionally care for populations with higher medical complexity and social risk. We also considered the alternative of requiring CEHRT but not requiring CEHRT-related attestations and requirements mentioned earlier, such as the Security Risk Assessment and SAFER Guides measures. We decided to include them given they help ensure safer and more meaningful use of CEHRT amongst ASM participants. Because they have been a consistent part of MIPS reporting in the past, ASM participants are likely familiar with these attestations and measures, which could help reduce burden.

We also considered the alternative of not requiring CEHRT to achieve a Promoting Interoperability ASM performance category score greater than zero. However, we were concerned this would deviate from existing MIPS policy and may disincentivize CEHRT adoption among ASM participants. Furthermore, requiring CEHRT to achieve a Promoting Interoperability category score underscores the role CEHRT plays in providing foundational IT capabilities to enable the reporting of quality data and inclusion of additional IT functionality, such as e-prescribing and health information exchange (HIE), which is captured in ASM's Promoting Interoperability measures. CEHRT use plays an important role in helping ASM participants improve and transform care for Medicare beneficiaries with chronic conditions, whether through electronic clinical decision support, physician order entry or exchanging electronic health information with other clinicians or health care settings.

Lastly, we considered inclusion of The Actions to Limit or Restrict Compatibility or Interoperability of CEHRT attestation in ASM as it would help ensure that ASM participants are acting in good faith when implementing and using CEHRT to exchange electronic health information, and not knowingly and willfully taking action to limit or restrict the compatibility or interoperability of CEHRT.

We request comments on our proposals to require that ASM participants use CEHRT to receive a score for the ASM Promoting Interoperability performance category. We also seek comments on the definition of meaningful EHR user and other alternatives discussed in this section of this proposed rule that would be required for ASM participants to achieve a Promoting Interoperability ASM performance category score greater than zero; this includes allowing for a CEHRT-related opt-out, not requiring CEHRT, and requiring the Actions to Limit or Restrict Compatibility or Interoperability of CEHRT attestation.

(ii) Promoting Interoperability Objectives and Measures

To receive a score for the ASM Promoting Interoperability performance category, clinicians must complete the relevant attestations and measures related to CEHRT and report Promoting Interoperability objectives and measures. Our Promoting Interoperability objectives and measures align with model goals and objectives and measures used in other CMS programs, including MIPS. We propose at § 512.740(b)(2) that an ASM participant must report on objectives and associated MIPS measures specified by CMS to assess performance in the Promoting Interoperability ASM performance category.

We propose at § 512.740(b)(2) that an ASM participant must fulfill the following requirements to earn an ASM performance category score for the Promoting Interoperability performance category: For each measure, as applicable, ASM participants would report the numerator (of at least one) and denominator, or yes/no statement or an exclusion for each measure that includes an option for an exclusion. We would require ASM participants to report all Promoting Interoperability

[230] Security Risk Analysis: *https://qpp.cms.gov/docs/pi_specifications/Measure%20Specifications/2025-MIPS-Promoting%20Interoperability-Measure-Security-Risk-Analysis.pdf.*

[231] SAFER Guides. *https://qpp.cms.gov/docs/pi_specifications/Measure%20Specifications/2025-MIPS-Promoting-Interoperability-Measure-High-Priority-Practices-Guide-of-SAFER-Guides.pdf.*

measures at the TIN/NPI level, which is consistent with the methodology used to identify eligible ASM participants, as described in section III.C.2.c.(3)(a)(i) of this proposed rule. We considered allowing for TIN-level reporting for Promoting Interoperability measures but decided to prioritize maintaining individual accountability and robust comparisons among ASM heart failure participants or ASM low back pain participants. We propose at §§ 512.740(b)(2)(i) through (iv) that ASM participants must attest to the objectives and associated measures for the ASM performance year. The Promoting Interoperability measures support the following objectives: Electronic Prescribing, HIE, Provider to Patient Exchange, and Public Health and Clinical Data Exchange, as shown in Table 41. The objectives encourage leveraging the electronic exchange of health information, with a focus on the safety of prescribing medications, communication between clinicians, patient access to their health information and reporting essential health data to public health agencies.

BILLING CODE 4120–01–P

TABLE 41: PROPOSED PROMOTING INTEROPERABILITY MEASURES

Objectives	Measures		Available Points (based on performance)	Redistribution if exclusion is claimed
e-Prescribing	e-Prescribing		1-10 points	10 points to HIE objective
	Query of PDMP		10 points	10 points to the e-Prescribing measure
Health Information Exchange (HIE)	Option 1	Support Electronic Referral Loops by Sending Health Information	1-15 points	15 points to Provide Patients Electronic Access to Their Health Information measure
		Support Electronic Referral Loops by Receiving and Reconciling Health Information	1-15 points	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	Option 2	HIE Bi-Directional Exchange	30 points	No exclusion
	Option 3	Enabling Exchange under TECFA	30 points	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information		1-25 points	No exclusion
Public Health and Clinical Data Exchange	Report to the following public health or clinical data registries: 1. Immunization Registry Reporting 2. Electronic Case Reporting		25 points for the objective	25 points to the Provide Patients Electronic Access to their Health Information measure if an exclusion is claimed for both measures.
	Option to report one of the following public health agency or clinical data registry measures: • Public Health Registry Reporting, OR • Clinical Data Registry Reporting, OR • Syndromic Surveillance Reporting		No bonus points	Not applicable

BILLING CODE 4120–01–C

As discussed earlier in this section of this proposed rule, ASM participants would be required to submit collected data for the required measures in each objective (unless an applicable exclusion is claimed) for the same 180 continuous days (or more) during the calendar year. Given these measures have remained consistent, required measures in MIPS, as stated at § 414.1375(b)(2), they are likely familiar with the measure specifications and implemented by many MIPS clinicians, which represents a substantial portion of potential ASM participants. We believe these measures align with the goals of ASM and reflect meaningful use of CEHRT. Electronic prescribing and provider to patient exchange, for example, through a patient portal, support patient-centered care and

improve communication between patients and providers. Interoperability is needed for effective collaboration between specialists and PCPs (aligning with the goals and activities of ASM's improvement activities), comprehensive care coordination, and seamless transitions of care.

Of the measures in the Public Health and Clinical Data Exchange category in MIPS, we would include the required measures only (Immunization Registry Reporting and Electronic Case Reporting) in ASM as they provide critical information to the mission and operations of our public health agencies. The other measures in this category (Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting) would remain optional in ASM. Given these measures have been a stable part of the MIPS Promoting Interoperability measure set, keeping them optional allows for ease of reporting for ASM participants who may already have developed workflows and infrastructure to capture this data.

(iii) Adding, Removing, and Modifying Measures

We propose to avoid making significant changes to these measure sets over the period of model; however, we may propose to add or remove measures in response to relevant public comments, recommendations from participants and their collaborators, new CMS program activities, or significant changes to the included measures. Note, because the measures currently proposed are all part of MIPS, any updates CMS applies to the measures within MIPS would be incorporated into the Promoting Interoperability ASM measure sets accordingly. Alternatively, we considered adopting the MIPS Promoting Interoperability measures, but requiring notice and comment rulemaking before adopting any modifications made to the measures' specifications specified by CMS through rulemaking for MIPS.

We seek public comments on these proposals on Promoting Interoperability measures and objectives and proposed alternative for adopting modifications made to the MIPS Promoting Interoperability measure specifications specified by CMS through rulemaking.

(iv) Supporting Use of CEHRT

ASM aims to support the electronic exchange of health information using CEHRT to improve patient care and coordination of care. We propose at § 512.740(b)(4) requirements to support the use of CEHRT.

- *Supporting the use and performance of CEHRT.* We propose at § 512.740(b)(4)(i)(A)(1) and (2) that the ASM participant support use of CEHRT by providing acknowledgement of the requirement to cooperate in good faith with ONC direct review of the ASM participant's health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received; and if requested, cooperate in good faith with ONC direct review of the ASM participant's health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the ASM participant in the field. Furthermore, we propose at § 512.740(b)(4)(i)(B) that an ASM participant has the option to attest to the following objectives and measures: at § 512.740(b)(4)(i)(B)(1) that the ASM participant acknowledges the option to cooperate in good faith with ONC–ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC–ACB surveillance is received; and at § 512.740(b)(4)(i)(B)(2) if requested, that the ASM participant cooperate in good faith with ONC–ACB surveillance of the ASM participant's health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the ASM participant in the field. Proposals to support providers with the performance of CEHRT aligns with requirements of the MIPS program as finalized at § 414.1375(b)(3)(i) through 414.1375(b)(3)(i)(B)(2).

We seek comments on our policies supporting the use and performance of CEHRT.

(d) Alternatives Considered for the Promoting Interoperability Reporting Requirements

We considered alternatives for the Promoting Interoperability reporting requirements. Our proposals mostly align with reporting requirements for the Promoting Interoperability performance category with the MIPS program for multiple reasons. Aligning with MIPS Promoting Interoperability objectives and measures where appropriate promotes standardization across CMS and its programs. Measure alignment can also reduce confusion, burden, and operational complexity for ASM participants by limiting the need for ASM participants to implement different specifications for potentially similar or related measures. Furthermore, the MIPS Promoting Interoperability measure set has been stable for several years and has been successfully reported in MIPS by most of its participants. Therefore, we do not believe it would be an undue burden for ASM participants to continue reporting these measures, particularly given they support the goals of ASM.

In our first alternative, we considered requiring reporting for CEHRT attestation, the ONC Direct Review Attestation, the Security Risk Assessment Measure, and the Safety Assurance Factors for EHR Resilience (SAFER) Guides Measure; each of these items is required in MIPS to get a Promoting Interoperability performance category score greater than zero. This option would not require specific reporting of Promoting Interoperability measures.

We also considered a second alternative that would require the attestations in the first alternative as well as reporting one of the Health Information Exchange options. We believe this option would emphasize the importance of health information exchange to the ASM.

A third alternative we considered was to adopt, by reference, the provisions of MIPS for the PI category, including both the measures and scoring policies. We also considered deferring the PI category measures within ASM to the PI category within MIPS such that the ASM would automatically update to align with MIPS for each future ASM performance year. Aligning with the PI category within MIPS would reduce complexity for ASM participants, especially those who have been participating in MIPS. While we believe this would limit confusion and align objectives across CMS, we decided that this could introduce risk to ASM insofar changes to the PI category could be introduced in MIPS that may not align with ASM's goals and priorities; in these cases, ASM could consider not adopting or delaying adoption of these changes. We believe that maintaining the PI category in ASM through rulemaking would be the better approach; however, we invite comment on the merits of ASM deferring measure selection and scoring to the MIPS PI category.

A fourth alternative would be to develop new Promoting Interoperability measures specific to ASM. While new measures could potentially more meaningfully capture the use of health IT in patient care, we were concerned about the feasibility of new measure development and the operational challenges that would be imposed on ASM participants and their EHR vendors to implement these new measures.

We seek comments on our proposals on Promoting Interoperability measures. We also seek comments on alternatives to reporting the full set of Promoting Interoperability performance category measures. We also seek comment on the alternative considered to adopt the PI category in MIPS in its entirety, in addition to the applicable scoring methods, for each applicable ASM performance year, including any ongoing updates to the MIPS PI category over the course of the model.

(e) Promoting Interoperability ASM Performance Category Scoring

We propose at § 512.740(c)(1) an ASM participant earns a score for each measure by fulfilling the reporting requirements specified at § 512.740(b) and if an exclusion, under the measure's specifications as maintained and published by MIPS, is reported for a measure, the points available for that measure are redistributed to another measure. We propose at § 512.740(c)(1)(i) maintaining the score amounts and applicable redistribution scoring policies for each required measure as set forth in the MIPS measure specifications. We refer readers to Table 41 for the scores assigned to each measure as defined in the MIPS measure specifications. We considered the alternative of developing an ASM-specific scoring system that assigns different scores to each Promoting Interoperability measure. However, we were concerned this would deviate from MIPS, which is likely already familiar to ASM participants. Furthermore, the existing scoring in MIPS already reflects ASM's priorities, for example, with more measure achievement points assigned to the Health Information Exchange category compared to the others.

As stated earlier and consistent with MIPS, the optional Public Health and Clinical Data Exchange measures (Public Health Registry Reporting, Clinical Data Registry Reporting, or Syndromic Surveillance Reporting) in ASM would remain optional in ASM. Furthermore, we are not adopting the MIPS scoring policy of assigning 5 bonus points for submitting a ''yes'' response for any of the optional Public Health and Clinical Data Exchange measures given they may be less relevant to the care provided to Medicare beneficiaries by ASM participant, for example, engaging with a public health agency to submit syndromic surveillance data from an urgent care setting. In addition, bonus points may signal greater importance of these measures over other Promoting Interoperability measures that more directly support ASM's goals, such as interoperability to support primary and specialty care integration. We continue to capture essential public health reporting activities on immunizations and reportable conditions in the two required Public Health and Clinical Data Exchange Promoting Interoperability measures.

We propose at § 512.740(c)(2) that unless otherwise specified by CMS, provided an ASM participant meets the CEHRT requirements as described in section III.C.2.d.(5).(b), CMS sums the scores for each of the required Promoting Interoperability measures described at § 512.740(b) and divides this sum by the total number of available Promoting Interoperability points to determine the ASM Promoting Interoperability performance category score. The ASM Promoting Interoperability performance category score cannot exceed 100 percent. If an ASM participant does not demonstrate meaningful CEHRT use as described in section III.C.2.d.5.(b) they would receive a zero for their Promoting Interoperability ASM performance category score. The Promoting Interoperability ASM performance category score would be used as a Promoting Interoperability performance category scoring adjustment to the final score specified under § 512.745(a)(1)(iv).

We considered automatically applying a score of zero for an ASM participant's Promoting Interoperability performance score for any ASM participant who did not meet achieve full points on the Promoting Interoperability performance category, however, we recognize it is important to acknowledge and credit the achieved points on the individual measures. Therefore, we would leverage the Promoting Interoperability performance category score for the Promoting Interoperability performance category scoring adjustments to the ASM final score, as discussed in section III.C.2.e.(1). of this proposed rule. The concepts represented in the Promoting Interoperability requirements support ASM participants in improving value, by improving patient care while maintaining or lowering the cost of care.

We are not proposing any exceptions for the Promoting Interoperability ASM performance category requirements. CMS has established automatic reweighting criteria of the Promoting Interoperability category in MIPS at § 414.1380(c)(2)(i)(C)(9) for certain MIPS eligible clinicians, such as hospital-based clinicians and Ambulatory Surgical Center-based clinicians, and for clinicians in small practices as defined in § 414.1305. The MIPS reweighting policy generally excludes the Promoting Interoperability performance category from the MIPS final score if the applicable clinician or group practice does not submit Promoting Interoperability data. Due to ASM's participant selection criteria (see section III.C.2.c.(3). of this proposed rule) many ASM participants, except for those in small practices with 15 or fewer clinicians, would not qualify for this automatic reweighting criterion if they were to be considered eligible clinicians under MIPS. For ASM participants in small practices or solo practitioner ASM participants, we are proposing to adjust final scores as described in section III.C.2.e.(4). of this proposed rule. We believe the potential confusion and complexity to develop and implement an exclusion policy for the Promoting Interoperability ASM performance category would outweigh any potential benefits it would have for a likely small number of participants.

Lastly, we are proposing an Extreme and Uncontrollable Circumstances policy at § 512.780 and discussed in section III.C.2.i. of this proposed rule, but we are not proposing to include a Promoting Interoperability-specific hardship application in ASM. Data analysis of 2023 data submitted by clinicians who participated in MIPS that would have met the ASM participant selection criteria showed that less than 1 percent of those clinicians submitted a Promoting Interoperability -specific hardship application. The operational lift and resources needed to develop and maintain a hardship application for ASM likely outweigh the potential benefit only a few practices may receive.

We seek comments on these proposals and discussed alternatives to score the ASM Promoting Interoperability performance category.

e. Proposed Final Score Methodology

In this section, we propose a scoring methodology for assessing the total performance of each ASM participant (referred to as a ''final score'') that allows for accountability and alignment for performance within each ASM cohort. Specifically, we propose to define at § 512.705 ''final score'' to

mean a composite assessment (using a scoring scale of zero to 100 points) for each ASM participant for an ASM performance year determined using the methodology for assessing the total performance of an ASM participant according to performance standards for applicable measures and activities for each ASM performance category as described in § 512.745.

The methodology discussed in this section would calculate a final score based on the quality and cost ASM performance categories scores for each ASM participant while considering negative scoring adjustments for the improvement activities and Promoting Interoperability ASM performance categories. Additional points would be added to the final score for ASM participants that address complex care and ASM participants that are part of small practices. Later in this section of the proposed rule, we propose specific data submission requirements for ASM participants to receive a final score. ASM participants that do not meet these minimum data submission requirements would receive a final score of zero, which would lead to the maximum negative payment adjustment applicable for the corresponding ASM payment year. We also propose that ASM participants who meet the data submission requirements to receive a final score but cannot be measured on quality or cost performance would not receive a final score and would therefore receive a neutral payment adjustment.

Specifically, we propose at § 512.745(a) to calculate a final score of zero to 100 points using the formula we propose in section III.C.2.e.(5). of this proposed rule and specified at § 512.745(a)(5) for each ASM participant that meets the requirements to receive a final score as proposed in section III.C.2.e.(2) of this proposed rule and specified at § 512.745(a)(2). We propose policies to determine scores for the ASM performance categories in sections III.C.2.d.(2). through III.C.2.d.(5). of this proposed rule. ASM performance category scores reflect the assessment of each ASM participant's performance on the applicable measures and activities for an ASM performance category for its applicable performance period based on the performance standards for those measures and activities.

We would use the final score to determine an ASM payment adjustment factor for the ASM participant for the applicable ASM payment year as discussed in section III.C.2.f. of this proposed rule.

(1) ASM Performance Category Weights and Scoring Adjustments

To create a final score from zero to 100 based on the individual ASM performance category scores, we propose at § 512.745(a)(1)(i) through (iv) to assign an ASM performance category weight of 50 percent to each of the quality and cost ASM performance categories and to apply adjustments to the final score based on scores in the improvement activities and Promoting Interoperability ASM performance categories. Accordingly, we propose that the improvement activities and Promoting Interoperability ASM performance categories would not have a performance category weight but would have separately applied scoring adjustments that are potentially applied to the final score. The proposed weights for the quality and cost ASM performance categories, as well as the improvement activities and Promoting Interoperability ASM performance category scoring adjustments are described in Table 42.

TABLE 42: ASM PERFORMANCE CATEGORY SCORING WEIGHTS AND ADJUSTMENTS BY ASM PERFORMANCE CATEGORY

ASM Performance Category	Weight or Scoring Adjustment in Final Score
Quality	50 percent weight
Cost	50 percent weight
Improvement Activity	Scoring adjustment of zero, -10, or -20 points
Promoting Interoperability	Scoring adjustment of zero to -10 points

We are proposing to only add weights to the quality and cost ASM performance categories for the final score and to not add weights to the improvement activities and Promoting Interoperability ASM performance categories to broaden the distribution of final scores. Based on historical MIPS performance in the improvement activities and Promoting Interoperability performance categories, we believe ASM participants would be likely to achieve higher ASM performance category scores in these two performance categories. One of the stated goals of ASM is to increase two-sided risk and create payment adjustments of a higher magnitude for ASM participants to incentivize performance improvements. If final scores were clustered around a small range of performance scores, differentiating performance and operationalizing a wider range of payment adjustments could prove difficult.

We are also proposing to weight the cost and quality ASM performance category scores at 50 percent each because those weights align with ASM's goal, as described in sections III.C.2.d.(2). and III.C.2.d.(3). of this proposed rule, of decreasing the cost of care for beneficiaries with ASM's targeted chronic conditions and improving quality care through a focused measure set relevant to ASM's clinical specialties and targeted chronic conditions. To drive cost and quality improvement as described in sections III.C.2.d.(2). and III.C.2.d.(3). of this proposed rule, we believe that weighting cost and quality ASM performance category scores at 50 percent creates the necessary incentives to lower chronic condition cost of care while improving quality metrics.

We propose at §§ 512.745(a)(1)(iii) and 512.745(a)(1)(iv) to introduce improvement activities and Promoting Interoperability scoring adjustments to the ASM participant's final score dependent on the performance in the improvement activities and Promoting Interoperability ASM performance categories. We propose at § 512.745(a)(1)(iii)(A) that ASM participants that achieve a 100 percent score for the improvement activities ASM performance category would not receive an improvement activities ASM performance category scoring adjustment to their final scores. We propose at § 512.745(a)(1)(iii)(B) that ASM participants that receive a 50 percent improvement activities ASM performance category score (that is, an ASM participant that attested to meeting the requirements of one of the two proposed required improvement

activities) would receive an improvement activities ASM performance category scoring adjustment of negative 10 points to the final score specified at § 512.745(a). We propose at § 512.745(a)(1)(iii)(C) that ASM participants that receive a zero percent improvement activities ASM performance category score would receive an improvement activities ASM performance category scoring adjustment of negative 20 points to the final score specified at § 512.745(a). The maximum improvement activities ASM performance category scoring adjustment would be negative 20 points.

To determine the Promoting Interoperability performance category scoring adjustment, we propose at § 512.745(a)(1)(iv)(A) and (B) that we would multiply the Promoting Interoperability ASM performance category score by 100 then subtract that product from 100 and divide by the maximum negative Promoting Interoperability ASM performance category scoring adjustment of 10 points. The maximum Promoting Interoperability ASM performance category scoring adjustment would be negative 10 points. For example, if an ASM participant's Promoting Interoperability ASM performance category score was 73 percent, we would multiply 73 percent by 100, subtract 73 from 100 and divide the score by the maximum negative Promoting Interoperability ASM performance category scoring adjustment of 10, resulting in a negative Promoting Interoperability ASM performance category scoring adjustment of 2.7 points.

We considered weighting all the ASM performance category scores to determine a final score instead of proposing the scoring adjustments for the improvement activities and Promoting Interoperability ASM performance category scores. Under this alternative, we considered the following ASM performance category weights to calculate the final score when there is no reweighting: (1) quality 30 percent; (2) cost 30 percent; (3) improvement activities 25 percent, and (4) Promoting Interoperability 15 percent. For similar reasons discussed earlier in this section of this proposed rule, we believe that increasing the weight on the improvement activities and decreasing the Promoting Interoperability ASM performance category weights relative to performance category weights in MVPs as defined at § 414.1365(e)(1) would increase the incentive to achieve the desired aims of improved primary care and specialty care integration under ASM. We believe that the improvement activities would be important to meet ASM's goal of better integrating specialty and primary care clinicians as described in section III.C.2.d.(4). of this proposed rule. Ultimately, we believe that the proposed ASM performance category weights and scoring adjustments, as discussed earlier in this section of this proposed rule, would overcome the potential challenges in determining meaningful payment adjustments if final scores were clustered around a small range of performance scores.

We also considered using the same ASM performance category weights used by the Quality Payment Program to score performance categories in MVPs as defined at § 414.1365(e)(1) but without the potential for reweighting as defined at § 414.1365(e)(2) (89 FR 98345). As defined at § 414.1365(e)(1), MVPs use the following performance category weights to calculate the final score when there is no reweighting: (1) quality 30 percent; (2) cost 30 percent; (3) improvement activities 15 percent; and (4) Promoting Interoperability 25 percent. We believe that the improvement activities ASM performance category's goal of integrating specialty managed care with primary care specialists is central to ASM's larger goal. Therefore, a higher weight should be given to the improvement activities ASM performance category over the Promoting Interoperability ASM performance category.

We believe weighting the quality and cost performance categories at 50 percent more accurately assigns points in support of ASM's goals. With regards to the negative scoring adjustments, the improvement activities ASM performance category's goal of integrating specialty managed care with primary care specialists is central to ASM's larger goal. Therefore, a higher number of potential negative scoring adjustment points should be given to ASM participants that do not meet requirements of the improvement activities ASM performance category over the Promoting Interoperability ASM performance category.

We seek comments on our proposed ASM performance category weights and scoring adjustments as proposed at § 512.745(a)(1) and the alternative ASM performance category weights we considered in this proposed rule.

(2) Requirements To Receive a Final Score

(a) Determining a Final Score When an ASM Participant Meets or Does Not Meet Minimum Data Submission Requirements

We propose at § 512.745(a)(2) that we would determine whether an ASM participant is eligible to receive a final score for the applicable ASM performance year depending on the data submitted by the ASM participant. We propose at § 512.745(a)(2)(i) that ASM participants who meet the data submission requirement for the quality ASM performance category as proposed at § 512.725(a)(1)(i) and receive quality and cost ASM performance category scores would receive a final score greater than zero but not exceeding 100 for the applicable ASM performance year. These ASM participants would receive a payment adjustment based on the methodology proposed in section III.C.2.f of this proposed rule. We propose at § 512.745(a)(2)(ii) that ASM participants who do not meet the data submission requirement for the quality ASM performance category as proposed at § 512.725(a)(1)(i) would receive a final score of zero for the applicable ASM performance year. As discussed in section III.C.2.f of this proposed rule, these ASM participants would be subject to the maximum negative payment adjustment for the applicable ASM payment year. We also note that an ASM participant's final score may also be affected if the ASM participant is affected by an eligible extreme and uncontrollable circumstance during an ASM performance year as discussed in section III.C.2.i of this proposed rule. We refer readers to section III.C.2.e.(2).(b) later in this section of this proposed rule for proposals related to final scores when ASM participants meet the quality ASM performance category data submission requirements but do not receive a quality or cost ASM performance category score. We also refer readers to Table 43 later in this section of this proposed rule for a summary of the proposed final score policies and their impact on payment adjustments.

As we propose ASM to be a mandatory model, we believe that we must set a minimum data submission requirement for an ASM participant to meet or otherwise be subject to the maximum negative payment adjustment as discussed in section III.C.2.f of this proposed rule. We believe that our proposed minimum data submission requirement is reasonable because it requires that an ASM participant reports at least one non-administrative claims-

based quality measure that also meets the data completeness requirement. Ultimately, this requirement would mean that the ASM participant is held accountable on the quality ASM performance category. Since we do not require ASM participants to submit data for the cost ASM performance category because we directly calculate the EBCMs, this proposed minimum data submission requirement would allow us to hold ASM participants accountable for quality and cost performance except in the case the ASM participant does not meet the case minimums for the quality and cost ASM performance category measures as discussed later in section III.C.2.e.(2).(b) of this proposed rule.

We seek comments on our proposed requirements at § 512.745(a)(2)(i) to calculate a final score for ASM participants and our proposal at § 512.745(a)(2)(ii) that an ASM participant who does not meet these requirements would receive a final score of zero for the applicable ASM performance year.

(b) Not Determining a Final Score When an ASM Participant Cannot Be Scored on the Quality or Cost ASM Performance Category

At § 512.745(a)(2)(iii), we propose that ASM participants who meet the data submission requirement for the quality ASM performance category as proposed at § 512.725(a)(1)(i) but do not receive a quality ASM performance category or a cost ASM performance category score would not receive a final score for the applicable ASM performance year. As discussed in section III.C.2.f.(4) of this proposed rule, these ASM participants would not receive payment adjustments in the corresponding ASM payment year. That is, only ASM participants who meet the requirements to receive a final score proposed earlier in this section of this proposed rule and receive a quality or cost ASM performance category score would receive a final score for the applicable ASM performance year. As proposed in section III.C.2.f.(4) of this proposed rule, ASM participants that receive a final score greater or equal to zero and not exceeding 100 would receive an ASM payment adjustment factor, defined in section III.C.2.f of this proposed rule, based on that final score for the applicable ASM payment year; otherwise, we propose that the ASM participant would not receive a final score and would receive no payment adjustments for the applicable ASM payment year. We also refer readers to section III.C.2.i of this proposed rule for how the proposed extreme and uncontrollable circumstance policy influences an ASM participant's final score if an ASM participant has been deemed to be affected by an eligible circumstance.

We believe that it is appropriate to hold ASM participants accountable for quality and cost for the purpose of determining payment adjustments. We recognize that there may be instances where an ASM participant meets the minimum data submission requirements for the ASM performance category to receive a final score described earlier in this section of this proposed rule but does not meet the case minimums for any required quality measure as discussed in section III.C.2.d.(2).(h) of this proposed rule or does not meet the case minimum for the required EBCM as discussed in section III.C.2.d.(3).(g) of this proposed rule. An ASM participant who does not receive a final score would receive a no payment adjustment (that is, neutral payment adjustment), meaning that they would not receive an upward or downward payment adjustment to their Medicare Part B payments for covered professional services for the applicable payment year because of participation in ASM. We believe that not determining a final score for the ASM participant and not adjusting payments during the applicable ASM payment year ensures that the ASM participant would not be unfairly penalized. We also believe that this proposal avoids complex reweighing policies. Reweighting policies would potentially mean that each final score represents a different mix of measures from different ASM performance categories. For example, one ASM participant could have a final score comprised of a cost ASM performance category score with improvement activities and Promoting Interoperability ASM performance category scoring adjustments whereas another could have a final score comprised of quality and cost ASM performance category scores. We believe that ensuring that all ASM participants' final scores reflect quality and cost performance is the most appropriate for determining payment adjustments that incentivize the care improvement and transformation that we seek to achieve through ASM.

We considered requiring that an ASM participant would only receive a final score if we could score them on all four proposed ASM performance categories as discussed in section III.C.2.d. of this proposed rule. We believed, however, that such a requirement would potentially be burdensome and not as well aligned with our intention to hold all ASM participants accountable for quality and cost performance at a minimum.

Table 43 summarizes the proposed requirements to receive a final score and the resulting impact on payment adjustments discussed in this section and in section III.C.2.f of this proposed rule.

TABLE 43: PROPOSED FINAL SCORE POLICIES AND RESULTING PAYMENT ADJUSTMENTS

ASM Participant Meets Quality ASM Performance Category Data Submission Requirement?	ASM Participant Receives a Quality ASM Performance Category Score?	ASM Participant Receives a Cost ASM Performance Category Score?	Final Score	Payment Adjustment
Yes	Yes	Yes	Greater than 0 and not exceeding 100	Positive, neutral, or negative adjustment depending on final score
Yes	No	Yes	None	None (that is, neutral)
Yes	Yes	No	None	None (that is, neutral)
Yes	No	No	None	None (that is, neutral)
No	No	Yes	0	Negative adjustment equal to the applicable ASM risk level
No	No	No	0	Negative adjustment equal to the applicable ASM risk level

We seek comments on our proposal at § 512.745(a)(2)(iii) that ASM participants that we cannot score on the quality or cost ASM performance category would not receive a final score for an ASM performance year. We also seek comments on the alternative of requiring data submission for all four ASM performance categories that we considered.

(3) Complex Patient Scoring Adjustment

We propose at § 512.745(a)(3) to apply a complex patient scoring adjustment to ASM participants' final scores for eligible ASM participants as described later in this section of this proposed rule. We propose to use two risk indicators, Hierarchical Condition Category (HCC) risk scores and the proportion of patients with dual eligible status, ''dual eligible proportion,'' to calculate the complex patient scoring adjustment to ASM participants' final scores. For the purposes of ASM, we propose at § 512.705 that ''risk indicator'' refers to Hierarchical Condition Category (HCC) risk scores under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act or the proportion of beneficiaries with dual eligible status used in calculating the complex patient scoring adjustment as defined at § 512.745(a)(3).

Social and medical risk factors, such as income and co-occurring chronic conditions, play a major role in health status and, accordingly, the types of services and procedures furnished to a beneficiary. Physicians may face unique challenges delivering care to those with more ''patient complexity,'' a term used to describe and account for a combination of factors that impact beneficiaries' health outcomes. In ASM, our aim is to shift the focus away from volume and towards direct accountability for the cost and quality of health care services delivered. At the same time, by introducing an assessment of performance among physicians with similar clinical profiles but who may have different caseloads of complex patients, we seek to ensure that the care furnished by ASM participants is assessed fairly to espouse predictability and sustainability. We believe that inclusion of a complex patient scoring adjustment in the determination of final scores would help to achieve these objectives.

The Quality Payment Program calculates a complex patient bonus and adds it to the MIPS final score for qualifying MIPS eligible clinicians based on their caseload of complex patients using two well-established risk indicators within the Medicare program: HCC risk scores and dual-eligible proportion under § 414.1380(c)(3). The CY 2018 Quality Payment Program final rule established a complex patient bonus to be added to the final score for the CY 2020 MIPS payment year (82 FR 53771 through 537756) as required by MACRA. The purpose of the policy was to address the impact patient complexity may have on MIPS scoring and mitigate discrepancies without masking performance. Subsequent rulemaking continued using the complex patient bonus and modified the formula based on several factors including stakeholder feedback, updated analysis, and implications from the HHS Assistant Secretary for Planning and Evaluation (ASPE) reports to Congress (86 FR 65510 through 65519).

We considered, but are not proposing, adopting an approach in which quality performance is risk adjusted for complex patients. We believe that providers have substantial control over the health care encounter and the outcomes assessed after the encounter. Thus, we decided that adjustments made at the quality measure or quality ASM performance category level would undermine our core aim to promote direct accountability and high-quality outcomes for all beneficiaries. Further, ASPE's second report released in June 2020, Social Risk and Performance in Medicare's Value-Based Purchasing Programs, provides recommendations for addressing risk factors in Medicare's value-based payment programs, including discouraging risk adjustments on measures that assess the process and outcome of care given in the care setting.[232] The report reasoned that adjusting quality measures may have a negative impact on transparency for consumers and may inadvertently lower the standard of care. Instead, the report suggests including additional payments or bonuses for practices with a greater share of dual eligible and high-risk

[232] *https://aspe.hhs.gov/sites/default/files/private/pdf/263676/Social-Risk-in-Medicare%25E2%2580%2599s-VBP-2nd-Report-Executive-Summary.pdf.*

patients is more appropriate as it recognizes that providing excellent care for complex beneficiaries may require more physician services, resources, and capacity.[233]

Since the goal of the complex patient scoring adjustment policy in ASM is: (1) to protect access to care for complex patients and provide them with excellent whole-person care; and (2) to avoid placing ASM participants who care for complex patients at a potential disadvantage, we believe applying this complex patient scoring adjustment to the final score to determine payment adjustments is appropriate because caring for complex patients can affect all aspects of a practice, not just success in specific ASM performance categories. However, we recognize the importance of holding providers accountable for overall results, regardless of social and medical risk, and would want ASM participants to know the contribution of the complex patient scoring adjustment, if applicable, to their final score. Therefore, an ASM performance report, as discussed later in this section of this proposed rule, would include an ASM participant's complex patient scoring adjustment, if applicable, in addition to their final scores to ensure transparency in final score calculations.

We propose at § 512.745(a)(3)(i) that ASM participants who have at least one risk indicator (HCC risk scores and dual proportion) that is equal to or greater than the reference median for the risk indicator, described later in this section, for an applicable ASM performance year would have the complex patient scoring adjustment added to their final score for a given ASM performance year. The complex patient scoring adjustment would only be provided if the ASM participant meets the requirements to receive a final score greater than zero proposed at § 512.745(a)(2)(i) and discussed in section III.C.2.e.(2). of this proposed rule. We note that the proposed complex patient scoring adjustment calculation methodology is similar to MIPS' complex patient bonus. However, we propose limited methodological adjustments to better align the scoring adjustment with ASM's scoring approach.

To determine whether an ASM participant would qualify for the complex patient scoring adjustment, we propose to calculate a reference median for each risk indicator (HCC risk score and dual proportion) for each ASM cohort and for each ASM performance year. We propose to calculate the reference median of the ASM cohort's HCC risk scores and dual proportions using applicable data from 1 calendar year prior to the start of the applicable ASM performance year. We would only use applicable data from ASM participants that meet the data submission requirements for the quality ASM performance category for the applicable ASM performance year as described at § 512.725(a)(1)(i). For example, we would calculate the reference medians for the 2027 ASM performance year using data from the 2026 calendar year. We would then calculate each risk indicator (HCC risk score and dual proportion) for each ASM participant using data from the current ASM performance year (in this example, the 2027 ASM performance year). ASM participants who have at least one calculated risk indicator for the ASM performance year that is equal to or greater than the reference median risk indicator calculated for their applicable ASM cohort would be eligible to receive the complex patient scoring adjustment. ASM participants that do not have data available to calculate either risk indicator score for an applicable ASM performance year would not be eligible to have the complex patient scoring adjustment added to their final score.

We also propose to determine the reference median of each risk indicator separately for each ASM cohort to align with our proposed approach to make separate performance comparisons within each of these participant cohorts. We considered determining the reference median for each risk indicator using data from data from the concurrent ASM performance year but were concerned that Medicare claims runout periods would not provide complete data to calculate these medians within an ASM performance year. This approach would mirror the method that MIPS uses in calculating the complex patient bonus under § 414.1380(c)(3) with adaptations to align with the overall performance comparison approach of ASM. We also considered not requiring that an ASM participant have a median or higher value for at least one of the two risk indicators to qualify for the complex patient scoring adjustment. While this alternative would expand the number of ASM participants that would qualify for the complex patient scoring adjustment for an ASM performance, we believe targeting the complex patient scoring adjustments to ASM participants treating a higher caseload of highly complex patients would be more appropriate. We also considered using the mean, instead of the proposed median of the risk indicator as the cutoff point but believe it could decrease the percentage of ASM participants that would receive the complex patient scoring adjustment like what was observed by the Quality Payment Program in exploratory analyses for the MIPS complex patient bonus methodology (86 FR 65110).

We propose at § 512.745(a)(3)(ii)(C), like in MIPS, to determine a standardized score for each risk indicator based on the mean and standard deviation of the raw risk indicator score to provide a standardized measurement of the distance between each risk score and the mean: (raw risk indicator score − risk indicator mean)/risk indicator standard deviation. We propose to use the mean and standard deviation from 1 calendar year prior to the ASM performance year using applicable data from ASM participants identified for that ASM performance year. Standardization allows us to determine how far each risk indicator score is from the mean. For example, the mean and standard deviations for the 2027 ASM performance year would be determined based on data from CY 2026 for ASM participants identified for the 2027 ASM performance year, which is a similar methodology to our proposed methodology to calculate the risk indicator reference medians described earlier in this section of this proposed rule.

We propose at § 512.745(a)(3)(ii)(A) to calculate the social complex patient scoring adjustment component as follows:

Medically complex patient scoring adjustment component = 1.5 + 4*associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by an ASM participant;

We propose at § 512.745(a)(3)(ii)(B) to calculate the medical complex patient scoring adjustment component as follows:

Social complex patient scoring adjustment component = 1.5 + 4* associated dual proportion standardized score.

We propose § 512.745(a)(3)(ii)(C) to add the components together to calculate one overall complex patient scoring adjustment.

[233] Johnston KJ, Joynt Maddox KE. The Role Of Social, Cognitive, and Functional Risk Factors In Medicare Spending For Dual And Nondual Enrollees. *Health Aff (Millwood).* 2019;38(4):569–576. doi:10.1377/hlthaff.2018.05032. *https://www.healthaffairs.org/doi/10.1377/hlthaff.2018.05032.*

We propose at § 512.745(a)(3)(iii) that ASM participants with an HCC risk score or dual-eligible proportion above their respective medians, as calculated earlier in this section, would receive a complex patient scoring adjustment that cannot exceed 10 points and cannot be below zero points. We considered a complex scoring patient adjustment that could exceed 10 points and a complex scoring adjustment with a maximum point value less than 10 points but not below zero points. However, we believe that aligning the proposed complex patient scoring adjustment maximum point value with the MIPS complex patient bonus maximum point value would reduce confusion across ASM participant who would have previously participated in MIPS.

We believe the proposed formula compensates for a potential difference in payment related to HCC risk scores and dual proportion since MIPS uses the same approach in calculating the MIPS complex patient bonus defined at § 414.1380(c)(3) (86 FR 65510 through 65519). We believe this methodology and formula are strongly supported by data and analyses explained in the CY 2022 PFS proposed rule (86 FR 65510 through 65519). Furthermore, dual enrollees tend to have lower income, a greater prevalence of mental health conditions, somatic chronic conditions, and significantly higher annual costs of care than their nondual counterparts.[234] Thus, we believe that a complex patient scoring adjustment based on HCC risk scores and dual proportions, as is done in MIPS, would not only reduce inappropriate penalties among ASM participants that disproportionately care for dual eligible, high-risk populations but would also reduce inappropriate payments for ASM participants that care for less complex populations.

We seek comments on the proposed inclusion of the complex patient scoring adjustment in final scores and the proposed methodology for calculating the complex patient scoring adjustment. We also seek comments on our alternatives considered related to calculating the reference median based on data from the concurrent ASM performance year and using a reference mean instead of a reference median. We also seek comment on the alternative of not requiring ASM participants to have at least one risk indicator that is equal to or greater than the reference median to receive the complex patient scoring adjustment.

(4) Small Practice Scoring Adjustment

We propose at § 512.745(a)(4) that an ASM participant would be eligible to receive a small practice scoring adjustment in the calculation of their final score. We propose at § 512.705 to define a ''small practice'' as a practice consisting of 15 or fewer clinicians at the time we identify ASM participants for an ASM performance year as described at § 512.710(g). We propose at § 512.705 to define a ''solo practitioner'' as a practice consisting of 1 clinician at the time we identify ASM participants for an ASM performance year as described at § 512.710(g). Our proposed definitions for small practice and solo practitioner align with MIPS' small practice definition at § 414.1305.

We propose at § 512.745(a)(4)(i) to add 10 points to the final score of an ASM participant who: (1) is in a small practice as defined at § 512.705; (2) is not a solo practitioner as defined at § 512.705; and (3) and meets the requirement to receive a final score greater than zero as described at § 512.745(a)(2)(i) for an applicable ASM performance year. We propose at § 512.745(a)(4)(ii) to add 15 points to the final score of an ASM participant who is a solo practitioner as defined at § 512.705 and meets the requirement to receive a final score greater than zero as described at § 512.745(a)(2)(i) for an applicable ASM performance year.

We believe that it is necessary to support ASM participants against the potential challenges that they face in participation in Innovation Center models and other CMS value-based payment programs, like the Quality Payment Program. Participants in MIPS have provided feedback that many small practices and solo practitioners face challenges in their ability to participate in MIPS, including the costs to implement and maintain CEHRT, staff and training costs, and limited staff capacity to manage the complexity of the program (89 FR 98452). MIPS has several policies that aim to support small and solo practices, including scoring and reweighting policies as defined at § 414.1380. We considered adopting some of these policies for the purposes of ASM given our use of the MVPs as a framework for this model. However, our goal in designing a scoring policy for ASM was to increase incentives for participation and to reduce the complexity of reweighting policies based on the characteristics of an ASM participant or the context in which they practice.

We analyzed historical MIPS final score performance among a pool of likely ASM participants for both heart failure and low back pain. We found that small practices, including solo practitioners, were more likely to receive lower final MIPS scores compared to MIPS eligible clinicians in larger practices (that is, TINs with more than 15 clinicians). We also found that solo practitioners were more likely to receive lower scores than MIPS eligible clinicians in small practices (that is, practices with 2 to 15 clinicians in this situation). For these reasons, we believe that ASM participants in small practices would likely score lower than their counterparts in larger practices under ASM, with solo practitioners potentially scoring lower than other small practices. While we would not want to inadvertently skew the distribution of ASM participant final scores, we believe that it would be appropriate to support ASM participants in small practices to receive a final score adjustment.

We based the proposed magnitudes of the final scoring adjustments based on the distribution of MIPS final scores among likely ASM participants. We also considered small practice scoring adjustments that were lower and higher than the proposed 10 points for non-solo practitioner ASM participants in small practices and 15 points for solo practitioner ASM participants. However, we believe that the proposed magnitudes of the scoring adjustments would appropriately increase the applicable ASM participants' score and would be easily understood by ASM participants. We refer readers to section III.C.2.f.(4).(b). of this proposed rule for an alternative level of risk that we considered for ASM participants in small practices.

We believe that using a flat adjustment on the final score would be a clear and transparent method to support ASM participants to increase their score relative to other ASM participants so as to avoid potentially creating a barrier for them to achieve a net positive payment adjustment (see section III.C.2.f in this proposed rule for further discussion on our proposed payment methodology). Since we are not proposing to reweight ASM performance categories in the calculation of final scores as discussed earlier in this section of this proposed rule to simplify the data submission requirements and scoring policies, we believe that a flat adjustment would be a simple but effective mechanism to support ASM participants in small practices.

We considered but are not proposing a similar flat-point adjustment for ASM

[234] Johnston KJ, Joynt Maddox KE. The Role Of Social, Cognitive, and Functional Risk Factors In Medicare Spending For Dual And Nondual Enrollees. *Health Aff (Millwood).* 2019;38(4):569–576. doi:10.1377/hlthaff.2018.05032. *https://www.healthaffairs.org/doi/10.1377/hlthaff.2018.05032.*

participants in rural areas as defined at § 512.705 (which aligns with the MIPS rural area definition at § 414.1305). We, however, found in our analysis of historical MIPS performance data among likely ASM participants that there was not a systematic difference in the performance data between likely ASM participants in rural and non-rural areas. While MIPS reduces the reporting requirements for the improvement activities performance category for MIPS eligible clinicians in rural areas as defined at § 414.1380(b)(3), the lack of a systematic difference in historical MIPS performance between likely ASM participants of rural and non-rural status led us to not propose a scoring adjustment for ASM participants in rural areas. Furthermore, we observed that a high proportion of likely ASM participants in small practices were in rural areas. Adding a rural scoring adjustment on top of the small practice scoring adjustments would potentially be duplicative and inappropriately skew the distribution of final scores.

We seek comments on our proposal at § 512.745 (a)(4)(i) to add 10 points to the final score of an ASM participant who is in a small practice, is not a solo practitioner, and meets the requirements to receive a final score greater than zero and not exceeding 100. We also seek comment on our proposal at § 512.745 (a)(4)(ii) to add 15 points to the final score of an ASM participant who is a solo practitioner and meets the requirements to receive a final score greater than zero and not exceeding 100. Finally, we seek comments on the alternative we considered of applying a similar flat-point adjustment for ASM participants in rural areas.

(5) Final Score Calculation

We propose at § 512.745(a)(5) the following formula to calculate the final score for each ASM participant that meets the minimum data submission requirements discussed in section III.C.2.e.(2).(a) of this proposed rule:

Final score = [(quality ASM performance category score × quality ASM performance category weight) + (cost ASM performance category score × cost ASM performance category weight)] × 100 + improvement activities ASM performance category scoring adjustment + Promoting Interoperability ASM performance category scoring adjustment + Complex Patient scoring adjustment + Small Practice scoring adjustment.

NOTE: The final score cannot be below zero points or exceed 100 points

We believe that this proposed final score calculation appropriately utilizes the quality and cost ASM performance category scores as outlined in sections III.C.2.e of this proposed rule, weights the quality and cost ASM performance categories, and considers the inclusion of the negative improvement activities ASM performance category scoring adjustment, the negative Promoting Interoperability ASM performance category scoring adjustment, the positive complex patient payment adjustment, and positive small practice scoring adjustment.

For example, under the proposed final score calculation and the proposed weights for the quality and cost performance category, if an ASM participant has a quality performance category score of 80 percentage points [(40 measure achievement points out of 50 available measure achievement points)], a cost performance category score of 75 percentage points [(7.5 achievement points out of 10 available achievement points)], a negative improvement activity performance category scoring adjustment of −10 from successfully attesting to one improvement activity, a negative Promoting Interoperability ASM performance category scoring adjustment of −2.7 ((100 potential maximum Promoting Interoperability ASM performance category points − 73 Promoting Interoperability ASM performance category score)/ − 10), a complex patient scoring adjustment of 5.5, and a small practice scoring adjustment of 10 from being in a small practice, the final score would be as follows:

Final Score = [0.80 × 50 percent) + (0.75 × 50 percent)] × 100 + (− 10) + (− 2.7) + 5.5 + 10 = 80.3.

The ASM participant under the example conditions described above would have 77.5 points from the quality and cost ASM performance categories ([(0.80 × 50 percent) + (0.75 × 50 percent)] × 100), before the scoring adjustments are applied, and a final ASM score of 80.3 points

We seek comments on the proposed final score calculation formula.

(6) ASM Performance Report

We propose at § 512.745(b) to release an ASM participant's final score for each ASM performance year through an ''ASM performance report,'' which we propose to define at § 512.705 as the notification that CMS provides to the ASM participant for each ASM performance year, which contains the information specified at § 512.745(b). We propose at § 512.745(b)(1) through (7) that the ASM performance report would, at minimum, provide each ASM participant: (1) individual measure-level scores for each of the measures required under each ASM performance category; (2) ASM performance category-level scores; (3) complex patient scoring adjustment, as applicable; (4) small practice or solo practitioner scoring adjustment, as applicable; (5) final score, and (6) the applicable ASM payment adjustment factor and (7) ASM payment multiplier for the applicable ASM payment year as discussed in section III.C.2.f of this proposed rule. As proposed, the ASM performance reports would not contain any protected health information or personally identifiable information of beneficiaries. Accordingly, we would share the ASM performance reports with ASM participants as a matter of course without following the attestation and data sharing agreement process for CMS sharing of beneficiary-identifiable information proposed in section III.C.2.j. of this proposed rule.

We believe that the proposed approach to releasing ASM participant data would be a transparent way to help the ASM participant understand their performance on each of the required measures, activities, attestations, how those individual scores roll up to an overall ASM performance category score, and then how each ASM performance category score rolls up into the final score. We believe that this ASM performance report would be complementary to the other proposed data sharing approaches discussed in section III.C.2.j. of this proposed rule.

We seek comments on our proposal at § 512.745(b) to provide ASM participants with an ASM performance report for each ASM performance year. We also seek comments on the proposed components of the ASM performance report.

f. Proposed ASM Payment Approach

(1) Payment Approach

In this section, we discuss our proposed payment methodology to use an ASM participant's final score to determine net positive, neutral, or negative payment adjustments to an ASM participant's future Medicare Part B payments for an applicable ASM payment year.

ASM would test whether payment adjustments to ASM participants' future Part B FFS payments would preserve or improve the quality of care for beneficiaries with ASM's targeted chronic conditions receiving service from ASM participants while reducing program expenditures. Determining payment adjustments based on an ASM participant's performance across the ASM performance categories relative to other specialists furnishing services

related to each of ASM's targeted chronic conditions would directly incentivize performance improvement through financial incentives. We believe the proposed individualized payment adjustments under ASM would be reflective of the range of performance of specialists caring for beneficiaries with ASM targeted chronic conditions. As discussed in section III.C.1. of this proposed rule, we believe that the risk of a potential negative payment adjustment coupled with the incentive of a potential positive payment adjustment would incentivize the quality improvement and reduced low-value care spending that we aim to achieve through ASM. This type of risk arrangement would reward high performance and encourage ASM participants to improve the quality of care that they furnish to Medicare beneficiaries with ASM's targeted chronic conditions. Further, we believe that this type of incentive payment approach aligns with existing value-based purchasing programs, such as the Quality Payment Program, in which ASM participants may have previously participated, and through which they may have received payment adjustment on future Medicare Part B payments based on their performance in MIPS.

We believe our proposed payment methodology for an ASM participant to receive a positive, neutral, or negative payment adjustment based on their performance would be a strong incentive to promote performance improvement and achieve ASM's objectives.

(2) Payment Methodology Overview

We propose at § 512.750 a payment methodology for ASM where we would distribute, based on performance and in the form of scaled payment adjustments, a portion of the Medicare Part B payments paid to ASM participants for covered professional services during an ASM performance year, which would result in net positive, neutral, or negative payment adjustments during an ASM payment year. Accordingly, we propose to define at § 512.705 an ''ASM incentive pool'' that would be a fixed percentage of the total amount of Medicare Part B covered professional service claims paid to ASM participants with final scores within an ASM cohort during an ASM performance year that would be distributed in in the form of scaled payment adjustments during an ASM payment year. We would calculate an ASM incentive pool for each ASM cohort for each ASM payment year as described at § 512.750(c)(1)(iii). The ASM incentive pool would be the total amount of funds that we would use to calculate scaled payment adjustments for an ASM payment year. We propose to separately calculate an ASM incentive pool for each ASM cohort. For example, we would calculate a separate ASM incentive pool for the ASM heart failure cohort and ASM low back pain cohort. As discussed later in this section of this proposed rule, we would not prospectively withhold a portion of Part B payments for covered professional services during an ASM performance year to create the ASM incentive pools but would instead create virtual incentive pools based on actual spending during the ASM performance year.

We also propose to define at § 512.705 an ''ASM payment adjustment factor'' as a percent value based on an ASM's participant's final score as described at § 512.750(c)(1) that we use in calculating adjustments to the ASM participant's Medicare Part B payments for covered professional services during an ASM payment year. Based on their performance, an ASM participant could earn an ASM payment adjustment factor percentage that is less than, equal to, or more than the percentage of their Medicare Part B payments used to calculate the ASM incentive pool, leading to a net negative, neutral, or positive net payment adjustment. Similar to our proposal to calculate separate ASM incentive pools for each ASM cohort, we would determine ASM payment adjustment factors separately for each ASM cohort as described later in this section of this proposed rule. We also propose to define at § 512.705 an ''ASM payment multiplier'' as the numerical value equal to 1 plus the ASM payment adjustment factor determined for the ASM participant for an applicable ASM payment year as described at § 512.750(c).

As proposed at § 512.750(a), to adjust payments, the amount otherwise paid under Medicare Part B for covered professional services furnished by an ASM participant during an ASM payment year would be multiplied by the ASM participant's ASM payment multiplier unless that ASM participant receives no payment adjustment (that is, a neutral payment adjustment) as described at § 512.750(d) because they do not receive a final score for the corresponding ASM performance year. We refer readers to § 512.745(a)(2) and section III.C.2.e.(2). of this proposed rule for proposals related to final scores. We also refer readers to section III.C.2.f. of this proposed rule and § 512.750(f) for further proposals on how payment adjustments are applied in the case the ASM participant bills during an ASM payment year under a different TIN than the TIN we used to identify them as an ASM participant for the corresponding ASM performance year.

The proposed payment methodology is similar in design to existing incentive payment structures in CMS value-based programs, such as the Hospital Valued-Based Purchasing Program (Hospital VBP Program) [235] and the Skilled Nursing Facility Value-Based Purchasing Program (SNF VBP Program).[236]

- The Hospital VBP Program rewards acute care hospitals with incentive payments based on the quality of care they provide, rather than just the quantity of services they provide. The statutory requirements of the Hospital VBP Program are set forth in Section 1886(o) of the Social Security Act. The program uses selected measures that were first specified under the Hospital Inpatient Quality Reporting Program as established by section 1886(o)(2)(A) of the Act and defined at § 412.164(a).[237] A fixed percentage withhold of base operating Diagnosis-Related Group (DRG) payments for each discharge during an applicable fiscal year determines the amount of money that can be redistributed to participating hospitals through value-based incentive payments based on a participating hospital's total performance score. A hospital may earn back a value-based incentive payment percentage that is less than, equal to, or more than the applicable reduction for that program year (88 FR 59063 through 59108).

- Section 215 of the Protecting Access to Medicare Act of 2014 and subsequent additions of sections 1888(g) and (h) of the Act established the SNF VBP Program.[238] Then, section 111 of the Consolidated Appropriations Act, 2021 amended section 1888(h) of the Act to allow the Secretary to apply up to 9 additional measures to the SNF VBP Program.[239] The SNF VBP Program requires CMS to evaluate SNFs based on their performance on multiple measures, including improvement and achievement, provide quarterly performance reports to SNFs, and calculate incentive payments for SNFs based on their performance (88 FR

[238] 42 U.S.C. 1395yy(h).

[239] 42 U.S.C. 1395yy(h).

53276 through 53304).[240] To determine and fund the statutorily required incentive payments, CMS withholds 2 percent of SNFs' Medicare FFS Part A payments to fund the SNF VBP Program. CMS then redistributes 60 percent of this total withhold to SNFs as incentive payments, which CMS applies prospectively to all Medicare FFS Part A claims paid under the SNF Prospective Payment System (PPS) for the applicable program year (82 FR 36619 through 36621).

Our proposed payment methodology differs from the Hospital VBP Program and the SNF VBP Program in that we are not proposing a prospective withhold of ASM participants' Medicare Part B payments during an ASM performance year. Instead, we are proposing to determine a virtual ASM incentive pool as a fixed percentage of ASM participants' Medicare Part B covered professional service payments during the ASM performance year. We would then distribute this virtual incentive pool through scaled payment adjustments on ASM participants' future Medicare Part B payments during an ASM payment year. The size of each ASM incentive pool and the distribution of final scores within each ASM cohort would together influence the possible magnitude of the scaled payment adjustments and the distribution of net negative, neutral, and positive payment adjustments. As discussed earlier and later in this section of this proposed rule, we propose to calculate ASM incentive pools, ASM payment adjustment factors, and ASM payment multipliers separately for each ASM cohort. The higher an ASM participant's final score, the greater the likelihood that they would receive a positive payment adjustment. Under this proposed methodology, the ASM participant's performance during an ASM performance year would not have an immediate financial impact but would result in a future net payment adjustment determined by the ASM participant's performance relative to other ASM participants. We believe that this proposed payment methodology would allow ASM to create net positive, neutral, and negative payment adjustments based on the annual distribution of final scores in each ASM cohort.

We also recognize that MIPS, under the Quality Payment Program, uses a value-based purchasing approach but determines payment adjustments based on performance relative to a performance threshold. In accordance with section 1848(q)(6) of the Act and § 414.1405(b), MIPS compares each MIPS eligible clinician's final score against the performance threshold established for that MIPS payment year and against the other MIPS eligible clinicians in a single comparison pool to determine whether each MIPS eligible clinician will receive a positive, negative, or neutral payment adjustment. As defined at § 414.1405, scores equal to the defined performance threshold receive a neutral (zero percent) payment adjustment. Scores falling below one-quarter of the performance threshold receive a negative adjustment of minus 9 percent, while scores between one-quarter of the performance threshold and the performance threshold receive a negative payment adjustment less than zero percent and up to minus 9 percent based on a linear sliding scale. Scores above the performance threshold can receive positive payment adjustments greater than zero percent and up to positive 9 percent based on a linear sliding scale. Depending on the range of scores within a given MIPS performance period, a scaling factor (ranging from zero to 3 is applied to the positive adjustments to retain budget neutrality.

We considered, but decided not to propose, a payment methodology that includes a performance threshold like MIPS uses to determine ASM payment adjustment factors. To determine a MIPS payment adjustment factor for each MIPS eligible clinician for a MIPS performance period, CMS compares the MIPS eligible clinician's final score for the given year to the performance threshold CMS established for that same year in accordance with Section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that CMS compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a ''prior period'' specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years. For each CY performance period/MIPS payment year, CMS has finalized a performance threshold based on the mean final score of all MIPS eligible clinicians from a previous MIPS performance period, as set forth in § 414.1405(b)(4) through (10). CMS establishes the performance threshold via rulemaking prior to the beginning of each MIPS performance period.

Adopting a similar performance threshold and payment adjustment approach for ASM would introduce several operational complexities. First, given the proposed separate comparison of final scores and separate calculation of ASM payment adjustment factors and ASM payment multipliers for each ASM cohort, we would need to determine a performance threshold for each ASM cohort for each ASM performance year. Because ASM is a new Innovation Center model, we would need to set a prospective performance threshold for the first ASM performance year without historical data on final scores. This lack of historical data could present challenges in calibrating the performance threshold to actual performance within the first ASM performance year. Second, we believe that a payment methodology that leverages a prospective performance threshold would limit the magnitude of ASM's negative and positive payment adjustments and, ultimately, the model's incentives to improve performance compared to our proposal to scale the payment adjustments distributed to ASM participants to equal the amount of an ASM incentive pool. For example, if a larger proportion of participants score above the performance threshold relative to the proportion of participants who score below the performance threshold, then the positive payment adjustments for those participants scoring above the performance threshold may be smaller in magnitude due to there being fewer negative adjustments from participants scoring below the performance threshold that can be distributed in positive payment adjustments.

We seek comment on our overall payment approach for ASM, which would include an ASM incentive pool that is distributed in the form of scaled payment adjustments to ASM participants' future Medicare Part B payments based on their performance. We also seek comments on the alternative approach we considered that would use a performance threshold similar to MIPS in our payment methodology.

In the following sections, we propose and seek comments on our proposed policies to (1) compare performance across ASM participants within each ASM cohort and (2) calculate ASM payment adjustment factors and ASM payment multipliers, including how we propose to calculate the ASM incentive pools.

(3) Comparison of ASM Participant Performance

We propose at § 512.750(b) to separately compare the final scores of ASM participants in each ASM cohort to determine the payment adjustments

[240] *https://www.cms.gov/medicare/quality/nursing-home-improvement/value-based-purchasing.*

for each ASM participant. We believe that the ASM participant eligibility criteria appropriately identify specialists that can be held accountable for cost, quality, and practice improvement for specific chronic conditions. Accordingly, we believe that separately comparing ASM participants' final scores for each of the ASM targeted chronic conditions would provide more meaningful performance comparisons. Since each ASM cohort would be compared on the same set of requirements reported at the same TIN/NPI level (that is, the level at which an ASM participant is identified), the proposed performance comparison approach would allow for better differentiation in performance upon which to determine the payment adjustments.

Currently, under MIPS, performance measurement and the subsequent payment adjustment are based on a range of measures voluntarily reported by clinicians, each of whom receives a final score based on the submitted measures. A MIPS eligible clinician's performance is assessed against a pool of all clinicians, regardless of specialty type or the services they provide. In accordance with section 1848(q)(6) of the Act and § 414.1405(b), CMS compares each MIPS eligible clinician's final score against the performance threshold established for that MIPS payment year and against one another in a single comparison pool to determine whether each MIPS eligible clinician will receive a positive, negative, or neutral payment adjustment. CMS calculates MIPS payment adjustment factors in accordance with regulations at § 414.1405 (89 FR 61985). In ASM, we wish to test whether a more targeted approach where clinicians are evaluated: (1) on a set of relevant performance measures they are required to report; and (2) among clinicians furnishing similar sets of services, would produce final scores and subsequent payment adjustments that are more reflective of clinician performance. We believe our proposed approach to separately compare ASM heart failure participants against other ASM heart failure participants and ASM low back pain participants against other ASM low back pain participants supports and incentivizes accountable care by creating more meaningful payment adjustments that differentiate and reflect ASM participant performance related to the chronic condition for which we believe the ASM participant should be accountable.

We considered not separating ASM participants in each ASM cohort when comparing final scores to determine ASM payment adjustment factors and ASM payment multipliers, and instead, comparing the final scores of all ASM participants together. This approach would potentially be administratively easier to operationalize and would align with the current practice of comparison under MIPS, including MVPs, as defined at § 414.1405. It would also potentially lead to a more varied distribution of final scores that would translate into a more varied distribution of payment adjustment, which could be helpful in creating the desired payment incentives. However, we believe that comparing performance within each ASM cohort is more appropriate in meeting our aim to test whether like-to-like performance comparisons based on a clinically relevant measure set and the resulting payment incentives achieve ASM's objectives of increasing accountability for specialty care related to ASM targeted chronic conditions.

We also believe that comparing performance using a continuous distribution of final scores would result in more meaningful incentives for ASM participants because payment adjustments would be determined on relative performance across ASM participants instead of relative to a prospectively determined performance threshold. This approach also more closely mirrors the general market for goods and services, which does not provide an upfront guarantee of a certain market share or profit margin based on a predetermined threshold of performance. Rather, ASM participants would compete to provide the highest quality, most efficient care to ASM beneficiaries, and the top performers would receive positive payment adjustments—in the same way that competitive markets reward top performers with profits.

We seek comments on our proposal at § 512.750(b) to determine ASM payment adjustment factors and ASM payment multipliers by comparing final scores separately among each ASM cohort. We also seek comment on the alternative we considered of comparing final scores of all ASM participants together, like the MIPS approach for comparing performance scores.

(4) Calculation of ASM Payment Adjustment Factors and ASM Payment Multipliers

In this section, we first provide an overview of the proposed process to calculate ASM payment adjustment factors and ASM payment multipliers. We then break down each part of the calculation process and discuss our proposals and alternatives considered. As part of this process, we discuss the calculation of the ASM incentive pool using the ''ASM risk level,'' which we propose to define at § 512.705 as the magnitude of the maximum positive or negative net payment adjustment percentage to which an ASM participant would be subject during an ASM payment year as described at § 512.750(c)(1)(i), and the ''ASM redistribution percentage,'' which we propose to define at § 512.705 as a percentage of Medicare Part B covered professional services payments to ASM participants during an ASM performance year that CMS distributes in the form of payment adjustments to ASM participants during an ASM payment year as described at § 512.750(c)(1)(iii).

We then discuss our proposals on how we would convert final scores into ASM payment adjustment factors and ASM payment multipliers based on the ASM incentive pool and our proposed ''exchange function,'' which we propose to define at § 512.705 as the function used to translate an ASM participant's final score into an ASM payment adjustment factor as described at proposed § 512.750(c)(1)(ii). We also propose to define at § 512.705 a ''scaling factor'' as a numerical value calculated by CMS to ensure that the total estimated payment adjustments in an ASM payment year are equal to an ASM incentive pool for an applicable ASM payment year as described at § 512.750(c)(1)(iv).

Finally, we discuss how these ASM payment multipliers would be applied to future Medicare Part B claims for covered professional services during an ASM payment year.

(a) Overview of ASM Payment Adjustment Factor and Payment Multiplier Calculation Process

We propose at § 512.750(c) to use the following process to calculate ASM payment adjustment factors and ASM payment multipliers for each ASM payment year for ASM participants with final scores for the corresponding ASM performance year. We refer readers to Table 43 in section III.C.2.e.(2). of this proposed rule for a summary of how an ASM participant's final score influences their payment adjustment.

Calculation of ASM Incentive Pool

- *Step 1.* Calculate total Medicare Part B payments for covered professional services made to ASM participants with final scores in each ASM cohort during an ASM performance year.
- *Step 2.* Multiply the total calculated in Step 1 by the ASM risk level for each ASM payment year proposed at

§ 512.750(c)(1)(i) and discussed in section III.C.2.f.(4).(b).(i). of this proposed rule.

• *Step 3.* Multiply the amount calculated in Step 2 by the ASM redistribution percentage proposed at § 512.750(c)(1)(iii) and discussed in section III.C.2.f.(4).(b).(ii) of this proposed rule to determine the total ASM incentive pool amount available for payment adjustment for each ASM cohort.

Calculation of ASM Payment Adjustment Factor

• *Step 4.* Convert each ASM participant's final score into a transformed numerical final score by using the exchange function proposed at § 512.750(c)(1)(ii) and described in section III.C.2.f.(4).(c). of this proposed rule.

• *Step 5.* Calculate a scaling factor as proposed at § 512.750(c)(1)(iv) to ensure that the sum of applied ASM payment adjustment factors would equal the ASM incentive pool for each ASM cohort. The scaling factor is calculated by dividing the total amount in the ASM incentive pool (calculated in Step 3) by the sum of all ASM participant's transformed final scores (calculated in Step 4) multiplied by their respective total Medicare Part B covered professional services payments and the ASM risk level.

• *Step 6A.* For ASM participants that receive a final score greater than zero as described at § 512.745(2)(i), calculate an ASM payment adjustment factor for each ASM participant within each ASM cohort by multiplying the ASM risk level, the ASM participant's transformed final score (calculated in Step 4), and the scaling factor (calculated in Step 5), and then subtracting the ASM risk level from this product as described at § 512.750(c)(1)(i):

ASM payment adjustment factor = (ASM risk level × transformed final score × scaling factor) − ASM risk level

• *Step 6B.* For ASM participants that receive a final score of zero as described at § 512.745(2)(ii), calculate the ASM payment adjustment factor for each ASM participant equal to the negative of the applicable ASM risk level as described at § 512.750(c)(1)(i).

Calculation of ASM Payment Multiplier

• *Step 7.* Calculate the ASM payment multiplier for each ASM participant by using the following formula as described § 512.750(c):

ASM payment multiplier = 1 + ASM payment adjustment factor

Under this proposed calculation process, an ASM payment adjustment factor could be negative (meaning net negative payment adjustments), zero (meaning neutral or no payment adjustments), or positive (meaning net positive payment adjustments). Accordingly, an ASM payment multiplier above 1 would result in net positive payment adjustments; an ASM payment multiplier of 1 would result in no (that is, neutral) payment adjustments, and an ASM payment multiplier less than 1 would result in a net negative payment adjustment.

We propose at § 512.750(d) that ASM participants that do not receive a final score as discussed in section III.C.2.e.(2).(b). of this proposed rule would receive an ASM payment adjustment factor of zero and an ASM payment multiplier of 1 (that is, a neutral payment adjustment) for the applicable ASM payment year.

To illustrate how this process would work, we provide the following example of how we would calculate the ASM payment adjustment factor and ASM payment multiplier for individual ASM participants who received a final score greater than zero. In this example, we assume an ASM risk level of 9 percent and an ASM redistribution percentage of 85 percent.

• *Step 1.* We determine that all ASM participants with final scores in the example ASM cohort had a total of $1 billion in Medicare Part B covered professional service payments during the ASM performance year.

• *Steps 2 and 3.* We multiply the $1 billion calculated in Step 1 by the 9 percent ASM risk level and the 85 percent ASM redistribution percentage to determine an ASM incentive pool of $76.5 million for this example.

• *Step 4.* An ASM participant, in this example, received a final score of 80 points and the median score for the example ASM cohort was 50 points. When transformed under the exchange function, this final score would result in a transformed final score of 0.95.

• *Step 5.* We calculate a scaling factor of 1.5 applicable for all ASM participants in this example ASM cohort to ensure that the amount in the ASM incentive pool would be distributed in the form of scaled payment adjustments. The numerator of the scaling factor would be the $76.5 million in the ASM incentive pool (calculated in Steps 2 and 3) and the denominator would be calculated as $51 million based on the sum of all ASM participant's transformed final scores multiplied by their respective total Medicare Part B covered professional services payments and the 9 percent ASM risk level: ($76.5 million/$51 million = 1.5).

• *Step 6A.* The ASM payment adjustment factor, in this example, would be calculated as: [ASM risk level (9 percent) × transformed final score (0.95) × scaling factor (1.5)] − ASM risk level (9 percent) = 0.0385

• *Step 7.* The resulting ASM payment multiplier, in this example, would be calculated as: 1 + ASM payment adjustment factor (0.0385) = 1.0385. The value of this ASM payment multiplier would mean that the example ASM participant would receive a positive adjustment of 3.85 percent on all Medicare Part B covered professional service payments during the corresponding ASM payment year. We note that the parameters of the previous calculation are fictitious and may look entirely different when calculating the ASM payment adjustment factors and ASM payment multipliers for the model, depending on the distribution of final scores, the magnitude of Medicare Part B covered professional service payments associated with ASM participants, the size of ASM incentive pool, among other factors.

As discussed earlier in this section of this proposed rule, we are not proposing to use a performance threshold to determine a cutoff between positive and negative ASM payment adjustment factors and resulting ASM payment multipliers. We would, therefore, calculate ASM payment adjustment factors and resulting ASM payment multipliers based on the size of the ASM incentive pool and the distribution of final scores for a given ASM performance year using the proposed payment methodology described throughout this section of this proposed rule.

Our proposed process to calculate ASM payment adjustment factors and adjust an ASM participant's Medicare Part B payments using an ASM payment multiplier during an applicable ASM payment year as proposed at § 512.750 currently aligns with the processes and timelines by which the Quality Payment Program applies MIPS payment adjustments for each Medicare Part B claim made for covered professional services furnished by a MIPS eligible clinician as defined at § 414.1405(e). We believe that aligning the timeline and processes with the Quality Payment Program's application of MIPS payment adjustments would ensure operational consistency and minimize confusion. As discussed in section III.C.2.e.(6). of this proposed rule, we propose to provide an ASM participant with their ASM payment adjustment factor and ASM payment multiplier in the ASM

performance report provided to each ASM participant for the applicable ASM performance year.

We seek comment on our proposed process as described at § 512.750(c) to calculate the ASM payment adjustment factors and ASM payment multipliers, and how we would apply ASM payment multipliers to an ASM participant's Medicare Part B payment during an ASM payment year.

The following sections discuss our proposals and alternatives on how we propose to calculate an ASM incentive pool, including the proposed ASM risk level, ASM redistribution percentage, and our proposal for the exchange function.

(b) ASM Incentive Pool

As discussed earlier in this section of this proposed rule, we propose to calculate the ASM incentive pool for each ASM cohort based on two factors: (1) the ASM risk level as described at § 512.705(c)(1) (that is, the magnitude of the maximum positive or negative net payment adjustment percentage to which an ASM participant would be subject during an ASM payment year) and (2) the ASM redistribution percentage as described at § 512.750(c)(1)(iii) (that is, the percentage of Medicare Part B covered professional services payments to ASM participants during an ASM performance year that would be distributed in the form of payment adjustments to ASM participants during an ASM payment year). We discuss our proposals for the magnitude of ASM risk level and ASM redistribution percentage later in this section of this proposed rule. The total amount in an ASM incentive pool would directly determine the magnitude of ASM payment adjustment factors and resulting ASM payment multipliers that each ASM participant would receive during an ASM payment year.

We describe the step-by-step process of calculating the ASM incentive pool earlier in this section of this proposed rule. In summary, we propose at § 512.750(c)(1)(iii) to calculate an ASM incentive pool for each ASM cohort for applicable for each ASM payment year using the following formula:

$$\text{ASM Incentive Pool} = \text{ASM risk level} \times \text{ASM redistribution percentage} \times \Sigma \text{ASM participant Medicare Part B payments}$$

The proposed approach to calculating an ASM incentive pool aligns with the current approach that other CMS VBP programs use when calculating the total amount that can be distributed to program participants through payment adjustments. Both the SNF VBP Program (82 FR 36619 through 36621) and the Hospital VBP Program (88 FR 59063 through 59108) employ a similar calculation to determine the total amount that can be redistributed through payment adjustments for their respective program participants. We believe the proposed approach would determine an ASM incentive pool amount that would be appropriate to distribute through scaled payment adjustments, and that the proposed approach would align with the desired level of two-sided risk that we believe would incentivize behavioral change and increased accountability.

We seek comments on our proposed approach to calculate the ASM incentive pool for each ASM cohort.

(i) ASM Risk Level

As discussed earlier in this section of this proposed rule, we propose to use the annual ASM risk level to calculate the ASM incentive pool for each ASM cohort. We propose at § 512.750(c)(1)(i) to establish the ASM risk level that is the magnitude of the maximum downside or upside risk to which an ASM participant would be subject to during an ASM payment year. We propose at § 512.750(c)(1)(i)(A) through (E) the risk levels for each ASM payment year as summarized in Table 44.

TABLE 44: ASM RISK LEVELS

ASM Performance Year	ASM Payment Year	ASM Risk Level
2027	2029	9 percent
2028	2030	9 percent
2029	2031	10 percent
2030	2032	11 percent
2031	2033	12 percent

Our proposed ASM risk level of 9 percent for the 2029 ASM payment year (based on 2027 ASM performance year performance) and the 2030 ASM payment year (based on 2028 ASM performance year performance) aligns with the CY2024 applicable percent of 9 percent under MIPS, which is the maximum and minimum range of potential MIPS payment adjustment factor for a given MIPS payment year defined at § 414.1405(c) (88 FR 79378). Depending on the range of MIPS eligible clinicians' scores within a given MIPS performance period, a scaling factor (ranging from zero to 3) is applied to positive adjustments to retain budget neutrality as defined at § 414.1405(b)(3) (88 FR 79378), meaning that the maximum positive payment adjustment factor may be below or above the applicable percent. A MIPS eligible clinician with a score of zero receives a payment adjustment factor equal to the negative of the applicable percent as defined at defined at § 414.1405, meaning that all MIPS eligible clinicians are potentially subject to a maximum downside risk equivalent to the applicable percent. Based on our proposed ASM performance category and scoring approach that leverages the MVP measurement framework, we believe that starting and keeping the ASM risk level at 9 percent for the first two ASM payment years would be appropriate given its continued use within MIPS. We believe that gradually increasing the ASM risk level over time would provide an incentive for increased accountability that would be central to increasing accountability for longitudinal care management and improving the quality of care for beneficiaries with heart failure and low back pain.

We considered annual ASM risk levels higher and lower than what we propose for each ASM performance year. Higher ASM risk levels would mean that ASM participants with lower final scores would be subject to potentially higher negative payment adjustments, whereas lower ASM risk levels would mean that ASM participants with lower final scores would be subject to potentially lower negative payment adjustments. Calibrating the right level of risk is critical to ensure that ASM participants

would receive meaningful incentives to improve performance. We believe that starting with a level of downside risk already familiar to many ASM participants who previously participated in MIPS would be appropriate given that the application of ASM payment adjustment factors would be applied to Medicare Part B claims for covered professional services (as discussed earlier in this section of this proposed rule) in a similar fashion as MIPS as defined at § 414.1405(e).

While we propose at § 512.745(a)(4) a small practice scoring adjustment in an ASM participant's final score, we also considered whether to reduce the ASM risk level for ASM participants in small practices. Given the systematic differences in historical MIPS performance of likely ASM participants in small practices that we observed and discuss in section III.C.2.e.(4). of this proposed rule, reducing the ASM risk level for ASM participants in small practices would be one way to prevent them from being unfairly penalized in their payment adjustments. We were, however, concerned that decreasing the ASM risk level for ASM participants in small practices to be lower than the equivalent applicable percent in MIPS as defined at § 414.1405(c) would be a disincentive for ASM participants in small practices to submit the required data under ASM and would potentially limit the magnitude of any net positive payment adjustments. We, therefore, believe that the proposed small practice scoring adjustment is a simpler and more transparent adjustment for ASM participants in small practices.

We also considered a similar adjustment in ASM risk level for ASM participants in a rural location as an alternative to the rural practice scoring adjustment that we considered in section III.C.2.e.(4). of this proposed rule. For the same reasons discussed in section III.C.2.e.(4). of this proposed rule, we decided not to propose a scoring adjustment for ASM participants in rural areas.

We seek comments on our proposed ASM risk level for each ASM payment year as part of our payment approach. We also seek comment on the alternative risk levels we considered for each ASM payment year. Finally, we seek comment on the alternatives we considered related to a lower ASM risk level for ASM participants in small practices and in rural areas.

(ii) ASM Redistribution Percentage

As discussed earlier in this section of this proposed rule, we propose to set an ASM redistribution percentage that is the percentage of the Medicare Part B covered professional service payments to ASM participants during an ASM performance year multiplied by the applicable ASM risk level that would be distributed in the form of scaled payment adjustments to ASM participants during an ASM payment year. As discussed earlier, we propose to define this total amount available for distribution as the ASM incentive pool. We propose at § 512.750(c)(1)(iii) an ASM redistribution percentage of 85 percent beginning with the 2029 ASM payment year. Under this proposed ASM redistribution percentage, 85 percent of the Medicare Part B covered professional service payments to ASM participants during an ASM performance year multiplied by the applicable ASM risk level (that is, the value of the ASM incentive pool) would be distributed to ASM participants in the form of scaled payment adjustments. The other 15 percent of the Medicare Part B payments multiplied by the ASM risk level would be retained in the Medicare Trust Fund. To illustrate the scale of the net payment adjustments under these proposed policies, the proposed ASM redistribution percentage of 85 percent and an ASM risk level of 9 percent would lead to an estimated net 7.65 percent (that is, 85 percent multiplied by 9 percent) of the Medicare Part B covered professional service payments distributed in the form of payment adjustments to ASM participants and an estimated 1.35 percent (that is, 15 percent multiplied by 9 percent) retained by Medicare We refer readers to the regulatory impact analysis in section VII of this proposed rule for further discussion on the estimated impacts of these payment adjustments.

As with our proposed exchange function discussed later in this section of this proposed rule, we view the important factors when specifying a ASM redistribution percentage to be—(1) the number of ASM participants that receive a positive payment adjustment; (2) the marginal incentives for all ASM participants to make broad-based care quality improvements and reduce low-value care,; and (3) the ability for ASM to demonstrate savings over the ASM test period. We intend for the proposed ASM redistribution percentage to appropriately balance these factors.

We analyzed the distribution of ASM payment adjustment factors using simulated final scores data, focusing on the full range of available ASM payment adjustment factors using a sample of likely ASM participants. We found that an 85 percent ASM redistribution percentage would achieve an appropriate distribution of the number of ASM participants that would receive positive and negative payment adjustments under the different exchange functions that we considered, as discussed later in this section of this proposed rule. We also found that an 85 percent ASM redistribution percentage under the proposed exchange function would achieve the desired magnitude of positive and negative ASM payment adjustment factors under the ASM risk level proposed for the 2027 ASM performance year.

We considered ASM redistribution percentages as high as 100 percent and as low as 60 percent. An ASM redistribution percentage of 100 percent would mean that the entirety of Medicare Part B covered professional service payments multiplied by the applicable ASM risk level would be distributed through ASM payment adjustment factors to ASM participants. We believe that ensuring a particular level of net savings through an ASM redistribution percentage less than 100 percent would help guarantee a particular level of Medicare Part B savings that would contribute to the net savings in total cost of care from provider behavioral effects that we hypothesize would occur as part of ASM as described in section III.C.1.(b). of this proposed rule.

We refer readers to the regulatory impact analysis in section VII. of this proposed rule for further discussion on the scale of ASM and its estimated financial impacts. We considered an ASM redistribution percentage as low as 60 percent because it would increase the potential for higher net savings on Medicare Part B payments and mirrors a similar rate used by SNF VBP Program (82 FR 36619 through 36621). In analyses, however, we found decreasing the ASM redistribution percentages below what we are proposing (for example, to 60 percent or 75 percent) would result in an unfavorable distribution of negative and positive ASM payment adjustment factors that would not create the desired set of payment incentives to achieve ASM's goals.

We seek comments on our proposed ASM redistribution percentage and alternatives considered.

(c) Exchange Function

An exchange function translates a participant's final score into a payment adjustment. The type of exchange function used can influence: (1) how many participants receive positive, neutral, or negative payment adjustments; and (2) the size, or magnitude, of the payment adjustment percentage that corresponds to a given

performance score. The choice of an exchange function ultimately contributes to creating an optimal set of incentives by setting the distribution and size of payment adjustments.

We propose at § 512.750(c)(1)(ii) to use a logistic exchange function to translate final scores into ASM payment adjustment factors that would distribute each ASM incentive pool to their respective ASM participants through ASM payment adjustment factors that result in net negative, neutral, or positive payment adjustments.

In our view, important factors when adopting an exchange function include: (1) the percentage of ASM participants that would receive positive payment adjustments compared to those that would receive negative payment adjustments and (2) the magnitude of the maximum positive and negative net payment adjustment. We believe that ASM would be most effective at encouraging ASM participants to improve the quality of care that they provide to Medicare beneficiaries if ASM participants can earn positive adjustments through high performance across ASM's performance categories but also face some level of downside risk through possible negative payment adjustments. We also believe that the magnitude of negative and positive adjustments must create a strong incentive for improving care related to ASM's targeted chronic conditions. The choice of an exchange function, and the specific parameters of the chosen exchange function, can create different distributions of ASM payment adjustment factors, ASM payment multipliers, and net payment adjustments based on the final scores of ASM participants in each ASM cohort.

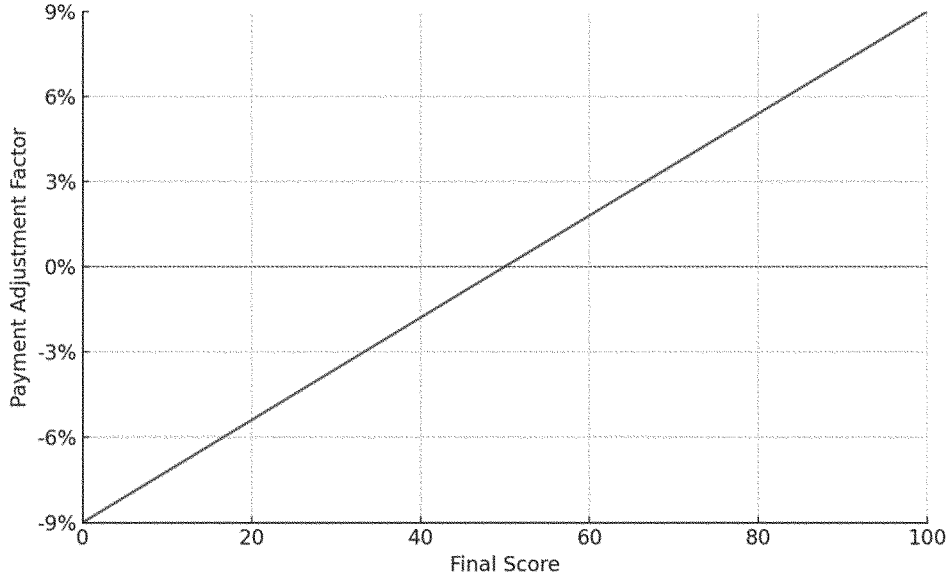
In the Quality Payment Program, CMS uses a linear exchange function to translate MIPS eligible clinicians' final scores into MIPS payment adjustment factors relative to an annually determined performance threshold so that the program is budget neutral (89 FR 62199). Under the Hospital VBP Program, CMS uses a linear exchange function to translate a hospital's Total Performance Score into the percentage multiplier to be applied to each Medicare discharge claim submitted by the hospital during the applicable FY (76 FR 26531 through 26534). We refer readers to the Hospital VBP Program Final Rule (76 FR 26531 through 26534) for detailed discussion of the Hospital VBP Program's exchange function, as well as responses to public comments on this issue. Under the SNF VBP Program, CMS uses a logistic function to translate a SNF's performance score into an incentive payment multiplier (82 FR 36616 through 36619). The SNF VBP Program also considered a cube exchange function during its notice-and-comment rulemaking related to the SNF VBP Program exchange function (82 FR 36616 through 36619). We refer readers to the SNF VBP Program final rule (82 FR 36616 through 36619) for detailed discussion on the SNF VBP Program's exchange function and responses to public comments on this issue.

Using the exchange functions that other Medicare VBP programs use or considered using while determining their payment methodology, we considered three exchange functions for use in ASM's payment methodology: (1) linear, (2) logistic, and (3) cube. The equations and graphs of the proposed exchange functions displayed in the remainder of this section of this proposed rule are illustrative. We note that the actual exchange functions' forms and slopes would vary depending on the distributions of final scores and wish to emphasize that we present these representations solely for the reader's clarity as we discuss our exchange function policy.

The linear function is a simple, steadily increasing function ranging from zero to one hundred (Figure 2). A linear exchange function would provide ASM participants the same marginal incentive to continually improve performance of their final score. The linear exchange function we considered had the following formula, where x_i is an ASM participant's final score:

$$f(x_i) = \frac{x_i}{100}$$

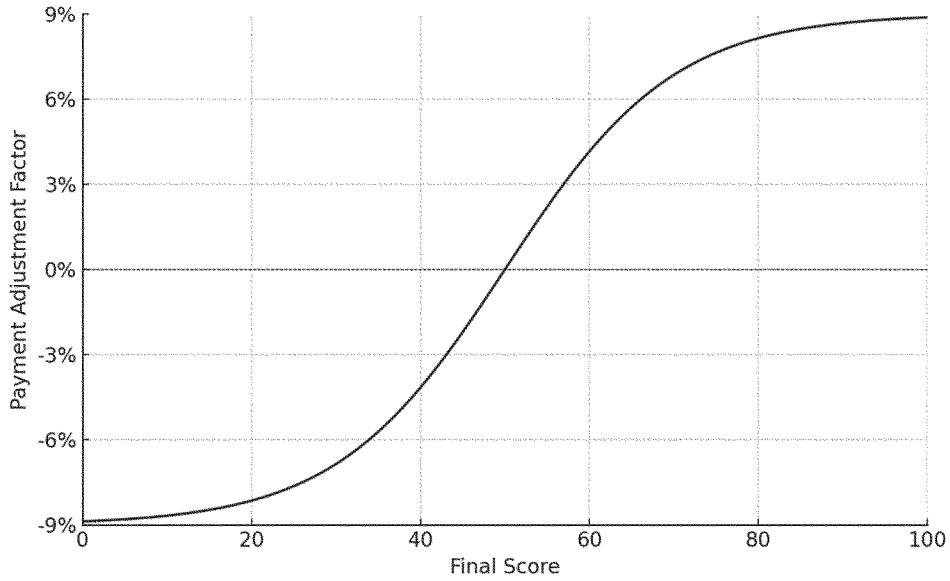
FIGURE 2: Illustrative Linear Exchange Function



The logistic function is an S-shaped curve ranging between zero and one hundred with an inflection point at a specified midpoint (Figure 3). The S-shaped curve would mean that participants with scores within the bottom end of the distribution would receive similar payment adjustments and participants at the top end of the distribution would receive similar payment adjustments to one another. There would be more variation in the resulting payment adjustments for those participants with final scores in the middle of the distribution. The logistic exchange function we considered had the following formula, where x_i is an ASM participant's final score, x_0 represents the function's midpoint:

$$f(x_i) = \frac{1}{1 + e^{-0.1(x_i - x_0)}}$$

FIGURE 3: Illustrative Logistic Exchange Function

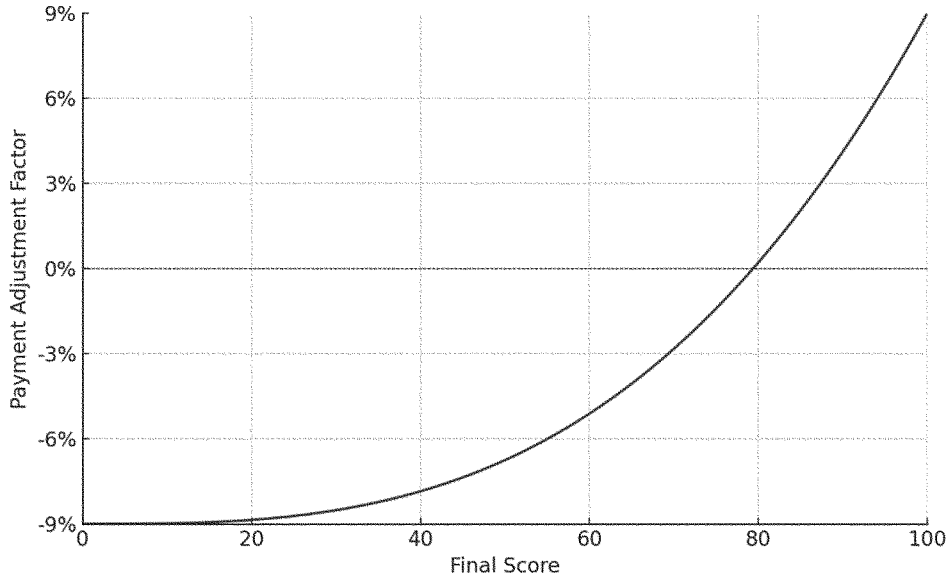


For the logistic exchange function, we considered values of the function's midpoint (that is, x_0 in the earlier formula) set at: (1) 50, which represents the midpoint between the zero to 100 point range that an ASM participant could achieve in their final score; (2) the annual median final score in the ASM performance year for each ASM cohort, and (3) the annual mean final score in the ASM performance year for each ASM cohort. The functional form of the logistic function when centered at 50 points would mean that those ASM participants with final scores within the top 25 percent and the bottom 25 percent of final scores would receive relatively similar ASM payment adjustment factors. However, setting the midpoint at the median or mean final score could help to achieve a more balanced distribution between ASM payment adjustment factors that result in net positive or net negative payment adjustments.

The cube function exponentially increases between zero and one hundred (Figure 4). The cube functions means that the incentive to improve performance increases more dramatically at the top end of the score distribution, meaning that a one-point difference in final score at the top end would result in a bigger difference in payment adjustment than the same one-point difference at the lower end of the final score distribution. The cube exchange function we considered had the following formula, where x_i is an ASM participant's final score:

$$f(x_i) = \left(\frac{x_i}{100}\right)^3$$

FIGURE 4: Illustrative Cubic Exchange Function



We analyzed these three exchange functions using simulated final score data. For the logistic exchange function, we used a midpoint of the median final score within each ASM cohort (see discussion on the logistic function's midpoint earlier in this section of this proposed rule). We simulated final scores by simulating each of the four ASM performance category scores using informed distributions for measures and the proposed scoring policies for each ASM performance category (see the regulatory impact analysis in section VII of this proposed rule for further information on our simulation methods). Our modeling ensures that the estimated ASM payment adjustment factors and ASM payment multipliers for each ASM cohort resulted in net payment adjustments that equaled the total ASM incentive pool for the applicable ASM cohort. We evaluated the distribution of ASM payment adjustments factors that resulted from each function (that is, the number and proportion of each ASM cohort that received net negative and positive payment adjustments). We also evaluated descriptive statistics (for example, mean, median, minimum, maximum) of the resulting ASM payment adjustment factors and ASM payment multipliers from each function. We also considered the distribution of ASM payment adjustment factors and ASM payment multipliers by specific ASM participant characteristics, such as small practices.

In our analysis, we found that linear and logistic exchange functions produced relatively similar distributions of ASM participants that would receive net positive payment adjustments, whereas more ASM participants would receive net positive payment adjustments under the cube function. Comparatively, the steadily increasing linear exchange function would mean that there would be a more even distribution of ASM payment adjustment factors across the distribution of final scores. Under the cube function, fewer ASM participants would receive net positive payment adjustments.

We found that setting the logistic function midpoint at the median or mean final score for each ASM cohort produced a maximum ASM payment adjustment factor that exceeded the maximum ASM payment adjustment factor under the linear exchange function (we refer readers to the discussion of the logistic function's midpoint earlier in this section of this proposed rule). That is, adjusting the logistic function midpoint to a value around the mean or median final score of each ASM cohort would increase the maximum net positive payment adjustment while producing a more even distribution between net positive and negative payment adjustments. The cube function produced the highest maximum ASM payment adjustment factor. All the exchange functions had the same maximum negative ASM payment adjustment factor because the ASM risk level would determine the maximum net negative payment adjustment.

When we compared the median ASM payment adjustment factor produced under each exchange function, we found that the logistic exchange function would produce the highest median net payment adjustment followed by the linear exchange function and then the cube exchange function. The cube exchange function would allow those ASM participants that achieve the highest final scores to achieve high ASM payment adjustment factors but would mean that ASM participants with final scores near the median final score would receive potentially lower ASM payment adjustment factors.

Based on the results of this analysis, we believe that the logistic exchange function would be best suited to achieving the appropriate distribution of ASM payment adjustment factors at the appropriate level of magnitude.

We recognize that using the same exchange function from other CMS programs would help stakeholders that use these programs' payment information across care settings better understand ASM's payment methodology. Both the Hospital VBP program and the Quality Payment

Program use some form of a linear exchange function in their payment methodologies. Three key program aspects that facilitate the use of a linear exchange function are a program's number of measures, measure weights, and correlation across program measures. These three aspects mean that there is less chance for a single required measure to skew scores into a non-normal distribution, meaning that it would be appropriate to use a linear exchange function for these programs (82 FR 36618). When first established, the SNF VBP Program relied on a single performance measure to determine performance scores. This approach meant that the distribution of performance scores could have been easily skewed, which could have resulted in an undesired distribution of incentive payments (82 FR 36618). The SNF VBP Program has since added up to 9 measures by which it can assess performance and has retained use of a logistic exchange function (88 FR 53276 through 53304). In our analysis, we found that simulated final scores among likely ASM participants could be skewed due to the potential directional correlation between measures across ASM's performance categories; for example, an ASM participant who performs well on one required quality measure may perform well across other quality measures. The potential for a skewed final score distribution and the use of a linear exchange function could result in an undesired distribution of ASM payment adjustment factors. For these reasons, we believe that the logistic exchange function would be more appropriate for the purposes of ASM's payment methodology.

We seek comments on our proposal to use a logistic exchange function with midpoint set at the median final score for each ASM cohort to translate final scores into ASM payment adjustment factors. We also seek comments on the alternative exchange functions and specifications of each exchange function we considered.

(d) Notification of ASM Payment Adjustment Factors and ASM Payment Adjustment Multipliers to ASM Participants

As discussed in section III.C.2.e.(6) of this proposed rule, we propose at § 512.750(e) to notify ASM participants of their ASM payment adjustment factor and ASM payment multiplier through the ASM performance report provided for each ASM performance year. As discussed earlier, we propose at § 512.750(a) that the amount otherwise paid under Medicare Part B for covered professional services furnished by an ASM participant during an ASM payment year would be multiplied by the ASM payment multiplier determined based on an ASM participant's performance during an ASM performance year.

As discussed earlier in this section of this proposed rule, our proposed process currently draws from the processes and timelines by which the Quality Payment Program applies MIPS payment adjustments for MIPS eligible clinician as defined at § 414.1405(e). Aligning the timeline and processes with the Quality Payment Program application of MIPS payment adjustments would ensure operational consistency and minimize confusion for ASM participants that have previously participated in MIPS.

Given the time separation between the ASM performance year and the ASM payment year, there may be situations when an ASM participant's TIN affiliation changes between the ASM performance year and the corresponding ASM payment year. We propose at § 512.750(f) that ASM payment adjustment factors and ASM payment multipliers would continue to apply to Medicare Part B covered professional services payments to ASM participants during an ASM payment year with adjustments made depending on how TIN affiliations change after an ASM performance year and the end of the corresponding ASM payment year. In Table 45, we provide several illustrative scenarios and how our proposed policies discussed in this section of this proposed rule would affect the application of ASM payment multipliers in each scenario.

During an ASM payment year, we propose at § 512.750(f)(1) that Medicare Part B professional service claims submitted by an NPI who is an ASM participant with a final score for an ASM performance year but under a TIN (1) that did not identify the NPI as an ASM participant for the applicable ASM performance year and (2) to which the NPI began assigning billing rights after the ASM performance year but before the end of the payment year would be adjusted using the ASM payment multiplier calculated for the ASM participant for the corresponding ASM performance year. For example, if an ASM participant identified by TIN-A/NPI bills Medicare under their original practice (TIN A) during an ASM performance year but begins billing Medicare Part B covered professional services claims under a new practice (TIN B) after the ASM performance year but before the end of the corresponding ASM payment year, then we would apply the ASM participant's ASM payment multiplier to Medicare Part B claims submitted by the NPI under the new practice (TIN-B/NPI). If the same ASM participant (TIN-A/NPI) from the above example also billed under TIN A during the same ASM payment year, we would adjust their Medicare Part B payments for covered professional services using the applicable ASM payment multiplier calculated for the ASM participant.

Our proposal means that we would not apply ASM payment multipliers to Medicare Part B claims submitted by TINs, other than the TIN identifying an ASM participant for an applicable ASM performance year and corresponding ASM payment year, to which the ASM participant assigned billing rights to before or during an ASM performance year. For example, if an ASM participant identified by TIN-A/NPI billed to TIN A and TIN B during the ASM performance year, then we would not apply the ASM payment multiplier to Medicare Part B claims submitted by the NPI under TIN-B during the corresponding ASM payment year. Our reasons for only applying ASM payment multipliers to Medicare Part B claims to TIN/NPIs combinations created after the end of the ASM performance year and before the end of the corresponding ASM payment year would be to prevent application of multiple payment adjustments on Medicare Part B claims, such as MIPS payment adjustments, during an ASM payment year. Building on the earlier example, in a given ASM performance year, an ASM participant (TIN-A/NPI) could be a MIPS eligible clinician under a different TIN/NPI combination (TIN-B/NPI) and receive a MIPS payment adjustment factor that would apply in the MIPS payment year that aligns with the corresponding ASM payment year. We would not want to interfere with the application of a MIPS payment adjustment factor to Medicare Part B claims billed under the TIN that identified the same NPI as a MIPS eligible clinician.

If we identify an NPI as ASM participants under multiple TINs and that NPI begins billing Medicare Part B claims under a new TIN (that is, neither of the original TINs) after the ASM performance year but before the end of the corresponding ASM payment year, then we propose at § 512.750(f)(2) to adjust Medicare Part B covered professional service payments submitted by the NPI under the new TIN using the highest of all ASM payment multipliers received for all TIN and NPI combinations that identified the NPI as multiple ASM participants for the corresponding ASM performance year. While we believe that there would

be few instances where a single NPI would be identified as multiple ASM participants, we believe this policy would appropriately track accountability to the NPI under a new TIN while reducing complexity by only applying on ASM payment adjustment multiplier.

BILLING CODE 4120–01–P

TABLE 45: APPLICATION OF PAYMENT ADJUSTMENTS DURING AN ASM PAYMENT YEAR

Scenario	Payment Adjustment
An ASM participant receives a final score under TIN A for an ASM performance year and bills under TIN A in the corresponding ASM payment year.	The ASM participant would receive a payment adjustment on Medicare Part B covered professional services claims during the applicable ASM payment year under their TIN A/NPI combination using the ASM payment multiplier received under the TIN A/NPI combination.
An ASM participant receives a final score under TIN A for an ASM performance year and begins billing under TIN B after the end of the ASM performance year but before the end of corresponding ASM payment year.	The ASM participant would receive a payment adjustment on Medicare Part B covered professional services claims during the applicable ASM payment year under their TIN B/NPI combination using the ASM payment multiplier received under the TIN A/NPI combination.
An ASM participant receives a final score under TIN A for an ASM performance year but bills under TIN B during the corresponding ASM payment year. The ASM participant billed under TIN B before or during the ASM performance year.	The ASM participant would not receive a payment adjustment on Medicare Part B covered professional services claims during the applicable ASM payment year under their TIN B/NPI combination using the ASM payment multiplier received under the TIN A/NPI combination.
An NPI is considered an ASM participant and receives a final score under TIN A and TIN B for an ASM performance year and continues to bill under TIN A and TIN B in the corresponding ASM payment year.	The ASM participant would receive a payment adjustment on Medicare Part B covered professional services claims during the applicable ASM payment year under their TIN A/NPI combination using the ASM payment multiplier received under TIN A/NPI combination and payment adjustments under TIN B/NPI combination using the ASM payment multiplier received under the TIN B/NPI combination.
An NPI is considered an ASM participant and receives a final score under TIN A and TIN B for an ASM performance year but begins billing only under TIN C after the ASM performance year but before the end corresponding ASM payment year.	The ASM participant would receive a payment adjustment on Medicare Part B covered professional services claims during the applicable ASM payment year under their TIN C/NPI combination using the higher of all ASM payment multipliers received under TIN A/NPI or TIN B/NPI combinations.

BILLING CODE 4120–01–C

Our proposals would closely link the ASM participants' performance during an ASM performance year to the ASM payment multiplier. It would also ensure that ASM participants that qualify for net positive payment adjustments keep them, even if they change TINs by the start of the ASM performance year. For those who have a net negative payment adjustment, this proposal would also ensure ASM participants would remain accountable for their performance. As discussed earlier in this section of this proposed rule, our proposals would also prevent interference with the application of MIPS payment adjustment factors if the NPI identifying the ASM participant was a MIPS eligible clinician under a different TIN/NPI combination during the same ASM performance year/MIPS performance period.

We based our proposed approach on sub-regulatory guidance issued by the Quality Payment Program on how MIPS payment adjustment factors follow MIPS eligible clinicians if they change their TIN affiliation after a MIPS performance period (81 FR 77330, 85 FR 84917 through 84919, and 86 FR 65536).[241] Like MIPS, our proposal for ASM tracks accountability to the ASM participant regardless of their specific TIN affiliation at the time we would apply ASM payment multipliers to an ASM participant's Medicare Part B covered professional services payments during an ASM payment year.

We seek comments on our proposed approach to notify and apply ASM payment multipliers to Medicare Part B covered professional services payments during an ASM payment year. We also seek comment on how ASM payment multipliers would be applied to Medicare Part B covered professional services payments for ASM participants whose TIN affiliations change after an ASM performance year and before the end of a corresponding ASM payment year.

g. Proposed Timely Error Notice Process

We believe that it is necessary to have a process by which ASM participants may appeal the ASM performance report. However, the standard CMS claims appeals process submitted through a MAC would not lead to timely resolution of disputes for the purposes of ASM because MACs and other CMS officials would not have timely access to beneficiary attribution data. Therefore, we propose to waive the requirements of section 1869 of the Act specific to

[241] *https://qpp.cms.gov/resources/document/21ee9d76-a002-4f5d-b228-3a99b32aa7dc.*

claims appeals for purposes of testing ASM. The proposed ASM error notice process is specific to ASM and distinct from the standard CMS appeals procedures set forth under section 1869 of the Act. We note that ASM participants would still be subject to the same limitations on review as stipulated at § 512.170.

We propose at § 512.755(a) to permit ASM participants to submit a timely error notice regarding the calculations contained within the ASM performance report if the ASM participant believes an error occurred in calculations due to data quality or other issues, or if the ASM participant believes an error occurred in calculations due to misapplication of methodology. We propose at § 512.755(b) that if an ASM participant believes the ASM performance report contains a calculation error, then the ASM participant would be required to submit a timely error notice documenting the suspected calculation error within 30 calendar days of issuance of the ASM performance report. We also propose that CMS may specify different requirements for the form, manner, or deadline for submission of the error notice. If the ASM participant does not provide such timely error notice error in accordance with the timelines and processes specified by CMS, then we propose at § 512.755(b)(1) that the ASM performance report would be deemed final and the ASM participant would be precluded from later contesting those elements of the ASM performance report for that performance year. Additionally, we propose that only an ASM participant may submit a written timely error notice according to the provisions at proposed § 512.755(b)(2).

The proposed 30-day window to review and appeal CMS calculations aligns with the length of time we have finalized for submitting appeals in other mandatory Innovation Center models, such as TEAM and the Increasing Organ Transplant Access (IOTA) Model.

We acknowledge that the Quality Payment Program allows MIPS eligible clinicians to request a targeted review within 60 days of the closing of the data submission period. As explained in the 2016 Quality Payment Program Final Rule (81 FR 77353), section 1848(q)(13)(A) of the Act describes the required review process for MIPS as ''targeted'' and ''informal,'' and does not warrant a second level of review or appeals. Under MIPS, all decisions under the targeted review process are final.

We considered an appeal window that conforms with MIPS, however, a 60-day timeframe would not be appropriate for ASM, as it would not provide sufficient time to generate final ASM payment adjustment factors and ASM payment multipliers before the applicable ASM payment year begins, given the process outlined in § 512.190 of the Standard Provisions—which offers the ASM participant the opportunity to request two additional levels of appeal, including a final review by the CMS Administrator. If an ASM participant elects to go through all levels of appeal available to them, this would be a lengthy process that must conclude by December 1, when CMS must submit final payment adjustment factors to the MACs for the subsequent payment year. Therefore, because of the two additional levels of appeal, CMS is unable to offer ASM participants a lengthier period to review their initial calculations.

We propose at § 512.755(c) that if CMS receives a timely notice of a calculation error, we would issue an initial determination in writing within 30 calendar days to either confirm that there was an error in the calculation or verify that the calculation is correct. We note that CMS would reserve the right to an extension of the time for providing its initial determination upon written notice to the ASM participant.

If an ASM participant disagrees with CMS' initial and wishes to dispute the results of the initial determination, under proposed § 512.755(d), the ASM participant or CMS may request a reconsideration of the initial determination by following the reconsideration review process described in the standard provisions at § 512.190.

We solicit comment on our proposed timely error notice process for ASM appeals at § 512.755 as well as alternatives considered.

h. Proposed Waivers of Medicare Program Requirements

(1) Background

Under section 1115A(d)(1) of the Act, the Secretary may waive such requirements of Titles XI and XVIII and of sections 1902(a)(1), 1902(a)(13), 1903(m)(2)(A)(iii) of the Act, and certain provisions of section 1934 of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act. We propose to waive ASM participants from MIPS reporting and payment adjustments. We also propose to waive certain telehealth restrictions to encourage greater flexibility with the use of telehealth services by ASM participants. We seek comment on these proposed waivers.

(2) MIPS Waiver

We believe it may be necessary and appropriate to provide flexibilities to clinicians participating in ASM. We propose at § 512.775 to use the Innovation Center's statutory authority under section 1115A(d)(1) of the Act to waive all ASM participants from participation in MIPS for any ASM performance year/ASM payment year in which they meet the ASM participant eligibility criteria, unless otherwise specified at proposed § 512.710(a)(2). Our previous and current efforts in testing models where participants are judged against the performance of their peers, such as the SNF VBP Program and the HVBP Program, are likely to incentivize substantial improvements in cost savings and efficiency. We are building off existing mechanisms for payment adjustments of Medicare Part B claims found in MIPS. To maximize the effectiveness of these payment adjustments, we propose to waive ASM participants from participation in MIPS. This waiver would ease administrative burden, as ASM participants would be required to only report ASM performance category measures. The waiver would also prevent possible double-payment adjustments by ensuring ASM participants report their performance measures and receive payment adjustments through ASM alone. The MIPS waiver would only be available to ASM participants for the year(s) for which they are measured for performance under the model (that is, the ASM performance year). For example, if a clinician meets eligibility criteria for the model in CY 2027 and is measured for performance under the model for that year, the MIPS waiver applies to CY 2027 and the clinician is not required to participate in MIPS and be measured for performance under MIPS for that year. Yet, for any subsequent year that that clinician does not meet ASM eligibility criteria and is not measured for performance under the model, the MIPS waiver does not apply. The clinician must participate in MIPS and be measured for performance under MIPS if determined to be a MIPS eligible clinician for the applicable MIPS performance period.

As described in section III.C.2.m of this proposed rule, we intend to promote as much longitudinal model overlap as possible and ensure maximum flexibility for ASM participants to join existing voluntary models, including Advanced APMs. Specialty care providers have been part of whole-person and primary care models, such as the Medicare Shared Savings Program, but the performance

measures in those programs are less relevant to specialty care. ASM takes the founding tenets for MVPs and goes further, allowing for like-to-like comparisons for all ASM participants by ensuring they are reporting on the same, clinically relevant measures.

For these reasons, we propose to seek a MIPS waiver at § 512.775(a) for all ASM participants regardless of whether they have achieved QP status through another Medicare model or program.

We seek comment on the proposed MIPS waiver for all ASM participants at § 512.775(a).

(3) Telehealth

(a) Background

We expect that the proposed ASM design features would lead to greater interest on the part of ASM participants caring for ASM beneficiaries in furnishing services to beneficiaries in their home or place of residence. ASM would create new incentives for comprehensive care management for beneficiaries, including early identification and intervention regarding changes in health status. Under section 1834(m) of the Act, Medicare pays for telehealth services furnished by a physician or practitioner under certain conditions even though the physician or practitioner is not in the same location as the beneficiary. Under the longstanding statutory payment requirements, telehealth services must be furnished to a beneficiary located in one of the originating sites specified in section 1834(m)(4)(C)(ii) of the Act and the site must satisfy at least one of the geographic requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act. Generally, for Medicare payment to be made for telehealth services under the Medicare Physician Fee Schedule several conditions must be met, as set forth under § 410.78(b). Specifically, the service must be on the Medicare list of telehealth services and meet all the following other requirements for payment: (1) the service must be furnished via an interactive telecommunications system, (2) the service must be furnished to an eligible telehealth individual, and (3) the individual receiving the services must be in an eligible originating site. For most telehealth services, this requires the beneficiary to be located at an originating site that is in certain, mostly rural, areas, and in a setting that is a health care facility.

During the COVID–19 PHE, CMS used emergency authority under section 1135(b)(8) of the Act to waive these requirements to allow beneficiaries to be located in an originating site in any geographic area and in any setting, including the home of the beneficiary. Congress has enacted several laws that temporarily extend these flexibilities beyond the PHE. Most recently, the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4) amended section 1834(m)(4)(C)(iii) of the Act to extend these originating site flexibilities through September 30, 2025. Absent Congressional action, beginning October 1, 2025, the statutory limitations that were in place for Medicare telehealth services prior to the COVID–19 PHE will retake effect for most telehealth services. These include geographic and location restrictions on where the services are provided.

When all these conditions are met, Medicare pays a facility fee to the originating site and provides separate payment to the distant site practitioner for the service. Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include professional consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when furnished via a telecommunications system. For the list of approved Medicare telehealth services, see the CMS website at *https://www.cms.gov/medicare/coverage/telehealth/list-services.* Under section 1834(m)(4)(F)(ii) of the Act, we have an annual process to consider additions to and deletions from the list of telehealth services.

Some literature suggests certain beneficial telehealth technologies, which enable health care providers to deliver care to patients in locations remote from providers, are being increasingly used to complement face-to-face patient-provider encounters to increase access to care, especially in rural or underserved areas.[242] In these cases, the use of remote access technologies may improve the accessibility and timeliness of needed care, increase communication between providers and patients, enhance care coordination, and improve the efficiency of care. We note that certain covered professional services that are commonly furnished remotely using telecommunications technology are paid under the same conditions as in-person physicians' services and thus do not require a waiver to be considered as telehealth services. Such services that do not require the patient to be present in person with the practitioner when they are furnished are covered and paid in the same way as services delivered without the use of telecommunications technology when the practitioner is in person at the medical facility furnishing care to the patient.

In other CMS episode-based payment models, such as TEAM and the Comprehensive Care for Joint Replacement Model (CJR) model, participants were permitted to use telehealth waivers that applied to two provisions:

- CMS waived the geographic site requirements under 1834(m)(4)(C)(i)(I) through (III) of the Act which allowed telehealth services to be furnished to eligible telehealth individuals when they are located at an originating site at the time the service is furnished via a telecommunications system but without regard to the site meeting one of the geographic site requirements.
- CMS waived the originating site requirements under section 1834(m)(4)(C)(ii)(I) through (VIII) of the Act which allowed the eligible telehealth individual to not be in an originating site when the otherwise eligible individual is receiving telehealth services in their home or place of residence.

These telehealth waivers allowed providers and suppliers furnishing services to ASM beneficiaries to utilize telemedicine for beneficiaries that are not classified as rural and allowed the greatest degree of efficiency and communication between providers and suppliers and beneficiaries by allowing beneficiaries to receive telehealth services at their home or place of residence. We believe similar telehealth waivers would be essential to maximize the opportunity to improve the quality of care and efficiency for ASM.

(b) Telehealth Waivers

Specifically, like the telehealth waivers in TEAM and the CJR model, we propose at § 512.775(b) to waive the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act that limit telehealth payment to services furnished within specific types of geographic areas or in an entity participating in a federal telemedicine demonstration project approved as of December 31, 2000. Waiving of this requirement would allow beneficiaries located in any region to receive services related to the episode to be furnished via telehealth, as long as all other Medicare requirements for telehealth services are met. Any service on the list of Medicare approved telehealth services and reported on a claim that is not excluded from the proposed episode (see section III.C.2.c.(3).(b). of this

[242] Azizi Z, Broadwin C, Islam S, et al. Digital Health Interventions for Heart Failure Management in Underserved Rural Areas of the United States: A Systematic Review of Randomized Trials. *J Am Heart Assoc.* 2024;13(2):e030956. doi:10.1161/JAHA.123.030956.

proposed rule) could be furnished to an ASM beneficiary, regardless of the beneficiary's geographic location. Under ASM, this waiver would support care coordination and increasing timely access to high quality care for all ASM beneficiaries, regardless of geography. Additionally, we propose waiving the originating site requirements of sections 1834(m)(4)(C)(ii)(I) through (VIII) of the Act that specify the particular sites at which the eligible telehealth individual must be located at the time the service is furnished via a telecommunications system. Specifically, we propose at § 512.775(b)(2) to waive the requirement only when telehealth services are being furnished in the ASM beneficiary's home or place of residence during the episode. Any service on the list of Medicare approved telehealth services that is not excluded from the proposed episode definition (see section III.C.2.c.(3).(b). of this proposed rule) could be furnished to a ASM beneficiary in their home or place of residence, unless the service's HCPCS code descriptor precludes delivering the service in the home or place of residence.

The existing set of codes used to report evaluation and management (E/M) visits are extensively categorized and defined by the setting of the service, and the codes describe the services furnished when both the patient and the practitioner are in that setting. Section 1834(m) of the Act provides for the conditions under which Medicare can make payment for office visits when a patient is located in a health care setting (the originating sites authorized by statute) and the eligible practitioner is located elsewhere. However, we do not believe that the kinds of E/M services furnished to patients outside of health care settings via real-time, interactive communication technology are accurately described by any existing E/M codes. This would include circumstances when the patient is located in his or her home and the location of the practitioner is unspecified. To create a mechanism to report E/M services accurately, TEAM and the CJR model used specific sets of HCPCS G-codes to describe the E/M services furnished to the model beneficiaries in their homes via telehealth. We considered whether establishing ASM-specific G-codes would serve a distinct purpose to the model. Upon review of existing G-codes for services provided via telehealth, we identified concerns with administrative burden and duplicative codes. Thus, we propose to allow ASM participants to bill established G-codes.[243]

Under the proposed waiver of the geographic site requirement and originating site requirement, all telehealth services would be required to be furnished in accordance with all Medicare coverage and payment criteria, and no additional payment would be made to cover set-up costs, technology purchases, training and education, or other related costs. The facility fee paid by Medicare to an originating site for a telehealth service would be waived if there is no facility as an originating site (that is, the service was originated in the beneficiary's home). Finally, ASM participants furnishing a telehealth service to an ASM beneficiary in his or her home or place of residence would not be permitted to bill for telehealth services that were not fully furnished when an inability to provide the intended telehealth service is due to technical issues with telecommunications equipment required for that service. Beneficiaries would be able to receive services furnished under the telehealth waivers only during the episode.

We plan to monitor patterns of utilization of telehealth services under ASM to monitor for overutilization or reductions in medically necessary care, and significant reductions in face-to-face visits with ASM participants.

We seek comments on the proposed waivers with respect to telehealth services at § 512.775(b).

i. Proposed Extreme and Uncontrollable Circumstances (EUC) Policy

Events may occur outside the purview and control of the ASM participant that may affect their performance in the model. We propose at § 512.780 to apply a variation of the EUC policy for MIPS eligible clinicians (83 FR 60081), but with notable differences around scoring. Currently, MIPS has three mechanisms to adjust scoring MIPS performance categories due to external circumstances that may impact a MIPS eligible clinician's ability to report during a given performance year: (1) the MIPS automatic EUC policy; [244] (2) the MIPS EUC Exception; and (3) the MIPS Promoting Interoperability Performance Category Hardship Exception.[245] The latter two require affected MIPS eligible clinicians to submit an application to MIPS for consideration before being granted the exception. The MIPS Automatic EUC Policy, however, grants the exception to any MIPS eligible clinician located in a CMS-designated region affected by EUC, such as a Federal Emergency Management Agency (FEMA)-designated major disaster or an HHS-determined public health emergency. The exception eliminates the need for an application to request reweighting one or more MIPS performance categories.

We propose to adopt at § 512.780 a modified version of the MIPS Automatic EUC Policy. We would use the same triggering events from the MIPS Automatic EUC Policy, such as federal disaster and/or public health emergency declarations, as the basis for determining whether an ASM participant may be automatically exempted from submitting ASM performance category data for an ASM performance year during which they were impacted by the EUC. If the ASM participant's CBSA or metropolitan division that we use to determine ASM participant eligibility (as described at § 512.710(e)(5)) is within an area identified by CMS, under § 414.1380(c)(2)(i)(A)(8), as having been affected by extreme and uncontrollable circumstances,, then the ASM participant would be exempted from the requirement to submit ASM performance category data, as described at proposed § 512.720. We propose at § 512.780(c)(1) that ASM participants who qualify for the exemption and do not submit ASM performance category data that meet the requirements at § 512.720 would not receive a final score and would receive an ASM payment adjustment factor that results in a neutral payment adjustment for the applicable ASM payment year. We propose at § 512.780(c)(2) that ASM participants who qualify for the exemption but still submit ASM performance category data that meet the requirements at § 512.720 would be scored according to the methodology described at proposed § 512.745. We also considered using claims data to determine whether an ASM participant furnishes services in a Federal disaster area or in an area in which HHS has declared a public health emergency. However, we believe that using the same methodology to determine whether a clinician furnishes services in a mandatory geographic area as part of the ASM participant eligibility criteria would ensure consistency across geographic determinations used for EUC-related exemptions.

Furthermore, we recognize the external impact of circumstances outside of the ASM participants' control, such as large-scale cyberattacks

[243] *https://www.cms.gov/medicare/coverage/telehealth/list-services.*

[244] *https://qpp.cms.gov/resources/document/3579730b-0891-4491-b880-eb21da631b15.*

[245] *https://qpp.cms.gov/mips/exception-applications.*

and other emergencies outside of those identified in the previous paragraphs. We propose at § 512.780(b)(1) and (2) to allow CMS to determine, based on information known to the agency prior to the beginning of the relevant ASM payment year, that data for an ASM participant are inaccurate, unusable, or otherwise compromised due to circumstances outside of the control of the clinician and its agents, including third-party intermediaries. We propose to notify ASM participants of CMS' decision on the existence of circumstances as proposed at § 512.780(b)(1) and the impact of these circumstances upon scoring methodology for affected ASM participants. We also propose to grant CMS discretion in the form and manner of the notice to ASM participants.

We considered adopting an application-based process for EUC exceptions like the MIPS provisions described at § 414.1380(c)(6). However, we believe that any hardships outside of those contemplated at proposed § 512.780(a) and (b) that renders an ASM participant unable to report on ASM performance categories for quality, improvement activities, or Promoting Interoperability, would likely result in the ASM participant being unable to bill claims for that ASM performance year as well. Accordingly, we believe that ASM participants in these circumstances would likely not meet the case minimums for quality and cost measures in their respective ASM performance categories (as proposed at §§ 512.725(g) and 512.730(d)) and would, therefore, be subject to a neutral payment adjustment for the applicable ASM payment year. For example, if the ASM participant does not have 20 EBCM episodes identified in claims data for the impacted ASM performance year, then the ASM participant would not receive a final score and would be subject to an automatic neutral payment adjustment. However, in this scenario, since CMS is unable to determine whether the ASM participant meets the 20 EBCM episodes for the given ASM performance year until all claims for that ASM performance year have been completed, the ASM participant is encouraged to submit as much data as they are able to for all other ASM performance measures.

We considered whether an ASM participant affected by the circumstances at proposed § 512.780(a) or (b) who chooses to report ASM performance category data would be subject to a lower risk level as described at § 512.745(a)(3). Applying a differential risk level for some ASM participants could skew the calculation of ASM payment adjustment factors for all ASM participants depending on how many ASM participants are impacted by the identified circumstances. Instead of adjusting the ASM participant's risk level, we believe it would be preferable for ASM participants not to receive a final score, which would result in an automatic neutral payment adjustment.

We seek comments on the proposed provisions at § 512.780, as well as the alternatives that we considered.

j. Proposed Data Sharing

Under this proposed model, we aim to incentivize ASM participants to engage in care redesign efforts to improve quality of care and reduce Medicare FFS spending for ASM beneficiaries. We expect ASM participants to work toward independently tracking their own data through electronic health records, health information exchanges, or other means that they believe are necessary to best evaluate the health needs of their patients, improve health outcomes, and produce efficiencies in the provision and use of health care items and services. However, we are proposing certain data sharing requirements in § 512.760 to assist ASM participants in this process and in meeting the model objectives.

We propose at § 512.760(d) to provide certain aggregate data that has been de-identified in accordance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rule, 45 CFR 164.514(b), for the purposes of helping ASM participants understand their progress towards improving upon the model's performance metrics. Any aggregate data provided in advance of an ASM performance report for an ASM performance year would not be a guarantee of the ASM participant's final score or ASM payment adjustment factor.

Additionally, as with other mandatory Innovation Center models such as TEAM and IOTA, we propose to provide certain beneficiary-identifiable data to ASM participants regarding the ASM beneficiaries under their care, upon request and execution of a data sharing agreement. We anticipate that ASM participants would use this data to assess their treatment patterns and overall care plans and to identify room for improvement under the model or conducting other ''health care operations'' under the HIPAA Privacy Rule, 45 CFR 165.501. Specifically, subject to the limitations discussed in this proposed rule, and in accordance with applicable law, including the HIPAA Privacy Rule (45 CFR part 160 and subparts A and E of part 164), we propose at § 512.760(b) that CMS may offer an ASM participant an opportunity to request certain Medicare beneficiary-identifiable data. We propose that CMS would share this beneficiary identifiable data with ASM participants on the condition that the ASM participants and other individuals or entities performing functions or services related to the ASM participant's activities observe all relevant statutory and regulatory provisions regarding: (1) the appropriate use of data; and (2) the confidentiality and privacy of individually identifiable health information, and comply with the terms of the data sharing agreement proposed at § 512.760(e).

Moreover, we recognize that an individual clinician generally may not be a covered entity. However, the participant clinicians are likely part of a covered entity and therefore are subject to the HIPAA Rules.

We propose at § 512.760(f) that ASM participants must allow Medicare beneficiaries to request restrictions on sharing data, consistent with 45 CFR 164.522(a). We also propose at § 512.760(b)(4) that, for the beneficiary-identifiable claims data, we would exclude information that is subject to the regulations governing the confidentiality of substance use disorder patient records (42 CFR part 2) from the data shared with an ASM participant.

We request comment and feedback on our proposed policies at § 512.760(a) to make certain beneficiary-identifiable data available to ASM participants upon execution of an ASM data sharing agreement.

(1) Data Provided to ASM Participants

(a) Legal Authority To Share Beneficiary-Identifiable Data and Applicability to Proposed ASM Data Sharing Processes

We believe that an ASM participant may need access to certain Medicare beneficiary-identifiable data for the purposes of evaluating its performance, conducting quality assessment and improvement activities, conducting population-based activities relating to improving health or reducing health care costs, or conducting other health care operations listed in the first or second paragraph of the definition of ''health care operations'' under the HIPAA Privacy Rule, 45 CFR 164.501.

We recognize there are sensitivities surrounding the disclosure of beneficiaries' individually identifiable health information, and that several laws place constraints on the sharing of individually identifiable health information. For example, section 1106 of the Act generally bars the disclosure

of information collected under the Act without consent unless a law (statute or regulation) permits the disclosure. Here, the HIPAA Privacy Rule would allow for the proposed disclosure of individually identifiable health information by CMS to ASM participants so they can carry out ''health care operations'' that fall within the first and second paragraphs of the definition of the term as defined at 45 CFR 164.501. In this proposed rule, we propose to make ASM participants accountable for quality and cost outcomes during an applicable ASM performance year. We believe it is necessary for the purposes of this model to offer ASM participants the ability to request certain raw beneficiary-identifiable Medicare claims data that CMS used to determine ASM participant eligibility for an applicable ASM performance year, as well as for the beneficiaries who trigger an EBCM episode with the ASM participant during the applicable ASM performance year. ASM participants would only receive data for the ASM beneficiaries who are their patients. We believe these data would constitute the minimum information necessary to enable ASM participants to understand care spending patterns, appropriately coordinate care, and target care strategies toward ASM beneficiaries.

Under the HIPAA Privacy Rule, covered entities (defined in 45 CFR 160.103 as health plans, health care providers that conduct certain transactions electronically, and health care clearinghouses) may only use or disclose protected health information (PHI), a subset of individually identifiable health information I, as permitted or required by the HIPAA Privacy Rule, without the individual's authorization. The Medicare FFS program, a ''health plan'' function of the Department, is subject to the HIPAA Privacy Rule limitations on the use or disclosure of PHI without an individual's authorization. ASM participants are also covered entities, provided they are health care providers as defined by 45 CFR 160.103 and they electronically transmit any health information in connection with one or more HIPAA standard transactions, such as for claims, eligibility or enrollment transactions. ASM participants are clinicians who are either covered entities themselves, or they are part of a covered entity. We believe that the proposed disclosure of beneficiary-identifiable data under the ASM model would be permitted by the HIPAA Privacy Rule under the provisions that permit disclosures of PHI for ''health care operations'' purposes. Under those provisions, a covered entity is permitted to disclose PHI to another covered entity for the recipient's health care operation's purposes if both covered entities have or had a relationship with the subject of the PHI being requested, the PHI pertains to such relationship, and the PHI disclosure is for a ''health care operations'' purpose listed within the first two paragraphs of the definition of ''health care operations'' in the HIPAA Privacy Rule (45 CFR 164.506(c)(4)).

The first paragraph of the definition of health care operations includes ''conducting quality assessment and improvement activities, including outcomes evaluation and development of clinical guidelines,'' and ''population-based activities relating to improving health or reducing health costs, protocol development, case management and care coordination.'' The second paragraph of the definition of health care operations includes ''evaluating practitioner and provider performance'' (45 CFR 164.501).

We propose at § 512.760 that, subject to having an ASM data sharing agreement in place, an ASM participant may request from CMS certain beneficiary-identifiable claims for ASM beneficiaries under their care. Under the ASM data sharing agreement, we propose at § 512.760(b)(5)(i) and (ii) to allow CMS to share data with an ASM participant which includes unrefined (raw) Medicare Parts A, B, and D beneficiary-identifiable claims data used to determine ASM participant eligibility for an applicable ASM performance year, as well as unrefined (raw) Medicare Parts A, B, and D beneficiary-identifiable claims data for ASM beneficiaries who trigger an episode with the ASM participant during the applicable ASM performance year. ASM participants would use the data on their patients to evaluate the performance of the ASM participant and other providers and suppliers, such as clinicians with whom the ASM participant may have entered into a collaborative care arrangement, that furnished services to the patient, conducts quality assessment and improvement activities, and conducts population-based activities relating to improved health for their patients. When done by or on behalf of an ASM participant that is a covered entity, these data uses would qualify as ''health care operations'' under the first and second paragraphs of the definition of health care operations at 45 CFR 164.501. This encompasses the anticipated uses of the beneficiary-identifiable data by an ASM participant so that such uses would be permissible under the HIPAA Privacy Rule. Moreover, done by or on behalf of a covered entity, these are covered functions and activities that would qualify as ''health care operations'' under the first and second paragraphs of the definition of health care operations at 45 CFR 164.501, thus encompassing the anticipated uses of the beneficiary-identifiable data by an ASM participant and that such uses would be permissible under the HIPAA Privacy Rule. Moreover, our proposed disclosures would be made only to HIPAA covered entities that have (or had) a relationship with the subject of the information, the information we would disclose would pertain to such relationship, and those disclosures would be for purposes listed in the first two paragraphs of the definition of ''health care operations.''

When using or disclosing PHI, or when requesting this information from another covered entity, covered entities or business associates must make ''reasonable efforts to limit'' the PHI that is used, disclosed, or requested to the ''minimum necessary'' to accomplish the intended purpose of the use, disclosure, or request (45 CFR 164.502(b)). Thus, ASM participants must limit their beneficiary-identifiable data requests to the minimum necessary, as selected from the proposed data elements identified at § 512.760(c), to accomplish the intended purpose of the use, disclosure, or request. The proposed minimum necessary data elements include, but are not limited to:

- Medicare beneficiary identifier (ID).
- Procedure code.
- Sex.
- Diagnosis code.
- Claim ID.
- The from and through dates of service.
- The provider or supplier ID.
- The claim payment type.
- Date of birth and death, if applicable.
- Tax identification number.
- National provider identifier.

The Privacy Act of 1974 also places limits on agency data disclosures. The Privacy Act applies when Federal agencies maintain systems of records by which information about an individual is retrieved by use of one of the individual's personal identifiers (names, Social Security numbers, or any other codes or identifiers that are assigned to the individual). The Privacy Act generally prohibits disclosure of information from a system of records to any third party without the prior written consent of the individual to whom the records apply (5 U.S.C. 552a(b)).

''Routine uses'' are an exception to this general principle. A routine use is a disclosure outside of the agency that is compatible with the purpose for which the data was collected. Routine uses are established by means of a publication in the **Federal Register** about the applicable system of records describing to whom the disclosure will be made and the purpose for the disclosure. For the proposed ASM model, we believe that the proposed data disclosures are compatible with the purposes for which the data discussed in this rule was collected, and, thus, would not run afoul of the Privacy Act, provided we ensure that an appropriate Privacy Act system of records ''routine use'' is in place prior to making any disclosures. The systems of records from which CMS would share data are the Medicare Integrated Data Repository (IDR), the Common Working File, Medicare Provider Enrollment, Chain, and Ownership System (PECOS), the Enrollment Database (EDB), and the Part D Event (PDE) File. We believe that the proposed data disclosures are compatible with the purposes for which the data discussed in the proposed rule were collected and may be disclosed in accordance with the routine uses applicable to those records.

We propose at § 512.760 that we would share the ASM beneficiary-identifiable lists and data with ASM participants who have submitted a formal request for the data. Under our proposal, the request must be submitted on at least an annual basis in a manner and form specified by CMS. The request also would need to identify the data being requested and include an attestation that (1) the ASM participant is requesting this beneficiary-identifiable data as a HIPAA covered entity, or as part of a HIPAA covered entity, and (2) the ASM participant's request reflects the minimum data necessary for the ASM participant to conduct activities that are described in the first or second paragraph of the definition of health care operations at 45 CFR 164.501. In addition, ASM participants who request this data must have a valid and signed ASM data sharing agreement in place, as described in more detail later in this section of this proposed rule. We propose at § 512.760(b) that we would make available beneficiary-identifiable data for ASM participants to request for purposes of conducting activities described in the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on behalf of their attributed patients who are Medicare beneficiaries. We believe that access to beneficiary-identifiable claims data would improve care coordination between ASM participants and other health care providers.

We also propose at § 512.760(b)(2)(ii) that ASM participants limit the request for beneficiary-identifiable claims data to Medicare beneficiaries who have been seen by ASM participants for an ASM targeted chronic condition, and who did not request to restrict sharing their claims data with the ASM participant, as proposed at § 512.760(f)(1). Finally, we propose that CMS would share beneficiary identifiable data with an ASM participant on the condition that the ASM participant and other individuals or entities performing functions or services related to the ASM participant's activities, comply with all applicable laws governing the use of data and the privacy and security of individually identifiable health information and the terms of the ASM data sharing agreement proposed at § 512.760(e)(1).

(b) Medicare Beneficiary Opportunity To Request Restrictions on Data Sharing

We propose at § 512.760(f)(1) that ASM beneficiaries would be notified about the opportunity to request restrictions on sharing claims data with an ASM participant, in accordance with 45 CFR 164.522. Recognizing the administrative burden associated with such restrictions, however, we note that under 45 CFR 164.522(a)(1)(iii), covered entities are not required to agree to such a restriction unless the request fulfills the conditions set forth at 45 CFR 164.522(a)(1)(vi). Furthermore, we propose that Medicare beneficiaries may not decline to have the aggregate, de-identified data proposed in § 512.760(d) shared with ASM participants. We also note that, in accordance with 42 U.S.C. 290dd–2 and its implementing regulations at 42 CFR part 2, we do not share beneficiary identifiable claims data relating to the diagnosis and treatment of substance use disorders under this model.

We recognize this policy is distinct from the data sharing policy in IOTA and other voluntary Innovation Center models. We considered aligning the data sharing provisions with IOTA but decided to align with HIPAA requested data restriction provisions because they are less administratively burdensome on providers. We request comment and feedback on our proposed policies at § 512.760(f) to enable ASM beneficiaries to request restrictions on data sharing with their treating ASM participant. We also request comment and feedback on whether ASM should align its data sharing policies with existing Innovation Center models or retain its existing proposed structure, which is based on HIPAA requirements at 45 CFR 164.522.

(c) Aggregated Data Sharing

We propose at § 512.760(d) to deliver certain aggregate data that has been de-identified in accordance with the HIPAA Privacy Rule, 45 CFR 164.514(b), for the purposes of helping ASM participants understand their progress towards improving upon the model's performance metrics. Such aggregated, de-identified data could include, when available, claims-based cost, utilization, and quality data. Cost and utilization data could include fields such as average Medicare FFS (Part A and Part B) expenditure per beneficiary, the top diagnosis codes for beneficiaries the ASM participant is seeing, or hospital admission and readmission rates. Quality data could include preliminary measure rates for the claims-based measures in each ASM measure set. The data would support ASM participants in analyzing care provided to their Medicare patients and their efforts to monitor, understand, and manage utilization and expenditure patterns as well as to develop, target, and implement quality improvement programs and initiatives. We are considering providing these two forms of performance feedback at regular intervals, allowing insights into trends that could result in improved model performance and beneficiary care. We seek comments on the elements, cadence, and format of this claims-based performance aggregated data and how it could be most beneficial to ASM participants in improving quality and reducing costs.

Any aggregate data provided in advance of an ASM performance report for an ASM performance year would not be a guarantee of the ASM participant's final score or ASM payment adjustment factor. Since this data would be de-identified according to the HIPAA Privacy Rule requirements and would not contain any protected health information (PHI) or personally identifiable information (PII), this aggregate data would be provided to ASM participants regardless of whether they have executed an ASM data sharing agreement with CMS.

(2) ASM Data Sharing Agreement

(a) General Requirement for Beneficiary-Identifiable Data

We propose at § 512.760(e)(1) that if an ASM participant wishes to retrieve ASM beneficiary-identifiable data, the ASM participant would be required to

complete, sign, and submit—and thereby agree to the terms of—an ASM data sharing agreement with CMS on at least an annual basis. We propose to define the ''ASM data sharing agreement'' as an agreement between the ASM participant and CMS that includes the terms and conditions for any beneficiary-identifiable data being shared with the ASM participant under proposed § 512.760(e). We propose that under the ASM data sharing agreement, the ASM participant would be required to comply with the limitations on the use and disclosure of PHI imposed by the HIPAA Privacy Rule, the applicable ASM data sharing agreement, and the statutory and regulatory requirements of ASM. We also propose that the ASM data sharing agreement would include certain protections and limitations on the ASM participant's use and further disclosure of the beneficiary-identifiable data and would be provided in a form and manner specified by CMS. We propose at § 512.760(g) that a designated data custodian would be the individual(s) that an ASM participant would identify as responsible for ensuring compliance with all privacy and security requirements, including all applicable laws and terms of the ASM data sharing agreement, and for notifying CMS of any incidents relating to unauthorized disclosures of beneficiary-identifiable data.

We believe it is important for the ASM participant to first complete and submit a signed ASM data sharing agreement before it retrieves any beneficiary-identifiable data to help protect the privacy and security of any beneficiary-identifiable data shared by CMS with the ASM participant. As noted previously in this section of the proposed rule, there are important sensitivities surrounding the sharing of this type of individually identifiable health information, and CMS must ensure to the best of its ability that any beneficiary-identifiable data that it shares with ASM participants would be further protected in an appropriate fashion.

We seek public comment on our proposal at § 512.760(e) to require that the ASM participant agree to comply with all applicable laws and terms of the ASM data sharing agreement as a condition of retrieving beneficiary-identifiable data, and on our proposal that the ASM participant would need to submit the signed ASM data sharing agreement at least annually if the ASM participant wishes to retrieve the beneficiary-identifiable data.

(b) Content of the ASM Data Sharing Agreement

We recognize that ASM participants may already be required to comply with the HIPAA Privacy Security, and Breach Notification Rules ''(HIPAA Rules'') as covered entities themselves, or as employees or owners of HIPAA covered entities. However, since ASM participation is at the TIN–NPI level, we recognize that the TINs to which the ASM participants belong may be the covered entities, rather than the ASM participants themselves. Thus, we included language allowing ASM data sharing agreements to be executed between CMS and ASM participants or the covered entities that conduct HIPAA standard transactions on behalf of the ASM participants. We also propose at §§ 512.760(e)(1)(i) through (v) to impose CMS-specific requirements within the ASM data sharing agreement to reinforce the Innovation Center's specific expectations and consequences for misuse, which is intended to protect the privacy and security CMS' beneficiary-identifiable data in the hands of ASM participants and any downstream recipients. We propose that under the ASM data sharing agreement, ASM participants would agree to certain terms, including:

- Complying with the requirements for use and disclosure of this ASM beneficiary-identifiable data that are imposed on covered entities, as defined by 45 CFR 160.103, by the regulations at 45 CFR part 160 and part 164, subparts A and E, including but not limited to ensuring the data will not be used for purposes outside of conducting health care operations as defined at 45 CFR 164.501 and as permitted by 45 CFR 164.506(c)(4) on behalf of their ASM beneficiaries
- Complying with privacy, security, breach notification, and data retention requirements specified by CMS in the ASM data sharing agreement if CMS deems such requirements necessary to safeguard beneficiary data, in addition to applicable law, such as the HIPAA Privacy, Security, and Breach Notification Rules
- Contractually binding any and each downstream recipient of the ASM beneficiary-identifiable data, such as persons or entities performing functions or services related to the ASM participant's data sharing activities including those that meet the definition of a business associate as defined at 45 CFR 160.103 and non-ASM participant parties to collaborative care arrangements described at § 512.771, to the same terms and conditions to which the ASM participant is itself bound in its ASM data sharing agreement with CMS as a condition of the business associate's receipt of the ASM beneficiary-identifiable data obtained by the ASM participant
- Acknowledging that if the ASM participant or any downstream recipient misuses or discloses the ASM beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the ASM data sharing agreement, CMS may do any or all of the following: deem the ASM participant ineligible to obtain ASM beneficiary-identifiable data for any amount of time, or subject the ASM participant to additional sanctions and penalties available under applicable law.
- An ASM participant must comply with all applicable laws and the terms of the ASM data sharing agreement to obtain ASM beneficiary-identifiable data.

We propose at § 512.760(e)(2) that CMS would share beneficiary-identifiable data with an ASM participant on the condition that the ASM participant and other individuals or entities performing functions or services related to the ASM participant's data sharing activities, including business associates of the ASM participant as defined at 45 CFR 160.103 and non-ASM participant parties to collaborative care arrangements described at § 512.771, comply with all relevant laws governing the use of data and the privacy and security of individually identifiable health information and the proposed terms of the ASM data sharing agreement.

We believe that these proposed terms for sharing beneficiary-identifiable data with ASM participants are appropriate and important, as CMS must ensure to the best of its ability that any beneficiary-identifiable data that it shares with ASM participants would be further protected by the ASM participant, and any business associates of the ASM participant as defined at 45 CFR 160.103 and non-ASM participant parties to collaborative care arrangements described at § 512.771, in an appropriate fashion. We have these types of agreements in place as part of the governing documents of other models tested under section 1115A of the Act and in the Medicare Shared Savings Program. In these agreements, CMS typically requires the identification of data custodian(s) and imposes certain requirements related to administrative, physical, and technical safeguards for data storage and transmission; limitations on further use and disclosure of the data; procedures

for responding to data incidents and breaches; and data destruction and retention. These provisions would be in addition to any restrictions imposed by applicable law, such as the HIPAA Rules. These ASM data sharing agreement provisions would not prohibit the ASM participant from making any disclosures of the data otherwise required by law.

We solicit public comments on this proposal at § 512.760(e) to impose certain requirements in the ASM data sharing agreement related to privacy, security, data retention, breach notification, and data destruction.

k. Proposed ASM Beneficiary Incentives, Collaborative Care Arrangements, and Applicability of CMS-Sponsored Model Safe Harbor at § 1001.952(ii)

(1) ASM Beneficiary Incentives

As part of CMS' commitment to empower patients to actively participate and be accountable for quality and whole health outcomes, we invite ASM participants to think outside the box with regards to physical and lifestyle factors that contribute to the ASM's targeted chronic conditions. We propose at § 512.770(a)(1) through (8) to allow ASM participants the option of providing in-kind patient engagement incentives, so long as the following criteria are met:

- The incentive must be provided directly by the ASM participant or by an agent of the ASM participant under the ASM participant's direction and control to an ASM beneficiary who is an established patient of the ASM participant.
- The ASM participant must be solely responsible for any costs associated with the provision of the incentive, including but not limited to, the retail value of the item or services offered as the ASM beneficiary incentive.
- The item or service provided must be reasonably connected to medical care provided by the ASM participant to an ASM beneficiary for an ASM targeted chronic condition.
- The item or service must be a preventive care item or service or an item or service that advances a clinical goal for an ASM beneficiary by engaging the ASM beneficiary in better managing an ASM targeted chronic condition. ASM's clinical goals are centered around promoting preventive care through improved management of ASM targeted chronic conditions; empowering patients to actively participate and be accountable for quality and whole health outcomes; and facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.
- The item or service must not be tied to the receipt of items or services outside the services furnished by the ASM participant to the ASM beneficiary.
- The item or service must not be tied to the receipt of items or services from a particular provider or supplier.
- The availability of the items or services must not be advertised or promoted, except that an ASM beneficiary may be made aware of the availability of the items or services at the time the ASM beneficiary could reasonably benefit from them.
- The cost of the items or services must not be shifted to any Federal health care program, as defined at section 1128B(f) of the Act.
- The totality of items or services, including technology as described at paragraph (b) of this section, provided to an ASM beneficiary may not exceed $1,000 in retail value for any one ASM beneficiary.

We envision this could take the form of remote patient monitoring devices such as blood pressure monitors or scales with or without the capability to send data to their providers, vouchers for healthier food options or meal planning, and promotions for regular physical activity such as gym memberships or classes. These are, however, just examples and are not inclusive of all options available to ASM participants who offer beneficiary incentives. To safeguard against potential fraud, waste, and abuse, however, we propose to require limits on the retail value of offered items or services, when offered items must be retrieved from the ASM beneficiary, and when an ASM beneficiary becomes eligible for ASM beneficiary incentives. Specifically, due to multi-use nature of technological items and devices, we propose at § 512.770(b)(1) and (2) the following stipulations for technology that is provided to ASM beneficiaries:

- Items or services involving technology provided to a ASM beneficiary must be the minimum necessary to advance a clinical goal of the model as proposed at § 512.770(b), which are: promoting preventive care through improved management of ASM targeted chronic conditions; empowering patients to actively participate and be accountable for quality and whole health outcomes; and facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.
- Items of technology exceeding $75 in retail value must remain the property of the ASM participant. However, upon the end of their care relationship with the ASM participant, that technology must be retrieved from the ASM beneficiary with documentation of the ultimate date of retrieval. The ASM participant must document all retrieval attempts. In cases when the item of technology is not able to be retrieved, the ASM participant must determine why the item was not retrievable. If it was determined that the item was misappropriated, then the ASM participant must take steps to prevent future beneficiary incentives for that ASM beneficiary. Following this process, documented, diligent, good faith attempts to retrieve items of technology would be deemed to meet the retrieval requirement. If the provided technology breaks or is otherwise rendered unusable for its intended purposes, the technology must be retrieved from the ASM beneficiary with documentation of the ultimate date of retrieval. The ASM participant may replace the unusable unit with the same or similar technology, to the extent practicable, that meets the original requirements for the technology.
- In addition to the requirements on audits and record retention at § 512.135, we propose at § 512.770(c)(1) through (4) that ASM participants who wish to offer ASM beneficiary incentives must also ensure documentation of the incentives distributed according to the following requirements:
- ASM participants must maintain documentation of items and services furnished as beneficiary incentives that exceed $75 in retail value.
- The documentation must be established contemporaneously with the provision of the items and services with a record established and maintained to include at least the date the incentive is provided and the identity of the ASM beneficiary to whom the item or service was provided.
- The documentation regarding items of technology exceeding $75 in retail value must also include contemporaneous documentation of any attempt to retrieve technology at the end of an episode, or why the items were not retrievable.
- The ASM participant must retain and provide access to the required documentation.

We seek comment on the proposed parameters at § 512.770 for allowed ASM beneficiary incentives, especially regarding the practicality and feasibility

of the requirements around items of technology.

(2) Collaborative Care Arrangements

To support the goals of ASM, we propose to encourage ASM participants to enter into collaborative care arrangements with primary care practices to further the ASM participant's performance in the improvement activities ASM performance category or advance the clinical goals of ASM.

To allow ASM participants greater flexibility when negotiating collaborative care arrangements, we propose at § 512.771(a) to make the CMS-sponsored model arrangements safe harbor at 42 CFR 1001.952(ii)(1) available to ASM participants when establishing collaborative care arrangements so long as they comply with the requirements of that safe harbor and proposed § 512.771. We propose at § 512.771(a) to require all collaborative care arrangements to:

- Be in writing, signed by both parties, and containing the effective date of the collaborative care arrangement.
- Be exclusively between the ASM participant and the primary care practice with whom the ASM participant shares at least one established patient who is an ASM beneficiary,
- The arrangement must be entered into for the purpose of furthering the ASM participant's improvement activities or advancing at least one of ASM's three clinical goals proposed at § 512.771(b), which are: promoting preventive care through improved management of ASM targeted chronic conditions; empowering patients to actively participate and be accountable for quality and whole health outcomes; and facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.
- Participation in a collaborative care arrangement must be voluntary and without penalty for nonparticipation.
- Both parties to the collaborative care arrangement must comply with all applicable statutes, regulations, and guidance, including without limitation: federal criminal laws; the False Claims Act (31 U.S.C. 3729 *et seq.*); the anti-kickback statute (42 U.S.C 1320a–7b(b)); the civil monetary penalties law (42 U.S.C. 1320a–7a); and the physician self-referral law (42 U.S.C. 1395nn).
- The opportunity to enter into a collaborative care arrangement, and the amount of any payment or other remuneration under a collaborative care arrangement, must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business generated by, between, or among the parties to the collaborative care arrangement or any other person.
- Any payment or other remuneration between the parties set forth in a collaborative care arrangement must not exceed fair market value and must be determined in accordance with a methodology that is solely based on the purposes identified at paragraphs (b)(2)(i) and (b)(2)(ii) of this section.
- Any payment or other remuneration set forth in the collaborative care arrangement must be solely between the parties to the arrangements. Any payment between the parties must be made by check, electronic funds transfer, or another traceable cash transaction.
- Both parties to the collaborative care arrangement must retain the ability to make decisions in the best interests of the ASM beneficiary, including the selection of clinicians, devices, supplies, and treatments.
- The collaborative care arrangement must not induce any party to reduce or limit medically necessary services to any Medicare beneficiary, or reward the provision of items and services that are medically unnecessary.
- ASM participants must maintain contemporaneous documentation, in accordance with § 512.135, regarding all collaborative care arrangements to which they are a party.
- The collaborative care arrangement must stipulate that any non-ASM participant party is considered a downstream recipient for CMS data sharing purposes, and must require the non-ASM participant party to comply with applicable data sharing requirements at proposed § 512.760.
- Any non-ASM participant party to a collaborative care arrangement shall be a downstream participant subject to the standard provisions for Innovation Center models specified in subpart A of this part 512.

As currently defined, a collaborative care arrangement is exclusively between an ASM participant and a primary care practice. We considered expanding this definition to allow multiple ASM participants in the same TIN to enter into a collaborative care arrangement with a primary care practice. We are concerned about the burden that may be introduced by having each ASM participant enter these arrangements individually, however, elevating the arrangement to the TIN level opens risks related to other elements of collaborative care arrangement, such as remuneration. We welcome comments on our collaborative care arrangement definition and how to address the burden it may impose on ASM participants and partnered primary care practices. We also welcome comments on the types of services and remuneration that ASM participants may contemplate in their collaborative care arrangements to meet improvement activity specifications or advancing at least one of ASM's three clinical goals as proposed at § 512.771(b).

We welcome comments on these proposals at §§ 512.771(a) and (b).

(3) Application of the CMS-Sponsored Model Arrangements and Patient Incentives Safe Harbor to ASM Beneficiary Incentives and Collaborative Care Arrangements

Consistent with the authority under section 1115A(d)(1) of the Act, the Secretary may consider issuing waivers of certain fraud and abuse provisions in sections 1128A, 1128B, and 1877 of the Act. No fraud or abuse waivers are being issued in this document; fraud and abuse waivers, if any, would be set forth in separately issued documentation. Any such waiver would apply solely to ASM and could differ in scope or design from waivers granted for other programs or models. Thus, notwithstanding any provision of this proposed rule, ASM participants must comply with all applicable laws and regulations, except as explicitly provided in any such separately documented waiver issued under section 1115A(d)(1) of the Act specifically for ASM.

In addition to or in lieu of a waiver of certain fraud and abuse provisions in sections 1128A and 1128B of the Act, CMS expects to make a determination that the anti-kickback statute safe harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives (§ 1001.952(ii)(1) and (2)) is available to protect remuneration exchanged under certain collaborative care arrangements and patient incentives that may be permitted under the final rule, if issued. Specifically, we propose at §§ 512.765(a) and (b) that the CMS-sponsored models safe harbor would be available to protect collaborative care arrangements and ASM beneficiary incentives so long as they meet specified requirements at proposed §§ 512.770 and 512.771 under the model and the requirements of the safe harbor at § 1001.952(ii).

We considered not allowing use of the respective safe harbor provisions for ASM participants who enter into collaborative care arrangements or who wish to provide beneficiary incentives. However, we determined that use of the safe harbor would encourage the goals of the model. We believe that a

successful model requires integration and coordination among ASM participants and other health care providers and suppliers. We believe the use of the respective safe harbor provisions available for collaborative care arrangements and beneficiary incentives would encourage and improve beneficiary experience of care and coordination of care among providers and suppliers. We also believe these safe harbor provisions offer flexibility for innovation and customization of the patient care experience. Use of the respective safe harbor provisions for collaborative care arrangements and beneficiary incentives allow for emerging arrangements that reflect up-to-date understandings in medicine, science, and technology.

Thus, we propose at § 512.765 making the CMS-sponsored model arrangements at §§ 1001.952(ii)(1) and 1001.952(ii)(2) available for ASM participants to foster stronger connections with primary care providers in their communities and to promote a more holistic approach to ASM beneficiary care outcomes, so long as they comply with the proposed requirements at §§ 512.770 and 512.771. We seek public comments on this proposal.

l. Proposed Evaluation Approach

(1) Background

As proposed, ASM is designed to incentivize specialist providers to engage in accountable care and aims to improve quality of care while lowering spending. An evaluation of ASM would be required in accordance with section 1115A(b)(4) of the Act, which requires the Secretary to evaluate each model tested by the Innovation Center (84 FR 34533). All Innovation Center models are rigorously evaluated on their ability to improve quality of care and reduce costs. Additionally, we routinely monitor Innovation Center models for potential unintended consequences of the model that run counter to the stated objective of lowering costs without adversely affecting quality of care. Outlined later in this section are the proposed design and evaluation methods, the data collection methods, key evaluation research questions, and the evaluation period and anticipated reports for the proposed ASM.

(2) Design and Evaluation Methods

We propose an evaluation methodology for ASM that would be consistent with the standard Innovation Center evaluation approaches that we have taken in other models, such as TEAM and CJR. Specifically, the evaluation design and methodology for ASM would be designed to allow for a comparison of historic patterns of care among ASM participants to any changes made in these patterns in response to ASM. The overall design would include a comparison of ASM participants with comparable specialist providers not participating in ASM to help us discern simultaneous and competing providers and market level forces that could influence our findings.

Our proposed evaluation methodology for this model builds upon our proposal to use CBSAs and metropolitan divisions as the geographic unit of selection for participation in the model based on a stratified random assignment as described in section III.C.2.c.(4) of this proposed rule. Under this approach, researchers evaluate the effects of the model on outcomes of interest by directly comparing CBSAs and metropolitan divisions that are randomly selected to participate in the model to a comparison group of CBSAs and metropolitan divisions that were not randomly selected for the model but could have been. Randomized evaluation designs of this kind are widely considered the ''gold standard'' for social science and medical research because they ensure that the systematic differences are reduced between units that do and do not experience an intervention, which ensures that (on average) differences in outcomes between participating and non-participating units reflect the effect of the intervention.

We plan to use a range of analytic methods, including regression and other multivariate methods appropriate to the analysis of stratified randomized experiments to examine each of our measures of interest. Measures of interest could include, for example, quality of and access to care, utilization patterns, expenditures, and beneficiary experience. With these methods, we would be able to examine the experience of the ASM participants over time relative to those in the comparison group controlling for as many of the relevant confounding factors as is possible. The evaluation would also include rigorous qualitative analyses to understand the contextual factors influencing the implementation and impact of ASM and the evolving nature of care delivery transformation.

In our proposed evaluation methodology, we plan to account for the impact of ASM at the geographic unit level, the TIN/NPI level, and the beneficiary level. We would also consider various statistical methods to address factors that could confound or bias our results. We would also account for clustering of beneficiaries within TINs and markets. Accounting for clustering ensures that we do not overstate our effective sample size by failing to account for the fact that the performance of participants in a market may not be fully independent of one another. Accounting for clustering may also improve statistical precision and allow us to better examine how patterns of performance vary across TINs and markets. Thus, in our analysis, if a large TIN consistently has poor performance, clustering would allow us to detect improved performance in the other, smaller TINs in a market rather than place too much weight on the results of one TIN and potentially lead to biased estimates and mistaken inferences.

Finally, we plan to use various statistical techniques to examine the effects of the ASM while also accounting for the effects of other ongoing interventions such as the Medicare Shared Savings Program. For example, we are considering additional regression techniques to help identify and evaluate the incremental effects of adding ASM in areas where patients and market areas are already subject to these other interventions as well as potential interactions among these efforts.

(3) Data Collection Methods

As part of our proposed evaluation methodology, we propose to consider multiple sources of data to evaluate the effects of ASM. We expect to base much of our quantitative analyses on secondary data sources including Medicare FFS claims. The beneficiary claims data would provide information such as utilization and expenditures in total and by type of provider and service. In conjunction with the secondary data sources mentioned previously, we would consider a CMS-administered survey, guided interviews, and focus groups of beneficiaries who experienced a heart failure or low back pain episode during the ASM test period. This survey would be administered to ASM beneficiaries who were in an episode or similar patients selected as part of a control group. The primary focus of this survey would be to obtain information on the ASM beneficiary's experience in episodes relative to usual care. We are also considering a survey administered by CMS to ASM participants. These surveys would provide insight into providers' experience under the model and further information on the care redesign strategies undertaken by health care providers.

In addition, we would consider site visits and focus groups with selected active ASM participants. We believe that these qualitative methods would

provide contextual information that would help us better understand the dynamics and interactions occurring between ASM participants and other providers. For example, these data would help us better understand ASM participants' plans for engagement with PCPs in accountable care arrangements, as well as how those plans were implemented and what they achieved. Additionally, in contrast to relying on quantitative methods alone, qualitative approaches would enable us to capture variations in implementation as well as identify factors that are associated with successful interventions and distinguish the effects of multiple interventions that may be occurring within participating providers, such as simultaneous ACO and bundled payment participation.

We are considering primary data collection efforts with providers and beneficiaries within the comparison group. The systematic data collection from comparison group providers would allow for parsing out changes in standard of care from the ASM impact. Additionally, primary data collection with beneficiaries who received care at comparison group providers would provide critical information about the impact of the model on self-reported health status, experience of care and overall satisfaction.

(4) Key Evaluation Research Questions

Our evaluation would assess the impact of ASM on the dual aims of improved care quality and reduced costs. The evaluation would include assessments of Medicare expenditures, utilization, quality outcomes, and patient experience of care. Our key evaluation questions would include, but are not limited to, the following:

- Payment. Is there a reduction in Medicare expenditures in absolute terms? By subcategories including major cost drivers for heart failure and low back pain episodes? Does ASM reduce variations in expenditures that are not attributable to differences in health status? Did ASM result in net savings to the Medicare program, after accounting for any payment adjustments made under the model?
- Utilization. Are there changes in Medicare utilization patterns overall and for specific types of services including services identified as ''low value''? How do these patterns compare to historic patterns, regional variations, and national patterns of care? How are these patterns of changing utilization associated with Medicare payments, patient outcomes, and general clinical judgment of appropriate care?
- Quality of care. What impact did the model have on quality of care for beneficiaries? Did the incidence of relevant clinical outcomes such as hospital admissions remain constant or decrease? Were there changes in beneficiary outcomes under the model compared to appropriate comparison groups?
- Beneficiary experience. What impact did the model have on beneficiary experience overall and for beneficiary subgroups? Did the model have an impact on beneficiaries' engagement in their health care decisions?
- Care delivery transformation. How has provider behavior in the mandatory geographic areas changed under the model? Is there evidence of broader market-level changes? Are provider relationships changing over the course of the model? Is the model facilitating continuity of care between specialty and PCPs? Is there evidence that the participants' changes in care delivery that were made in the response to the model will be sustained?
- Unintended outcomes. Did ASM result in any unintended consequences, including adverse selection of patients, access problems, cost shifting, evidence of stinting on appropriate care, anti-competitive effects on local health care markets, evidence of inappropriate referrals practices? If so, how, to what extent, and for which beneficiaries or providers?

(5) Evaluation Period and Anticipated Reports

As discussed in section III.C.2.b. of this proposed rule, we propose that the ASM test period would be 7 years that includes both ASM performance years and ASM payment years. The evaluation period would encompass the ASM test period. We would plan to evaluate ASM on an annual basis. However, we recognize that interim results are subject to issues such as sample size and random fluctuations in practice patterns. Hence, while we intend to conduct periodic summaries to offer useful insight during the model test, a final analysis after the end of the 7-year ASM test period would be important for ultimately synthesizing and validating results.

We seek public comments on our proposed design, evaluation, data collection methods, and research questions.

m. Proposed Overlap With Other Models Tested Under Section 1115A and CMS Programs

We propose to permit ASM to overlap with other CMS Innovation Center models and CMS programs, with the exception of MIPS, from which ASM participants would be excluded from reporting and participation, as proposed in section III.C.2.h.(2) of this proposed rule.

We intentionally designed ASM to apply to Medicare FFS beneficiaries that are assigned, aligned, or attributed to other CMS Innovation Center models, such as existing or forthcoming population-based total cost of care models, or CMS programs, such as the Medicare Shared Savings Program, while ensuring compatibility and alignment towards improving care and reducing spending. The ASM payment methodology allows for overlaps between ASM and other Innovation Center models or CMS programs by avoiding shared savings payments to participants in more than one shared savings model, as barred by statute in 42 USC 1395jjj(b)(4)(A).

Overlapping incentives are key to aligning incentives across the care team because clinicians are more likely to change their behavior or engage in care transformation when the incentives directly affect them.[246] Because specialists drive the majority of spending within Original Medicare, increasing specialist awareness of their participation in ACOs and better engaging them in care transformation is key.[247] [248] Given this objective, ASM would apply to all clinicians meeting the ASM participant eligibility criteria, regardless of whether the clinician is excused from reporting to MIPS due to Advanced APM participation or if the clinician is exempt from reporting MIPS due to eligibility requirements. One reason that we propose to include this broad selection of clinicians as part of ASM is to encourage more specialist engagement with ACOs. The benefits of driving further specialist engagement in value-based care outweigh the additional burdens, especially given the specialists' patient panels make up a smaller portion of ACO-assigned beneficiaries relative to primary care.[249]

[249] Barnett ML, McWilliams JM. Changes in specialty care use and leakage in Medicare accountable care organizations. Am J Manag Care. 2018 May 1;24(5):e141–e149.

Furthermore, for any clinician who achieves Qualifying APM Participant (QP) status in an Advanced Alternative Payment Model, the QP is waived from reporting and participating in MIPS (81 FR 77062). In addition, participation in MIPS is optional for those Advanced APM participants who are partial QP (81 FR 77014). ASM, however, was designed to purposely overlap with Advanced APMs and ACOs to increase engagement of specialists, regardless of organizational structure. And for specialists participating in an ACO, ASM intends to capture Medicare FFS beneficiaries across the entire specialist practice rather than only the subset of beneficiaries assigned to the ACO. This expands the impact of incentives beyond those beneficiaries assigned to the ACO to the specialist's full panel of beneficiaries who are treated for each relevant condition. This ensures that ACOs are enabled by a landscape of specialists, whether participating in an ACO model or not, who are more likely to cooperate in care transformation to achieve their shared goals.

For these reasons, we propose to allow overlaps between ASM and other Innovation Center models and CMS programs. We propose that this model would apply to all clinicians meeting the eligibility criteria, regardless of whether the clinician is exempt from MIPS reporting during ASM's performance year due to QP status or Partial QP status as a result of meeting the thresholds for payments or patients tied to participation in an Advanced APM. We seek comment on the proposal to permit overlap between ASM and other Innovation Center and CMS programs.

n. Application of Standard Provisions for Mandatory Innovation Center Models

ASM meets the criteria for application of the Standard Provisions for Mandatory Innovation Center Models (42 CFR part 512, subpart A). Unless otherwise specified, all ASM participants and ASM beneficiaries would be subject to the provisions at §§ 512.100 through 512.190, which address the following areas:

- Beneficiary Protections.
- Cooperation in Model Evaluation and Monitoring.
- Audits and Record Retention.
- Rights in Data and Intellectual Property.
- Monitoring and Compliance.
- Remedial Action.
- Innovation Center Model Termination by CMS.
- Limitations on Review.
- Miscellaneous Provisions on Bankruptcy and Other Notifications.
- Reconsideration Review Process.

We recognize the standard provisions were not intended to encompass all the terms and conditions that would apply to each Innovation Center model, because each model embodies unique design features and implementation plans that may require additional, more tailored provisions, including with respect to payment methodology, care delivery and quality measurement, that would continue to be included in each model's governing documentation. Thus, we seek public comment on whether ASM should set forth model-specific provisions related to any of the provisions identified above.

E. Medicare Diabetes Prevention Program (MDPP)

The Centers for Medicare & Medicaid Services' (CMS) Medicare Diabetes Prevention Program Expanded Model (hereafter, ''MDPP'' or ''MDPP expanded model'') is an evidence-based behavioral intervention that aims to prevent or delay the onset of type 2 diabetes for eligible Medicare beneficiaries diagnosed with prediabetes. MDPP is an expansion in duration and scope of the Diabetes Prevention Program (DPP) model test, which was initially tested by CMS through a Round One Health Care Innovation Award (2012–2016).[250] The DPP model test successfully met statutory criteria for model expansion,[251] demonstrating 5 percent weight loss from their starting weight by participants (a key metric of the program's success) along with statistically significant reductions in Medicare spending, emergency department (ED) visits, and inpatient stays.[252] The MDPP expanded model was implemented through the rulemaking process in two phases, in the CY 2017 PFS (81 FR 80459 through 80483) and CY 2018 PFS final rules (82 FR 53234 through 53339).

MDPP was established in 2017 as an ''additional preventive service,'' [253] covered by Medicare and not subject to beneficiary cost-sharing, in addition to being available once per lifetime to eligible beneficiaries. To facilitate delivery of MDPP in a non-clinical community setting (to align with the certified DPP model tested by The CMS Innovation Center), CMS created a new MDPP supplier type through rulemaking in the CY 2017 PFS final rule (81 FR 80471), in addition to requiring organizations that wish to participate in MDPP to enroll in Medicare separately, even if they are already enrolled in Medicare for other purposes.

MDPP is a non-pharmacological behavioral intervention consisting of up to 22 intensive sessions furnished over 12 months, which consists of 16 core sessions delivered weekly over 6 months followed by core maintenance sessions delivered monthly in the following 6 months. MDPP sessions are delivered by a trained Coach who provides training on topics that include long-term dietary change, increased physical activity, and behavior change strategies for weight control and diabetes risk reduction. All sessions must adhere to a Centers for Disease Control and Prevention (CDC) approved National Diabetes Prevention Program (National DPP) curriculum [254] and must be 1 hour in length. The primary goal of the MDPP expanded model is to help Medicare beneficiaries reduce their risk for developing type 2 diabetes by achieving at least 5 percent weight loss from the first core session (81 FR 80465).

Eligible organizations seeking to furnish MDPP began enrolling in Medicare as MDPP suppliers on January 1, 2018, and began furnishing MDPP on April 1, 2018 (82 FR 53237). As of March 2025, there were 331 approved MDPP suppliers.[255] The most recent MDPP evaluation report reflected that between April 2018 and September 2024, approximately 9,015 beneficiaries have participated in MDPP. Of these, 4,396 were Medicare FFS beneficiaries and 4,650 were MA beneficiaries.[256]

[250] The Health Care Innovation Awards funds awards to organizations that implemented the most compelling new ideas to deliver better health, improved care, and lower costs to people enrolled in Medicare, Medicaid and Children's Health Insurance Program (CHIP), particularly those with the highest health care needs. The CMS Innovation Center announced the first batch of awardees for the Health Care Innovation Awards on May 8, 2012, and the second (final) batch on June 15, 2012. For more, see *https://www.cms.gov/priorities/innovation/innovation-models/health-care-innovation-awards.*

Through the Diabetes Prevention Recognition Program (DPRP), CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence based DPRP Standards,[257] which are updated every 3 years. The CDC established the DPRP in 2012 and possesses significant experience assessing the quality of program delivery by organizations throughout the United States, applying a comprehensive set of national quality standards. For further information on the DPP model test,[258] the CDC's National DPP,[259] and DPRP Standards,[260] please refer to the CY 2017 (81 FR 80471) and CY 2018 PFS (82 FR 52976) final rules and related websites.

The Public Health Emergency (PHE) for COVID–19 prompted changes to allow live, virtual delivery via distance learning for MDPP, among other changes (85 FR 84830 through 84841). Changes to MDPP in the CY 2024 PFS final rule (88 FR 78818) included a simplified payment structure to allow for FFS payments for beneficiary attendance while retaining the performance-based payments for diabetes risk reduction (that is, weight loss). Beginning January 1, 2024, payments are made to an MDPP supplier if an MDPP beneficiary attends any core session in the first 6 months or core maintenance session in the second 6 months, allowing payment for up to 22 sessions in a 12-month timeframe. The CY 2024 PFS final rule also extended certain PHE flexibilities, including the option to deliver some or all MDPP sessions via distance learning and for beneficiaries to virtually self-report weight for MDPP distance learning sessions, until December 31, 2027 (88 FR 79241).

CDC released the 2024 DPRP Standards [261] to replace the 2021 DPRP Standards in June 2024. The CY 2025 PFS final rule (89 FR 97710) made conforming changes to align with the 2024 CDC DPRP Standards and further clarify regulatory language pertaining to program delivery and claim submission by adding new MDPP terms for ''in-person with a distance learning component'' and ''combination with an online component.'' The CY 2025 PFS final rule also updated self-reporting weight requirements for an MDPP distance learning session by providing beneficiaries with a new option to self-report their weight using two photos for distance learning sessions. In addition, the CY 2025 PFS final rule added a HCPCS modifier for reporting a make-up session on the same day as a regularly scheduled MDPP session, and bridge payments were removed from MDPP's FFS payment structure.

While the CY 2024 and CY 2025 PFS final rules included changes to MDPP, which included enhancements that simplified payment structure and extended the ability for MDPP suppliers to deliver some or all MDPP sessions via distance learning, additional changes to MDPP through the CY 2026 PFS proposed rule are necessary to increase uptake of MDPP. Participation in MDPP has been low, with less than 1 percent of eligible beneficiaries participating in the program. While an estimated 9.3 million Medicare FFS beneficiaries are potentially eligible for the program (that is, have a prediabetes diagnosis but not a diabetes diagnosis in claims), fewer than 5,000 Medicare FFS beneficiaries have participated in MDPP during the first 6 years of the program. Increasing the uptake of MDPP among both suppliers and beneficiaries is necessary to increase the impact and success of the program.

In this proposed rule, we are proposing several changes which are aimed towards increasing the uptake of this important prevention-focused program while empowering beneficiaries and promoting further alignment between MDPP and the CDC DPRP Standards. Specifically, we are proposing changes to 42 CFR 410.79(b) to add definitions for the following terms: Live Coach interaction, Online delivery period, and Online session while modifying the definition of ''Online.'' We also propose changes to the expanded model by amending § 410.79(c)(1)(ii) and (e)(3)(iii)(C) to address operational questions and barriers related to weight collection requirements. We also propose to extend flexibilities allowed during the PHE for COVID–19 through December 31, 2029 by modifying the definition of extended flexibilities period in § 410.79(b). Finally, we are proposing to test the inclusion of an asynchronous delivery modality by modifying § 410.79 by revising paragraph (b) adding paragraph (f) and amending § 424.205(c)(10), (f)(2)(i), and (f)(5), which will allow MDPP suppliers to deliver the Set of MDPP services Online through December 31, 2029, clarify that MDPP suppliers are not required to maintain in-person delivery capability through December 31, 2029, and introduce a new G-code and payment for Online sessions. These changes are expected to expand beneficiary access to MDPP, reduce barriers to participation, improve MDPP session attendance and retention, and promote safety.

1. Changes to § 410.79(b)

The 2024 CDC DPRP Standards include the following delivery modes with definitions: ''In-person,'' ''Distance learning (live),'' ''In-person with a distance learning component,'' ''Online (non-live),'' and ''Combination with an online component.'' [262] These delivery modes also serve as organization codes for CDC DPRP recognition. As indicated in § 410.79(b), distance learning refers to an MDPP session that is delivered by trained Coaches via remote classroom and is furnished in a manner consistent with the DPRP Standards for distance learning sessions. The Coach provides live (synchronous) delivery of session content in one location and participants call-in or video-conference from another location.

The CY 2024 PFS final rule introduced and defined ''distance learning'' for MDPP and provided a definition for ''online delivery'' (88 FR 79243). The CY 2025 PFS final rule modified the definition for ''online delivery'' at § 410.79(b), to align with the 2024 CDC DPRP Standards [263] by revising the term from ''online delivery'' to ''online'' to align with both the MDPP ''distance learning'' term and CDC DPRP ''online (non-live)'' term (89 FR 98045). We also finalized the definition for the MDPP ''Online'' delivery mode to provide that sessions that are delivered one hundred percent (100 percent) through the internet via smartphone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI)) Coach

teaching the content. These sessions must be furnished in a manner consistent with the DPRP Standards for Online sessions. Live Coach interaction must be offered to each participant during weeks when the participant has engaged with content. E-mails and text messages can count toward the requirement for live Coach interaction if there is bi-directional communication between the Coach and participant, whereby both parties engage in the interaction. Chat bots and AI forums do not count as live Coach interaction. This modified definition added the term ''non-live'' and further clarified that Chat bots and AI forums do not constitute live interaction.

We propose to amend § 410.79(b) by adding definitions for Live Coach Interaction and Online session while modifying the definition for Online as defined at § 410.79(b) to clarify the Online delivery modality and remove requirements in the Online definition that will be outlined at § 410.79(f). We also propose adding the definition of Online delivery period, which refers to the 4-year period (January 1, 2026 to December 31, 2029) to test the inclusion of the Online delivery modality, described at § 410.79(f), to apply. During this time, MDPP suppliers may deliver the Set of MDPP services Online.

We propose to amend § 410.79(b) by adding definitions for ''Live Coach Interaction'' and ''Online Session'' while modifying the definition for Online as defined at § 410.79(b) to clarify the ''Online'' delivery modality and remove requirements in the Online definition that will be outlined at § 410.79(f). We also propose adding the definition of Online Delivery Period, which refers to the 4-year period (January 1, 2026 to December 31, 2029) to test the inclusion of the Online delivery modality, described at § 410.79(f), to apply. During this time, MDPP suppliers may deliver the Set of MDPP services Online.

The CY 2024 PFS final rule extended certain PHE flexibilities finalized in the CY 2021 PFS final rule, including the option to deliver some or all MDPP sessions via distance learning and for beneficiaries to virtually self-report weight for MDPP distance learning sessions, until December 31, 2027 (88 FR 79241). In the CY 2024 PFS, we finalized that during the Extended flexibilities period, MDPP suppliers may provide virtual services as long as they are provided in a manner consistent with the CDC DPRP standards for distance learning. The extension of these flexibilities allowed beneficiaries to obtain the Set of MDPP services either in-person, through distance learning, or through a combination of in-person and distance learning for a proposed period of 4 years. The Extended flexibilities definition refers to § 410.79(e)(3)(iii) and (iv), and the extended flexibilities period described at § 410.79(b) refers to the 4-year period (January 1, 2024 to December 31, 2027) for the Extended flexibilities to apply.

Prior to the PHE for COVID–19, MDPP suppliers delivered the program predominantly in-person. Delivery modes have shifted over time, with an increasing number of beneficiaries participating through the virtual delivery option. The most recent evaluation report indicates that from April 2018 through March 2024, 59 percent of MDPP beneficiaries predominantly attended the program in person, 7.5 percent of MDPP beneficiaries attended the program through a mix of in-person and virtual sessions, and 33.5 percent predominantly attended the program virtually.[264] Among beneficiaries who participate in MDPP via distance learning or in-person with a distance learning component (hybrid), most expressed their satisfaction by citing the flexibility the choices provided when faced with challenges such as inclement weather or travel restrictions that made in-person participation difficult.[265]

We are also proposing to extend flexibilities allowed during the PHE for COVID–19 through December 31, 2029 by revising the dates included in the definition for ''extended flexibilities period'' a § 410.79(b). We propose extending this flexibility to promote continued access to MDPP for beneficiaries. In particular, beneficiaries in geographic areas with a limited number of in-person MDPP suppliers or other areas (for example, rural) where travel to an in-person session may be challenging and may be further exacerbated under certain circumstances; for example, during inclement weather.

This proposed change will ensure that all delivery modalities for MDPP are available during the same period of time (that is, through December 31, 2029) creating greater alignment, reducing potential confusion amongst beneficiaries and suppliers, and streamlining the program. Additionally, the proposed change provides MDPP suppliers with a variety of modes in which to deliver the program and facilitates consistency across delivery modalities adhering to this same timeframe.

We are proposing to amend § 410.79(b) and seek comments on these proposals.

2. Proposed Changes to § 410.79 (c)(1)(ii) and (e)(3)(iii)(C)

Our policies for obtaining weight measurements for baseline weight and performance-based weight loss achievement goals are described at § 410.79(c)(1)(ii), and for the MDPP expanded model emergency policy, summarized at § 410.79(e)(3)(iii). Currently, these policies permit weight measurements used to determine the achievement or maintenance of the required minimum weight loss to be taken in person by an MDPP supplier during an MDPP session, or via digital technology during the Extended flexibilities period. Specifically, these policies permit an MDPP supplier to obtain weight measurements for MDPP beneficiaries for the baseline weight and any weight loss-based performance achievement goals in the following manner: (1) in-person, when the weight measurement can be obtained safely and in compliance with all applicable laws and regulations; (2) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (3) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary (89 FR 98046).

The CY 2025 PFS policies regarding beneficiary weight self-reported measurements and virtual weight collection (89 FR 98045) provided additional flexibilities for beneficiaries to self-report their weights by providing one or 2 (two) date-stamped photo(s) or a video recording of the beneficiary's weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. The photo(s) or video must clearly document the weight of the MDPP beneficiary as it appears on their digital scale on the date associated with the billable MDPP session. If choosing to submit one photo, this photo must show the beneficiary's weight on the scale with the beneficiary visible in their home. If choosing to submit two (2) photos, one photo must show the beneficiary's weight on the digital scale, and a second photo must show the beneficiary visible in their home.

Overall, commenters on the proposed MDPP Extended flexibilities in the CY 2024 PFS and CY 2025 PFS rules were very supportive of CMS continuing to

[264] RTI International. Evaluation of the Medicare Diabetes Prevention Program. March 2025. *https://www.cms.gov/priorities/innovation/data-and-reports/2025/mdpp-finalevalrpt.*

[265] RTI International. Evaluation of the Medicare Diabetes Prevention Program. March 2025. *https://www.cms.gov/priorities/innovation/data-and-reports/2025/mdpp-finalevalrpt.*

allow virtual weight collection (88 FR 79240 through 79256, 89 FR 98046). However, we received several comments regarding barriers to virtual weight collection experienced by MDPP suppliers and beneficiaries. This problem has become even more relevant as suppliers continue to expand distance learning to help reach beneficiaries in rural and underserved areas, sometimes across state lines.

For example, several commenters reported that many of their beneficiaries are unable to take a picture while standing on their home scales due to risk of injury and physical health limitations. The current weight collection requirements discourage individuals with mobility concerns from participating in MDPP due to risk of injury while self-reporting weight from home. Beneficiaries with mobility concerns may need to obtain weight at a medical office using a special scale (for example, wheelchair scale). Currently, beneficiaries do not have the option to submit medical record data as proof of weight, contributing to participant burden. Additionally, we have received feedback from suppliers stating that the requirement that beneficiaries must self-report weight by providing date-stamped photo(s) or video which must show the beneficiary's weight on the digital scale and the visible in their home is restrictive.

We acknowledge in our responses to these comments that some MDPP beneficiaries may lack the technology or capacity to provide a date-stamped photograph to document their body weight measurements. We previously stated that in situations in which beneficiaries may be unable to self-report their weight according to the MDPP conditions of coverage, suppliers may want to consider collecting weight measurements from the MDPP beneficiary in person (88 FR 79249). However, this may not be a practical option for beneficiaries who have chosen distance learning based on not living within driving distance from an MDPP supplier location, lack access to transportation, or are participating from a location outside of their home or an in-person delivery site.

Therefore, we propose revising § 410.79(c)(1)(ii) to allow for weight measurements used to determine the achievement or maintenance of the required minimum weight loss to be based on weight documented in the beneficiary's medical record within 2 days of the completion of the MDPP session. Currently, beneficiaries must weigh in during their in-person MDPP session or self-report weight measurements on the date associated with the billable MDPP session. We anticipate that suppliers and beneficiaries will appreciate the expanded flexibilities surrounding weight collection for MDPP as current requirements limit the ability of a beneficiary to report their weight from locations outside of an in-person delivery site or their home and prevent beneficiaries from submitting weight measurements documented in a medical record. We expect these additional flexibilities to empower beneficiaries, improve MDPP beneficiary engagement, session attendance, retention, and program completion. We considered alternative timeframes ranging from 3 to 5 days for this proposed change. We believe a 2-day documentation window prevents significant overlap between session documentation periods, considering core sessions occur weekly. We believe a shorter timeframe would be overly restrictive for suppliers and beneficiaries. We solicit public comments on this proposed timeframe and welcome feedback on whether the two (2) day documentation window is appropriate, or if alternative timeframes would better serve MDPP suppliers and MDPP beneficiaries while maintaining program integrity.

Additionally, we propose revising § 410.79(e)(3)(iii)(C) to allow beneficiaries to self-report weight from a reasonable location outside of an in-person delivery site. Examples of a reasonable location outside of an in-person delivery site include, but are not limited to fitness centers, medical facilities, and temporary abodes (for example, travel accommodations or a family member's home). Currently, beneficiaries must submit photo(s) or video documenting their weight on a digital scale from their home, which limits their ability to submit required weight measurements when on vacation or away from their home. We are continuing to require the date-stamp on photo(s) to ensure program integrity in the virtual setting.

We propose amending § 410.79(c)(1)(ii) and (e)(3)(iii)(C). We are soliciting comments on these proposals.

3. Proposed Changes to § 410.79 by Adding Paragraph (f) and Amending § 424.205(c)(10), (f)(2)(i), and (f)(5)

In the CY 2018 PFS final rule, we stated our intention to align MDPP with CDC DPRP Standards whenever possible (82 FR 53245). The CDC DPRP Standards have included virtual, online modalities and approaches since 2015.[266] MDPP has included in-person delivery of the Set of MDPP Services since it began serving beneficiaries in 2018. The MDPP expanded model emergency policy (85 FR 84831) broadened the delivery of the Set of MDPP services through synchronous distance learning to provide greater flexibility during the PHE for COVID–19, and later extended distance learning, and other related flexibilities through December 31, 2027, as part of the CY 2024 PFS final rule (82 FR 53249).

In the CY 2021 PFS final rule, we established that virtual sessions performed under flexibilities finalized in that rule could only be performed by MDPP suppliers who offered in-person services (85 FR 84830) and maintained CDC DPRP ''in-person'' recognition (85 FR 84830 and 84831). In the CY 2024 PFS final rule, we extended flexibilities allowed during the PHE for COVID–19 for 4 years, or through December 31, 2027 (88 FR 79241). We also confirmed that suppliers who exclusively delivered MDPP services virtually via distance learning without maintaining in-person delivery capability were not permitted to furnish the Set of MDPP services because MDPP beneficiaries may elect to return to in-person services, and MDPP suppliers need to be able to accommodate their request (88 FR 79248).

The CY 2025 PFS final rule confirmed that only MDPP ''in-person,'' ''distance learning,'' and ''in-person with a distance learning component'' delivery modes are acceptable delivery modalities for MDPP during the Extended flexibilities period, as finalized in the CY 2024 PFS final rule (88 FR 79241). The CY 2025 PFS final rule did not include ''online'' nor ''combination with an online component'' as accepted delivery modalities for MDPP. For the MDPP Extended flexibilities period, we finalized in the CY 2024 PFS final rule to limit virtual delivery to the CDC DPRP definition of ''distance learning'' (88 FR 79243). We stated that the MDPP Extended flexibilities do not include online delivery (or asynchronous virtual), as defined in the CDC DPRP Standards through the ''Online'' modality, including virtual make-up sessions (88 FR 79244). The 2024 CDC DPRP Standards allow for National DPP make-up sessions to be furnished using any delivery mode, including online.[267]

[266] 2015 CDC DPRP Standards: *https://stacks.cdc.gov/view/cdc/44247.*

[267] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://*

The MDPP expanded model was certified as a primarily in-person program. Virtual-only providers include those that deliver the National DPP services solely by distance learning or online delivery. Although ''telehealth'' is included in CDC's definition of distance learning, CMS stated in the CY 2017 PFS final rule (82 FR 53235) that the Set of MDPP services delivered via a telecommunications system, or other remote technologies do not qualify as telehealth services. Additionally, we have stated that through utilizing distance learning, participants may still interact with their Coach and other participants in their cohort in real-time, allowing for relationship building and peer support, unlike the Online modality which is delivered asynchronously (88 FR 79244).

We have responded to previous public comments requesting that CMS allow asynchronous delivery of MDPP and virtual-only providers to offer MDPP in previous rules (85 FR 84831, 89 FR 98045). Commenters have expressed that the exclusion of an asynchronous delivery modality is misaligned with the CDC DPRP Standards, which permit ''online'' asynchronous participation. Suppliers have commented that the exclusion of asynchronous modality significantly limits program participation. Advocacy group members pursued legislation that would require CMS to open the MDPP to suppliers of asynchronous ''online'' MDPP programs through the PREVENT DIABETES Act [H.R. 7856] [268] in April 2024. Although this bill was not enacted into law, suppliers continue to encourage CMS to meet the demand for asynchronous delivery of MDPP. After the PHE went into effect in March 2020, more than 90 percent of all MDPP sessions were delivered virtually via Distance learning. To date, average weight loss for MDPP beneficiaries is 4.9 percent of starting body weight. Among beneficiaries that attend their sessions primarily in person, the average weight loss was 4.6 percent, compared with an average weight loss of 5.3 percent among those that attend sessions virtually via Distance learning.[269]

We propose adding paragraph (f) to 45 CFR 170.79 to test the addition of coverage of an Online delivery modality during the Online delivery period (until December 31, 2029). Consistent with the 2024 CDC DPRP Standards, organizations are required to submit a separate application for each delivery mode used to the CDC. This will result in a separate organization code (orgcode) for each delivery mode. Therefore, organizations are required to obtain an online organization code from CDC prior to delivering Online sessions for MDPP.

As referenced above, The MDPP expanded model was certified as a primarily in-person program, and CMS previously opposed inclusion of an asynchronous delivery modality for MDPP for various reasons. We consider the proposed change to include the Online, asynchronous delivery modality as an MDPP delivery modality as a test during the Online delivery period permitted under the PHE. To evaluate the efficacy of Online delivery during the Online delivery period, beneficiary outcomes from asynchronous (that is, Online) will be evaluated to determine if this delivery modality reduces costs and improves quality. We continuously monitor MDPP trends and believe that the inclusion of Online delivery during the Online delivery period will build upon previous changes to introduce distance learning during the PHE for COVID–19 (85 FR 84830 through 84841) and respond to innovations in health care delivery and the increased provision of services outside of in-office settings. In addition, we anticipate that the inclusion of the Online delivery modality will promote beneficiary access to services, remove the barrier of beneficiaries having to wait for a cohort to start due to the on-demand nature of this proposed modality, build on the inclusion of the distance learning delivery modality, and align with the CMS Innovation Center Strategy to Make America Healthy Again by promoting evidence-based prevention, empowering people to achieve their health goals, and driving choice and competition for people.[270] In the CY 2024 PFS, CMS reminded MDPP suppliers that they are required to maintain capacity to deliver the MDPP set of services in-person [271] however, we are proposing under paragraph (f)(2) of 42 CFR 410.79 to explicitly not require MDPP suppliers to maintain in-person delivery capability during the Online delivery period. This will allow for distance learning and online-only organizations to enroll in Medicare as an MDPP supplier and streamline the process to allow for Online delivery of the Set of MDPP services. In hopes of further increasing program participation among suppliers and beneficiaries and promoting alignment between MDPP and the 2024 CDC DPRP Standards, we propose adding coverage of the delivery of the Set of MDPP services using the Online modality during the Online delivery period to test if outcomes, for MDPP beneficiaries, including weight loss, are similar to the in-person and distance learning delivery modalities.

Additionally, under § 410.79 (f)(2)(i), we propose that Online sessions must be furnished in a manner consistent with the DPRP Standards regarding program format, coach interaction, and program intensity and duration to qualify for payment. Online sessions must be delivered one hundred percent (100 percent) through the internet via smartphone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence ([AI]) Coach teaching the content. We propose at § 410.79 (f)(2)(i)(A) that Live Coach interaction must occur between MDPP beneficiaries and Coaches during the weeks when the beneficiary has engaged with content to qualify for payment. MDPP suppliers may not use AI or Machine Learning (ML) to replace Live Coach interaction.

Additionally, we propose that weight collection procedures referenced in the MDPP expanded model emergency policy at § 410.79(e)(3)(iii)(C) as well as the proposed (c)(1)(ii) apply during the online delivery period for MDPP services, as defined at § 410.79 (b). Beneficiaries must submit weight measurements on the date on which the online session is completed. We also propose at § 410.79 (f)(2)(i)(B) that MDPP suppliers must ensure safeguards are in place to ensure the accuracy of beneficiary weight measurements. These safeguards may include but are not limited to quality controls, diagnostic testing of hardware and/or software, and monitoring of trends (for example, rapid beneficiary weight loss within a short timeframe), are in place to ensure the accuracy of beneficiary weight

measurements. For example, if organizations choose to use a website or mobile application to deliver the Set of MDPP services Online, integrations with hardware such as smart/Bluetooth™ scales may be used to collect beneficiary weight measurements. Scales may be set up to automatically transmit weight measurements directly to the MDPP supplier and MDPP suppliers may opt to perform data validation checks and flag suspicious entries or ensure necessary firmware updates are deployed to ensure the accuracy and/or security of such scales. As described in at § 410.79 (f)(2)(i)(B), MDPP suppliers delivering the Set of MDPP services must ensure necessary technological safeguards to ensure the accuracy of weight collected through Bluetooth™ scales, transmitted through an application, or utilizing any other means that do not involve direct Coach interaction or coach review of photos/video. For instance, CMS expects organizations to ensure safeguards to avoid fraud, waste, and abuse (including but not limited to hardware or software errors and data manipulation) and organizations may be subject to audits to ensure compliance.

While CDC DPRP Standards define ''combination with an online component'' as a yearlong National Diabetes Prevention Program Lifestyle Change Program (National DPP LCP) delivered as a combination of online (non-live) with in-person and/or distance learning, we are proposing that MDPP suppliers deliver MDPP via in-person, distance learning, in-person with a distance learning component, or Online modalities. While MDPP suppliers may offer synchronous and asynchronous modalities, they may not intermingle asynchronous (for example, Online) and synchronous (that is, In-Person, In-person with a distance learning component, and Distance learning) delivery modalities for individual beneficiaries. The Set of MDPP services, inclusive of make-up sessions, must be delivered to individual beneficiaries fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component) or fully asynchronously (that is, Online). To evaluate the efficacy of the Online delivery modality during the Online Delivery Period, beneficiary outcomes from synchronous (that is, In-person, distance learning, or In-person with a distance learning component) delivery of the Set of MDPP services must be compared to beneficiary outcomes from asynchronous (that is, Online), therefore, these modalities must be delivered separately for individual beneficiaries in order to evaluate whether Online results, including weight loss, are similar to in-person and distance learning delivery modalities.

If organizations choose to provide the Set of MDPP services Online, we propose that organizations must adhere to requirements consistent with CDC DPRP Standards regarding program format, coach interaction, and program intensity and duration to qualify for payment, as described at § 410.79 (f)(2)(i).[272] Specifically, we propose during the Online delivery period at § 410.79(f)(2)(i)(D) that organizations must ensure that participants enrolled in self-paced programs engage with the content through use of one or more of the following: documented completion of videos/presentations and other learning modules in the application; knowledge checks (multiple choice or short answer); participant contributions to group discussions on a community board; and participant responses to the Coach via email, text message, or in-app messaging.

Though the 2024 CDC DPRP Standards indicate live lifestyle coach interaction is required for Online delivery and should be offered to each participant during weeks when the participants have engaged with program content, we propose that live coach interaction must occur between the Coach and MDPP beneficiary as part of each session for the MDPP supplier to receive payment for that session at § 410.79(f)(2)(i)(A). Consistent with the CDC DPRP Standards, E-mails and text messages can count toward the requirement for live coach interaction as long as there is bi-directional communication (that is, organizations may not simply send out an announcement via text or e-mail and count that as live coach interaction; the participant must have the ability to respond to and get support from the live coach) and both parties engage in some sort of communication. In alignment with CDC DPRP Standards, we are proposing that Coaches be required to track beneficiary engagement and completion of Online modules. Additionally, proactive outreach by the Coach may be used to encourage session completion and reporting of weight. To promote consistency with the 2024 CDC DPRP Standards and to ensure that beneficiaries receive Live Coach interaction across delivery modalities, we are proposing that MDPP Suppliers may not require that beneficiaries initiate Coach interactions and MDPP Suppliers may not use AI or Machine Learning (ML) to replace live coaching, as described at § 410.79(f)(2)(i)(A).

We also propose to amend § 424.205(c)(10) to allow the minimum number of required MDPP core sessions and core maintenance sessions to be delivered Online during the Online delivery period.

At § 424.205(c)(10)(i), we propose to require 16 in-person, distance learning, or online core sessions no more frequently than weekly for the first 6 months of the MDPP services period, which begins on the date of attendance at the first such core session. Next, at § 424.205(c)(10)(ii), we propose to require one in-person, distance learning, or online core maintenance session each month during months 7 through 12 (6 months total) of the MDPP services period.

We also propose to amend § 424.205(f)(2)(i) to include the online modality among acceptable session types for session documentation. We are proposing in § 424.205(f)(5)(i) through (iv) to incorporate changes necessary for other proposed changes, including the addition of references directly to § 410.79(c)(1)(ii), and removal of references to ''in person'' in regard to how weight loss must be measured. These proposed changes provide greater clarity regarding the MDPP supplier's records in regard to claim submission for weight loss and are aligned with the proposed changes allowing for weight documented in a medical record.

We anticipate that beneficiaries will appreciate the option to participate in MDPP via the Online modality, which will expand beneficiary access to MDPP, reduce barriers to participation, and improve health outcomes. MDPP suppliers and advocacy groups will also appreciate inclusion of the Online modality, as these entities have commented that the exclusion of the online modality significantly limits program participation, particularly for beneficiaries living in areas without a nearby in-person MDPP delivery site (for example, rural areas) or access to transportation.

We propose to amend § 410.79(f) and § 424.205(c)(10), (f)(2)(i), and (f)(5). We are soliciting comments on these proposals.

4. Changes to § 414.84

MDPP, as defined at § 410.79(b), consists of up to 16 sessions offered during the core session period (Months 1 to 6) and 6 monthly maintenance sessions offered during the core

[272] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures.*

maintenance session interval period (Months 7 to 12), (collectively the ''core services period''). While MDPP has an attendance-based fee-for-service payment structure as finalized in the CY 2024 PFS final rule (88 FR 79251), MDPP suppliers are also rewarded for successful outcomes for beneficiaries (weight loss), motivating them to not only retain participants, but also deliver a high-quality program that achieves better outcomes through performance-based payments. The fee-for-service payment structure finalized in the CY 2024 PFS final rule (88 FR 79251) added a distance learning HCPCS G-code, taking into consideration the Extended flexibilities.

We propose edits throughout § 414.84 by revising paragraphs (b)(1) introductory text and (b)(2) introductory text to update language to include all accepted MDPP delivery modes for performance goals in which beneficiaries achieve weight loss milestones. We also propose adding paragraph (c)(3) to indicate payment for Online delivery, including the inclusion of a new HCPCS G-code, G9871, for online delivery (Behavioral counseling for diabetes prevention, online, 60 minutes). Finally, we propose redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5) respectively and revising the redesignated paragraph (c)(4)(ii) to include a payment rate for a core session or core maintenance session furnished Online during the Online delivery period ($18). We seek comments on these proposals.

Table 46 displays the proposed CY 2026 MDPP payment structure for the set of MDPP services delivered Online.

TABLE 46: MEDICARE DIABETES PREVENTION PROGRAM (MDPP) EXPANDED MODEL CALENDAR YEAR PROPOSED (CY) 2026 ONLINE PAYMENT STRUCTURE

HCPCS G-Code	Payment Description*	CY 2026
G9871	Behavioral counseling for diabetes prevention, online, 60 minutes	$18
G9880	5 percent WL Achieved from baseline weight	$XXX
G9881	9 percent WL Achieved from baseline weight	$XX
G9888	Maintenance 5 percent WL from baseline in months 7-12	$X

Note: Medicare pays up to 22 sessions. Online sessions billed with code G9871cannot be combined with G9886 or G9887, in a 12-month period:
Months 1-6: one online session every week (up to 16)
Months 7-12: one online session every month (up to 6)
Months 7-12, once participant achieves 5% WL, suppliers delivering the set of MDPP services Online may submit Maintenance of 5% WL claim with attendance claim (G9888 + G9871). Medicare will pay for Maintenance 5% WL up to 6 times in months 7-12.

As indicated in Table 46, performance payments for 5 percent weight loss achieved from baseline weight (G9880) and 9 percent weight loss achieved from baseline weight (G9881) will remain the same regardless of delivery modality for MDPP. For each beneficiary, MDPP suppliers must either bill claims with G9886, G9887, a combination of G9886 and G9887, or G9871. The proposed G9871 for behavioral counseling for diabetes prevention, online, 60 minutes is for the set of MDPP services delivered Online, asynchronously. The existing G9886, behavioral counseling for diabetes prevention, in-person, group, 60 minutes, and G9887, behavioral counseling for diabetes prevention, distance learning, 60 minutes are delivered synchronously. Therefore, we are proposing that for each beneficiary, suppliers may not bill for the Set of MDPP services that were delivered through a combination of synchronous and asynchronous delivery modalities. Specifically, for MDPP beneficiaries, MDPP suppliers may not bill for Online Sessions as well as In-Person or Virtual Sessions during the Online delivery period. The Set of MDPP services must be delivered to individual beneficiaries as exclusively Online sessions (fully asynchronous) or exclusively In-person, distance learning, or In-person with a distance learning component sessions (fully synchronous). To evaluate the efficacy of Online delivery during the Online Delivery Period, beneficiary outcomes from synchronous (that is, In-person, Distance learning, or In-person with a distance learning component) delivery of the Set of MDPP services must be compared to beneficiary outcomes from asynchronous (that is, Online), therefore, these modalities must remain mutually exclusive for individual beneficiaries. While the 2024 CDC DPRP Standards define ''Combination with an online component'' as sessions that are delivered as a combination of online (non-live) with in-person or distance learning, this will not be an accepted delivery modality for MDPP while online delivery is being tested through December 31, 2029.

In summary, we are proposing to amend § 414.84 by revising paragraphs (b)(1) introductory text and (b)(2) introductory text; adding paragraph (c)(3); redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5) respectively; and revising the redesignated paragraph (c)(4)(ii). We are seeking comments on these proposals.

I. Medicare Prescription Drug Inflation Rebate Program

1. Background

a. Overview of the Medicare Prescription Drug Inflation Rebate Program

Sections 11101 and 11102 of the Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, enacted August 16, 2022) established requirements under which drug manufacturers must pay inflation rebates if they raise their prices for certain drugs payable under Part B and/or covered under Part D faster than the rate of inflation. Specifically, section 11101 of the IRA amended section 1847A of the Social Security Act (the

Act) by adding new subsection (i) which establishes a requirement for drug manufacturers to pay rebates into the Federal Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the specified amount, as determined under section 1847A(i)(3)(A)(ii) of the Act, exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The IRA also provides for an adjustment to the beneficiary coinsurance amount in cases where the price of a Part B rebatable drug increases faster than the rate of inflation such that the beneficiary coinsurance is calculated based on the lower inflation-adjusted payment amount instead of the applicable payment amount. Section 1847A(i)(2) of the Act defines a ''Part B rebatable drug,'' in part, as a single source drug or biological product (as defined in section 1847A(c)(6)(D) of the Act), including a biosimilar biological product (as defined in section 1847A(c)(6)(H) of the Act), but excluding a qualifying biosimilar biological product (as defined in section 1847A(b)(8)(B)(iii) of the Act) for which payment is made under Part B.

Section 11102 of the IRA added section 1860D–14B of the Act, which requires drug manufacturers to pay rebates into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund for each 12-month applicable period, starting with the applicable period that began on October 1, 2022, for Part D rebatable drugs if the annual manufacturer price (AnMP) of such drug, which is calculated as set forth in section 1860D–14B(b)(2) of the Act, exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1860D–14B(b)(3) of the Act. Section 1860D–14B(g)(1)(A) of the Act defines a ''Part D rebatable drug,'' in part, as a drug or biological described at section 1860D–14B(g)(1)(C) of the Act that is a ''covered Part D drug'' as that term is defined in section 1860D–2(e) of the Act. The definition of a Part D rebatable drug includes drugs approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic (FD&C) Act, drugs approved under an abbreviated new drug application under section 505(j) of the FD&C Act that meet certain sole source criteria described at sections 1860D–14B(g)(1)(C)(ii)(I) through (IV) of the Act, and biologicals licensed under section 351 of the Public Health Service Act, including biosimilars.

The IRA sets forth different parameters for determining rebates under the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program. With respect to the rebates owed, for each calendar quarter beginning on or after January 1, 2023, the manufacturer of a Part B rebatable drug is required, for such drug, not later than 30 days after the date of receipt of the Rebate Report from CMS, to pay a rebate into the Federal Supplementary Medical Insurance Trust Fund if the amount specified in section 1847A(i)(3)(A)(ii)(I) of the Act exceeds the inflation-adjusted payment amount (calculated as set forth in section 1847A(i)(3)(C) of the Act) for an applicable calendar quarter. In contrast, for each 12-month applicable period beginning on or after October 1, 2022, the manufacturer of a Part D rebatable drug is required, for such drug, not later than 30 days after the date of receipt of the Rebate Report from CMS, to pay a rebate into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund if the amount of the AnMP (calculated as set forth in section 1860D–14B(b)(2) of the Act) exceeds the inflation-adjusted payment amount (calculated as set forth in section 1860D–14B(b)(3) of the Act). With respect to invoicing manufacturers for the rebate amount owed, under section 1847A(i)(1) of the Act, CMS must report rebate amounts to each manufacturer of a Part B rebatable drug no later than 6 months after the end of each calendar quarter, except that for calendar quarters beginning in 2023 and 2024, CMS has until September 30, 2025, to invoice manufacturers for rebates. In contrast, under section 1860D–14B(a) of the Act, CMS must report rebate amounts to each manufacturer of a Part D rebatable drug no later than 9 months after the end of each applicable period, except that for the first two applicable periods (that is, October 1, 2022, to September 30, 2023, and October 1, 2023, to September 30, 2024), CMS has until December 31, 2025, to invoice manufacturers for Part D inflation rebates. Additionally, there are statutory differences in the inputs (that is, data sources) used to calculate the rebate amounts for Part B and Part D.

In the CY 2025 PFS final rule (89 FR 98228 through 98313), to implement sections 11101 and 11102 of the IRA, we codified these requirements and established other policies at parts 427 and 428 under title 42, chapter IV of the Code of Federal Regulations for Part B and Part D, respectively.

b. Summary of Proposed Policies for the Medicare Prescription Drug Inflation Rebate Program

We are proposing new policies for the Medicare Part B Drug Inflation Rebate Program as follows:

- Proposed § 427.302(c)(5) describes how CMS would identify the payment amount benchmark quarter if data needed to calculate the payment amount in the payment amount benchmark quarter are not available.
- Proposed § 427.302(d)(1)(i) describes CMS' method for calculating the payment amount in the payment amount benchmark quarter if a published payment limit is not available.
- Proposed § 427.302(d)(1)(ii) describes CMS' method for calculating the payment amount in the payment amount benchmark quarter if there is no published payment limit and neither positive Average Sale Price (ASP) nor positive Wholesale Acquisition Cost (WAC) data are available in the ASP Data Collection System.

We also are proposing new policies for the Medicare Part D Drug Inflation Rebate Program as follows:

- Proposed to use a claims-based methodology to implement § 428.203(b)(2), which provides that, for claims with dates of service on or after January 1, 2026, and with respect to an applicable period, CMS will exclude from the total number of units used to calculate the total rebate amount for a Part D rebatable drug those units of the Part D rebatable drug for which a manufacturer provided a discount under the 340B Program.
- Proposed to establish a 340B repository to receive voluntary submissions from 340B covered entities of certain data elements from Part D 340B claims.

2. Medicare Part B Drug Rebates for Single Source Drugs and Biological Products With Prices That Increase Faster Than the Rate of Inflation

a. Definitions (§ 427.20)

We propose to amend § 427.20 by removing the term ''Billing and payment code FDA approval or licensure date''. The term was not included in the CY 2025 PFS proposed rule. This term was intended to be used in the final rule at § 427.302(c), as evidenced by references to it in the final rule (89 FR 98244). Prior to publication of the final rule, however, we ultimately incorporated the definition text in place of the defined term, rendering the defined term inoperative, and we neglected to delete the unused term. To avoid any confusion arising from superfluous

regulatory text, we are proposing to remove the definition.

In the CY 2025 final rule (89 FR 98579), we codified the definition of manufacturer in § 427.20 to have the meaning set forth in section 1847A(c)(6)(A) of the Act. As articulated in the CY 2025 final rule (89 FR 98266), we will identify the manufacturer that is responsible for paying a rebate amount using the same approach used for reporting ASP and Medicaid Drug Rebate Program (MDRP) data. In this proposed rule, as a matter of operations, we are clarifying that CMS identifies the manufacturer with financial responsibility for the inflation rebate for a Part B rebatable drug by reviewing ASP data submissions for the current reporting period and the agency will also take into account, as applicable, manufacturer-identifying information in other CMS systems including MDRP.

b. Drugs Covered as Additional Preventive Services (DCAPS)

Medicare Part B covers ''additional preventive services,'' as defined under section 1861(ddd)(1) of the Act, that identify medical conditions or risk factors and that the Secretary determines are: (A) reasonable and necessary for the prevention or early detection of an illness or disability; (B) recommended with a grade of A or B by the United States Preventive Services Task Force; and (C) appropriate for individuals entitled to benefits under Part A or enrolled under Part B. Section 1861(ddd)(2) of the Act states that, in making determinations under section 1861(ddd)(1) of the Act, the Secretary shall use the process for making National Coverage Determinations (as defined in section 1869(f)(1)(B) of the Act) in the Medicare program. Section 1833(a)(1)(W)(ii) of the Act provides for the payment for additional preventive services, including drugs.

On September 30, 2024, CMS established coverage of certain drugs as an additional preventive service under section 1861(ddd)(1) of the Act for the first time.[273] Such drugs covered as additional preventive services are referred to DCAPS, and we will use the term ''DCAPS drug(s),'' for ease of the reader.

As described at § 410.152(o)(3), CMS will determine the payment limit for the applicable billing and payment code for a DCAPS drug by applying the ASP methodology if ASP data is available (89 FR 98225). If ASP data is not available, then the payment limit would be determined using National Average Drug Acquisition Cost (NADAC) prices for the drug. If ASP data and NADAC prices are not available, the payment limit would be calculated using the Federal Supply Schedule (FSS) prices for the drug. If ASP data, NADAC prices, and FSS prices are not available, the payment limit would be the invoice price determined by the Medicare Administrative Contractor.

In this proposed rule we are addressing whether DCAPS drugs are Part B rebatable drugs, as discussed in the CY 2025 PFS final rule (89 FR 98250). The current set of drugs covered as DCAPS drugs meets the definition of a Part B rebatable drug under section 1847A(i)(2) of the Act. Therefore, CMS intends to identify DCAPS drugs as Part B rebatable drugs as defined in section 1847A(i)(2) of the Act. Under this proposal, we would calculate rebates for DCAPS drugs in alignment with the methodology described in §§ 427.300 through 427.402. Manufacturers of DCAPS drugs would receive reports of rebate amounts subject to the process and timing described in §§ 427.500 through 427.505.

c. Billing Units That Are Packaged Into the Payment Amount for an Item or Service and Are Typically Not Separately Payable

Section 1847A(i)(3)(B)(ii)(II) of the Act requires that units ''that are packaged into the payment amount for an item or service and are not separately payable'' be excluded from the total number of units of a billing and payment code for a Part B rebatable drug. As stated in the CY 2025 final rule (89 FR 98247), we will remove billing units that are packaged into the payment amount for an item or service and are not separately payable. We codified this policy at § 427.303(b)(3). We have identified rare instances where claims for separate payment have been submitted for a Part B rebatable drug when such claims are reimbursable only as part of a bundled payment. CMS excludes units associated with such separately billed claims from the rebate calculation consistent with § 427.303(b)(3).

d. Identification of the Payment Amount Benchmark Quarter (§ 427.302(c))

We are proposing at § 427.302(c)(5) that if data needed to calculate the payment amount in the payment amount benchmark quarter as described in and determined under § 427.302(d)(1) are not available in the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later, CMS will use the third full calendar quarter after the Part B rebatable drug is assigned a billing and payment code as the payment amount benchmark quarter. Without a payment amount in the payment amount benchmark quarter, we would not be able to calculate Part B inflation rebates for such billing and payment codes. We believe this approach will allow CMS to calculate a payment amount in the payment amount benchmark quarter, incorporating the two-quarter lag used to set payments in alignment with section 1847A of the Act. We are making this proposal to address identified instances as described in section III.E.2.e. of this proposed rule.

This proposal would require CMS to make technical edits to and to renumber regulations at § 427.302(c). Therefore, we propose conforming changes to § 427.302(c) and to redesignate § 427.302(c)(5) as § 427.302(c)(6).

e. Identification of the Payment Amount in the Payment Amount Benchmark Quarter (§ 427.302(d)(1))

Section 1847A(i)(3)(C) of the Act specifies use of the ''payment amount for the billing and payment code for such drug in the payment amount benchmark quarter'' (''payment amount in the payment amount benchmark quarter'') in the determination of the inflation-adjusted payment amount. As stated in the CY 2025 PFS final rule (89 FR 98244), to identify the payment amount in the payment amount benchmark quarter, we use the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter. If the published payment limit is not available for the applicable benchmark quarter, we stated we will use the lower of 106 percent of ASP or 106 percent of WAC. However, we have identified instances in which some or all NDCs in a billing and payment code have zero or negative ASP or WAC values. Using such data could result in a payment amount in the payment amount benchmark quarter that is zero, negative, or unreasonably low due to the inclusion of the zero or negative ASP or WAC values. In addition, when the published payment limit is not available, using 106 percent of ASP or 106 percent of WAC to calculate the payment amount in the payment amount benchmark quarter may not be appropriate in instances where the payment limit is based on a different amount, such as in the case of Part B rebatable drugs that are biosimilars for which the add-on amount reflects the

[273] See: Preexposure Prophylaxis (PrEP) Using Antiretroviral Therapy to Prevent Human Immunodeficiency Virus (HIV) Infection, available at *https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&ncaid=310.*

payment amount for the reference biological product (as set forth in section 1847A(b)(8) of the Act). For the purposes of calculating a payment amount under the statute, CMS finalized in the CY 2025 PFS final rule (89 FR 97981) that negative or zero manufacturer's ASP data are considered ''not available.'' We also note that the published payment limit for a drug with negative or zero ASP data reported after January 1, 2025, could be based on a positive amount that is carried forward from a previous quarter in accordance with § 414.904(i).

In this proposed rule, we are proposing to remove from § 427.302(d)(1) ''determined under section 1847A of the Act''. This text was inadvertently included in the PFS CY 2025 final rule (89 FR 98583) and needs to be removed because the statutory provision governing the payment amount in the payment amount benchmark quarter, section 1847A(i)(3)(C)(i) of the Act, does not limit that amount to payment amounts determined under section 1847A of the Act and because the payment limits for some Part B rebatable drugs are not determined under section 1847A of the Act.

Additionally, in this proposed rule, we are proposing to revise § 427.302(d)(1)(i) by removing ''If a published payment limit is not available for the applicable payment amount benchmark quarter, CMS will use the lower of 106 percent of manufacturer-reported ASP or 106 percent of manufacturer-reported WAC.'' We also are proposing to revise § 427.302(d)(1)(ii) by removing ''If neither a published payment limit nor manufacturer-reported ASP or WAC data are available, CMS will use WAC data from other public sources to calculate 106 percent of WAC, which, solely for the purposes of this section, CMS will consider to be the payment amount for the payment amount benchmark quarter.'' If a published payment limit is not available for the applicable payment amount benchmark quarter, at § 427.302(d)(1)(i), we are proposing to calculate the payment amount in the payment amount benchmark quarter using positive ASP or positive WAC data reported by manufacturers to the ASP Data Collection System.[274] Additionally, at § 427.302(d)(1)(ii), if neither positive ASP nor positive WAC data are available in the ASP Data Collection System for the given quarter, we are proposing to use WAC data from other public sources for the given quarter to calculate the payment amount in the payment amount benchmark quarter. We believe these proposals would allow CMS to calculate a payment amount in the payment amount benchmark quarter that aligns with section 1847A of the Act, rather than strictly limiting this calculation to the lower of 106 percent of ASP or 106 percent of WAC as reported for a given drug, as previously stated in the CY 2025 PFS final rule, which may not align with CMS' policy for calculating payment limits under § 414.904. Under this proposed approach, we would also avoid calculating inappropriately large inflation rebate amounts for drugs that had zero or negative sales in their payment amount benchmark quarter.

f. Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments (§§ 427.500 Through 427.505)

Section 1847A(i)(1)(A) of the Act requires the Secretary to provide a report to each manufacturer of a Part B rebatable drug with the following information not later than 6 months after the end of an applicable calendar quarter: (1) the total number of billing units for each Part B rebatable drug; (2) the amount, if any, of the excess average sales price increase (the amount by which the specified amount exceeds the inflation-adjusted payment amount as calculated at § 427.302(g)) for an applicable calendar quarter; and (3) the rebate amount for the Part B rebatable drug. In compliance with section 1847A(i)(1)(B) of the Act, manufacturers of a Part B rebatable drug must provide a rebate for each Part B rebatable drug no later than 30 calendar days after the receipt of the information provided by the Secretary in section 1847A(i)(1)(A) of the Act.

In accordance with §§ 427.504 and 427.505, CMS has established a standard method and process to issue Rebate Reports to manufacturers of Part B rebatable drugs and to accept manufacturer rebate payments. CMS has established an online portal, the ''Manufacturer Payment Portal'' (MPP),[275] administered by a CMS contractor, through which manufacturers will access their Rebate Reports, submit Suggestions of Error, as applicable, and pay rebate amounts due, as described in §§ 427.504 and 427.505. Manufacturers of Part B rebatable drugs should provide points of contact to view Preliminary Rebate Reports Rebate Reports, enter and modify banking information, and initiate payment of rebate amounts through the MPP.

i. Rebate Reports and Reconciliation (§ 427.501)

As stated in the CY 2025 PFS final rule (89 FR 98264), we codified a multi-step process to provide a manufacturer, as defined in § 427.20, with the rebate information specified in section 1847A(i)(1)(A) of the Act. Specifically, in the CY 2025 PFS final rule (89 FR 98264), CMS established the information that will be included in a Rebate Report at § 427.501, including the NDC(s) and billing and payment codes identified for the Part B rebatable drug, the total number of billing units, the applicable calendar quarter, and the rebate amount due, among other items specified in § 427.501. Consistent with the approach specified in section 80.3 of the Medicare Part B Drug Inflation Rebate Guidance, published December 14, 2023, we propose to add paragraph (c)(3) in § 427.501 to clarify that CMS would report the manufacturer's rebate amount due as a dollar amount that is rounded to the nearest cent. CMS did not specify an approach to reporting of the rebate amount in the CY 2025 PFS final rule and we believe it is necessary to provide this information to manufacturers to provide notice of CMS' approach to rounding of the rebate amount. The calculation steps specified in subpart D of part 427 will not include rounded values.

In the CY 2025 PFS final rule (89 FR 98578), to determine which data elements would be included when CMS reports the rebate amount to the manufacturer, we stated that we considered the statutory requirements outlined in section 1847A(i)(1)(A)(i) through (iii) of the Act to determine what information is necessary for manufacturers to review the accuracy of the rebate amount while also protecting proprietary information. As stated on page 98578 of the CY 2025 PFS final rule, CMS structured a two-step reporting process to first include a Preliminary Rebate Report to provide an initial notice to manufacturers regarding whether they may owe a rebate amount, followed by the Rebate Report. Further, we proposed and finalized additional data elements within the Preliminary Rebate Reports and the Rebate Reports not listed in statute based on input from public comments (for example, the applicable benchmark period, the rebate period CPI–U). CMS did not finalize additional elements suggested, such as claims-level data, after weighing whether any such additional information fulfilled CMS' statutory obligation and the potential benefits to

[274] Available at *https://portal.cms.gov/portal/*.

[275] See: *https://www.cms.gov/files/document/medicare-prescription-drug-inflation-rebate-program-onboarding-memo.pdf*.

manufacturers against the administrative burden additional reporting would impose on the agency and operational feasibility. The data elements set forth in § 427.501(b)(1) and (c)(1) satisfy these considerations.

In this proposed rule, CMS clarifies that certain data elements provided to manufacturers in Preliminary Rebate Reports, Rebate Reports, and reconciled reports of a rebate amount (which may each include the same elements, revised as applicable due to updates in the data), are provided to manufacturers of a Part B rebatable drug in a manner consistent with section 1927(b)(3)(D) and 1847A(f)(2)(D) of the Act. Section 1927(b)(3)(D) of the Act specifies that information disclosed by manufacturers or wholesalers under section 1927(b)(3) (submissions of drug product and pricing information under the National Drug Rebate Agreement (NDRA)) or under a Master Agreement with the Secretary of Veterans Affairs (other than WAC) ''is confidential and shall not be disclosed by the Secretary or the Secretary of Veterans Affairs or a State agency (or contractor therewith) in a form which discloses the identity of a specific manufacturer or wholesaler, prices charged for drugs by such manufacturer or wholesaler, except'' as otherwise allowed in section 1927(b)(2)(D)(i) through (vii) of the Act. Section 1927(b)(3)(D)(i) provides an exception to this confidentiality requirement ''as the Secretary determines to be necessary to carry out'' certain sections of the Act, including section 1847A of the Act (that is, the Part B Drug Inflation Rebate Program). Section 1847A(f)(2)(D) of the Act contains parallel confidentiality protections for ASP information reported by manufacturers and wholesalers, including a parallel exception for purposes of Part B rebate effectuation, and would apply to ASP data reported by entities that do not have a NDRA and that report ASP data outside the MDRP.

Specifically, CMS anticipates that most data included in Preliminary Rebate Reports, Rebate Reports, reconciled Preliminary Rebate Reports, and reconciled Rebate Reports will not implicate sections 1927(b)(3)(D) or 1847A(f)(2)(D) of the Act, as CMS anticipates that in most cases the party that will receive these reports will be the same party that reported the relevant information. However, CMS acknowledges that some situations may raise a possibility of disclosure by the Secretary of AMP or ASP information, or information derived therefrom, to a party besides the party that reported the information originally; such situations could implicate sections 1927(b)(3)(D) and/or section 1847A(f)(2)(D) of the Act. Such situations may include, but are not necessarily limited to: (1) transfer of a rebatable drug from one manufacturer to another manufacturer, such that the manufacturer identified in the Rebate Report differs from the manufacturer that originally reported certain benchmark pricing information (see also section III.E.2.a of this proposed rule regarding transfer of labeler codes); and (2) cases in which CMS displays a specified amount, the total HCPCS units, and the proportion of manufacturer-reported ASP units for reports associated with grouped HCPCS codes. In instances where the parties may be different, CMS emphasizes that the data included in a report of the rebate amount is based on CMS' independently performed calculations. Though these calculations rely on information disclosed by manufacturers as inputs, in most cases the data reported in a Preliminary Rebate Report and a Rebate Report (or a reconciled version of these reports) will not be identical to the information reported by manufacturers (for example, manufacturers report ASP data at the NDC–11 level, whereas the payment amount in the payment amount benchmark quarter reflects an aggregated, HCPCS-level value that was calculated using the NDC–11-level ASP data). Therefore, reporting such data elements to another manufacturer for purposes of the Part B Drug Inflation Rebate Program would not violate the confidentiality requirements in sections 1927 and 1847A of the Act.

Second, on page 98265 of the CY 2025 PFS final rule, CMS stated that the purpose of providing additional data elements not explicitly listed in section 1847A(i)(1)(A)(i) through (iii) of the Act (for example, the payment amount in the payment amount benchmark quarter, specified amounts, and certain unit data) is based on CMS' assessment of ''data elements that are necessary for a manufacturer to review the Preliminary Report and for a Suggestion of Error.'' Providing these data in the Preliminary Rebate Report (and corresponding subsequent reports) ensures that—(1) manufacturers will be able to submit a Suggestion of Error, thereby promoting accuracy in the implementation of the rebate program; and (2) manufacturers will have advanced notice of a potential rebate amount due. While section 1847A(i)(1)(A)(i) of the Act states that ''[T]he Secretary shall, for each part B rebatable drug, report to each manufacturer . . . information on the total number of units of the billing and payment code'' this level of information alone is not sufficient to support CMS' goal of providing enough information for a manufacturer to submit a Suggestion of Error, if necessary. For Part B rebatable drugs, it is necessary to provide the proportion of ASP-reported units in addition to providing the total HCPCS units (as required by statute) so that the manufacturer has sufficient information to understand the total rebate amount calculated. CMS acknowledges that by providing the proportion of ASP-reported units, a manufacturer could estimate the proportion of ASP-reported units for another drug(s) included in the same HCPCS code. However, CMS believes that providing this information is necessary to carry out the rebate program because it enables manufacturers to submit a potential Suggestion of Error, which promotes accuracy in the calculation of the rebate amount.

ii. Rebate Report for Applicable Calendar Quarters in CY 2023 and CY 2024 (§ 427.502)

As stated in the CY 2025 PFS final rule (89 FR 97710), we codified at § 427.502 the option afforded to CMS in section 1847A(i)(1)(C) of the Act to delay sending the information required by section 1847A(i)(1)(A) of the Act for applicable calendar quarters in calendar years 2023 and 2024 until not later than September 30, 2025. Specifically, per § 427.502, CMS will issue one report for the 4 applicable calendar quarters in CY 2023 and one report for the 4 applicable calendar quarters in CY 2024. Additionally, CMS will send a reconciled rebate amount for the four applicable calendar quarters in CY 2024 9 months after the Rebate Report, to allow for 12 months of claims run-out for each applicable calendar quarter. We stated in the CY 2025 PFS proposed rule (89 FR 61959) that this approach aligns claims and payment data run-out with the run-out used during a regular reconciliation cycle. However, CMS finalized the regulatory text specifying the time periods for regular reconciliation cycles at § 427.501(d) with text that provides CMS with operational flexibility as to the exact date the report with the reconciled rebate amount will be provided to each manufacturer of a Part B rebatable drug by including the word ''within'' prior to the specified date. We propose to amend § 427.502(c)(2)(ii) to add the word ''within'' prior to ''nine months'' to be consistent with the regulatory text and cadence for regular reconciliation cycles as well as to provide operational

flexibility on the timing of the release of the report with the reconciled rebate amount.

3. Medicare Part D Drug Rebates for Certain Drugs and Biologicals With Prices That Increase Faster Than the Rate of Inflation

a. Clarification Regarding the Payment Amount Benchmark Period for Certain Subsequently Approved Drugs

In the CY 2025 PFS final rule (89 FR 98280), CMS finalized policies to identify the payment amount benchmark period as set forth in § 428.202(c). At § 428.202(c)(2), we finalized that for a subsequently approved drug, the payment amount benchmark period is the first calendar year beginning after the drug's first marketed date. At § 428.202(c)(4), we finalized that, notwithstanding § 428.202(c)(2), for a subsequently approved drug for which there are no quarters during the first calendar year beginning after the drug's first marketed date for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in § 428.202(d)(3), the payment amount benchmark period is the first calendar year in which such NDC–9 has at least 1 quarter of AMP reported.

At § 428.202(c)(3), we specified that the payment amount benchmark period must be no earlier than calendar year 2021 for a Part D rebatable drug first approved or licensed by the FDA on or before October 1, 2021, for which there are no quarters during the period beginning on January 1, 2021, and ending on September 30, 2021, for which AMP has been reported under section 1927(b)(3) of the Act for the NDC–9, including information as set forth in § 428.202(d)(3). At the time of development for rulemaking on the CY 2025 PFS, we did not believe it was necessary to clarify in § 428.202(c)(2) or (c)(4) that the payment amount benchmark period for a subsequently approved drug also must be no earlier than calendar year 2021, since a subsequently approved drug is by definition a Part D rebatable drug first approved or licensed by the FDA after October 1, 2021.

However, we have identified rare instances in which a subsequently approved drug's first marketed date precedes the FDA approval date reported under section 1927(b)(3)(A)(v) of the Act. It is therefore possible that a subsequently approved drug could have a first marketed date prior to 2020; in other words, the first calendar year beginning after the drug's first marketed date could precede 2021. The definition of the payment amount benchmark period at section 1860D–14B(g)(3) of the Act and the description of a subsequently approved drug at section 1860D–14B(b)(5)(A) of the Act suggest that a Part D rebatable drug should not have a payment amount benchmark period prior to 2021. As such, we propose to clarify in this rule that the payment amount benchmark period identified under § 428.202(c)(1) through (c)(5) for a Part D rebatable drug will be no earlier than 2021 in all instances. CMS also proposes to clarify that the payment amount benchmark period set forth in § 428.202(c)(3) or (c)(4) cannot precede the payment amount benchmark period set forth in § 428.202(c)(1) or (c)(2), as applicable, for a Part D rebatable drug.

b. Clarification Regarding Calculation of the Benchmark Period Manufacturer Price or AnMP in Instances of Quarters With Monthly Units but no Quarterly AMP

In the CY 2025 PFS Final Rule (89 FR 98287), CMS established policies for calculating the benchmark period manufacturer price and AnMP, as applicable, in situations in which certain data are missing but CMS still has sufficient data to complete the calculations. At § 428.202(g)(1), we finalized that if there is 1 or more quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported units under section 1927(b)(3)(A)(iv) of the Act but has reported AMP under sections 1927(b)(3)(A)(i)(I) and (ii) of the Act, CMS will calculate the benchmark period manufacturer price or AnMP, as applicable, using data only from quarter(s) with units.

In this proposed rule, we are clarifying that we are taking the same approach for the inverse scenario. That is, if there is 1 or more quarter(s) in the payment amount benchmark period or applicable period for which a manufacturer has not reported AMP under sections 1927(b)(3)(A)(i)(I) and (ii) of the Act but has reported units under section 1927(b)(3)(A)(iv) of the Act, CMS will calculate the benchmark period manufacturer price or AnMP, as applicable, using data only from quarter(s) with AMP. In other words, when a manufacturer has not reported AMP for a quarter but has reported units for months in that quarter, CMS will not use the units from that quarter in the calculation of the benchmark period manufacturer price or AnMP, as applicable. To the extent that a manufacturer reports a quarterly AMP value of zero for a given quarter, CMS will not consider zero to be a valid value and will instead consider AMP to be missing for that quarter.[276]

CMS will monitor this approach and may modify our policy in the future. We also remind manufacturers of their reporting obligations under section 1927(b) of the Act and § 447.510 of this title and that failure to provide timely information required under those authorities may result in penalties as detailed in section 1927(b)(3)(C)(i) of the Act.

c. Exclusion of 340B Acquired Units From Part D Rebatable Drug Requirements (§ 428.203(b)(2))

Section 1860D–14B(b)(1)(B) of the Act requires that beginning with plan year 2026, CMS shall exclude from the total number of units for a Part D rebatable drug, with respect to an applicable period, those units for which a manufacturer provides a discount under the 340B Program. Because this requirement starts after the first quarter of the applicable period that begins on October 1, 2025, the exclusion of 340B units will only apply for the last three quarters of this applicable period. That is, CMS will exclude 340B units starting on January 1, 2026.

As we stated in the CY 2025 PFS final rule (89 FR 98289), data on which units dispensed under Part D and covered by Part D plan sponsors were purchased under the 340B Program is unavailable from the data sources specified at section 1860D–14B(d) of the Act (that is, information submitted by manufacturers, States, and Part D plan sponsors), and we do not currently have access to this data through other means. We understand that the 340B status of a Part D drug is usually not known by the dispenser at the point-of-sale, and that 340B covered entities (hereinafter ''covered entities'') typically identify the 340B status of a Part D drug retrospectively. Because the covered entity and CMS do not exchange dispensed Part D drug information confirming the 340B status of a Part D rebatable drug, we are unable to precisely identify 340B units at the claim-level based on claims information reported to CMS by the covered entity. For these reasons, in this rule we are proposing a claims-based methodology to exclude 340B units starting on

[276] See CMS instructions for reporting AMP when a zero or negative value occurs. For example: *https://www.medicaid.gov/medicaid-chip-program-information/by-topics/prescription-drugs/downloads/rx-releases/mfr-releases/mfr-rel-038.pdf* and *https://www.medicaid.gov/sites/default/files/medicaid-chip-program-information/by-topics/prescription-drugs/downloads/rx-releases/mfr-releases/mfr-rel-080.pdf.*

January 1, 2026. Additionally, we are proposing to establish a voluntary 340B repository for data from covered entities about 340B units that we anticipate will allow for CMS to identify 340B units at the claim-level in future applicable periods.

i. Summary of Policies Discussed in the CY 2025 PFS Final Rule

In the CY 2025 PFS proposed rule (89 FR 62245), to fulfill the statutory requirement to remove 340B units from rebate calculations beginning on January 1, 2026, we proposed at § 428.203(b)(2)(i) to exclude from the total number of units determined under § 428.203(a), units for which a manufacturer provided a discount under the 340B Program (''340B units''). At § 428.203(b)(2)(ii), we proposed to determine the total number of 340B units by using data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period. In the preamble discussion (89 FR 61969), we proposed a new policy in accordance with proposed § 428.203(b)(2) to remove units from the total number of units dispensed of a Part D rebatable drug for each applicable period based on a calculated percentage that reflects the portion of 340B purchasing relative to total sales. We proposed the percentage (hereinafter, ''estimation percentage'') to equal the total number of units purchased by covered entities under the 340B Program for an NDC–9, divided by the total units sold of that NDC–9.

We stated that the estimation policy is consistent with CMS' authority under sections 1860D–14B(b)(1)(B), 1102(a), and 1871(a)(1) of the Act, the latter of which provide the authority to make rules and regulations as necessary for the efficient administration of programs, including the Medicare Part D Drug Inflation Rebate Program. Because the statutory requirement to remove 340B units from rebate calculations does not begin until January 1, 2026, for the applicable year that begins on October 1, 2025, we proposed to apply the estimation percentage only to those units associated with claims with dates of service in the last 3 quarters of the applicable period (that is, January 1, 2026, through September 30, 2026).

To identify the numerator of the estimation percentage (that is, the total number of units purchased under the 340B Program for an NDC–9), we proposed to use data from the Health Resources and Services Administration's (HRSA) 340B Prime Vendor Program (PVP). To identify the denominator of the estimation percentage (that is, the total units sold of an NDC–9), we proposed to use existing manufacturer reporting under the MDRP of AMP unit sales. Specifically, we proposed to use the total number of AMP units that are used to calculate the monthly AMP and which manufacturers are required to report to CMS for each covered outpatient drug (COD) in accordance with section 1927(b)(3)(A)(iv) of the Act. We believed that using these AMP unit data to calculate an estimation percentage would be consistent with the use of these same data to calculate the AnMP at § 428.202(b) and the benchmark period manufacturer price at § 428.202(d).

In the CY 2025 PFS proposed and final rules, we acknowledged certain limitations with the proposed data sources. For instance, the numerator of the proposed estimation percentage (PVP data) represents 340B units dispensed in multiple settings, whereas the denominator (unit sales used to calculate AMP) represents units typically dispensed only in the retail community pharmacy setting. Additionally, the proposed estimation percentage would represent the total number of 340B units dispensed as a proportion of total units dispensed, irrespective of insurance/payor type. Further, we noted that certain 340B purchases may not be reported to the PVP if those purchases were made through alternative distribution models. Many commenters agreed with these data limitations, strongly objected to the proposed estimation methodology, and suggested CMS not finalize this approach.

In the CY 2025 PFS proposed rule, CMS also solicited comments on a Medicare Part D Claims Data 340B Repository (hereinafter, ''340B repository''). This approach would require that covered entities submit certain data elements from Part D 340B claims to the 340B repository on a retrospective basis. In response to this comment solicitation, many commenters expressed strong support for a 340B repository.

In the CY 2025 PFS final rule (89 FR 98593), CMS finalized the proposal at § 428.203(b)(2)(i) to exclude from the total number of units determined under § 428.203(a) units for which a manufacturer provided a discount under the 340B Program (''340B units''), as well as the proposal at § 428.203(b)(2)(ii) to determine the total number of 340B units by using data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period. However, after consideration of the data limitations of the proposed estimation methodology and public comments, CMS did not finalize the proposed estimation methodology for the applicable period that begins on October 1, 2025. Instead, CMS stated that it would explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program starting January 1, 2026, through the establishment of a 340B repository.

CMS is not reproposing the estimation methodology proposed in the CY 2025 PFS proposed rule, but did consider this estimation percentage as an alternative to the proposal this year, as described in section III.E.3.c.iii. of this proposed rule titled ''Alternative Policy Considered''. Rather, we are proposing to implement § 428.203(b)(2) using a claims-based methodology to remove 340B units beginning January 1, 2026. We also propose the establishment of a Part D claims data 340B repository to receive voluntary submissions from covered entities of certain data elements from Part D 340B claims to allow CMS to assess such data for use in identifying 340B units for removal in a future applicable period.

ii. Claims-Based Methodology to Remove 340B Units from Rebate Calculations

We are proposing to implement § 428.203(b)(2) using a claims-based methodology[277] to remove 340B units from the Part D drug inflation rebate calculations by evaluating whether a Prescription Drug Event (PDE) record is potentially 340B-eligible based on (1) the affiliation of the National Provider Identifier (NPI) of the prescriber associated with that PDE record with a registered 340B covered entity, and (2) the designation of the dispensing pharmacy associated with that PDE as a 340B contract pharmacy (hereinafter ''Prescriber-Pharmacy Methodology''). CMS is proposing to use the described methodology unless and until a different method to remove 340B units is proposed and finalized. CMS acknowledges that the 340B OPAIS database may not list all pharmacies

[277] The 340B claims-based methodology described herein uses elements of the 340B simulation described in the published work: Nikpay, S., Bruno, J. P., & Carey, C. (2024). Recent court ruling could increase the size and administrative complexity of the 340B program. *Health affairs scholar, 2*(12), qxae157. *https://doi.org/10.1093/haschl/qxae157.*

that dispense 340B eligible drugs, including covered entities that have ''in-house'' pharmacies that are not registered in the 340B OPAIS database or 340B-eligible Aids Drug Assistance Programs (ADAPs) that collect rebates to receive 340B discounts instead of receiving such discount at the time of purchase from a contract pharmacy registered in the 340B OPAIS database. CMS is soliciting comments on whether and how to account for this limitation in the identification of 340B dispenses in the Prescriber-Pharmacy Methodology.

For the Prescriber-Pharmacy methodology, once a PDE record is identified as potentially 340B-eligible, the units associated with that PDE record would be removed from the rebate calculation. We understand that the determination of potential 340B-eligibility of a PDE record using the methodology described herein does not necessarily mean that the covered entity replenished (or can in the future replenish) the units at the 340B price, and we therefore believe the proposed claims-based methodology may overestimate the number of units that are potentially 340B-eligible. Examples of PDE records that would be identified as being potentially 340B-eligible by the claims-based methodology, but for which the covered entity may not be able to make a corresponding purchase of the accumulated units at the 340B price, include those for which: (1) a drug manufacturer placed restrictions on the contract pharmacy that resulted in a non-340B price; (2) the NDC dispensed on the claim was discontinued, in shortage, or generally unavailable from the pharmaceutical wholesaler; (3) the covered entity did not accumulate enough units to replenish a full bottle of the drug; or (4) the prescription was subsequent to care provided outside of a 340B covered entity. The approach described in this section would identify PDE records as potentially 340B-eligible based on two criteria: (1) the prescriber with the NPI listed on the PDE record provides care at a 340B covered entity, and (2) the pharmacy NPI on the PDE record is a contract pharmacy for that same 340B covered entity.

To establish a list of providers considered to be 340B-affiliated providers, we propose to first create a list of prescriber NPIs from PDE records with dates of service within each applicable period. This file would be generated at the prescriber-month level and capture prescriber NPIs with active billing histories for specific months within the applicable period. CMS would then crosswalk this list of prescriber NPIs and months to the provider fields[278] on Medicare Fee-For-Service (FFS) Part A inpatient claims and Part B outpatient claims and professional claims to identify the Medicare Provider Numbers (MPNs)[279] through which each prescriber NPI billed for each month they were active in the PDE data. The resulting file would include prescriber NPI, MPN, and month combinations within the applicable period. We then propose to filter the collated list of prescriber NPI and MPN combinations using the 340B Office of Pharmacy Affairs Information System (OPAIS) database,[280] which records the available MPNs for covered entities that are actively participating in the 340B program during the applicable period. Each prescriber NPI affiliated with an MPN that was also an active 340B covered entity listed on the OPAIS database for that particular month would be considered a 340B-affiliated prescriber for the month within the applicable period.

CMS acknowledges that not all covered entities have an MPN or report their MPN in the 340B OPAIS database, which may result in an inability for CMS to designate claims affiliated with such covered entities as being potentially 340B-eligible using this methodology. Notably, we understand that hospitals are required to report their MPN in the 340B OPAIS database if they intend to use 340B drugs for their Medicaid patients[281], and that hospitals make up the significant majority of 340B volume. To address the missing MPN scenarios, we are soliciting comments on a methodology to augment the prescriber NPI and MPN file described above by using NPI when the NPI is listed in the 340B OPAIS database, but MPN is not. We would use additional data sources such as CMS' Integrated Data Repository to map 340B OPAIS provided organizational NPIs to corresponding individual NPIs and MPN, when possible, to establish a supplemental list of prescriber NPIs that are associated with covered entities. Each prescriber NPI that is determined to be associated with a covered entity NPI, as listed in the 340B OPAIS database, would be considered a 340B-affiliated prescriber for the month within the applicable period. The resulting augmented 340B-affiliated prescriber NPI file would help to ensure a broader possible combination of prescriber-covered entity pairings than using the covered entity's organizational NPI from the 340B OPAIS database alone. CMS is soliciting comments on the benefits of using this augmented 340B-affiliated prescriber NPI approach to address covered entities that do not have MPN's listed in the 340B OPAIS database, as well as alternative methods to consider for how CMS could address the described scenario.

Next, we propose to use the 340B OPAIS database to identify registered contract pharmacies that have an active agreement with a 340B covered entity in the 340B OPAIS database during months within the applicable period and develop a list of 340B contract pharmacy names, addresses, and active months for each associated covered entity. We would then merge pharmacy NPIs onto this file using the name and address fields reported to the National Council for Prescription Drug Programs (NCPDP). We understand that matching the list of contract pharmacy names and addresses to the NCPDP database will not rely on the use of a single discrete data field and may require CMS to utilize a methodology that includes: (1) cleaning addresses to account for variations in spelling, abbreviations, punctuations, etc. between the pharmacy names and addresses from both sources; (2) geocode matching between the pharmacy addresses contained in each source; and (3) fuzzy string matching on pharmacy name and address fields after cleaning these fields. Specifically, CMS may conduct a cartesian join to generate potential matches between pharmacies from each data source located in the same state, limit these potential matches to pharmacies estimated to be within 0.2 miles of one another,[282] and select a final match for each HRSA OPAIS pharmacy based on fuzzy string matching between the pharmacy name and address fields in each database.[283]

[278] Provider field types include billing, rendering, attending, operating, other, and referring.

[279] There exist inconsistencies between how MPN is described in the 340B OPAIS database and the 2007 CMS System Manual, which states ''In order to avoid confusion with the NPI, the Medicare/Medicaid Provider Number (also known as the OSCAR Provider Number, Medicare Identification Number or Provider Number) has been renamed the CMS Certification Number (CCN).'' For the purpose of this discussion, CMS uses MPN interchangeably with CCN.

[280] See: *https://340bopais.hrsa.gov/home.*

[281] See: *https://www.hrsa.gov/opa/registration.*

[282] The 0.2 mile threshold was previously adopted in Nikpay, S., Bruno, J. P., & Carey, C. (2024). Recent court ruling could increase the size and administrative complexity of the 340B program. *Health affairs scholar, 2*(12), qxae157. *https://doi.org/10.1093/haschl/qxae157.*

[283] CMS proposes to use a fuzzy-matching approach that matches the similarity between the names and addresses. This approach first counts the characters that match. Next, it examines how close those characters are, accounting for transpositions in each name or address. Accounting for

Using a targeted analysis, CMS intends to conduct a manual review of this matching algorithm to identify and correct errors or omissions. CMS acknowledges that this matching algorithm may result in an inability to associate a small percentage of contract pharmacies with NPIs.

The output of the two preceding processes would be: (1) a month-level file containing 340B-affiliated prescriber NPIs and their associated MPNs, and (2) a month-level file containing pharmacy NPIs for contract pharmacies of 340B covered entities and the MPNs of these covered entities. CMS would join these two files by MPN and month to create a month-level file containing 340B-affiliated prescriber NPIs and pharmacy NPIs for contract pharmacies associated with these 340B covered entities. Based on preliminary analyses of this claims-based methodology, for most Part D drugs, CMS expects to remove about 10 percent to 35 percent of the total number of units [284] determined under § 428.203(a) used to calculate the total rebate amount determined under § 428.201(a). We emphasize that this approximation is preliminary and may vary significantly across different Part D rebatable drugs.

CMS notes that a prescriber NPI may have multiple affiliated covered entities, and that a 340B covered entity may have multiple contract pharmacies. Using this set of prescriber and pharmacy pairings, CMS would identify PDE records during the applicable period that have prescriber ID, service provider ID, and claim date fields that match one of the paired combinations of 340B-affiliated prescriber NPI, pharmacy NPI, and month. For PDE records that match against these pairings, the units associated with those PDE records would be considered 340B units and would be removed from the total number of units dispensed under Part D (as determined under § 428.203) used to calculate the total rebate amount.

CMS has considered an alternative methodology to the Prescriber-Pharmacy Methodology (hereinafter, ''the Beneficiary-Pharmacy Methodology''). In contrast to the Prescriber-Pharmacy Methodology, the Beneficiary-Pharmacy Methodology would identify potentially 340B-eligible units (that will be treated as 340B units for purposes of effectuating the exclusion at § 428.203(b)(2)) associated with PDE records that are: (1) dispensed by a pharmacy currently under contract with a 340B covered entity, and (2) for beneficiaries who receive care from a 340B covered entity affiliated with that pharmacy. To implement this methodology, CMS would create beneficiary-pharmacy pairs that meet the defined criteria by combining two files: (1) the same monthly file used in the Prescriber-Pharmacy Methodology that links 340B covered entities (identified by MPN or NPI) with pharmacy NPIs for those covered entities, and (2) a monthly file containing beneficiaries associated with PDE records from the applicable year and the MPNs of providers from which those beneficiaries received care. CMS would generate this latter file by identifying beneficiary-month combinations based on the date of dispense on the PDE record, then determining the MPNs (or NPIs) where those beneficiaries received services during those months. The identification of MPNs (or NPIs) where beneficiaries receive care would rely on inpatient, outpatient, and professional claims within both Medicare FFS and Medicare Advantage claims data.

To establish beneficiary-pharmacy pairs, CMS would merge the two files described above by MPN and month, producing month-level combinations that link beneficiaries to contract pharmacies. These combinations would reflect the universe of beneficiaries who receive services at a 340B covered entity and the associated contract pharmacies for those covered entities. To identify associated PDE records, CMS would filter for records with beneficiary ID, service provider ID, and claim date combinations that align with one of the beneficiary-pharmacy-month combinations. For any PDE record that matches these pairings, the units associated with the record would be considered 340B units.

While CMS anticipates the degree of overlap between the two methodologies to be high, CMS may consider revisions to the Prescriber-Pharmacy Methodology based on further analyses of the Beneficiary-Pharmacy Methodology—such as defining 340B units using the union of units identified by both methodologies or refining the Prescriber-Pharmacy Methodology. CMS is soliciting comments on the potential benefits and drawbacks of using a Beneficiary-Pharmacy Methodology and on whether a Beneficiary-Pharmacy Methodology could be combined with the Prescriber-Pharmacy Methodology to validate 340B units identified, such as via a union of the two methodologies.

iii. Alternative Policy Considered: Estimation Percentage Using PVP and AMP Data

As described in section III.E.3.c.i of this proposed rule, CMS considered an alternative estimation methodology to remove units from the total number of units dispensed of a Part D rebatable drug for each applicable period that would be based on a calculated percentage that reflects the portion of 340B purchasing relative to total sales. This alternative estimation methodology was proposed in the CY 2025 PFS rule (89 FR 61969), in which we proposed to use an estimation percentage that would equal the total number of units purchased by covered entities under the 340B Program for an NDC–9, divided by the total units sold of that NDC–9. CMS included more detail in section III.E.3.c.i of this proposed rule regarding the estimation percentage methodology originally discussed in the CY 2025 PFS proposed rule.

We acknowledged some limitations of this methodology in the CY 2025 PFS proposed and final rules, as noted above in section III.E.3.c.i of this proposed rule. After further consideration of comments received in response to the CY 2025 PFS proposed rule, CMS is no longer pursuing this policy at this time but may consider it in future rulemaking.

iv. Proposal To Establish a Medicare Part D Claims Data 340B Repository

In the initial Medicare Part D Drug Inflation Rebate Guidance, CMS solicited comments on the best mechanism to identify 340B units dispensed under Part D.[285] CMS discussed requiring the dispensing entity to include a 340B claims indicator on the Part D drug claim to be included in PDE records.[286] Many commenters disagreed that requiring the dispensing entity to include a 340B claims indicator on the Part D drug claim to be included on the PDE record was the most accurate way to identify 340B discounts for Part D drugs. A few commenters highlighted the operational challenges, administrative burden, and potential for increased dispensing fees and reimbursement issues with both point-of-sale modifiers and retrospective

transpositions addresses common typing mistakes such as entering the right characters in the wrong order.

[284] See: *https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-initial-guidance.pdf.*

[285] See: *https://www.cms.gov/files/document/medicare-part-d-inflation-rebate-program-initial-guidance.pdf.*

[286] Currently, a pharmacy may voluntarily use the value of ''AA'' in the Submission Type Code (D17–K8) field to indicate use of a 340B drug at the time of the adjudication or dispensing of the claim. See: National Council on Prescription Drug Program (NCPDP) 340B Information Exchange Reference Guide Version 2.0, June 2019, *https://www.ncpdp.org/NCPDP/media/pdf/340B_Information_Exchange_Reference_Guide.pdf.*

340B identifiers. In addition, a wide array of interested parties recommended that CMS create a mechanism through which covered entities would retrospectively submit data to CMS identifying 340B claims dispensed under Part D. Interested parties urged that this mechanism allow covered entities to submit these data directly to CMS, rather than through claims that dispensers submit via Part D plan sponsors.

In response to this feedback from interested parties, in the CY 2025 PFS proposed rule (89 FR 61971 through 61972) we solicited comments on establishing a repository in a future year of the Medicare Part D Drug Inflation Rebate Program to comply with the requirement under section 1860D–14B(b)(1)(B) of the Act that CMS shall exclude from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program. In the CY 2025 PFS proposed rule (89 FR 61971), we stated that this approach would require that covered entities submit certain data elements from Part D 340B claims to the repository, and we solicited comments on such a requirement. In the CY 2025 PFS final rule (89 FR 98293), we stated that we would explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program starting January 1, 2026, through the establishment of a repository. To inform policy development for this rulemaking, we reviewed and considered the comments received on the CY 2025 PFS proposed rule. We are proposing to establish a repository to receive voluntary submissions from covered entities of certain data elements from Part D 340B claims to allow CMS to assess such data for use in identifying units of Part D rebatable drugs for which a manufacturer provides a discount under the 340B Program in a future applicable period. We intend to allow covered entities to submit data on units of Part D rebatable drugs for which a manufacturer provides a discount under the 340B Program beginning in 2026 to begin testing the usability of the 340B repository.

We propose that the 340B repository would receive, via submission by covered entities that choose to submit data to the repository, data elements (as described in the next section) from all claims with dates of service during the relevant period which the covered entity determined utilized a drug for which the manufacturer provides a discount under the 340B program (''Part D 340B claims'') for all covered Part D drugs billed to Medicare Part D. As requested by interested parties in comments on the initial Medicare Part D Drug Inflation Rebate Guidance and the CY 2025 PFS proposed rule, the 340B repository would allow covered entities to submit these data directly to CMS (or a contractor), rather than through claims that dispensers submit to Part D plan sponsors. CMS would consider all data elements received by the 340B repository to be associated with Part D 340B claims; that is, the 340B repository would not further verify the 340B status of a claim but rather would serve solely to store these data.

Under this process, CMS intends to require a certification from covered entities that the covered entity has submitted all Part D 340B claims with dates of service during the relevant time period and that the data elements from all claims submitted to the 340B repository are from verified 340B claims and, to the best of the covered entity's knowledge, their submission includes all Part D 340B claims for the covered entity at the time of submission for the applicable period. We would require covered entities to certify the completeness and accuracy of the data submitted, and attest that the submitter is authorized to submit on behalf of the entity. We are exploring approaches to confirming completeness and accuracy of data submissions to the 340B repository and are soliciting comments on methods to review and ensure the accuracy of reported data. CMS would match the stored data elements in the 340B repository to PDE transactions for each Part D rebatable drug dispensed during the applicable period. If we determine that the data reported to the repository is usable and reliable and, in the future, propose and finalize a policy to use such data to exclude 340B units from rebate calculations, then units associated with PDE transactions that match to data elements stored in the 340B repository would be considered those for which the manufacturer provides a discount under the 340B Program and therefore would be removed from the total number of units used to calculate the total rebate amount. We understand the importance of maintaining the confidentiality of data submitted to the 340B repository. We do not expect concerns about the privacy of data submitted to the 340B repository, as this data would not be made available to external parties, including manufacturers and Part D plan sponsors.

v. Proposal for Covered Entities To Submit 340B Claims Data to the 340B Repository

We are proposing that covered entities would optionally begin submitting the fields specified by CMS below to the 340B repository beginning in 2026 for Part D 340B claims with dates of service on or after January 1, 2026 to allow for CMS to begin usability testing for the 340B repository. CMS would not use the data submitted during the testing period to remove units from Part D inflation rebates unless and until a policy to do so is proposed and finalized. CMS expects that hospitals receiving Medicare Disproportionate Share Hospital (DSH) payments, Federally Qualified Health Centers (FQHCs), and Critical Access Hospitals (CAHs) would begin to submit data elements to the 340B repository during the testing period. CMS strongly encourages all covered entities to submit data elements to the 340B repository during the testing period beginning in 2026, as this participation would allow for robust testing of data quality and completeness. It would also provide an opportunity for covered entities to develop and test their data submission processes. CMS will address the possibility of mandatory reporting of data elements to the 340B repository by covered entities in future years in future rulemaking. Many covered entities are providers and suppliers regulated by CMS under Title XVIII of the Social Security Act, including hospitals receiving DSH payments, CAHs and FQHCs. CMS is actively considering options for mandatory reporting to the 340B repository in the near future and recommends that covered entities take advantage of the testing period to prepare for future policy development related to 340B repository reporting.

We understand covered entities typically contract with vendors, such as 340B third-party administrators (TPAs), to determine 340B-eligibility of claims using data submitted by covered entities and their contractors. We would allow covered entities that choose to submit data to arrange for their TPAs or other vendors to submit certain data elements to the 340B repository on their behalf. Covered entities would certify and would ultimately be responsible for the accuracy of the data submitted to the 340B repository, even if a covered entity has an arrangement with a vendor to submit on its behalf.

We propose to require entities (whether a 340B covered entity, or a vendor on their behalf) that choose to submit data to the 340B repository during the testing period beginning in

2026 to provide information identifying the 340B covered entity, which could include information such as the covered entity's 340B ID and name as designated in the 340B OPAIS database, when submitting claim information to the 340B repository. We propose to use the collected identifying information to: (1) perform analyses to assess suitability of the data for future use in removing 340B units; and (2) provide a means to follow up with the covered entity on questions related to claims data submission. In addition to this identifying information, we propose to require covered entities that choose to submit data to the 340B repository during the testing period beginning in 2026 to submit the following data elements from Part D claims for covered Part D drugs that are purchased under the 340B Program and dispensed to Medicare Part D beneficiaries: (1) Date of Service (that is, the date the prescription was filled by the pharmacy); (2) Prescription or Service Reference Number; (3) Fill Number (that is, the code indicating whether the prescription is an original or a refill; if a refill, the code indicates the refill number); (4) Dispensing Pharmacy NPI; and (5) NDC–11. We propose to use these data elements to match claims to PDE transactions and perform further analyses to assess suitability of the data for future use in removing 340B units from Part D drug inflation rebate calculations.

In the CY 2025 PFS proposed rule (89 FR 61971), we solicited comments from interested parties on the first four data elements in the list referenced in the previous paragraph ((1) Date of Service; (2) Prescription or Service Reference Number; (3) Fill Number; and (4) Dispensing Pharmacy NPI) and whether these data elements would be accessible to covered entities to submit to CMS. In comments on the CY 2025 PFS proposed rule and summarized in the CY 2025 PFS final rule (89 FR 98293), many interested parties recommended that CMS collect additional data elements, such as the NDC, stating that the NDC would help CMS better match the data submitted by the covered entity to the PDE data for Part D rebatable drugs dispensed during an applicable period. We believe that collecting the NDC would provide useful information for analysis of the data submitted, in addition to the four data elements on which we solicited comment in the CY 2025 PFS proposed rule, and which are the minimum elements that would be necessary to match a submission to a PDE transaction to exclude units from inflation rebate calculations, were the repository to be used for such purpose in the future. The NDC is also a required data element collected under an existing state-based program that operates to match and identify 340B units, similar to the 340B repository that we are proposing to establish.[287] Therefore, we believe that requiring covered entities participating in the 340B repository during the testing period beginning in 2026 to submit the NDC in addition to the four data elements listed previously ((1) Date of Service, (2) Prescription or Service Reference Number; (3) Fill Number; and (4) Dispensing Pharmacy NPI) is reasonable and would not create substantial additional burden.

We are issuing an Information Collection Request alongside this proposed rule entitled ''Information Collection Request (ICR) for the Medicare Prescription Drug Inflation Rebate Program under Section 11101 and 11102 of the Inflation Reduction Act (IRA)'' (CMS–10930, OMB 0938–TBD) for submission to the 340B repository (by covered entities that choose to submit) of certain data elements from all 340B identified claims for all covered Part D drugs billed to Medicare Part D with dates of service during the relevant period. Section VI: The Collection of Information Requirements section of this proposed rule addresses the burden associated with the collection of data for the 340B repository. The Information Collection Request includes more details regarding how covered entities can submit data to the 340B repository, including the format for data submission.

vi. Timing Requirements for Covered Entity Submissions to a Medicare Part D Claims Data 340B Repository

CMS expects the Medicare Part D claims data 340B repository to launch in Fall 2026, meaning it would be available to collect 340B data from covered entities for claims with dates of service on or after January 1, 2026. To foster robust data reporting by covered entities, CMS understands that covered entities will need time to develop a process for collecting the 340B data elements described above and preparing the data in the form and manner prescribed by CMS. Additionally, given the variety in the scope of provider types and organizations that participate in the 340B Program, CMS recognizes the amount of preparation time varies. In consideration of these factors and the anticipated launch date for the 340B repository in Fall 2026, we are proposing to require covered entities that choose to submit data to the 340B repository during the testing period beginning in 2026 to submit the fields specified by CMS to the 340B repository by a date announced in the future, which would be no sooner than 3 months after the date on which the 340B repository is available to receive submissions from covered entities. Covered entities that choose to submit data would submit data elements related to Part D 340B claims with dates of service on or after January 1, 2026. At a point in the future, if this proposal is finalized, CMS would provide a deadline that CMS believes will allow sufficient time for covered entities to gather, validate, and submit the specified data to the 340B repository. CMS would provide the submission deadline(s) once the Medicare Prescription Drug Inflation Rebate ICR is finalized. During the rest of the testing period, CMS anticipates that covered entities will be expected to report data on a quarterly basis within 3 months of the end of a given calendar quarter. For example, for claims with dates of service between October 1, 2026, through December 31, 2026, covered entities that choose to submit data elements from Part D 340B claims would submit the data to the 340B repository no later than March 31, 2027. The data from these submissions would be used to assess the usability of such data to remove 340B units from the total number of units and total rebate amount specified in the Preliminary Rebate Report and Rebate Report detailed at §§ 428.401(b) and (c), respectively.

We are proposing to provide covered entities that choose to submit data to the 340B repository with additional time to submit data to reflect a revision to the 340B determination of claims with dates of service throughout an applicable period. A revision could come in one of two forms: (1) resubmission of data for a claim that the covered entity previously submitted to the 340B repository in error or with errors in the requested data fields, or (2) new submission of data for a claim for a drug that the covered entity had previously determined was not purchased under the 340B Program, but later identified was purchased under such program. In instances where the covered entity submits 340B Part D claims data to the repository that is either (1) incomplete, or (2) contains invalid data, we may inform the covered entity of such error

[287] The state of Oregon allows 340B covered entities to avoid duplicate 340B discounts and Medicaid rebates when contracting with one or more retail pharmacies to dispense drugs purchased at the 340B price by using a retroactive 340B claims submission process. The NDC–11 is one required data element in Oregon's retroactive 340B claims submission process. See: *https://www.oregon.gov/oha/HSD/OHP/Tools/340B%20Claims%20File%20Instructions%20and%20Design.docx.*

and request that the covered entity resolve and resubmit the 340B Part D claims data in order to process the submission successfully. We will provide details on the process and timing for covered entities to submit revised data to the 340B repository after the end of the reporting period in the future.

d. Reports of Rebate Amounts, Reconciliation, Suggestion of Error, and Payments (§§ 428.400 through 428.405)

Section 1860D–14B(a)(1) of the Act requires the Secretary to report to each manufacturer of a Part D rebatable drug the following information not later than 9 months after the end of the applicable period: (1) the amount, if any, of the excess AnMP increase described in section 1860D–14B(b)(1)(A)(ii) of the Act for each Part D rebatable drug, and (2) the rebate amount for each Part D rebatable drug. In compliance with section 1860D–14B(a)(2) of the Act, the manufacturer of a Part D rebatable drug must provide a rebate for each Part D rebatable drug no later than 30 calendar days after the receipt of the information provided by the Secretary in section 1860D–14B(a)(1) of the Act.

In accordance with §§ 428.404 and 428.405, CMS has established a standard method and process to issue Rebate Reports to manufacturers of Part D rebatable drugs and to accept manufacturer rebate payments. CMS has established an online portal, the ''Manufacturer Payment Portal'' (MPP), administered by a CMS contractor, through which manufacturers will access their Rebate Reports, submit Suggestions of Error, as applicable, and pay rebate amounts due, as described in §§ 428.404 and 428.405. Manufacturers of Part D rebatable drugs should provide points of contact to view Preliminary Rebate Reports and Rebate Reports, enter and modify banking information, and initiate payments of rebate amounts through the MPP.

i. Rebate Reports and Reconciliation (§ 428.401); Deadline and Process for Payment of Rebate Amount (§ 428.405)

As stated in the CY 2025 PFS final rule (89 FR 98264), we codified a multi–step process to provide a manufacturer as set forth in § 428.20 with the rebate information specified in section 1860D–14B(a) of the Act. Specifically, as stated in the CY 2025 PFS final rule (89 FR 98264), we established the information that will be included in a Rebate Report at § 428.401, which includes the NDC(s) identified for the Part D rebatable drug, the total number of units dispensed under Part D for the Part D rebatable drug for the applicable period, and the rebate amount due, among other items specified in § 428.401. Additionally, we established that payment for a rebate amount due must be paid by the 30th day after the date of the receipt of the information containing the rebate amount.

Consistent with the approach specified in section 40 of the revised Medicare Part D Drug Inflation Rebate Guidance, we propose to add paragraph (c)(3) in § 428.401 to clarify that CMS will report the manufacturer's rebate amount due as a dollar amount that is rounded to the nearest cent. CMS did not specify an approach to reporting of the rebate amount in the CY 2025 PFS final rule, and we believe it is necessary to provide this information to manufacturers to provide notice of CMS' approach to rounding of the rebate amount. The calculation steps specified in subpart C of part 428 will not include rounded values.

Additionally, we propose a clarifying edit at § 428.405(a)(1) to specify that the manufacturer must pay the rebate amount due no later than on the 30th calendar day after the date of receipt of the information regarding the rebate amount. The current language specifies that the payment is due ''30 calendar days'' after the date of receipt of information regarding the rebate amount. CMS does not believe this edit substantively revises the due date.

In the CY 2025 PFS final rule (89 FR 98588), to determine which data elements would be included when CMS reports the rebate amount to the manufacturer, we stated that we considered the statutory requirements outlined in section 1860D–14B(a)(1)(A) through (B) of the Act to determine what information is necessary for manufacturers to review the accuracy of the rebate amount while also protecting proprietary information. As stated on page 98588 of the CY 2025 PFS final rule, CMS structured a two-step reporting process to first include a Preliminary Rebate Report to provide an initial notice to manufacturers regarding whether they may owe a rebate amount, followed by the Rebate Report. Further, we proposed and finalized additional data elements within the Preliminary Rebate Reports and the Rebate Reports not listed in statute based on input from public comments (for example, the payment amount benchmark period, the applicable period CPI–U). CMS did not finalize additional elements suggested, such as data at the prescription drug event (PDE) record level, after weighing whether any such additional information fulfilled CMS' statutory obligation and the potential benefits to manufacturers against the administrative burdens additional reporting would impose on the agency and operational feasibility. The elements that are set forth in §§ 428.401(b)(1) and (c)(1) satisfy these considerations.

In this proposed rule, CMS clarifies that certain data elements provided to manufacturers in Preliminary Rebate Reports, Rebate Reports, and reconciled reports of a rebate amount (which may each include the same elements, revised as applicable due to updates in the data), are provided to manufacturers of a Part D rebatable drug in alignment with § 1927(b)(3)(D) of the Act. This section of the Act provides an exception to the confidentiality of information disclosed by manufacturers or wholesalers under section 1927(b)(3) of the Act as the Secretary determines to be necessary to carry out certain sections of the Act, including section 1860D–14B of the Act (that is, the Part D Drug Inflation Rebate Program).

Specifically, CMS anticipates that most data included in Preliminary Rebate Reports, Rebate Reports, reconciled Preliminary Rebate Reports, and reconciled Rebate Reports will not implicate § 1927(b)(3)(D) of the Act, as CMS anticipates that in most cases the party that will receive these reports will be the same party that reported the relevant information. However, CMS acknowledges that some situations may raise a possibility of disclosure by the Secretary of AMP information, or information derived therefrom, to a party besides the party that reported the information originally; such situations could implicate confidentiality under section 1927(b)(3)(D) of the Act. Such situations may include, but are not necessarily limited to, (1) transfer of a rebatable drug from one manufacturer to another manufacturer, such that the manufacturer identified in the Rebate Report differs from the manufacturer that originally reported certain benchmark pricing information, and (2) information about initial drugs associated with line extensions. In instances where the parties may be different, CMS emphasizes that the data included in a report of the rebate amount is based on CMS's independently performed calculations. Though these calculations rely on information disclosed by manufacturers as inputs, the data reported in a Preliminary Rebate Report and a Rebate Report (or a reconciled version of these reports) will not be identical to the information reported by manufacturers (for example, manufacturers report quarterly AMP values, whereas the benchmark period manufacturer price is an aggregate amount using AMP values

across multiple quarters when available). Therefore, reporting such data elements to another manufacturer for purposes of the Rebate Program would not violate the confidentiality requirements in sections 1927 of the Act. Additionally, CMS notes that section 1927(b)(3)(D)(i) of the Act provides an exception from the confidentiality provision in 1927(b)(3)(D) of the Act based on what the ''Secretary determines to be necessary to carry out'' under 1860D–14B of the Act (among other listed statutory provisions). CMS is applying this exception to the data elements in the Preliminary Rebate Report for the purpose of carrying out the Rebate Program.

Second, on page 98266 of the CY 2025 PFS final rule, CMS stated that the purpose of providing additional data elements not explicitly listed in sections 1860D–14B(a)(1)(A) through (B) of the Act (for example, benchmark period manufacturer price, the annual manufacturer price) is based on CMS' assessment of what data elements are necessary to review the Preliminary Rebate Report for a Suggestion of Error. Providing these data in the Preliminary Rebate Report (and corresponding reports) ensures that (1) manufacturers will be able to submit a Suggestion of Error, thereby promoting accuracy in the implementation of the rebate program, and (2) manufacturers will have advanced notice of a potential rebate amount due.

ii. Rebate Reports for the Applicable Periods Beginning October 1, 2022, and October 1, 2023 (§ 428.402)

As stated in the CY 2025 PFS final rule (89 FR 97710), we codified at § 428.402 the options afforded to CMS in section 1860D–14B(a)(3) of the Act to delay sending the information required by section 1860D–14B(a)(1) of the Act for the applicable periods beginning October 1, 2022, and October 1, 2023, until not later than December 31, 2025. Specifically, per § 428.402(c), CMS will issue a Preliminary Rebate Report for each applicable period followed by issuance of the Rebate Report for each applicable period no later than December 31, 2025. Additionally, for the applicable period beginning October 1, 2022, CMS will conduct a single reconciliation 21 months after issuance of the Rebate Report for this applicable period (see § 428.402(c)(1)(ii)). As set forth in § 428.402(c)(2)(ii), for the applicable period beginning October 1, 2023, the rebate amount will be reconciled twice at 9 and 33 months after the Rebate Report was issued for the applicable period. We stated in the CY 2025 PFS proposed rule (89 FR 61983) that this approach aligns claims and payment data run-out with the run-out used during a regular reconciliation cycle. However, CMS finalized the regulatory text specifying the time periods for regular reconciliation cycles at § 428.401(d) with text that provides CMS with operational flexibility as to the exact date the report with the reconciled rebate amount will be provided to each manufacturer of a Part D rebatable drug by including the word ''within'' prior to the specified date. We propose to amend §§ 428.402(c)(1)(ii) and (c)(2)(ii) to add the word ''within'' prior to the specified number of months (for example, 21 months for the applicable period beginning October 1, 2022, and 9 and 33 months for the applicable period beginning October 1, 2023) to be consistent with the regulatory text and cadence for regular reconciliation cycles, as well as to provide operational flexibility on the timing of the release of the report with the reconciled rebate amount.

F. Medicare Shared Savings Program

1. Executive Summary and Background

a. Purpose

As of January 1, 2025, the Medicare Shared Savings Program (Shared Savings Program) has 477 accountable care organizations (ACOs) with over 650,000 healthcare providers and organizations providing care to over 11.2 million assigned beneficiaries.[288] Eligible groups of providers and suppliers, such as physicians, hospitals, and other healthcare providers, may participate in the Shared Savings Program by forming or joining an ACO and in so doing agree to become accountable for the total cost and quality of care provided under Traditional Medicare to an assigned population of Medicare FFS beneficiaries. Under the Shared Savings Program, providers and suppliers that participate in an ACO continue to receive Traditional Medicare FFS payments under Parts A and B, and the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements, and in some instances may be required to share in losses if it increases healthcare spending.

We continue to gain experience with and observe the impact of changes to the Shared Savings Program's quality performance standard and other quality reporting requirements, financial methodology, beneficiary assignment methodology, participation options, and availability of new payment options, among other changes, finalized in recent years through the annual PFS rulemaking process.[289] Section III.F. of this proposed rule addresses proposed changes to the Shared Savings Program regulations to allow for timely improvements to program policies and operations as summarized in section III.F.1.c of this proposed rule.

b. Statutory and Regulatory Background on the Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as ''the Affordable Care Act''). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 et seq.) by adding section 1899 of the Act to establish the Medicare Shared Savings Program to facilitate coordination and cooperation among healthcare providers to improve the quality of care for Medicare FFS beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.)

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (the Cures Act) (Pub. L. 114–255). The Bipartisan Budget Act of 2018 (Pub. L. 115–123), further amended section 1899 of the Act to provide for the following: expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries; greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary

[288] See ''Shared Savings Program Fast Facts—As of January 1, 2025'', available at *https://www.cms.gov/files/document/2025-shared-savings-program-fast-facts.pdf.*

[289] Refer to the CY 2023 PFS final rule (87 FR 69777 through 69979), CY 2024 PFS final rule (88 FR 79093 through 79232), and CY 2025 PFS final rule (89 FR 98081 through 98213).

identification will supersede claims-based assignment; and allowing ACOs under certain two-sided models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011, **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the ''November 2011 final rule'')). A subsequent update to the program rules appeared in the June 9, 2015, **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the ''June 2015 final rule'')). The final rule entitled ''Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,'' which addressed changes related to the program's financial benchmark methodology, appeared in the June 10, 2016, **Federal Register** (81 FR 37950) (hereinafter referred to as the ''June 2016 final rule''). A final rule, ''Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act,'' appeared in the November 23, 2018, **Federal Register** (83 FR 59452) (hereinafter referred to as the ''November 2018 final rule'' or the ''CY 2019 PFS final rule''). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018, **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success and Extreme and Uncontrollable Circumstances Policies for Performance Year 2017; final rule (83 FR 67816) (hereinafter referred to as the ''December 2018 final rule'')). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled ''Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency,'' which was effective on the March 31, 2020 date of display and appeared in the April 6, 2020, **Federal Register** (85 FR 19230) (hereinafter referred to as the ''March 31, 2020 COVID–19 IFC''), we removed the restriction that prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the public health emergency (PHE) for coronavirus disease 2019 (COVID–19) (85 FR 19267 and 19268).

In the IFC titled ''Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program,'' which was effective on May 8, 2020, and appeared in the May 8, 2020, **Federal Register** (85 FR 27573 through 27587) (hereinafter referred to as the ''May 8, 2020 COVID–19 IFC''), we modified Shared Savings Program policies to: (1) allow ACOs whose agreement periods expired on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track's glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID–19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program's extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID–19 starting in January 2020.

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. For summaries of certain policies finalized in prior PFS rules, refer to the CY 2020 PFS proposed rule (84 FR 40705), the CY 2021 PFS final rule (85 FR 84717), the CY 2022 PFS final rule (86 FR 65253 and 65254), the CY 2023 PFS final rule (87 FR 69779 and 69780), the CY 2024 PFS final rule (88 FR 79094 and 79095) and the CY 2025 PFS final rule (89 FR 98082 and 98083). In the CY 2025 PFS final rule (89 FR 98081 through 98213), we finalized changes to Shared Savings Program policies, including to: sunset a requirement under which CMS would terminate an ACO's participation agreement, under certain circumstances, if it failed to maintain at least 5,000 assigned beneficiaries during an agreement period; revise the requirement that newly formed ACOs must agree to allow CMS to share a copy of their application with the Antitrust Agencies; update the definition of primary care services used in beneficiary assignment; revise the Shared Savings Program regulations to broaden a limited exception to the program's voluntary alignment policy; make changes to the quality performance standard and other quality reporting requirements, including to: (1) require Shared Savings Program ACOs to report the Alternative Payment Model (APM) Performance Pathway (APP Plus) quality measure set beginning in performance year 2025 and for subsequent performance years; (2) focus the collection types available to Shared

Savings Program ACOs for reporting the APP Plus quality measure set to electronic clinical quality measures (eCQMs) and Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs) by performance year 2027 and make Merit-based Incentive Payment System clinical quality measures (MIPS CQMs) available in performance years 2025 and 2026; (3) establish a Complex Organization Adjustment for Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs; score measures of the Medicare CQM collection type using flat benchmarks for their first two performance periods in MIPS; and (4) extend the eCQM/MIPS CQM reporting incentive for meeting the Shared Savings Program quality performance standard to performance years 2025 and 2026 and extend the eCQM reporting incentive for performance year 2027 and subsequent performance years; allow ACOs receiving advance investment payments to voluntarily terminate from the payment option while remaining in the Shared Savings Program; codify a policy for recouping advance investment payments from ACOs whose participation agreements are terminated by CMS; make modifications to the Shared Savings Program's financial methodology, including to (1) establish a third possible upward adjustment to an ACO's historical benchmark—the health equity benchmark adjustment—based on the number of beneficiaries the ACO serves who are dually eligible or enrolled in the Medicare Part D low-income subsidy (LIS); (2) establish a calculation methodology to account for the impact of improper payments in recalculating expenditures and payment amounts used in Shared Savings Program financial calculations upon reopening a payment determination; (3) establish a methodology for excluding payment amounts for Healthcare Common Procedure Coding System (HCPCS) and Current Procedural Terminology (CPT) codes exhibiting significant, anomalous, and highly suspect (SAHS) billing activity during CY 2024 or subsequent calendar years that warrant adjustment; and (4) make technical changes in provisions of the Shared Savings Program regulations on financial calculations, to align and clarify the language used to describe weights applied to the growth in ACO and regional risk scores for each Medicare enrollment type, as part of the calculation for capping ACO and regional risk score growth; and modify beneficiary notification requirements.

In a final rule entitled ''Medicare Program: Mitigating the Impact of Significant, Anomalous, and Highly Suspect Billing Activity on Medicare Shared Savings Program Financial Calculations in Calendar Year 2023,'' which was effective on October 15, 2024, and appeared in the September 27, 2024, **Federal Register** (89 FR 79152) (hereinafter referred to as the ''SAHS billing activity final rule''), we finalized an approach to address the SAHS billing activity CMS identified for CY 2023 to protect the accuracy, fairness, and integrity of Shared Savings Program financial calculations.

Policies applicable to Shared Savings Program ACOs for purposes of quality reporting for other programs have also continued to evolve based on changes in statute, such as the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10), which established the Quality Payment Program. In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the MIPS and Advanced APMs and related policies applicable to eligible clinicians who participate in APMs, including the Shared Savings Program. We have also made updates to policies under the Quality Payment Program through the annual CY PFS rules.

c. Summary of Shared Savings Program Proposals

In sections III.F.2. through III.F.9. of this proposed rule, we propose modifications to the Shared Savings Program's policies. As a general summary, we are proposing the following changes to Shared Savings Program policies to:

- Modify requirements for determining an ACO's eligibility for Shared Savings Program participation options, for agreement periods beginning on or after January 1, 2027, to limit participation in a one-sided model to an ACO's first agreement period under the BASIC track's glide path (if eligible), and require ACOs inexperienced with performance-based risk Medicare ACO initiatives (defined at § 425.20) to progress more rapidly to higher levels of risk and potential reward under Level E of the BASIC track or the ENHANCED track (subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in benchmark year (BY) 1, BY2, or both, from participating in the ENHANCED track under the proposals at section III.F.4.b.(2).(b). of this proposed rule), compared to existing policies (section III.F.2 of this proposed rule).

- Modify Shared Savings Program eligibility requirements to require ACOs to make certain changes to their ACO participant list when an ACO participant experiences a change of ownership (CHOW) where the surviving Taxpayer Identification Number (TIN) is newly enrolled in the Provider Enrollment, Chain, and Ownership System (PECOS) with no prior Medicare billing claims history, during the performance year and outside of the annual change request cycle, and similarly allow for changes during the performance year to the ACO's Skilled Nursing Facility (SNF) affiliate list if a SNF affiliate undergoes a CHOW resulting in change to the Medicare enrolled TIN (section III.F.3 of this proposed rule).

- Modify Shared Savings Program eligibility requirements and financial reconciliation requirements in connection with the statutory requirement that ACOs have at least 5,000 assigned Medicare FFS beneficiaries to:

++ Require ACOs applying to enter a new agreement period to have at least 5,000 assigned beneficiaries in BY3, while allowing the ACO to have under 5,000 assigned beneficiaries in BY1, BY2, or both (section III.F.4.b.(2)(a) of this proposed rule).

++ Require ACOs that enter a new agreement period with less than 5,000 assigned beneficiaries in BY1, BY2, or both to enter the BASIC track (section III.F.4.b.(2).(b). of this proposed rule).

++ Cap shared savings and shared losses at a lesser amount for ACOs with fewer than 5,000 assigned beneficiaries in any of the three BYs, to help ensure the amounts reflect the ACO's performance in the program rather than normal variation in expenditures (section III.F.4.c.(1). of this proposed rule).

++ Exclude ACOs that fall below 5,000 assigned beneficiaries in any benchmark year from being eligible to leverage existing policies that provide certain low revenue ACOs participating in the BASIC track with increased opportunities to share in savings (section III.F.4.c.(2). of this proposed rule).

- Update the definition of primary care services used in beneficiary assignment at § 425.400(c) (section III.F.5. of this proposed rule).

• Revise the quality performance standard and other quality reporting requirements, including the following (section III.F.6. of this proposed rule):

++ Revise the definition of a beneficiary eligible for Medicare CQMs at § 425.20 for performance year 2025 and subsequent performance years so that the population identified for reporting within the Medicare CQM collection type would have greater overlap with the beneficiaries that are assignable to an ACO (section III.F.6.b. of this proposed rule).

++ Remove the health equity adjustment applied to an ACO's quality score beginning in performance year 2025 and revise the terminology used to describe the health equity adjustment and other related terms for performance years 2023 and 2024 (section III.F.6.c. of this proposed rule).

++ Update the APP Plus quality measure set for Shared Savings Program ACOs including the removal of Quality ID: 487 Screening for Social Drivers of Health (section III.F.6.d of this proposed rule).

++ Require CMS-approved survey vendors to administer the CAHPS for MIPS Survey via a web-mail-phone protocol beginning with 2027 (section III.F.6.e. of this proposed rule).

• Expand the application of the Shared Savings Program quality and finance extreme and uncontrollable circumstances (EUC) policies to an ACO that is affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, for performance year 2025 and subsequent performance years (section III.F.7 of this proposed rule).

• Revise the Shared Savings Program regulations for performance year 2025 and subsequent performance years to rename the ''health equity benchmark adjustment'' to the ''population adjustment'' (section III.F.8. of this proposed rule).

• Modify the Shared Savings Program quality reporting monitoring requirements at § 425.316 to specify for performance years beginning on or after January 1, 2026, requirements to monitor ACOs for failure to meet both the quality performance standard and the alternative quality performance standard, the latter of which (established in the CY 2023 PFS final rule) was inadvertently omitted from the existing framework. Similarly, modify § 425.224(b)(1)(ii)(A) related to reviewing applications for renewing and re-entering ACOs with a demonstrated pattern of failure to meet both the quality performance standard and the alternative quality performance standard (section III.F.9 of this proposed rule).

Taken together, the Shared Savings Program proposals in this proposed rule are anticipated to reduce program spending by $20 million in total through the end of the 10-year period 2026 through 2035, ranging from approximately $590 million lower spending at the 10th percentile to $670 million higher spending at the 90th percentile (as described in section VII of this proposed rule).

Certain policies, including both existing policies and the proposed new policies described in this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following proposals require the use of our authority under section 1899(i) of the Act: the proposal to change the requirements for ACOs' progression to performance-based risk under the program's participation options (described in section III.F.2 of this proposed rule); the proposal to potentially apply an alternative loss recoupment limit, in conducting financial reconciliation for each performance year, for an ACO with fewer than 5,000 assigned beneficiaries in any BY, for agreement periods beginning on or after January 1, 2027 (described in section III.F.4.c of this proposed rule); the proposal to exclude ACOs that fall below 5,000 assigned beneficiaries in any BY from being eligible to benefit from the policies providing certain low revenue ACOs participating in the BASIC track with additional opportunities to share in savings, for agreement periods beginning on or after January 1, 2027 (described in section III.F.4.c of this proposed rule); and the proposal to mitigate shared losses for an ACO determined to be affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, for performance year 2025 and subsequent performance years (described in section III.F.7.c of this proposed rule). As described in the Regulatory Impact Analysis in section VII. and elsewhere in this proposed rule, these proposed changes to our payment methodology are expected to improve the quality and efficiency of care and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies we have adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

We will continue to reexamine this projection in the future to ensure that an alternative payment model does not result in additional program expenditures and so continues to satisfy the requirement under section 1899(i)(3)(B) of the Act. If we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake notice and comment rulemaking to adjust the payment model to ensure continued compliance with the statutory requirements.

2. Shared Savings Program Participation Options Under the BASIC Track

a. Background on Shared Savings Program Participation Options

Section 1899(d) of the Act establishes the general requirements for shared savings payments to participating ACOs. Specifically, section 1899(d)(1)(A) of the Act specifies that providers of services and suppliers participating in an ACO will continue to receive payments under the original Medicare FFS program under Parts A and B in the same manner as would otherwise be made, and that an ACO is eligible to receive payment for a portion of savings generated for Medicare provided that the ACO meets both the quality performance standards established by the Secretary and achieves savings against its benchmark. Additionally, section 1899(i)(3) of the Act authorizes the Secretary to use other payment models rather than the one-sided model described in section 1899(d) of the Act, as long as the Secretary determines that the other payment model will improve the quality and efficiency of items and services furnished to Medicare beneficiaries without additional program expenditures.

Since its inception in 2012, the Shared Savings Program has included both one-sided shared savings only models incorporating the statutory payment methodology under section 1899(d) of the Act, and two-sided shared savings and losses models that were also based on the payment methodology under section 1899(d) of the Act but incorporated performance-based risk using the authority under section 1899(i)(3) of the Act to use other

payment models.[290] Under the Shared Savings Program regulations at § 425.20, we defined a one-sided model to mean a model under which the ACO may share savings with the Medicare program, if it meets the requirements for doing so, but is not liable for sharing any losses incurred under 42 CFR part 425 subpart G. At § 425.20, we defined a two-sided model to mean a model under which an ACO may share savings with the Medicare program, if it meets the requirements for doing so, and is also liable for sharing any losses incurred under subpart G. Subpart G of the program's regulations includes provisions on the calculation of shared savings and losses (as applicable) under the program's tracks, among other policies.

At § 425.600, we describe the options for an ACO's selection of risk model. This section includes the criteria used by CMS to determine an ACO's eligibility to participate under the program's tracks or levels of participation, as well as limitations on the amount of time an ACO may participate under a one-sided model, options and requirements for an ACO to participate under a two-sided model, and provisions governing the progression from a one-sided model to higher levels of risk and potential reward under a two-sided model (as applicable).

Over time, we have modified the available financial models under the Shared Savings Program, and approaches to determining an ACO's eligibility to participate under these financial models, which we refer to as the ACO's participation options. For additional information on the changes to the Shared Savings Program's available financial models, including finalization of the existing policies and background on earlier requirements, we refer readers to the discussion in the CY 2023 PFS final rule, at 87 FR 69805 through 69821.

As finalized with the December 2018 final rule (see 83 FR 67831 through 67841), for agreement periods beginning on July 1, 2019, and in subsequent years, eligible ACOs enter into an agreement period of not less than 5 years under one of two tracks of the Shared Savings Program, either the BASIC track (see §§ 425.600(a)(4) and 425.605) or the ENHANCED track (see §§ 425.600(a)(3) and 425.610). The BASIC track includes a glide path from one-sided model Levels A and B [291] to incrementally higher levels of performance-based risk under Levels C, D, and E. [292] The ENHANCED track offers the highest level of risk and potential reward under the Shared Savings Program. Level E of the BASIC track and the ENHANCED track each qualify as an Advanced APM under the Quality Payment Program.[293]

In rulemaking following the December 2018 final rule, we modified the approach for determining an ACO's eligibility for participation options in the BASIC track and ENHANCED track, along with the number of performance years an ACO may remain under a one-sided model of the BASIC track's glide path.[294] As finalized with the CY 2023 PFS final rule (87 FR 69805 through 69821), for agreement periods beginning on or after January 1, 2024, § 425.600(g) specifies the criteria CMS uses to determine an ACO's eligibility to enter an agreement period under the BASIC track's glide path, Level E of the BASIC track, or the ENHANCED track. Under these policies, CMS determines an ACO's eligibility for participation options in the BASIC track and ENHANCED track based on the ACO's experience and its ACO participants' experience with the Shared Savings Program and other performance-based risk Medicare ACO initiatives.[295] In accordance with § 425.600(g), we use the following approach:

- If an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives (as defined at § 425.20),[296] the ACO may enter either the BASIC track's glide path at any of the levels of risk and potential reward (Levels A through E), or the ENHANCED track. In accordance with § 425.600(g)(1)(i)–(iii), an ACO that is inexperienced with performance-based risk Medicare ACO initiatives may participate under the BASIC track's glide path for a maximum of two agreement periods:

++ An ACO that enters an agreement under the BASIC track's glide path at either Level A or Level B is deemed to have completed one agreement under the BASIC track's glide path and is only eligible to enter a second agreement under the BASIC track's glide path if the ACO continues to meet the definition of inexperienced with performance-based risk Medicare ACO initiatives and satisfies either of the following: (A) the ACO is the same legal entity as a current or previous ACO that previously entered into a participation agreement for participation in the BASIC track's glide path only one time; or (B) for a new ACO identified as a re-entering ACO, the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track's glide path only one time.

++ An ACO that is determined to be inexperienced with performance-based risk Medicare ACO initiatives but is not eligible to enter the BASIC track's glide path may enter either the BASIC track Level E for all performance years of the agreement period, or the ENHANCED track.

- If an ACO is determined to be experienced with performance-based risk Medicare ACO initiatives (as defined at § 425.20), the ACO may enter either the BASIC track Level E for all performance years of the agreement period, or the ENHANCED track.

Section 425.600(a)(4)(i)(C) specifies glide path progression for agreement

[290] For additional background, we refer readers to the CY 2023 PFS final rule (87 FR 69805 and 69806) for a summary of changes to the program's financial models, or ''tracks,'' over time.

[291] For details on the Level A financial model, see §§ 425.600(a)(4)(i)(A)(*1*) and 425.605(d)(1)(i). For details on the Level B financial model see §§ 425.600(a)(4)(i)(A)(*2*) and 425.605(d)(1)(ii).

[292] For details on the Level C financial model, see §§ 425.600(a)(4)(i)(A)(*3*) and 425.605(d)(1)(iii). For details on the Level D financial model, see §§ 425.600(a)(4)(i)(A)(*4*) and 425.605(d)(1)(iv). For details on the Level E financial model, see §§ 425.600(a)(4)(i)(A)(*5*) and 425.605(d)(1)(v).

[293] For related information, on Advanced APM status under the Quality Payment Program for each track/level, see the December 2018 final rule, Table 3 ''Comparison of Risk and Reward Under BASIC Track and ENHANCED Track'', and table notes at 83 FR 67852 and 67853.

[294] We refer readers to discussions in earlier rulemaking, including: December 2018 final rule (83 FR 67863 through 67922); May 8, 2020 COVID–19 IFC (85 FR 27575 and 27576) and CY 2021 PFS final rule (85 FR 84767 through 84769); Fiscal Year (FY) 2022 Medicare Hospital Inpatient Prospective Payment System (IPPS) and Long-Term Care Hospital (LTCH) Prospective Payment System (PPS) final rule (86 FR 45502 through 45506); and CY 2023 PFS final rule (87 FR 69805 through 69821).

[295] See the definitions of ''experienced with performance-based risk Medicare ACO initiatives,'' ''inexperienced with performance-based risk Medicare ACO initiatives,'' and ''performance-based risk Medicare ACO initiative'' under § 425.20.

[296] In accordance with § 425.20 ''inexperienced with performance-based risk Medicare ACO initiatives'' means an ACO that CMS determines meets all of the following: (1) the ACO is a legal entity that has not participated in any performance-based risk Medicare ACO initiative as defined at § 425.20, and has not deferred its entry into a second Shared Savings Program agreement period under a two-sided model at § 425.200(e); and (2) less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model at § 425.200(e), in each of the 5 most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years. For brevity, we sometimes refer to such ACOs as ''inexperienced with performance-based risk'' or ''inexperienced with risk.''

periods beginning on or after January 1, 2024. Under these requirements, an ACO eligible to enter the BASIC track's glide path may elect to enter its agreement period at any of the levels of risk and potential reward available under Levels A through E. An ACO is automatically advanced to the next level of the BASIC track's glide path at the start of each subsequent performance year of the agreement period, if a higher level of risk and potential reward is available under the BASIC track, except in the following circumstances: (1) the ACO elects to transition to a higher level of risk and potential reward within the BASIC track's glide path as provided at § 425.226(a)(2)(i); (2) the ACO elects to maintain its level of participation as provided at § 425.600(a)(4)(i)(C)(*3*); [297] or (3) the ACO elected to participate under a one-sided model, but is determined to be experienced with performance-based risk Medicare ACO initiatives and will be automatically advanced to Level E within the BASIC track at the start of the next performance year and will remain in Level E for all subsequent performance years of the agreement period, in accordance with § 425.600(h)(2)(i).[298]

Under our existing policies, new ACOs inexperienced with performance-based risk Medicare ACO initiatives may participate in a BASIC track one-sided model for up to 7 performance years before being required to transition to performance-based risk. For example, an eligible ACO may enter a first BASIC track agreement period in the glide path and elect to remain under Level A for all 5 performance years of this agreement period. If the ACO is eligible to enter a second BASIC track agreement period in the glide path and enters at Level A for its first performance year, the ACO would be automatically advanced to Level B in its second performance year, respectively its sixth and seventh cumulative performance years under a one-sided model. The ACO would participate under performance-based risk for the third and subsequent performance years of its second agreement period under the BASIC track, either by being automatically advanced to Level C, D and E for each of the 3 remaining performance years of its second agreement period under the glide path, or electing to advance more rapidly to higher levels of risk and reward along the glide path.

ACOs that initially elect to remain in Level A of the BASIC track for all 5 performance years for their first agreement period under the BASIC track have the option to subsequently elect to transition to performance-based risk during this agreement period in accordance with § 425.226(a)(2)(i) and § 425.600(a)(4)(i)(C)(*3*)(*iii*), and (a)(4)(i)(C)(*4*) to (*6*). For example, an ACO inexperienced with performance-based risk Medicare ACO initiatives that enters an agreement period under the BASIC track at Level A and elects to maintain participation at Level A for the second and subsequent performance years of this agreement period may subsequently elect to advance to a two-sided model along the BASIC track's glide path (Level C, D or E) for performance year 3, 4 or 5 of this agreement period. In such a case, in accordance with § 425.600(a)(4)(i)(C)(*6*), when an ACO elects to transition to a higher level of risk and reward available under the BASIC track's glide path, the ACO would be automatically advanced to the next level of the BASIC track's glide path at the start of each subsequent performance year of the agreement period, if a higher level of risk and potential reward is available. Further, in progressing to performance-based risk in the BASIC track's glide path, the ACO would be considered experienced with performance-based risk Medicare ACO initiatives for purposes of determining the ACO's participation options for a future agreement period, and therefore eligible to enter either the BASIC track Level E for all performance years or the ENHANCED track in accordance with § 425.600(g)(2).

CMS accepts applications for ACOs to participate in the Shared Savings Program annually. Applicant ACOs are required to make a track selection when submitting their application, which is reviewed by CMS to determine the ACO's eligibility for the selected option.[299] During the annual change request cycle, for ACOs currently participating in the program, ACOs participating in the BASIC track's glide path have the opportunity to submit participation options change requests, in connection with their level of participation, among other change requests, prior to the start of the next performance year in the program. For instance, ACOs participating in the BASIC track's glide path may elect to remain in Level A (if participation in Level A was previously elected), or to advance to higher levels of risk and reward along the glide path.[300] The timing of the annual application cycle and change request cycle typically coincide, and span a period from Spring through Fall in advance of the start of the upcoming performance year beginning on January 1st.[301] During the application and change request cycles, CMS communicates information about an ACO's experience with performance-based risk Medicare ACO initiatives, and track/level eligibility, among other information, at standardized intervals, to applicant ACOs and currently participating ACOs.

b. Considerations for Timing of ACOs' Progression to Performance-Based Risk in the Shared Savings Program

As we have explained in earlier rulemaking, and as we continue to believe, financial models under which ACOs bear a degree of financial risk have potential to induce more meaningful systematic change in providers' and suppliers' behavior towards meeting the Shared Savings Program's goals, compared to one-sided models (see for example, 76 FR 67904 through 67909, 80 FR 32758 through 32760, and 83 FR 67967 through 67968). As described in section III.F.2.a. of this proposed rule, our policies on the amount of time an ACO can participate under a one-sided model of the Shared Savings Program, and progression to two-sided risk, have varied over time, including as a result of changes finalized with the CY 2023 PFS final rule. In the CY 2023 PFS final rule (87 FR 69808), we explained our ongoing consideration for how long ACOs should be allowed to participate under a one-sided model (including through prior rulemaking). In explaining what

[297] In accordance with § 425.600(a)(4)(i)(C)(*3*), a new ACO (not a renewing ACO or re-entering ACO as defined at § 425.20) participating in its first agreement period under the BASIC track that enters the glide path at Level A may elect to remain under Level A for all subsequent performance years of the agreement period. As described in the CY 2023 PFS final rule, an ACO must make this election prior to its automatic advancement to Level B for performance year 2 of its agreement period under the BASIC track's glide path. See 87 FR 69810.

[298] We refer readers to the CY 2023 PFS final rule (87 FR 69811 and 69812), in which we finalized the approach to monitoring of risk experience for agreement periods under Level A of the BASIC track, for performance years beginning on or after January 1, 2024, for a detailed explanation and examples of the approach.

[299] See Medicare Shared Savings Program, Application Reference Manual (April 2025, version 7), available at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/sharedsavingsprogram/downloads/ssp-application-reference-manual.pdf*.

[300] See Medicare Shared Savings Program, Managing Program Participation Guidance (April 2025, version 2), available at *https://www.cms.gov/files/document/managing-program-participation-guidance.pdf*.

[301] For resources and information on the Shared Savings Program application and change request cycles, refer to the Shared Savings Program website at *https://www.cms.gov/medicare/payment/fee-for-service-providers/shared-savings-program-ssp-acos* (including the Application Types & Timelines webpage, and Application Toolkit webpage).

has contributed to this consideration, we identified the importance of balancing our goal of driving the greatest possible shift to high-value care delivery, which we believe may be incentivized most effectively under a two-sided model, with a concern that requiring ACOs to take on too much downside risk too quickly may disincentivize program participation and reduce the program's potential to positively affect the quality and cost of care furnished to beneficiaries. As described in the CY 2023 PFS final rule, a number of factors informed our proposal and decision to finalize the current approach that allows eligible ACOs to participate for a 5-year agreement period under Level A of the BASIC track with the opportunity to enter a second agreement period under the BASIC track's glide path beginning under a one-sided model. In the following discussion, we summarize these considerations.

In the CY 2023 PFS final rule (see 87 FR 69806 through 69807), we provided background on comments summarized in the December 2018 final rule, which finalized our proposal to limit ACOs to two performance years under a one-sided model (or three performance years for eligible low revenue ACOs).[302] We explained that most commenters on that proposal recommended that CMS extend the time any ACO can participate in a one-sided model to 3 performance years, as opposed to the 2 performance years proposed for ACOs eligible to participate under the BASIC track with participation agreements beginning on or after January 1, 2020 that do not qualify for a third year under the one-sided model under the exception at § 425.600(a)(4)(i)(B)(*2*)(*ii*), stating that it takes longer than 2 performance years to implement meaningful changes in a healthcare delivery model and among healthcare provider and patient populations. Other commenters believed that the progression to two-sided risk that we proposed and ultimately finalized was far too aggressive and would deter participation. These commenters generally suggested allowing for 4 or 5 performance years (or a full agreement period) under a one-sided model. Some commenters suggested that rural ACOs should be allowed at least two, 5-year agreement periods under a one-sided model (83 FR 67847).

In the CY 2023 PFS final rule (see 87 FR 69807 through 69808), we described participation trends for PY 2022 and explained that while many ACOs had agreed to participate under a two-sided model, not all ACOs appeared to be ready to take on performance-based risk. In particular, we described our experience with policies finalized in connection with the PHE for COVID–19, in which ACOs participating in the BASIC track's glide path could forgo automatic advancement and ''freeze'' their participation for PY 2021 and PY 2022 at their PY 2020 and PY 2021 levels, respectively.[303] We observed that when given the opportunity to freeze at the ACO's current BASIC track level of the glide path, most eligible ACOs under a one-sided model (Level A or Level B) chose to remain in a one-sided model. More generally, we explained that although we continued to believe there are stronger incentives for increased efficiency when ACOs are in a two-sided risk track, ACOs had continued to report that they were constrained by the participation options finalized with the December 2018 final rule, and needed more time to invest in infrastructure and redesigned care processes for high quality and efficient healthcare service delivery before transitioning to performance-based risk. See 87 FR 69808.

We noted our determination that allowing a maximum of 7 years under the one-sided model, as finalized in the CY 2023 PFS final rule, would strike a more appropriate balance within the structure of 5 performance year agreement periods, than only allowing for 2 years under a one-sided model. See 87 FR 46114; see also 87 FR 69809. We also noted that giving ACOs longer than 7 years or potentially unlimited time under a one-sided model would dilute the program's ability to meaningfully influence expenditures and quality through the incentives provided by ACO risk assumption. Moreover, we explained that the approach that would extend the time an eligible ACO could participate under a one-sided model to 7 years would allow ACOs more time to make investments in care improvement and to capitalize on these investments, while still working to lower costs and improve the quality of care for their assigned beneficiaries. 87 FR 69809. We also recognized that ACOs are best able to select their participation options to meet the needs of their organizations, including when to time their transition to performance-based risk, including within an agreement period. *Id.* We also explained our intention with these changes was to provide ACOs with a more gradual ''on-ramp'' to taking on two-sided risk and to allow them the flexibility to best ensure their readiness to take on two-sided risk, and our belief that the approach would encourage more ACOs to form and join the program, as well as encourage currently participating ACOs to remain in the program. See 87 FR 69812; see also 87 FR 69816.

In the CY 2023 PFS final rule, we also recognized differing potential barriers to program participation by low revenue ACOs, and high spending ACOs, among other ACOs with particular characteristics or compositions. For instance, we recognized the importance of finalizing the participation option under which an eligible ACO may stay in a one-sided model of the BASIC track for the full 5-year agreement period for growing participation in the Shared Savings Program by eligible ACOs serving higher spending populations, particularly low revenue, physician-led ACOs. See 87 FR 70195. In combination with the expanded time under a one-sided model, policies finalized with the CY 2023 PFS final rule to allow the option for eligible new, low revenue ACOs inexperienced with risk to receive advance investment payments (see § 425.630), and expanded opportunities for certain low revenue ACOs participating in the BASIC track to share in savings even if they do not meet the MSR (see § 425.605(h)), were designed to support program participation by low revenue ACOs. See 87 FR 70195. Additionally, in the CY 2023 PFS final rule (87 FR 70192), we explained that in combination with modifications to the benchmarking methodology to reduce the impact of the negative regional adjustment also being finalized in that rule, offering eligible ACOs a shared savings-only BASIC track participation option for a full 5-year agreement period, was expected to significantly re-engage participation for ACOs serving higher cost beneficiaries. We also explained our belief that flexibility with respect to the timeline for progression to two-sided risk would be important in the Shared Savings Program to encourage small, rural, safety-net providers to form ACOs or to join larger, more urban practices to share resources,

[302] See § 425.600(a)(4)(i)(B)(*2*)(*i*)–(*ii*) for provisions on automatic advancement along the BASIC track's glide path. Note, ACOs with an agreement period beginning on July 1, 2019 could participate under a one-sided model for up to 3 performance years under the exception to automatic advancement along the BASIC track's glide path in accordance with § 425.600(a)(4)(i)(B)(*2*)(*i*), or for four performance years under the exception for eligible low revenue ACOs in accordance with § 425.600(a)(4)(i)(B)(*2*)(*ii*).

[303] The PHE for COVID–19 was in effect starting in January 2020, and ongoing at the time of the CY 2023 PFS rulemaking during 2022, and expired on May 11, 2023. See for example, U.S. Department of Health and Human Services website, COVID–19 Public Health Emergency webpage, available at *https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html.*

which among other factors could help provide high need beneficiaries served by small, rural, safety-net providers with the resources to better coordinate their care and improve outcomes. See 87 FR 69809; see also 87 FR 69813.

Recently, CMS has announced a vision to Make America Healthy Again.[304] Relatedly, the Innovation Center announced a strategy to focus on testing models that transform the U.S. health system into one that builds healthier lives through prevention, individual empowerment, and choice and competition, under which people achieve their health goals and the providers caring for them are directly accountable for their health outcomes and the costs of their care.[305] This strategy includes, among other objectives for protecting Federal taxpayers, to require all models to have downside financial risk and require providers to assume some of the financial risk. Similarly, with the Shared Savings Program, we are examining approaches to encourage ACO participation under two-sided models.

In light of CMS' current vision and strategic direction, we are revisiting Shared Savings Program policies on the amount of time an ACO can remain under a one-sided model, and the progression to performance-based risk, and in particular the current policy that allows ACOs to participate for up to 7 performance years under a one-sided model. Specifically, we are considering the effectiveness of the current requirements for determining an ACO's participation options, finalized with the December 2018 final rule, and modified through subsequent rulemaking, including the CY 2023 PFS final rule, as summarized elsewhere in this section of this proposed rule, in achieving a balance between encouraging transition to two-sided risk and a concern that requiring ACOs to take on too much downside risk too quickly may disincentivize program participation. In the following discussion, we describe more recent trends in ACO participation in the Shared Savings Program (including as a result of changes to program requirements through rulemaking) and ACO financial performance, which inform our consideration of our current policies on ACOs' progression to performance-based risk under the Shared Savings Program. This discussion focuses on Shared Savings Program participation trends in general between PY 2018 and PY 2025; participation trends among new, low revenue ACOs inexperienced with performance-based risk Medicare ACO initiatives, and ACOs serving medically complex, high-cost populations, for which we have finalized policies to facilitate program participation through CY 2023, 2024, and 2025 PFS rulemaking; our experience with the timing of ACO progression to performance-based risk under participation options that allow an eligible ACO to participate for up to 7 performance years under a one-sided model; and financial performance trends for recent performance years, among ACOs transitioning from one-sided to two-sided levels of the BASIC track, or remaining under the BASIC track's two-sided model levels.

The redesign of participation options with the December 2018 final rule greatly increased ACO participation in two-sided models.[306] For PY 2018, 82 percent of ACOs were participating under a one-sided model, and 18 percent of ACOs were participating under a two-sided model.[307] For PY 2025, 29 percent of ACOs are participating under a one-sided model, and 71 percent of ACOs are participating under a two-sided model.[308] With respect to recent trends, Table 47 shows the number of ACOs participating in the BASIC track (by Level) and ENHANCED track for PYs 2022 through 2025.[309] As shown in Table 47, participation in one-sided models is lower in PY 2025 (29 percent of ACOs) compared to PY 2022 (41 percent of ACOs), and PY 2023 and PY 2024 (33 percent of ACOs for each PY). Further, from program participation for PYs 2022 through 2025, we have observed that when ACOs participate under two-sided risk they opt for higher levels of risk and reward. Very few ACOs are participating under Levels C or D of the BASIC track's glide path, compared to participation in Level E of the BASIC track or the ENHANCED track. Among ACOs participating under two-sided risk, more ACOs are participating under the highest level of risk and potential reward offered by the ENHANCED track than in Levels C, D and E of the BASIC track combined.

TABLE 47: COUNT OF ACOs PARTICIPATING IN BASIC TRACK LEVELS AND ENHANCED TRACK FOR PYs 2022 THROUGH 2025

Performance Year	Total	BASIC Track			ENHANCED track
		Levels A and B	Levels C and D	Level E	
PY 2022	483	199 (41%)	40 (8%)	98 (21%)	146 (30%)
PY 2023	456	151 (33%)	19 (4%)	125 (28%)	161 (35%)
PY 2024	480	159 (33%)	10 (2%)	104 (22%)	207 (43%)
PY 2025	477	137 (29%)	5 (1%)	81 (17%)	254 (53%)

Shared Savings Program participation with the two most recent start dates shows that nearly one-half of new ACOs are entering a one-sided model of the BASIC track, while the vast majority of ACOs continuing their participation in the program are participating under a two-sided model. Among the 140 ACOs entering a new agreement period for the January 1, 2024 start date, 51.6 percent (or 31 of 60) of ACOs participating in their first agreement period entered the BASIC track at Level A, while 2.5 percent (or 2 of 80) of ACOs participating in their second or subsequent agreement period entered the BASIC track at Level A. Among the 229 ACOs entering a new agreement period for the January 1, 2025 start date, 45.9 percent (or 17 of 37) of ACOs participating in their first agreement period entered the BASIC track at Level A or B, while 17.7 percent (or 34 of 192) of ACOs participating in their second or subsequent agreement period entered the BASIC track at Level A.

We have gained experience with ACOs' participation under changes to the Shared Savings Program policies more recently finalized with CY 2023, 2024 and 2025 PFS rulemakings, which include policies to encourage participation by new, low revenue ACOs, such as through the availability of a payment option for eligible ACOs to receive advance investment payments, and ACOs serving medically complex, high-cost patient populations, such as through changes to the program's benchmarking methodology. Our initial experience with ACOs entering agreement periods beginning on January 1, 2024 and January 1, 2025, offers insight into participation among such ACOs.

For agreement periods beginning on January 1, 2024, and subsequent years, eligible new, low revenue ACOs inexperienced with performance-based risk Medicare ACO initiatives may receive advance shared savings payments in the form of advance investment payments designed to assist ACOs that face difficulty funding the start-up costs for forming ACOs, caring for beneficiaries in underserved communities, and achieving long term success in the Shared Savings Program (see 87 FR 69782 through 69806). To be eligible to receive advance investment payments for the first two performance years of the ACO's agreement period, the ACO must enter the program under BASIC track Level A and remain under a one-sided model level of the BASIC track's glide path (Level A or B) for its second performance year, among other requirements specified at § 425.630(b). Among the new, low revenue ACOs inexperienced with performance-based risk Medicare ACO initiatives recently entering a first agreement period in the Shared Savings Program under a one-sided model, 19 of 21 of these new, low revenue ACOs inexperienced with performance-based risk entering an agreement period beginning on January 1, 2024 opted to receive advance investment payments for at least one performance year, while 10 of 12 of these new, low revenue ACOs inexperienced with performance-based risk entering an agreement period beginning on January 1, 2025 are receiving advance investment payments for PY 2025.[310]

Further, through recent rulemaking, we have refined the Shared Savings Program's financial benchmarking methodology to support participation by ACOs serving medically complex, high-cost populations. For instance, with the CY 2025 PFS final rule (89 FR 98155 through 98166), we established an approach applicable for agreement periods beginning on January 1, 2025, and in subsequent years, under which we adjust an ACO's historical benchmark based on the highest of three positive adjustments for which it is eligible, either the regional adjustment, prior savings adjustment, or health equity benchmark adjustment, in accordance with § 425.652(a)(8)(ii). As we explained in the CY 2025 PFS final rule (see 89 FR 98157), the health equity benchmark adjustment (HEBA), was designed to encourage new participation from ACOs serving medically complex, high-cost populations that are receiving lower regional adjustments or lower prior savings adjustments, or receiving neither adjustment. As described in the CY 2025 PFS final rule (89 FR 98523 through 98524), increased program participation by these ACOs as a result of these benchmark changes are expected to generate $260 million greater net savings for Medicare over 10 years.

Based on early experience with program participation for the January 1, 2025 agreement period start date, the HEBA (as proposed to be renamed the ''population adjustment'' as described in section III. F.8 of this proposed rule) is anticipated to provide an upward adjustment to ACO historical benchmarks for 33 of 229 ACOs that began a new agreement period for the 2025 start date (which includes new, renewing and re-entering ACOs and is approximately 14 percent of ACOs beginning a new agreement period with a January 1, 2025 start date). From an internal analysis of PY 2025 preliminary benchmarks for ACOs entering an agreement period beginning on January 1, 2025, we estimate that among the 33 ACOs that are anticipated to receive a HEBA to their historical benchmark, 13 are new ACOs participating in their first agreement period and would otherwise not have received a positive adjustment to the benchmark, 7 are in a one-sided model, and 6 are in a two-sided model. While we are still gaining experience with the impact of the HEBA on ACO benchmarks and ACO participation, these early findings suggest that the HEBA may incentivize participation in the Shared Savings Program from ACOs serving high spending and high risk populations, including encouraging participation in two-sided models.

More generally, we considered participation trends among ACOs that are higher spending compared to their

[310] See Medicare Shared Savings Program, Accountable Care Organizations, Public Use Files, for PY 2024 and PY 2025, available at *https://data.cms.gov/medicare-shared-savings-program/accountable-care-organizations*. We note that one ACO that began receiving advance investment payments in PY 2024 is no longer receiving these payments in PY 2025.

regional service area, which would have a negative regional adjustment value, and ACOs with lower spending compared to their regional service area, which would have a positive regional adjustment value (see §§ 425.601(f)(5) and 425.656(e)(5)). Based on internal analysis, among both groups of ACOs—higher spending or lower spending compared to their regional service area—entering the program for an initial agreement period with the 2022, 2023, 2024 or 2025 start date,[311] either an equal number of ACOs, or more ACOs, entered two-sided models compared to one-sided models. We also observe that the number of ACOs with higher spending compared to their regional service area that are entering the program for an initial agreement period has generally increased with recent start dates, with 6 of such ACOs entering in 2022, 9 of such ACOs entering in 2023, 16 of such ACOs entering in 2024, and approximately 14 of such ACOs entering in 2025. These trends suggest that the policies adopted in CY 2023, 2024, and 2025 PFS rulemaking cycles, applicable for the January 1, 2024 and January 1, 2025 start dates, are encouraging participation from ACOs serving high spending and high risk populations. As a more general consideration, we continue to recognize there are ACOs that may need time to gain experience with the Shared Savings Program by participating in a one-sided model prior to transitioning to two-sided risk, which may be indicated by entry of some higher spending ACOs in the Shared Savings Program under a one-sided model for their first agreement period.

Additionally, the experience of new ACOs entering the program with July 1, 2019 or January 1, 2020 agreement period start dates provides insight into participation options in which ACOs are allowed to participate for a first agreement period in the BASIC track's glide path under a one-sided model and renew their participation agreements to continue their participation in the glide path.[312] We analyzed program participation by ACOs that entered a first agreement period beginning on July 1, 2019 or January 1, 2020,[313] and renewed to continue their participation in the Shared Savings Program for a second or subsequent agreement period, for trends in whether ACOs have chosen to enter and remain in a one-sided model (if eligible) or progress to performance-based risk. For July 1, 2019 starters, our observations span a period of 7 performance years (the 6-month performance year from July 1, 2019 through December 31, 2024, and PYs 2020 through 2025). For 2020 starters, our observations span a period of 6 performance years (PYs 2020 through 2025). As shown in Table 48, many ACOs appear prepared to participate under two-sided risk after 5 or fewer years under a one-sided model. Approximately 16 percent (or 4 of 25) of July 1, 2019 starters, and 10.5 percent (or 2 of 19) of 2020 starters chose to enter and remain under one-sided for their first agreement period and upon renewal in a second agreement period of the BASIC track's glide path, while the vast majority of ACOs elected to participate under performance-based risk either during their first agreement period or upon renewal.

TABLE 48: Participation as of PY 2025 for ACOs that Entered a First Agreement Period Beginning on either July 1, 2019 or January 1, 2020 and Renewed to Continue Participation in the Shared Savings Program

Track / Level for ACO's First Agreement Period and as of PY 2025	New ACOs for 7/1/2019 Start Date	New ACOs for 1/1/2020 Start Date
Participated in one-sided model of the BASIC track for 1st agreement period; entered 2nd agreement period in the BASIC track's glide path at Level A	4 (16.0%)	2 (10.5%)
Participated in one-sided model of the BASIC track for 1st agreement period; entered 2nd agreement period under two-sided risk at renewal	9 (36.0%)	9 (47.4%)
Entered a one-sided model of the BASIC track at the start of its 1st agreement period and progressed to a two-sided model of the BASIC track during 1st agreement period	6 (24.0%)	2 (10.5%)
Participated in two-sided model for 1st agreement period; continued participation in two-sided model for 2nd agreement period	6 (24.0%)	6 (31.6%)
Total	25 (100%)	19 (100%)

Note: The total number of ACOs excludes ACOs with a participation agreement effective termination date prior to January 1, 2025: 19 ACOs with a July 1, 2019 start date of which 13 ACOs were participating in a one-sided model; and 17 ACOs with a 2020 start date of which 10 ACOs were participating under a one-sided model.

As described in the Regulatory Impact Analysis, section VII. of this proposed rule, we analyzed financial performance of groups of ACOs that participated in both PYs 2022 and 2023. Cohorts were assembled based on the track/level of participation of the ACOs in PY 2022 and PY 2023. This analysis shows the highest rates of average net savings among the following groups: (1) ACOs remaining in two-sided models of the BASIC track (Levels C, D or E) over the

[311] Based on analysis of preliminary benchmark data among ACOs entering an initial agreement period with a 2025 start date.

[312] Eligible ACOs that participated under the BASIC track's glide path for an agreement period beginning on July 1, 2019 or January 1, 2020, and entered in Level A or Level B, were allowed to elect to continue their participation in a one-sided model for the duration of their agreement period, as a result of a series of policy changes. See § 425.600(a)(4)(i)(B)(*1*), (a)(4)(i)(B)(*2*)(*i*), (a)(4)(i)(B)(*2*)(*iii*)–(*iv*) and (a)(4)(i)(B)(*2*)(*vi*). If eligible, these ACOs could enter a second agreement period under the BASIC track's glide path in accordance with § 425.600(g)(1).

[313] The agreement period from July 1, 2019 through December 31, 2024 spanned 5 years and 6 months, across 6 performance years, in accordance with § 425.200(b)(4)(ii) and (c)(3). The agreement period from January 1, 2020 through December 31, 2024 spanned 5 years, in accordance with § 425.200(b)(5).

2-year period; and (2) ACOs moving from a one-sided model of the BASIC track (Level A or B) to a two-sided model of the BASIC track (Level C, D or E) over PY 2022 to PY 2023. These cohorts also demonstrated the lowest average unadjusted per capita spending growth rates over this 2-year period. These findings suggest that ACOs transitioning to or remaining in two-sided model levels of the BASIC track outperform ACOs remaining in one-sided models of the BASIC track.

To follow is a summary of the key points from our observations previously described in this section of this proposed rule. Based on early experience with ACO participation under policies applicable with agreement periods beginning on January 1, 2024, or January 1, 2025, and subsequent years, the option for ACOs to enter a one-sided model for a first agreement period in the BASIC track appears to be an important pathway for attracting new ACOs to enter the Shared Savings Program, including new, low revenue ACOs, particularly in combination with the option to receive advance investment payments, and ACOs serving higher spending populations, particularly in combination with the benchmarking methodology applicable for agreement periods beginning on January 1, 2025, and subsequent years, under which an ACO may receive an upward adjustment to its benchmark through the application of the HEBA. From participation trends of ACOs entering the Shared Savings Program for a first agreement period beginning on July 1, 2019 or January 1, 2020, few ACOs choose to remain under a one-sided model beyond an initial agreement period under the BASIC track's glide path, and many more ACOs were prepared to participate under a two-sided model either during their first agreement period or upon renewal. Further, based on participation data from PYs 2022 through 2025, ACOs are tending to enter the program's two-sided models under the highest levels of risk and potential reward, under Level E of the BASIC track or the ENHANCED track. Additionally, ACOs transitioning from one-sided to two-sided levels of the BASIC track, or remaining under the BASIC track's two-sided model levels, are anticipated to generate higher levels of average net savings compared to ACOs that remain in a one-sided model of the BASIC track, based on internal analysis of PY 2022 and PY 2023 financial performance.

c. Proposal To Limit Participation in a One-Sided Model to an ACO's First Agreement Period Under the BASIC Track's Glide Path

We believe that an approach under which we limit the amount of time an ACO can remain under a one-sided model of the Shared Savings Program and thereby encourage ACOs to transition to performance-based risk, would be aligned with our current strategic direction, as part of achieving CMS' vision to Make America Healthy Again. In light of the previously described findings from our experience with ACOs' participation in the Shared Savings Program under agreement periods beginning on or after July 1, 2019 through January 1, 2025 (discussed in section III.F.2.b of this proposed rule), we believe that allowing eligible ACOs inexperienced with performance-based risk Medicare ACO initiatives to participate for a 5-year agreement period under the BASIC track's glide path, in which they could elect to remain under a one-sided model for 5 years, remains an important option to attract participation by ACOs that may need to gain experience with the accountable care model and invest in infrastructure and redesigned care processes for high quality and efficient healthcare service delivery before transitioning to performance-based risk. In particular, we continue to believe that this participation option serves as an important pathway for program entry and participation by eligible new, low revenue ACOs inexperienced with performance-based risk Medicare ACO initiatives, particularly in combination with the option to receive advance investment payments, and by eligible ACOs serving medically complex, high-cost populations, in combination with the program's current benchmarking methodology. We also believe that this participation option would remain important for attracting small, rural, safety-net providers to join or form ACOs.

However, as a departure from our position as described in CY 2023 PFS rulemaking, we are concerned that the current participation option permitting eligible ACOs to extend participation under the BASIC track's glide path to a second agreement period, in which they can participate under a one-sided model for the first two performance years (thereby allowing eligible ACOs to remain under a one-sided model for up to 7 performance years) prior to progressing to two-sided risk, may weaken the incentives for ACOs to transition to two-sided risk, and for ACOs to make more meaningful changes to healthcare delivery during their first 5-year agreement period, or at the start of their second agreement period. Based on our experience with participation by ACOs that entered a first agreement period beginning on July 1, 2019 or January 1, 2020, and renewed to continue their participation in the Shared Savings Program for a second or subsequent agreement (as described in section III.F.2.b of this proposed rule), ACOs tend to accept performance-based risk by their sixth performance year in the program, suggesting that one 5-year agreement period under a one-sided model would be sufficient for eligible ACOs to gain experience with the Shared Savings Program prior to accepting performance-based risk. Permitting ACOs to participate for longer periods under a one-sided model could impede CMS' achievement of the Shared Savings Program's goals. Alternatively, disallowing a second agreement period under the BASIC track's glide path, thereby requiring an ACO to enter Level E or the ENHANCED track by their second agreement period, would create greater incentives for ACOs to make the most meaningful changes in healthcare delivery, and in turn cost and quality improvements, for their assigned Medicare FFS beneficiary population.

Therefore, we propose to use our authority under section 1899(i)(3) of the Act to limit the amount of time an ACO may participate in the Shared Savings Program under a one-sided model, and require ACOs to more rapidly progress to higher levels of risk and potential reward under a two-sided model. We propose that for agreement periods beginning on or after January 1, 2027, an ACO that is inexperienced with performance-based risk Medicare ACO initiatives entering the BASIC track's glide path at Level A may continue to elect to remain under a one-sided model for all subsequent performance years of its first 5-year agreement period. However, we propose such an ACO must enter its second or subsequent agreement period under Level E of the BASIC track or the ENHANCED track (subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track under the proposals at section III.F.4.b.(2).(b) of this proposed rule). In so doing, this proposal limits the amount of time an ACO can participate under the BASIC track's glide path to one agreement period, and also limits the amount of time under a one-sided model to, at most, 5 performance years.

We believe this proposed approach strikes a balance between (1) policies that support growth of the Shared Savings Program by allowing for participation under a one-sided model for up to the entirety of an eligible ACO's first agreement period, and (2) policies encouraging participation in performance-based risk which we believe have the potential for increased effectiveness towards meeting the program's goals. This proposed approach retains an option for ACOs inexperienced with performance-based risk Medicare ACO initiatives, and that have no prior participation in the Shared Savings Program, to participate for their first agreement period under the BASIC track's glide path, with the option for ACOs to elect to remain under a one-sided model for this 5-year agreement period, or to advance along the glide path to higher levels of risk and potential reward. We recognize that commenters in earlier rulemaking have made various suggestions for the amount of time an ACO should be allowed to remain under a one-sided model, including 4 or 5 performance years or a full agreement period (as described in section III.F.2.b of this proposed rule). See 87 FR 69806 through 69807; see also 83 FR 67847. We prefer an approach that continues to allow eligible ACOs to participate for up to 5 performance years (the duration of such ACOs' first 5-year agreement period) under a one-sided model, which we believe is effective in attracting new ACOs to enter the Shared Savings Program, based on our analysis of participation trends, as we describe in section III.F.2.b of this proposed rule. Additionally, using an approach that leverages the existing structure of the regulations for how we identify participation options for an ACO inexperienced with performance-based risk Medicare ACO initiatives entering a first agreement period reduces complexity in the program's policies, thereby facilitating ACOs' ability to ascertain the available participation options and allowing CMS to more readily implement the proposed approach to determining ACO eligibility for participation options. This proposed approach would also encourage ACOs inexperienced with performance-based risk Medicare ACO initiatives participating in the BASIC track's glide path for a first agreement period to prepare to take on two-sided risk no later than the start of their next 5-year agreement period in the Shared Savings Program, and thereby more quickly make meaningful changes to healthcare delivery, than the current approach.

To create the most meaningful incentive to change healthcare delivery and based on our experience with ACOs' selection of participation options, we believe it is appropriate to require ACOs to transition to participation in Level E of the BASIC track or the ENHANCED track after no more than 1 agreement period under the BASIC track's glide path, which could include up to 5 performance years of participation under a one-sided model (for eligible ACOs). A number of factors informed our consideration of this approach. For one, under the benchmarking methodology applicable to agreement periods beginning on January 1, 2025, and in subsequent years, in accordance with § 425.652(a)(8)(ii), we adjust an ACO's historical benchmark based on the highest of three positive adjustments for which it is eligible, either the regional adjustment, prior savings adjustment, or HEBA. This approach to upwardly adjusting the benchmark could bolster the value of the rebased benchmark, calculated at § 425.652(c), for the ACO's second and subsequent agreement period. The potential upward adjustment to an ACO's benchmark through a regional adjustment, prior savings adjustment or HEBA, in combination with other policies under the existing financial methodology specified in subpart G, could help ensure there is sufficient incentive for ACOs to continue to participate in the program under higher levels of risk and potential reward.

Additionally, although we recognize participation in Level C and Level D may serve as a means for some ACOs to gain experience with performance-based risk, we believe the relatively low interest in participation in these financial models suggests it would be sufficient to only allow for participation in these lower levels of risk within the ACO's first agreement period under the BASIC track's glide path. As discussed in section III.F.2.b of this proposed rule, in recent performance years (PY 2023 through 2025) there has been limited and declining participation in Level C and Level D of the BASIC track's glide path. Further, as we have observed based on more recent participation trends, once ACOs progress to performance-based risk, most ACOs do so by participating under Level E of the BASIC track, or the ENHANCED track. We believe that limiting additional participation in Levels C and D of the BASIC track to an ACO's first and only agreement period in the glide path (if eligible) will support our programmatic goals by facilitating ACOs' transition to two-sided models under which they have greater potential for risk and reward, and make more meaningful changes to healthcare delivery, and in turn cost and quality improvements, for their assigned Medicare FFS beneficiary population.

We propose to specify related requirements in amendments to the Shared Savings Program regulations at § 425.600 and propose technical and conforming changes elsewhere within § 425.600 and at § 425.605. We propose to amend § 425.600(g) introductory text, to limit the applicability of the requirements in this paragraph for determining an ACO's eligibility for the Shared Savings Program participation options to agreement periods beginning on or after January 1, 2024, and before January 1, 2027.

At § 425.600, we propose to redesignate paragraph (h) as paragraph (i), and propose to add a new paragraph (h) that specifies the requirements CMS would use to determine an ACO's eligibility for Shared Savings Program participation options for agreement periods beginning on or after January 1, 2027, as described in further detail in the discussion that follows. Additionally, as we describe in section III.F.4.b.(2).(b) and in greater detail in the discussion that follows, § 425.600(h)(3) would include a limited proposed exception for participation in the ENHANCED track by ACOs with less than 5,000 assigned beneficiaries in certain benchmark years. This limited proposed exception reflects our proposal that for agreement periods beginning on or after January 1, 2027, an ACO with fewer than 5,000 assigned beneficiaries in benchmark year (BY) 1, BY2, or both may only enter the BASIC track.

We propose to specify in new § 425.600(h)(1) how CMS determines an ACO's eligibility for participation options, for agreement periods beginning on or after January 1, 2027, if an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives (as defined at § 425.20). We propose to specify at § 425.600(h)(1) introductory text that if an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track's glide path at any of the levels of risk and potential reward, Levels A through E, or the ENHANCED track, subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track specified in new § 425.600(h)(3)

(described in section III.F.4.b.(2).(b) of this proposed rule).

We propose to specify under new § 425.600(h)(1)(i) that, for agreement periods beginning on or after January 1, 2027, an ACO that is inexperienced with performance-based risk Medicare ACO initiatives may participate under the BASIC track's glide path for a maximum of one agreement period, and for which the progression along the glide path is specified at § 425.600(a)(4)(i)(C). We propose to specify under new § 425.600(h)(1)(ii) that an ACO that enters an agreement period under the BASIC track's glide path at any of the levels of risk and potential reward, Levels A through E, would be deemed to have completed one agreement period under the BASIC track's glide path. For the purpose of determining the ACO's prior participation in the BASIC track's glide path, we would consider whether the ACO satisfies either of the following: (A) the ACO is the same legal entity as a current or previous ACO that previously entered into a participation agreement for participation in the BASIC track's glide path; or (B) for a new ACO identified as a re-entering ACO (as defined at § 425.20), the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track's glide path.

We propose to specify under new § 425.600(h)(1)(iii) that an ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives but which is not eligible to enter the BASIC track's glide path, in accordance with the provisions of § 425.600(h)(1), may enter BASIC track Level E for all performance years of the agreement period, or the ENHANCED track, subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track specified in new § 425.600(h)(3) (described in section III.F.4.b.(2).(b) of this proposed rule).

We would adopt an approach similar to our existing requirements for determining the participation options of an ACO that is experienced with performance-based risk Medicare ACO initiatives (as defined at § 425.20). We propose to specify in new § 425.600(h)(2), for agreement periods beginning on or after January 1, 2027, if an ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track Level E for all performance years of the agreement period, or the ENHANCED track, subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track specified in new § 425.600(h)(3) (described in section III.F.4.b.(2).(b) of this proposed rule).

Additionally, as discussed in section III.F.4 of this proposed rule, we propose at § 425.600(h)(3) to require, for agreement periods beginning on or after January 1, 2027, that if an ACO is determined to have fewer than 5,000 assigned beneficiaries in either the first benchmark year, second benchmark year, or both, in accordance with § 425.110(a)(3), the ACO may only enter the BASIC track. Under this approach, an ACO prohibited from participating in the ENHANCED track because it has fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, may enter an agreement period beginning on or after January 1, 2027, in the BASIC track, at a level of risk and potential reward otherwise determined in accordance with the proposed requirements of new § 425.600(h), as follows:

- An ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives may enter the BASIC track's glide path at any of the levels of risk and potential reward, Levels A through E (if eligible in accordance with the proposed requirements at new § 425.600(h)(1)), or BASIC track Level E for all performance years of the agreement period.
- An ACO determined to be experienced with performance-based risk Medicare ACO initiatives may enter BASIC track Level E for all performance years of the agreement period.

We are proposing to apply this modified approach in determining ACOs' participation options for agreement periods beginning on or after January 1, 2027, since the application cycle for the January 1, 2027 start date (anticipated to occur in CY 2026) would be the next cycle following the anticipated effective date for the CY 2026 PFS final rule of January 1, 2026. The majority of the application cycle for the January 1, 2026 start date, spanning Spring—Fall 2025, will occur before this rule is finalized.

The criteria CMS used to determine an ACO's eligibility to enter an agreement period, at § 425.600(g), that were applied in determining participation options for ACOs entering an agreement period beginning on January 1, 2024 or January 1, 2025, would also be applied in determining participation options for ACOs entering an agreement period beginning on January 1, 2026. If finalized, the proposed criteria to determine an ACO's eligibility to enter an agreement period, specified under new § 425.600(h), would be applied in determining participation options for ACOs entering an agreement period beginning on or after January 1, 2027. That is, we would apply the modified approach (if finalized) consistently across new ACO applicants, renewing ACOs (as defined at § 425.20) and re-entering ACOs (as defined at § 425.20) in determining ACO participation options for agreement periods beginning on or after January 1, 2027.

We recognize that with the changes in the program's policies over time, there are currently ACOs participating in agreement periods, to which different requirements apply for determining the ACO's participation options, in accordance with § 425.600. This proposed approach would change how we determine an ACO's eligibility for Shared Savings Program participation options, program-wide. If we finalize the proposed approach, ACOs currently participating in a first agreement period under the BASIC track's glide path (with 2022, 2023, 2024, and 2025 start dates) and ACOs entering a first agreement period in the BASIC track's glide path with the January 1, 2026 start date, would be ineligible to enter a subsequent agreement period under the BASIC track's glide path, with a start date on or after January 1, 2027. Instead, such ACOs, should they continue their participation in the Shared Savings Program for a second or subsequent agreement period, would be limited to participation in Level E of the BASIC track or the ENHANCED track (subject to the exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track). Based on the number of ACOs currently participating in a first agreement period under a one-sided model of the BASIC track's glide path, we anticipate the proposed approach could limit participation in a one-sided model to a maximum of 5 performance years (instead of 7 performance years) for 57 ACOs currently participating in Level A of the BASIC track (7 2022 starters, 7 2023 starters, 26 2024 starters, and 17 2025 starters).[314] At the time of this proposed rule, the number of eligible 2026 starters

[314] Total count of ACOs participating in Level A of the BASIC track, among ACOs entering a first agreement period in the Shared Savings Program by start date, as of performance year 2025. See *Data.CMS.gov,* Medicare Shared Savings Program, Accountable Care Organizations, Public Use File (by performance year, for PY 2025), available at *https://data.cms.gov/medicare-shared-savings-program/accountable-care-organizations.*

that may enter the BASIC track's glide path at Level A is yet to be determined.

We acknowledge that ACOs currently participating in Level A of the BASIC track may have joined or remained in the Shared Savings Program relying on the availability of participation options established with the CY 2023 PFS final rule. We further acknowledge that the proposed modifications to limit participation in the BASIC track's glide path and the amount of time an ACO may remain under a one-sided model, if finalized, may alter the ACOs' incentives to remain in the Shared Savings Program. As discussed in the Regulatory Impact Analysis, in section VII of this proposed rule, we project that discontinuing the option for ACOs to participate under a second agreement period in the BASIC track's glide path may create potential uncertainty for some ACOs on continuing in the program. We further explain that, notwithstanding this uncertainty for some ACOs, the proposed changes have the potential to improve care management and increase savings from other ACOs that successfully manage the transition to performance-based risk earlier than they would have. At this juncture, we do not find the concern about the potential attrition by ACOs unwilling to transition to performance-based risk a compelling reason to forgo the proposed changes to the Shared Savings Program's participation options. As we have explained elsewhere in this section of this proposed rule, we believe the program's benchmarking methodology includes sufficient incentive for ACOs to continue to participate in the program. Additionally, based on trends in program participation, we anticipate that at least some of the ACOs currently participating under Level A of the BASIC track may elect to transition to a two-sided model level of the BASIC track during the remaining performance years of their current agreement period or would transition to a two-sided risk model at the beginning of their next agreement period notwithstanding the proposed change. More generally, we believe the concern about potential for loss of participation by ACOs unwilling to progress to two-sided risk with their second agreement period is balanced against, and outweighed by, the potential for increased effectiveness from other ACOs that continue to participate and successfully manage an earlier transition to performance-based risk, and establishing a policy that we believe will further advance the program's goals.

To follow are several examples, to illustrate how the proposed policies for determining ACO participation options would apply. Take for example a new ACO inexperienced with performance-based risk Medicare ACO initiatives that enters the BASIC track's glide path at Level A for an agreement period beginning on January 1, 2027, and concluding December 31, 2031, based on the criteria used to determine ACO participation options specified under new § 425.600(h) (as proposed). Under this example, the ACO would be able to elect to remain under Level A for all subsequent performance years of its agreement period (performance years 2028 through 2031) in accordance with § 425.600(a)(4)(i)(C)(*3*). Assume for this example the ACO chooses to remain under Level A for the duration of its first agreement period, and applies to renew to continue its participation in the Shared Savings Program for a new agreement period beginning on January 1, 2032. Under the proposed approach, the ACO would be considered inexperienced with performance-based risk Medicare ACO initiatives, and would be identified by CMS as having previously entered an agreement period under the BASIC track's glide path and deemed to have completed one agreement period under the BASIC track's glide path. As a result, the ACO would be ineligible to enter the BASIC track's glide path and would be limited to participating under Level E of the BASIC track, or the ENHANCED track (subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track) for its second agreement period beginning on January 1, 2032, or a subsequent agreement period.

As another example, consider a new ACO inexperienced with performance-based risk Medicare ACO initiatives that enters the BASIC track's glide path at Level A for an agreement period beginning on January 1, 2026, based on the criteria used to determine ACO participation options specified at § 425.600(g). Under this example, the ACO elects to remain under Level A for all subsequent performance years of its agreement period in accordance with § 425.600(a)(4)(i)(C)(*3*). If the ACO applies to renew to continue its participation in the Shared Savings Program for a new agreement period, beginning on January 1, 2031, under the proposed approach, the ACO would be considered inexperienced with performance-based risk Medicare ACO initiatives, and would be identified by CMS as having previously entered an agreement period under the BASIC track's glide path and deemed to have completed one agreement period under the BASIC track's glide path. As a result, the ACO would be ineligible to enter the BASIC track's glide path and would be limited to participating under Level E of the BASIC track, or the ENHANCED track (subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track) for its second agreement period beginning on January 1, 2032, or a subsequent agreement period. Similarly situated ACOs that entered an agreement period beginning on January 1, 2022, January 1, 2023, January 1, 2024, or January 1, 2025 that elected to remain under a one-sided model of the BASIC track's glide path for the duration of their 5-year agreement period, and are applying to renew to continue their participation in the program for a new agreement period, would have the same participation options as the ACO in this example.

We are proposing to use our authority under section 1899(i)(3) of the Act to change the requirements for ACOs' progression to performance-based risk under the program's participation options. To adopt requirements in connection with participation under a two-sided model of the Shared Savings Program under section 1899(i)(3) of the Act, we must determine that doing so will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. As we have discussed in earlier rulemaking, in connection with the use of this authority for establishing the program's participation options (see 76 FR 67904 through 67909, 80 FR 32771 and 32772, 83 FR 67834 through 67841), the program's two-sided models provide an additional opportunity for ACOs to enter a risk-sharing arrangement and accept greater responsibility for beneficiary care. Under the proposed approach we would modify the Shared Savings Program participation options to reduce the maximum amount of time an ACO may participate under the BASIC track's glide path from two agreement periods to one agreement period, thereby limiting the amount of time an ACO may remain under a one-sided model to at most 5 performance years. We would also require ACOs inexperienced with performance-based risk Medicare ACO initiatives to progress more rapidly to higher levels of risk and potential reward under Level E of the BASIC track or the ENHANCED track, compared to the current requirements. Under the

proposed approach, ACOs entering and continuing their participation in the Shared Savings Program would continue working towards meeting the program's goals of lowering growth in Medicare FFS expenditures and improving the quality of care furnished to Medicare beneficiaries. As we have described elsewhere in this section of this proposed rule, we believe that requiring ACOs to more quickly progress to performance-based risk would create incentives for ACOs to make more meaningful changes to healthcare delivery, and in turn cost and quality improvements, for their assigned Medicare FFS beneficiary population. As discussed in the Regulatory Impact Analysis, in section VII of this proposed rule, we project that the proposed changes in participation options, in combination with other proposed changes to the statutory payment model in this proposed rule, as well as current policies we have adopted under the authority of section 1899(i)(3) of the Act, are expected to improve the quality and efficiency of items and services furnished under the Medicare program, and would not be expected to increase program expenditures relative to those of the statutory payment model.

We will continue to reexamine this projection to ensure that an alternative payment model does not result in additional program expenditures and so continues to satisfy the requirement under section 1899(i)(3)(B) of the Act. If we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake notice and comment rulemaking to adjust the payment model to ensure continued compliance with the statutory requirements.

Additionally, we propose to make the following technical and conforming changes, for completeness and clarity, to reflect our proposals to redesignate existing § 425.600(h) as paragraph (i), and to specify in a newly added paragraph (h) of § 425.600 the requirements for determining an ACO's eligibility for Shared Savings Program participation options for agreement periods beginning on or after January 1, 2027.

- Amending a cross-reference within § 425.600(a)(4)(i)(C)(*1*) to include a reference to proposed new paragraph (h)(1) at § 425.600.
- Amending cross-references within § 425.600(a)(4)(ii) and § 425.605(d)(1) introductory text to include a reference to proposed new paragraph (h) at § 425.600.
- Amending cross-references within § 425.600(a)(4)(i)(C)(*2*)(*iii*) and § 425.605(b)(2)(ii)(E) to refer to provisions within proposed newly redesignated paragraph (i) at § 425.600 instead of existing paragraph (h).
- Revising § 425.605(d)(2), describing the level of risk and reward specified for Level E of the BASIC track. Currently this paragraph specifies Level E risk and reward at § 425.605(d)(1)(v) applies to an ACO eligible to enter the BASIC track that is determined to be experienced with performance-based risk Medicare ACO initiatives as specified at § 425.600(d) or § 425.600(g). We propose to amend this provision for greater consistency with the proposed approach to determining participation options described in this section of this proposed rule and new § 425.600(h)(1)(iii) and (h)(2), under which for agreement periods beginning on or after January 1, 2027, an ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives that is not eligible to enter the BASIC track's glide path, or an ACO that is determined to be experienced with performance-based risk Medicare ACO initiatives may enter either the BASIC track Level E for all performance years of the agreement period (among other participation options). Therefore, we propose to revise § 425.605(d)(2) to state more generally: if the ACO enters the BASIC track at Level E as specified at § 425.600(d), (g), or (h), the level of risk and reward specified at § 425.605(d)(1)(v) applies to all performance years of an ACO's agreement period.

We seek comment on the proposed changes to the requirements for determining an ACO's eligibility for Shared Savings Program participation options, for agreement periods beginning on or after January 1, 2027. We seek comment on the proposal to limit the amount of time an ACO can participate under the BASIC track's glide path to one agreement period, and thereby to limit the amount of time an ACO (if eligible) can participate under a one-sided model to, at most, 5 performance years instead of 7 performance years. We also welcome comments on requiring ACOs that are determined to be inexperienced with performance-based risk Medicare ACO initiatives, and identified by CMS as having previously entered an agreement period under the BASIC track's glide path, to progress more rapidly to higher levels of risk and potential reward under Level E of the BASIC track or the ENHANCED track (subject to the proposed exception prohibiting ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, from participating in the ENHANCED track), thereby limiting ACOs' participation in lower levels of risk and potential reward to their first and only agreement period under the BASIC track's glide path.

3. Eligibility Requirements

a. ACO Participant Change of Ownership (CHOW) Scenarios

(1) Background

In the June 2015 final rule (80 FR 32707 through 32712), we added § 425.118(a) and (b) to establish requirements for maintaining, updating, and submitting to CMS an accurate and complete ACO participant list.

Section 425.118(a) includes requirements for ACOs to submit and certify their ACO participant lists before the start of each agreement period and each performance year thereafter, as well as at other times. Section 425.118(b)(1) and (2) authorize ACOs to make additions or deletions to their ACO participant lists, and § 425.118(b)(3) authorizes CMS to make annual adjustments based upon ACO participant list additions or deletions for purposes of the ACO's assignment, historical benchmark, financial calculations, and quality reporting. Additionally, CMS has the authority at § 425.305(a) to screen ACOs, ACO participants, and ACO providers/suppliers for program integrity purposes, as well to impose safeguards where negative program integrity history is present.

To be eligible to participate in the Shared Savings Program, as specified at § 425.118(a)(1), an ACO must maintain, update, and submit to CMS an accurate and complete ACO participant list. The ACO participant list identifies each ACO participant by its Medicare-enrolled TIN and legal business name (LBN). ACO participant agreements must require an ACO participant to report changes in enrollment information to the ACO within 30 days of the change (§ 425.116(a)(6)) and in accordance with Shared Savings Program requirements (§ 425.116(a)(3)).

CMS uses the certified ACO participant list to conduct critical oversight functions of the Shared Savings Program for downstream operations, such as establishing historical benchmarks; data sharing; financial performance; quality reporting; public reporting; and program eligibility. Changes to the certified ACO participant list can impact an ACO's overall eligibility to participate in the Shared Savings Program. For example, removing an ACO participant could drop the ACO's overall number of assigned Medicare fee-for-service beneficiaries below the 5,000 minimum

required for participation in the Shared Savings Program (§ 425.110(a)(1)). Additionally, modifications to the certified ACO participant list can affect whether an ACO is determined to be a ''low revenue ACO'' or ''high revenue ACO,'' as well as CMS' determination regarding whether an ACO is ''experienced with performance-based risk Medicare ACO initiatives'' or ''inexperienced with performance-based risk Medicare ACO initiatives,'' as defined in § 425.20.

Because of the ACO participant list's downstream effects on an ACO's participation in the Shared Savings Program, changes to the certified ACO participant list are only permitted during the annual Shared Savings Program change request cycle. Absent unusual circumstances, CMS does not make adjustments during the performance year to the ACO's assignment, historical benchmark, performance year financial calculations, the quality reporting sample, or the obligation of the ACO to report on behalf of eligible professionals that bill under the TIN of an ACO participant for certain CMS quality initiatives to reflect the addition or deletion of entities from the ACO participant list that become effective during the performance year (§ 425.118(b)(3)(ii). This includes adjustments of the ACO's obligation to report on behalf of eligible professionals that bill under the TIN of an ACO participant to reflect the addition or deletion of entities from the ACO participant list that occurred during the performance year (§ 425.118(b)(3)(i)). Limiting additions of new ACO participants or revisions to an existing ACO participant on an ACO's participant list to one annual change request cycle ensures the integrity of program operations for both CMS and ACOs. CMS has sole discretion to determine whether unusual circumstances exist that would warrant such adjustments (§ 425.118(b)(3)(ii)).

Before the start of an agreement period, before each performance year thereafter, and at such other times as specified by CMS, the ACO must submit to CMS an ACO participant list (§ 425.118(a)(2)). As operationalized, ACOs are able to add an entity to their previously certified ACO participant list according to the form and manner specified by CMS (§ 425.118(b)(1)). To add a new ACO participant TIN, an ACO must submit a change request by the final deadline established by CMS (§ 425.118(b)(1)). Currently, change requests are only accepted by CMS during the change request cycle. All additions to the ACO participant list approved by CMS during the change request cycle are effective on January 1 of the next performance year (§ 425.118(b)(1)(ii)).

A change of ownership (CHOW) can occur when an ACO participant is purchased (or leased) by another organization. In such a case, the CHOW often results in the transfer of the previous owner's Medicare Identification Number and provider agreement (including the previous owner's outstanding Medicare debts) to the new owner. (See generally, § 489.18(c).) If the purchaser or lessee elects not to accept a transfer of the provider agreement, then the old agreement should be terminated, and the purchaser or lessee is considered a new applicant and must initially enroll in Medicare.[315]

To notify CMS of the CHOW, an ACO participant submits the appropriate Medicare Enrollment Application form to their Medicare Administrative Contractor (MAC) or in the Provider Enrollment, Chain, and Ownership System (PECOS).[316] The MAC uses the forms and required supporting documentation to document and identify changes in ownership and/or subsequent changes in TINs and Medicare Identification Numbers. When an ACO participant undergoes a CHOW resulting in a change to the TIN used for the Shared Savings Program, the ACO must provide documentation of the CHOW in a new change request to add the surviving Medicare enrolled TIN with no prior Medicare billing claims history to its ACO participant list. This allows CMS to appropriately track eligibility and other program requirements as well as perform other program operations such as beneficiary assignment, benchmark and performance year expenditure calculations, and determinations of shared savings and losses for ACOs with ACO participants that have undergone a CHOW.

In some circumstances, an ACO participant CHOW could result in one Medicare-enrolled TIN being absorbed into an existing Medicare-enrolled TIN. This would mean the surviving ACO participant TIN would have Medicare billing claims history or other factors affecting an ACO's overall performance or benchmarking. Under this scenario, the surviving TIN could have a patient population and providers and suppliers who were not accounted for when CMS established the ACO's benchmarks. Such a scenario could lead to variation in the patient population seen during the performance year compared to the ACO's historical benchmark.

In a dynamic healthcare environment, ACO participants may experience CHOWs and/or subsequent TIN changes during the performance year that affect their ability to continue in the Shared Savings Program. ACOs and ACO participants have requested that we establish a process whereby an ACO participant[317] that experiences a CHOW resulting in a surviving Medicare enrolled TIN with no prior Medicare billing claims history can be submitted by the ACO for CMS to review during the performance year.

Currently, there are 477 ACOs participating in the Shared Savings Program with more than 15,000 ACO participant TINs and 650,000 ACO providers and suppliers who have agreed to participate in ACOs. Due to the volume of data that we utilize to operationalize the Shared Savings Program, allowing for frequent or high volumes of changes to occur to an ACO's certified participant list during a performance year can increase the risk of errors, as well as uncertainty surrounding what data is utilized to produce a report. Additionally, it is important to ensure a degree of finality to reports for CMS and for ACOs to use during their participation in the Shared Savings Program and not allow data to constantly change. Therefore, it is important to limit the circumstances in which we allow ACOs to modify their certified ACO participant lists during a performance year, as well as the operational processes we allow to account for changes to occur during the performance year.

(2) Proposal To Allow Modifications to the Certified ACO Participant List for ACO Participant CHOWs During a Performance Year

We recognize that requiring ACOs to wait until the upcoming change request cycle each performance year to update their certified ACO participant list to reflect an ACO participant's CHOW can, in some cases, present operational

[315] If the purchaser (or lessee) elects not to accept a transfer of the provider agreement, then the old agreement is terminated, and the purchaser or lessee is considered a new applicant. (See generally Enrollment Applications at *https://www.cms.gov/medicare/enrollment-renewal/providers-suppliers/chain-ownership-system-pecos/enrollment-applications.*)

[316] Medicare provider and suppliers can enroll using the Provider Enrollment, Chain, and Ownership System (PECOS). PECOS is a web-based platform managed by CMS that facilitates the enrollment process for Medicare providers and suppliers. See *https://www.cms.gov/medicare/enrollment-renewal/providers-suppliers/chain-ownership-system-pecos.*

[317] A ''certified ACO participant'' means ''an ACO participant that an ACO has listed on the ACO's certified ACO participant list.'' *See* 425.118(a)(3): ''The ACO must certify the submitted lists in accordance with § 425.302(a)(2).''

difficulties for ACOs. This gap may interfere with an ACO's ability to provide coordinated care to an ACO participant's patient population and negatively impact the ACO's participation in the Shared Savings Program. To account for such scenarios and to support ACOs' participation, effective January 1, 2026, we propose ACOs that experience certain ACO participant CHOWs outside of the change request cycle must update their certified ACO participant list to reflect such ACO participant's CHOW. This applies to instances in which an ACO participant has undergone a CHOW resulting in a change to its Medicare enrolled TIN whereby the surviving Medicare enrolled TIN has no Medicare billing claims history. Without the ability to report an ACO participant's CHOW and effectuate a change in the ACO's participant list during the performance year, the ACO may be unable to provide coordinated care to an ACO participant's patient population, which may cause the ACO's beneficiary count to fall below 5,000. An ACO participant change in ownership that reduces the ACO's number of assigned beneficiaries could constitute a significant change (as described at § 425.214) for the ACO, adversely affecting the ACO's participant agreement and jeopardizing the ACO's continued participation in the Shared Savings Program. At § 425.214(a)(3), a significant change occurs when an ACO is no longer able to meet the eligibility or requirements of the Shared Savings Program.

To avoid confusion for ACOs and their ACO participants as well as to establish a clear and consistent process for the recognition of claims billed by the TIN of an ACO participant that has recently experienced a CHOW, we propose to add new paragraph § 425.118(b)(3) to require an ACO to submit to CMS for review an ACO participant change request for a CHOW resulting in a change to the ACO participant's Medicare enrolled TIN whereby the surviving Medicare enrolled TIN has no Medicare billing claims history in a form and manner set by CMS. We are proposing to require an ACO to submit an ACO participant change request for a CHOW resulting in a change to the TIN throughout the performance year, no later than 30 days after the CHOW and outside of the change request cycle. We propose that this requirement be limited to instances where the surviving TIN is newly enrolled in PECOS with no prior Medicare billing claims history to limit program disruption such as adversely affecting quality performance. We propose at § 425.118(b)(3) that if CMS approves the change request containing a new ACO participant TIN, the ACO participant list would be updated in the form and manner specified by CMS. We propose that CMS would have sole discretion whether to approve the ACO participant change request for a CHOW.

In alignment with proposed § 425.118(b)(3) and (b)(4)(iii) and upon CMS approval of the change request submitted with the TIN, we would adjust the ACO's assignment, performance year financial calculations, and the requirement that the ACO must submit quality data as described at §§ 425.508 and 425.510 for the applicable performance year on behalf of eligible professionals that bill under the TIN of an ACO participant. We would process these adjustments during the applicable Quality Payment Program (QPP) snapshot dates for the relevant Performance Period. The adjustments would reflect the addition of the surviving Medicare enrolled TIN with no prior Medicare billing claims history as a result of a CHOW to the ACO participant list as the changes become effective during the performance year.

While we considered allowing ACOs to submit all change of ownership requests outside of the change request cycle, we propose limiting the out-of-cycle change of ownership requests to those ACO participant TINs without a prior Medicare billing claims history to avoid large discrepancies between the benchmark year patient population and the performance year patient population. To mitigate any disruptions in program calculations, we would require the surviving Medicare enrolled TIN to have no Medicare billing claims history, meaning that the TIN does not have any paid claims for prior benchmark or performance years. This proposal does not apply to a CHOW in which a TIN is absorbed into an existing TIN and the surviving TIN has prior Medicare billing claims history. Approval of the change request would not allow prior claims from the certified ACO participant TIN to be reprocessed under the surviving ACO participant TIN. Additionally, this proposal would mitigate operational impacts, including determining expenditures used in financial reconciliation, determining an ACO's quality sample, and producing quarterly and annual reports.

We propose to incorporate the ACO participants' surviving Medicare enrolled TINs with no prior Medicare billing claims history into the ACO's assignment, historical benchmark, performance year financial calculations, or the obligation of the ACO to report quality data on behalf of eligible professionals that bill under the TIN of an ACO participant, when processed during applicable QPP snapshot dates for the relevant Performance Period, during the performance year in which they are approved (§ 425.118(b)(4)(iii)). Effectuating an ACO participant change request for a CHOW resulting in a surviving Medicare enrolled TIN with no prior Medicare billing claims history during the performance year could prevent an ACO participant from losing its status to participate in an ACO. This proposal, if finalized, would support such ACO participant's ability to retain its assigned beneficiaries and facilitate the provision of high-quality, value-based, evidence-based care.

Under our proposal at § 425.118(b)(4)(iii), it is important to consider the operational impact. For example, the Quality Payment Program (QPP) updates eligibility data at multiple points throughout the year to assist ACOs in planning their Shared Savings Program participation. The QPP updates are based on past and current Medicare Part B claims and PECOS data. The Shared Savings Program sends ACO participant files to QPP, which then applies specific criteria to inform ACO eligibility reports. We review Alternative Payment Model (APM) participation four times for every performance year for clinicians and practices that are members of APMs (each review is called a ''snapshot''). The first three snapshots are processed using the most current data available at the time. For CMS to meet operational processes such as QPP Determinations and APM Incentive Payments, ACOs would need to submit a change request in sufficient time for CMS to review, approve, and the ACO certify, the revised ACO participant list without affecting annual adjustments under proposed § 425.118(b)(4)(iii). We will make available the operational considerations each PY to ensure ACOs are aware of the schedule considerations impacting the QPP Determination and APM Incentive Payments schedule.

Additionally, under proposed § 425.118(b)(4)(iii), CMS would then adjust the ACO's assignment, financial calculations, the requirement for submission of quality data at § 425.508 and § 425.510 on behalf of eligible professionals that bill under the TIN of an ACO participant to reflect the addition of entities to the ACO participant list as they become effective during the performance year. This would be accomplished by providing ACOs with a mechanism to report an ACO participant CHOW that resulted in a new ACO participant TIN with no

prior claims history on their certified ACO participant list and requiring that ACOs submit supporting documentation in the form and manner specified by CMS under proposed § 425.118(b)(3).

Our proposal would redesignate the current § 425.118(b)(3) as § 425.118(b)(4) and add new paragraph § 425.118(b)(3), and § 425.118(b)(4)(iii). We propose to add new § 425.118(b)(3) to require an ACO to submit notice and supporting documentation according to the form and manner specified by CMS to demonstrate that a CHOW resulting in a change to the Medicare enrolled TIN has taken place. This supporting documentation would include information and material currently collected by CMS during the annual change request cycle when an ACO participant has merged with or been acquired by another entity.

Should we finalize our proposals for § 425.118(b)(3) and (b)(4)(iii), we would provide additional guidance on the types of documentation that would suffice to meet the form and manner requirements. This supporting documentation could include a bill of sale, joinder agreement, or other legal document demonstrating a CHOW resulting in a new Medicare-enrolled TIN. Documentation demonstrating the surviving Medicare enrolled TIN with no prior Medicare billing claims history could also include documentation from the Internal Revenue Service (IRS) or from a state's Secretary of State (for example, IRS W–9, Employer Identification Number registration, or TIN assignment notice), or an affidavit explaining the CHOW resulting in the surviving Medicare enrolled TIN and confirming reassignment from the original ACO participant TIN to the surviving ACO participant TIN. This could include an attestation from the ACO that all the providers and suppliers that previously assigned their right to receive Medicare payment to the original ACO participant entity's TIN have reassigned such right to the surviving Medicare enrolled TIN with no prior Medicare billing claims history for the identified ACO participant and will be added to the ACO provider/supplier list within 30 days in accordance with § 425.118(a)(4). As noted, we would provide guidance on the types of documentation that would suffice, should we finalize our proposals.

We propose that the change have an effective date of January 1, 2026, and anticipate this approach would allow some ACOs to remain in the Shared Savings Program without interruption by continuing to utilize ACO participants who may have experienced a CHOW resulting in a surviving Medicare enrolled TIN with no prior Medicare billing claims history.

We seek comments on this proposal.

b. SNF Affiliate Change of Ownership (CHOW) Scenarios

(1) Background

The Medicare Skilled Nursing Facility (SNF) benefit applies to beneficiaries who require a short-term intensive stay in a SNF and skilled nursing and/or skilled rehabilitation care. Pursuant to section 1861(i) of the Act, beneficiaries must have a prior inpatient hospital stay of no fewer than three consecutive days to be eligible for Medicare coverage of inpatient SNF care. This requirement is referred to as the SNF 3-Day Rule. Section 1899(f) of the Act permits the Secretary to waive certain payment or other program requirements necessary to carry out the Shared Savings Program. Specifically, CMS has used the authority under section 1899(f) to waive section 1861(i) of the Act to allow coverage of certain SNF services that are not preceded by a qualifying 3-day inpatient hospital stay. The Shared Savings Program's SNF 3-day rule waiver waives the requirement for a 3-day inpatient hospital stay prior to a Medicare-covered, post-hospital, extended-care service for eligible beneficiaries if certain conditions are met.

The SNF 3-day rule waiver at § 425.612(a)(1) allows for Medicare payment for otherwise covered SNF services when ACO providers/suppliers participating in ACOs participating under a two-sided model admit eligible beneficiaries, or certain excluded beneficiaries during a grace period, to an eligible SNF affiliate without a 3-day prior inpatient hospitalization. All other provisions of the section 1861(i) of the Act and regulations regarding Medicare Part A post-hospital extended care services continue to apply. This waiver became available starting January 1, 2017, and all ACOs participating under, or that apply to participate under, Levels C–E of the BASIC track or under the ENHANCED track are eligible to apply for the waiver.

It is important to note that the Shared Savings Program SNF 3-day rule waiver does not create a new benefit or extend Medicare SNF coverage to patients who could be treated in outpatient settings or who require long-term custodial care. Also, the SNF 3-day rule waiver does not restrict a beneficiary's choice of provider or supplier. A beneficiary continues to have the option to seek care from any Medicare FFS provider or supplier, including from a SNF or other facility that is not an affiliate of an ACO participating in the Shared Savings Program. If a beneficiary that is assigned to an ACO chooses to receive care from a SNF or other facility that is not an affiliate of the ACO, normal Medicare requirements apply, including the requirement for a 3-day inpatient hospitalization. The SNF 3-day rule waiver is intended to provide ACOs that are participating in certain performance-based risk tracks with additional flexibility to increase quality and decrease costs. As described at § 425.612(d)(2), CMS monitors and audits the use of the SNF 3-day rule waiver in accordance with § 425.316.

As part of the 3-day rule waiver supplemental application information requirements, at § 425.612(a)(1)(i)(B), ACOs must provide to CMS the list of SNFs with whom the ACO will partner along with executed SNF affiliate agreements between the ACO and each listed SNF. The SNF affiliate agreement with the ACO includes all individual SNFs identified by a CMS Certification Number (CCN) under the Medicare-enrolled SNF TIN that agree to partner with the ACO for purposes of a SNF 3-day rule waiver. The SNF 3-day rule waiver enables eligible SNFs to admit eligible beneficiaries to their SNF without a prior 3-day inpatient hospitalization. To identify an eligible SNF for purposes of a SNF 3-day rule waiver, the SNF's Medicare enrolled TIN and CCN must appear on the SNF affiliate list.

To have and maintain a SNF 3-day rule waiver, an ACO must have at least one approved SNF on its SNF affiliate list to meet the requirements of § 425.612(a)(1)(i)(B). Similar to the certified ACO participant list, ACOs can submit modifications to their SNF affiliate list in the form and manner specified by CMS (currently submitted during the annual change request cycle), and approved additions to the list become effective on January 1 of the following performance year.

Operationally, the Shared Savings Program does not provide a mechanism by which an ACO can add a new TIN to its SNF affiliate list outside of the annual change request cycle, including in situations where a SNF affiliate experiences a CHOW resulting in a change to the Medicare-enrolled TIN. ACOs and SNF affiliates may encounter the same CHOW scenario as described in section III.F.3.a. of this proposed rule for ACO participants. If a SNF affiliate experiences a CHOW resulting in a change to the Medicare-enrolled TIN, it can no longer admit eligible beneficiaries without a prior 3-day inpatient hospitalization due to the

change in Medicare enrollment and our current operational processes for receiving and reviewing SNF affiliate list modifications on an annual basis.

(2) Proposal To Allow Modifications to the SNF Affiliate List for SNF Affiliate CHOWs During a Performance Year

ACOs have requested that we establish a mechanism to report a CHOW which results in a change in the Medicare-enrolled TIN for an approved SNF affiliate, which can be reviewed and effectuated by CMS during the performance year. This would enable the SNF affiliate to continue to participate with the ACO in the SNF 3-day rule waiver during the performance year and not have to wait until the next change request cycle to notify CMS of the change to the Medicare-enrolled TIN for the approved SNF affiliate.

We recognize that requiring ACOs to wait until the upcoming change request cycle each performance year to update their SNF affiliate list to reflect an SNF affiliate's CHOW can interrupt ACO operations. This gap may prevent an ACO from utilizing a SNF affiliate that has undergone a CHOW resulting in a change in Medicare-enrolled TIN for the approved SNF affiliate under the SNF 3-day rule waiver. Therefore, we propose to amend § 425.612(a)(1)(i)(B) by moving the text to § 425.612(a)(1)(i)(B)*(1)* and revising it to specify that the list of SNFs must include the Medicare enrolled TIN and the CCN of each SNF. We propose this revision to ensure that we can link the SNF CCN with the correct Medicare enrolled TIN. We also propose adding § 425.612(a)(1)(i)(B)*(2)* to require ACOs to notify CMS no later than 30 days after the change of ownership of a SNF affiliate, identified in accordance with paragraph (a)(1)(i)(B)(1), that has resulted in a change to the Medicare enrolled TIN of the SNF affiliate in the form and manner specified by CMS.

We propose to require an ACO to submit such a notification at any point during the performance year that is 30 days after the change in ownership, which would include times outside of the change request cycle. This proposal is limited to a change of ownership of a SNF affiliate that has resulted in a change to the Medicare-enrolled TIN, as the CHOW affects the SNF affiliate's ability to participate under the 3-day rule waiver. This proposal would not allow an ACO to add a new SNF affiliate as the result of a CHOW. Additionally, we propose to require an ACO to submit supporting documentation demonstrating the change in SNF affiliate TIN similar to that described in section III.F.3.a. of this proposed rule, and in accordance with the form and manner specified by CMS. Supporting documentation could include information from the Internal Revenue Service (IRS) or the State's Secretary of State, IRS W–9, Employer Identification Number registration, TIN assignment notice, or an affidavit explaining the TIN change and confirming reassignment from the original SNF affiliate TIN to the new SNF affiliate TIN.

Following CMS approval of the ACO's change request under proposed § 425.612(a)(1)(i)(B) we would send an updated list of approved SNF affiliates to the Medicare Administrative Contractor (MAC). The MAC would process the change; however, an ACO would still need to confirm with its MAC that the change has been fully effectuated. Our proposal does not impact assignment of beneficiaries to an ACO, and therefore would not impact the ACO beneficiaries eligible for the SNF 3-day rule waiver. It would only impact the SNFs that are approved as affiliates to provide care without the required three -day inpatient hospital stay.

A recent report released by the Assistant Secretary for Planning and Evaluation (ASPE) found frequent changes of ownership in hospitals and SNFs between 2016 and 2021, reporting that more than 3,200 SNFs experienced a CHOW.[318] Requiring an ACO to submit updates to its SNF affiliate list during the performance year if one of its SNF affiliates experiences a CHOW requires clear policies and procedures associated with such changes. It is important to avoid a scenario where CMS or an ACO is unclear whether a SNF is approved to use the SNF 3-day rule waiver and when that information has been shared with the MAC for proper claims processing. Therefore, it is important to limit the circumstances which allow for ACOs to modify their SNF affiliate lists during a performance year outside of the scenario a CHOW.

Overall, the proposal to allow modifications to the SNF affiliate list for SNF affiliate CHOWs resulting in a change to the TIN would benefit CMS, ACOs and their SNF affiliates, and beneficiaries. This change would support continuous operations that improve access to quality care and care coordination as beneficiaries transition to a SNF. Historically, SNFs that undergo a CHOW that result in a change to the TIN have been unable to continue participation in the SNF 3-day rule waiver until the next change request cycle. Our proposal, if finalized, would ensure more timely access to skilled nursing care for Medicare beneficiaries.

We propose that the change have an effective date of January 1, 2026, and anticipate this approach would provide ACOs the flexibility to continue to utilize the SNF 3-day rule waiver for SNF affiliates who may have experienced a CHOW resulting in a change to the TIN.

We seek comments on our proposal.

4. ACO Eligibility and Related Financial Reconciliation Requirements

a. Overview

Under the Shared Savings Program regulations, CMS ''deems'' an ACO to have initially satisfied the statutory requirement to have at least 5,000 assigned Medicare FFS beneficiaries (section 1899(b)(2)(D) of the Act), if 5,000 or more beneficiaries are historically assigned to the ACO participants in each of the three historical benchmark years as defined at § 425.110(a)(2). Since the start of the Shared Savings Program, we have denied the applications of ACOs applying to participate in the program if the number of assigned beneficiaries was below 5,000 beneficiaries in any historical benchmark year. This policy was established to align with the statutory requirement and to ensure CMS is able to reliably and accurately assess ACO financial and quality performance. The purpose of the historical benchmark is to establish a fair and reliable baseline to compare with performance year expenditures in the calculation of an ACO's shared savings or losses. As an ACO's assigned beneficiary population decreases, the ability of CMS to reliably and accurately assess ACO financial and quality performance also decreases. In the November 2011 final rule (see for example, 76 FR 67807 and 67808), we expressed the benefit of a 5,000-beneficiary minimum to maintain program eligibility and allow CMS to assess ACO financial and quality performance, while also planning a course of action for when an ACO falls below the 5,000-beneficiary minimum.

[318] *Changes in Ownership of Skilled Nursing Facilities from 2016–2021: Variations by Size, Occupancy Rate, Penalty Amount, and Type of Ownership*, May 10, 2024, *https://aspe.hhs.gov/sites/default/files/documents/9c4c5c8f2d48309c83e87f544b1aed90/snf-ownership-changes-variations.pdf.*

Furthermore, CMS finalized the minimum savings rate (MSR) for ACOs with at least 5,000 assigned beneficiaries such that the MSR for each ACO would be based on increasing confidence intervals as the number of assigned beneficiaries increases (76 FR 67928 and 67929). At the same time, CMS recognized the higher uncertainty regarding expenditures for smaller ACOs and CMS's desire to encourage program participation by smaller ACOs. Accordingly, CMS set the confidence interval at 90 percent for ACOs with 5,000 beneficiaries assigned, resulting in an MSR of 3.9 percent for those ACOs. For ACOs with 20,000 and 50,000 assigned beneficiaries, CMS set the confidence interval at 95 percent and 99 percent, respectively, for those ACOs, resulting in MSRs of 2.5 percent and 2.2 percent (76 FR 67928). As ACO size increases from 5,000 to 20,000 assigned beneficiaries (or similarly from 20,000 to 50,000), CMS blends the MSRs between the two neighboring confidence intervals, resulting in the MSRs as shown in Table 6 of the November 2011 final rule (76 FR 67928).

Building on the November 2011 final rule, in the December 2018 final rule, CMS finalized a variable MSR and Minimum Loss Rate (MLR) for ACOs that fall below 5,000 beneficiaries in the performance year according to assigned beneficiary ranges and based on a confidence interval of 90 precent, as a way to better ensure that the program is rewarding or holding accountable ACOs for actual performance, not normal expenditure fluctuations (83 FR 67927) (§§ 425.605 and 425.610).

Although most ACOs are able to reach the 5,000 beneficiaries assigned minimum, we recognize that this requirement does prevent some applicants from participating in the Shared Savings Program. Since the inception of the program, we have gained additional experience with the requirement to have 5,000 beneficiaries assigned in each benchmark year, and experience with how this requirement relates to the integrity and stability of financial performance calculations. This experience has provided additional information that shows we can both retain the financial integrity of benchmark calculations and ensure CMS can reliably and accurately assess ACO financial and quality performance while allowing for ACOs that have fewer than 5,000 beneficiaries assigned in their benchmark years to enter the program, if we implement additional safeguards that protect ACOs and the Trust Funds. As described in this section of this proposed rule, we propose changes to the Shared Savings Program eligibility requirements to allow for participation by ACOs with a minimum of 5,000 assigned beneficiaries in their third benchmark year, even if the ACO has fewer than 5,000 assigned beneficiaries in benchmark year (BY) 1, BY2, or both (see section III.F.4.b.(2)(a)). Further, we propose safeguards to limit ACOs entering a new agreement period with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, at the time of application, to participation in the BASIC track (see section III.F.4.b.(2)(b) of this proposed rule). We also propose additional safeguards for ACOs with fewer than 5,000 assigned beneficiaries in any of their benchmark years, by applying an alternative performance payment limit and loss recoupment limit for these ACOs (see III.F.4.c.(1).(b) of this proposed rule), and excluding these ACOs from leveraging policies providing certain low revenue ACOs participating in the BASIC track with additional opportunities to share in savings (see III.F.4.c.(2).(b) of this proposed rule).

b. ACO Eligibility Requirement

(1) Background

(a) Background on Assigned Beneficiary Minimum Requirement

Section 1899(b)(2)(D) of the Act requires participating ACOs to include primary care ACO professionals that are sufficient for the number of Medicare FFS beneficiaries assigned to the ACO and that, at a minimum, the ACO shall have at least 5,000 such beneficiaries assigned to it under section 1899(c) of the Act in order to be eligible to participate in the Shared Savings Program.

In the November 2011 final rule (76 FR 67808), in alignment with the statutory requirement at section 1899(b)(2)(D) of the Act, CMS established that for an ACO to satisfy the requirement to have at least 5,000 assigned beneficiaries, the ACO must have 5,000 or more beneficiaries historically assigned to the ACO participants in each of the 3 benchmark years. See § 425.110(a)(2). We described the importance of maintaining at least 5,000 assigned beneficiaries with respect to both eligibility of the ACO to participate in the program and the ability of CMS to reliably and accurately assess ACO financial and quality performance. However, we also noted in that rule (76 FR 67807) that we understood circumstances may change during an ACO's agreement period, and that an ACO's assigned population may vary accordingly, and if the ACO falls below 5,000 beneficiaries during the agreement period, the ACO will be subject to compliance actions (described at §§ 425.216 and 425.218).

Additionally, in the November 2011 final rule (76 FR 67929), we finalized the MSR/MLR with a sliding scale that varies based on the number of beneficiaries assigned to the ACO from 5,000 up to 60,000. The largest ACOs with over 50,000 assigned beneficiaries had 99 percent confidence intervals. At the same time, CMS also recognized ACOs with the minimum 5,000 assigned beneficiaries must meet a higher MSR of 3.9 percent to be eligible for shared savings payments, based on a confidence interval of 90 percent (76 FR 67927).

In the CY 2025 PFS final rule (89 FR 98085 through 98086), we finalized a policy to sunset the requirement at § 425.110(b)(2) that CMS will terminate an ACO's participation agreement and determine that an ACO is not eligible to share in savings for that performance year if an ACO's assigned beneficiary population is not at least 5,000 by the end of the performance year specified by CMS in its request for a corrective action plan. We explained that this requirement could be sunset because the policy finalized in the December 2018 final rule (83 FR 67925 through 67929), to use a variable MSR/MLR when performing shared savings and shared losses calculations if an ACO's assigned beneficiary population fell below 5,000 for the performance year, was effective in protecting both CMS and the ACO from inappropriate overpayments or underpayments and reduced the financial risk of allowing ACOs to continue to participate in the Shared Savings Program if they experience a reduction in assigned beneficiaries. As we have explained in prior rulemaking, the MSR/MLR protects against an ACO earning shared savings or being liable for shared losses when the change in expenditures represents normal, or random, variation rather than actual program performance (see, for example, 83 FR 67923 through 67926).

After gaining 13 years of experience administering the Shared Savings Program, including lessons learned from applying the requirement at section 1899(b)(2)(D) of the Act that ''[a]t a minimum, the ACO shall have at least 5,000 such beneficiaries assigned to it [. . .] in order to be eligible to participate in the ACO program,'' we have determined it is in the best interest of Medicare beneficiaries, the Trust Funds, and participating ACOs to modify the requirement at § 425.110(a)(2) so that it better supports the goals of the Shared Savings Program. As the program grows in experience, the

programmatic guardrails can be changed to better incentivize ACOs, especially those that have successfully participated in the program, to participate in the program while maintaining CMS's ability to reliably and accurately assess ACO financial and quality performance. Historically, the 5,000 assigned beneficiary benchmark year minimum has been implemented across all benchmark years to assess an ACO's financial and quality performance. However, after reviewing historical data and program operations, we believe the 5,000 -beneficiary benchmark year minimum can be applied to BY3 only, which provides the most recent data available prior to an ACO entering an agreement period, to maximize the goals and benefit of the Shared Savings Program.

The 5,000-beneficiary benchmark year minimum applied across all benchmark years helps to ensure that CMS is able to reliably and accurately assess ACO financial and quality performance during the Shared Savings Program application process. However, this beneficiary threshold is most critical in assessing BY3. Specifically, during the application cycle, CMS makes available to all currently participating ACOs and all applicant ACOs estimates of the number of assigned beneficiaries for each of the three benchmark years. The BY3 assignment provided is based on the most recently available 24 months of Medicare beneficiary claims data. The application cycle occurs during the calendar year that corresponds to BY3, and we run assignment based upon the 24 months prior to the end date of the most recent quarter available. Therefore, BY3 is the most current assignment run we produce during the application cycle for assessing the number of assigned beneficiaries an ACO has at the time they are applying to participate in the Shared Savings Program.

(b) Background on Track Specific Requirements for Participation Options

With the December 2018 final (83 FR 67831 through 67841), we finalized the availability of participation options under the BASIC track and ENHANCED track for ACOs entering an agreement period beginning on July 1, 2019, and in subsequent years. We refer readers to section III.F.2.a of this proposed rule for a detailed description of background on Shared Savings Program participation options. The BASIC track and the ENHANCED track offer differing levels of risk and potential reward. See §§ 425.600(a)(3) to (4), 425.605, and 425.610. In general, an ACO that meets or exceeds its MSR, and otherwise qualifies for a shared savings payment, shares in savings at a sharing rate specified by the ACO's participation track (and level, if applicable), not to exceed a performance payment limit (a percentage of the ACO's updated historical benchmark). There is a limited exception for eligible low revenue ACOs participating under the BASIC track, under which an ACO that does not meet the MSR requirement but meets other criteria may qualify for a shared savings payment, at a lower sharing rate, in accordance with § 425.605(h). An ACO under a two-sided model that meets or exceeds its MLR shares in losses at a shared loss rate specified by the ACO's participation track (and level, if applicable), not to exceed a loss recoupment limit (a percentage of the ACO's updated historical benchmark). In summary:

- The BASIC track (see §§ 425.600(a)(4) and 425.605) includes a ''glide path'', from one-sided model Levels A and B to incrementally higher levels of performance-based risk under Levels C, D, and E.

++ Under Level A and B of the BASIC track, an ACO may share in savings at a sharing rate of up to 40 percent (§ 425.605(d)(1)(i)(A) and (d)(1)(ii)(A)), not to exceed 10 percent of updated benchmark (§ 425.605(d)(1)(i)(B) and (d)(1)(ii)(B)).

++ Under Level C of the BASIC track, an ACO may share in savings at a sharing rate of up to 50 percent (§ 425.605(d)(1)(iii)(A)), not to exceed 10 percent of updated benchmark (§ 425.605(d)(1)(iii)(B)), and may share in losses at a loss sharing rate of 30 percent (§ 425.605(d)(1)(iii)(C)), not to exceed 2 percent of total Medicare Parts A and B FFS revenue of the ACO participants in the ACO capped at 1 percent of updated benchmark (§ 425.605(d)(1)(iii)(D)).

++ Under Level D of the BASIC track, an ACO may share in savings at a sharing rate of up to 50 percent (§ 425.605(d)(1)(iv)(A)), not to exceed 10 percent of updated benchmark (§ 425.605(d)(1)(iv)(B)), and may share in losses at a loss sharing rate of 30 percent (§ 425.605(d)(1)(iv)(C)), not to exceed 4 percent of total Medicare Parts A and B FFS revenue of the ACO participants in the ACO capped at 2 percent of updated benchmark (§ 425.605(d)(1)(iv)(D)).

++ Under Level E of the BASIC track, an ACO may share in savings at a sharing rate of up to 50 percent (§ 425.605(d)(1)(v)(A)), not to exceed 10 percent of updated benchmark (§ 425.605(d)(1)(v)(B)), and may share in losses at a loss sharing rate of 30 percent (§ 425.605(d)(1)(v)(C)), not to exceed 8 percent of total Medicare Parts A and B FFS revenue of the ACO participants in the ACO capped at 4 percent of updated benchmark (§ 425.605(d)(1)(v)(D)). The loss recoupment limit is the percentage of revenue specified in the revenue-based nominal amount standard under the Quality Payment Program (42 CFR 414.1415(c)(3)(i)(A)) capped at 1 percentage point higher than the expenditure-based nominal risk amount (§ 414.1415(c)(3)(i)(B)).

- Under the ENHANCED track (§§ 425.600(a)(3) and 425.610), with the highest level of risk and potential reward under the Shared Savings Program, an ACO may share in savings at a sharing rate of up to 75 percent (§ 425.610(d)), not to exceed 20 percent of updated benchmark (§ 425.610(e)), and may share in losses at a loss sharing rate not less than 40 percent and not to exceed 75 percent (§ 425.610(f)), capped at 15 percent of updated benchmark (§ 425.610(g)).

Currently, CMS allows ACOs to choose to participate in either the BASIC track or ENHANCED track (see § 425.600(a), and see also § 425.226(a)), provided the ACO meets the eligibility criteria set forth in 42 CFR part 425 Subpart B. An ACO must select a Shared Savings Program participation option for which CMS determines it is eligible under § 425.600(g). An ACO entering the BASIC track may elect to start at any level for which it is eligible, based on its experience with performance-based risk Medicare ACO initiatives (refer to § 425.600(a)(4)(i)(C)(1) and (g)). During the application cycle, CMS conducts a prescreening assessment to evaluate an ACO's eligibility for its selected level. The evaluation includes verifying whether the ACO complies with general program requirements and the ability of the ACO to take on risk (83 FR 41806). *See* §§ 425.202(a) and 425.204. Also, part of this check assesses the ACO's ability to provide an adequate repayment mechanism for shared losses if the chosen track is two-sided (§ 425.204(f)(3)(i)). CMS may deny an ACO applicant's application if the ACO applicant fails to satisfy the requirements of the Shared Savings Program on the basis of information contained in and submitted with the application per § 425.206(a)(1).

(2) Proposed Revisions

(a) Allow ACOs To Enter the Shared Savings Program With Fewer Than 5,000 Assigned Beneficiaries in BY1, BY2, or Both

The present requirement in § 425.110(a)(2) for an applicant ACO to have at least 5,000 assigned Medicare

FFS beneficiaries in each of the 3 historical benchmark years, as described in section III.F.4.b.(1)(a), is the most common reason we deny ACO applicants' applications. In evaluating potential changes to this eligibility policy at § 425.110(a), we considered ways to increase flexibility regarding the minimum number of assigned beneficiaries required in benchmark years, to continue to support new and previously successful renewing and re-entering ACOs participating in the Shared Savings Program, while minimizing adverse financial impacts to ACOs and the Shared Savings Program that may arise from program participation by ACOs with fewer than 5,000 beneficiaries assigned in one or more historical benchmark years.

Consequently, we propose to amend our requirements at § 425.110(a)(2) to specify that, for agreement periods beginning on or after, January 1, 2027, ACOs applying to enter a new agreement period would be required to have at least 5,000 assigned beneficiaries in the ACO's BY3 but could be under 5,000 assigned beneficiaries in BY1, BY2, or both. Currently, on the basis of § 425.110(a)(2), we deny an applicant ACO's application to enter or renew its participation in the program if the ACO would be assigned fewer than 5,000 beneficiaries in any of benchmark years 1 to 3. Under the policy we are proposing, ACOs would not be prevented, on the basis of § 425.110(a)(2), from entering the program if they are below 5,000 assigned beneficiaries in BY1, BY2, or both. We propose to sunset the current policy regarding ACOs with fewer than 5,000 assigned beneficiaries in any of the benchmark years after December 31, 2026, and make this change applicable for ACOs applying to enter new agreement periods beginning January 1, 2027, and for subsequent agreement periods. We are proposing to apply this modified approach for agreement periods beginning January 1, 2027, instead of January 1, 2026, because the application cycle for agreement periods starting January 1, 2026, is underway and this proposal, if finalized, would not be finalized until November 2025, by which point we will be preparing to grant or deny applications for agreement periods starting January 1, 2026, in early December.[319]

We believe this proposal is consistent with the statutory requirements at section 1899(b)(2)(D) of the Act that ''At a minimum, the ACO shall have at least 5,000 [Medicare FFS] beneficiaries assigned to it under subsection (c) in order to be eligible to participate in the ACO program,'' because the proposal requires that an ACO must meet the 5,000-beneficiary minimum before entering an agreement period. While the statute established this requirement, subsequent rulemaking defines its specific implementation parameters such as benchmark years. This proposed update aligns with both the statutory requirements at section 1899(b)(2)(D) of the Act and requirements of this proposed rule.

Over the last several Shared Savings Program application cycles for ACOs entering a new agreement period, about 2 percent of applicants on average were denied participation in the program due to the ACOs having fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, while still having more than 5,000 assigned beneficiaries in BY3 and meeting all other program eligibility requirements. Additionally, the proposed revisions would allow new, renewing, and re-entering ACOs that have been successful in the program previously and who fall under 5,000 assigned beneficiaries in BY1 and/or BY2 to continue to participate in the Shared Savings Program as long as such ACOs meet all other Shared Savings Program requirements.

This proposal would provide greater flexibility on the requirement to have 5,000 assigned beneficiaries in each benchmark year, but it also could introduce risk for both the ACO and the program. For example, as an ACO's assigned beneficiary population decreases, variability in the population's expenditures increases because a few beneficiaries with unusually high or unusually low expenditures could have a substantive impact on an ACO's overall expenditures. The reduction in the size of the ACO's assigned beneficiary population in benchmark years could result in variability in benchmark calculations that could cause shared savings payments or shared losses owed to be based on normal expenditure fluctuations, rather than reflect ACO performance in the program. Accordingly, we are also proposing safeguards to address variability in calculations and to protect both ACOs and Medicare Trust Funds in the proposals discussed in sections III.F.4.b. and III.F.4.c. of this proposed rule.

We propose to revise § 425.110 as follows. At § 425.110(a), we propose to revise paragraph (2) by adding the introductory phrase, ''For agreement periods beginning before January 1, 2027'', to limit the timing of applicability of the provision.

We propose to add new paragraph (3) to § 425.110(a) specifying that for agreement periods beginning on or after January 1, 2027, we determine whether an ACO has 5,000 or more beneficiaries historically assigned to the ACO participants in each of the 3 benchmark years, as calculated using the assignment methodology set forth in subpart E of this part. We also propose to specify under new § 425.110(a)(3) that we would use the most recent data available to estimate the number of assigned beneficiaries in the third benchmark year. Additionally, we propose to specify in new § 425.110(a)(3)(i) through (ii) the following provisions in connection with our determination of whether an ACO has 5,000 or more assigned beneficiaries in its benchmark years.

- We would deem an ACO to have initially satisfied the requirement to have at least 5,000 assigned beneficiaries as specified at § 425.110(a)(1) if 5,000 or more beneficiaries are historically assigned to the ACO participants in the third benchmark year.
- If an ACO has fewer than 5,000 assigned beneficiaries in either the first benchmark year, the second benchmark year, or both, the ACO may only participate under the BASIC track in accordance with new § 425.600(h)(3) (as described in sections III.F.2. and III.F.4.b.(2)(b) of this proposed rule).

(b) Require an ACO With Fewer Than 5,000 Assigned Beneficiaries in BY1, BY2, or Both To Participate Only Under BASIC Track

Providing greater flexibility around the requirement to have 5,000 assigned beneficiaries in BY1, BY2, or both may introduce risk to the program. As explained in section III.F.4.b.(1)(b) of this proposed rule, as an ACO's assigned beneficiary population decreases, variability in the population's average expenditures increases. The reduction in the size of the ACO's assigned beneficiary population in benchmark years could result in variability in benchmark calculations that could cause shared savings payments or shared losses owed to be based on normal variation in expenditures, rather than reflect ACO performance in the program. We propose that if an ACO, when entering a new agreement period, is under the 5,000-beneficiary minimum in BY1, BY2, or both, but meets this requirement in BY3, the ACO may only enter an agreement period in the BASIC track, to

[319] See Medicare Shared Savings Program, Key Application Actions and Deadlines For Agreement Period Beginning on January 1, 2026, available at *https://www.cms.gov/files/document/key-application-dates-and-deadlines-2026.pdf.*

reduce the potential risk to the ACO and to the Shared Savings program as described in section III.F.4.b.(2)(a) of this proposed rule.

Currently, we allow ACOs to choose to participate in either the BASIC track or ENHANCED track, as long as they meet all applicable eligibility criteria, including the requirements to participate under performance-based risk, as described in section III.F.4.b.(1).(b) of this proposed rule. *See* § 425.600(a)(4)(i)(C)(*4*), and (g). We apply eligibility checks for an applicant ACO's track selection during the annual application cycle and communicate track eligibility to the ACO through the Participations Options Report. Under the proposed approach, during the application cycle, we would review an ACO's track selection in combination with its number of assigned beneficiaries in each benchmark year and provide information to the ACO about its participation options. ACOs would receive an opportunity to correct deficiencies and/or make updates or modifications to the ACO's change request(s) during two rounds of RFI (Request for Information) submission periods in Phase 1 of the application cycle. We would also provide a final disposition of an ACO's eligibility for program participation, and we would deny applicants from participation in the program if they do not meet all eligibility criteria.

We propose that this change would be applicable for ACOs applying to enter new agreement periods beginning on or after January 1, 2027.

As described in section III.F.4.c.(1)(b). of this proposed rule, an ACO with fewer than 5,000 assigned beneficiaries in one or both of benchmark years 1 and 2 could experience variability in benchmark calculations which could cause shared savings payments or shared losses owed to be based on normal expenditure fluctuations, rather than reflect actual program performance, because a small number of beneficiaries either with unusually high or unusually low expenditures could substantially affect the variability of the benchmark calculations. This proposal to limit ACOs in this situation to the BASIC track protects these ACOs from incurring a larger shared losses rate of up to 75 percent (*see* § 425.610(f)(4)), and it protects the Medicare Trust Funds from paying a larger shared savings rate of up to 75 percent (*see* § 425.610(d)(4)), which could result under the ENHANCED track, attributable to variability in benchmark calculations associated with ACOs with fewer than 5,000 assigned beneficiaries in one or both of benchmark years 1 and 2 rather than actual program performance.

We seek comments on the proposals to allow ACOs to enter the Shared Savings Program if they have fewer than 5,000 assigned beneficiaries in BY1, BY2, or both (but have at least 5,000 assigned beneficiaries in BY3) and the requirement that these ACOs may only enter an agreement period in the BASIC track.

As described in sections III.F.2 and III.F.4.b.(2).(a) of this rule, we propose to specify a related provision in new § 425.600(h)(3), applicable for agreement periods beginning on or after January 1, 2027, that if an ACO is determined to have fewer than 5,000 assigned beneficiaries in either the first benchmark year, the second benchmark year, or both, in accordance with § 425.110(a)(3) (as proposed to be revised), the ACO may only enter the BASIC track. As described in further detail in section III.F.2 of this proposed rule, under this proposed approach, an ACO may enter a level of risk and potential reward under the BASIC track in accordance with the requirements of new § 425.600(h).

c. Calculating Shared Savings and Losses for ACOs That Fall Below 5,000 Assigned Beneficiaries

(1) Apply an Alternative Performance Payment Limit and Loss Recoupment Limit During Financial Reconciliation for ACOs That Fall Below 5,000 Assigned Beneficiaries in any Benchmark Year

(a) Background

Section 1899(d)(2) of the Act addresses how payments for shared savings are to be determined and states that the Secretary shall establish limits on the total amount of shared savings that may be paid to an ACO under that provision. Section 1899(i) of the Act authorizes the Secretary to use other payment models rather than the one-sided model described in section 1899(d) of the Act, as long as the Secretary determines that the other payment model(s) will improve the quality and efficiency of items and services furnished to Medicare beneficiaries without additional program expenditures. We have used our authority under section 1899(i)(3) of the Act to establish the Shared Savings Program's two-sided payment models.[320] Under the authority granted by sections 1899(d)(2) and 1899(i)(1) of the Act, over time we have adopted methods to determine and limit performance payments and loss recoupment. We refer readers to discussions in earlier rulemaking on establishing the performance payment limit and loss recoupment limit for Levels A through E of the BASIC track (83 FR 67842 through 67857) and the ENHANCED track (formerly named Track 3, see 80 FR 32778 and 32779). The track- or level- specific caps are described in section III.F.4.b.(1)(b) of this proposed rule.

When we calculate the performance payment limit, which is the maximum amount of earned shared savings an ACO can receive in a performance year, in the determination of an ACO's shared savings, we first calculate an ACO's per capita updated benchmark expenditures for the performance year and then multiply this value by the ACO's assigned beneficiary person years[321] for the performance year, which equals their total benchmark expenditures. We then calculate the performance payment limit as a percentage of total benchmark expenditures, with the applicable percentage dependent on the ACO's track/level of participation (either 10 percent for all levels of the BASIC track, or 20 percent for the ENHANCED track). An ACO's earned shared savings payment is capped at the ACO's performance payment limit amount. See §§ 425.600(a)(3)–(4), 425.605, and 425.610 and the discussion in section III.F.4.b.(1).(b) of this proposed rule.

When we calculate the benchmark-based loss recoupment limit, which is the maximum amount of losses an ACO can owe in a performance year, in the determination of an ACO's shared losses, we calculate an ACO's per capita benchmark expenditures and then multiply this value by the ACO's assigned beneficiary person years for the performance year, which equals their total benchmark expenditures. CMS then calculates the loss recoupment limit as a percentage of total benchmark expenditures, with the applicable

[320] See earlier rulemaking establishing two-sided models, including Track 3 (subsequently renamed the ENHANCED track) (80 FR 32771 and 32772), and the BASIC track (83 FR 67834 through 67841). We also used our authority under section 1899(i)(3) of the Act to remove payment amounts for episodes of care for treatment of COVID–19 (see § 425.611(c)(3) and 85 FR 27577 through 27582), SAHS billing activity for CY 2023 (see § 425.670(c)(3) and 89 FR 79161), and SAHS billing activity, from ACO participants' Medicare FFS revenue used to determine the loss recoupment limit in the two-sided models of the BASIC track for CY 2024 and subsequent calendar years (see § 425.672(c)(3) and 89 FR 98199 and 98200).

[321] Person years are the fraction of the year during which the beneficiary was enrolled in each Medicare enrollment type. To calculate person years: CMS sums the number of Shared Savings Program-eligible months for the beneficiary for each Medicare enrollment type; CMS then divides this number by 12 (the number of months in a calendar year).

percentage dependent on the ACO's track/level of participation as described at §§ 425.600(a)(3) through (4), 425.605, and 425.610 and in section III.F.4.b.(1).(b).: either 1 percent for Level C, 2 percent for Level D, or 4 percent for Level E of the BASIC track, or 15 percent for the ENHANCED track.

With respect to ACOs participating in two-sided model levels of the BASIC track, the loss recoupment limit is a percentage of total Medicare Parts A and B FFS revenue of the ACO participants in the ACO (revenue-based loss recoupment limit) not to exceed a percentage of the ACO's updated benchmark (benchmark-based loss recoupment limit). CMS calculates the revenue-based loss recoupment limit as a percentage of total Medicare Parts A and B FFS revenue of the ACO participants in the ACO. If the amount of the ACO's revenue-based loss recoupment limit exceeds the amount of the benchmark-based loss recoupment limit, CMS applies the benchmark-based loss recoupment limit. Refer to § 425.605(d)(1)(iii)(D), (d)(1)(iv)(D), and (d)(1)(v)(D). The percentages of the revenue-based and benchmark-based loss recoupment limits vary based on the Level of the BASIC track, as described in section III.F.4.b.(1).(b)., providing for increasing performance-based risk along the two-sided model levels of the BASIC track's glide path: 2 percent of ACO participant revenue capped at 1 percent of updated benchmark under Level C; 4 percent of ACO participant revenue capped at 2 percent of updated benchmark under Level D; and 8 percent of ACO participant revenue capped at 4 percent of updated benchmark under Level E.

We detailed how CMS performs the calculation of the benchmark-based performance payment limits and loss recoupment limits in programmatic material, including publicly available specifications documents. See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications, (December 2024, Version #12), available at *https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-3* (see section 4.3 ''Performance Year Financial Reconciliation Calculations'' and section 3.3 ''ACO Participants' Revenue'').

(b) Proposed Revisions

For ACOs with fewer than 5,000 assigned beneficiaries in any benchmark year, we are proposing an alternative limit to performance payments and loss recoupment applicable for these ACOs in agreement periods beginning on or after January 1, 2027. We propose that this policy would apply during financial reconciliation for any performance year in an agreement period for which the ACO was assigned fewer than 5,000 beneficiaries in any benchmark year. These alternative caps would help to safeguard ACOs and the Medicare Trust Funds by imposing stricter limits on performance payments and loss recoupment for ACOs with fewer than 5,000 assigned beneficiaries in any of their benchmark years at the time of financial reconciliation compared to the limits on performance payments and loss recoupment under the current methodology. The proposed timing of applicability for this policy would be consistent with the timing of applicability for our proposed approach to allow participation by ACOs with 5,000 assigned beneficiaries in BY3, and fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, described in section III.F.4.b.(2) of this proposed rule.

There are a number of possible circumstances that could cause an ACO's assigned beneficiary population in the benchmark years to fall below 5,000 assigned beneficiaries. Under our proposal, for agreements periods beginning on or after January 1, 2027, we would allow for participation by ACOs with fewer than 5,000 assigned beneficiaries in BY1, BY2, or both (as described in section III.F.4.b.(2) of this proposed rule). Additionally, regardless of the number of assigned beneficiaries an ACO has at the time of program entry, the ACO's assigned population for its benchmark years may be adjusted during the course of its 5year agreement period. For example, as described in § 425.652(a)(9), an ACO may receive an adjusted historical benchmark because of changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection at § 425.226(a)(1), or changes to the beneficiary assignment methodology specified in 42 CFR part 425 Subpart E, among other changes. Participant list changes occurring within an agreement period, for example, could result in an ACO falling below 5,000 historically assigned beneficiaries in any benchmark year, including BY3, for the purpose of the performance year financial reconciliation.

Under this proposed approach, we would use an alternative calculation for the benchmark-based [322] performance payment limits and loss recoupment limits, in which we would compute an ACO's total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures and the ACO's assigned beneficiary person years from the benchmark year with the lowest number of assigned beneficiaries. We note that we only would use this alternative calculation if an ACO has fewer than 5,000 historically assigned beneficiaries in a benchmark year; otherwise, we would use our current performance payment limit calculation that uses the ACO's assigned beneficiary person years from Benchmark Year 3 (BY3). More specifically, we would multiply the person years for assigned beneficiaries for the benchmark year with the lowest number of assigned beneficiaries by the ACO's per capita benchmark expressed as a single value to get an ACO's alternative total benchmark expenditures. We would calculate the product of the track/level specific percentage used to calculate the benchmark-based performance payment limit, as described in section III.F.4.b.(1).(b).) or loss recoupment limit, as described in section III.F.4.b.(1).(b)) and the ACO's alternative amount of total benchmark expenditures. We would also continue to compute a benchmark-based performance payment limit and loss recoupment limit for the ACO, as described in section III.F.4.b.(1).(b)), specified for the ACO's track/level of participation.

We propose to compare the alternative benchmark-based performance payment limit or loss recoupment limit (calculated using assigned beneficiary person years from the benchmark year with the lowest number of assigned beneficiaries) with the benchmark-based performance payment limit or loss recoupment limit calculated with assigned beneficiary person years for the performance year. We would apply the lesser of these two aforementioned amounts (in absolute value) in determining the final performance payment limit or loss recoupment limit. This approach would ensure that no ACO would receive a larger cap with the alternative performance payment limit or loss recoupment limit than it would receive under the current methodology.

[322] This proposal would not change the calculation of the revenue-based loss sharing limit.

We propose to specify the proposed approach in amendments to the Shared Savings Program regulations at new § 425.605(i) (BASIC track) and new § 425.610(l) (ENHANCED track).

At new § 425.605(i), we propose to include provisions to codify the existing approach to calculating the performance payment limit under new paragraph (i)(1)(i), and the loss recoupment limit under new paragraph (i)(2)(i). We propose to specify under new paragraphs (i)(1)(ii) and (i)(2)(ii) of § 425.605 provisions for how CMS determines whether to apply an alternative performance payment limit or loss recoupment limit (respectively), if an ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2, or BY3, in conducting financial reconciliation for each performance year, for agreement periods beginning on or after January 1, 2027. At this new § 425.610(l)(1) to (2), we propose to include provisions to codify the existing approach to calculating the performance payment limit, and the loss recoupment limit. We propose to specify under new paragraph (l)(3) of § 425.610 provisions for how CMS determines whether to apply an alternative performance payment limit or loss recoupment limit if an ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2, or BY3, in conducting financial reconciliation for each performance year, for agreement periods beginning on or after January 1, 2027.

This proposed policy to potentially reduce the limit on performance payments and loss recoupment limit when an ACO falls below 5,000 assigned beneficiaries in any benchmark year would safeguard the overall financial integrity of the Shared Savings Program, including the Trust Funds, and protect ACOs. The proposed policy would potentially limit shared savings and shared losses in the event that a historical benchmark may be less reliable due to a smaller (fewer than 5,000) assigned beneficiary population size in any benchmark year. As previously discussed in this section, as an ACO's assigned beneficiary population decreases, variability in the population's expenditures increases. The reduction in the size of the ACO's assigned beneficiary population in benchmark years could result in variability in benchmark calculations, which could cause shared savings payments made to the ACO or shared losses owed to be based on normal expenditure fluctuations, rather than reflect actual program performance. We expect these alternative caps to apply to ACOs rarely; when applied, we expect these alternative caps to have limited reductions to an ACO's shared savings or shared losses payments but to provide adequate protections and risk mitigation in outlier cases. In an analysis of performance year reconciliation data for performance years 2020–2023, CMS found that on average, only 2 percent of ACOs at the time of financial reconciliation have at least one benchmark year below 5,000 assigned beneficiaries.

Tables 49 and 50 below provide examples of the alternative performance payment limit and alternative loss recoupment limit calculations that would apply for an ACO with fewer than 5,000 assigned beneficiaries in at least one benchmark year under this proposal.

BILLING CODE 4120–01–P

TABLE 49: EXAMPLE ALTERNATIVE PERFORMANCE PAYMENT LIMIT CALCULATION

Determine which BY corresponds with the lowest number of assigned beneficiaries as determined at the time of financial reconciliation.	Number of assigned beneficiaries for each BY, determined at the time of financial reconciliation. BY1: 4,300 BY2: 3,900 BY3: 5,500 BY with lowest number of assigned beneficiaries: **BY2**
Determine number of assigned beneficiary person years for the BY with the lowest number of assigned beneficiaries, determined at the time of financial reconciliation.	Number of assigned beneficiary person years for each BY, determined at the time of financial reconciliation. BY1: 3,550 BY2: 3,250 BY3: 5,050 Number of assigned beneficiary person years for BY2: **3,250**
Calculate alternative total benchmark expenditures based on number of assigned beneficiary person years for the BY with the lowest number of assigned beneficiaries.	Per capita benchmark expenditures[1]: $13,000 Alternative total benchmark expenditures: $13,000 * 3,250 = **$42,250,000**
Calculate alternative performance payment limit based on Track-specific percentage.	ACO Track: BASIC Track Level E Alternative performance payment limit: 10% * $42,250,000 = **$4,225,000**
Compare alternative performance payment limit to existing performance payment limit and apply the lesser value.	Existing performance payment limit: ($13,000 per capita benchmark expenditures * 5,050 PY person years) *10% = **$6,565,000** Final performance payment limit: **$4,225,000**

Notes: [1] Updated Per Capita Benchmark Expenditures expressed as a single value ($).

TABLE 50: EXAMPLE ALTERNATIVE LOSS RECOUPMENT LIMIT CALCULATION

Determine which BY corresponds with the lowest number of assigned beneficiaries as determined at the time of financial reconciliation.	Number of assigned beneficiaries for each BY, determined at the time of financial reconciliation. BY1: 4,300 BY2: 3,900 BY3: 5,500 BY with lowest number of assigned beneficiaries: **BY2**
Determine number of assigned beneficiary person years for the BY with the lowest number of assigned beneficiaries, determined at the time of financial reconciliation.	Number of assigned beneficiary person years for each BY, determined at the time of financial reconciliation. BY1: 3,550 BY2: 3,250 BY3: 5,050 Number of assigned beneficiary person years for BY2: **3,250**
Calculate alternative total benchmark expenditures based on number of assigned beneficiary person years for the BY with the lowest number of assigned beneficiaries.	Per capita benchmark expenditures[1]: **$13,000** Alternative total benchmark expenditures: $13,000 * 3,250 = **$42,250,000**
Calculate alternative loss recoupment limit based on Track-specific percentage.	ACO Track[2]: BASIC Track Level E 8% of ACO Participant Total Medicare Parts A and B FFS Revenue: **$2,750,000** 4% of Alternative total benchmark expenditures: **$1,690,000** Alternative loss recoupment limit: -4% * $42,250,000 = **-$1,690,000**
Compare alternative loss recoupment limit to existing loss recoupment limit and apply the lesser absolute value.	Existing loss recoupment limit [3]: ($13,000 per capita benchmark expenditures * 5,050 PY person years) *-4% = -$**2,626,000** Final loss recoupment limit: **-$1,690,000**

Notes: [1] Updated Per Capita Benchmark Expenditures expressed as a single value ($).

[2] For BASIC Track Level E, if 8 percent of total Medicare Parts A and B FFS Revenue for ACO Participants is greater than 4 percent of Total Benchmark Expenditures, then the loss recoupment limit is equal to -4 percent of Total Benchmark Expenditures.

[3] In this case, the ACO's revenue-based loss sharing limit exceeds the benchmark-based loss sharing limit; therefore, the ACO's loss sharing limit is based on total benchmark expenditures.

BILLING CODE 4120–01–C

As explained elsewhere in this section of this proposed rule, we have used our authority under section 1899(i)(3) of the Act to establish the two-sided payment models of the BASIC track and ENHANCED track, including the existing approach to calculating the loss recoupment limits (based on the ACO's assigned beneficiary person years for the performance year). Therefore, we propose to continue to use our authority under section 1899(i)(3) of the Act to implement our proposal to apply the lower of a loss recoupment limit calculated based on performance year assigned beneficiary person years, or an alternative loss recoupment limit calculated based on the ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries, in conducting financial reconciliation for a performance year in agreement periods beginning on or after January 1, 2027.To implement this alternative payment model under the Secretary's authority under section 1899(i) of the Act, we must determine that it would improve the quality and efficiency of items and services furnished to Medicare beneficiaries without resulting in additional program expenditures. As discussed further in the Regulatory Impact Analysis, in section VII. of this proposed rule, we project that the proposed change to apply an alternative loss recoupment limit for ACOs with fewer than 5,000 assigned beneficiaries in any BY, in combination with other proposed changes to the statutory payment model in this proposed rule, as well as current policies we have adopted under the authority of section 1899(i)(3) of the Act, are expected to improve the quality and efficiency of items and services furnished under the Medicare program, and would not be expected to increase program expenditures relative to those of the statutory payment model. As described in the Regulatory Impact Analysis for this proposed rule, by potentially reducing shared savings payments to outliers with sharp growth in beneficiary assignment during the agreement period despite benchmark year counts dropping below the current minimum, the program may see additional net savings to the Medicare Trust Funds as compared to the current existing policy. Meanwhile, the alternative loss recoupment limit is not

expected to materially reduce shared losses collected by the program as only a few ACOs have shared losses, and those losses rarely approach the regular benchmark-based loss recoupment limit. Also, the alternative loss recoupment limit would potentially marginally increase participation in the Shared Savings Program by providing certain ACOs greater assurance that they would be protected from elevated exposure to unusually large shared loss liabilities in rare situations where their assignment counts could decrease well below 5,000. Attracting additional ACOs to the Shared Savings Program increases the number of providers and suppliers who are working together to coordinate care for beneficiaries, providing quality care at lower cost.

We seek comments on the proposals to apply an alternative performance payment limit and loss recoupment limit during financial reconciliation for ACOs that fall below 5,000 assigned beneficiaries in any BY.

(2) Exclude ACOs That Fall Below 5,000 Assigned Beneficiaries in any BY From Policies Providing Certain Low Revenue ACOs Participating in the BASIC Track Increased Opportunities To Share in Savings

(a) Background

With the CY 2023 PFS final rule (87 FR 69946 through 69952), we finalized an approach, under our authority of section 1899(i)(3) of the Act,[323] to expand the eligibility criteria to qualify for shared savings payments to enable certain low revenue ACOs participating in the BASIC track to share in savings even if the ACO does not meet the MSR as required under section 1899(d)(1)(B)(i) of the Act. In accordance with § 425.605(h), ACOs participating in the BASIC track that do not meet the MSR requirement, but that do meet the quality performance standard or the alternative quality performance standard at § 425.512 and otherwise maintain eligibility to participate in the Shared Savings Program, qualify for a shared savings payment if all the following criteria are met:

- The ACO has average per capita Medicare Parts A and B FFS expenditures for the performance year below the updated benchmark (§ 425.605(h)(1)(i)).
- The ACO is a low revenue ACO as defined at § 425.20 as determined at the time of financial reconciliation for the performance year (§ 425.605(h)(1)(ii)).
- The ACO has at least 5,000 assigned beneficiaries for the performance year at the time of financial reconciliation for the performance year (§ 425.605(h)(1)(iii)).
- The ACO is participating in an agreement period beginning on January 1, 2024, or in subsequent years (§ 425.605(h)(1)(iv)).

Section 425.605(h)(2) specifies the sharing rate applied for ACOs that meet the aforementioned criteria, which is one-half the applicable percentage described at § 425.605(d). As we explained in the CY 2023 PFS final rule (see 87 FR 69948 and 69949), under this approach, an eligible ACO that does not meet the MSR but meets the quality performance standard required to share in savings at the maximum sharing rate receives half of the maximum sharing rate for their level of participation (20 percent instead of 40 percent under Levels A and B, and 25 percent instead of 50 percent under Levels C, D, and E). Where an eligible ACO does not meet the MSR or the quality performance standard required to share in savings at the maximum sharing rate but meets the alternative quality performance standard, the sharing rate is further adjusted according to a sliding scale approach for determining shared savings.

(b) Proposed Revisions

We propose to exclude ACOs that fall below 5,000 assigned beneficiaries in any BY from being eligible to benefit from the policies at § 425.605(h) that provide certain low revenue ACOs participating in the BASIC track with additional opportunities to share in savings. As we have explained in prior rulemaking, the MSR/MLR protects against an ACO earning shared savings or being liable for shared losses when the change in expenditures represents normal, or random, variation rather than actual program performance. ACOs with assigned beneficiary populations below 5,000 raise concerns that any shared savings payments made to the ACO would not reward true cost savings but instead would pay for normal expenditure fluctuations (see 83 FR 67923 through 67926 for prior discussion). To protect against issuing payments to certain low revenue ACOs participating in the BASIC track related to normal or random variation in expenditures, we propose revising § 425.605(h) to include an additional criterion that ACOs must have at least 5,000 assigned beneficiaries in all three benchmark years at the time of financial reconciliation for a performance year to qualify for a shared savings payment at § 425.605(h). Specifically, we propose to amend § 425.605(h)(1) by adding new paragraph (v) that specifies: ''For agreement periods beginning on or after January 1, 2027, the ACO has at least 5,000 assigned beneficiaries in each of the ACO's benchmark years.'' The proposed timing of applicability for this policy would be consistent with the timing of applicability for our proposed approach to allow participation by ACOs with 5,000 assigned beneficiaries in BY3, and fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, described in section III.F.4.b.(2). of this proposed rule.

We seek comments on the proposal to exclude ACOs that fall below 5,000 assigned beneficiaries in any BY from being eligible to benefit from policies at § 425.605(h) providing certain low revenue ACOs participating in the BASIC track with increased opportunities to share in savings.

5. Revisions to the Definition of Primary Care Services Used in Shared Savings Program Beneficiary Assignment

a. Background

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that the Secretary shall determine an appropriate method to assign Medicare fee-for-service beneficiaries to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs), for performance years beginning on or after January 1, 2019. However, the statute does not specify a list of services considered to be primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes, that we considered to be primary care services. In that final rule, we indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking (refer to 80 FR 32746 through 32748; 80 FR 71270 through 71273; 82 FR 53212 and 53213; 83 FR 59964 through 59968; 85 FR 27582 through 27586; 85 FR 84747

[323] Refer to Executive Order 14192 ''Unleashing Prosperity Through Deregulation'' *https://www.federalregister.gov/documents/2025/02/06/2025–02345/unleashing-prosperity-through-deregulation.*

through 84756; 85 FR 84785 through 84793; 86 FR 65273 through 65279; 87 FR 69821 through 69825; 88 FR 79163 through 79174; 89 FR 98087 through 98101) to reflect additions or modifications to the codes that have been recognized for payment under the PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program. For the performance year beginning on January 1, 2025, and subsequent performance years, we defined primary care services for purposes of assigning beneficiaries to ACOs under § 425.402 at § 425.400(c)(1)(ix).

b. Proposed Revisions

Based on feedback from ACOs and our further review of the HCPCS and CPT codes that are currently used for payment under the PFS or that we are proposing to use for payment under the PFS starting in CY 2026, we have determined it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes for the performance year starting on January 1, 2026, and subsequent performance years, in order to remain consistent with billing and coding under the PFS.

We propose to specify a revised definition of primary care services used for assignment for the performance year starting on January 1, 2026, and subsequent performance years in a new provision of the Shared Savings Program at § 425.400(c)(1)(x) to include the list of HCPCS and CPT codes specified at § 425.400(c)(1)(ix), as well as the following additions: Enhanced Care Model Management Services (HCPCS codes (GPCM1, GPCM2, and GPCM3), and the deletion of Social Determinants of Health Risk Assessment Services (HCPCS code G0136), if finalized under Medicare FFS payment policy.

We propose to use the new provision at § 425.400(c)(1)(x) for determining beneficiary assignment for the performance year starting on January 1, 2026, and in subsequent performance years.

The following provides additional information about the CPT and HCPCS codes that we are proposing to add to the definition of primary care services used for purposes of beneficiary assignment:

Enhanced Care Model Management Services (HCPCS Codes GPCM1, GPCM2, and GPCM3): In section II.G of this proposed rule, we are proposing three new add-on HCPCS codes to allow for payment under the PFS when BHI or CoCM are furnished in conjunction with APCM services for practitioners who meet the requirements to furnish both services. Specifically, we are proposing to allow for payment of the following codes, discussed in more detail below, under the PFS: GPCM1, an add-on code that mirrors 99492 (CoCM initial month), GPCM2, an add-on code that mirrors 99493 (subsequent months) for CoCM services delivered to patients also receiving APCM services, and GPCM3, an add-on code for general behavioral health integration services that mirrors CPT code 99484 (20 minutes or more of BHI services) for BHI services delivered to patients also receiving APCM services.

- *HCPCS code GPCM1* (Initial psychiatric collaborative care management, in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant and directed by the treating physician or other qualified health care professional, with the following required elements: outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional, initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan, review by the psychiatric consultant with modifications of the plan, if recommended, entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, *and* participation in weekly caseload consultation with the psychiatric consultant, and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies (list separately and in addition to the Advanced Primary Care Management code.)).
- *HCPCS code GPCM2*(Subsequent psychiatric collaborative care management, in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: tracking patient follow-up and progress using the registry, with appropriate documentation, participation in weekly caseload consultation with the psychiatric consultant, ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers, additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant, provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies, monitoring of patient outcomes using validated rating scales, and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment. (list separately and in addition to Advanced Primary Care Management code)).
- *HCPCS code GPCM3*(Care management services for behavioral health conditions, directed by a physician or other qualified health care professional, per calendar month, with the following required elements: initial assessment or follow-up monitoring, including the use of applicable validated rating scales, behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes, facilitating and coordinating treatment such as psychotherapy, pharmacotherapy, counseling and/or psychiatric consultation, and continuity of care with a designated member of the care team (list separately and in addition to Advanced Primary Care Management cod)).

All of these codes are proposed as optional add-on codes for APCM services that would facilitate providing complementary BHI services by removing the time-based requirements and reducing documentation requirements of the existing BHI and CoCM CPT codes. We believe removing the time-based requirements and reducing the documentation requirements may make primary care practitioners more likely to offer BHI and CoCM services, which would improve access to BHI and CoCM for primary care patients and access to primary care for BHI and CoCM patients.

These new HCPCS codes are designed to allow for the payment of services that, when reported as standalone services, are currently included in the definition of primary care services used for purposes of assignment when furnished in conjunction with APCM services: BHI (CPT codes 99484, 99492, 99493 and 99494), CoCM (HCPCS code G2214), and APCM (HCPCS codes G0556, G0557, and G0558) (refer to 82

FR 53212 through 53213, 85 FR 84750 through 84755, and 89 FR 98087 through 98097, respectively).

The new HCPCS codes also are similar to CPT codes 99354 and 99355 (83 FR 59965 through 59968), which likewise are included in the definition of primary care services used for purposes of assignment. Including these new HCPCS codes for BHI and CoCM APCM add-on services into the definition of primary care services used for purposes of assignment would increase the accuracy of assignment based on the provision of primary care by ensuring that all expenditures for BHI and CoCM are used to determine beneficiary assignment.

The following provides additional information about the CPT and HCPCS codes that we are proposing to remove from the definition of primary care services used for purposes of beneficiary assignment:

HCPCS code G0136 (Administration of a standardized, evidence-based social determinants of health risk assessment tool, 5–15 minutes): In section II.I of this rule, we are proposing to delete HCPCS code G0136 as we have come to believe that the resource costs described by HCPCS code G0136 are already accounted for in existing codes, including but not limited to evaluation and management visits. Accordingly, we are proposing to not include this HCPCS code in the definition of primary care services used for purposes of assignment, beginning January 1, 2026, and in subsequent years, if the deletion is finalized.

As part of this revised definition of primary care services used for assigning beneficiaries at § 425.402, we propose to incorporate a provision at § 425.400(c)(1)(x)(C), specifying that the primary care service codes for purposes of assigning beneficiaries include a CPT code identified by CMS that directly replaces a CPT code specified at § 425.400(c)(1)(x)(A) or a HCPCS code specified at § 425.400(c)(1)(x)(B), when the assignment window or expanded window for assignment (as defined at § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under Medicare FFS.

We seek comments on these proposed changes to the definition of primary care services used for assigning beneficiaries at § 425.400(c)(1)(x) to Shared Savings Program ACOs for the performance year starting on January 1, 2026, and subsequent performance years. We also seek comments on any other existing or new HCPCS or CPT codes proposed elsewhere in this proposed rule that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

6. Quality Performance Standard & Other Quality Reporting Requirements

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care. As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality healthcare at the individual and population levels. In the November 2011 final rule, we established a quality measure set spanning four domains: patient experience of care and wherever practicable, caregiver experience of care, care coordination/patient safety, preventative health, and at-risk population (76 FR 67872 through 67891). We have subsequently updated the measures that comprise the quality measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, 2019, 2021, 2023, 2024, and 2025 PFS final rules (79 FR 67907 through 67921, 80 FR 71263 through 71269, 81 FR 80484 through 80489, 83 FR 59708 through 59715, 85 FR 84733 through 84734, 87 FR 69860 through 69863, 88 FR 79112 through 79114, and 89 FR 98124 through 98132, respectively).

b. Proposal To Revise the Definition of a ''Beneficiary Eligible for Medicare CQMs''

(1) Background

In the CY 2024 PFS final rule (88 FR 79097 through 79107), for performance year 2024 and subsequent performance years, we established Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs) as a new collection type for Shared Savings Program ACOs within the APP quality measure set and for which the ACO reports quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20. This option has allowed and continues to allow ACOs to develop experience aggregating data for their Medicare fee-for-service (FFS) patients across their participant TINs and provides ACOs with opportunities to develop workflows to allow them to transition to reporting quality data for their entire population through digital quality measurement.

As stated in the CY 2024 PFS final rule (88 FR 79101), Medicare CQMs have served and continue to serve as a transition collection type to help some ACOs build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient MIPS CQMs and eCQMs by defining a population of beneficiaries that exist within the all payer/all patient MIPS CQM specifications and tethering that population to claims encounters with ACO professionals with specialties used in assignment. Specifically, Medicare CQMs addressed the concern raised by ACOs that for ACOs with a higher proportion of specialty practices, the broader all payer/all patient eligible population would capture beneficiaries with no primary care relationship to the ACO. Further, given ACOs are commonly made up of multiple practices using multiple EHRs, ACOs have been able to utilize Medicare Part A and B claims data to help identify the ACO's eligible population and validate the ACO's patient matching and deduplication efforts. We also stated that Medicare CQMs are an all-beneficiary Medicare measure (not just ACO assigned beneficiaries) and are designed to help ACOs address challenges with aggregating patient data required to report Medicare CQMs and the all payer/all patient MIPS CQMs and eCQMs in the future (88 FR 79102).

In the CY 2024 PFS final rule (88 FR 79107), we also finalized the definition of a ''beneficiary eligible for Medicare CQMs'' at § 425.20 as a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs), who is either of the following:

- A Medicare FFS beneficiary (as defined at § 425.20) who—

++ Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

++ Had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

- A Medicare FFS beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

We discussed in the CY 2024 PFS final rule that, in response to our proposed definition of a ''beneficiary eligible for Medicare CQMs'' in the CY 2024 PFS proposed rule, many commenters raised questions and concerns regarding how CMS will determine the appropriate Medicare CQM population for these measures (88 FR 79102). Some commenters noted that the proposed denominator eligibility criteria are similar to, but differ in timeline from, the current assignment methodology and that this creates unnecessary complexity, potentially leading to concerns in identifying the appropriate Medicare ACO population. A few commenters suggested we combine the new Medicare CQM methodology with the existing assignment methodology, which would mitigate potential challenges and ensure a smoother implementation process. Several commenters asked that we clarify if the list of ''beneficiaries eligible for Medicare CQMs'' is limited to assigned beneficiaries or if it includes all assignable beneficiaries eligible for the measure.

In the CY 2024 PFS final rule (88 FR 79102), in response to commenters' suggestions to align the definition of ''beneficiary eligible for Medicare CQM'' with our assignment methodology, we noted that our definition of a beneficiary eligible for Medicare CQMs aims to align Medicare CQMs with the all payer/all patient measure specifications because Medicare CQMs are intended to support ACOs in the transition to all payer/all patient measures. We stated that the definition would limit Medicare CQM reporting to beneficiaries that had an encounter with an ACO professional with a specialty used in assignment or who were voluntarily assigned to the ACO. We noted that our approach would also balance our commitment to the transition to all payer/all patient measures with the need to provide additional support to some ACOs as they build the skills and infrastructure necessary to report digital quality measures.

To support ACOs in reporting Medicare CQMs, we finalized that we would provide each ACO with a list of beneficiaries eligible for Medicare CQMs each quarter throughout the performance year as part of the ACO's Quarterly Informational Reports Packages to give ACOs access to the full 12 months of encounters necessary to report Medicare CQMs (88 FR 79104 through 79105). We stated that the list would be cumulative and updated quarterly to reflect the most recent quarter's data, and the fourth quarter list of beneficiaries eligible for Medicare CQMs would include encounters with dates of service January 1st through December 31st of the performance year. We stated that the quarterly list would include beneficiary-level age, diagnosis, encounter, and exclusion flags on the list of beneficiaries eligible for Medicare CQMs to aid ACOs in identifying the denominator eligible population for each measure to the extent that such data can be identified through claims and Medicare administrative systems. We also stated that it was important to note that these flags are meant to assist ACOs in the aggregation of data and do not replace the need for ACOs to evaluate their patient population against each Medicare CQM specification prior to submission, including determining the beneficiaries that meet the denominator criteria for the measure. We now note, by way of additional explanation, that since the list does not apply measure-specific eligibility criteria, the list may include Medicare FFS beneficiaries who are not eligible for inclusion in any of the three Medicare CQMs in the APP quality measure set.

Based on our experience with providing ACOs with the quarterly lists of beneficiaries eligible for Medicare CQMs for performance year 2024, we have learned that the complexity of the current definition of a ''beneficiary eligible for Medicare CQMs'' has continued to create confusion for some Shared Savings Program ACOs. Some of these ACOs have sought additional clarification and guidance from CMS. Revising the definition of a ''beneficiary eligible for Medicare CQMs'' would be responsive to these ACOs and other stakeholder feedback and would reduce ACOs' burden with respect to the patient matching necessary to report Medicare CQMs. Some of the ACO feedback we have received has been based on the differences between the Medicare CQM beneficiary lists that they have received from CMS and the assignable or assigned beneficiary files that ACOs also receive from CMS. Differences in the beneficiary information obtained from these files has contributed to concerns from ACOs about which beneficiaries to use for quality data reporting through Medicare CQMs.

The methodology used to generate the list of ''beneficiaries eligible for Medicare CQMs'' differs from the methodology described at §§ 425.400, 425.401, 425.402, and 425.404 used to generate the list of beneficiaries assignable to an ACO, that is the universe of beneficiaries who receive at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included at § 425.402(c). These methodologies differ in time frames and encounter codes used, which has led to inquiries by ACOs and increased burden due to marginal differences in overlapping populations that meet these criteria. Our current definition of a ''beneficiary eligible for Medicare CQMs'' was intended to create alignment with the all payer/all patient MIPS CQM Specifications. The use of the terms of ''claim'' and ''measurement period'' in the definition of a ''beneficiary eligible for Medicare CQMs'' are consistent with the application of all payer/all patient MIPS CQM Specifications. The codes designated as eligible encounters used to identify the eligible population in all payer/all patient MIPS CQM Specifications only partially overlap with the HCPCS and revenue center codes designated at § 425.400(c) as primary care services for purposes of assignment under the Shared Savings Program. Similarly, the measurement period applicable to each measure in the all payer/all patient MIPS CQM Specifications only partially overlaps with the 12-month period used in assignment (88 FR 79098). These differences mean an ACO may have beneficiaries eligible for Medicare CQMs that are not part of an ACO's assigned or assignable population. For example, this may occur if the beneficiary has a claim by an ACO professional or specialty designation that is not a primary care service or a claim that occurs during the measurement period but outside the assignment window.

(2) Proposed Revisions

Considering the concerns raised by ACOs and other interested parties, and our commitment to supporting ACOs in the transition to digital quality measure reporting, we propose to revise the definition of a ''beneficiary eligible for Medicare CQMs'' at § 425.20 effective January 1, 2025, meaning we propose to apply the revised definition for performance year 2025, as well as for subsequent performance years. Specifically, beginning with performance year 2025 and continuing in subsequent performance years, we propose to revise the definition to require, in (1)(ii)(B) of the definition, ''at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the specialty designations included at

§ 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.'' We would redesignate the existing (1)(ii) as (1)(ii)(A). The current definition of ''beneficiary eligible for Medicare CQMs'' requires, in (1)(ii), ''at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included at § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.'' For performance year 2025 and subsequent performance years, the revised definition we are proposing in (1)(ii)(B) would align with our modifications to the stepwise assignment methodology and approach to identifying the beneficiaries assignable to an ACO, as finalized in the CY 2024 PFS final rule (88 FR 79162) and described at § 425.402(a)(5), where nurse practitioners, physician assistants, and clinical nurse specialists were added to the process for identifying beneficiaries assignable to an ACO beginning in performance year 2025. Specifically, the revised definition we are proposing in (1)(ii)(B) uses ''primary care services'' and ''performance year,'' instead of ''claims'' and ''measurement period,'' respectively, as used in the current definition. The proposed definition in (1)(ii)(B) would continue to align with the special assignment conditions for ACOs, including Federally Qualified Health Centers (FQHCs) and Rural Health Clinics (RHCs), as described at § 425.404. We provide a list of ''beneficiaries eligible for Medicare CQMs'' to each ACO. We would continue to include on that list all beneficiaries for whom a service is reported on an FQHC/RHC claim. As described at § 425.404, we treat a service reported on an FQHC/RHC claim as a primary care service performed by a primary care physician.

The proposal to revise the definition of a ''beneficiary eligible for Medicare CQMs'' would reduce ACOs' burden in the patient matching necessary to report Medicare CQMs because the list of ''beneficiaries eligible for Medicare CQMs'' would have greater overlap with the list of beneficiaries that are assignable to an ACO. Specifically, more closely aligning these definitions would mean that, for most ACOs, the large majority of an ACO's beneficiaries eligible for Medicare CQMs would be part of the list of beneficiaries assignable to an ACO. Therefore, under the proposed definition of a ''beneficiary eligible for Medicare CQMs,'' most ACOs would have to do less patient matching than they presently do because there would be fewer differences between the definition of ''beneficiary eligible for Medicare CQMs'' and ''assignable beneficiary.'' The proposal would also help each ACO identify its eligible population and validate the ACO's patient matching and deduplication efforts because ACOs would see fewer differences between the Medicare CQM beneficiary list and the list of beneficiaries assignable to the ACO. We believe our proposal to revise the definition of a ''beneficiary eligible for Medicare CQMs'' would substantially address ACOs' and interested parties' concerns by better aligning the definitions and clarifying which beneficiaries' data to use for quality data reporting through Medicare CQMs.

We conducted a gap analysis using performance year 2024 data to analyze the overlap of our proposed definition of a ''beneficiary eligible for Medicare CQMs'' and the current performance year 2025 methodology used to identify beneficiaries assignable to an ACO. The goal of this analysis was to determine whether the proposed change in the definition of a ''beneficiary eligible for Medicare CQMs'' would accomplish our goal of aligning that population with the list of beneficiaries assignable to an ACO. With the addition of nurse practitioners, physician assistants, and clinical nurse specialists beginning in performance year 2025 for identifying assignable beneficiaries, as well as the proposed change to the definition of a ''beneficiary eligible for Medicare CQMs'' to require ''primary care services,'' the overlap between the Medicare CQM eligible population and the list of beneficiaries assignable to an ACO is expected to increase, on average, to 85 percent for most ACOs. We note that the amount of overlap between assignable beneficiaries and beneficiaries eligible for Medicare CQMs will vary across ACOs due to factors like different population composition and different use patterns of non-physician care codes. Overall, we believe that the proposed changes will generally help ACOs identify and collect data for the population of beneficiaries eligible for Medicare CQMs and support adoption of Medicare CQMs. Therefore, we propose to revise the definition of a ''beneficiary eligible for Medicare CQMs,'' at § 425.20, for performance year 2025 and subsequent performance years, to require at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the specialty designations included at § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

To support ACOs in preparing for this proposed change, we will continue to provide the quarterly list based on the definition of a ''beneficiary eligible for Medicare CQMs'' as finalized in the CY 2024 PFS final rule (88 FR 79097 through 79107) and will add an additional variable to the quarterly list to flag each beneficiary who had a primary care service visit, beginning with the performance year 2025 Quarter 2 list, to identify ''beneficiaries eligible for Medicare CQMs'' under the proposed definition. If this proposal is finalized, then the quarterly list, starting with performance year 2025 Quarter 4, would be based on the finalized definition of a ''beneficiary eligible for Medicare CQMs.''

Section 1871(e)(1)(A) of the Act prohibits the Secretary from applying substantive changes in regulations retroactively before the effective date of the change except where the Secretary determines, as relevant here, that failure to apply the change retroactively would be contrary to the public interest. It is in the public interest to apply our proposed changes to the definition of a ''beneficiary eligible for Medicare CQMs'' beginning in performance year 2025. Applying these changes starting with performance year 2025 is in the public interest because, absent the proposed changes in the definition, the current definition is an ongoing contributor to ACOs' confusion regarding which beneficiaries to use for quality data reporting through Medicare CQMs and creates burden for ACOs in patient matching and quality reporting. Minimizing this complexity through our proposed changes in definition will reduce the burden on ACOs that elect to report Medicare CQMs and better enable them to gain experience with aggregating and deduplicating data, since Medicare CQMs are intended to aid in the transition to digital quality measure reporting quality data for an ACO's entire population. The proposed changes to the definition, and resulting burden reduction, will allow ACOs to devote greater resources to improving care coordination so that they are better positioned to deliver the right care at the right time, all to the benefit of Medicare beneficiaries served by the ACO and Medicare Trust Funds. We believe the proposed changes would have minimal impact on ACOs' existing processes because the ACO would continue to apply the measure specifications to the population of beneficiaries eligible for Medicare

CQMs, but the beneficiary population would be based on a list of beneficiaries that better reflects the ACO's assigned population.

We propose to revise the definition of ''Beneficiary eligible for Medicare CQMs'' at § 425.20, as follows:

- We are adding a new paragraph (A) to paragraph (1)(ii) of the definition of ''beneficiary eligible for Medicare CQMs'' at § 425.20 to establish that, in addition to the requirement in paragraph (1)(i) and for performance year 2024, a beneficiary eligible for Medicare CQMs ''had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included at § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.'' This proposal would effectively move the existing text of paragraph (1)(ii) to paragraph (1)(ii)(A) and limit the application of the existing text of paragraph (1)(ii) to performance year 2024.
- We are adding a new paragraph (B) to paragraph (1)(ii) of the definition of ''beneficiary eligible for Medicare CQMs'' at § 425.20 to establish that, in addition to the requirement in paragraph (1)(i) and for performance year 2025 and subsequent performance years, a beneficiary eligible for Medicare CQMs ''had at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the specialty designations included at § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.''

We are seeking public comments on the proposed changes to the definition of a ''beneficiary eligible for Medicare CQMs'' at § 425.20.

c. Proposals To Remove the Health Equity Adjustment Applied to an ACO's Quality Score and Revise Certain Terminology in the Shared Savings Program Regulations

(1) Background

In the CY 2023 PFS final rule (87 FR 69838 through 69857), we finalized a health equity adjustment that would be available for performance year 2023 and subsequent performance years to an ACO that reports the three eCQMs/MIPS CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 for all three eCQMs/MIPS CQMs, and administers the CAHPS for MIPS survey. We finalized that such ACOs may receive up to a maximum of 10 additional points added to their MIPS quality performance category score. The level of the adjustment is based on the joint consideration of an ACO's performance on quality measures and the population served by the ACO, such that ACOs that perform well on quality measures and serve a high proportion of beneficiaries who are from underserved neighborhoods (residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85); or who are eligible for the Medicare Part D Low-Income Subsidy (LIS), or are dually eligible for Medicare and Medicaid would receive a higher number of bonus points added to their MIPS quality performance category score. In the CY 2024 PFS final rule (88 FR 79110 through 79111), we finalized that ACOs reporting Medicare CQMs would be eligible for the health equity adjustment to their quality performance category score.

The health equity adjustment was designed to further several goals, including supporting ACOs transitioning to all payer/all patient quality measure reporting, incentivizing ACOs to report eCQMs/MIPS CQMs/Medicare CQMs, improving quality, and recognizing high-performing ACOs serving underserved populations (87 FR 69841 through 69842; 88 FR 79097). The regulation at § 425.512(b) specifies how we calculate an ACO's health equity adjusted quality performance score for performance year 2023, performance year 2024, and performance year 2025 and subsequent performance years. We also incorporated references to an ACO's health equity adjusted quality performance score at §§ 425.512(a), 425.512(c), 425.605(d), and 425.610(d) and (f), as applicable.

In the CY 2025 PFS final rule, we established or extended additional scoring adjustments for ACOs, such as the Complex Organization Adjustment (89 FR 98116 through 98117 and 89 FR 98105) and the eCQM/MIPS CQM reporting incentive (89 FR 98121 through 98124), respectively.

Complex Organization Adjustment: In the CY 2025 PFS final rule (89 FR 98116 through 98117), we established a Complex Organization Adjustment beginning in the CY 2025 performance period/2027 MIPS payment year to account for the organizational complexities faced by Virtual Groups and APM Entities, including Shared Savings Program ACOs, when reporting eCQMs. A Virtual Group and an APM Entity will receive one measure achievement point for each submitted eCQM that meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340. Each reported eCQM may not score more than 10 measure achievement points and the total achievement points (numerator) may not exceed the total available measure achievement points (denominator) for the quality performance category. The Complex Organization Adjustment for a Virtual Group or APM Entity may not exceed 10 percent of the total available measure achievement points in the quality performance category. The adjustment will be added for each eCQM submitted at the individual measure level. Since Shared Savings Program ACOs are APM Entities, this policy is applicable to Shared Savings Program ACOs reporting the APP Plus quality measure set beginning in performance year 2025.

eCQM/MIPS CQM Reporting Incentive: We originally adopted an incentive for ACOs to begin transitioning to eCQM/MIPS CQM reporting (herein referred to as the ''eCQM/MIPS CQM reporting incentive'') in the CY 2022 PFS final rule (86 FR 65261 through 65262). In the CY 2023 PFS final rule, we extended the eCQMs/MIPS CQM reporting incentive through performance year 2024 to align with the timeline for sunsetting of the CMS Web Interface reporting option and to allow ACOs an additional year to gauge their performance on the eCQMs/MIPS CQMs before full reporting of the measures are required beginning in performance year 2025 (87 FR 69836 through 69838). We further extended the eCQM/MIPS CQM reporting incentive in the CY 2025 PFS final rule (89 FR 98124) to continue to support ACOs in the transition to eCQMs for digital quality measurement reporting. Meeting the criteria for the eCQM/MIPS CQM incentive allows an ACO to meet the quality performance standard and be eligible to receive maximum shared savings and avoid maximum shared losses (if applicable).

The extension of the eCQM/MIPS CQM reporting incentive ensures continued support for ACOs as they gain experience reporting all payer/all patient measures. Specifically, for performance year 2025 and subsequent performance years for ACOs reporting eCQMs, and performance years 2025 and 2026 for ACOs reporting MIPS CQMs, an ACO will meet the quality performance standard used to determine eligibility for maximum shared savings and to avoid maximum shared losses, if applicable:

- If the ACO reports all of the eCQMs/MIPS CQMs in the APP Plus quality measure set applicable for a performance year, meeting the MIPS

data completeness requirement for all eCQMs/MIPS CQMs;

- Achieves a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set; and
- Achieves a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining measures in the APP Plus quality measure set (89 FR 98122 through 98124).

We stated in the CY 2025 PFS final rule (89 FR 98123) that we believe the increased number of quality measures that will be phased into the APP Plus quality measure set over time will afford ACOs expanded opportunities to satisfy the eCQM/MIPS CQM reporting incentive criteria. For instance, the number of eCQMs/MIPS CQMs in the APP Plus quality measure set will increase from four in performance year 2025 to five in performance year 2026. Once MIPS CQMs are removed from the APP Plus quality measure set in performance year 2027, the number of eCQMs in the APP Plus quality measure set will increase from 5 to 6 in performance year 2027. With the proposed removal of Quality ID: 487 Screening for Social Drivers of Health from the APP Plus quality measure set as described in section III.F.6.d.(2) of this proposed rule, once all of the eCQMs are incorporated into the APP Plus quality measure set and if that proposal is finalized, there would be seven eCQMs. Out of these seven eCQMs, two of them (Quality ID: 001 Diabetes: Glycemic Status Assessment Greater Than 9% and Quality ID: 236 Controlling High Blood Pressure) are outcome measures and focus on the management of chronic conditions. There are also three eCQMs (Quality ID: 112 Breast Cancer Screening, Quality ID: 113 Colorectal Cancer Screening, and Quality ID: 493 Adult Immunization Status) that focus on wellness and prevention.

(2) Proposal To Remove the Health Equity Adjustment Applied to an ACO's Quality Score

After further consideration and experience implementing the eCQM/MIPS reporting incentive and the Complex Organization Adjustment, in conjunction with the previous policies we have finalized with respect to the health equity adjustment, we have concluded that the eCQM/MIPS CQM reporting incentive and the Complex Organization Adjustment provide duplicative incentives to the incentive provided by the health equity adjustment, for ACOs to meet the quality performance standard under the Shared Savings Program.

As described in section III.F.6.c.(1) of this proposed rule, an ACO that is eligible for the health equity adjustment may receive up to a maximum of 10 additional points that are added to its MIPS quality performance category score, and the sum of which then becomes the ACO's health equity adjusted quality performance score (87 FR 69831). The application of the health equity adjustment to an ACO's MIPS quality performance category score allows the ACO to achieve a higher quality score that would be used to determine whether the ACO meets the quality performance standard. For performance year 2024 and subsequent performance years, if the ACO's health equity adjusted quality performance score is equivalent to or higher than the 40th percentile across all MIPS quality performance category scores, excluding entities/providers eligible for facility-based scoring, then the ACO is determined to have met the quality performance standard under the Shared Savings Program and is eligible to receive maximum shared savings and avoid maximum shared losses (if applicable), at which point additional ACO quality performance points provide no further benefit.

Another pathway for an ACO to meet the quality performance standard is to meet the criteria for the eCQM/MIPS CQM reporting incentive as described in section III.F.6.c.(1) of this proposed rule. ACOs that meet the criteria for the eCQM/MIPS CQM reporting incentive would meet the quality performance standard regardless of what their MIPS quality performance category score is and be eligible to receive maximum shared savings and avoid maximum shared losses, if applicable.

Based on performance year 2023 ACO quality results, among 71 ACOs that qualified for the health equity adjustment in performance year 2023, 13 ACOs earned health equity adjustment bonus points with an average of 3.54 bonus points (out of 10) awarded. Since all 13 of the ACOs that received health equity adjustment bonus points also met the criteria for the eCQM/MIPS CQM reporting incentive, these ACOs would have met the quality performance standard to be eligible to receive maximum shared savings and avoid maximum shared losses (if applicable) even if the health equity adjustment bonus points were not applied. This demonstrates the duplicative nature of the health equity adjustment and the eCQM/MIPS CQM reporting incentive. Although limited data is currently available, we expect that this trend will continue and that ACOs that would have received health equity adjustment bonus points are likely to also meet the criteria for the eCQM/MIPS CQM reporting incentive and meet the quality performance standard in future performance years.

The Complex Organization Adjustment upwardly adjusts an ACO's MIPS quality performance category score when the ACO reports eCQMs. As described in section III.F.6.c.(1) of this proposed rule, an ACO will receive one measure achievement point for each submitted eCQM that meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340, and the Complex Organization Adjustment may be up to 10 percent of the total available measure achievement points in the quality performance category. Based on the quality measures finalized for the APP Plus quality measure set for the Shared Savings Program (89 FR 98128 through 98130), ACOs that report eCQMs will receive the Complex Organization Adjustment to their MIPS quality performance category score on up to four measures (that is, four points) in performance year 2025, 5 measures (that is, five points) in performance year 2026, and 6 measures (that is, six points) in performance year 2027, if each eCQM meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340. Should we finalize our proposal to remove Quality ID: 487 Screening for Social Drivers of Health from the APP Plus quality measure set as described in section III.F.6.d.(2) of this proposed rule, for performance year 2028 or the performance year that is one year after the eCQM specification becomes available for Quality ID: 493 Adult Immunization Status, whichever is later, ACOs that report eCQMs would receive the Complex Organization Adjustment on up to seven measures (that is, seven points) if each eCQM meets the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340. As the number of eCQMs that ACOs are required to report in the APP Plus quality set grows, the relative value of the Complex Organization Adjustment will increase. Both the health equity adjustment and the Complex Organization Adjustment serve to upwardly adjust an ACO's quality score in order to increase the ACO's ability to meet the quality performance standard by achieving a quality score that is

equivalent to or higher than the 40th percentile across all MIPS quality performance category scores, excluding entities/providers eligible for facility-based scoring. The health equity adjustment and Complex Organization Adjustment are duplicative because they serve a similar function. The Complex Organization Adjustment is accounted for in the calculation of the ACO's MIPS quality performance category score; whereas, the health equity adjustment bonus points are added to the ACO's MIPS quality performance category score. Both ultimately increase an ACO's MIPS quality performance category score and, therefore, improve the ACO's ability to meet the quality performance standard.

As discussed in the CY 2023 PFS final rule, we finalized the health equity adjustment to support ACOs that report all payer/all patient eCQMs/MIPS CQMs, perform high on quality, and serve a high proportion of underserved beneficiaries (87 FR 69838). We further stated that, because every year a greater proportion of ACOs are making the switch to eCQMs, instituting a health equity adjustment for those ACOs making the switch to eCQMs would allow us to study the impacts and make refinements during subsequent rulemaking (87 FR 69839). Moreover, in the CY 2023 PFS final rule, we expressed our concern that ACOs that serve a large portion of beneficiaries dually eligible for Medicare and Medicaid and the Medicare Part D LIS may receive lower quality scores during the switch to eCQMs without an adjustment and, in turn, be incentivized to avoid these populations, delay switching to eCQMs for as long as possible, or even cease participation in the Shared Savings Program altogether (87 FR 69839).

We believe that the eCQM/MIPS CQM reporting incentive and the Complex Organization Adjustment sufficiently support ACOs to address the unique challenges they face when reporting all payer/all patient measures and sufficiently support ACOs that serve large proportions of beneficiaries dually eligible for Medicare and Medicaid and the Medicare Part D LIS. Both the eCQM/MIPS reporting incentive and the Complex Organization Adjustment have broader applicability than the health equity adjustment. The eCQM/MIPS CQM reporting incentive is available to all ACOs that report eCQMs/MIPS CQMs and meet the criteria for the reporting incentive; whereas the Complex Organization Adjustment is available to all ACOs that report eCQMs and meet the case minimum requirement at § 414.1380(b)(1)(iii) and the data completeness requirement at § 414.1340 for each eCQM. Due to the criteria that need to be met for an ACO to be eligible to receive the health equity adjustment, it only applies to a select group of ACOs that serve large proportions of beneficiaries dually eligible for Medicare and Medicaid and the Medicare Part D LIS. Furthermore, unlike the eCQM/MIPS CQM reporting incentive, the health equity adjustment does not guarantee that ACOs will meet the quality performance standard.

We believe that the application of the Complex Organization Adjustment and the extension of the eCQM/MIPS CQM reporting incentive, as finalized in prior rules, have made it unnecessary to continue the policy of applying the health equity adjustment to an ACO's quality score. The Complex Organization Adjustment and the extension of the eCQM/MIPS CQM reporting incentive underscore our commitment to all payer/all patient quality measure reporting and are more broadly applicable than the health equity adjustment. Therefore, we propose to remove the health equity adjustment applied to an ACO's quality score beginning in performance year 2025. In alignment with the Administration's priority to streamline regulations,[324] our proposal to remove the health equity adjustment applied to an ACO's quality score beginning in performance year 2025 would de-duplicate scoring factors and simplify our quality scoring methodology, without reducing the support available under our policies for ACOs to meet the quality performance standard and be eligible to receive maximum shared savings and avoid maximum shared losses (if applicable).

Additionally, in the CY 2024 PFS final rule, we finalized that ACOs that report Medicare CQMs would be eligible to have the health equity adjustment added to their quality performance category score when calculating shared savings payments (88 FR 79110). In the CY 2025 PFS final rule, we finalized that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type would be scored using flat benchmarks for the measure's first two performance periods in MIPS (89 FR 98120 and 98121). In performance year 2025, all four Medicare CQMs that are in the APP Plus quality measure will be scored using a flat benchmark. We believe that the use of flat benchmarks in a measure's first two performance periods in MIPS may allow ACOs with high scores to earn maximum or near maximum measure achievement points while allowing for room for quality improvement and rewarding that improvement in subsequent years. Use of flat benchmarks in a measure's first two performance periods in MIPS also helps to ensure that ACOs with high quality performance on a measure are not penalized as low performers (89 FR 98105). There are scoring scenarios in which ACOs would earn higher measure achievement points under flat benchmarks than they would earn under performance period benchmarks, most notable being scenarios in which ACOs have a tight distribution of performance rates on a measure (89 FR 98119). We anticipate that flat benchmarks would provide benefits that are duplicative of the health equity adjustment for ACOs reporting Medicare CQMs for performance year 2025, where performance year 2025 is the measure's first or second performance period in MIPS using the Medicare CQM collection type.

Section 1871(e)(1)(A)(ii) of the Act prohibits the Secretary from retroactively applying a substantive change in Medicare regulations unless, as applicable here, the Secretary determines that failure to apply the change retroactively would be contrary to the public interest. We believe it would be contrary to the public interest to apply the proposed removal of the health equity adjustment applied to an ACO's quality score prospectively only. As such, we have proposed to apply the removal retroactively, beginning in performance year 2025. Performance year 2025 will be the first performance year when the Complex Organization Adjustment will apply to ACOs for reporting eCQMs. In performance year 2025, the eCQM/MIPS CQM reporting incentive will continue to be applicable to ACOs, and all Medicare CQMs in the APP Plus quality measure set will be scored using flat benchmarks.

As we discussed earlier in this section, the eCQM/MIPS CQM reporting incentive and the Complex Organization Adjustment provide duplicative incentives alongside the incentive provided by the health equity adjustment, for ACOs to meet the quality performance standard under the Shared Savings Program. Performance year 2023 ACO quality results demonstrate the duplicative nature of the health equity adjustment and the eCQM/MIPS CQM reporting incentive, where the ACOs that earned health equity adjustment bonus points also met

[324] Refer to Executive Order 14192 ''Unleashing Prosperity Through Deregulation'' *https://www.federalregister.gov/documents/2025/02/06/2025-02345/unleashing-prosperity-through-deregulation.*

the criteria for the eCQM/MIPS CQM reporting incentive. The health equity adjustment is added to an ACO's MIPS quality performance category score. ACOs that achieve the quality performance standard by meeting the eCQM/MIPS CQM reporting incentive are evaluated on their performance on measure-level quality performance scores, not the ACO's MIPS quality performance category score. As such, health equity adjustment bonus points are not used in the determination of the quality performance standard for ACOs that achieve the quality performance standard by meeting the eCQM/MIPS CQM reporting incentive. This dynamic further adds to the confusion and operational complexity of having multiple duplicative incentives for ACOs to meet the quality performance standard under the Shared Savings Program. Both the health equity adjustment and the Complex Organization Adjustment serve to upwardly adjust an ACO's quality score in order increase the ACO's ability to meet the quality performance standard. Furthermore, we noted earlier in this section that we anticipate that flat benchmarks would provide benefits that are duplicative of the health equity adjustment for ACOs reporting Medicare CQMs for performance year 2025, where performance year 2025 is the measure's first or second performance period in MIPS using the Medicare CQM collection type.

We also discussed that we believe that the eCQM/MIPS CQM reporting incentive and the Complex Organization Adjustment sufficiently support ACOs to address the unique challenges they face when reporting all payer/all patient measures and sufficiently support ACOs that serve large proportions of beneficiaries dually eligible for Medicare and Medicaid and the Medicare Part D LIS (these are the goals of the health equity adjustment) due to the broader applicability of both the eCQM/MIPS reporting incentive and the Complex Organization than the health equity adjustment.

We believe that it is in the public interest to remove the health equity adjustment applied to an ACO's quality score beginning in performance year 2025 to simplify our quality scoring methodology for ACOs, while maintaining sufficient support for ACOs to meet the quality performance standard through the application of the eCQM/MIPS CQM reporting incentive, the Complex Organization Adjustment, and use of flat benchmarks for Medicare CQMs. Our proposal would allow ACOs to focus on a simpler scoring methodology that includes more widely applicable incentives, determine how to improve the quality of care furnished to their beneficiaries, and operate with greater focus to improve care coordination activities, thus resulting in the improvement of their performance on quality measures and ability to serve their beneficiaries. Making this change retroactively would provide greater clarity for ACOs by establishing continuity in resource language between performance year 2025 and subsequent performance years, allowing ACOs to plan ahead and have additional time to update internal operations and more easily prepare for consistent quality performance standards.

Specifically, we propose to revise and republish paragraph (b) of § 425.512, to include the following proposed amendments:

- At § 425.512 removing paragraph (b)(3).
- At § 425.512 redesignating paragraphs (b)(4) and (b)(5) as paragraphs (b)(3) and (b)(4), respectively.
- Revising references to paragraphs (b)(4) and (b)(5) (which we propose to redesignate as paragraphs (b)(3) and (b)(4)), as follows:

++ At § 425.512 in paragraphs (b)(1) and (b)(2), removing the reference ''paragraph (b)(4)'' and adding in its place the reference ''paragraph (b)(3)''.

++ At § 425.512 in paragraph (b)(4)(iii) (which we propose to redesignate as paragraph (b)(3)(iii)), removing the reference ''paragraph (b)(4)(ii)'' and adding in its place the reference ''paragraph (b)(3)(ii)''.

++ At § 425.512 in paragraph (b)(4)(iv)(A)(*2*) (which we propose to redesignate as paragraph (b)(3)(iv)(A)(*2*)) introductory text, removing the reference ''paragraph (b)(4)(iv)(A)(*1*)(*ii*)'' and adding in its place the reference ''paragraph (b)(3)(iv)(A)(*1*)(*ii*)''.

++ At § 425.512 in paragraph (b)(4)(iv)(B) (which we propose to redesignate as paragraph (b)(3)(iv)(B)), removing the reference ''paragraph (b)(4)(iv)(A)'' and adding in its place the reference ''paragraph (b)(3)(iv)(A)''.

++ At § 425.512 in paragraph (b)(4)(v) (which we propose to redesignate as paragraph (b)(3)(v)), removing the references to ''paragraph (b)(4)(iv)(B)'', ''paragraph (b)(4)(iii)'', and ''paragraph (b)(4)(iv)'' and adding in their place the references to ''paragraph (b)(3)(iv)(B)'', ''paragraph (b)(3)(iii)'', and ''paragraph (b)(3)(iv)'', respectively.

- At § 425.512 in paragraph (b)(4)(iv)(A)(*2*)(*ii*) (which we propose to redesignate as paragraph (b)(3)(iv)(A)(*2*)(*ii*)), removing the phrase ''For performance year 2024 and subsequent performance years'' and adding in its place the phrase ''For performance year 2024''.
- At § 425.512 in paragraph (b)(5) (which we propose to redesignate as paragraph (b)(4)), revising the introductory text and paragraph references to read as follows: ''Use of ACO's quality score. The ACO's quality score, determined in accordance with paragraphs (b)(1) through (3) of this section, is used as follows:''.

(3) Proposal To Revise the Terminology in the Shared Savings Program Regulations Used To Describe the Health Equity Adjustment and Other Related Terms

To accurately reflect the data used to calculate the health equity adjustment in performance years 2023 and 2024, we propose to revise the terminology used to describe this adjustment and other related terms in the Shared Savings Program regulations. Previously, the term health equity was used in a broad way that could lead to confusion regarding whether or not impermissible features, such as race and ethnicity, were included in Shared Savings Program policies (which they are not). No changes in the methodology currently used to calculate the health equity adjustment bonus points or the health equity adjusted quality performance score are being proposed for performance years 2023 and 2024.

In revising the terminology used to describe the health equity adjustment, we found that our use of the terms ''quality score'' and ''quality performance score'' could lead to confusion. As such, we also propose to revise the terms ''quality score'' and ''quality performance score'' at § 425.512. We propose to apply the term ''quality score'' consistently throughout § 425.512 to mean an ACO-level quality score and also apply the term ''quality performance score'' to consistently mean a measure-level score.

Additionally, we propose to update the cross-references in §§ 425.605 and 425.610 to reference the entirety of § 425.512. With respect to § 425.512(b), we note that the amendments are specified in revised and republished paragraph (b). Specifically, we propose the following conforming revisions to terminology used in the Shared Savings Program at §§ 425.512, 425.605, and 425.610:

- At § 425.512 in paragraphs (a)(3)(i), (b)(5)(iv) (which, as discussed later in this section, we propose to redesignate as paragraph (b)(4)(iv)), (c)(2)(i), (c)(2)(ii), and (c)(3)(i) removing the phrase ''quality performance score'' and adding in its place the phrase ''quality score''.

• At § 425.512 in paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(1), (a)(5)(i)(B)(1), (a)(5)(i)(C)(1), (a)(7), (b)(1), (b)(2), (c)(3)(ii), (c)(3)(iii), and (c)(3)(iv) removing the phrase ''health equity adjusted quality performance score'' and adding in its place the phrase ''quality score''.

• At § 425.512 in paragraph (b) subject heading revising to read as follows: ''Calculation of an adjustment to an ACO's quality score for performance years 2023 and 2024''.

• At § 425.512 in paragraphs (b)(1) and (b)(2), removing the phrase ''health equity adjustment bonus points'' and adding in its place the phrase ''population and income adjustment bonus points''.

• At § 425.512 in paragraph (b)(4) (which we propose to redesignate as paragraph (b)(3)), revising the introductory text to read as follows: ''Calculation of ACO's population and income adjustment bonus points. CMS calculates the ACO's bonus points as follows:''.

• At § 425.512 in paragraph (b)(4)(iv) (which we propose to redesignate as paragraph (b)(3)(iv)), removing the phrase ''an underserved multiplier'' and adding in its place the phrase ''a multiplier''.

• At § 425.512 in paragraph (b)(4)(iv)(A)(*1*) (which we propose to redesignate as paragraph (b)(3)(iv)(A)(*1*)), removing the phrase ''that is considered underserved''.

• At § 425.512 in paragraph (b)(4)(iv)(B) (which we propose to redesignate as paragraph (b)(3)(iv)(B)), removing the phrase ''health equity adjustment bonus points'' and adding in its place the phrase ''bonus points''.

• At § 425.512 in paragraph (b)(4)(v) (which we propose to redesignate as paragraph (b)(3)(v)): removing the phrase ''underserved multiplier'' and adding in its place the phrase ''multiplier''; and removing the phrase ''health equity adjustment bonus points'' and adding in its place the phrase ''bonus points''.

• At § 425.605 in paragraphs (d)(1)(i)(A)(*3*)(*ii*), (d)(1)(i)(A)(*4*)(*ii*), (d)(1)(ii)(A)(*3*)(*ii*), (d)(1)(ii)(A)(*4*)(*ii*), (d)(1)(iii)(A)(*3*)(*ii*), (d)(1)(iii)(A)(*4*)(*ii*), (d)(1)(iv)(A)(*3*)(*ii*), (d)(1)(iv)(A)(*4*)(*ii*), (d)(1)(v)(A)(*3*)(*ii*), and (d)(1)(v)(A)(*4*)(*ii*) removing the phrase ''health equity adjusted quality performance score calculated according to § 425.512(b)'' and adding in its place ''quality score calculated according to § 425.512''.

• At § 425.610 in paragraphs (d)(3)(ii), (d)(4)(ii), (f)(3)(i)(A) and (f)(4)(i)(A) removing the phrase ''health equity adjusted quality performance score calculated according to § 425.512(b)'' and adding in its place the phrase ''quality score calculated according to § 425.512''.

We seek public comments on these proposed changes. These proposed changes are reflected in Tables 52 and 53 in section III.F.6.f. of this proposed rule.

d. Proposal To Update the APP Plus Quality Measure Set

(1) Background

In the CY 2025 PFS final rule, we created the APP Plus quality measure set to align with the Adult Universal Foundation measures (89 FR 98356) and finalized a phase-in schedule for incorporating measures into the APP Plus quality measure set.

We finalized in the CY 2025 PFS final rule (89 FR 98105) that, for performance year 2025 and subsequent performance years, Shared Savings Program ACOs will be required to report the APP Plus quality measure set. We also finalized that Shared Savings Program ACOs will be required to report on and will be scored on all applicable quality measures in the APP Plus quality measure set according to the phase-in schedule for incorporating measures into the APP Plus quality measure set. We also stated in the CY 2025 PFS final rule (89 FR 98116 through 98117) that the APP Plus quality measure set for Shared Savings Program ACOs will include 11 measures (eight eCQMs/Medicare CQMs, two administrative claims-based measures, and the CAHPS for MIPS Survey measure) beginning with performance year 2028 or the performance year that is one year after the eCQM specifications become available for Quality ID: 487 Screening for the Social Drivers of Health and Quality ID: 493 Adult Immunization Status, whichever is later, and ACOs will be scored on the required 11 measures.

The final APP Plus quality measure set for Shared Savings Program ACOs, for performance year 2025 and subsequent performance years, was specified in Tables 39 through 42 of the CY 2025 PFS final rule (89 FR 98128 through 98132).

(2) Proposed Revisions

Proposed changes to the following measures that are included in the APP Plus quality measure set are discussed in section IV.A.4.b.(2) of this proposed rule:

- Breast Cancer Screening (Quality ID: 112)
- Colorectal Cancer Screening (Quality ID: 113)
- Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality ID: 134) (eCQM collection type only)
- Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID: 484)
- Screening for Social Drivers of Health (Quality ID: 487)

Further discussion and our rationale for the proposed modification or removal of these measures is provided in Table Groups D and DD, and C, respectively, in Appendix 1 of this proposed rule.

With the proposed removal of Quality ID: 487 Screening for Social Drivers of Health from the APP Plus quality measure set as described in section IV.A.4.b.(2) and Table Group C in Appendix 1 of this proposed rule, we propose that the APP Plus quality measure set for Shared Savings Program ACOs would include ten measures (seven eCQMs/Medicare CQMs, two administrative claims-based measures, and the CAHPS for MIPS Survey measure) beginning with performance year 2028 or the performance year that is 1 year after the eCQM specification becomes available for Quality ID: 493 Adult Immunization Status, whichever is later. ACOs would be scored on the required ten measures. The proposed APP Plus quality measure set for Shared Savings Program ACOs, for performance year 2028 or the performance year that is 1 year after the eCQM specification becomes available for Quality ID: 493, whichever is later, is specified in Table 51 of this proposed rule.

BILLING CODE 4120–01–P

TABLE 51: MEASURES INCLUDED IN THE APP PLUS QUALITY MEASURE SET FOR SHARED SAVINGS PROGRAM ACOs BEGINNING WITH PERFORMANCE YEAR 2028 OR THE PERFORMANCE YEAR THAT IS ONE YEAR AFTER THE ECQM SPECIFICATION BECOMES AVAILABLE FOR QUALITY ID: 493, WHICHEVER IS LATER

Quality #	Measure Title	Collection Type	Submitter Type	Meaningful Measures 2.0 Area	Measure Type
321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Person-Centered Care	Patient Engagement/Experience
479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
484	Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
001	Diabetes: Glycemic Status Assessment Greater Than 9%	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Behavioral Health	Process
236	Controlling High Blood Pressure	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
112	Breast Cancer Screening	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Wellness and Prevention	Process
113	Colorectal Cancer Screening	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Wellness and Prevention	Process
305	Initiation and Engagement of Substance Use Disorder Treatment	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Behavioral Health	Process
493	Adult Immunization Status	eCQM/Medicare CQM	APM Entity/Third Party Intermediary	Wellness and Prevention	Process

^ Indicates this is an outcome measure for purposes of qualifying for the eCQM reporting incentive and the alternative quality performance standard.

BILLING CODE 4120–01–C

e. Proposal To Add a Web-Based Survey Mode to the CAHPS for MIPS Survey

(1) Background

The CAHPS for MIPS Survey is an annual survey available to MIPS groups in Traditional MIPS and MIPS Value Pathways (MVPs), and APM Entities. As required at § 425.510(b)(2), for performance years beginning on or after January 1, 2025, ACOs must report quality data on the APP Plus quality measure set established under § 414.1367 according to the method of submission established by CMS. The CAHPS for MIPS Survey is a quality measure in the APP Plus quality measure set (89 FR 98367 through 98371). Therefore, Shared Savings Program ACOs are required to administer the CAHPS for MIPS Survey (except if an ACO does not meet the required sample size specified at § 414.1380(b)(1)(vii)(B)) in order to meet the quality reporting requirement under the Shared Savings Program. Currently, data is collected using a mail-phone survey administration protocol administered in English and Spanish, with additional translations available. The CAHPS for MIPS Survey may only be administered by CMS-approved survey vendors.

In the CY 2025 PFS proposed rule (89 FR 61869, 62042, and 62043), we included a request for information (RFI) on the potential expansion of the survey modes of the CAHPS for MIPS Survey from a mail-phone protocol to a web-mail-phone protocol. We solicited public comment on this new protocol given the positive results found from our 2023 CAHPS for MIPS Web Mode Field Test. The field test added the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS Survey administration, and we found that the addition resulted in an increased response rate (89 FR 62043). Commenters widely supported an expansion of CAHPS for MIPS Survey modes to include a web-based survey protocol, emphasizing that this could help increase response rates.

(2) Proposed Revisions

Based on the results of the field test, and informed by the responses from commenters in response to our RFI, we propose to require that beginning with 2027, CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. Additionally, under this proposal and pursuant to the policy we finalized in the CY 2025 PFS final rule to require, beginning with the 2026 performance period/2028 MIPS payment year, CMS-approved survey vendors to submit the range of costs of their services (89 FR 98459 through 98460), the cost of adding the web survey mode would be included as part of the overall costs of CAHPS for MIPS Survey administration publicly reported by vendors. We refer readers to section IV.B.4.a.(5). of this proposed rule for additional information on this proposal.

f. Summary of Proposals

In Tables 52 and 53 of this proposed rule, we summarize the quality reporting requirements and quality performance standard policies for performance year 2025 and subsequent performance years, including our proposals in this proposed rule. These tables reflect our proposal to remove the health equity adjustment applied to an ACO's quality score and use of the term ''quality score'' beginning in performance year 2025, as discussed in section III.F.6.c. of this proposed rule. Table 52 also reflects the proposed removal of Quality ID: 487 Social Drivers of Health from the APP Plus quality measure set for Shared Savings Program ACOs, as discussed in section III.F.6.d. of this proposed rule, for performance year 2028 or the performance year that is 1 year after the eCQM specification becomes available for Quality ID: 493, whichever is later.

BILLING CODE 4120–01–P

TABLE 52: PROPOSED APP PLUS QUALITY MEASURE SET REPORTING REQUIREMENTS AND QUALITY PERFORMANCE STANDARD POLICIES FOR SHARED SAVINGS PROGRAM ACOS FOR PERFORMANCE YEARS 2025 AND 2026

	Performance Year 2025	Performance Year 2026

BILLING CODE 4120–01–C

g. Toward Digital Quality Measurement in CMS Quality Programs Including for the Medicare Shared Savings Program—Request for Information

As stated in the CY 2025 PFS final rule (89 FR 98106), CMS aims to fully transition to digital quality measurement (dQM) in CMS quality reporting and value-based purchasing programs. Including eCQMs as a collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set aligns with our goal to transition to digital quality measurement, including the alignment and development of Fast Healthcare Interoperability Resources (FHIR) standards and tools for eCQM reporting.

In support of these goals, we direct interested parties to section IV.A.4.c.of this proposed rule, which contains a Request for Information (RFI) to gather public input on the transition to dQM for CMS programs and on our anticipated approach on the use of FHIR standards in eCQM reporting. In that section, we describe the current state and request input on key components of the ongoing dQM transition related to FHIR-based eCQMs for the Shared Savings Program and the MIPS quality performance category. These components include: (1) FHIR-based eCQM conversion progress; (2) Data standardization for quality measurement and reporting; (3) The timeline under consideration for FHIR-based eCQM reporting; (4) Measure development and reporting tools; and (5) FHIR Reporting and Data Aggregation for ACOs.

7. Proposal To Revise the Extreme and Uncontrollable Circumstances Policies To Determine Quality and Financial Performance

a. Overview

In the interim final rule with comment period (IFC) entitled ''Medicare Program; Medicare Shared Savings Program: Extreme and Uncontrollable Circumstances Policies for Performance Year 2017'', which appeared in the December 26, 2017 **Federal Register** (82 FR 60912 through 60919) (herein referred to as the ''December 2017 IFC''), we established automatic extreme and uncontrollable circumstances (EUC) policies under the Shared Savings Program for performance year 2017 due to the urgency of providing relief to ACOs impacted by natural disasters (Hurricanes Harvey, Irma, and Maria, and California wildfires). We agreed with interested parties that the financial and quality performance of ACOs located in areas subject to EUCs could be significantly and adversely affected. For example, natural disasters may affect the infrastructure of ACO participants, ACO providers/suppliers, and potentially the ACO legal entity itself, thereby disrupting routine operations related to their participation in the Shared Savings Program and achievement of program goals (82 FR 60913). We stated that these disruptions could hinder quality performance in ACOs and thus could result in shared losses for which the ACO might be held responsible (82 FR 60914).

Since their establishment, we have revised our EUC policies and expanded them in response to PHEs, to determine the duration of the PHE and the percentage of ACOs' performance year assigned beneficiary populations that were EUC-affected (83 FR 68037), and to specify policies for addressing the effect of EUCs on ACOs' quality performance (85 FR 27576 and 27577; 85 FR 84746).

The current Shared Savings Program quality and finance EUC policies at §§ 425.512(c), 425.605(f), and 425.610(i) have been for ACOs affected by natural disasters or PHEs as determined by the Quality Payment Program; however, current policies do not unambiguously address ACOs affected by an EUC due

to a cyberattack, including ransomware/malware.

Cyberattacks, including ransomware/malware, can be circumstances that are outside of the ACO's control and may have several possible effects on our ability to accurately and effectively measure ACOs' quality performance. For instance, a breach of confidential medical records of beneficiaries may make it difficult for ACOs to access medical record data required for quality reporting. Cyberattacks could inhibit the operation of EHR systems and thus render data submitted by ACOs inaccurate and unusable; failure to report quality data that comes from EHR systems could cause ACOs to fail the Shared Savings Program's quality reporting requirements and, therefore, fail to meet the quality performance standard. Further, for ACOs impacted by ransomware/malware, the medical records needed for quality reporting may be inaccessible. Effects due to cyberattacks, including ransomware/malware, on ACO participants and their beneficiary populations could impact the ACO's ability to successfully meet the Shared Savings Program quality performance standard.

Currently the Shared Savings Program's EUC policies regarding calculation of the ACO's quality performance score and mitigating shared losses for ACOs participating under a two-sided model are aligned with the Quality Payment Program's automatic EUC policy, to account for natural disasters and other extreme and uncontrollable circumstances that impact an entire region or locale. We believe that there is a need to revise the quality and finance EUC policies to plainly account for an ACO affected at the legal entity level by an EUC due to a cyberattack, including ransomware/malware, where such a determination is made by the Quality Payment Program through the MIPS EUC Exception application process.

b. Proposal To Revise the EUC Policy To Determine Quality Performance

(1) Background

The current Shared Savings Program quality EUC policies are codified in the regulation at § 425.512(c). These policies were described in the December 2017 IFC (82 FR 60912 through 60919), March 31, 2020 COVID–19 IFC (85 FR 19267 through 19268), CY 2021 PFS final rule (85 FR 84744 through 84747), and CY 2023 PFS final rule (87 FR 69857 through 69858). In the CY 2021 PFS final rule (85 FR 84744 through 84747),we established at § 425.512(c) that, for performance year 2021 and subsequent performance years, including the applicable quality data reporting period for the performance year, we use an alternative approach to calculating the quality score, as described at § 425.512(c), for ACOs affected by EUCs, instead of using the approach as described at § 425.512(a). We determine the ACO was affected by an EUC based on either of the following:

- Twenty percent or more of the ACO's assigned beneficiaries reside in an area identified under the Quality Payment Program as being affected by an EUC.
- The ACO's legal entity is located in an area identified under the Quality Payment Program as being affected by an EUC.

As we established in the CY 2022 PFS final rule (86 FR 65271 and 65272), if CMS determines the ACO meets these requirements, then CMS calculates the ACO's quality score based on the following: For performance year 2024 and subsequent performance years, the ACO's minimum quality performance score is set to the equivalent of the 40th percentile MIPS quality performance category score across all MIPS quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year (§ 425.512(c)(2)(ii)).

Further, as stated in § 425.512(c)(3)(iv), if the ACO reports quality data on the APP Plus quality measure set, then CMS calculates the ACO's quality score based on the following: For performance year 2025 and subsequent performance years, if the ACO reports the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 and receives a MIPS quality performance category score, then CMS will use the higher of the ACO's quality performance score or the equivalent of the 40th percentile MIPS quality performance category score across all MIPS quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

At § 425.512(c)(4), CMS applies determinations made under the Quality Payment Program with respect to—

- Whether an EUC has occurred; and
- The affected areas.

At § 425.512(c)(5), CMS has sole discretion to determine the time period during which an EUC occurred, the percentage of the ACO's assigned beneficiaries residing in the affected areas, and the location of the ACO legal entity.

(2) Proposed Revisions

We are proposing that, for performance year 2025 and subsequent performance years, we would expand the application of the quality and finance EUC policies to an ACO, as defined at § 425.20, and as an APM Entity as defined at § 414.1305, that is affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program. Specifically, we are proposing to add § 425.512(c)(1)(iii) to state: For performance year 2025 and subsequent performance years, the ACO, as defined at § 425.20, is affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program.

If an ACO is affected at the legal entity level (as the term is commonly used throughout 42 CFR part 425) by an EUC due to a cyberattack, including ransomware/malware, and wants relief from Shared Savings Program quality reporting requirements, then the ACO must submit a MIPS EUC Exception application to the Quality Payment Program as an APM Entity for the affected performance year. If the Quality Payment Program approves an ACO's MIPS EUC Exception application, as an APM Entity, for a cyberattack, including ransomware/malware, for the affected performance year, then we would apply the Shared Savings Program quality and finance EUC policies at §§ 425.512(c), 425.605(f), and 425.610(i) to provide relief to the ACO from the Shared Savings Program quality reporting requirements and mitigate shared losses for the affected performance year. Under our proposal, the Shared Savings Program would not apply the quality and finance EUC policies to an ACO that submits a MIPS EUC Exception application as an individual, group, or virtual group.

For information on how to submit a MIPS EUC Exception application for performance year 2025, ACOs can refer to the Quality Payment Program Exception Application website (https://qpp.cms.gov/mips/exception-applications?py=2025) and 2025 MIPS EUC Exception Guide (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3239/2025-MIPS-Extreme-and-Uncontrollable-Circumstances-Exception-Application-Guide.pdf*).

Under our proposal, in alignment with § 425.512(c)(3)(iv), beginning in performance year 2025, if an ACO with an approved MIPS EUC Exception application for a cyberattack, including ransomware/malware, reports the APP Plus quality measure set, meets the data

completeness requirement at § 414.1340, and receives a MIPS quality performance category score, then we would use the higher of the ACO's quality score or the equivalent of the 40th percentile MIPS quality performance category score across all MIPS quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year. Under our proposal, in alignment with § 425.512(c)(2)(ii), if CMS determines the ACO meets the requirements of § 425.512(c)(1), then the ACO's minimum quality performance score would be set to the equivalent of the 40th percentile MIPS quality performance category score, excluding entities/providers eligible for facility-based scoring, for the relevant performance year. This proposal would allow an ACO affected by a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, to meet the Shared Savings Program quality performance standard for sharing in savings at the maximum rate under its track and to have any shared losses pro-rated based on the length of the cyberattack, including ransomware/malware, as described in section III.F.7.c.(2) of this proposed rule.

Section 1871(e)(1)(A)(ii) of the Act prohibits the Secretary from applying substantive changes in regulations retroactively before the effective date of the change except where the Secretary determines, as relevant here, that failure to apply the change retroactively would be contrary to the public interest. We are aware that cyberattacks, including ransomware/malware, have increased in recent years. It is in the public interest to revise the Shared Savings Program quality and finance EUC policies (the latter of which we discuss in section III.F.7.c. of this proposed rule) to expand the application of these policies to an ACO at the legal entity level that is affected by an EUC due to a cyberattack, including ransomware/malware, beginning in performance year 2025. Because ACOs rely heavily on digital infrastructure and third-party vendors, they are increasingly vulnerable to ransomware, data breaches, and system outages. Cyberattacks, including ransomware/malware, can severely disrupt care coordination, compromise patient data, and disrupt the patient care environment. These disruptions can delay necessary treatments or procedures and reduce the quality of care provided to beneficiaries. We have heard from ACOs that have experienced cyberattacks about the adverse impact on clinical processes. For example, we have heard from ACOs that as a result of a cyberattack, impacted systems were unavailable and manual processes were implemented, including moving to paper records for certain clinical processes in order to continue to provide patient care. For these reasons, we understand that cyberattacks can disrupt the patient care environment, and we want ACOs to be able to continue to prioritize patient care during and in the aftermath of a cyberattack. As such, we believe that it is in the public interest to provide relief from the Shared Savings Program quality reporting requirements and by mitigating shared losses to any ACO that has an approved MIPS EUC Exception application due to cyberattack during performance year 2025 so that those ACOs can prioritize patient care during and in the aftermath of a cyberattack.

A cyberattack could interfere with the operation of electronic health record systems, affect the integrity of the data used to meet quality reporting requirements, and as a result render ACOs unable to report data that is true, accurate, and complete. Failure to meet the quality performance standard could result in an ACO owing maximum shared losses through no fault of the ACO. If the result of a cyberattack is that an ACO cannot satisfactorily meet the quality performance standard, then the ACO may not receive funds they could otherwise use to reinvest into the ACO and continue to improve the quality of care provided. Therefore, should any ACOs experience a cyberattack during 2025, we do not believe it is in the best interest of an ACO's patient population to disadvantage an ACO from earning shared savings (or for an ACO to incur shared losses) as a result of a disruption caused by a cyberattack.

Additionally, a cyberattack could contribute to unpredictable changes to utilization and spending that may have an impact on expenditures for the applicable performance year beyond the ACO's control. The impact of cyberattacks on physician practices were underscored in a 2024 survey conducted by the American Medical Association, with 90% of respondents at the time of the survey noting that they continued to lose revenue from unpaid claims, 63% noted that they were losing revenue due to the inability to charge patient co-pays or remaining obligations, and 91% had to commit additional staff time and resources to complete revenue cycle tasks.[325] Additionally, 42% of respondents were unable to purchase supplies, 29% of respondents were reliant upon private bank loans to fund their practice operations, 42% of respondents noted patients were unable to access coverage and cost information, and 25% shared that patients at the time of the survey continued to face difficulties getting their prescriptions filled.[326] These examples illustrate how a cyberattack could impact clinical processes that could contribute to unpredictable utilization and spending. This unpredictable utilization could further skew the results of the data used for quality reporting and assessing whether ACOs met the quality performance standard. Coupled with the previously mentioned impact to data integrity due to the possible need to use paper records to collect and submit quality data, cyberattacks could cause ACOs to submit quality data that is not a true, accurate, and complete reflection of their quality performance.

If cyberattacks occur during performance year 2025 and subsequent performance years, we do not wish to hold ACOs who are experiencing extreme and uncontrollable circumstances accountable to a quality performance standard that could be based on inaccurate assessment of their beneficiaries' utilization of care and to apply the Shared Savings Program finance EUC policies §§ 425.605(f), and 425.610(i) to 100 percent of the ACO's assigned beneficiaries when an ACO has a MIPS EUC Exception application for a cyberattack, including ransomware/malware. Thus, we believe it is in the public interest to grant ACOs who have an approved MIPS EUC application relief from the Shared Savings Program quality performance standard so that the standard is accurately assessed and ACOs are not held accountable to an inaccurate assessment of the quality of care they provide based on potentially skewed health care utilization as the result of a cyberattack and to provide relief to the ACO by mitigating shared losses for the affected performance year. Our proposal would grant relief to ACOs that submit a MIPS EUC Exception application to the Quality Payment Program for a cyberattack, including ransomware/malware, and for which the Quality Payment Program approves the ACO's MIPS EUC Exception application.

We propose the following revisions to the Shared Savings Program regulation at § 425.512(b):

[325] American Medical Association (2024). *Change Healthcare cyberattack impact: Key takeaways from informal AMA follow-up survey,* available at https://www.ama-assn.org/system/files/change-healthcare-follow-up-survey-results.pdf.

[326] Ibid.

• We are revising paragraph (b)(5)(iv) (which we propose to redesignate as paragraph (b)(4)(iv)), to remove the reference to ''paragraphs (c)(3)(ii) through (c)(3)(iv)'' and add in its place reference to ''paragraphs (c)(3)(ii) and (c)(3)(iii)'' consistent with our proposal to limit the applicability of § 425.512(b) to performance years 2023 and 2024, as discussed in section III.F.6.c.(2) of this proposed rule.

We propose the following revisions to the Shared Savings Program quality EUC regulation at § 425.512(c):

• We are revising paragraph (c)(1) to read as follows, ''CMS determines the ACO was affected by an extreme and uncontrollable circumstance based on any of the following:''

• We are adding a new paragraph (iii) to (c)(1) to establish that for performance year 2025 and subsequent performance years, the ACO, as defined at § 425.20, is affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program.

We seek public comments on the proposed changes to the quality EUC policy. We also seek comment on whether there are other scenarios we should consider recognizing under the Shared Savings Program quality and finance EUC policies, while safeguarding against overly broad EUC policies that would allow ACOs to circumvent quality reporting requirements or avoid shared losses.

c. Proposal To Revise the EUC Policy To Determine Financial Performance

(1) Background

As discussed in section III.F.7.a. of this proposed rule, the December 2017 IFC established policies for assessing the financial and quality performance of Shared Savings Program ACOs that were affected by EUCs during performance year 2017. These policies, and their subsequent revisions, are equally applicable for the finance EUC policies.

We further refined the finance EUC policies in the May 8, 2020 COVID–19 IFC (85 FR 27550), where we clarified the applicability of the program's EUC policy to mitigate shared losses for the period of the PHE for COVID–19 starting in January 2020. We explained that catastrophic events outside an ACO's control could increase the difficulty of coordinating care for patient populations and, due to the unpredictability of changes in utilization and cost of services furnished to beneficiaries, may have a significant impact on expenditures for the applicable performance year (85 FR 27577). These factors could jeopardize the ACO's ability to succeed in the Shared Savings Program, and ACOs, especially those in performance-based risk tracks, may reconsider whether they are able to continue their participation in the program (85 FR 27577).

Under our current policies at §§ 425.605(f)(2) and 425.610(i)(2), ACOs (as defined at § 425.20) that CMS determines to have been affected by an EUC will have their shared losses (if applicable) reduced by an amount that is proportional to the percentage of the year (determined by total months) affected by the EUC(s) and the percentage of the ACO's performance year-assigned beneficiaries residing in EUC-affected areas.

At §§ 425.605(f)(3) and 425.610(i)(3), we apply determinations made by the Quality Payment Program with respect to the following:

• Whether an extreme uncontrollable circumstance has occurred; and
• The affected areas

At §§ 425.605(f)(4) and 425.610(i)(4), CMS has sole discretion to determine the time period during which an EUC occurred and the percentage of the ACO's assigned beneficiaries residing in the affected areas.

(2) Proposed Revisions

If the Quality Payment Program approves an ACO's MIPS EUC Exception application, as an APM Entity, for a cyberattack, including ransomware/malware, for the affected performance year, we propose to apply the Shared Savings Program finance EUC policies at §§ 425.605(f) and 425.610(i) to provide relief to the ACO by mitigating shared losses for the affected performance year.

As discussed in section III.F.7.c.(1) of this proposed rule, currently ACOs that we determine to have been affected by an EUC will have their shared losses (if applicable) reduced by an amount that is proportional to the percentage of the year (determined by total months) affected by the EUC(s) and the percentage of the ACO's performance year-assigned beneficiaries residing in EUC-affected areas. Unlike the determination of an EUC for a natural disaster or PHE that distinguishes the geographic locations impacted by the EUC, the MIPS EUC Exception application captures the APM Entity's (such as an ACO's) request for the EUC but does not differentiate geographic area(s) impacted by the EUC. Therefore, we would be unable to determine the percentage of the ACO's performance year-assigned beneficiaries residing in an EUC-affected area based on the ACO's submission of an EUC application to the Quality Payment Program in the case of a cyberattack, including ransomware/malware. So, we are proposing to apply the Shared Savings Program finance EUC policies §§ 425.605(f), and 425.610(i) to 100 percent of the ACO's assigned beneficiaries when an ACO has a MIPS EUC Exception application for a cyberattack, including ransomware/malware, approved by the Quality Payment Program for the affected performance year.

The MIPS EUC Exception application contains fields that allow an ACO to enter both a start date and an end date for the EUC. The application allows an ACO to provide either a start date and an end date or a start date only (if the EUC still persists at the time the application is submitted to CMS). We propose that if an ACO provides a start date and an end date for the EUC in its application to the Quality Payment Program, then we would use those dates to determine the duration of the EUC. The start date must be provided in the application. The end date may also be provided in the application but is not required. An ACO may subsequently update the end date by contacting the Quality Payment Program Service Center.

We further propose that, if an ACO does not provide an end date in the ACO's MIPS EUC Exception application or by contacting the Quality Payment Program Service Center to provide an end date prior to the end of the application submission period, then we would apply a 90-day default duration for purposes of mitigating shared losses. This 90-day default duration is consistent with the timeframe used for determining a PHE declaration by the Secretary (the declaration lasts for the duration of the emergency or 90 days but may be extended by the Secretary).[327]

If the ACO's MIPS EUC Exception application has a start date that occurs less than 90 days before the end of the performance year, and the ACO's MIPS EUC Exception application does not include an end date for the EUC and the ACO does not provide an end date to CMS in the form and manner CMS specifies, then we propose that December 31 of the performance year would be the end date for which the ACO was impacted by the EUC, since that is when both the MIPS EUC Exception and the performance year

[327] See *Administration for Strategic Preparedness & Response* website, *Declarations of a Public Health Emergency* webpage, at *https://aspr.hhs.gov/legal/PHE/pages/default.aspx* (describing duration of a public health emergency, among other information).

used to calculate shared savings and shared losses end.

If an ACO is affected by an EUC that persists from one performance year to a subsequent performance year, then the ACO would be required to submit a MIPS EUC Exception application for each affected performance year.

Moreover, as we discussed in the December 2017 IFC (82 FR 60916 through 60917), to exercise our authority under section 1899(i)(3) of the Act to use other payment models, we must demonstrate that the payment model—(1) ''. . . does not result in spending more for such ACO for such beneficiaries than would otherwise be expended . . . if the model were not implemented. . . .'' and (2) ''will improve the quality and efficiency of items and services furnished under'' Medicare. As described in section III.F.7.b.(2) for this proposed rule, we assessed the impacts of our proposal for mitigating shared losses for ACOs affected by extreme and uncontrollable circumstances due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program. We considered the following: the impact of the potential loss of participation in the program by ACOs affected by a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, should we not implement the policy described in this section of this proposed rule, and the anticipated minimal impact of adjusting losses for ACOs affected by a cyberattack, including ransomware/malware, as determined by the Quality Payment Program. On the basis of this assessment, we believe incorporating this extreme and uncontrollable circumstances policy into the payment methodologies would meet the requirements of section 1899(i) of the Act by not increasing expenditures above the costs that would be incurred under the statutory payment methodology under section 1899(d) of the Act and by encouraging affected ACOs to remain in the program, which we believe will increase the quality and efficiency of the items and services furnished to the beneficiaries they serve. For these reasons, we conclude that our proposal is permissible under our authority as described in section 1899(i)(3) of the Act.

Therefore, we propose the following revisions to the Shared Savings Program finance EUC regulations at §§ 425.605 and 425.610:

- At § 425.605, we are adding paragraph (f)(2)(ii) to read as follows, ''For performance year 2025 and subsequent performance years, for an ACO as defined at § 425.20 that is determined to be affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, for any month of the performance year that is affected, CMS considers 100 percent of the ACO's assigned beneficiaries to reside in an affected area.''
- At § 425.605, we are revising paragraph (f)(3) to read as follows, ''CMS applies determinations made under the Quality Payment Program with respect to all of the following (as applicable):''
- At § 425.605, we are removing the punctuation ''; and'' at the end of paragraph (f)(3)(i) and adding in its place a period.
- At § 425.605, we are adding a new paragraph (f)(3)(iii) to indicate the following: ''The time period during which the ACO was affected by a cyberattack, including ransomware/malware.''
- At § 425.605, we are redesignating the paragraph (f)(4) as paragraph (f)(5).
- At § 425.605, we are adding a new paragraph (f)(4) to indicate the following: ''CMS will determine the time period during which an ACO is affected by a cyberattack, including ransomware/malware, as follows:

++ At § 425.605 paragraph (f)(4)(i), CMS will use the start and end date indicated on an ACO's application to the Quality Payment Program for an extreme and uncontrollable circumstance exception due to a cyberattack, including ransomware/malware, or the start date indicated on the application and an end date subsequently provided by the ACO in the form and manner as specified by CMS.

++ At § 425.605 paragraph (f)(4)(ii), except as specified in paragraph (f)(4)(iii), if no end date is indicated on the ACO's application or otherwise provided to us in a form and manner specified by us, described in paragraph (f)(4)(i), we will apply a 90-day duration for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

++ At § 425.605 paragraph (f)(4)(iii), if the start date indicated on the ACO's application described in paragraph (f)(4)(i), is less than 90 days before the end of the performance year and no end date is indicated on the ACO's application or otherwise provided to CMS in the form and manner specified by CMS, described in paragraph (f)(4)(i) of this section, we will apply an end date of December 31st of the performance year for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.''

- At § 425.610, we are adding paragraph (i)(2)(ii) to read as follows, ''For performance year 2025 and subsequent performance years, for an ACO as defined at § 425.20 that is determined to be affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, for any month of the performance year that is affected, CMS considers 100 percent of the ACO's assigned beneficiaries to reside in an affected area.''
- At § 425.610, we are revising paragraph (i)(3) to read as follows, ''CMS applies determinations made under the Quality Payment Program with respect to all of the following (as applicable):''
- At § 425.610, we are removing the punctuation ''; and'' at the end of paragraph (i)(3)(i) and adding in its place a period.
- At § 425.610, we are adding a new paragraph (i)(3)(iii) to read as follows: ''The time period during which the ACO was affected by a cyberattack, including ransomware/malware.''
- At § 425.610, we are adding a new paragraph (i)(4) to indicate the following: ''CMS will determine the time period during which an ACO is affected by a cyberattack, including ransomware/malware, as follows:

++ At § 425.610 paragraph (i)(4)(i), we will use the start and end date indicated on an ACO's application to the Quality Payment Program for an extreme and uncontrollable circumstance exception due to a cyberattack, including ransomware/malware, or the start date indicated on the application and an end date subsequently provided by the ACO in the form and manner as specified by CMS.

++ At § 425.610 paragraph (i)(4)(ii), and except as specified in paragraph (i)(4)(iii), if no end date is indicated on the ACO's application or otherwise provided to us in a form and manner specified by us, described in paragraph (i)(4)(i), we will apply a 90-day duration for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

++ At § 425.610 paragraph (i)(4)(iii), if the start date indicated on the ACO's application described in paragraph (i)(4)(i) is less than 90 days before the end of the performance year and no end date is indicated on the ACO's application or otherwise provided to CMS in the form and manner specified by CMS, described in paragraph (i)(4)(i) of this section, CMS will apply an end date of December 31st of the

performance year for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.''

• We are redesignating paragraph (i)(4) as paragraph (i)(5).

We seek public comments on these proposed changes to the finance EUC policies.

d. Proposed Scenarios for the Start and End Dates Provided by ACOs When the MIPS EUC Exception Application Is Submitted to CMS and Applying Our Existing Regulations

Scenario 1: ACO provides a start date and end date for the EUC in the application, or the ACO contacts the Quality Payment Program Service Center to provide an end date for the EUC prior to the end of the application submission period.

• *Application of the quality EUC policy:* The quality EUC policy would apply to the ACO for the entire performance year, where we would use the higher of the ACO's quality score (if the ACO reports quality data on the APP Plus quality measure set) or the equivalent of the 40th percentile MIPS quality performance category score, as established at § 425.512(c)(3)(iv).

• *Application of the finance EUC policies:* The finance EUC policies as established at § 425.605 and § 425.610 would apply for the timeframe captured by the start and end date for the EUC and would apply to 100 percent of the ACO's assigned beneficiaries for the duration of the EUC.

Scenario 2: ACO provides a start date of March 1 for the EUC, but no end date in the application and the ACO does not contact the Quality Payment Program Service Center to provide an end date prior to the end of the application submission period.

• *Application of the quality EUC policy:* The quality EUC policy would apply to the ACO for the entire performance year, where we would use the higher of the ACO's quality score (if the ACO reports quality data on the APP Plus quality measure set) or the equivalent of the 40th percentile MIPS quality performance category score, as established at § 425.512(c)(3)(iv).

• *Application of the finance EUC policies:* The finance EUC policies as established at §§ 425.605 and 425.610 would apply a start date of March 1 and an end date that would be 90 days from the start date and will apply to 100 percent of the ACO's assigned beneficiaries for the duration of the EUC.

Scenario 3: ACO provides a start date of November 1 for the EUC, but no end date in the application and the ACO does not contact the Quality Payment Program Service Center to provide an end date prior to the end of the application submission period.

• *Application of the quality EUC policy:* The quality EUC policy would apply to the ACO for the entire performance year, where CMS would use the higher of the ACO's quality score (if the ACO reports quality data on the APP Plus quality measure set) or the equivalent of the 40th percentile MIPS quality performance category score, as established at § 425.512(c)(3)(iv).

• *Application of the finance EUC policies:* The finance EUC policies as established at §§ 425.605 and 425.610 would apply a start date of November 1 and an end date of December 31, which is the last day of the performance year, and will apply to 100 percent of the ACO's assigned beneficiaries for the duration of the EUC.

8. Population Adjustment—Financial Benchmarking Methodology

a. Overview

In the CY 2025 PFS final rule (89 FR 98574 through 98576), we finalized the Health Equity Benchmark Adjustment (HEBA), aimed at increasing participation in the Shared Savings Program by ACOs that serve an above-average proportion of Medicare Part D enrollees receiving Low Income Subsidy (LIS) or dually eligible beneficiaries and incentivizing ACOs to provide coordinated care to these populations. We believe this policy encourages participation in the Shared Savings Program from ACOs that otherwise may not have considered entering the program, as 45 percent of the ACOs receiving the HEBA in 2025 would not have qualified for the prior savings adjustment or positive regional adjustments, and therefore would have had a less favorable benchmark, had they not received the HEBA. However, since finalizing this policy, we believe it would add clarity to rename the HEBA to ''population adjustment.'' This proposed revision would more accurately reflect the nature of the adjustment, which accounts for the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

This proposed change seeks to harmonize the adjustment's name with the naming convention used for the other adjustments—the regional and prior savings adjustments—where the titles explicitly reflect key aspects of their underlying methodology. The adoption of the term ''population adjustment'' would reflect the specific data inputs and population focus of this adjustment, while also promoting consistency in nomenclature across adjustments.

We recognize that the revisions proposed herein differ from the approach proposed in the amendments to the Health Equity Adjustment applied to an ACO's quality score as described in section III.F.6.c. of this proposed rule. However, the intent and effect of these respective sections are distinct and therefore the proposed revisions reflect a separate rationale and methodology. Accordingly, the two sections serve different purposes and warrant distinct treatment within the rule.

b. Revise the Terminology in the Shared Savings Program Regulations Used To Describe the Adjustment

(1) Background

(a) Context for the HEBA

Relying on our authority under section 1899(d)(1)(B)(ii) of the Act, we finalized the health equity adjustment to the historical benchmark for agreement periods beginning on January 1, 2025, and in subsequent years (89 FR 98155 through 98166). We finalized provisions of the regulation in 42 CFR part 425, subpart G (see §§ 425.652(a)(8) and 425.662) specifying the methodology for calculating the health equity adjustment to the historical benchmark, determining an ACO's eligibility for the adjustment, and the applicability of the adjustment. The text included the terms ''health equity benchmark adjustment,'' ''Health Equity Benchmark Adjustment (HEBA) scaler,'' and ''HEBA.'' In the CY 2025 PFS final rule, we noted the limitations of benchmarks based on historically observed spending, as they could be set too low if they are based on the spending of a population of underserved communities. We discussed that without appropriate adjustments, ACOs caring for these populations may face financial penalties even if they succeed in improving access to high-value care during their agreement periods. Additionally, we noted that the Congressional Budget Office (CBO) reported high start-up costs for providers in rural and underserved communities as a barrier to forming ACOs.[328] We stated in the CY 2025 PFS proposed rule that these providers may want to participate in ACOs but are disincentivized due to steep start-up costs. The HEBA was finalized to provide additional financial

[328] Congressional Budget Office. (April 16, 2024). Medicare Accountable Care Organizations: Past Performance and Future Directions (59879). *https://www.cbo.gov/publication/59879.*

resources to ACOs serving these populations, and to encourage those ACOs to attract and retain beneficiaries from communities that have faced challenges accessing care. The adjustment is calculated based on the number of beneficiaries an ACO serves who are either enrolled in the LIS program or are dually eligible for Medicare and Medicaid, offering a targeted mechanism to reflect the needs of higher-risk populations.

(b) HEBA Provisions Finalized in CY 2025 PFS Final Rule

For agreement periods beginning on January 1, 2025, and in subsequent years, the Shared Savings Program utilizes three key mechanisms to upwardly adjust ACO benchmarks: the HEBA, the positive regional adjustment, and the prior savings adjustment. The positive regional adjustment evaluates an ACO's efficiency compared to its regional service area. The prior savings adjustment reflects an ACO's historical success in reducing Medicare fee-for-service (FFS) spending growth. The HEBA can increase benchmarks for ACOs with 15 percent or more assigned beneficiaries enrolled in LIS or dually eligible for Medicare/Medicaid, offering a targeted mechanism to reflect the needs of higher-risk populations.

These adjustments are not cumulative: ACOs receive the highest applicable adjustment, capped at 5 percent of national FFS per capita expenditures (89 FR 98158). For ACOs serving medically complex and high-cost beneficiaries, the HEBA often becomes their most favorable adjustment as they may not qualify for the regional adjustment or prior savings adjustments. While risk adjustment accounts for patient health status and dual eligibility status and benchmark calculations stratify expenditures by dual eligibility status, these mechanisms may fall short in fully reflecting costs for ACOs serving LIS or dually eligible beneficiaries in regions with high proportions of dual eligible and LIS populations. This can leave ACOs caring for these populations with unfavorable benchmarks and may reduce their incentive to participate in the program. As explained earlier in this section of this proposed rule, the HEBA addresses this gap by directly increasing benchmarks for ACOs with a significant proportion of LIS or dually eligible beneficiaries, providing a meaningful financial incentive for participation by those ACOs and retention of such beneficiaries.

(c) HEBA Impact—Initial Observations

As described in the CY 2025 PFS final rule (89 FR 98158), CMS finalized a process to provide ACOs with a preliminary HEBA calculation at the start of their agreement period, using the ACO's BY3 assigned population. This preliminary calculation uses the proportion of the ACO's BY3 assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid. We specified that we would then update the calculation when the ACO's historical benchmark is updated at the time of financial reconciliation for the performance year to reflect the ACO's performance year-assigned population in the calculation of the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

Based on internal analysis of PY 2025 preliminary benchmarks,[329] among 33 ACOs estimated to receive a HEBA, 13 are new ACOs participating in their first agreement period and would otherwise not have received a positive regional adjustment to the benchmark (for example, ACO spending is above their region's expenditures) or a prior savings adjustment, since these ACOs are in their first agreement period. This early observation suggests that the HEBA is encouraging more participation in the Shared Savings Program, as intended, by high-cost ACOs[330] that may otherwise not have elected to apply and participate in the program and whose assigned beneficiary populations have the greatest potential to benefit from care coordination and quality improvement. Our initial analysis of the preliminary benchmarks suggests that these ACOs could see an approximate 1.36 percent increase in their benchmark compared to an approximate 2.29 percent for ACOs that received either a prior savings adjustment or positive regional adjustment. These figures are provisional as they rely on preliminary BY3 population data. Final figures will depend on the ACO's final PY 2025 assigned population, which is not determined until financial reconciliation, consistent with § 425.662(b)(4).

The regulatory impact analysis of the HEBA from the CY 2025 PFS final rule (89 FR 98523 through 98524) estimated that total net savings is projected to grow over ten years by approximately $260 million as a result of the HEBA attracting additional high-cost ACOs to join the program and creating savings for the Medicare program, ranging from $1.2 billion cost to a $2.2 billion savings at the 10th and 90th percentiles.

(d) Expanding Participation

The HEBA policy aligns with CMS' aims of advancing prevention, wellness, and chronic disease management, while supporting the growth and expansion of the Shared Savings Program. Analysis reveals significant untapped potential to increase Shared Savings Program participation among practices currently not participating in the program, in particular among providers serving higher cost populations.[331]

We conducted an analysis of Taxpayer Identification Numbers (TINs) associated with medical providers and/or practices not part of ACOs participating in the Shared Savings Program during PY 2022. The analysis compared TINs that participated in the Shared Savings Program with those that did not. Results indicated that many non-participating TINs served a larger share of beneficiaries with disabled or aged/dual enrollment status and had greater presence in rural areas. The study also found that of all the TINs serving beneficiaries eligible to participate in a Shared Savings Program ACO, 84 percent (or 58,000 TINs) were not participating in the Shared Savings Program. By contrast, only about 11,000 TINs with at least one ACO-assigned beneficiary participated in a Shared Savings Program ACO. Among these non-participants, two-thirds were small practices that furnish care to 100 or fewer beneficiaries. The analysis also highlighted key differences between ACO participating and non-participating TINs in terms of the population they served and their geographic distribution. We observed that TINs associated with medical providers and/or practices not participating in Shared Savings Program ACOs are in regions with low Shared Savings Program ACO penetration and have a greater presence in rural areas. These practices serve larger shares of dual eligible and disabled beneficiaries and have higher spending per beneficiary driven primarily by inpatient and SNF expenditures.

Encouraging participation in ACOs by practices serving these higher-cost

[329] These benchmarks are preliminary because they are established at the start of an ACO's agreement period and include incomplete data from benchmark year 3.

[330] By ''high-cost ACOs,'' we refer in this rulemaking to those ACOs with spending above their region expenditures.

[331] CMS, Press Release ''Dr. Mehmet Oz Shares Vision for CMS'' (April 10, 2025), available at *https://www.cms.gov/newsroom/press-releases/dr-mehmet-oz-shares-vision-cms.*

beneficiaries remain crucial to the Shared Savings Program. Our internal analysis shows that Shared Savings Program ACOs have been successful in reducing inpatient and SNF spending. The HEBA accounts for a higher proportion of dual eligible and LIS beneficiaries, and therefore can strengthen the business case for providers that serve these populations to join and form ACOs and participate in the Shared Savings Program.

The adjustment is particularly critical in rural areas where the CBO has identified high start-up costs as a significant barrier to ACOs formation.[332] By enabling ACOs in rural and resource-limited areas to operate under more viable and realistic financial benchmarks, the HEBA policy aims to expand participation in the Shared Savings Program and increase the likelihood that these ACOs can succeed financially while delivering high-quality care.

(2) Proposed Revisions

We are proposing to update the language used to describe this adjustment to the benchmark to more accurately reflect the populations served by the ACOs receiving the adjustment as discussed in section III.F.8.b.(1) of this proposed rule. This change reflects efforts to harmonize terminology across benchmark-related methodologies—regional and prior savings adjustments—where the titles explicitly reflect key features of their underlying methodology. The revision to ''population adjustment'' more accurately reflects the population of beneficiaries that are captured by this adjustment (ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid), as well as promote consistency in nomenclature across adjustment.

Specifically, we propose to revise Shared Savings Program regulations that include references to ''health equity benchmark adjustment'' or HEBA to ''population adjustment''. We also propose to revise the term ''HEBA scaler'', which is a component in the calculation to ''scaler''. The naming changes would apply for performance year 2025 and subsequent performance years. This proposal would revise only the terminology in the regulations. The calculation described in the regulations would be unchanged, if the proposed changes are finalized. This proposal, if finalized, would have a minimal impact on Shared Savings Program operations. CMS would only need to update the language used in historical benchmark reports and the assignment summary report, beginning with report deliveries occurring after the rule is finalized., and certain other programmatic materials, for example, the Medicare Shared Savings Program Assignment List Report and Assignment Summary Report User's Guide, and the Medicare Shared Savings Program's Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications.

These proposed revisions reflect changes to the terminology used in the regulations at §§ 425.652, 425.658, 425.662 and 425.672. No changes in the methodology currently used to calculate the health equity benchmark adjustment are being proposed. Specifically, we propose the following revisions to provisions of the regulation:

- At § 425.652(a)(8)(ii)(A), we propose to remove the phrase ''health equity benchmark adjustment (HEBA)'' and add in its place the phrase ''population adjustment''.
- At § 425.652 in paragraphs (a)(8)(ii)(B), (a)(8)(ii)(B)(*2*), (a)(9)(v),and (a)(9)(vi), we propose to remove the phrase ''HEBA'' and add in its place the phrase ''population adjustment''.
- At § 425.652(a)(9)(v), we propose to remove the phrase ''HEBA scaler used in calculating the HEBA at § 425.662(b)(2)'' and add in its place the phrase ''scaler used in calculating the population adjustment at § 425.662(b)(2)''.
- At § 425.658 in paragraph (d), we propose to remove the phrase ''HEBA'' and add in its place the phrase ''population adjustment''.
- At § 425.662, we propose to revise the section heading to read as follows: ''Calculating the population adjustment to the historical benchmark.''
- At § 425.662 we propose to revise paragraph (a) to read as follows: ''*General.* For agreement periods beginning on January 1, 2025, and in subsequent years, CMS calculates the population adjustment to the historical benchmark''.
- At § 425.662 in paragraph (b) introductory text, we propose to remove the phrase ''health equity benchmark adjustment'' and add in its place the phrase ''population adjustment''.
- At § 425.662 in paragraph (b)(2), and we propose to remove the phrase ''Calculates the HEBA scaler'' and add in its place the phrase ''Calculates a scaler''.
- At § 425.662, we propose to revise paragraph (b)(3) to read as follows: ''Determines the ACO's eligibility for the population adjustment based on the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D low-income subsidy (LIS) or dually eligible for Medicare and Medicaid. An ACO is only eligible for the population adjustment if this proportion is greater than or equal to 15 percent. An ACO with a proportion less than 15 percent is ineligible to receive the population adjustment.''
- At § 425.662, we propose to revise paragraph (b)(4) to read as follows: ''Calculates the population adjustment. If the ACO is eligible for the population adjustment as determined in paragraph (b)(3) of this section, the adjustment is equal to the product of the scaler calculated in paragraph (b)(2) of this section and the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.''
- At § 425.662 in paragraph (c), we propose to remove the phrase ''HEBA'' and add in its place the phrase ''population adjustment''.
- At § 425.672 in paragraph (c)(2)(iv), we propose to remove the phrase ''and calculating the HEBA scaler'' and add in its place the phrase ''and calculating the scaler''.

We seek public comments on this proposed change.

9. Shared Savings Program Quality Reporting Monitoring Provisions

a. Overview

In this section, we propose to revise our regulations at § 425.316(c)(2) related to monitoring of ACOs for compliance with the quality performance standards. Relatedly, we propose to revise § 425.224(b)(1)(ii)(A) related to reviewing applications for renewing and re-entering ACOs. The purpose of these proposed changes is to revise our regulations to ensure that ACOs continue to satisfy program requirements or to identify a pattern of noncompliance with ACOs meeting both the quality performance standard and the alternative quality performance standard. We believe these revisions would not significantly impact the program as currently implemented.

b. Background

In the CY 2021 PFS final rule (85 FR 84740 through 84743), we finalized changes to the Shared Savings Program quality performance standard and quality reporting requirements for performance years beginning on January 1, 2021. The regulation we finalized at

[332] Congressional Budget Office (CBO), ''Medicare Accountable Care Organizations: Past Performance and Future Directions,'' April 2024, available at *https://www.cbo.gov/system/files/2024-04/59879-Medicare-ACOs.pdf.*

§ 425.316(c)(2) aligned the Shared Savings Program quality reporting requirements with the requirements that applied under the APP under the Quality Payment Program (85 FR 85039 and 85040). We have subsequently updated the quality performance standard and reporting requirements through rulemaking in the CYs 2022, 2023, 2024, and 2025 PFS final rules (86 FR 65255 through 65272, 87 FR 69860 through 69863, 88 FR 79112 through 79114, and 89 FR 98101 through 98132, respectively).

In the CY 2023 PFS final rule (87 FR 70234), we finalized an alternative quality performance standard at § 425.512(a)(4)(ii) and (a)(5)(ii) for performance year 2023 and subsequent performance years. Specifically, to meet the alternative quality performance standard for performance year 2025 and subsequent years as described at § 425.512(a)(5)(ii)(B), an ACO must report quality data on the APP Plus quality measure set established at § 414.1367 according to the method of submission established by CMS and achieve a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the outcome measures in the APP Plus quality measure set. An ACO that does not meet the quality performance standard but does meet the alternative quality performance standard is eligible to share in savings on a sliding scale as described at §§ 425.605 and 425.610. Additionally, ACOs that do not meet both the quality performance standard and the alternative quality performance standard will not be eligible for shared savings and will have a shared loss rate not exceeding 75 percent as described at § 425.610(f)(3)(ii) for performance year 2023 and subsequent performance years.

The PHE for COVID–19 was in effect starting in January 2020 and expired on May 11, 2023.[333] All Shared Savings Program ACOs were deemed affected by the PHE for COVID–19 under the program's quality EUC policy for performance years 2022 and 2023 as defined at § 425.512(c) and were determined to have met the quality performance standard at § 425.512(a) (85 FR 84746). ACOs received a minimum quality performance score equal to the 30th percentile Merit-based Incentive Payment System (MIPS) Quality performance category score in PY 2022, and a score equal to the equivalent of the 40th percentile in PY 2023 across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. ACOs that were able to successfully report quality data received the higher of their own MIPS Quality performance category score (adjusted for health equity for performance year 2023, if applicable) or the applicable 30th percentile score. As such, all ACOs that qualified for shared savings for performance years 2022 and 2023 were eligible to receive the maximum sharing rate for their track (or performance level within a track) and, for performance year 2022, any shared losses determined to be owed to CMS using either a fixed (BASIC Track) or scaled loss rate (ENHANCED Track) were fully offset by the EUC policy and any shared losses determined for performance year 2023 were reduced by a least five-twelfths.

To ensure that the ACO continues to satisfy Shared Savings Program requirements, CMS monitors and assesses the performance of ACOs, their ACO participants, and ACO providers/suppliers. The monitoring policies at § 425.316(c) apply to compliance with quality performance standards. To identify ACOs that are not meeting the quality performance standards, we will review an ACO's submission of quality measurement data at §§ 425.500 or 425.512. Currently, as specified at § 425.316(c)(2)(i), if the ACO fails to meet the quality performance standard, we may take one or more of the actions prior to termination specified at § 425.216. As further specified at § 425.316(c)(2)(i), depending on the nature and severity of the noncompliance, we may forgo pre-termination actions and may immediately terminate the ACO's participation agreement at § 425.218. While § 425.316(c)(2) addresses the quality performance standard, it fails to acknowledge the alternative quality performance standard. When we established the alternative quality performance standard in the CY 2023 PFS final rule, we inadvertently did not also propose to modify the corresponding monitoring policies at § 425.316(c)(2). Due to the quality EUC policies in effect until 2023, we did not encounter this discrepancy when monitoring ACO compliance with quality performance standards.

c. Proposed Revisions

We propose to add § 425.316(c)(3) to apply to performance years beginning on or after January 1, 2026. Under our proposal, if an ACO fails to meet both the quality performance standard and the alternative quality performance standard, as determined at § 425.512, we would be authorized to take one or more of the actions prior to termination as specified at § 425.216. Under the proposal, if an ACO is unable to meet the quality performance standard, then the ACO could still meet the alternative quality performance standard without CMS taking one of the prescribed actions prior to termination. However, if an ACO fails to meet both standards, then we believe it would be appropriate for CMS take one of the actions described at § 425.216 (provide a warning notice to the ACO, request a corrective action plan from the ACO, or place the ACO on a special monitoring plan) for noncompliance with the quality performance standards. We inadvertently did not modify the monitoring portion of the regulation, § 425.316(c), when we established the alternative quality performance standard in the CY 2023 PFS final rule and believe that it would be appropriate to revise the regulation at § 425.316(c) to be consistent with our longstanding practice to monitor ACOs for their compliance with our quality reporting and quality performance standard requirements. Specifically, we propose to add a new paragraph (c)(3) to § 425.316 to recognize that, for performance years beginning on or after January 1, 2026, if an ACO fails to meet both the quality performance standard and the alternative quality performance standard, as determined at § 425.512, CMS may take one or more of the actions prior to termination specified at § 425.216. Additionally, in keeping with our established policies at § 425.316(c)(2)(ii), we propose to continue to terminate an ACO's participation agreement if it: (1) fails to meet both the quality performance standard and alternative quality performance standard for 2 consecutive PYs within an agreement period; (2) fails to meet both the quality performance standard and alternative quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order; (3) are a renewing ACO or re-entering ACO that fails to meet both the quality performance standard and alternative quality performance standard for the last performance year of the ACO's previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of

[333] *See* Administration for Strategic Preparedness & Response website, Declarations of a Public Health Emergency webpage, at https://aspr.hhs.gov/legal/PHE/pages/default.aspx (listing declarations of a public health emergency, among other information). *See also* U.S. Department of Health and Human Services website, COVID–19 Public Health Emergency webpage, available at https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html.

failed quality performance during the previous agreement period; or (4) are a renewing ACO or re-entering ACO fails to meet both the quality performance standard and alternative quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period.

As part of the Shared Savings Program application process, we identify applicant ACOs that have previously participated in the Shared Savings Program. If the applicant ACO has a history of noncompliance with the requirements of the Shared Savings Program, we may request the ACO demonstrate that it has corrected the deficiencies that caused any noncompliance under their previous participation agreement (§ 425.224(b)(1)(iii)). The list of criteria we review for previous noncompliance includes, but is not limited to, whether the ACO demonstrated a pattern of failure to meet the quality performance standards, whether, for 2 PYs, the average per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiary population exceeded its updated benchmark, whether the ACO failed to repay shared losses in full within 90 days, whether the ACO failed to repay shared losses for any performance year while participating under a model authorized under section 1115A of the Act. In alignment with our proposal above, we also propose to modify § 425.224(b)(1)(ii)(A) to include the alternative quality performance standard. Specifically, we propose to modify § 425.224(b)(1)(ii)(A) to state that, as part of the factors we evaluate when determining whether to approve a renewing ACO's or re-entering ACO's application, we will evaluate whether the ACO demonstrated a pattern of failure to meet the quality performance standard and alternative quality performance standard (if applicable), or met any of the criteria for termination at § 425.316(c)(1)(ii), (c)(2)(ii), or (c)(3)(ii).

We seek comments on these proposals.

G. Changes to the Regulations Associated With the Ambulance Fee Schedule

1. Ambulance Fee Schedule Background

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Our regulations relating to coverage for ambulance services are set forth at 42 CFR part 410, subpart B. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established, as required by section 1834(l) of the Act, in 42 CFR part 414, subpart H. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. (For a discussion about the ambulance inflation factor (AIF), please see CY 2011 PFS final rule (75 FR 73397). We stated in the CY 2011 PFS final rule that the AIF will be announced by instruction and on the CMS Web site. AIF transmittals are available on CMS' website: *https://www.cms.gov/medicare/payment/fee-schedules/ambulance/afs-regulations-and-notices* and in the Medicare Claims Processing Manual, Chapter 15, section 20.4). The AFS also incorporates two permanent add-on payments in § 414.610(c)(5)(i) and three temporary add-on payments in § 414.610(c)(1)(ii) and (c)(5)(ii) to the base rate and/or mileage rate.

2. Ambulance Extender Provisions

a. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275, enacted July 15, 2009) (MIPPA), amended section 1834(l)(13) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008, and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.
- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

The payment add-ons under section 1834(l)(13) of the Act have been extended several times. Section 3203 of the American Relief Act of 2025 (Pub. L. 118–158, December 21, 2024) extended these provisions through March 31, 2025. Most recently, section 2203 of the Full-Year Continuing Appropriations and Extensions Act, 2025 (Pub. L. 119–4, March 15, 2025) amended section 1834(l)(13) of the Act to extend the payment add-ons through September 30, 2025. Thus, these payment add-ons apply to covered ground ambulance transports furnished before October 1, 2025. We are proposing to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement. (For a discussion of past legislation extending section 1834(l)(13) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74438 through 74439), the CY 2015 PFS final rule with comment period (79 FR 67743), the CY 2016 PFS final rule with comment period (80 FR 71071 through 71072), the CY 2019 PFS final rule with comment period (83 FR 59681 through 59682), and the CY 2024 PFS final rule with comment period (88 FR 79292–79293)).

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary.

b. Amendment to Section 1834(l)(12) of the Act

Section 414(c) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (MMA) (Pub. L. 108–173, December 8, 2003) added section 1834(l)(12) to the Act, which specified that, in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004, interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment

increase was applied to ground ambulance transports that originated in a ''qualified rural area,'' that is, to transports that originated in a rural area comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). This rural bonus is sometimes referred to as the ''Super Rural Bonus'' and the qualified rural areas (also known as ''super rural'' areas) are identified during the claims process via the use of a data field included in the CMS-supplied ZIP code file.

The Super Rural Bonus under section 1834(l)(12) of the Act has been extended several times. Section 3203 of the American Relief Act of 2025 extended this provision through March 31, 2025. Most recently, section 2203 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended section 1834(l)(12)(A) of the Act to extend this rural bonus through September 30, 2025. Therefore, we are continuing to apply the 22.6 percent rural bonus described in this section (in the same manner as in previous years) to ground ambulance services with dates of service before October 1, 2025, where transportation originates in a qualified rural area. Accordingly, we are proposing to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement. (For a discussion of past legislation extending section 1834(l)(12) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74439 through 74440), CY 2015 PFS final rule with comment period (79 FR 67743 through 67744), the CY 2016 PFS final rule with comment period (80 FR 71072), the CY 2019 PFS final rule with comment period (83 FR 59682) and the CY 2024 PFS final rule with comment period (88 FR 79293)).

This statutory provision is self-implementing. It requires an extension of this rural bonus (which was previously established by the Secretary) through September 30, 2025, and does not require any substantive exercise of discretion on the part of the Secretary.

IV. Updates to the Quality Payment Program

A. CY 2026 Modifications to the Quality Payment Program Reporting and Data Submission

1. Executive Summary

a. Overview

This section of this proposed rule outlines changes to the Quality Payment Program starting January 1, 2026, except as otherwise noted for specific provisions. We continue to move the Quality Payment Program forward, including focusing more on alignment between the Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APM) tracks of participation, alignment with broader CMS initiatives, and new options for clinicians to participate in more meaningful ways. We aim to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the MIPS and Advanced APMs for the CY 2026 performance period/2028 MIPS payment year.

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015), the Quality Payment Program is a value-based payment program, by which the Medicare program rewards clinicians who provide high-value, high-quality care to their patients in a cost-efficient manner. There are two ways for clinicians who provide services under the Medicare program to participate in the Quality Payment Program: MIPS and Advanced APMs. The statutory requirements for the Quality Payment Program are set forth in section 1848(q) and (r) of the Act for MIPS and section 1833(z) of the Act for Advanced APMs.

For the MIPS participation track, MIPS eligible clinicians (defined at § 414.1305) [334] are subject to a MIPS payment adjustment (positive, neutral, or negative) based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We assess each MIPS eligible clinician's total performance according to established performance standards with respect to the applicable measures and activities specified in each of these four performance categories during a performance period to compute a final composite performance score (a ''final score'' as defined at § 414.1305). In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight under these exceptions, for the CY 2026 performance period/2028 MIPS payment year, the scoring weights are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category.

Once calculated, each MIPS eligible clinician's final score is compared to the performance threshold established in prior rulemaking for that performance period to calculate the MIPS payment adjustment factor as specified in section 1848(q)(6) of the Act, such that the MIPS eligible clinician will receive in the applicable MIPS payment year: (1) a positive adjustment, if their final score exceeds the performance threshold; (2) a neutral adjustment, if their final score meets the performance threshold; or (3) a negative adjustment, if their final score is below the performance threshold. In calculating the MIPS payment adjustment factor for a MIPS eligible clinician, CMS accounts for scaling factor and budget neutrality requirements, as further specified in section 1848(q)(6) of the Act. CMS then applies the MIPS payment adjustment factor to amounts otherwise paid under Medicare Part B with respect to covered professional services for the MIPS eligible clinician for the applicable MIPS payment year such that their payments for such covered professional services are increased, decreased, or not adjusted based on the MIPS eligible clinician's final score relative to the performance threshold.

Section 1848(q) of the Act sets forth other requirements applicable to MIPS, including opportunities for feedback and targeted review and public reporting of MIPS eligible clinicians' performance. Section 1848(r) of the Act sets forth more specific requirements for development of measures for the cost performance category under MIPS.

For the Advanced APM track, if an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) or Partial QP status, they are excluded from the MIPS reporting requirements and payment adjustment (though eligible clinicians who are Partial QPs may elect to participate in MIPS and be subject to the MIPS reporting requirements and payment adjustment). Under current law, eligible clinicians who are QPs for the 2024 performance period and beyond will receive an increased physician fee schedule update of 0.75 percent based on the QP conversion factor in the corresponding payment year. QPs will continue to be excluded from MIPS reporting and payment adjustments for the applicable year. We note that, historically, QPs received a lump sum APM Incentive Payment in the corresponding payment year,

[334] We note that the term MIPS eligible clinician is defined at § 414.1305 as including a group of at least one MIPS eligible clinician billing under a single tax identification number. We refer readers to our policies governing group reporting and scoring under MIPS as set forth at § 414.1310(e).

calculated as a specified percentage of the QP's paid claims for covered professional services from the base year. Under current law, payment year 2026 is the last year for these payments. Only legislation enacted by Congress can make changes to either the enhanced QP conversion factor updates or the APM Incentive Payment.

We plan to continue developing policies for the Quality Payment Program that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We continue to implement MIPS Value Pathways (MVPs) to allow for a more cohesive participation experience by connecting activities and measures from the four MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

As we move into the ninth year of the Quality Payment Program, we will be implementing the updates set forth in this section of this proposed rule, encouraging continued improvement in clinicians' performance with each performance year and driving improved quality of health care through payment policy.

b. Summary of Major Proposals

(1) Transforming the Quality Payment Program

We continue to align with broader CMS initiatives, such as the Universal Foundation (*https://www.cms.gov/medicare/quality/cms-national-quality-strategy/aligning-quality-measures-across-cms-universal-foundation*) in an effort to promote the highest quality outcomes and safest care for all individuals. The Universal Foundation focuses on provider attention, reducing burden, prioritizing development and movement toward interoperable digital quality measures, allowing for comparisons across CMS programs, and helping to identify measurement gaps.

We are implementing meaningful improvements designed to strengthen healthcare delivery and advance patient outcomes. Through these efforts, we strive to create a healthcare system that not only responds to chronic disease but works proactively to prevent it. In alignment with our goal of promoting preventive care and fostering a more proactive approach to health management, we propose adding a new ''Advancing Health and Wellness'' subcategory within the improvement activities performance category. Through the proposals described in this proposed rule, we intend to transform and simplify MIPS, promote the use of connected measures and activities, continue rewarding clinicians for providing high value care, and use data-driven information to help all clinicians improve care and engage patients.

Separately, we propose expanding our portfolio of available MVPs for the CY 2026 performance period/2028 MIPS payment year and remain committed to our goal of ensuring more meaningful participation in the Quality Payment Program through MVPs. We have revised the format of each MVP to categorize the quality measures by clinical conditions or episodes of care. The new format offers a streamlined set of quality measures to aid clinicians in selecting the most clinically relevant measures. While traditional MIPS continues to be a reporting option, we intend to propose ending traditional MIPS in the future, at which point MVPs would become mandatory. That future date has not been determined and will be established through notice and comment rulemaking.

We are issuing a request for information (RFI) to address the use of Fast Healthcare Interoperability Resources (FHIR)-based electronic clinical quality measures (eCQMs) in quality reporting and payment programs as discussed in section IV.A.4.c. of this proposed rule. In section IV.A.3. of this proposed rule, we seek feedback on two RFIs related to MVPs to address: (1) potential Core Elements MVP reporting requirements; and (2) functions utilizing Medicare procedural codes to further facilitate more MVP specialty reporting. Additionally, we are seeking feedback on future use of well-being and nutrition measures in the Quality Payment Program. We are issuing three additional RFIs in section IV.A.4.d.(4) of this proposed rule related to enhancing healthcare data quality and monitoring systems. These RFIs address: (1) potential future modifications to the Query of Prescription Drug Monitoring Program (PDMP) measure (2) potential modifications to the Promoting Interoperability performance category's objectives and measures and (3) potential improvements to enhance health information MIPS eligible clinicians are exchanging across systems. These initiatives reflect our commitment to advancing interoperability, improving patient safety, and supporting the transition to value-based care through modern technology and standardized data exchange practices.

(a) Transforming MIPS: MVP Strategy

To support our goal of phasing out traditional MIPS and transitioning to MVP reporting, we are proposing policies, that if finalized, would encourage increased participation from specialists. Our proposals seek to specify which groups fall under the multispecialty subgroups requirement that begins in CY 2026 through self-attestation and to maintain flexibility for multispecialty small practices to report MVPs as groups. Specifically, we are proposing updates to two MVP subgroup policies as follows: (1) update the MVP group registration process to add the multispecialty self-attestation requirement; and (2) maintain the MVP group reporting option for multispecialty groups with a small practice designation.

We are also seeking feedback via three RFIs. First, we are seeking feedback on the development of a subset of key quality measures within each MVP, referred to as ''Core Elements,'' from which an MVP Participant would be required to report one Core Element that would highlight measures that represent the foundation and focus of an MVP and would better enable comparison of clinician performance. This would provide for more accurate comparisons of similar clinicians and would give patients the best information available about clinicians so they can make the most informed decisions about their care. Second, we are also seeking feedback on identifying Medicare Part B procedural billing codes that align with each MVP to encourage specialists to report the relevant MVP based on their use of the procedural billing codes. Third, we are seeking feedback on well-being and nutrition tools and measures that assess overall health, happiness, and satisfaction in life.

(b) MIPS Value Pathways Development and Maintenance

To continue moving the healthcare community toward value-based, high-quality, safe, and cost-efficient care, we are proposing six new MVPs around the following topics: Diagnostic Radiology, Interventional Radiology, Neuropsychology, Pathology, Podiatry, and Vascular Surgery.

We are also proposing MVP maintenance updates to our MVP inventory that are aligned with the MVP development criteria and take into consideration feedback from interested parties we have received through the maintenance process. Additionally, we have updated the format of the MVP tables to stratify quality measures by clinical conditions and/or episodes of care for each MVP identified as ''Clinical Groupings''. When applicable, an ''Advancing Health and Wellness'' and/or ''Experience of Care'' clinical grouping is included for cross-cutting quality measures. This new stratified

format offers a streamlined set of quality measures to aid clinicians in selecting the most clinically relevant measures applicable to their clinical area and identifies when quality and cost measures are linked.

Finally, we are proposing to provide additional flexibilities to allow qualified clinical data registries (QCDRs) and qualified registries additional time to fully support finalized MVPs. Specifically, we are proposing to sunset the current requirement and modify § 414.1400(b)(1)(ii) to state that QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data through CY 2025 performance period/2027 MIPS payment year. We are also proposing to modify the requirement at § 414.1400(b)(1)(ii) to provide that, beginning with the CY 2026 performance period/2028 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data no later than one year after finalization of the MVP. We are proposing to retain the remaining language currently set forth at § 414.1400(b)(1)(ii) without modification.

(c) APM Performance Pathway

We are proposing to update some quality measures in the APM Performance Pathway (APP), original quality measure set and the APP Plus quality measure set to reflect our proposed changes to measures specified for the quality performance category as discussed section IV.A.4.b. of this proposed rule.

(d) Fast Healthcare Interoperability Resources (FHIR) Request for Information

We want to engage interested parties, ahead of future policy decisions, on the timeline and measure development of FHIR-based eCQMs in quality reporting and payment programs. In this RFI, we are providing updates on our activities since prior RFIs and are seeking information from interested parties on a range of issues to better inform future proposals. More specifically, the RFI is seeking feedback, related to the digital quality measurement (dQM) transition, on the following:

- What challenges providers and health information technology vendors anticipate during the transition.
- What guidance may be required from CMS to support the transition.
- Feedback on the stepwise approach to FHIR-based eCQM reporting.
- What challenges Accountable Care Organizations (ACOs) specifically have with reporting via FHIR, to include challenges about aggregated data.
- Any other implementation concerns.

(e) MIPS Quality Performance Category

For the CY 2026 performance period/2028 MIPS payment year, we are proposing to establish a measure set inventory of 190 MIPS quality measures, of which 187 are available in traditional MIPS and three are available only for utilization in MVPs.

The proposed measure removals focus on process measures, measures reaching extremely topped out status or the end of the topped-out measure lifecycle, measures no longer aligned with clinical guidelines and measures the steward would no longer maintain. The measure additions focus on measuring outcomes and increasing the number of eCQMs. Substantive changes to measures would ensure the measures included in MIPS continue to be meaningful and drive improvements in quality of care.

Additionally, as discussed in section IV.A.4.d.(1).(b). of this proposed rule, we are proposing to revise the definition of a ''high priority measure'' to remove health equity.

(f) MIPS Cost Performance Category

We are proposing to modify the Total Per Capita Cost (TPCC) measure beginning in the CY 2026 performance period/2028 MIPS payment year. We are also proposing to update the operational list of care episodes and patient condition groups and codes to reflect coding changes identified through our annual maintenance process for MIPS cost measures. Lastly, we are proposing to adopt a 2-year informational-only feedback period for newly implemented MIPS cost measures, which we are also proposing to codify at § 414.1380(b)(2).

(g) MIPS Improvement Activities Performance Category

We are proposing the following updates to the MIPS Improvement Activity Inventory beginning with the CY 2026 performance period/2028 MIPS payment year. First, we propose to add a new subcategory to the Improvement Activities performance category: Advancing Health and Wellness. Second, we propose to remove the Achieving Health Equity subcategory. Third, we propose to add three new improvement activities into two of our existing subcategories: (1) Population Management and (2) Patient Safety and Practice Assessment. Fourth, we propose to modify seven existing improvement activities currently specified for the performance category. Fifth, we propose to remove eight improvement activities currently specified for the performance category.

(h) MIPS Promoting Interoperability Performance Category

Beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing several policies and measure updates for the MIPS Promoting Interoperability performance category. Specifically, for the MIPS Promoting Interoperability performance category, we are proposing to modify the Security Risk Analysis measure and the High Priority Practices Safety Assurance Factors for Electronic Health Record (EHR) Resilience (SAFER) Guide measure, and adopt one new optional bonus measure, the Public Health Reporting Using Trusted Exchange Framework and Common Agreement™ (TEFCA™) measure.

Promoting Interoperability Program, we are proposing the following:

- Adopt and codify at § 414.1380(b)(4)(iii) and § 495.24(f)(3), respectively, a measure suppression policy beginning with the CY 2026 performance period/2028 MIPS payment year and the EHR reporting period in CY 2026.
- Suppress the Electronic Case Reporting measure by excluding the measure from scoring for MIPS eligible clinicians for the CY 2025 performance period/2027 MIPS payment year and eligible hospitals and critical access hospitals for the EHR reporting period in CY 2025.

Additionally, we include the following RFIs in section IV.A.4.d.(4) of this proposed rule.

- RFI Regarding the Query of PDMP Measure seeks public comment on potential future modifications to the Query of PDMP measure that would transition the measure from attestation-based reporting to performance-based reporting and expand the types of drugs that apply to the measure to include all Schedule II drugs.
- RFI Regarding performance-based measures seeks public comment on the potential modifications to the Promoting Interoperability performance category's objectives and measures that would transition from attestation-based reporting to performance-based reporting.
- RFI Regarding Data Quality seeks public comments on the improvements to enhance overall healthcare data quality, addressing current gaps in accuracy, completeness, and consistency of health information MIPS eligible clinicians are exchange across systems.

(i) MIPS Final Score Methodology (Scoring the Quality Performance Category)

We are proposing to update our approach for identifying measures impacted by limited measure choice to apply the analysis and criteria finalized in the CY 2025 PFS final rule (89 FR 98432 and 98433) to MVPs, in addition to specialty measure sets. MVPs, similar to specialty measure sets, contain a limited set of quality measures for a clinician to choose from. We are also proposing a list of topped out measures impacted by limited measure choice and subject to the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year.

Lastly, we are proposing to modify the methodology for scoring the administrative claims-based measures within the quality performance category beginning with the 2025 performance period/2027 MIPS payment year. The proposed administrative claims-based quality measure scoring methodology would be based on standard deviation, median, and an achievement point value derived from the performance threshold.

(j) MIPS Payment Adjustment

We are proposing to continue using the CY 2017 performance period/2019 MIPS payment year to establish the performance threshold. We are also proposing to establish a performance threshold of 75 points for the CY 2026 performance period/2028 MIPS payment year through the CY 2028 performance period/2030 MIPS payment year.

(k) Third Party Intermediaries

We are proposing to codify at § 414.1400(d)(9) a policy we previously finalized in the CY 2025 PFS final rule to require CMS-approved survey vendors to submit a range of the cost of their services with their application beginning with the CY 2026 performance period/2028 MIPS payment year (89 FR 98459 and 98460). We are also proposing to codify at § 414.1400(d)(3)(iv)(A) a policy previously finalized in the CY 2024 PFS final rule to require an entity to administer the CAHPS for MIPS Survey Spanish translation to Spanish-preferring patients (88 FR 79332 through 79334).

We are proposing to require that, beginning with the CY 2027 performance period/2029 MIPS payment year, CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. We are proposing to codify this proposed requirement at § 414.1400(d)(10). In addition, we propose to modify our requirements at § 414.1400(d)(3) for an entity applying to become a CMS-approved survey vendor to ensure the entity is capable of administering a web-mail-phone protocol prior to CMS approval.

Lastly, we are proposing to sunset one of the requirements to apply to become a CMS-approved survey vendor at § 414.1400(d)(8).

(2) Advanced APM Proposals

We are proposing to modify the methodology we use to calculate QP status at § 414.1425 to include an individual calculation for all eligible clinicians in Advanced APMs. Additionally, we are proposing to use Covered Professional Services to identify beneficiaries, as described at § 414.1305 to define an Attribution-eligible beneficiary, in our calculations for all Advanced APMs.

We are proposing to sunset our Advanced APM criterion at § 414.1415(c)(7), and § 414.1420, which currently sets a limit on the number of clinicians belonging to an APM Entity participating in a Medical Home Model.

We are also proposing to modify the language at § 414.1455(b)(3)(ii) and § 414.1455(b)(3)(vi) that establishes Targeted Review for QPs to ensure that the Targeted Review timeline described in such section is the same timeline as that established for MIPS Targeted Reviews specified at § 414.1385(a)(2) and § 414.1385(a)(5).

2. Definitions

At § 414.1305, we are proposing to revise the definition of the following terms:

- High priority measure
- Attribution-eligible beneficiary
- Multispecialty group
- MVP Participant
- Single specialty group

These terms and definitions are discussed in detail in the relevant sections of this proposed rule.

3. Transforming the Quality Payment Program

Section 1848(q)(1)(D) of the Act requires that the Secretary establish and apply a process that includes features of the provisions of section 1848(m)(3)(C) of the Act for MIPS eligible clinicians in a group practice reporting for the quality performance category and provides that the Secretary may establish such a process for the other three MIPS performance categories. Section 1848(q)(1)(D)(ii) of the Act requires that the process we establish and apply under section 1848(q)(1)(D)(i) of the Act, to the extent practicable, must reflect the range of items and services provided by the MIPS eligible clinicians within the group practice. In accordance with the statute, in the CY 2022 PFS final rule, we finalized the MIPS Value Pathways (MVP) reporting option for MIPS eligible clinicians beginning in the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). To support CMS' goal of phasing out traditional MIPS and transitioning to MVP reporting, we are proposing policies that would enable groups to self-identify their specialty composition and submit MVP data that appropriately reflects the diverse range of services provided by the clinicians within the group. These policies would also help groups in assessing whether they would need to participate as subgroups, based on the scope of care provided by the clinicians within a group. Additionally, the proposed subgroup policies would continue the voluntary subgroup participation option for multispecialty group practices that qualify as small practices. Additionally, we seek feedback on developing a subset of key quality measures within MVPs to better enable comparison of clinician performance and emphasize measures that reflect the core of a specialty. We also seek feedback on the consideration to identify Medicare Part B procedural billing codes that align with each MVP, and to encourage, or potentially require, specialists to report the relevant MVP based on their use of the procedural billing codes.

a. Subgroup Reporting

(1) Background

In the CY 2022 PFS final rule, we finalized the option for MIPS eligible clinicians to participate as subgroups for reporting MVPs beginning in the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to regulations at §§ 414.1305, 414.1318, and 414.1365 and the CY 2022 PFS final rule (86 FR 65398 through 65405), the CY 2023 PFS final rule (87 FR 70038 through 70045), and the CY 2024 PFS final rule (88 FR 79323 through 79328) for additional details on previously finalized subgroup policies.

In the CY 2022 PFS final rule (86 FR 65392 through 65394), we finalized the definition of an MVP participant at § 414.1305. Beginning with the CY 2023 performance period/2025 MIPS payment year, an MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM

Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. We also finalized at § 414.1305 that, beginning with the CY 2026 performance period/2028 MIPS payment year, an MVP Participant means an individual MIPS eligible clinician, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories (86 FR 65392 through 65394). We excluded ''multispecialty group'' from the MVP participant definition beginning with the CY 2026 performance period/2028 MIPS payment year and replaced the term with ''subgroup'' to account for the requirement for multispecialty groups to divide into subgroups if they choose to report MVPs.

Under the MVP Participant definition codified at § 414.1305, multispecialty groups and single specialty groups may report as groups or choose to form subgroups to report MVPs for the CY 2023 performance period/2025 MIPS payment year through the CY 2025 performance period/2027 MIPS payment year. Beginning with the CY 2026 MIPS performance period/2028 MIPS payment year, multispecialty groups will no longer be able to report MVP as a single group. This will mean that if a multispecialty group would like to report an MVP, beginning with the CY 2026 MIPS performance period/2028 MIPS payment year, MIPS eligible clinicians in multispecialty groups must divide into and report as subgroup or report as an individual to report an MVP. Alternatively, MIPS eligible clinicians in multispecialty groups may continue to participate in traditional MIPS reporting. In the CY 2023 PFS final rule (87 FR 70038 through 70040), we finalized at § 414.1305 the definitions of a single specialty group and a multispecialty group. Specifically, a single specialty group means a group as defined at § 414.1305 consisting of one specialty type, as determined by CMS using Medicare Part B claims. A multispecialty group means a group as defined at § 414.1305 consisting of two or more specialty types, as determined by CMS using Medicare Part B claims.

In the CY 2022 PFS final rule (86 FR 65415 through 65418), we also established a registration process at § 414.1365(b) for clinicians who choose to participate in MVP reporting. Under this policy, an MVP participant must register between April 1 and November 30 of the applicable calendar year performance period, or a later date specified by CMS. An MVP participant that elects to report the CAHPS for MIPS Survey associated with an MVP must complete their registration by June 30 of the applicable performance period. Section 414.1365(b)(2)(i) further provides that the MVP participant must select an MVP they intend to report and may select an outcomes-based administrative claims measure if available in the selected MVP (86 FR 65416 through 65417). We refer readers to the CY 2022 PFS final rule (86 FR 65415 through 65418) for additional details on MVP and subgroup registration requirements.

In this section, we propose to: (1) maintain the MVP group reporting option for multispecialty groups with a small practice designation and (2) modify the MVP group registration process to add the self-attestation requirement.

(2) Maintain the MVP Group Reporting Option for Small Practices

At § 414.1305, beginning with the CY 2019 performance period/2021 MIPS payment year, we define a small practice to mean a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period. As discussed in section IV.A.3.a.(1) of this proposed rule, we previously finalized subgroup reporting requirements for multispecialty groups beginning in the CY 2026 performance period/2028 MIPS payment year (86 FR 39360). Under this policy, a multispecialty group designated as a small practice (with 15 or fewer eligible clinicians) will not be allowed to participate as a single group in MVP reporting. If clinicians in such groups would like to participate in MVP reporting, beginning in the CY 2026 performance period/2028 MIPS payment year, such groups will currently need to divide into subgroups. Alternatively, clinicians in these groups could participate as individuals in MVP reporting or continue to report at the group level in traditional MIPS reporting.

We acknowledge that, like large groups, small practices could be classified as a single specialty or multispecialty groups. However, we do not believe there are additional benefits to require a small practice of 15 or fewer clinicians to further divide into smaller subgroups as we anticipate that multiple subgroups within a small practice could choose to report the same set of measures within the same MVP. Historically, we have received feedback from MIPS eligible clinicians in small practices expressing concerns regarding the lack of adequate resources for these clinicians to meet MIPS reporting requirements. Additionally, we are concerned that requiring small practices to divide into smaller subgroups could negatively impact small practices as the subgroups may not meet the established case minimums for the quality measures in the selected MVP, resulting in lower scores. We recognize the challenges for small group practices to allocate the resources needed to administer quality reporting requirements. We are concerned that if we require multispecialty groups that qualify as small practices to divide and report as subgroups, these practices would avoid participating in MVP reporting and continue to participate in traditional MIPS reporting. Based on the 2022 Quality Payment Program Experience Report (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2817/2022ExperienceReport.pdf*), there is a decrease in MIPS participation from clinicians in small practices from the CY 2021 performance period/2023 MIPS payment year to the CY 2022 performance period/2024 MIPS payment year. Given that we intend to sunset traditional MIPS in a future year, we want to adopt policies which would reduce barriers for small group practices to transition to MVP reporting. Therefore, it would be beneficial to continue the MVP group reporting option for small practices regardless of the specialty composition of the clinicians within the small practices.

For the above reasons, we propose to modify the definition of an MVP participant at § 414.1305 to provide that multispecialty groups that meet the requirements of a small practice may be MVP participants. Because multispecialty groups that meet the requirements of a small practice would meet the definition of an MVP participant, they would, unlike other multispecialty groups, be permitted to report an MVP as a single group. Specifically, we propose to modify the definition of an MVP participant at § 414.1305 to provide that, for the CY 2026 performance period/2028 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, multispecialty group that meets the requirements of a small practice, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

Under this proposal, to utilize the MVP reporting option, a multispecialty group that meets the requirements of a small practice would not be required to divide and report as subgroups, although it could still do so if it chooses.

We seek comments on the above proposal to modify the MVP participant definition at § 414.1305 by adding the

term ''multispecialty group that meets the requirements of a small practice'' to maintain the MVP group reporting option for groups with a small practice designation.

(3) Proposal To Modify the MVP Group Registration Process

Beginning in the CY 2026 performance period/2028 MIPS payment year, to implement the subgroup reporting requirement for multispecialty groups as previously discussed, we would need to determine the specialty composition of a group as a single specialty or multispecialty group as defined at § 414.1305. Currently in the Quality Payment Program, we assign specialty type for MIPS eligible clinicians at the individual clinician (or TIN–NPI) level and not collectively at the group (or TIN) level. As discussed in the CY 2023 PFS final rule (87 FR 70039), we currently use the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) and Medicare Part B claims data to identify clinician specialty for different purposes. For public reporting purposes, we rely on PECOS as the primary data source, and for purposes of MIPS eligibility determination, we use both PECOS and claims data. Additionally, we use the information on claims to identify clinician specialty when attributing some of the measures in the cost and quality performance categories.

As discussed above in section IV.A.3.a.(1) of this proposed rule, we finalized at § 414.1305 in the CY 2023 PFS final rule (87 FR 70038 through 70040) the definition of a single specialty group as a group consisting of one specialty type, and the definition of a multispecialty group as a group consisting of two or more specialty types, as determined by CMS using Medicare Part B claims. In the CY 2023 PFS final rule (87 FR 70039 through 70040), we received mixed feedback from commenters on the proposal to utilize claims data for identifying specialty composition of a group. Many were concerned that the specialty information indicated on Medicare Part B claims is not an accurate representation of the actual care provided by the various clinicians in a multispecialty group. A few commenters recommended the use of a specialty attestation process during subgroup registration instead of using the claims data. In responding to the comments received regarding the recommendation to consider a specialty attestation process, we explained our intent was to provide group specialty designations either as a single specialty or multispecialty group in advance of the MVP registration process, allowing group practices to make changes in their administrative workflows accordingly (87 FR70040).

To operationalize the previously finalized definitions of a single specialty and multispecialty group and to implement the previously finalized CY 2026 subgroup reporting requirement for multispecialty group practices, we considered utilizing claims data to assign these specialty designations to group practices. After further analyzing the claims data, we recognize and agree there are additional nuances to consider in using the claims analysis to accurately identify the specialty composition of a group.

For example, the claims data may not reflect the care provided by certain clinician types in a group, such as nurse practitioners (NPs), and physician assistants (PAs). The NPs and PAs that are part of group practices could be involved in more than one clinical focus and the specialty information on claims for these clinicians reflects their educational credentials rather than the type of care provided.

We recognize there could be instances when a group practice consists of clinicians across multiple specialty types but provides care in a single clinical area. We are also concerned that using the individual clinician (or NPI) level specialty code information available from the claims data to collectively designate a group as either a single specialty or multispecialty would inadvertently misrepresent the specialty composition of a group because of the way clinician specialty is reflected on claims. For example, claims data would indicate that a group practice, focused on providing cardiovascular care for patients and consisting of internists, cardiologists, NPs, and PAs, meets our definition of a multispecialty group. If we use claims data to implement the previously finalized definitions of single specialty and multispecialty groups, this group providing cardiovascular care would be designated as a multispecialty group and will be required to form subgroups for reporting an MVP beginning in the CY 2026 performance period/2028 MIPS payment year. Given the single clinical focus of care provided by all the clinicians in such group practice, we anticipate the multiple subgroups within such group would choose to report the measures and activities in the Advancing Care for Heart Disease MVP, resulting in redundant data submissions. In such instances, we acknowledge utilizing the claims data would result in CMS incorrectly identifying a group's specialty composition as a single specialty or a multispecialty group.

Additionally, we acknowledge that the composition of groups may not be constant due to several factors unrelated to MVP policies (for example, clinician turnover and acquisitions or consolidation of practices). In instances when the overall composition of a group changes due to clinician turnover, consolidation of practices, or other reasons, the specialty designations provided by CMS may not fully capture the changes in the group composition during a performance period. Therefore, we are unable to utilize the claims data at this time to evaluate the specialty composition of a group or to designate a group practice as either a single specialty or a multispecialty group. We recognize we need to conduct a thorough analysis of the claims data to pursue an effective and sophisticated approach for assessing the feasibility of appropriately assigning specialty designations to groups. Please see our discussion in section IV.A.3.c. of this proposed rule for language associated with the Medicare Procedural Codes Request for Information (RFI), where we discuss potential alternative approaches for utilizing Medicare Part B claims to identify clinician specialties within a group for considering policies encouraging MIPS eligible clinicians to report an MVP aligned with the scope of care provided.

In lieu of using the claims data for designating a group as either a single specialty or a multispecialty group, we propose that to report an MVP, a group practice which is either a single-specialty group or a multispecialty group that meets the requirements of a small practice, would be required to attest to its designation as a group that meets the requirements of a single specialty group, or a multispecialty group that meets the requirements of a small practice, respectively. We note that we are not proposing the self-attestation requirement for subgroups because under the current policy at § 414.1365(b), subgroup registration is an additional step in the MVP registration process for multispecialty groups choosing to report an MVP. We refer readers to the CY 2022 and CY 2023 PFS final rules (86 FR 65415 through 65418 and 87 FR 70040 through 70041) for previously finalized MVP subgroup registration requirements.

In section IV.A.3.a.(2) of this proposed rule, we are proposing to expand the definition of MVP Participant to include multispecialty groups meeting the requirements of small practices. Under this proposal, a

multispecialty group practice consisting of 15 or fewer clinicians that chooses to report an MVP would be exempt from the requirement to participate as subgroups. For a group practice consisting of 16 or more clinicians, and the clinicians within the group are involved in a single focus of care, we anticipate the group practice would attest as a single specialty group and register as a single group for MVP reporting. If a group practice consists of 16 or more clinicians and the clinicians within the group are involved in multiple foci of care, the group practice cannot register for MVP reporting as a single group. MIPS eligible clinicians in such groups would need to divide into subgroups or if applicable, participate as individuals for reporting an MVP.

To align with the proposed self-attestation process during MVP registration as a mechanism for identifying the group specialty composition, we propose modifying the definitions of a single specialty group and a multispecialty group. These proposed updates and the self-attestation requirement for groups participating in MVP reporting would enable group practices to assess their need for participation as subgroups based on the scope of care provided by the clinicians within the group. Additionally, the proposed updates would allow either a single-specialty group or a multispecialty group that meets the requirements of a small practice to self-identify themselves and report the MVP as a single group. This proposed process would also alleviate the concerns associated with determining a group's specialty composition due to inaccurate representation of the clinician specialty information on the claims data.

For the above reasons, to implement the previously finalized subgroup reporting requirement for multispecialty group practices beginning with CY 2026 performance period/2028 MIPS payment year and to operationalize the definitions of a single specialty and multispecialty group, we are proposing updates to the previously finalized MVP registration process to include the addition of a self-attestation process for groups to identify themselves as either a single specialty group or a multispecialty group that meets the requirements of a small practice. Specifically, we are proposing that, beginning with the CY 2026 performance period/2028 MIPS payment year, a group practice registering for MVP reporting that intends to participate as a single group would need to attest either as a single specialty group or a multispecialty group that meets the requirements of a small practice during MVP registration.

We propose to codify this proposal at § 414.1365(b)(2)(iv), providing that, beginning with the CY 2026 performance period/2028 MIPS payment year, to report an MVP, a group must attest to being either a single specialty group or a multispecialty group that meets the requirements of a small practice. As discussed above in this section of the proposed rule, at this time, we are unable to utilize claims data for designating a group as either a single specialty group or a multispecialty group. Therefore, we propose to make conforming changes and revise the current definitions of a single specialty group and a multispecialty group at § 414.1305. We propose to revise the definition of a single specialty group at § 414.1305 to mean a group that consists of clinicians in one specialty type or clinicians involved in a single focus of care. We propose to revise the definition of a multispecialty group at § 414.1305 to mean a group that consists of clinicians in two or more specialty types or clinicians involved in multiple foci of care.

We seek public comments on the above proposal to update the MVP group registration by adding a self-attestation requirement. We also seek comment on our conforming proposals to update the definitions of a single specialty group and a multispecialty group. We refer readers to section V.B.5.c.(6).(b). of this proposed rule for discussion on the burden estimates for these proposals.

b. Core Elements Request for Information (RFI)

One of the goals of the transition from traditional MIPS to MVPs is to provide patients with comparative clinician performance data to make better assessments of the care provided to patients by requiring clinicians within an MVP to report on the same group of measures. While MVPs were designed to reduce the burden of measure selection by narrowing the scope of large, unaligned inventories, some MVPs still have a large selection of measures to accommodate the variety of clinicians who may choose to report that MVP. The MVPs finalized for the CY 2025 performance period/2027 MIPS payment year contain an average of 14 quality measures for MVP Participants to select from, ranging from 8 to 24 quality measures in each MVP (89 FR 98972 through 99056). Given this degree of measure volume, we are concerned that MVP reporting may not produce sufficient comparative performance data on standardized measures to support patient choice of care. We are considering policies to ensure more direct comparability by requiring the reporting of a subset of measures within an MVP that are meaningful for clinicians and patients.

Specifically, we are considering a policy to require an MVP Participant to select one quality measure from a subset of quality measures in each MVP, referred to as ''Core Elements.'' MVP Participants would select the other three required quality measures and would still have to meet existing MVP reporting requirements. This policy aims to emphasize and increase reporting on select quality measures that are most important to clinicians and patients and reflect care that is at the crux of the MVP's applicable specialty, medical condition, or episode of care. Core Elements could be, but would not necessarily be, outcomes measures. Core Elements would highlight measures that represent the foundation and essence of an MVP. The resulting standardized reporting would lead to more directly comparable clinician data on a subset of key quality measures within an MVP that constitute critical elements within that specialty which will better enable patients to compare the care provided to patients, emphasize a crucial subset of quality measures, and may also drive quality and outcome improvement.

The quality measures identified as Core Elements for an MVP would be meaningful and reflect the critical care elements for each MVP's relevant specialty, medical condition or episode of care. We may also consider Core Elements from the Adult Universal Foundation quality measures or the MVP's Advancing Health and Wellness quality measures subcategory, when possible.

If we propose implementing Core Elements in MVPs, we would propose Core Elements for existing MVPs via notice and comment rulemaking. When new MVPs are proposed, we would identify the MVP's Core Elements at that time through notice and comment rulemaking. Given the existing quality measure gaps for certain specialists and subspecialists, there may be clinicians for whom there would not be an applicable and available Core Element.

We are considering proposing the Core Elements policy in the CY 2027 PFS proposed rule and proposing the policy for implementation prior to the sunset of traditional MIPS. In the CY 2025 PFS proposed rule, we discussed that we anticipate we may be ready to fully transition to MVPs by the CY 2029 performance period/2031 MIPS payment year (89 FR 62012).

RFI Questions

We request public comment on the following questions related to MVP Core Elements:

- One of the key goals of Core Elements is to provide patients with enough information across different clinicians to compare specialist performance on foundational measures within a clinical area. Are there other ways to ensure MVP reporting results provide comparative performance data for patients on critical measures?
- Core Elements will be selected based on clinical relevance, but for consistency across MVPs, we are considering a set number of Core Elements for all MVPs. We are also considering setting the number of Core Elements in an MVP based on a percentage of the total number of quality measures in an MVP. For example, we may consider a policy that identifies 25 percent of an MVP's quality measures as Core Elements, such that an MVP with 12 quality measures would have three Core Elements measures to choose from. We request feedback on the ideal number or percentage of Core Elements in MVPs.
- One of our concerns is that Core Elements specified for a few collection types, such as electronic clinical quality measures (eCQMs) or Qualified Clinical Data Registry (QCDR) measures, would limit clinician choice and may unintentionally force clinicians to report via intermediaries. One possible solution would be to include Core Elements with several different collection types, when possible, to provide clinicians with some choice of collection type. Are there other flexibilities or options that could reduce this limitation?
- We are considering policies to increase the likelihood that clinicians have an applicable and available Core Element. We request feedback on ways to include measures that are applicable for more clinicians, such as including cross-cutting and broadly applicable measures. We also request feedback on ways to avoid disadvantaging clinicians without an applicable Core Element, such as attesting to no applicable and available Core Element.
- As we consider which measures should be used as Core Elements, we are interested in receiving feedback on specific measures that should or should not be considered for the Core Elements requirement, including measures in the proposed Advancing Health and Wellness quality measures clinical grouping, as discussed in section IV.A.4.a.(2) of this proposed rule, or Adult Universal Foundation quality measures.
- We request feedback on our goal to consider the Core Elements policy for proposal in the CY 2027 PFS proposed rule.
- We understand the Core Elements requirement places a new restriction on MVP reporting. We request feedback on whether the Core Elements reporting requirement would impact your decision to report an MVP while traditional MIPS remains a reporting option.

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

c. Medicare Procedural Codes Request for Information (RFI)

Alongside the proposed subgroup policies and the RFI on MVP Core Elements requirements in sections IV.A.3.a and IV.A.3.b. of this proposed rule, we are considering utilizing Medicare procedural codes to further facilitate more MVP specialty reporting and to encourage and potentially require specialists to report an MVP applicable to their specialty or scope of care. In the CY 2022 PFS final rule, we finalized the MVP reporting option for MIPS eligible clinicians beginning in the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). To advance our goal of phasing out traditional MIPS and fully transitioning to MVP reporting, we continue to develop and maintain MVPs that are meaningful and relevant to the clinicians currently participating in MIPS. For the CY 2025 performance period, there are 21 MVPs available, covering the services provided by a wide range of clinician specialty types. Based on internal data, we received over 2,000 MVP registrations (including groups, individual clinicians, and subgroups) for the CY 2024 MIPS performance period/2026 MIPS payment year. Exploring approaches to utilize Medicare procedural billing codes for appropriately identifying MVPs relevant to a clinician specialty type could further increase MVP participation from MIPS eligible clinicians and groups.

Currently, MVP Participants may select any MVP to report. We recognize that a policy to assign clinicians to a particular MVP would limit the ability for clinicians to choose an MVP and therefore limit the measures they can select to report. However, it is important to ensure that clinicians report an MVP that is relevant to their specialty or scope of care to make performance measurement more clinically relevant for specialists and inform patient choice of care with meaningful and comparative clinician performance data. Therefore, we are considering a potential future policy to require clinicians to report a specific MVP based on the procedural codes that they bill. Furthermore, there may be measures within an MVP that are more relevant to an individual specialist based on the types of services they perform, so we are further considering requiring specialists to report specific measures within an MVP. See section IV.A.3.b. of this proposed rule for discussion of the Core Elements RFI.

Efforts were made in the CY 2025 PFS final rule to further the goal of using quality measurement to advance specific types of care. For example, we introduced the Advanced Primary Care Management (APCM) services (89 FR 97858 through 97906) coding and payment. APCM includes a performance measurement requirement for clinicians furnishing APCM services to assess clinicians on primary care quality, total cost of care, and meaningful use of CEHRT. The performance measurement requirements can be met for practitioners who are MIPS eligible clinicians by registering for and reporting the Value in Primary Care MVP. A practitioner who is part of a TIN participating in a Shared Savings Program ACO or REACH ACO, or in a Making Care Primary or a Primary Care First practice satisfies this requirement by virtue of meeting requirements under the Shared Savings Program, CMS Innovation Center ACO REACH, Making Care Primary, or Primary Care First models (89 FR 97879 through 97894).

In section III.D. of this proposed rule, the Innovation Center is proposing to test a mandatory model that focuses on high-volume, high-cost chronic-conditions and directly engages specialists in value-based payment. Specifically, the Ambulatory Specialty Model (ASM) is proposing the identification of a physician's specialty type using the specialty code on the

Medicare Part B claims data, in conjunction with a minimum volume of episodes triggered for the relevant condition-specific episode-based cost measure to identify specialists to include in the model. We refer readers to section III.D. of this rule for additional details on the model requirements and correlation to the existing MVP framework.

The frameworks used in APCM, where practitioners who are MIPS eligible clinicians must register for and report the Value in Primary Care MVP for the performance year in which they bill for APCM services (89 FR 97893 and 97894), and the proposed ASM in section III.D. of this proposed rule where procedural codes from Medicare Part B claims data would attribute clinicians to MVPs via cost measures, may be useful tools for increasing specialty reporting in MVPs and ultimately improving quality performance measurement. We are considering an approach that would identify relevant procedural codes for each MVP, where applicable, and then identify clinicians to report that MVP based on their billing of those procedural codes. We would prioritize linking MVPs with high-utilization and high-cost procedures. For example, quality measures in the Improving Care for Lower Extremity Joint Repair MVP such as 350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy and 351: Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation would be relevant for clinicians who perform hip replacement surgery and bill hip replacement surgery procedural codes. We therefore may connect the hip replacement surgery procedural codes to the Improving Care for Lower Extremity Joint Repair MVP and the relevant quality measures to encourage clinicians to report measures that are relevant to their scope of care, such as these RFI Questions.

We request public comment on the following questions related to the use of Medicare procedural codes to suggest or assign MVPs:

- If we do not suggest or assign MVPs to clinicians, how else can we encourage specialty reporting of relevant MVPs based on the scope of care provided?
- What data sources should we consider using to assign clinicians to an MVP?

To appropriately determine the relevance of the measures and activities in an MVP to the scope of care provided by the clinicians, we are considering using procedural billing codes from Medicare Part B claims data. We refer readers to section IV.A.3.a.(3) of this proposed rule for a discussion of our concerns for using Medicare Part B claims data to identify the specialty composition of a group.

- The MIPS determination period is used to determine MIPS eligibility and, as defined at § 414.1305, begins the calendar year, 2 years prior to the applicable performance period. Would it be appropriate to align with that timeline and use the procedural billing codes from Medicare Part B claims data from 2 years prior to the performance year in which a clinician would report the particular MVP?
- We are considering setting a volume threshold that clinicians must meet to be assigned to a particular MVP. For example, we may consider a threshold of 20 cases in order to be assigned to the MVP, given the case minimum requirement of 20 cases for most measures. What would be an appropriate volume threshold for the procedural billing codes?
- If we suggest or require the reporting of a particular MVP, we would limit clinicians' current flexibility to choose an MVP. Additionally, it would take time for CMS to identify effective approaches to operationalize this concept. Given these constraints, how long would clinicians need to prepare for a suggested MVP based on Medicare Part B claims data? How long would clinicians need to prepare for a required MVP based on Medicare Part B claims data?

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

d. Well-Being and Nutrition Measures Request for Information (RFI)

We are seeking input on well-being and nutrition measures for future years in the QPP. Well-being is a comprehensive approach to disease prevention and health promotion, as it integrates mental and physical health while emphasizing preventative care to proactively address potential health issues.[335] This comprehensive approach emphasizes person-centered care by promoting the well-being of patients and family members. We are seeking comments on tools and measures that assess overall health, happiness, and satisfaction in life that could include aspects of emotional well-being, social connections, purpose, and fulfillment. We would like to receive input and comments on the applicability of tools and constructs that assess for the integration of complementary and integrative health, skill building, and self-care. Please provide feedback on the relevant aspects of well-being for the QPP. We refer readers to section IV.A.4.a.(2) of this proposed rule for discussion of the proposed Advancing Health and Wellness quality measure clinical grouping in MVPs.

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

4. QPP Reporting and Data Submission

a. CY 2026 MVP Development and Maintenance

(1) Development of New MIPS Value Pathways (MVPs)

In the CY 2023 PFS final rule (87 FR 70035 through 70037), we finalized modifications to the MVP development process to broaden opportunities for the general public to provide feedback on new candidate MVPs prior to the notice and comment rulemaking process. We refer readers to the Quality Payment Program website to review the public feedback we received for each 2026 MVP candidate (*https://qpp.cms.gov/mips/candidate-feedback*).

Through our development processes for new MVPs (85 FR 84849 through 84856; 87 FR 70035 through 70037), we

[335] Well-Being Concepts. (2017). CDC Archives. Available at: *https://www.naspa.org/images/uploads/kcs/WHPL_Canon_WB_WellBeing_Concepts___HRQOL___CDC_2017.pdf.*

aim to gradually develop new MVPs that are relevant and meaningful for MIPS eligible clinicians. In this proposed rule, we are proposing to adopt the following six new MVPs:

- Diagnostic Radiology;
- Interventional Radiology;
- Neuropsychology;
- Pathology;
- Podiatry; and
- Vascular Surgery.

We refer readers to Appendix 3: MVP Inventory, in this proposed rule for a detailed description of each proposed new MVP.

We continue to encourage interested parties to utilize our established pre-rulemaking processes to develop and submit candidate quality and cost measures relevant to their specialty. Furthermore, we continue to develop MVPs based on needs and priorities, as described in the MVP Needs and Priorities document (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1803/MIPS%20Value%20Pathways%20(MVPs)%20Development%20Resources.zip),*

(2) MVP Maintenance Updates to Previously Finalized MVPs

Between the CY 2022 PFS final rule (86 FR 65998 through 66031) and the CY 2023 PFS final rule (87 FR 70037), we finalized the following 12 MVPs to be available for reporting beginning with the CY 2023 performance period/2025 MIPS payment year:

- Adopting Best Practices and Promoting Patient Safety within Emergency Medicine;
- Advancing Cancer Care;
- Advancing Care for Heart Disease;
- Advancing Rheumatology Patient Care;
- Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes;
- Improving Care for Lower Extremity Joint Repair;
- Optimizing Chronic Disease Management;
- Optimal Care for Kidney Health;
- Optimal Care for Neurological Conditions;
- Patient Safety and Support of Positive Experiences with Anesthesia;
- Promoting Wellness; and
- Supportive Care for Cognitive-Based Neurological Conditions.

In the CY 2024 PFS final rule (88 FR 79978 through 80047), we consolidated Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single primary care MVP titled ''Value in Primary Care MVP'' as well as finalized the following five additional MVPs to be available for reporting beginning with the CY 2024 performance period/2026 MIPS payment year:

- Focusing on Women's Health;
- Prevention and Treatment of Infectious Disorders Including Hepatitis C and Human Immunodeficiency Virus (HIV);
- Quality Care for the Treatment of Ear, Nose, and Throat Disorders;
- Quality Care in Mental Health and Substance Use Disorder; and
- Rehabilitative Support for Musculoskeletal Care.

In the CY 2025 PFS final rule (88 FR 79978 through 80047), we consolidated Optimal Care for Patients with Episodic Neurological Conditions and the Supportive Care for Neurodegenerative Conditions MVPs into a single neurological MVP titled ''Quality Care for Patients with Neurological Conditions MVP'' as well as finalized the following six additional MVPs to be available for reporting beginning with the CY 2025 performance period/2027 MIPS payment year:

- Complete Ophthalmologic Care;
- Dermatological Care;
- Gastroenterology Care;
- Pulmonology Care; and
- Surgical Care.

In this proposed rule, we are proposing modifications to all 21 previously finalized MVPs with the addition and removal of measures and improvement activities based on the MVP development criteria we previously established (85 FR 84849 through 84854). Through these modifications, we can expand upon the clinical concepts, advance health and wellness, address maintenance requests from the public, and remove measures and activities that would either be finalized for removal from their respective MIPS Inventory or replaced by more robust measures or activities.

Additionally, we have updated the format of the MVP tables to stratify quality measures by clinical conditions and/or episodes of care for each MVP. The new format does not change the measures and activities included in the MVP. It is intended to provide a more user-friendly format for MIPS eligible clinicians when choosing the measures and activities most applicable to their practice. We refer readers to Appendix 3: MVP Inventory of this proposed rule for the proposed modifications and detailed descriptions to the previously finalized MVPs. We also refer readers to section V.B.5.c.(6)(a) of this proposed rule for discussion on the burden estimates for these proposals.

(3) Third Party Intermediaries Support of MVPs

We refer readers to our regulation at § 414.1400 and section IV.B.4. of this proposed rule for more detailed discussion regarding our previously finalized requirements for third party intermediaries to submit data on behalf of MIPS eligible clinicians for certain MIPS performance categories. In the CY 2022 PFS final rule (86 FR 65542 through 65544), we finalized a new requirement at § 414.1400(b)(1)(ii) to state that, beginning with the CY 2023 performance period/2025 MIPS payment year, qualified clinical data registries (QCDRs) and qualified registries (as these terms are defined at § 414.1305) must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. This regulatory provision does not specifically address by when the QCDRs and qualified registries must support the MVPs. However, since finalizing this policy in the CY 2022 PFS final rule, QCDRs and qualified registries have been expected to be ready to support each newly finalized MVP that are applicable to their MIPS eligible clinicians for the first year of the MVP's implementation.

We acknowledge that some QCDRs and qualified registries may have difficulties programming new measures and preparing their systems to support MVP reporting within the brief timeframe from when we typically issue the PFS final rule and its effective date, which only allows 2 months for implementation (typically from November of one year to January of the next year). We have heard concerns from QCDRs and qualified registries regarding feasibility of meeting this requirement at § 414.1400(b)(1)(ii), such as the cost of implementing registry measures and working with other parties who may charge for QCDR measure use. QCDRs and qualified registries that are not ready to support applicable MVPs risk termination as they would not be in compliance with the requirement to support all applicable MVPs. Withdrawal and termination would also result in the removal of QCDR measures implemented in MIPS.

On these bases, we are proposing to modify the language currently set forth at § 414.1400(b)(1)(ii). As discussed previously, § 414.1400(b)(1)(ii) currently provides that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data.

We are proposing to modify § 414.1400(b)(1)(ii) to provide that, beginning with the CY 2026 performance period/2028 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data no later than one year after finalization of the MVP in accordance with the current requirement. We are also proposing to sunset the current requirement as of the end of the CY 2025 performance period/2027 MIPS payment year. We are proposing to retain the remaining language currently set forth at § 414.1400(b)(1)(ii) without modification.

This proposed modification will provide QCDRs and qualified registries with one year following the effective date of the final rule for programming and system preparation for MVP reporting success and reduce potential of withdrawal or termination.

We invite comments on our proposal.

b. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning with the CY 2021 performance period/2023 MIPS payment year. The APP was designed as a reporting and scoring pathway available only to MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity participating in a MIPS APM as defined in § 414.1305 (MIPS APM participants) (§ 414.1367(a)). The APP provides a predictable and consistent MIPS reporting option to reduce reporting burden for, and encourage continued APM participation by, these clinicians. We also established in the APM Performance Pathway for Shared Savings Program ACOs providing that, beginning with the Shared Savings Program performance year 2021 (CY 2021 performance period/2023 MIPS payment year), ACOs were required to report quality data for purposes of the Shared Savings Program via the APP (42 CFR 425.512(a)(3); 85 FR 84722).

In that same rule, we finalized a quality measure set (85 FR 84860 and 84861) for purposes of quality performance category scoring for the APP. For those MIPS eligible clinicians, groups, or APM Entities for whom a given measure is unavailable due to the size of the available patient population or who are otherwise unable to meet the minimum case threshold for a measure, we established that such measure would be removed from the quality performance category score for such MIPS eligible clinician, group, or APM Entity (85 FR 84861).

In the CY 2025 PFS final rule (89 FR 98562), we finalized a second, optional quality measure set within the APP, called the APP Plus quality measure set, to align with the Universal Foundation measure set. The measure set currently includes the current APP quality measures and 2 additional quality measures from the Adult Universal Foundation measure set. As discussed in the CY 2025 PFS final rule, we intend to incrementally add the remaining 3 Adult Universal Foundation measures by the CY 2028 performance period/2030 MIPS payment year. We also finalized a 1-year delay to the CY 2026 performance year/2027 MIPS payment year in the incorporation of the Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID #484) measure.

Further, for MIPS eligible clinicians, groups, and APM Entities reporting through the APP, we established in the CY 2021 PFS final rule (85 FR 84907) that we would not apply the quality measure scoring cap at § 414.1380(b)(1)(iv) in the event that a measure in the APP quality measure set is determined to be topped out. Because the APP quality measure set is fixed, we noted that it would not be appropriate to limit the maximum quality performance category score available to APP reporters. Should an APP quality measure be determined to be topped out, we would at that time consider amending the APP quality measure set through future rulemaking, if appropriate.

In the CY 2024 PFS final rule (88 FR 79329), we established the Medicare Clinical Quality Measure for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) collection type in the APP quality measure set and finalized that the Medicare CQM collection type would be available to only ACOs participating in the Shared Savings Program.

(2) Updates to Quality Measures in the APP and APP Plus Quality Measure Sets

In the CY 2021 PFS final rule, we adopted the original APP quality measure set (85 FR 84860 and 84861). Table 52 contains the original APP quality measure set. In the CY 2025 PFS final rule, we finalized a phased approach to establish the APP Plus quality measure set over four years (89 FR 62024), including by incorporating into the APP Plus quality measure set the measures from the original APP quality measure set.

To conform with changes to the MIPS quality measure inventory, as set forth in Table Group DD and Table Group C of this proposed rule, we are proposing to incorporate the updated versions of MIPS quality measures used in the APP quality measure set. We refer to readers the proposed revisions to the following MIPS measures:

- *Preventive Care and Screening:* Screening for Depression and Follow-up Plan (Quality ID: 134).
- Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID: 484) Because the APP is a reporting pathway within MIPS, all of the quality measures offered through the APP are the MIPS versions of the measures. As such, we generally take the approach of adopting changes to APP and APP Plus quality measures to conform with changes to the same measures within MIPS as a whole.

In the CY 2025 PFS final rule, we finalized a phased approach to establish the APP Plus quality measure set over 4 years (89 FR 62024). As finalized, the APP Plus quality measure set currently consists of all the measures currently within the APP quality measure set (5 Adult Universal Foundation measures and a separate quality measure) plus 1 additional measure from the Adult Universal Foundation measure set, with the intention of incrementally incorporating the remaining measures from the Adult Universal Foundation measure set by the CY 2028 performance year/2030 MIPS payment year. We finalized this incremental approach in part to allow for both the eCQM and, for Shared Savings ACOs, Medicare CQM collection types to be developed and become available.

We refer readers to Table 52 for the APP quality measure set beginning with the CY 2025 performance period/2027 MIPS payment year. The APP Plus quality measure sets for the CY 2026, 2027, and 2028 performance periods and subsequent performance periods are displayed in Tables 53, 54, and 55 respectively.

Because the APP is a feature within MIPS and therefore the quality measures used within the APP and APP Plus quality measure sets are all MIPS measures, any updates CMS applies to MIPS measures also are incorporated into the APP and APP Plus quality measure sets, accordingly. As set forth in Table Group DD and Table Group C of this proposed rule, we note that we are proposing changes to the following measures that are part of the APP Plus quality measure set:

- Breast Cancer Screening (Quality ID: 112).
- Colorectal Cancer Screening (Quality ID: 113).
- Preventive Care and Screening: Screening for Depression and Follow-up Plan (Quality ID: 134; eCQM collection type only).
- Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Quality ID: 484).
- Screening for Social Drivers of Health (Quality ID: 487).

These changes have been reflected in the Tables 54, 55, 56, and 57. For further discussion and rationale for the proposed modification or removal of these measures is provided at (Table Group DD and Table Group C of this proposed rule). Again, because the APP is a reporting pathway within MIPS, all of the quality measures offered through the APP are the MIPS versions of such measures, and we generally take the approach of adopting updates made to the MIPS measures for use in the APP quality measure sets.

* Indicates this measure will be incorporated into the APP Plus quality measure set in the CY 2028 performance period/2030 MIPS payment year, or the performance period that is one year after the eCQM specification becomes available, whichever is later.

BILLING CODE 4120–01–C

c. Toward Digital Quality Measurement in CMS Quality Programs—Request for Information

We have previously issued requests for information (RFIs) to gather public input on the transition to digital quality measurement (dQM) for CMS programs.[336] This RFI provides updates on our progress and seeks input as we continue our path forward in the dQM transition.

In this RFI, we are soliciting comments on our anticipated approach to the use of Health Level Seven® (HL7®) Fast Healthcare Interoperability Resources® (FHIR®) in electronic clinical quality measure (eCQM) reporting. Currently, several CMS programs use, or are considering using, eCQMs for various clinicians, facilities, providers, and other organizations to report their respective quality performance data. These CMS programs include the Medicare Shared Savings Program (Shared Savings Program) and the Quality Payment Program, particularly the Merit-Based Incentive Payment System (MIPS) quality performance category. We are seeking feedback on FHIR-based eCQM activities in these programs. We included a similar RFI in the FY 2026 Inpatient Prospective Payment System (IPPS)/Long-Term Care Hospital (LTCH) Prospective Payment System (PPS) proposed rule (90 FR 18323 through 18328) to solicit comments on FHIR-based eCQM activities in the Hospital Inpatient Quality Reporting (IQR) Program, the Hospital Outpatient Quality Reporting (OQR) Program, and the Medicare Promoting Interoperability Program.

We will consider the feedback we receive as we refine our dQM transition efforts and plan the strategic modernization of our quality measurement enterprise.

(1) Background

Having immediate access to electronic health information, in near real-time, supports quality measurement efforts, provides patients the ability to use these data for care considerations, and may lead to improved clinical outcomes. To support this, we aim to transition to a

[336] We refer readers to the following rules which contain the previous RFIs: FY 2022 IPPS/LTCH PPS final rule (86 FR 45342 through 86 FR 45349); FY 2023 IPPS/LTCH PPS final rule (87 FR 49181 through 87 FR 49188); CY 2022 Physician Fee Schedule (PFS) final rule (86 FR 65377 through 86 FR 65382); CY 2023 PFS proposed rule (87 FR 46259 through 87 FR 46262); CY 2022 Outpatient Prospective Payment System (OPPS)/Ambulatory Surgical Center (ASC) final rule (86 FR 63815 through 86 FR 63822); and CY 2022 End-Stage Renal Disease (ESRD) PPS final rule (86 FR 61941 through 86 FR 61948).

fully dQM landscape that promotes interoperability and increases the value of reporting quality measure data. In the coming years, we will continue to seek ways to advance technical infrastructure, update program regulations, and engage Federal partners and the public to support this dQM transition.[337]

We are collaborating with Federal agencies, including the Assistant Secretary for Technology Policy (ASTP) and Office of the National Coordinator for Health Information Technology (ONC) (collectively referred to as ASTP/ONC)[338] to support data standardization and alignment of requirements for the development and reporting of digital quality measures. Advancements in the interoperability of healthcare data and corresponding requirements from ASTP/ONC have created the technical foundation across health information technology (IT) systems to pursue modernization of CMS' quality measurement systems. The 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program final rule (85 FR 25642) and the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI–1) final rule (89 FR 1192) moved forward policy approaches that enable flexible, granular data sharing from the certified health IT systems used by many healthcare providers, facilities, and clinicians. Aligning technology requirements for healthcare providers, payers, public health agencies, and health IT developers allows for advancement of an interoperable health IT infrastructure that ensures providers and patients have access to health data when and where it is needed.

We continue to collaborate with ASTP on future versions of the United States Core Data for Interoperability (USCDI),[339] which establishes a baseline set of data elements referenced in health information exchange certification criteria under the ONC Health IT Certification Program. In addition, the ASTP USCDI+ program supports identification and establishment of domain-specific datasets that build on the USCDI foundation.[340] The USCDI+ Quality domain,[341] which we discuss in more detail in section IV.A.4.c.(2)(b) of this proposed rule, aims to harmonize data needs for quality measurement across Federal agencies and other interested parties, and inform supplemental standards necessary to support quality measurement. We also continue to work with ASTP to advance the interoperability of patient assessment data through collaboration with interested parties to develop FHIR implementation guides through the CMS-sponsored Post-Acute Care Interoperability (PACIO) Project.[342]

Moreover, the CMS Innovation Center's Enhancing Oncology Model recently completed its first reporting period in which FHIR-based application programming interfaces (APIs) were used by model participants to submit clinical data elements to CMS. This specification for reporting was developed as part of the USCDI+ Cancer domain, in close collaboration with ASTP, the National Institutes of Health (NIH), and the National Cancer Institute (NCI).[343]

We continue to collaborate with the Centers for Disease Control and Prevention (CDC) and other agencies within the U.S. Department of Health and Human Services (HHS) in our dQM transition strategy. The CDC National Healthcare Safety Network (NHSN) is leading the development of fully electronic and automated digital quality measures for patient safety and public health surveillance, preparedness, and response.[344] We are working together with NHSN to explore a modernized approach for reporting quality measures to CMS via the NHSN data pipeline. There are currently multiple digital quality measures soon to be reported to NHSN could be used in CMS programs.[345] CMS and CDC are working together to transition to fully automated digital quality measures using a two-pronged approach: (1) Develop new measures to address patient safety gaps; and (2) Update current measures to a FHIR-based format.

The NHSN dQM approach uses a reusable reporting framework (NHSN Digital Quality Measure Reporting Implementation Guide (IG))[346] in conjunction with content based in national, interoperable data standards (USCDI and USCDI+) that are aligned with CMS requirements, and submitted via secure data transfer via open-source FHIR API (NHSNLink).[347] Promoting the use of these standards-based, flexible, advanced data reporting methods will reduce the reporting burden on clinicians while increasing timeliness and completeness, and will improve the accuracy and quality of data, enhancing health system readiness and response capacity through near real-time data collection.

Our partners at Health Resources and Services Administration (HRSA) are also modernizing reporting of eCQMs.[348] As part of the Uniform Data System (UDS) modernization, HRSA developed the Uniform Data Systems Plus (UDS+), which provides for the electronic submission (using FHIR) of de-identified patient-level data, including data elements aligned to select CMS eCQMs that health centers are required to report.[349] HRSA developed a UDS+ FHIR IG, which specifies the FHIR API requirements for structuring and transmitting these data elements based on program requirements.

All these efforts to leverage standardized data and the FHIR model are intended to accelerate and support the transition to a data-driven healthcare system that will ultimately reduce provider burden, support the patient experience, and improve quality of care. Shifting towards approaches based on the FHIR standard will help us pave the way for future digital quality measures.[350]

We thank the public for providing feedback through industry conferences, direct conversations with CMS and our Federal partners, and submitting comments to RFIs in previous rulemaking. As we support healthcare providers, facilities, and clinicians, the health IT industry, and Federal partners in their respective activities, we are requesting public input on this RFI to better inform our ongoing strategy to transition to a fully digital quality landscape. Note that any substantive updates to program-specific requirements related to providing data

for quality measurement and reporting would be addressed through future notice-and-comment rulemaking, as necessary.

(2) Approach to eCQM Reporting Using FHIR in CMS Quality Programs

In this section, we describe the current state and request input on key components of the ongoing dQM transition related to FHIR-based eCQMs for the Medicare Shared Savings Program and the MIPS quality performance category. These components include: (1) FHIR-based eCQM conversion progress; (2) Data standardization for quality measurement and reporting; (3) The timeline under consideration for FHIR-based eCQM reporting; (4) Measure development and reporting tools; and (5) FHIR Reporting and Data Aggregation for ACOs.

(a) eCQM FHIR Conversion Activities

Currently, Medicare Shared Savings Program Accountable Care Organizations (ACOs) and eligible clinicians participating in MIPS can report eCQMs for their quality reporting. Electronic health record (EHR) and other health IT systems certified under the ONC Health IT Certification Program use patient data to calculate the results for each eCQM based upon the measure specifications for the eCQM.[351]

An important initial step in our dQM strategy is to ensure current eCQMs are specified using the FHIR standard and allow these measures to be calculated consistently using standardized data represented in FHIR. Standardized digital data can support multiple use cases, including quality measurement, quality improvement efforts, clinical decision support, research, and public health. The eCQMs currently use structured data defined by the Quality Data Model (QDM) and measure logic in Clinical Quality Language to evaluate a clinician's, provider's, facility's, or organization's performance on a measure concept.[352]

As we move to FHIR-based eCQMs, we continue to convert current eCQMs (authored using the QDM) to eCQMs authored using the HL7 FHIR® Quality Improvement Core (QI-Core) IG, updating to new versions as appropriate. We are conducting advanced validation of FHIR data exchange through ongoing HL7 Connectathons and integrated systems testing, leveraging and refining IGs to enhance interoperability and data standardization.[353] While new eCQMs continue to be developed, proposed, and adopted in existing CMS programs, we are working with measure developers to ensure existing eCQMs are converted to FHIR and that new eCQMs are also natively developed in FHIR. In the future, we are considering a requirement that all quality measures proposed for addition to CMS programs be specified in FHIR.

We are also considering requirements to include FHIR-based specifications for measures developed by Qualified Clinical Data Registries (QCDRs). Additional information and updates regarding eCQMs and the dQM transition can be found on the Electronic Clinical Quality Improvement (eCQI) Resource Center website, available at: *https://ecqi.healthit.gov/dqm?qt-tabs_dqm=dqm-strategic-roadmap.* We continue to explore potential applications of the FHIR standard to the reporting and use of different types of quality measurement data.

We seek feedback on the following questions:

- Are there specific eCQMs or components of existing eCQMs that you anticipate presenting particular challenges in specifying in FHIR?
- Are there gaps in the QI-Core IG that are likely to impact our ability to effectively specify current CMS eCQMs in FHIR?
- What supplementary activities would encourage additional engagement in FHIR testing activities (such as Connectathons) that support the development of current and future IGs to advance adoption and use of FHIR-based eCQMs?

(b) Data Standardization for Quality Measurement and Reporting

We are continuing to collaborate with ONC as it develops a certification approach to enable reporting of FHIR-based eCQMs using technology certified under the ONC Health IT Certification Program. This approach aims to repurpose and harmonize existing FHIR requirements in the ONC Health IT Certification Program whenever possible.[354] It also aims to incorporate industry-developed standards for the exchange of quality measurement data using FHIR.

In this section, we discuss the standards and other artifacts which CMS and ONC are evaluating to serve as the basis for new health IT certification criteria supporting FHIR-based quality measurement and reporting. New health IT certification criteria for quality measurement and reporting could include requirements for certified Health IT Modules to support the consistent capture and exchange of quality data using FHIR APIs. New criteria could also support standardized reporting rules to ensure successful submission of quality measure data for the Medicare Shared Savings Program and the MIPS quality performance category.

A key artifact CMS and ASTP are reviewing as part of this approach is the QI-Core IG, which defines a set of FHIR profiles within a common logic model for clinical quality measurement and clinical decision support intended for use for multiple use cases across domains.[355] As described previously, this IG is used to represent the data elements necessary to support current eCQMs.

The QI-Core IG builds on the HL7 FHIR® US Core IG (US Core IG) which is currently referenced under the ONC Health IT Certification Program and implements the USCDI in FHIR. The US Core IG is incorporated in the ''Standardized API for patient and population services'' health IT certification criterion [356] and is widely implemented across certified health IT systems. Accordingly, we anticipate that developers implementing the QI-Core IG will be able to leverage existing work from implementing the US Core IG. QI-Core is expected to evolve over time to reflect subsequent versions of the US Core IG. For example, QI-Core 6.0 builds upon US Core version 6.1.0, which provides consensus-based capabilities aligned with USCDI version 3 (v3) data elements for FHIR APIs. In the HTI–1 final rule (89 FR 1196), ONC finalized the expiration of USCDI v1 on January 1, 2026, and adopted USCDI v3 as the new baseline version of USCDI after USCDI v1 expires.

We are also supporting ASTP in their work to advance alignment between the QI-Core IG and the USCDI+ Quality data element list, which incorporates additional data elements beyond USCDI. We have collaborated with ASTP around the development of USCDI+ Quality as an extension to USCDI to improve healthcare interoperability across quality programs, establishing a consistent baseline of harmonized data

[356] 45 CFR 170.315(g)(10).

elements for a wide range of quality measurement use cases.[357] Specifically for CMS programs, USCDI+ Quality includes the data elements to support program-specific measures.[358]

We are also considering the Data Exchange for Quality Measures (DEQM) IG [359] as part of the framework supporting the transition to FHIR-based eCQMs, in particular for supporting FHIR-based reporting to CMS. The DEQM IG provides a framework that defines conformance profiles and guidance to enable the exchange of quality information and enable FHIR-based quality measure reporting. It is based upon other related work in the FHIR and quality measure realm, including the US Core IG, the Healthcare Effectiveness Data and Information Set (HEDIS) IG, and Quality Reporting Document Architecture (QRDA) Category I and III reporting specifications. We are considering the use of the DEQM IG with quality measures specified in accordance with QI-Core.

To facilitate the exchange of significant volumes of data to support quality measurement, we are also evaluating the use of HL7 FHIR ® Bulk Data [360] including analysis of: Potential enhancements to support the use of Bulk paired with the QI Core IG and potential use of Bulk paired with the DEQM IG.[361] The existing Bulk Data Access IG defines a standardized, FHIR-based approach for exporting bulk data from a FHIR server to an authenticated and authorized client. ONC has adopted the Bulk Data Access IG STU 1, version 1.0.0, published on August 8, 2019 (hereafter referred to as version 1), and has incorporated it into the ONC Health IT Certification Program.[362] The Bulk Data Access IG has recently seen considerable revisions and enhancements over version 1 from the HL7 standards community. A new version of the Bulk Data Access IG, planned to be balloted in 2025, is expected to introduce new features such as the capacity to organize output by patient and criteria-based cohort creation, which could significantly enhance the quality reporting use case for the IG.[363] The HL7 community will also continue to prepare additional enhancements to the Bulk Data Access IG throughout 2025, with the Argonaut Project announcing Bulk Import as a 2025 project.[364] Bulk Import is already being used by AHA in their UDS+ IG,[365] and has the potential to enhance the quality reporting use case more broadly. It defines a standardized mechanism for data submitters to upload or submit their Bulk FHIR data to a receiving system when they have their Bulk FHIR data ready to submit, rather than having to reactively respond to a Bulk FHIR export request initiated by a receiving system.

We seek feedback on the following questions:

- Can you share any experiences or challenges reviewing, implementing, or testing the QI-Core, DEQM, or Bulk FHIR standards, including any experiences or challenges unique to Bulk FHIR Import versus Bulk FHIR Export?
- Are there any deficiencies or gaps in the DEQM IG that must be addressed before it can potentially be used for reporting to CMS on eCQMs using FHIR APIs?
- Are there additional baseline requirements or capabilities that need to be considered before FHIR-based eCQMs could be reported to CMS using Bulk FHIR?
- Are there additional supports or enhancements that CMS should consider for the QI Core, DEQM, or Bulk FHIR IGs that would support quality measurement and reporting beyond the CMS eCQMs or potential dQMs?

(c) Timeline Under Consideration for FHIR-Based eCQM Reporting

As we noted in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 49183), we are considering proposing a transition period during which healthcare providers that satisfy quality reporting requirements by using the eCQM collection type may report using either QDM- or FHIR-based eCQMs.

For MIPS and other programs that use the eCQM collection type, we are considering a similar transition for the eCQM collection type to FHIR, instead of QDM-based eCQMs. This period would provide time for providers and clinicians participating in CMS programs, health IT developers, and CMS to engage in learning to optimize systems and processes. During this period, participants that have chosen to satisfy applicable quality reporting requirements by reporting eCQMs would be able to choose to submit either QDM-based *or* FHIR-based eCQMs to meet respective reporting requirements. For instance, participants who are implementing updated certified health IT and gaining experience with FHIR-based eCQMs could continue submitting QRDA files to meet program requirements, while those who are ready to report FHIR-based eCQMs would be able to do so, for a specified period. For the purposes of this RFI, we refer to this concept as the ''reporting options'' period.

As a note, while MIPS eligible clinicians have the option to satisfy quality reporting requirements by reporting an eCQM, it is currently not required within MIPS. We are not proposing to limit any collection types for MIPS eligible clinicians to report quality measures for the quality performance category.

We acknowledge that participants in the identified CMS programs may proceed with updating certified health IT and implementing dQMs at different speeds. Hence, we are considering the reporting options period to provide additional time for clinicians who elect to report the eCQM collection type, in advance of any future proposal to require FHIR-based reporting for eCQMs. We are considering at least a two-year reporting options period before any future proposal to require only FHIR-based reporting for eCQMs. Note that any updates to specific program requirements related to providing data for quality measurement and reporting would be addressed through future notice-and-comment rulemaking, as necessary.

We seek feedback on the following questions:

- Would a minimum of 24 months from the effective date of a FHIR-based eCQM reporting option using ONC Health IT Certification Program criteria to support quality program submission provide sufficient time for implementation (including measure specification review, certified health IT updates, workflow changes, training, and testing)?
- What resources or guidance could CMS provide to assist with the transition to submission of FHIR-based eCQM data?
- What challenges, if any, do you anticipate with the reporting timeline of FHIR-based eCQMs (beginning with at least a 2-year reporting options period

before any future proposal to require FHIR-based reporting)?

- What resources, guidance, or other support could we provide to encourage and facilitate the early adoption and reporting of FHIR-based eCQMs during the data submission period?

(d) Measure Development and Reporting Tools

We develop and maintain tools and resources to assist measure developers in the different stages of the Measure Lifecycle.[366] The Measure Authoring Development Integrated Environment (MADiE) is a free software tool that supports the eCQM development and testing process through dynamic authoring and testing within a single application.[367] MADiE supports QI-Core profile-informed authoring, testing, and verification of the behavior of FHIR-based eCQMs.[368] We encourage measure developers to continue using this environment for the development of FHIR-based eCQMs.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49183), we described plans to modernize programmatic data receiving systems through a unified CMS FHIR receiving system that would provide a single point of data receipt for quality reporting programs. We may also consider separate FHIR receiving systems for some programs initially as the shift to FHIR across CMS programs will be incremental. We will provide information on the form and manner for reporting for each program in respective notice-and-comment rulemaking, as necessary. Our vision remains to ultimately develop and implement a single point of data receipt via a unified CMS FHIR receiving system.

In the CMS Digital Quality Measurement Strategic Roadmap, we noted the development of a FHIR-based measure calculation tool (MCT).[369] After further consideration and testing, we have decided not to advance the MCT as previously described.

We seek feedback on the following questions:

- What capabilities would be most useful for CMS to support in a FHIR-based eCQM reporting model?
- What additional concerns, if any, should CMS take into consideration when developing FHIR-based reporting requirements for systems receiving quality data?

(e) FHIR Reporting and Data Aggregation for ACOs

As finalized in the CY 2025 PFS final rule, Shared Savings Program ACOs are required to report the Alternative Payment Model (APM) Performance Pathway (APP) Plus quality measure set beginning with the 2025 performance year (89 FR 98105). For the 2025 performance year, ACOs will be required to report four measures using one of the three collection types: eCQMs, MIPS Clinical Quality Measure (CQM), or Medicare CQM. We finalized the incremental increase in the number of measures required with each subsequent performance year (89 FR 98105), sunsetting the MIPS CQM collection type beginning with the CY 2027 performance period/2029 MIPS payment year (89 FR 98111).

As ACOs bring together health care providers using disparate EHR systems from which data is extracted and aggregated, they have encountered challenges with aggregating, deduplicating, and matching all patient data required under the eCQM and MIPS CQM quality measure collection types. We released a document that describes eCQM and MIPS CQM reporting scenarios specific to Shared Savings Program ACOs and that provides guidance on patient matching and data aggregation, and how MIPS data completeness policy applies to an ACOs eligible and matched patient population, available here: *https://www.cms.gov/files/document/medicare-shared-savings-program-reporting-mips-cqms-and-ecqms-alternative-payment-model-performance.pdf.* While the number of ACOs reporting eCQMs and MIPS CQMs has grown, uptake has been slow. In 2021, 12 ACOs reported using either eCQMs or MIPS CQMs. The number using these collection types increased to 37 ACOs in 2022, and 73 ACOs in 2023.

We have provided reporting incentives specific to eCQMs and MIPS CQMs to encourage the adoption of eCQMs and MIPS CQMs (89 FR 98123). We are interested in how a transition to FHIR-based reporting of eCQMs could help to mitigate the burden ACOs may experience related to aggregating quality data from multiple practices and multiple EHR systems. We note that any updates to specific program requirements related to providing data for quality measurement and reporting requirements would be addressed through future notice-and-comment rulemaking, as necessary.

We seek feedback on the following questions:

- What types of technical support, guidance, and resources would be most beneficial for ACOs in the implementation of FHIR-based eCQMs?
- Are you presently ready and able to report eCQM data using FHIR? Are there any challenges you anticipate facing in transitioning to these reporting methods?
- What changes need to be made to health IT functionality, including EHRs, to better support efforts to aggregate data from multiple settings or health IT systems, including EHRs, to enable ACOs to successfully report eCQMs using FHIR?
- For ACOs developing the infrastructure needed to aggregate data from multiple settings and health IT systems, including EHRs, what are the estimated costs and timelines that your ACO has identified for implementing capabilities necessary to perform this data aggregation? Where applicable, please provide appropriate context.
- What changes could be made to the available eCQMs and eCQM specifications to better support the efficacy and relevance of applicable measures for ACOs reporting from multiple settings?
- What feedback do you have, if any, on ACO experience reporting aggregate quality measure data using the Data Exchange for Quality Measures (DEQM) IG?
- What feedback do you have, if any, on ACO experience using Bulk FHIR?
- What feedback do you have, if any, on ACO experience using the QI Core IG?
- What challenges, if any, do you anticipate for eligible clinicians, group practices, and ACOs transitioning to FHIR-based eCQMs within the anticipated reporting options timeline?

(3) General Solicitation of Comments

In conjunction with the previous questions, we are also seeking input on the following:

- Specific to FHIR-based quality reporting, are there any additional factors, or considerations to account for, that may help reduce reporting burden across entities? Are there any areas CMS should consider that would help reduce burden for reporting quality beyond the scope of CMS eCQMs or potential dQMs?
- Would the ability to reuse or repurpose technology, standards, data elements, and/or specifications reduce burden for healthcare providers in measuring and reporting quality overall?
- The Trusted Exchange Framework and Common Agreement™ (TEFCA™) framework supports nationwide health information exchange by connecting

[366] *https://mmshub.cms.gov/cms-tools.*

[367] *https://www.emeasuretool.cms.gov/.*

[368] *Ibid.*

[369] *https://ecqi.healthit.gov/dqm?qt-tabs_dqm=dqm-strategic-roadmap.*

health information networks (HINs) across the country.[370] Additionally, TEFCA facilitates FHIR exchange by requiring Qualified HINs (QHINs) to perform patient discovery for those querying for data and providing data holders with FHIR endpoints to enable point-to-point exchange via FHIR APIs.

How could this initiative potentially support exchange of FHIR-based quality measures consistent with the FHIR Roadmap (available here: *https://rce.sequoiaproject.org/three-year-fhir-roadmap-for-tefca/*)?

How might TEFCA enable the use of data for secondary uses such as treatment and research?

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

f. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We refer readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, CY 2023, CY 2024, and CY 2025 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877, 86 FR 65431 through 65445, 87 FR 70047 through 70055, 88 FR 79329 through 79338, and 89 FR 98373 through 98375 respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In the CY 2026 PFS proposed rule, we are proposing to:

- Amend the definition of the term ''high priority measure'' to remove references to health equity at § 414.1305.
- Modify the MIPS quality measure set as described in Appendix 1 of this proposed rule, including the addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.

(b) High Priority Measure Definition

The Meaningful Measures Initiative provides for the identification of high priority areas for quality measurement and quality improvement, which identifies the core quality of care issues that advances our work to improve patient outcomes (83 FR 59719). To further identify priority areas for MIPS quality measurement, we defined the term high priority measure at § 414.1305, beginning with the CY 2019 performance period/2021 MIPS payment year, as an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure (83 FR 59761). In the 2023 PFS final rule (87 FR 70047 through 70049), we finalized an amended definition of the term ''high priority measure'' to include quality measurement pertaining to health equity. We also codified this revised definition at § 414.1305 beginning with the CY 2023 performance period/2025 MIPS payment year (87 FR 70047 through 70048).In the CY 2023 PFS final rule (87 FR 70047), we noted significant and persistent inequities in healthcare outcomes exist in the United States and that we are committed to developing innovative solutions that support access to high quality care and promote health equity, including the exploration of solutions to measure health equity within MIPS. Consequently, we stated that we believed it was imperative to include quality measures pertaining to health equity as high priority measures in order to incentivize the adoption of health equity measures by MIPS eligible clinicians. In the 2023 PFS final rule (87 FR 70049) we defined health equity as ''the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identify, socioeconomic status, geography, preferred language, and other factors that affect access to care and health outcomes.''

This definition was adopted during the Public Health Emergency (PHE) for COVID–19. At the time we believed that adding the term health equity to our definition of a high priority measure was the best way to address health disparities exacerbated by the pandemic. On September 12, 2023, Health and Human Services (HHS) announced the end of the Federal PHE for COVID–19 in a statement effective May 11, 2023.[371] Now that the PHE has ended, we believe that these disparities are best addressed through other mechanisms. We believe that our definition of ''health equity'' was confusing and that health disparities are best addressed through efforts to improve overall healthcare quality for all beneficiaries. In section IV.A.3.d of this proposed rule, we requested public input to identify measures around well-being and nutrition as high priority area for quality measurement and quality improvement. Therefore, we propose to remove quality measurement pertaining to health equity from the definition of the term ''high priority measure''

Specifically, we are amending the definition of the term high priority measure at § 414.1305 to mean an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure beginning with the CY 2026 performance period/CY 2028 MIPS payment year.

(c) Selection of Quality Measures

(i) Addition of New Quality Measures

(A) Pre-Rulemaking Process

Prior to introducing a new MIPS quality measure in a proposed rule, we receive public input on measures through the pre-rulemaking process (referred to as the Pre-Rulemaking Measure Review (PRMR)) established in accordance with section 1890A of the Act. Although section 1848(q)(2)(D)(viii) of the Act provides that the pre-rulemaking process under section 1890A of the Act is not required to

[370] For more information about TEFCA, see *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca.*

[371] Available at *https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html.*

apply to the selection of MIPS quality measures, we have found that the pre-rulemaking process provides a comprehensive review of measures from multi-stakeholder workgroups and have accordingly elected for such measures to be reviewed utilizing the PRMR process (87 FR 70048). Under the established PRMR process (additional information regarding the PRMR process is available at *https://p4qm.org/PRMR*), CMS has contracted with a Consensus-Based Entity (CBE), which is responsible for convening a multi-stakeholder panel comprised of clinicians, patients, measure experts, and health information technology specialists to provide input on measures CMS is considering for use in Medicare.

The pre-rulemaking process begins with CMS's publication of measures under consideration for use in Medicare (the MUC List). Each measure on the MUC List is reviewed by one of several committees convened by the PQM for the purpose of providing multi-stakeholder input to the Secretary. The PRMR process includes opportunities for public comments through a 21-day public comment period, as well as public listening sessions. The PQM posts the compiled comments and listening session inputs received during the public comment period and the listening sessions within 5 days of the close of the public comment period. More details regarding the PRMR process may be found in the PQM Guidebook of Policies and Procedures for Pre-Rulemaking Measure Review and Measure Set Review.

The final vote of a multistakeholder committee convened by the CBE may result in the following disposition of a measure: recommended, recommended with conditions, do not recommend, or no consensus. A ''no consensus'' recommendation signals continued disagreement among the committee despite being presented with perspectives from public comments, committee member feedback and discussion, and highlights the multi-faceted assessments of quality measures. Quality measures that are considered for potential implementation in MIPS starting with CY 2026 performance period/CY 2028 payment year period were included on the 2024 Measures Under Consideration (MUC) List (available at *https://mmshub.cms.gov/sites/default/files/2024-MUC-List.xlsx*). The new MIPS quality measures finalized, as proposed, are described in Table Group A of Appendix 1 of this proposed rule. There may be cases in which the CBE does not recommend a measure to move forward to the rulemaking process and eventual implementation due to a measure not being endorsed by the CBE or other CBE, but we go forth with proposing a measure. We note that section 1848(q)(2)(D)(iii)(v)(III) of the Act does not preclude the Secretary from proposing and implementing measures that are not endorsed by a CBE as long as the measure is evidence-based.

(ii) Removal of Quality Measures

In the CY 2025 PFS final rule, we codified previously established criteria for the removal of MIPS quality measures from the MIPS quality measure inventory at § 414.1330. In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we established the following criteria for measure removal to include: If the Secretary determines that the MIPS quality measure is no longer meaningful, such as MIPS quality measures that are topped out; and, if a measure steward is no longer able to maintain the quality measure. In the CY 2019 PFS final rule (83 FR 59763), we expanded the criteria for measure removal to include MIPS quality measures that reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range); the MIPS quality measure may be proposed for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped-out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors.

Also, in the CY 2019 PFS final rule (83 FR 59764), we established other criteria for measure removal, specifically MIPS quality measures that are: duplicative; not maintained or updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice; and low-bar, standard of care process measures. As described in the CY 2019 PFS final rule (83 FR 59765), we established an approach to incrementally remove process measures where prior to removal, consideration will be given to, but will not be limited to the following:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the MIPS quality measure addresses a priority area highlighted in the Measure Development Plan: *https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measuredevelopment.html.*
- Whether the MIPS quality measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the MIPS quality measure is designated as high priority or not.
- Whether the MIPS quality measure has reached extremely topped out status within the 98th to 100th percentile range, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made.

In the CY 2020 PFS final rule (84 FR 62958 through 62959), we expanded the criteria for measure removal to include MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods and not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians. For MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods, we noted that we will factor in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome; and consideration of the MIPS quality measure in developing MVPs) prior to determining whether to remove the MIPS quality measure.

(iii) Inventory of Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding new measures to the list, as appropriate; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2025 PFS final rule (89 FR 98599 through 98954), CY 2024 PFS final rule (88 FR 79556 through 79964), CY 2023 PFS final rule (87 FR 70250 through 70633), CY 2022 PFS final rule (86 FR 65687 through 65968), CY 2021 PFS final rule (85 FR 85045 through 85377), CY 2020 PFS final rule (84 FR 63205 through 63513), CY 2019 PFS final rule (83 FR 60097 through 60285), CY 2018 Quality

Payment Program final rule (82 FR 53966 through 54174), and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). We are proposing changes to the MIPS quality measure inventory, as set forth in Appendix 1 of this proposed rule, including the following: the addition of new measures; updates to specialty sets (that is, creation of new specialty sets; addition and/or removal of measures; and substantive changes to existing measures within specialty sets); removal of existing measures; and substantive changes to existing measures. For the CY 2026 performance period, we are proposing an inventory of 190 MIPS quality measures.

The new MIPS quality measures that we are proposing to include in MIPS for the CY 2026 performance period/CY 2028 payment year and future years can be found in Table Group A of Appendix 1 of this proposed rule. For the CY 2026 performance period, we are proposing 5 new MIPS quality measures, which include 3 high priority measures, one of which is also patient-reported outcome measures.

On January 4, 2025, we announced that we will be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 10 (CY 2017 performance period/2019 MIPS payment year through CY 2026 performance period/2028 MIPS payment year) of MIPS under the Quality Payment Program.[372] The recommendations we received were based on the MIPS quality measures finalized in the CY 2025 PFS final rule and the 2024 MUC List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, and/or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with are proposed in this proposed rule. We proposed modifications to existing specialty sets as described in Table Group B of Appendix 1 of this proposed rule. Modifications to specialty sets include the addition of new measures and/or existing measures within the MIPS quality measure inventory, removal of measures, and/or substantive changes to previously finalized measures. Specialty and subspecialty sets are not inclusive of every specialty or subspecialty. We develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets as described in Tables Group A and Group B of Appendix 1 of this proposed rule, we referred readers to Table Group C of Appendix 1 of this PFS proposed rule for a list of MIPS quality measures proposed for removal and applicable rationale for each measure. In the 2025 PFS final rule (89 FR 98388), we codified previously finalized removal criteria for MIPS quality measures at 42 CFR 414.1330(c). Of the 10 MIPS quality measures proposed for removal, 1 MIPS quality measure is being proposed for removal at the measure steward's request and is not aligned with current clinical guidelines), 4 MIPS quality measures are extremely topped out, 1 MIPS quality measure has reached the topped-out lifecycle, 1 MIPS quality measure is no longer able to be maintained by the measure steward, and 3 are process measures. For a detailed discussion of our rational for the removal of these measures please see Table Group C of Appendix 1 of this proposed rule. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (*see,* for example, 83 FR 59763 through 59765). The proposal to remove the MIPS quality measures described in Table Group C of Appendix 1 of this proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program.

Also, in Appendix 1 of this proposed rule, we are proposing substantive changes to 42 MIPS quality measures, which can be found in Table Group D of this proposed rule. We have previously established criteria that would apply when we are considering making substantive changes to a quality measure (81 FR 77137, and 86 FR 65441 through 65442). On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive. The proposed inventory of 190 MIPS quality measures includes 187 MIPS quality measure available for utilization in traditional MIPS and MVPs, and 3 MIPS quality measures available only for utilization in MVPs (as finalized in the CY 2024 PFS final rule (88 FR 79897 through 77902)).

In CY 2026 PFS proposed rule, we are proposing to modify the quality performance category measure inventory, a set of 190 MIPS quality measures for the CY 2026 performance period, which includes the following:

- Implementation of 5 new MIPS quality measures including 3 high priority measures one of which is a patient reported outcome measure;
- Removal of 10 MIPS quality measures: 1 quality measure at the measure steward's request due to not being aligned with current clinical guidelines, 4 quality measures are extremely topped out, 1 quality measure has reached the end of the topped-out lifecycle, 1 measure where the measure steward is no longer able to maintain the quality measure, 3 process measures , and;
- Substantive changes to 42 MIPS quality measures.

We refer readers to Table Groups A through DD of Appendix 1 of this proposed rule for a summary of the new measures proposed, the measures proposed for removal, and the substantive changes proposed. We seek public comments on these proposals.

(2) Cost Performance Category

(a) Background

Section 1848(q)(2)(A)(ii) of the Act includes resource use as a performance category under MIPS. We refer to this performance category as the cost performance category. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of MIPS are used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians are evaluated under all four of the MIPS performance categories, including the cost performance category.

Section 1848(q)(2)(B)(ii) of the Act provides that, for the cost performance category, the measurement of resource use (that is, cost) for such period must be in accordance with section 1848(p)(3) of the Act, using the methodology under section 1848(r) as appropriate, and, as feasible and applicable, accounting for the cost of drugs under Medicare Part D. Section 1848(p)(3) of the Act provides that costs shall be evaluated, to the extent practicable, based on a composite of appropriate measures of costs established by the Secretary that eliminate the effect of geographic adjustments in payment rates, and take into account risk factors (such as socioeconomic and demographic characteristics, ethnicity, and health status of individuals) and other factors determined appropriate by the Secretary. Section 1848(r) of the Act

[372] Message to the Quality Payment Program listserv on January 4, 2025, entitled ''The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2026 Performance Year of the Merit-based Incentive Payment System (MIPS).''

specifies a series of steps and activities for the Secretary to undertake to involve physicians, practitioners, and other interested parties in enhancing the infrastructure for cost measurement, including for purposes of MIPS and Advanced APMs under section 1833(z) of the Act.

We are proposing the following updates to the cost performance category beginning with the CY 2026 performance period/2028 MIPS payment year:

- Modify the MIPS cost measure inventory as described in Appendix X of this rule;
- Update the operational list of care episode and patient condition groups and codes to reflect changes to service and diagnosis codes that define care episodes and patient condition groups, as identified through the annual maintenance of episode-based measures; and
- Adopt a 2-year informational-only feedback period for new cost measures, where a measure would not impact MIPS cost performance category scores, final scores, or payment adjustments until the third year it is implemented.

For a description of the statutory authority for and existing policies pertaining to the cost performance category, we refer readers to §§ 414.1350 and 414.1380(b)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77162 through 77177), CY 2018 Quality Payment Program final rule (82 FR 53641 through 53648), CY 2019 PFS final rule (83 FR 59765 through 59776), CY 2020 PFS final rule (84 FR 62959 through 62979), CY 2021 PFS final rule (85 FR 84877 through 84881), CY 2022 PFS final rule (86 FR 65445 through 65461), CY 2023 PFS final rule (87 FR 70055 through 70057), CY 2024 PFS final rule (88 FR 79339 through 79349), and CY 2025 PFS final rule (89 FR 98390 through 98408).

More details on the proposals in this section, which we invite comments on, are provided in section IV.A.4.d.(2)(b) through section IV.A.4.d.(2).(d). of this proposed rule. We also refer readers to section V.B.5.c. of this proposed rule for discussion on the burden estimates for these proposals.

(b) Selection of Cost Measures

In accordance with our statutory authority as described in section IV.A.4.d.(2)(a) of this proposed rule and our regulation at § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category.

We consider adoption of cost measures to support the transition from traditional MIPS to MVPs by allowing new MVPs to be created and enhancing existing MVPs. Additionally, adopting cost measures also increases the cost coverage of care episode and patient condition groups, moving closer towards the statutory goal of covering 50 percent of expenditures under Medicare Parts A and B, as specified under section 1848(r)(2)(i)(I) of the Act.

In the CY 2022 PFS final rule (86 FR 65455 through 65459), we established common standards to ensure consistency across episode-based measures being considered for potential use in MIPS. Specifically, the CY 2022 PFS final rule requires that any episode-based measure for the cost performance category include the following: (1) episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment.

Additionally, in the CY 2025 PFS final rule (89 FR 98405), we codified removal criteria for the removal of MIPS cost measures from the MIPS cost measure inventory at § 414.1350. We may remove a cost measure from MIPS based on one or more of the following factors, provided however that we may retain a cost measure that meets one or more of the following factors if we determine the benefit of retaining the measure outweighs the benefit of removing it.

- It is not feasible to implement the measure specifications.
- A measure steward is no longer able to maintain the cost measure.
- The implementation costs or negative unintended consequences associated with a cost measure outweigh the benefit of its continued use in the MIPS cost performance category.
- The measure specifications do not reflect current clinical practice or guidelines.
- The availability of a more applicable measure, including a measure that applies across settings, applies across populations, or is more proximal in time to desired patient outcomes for the particular topic.

We are not proposing to adopt any new measures for the CY 2026 performance period/2028 MIPS payment year. We are also not proposing to remove any measures for the CY 2026 performance period/2028 MIPS payment year.

(c) Inventory of Cost Measures

As discussed previously, we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. While the requirement to annually issue a list of final measures as set forth in section 1848(q)(2)(D)(i) of the Act only applies to quality measures adopted for the MIPS quality performance category, we have applied some of these requirements for cost measures. Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list of quality measures by removing measures from the list, as appropriate; adding new measures to the list, as appropriate; and determining whether measures that have undergone substantive changes should be included on the updated list. In the CY 2022 PFS final rule, we stated that section 1848(q)(2)(D)(i)(II)(cc) of the Act, which requires all substantive changes to quality measures to be proposed and identified through notice-and-comment rulemaking, also should apply to cost measures (86 FR 65459).

On an annual basis, we review the established MIPS cost measure inventory to consider updates to the measures identified through measure maintenance reviews. The CMS Measure Maintenance System (MMS) provides additional information about measure maintenance review processes and best practices (*https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance/overview*). Possible updates to measures may be minor or substantive. In the CY 2022 PFS final rule, we finalized several criteria for determining whether a proposed change to a cost measure would be substantive beginning with the CY 2022 performance period/2024 MIPS payment year (86 FR 65459 and 65460).

Section 1848(r)(10) of the Act provides that the pre-rulemaking requirements set forth in sections 1890(b)(7) and 1890A of the Act do not apply to our development of MIPS cost measures under section 1848(r) of the Act. Historically, we have subjected existing cost measures for which we are considering substantive changes to the pre-rulemaking process required by section 1890A of the Act prior to notice-and-comment rulemaking.

There are currently 35 cost measures in the cost performance category for the CY 2025 performance period/2027 MIPS payment year, comprising 33 episode-based measures covering a range of conditions and procedures and 2 population-based measures. Previously finalized MIPS cost measures can be found in the CY 2018 Quality Payment

Program final rule (82 FR 53641 through 53648), CY 2019 PFS final rule (83 FR 59765 through 59776), CY 2020 PFS final rule (84 FR 62959 through 62979), CY 2021 PFS final rule (85 FR 84877 through 84881), CY 2022 PFS final rule (86 FR 65445 through 65461), CY 2023 PFS final rule (87 FR 70055 through 70057), CY 2024 PFS final rule (88 FR 79339 through 79349), and CY 2025 PFS final rule (89 FR 98390 through 98408).

We are neither proposing any new MIPS cost measures nor proposing to remove any MIPS cost measures for the CY 2026 performance period/2028 MIPS payment year. We are proposing substantive changes to the Total Per Capita Cost (TPCC) measure, one of the 2 population-based measures, which can be found in Table Group A of Appendix X of this proposed rule, beginning with the CY 2026 performance period/2028 MIPS payment year.

We invite comments on the proposal in this section.

(d) Proposed Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Generally, to calculate MIPS eligible clinicians' performance on cost measures, we use codes from claims data to identify and apply each cost measure's specifications, which govern the attribution, scope, and calculation of the cost measure. We are proposing revisions to the operational list of care episode and patient condition groups and codes to reflect to reflect coding changes due to annual measure maintenance of implemented cost measures. This section of this proposed rule provides context on the statutory requirements for care episode and patient condition groups and proposes changes to the operational list.

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve physicians, practitioners, and other interested parties in enhancing the infrastructure for cost measurement, including for purposes of MIPS and Advanced APMs under section 1833(z) of the Act. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Medicare Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from interested parties, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list of care episode and patient condition codes as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other interested parties.

For more information about past revisions to the operational list that we made as we developed, proposed, and finalized episode-based measures, we refer readers to the CY 2023 PFS final rule (87 FR 70056 through 70057), CY 2024 PFS final rule (88 FR 79348), and CY 2025 PFS final rule (89 FR 98404). The current operational list and prior operational lists are available at the QPP Cost Measure Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about.*

In accordance with section 1848(r)(2)(H) of the Act, we are proposing to revise the operational list beginning with the CY 2026 performance period/2028 MIPS payment year to reflect changes to codes used to identify existing care episode and patient condition groups, based on new information gathered during annual maintenance of episode-based measures and the Medicare Spending Per Beneficiary (MSPB) Clinician measure. We conduct annual maintenance for measures implemented in MIPS to ensure that the codes used for the measure specifications remain up to date. For example, we may update the service or diagnosis codes associated with a cost measure's specifications to retain the intent of the measure when these codes are changed in, added to, or deleted from the applicable code sets. During our annual maintenance review process for MIPS cost measures, we worked with the measure developer to identify several non-substantive changes to service and diagnosis codes that should be reflected in the operational list care episode and patient condition groups so that, to the extent feasible, there is alignment between the operational list and measure specifications. More information on the annual maintenance process is available at the CMS Measures Management System (MMS) page at *https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance/annual-update.*

Our proposed revisions to the operational list are available for review on our QPP Cost Measure Information page at *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/about.*

We invite public comments on our proposals in this section.

(e) Proposal to Adopt a Two-Year Informational-Only Feedback Period for New MIPS Cost Measures

(i) Background on Informational-Only Feedback Period

Section 1848(q)(2)(B) of the Act provides that MIPS measures and activities must be specified for a performance period for each of the four performance categories, including the cost performance category as set forth in section 1848(q)(2)(B)(ii) of the Act. Section 1848(q)(5)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to performance standards with respect to applicable measures and activities specified in accordance with section 1848(q)(2)(B) with respect to each performance category. Section 1848(q)(5)(A) of the Act further directs the Secretary to provide for a composite assessment (that is, a MIPS final score) for each MIPS eligible clinician for the applicable performance period for such MIPS payment year using such methodology. At § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category.

Currently, we assess a MIPS eligible clinician's performance on any measure we have specified for the MIPS cost performance category for a performance period that is attributed to a MIPS eligible clinician in accordance with § 414.1350(b)(8), calculating a score on the clinician's performance with respect to the cost measure in accordance with § 414.1380(b)(2). As we discussed in detail in the CY 2025 PFS final rule when we modified our scoring methodology (89 FR 98438 through 98446), we score cost measures by comparing a MIPS eligible clinician's attributed costs to benchmark ranges based on the median cost of all MIPS eligible clinicians attributed the same cost measure, plus or minus standard deviations (§ 414.1380(b)(2)(i)(B)). We then calculate the cost performance category score as set forth in § 414.1380(b)(2)(iii), which we incorporate into our calculation of the MIPS final score in accordance with §§ 414.1380(c) and 414.1350(d). We then compare the MIPS final score with

the performance threshold established for that MIPS payment year to calculate the MIPS payment adjustment in accordance with section 1848(q)(6) of the Act and § 414.1405. Section 1848(q)(12) of the Act further provides that we must make available timely confidential feedback to MIPS eligible clinicians regarding their performance in the cost performance category.

MIPS eligible clinicians receive ample notice in advance of the cost measures on which they may be scored through several avenues: (1) the cost measure development process, which requires input from clinicians, specialty societies, and other interested parties as outlined in section 1848(r)(2) of the Act and the CY 2019 PFS final rule (83 FR 59770); (2) the Pre-Rulemaking Measure Review (PRMR) process, where measures are assessed for their potential use in MIPS; (3) and the notice-and-comment rulemaking process, where we propose and finalize any cost measures for use in a future MIPS performance period. During this time, clinicians have access to measure specifications and testing information for review. Once measures are finalized for use in MIPS, we score MIPS eligible clinicians' performance on these measures as discussed previously and provide feedback to each clinician on their performance after the close of each performance period, as described in the CY 2025 PFS final rule (89 FR 98398 and 98399; 89 FR 98445).

While MIPS eligible clinicians have information available about new cost measures on which they may be assessed prior to the start of the performance period, they do not receive a score or performance feedback on any new cost measure until partially through the second performance period in which the measure is in use. We have received several requests from interested parties that we make performance feedback available earlier to MIPS eligible clinicians, such as prior to or during the performance period for which new measures are used to calculate MIPS performance category scores, final scores, and payment adjustments. Clinicians and specialty societies have provided this feedback through the notice-and-comment rulemaking process (89 FR 98398 and 98399), PRMR public comments, and other engagement not associated with a specific rule or public comment period. PRMR public comments are available for download here: *https://p4qm.org/PRMR/Resources.*

For example, some commenters have stated that MIPS eligible clinicians do not know in real time which cost measures they will be assessed on, which episodes and patients will be attributed to them, and what costs outside of their practice they are being held accountable for until after the performance period is over; they stated that, without frequent and actionable data, MIPS eligible clinicians cannot make changes to their care (89 FR 98398). While we are continuing to work towards providing meaningful and timely information on cost measures generally, we recognize the importance of providing this information for measures implemented in MIPS.

In addition, many commenters on the CY 2025 PFS proposed rule suggested that we adopt an informational-only feedback period for a minimum of 2 years after adoption of a new cost measure (89 FR 98398). Our understanding of this suggestion is that we would score the cost measure as attributed to each MIPS eligible clinician and share that score confidentially with the MIPS eligible clinician for informational-only purposes without including the score in our calculation of the cost performance category score or MIPS final score. Commenters stated this informational-only feedback period would help MIPS eligible clinicians understand which new cost measures they may be assessed on prior to these measures affecting MIPS payment adjustments (89 FR 98398). Similarly, some commenters stated that more timely and detailed performance feedback would provide MIPS eligible clinicians with an opportunity to improve their cost performance (89 FR 98445). We believe that providing feedback prior to MIPS payment adjustments through an informational-only feedback period would allow MIPS eligible clinicians more time to improve their cost performance before new measures affect payment.

We have considered this feedback when exploring an informational-only feedback period for MIPS cost measures. We believe that an informational-only feedback period supports our goals for the Quality Payment Program of encouraging clinicians to provide high-value, high-quality care to their patients in a cost-efficient manner. An informational-only feedback period would allow MIPS eligible clinicians time to develop familiarity with the cost measures and better understand the impact of new measures within the context of MIPS, prior to scores for these measures affecting their MIPS final scores or payment adjustments. Even though MIPS eligible clinicians have ample notice of cost measure specifications prior to the performance period as previously discussed, they may not be able to predict how they will perform on a new cost measure. Specifically, as previously discussed, we score a MIPS eligible clinician's performance on a cost measure based on how their attributed costs compare to benchmark ranges (§ 414.1380(b)(2)). We determine these cost measure benchmarks based on the range of costs attributed to all MIPS eligible clinicians for the same cost measure during the same performance period (§§ 414.1380(b)(2) and 414.1380(b)(2)(i)), rather than a benchmark determined based on historical data, for the reasons discussed in the CY 2025 PFS final rule (89 FR 98440). As a result, MIPS eligible clinicians do not have performance targets by which to predict their performance before or during the performance period. An informational-only feedback period would provide MIPS eligible clinicians with information and time to develop performance improvement strategies before their performance on new cost measures affects payment or is incorporated into MIPS final scores.

(ii) Proposal To Adopt an Informational-Only Feedback Period of Two Years for New Cost Measures

Section 1848(q)(1)(A) of the Act requires that the Secretary develop a methodology for assessing the total performance of each MIPS eligible clinician, provide a MIPS final score for each MIPS eligible clinician using such methodology, and to determine and apply a MIPS payment adjustment factor for each MIPS eligible clinician using the MIPS final score. As discussed previously, section 1848(q)(5) of the Act more specifically requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician on measures and activities specified under section 1848(q)(2)(B) of the Act and to provide for a MIPS final score. As part of this methodology, we are proposing an informational-only feedback period of 2 years for new cost measures finalized for use in MIPS beginning with the CY 2026 performance period/2028 MIPS payment year.

Specifically, we propose that, beginning with the CY 2026 performance period/2028 MIPS payment year, we would score all new cost measures for the first 2 years after the measure is initially finalized for informational-only purposes; we would not incorporate any informational-only scores on cost measures into MIPS eligible clinicians' cost performance category score or MIPS final score. If a MIPS eligible clinician is attributed a

cost measure during its informational-only feedback period, then we would calculate a measure score in accordance with our scoring policies at § 414.1380(b)(2) and confidentially provide the score, as well as MIPS performance feedback (*see* 82 FR 53799 through 53801), to the clinician on an annual basis. As we would not include the informational-only score in our calculation of cost performance category scores or MIPS final scores, MIPS eligible clinicians' performance on the new cost measures would not affect our calculation of their MIPS payment adjustments.

We further propose that we would begin incorporating these cost measures' scores into MIPS eligible clinicians' cost performance category and MIPS final scores beginning with the cost measure's third year in MIPS, after this 2-year informational-only feedback period. Once we begin incorporating these measures' scores into MIPS eligible clinicians' cost performance category and MIPS final scores, then MIPS eligible clinicians' performance on these measures would also affect their MIPS payment adjustments.

While we are not proposing to adopt any new cost measures in this proposed rule, we are proposing that this policy would begin with the CY 2026 performance period/2028 MIPS payment year. If finalized as proposed beginning with the CY 2026 performance period/2028 MIPS payment year, then this policy would be in place prior to any new cost measures being added to the MIPS cost performance category in future rulemaking.

We propose that this informational-only feedback period policy would not be applied to any existing cost measures already finalized for MIPS prior to the CY 2026 performance period/2028 MIPS payment year. We further propose that modifications to existing cost measures would not alter whether a measure is considered a new or existing measure. We are proposing this policy for measures that have not previously been implemented in MIPS so that MIPS eligible clinicians receive initial performance feedback on new cost measures without affecting their MIPS payment adjustments. The measures within the current cost measure inventory have already been implemented through the rulemaking process and are finalized for use in MIPS scoring for the CY 2025 performance period/2027 MIPS payment year. As a result, MIPS eligible clinicians have already made decisions about their MIPS participation for the CY 2025 performance period/2027 MIPS payment year based on the inclusion of existing cost measures in MIPS scoring and payment adjustments. Further, many of the existing cost measures have been in use in MIPS for several years, so MIPS eligible clinicians have become more familiar with the measure specifications and opportunities for improvement. We anticipate that this proposed informational-only feedback period would drive performance improvement for MIPS eligible clinicians, while continuing to support the statutory requirement for clinicians to be scored on cost as part of their composite performance score, as specified under section 1848(q)(5)(A) of the Act.

The timeline for new cost measures adopted after the effective date of this proposal would be as follows:

– First CY Performance Period/MIPS Payment Year: Informational-only feedback period.

– Second CY Performance Period/MIPS Payment Year: Informational-only feedback period.

– Third CY Performance Period/MIPS Payment Year: Cost measure scores would be incorporated into MIPS eligible clinicians' cost performance category and MIPS final scores, affecting their MIPS payment adjustments for the performance period's corresponding payment year.

We also propose that cost measures within an informational-only feedback period can be included in an MVP if they are clinically relevant. MVPs aim to improve value through assessing linked performance categories, including cost and quality (86 FR 65391). As such, we would include cost measures eligible for scoring as well as measures in the informational-only feedback period in MVPs, when appropriate, consistent with § 414.1365(c)(2). CMS may create an MVP that only includes cost measures in an informational-only feedback period in instances where these are the only relevant cost measures for an MVP. Any cost measures would continue to be determined for use in an MVP in accordance with the MVP development criteria and the MVP cost reporting requirements as set forth in the CY 2022 PFS final rule (86 FR 65405 through 65409; 86 FR 65412, respectively).

We propose that an MVP, including any cost measures within their informational-only feedback period, would continue to be scored according to all scoring policies outlined in § 414.1365(d), including § 414.1365(d)(3)(ii). Section 414.1365(d)(3)(ii) provides that we calculate the cost performance category score for the cost measures included in the MVP that an MVP participant selects and reports using the methodology at § 414.1380(b)(2), the same as for any cost measures. As we are proposing to codify this informational-only feedback period policy at § 414.1380(b)(2) as discussed below, cost measures included in an MVP (that an MVP participant selects and reports) that are in their informational-only feedback period would be treated in the same manner as if the MVP participant was attributed the cost measure under traditional MIPS.

In other words, we propose that, if a new cost measure in its informational-only feedback period is included in an MVP, then we would calculate a measure score in accordance with our proposed scoring policy at § 414.1380(b)(2) and confidentially provide the score, as well as MIPS performance feedback, to the MVP participants that select and report that MVP on an annual basis. We would not incorporate any informational-only scores on cost measures into the MVP participant's cost performance category score or MIPS final score.

This proposal would provide MIPS eligible clinicians the ability to receive informational-only feedback on their cost measure performance and their performance within an MVP, without delaying the creation of clinically meaningful MVPs in MIPS. We have also heard feedback from interested parties requesting that we implement MVPs through a gradual process, where there is transparency and time for MIPS eligible clinicians to adapt to changes (86 FR 65394 through 65395). We believe that including cost measures in MVPs that are in the informational-only feedback period aligns with these requests, providing transparency and time to adapt to new cost measures that a MIPS eligible clinician may be attributed within an MVP. In addition, we seek to align scoring of MVPs with scoring of traditional MIPS whenever possible, in accordance with the MVP scoring policy outlined in the CY 2022 PFS final rule (86 FR 65419 through 65421).

We also propose that we would not publicly report MIPS eligible clinicians' performance on cost measures within their informational-only feedback period. Public reporting of information regarding performance of eligible clinicians and groups, as required by section 1848(q)(9) of the Act, allows patients to use data to inform their care decisions. The goal of an informational-only feedback period is to provide MIPS eligible clinicians time and information to become familiar with new cost measures prior to affecting MIPS eligible

clinicians. We believe that public reporting while a measure is within this feedback period would be inconsistent with the goals of this policy.

In addition, the 2-year informational-only feedback period aligns with the current structure of public reporting, where for the first 2 years that a measure is in use in MIPS, it cannot be publicly reported, as outlined in § 414.1395(c). The cost measures would be available for consideration for public reporting starting in the third year that they are in use (that is, the first year that new cost measures are included in MIPS eligible clinicians' cost performance category and MIPS final scores).

Additionally, we propose to codify this informational-only feedback period by amending § 414.1380(b)(2). Specifically, we propose to add this policy under several new paragraphs at § 414.1380(b)(2)(vi). First, we propose that § 414.1380(b)(2)(vi) would provide that, beginning with the 2028 MIPS payment year, CMS will calculate a score for each new cost measure in accordance with the scoring policy set forth in this paragraph (b)(2) for informational-only purposes during the measure's informational-only feedback period.

Second, we propose to define the terms ''new cost measure'' and ''informational-only feedback period'' for the purposes of this paragraph (b)(2)(vi) at § 414.1380(b)(2)(vi)(A). We propose to define ''new cost measures'' at § 414.1380(b)(2)(vi)(A)(*i*) as meaning a measure that CMS has newly specified for the MIPS cost performance category for a performance period under § 414.1350 beginning with the 2028 MIPS payment year. We would further provide at § 414.1380(b)(2)(vi)(A)(*i*) that this term excludes any cost measures that CMS has specified for the MIPS cost performance category prior to the 2028 MIPS payment year or CMS modifies at any time. We propose to define ''informational-only feedback period'' at § 414.1380(b)(2)(vi)(A)(*ii*) as meaning a 2-year period beginning with the first day of the first performance period and ending with the final day of the second performance period for the 2 applicable MIPS payment years for which CMS initially has specified the new cost measure.

Third, we propose to add paragraphs (B), (C), and (D) to § 414.1380(b)(2)(vi) to codify our proposed scoring of a new cost measure during and after its informational-only feedback period. We would provide at § 414.1380(b)(2)(vi)(B) that, during a new cost measure's informational-only feedback period, CMS will not include any scores for the new cost measure calculated for informational-only purposes under this paragraph (b)(2)(vi) in CMS's calculation of a MIPS eligible clinician's cost performance category score under paragraph (b)(2)(iii) or a MIPS eligible clinician's MIPS final score under paragraph (c) of § 414.1380. At § 414.1380(b)(2)(vi)(C), we would provide that, during a new cost measure's informational-only feedback period, CMS will confidentially provide each MIPS eligible clinician with their measure score under this paragraph (b)(2)(vi) for informational-only purposes. Also, we would provide at § 414.1380(b)(2)(vi)(C) that CMS will provide performance feedback to the MIPS eligible clinician in accordance with section 1848(q)(12) of the Act. We would provide at § 414.1380(b)(2)(vi)(D) that, upon completion of a new cost measure's informational-only feedback period, CMS will include its calculation of any scores for the cost measure in CMS' calculation of a MIPS eligible clinician's cost performance category score under paragraph (b)(2)(iii) and a MIPS eligible clinician's MIPS final score under paragraph (c) of § 414.1380.

Finally, we propose to modify the paragraph at § 414.1380(b)(2)(iii) to exclude cost measure scores calculated for informational-only purposes as provided in paragraph (b)(2)(vi). We are not proposing any modification to the remaining text as currently codified at § 414.1380(b)(2)(iii).

We invite comments on this proposal.

(3) Improvement Activities Performance Category

(a) Background

Section 1848(q)(2)(A)(iii) of the Act includes clinical practice improvement activities as a performance category under MIPS. We refer to this performance category as the improvement activities performance category. As required by section 1848(q)(2) and (5) of the Act, the four performance categories of MIPS are used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians are evaluated under all four of the MIPS performance categories, including the improvement activities performance category.

Section 1848(q)(2)(C)(v)(III) defines the term ''clinical practice improvement activities'' as an activity that relevant eligible professional organizations and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes. Section 1848(q)(2)(B)(iii) of the Act provides that, for the improvement activities category, the Secretary shall specify subcategories of clinical practice improvement activities, including at least six subcategories as specified in section 1848(q)(2)(B)(iii)(I) through (VI) of the Act. These statutorily enumerated subcategories are: (1) expanded practice access (such as same day appointments for urgent needs and afterhours access to clinician advice); (2) population management (such as monitoring health conditions of individuals to provide timely health care interventions or participation in a qualified clinical data registry); (3) care coordination (such as timely communication of test results, timely exchange of clinical information to patients and other providers, and use of remote monitoring or telehealth); (4) beneficiary engagement (such as the establishment of care plans for individuals with complex care needs, beneficiary self-management assessment and training, and using shared decision-making mechanisms); (5) patient safety and practice assessment (such as through use of clinical or surgical checklists and practice assessments related to maintaining certification); and (6) participation in an alternative payment model, as defined in section 1833(z)(3)(C) of the Act (section 1848(q)(2)(B)(iii)(I) through (VI) of the Act).

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 Physician Fee Schedule (PFS) final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886), the CY 2022 PFS final rule (86 FR 65462 through 65466), the CY 2023 PFS final rule (87 FR 70057 through 70061), and the CY 2024 PFS final rule (88 FR 79350 and 88 FR 79351). We also refer readers to § 414.1305 for the relevant definitions of improvement activities and attestation, § 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

We are proposing various updates to the Improvement Activities Inventory beginning with the CY 2026 performance period/2028 MIPS payment year, as described further later

in this section. First, we propose to remove the Achieving Health Equity subcategory. Second, we propose to add a new subcategory to the improvement activities performance category: Advancing Health and Wellness. Third, we propose to add three new improvement activities into two of our existing subcategories: (1) Population Management and (2) Patient Safety and Practice Assessment. Fourth, we propose to modify seven existing improvement activities currently specified for the performance category. Fifth, we propose to remove eight improvement activities currently specified for the performance category.

We refer readers to section V.B.5.e of this proposed rule for discussion of the burden estimates for these proposals.

(b) Improvement Activities Inventory

(i) Annual Call for Activities Background

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the first year of MIPS, we implemented the initial Improvement Activities Inventory consisting of approximately 95 activities (81 FR 77817 through 77831). We took several steps to ensure the Inventory was inclusive of activities aligned with statutory and program requirements. As part of this process, we conducted numerous interviews with high performing organizations of all sizes and conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), Consumer Assessment of Healthcare Providers and Systems (CAHPS) surveys, and Agency for Healthcare Research and Quality's (AHRQ) Patient Safety Organizations. In addition, we reviewed the comments we received in response to the MIPS and APMs Request for Information (RFI) related to the improvement activities performance category, as described in the CY 2016 PFS final rule with comment period (80 FR 71259 and 71260). For the MIPS and APMs RFI, we sought input on what activities could be classified as clinical practice improvement activities according to the definition under section 1848(q)(2)(C)(v)(III) of the Act.

Beginning with the CY 2018 performance period/2020 MIPS payment year (82 FR 53656 through 53659), we introduced an informal process for interested parties to submit new improvement activities or modifications for our consideration and potential inclusion in the comprehensive Improvement Activities Inventory. In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), beginning with the CY 2019 performance period/2021 MIPS payment year, we finalized a formal Annual Call for Activities process for the addition of possible new activities and for possible modifications to current activities in the Improvement Activities Inventory. This process requires interested parties to submit a nomination form similar to the one we used for the CY 2018 performance period/2020 MIPS payment year (82 FR 53656 through 53659). In order to submit a request for a new activity or a modification to an existing activity, the interested party must submit a nomination form (OMB control # 0938–1314) available at *www.qpp.cms.gov* during the Annual Call for Activities.

(ii) Proposals To Update the Improvement Activities Inventory

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. For our previously finalized Improvement Activities Inventories, we refer readers to Table H in the CY 2017 Quality Payment Program final rule (81 FR 77817) Appendix, Tables F and G in the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229) Appendix, Tables A and B in the CY 2019 PFS final rule (83 FR 60286 through 60303) Appendix 2, Tables A, B, and C in the CY 2020 PFS final rule (84 FR 63514 through 63538) Appendix 2, Tables A, B, and C in the CY 2021 PFS final rule (85 FR 85370 through 85377) Appendix 2, Tables A, B, and C in the CY 2022 PFS final rule (86 FR 65969 through 65997) Appendix 2, and Tables A, B, and C in the CY 2023 PFS final rule (70633 through 70650) Appendix 2. We also refer readers to the Quality Payment Program website and the Explore Measures and Activities tool at *https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2025* for a complete list of the current improvement activities. In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305, consistent with the statutory definition at section 1848(q)(2)(C)(v)(III) of the Act, to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant interested parties identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

We are proposing various updates to the improvement activities performance category, beginning with the CY 2026 performance period/2028 MIPS payment year. First, we propose to remove the Achieving Health Equity subcategory. Second, we propose adding a new subcategory to the improvement activities performance category: Advancing Health and Wellness. Third, we propose adding three new improvement activities into two of our existing subcategories: (1) Population Management and (2) Patient Safety and Practice Assessment. Fourth, we propose modifying seven existing improvement activities currently specified for the performance category. Fifth, we propose to remove eight improvement activities currently specified for the performance category. Generally, the three proposed new activities would fill gaps in the Improvement Activities Inventory and the seven proposed modified activities represent updates to the clinical goals of each modified activity. Our proposal to remove eight improvement activities reflects changes in our priorities and an intent to maintain an inventory of activities that are focused on driving improved patient outcomes directly. While we acknowledge the importance of clinical work and research that address the needs of specific populations, we propose to exclude activities that do not have a direct and measurable impact on improving patient health outcomes. If MIPS-eligible clinicians or groups identify a need for clinical quality improvement specific to a unique population under their care, they can select from existing activities in the Inventory that are designed to support such targeted efforts. Our proposal focuses on removing activities that do not lead to demonstrable improvements in patient outcomes, rather than those that address specific population needs through evidence-based clinical intervention. For example, IA_PSPA_19 (Implementation of formal quality improvement methods, practice changes or other practice improvement processes) allows for significant flexibility in the focus area of the quality improvement completed.

(iii) Proposals To Update Subcategories Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

As discussed previously, section 1848(q)(2)(B)(iii) of the Act provides that the Secretary specifies clinical practice improvement activities under subcategories, which must include at least six enumerated subcategories. Under section 1848(q)(2)(B)(iii) of the

Act, we established the current subcategories for the improvement activities performance category at § 414.1355(c).

(1) Proposal To Remove Achieving Health Equity Subcategory Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

We are proposing to remove of the ''Achieving Health Equity'' (AHE) subcategory beginning with the CY 2026 performance period/2028 MIPS payment year. We would also remove this subcategory from our regulation at § 414.1355(c)(7), replacing it with a new subcategory as described in later in this section.

This proposal to remove the AHE subcategory would not de-emphasize our focus on improving access, enhancing care coordination, and strengthening patient engagement. The removal of this subcategory would also be aligned with other QPP programs that have shifted focus to identifying improvement objectives on topics of prevention, nutrition, and well-being.

As discussed below, we are also proposing to recategorize five existing improvement activities from the Achieving Health Equity (AHE) subcategory to other established subcategories to better align with the substantive focus of these activities' descriptions. This proposed recategorization also reflects a strategic shift to emphasize emerging priorities such as wellness and prevention.

We are seeking public comments on our proposal to remove the Advancing Health Equity subcategory from the improvement activities performance category and from § 414.1355(c)(7) beginning with the CY 2026 performance year/2028 MIPS payment year.

(2) Proposal To Add New Advancing Health and Wellness Subcategory Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

We are proposing to add a new subcategory, titled ''Advancing Health and Wellness'' (AHW), beginning with the CY 2026 performance period/2028 MIPS payment year. This proposed addition would emphasize CMS's priority of overall health promotion and address broader aspects of healthcare that go beyond the direct treatment of diseases.

We are proposing to amend § 414.1355(c)(7) by adding a new subcategory, ''Advancing Health and Wellness'' (AHW), to replace the ''Achieving Health Equity'' subcategory. Our proposal to add the AHW subcategory for the improvement activities performance category would address gaps in MIPS eligible clinicians' involvement in preventive care and health promotion. Our goal for this new subcategory is to ensure that care is tailored to meet the needs of patients, including their mental health and chronic disease management and prevention.

As discussed in sections IV.A.4.d.(3)(b)(iii) and IV.A.4.d.(3)(b)(vii) of this proposed rule, we are also proposing to reassign one existing improvement activity (IA_PM_13 ''Chronic Care and Preventative Care Management for Empaneled Patients'') to this new AHW subcategory. This activity allows a MIPS eligible clinician to manage chronic and preventive care for empaneled patients and would align with the ''Advancing Health and Wellness'' subcategory description. If this proposal to add this subcategory is finalized, we would consider adding more activities to this subcategory in future rulemaking.

We are seeking public comments on our proposal to adopt a new subcategory, ''Advancing Health and Wellness,'' to the improvement activities performance category and at § 414.1355(c)(7) beginning with the CY 2026 performance year/2028 MIPS payment year.

(iv) Proposals To Adopt New Improvement Activities Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

We propose to adopt three new improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year. We propose that the IA_PM_XX (Improvement Detection of Cognitive Impairment in Primary Care) and IA_PM_XX (Integrating Oral Health Care in Primary Care) activities would be included in the Population Management subcategory. We propose that the IA_PSPA_XX (Patient Safety in Use of Artificial Intelligence [AI]) activity would be included in the Patient Safety and Practice Assessment subcategory.

The first new improvement activity, IA_PM_XX, titled ''Improving Detection of Cognitive Impairment in Primary Care,'' would allow MIPS eligible clinicians to increase the detection of cognitive impairment, especially in its early stages, by tracking baseline detection rates for mild cognitive impairment (MCI), dementia, and cognitive impairment. If rates are below 1.0, clinicians would increase Annual Wellness Visit uptake, ensure structured cognitive assessments, and address memory concerns during intake for patients 65+. Detection rates would be remeasured quarterly, with a focus on Medicare patients aged 65 and older. The second new improvement activity, IA_PM_XX, titled ''Integrating Oral Health Care in Primary Care,'' would allow MIPSeligible clinicians to include an oral health risk assessment and intraoral screening in primary care, educate patients on the importance of oral health, and provide counseling on its impact on systemic diseases. For patients without a dental home or those with oral health needs, a dental referral would be provided.

The third new improvement activity, IA_PSPA_XX, titled ''Patient Safety Use of Artificial Intelligence,'' would involve developing a new data-collection field within patient safety reporting systems for AI-attributable events. This would include events where actual harm was caused to a patient because AI technology was used, as well as near misses. Once a MIPS-eligible clinician has identified an event, a process to identify the cause and plan for future mitigation would be documented.

We refer readers to Table F–B1 in Appendix 2 for more information regarding each of these proposed improvement activities.

We are seeking public comments on our proposals to add each of these activities to the improvement activities performance category beginning with the CY 2026 performance period/2028 MIPS payment year.

(v) Proposals To Modify Existing Improvement Activities Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

We are proposing to modify seven existing improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year. First, IA_AHE_1, IA_AHE_3, IA_AHE_6, IA_AHE_7, and IA_AHE_10, currently specified for the Achieving Health Equity subcategory, would be reassigned to other subcategories to better align each individual activity's purpose with its subcategory. We propose to reassign IA_AHE_1 and IA_AHE_6 to the ''Expanded Practice Access'' (EPA) subcategory, IA_AHE_3 and IA_AHE_7 to the ''Beneficiary Engagement'' (BE) subcategory, and IA_AHE_10 to the ''Patient Safety and Practice Assessment'' (PSPA) subcategory. Second, we propose to also reassign IA_PM_13, ''Chronic Care and Preventative Care Management for Empaneled Patients,'' to the new ''Advancing Health and Wellness'' subcategory. Third, we propose several modifications

to IA_BMH_1, currently titled ''Diabetes Screening.'' Specifically, we propose to expand the scope of the activity. Currently, IA_BMH_1 is focused on screening only diabetic patients taking anti-psychotic medications.

The proposed modifications to IA_BMH_1 would broaden the relevant patient population by requiring a comprehensive physical health screening on all patients taking anti-psychotic medications. This modified activity would encompass a broader range of health conditions, beyond just diabetes, that may be impacted by antipsychotic medications. While diabetes remains a key focus due to its significant association with antipsychotic use, the expanded title reflects the inclusion of additional monitoring components, such as obesity, hypertension, dyslipidemia, movement disorders (for example, tardive dyskinesia), and other relevant physical health conditions. Diabetes would remain relevant for this improvement activity as it is a major comorbidity linked to antipsychotic medications, and monitoring for diabetes would remain an integral part of the comprehensive health assessment for these patients under this activity. We also propose to modify the title of IA_BMH_1, renaming it to ''Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring.'' This proposed title better reflects the substantive modifications we are proposing for this activity.

We refer readers to Table F–B2 in Appendix 2 for more information regarding each of these proposed modifications to existing improvement activities.

We are seeking public comments on our proposals to modify each of these activities currently specified for the improvement activities performance category beginning with the CY 2026 performance period/2028 MIPS payment.

(vi) Proposals To Remove Existing Improvement Activities Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

Additionally, we are proposing to remove eight previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year: IA_AHE_5, IA_AHE_8, IA_AHE_9, IA_AHE_11, IA_AHE_12, IA_PM_6, IA_PM_26, and IA_ERP_3. We are proposing removal of these specific improvement activities in accordance with our activity removal policy set forth at § 414.1355(d). Specifically, we propose to remove each of these eight improvement activities under Removal Factor 7, which provides that we may remove an improvement activity if we determine it is obsolete (§ 414.1355(d)(7)). When we codified this Removal Factor at § 414.1355(d)(7) in the CY 2025 PFS final rule (89 FR 98408 and 98409), we stated that, when we originally established this removal factor, we employed a commonly used definition of ''obsolete'' as in 'out of date' (89 FR 98409). We further stated that, in the context of the Quality Payment Program, this means an activity that no longer reflects current clinical best practices, that is no longer available for implementation (for example, when a program or initiative upon which an activity depends has been ended or closed), and/or that, because of the nature of the activity, cannot be attested to year after year with a reasonable expectation of clinical quality improvement year after year (89 FR 98409).

We are proposing to remove these activities to evolve the Improvement Activities Inventory and emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Factor 7, Activity is Obsolete, supports our proposals to remove these activities as they do not reflect CMS's current prioritization of best clinical practices and are no longer available for implementation as they have been suspended for CY 2025. Our proposal to remove IA_ERP_3 would also align with recent FDA and CDC guidance regarding updating vaccination recommendations and expiration of the PHE for COVID–19.[373] [374] We refer readers to Table F–B3 in Appendix 2 for more information regarding our proposals to remove each of these existing improvement activities.

We are seeking public comments on our proposals to remove each of these activities from the improvement activities performance category beginning with the CY 2026 performance period/2028 MIPS payment.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A)(iv) of the Act includes the meaningful use of certified electronic health record (EHR) technology (CEHRT) as a performance category under MIPS. We refer to this performance category as the Promoting Interoperability performance category (and in past rulemaking, we referred to it as the advancing care information performance category).

Section 1848(q)(2)(B)(iv) of the Act provides that the requirements established under section 1848(o)(2) of the Act for determining whether a MIPS eligible clinician is a meaningful EHR user also apply to our assessment of a MIPS eligible clinician's performance on measures and activities with respect to the MIPS Promoting Interoperability performance category. Section 1848(o)(2)(D) of the Act generally provides that the requirements for being a meaningful EHR user under section 1848(o)(2) continue to apply for purposes of MIPS.

Under section 1848(o)(2)(A) of the Act, a MIPS eligible clinician must meet three requirements related to the meaningful use of CEHRT during a performance period for a MIPS payment year. Specifically, under section 1848(o)(2)(A) of the Act, the MIPS eligible clinician must: (1) demonstrate to the satisfaction of the Secretary the use of CEHRT in a meaningful manner, which shall include the use of electronic prescribing as determined to be appropriate by the Secretary; (2) demonstrate to the satisfaction of the Secretary that their CEHRT is connected in a manner that provides, in accordance with law and standards applicable to the exchange of information, for electronic exchange of health information to improve the quality of care, such as promoting care coordination, and demonstrates (through a process specified by the Secretary, such as use of an attestation), that they have not knowingly and willfully taken action (such as to disable functionality) to limit or restrict the compatibility or interoperability of the CEHRT; and (3) use CEHRT to submit information on clinical quality measures and such other measures as selected by the Secretary.

For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to our regulations at §§ 414.1375 and 414.1380(b)(4) and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), CY 2022 PFS final rule (86 FR 65466 through 65490), CY 2023 PFS final rule (87 FR 70060 through 70087), CY 2024 PFS final rule (88 FR 79308

[373] *https://www.nejm.org/doi/full/10.1056/NEJMsb2506929?logout=true.*

[374] *https://archive.cdc.gov/www_cdc_gov/coronavirus/2019-ncov/your-health/end-of-phe.html.*

through 79312 and 88 FR 79351 through 79365), the 21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking final rule (89 FR 54662 through 54718), and CY 2025 PFS final rule (89 FR 98414 through 98427).

In this proposed rule, we are proposing to:

- Modify the Security Risk Analysis measure to include a second component requiring an affirmative attestation of having conducted security risk management in accordance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Security Rule;
- Modify the High Priority Practices Safety Assurance Factors for Electronic Health Record (EHR) Resilience (SAFER) Guide Measure by requiring an affirmative attestation of completing an annual self-assessment using the SAFER Guides published in January of 2025; and
- Adopt the Public Health Reporting Using Trusted Exchange Framework and Common Agreement™ (TEFCA™) measure as an optional bonus measure under the Public Health and Clinical Data Exchange objective.

For both the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program, we are proposing to:

- Adopt and codify at § 414.1380(b)(4)(iii) and § 495.24(f)(3), respectively, a measure suppression policy beginning with the CY 2026 performance period/2028 MIPS payment year and the EHR reporting period in CY 2026; and
- Suppress the Electronic Case Reporting measure by excluding the measure from scoring for MIPS eligible clinicians for the CY 2025 performance period/2027 MIPS payment year and eligible hospitals and critical access hospitals (CAHs) for the EHR reporting period in CY 2025

(b) Definition of Certified EHR Technology

In accordance with § 414.1375(b)(1), to earn a performance category score for the MIPS Promoting Interoperability performance category, a MIPS eligible clinician must be a meaningful EHR user for MIPS and use CEHRT during the performance period, as both terms are defined in § 414.1305. In the CY 2025 PFS final rule, we discussed modifications we had previously finalized related to the CEHRT definition for the Quality Payment Program, including for the MIPS Promoting Interoperability performance category, at § 414.1305 (89 FR 98414 and 98415). Currently, we define CEHRT, for purposes of MIPS, as EHR technology (which could include multiple technologies) certified under the Office of National Coordinator for Health Information Technology's (ONC) [375] Health Information Technology (IT) Certification Program that meets the Base EHR definition at 45 CFR 170.102 and certified as meeting additional ONC health IT certification criteria as adopted and updated in 45 CFR 170.315 as enumerated in paragraph (2) of the CEHRT definition at § 414.1305, including as necessary to report on applicable objectives and measures specified for MIPS. In section IV.A.4.d.(4)(h)(i) of this proposed rule, we provide Table 62, which sets forth the objectives and measures for the Promoting Interoperability performance category for the CY 2026 performance period/2028 MIPS payment year and the associated ONC health IT certification criteria set forth at 45 CFR 170.315, as is currently applicable. Given the central role of using CEHRT that meets this definition at § 414.1305 for purposes of earning a score for the MIPS Promoting Interoperability performance category, we highlight recent updates to the ONC Health IT Certification Program's certification criteria.

In the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI–1) final rule (89 FR 1205 through 1210), ONC adopted the certification criterion, ''decision support interventions (DSI)'' at 45 CFR 170.315(b)(11) to replace the ''clinical decision support (CDS)'' certification criterion at 45 CFR 170.315(a)(9), the latter of which is included in the Base EHR definition 45 CFR 170.102 until December 31, 2024. The finalized DSI criterion at 45 CRF 170.315(b)(11) requires that Health IT Modules must, among other functions, enable a limited set of identified users to select (that is, activate) evidence-based DSIs and Predictive DSIs (as defined at 45 CFR 170.102) [376] and support ''source attributes'' [377]—categories of technical performance and quality information—for both evidence-based and Predictive DSIs. ONC further finalized that a Health IT Module may meet the Base EHR definition by either being certified to the existing CDS version of the certification criterion at 45 CFR 170.315(a)(9) or being certified to the revised DSI criterion at 45 CFR 170.315(b)(11), for the period up to, and including, December 31, 2024. On and after January 1, 2025, ONC finalized that only the DSI criterion at 45 CFR 170.315(b)(11) is included in the Base EHR definition (89 FR 1281). ONC further finalized that the adoption of the criterion at 45 CFR 170.315(a)(9) expired on January 1, 2025 (89 FR 1281).

In addition to the DSI criterion, to which Health IT Modules must be certified to meet the Base EHR definition after January 1, 2025, ONC finalized other updates in the HTI–1 final rule, for which health IT developers must update and provide Health IT Modules to their customers by January 1, 2026. These include updates resulting from the following finalized policies:

- The ''[t]ransmission to public health agencies—electronic case reporting'' criterion at 45 CFR 170.315(f)(5) was updated to specify consensus-based, industry-developed electronic standards and implementation guides (IGs) to replace functional, descriptive requirements in the existing criterion (89 FR 1226). We have identified this criterion as required for the Electronic Case Reporting measure.
- The United States Core Data for Interoperability (USCDI) version 3 was adopted at 45 CFR 170.213(b), and ONC finalized that USCDI version 1 at 45 CFR 170.213(a) will expire on January 1, 2026. This change impacts several ONC health IT certification criteria that reference the USCDI, including the ''transitions of care'' certification criterion at 45 CFR 170.315(b)(1), the ''Clinical information reconciliation and incorporation—Reconciliation'' certification criterion at 45 CFR 170.315(b)(2) and the ''View, download, and transmit to 3rd party'' certification criterion at 45 CFR 170.315(e)(1) (89 FR 1214). The ''transitions of care'' certification criterion at 45 CFR 170.315(b)(1) is included in the ''Base EHR definition'' while the ''Clinical information reconciliation and incorporation—Reconciliation'' certification criterion at 45 CFR 170.315(b)(2) is required for the ''Support Electronic Referral Loops by Receiving and Reconciling Health Information'' measure and the ''View, download, and transmit 3rd party'' certification criterion is required for the ''Provide Patients Electronic Access to their Health Information'' measure.

[375] On July 29, 2024, notice was posted in the **Federal Register** that ONC would be dually titled to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (89 FR 60903). We will continue to refer to ONC in historical actions prior to this date and in actions involving the ONC Health IT Certification Program. We will otherwise use ASTP to refer to the office.

[376] 45 CFR 170.315(b)(11)(iii)(A) and (B).

[377] 45 CFR 170.315(b)(11)(iv)(A) and (B).

• The ''standardized application programming interface (API) for patient and population services'' certification criterion at 45 CFR 170.315(g)(10), which is included in the Base EHR definition, was updated to include newer versions of certain standards, including USCDI version 3 and updated functionality to support the criterion (89 FR 1283).

We refer readers to the HTI–1 final rule (89 FR 1192) and resources available on the ONC's website for complete information regarding the updates to ONC health IT certification criteria.[378]

(c) Proposal to Modify the Security Risk Analysis Measure

(i) Background

The HIPAA Security Rule [379] (45 CFR part 160 and subparts A and C of part 164) contains, among other things, the administrative safeguards that covered entities and business associates (45 CFR 160.103) must implement, such as the standard and implementation specifications for security management processes. Among those safeguards are implementation specifications that require covered entities and business associates to conduct an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of electronic protected health information (ePHI) held by the covered entity or business associate (45 CFR 164.308(a)(1)(ii)(A)) and to implement security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level to comply with the general requirements of the HIPAA Security Rule at 45 CFR 164.306(a) and the risk management requirements at 45 CFR 164.308(a)(1)(ii)(B).

For MIPS eligible clinicians, ensuring the privacy and security of ePHI is essential for demonstrating meaningful use of CEHRT. In the Medicare and Medicaid Programs; Electronic Health Record Incentive Program final rule (Stage 1 final rule) (75 FR 44368 through 44369), the Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 2 final rule (Stage 2 final rule) (77 FR 54002 and 54003), and the Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (Stage 3 final rule) (80 FR 62793 through 62794), we discussed the benefits of safeguarding electronic health information and our determination that protecting electronic health information is essential to all other aspects of meaningful use. In the Stage 1 final rule, we noted that, while CEHRT provides tools for protecting health information, processes and possibly tools outside the scope of CEHRT are required (75 FR 44369). In the Stage 2 final rule, we also noted that unintended, unlawful, or both disclosures of protected health information could diminish individuals' confidence in EHRs and electronic health information exchange; ensuring that health information is adequately protected and secured will assist in addressing the unique risks and challenges that may be presented by EHRs (77 FR 54002). On these bases, we adopted and maintained the Security Risk Analysis measure based on the HIPAA Security Rule risk analysis requirement at 45 CFR 164.308(a)(1)(ii)(A) for the Medicare EHR Incentive Program for Eligible Professionals, the predecessor to the MIPS Promoting Interoperability performance category.[380] Additional information on the initial adoption of this measure can be found in prior rulemakings for the predecessor Medicare EHR Incentive Program for Eligible Professionals, including the Stage 1 final rule (75 FR 44369), Stage 2 final rule (77 FR 54002 and 54003), and Stage 3 final rule (80 FR 62793 through 62794). In the CY 2017 Quality Payment Program final rule (81 FR 77219 through 77220), we adopted the Protect Patient Health Information objective for the MIPS Promoting Interoperability performance category and included the Security Risk Analysis measure within this objective. We subsequently modified this measure in the CY 2019 PFS final rule (83 FR 59790).

To earn a score for the MIPS Promoting Interoperability performance category, a MIPS eligible clinician must attest ''Yes'' or ''No'' as to whether they have conducted or reviewed a security risk analysis as required under the HIPAA Security Rule at 45 CFR 164.308(a)(1)(ii)(A) during the year in which the performance period occurs. MIPS eligible clinicians must attest ''Yes'' to the measure to be considered a meaningful EHR user. The measure is not scored individually at § 414.1380(b)(4)(ii) and does not contribute to the MIPS eligible clinician's Promoting Interoperability performance category score for the Protect Patient Health Information objective and measures. An attestation of ''No'' demonstrates that the MIPS eligible clinician did not complete the actions included in the measure as required by § 414.1375(b)(2)(ii)(A) and did not satisfy the definition of a meaningful EHR user at § 414.1305. Therefore, if the MIPS eligible clinician submits a ''No'' attestation for this measure, they would not earn a score for the Promoting Interoperability performance category, resulting in a score of zero, in accordance with § 414.1375(b)(2). We refer readers to Tables 59 and 60 in sections IV.A.4.d.(4)(h)(i) and IV.A.4.d.(4)(h)(ii), respectively, of this proposed rule for more information on the proposed objectives and measures and scoring methodology for the Promoting Interoperability performance category, including the Security Risk Analysis measure.

(ii) Proposal To Modify to the Security Risk Analysis Measure Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

While the Security Risk Analysis measure currently requires MIPS eligible clinicians to attest to conducting a security risk analysis as required under the HIPAA Security Rule, the Security Risk Analysis measure does not currently require MIPS eligible clinicians to manage their security risk or attest to having implemented security measures to manage their security risk. Codified at 45 CFR 164.308(a)(1)(ii)(B), the HIPAA Security Rule implementation specification for risk management requires the implementation of security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level to comply with 45 CFR 164.306(a). The HIPAA Security Rule does not prescribe a specific methodology for conducting a risk analysis or managing risk (45 CFR 164.308(a)(1)(ii)(A) and (B)). We refer readers to the Security Risk Assessment Tool (*https://www.healthit.gov/topic/*

[378] For more information, visit: *https://www.healthit.gov/topic/laws-regulation-and-policy/health-data-technology-and-interoperability-certification-program.*

[379] The U.S. Department of Health and Human Services has proposed to modify the HIPAA Security Rule to strengthen the cybersecurity of electronic protected health information, including proposals to revise the existing requirements to conduct a risk analysis and risk management. *See generally* HIPAA Security Rule to Strengthen the Cybersecurity of Electronic Protected Health Information proposed rule (90 FR 898).

[380] Section 101(b) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) sunset the Medicare EHR Incentive Program for Eligible Professionals, set forth at section 1848(o) of the Act. As discussed previously, section 1848(o)(2) of the Act has been incorporated into the MIPS Promoting Interoperability performance category's requirements via section 1848(q)(2)(B)(iv) of the Act. *See* CY 2017 Quality Payment Program final rule (81 FR 77018 and 77019) for more information regarding the sunsetting of the Medicare EHR Incentive Program for Eligible Professionals.

privacy-security-and-hipaa/security-risk-assessment-tool) developed by ASTP/ONC in collaboration with the U.S. Department of Health and Human Services (HHS) Office for Civil Rights (OCR), and to OCR's cybersecurity newsletters and other risk analysis materials,[381] for educational resources on conducting a security risk assessment as required by the HIPAA Security Rule. Additional information is also available in the National Institute of Standard and Technology (NIST) special publication, *Implementing the Health Insurance Portability and Accountability Act (HIPAA) Security Rule: A Cybersecurity Resource Guide*.[382]

In this section of the proposed rule, we propose to modify the existing Security Risk Analysis measure to add a second attestation, requiring MIPS eligible clinicians to also attest ''Yes'' to having implemented security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level such that they are compliant with 45 CFR 164.306(a) as required by the HIPAA Security Rule implementation specification for risk management. This second attestation would be in addition to the current requirement under the measure for MIPS eligible clinicians to attest ''Yes'' to having conducted or reviewed a security risk analysis. If the proposed modification to this measure is finalized, MIPS eligible clinicians would be required to submit two affirmative (''Yes'') attestations to comply with § 414.1375(b)(2)(ii)(A), in which they have: (1) conducted or reviewed a security risk analysis as required under the HIPAA Security Rule at 45 CFR 164.308(a)(1)(ii)(A); and (2) conduct security risk management activities as required under the HIPAA Security Rule at 45 CFR 164.308(a)(1)(ii)(B), specifically the implementation of security measures sufficient to reduce risks and vulnerabilities to a reasonable and appropriate level to comply with 45 CFR 164.306. Also, we are proposing to modify the measure specifications to better align with the requirements of the HIPAA Security Rule.

The modifications we propose to the Security Risk Analysis measure would increase accountability among MIPS eligible clinicians that have not taken steps to reduce risks and vulnerabilities to ePHI and would provide transparency regarding the efforts of MIPS eligible clinicians that are already taking steps to manage this risk. Furthermore, the proposed modification to the Security Risk Analysis measure would align with the Medicare Promoting Interoperability Program's proposal in the FY 2026 Hospital Inpatient Protective Payment System/Long-Term Care Hospital Prospective Payment System (IPPS/LTCH PPS) proposed rule (90 FR 18357 and 18358) to modify its Security Risk Analysis measure.

To reflect the proposed addition of the risk management component, the proposed modified measure would read as follows: First, conduct or review a security risk analysis and second, conduct security risk management activities, in accordance with the requirements under 45 CFR 164.308(a)(1)(ii)(A) and (B). Security risk analysis and management activities include addressing the security of data created or maintained by CEHRT (*to include encryption*), in accordance with 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3). The encryption implementation specified at 45 CFR 164.312(a)(2)(iv) must be implemented if it is reasonable and appropriate; if encryption is not reasonable and appropriate, then the MIPS eligible clinician would adopt an equivalent alternative measure if it is reasonable and appropriate to do so.

To meet the requirements of the modified measure as proposed, we propose MIPS eligible clinicians would need to separately attest ''Yes'' to both components of the proposed revised Security Risk Analysis measure. A MIPS eligible clinician would be required to both attest ''Yes'' that they have met the existing security risk analysis requirement component, *and* attest ''Yes'' that they have met the security risk management component of the modified Security Risk Analysis measure to be considered a meaningful EHR user beginning with the CY 2026 performance period/2028 MIPS payment year.

We are not proposing to modify when a MIPS eligible clinician must complete the actions specified for the Security Risk Analysis measure as currently provided at § 414.1375(b)(2)(ii)(A). As set forth at § 414.1375(b)(2)(ii)(A), a MIPS eligible clinician may attest ''Yes'' regarding their completion of the actions included in this measure so long as they complete the required actions any time during the calendar year in which the performance period occurs.

We also are not proposing to modify the current scoring approach for the Security Risk Analysis measure, as described in section IV.A.4.d.(4)(h)(ii) of this proposed rule. To meet the requirements of the Promoting Interoperability performance category, MIPS eligible clinicians would need to affirmatively (''Yes'') attest to the two components of the measure; otherwise, MIPS eligible clinicians would receive score of zero for the entire Promoting Interoperability performance category. If a MIPS eligible clinician attests ''No'' because they have not completed the risk analysis component, the risk management component, or neither component, or did not report the measure, then they would fail to earn a score for the Promoting Interoperability performance category (and receive a score of zero) as currently provided at § 414.1375(b)(2)(ii)(A).

We seek public comment on this proposal to modify the Security Risk Analysis measure beginning with the CY 2026 performance period/2028 MIPS payment year. Also, we seek public comment regarding compliance with security risk management requirements and the potential impact the proposed modification to the Security Risk Analysis measure would have on risk management compliance and any potential burden from this proposal.

(d) Proposal To Modify the High Priority Practices Safety Assurance Factors for EHR Resilience (SAFER) Guide Measure

(i) Background

The 2025 SAFER Guides are an evidence-based set of recommendations in the form of eight stand-alone, subject-oriented chapters (previously nine chapters comprising the 2016 SAFER Guides) that present the health IT community, including MIPS eligible clinicians that use health IT, with best practice recommendations to improve the safety and safe use of EHRs.[383] The SAFER Guides were first released in 2014 and updated in 2016. In the CY 2022 PFS final rule (86 FR 65475 through 65477), CMS adopted the High Priority Practices SAFER Guide measure under the Protect Patient Health Information Objective in the Promoting Interoperability performance category beginning with the CY 2022 performance period/2024 MIPS payment year. In the CY 2024 PFS final rule, we modified the requirements for the High Priority Practices SAFER Guide measure beginning with the CY 2024 performance period/2026 MIPS payment year (88 FR 79354 through 79356), to require MIPS eligible clinicians to conduct, and attest ''Yes,'' to having completed an annual self-

[381] U.S. Department of Health and Human Services, Office of Civil Rights newsletters and risk analysis materials located at: *https://www.hhs.gov/hipaa/for-professionals/security/guidance/index.html*.

[382] *See* NIST SP 800–66, rev. 2, located at: *https://csrc.nist.gov/pubs/sp/800/66/r2/final*.

[383] ASTP SAFER Guides located at: *https://www.healthit.gov/topic/safety/safer-guides*.

assessment using the High Priority Practices SAFER Guide.

(ii) Proposed Modification to the High Priority Practices SAFER Guide Measure Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

In January of 2025, ASTP published an updated set of SAFER Guides (hereafter referred to as the 2025 SAFER Guides) located at: *https://www.healthit.gov/topic/safety/safer-guides.* The 2025 SAFER Guides consist of eight guides organized into three broad groups of Foundational Guides, Infrastructure Guides, and Clinical Process Guides. All Guides have been revised and contain new recommendations as well as the comprehensive consolidation of recommendations that were similar and overlap in function or intent with the 2016 SAFER Guides. For example, the ''System Configuration'' and ''System Interfaces'' chapters have been consolidated into a single chapter titled, ''System Management.'' The entirety of the content recommendations, bibliography, and implementation guidance have been organized into a comprehensive table, which promotes the adoption of best safety practices for health IT. This update represents the most comprehensive revision of the SAFER Guides since they were first released. Table 58 provides the titles of the various guides, and chapters within the guides, that collectively comprise the 2016 SAFER Guides and the 2025 SAFER Guides, respectively.

When we finalized requiring a ''Yes'' attestation to account for completion of the self-assessment in the CY 2024 PFS final rule, as opposed to allowing a ''Yes'' or ''No'' attestation, some commenters expressed concern that the 2016 SAFER Guides contained outdated references and did not reflect current practices (88 FR 79355 through 79357). Additionally, some commenters recommended that CMS and ONC review and make updates to the 2016 SAFER Guides, regarding data privacy protections and present-day safety practices (88 FR 79355 through 79357). Our proposal to modify the requirement of the High Priority Practices SAFER Guide measure to reference the updated 2025 version of the High Priority Practices SAFER Guide is a direct response to such concerns. The 2025 version of the High Priority Practices SAFER Guide is updated and streamlined to focus on the highest risk, most commonly occurring issues that can be addressed through technology or practice changes to build system resilience.

TABLE 58: COMPARISON OF THE 2016 SAFER GUIDES AND THE 2025 SAFER GUIDES

Category	2016 SAFER Guides	2025 SAFER Guides
Foundational Guides	• High Priority Practices • Organizational Responsibilities	• High Priority Practices • Organizational Responsibilities
Infrastructure Guides	• Contingency Planning • System Configuration • System Interfaces	• Contingency Planning • System Management
Clinical Process Guides	• Patient Identification • Computerized Provider Order Entry with Decision Support • Test Results Reporting and Follow-Up • Clinician Communication	• Patient Identification • Computerized Provider Order Entry with Decision Support • Test Results Reporting and Follow-Up • Clinician Communication

We are proposing to modify the High Priority Practices SAFER Guide measure, which currently requires MIPS eligible clinicians to attest ''yes'' to completing an annual self-assessment, by specifying that MIPS eligible clinicians utilize the 2025 version of the High Priority Practices SAFER Guide beginning with the CY 2026 performance period/2028 MIPS payment year. At § 414.1375(b)(2)(ii)(D), to earn a score for the Promoting Interoperability performance category, a MIPS eligible clinician is required to submit an affirmative attestation regarding their completion of the annual self-assessment to meet the requirement of the High Priority Practices SAFER Guide measure during the year in which the performance period occurs. For the CY 2025 performance period/2027 MIPS payment year, MIPS eligible clinicians complete this annual self-assessment using the 2016 version of the High Priority Practices SAFER Guide. We are proposing to modify this measure by requiring that MIPS eligible clinicians complete this annual self-assessment using the 2025 version of the High Priority Practices SAFER Guide beginning with the CY 2026 performance period/2028 MIPS payment year.

We are not proposing any modifications to the scoring policies for this measure as previously finalized. To meet the requirements of the Promoting Interoperability performance category, MIPS eligible clinicians would need to affirmatively (''Yes'') attest to meeting the requirement of the measure; otherwise, MIPS eligible clinicians would receive score of zero for the entire Promoting Interoperability performance category. If a MIPS eligible clinician attests ''No'' because they have not completed an annual self-assessment using the 2025 version of the High Priority Practices SAFER Guide, or did not report the measure, then they would fail to earn a score for the Promoting Interoperability performance category (and receive a score of zero) as currently provided at § 414.1375(b)(2)(ii)(D). We refer readers to the CY 2024 PFS final rule for further information regarding the High Priority Practices SAFER Guide measure and its requirements (88 FR 79354 through 79356).

Both the 2016 and the 2025 SAFER Guides are available on the ASTP/ONC website located at: *https://www.healthit.gov/topic/safety/safer-guides.* We encourage MIPS eligible clinicians to begin to familiarize

themselves with the 2025 SAFER Guides.

We seek public comment on the proposal to modify the High Priority Practices SAFER Guide measure by requiring MIPS eligible clinicians to conduct an annual self-assessment using the 2025 High Priority Practices SAFER Guide (instead of the 2016 version) at any point during the calendar year in which the performance period occurs, beginning with the CY 2026 performance period/2028 MIPS payment year.

(e) Public Health and Clinical Data Exchange Objective: Proposal To Adopt the Public Health Reporting Using the Trusted Exchange Framework and Common AgreementÔ (TEFCA) Measure as an Optional Bonus Measure Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

(i) Background

Under section 1848(o)(2)(A)(ii) of the Act, the MIPS Promoting Interoperability performance category encourages health information exchange, including for public health purposes through the Public Health and Clinical Data Exchange objective. Effective and efficient responses to public health events require rapid, accurate exchange of electronic health information between health care providers, and Federal, State, tribal, local, and territorial public health agencies (PHAs). Health care providers and MIPS eligible clinicians collect this electronic health information for patient care, and PHAs use the information for public health purposes such as tracking a disease, initiating contact tracing, or pinpointing the source of a disease or outbreak of foodborne illness.

Currently, there are five measures under the Promoting Interoperability performance category Public Health and Clinical Data Exchange objective: Immunization Registry Reporting, Electronic Case Reporting, Syndromic Surveillance Reporting, Public Health Registry Reporting, and Clinical Data Registry Reporting. Two of the measures, Immunization Registry Reporting and Electronic Case Reporting, are required under the objective; three of the measures, Syndromic Surveillance Reporting, Public Health Registry Reporting and Clinical Data Registry Reporting, are optional bonus measures. MIPS eligible clinicians may receive a total of 5 bonus points for reporting on one or more optional measures.

Measures under the Public Health and Clinical Data Exchange objective promote the exchange of health information for specific public health use cases with PHAs and other entities using CEHRT. However, one difficulty with the electronic exchange of health information for many different public health purposes is that exchange between PHAs and MIPS eligible clinicians requires different processes for each measure under the Public Health and Clinical Data Exchange objective. For instance, health information exchange for the Electronic Case Reporting measure may be based on several point-to-point connections among MIPS eligible clinicians, intermediaries, and PHAs, but these connections and agreements may be different for other use cases such as those associated with the Immunization Registry Reporting measure. TEFCA establishes a common governance and technical framework for nationwide health information exchange. We anticipate that participation in TEFCA could help reduce the difficulty of public health information exchange over time. Facilitating health information exchange with PHAs through the TEFCA framework has the potential to increase standardization of connections to PHAs and reduce reporting burden for MIPS eligible clinicians and PHAs.

(ii) Background on TEFCA

Section 4003(b) of the 21st Century Cures Act, enacted in 2016, amended section 3001(c) of the Public Health Service Act and required HHS to take steps to ensure full network-to-network exchange of health information. Specifically, in section 3001(c)(9)(A) of the Public Health Service Act, the Congress directed the National Coordinator, in collaboration with NIST and other agencies within HHS, to ''develop or support a trusted exchange framework, including a common agreement among health information networks nationally.'' Since the enactment of the 21st Century Cures Act, HHS has pursued development of the TEFCA framework.

The electronic exchange of health information allows MIPS eligible clinicians, other healthcare providers, and patients to access and securely share a patient's vital medical information electronically.[384] By standardizing health information exchange across many different networks, TEFCA helps to ensure nationwide network-to-network exchange of health information. Standardization across networks simplifies health information exchange by reducing the number of connections that health care providers, MIPS eligible clinicians, PHAs, and other interested parties need to make to send and receive health information. TEFCA supports this standardization by creating baseline governance, legal, and technical requirements that enable secure health information exchange across different networks nationwide, including: a common method for authenticating trusted network participants, a common set of rules for trusted exchange, organizational and operational policies to enable the exchange of health information among networks, and a process for filing and adjudicating noncompliance with the terms of the Common Agreement.[385] We anticipate that TEFCA can help expand the nationwide availability of secure health information exchange capabilities in public health reporting.

CMS, the Centers for Disease Control and Prevention (CDC), and ASTP/ONC have been working closely with PHAs and other interested parties to expand the use of TEFCA for sharing health information for public health purposes. TEFCA is an important part of a shared vision for building a modernized public health infrastructure that connects previously siloed public health and health care systems. Early efforts to enable public health reporting through TEFCA exchange have focused on electronic case reporting, which is likely to be the primary mechanism of public health information exchange supported by entities that are part of TEFCA during CY 2026.

(iii) Proposal To Adopt the Public Health Reporting Using TEFCA Measure as an Optional Bonus Measure Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year

We propose to adopt an optional bonus measure under the Public Health and Clinical Data Exchange objective for health information exchange with a PHA that occurs using TEFCA (the Public Health Reporting Using TEFCA measure) beginning with the CY 2026 performance period/2028 MIPS payment year. Specifically, we are proposing to adopt the following measure as an optional bonus measure:

- Public Health Reporting Using TEFCA. The MIPS eligible clinician: (1) participates as a signatory to a

[384] For additional information about health information exchange, visit: *https://www.healthit.gov/topic/health-it-and-health-information-exchange-basics/what-hie.*

[385] Additional information on TEFCA can be found on the ASTP website, located at: *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca.*

Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** (89 FR 93309) and on ASTP/ONC's website);[386] (2) is not suspended from participating in TEFCA Exchange; (3) submits health information using TEFCA to a PHA consistent with one or more of the measures under the Public Health and Clinical Data Exchange objective; (4) is in active engagement Option 2 (Validated Data Production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective; and (5) uses the functions of CEHRT to exchange with the PHA.

Under our proposal, a MIPS eligible clinician would be able to claim five bonus points under the Public Health and Clinical Data Exchange objective if the MIPS eligible clinician has attested that they are in active engagement Option 2 (Validated Data Production) with a PHA to submit electronic production data for one or more of the measures under the Public Health and Clinical Data Exchange objective using TEFCA. As previously finalized in the CY 2023 PFS rule (87 FR 70071 through 70074), for the measures in the Public Health and Clinical Data Exchange objective, MIPS eligible clinicians are required to report their level of active engagement as either Option 1 (Pre-production and Validation) or Option 2 (Validated Data Production), and may only spend one performance period at Option 1 (Pre-production and Validation) level of active engagement before advancing to Option 2 (Validated Data Production) to fulfill measure requirements. Under our proposal, this bonus measure would only be available where the MIPS eligible clinician is in active engagement Option 2 (Validated Data Production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective.

Furthermore, under the proposal, to attest ''Yes'' for the Public Health Reporting Using TEFCA measure, a MIPS eligible clinician must be a signatory to a TEFCA Framework Agreement,[387] meaning either the Common Agreement or an agreement that includes the Participant/Sub-participant Terms of Participation,[388] and is not suspended under the respective agreement. Additionally, to attest ''Yes'' for such bonus measure, a MIPS eligible clinician must transmit electronic health information for at least one measure under the Public Health and Clinic Data Exchange objective using TEFCA.

For more information about exchange of public health data using TEFCA, we refer readers to the TEFCA Public Health Exchange Purpose Implementation Standard Operating Procedure (SOP).[389] The Public Health Exchange Purpose Implementation SOP currently identifies electronic case reporting and electronic laboratory reporting as exchange use cases, but the SOP can also be used for any allowable public health purpose. CMS, CDC, and ASTP/ONC are focused on establishing a foundation for MIPS eligible clinicians to use TEFCA to meet their public health reporting needs for the benefit of both public health and clinical care.

Finally, the MIPS eligible clinician must use the functions of CEHRT to engage in exchange with a PHA. We believe there are numerous certified health IT capabilities that can support exchange under a TEFCA Framework Agreement with a PHA. For instance, MIPS eligible clinicians may exchange information under a TEFCA Framework Agreement by using technology certified to the ONC health IT certification criterion, ''Transmission to public health agencies—electronic case reporting'' at 45 CFR 170.315(f)(5). This criterion is associated with the exchange use cases currently identified under the TEFCA Public Health Exchange Purpose Implementation SOP. We further recognize that MIPS eligible clinicians may connect to entities that connect directly or indirectly to a Qualified Health Information Network™ [390] (QHIN) using certified health IT in a variety of ways. This includes the other ONC health IT certification criterion at 45 CFR 170.315(f) associated with the Public Health and Clinical Data Exchange objective measures, and we believe that we should allow for substantial flexibility in how MIPS eligible clinicians use certified health IT to exchange health information under a TEFCA Framework Agreement. We seek public comment on ONC health IT certification criteria that can support the proposed bonus measure.

We propose that a MIPS eligible clinician may earn a total of five bonus points if the MIPS eligible clinician attests ''Yes'' to one, more than one, or all of the following optional bonus measures: the Public Health Reporting Using TEFCA measure, the Public Health Registry Reporting measure, the Clinical Data Registry Reporting measure, or the Syndromic Surveillance Reporting measure. In the CY 2022 PFS final rule, we previously finalized that, beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians may attest ''Yes'' to more than one optional bonus measure in the Public Health and Clinical Data Exchange Objective, but the MIPS eligible clinician can only earn a total of 5 bonus points even if the MIPS eligible clinician attests ''Yes'' to multiple bonus measures (86 FR 65474 and 65475). As set forth in Table 60 in section IV.A.4.d.(4)(h)(i) of this proposed rule, we have specified optional bonus measures for only the Public Health and Clinical Data Exchange Objective. We did not codify such policy in regulation at that time.

Currently, our regulation at § 414.1380(b)(4) sets forth our scoring policy for bonus measures across all objectives in the Promoting Interoperability performance category, but does not clearly reflect the finalized policy as described in the CY 2022 PFS final rule (86 FR 86 FR 65474 and 65475). Specifically, § 414.1380(b)(4)(ii)(C) currently provides that, for the 2023 performance period/2025 MIPS payment year and subsequent years, each optional measure is worth five points, as specified by CMS. Such language may imply that we will provide five points for performance of each individual optional measure; this language does not account for the maximum total of 5 bonus points scoring policy that was previously finalized in the CY 2022 PFS final rule (86 FR 65474 and 65475). In the CY 2023 PFS final rule (87 FR 70228), the current regulation codified at § 414.1380(b)(4) inadvertently did not reflect the intent of the allocation of bonus points for optional bonus measures as previously finalized (86 FR 86 FR 65474 and 65475). To rectify such

[386] Agreement located at: *https://www.healthit.gov/sites/default/files/2024-11/Common_Agreement_2.1.pdf.*

[387] The Common Agreement defines ''Framework Agreement(s)'' as: ''any one or combination of the Common Agreement, a Participant-QHIN Agreement, a Participant-Subparticipant Agreement, or a Downstream Subparticipant Agreement, as applicable.'' *See* Common Agreement for Nationwide Health Information Interoperability Version 2.1 (Nov 2024) located at: *https://www.healthit.gov/sites/default/files/2024–11/Common_Agreement_2.1.pdf.*

[388] Participant/Subparticipant Terms of Participation (Apr. 2024) located at: *https://rce.sequoiaproject.org/wp-content/uploads/2024/05/Common-Agreement-v2.0-Exhibit-1_508.pdf.*

[389] For more information, visit: *https://rce.sequoiaproject.org/wp-content/uploads/2024/08/XP-Implementation-SOP-Public-Health-PH.pdf.*

[390] A Qualified Health Information Network is a health information network that facilitates TEFCA exchange by undergoing technology and security testing, onboarding, and designation. For more information, visit: *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca.*

incongruency beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing to amend the regulation at § 414.1380(b)(4)(ii)(C) to address our previously finalized scoring policy.

Specifically, we are proposing to amend our regulation by adding a new paragraph at § 414.1380(b)(4)(ii)(C)(*3*) to provide that, beginning with the CY 2026 performance period/2028 MIPS payment year, the total number bonus points available to be earned when reporting one bonus measure, more than one bonus measure, or all bonus measures is a total of five bonus points. We are not proposing any substantive modifications to the remaining regulation text as currently codified at § 414.1380(b)(4)(ii)(C). we are proposing technical modifications to reorganize the current regulation text as new paragraphs at § 414.1380(b)(4)(ii)(C)(*1*) and (C)(*2*).

Because the Public Health Reporting Using TEFCA measure would be an optional bonus measure, we are not proposing any exclusions. Also, we are proposing that if a MIPS eligible clinician uses TEFCA to fulfill any of the required Public Health and Clinical Data Exchange objective measures, such as Electronic Case Reporting or Immunization Registry Reporting that MIPS eligible clinician would be able to claim the five bonus points if it affirmatively attests ''Yes'' to the Public Health Reporting Using TEFCA measure in addition to earning points for fulfilling the requirements of the required measure(s).

MIPS eligible clinicians can participate in TEFCA as Participants with a QHIN, or as Sub-participants through a regional HIE or Health Information Network (HIN) that is a QHIN participant, through a health system, or through an EHR vendor.

We seek public comment on the proposal to adopt the Public Health Reporting Using TEFCA measure as an optional bonus measure under the Public Health and Clinical Data Exchange objective beginning with the CY 2026 performance period/2028 MIPS payment year.

Also, we seek public comment on the proposal to modify the regulation at § 414.1380(b)(4)(ii)(C) to clarify the scoring of optional bonus measures under the Public Health and Clinical Data Exchange objective beginning with the CY 2026 performance period/2028 MIPS payment year.

(f) Proposal To Adopt Measure Suppression Policy for the MIPS Promoting Interoperability Performance Category Beginning With the CY 2026 Performance Period/2028 MIPS Payment Year and for the Medicare Promoting Interoperability Program for Eligible Hospitals and Critical Access Hospitals (CAHs) Beginning With the EHR Reporting Period in CY 2026

For MIPS, section 1848(q)(1)(A)(i) and (ii) of the Act provides, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards for a performance period and use such methodology to provide for a composite performance score (that is, MIPS final score) for each such clinician for each performance period. As discussed previously in section IV.A.4.d.(4)(a), section 1848(q)(2)(A)(iv) of the Act requires that we assess a MIPS eligible clinician's performance as a meaningful user of CEHRT to calculate the MIPS final score. Section 1848(q)(2)(B)(iv) of the Act provides that we apply the requirements established for a performance period under section 1848(o)(2) of the Act to determine whether a MIPS eligible clinician is a meaningful user of CEHRT.

For the Medicare Promoting Interoperability Program, sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Act (as amended by the Health Information Technology for Economic and Clinical Health Act, Title XII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (ARRA), Pub. L. 111–5) authorize downward payment adjustments under Medicare, beginning with FY 2015 for eligible hospitals and Critical Access Hospitals (CAHs) that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for the applicable electronic health record (EHR) reporting period. Section 602 of Title VI, Division O of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) added subsection (d) hospitals in Puerto Rico as eligible hospitals under the Medicare EHR Incentive Program and extended the participation timeline for these hospitals such that downward payment adjustments were authorized beginning in FY 2022 for section (d) Puerto Rico hospitals that do not successfully demonstrate meaningful use of CEHRT for the applicable EHR reporting period.

For both the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, sections 1848(o)(2)(A) and 1886(n)(3)(A) of the Act, respectively, set forth three substantively similar criteria to determine whether a MIPS eligible clinician or an eligible hospital or CAH is a meaningful user of CEHRT. In addition, sections 1848(o)(2)(B)(i) and 1886(n)(3)(B)(i) of the Act, respectively, provide, in relevant part, that the Secretary shall select measures for purposes of the third criterion for assessing and determining if MIPS eligible clinician, an eligible hospital, or CAH is a meaningful user of CEHRT (sections 1848(o)(2)(A)(iii) and 1886(n)(3)(A)(iii) of the Act, respectively).

We have identified a need for additional flexibility in whether we use a measure to calculate scores or otherwise determine whether MIPS eligible clinicians meet the definition of a meaningful EHR user in the MIPS Promoting Interoperability performance category and eligible hospitals and CAHs meet the definition for the Medicare Promoting Interoperability Program. This would account for the impact of changing conditions that are beyond the control of MIPS eligible clinicians, eligible hospitals, and CAHs, which arise outside of rulemaking for a given performance period or EHR reporting period. Such flexibility would allow us to ensure that MIPS eligible clinicians,[391] eligible hospitals, and CAHs are not impacted negatively by external factors as determined by CMS when they are being assessed for meeting measure requirements or meeting the definition of a meaningful user.

A measure suppression policy would provide CMS with the flexibility to not score a measure for circumstances outside the control of MIPS eligible clinicians meeting the requirements of the MIPS Promoting Interoperability performance category and eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program. There may be circumstances that could impede the assessment of

[391] In the CY 2024 PFS final rule (88 FR 79124 through 79132), the Medicare Shared Savings Program aligned its CEHRT use requirements for Accountable Care Organizations (ACOs) with the MIPS Promoting Interoperability performance category's requirements. As codified at § 425.507, beginning with performance years on or after January 1, 2025, unless otherwise excluded, an ACO participant, ACO provider/supplier, and ACO professional that is a MIPS eligible clinician, Qualifying APM Participant (QP), or Partial Qualifying APM Participant (Partial QP) (each as defined at § 414.1305) must: (1) report the objectives and measures for MIPS Promoting Interoperability performance category; and (2) earn a performance category score for the MIPS Promoting Interoperability performance category.

performance or a fair comparison of performance across applicable participants, creating the potential to unduly penalize a significant portion of MIPS eligible clinicians, eligible hospitals, and CAHs. We believe that there are certain circumstances that would warrant the necessity to suppress the scoring of a measure.

On this basis, for both the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, beginning with the CY 2026 performance period/2028 MIPS payment year for MIPS eligible clinicians and the EHR reporting period in CY 2026 for eligible hospitals and CAHs, we propose to adopt a measure suppression policy to permit CMS to exclude a measure from scoring or the determination of a meaningful EHR user for an applicable performance period/MIPS payment year or EHR reporting period in an applicable CY. Specifically, we propose that such a measure suppression policy would allow CMS to exclude a measure from scoring due to circumstances that impede the effective measurement of a measure within the measure's applicable objective or to exclude such a measure from the determination of a meaningful EHR user for measures that are not scored. We have previously finalized similar measure suppression policies for the MIPS quality performance category (§ 414.1380(b)(1)(vii)(A)) and MIPS cost performance category (§§ 414.1380(b)(2)(v)(A) and (B)). We have modeled the proposed measure suppression policy we are proposing for the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program on such policies, with some substantive differences to reflect more specific requirements of the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program.

For an applicable performance period/MIPS payment year or EHR reporting period, we propose that CMS would determine whether certain circumstances exist warranting suppression of a measure within the MIPS Promoting Interoperability performance category or Medicare Promoting Interoperability Program based on CMS's consideration of one or more of the following factors:

- The nature, breadth, and duration of the circumstance's effect on MIPS eligible clinicians', eligible hospitals', and CAHs' ability to fulfill the measure requirement;
- The availability of certified health IT modules to fulfill the measure;
- The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance;
- Out-of-date or conflicting technical standards;
- Technical or operational capacity of required partners; or
- Other factors as determined by CMS.

The aforementioned factors would provide a basis for CMS to determine when circumstances may warrant CMS to suppress the scoring of a measure, particularly when circumstances arise that may impact a significant portion or all MIPS eligible clinicians, eligible hospitals, and CAHs. We believe that there may be circumstances that affect the ability of MIPS eligible clinicians, eligible hospitals, and CAHs to meet the requirements of a measure that are outside of their control, such as technical or operational limitations experienced by required partners that limit the ability of MIPS eligible clinicians, eligible hospitals, and CAHs to complete specific elements of a measure. Also, there may be circumstances in which the timeline for the availability of certified health IT modules or updated technical standards may be delayed or incongruent with measure implementation requirements and, as a result, we believe that MIPS eligible clinicians, eligible hospitals, and CAHs should not be penalized or unfairly scored on a measure. If we transition to performance-based measures in the future, we may find that the data being reported may not be consistent due to various factors causing the data to not be valid or accurate.

Under the measure suppression policy we are proposing for the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program, our decision to suppress a measure would still require the measure to be reported. However, regardless of what data, attestation, or other information the MIPS eligible clinician, eligible hospital, or CAH reported for the measure, it would not affect the score for the applicable objective or the determination of a meaningful EHR user for measures that are not scored. For example, for a measure that requires a ''Yes'' or ''No'' response, the MIPS eligible clinician's, eligible hospital's, or CAH's score for the objective in which the measure is found would not be negatively impacted, regardless of whether it reported a ''Yes'' or a ''No,'' as long as they reported a response.

Establishing a measure suppression policy would allow us to identify measures affected by one or more of the aforementioned factors outside of rulemaking to timely address such a situation. For any measure for which we determine it must be suppressed based on one of more of the factors we have identified, we would notify MIPS eligible clinicians, eligible hospitals, and CAHs of the suppression via existing communication channels. This proposal would allow us to disseminate via a listserv announcement (MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program) and publish on a CMS website (MIPS Promoting Interoperability performance category) measures identified as being suppressed for an applicable CY performance period/MIPS payment year and EHR reporting period in an applicable CY, no later than the beginning of the applicable data submission period when technically feasible, which starts in January of the CY following the applicable performance period/EHR reporting period.

We are proposing to adopt this measure suppression policy for the MIPS Promoting Interoperability performance category beginning with the CY 2026 performance period/2028 MIPS payment year and the Medicare Promoting Interoperability Program for eligible hospitals and CAHs beginning with the EHR reporting period in CY 2026.

We propose to codify the proposed measure suppression policy at § 414.1380(b)(4)(iii) for the MIPS Promoting Interoperability performance category and § 495.24(f)(3) for the Medicare Promoting Interoperability Program. Specifically, we propose to codify at § 414.1380(b)(4)(iii) that, beginning with the CY 2026 performance period/2028 MIPS payment year, if certain circumstances occur impacting CMS's assessment of performance of MIPS eligible clinicians on a measure specified for the Promoting Interoperability performance category under § 414.1375, CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS's calculation of the MIPS Promoting Interoperability performance category objective score under § 414.1380(b)(4) or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. In addition, we propose to codify at § 495.24(f)(3) that beginning with the EHR reporting period in CY 2026, if certain circumstances occur impacting CMS's assessment of performance of eligible hospitals and CAHs on a measure specified for the Medicare Promoting Interoperability Program, CMS may, in

its sole discretion, suppress the affected measure by excluding it from CMS's calculation of the Medicare Promoting Interoperability Program objective score or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. Also, we are proposing to codify at both § 414.1380(b)(4)(iii) and § 495.24(f)(3) that CMS would determine whether certain circumstances exist warranting suppression of a measure based on one or more of the following factors::

- The nature, breadth, and duration of the circumstance's effect on MIPS eligible clinicians', eligible hospitals', and CAHs' ability to fulfill the measure requirement;
- The availability of certified health IT modules to fulfill the measure;
- The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance;
- Out-of-date or conflicting technical standards;
- Technical and operational capacity of required partners; or
- Other factors as determined by CMS.

We seek public comment on our proposals to adopt and codify a measure suppression policy for the MIPS Promoting Interoperability performance category beginning with the CY 2026 performance period/2028 MIPS payment year at § 414.1380(b)(4)(iii), and the Medicare Promoting Interoperability Program beginning with the EHR reporting period in CY 2026 at § 495.24(f)(3).

(g) Proposal To Suppress the Electronic Case Reporting Measure by Excluding the Measure From Scoring for the MIPS Promoting Interoperability Performance Category for the CY 2025 Performance Period/2027 MIPS Payment Year and the Medicare Promoting Interoperability Program for the EHR Reporting Period in CY 2025

(i) Background: Public Health and Clinical Data Exchange Objective

The Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category for MIPS eligible clinicians and the Medicare Promoting Interoperability Program for eligible hospitals and CAHs has been an important mechanism for encouraging healthcare data exchange for public health purposes. Effective responses to public health events require fast, accurate exchange of data between health care providers and Federal, State, and local public health agencies (PHAs). MIPS eligible clinicians, eligible hospitals, and CAHs collect these data for patient care, and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

For the MIPS Promoting Interoperability performance category, there are two required measures and three optional measures under the Public Health and Clinical Data Exchange objective: Immunization Registry Reporting; Electronic Case Reporting; Syndromic Surveillance Reporting (optional); Public Health Registry Reporting (optional); and Clinical Data Registry Reporting (optional). For background on this objective and its associated measures, we refer readers to the CY 2019 PFS final rule (83 FR 59795, 59815 through 59817). In the CY 2022 PFS final rule (86 FR 65469 through 65475), we finalized the requirement for MIPS eligible clinicians to report two of the 5 measures associated with the Public Health and Clinical Data Exchange objective, beginning with the performance period in CY 2022: Immunization Registry Reporting and Electronic Case Reporting. For background on this objective and its associated measures for MIPS eligible clinicians, we refer readers to the CY 2023 PFS final rule (87 FR 70071 through 70074).

For the Medicare Promoting Interoperability Program for eligible hospitals and CAHs, there are eight measures under the Public Health and Clinical Data Exchange objective: Immunization Registry Reporting; Electronic Case Reporting; Syndromic Surveillance Reporting; Electronic Laboratory Reporting; Antimicrobial Use Surveillance; Antimicrobial Resistance Surveillance; Public Health Registry Reporting (optional); and Clinical Data Registry Reporting (optional). In the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes proposed rule, we proposed a ninth measure, which would be optional if finalized: Public Health Reporting Using TEFCA (90 FR 18360). In the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2022 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Changes to Medicaid Provider Enrollment; and Changes to the Medicare Shared Savings Program (FY 2022 IPPS/LTCH PPS) final rule (86 FR 45470 through 45478), we finalized the requirement for eligible hospitals and CAHs to report four measures associated with the Public Health and Clinical Data Exchange objective, beginning with the EHR reporting period in CY 2022: Immunization Registry Reporting; Electronic Case Reporting; Syndromic Surveillance Reporting; Electronic Laboratory Reporting. We subsequently finalized the requirement for eligible hospitals and CAHs to report Antimicrobial Use Surveillance and Antimicrobial Resistance Surveillance in the FY 2024 IPPS/LTCH PPS final rule (87 FR 49335 through 49337).

The Public Health and Clinical Data Exchange objective of the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program has been an important mechanism for encouraging data exchange between MIPS eligible clinicians, eligible hospitals, CAHs, and PHAs. Requiring MIPS eligible clinicians, eligible hospitals, and CAHs to report on required measures provides ongoing incentive for EHR vendors to implement the necessary capabilities in their products and encourages MIPS eligible clinicians, eligible hospitals, and CAHs to engage in the reporting activities described in the measures.

As noted previously, MIPS eligible clinicians, eligible hospitals, and CAHs are required to report the Electronic Case Reporting measure for the Public Health and Clinical Data Exchange objective as specified for the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, respectively. The Electronic Case Reporting measure currently requires that the MIPS eligible clinician, eligible hospital, or CAH be in active engagement with a PHA to submit electronic case reporting of reportable conditions. A MIPS eligible clinician, eligible hospital, or CAH is required to report their level of active engagement as either Option 1 (Pre-production and Validation) or Option 2 (Validated Data Production).

As described in the CY 2023 PFS final rule (87 FR 70072) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 49338), we currently define ''active engagement'' as when the MIPS eligible clinician, eligible hospital, or CAH is in the process of moving towards sending ''production data'' to a PHA or clinical data registry (CDR), or is sending production data to a PHA or CDR. We further noted that the term ''production

data'' refers to data generated through clinical processes involving patient care; the term is used to distinguish between this data and ''test data'' which may be submitted for the purposes of enrolling in and testing electronic data transfers (87 FR 70072; 87 FR 49337 through 49340).

In the CY 2023 PFS final rule (70071 through 70074) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 49337 through 49340), we finalized that, beginning with the CY 2023 performance period/2025 MIPS payment year and the EHR reporting period in CY 2023, respectively, a MIPS eligible clinician, eligible hospital, or CAH must indicate its level of active engagement at either Option 1 (Pre-production and Validation) or Option 2 (Validated Data Production) to fulfill the Electronic Case Reporting measure and other measures specified for the Public Health and Clinical Data Exchange objective. We further finalized that generally, beginning with the CY 2024 performance period/2026 MIPS payment system and the EHR reporting period in CY 2024, MIPS eligible clinicians, eligible hospitals, and CAHs may spend only one performance period at the Option 1 (Pre-production and Validation) level of active engagement for the Electronic Case Reporting measure and other measures specified for the Public Health and Clinical Data Exchange objective, and MIPS eligible clinicians, eligible hospitals and CAHs must progress to the Option 2 (Validated Data Production) level of active engagement in the next EHR reporting period for which they report the measure (87 FR 70071 through 70074; 87 FR 49340 through 49342). The only exception to this requirement that we finalized is that, in the event a MIPS eligible clinician, eligible hospital, or CAH chooses to switch between one or more PHAs or CDRs, they will be permitted to spend on additional performance period at Option 1 (Pre-production and Validation) to assist with onboarding to the new CDR or PHA (87 FR 70071 through 70074; 87 FR 49340 through 49342).

Additional information on the history of the Electronic Case Reporting measure can be found in prior rulemakings for the predecessor Medicare EHR Incentive Programs for Eligible Professionals and for Eligible Hospitals and Critical Access Hospitals,[392] the MIPS Promoting Interoperability performance category,[393] and the Medicare Promoting Interoperability Program.[394]

For both the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program, the Electronic Case Reporting measure also includes three exclusions. A MIPS eligible clinician, eligible hospital, or CAH meeting one or more of the three established criteria may claim an exclusion from performing and reporting the Electronic Case Reporting measure for the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, respectively. The first exclusion criterion is that the MIPS eligible clinician, eligible hospital, or CAH does not treat or diagnose any reportable diseases for which data are collected by its jurisdiction's reportable disease system during the performance period or EHR reporting period (Exclusion 1). The second exclusion criterion is that the MIPS eligible clinician, eligible hospital, or CAH operates in a jurisdiction for which no PHA is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period (Exclusion 2). The third exclusion criterion is that the MIPS eligible clinician, eligible hospital, or CAH operates in a jurisdiction where no PHA has declared readiness to receive electronic case reporting data as of six months prior to the start of the performance period (Exclusion 3). We interpret ''capable of receiving electronic case reporting data in the specific standards required'' in Exclusion 2 to mean that there is not a PHA in a MIPS eligible clinician's, eligible hospital's, or CAH's jurisdiction that has the ability to advance, and has advanced, a MIPS eligible clinician, eligible hospital, or CAH registered with the PHA to Active Engagement Option 2: Validated Data Production in the timeframe required for the MIPS eligible clinician, eligible hospital, or CAH to achieve Validated Data Production under the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program. For information regarding the 2025 measure specifications for the Electronic Case Reporting measure for the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, we refer readers to: *https://qpp.cms.gov/docs/pi_specifications/Measure%20Specifications/2025-MIPS-Promoting-Interoperability-Measure-Electronic-Case-Reporting-Updated-April-2025.pdf* and *https://www.cms.gov/files/document/cms-specifications-manual-ehr-period-cy-2025.pdf.*

We note that the policy proposals for the Medicare Promoting Interoperability Program appeared in the **Federal Register** on April 30, 2025 (90 FR 18002) as part of the FY 2026 IPPS/LTCH PPS proposed rule. The proposed rule contains proposals for program scoring (90 FR 18361) that are unchanged with respect to Electronic Case Reporting measure; scoring changes to the measure are outlined in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69604).

(ii) Proposal To Suppress the Electronic Case Reporting Measure for the CY 2025 Performance Period and the EHR Reporting Period in CY 2025

As discussed previously in section IV.A.4.d.(4)(g)(i), MIPS eligible clinicians, eligible hospitals, and CAHs have been required to register with a PHA and send testing files (Pre-production and Data Validation files) to report the Electronic Case Reporting measure at the Option 1 level of active engagement (87 FR 70071 through 70074; 87 FR 49338 through 87 FR 49342). Beginning with the CY 2024 performance period/2026 MIPS payment system and the EHR reporting period in CY 2024, MIPS eligible clinicians, eligible hospitals, and CAHs may spend only one performance period at the Option 1 (Pre-production and Validation) level of active engagement for the Electronic Case Reporting measure, and they must progress to the Option 2 (Validated Data Production) level of active engagement in the next performance period or EHR reporting period for which they report the measure (87 FR 70071 through 70074; 87 FR 49338 through 87 FR 49342). Therefore, beginning with the CY 2025 performance period and EHR reporting period in CY 2025, many MIPS eligible clinicians, eligible hospitals, and CAHs may need to submit case files (that is, production data) using CEHRT to their PHA to report that they have progressed to Option 2 level of active engagement for the Electronic Case Reporting measure.

In regard to the level of engagement pertaining to Option 1 and Option 2 for

[392] We refer readers to Stage 1 final rule (75 FR 1844), Stage 2 final rule (77 FR 13698), and Stage 3 final rule (80 FR 62762).

[393] We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77008), CY 2018 Quality Payment Program final rule (82 FR 53568), the CY 2019 PFS final rule (83 FR 59815), the CY 2022 PFS final rule (86 FR 65469 through 65475), and the CY 2023 PFS final rule (87 FR 70071 through 70082).

[394] We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45470 through 45478).

the CY 2025 performance period and EHR reporting period in CY 2025, we have recently been informed by the Centers for Disease Control and Prevention (CDC) that it has temporarily paused electronic case reporting registration and onboarding of new health care organizations (HCOs) to establish a more efficient and automated process. During such time, the CDC will evaluate the onboarding process for HCOs and their EHR vendors and establish a more sustainable long-term path for broadscale adoption and integration of healthcare and electronic case reporting data. On June 6, 2025, we shared this information through the Quality Payment Program (QPP) and Medicare Promoting Interoperability Program listserv announcements and published this information on the QPP Resource Library webpage (located at: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3268/2025-MIPS-Promoting-Interoperability-CDC-Pause-In-eCR-Onboarding.pdf*) and CMS QualityNet Hospital Inpatient Notifications webpage (located at: *https://qualitynet.cms.gov/files/68437ab1416b533f04e5f5f0?filename=2025-59-IP.pdf*). Due to this temporary pause, some MIPS eligible clinicians, eligible hospitals, and CAHs may not meet the electronic case reporting registration and onboarding requirements by the end of the CY 2025 performance period and EHR reporting period in CY 2025. The onboarding process includes a timeframe that accounts for connecting to intermediaries to send electronic case reporting data to PHAs with HCOs and EHR vendors. This temporary pause will enable the CDC to evaluate the onboarding process for HCOs and their EHR vendors. The CDC is enhancing its electronic case reporting modernization initiatives and creating a sustainable long-term strategy for the widespread adoption and integration of healthcare and electronic case reporting data.

To avoid undue adverse consequences for MIPS eligible clinicians, eligible hospitals, and CAHs as a result of such circumstances, which are outside of their control, we are proposing to suppress the Electronic Case Reporting measure. Specifically, we propose to exclude the Electronic Case Reporting measure from scoring under the MIPS Promoting Interoperability performance category for the CY 2025 performance period and the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025.

Specifically, we propose that we would suppress the Electronic Case Reporting measure by excluding it from calculations for scoring purposes, but MIPS eligible clinicians, eligible hospitals, and CAHs would continue to be required to report the measure, in which they would either attest ''Yes'' or ''No'' to meeting the requirements pertaining to Option 1 and Option 2, or claim an applicable exclusion. As long as the MIPS eligible clinicians, eligible hospitals, and CAHs report responses, their score for the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category or the Medicare Promoting Interoperability Program, as applicable, would not be adversely affected irrespective of the responses reported for this measure.

If this proposal is finalized as proposed, MIPS eligible clinicians, eligible hospitals, and CAHs should report the Electronic Case Reporting measure in accordance with the applicable specifications. However, if this proposal is not finalized, we encourage MIPS eligible clinicians, eligible hospitals, and CAHs to claim an exclusion, if applicable.

Please note that we are proposing to suppress the Electronic Case Reporting measure through rulemaking in order to notify MIPS eligible clinicians, eligible hospitals, and CAHs of how we intend to address the issues related to CDC's pause on onboarding, which may affect MIPS eligible clinicians', eligible hospitals', and CAHs' ability to meet requirements of the Electronic Case Reporting measure for the MIPS Promoting Interoperability performance category for the CY 2025 performance period and the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025. In the absence of a measure suppression policy currently in effect for the CY 2025 performance period and the EHR reporting period in CY 2025, we are utilizing this proposed rule and subsequently, the upcoming CY 2026 PFS final rule that will be published by November 1, 2025, to communicate and seek public comment on our proposed approach to address scoring of the Electronic Case Reporting measure due to the CDC's pause on onboarding.

We note that the Public Health and Clinical Data Exchange objective requirements and the 25 points attributed to the objective under the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program would remain the same if we finalize this proposal. The Electronic Case Reporting measure would continue to be a required measure even though we are proposing to suppress it by excluding it from our scoring calculations. If this proposal is finalized as proposed, the 25 points attributed to the Public Health and Clinical Data Exchange objective the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program would apply to the measure(s) in the objective that are required and not suppressed. Moreover, we note that this proposal does not affect the measure specifications nor the required reporting of the measure but merely affects whether the measure is scored for purposes of the applicable objective.

We seek public comment on the proposals to suppress the Electronic Case Reporting measure by excluding the measure from scoring for MIPS eligible clinicians meeting the requirements of the MIPS Promoting Interoperability performance category, and eligible hospitals, and CAHs participating in the Medicare Promoting Interoperability Program for the CY 2025 performance period and the EHR reporting period in CY 2025.

(h) Proposed Requirements for the Promoting Interoperability Performance Category for the CY 2026 Performance Period/2028 MIPS Payment Year

(i) Proposed Objectives and Measures for the CY 2026 Performance Period/2028 MIPS Payment Year

For reference, Table 59 sets forth the objectives and measures for the Promoting Interoperability performance category that would be required for the CY 2026 performance period/2028 MIPS payment year. Table 59 reflects proposed modifications to previously established objectives and measures, including the proposal to establish a new optional bonus measure, under the Promoting Interoperability performance category.

TABLE 59: PROPOSED OBJECTIVES AND MEASURES FOR THE PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY BEGINNING WITH THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Objective	Measure	Numerator	Denominator	Exclusion
Electronic Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
Electronic Prescribing	Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period.
Health Information Exchange: The MIPS eligible clinician provides a summary of	Support Electronic Referral Loops by Sending Health Information: For at	Number of transitions of care and referrals in the denominator where	Number of transitions of care and referrals during the performance period	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times

Objective	Measure	Numerator	Denominator	Exclusion
care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other healthcare providers into their EHR using the functions of CEHRT	least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or healthcare provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	the summary of care record was created using CEHRT and exchanged electronically	for which the MIPS eligible clinician was the transferring or referring clinician	during the performance period.
Health Information Exchange (HIE)	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, mediation allergy, and current problem list.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Health Information Exchange	HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	maintained in the EHR during the performance period in accordance with applicable law and policy. Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs and not engaging in exclusionary behavior when determining exchange partners. Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.			
Health Information Exchange	Enabling Exchange Under TEFCA MIPS eligible clinicians would attest to the following: ● Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ASTP/ONC's website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy. ● Using the functions	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.			
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information.	Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT.	Number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT.	Number of unique patients seen by the MIPS eligible clinician during the performance period.	N/A
Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.	Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	The MIPS eligible clinician: 1. Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT

Objective	Measure	Numerator	Denominator	Exclusion
				definition at the start of the performance period; OR 3. Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.
Public Health and Clinical Data Exchange	Electronic Case Reporting: The MIPS eligible clinician is in active engagement with a PHA to electronically submit case reporting of reportable conditions.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	The MIPS eligible clinician: 1. Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the performance period; OR 2. Operates in a jurisdiction for which no PHA is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. Operates in a jurisdiction where no PHA has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period.
Public Health and Clinical Data Exchange	Public Health Registry Reporting (Optional Bonus): The MIPS eligible clinician is in active engagement with a PHA to submit data to public health registries.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None
Public Health and Clinical Data Exchange	Clinical Data Registry Reporting (Optional Bonus): The MIPS eligible clinician is in active engagement to submit data to a clinical data registry.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None
Public Health and Clinical Data Exchange	Syndromic Surveillance Reporting (Optional Bonus): The MIPS eligible clinician is in active engagement with a PHA to submit syndromic surveillance data from an urgent care setting.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None

Objective	Measure	Numerator	Denominator	Exclusion
Public Health and Clinical Data Exchange	Public Health Reporting Using TEFCA (Optional Bonus):* The MIPS eligible clinician is (1) participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ASTP/ONC's website); (2) is not suspended from participating in TEFCA exchange; (3) submits health information using TEFCA to a PHA consistent with one or more of the measures under the Public Health and Clinical Data Exchange objective; (4) is in active engagement Option 2 (validated data production) with a PHA to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective; and (5) uses the functions of CEHRT to exchange with the PHA.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None
Protect Patient Health Information: Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.	Security Risk Analysis:* First, conduct or review a security risk analysis; and second, conduct security risk management activities, in accordance with the requirements under 45 CFR 164.308(a)(1)(ii)(A) and (B). Security risk analysis and management activities include addressing the	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None

Objective	Measure	Numerator	Denominator	Exclusion
	security of data created or maintained by CEHRT (to include encryption), in accordance with 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3). The encryption implementation specified at 45 CFR 164.312(a)(2)(iv) must be implemented if it is reasonable and appropriate; if encryption is not reasonable and appropriate, then the MIPS eligible clinician would adopt an equivalent alternative measure if it is reasonable and appropriate to do so.			
Protect Patient Health Information	High Priority Practices SAFER Guide:* Beginning with the 2026 MIPS payment year, submit an affirmative attestation regarding the MIPS eligible clinician's completion of the annual self-assessment under the High Priority Practices SAFER Guide measure using the 2025 High Priority Practices SAFER Guide during the year in which the performance period occurs.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None

*The proposed bonus measure, Public Health Reporting Using TEFCA, and the proposed modifications to the Security Risk Analysis measure and the High Priority Practices SAFER Guide measure would be effective beginning with the CY 2026 performance period.

(ii) Proposed Scoring Methodology for the CY 2026 Performance Period/2028 MIPS Payment Year

For reference, Table 60 sets forth the scoring methodology for the Promoting Interoperability performance category for the CY 2026 performance period/2028 MIPS payment year, which includes the proposed new optional bonus measure, Public Health Reporting Using TEFCA. When earning bonus points, a MIPS eligible clinician can receive a maximum of 5 points regardless of the number of bonus measures reported.

TABLE 60: PROPOSED SCORING METHODOLOGY FOR THE CY 2026 PERFORMANCE PERIOD/ 2028 MIPS PAYMENT YEAR

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: • Immunization Registry Reporting • Electronic Case Reporting****	25 points	Required
	Report one of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting • Syndromic Surveillance Reporting • Public Health Reporting Using TEFCA*	5 points (*bonus*)	Optional
Protect Patient Health Information	Security Risk Analysis*	Not scored**	Required
	High Priority Practices SAFER Guide*	Not scored**	Required
No Associated Objective: Attestation Requirements***	ONC Direct Review Attestation	Not scored	Required
	Actions to Limit or Restrict the Compatibility of CEHRT	Not scored	Required
	ONC-ACB Surveillance Attestation	Not scored	Optional

*The proposed optional bonus measure, Public Health Reporting Using TEFCA, and the proposed modifications to the Security Risk Analysis measure and the High Priority Practices SAFER Guide measure would be effective beginning with the CY 2026 performance period.
**MIPS eligible clinicians must submit an affirmative attestation regarding the Security Risk Analysis measure and the High Priority Practices SAFER Guide measure. Failure to submit an affirmative ("Yes") attestation to fulfill such requirements will result in a zero score for the Promoting Interoperability performance category.
***Attestation Requirements: MIPS eligible clinicians must submit an attestation regarding the ONC Direct Review and that they did not knowingly and willfully take action to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3). Failure to submit an attestation or an affirmative ("Yes") attestation to fulfill such requirements will result in a zero score for the Promoting Interoperability performance category.
****We note that the proposal pertaining to the suppression of this measure, which excludes the measure from scoring is for the CY 2025 performance period/2028 MIPS payment year outlined in section (g) of this proposed rule. The proposed suppression of this measure does not include the CY 2026 performance period/2028 MIPS payment year.

(iii) Exclusion Redistribution

Many required measures would have exclusions associated with them as set forth in Table 59. If a MIPS eligible clinician believes that an exclusion for a particular measure applies to them, they may claim it when they submit their data. The maximum points available in Table 60 do not include the points that would be redistributed if a MIPS eligible clinician claims an exclusion for a specific measure. Table 61 sets forth how points would be redistributed among the objectives and measures specified for the Promoting

Interoperability performance category for the CY 2026 performance period/ 2028 MIPS payment year in the event a MIPS eligible clinician claims an exclusion for a given measure.

TABLE 61: PROPOSED EXCLUSION REDISTRIBUTION FOR CY 2026 PERFORMANCE PERIOD/ 2028 MIPS PAYMENT YEAR

Objective	Measure	Redistribution if exclusion is claimed
Electronic Prescribing	e-Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange Under TEFCA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following two measures: • Electronic Case Reporting • Immunization Registry Reporting	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure

(iv) ONC Health IT Certification Criteria

Table 62 sets forth the objectives and measures for the Promoting Interoperability performance category for the CY 2026 performance period/ 2028 MIPS payment year and the associated ONC health IT certification criteria set forth at 45 CFR 170.315, as is currently applicable. We refer readers to the CY 2024 PFS final rule (88 FR 79307 through 79312) for discussion of and amendments to the definition of CEHRT at § 414.1305.

TABLE 62: PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY OBJECTIVES AND MEASURES AND ONC HEALTH IT CERTIFICATION CRITERIA

Objective	Measure	Certification Criteria (CY 2026 Performance Period/2028 MIPS Payment Year) in Title 45 of the CFR
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing
	Query of PDMP	§ 170.315(b)(3) Electronic prescribing
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	§ 170.315(b)(1) Transitions of care
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
Health Information Exchange (alternative)	Health Information Exchange (HIE Bi-Directional Exchange	Examples of certified health IT capabilities to support the actions of this measure may include but are not limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Standardized API for patient and population services
Health Information Exchange (alternative)	Enabling Exchange Under TEFCA	Examples of certified health IT capabilities to support the actions of this measure may include but are not limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Standardized API for patient and population services
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	§ 170.315(e)(1) View, download, and transmit to 3rd party
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Standardized API for patient and population services
Public Health and Clinical Data Exchange	Immunization Registry Reporting	§ 170.315(f)(1) Transmission to immunization registries
	Syndromic Surveillance Reporting (Optional)	§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance
	Electronic Case Reporting	§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting

Objective	Measure	Certification Criteria (CY 2026 Performance Period/2028 MIPS Payment Year) in Title 45 of the CFR
	Public Health Registry Reporting (Optional)	§ 170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
		§ 170.315(f)(7) Transmission to public health agencies — health care surveys
	Clinical Data Registry Reporting (Optional)	No health IT certification criteria at this time.
	Public Health Reporting Using TEFCA (Optional)	Examples of certified health IT capabilities to support the actions of this measure may include but are not limited to technology certified to the following criteria:
		§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
Protect Patient Health Information	Security Risk Assessment	The requirements are a part of CEHRT specific to each certification criterion.
	High Priority Practices SAFER Guide	No health IT certification criteria at this time.

(i) Requests for Information (RFI) Regarding the Query of Prescription Drug Monitoring Program (PDMP) Measure

(i) Background on PDMPs and the Query of PDMP Measure

PDMPs are electronic databases that monitor the use of controlled substances, including prescription drug usage and prescription drug history. PDMPs are critical decision support tools for addressing prescription drug use, misuse, and diversion. Recent legislation has continued to advance the use of PDMPs, including the Substance Use–Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT for Patients and Communities Act) (Pub. L. 115–271), enacted in 2018, that authorizes important investments in combating the opioid epidemic. Among other provisions, the SUPPORT for Patients and Communities Act included new requirements and Federal funding for the enhancement, integration, and interoperability of PDMPs to help reduce opioid misuse and overprescribing and to help promote the overall effective prevention and treatment of opioid use disorders.

Currently, all 50 states, the District of Columbia, Guam, Puerto Rico, and the Northern Mariana Islands host PDMPs.[395] PDMPs play an important role in patient safety by enabling clinicians to check PDMP data for prescription opioids and other controlled medications received by a patient from other clinicians to determine whether a patient is put at high risk for overdose. A literature review of recent studies on PDMP effectiveness compiled by the PDMP Training and Technical Assistance Center (TTAC) at the Institute for Intergovernmental Research and published in the *PDMP Administrators' Orientation Guide of PDMPs* highlights the role of PDMPs in reducing the following: high-risk opioid prescribing and dispensing behaviors; overall supply of opioid prescriptions; multiple provider episodes (for example, doctor or pharmacy shopping); opioid-related overdose rates; and admissions to treatment facilities for prescription drug misuse.[396]

Increased integration of PDMP data into health IT systems such as EHRs, pharmacy dispensing software systems (PDS), and HIEs continues to reduce barriers to and burden of PDMP review by incorporating PDMP queries into the provider workflow. A PDMP TTAC assessment of PDMP Policies and Capabilities[397] published in December 2024 found that 49 of the 54 PDMPs have taken steps to integrate PDMP data into EHRs, HIEs, and PDS systems. We refer readers to Table 63 for more information.

TABLE 63 PDMP INTEGRATION AS OF 2024[398]

Type of Integration	Number of PDMPs
EHR, HIE, and PDS	18
EHR and PDS	24
EHR and HIE	1
EHR only	5
HIE only	1

We continue to work with Federal partners and industry stakeholders to advance common standards for the exchange of information between PDMPs, EHRs, PDS systems, HIEs, and exchange networks. ONC and CDC convened the PDMP and health IT system communities to standardize data format and transport protocols to exchange controlled substances prescription data between PDMP and health IT systems, which produced a PDMP–EHR Integration Toolkit.[399] ONC and CDC jointly developed the Integration Framework to provide guidance to health care systems, states, and health IT vendors to support successful project execution, management and communications for implementing health IT integrations, such as PDMP data integration into clinical workflow.[400] Moreover, ASTP/ONC continues to collaborate with industry partners furthering the development of a Health Level 7® (HL7) Fast Healthcare Interoperability Resources® (FHIR) Implementation Guide that allows EHRs and other health IT systems to support more seamless exchange of prescription data with PDMP systems.[401] We refer readers to the ASTP/ONC website for additional information and resources regarding PDMPs.[402]

On August 5, 2024, the Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability (HTI–2) proposed rule appeared in the **Federal Register** (89 FR 63498). The HTI–2 proposed rule includes a proposal for a PDMP certification criterion at 45 CFR 170.315(f)(9) entitled ''Prescription Drug Monitoring Program (PDMP) Databases—Query, receive, validate, parse, and filter'' that would enable the bi-directional interaction and electronic health information exchange between certified Health IT Modules and PDMP databases using a consistent approach to querying PDMP data (89 FR 63547). Specifically, the proposed certification criterion would enable the query of prescription drug monitoring systems and the receipt, validation, parsing, and filtering of medication information from PDMPs. The proposed criterion would be a functional criterion agnostic to a specific PDMP standard, but would include transport, content, and vocabulary standards where appropriate. ONC has not finalized the proposal to date.

In the CY 2019 PFS final rule, CMS adopted the Query of PDMP measure under the e-Prescribing objective of the Promoting Interoperability performance category to support HHS initiatives aimed at improving the treatment of opioid and substance use disorders by helping MIPS eligible clinicians avoid inappropriate prescriptions (83 FR 59795). The Query of PDMP measure provides that, for at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history as described in the CY 2024 PFS final rule (88 FR 79353 and 79354).

We are interested in continuing to make improvements to the Promoting Interoperability performance category that promote patient safety and encourage appropriate prescribing of controlled substances while minimizing provider burden. We further believe improved technology approaches and increased PDMP integration into EHR systems can enable increased utilization of PDMPs and associated positive outcomes for patients.

Therefore, we are seeking public comment through this RFI to potentially inform future rulemaking for the Query of PDMP measure related to the following policy considerations: (1) changing the Query of PDMP measure from an attestation-based measure (''Yes'' or ''No'') to a performance-based measure (numerator and denominator), as well as alternative measures designed to more effectively assess the degree to which participants are utilizing PDMPs; and (2) expanding the types of drugs to which the Query of PDMP measure could apply.

(ii) RFI on Changing the Query of PDMP Measure From an Attestation-Based Measure to a Performance-Based Measure

The Query of PDMP measure was initially finalized in the CY 2019 PFS final rule (83 FR 59800 through 598045) as a performance-based measure with a numerator and denominator described as follows:

- Denominator: Number of Schedule II opioids [403] electronically prescribed using CEHRT by the MIPS eligible clinician during the performance period.
- Numerator: The number of Schedule II opioid prescriptions in the denominator for which data from CEHRT is used to conduct a query of a PDMP for prescription drug history except where prohibited and in accordance with applicable law. A numerator of at least one is required to fulfill this measure.

In the CY 2020 and CY 2021 PFS final rules (84 FR 62992 through 62994 and 85 FR 84887 through 84888), we described the concerns expressed by interested parties that they believed it was premature for the Promoting Interoperability performance category to require the Query of PDMP measure and score it based on performance. In the CY 2022 PFS proposed rule (86 FR 39410), we discussed our support of efforts to expand the use of PDMPs, describing federally supported activities aimed at developing a more robust and standardized approach to EHR–PDMP integration, and additional discussions on the feedback we have received from health IT vendors and MIPS eligible clinicians thus far. In the CY 2023 PFS final rule (87 FR 70062 through 70067), we finalized the Query of PDMP measure to require a ''Yes'' or a ''No'' attestation from MIPS eligible clinicians participating in the Quality Payment Program beginning with the CY 2023 performance period/2025 MIPS payment year. A ''Yes'' response would indicate that, for at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for a prescription drug history.

Given recent progress in a variety of areas, there is now a clearer trajectory moving forward to enhance the Promoting Interoperability performance category's capacity to incentivize use of PDMPs, and thereby, to improve the quality of health care and promote care coordination. Notably, PDMPs are now widely available across all 50 States and several localities, and PDMP integration with HIEs, EHRs, and PDSs has increased since the Query of PDMP measure was finalized as an attestation measure. Therefore, to further promote the utilization of PDMPs and to support appropriate prescribing for controlled substances, we are inviting public comment and feedback on the potential modification or replacement of the Query of PMDP measure from an attestation measure to a performance-based measure to inform potential future rulemaking and include the following questions:

- Should CMS propose to adopt a performance-based (numerator/denominator) reporting requirement for the Query of PDMP measure? If so, how should the numerator and denominator be defined?

For example, one approach we are considering to potentially inform future rulemaking is the following description of a numerator and a denominator, which is updated from the numerator and denominator established in the CY 2019 PFS final rule (83 FR 59800 through 59804), when the Query of PDMP measure was initially finalized as a performance-based measure and only included Schedule II opioids:

++ Denominator: Number of Schedule II opioid or Schedule III or IV drugs electronically prescribed using CEHRT by the MIPS eligible clinician during the performance period.

++ Numerator: The number of prescriptions of Schedule II opioid or Schedule III or IV drugs in the denominator for which data from CEHRT is used at the time of prescribing to conduct a query of a PDMP for prescription drug history.

- What are potential barriers for MIPS eligible clinicians meeting the Query of PDMP measure as a performance-based measure?
- How should CMS account for varying levels of readiness and capacity for performance-based reporting, particularly for small and rural providers, including MIPS eligible clinicians?

[403] In the CY 2019 PFS final rule, the Query of PDMP only included Schedule II opioids (83 FR 59800 through 59804). We finalized the expansion of the Query of PDMP measure to include Schedule II opioids and Schedule III and IV drugs beginning with the CY 2023 performance period in the CY 2023 PFS final rule (87 FR 70062 through 70067).

- Are there specific exclusions that we should consider for performance-based reporting?
- What timeframe would allow for systems and process changes to account for a change of the Query of PDMP measure from an attestation measure to a performance-based measure while minimizing burden?
- Would adoption and use of Health IT Modules certified to the ''Prescription Drug Monitoring Program (PDMP) Databases—Query, receive, validate, parse, and filter'' certification criterion proposed by ONC in the HTI–2 proposed rule (89 FR 63547), if this criterion were to be finalized, help to mitigate previously identified burden associated with implementing and reporting on a performance-based ''Query of PDMP'' measure?
- How would the adoption and use of Health IT Modules certified to the proposed ''Prescription Drug Monitoring Program (PDMP) Databases—Query, receive, validate, parse, and filter'' certification criterion, if it were finalized, impact the numerator and denominator of a potential performance-based PDMP measure?

We are also requesting feedback on a broader set of performance-based measurement concepts that could help to advance our priorities with respect to the use of PDMPs to support the prevention and treatment of opioid use disorders. We are specifically interested in creating performance-based measures that allow MIPS eligible clinicians to leverage technology to improve care and reduce burden.

- What are other measure concepts we should consider that would allow us to focus on outcomes related to overdose prevention?
- Should we explore measures related to monitoring data from PDMPs that could assess multiple opioid prescriptions, opioid prescriptions from multiple prescribers, combined opioid and benzodiazepine prescriptions, or very high standardized dosage of opioids prescribed?
- What measure concepts related to the use of PDMPs are likely to involve the lowest effort and provide the highest value to the health care community?

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

(iii) RFI on the Modification of the Query of PDMP Measure To Include All Schedule II Drugs

Under the Controlled Substances Act (CSA),[404] the Drug Enforcement Administration classifies drugs, substances, and certain chemicals used to make drugs into five distinct categories or schedules depending upon the drug's acceptable medical use and the drug's abuse or dependency potential. A drug's abuse rate is a factor used to determine its classification; for example, Schedule I medications have the highest abuse potential while medications in Schedule V have a low abuse potential.[405] We refer readers to Table 64 for information on each Schedule, including abuse potential, medicinal use, if any, and drug examples. For additional information, we refer readers to the listing of drugs and their schedule located at CSA Scheduling at: *https://www.deadiversion.usdoj.gov/schedules/orangebook/c_cs_alpha.pdf.*

TABLE 64: CONTROLLED SUBSTANCE SCHEDULES, DESCRIPTIONS, AND EXAMPLES[406]

Schedule	Description	Examples
Schedule I	No accepted medical use, are unsafe, and hold a high potential for abuse.	Heroin and LSD
Schedule II	Accepted medical use, high potential for abuse, abuse could lead to severe psychological or physical dependence.	Hydrocodone, methadone, meperidine, oxycodone, morphine, codeine, and amphetamine
Schedule III	Accepted medical use, less potential for abuse than schedule I or II substances, abuse may lead to moderate or low physical dependence or high psychological dependence.	Ketamine and anabolic steroids
Schedule IV	Accepted medical use, low potential for abuse relative to schedule III substances, abuse may lead to limited physical or psychological dependence relative to schedule III substances.	Alprazolam, clonazepam, diazepam, and tramadol
Schedule V	Accepted medical use, low potential for abuse relative to schedule IV substances, abuse may lead to limited physical or psychological dependence relative to schedule IV substances.	Pregabalin, cough preparations containing less than 200 mg per 100 mL or 100 g of codeine

[404] Public Law 91–513, tit. II, 84 Stat. 1236, 1242–84 (1970); codified, as amended, at 21 U.S.C. 801 *et seq.*

[405] United States Drug Enforcement Administration website located at: *https://www.dea.gov/drug-information/drug-scheduling.*

PDMPs are operated at the state level, and individual state requirements for reporting and use differ from state to state.[407] Currently, almost every state collects data on Schedules II, III, and IV drugs that are prescribed.[408]

In the CY 2023 PFS final rule, we finalized the expansion of the Query of PDMP measure to not only include Schedule II opioids, but also include Schedule III and IV drugs, beginning with the CY 2023 performance period/2025 MIPS payment year (87 FR 70061 through 70068). We also finalized the measure description: for at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history. We noted that expanding the Query of PDMP measure to include Schedule III and IV drugs in addition to Schedule II opioids would offer MIPS eligible clinicians a broader clinical picture aimed at overall patient safety efforts and would reduce burden by minimizing the need to create specialty reports within the EHR specific to capturing one class of drugs. For additional information on the Query of PDMP measure policies, we refer readers to the CY 2023 PFS final rule (87 FR 70061 through 70068) and the CY 2024 PFS final rule (88 FR 79353 through 79354).

To further promote the MIPS Promoting Interoperability performance category's capacity to incentivize the electronic exchange of health information through the use of PDMPs and thereby improve the quality of care by supporting appropriate prescribing of controlled substances, we are considering proposing in future rulemaking to expand the Query of PDMP measure to include all Schedule II drugs, rather than only including Schedule II opioids. Notably, this would expand the Query of PDMP measure to include controlled substances that are categorized as Schedule II drugs that are not opioids, such as central nervous system stimulants that can be prescribed for Attention-Deficit Hyperactivity Disorder (ADHD). We refer readers to Table 65 for examples of Schedule II opioid drugs and other Schedule II drugs.

TABLE 65: EXAMPLES OF SCHEDULE II OPIOID DRUGS AND OTHER SCHEDULE II DRUGS[409]

Schedule II Opioid Drugs	Other Schedule II Drugs
• Codeine • Fentanyl • Hydrocodone • Meperidine • Methadone • Morphine • Oxycodone	• Amphetamine • Lisdexamfetamine • Methamphetamine • Methylphenidate • Pentobarbital

For this RFI, we are inviting public comment and feedback on possible future expansion of the Query of PDMP measure to include all Schedule II (Schedule II opioids and other Schedule II drugs), Schedule III, and Schedule IV drugs in future rulemaking. We are also seeking responses to the following specific questions:

- What challenges exist, if any, around expanding the Query of PDMP measure to include all Schedule II drugs?
- What are the potential benefits versus risks of expanding the Query of PDMP measure to include all Schedule II drugs?
- Would expanding the Query of PDMP measure to Schedule II non-opioid drugs create barriers for patients appropriately prescribed Schedule II non-opioid drugs (for example, central nervous stimulants appropriately prescribed for ADHD)?
- How should CMS account for varying levels of readiness and capacity for MIPS eligible clinicians to meet an expanded scope of the measure, particularly for small and rural providers?
- What exclusions should be considered, if any?

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

(j) RFI Regarding Performance-Based Measures

As finalized in the CY 2023 PFS final rule (87 FR 70071 through 70074), the measures under the Public Health and Clinical Data Exchange objective require MIPS eligible clinicians to indicate their level of active engagement with a PHA (Option 1 or Option 2), but do not measure the degree to which MIPS eligible clinicians are exchanging the data specified under each measure. Historically, the Public Health and Clinical Data Exchange objective has included measures that required reporting via attestation to account for factors such as the ongoing development of connections between MIPS eligible clinicians and PHAs, as well as variation across state and local requirements which govern reporting requirements for MIPS eligible clinicians, as established by the Stage 2 final rule for the Medicare EHR Incentive Program for Eligible Professionals (77 FR 54022). However,

[406] GAO–21–22, Prescription Drug Monitoring Programs: Views on Usefulness and Challenges of Programs; 21 U.S.C. 812; and the U.S. Drug Enforcement Administration website located at: *https://www.dea.gov/drug-information/drug-scheduling.*

[407] PDMP TTAC website located at: *https://www.pdmpassist.org/State.*

[408] PDMP TTAC website located at: *https://www.pdmpassist.org/Policies/Maps/PDMPPolicies.*

[409] For additional information on drug scheduling, we refer readers to the U.S. Drug Enforcement Administration website located at: *https://www.dea.gov/drug-information/drug-scheduling.*

given the ongoing advancements in public health reporting infrastructure across the nation, we are exploring whether alternatives to the current attestation-based measures can drive further improvements in the quality and consistency of reporting to PHAs and associated public health outcomes. This approach would align with the meaningful use of CEHRT criteria set forth in section 1848(o)(2)(A) of the Act, as previously discussed, which seek to improve the use of EHRs and health care quality over time.

In the CY 2025 PFS proposed rule (89 FR 62072 through 620750), we included an RFI regarding the Public Health and Clinical Data Exchange objective, including questions that sought feedback on replacing current attestation-based measures with measures that would require reporting of a numerator and denominator to better assess performance on measures included under the Public Health and Clinical Data Exchange objective. Because we only require that a MIPS eligible clinician indicate their level of active engagement (Option 1 or Option 2), attestation-based reporting does not capture aspects of the health information shared with PHAs that we are seeking to improve, such as comprehensiveness, quality, or timeliness.

We appreciate the responses received on our RFI in the CY 2025 PFS proposed rule, and we are seeking additional feedback from commenters through another RFI in this proposed rule. For this RFI, we are seeking to further refine our discussion of possible future measures to address commenter concerns and seek information to ensure any future proposals align with our goals of ultimately improving public health outcomes. Specifically, we are interested in new measure concepts for public health that would allow us to better focus on aspects of the data quality of public health reporting. We are seeking public comment on the following questions:

- What aspects of data quality and usability are most appropriate and valuable to measure in the context of the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category (for example, timeliness and completeness of reporting)?
- How could data completeness be defined? For instance, how should we define ''complete data?'' Should we consider a threshold approach, under which MIPS eligible clinicians would attest that they are successfully sending complete data for a minimum set of data elements to a PHA?

++ For example, for the Electronic Case Reporting measure, should we define a minimum threshold for completeness of certain data elements that are critical to public health and are supported in CEHRT (for example, data elements included in a specific version of the USCDI such as medications or medication dose)? If so, how should we define or set such thresholds?

- Are there other metrics available that we should consider in the Promoting Interoperability performance category that more directly relate to actions and outcomes that public health reporting is intended to enable (for example, overdose prevention)?
- Of the current types of public health data exchange reflected in the Public Health and Clinical Data Exchange objective measures, what use cases should we prioritize for a focus on data quality that would provide the highest value to the health care community while resulting in the least burden?

As part of our exploration of alternative measure concepts to assess performance on different aspects of the Public Health and Clinical Data Exchange objective measures, we are considering revising our approach to scoring the measures under the objective. Currently, MIPS eligible clinicians can earn 25 points for reporting on the 2 required measures and can earn an additional five bonus points for reporting any of 3 optional bonus measures.

We are seeking public comment on the following questions.

- Under a revised scoring approach, should we specify that MIPS eligible clinicians could earn 10 points for each required measure and five points for each bonus measure, with a maximum of 10 bonus points for a total of 30 points for the objective? Are there other scoring approaches for the Public Health and Clinical Data Exchange objective we should consider?
- Should we score all public health measures for which we finalize a numerator and denominator based on performance? Or should we only score a subset of measures based on performance?

In recent years, ONC has finalized updates to ONC Health IT Certification Program's certification criteria that are included in CEHRT to provide technical capabilities based on FHIR, an advanced, modern interoperability standard developed by HL7 to facilitate efficient, scalable and standardized health information exchange. [410] For instance, technology certified to the ''Standardized API for patient and population services'' criterion at 45 CFR 170.315(g)(10) provides that health IT modules certified to that criteria use FHIR API in Health IT Modules for data in a version or versions of the USCDI. In the HTI–1 final rule, ONC finalized that Health IT Modules certified to the ''Electronic case reporting'' criterion at 45 CFR 170.315(f)(5) may meet the requirements of the criterion by certifying to the HL7 FHIR Implementation Guide: Electronic Case Reporting—US Realm 2.1.0—STU 2 US to support electronic case reporting (89 FR 1231). In the HTI-2 proposed rule, ONC also proposed several updates to public health certification criteria that include reference to FHIR implementation specifications (89 FR 63537 through 63558). In 2024, ASTP/ONC released the Draft FHIR Federal Action Plan with a goal of building an ecosystem for innovation that strengthens consistent use of the FHIR standard.[411] ASTP/ONC, CMS, and CDC plan to continue to explore opportunities to leverage FHIR-based capabilities within certified health IT to support public health reporting, and we are seeking comment on how such future updates could impact the potential measure strategies discussed in this section. Specifically, we are seeking public comment on the following questions:

- What are the most promising uses of FHIR approaches to the public health reporting requirements under the Promoting Interoperability performance category? What approaches have the most potential to reduce the burden of reporting on MIPS eligible clinicians and increase the quality and timeliness of data submitted to PHAs?
- Approaches to public health reporting using FHIR have focused on greater automation of the interactions between health care providers and PHAs to reduce burden on providers and increase PHAs' ability to obtain the information they need. How might FHIR approaches to the exchange of public health data impact measurement of MIPS eligible clinicians' performance?
- Use of FHIR APIs could ultimately result in consolidation of disparate functions in EHRs that are currently being used to support different types of public health data exchange, for instance, through availability of an API

[410] Additional resources regarding FHIR are located at: *https://www.healthit.gov/topic/standards-technology/standards/fhir.*

[411] The Draft FHIR Federal Action Plan is located at: *https://www.healthit.gov/isp/about-fhir-action-plan.*

that makes data available for a range of public health use cases. If these approaches are implemented in certified health IT in the future, should we consider streamlining or reduce the number of measures required in the Promoting Interoperability performance category?

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

(k) RFI Regarding Data Quality

Gaps and discrepancies in data accuracy, completeness, reliability, and consistency undermine the integrity of health information exchange. We believe MIPS eligible clinicians should be able to seamlessly exchange high-quality health information with patients, providers, and payers across systems. For the purposes of this discussion, we define data quality as the degree to which health information is accurate, complete, timely, consistent, and reliable. These factors increase the overall quality of health information that touches several aspects of the health care continuum: clinical information, patient safety, claims, provider data, eligibility, benefits, and administrative data.[412] Poor data quality poses direct threats to patient safety, especially when providers, including MIPS eligible clinicians, treat patients based on inaccurate or incomplete information.[413] Accountability, transparency, and improvement efforts also suffer when health care actors evaluate—or are evaluated based on—care quality and outcomes that do not reflect true performance due to unreliable or low quality data.[414] Poor quality data also poses risks beyond health care delivery and administration. Because health care data captured by EHRs serve as the foundation for public health reporting and clinical research using real world evidence, widespread deficits in data quality can adversely affect clinical innovation and public health decision-making.[415]

We encourage MIPS eligible clinicians to work with their health IT vendors to ensure the richest, highest quality data are sent to their exchange partners. This partnership can help ensure data validation; reduce burden between MIPS eligible clinicians and their exchange partners; and reduce unintended consequences and risks that come with low-quality data. For example, timely, complete data are needed for monitoring adverse events such as antimicrobial resistance. When providers send accurate data the first time, this reduces the need for prolonged testing and email exchanges between providers, PHAs, payers, and patients.

As the prevalence of electronic health information continues to grow, and as providers and payers continue to move to a value-based care model, the need for high-quality data will become increasingly important.[416] We want to both encourage and support MIPS eligible clinicians use of modern technologies and standards to ensure data are usable, complete, accurate, timely, and consistent. We are seeking public comment on the following questions:

- What data quality challenges does your health care organization experience (for example, discrepancies in data accuracy, completeness, reliability, and consistency)? How are you working to address data quality challenges? What data quality challenges persist longitudinally across your patient population(s)?
- What are the primary barriers to collecting high-quality data? What resources do you believe could help your organization address these challenges?
- What solutions have MIPS eligible clinicians found most effective to address data quality?
- What steps should CMS consider to drive further improvement in the quality and usability of health information being exchanged? How can CMS partner with MIPS eligible clinicians, industry, and Federal agencies to drive further improvements in the quality and usability of health information being exchanged? What methods should CMS and other partners explore to further rectify data quality issues in the health care community?

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

B. Additional CY 2026 Modifications to the Quality Payment Program

1. MIPS Final Score Methodology

a. Performance Category Scores

(1) Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, provide for a final score for each MIPS eligible clinician. Section 1848(q)(6)(A) of the Act specifies that, to then determine a MIPS payment adjustment factor for each MIPS eligible clinician for an applicable MIPS payment year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. We refer readers to section IV.B.2. of this proposed rule for further discussion of the performance threshold, and our calculation of MIPS payment adjustment factors, and our proposals with respect thereto.

[415] Weng C. Clinical data quality: a data life cycle perspective. Biostat Epidemiol. 2020;4(1):6–14. Located at: *https://pubmed.ncbi.nlm.nih.gov/32258941.*

[416] For more information on EHR adoption over time, visit: *https://www.healthit.gov/data/quickstats/national-trends-hospital-and-physician-adoption-electronic-health-records.*

Section 1848(q)(2)(A) of the Act provides that the Secretary must assess each MIPS eligible clinician with respect to four performance categories in determining each MIPS eligible clinician's final score: quality, resource use (referred to as ''cost''), clinical practice improvement activities (referred to as ''improvement activities''), and meaningful use of certified EHR technology (referred to as ''Promoting Interoperability''). Section 1848(q)(2)(B) of the Act describes the measures and activities that must be specified under each performance category. Section 1848(q)(3) of the Act provides that we must establish performance standards with respect to the measures and activities specified under the four performance categories for a performance period, considering historical performance standards, improvement, and the opportunity for continued improvement. To calculate a final score for each MIPS eligible clinician for the performance period of an applicable MIPS payment year, section 1848(q)(5)(A) of the Act provides that we must develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards we have established with respect to applicable measures and activities specified for each performance category, using a scoring scale of 0 to 100.

In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight pursuant to these exceptions, for the CY 2026 performance period/2028 MIPS payment year, the scoring weights for each performance category are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

For the CY 2026 performance period/2028 MIPS payment year, we propose to update our scoring methodologies to respond to statutory requirements and impacts observed in performance data. Specifically, we propose to—

- Modify the existing approach for identifying measures impacted by limited measure choice and subject to topped out measure benchmarks by applying the existing analysis to MVPs;
- Apply defined topped out benchmarks for certain topped out measures for clinicians impacted by limited measure choice; and
- Modify the benchmarking methodology for scoring administrative claims-based measures in the quality performance category.

The policies proposed in this section of the proposed rule for scoring the quality performance category within traditional MIPS would apply to MVP scoring under § 414.1365(d)(3)(i) since a quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

We are not proposing any changes to our scoring policies for the cost, improvement activities, or Promoting Interoperability performance categories.

(2) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure, and Administrative Claims Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules, and § 414.1380(b)(1) for our current policies regarding, among other things, quality measure benchmarks, calculating total measure achievement points, calculating the quality performance category score, including achievement and improvement points, the small practice bonus, and scoring flexibilities (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR65490 through 65509, 87 FR 70088 through 70091, and 88 FR 79368 and 79369). In the CY 2025 PFS final rule (89 FR 98427 through 98439), we finalized policies for scoring topped out measures in specialty measure sets with limited measure choice at § 414.1380(b)(1)(iv)(C) and § 414.1380(b)(1)(ii)(E) and a Complex Organization Adjustment for virtual groups and APM Entities at § 414.1380(b)(1)(vii)(C).

(a) Scoring for Topped Out Measures With Limited Measure Choice

(i) Background on Scoring Topped Out Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2023 and 2025 PFS final rules (81 FR 77282 through 77287, 82 FR 53721 through 53727, 83 FR 59761 through 59765, 88 FR 70090 and 70091, and 89 FR 98429 through 98435), and § 414.1380(b)(1)(iv) for established topped out measure scoring policies.

Topped out measures are measures for which measure performance is considered so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (81 FR 77136). Section 1848(q)(3)(B) of the Act requires that in establishing performance standards with respect to measures and activities, we consider, among other things, the opportunity for continued improvement. Topped out measures do not provide an opportunity for continued improvement, nor do payment adjustments based on topped out measures incentivize clinicians to improve their care. As a result, we finalized policies in the CY 2018 Quality Payment Program final rule (82 FR 53723 through 53727) to identify and cap the scoring potential of such measures. Additionally, we established practices for the removal of such measures, such as establishing the topped out measure lifecycle, to continue to drive quality improvement in areas where such improvement is possible and necessary. The topped out measure lifecycle is described in the CY 2018 Quality Payment Program final rule (82 FR 53721 and 53727). We established at § 414.1380(b)(1)(iv)(B) that we would cap scoring for topped out measures at 7 measure achievement points in the second consecutive year that the measure benchmark is identified as topped out. If a measure has been identified as topped out for 3 consecutive years after being originally identified through the benchmarks, such measure may then be proposed for removal through notice-and-comment rulemaking (83 FR 59761). This timeline, however, is not fixed. We noted our concern that removal of topped out measures would leave clinicians with fewer than 6 applicable measures to report and that such removal in those instances would impact some specialties more than others (82 FR 53721). We stated that consideration for ensuring available applicable measures would be made when considering measure removals (83 FR 59763).

Although in the CY 2018 Quality Payment Program final rule (82 FR 53727), we established the topped out scoring cap to encourage MIPS eligible clinicians to submit measures that are not topped out, we created an exemption to this policy in the CY 2025 PFS final rule (89 FR 98430) for certain measures, which are frequently used by certain specialties impacted by limited measure choice. To address scoring

scenarios in which limited measure choice compels clinicians to report topped out measures with scoring caps, we finalized in the CY 2025 PFS final rule (89 FR 98429 through 98432) at § 414.1380(b)(1)(iv)(C) that beginning with the CY 2025 performance period/2027 MIPS payment year, topped out measures frequently used by certain specialties reporting specialty measure sets that are impacted by limited measure choice (specified in accordance with § 414.1380(b)(1)(ii)(E)) are not subject to the 7-point scoring cap. As part of the CY 2025 PFS final rule, we finalized at § 414.1380(b)(1)(ii)(E) that beginning with the CY 2025 performance period/2027 MIPS payment year, we will annually publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice (89 FR 98432). Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period, in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

In the CY 2025 PFS final rule (89 FR 98432 through 98435), we also finalized our approach for identifying the list of measures impacted by limited measure choice and subject to defined topped out measure benchmarks. Specifically, we finalized that each specialty measure set is reviewed by collection type to identify if the prevalence of topped out measures within such a set hinders a clinician's ability to successfully participate in the MIPS quality performance category. To make such a determination, we finalized that we analyze the ability of clinicians reporting the specialty measure sets under review to reasonably achieve 75 percent of available quality achievement points based upon the measures available to them and program requirements. Specifically, at the collection type level, each measure is assigned points based upon the current benchmarking data: new measures receive 7 or 5 points based on year in the program, measures with benchmarks are given points based upon the highest decile achievable with a less than perfect score (less than 100 percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark are given 0 points. All measure set points are added together to get an output of scoring potential; the Medicare Part B claims collection type measure sets have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each measure set are then compared to the analysis threshold, which is currently 75 percent of available quality achievement points, based upon the number of available measures. Any measure sets that are not able to meet or exceed the threshold are flagged as 'at-risk.' Additional factors that we take into consideration include whether the topped out measure within the specialty measure set under review is considered a cross-cutting measure or is a broadly applicable measure, which we consider to be a measure included in three or more specialty sets. We also consider in reviewing topped out measures within a specialty measure set whether the specialty measure set contains more than ten measures, by collection type (89 FR 98432 through 98435).

(ii) Proposed Measures To Be Subject to the Defined Topped Out Measure Benchmark for the CY 2026 Performance Period/2028 MIPS Payment Year

Beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing to modify this previously finalized approach for identifying measures impacted by limited measure choice (89 FR 98432 through 98435) by applying the analysis and criteria to MVPs, in addition to the analysis of specialty measure sets. For the CY 2026 performance period/2028 MIPS payment year, we are also proposing to continue to use an analysis threshold of 75 percent of available quality achievement points in our determination of which measures would not be subject to the 7-measure achievement point cap. We refer readers to section IV.B.2.b.(2) of this proposed rule where we are proposing a performance threshold of 75 points for the CY 2026 through CY 2028 performance periods/2028 through 2030 MIPS payment years.

MVPs, like specialty measure sets, contain a limited set of quality measures for a clinician to choose from. We have received feedback from interested parties and independently verified that clinicians reporting MVPs in which there is high presence of topped out measures receiving the 7-point cap are often facing both limited measure choice and limited scoring opportunities. Given the limited number of available measures, the prevalence of topped out measures within an MVP may similarly hinder a clinician's ability to successfully participate in the MIPS quality performance category. Using the same methodology applicable to topped out measures within specialty measure sets, we propose to conduct an analysis of each MVP to identify if the prevalence of topped out measures within such MVP hinders a clinician's ability to successfully participate in the MIPS quality performance category. According to the approach finalized in the CY 2025 PFS final rule for specialty measure sets (89 FR 98432 through 98435), at the collection type level, each quality measure in an MVP would be assigned points based upon the current benchmarking data: new measures would receive 7 or 5 points based on year in the program, measures with benchmarks would be given points based upon the highest decile achievable with a less than perfect score (less than 100 percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark would be given 0 points. All points would be added together to get an output of scoring potential; the Medicare Part B claims collection type measures would have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each MVP would be compared to the analysis threshold, which is currently 75 percent of available quality achievement points, based upon the number of available measures. Any MVPs that are not able to meet or exceed the threshold would be flagged as 'at-risk.' Additional factors that we would take into consideration would include whether the topped out measure within the MVP under review is considered a cross -cutting measure or is a broadly applicable measure, which we would consider to be a measure included in three or more MVPs or specialty sets. We would also consider in reviewing topped out measures within an MVP whether the MVP contains more than ten measures, by collection type.

Table 66 contains the list of measures that meet the criteria for topped out measures impacted by limited measure choice in specialty measure sets and MVPs, and for which we are proposing to apply the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year. We had considered proposing MIPS CQM 424: Perioperative Temperature Management to be subject to the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year since it met the criteria for topped out measures in specialty measure sets impacted by limited measure choice, according to the methodology finalized in the CY 2025

PFS final rule (89 FR 98432 through 98435). However, we are not proposing that measure for the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year because it is being proposed for removal for the CY 2026 performance period/2028 MIPS payment year in section IV.A.4.d.(1)(c)(ii) of this proposed rule.

BILLING CODE 4120–01–P

TABLE 66: PROPOSED TOPPED OUT MEASURES IMPACTED BY LIMITED MEASURE CHOICE AND SUBJECT TO DEFINED TOPPED OUT MEASURE BENCHMARKS FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Measure ID	Collection Type	Measure Title
141	Medicare Part B Claims	Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care
143	eCQM, MIPS CQM	Oncology: Medical and Radiation - Pain Intensity Quantified
144	MIPS CQM	Oncology: Medical and Radiation - Plan of Care for Pain
249	Medicare Part B Claims, MIPS CQM	Barrett's Esophagus
250	Medicare Part B Claims, MIPS CQM	Radical Prostatectomy Pathology Reporting
320	Medicare Part B Claims	Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients
350	MIPS CQM	Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy
351	MIPS CQM	Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation

Measure ID	Collection Type	Measure Title
360	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies
364	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines
395	Medicare Part B Claims, MIPS CQM	Lung Cancer Reporting (Biopsy/Cytology Specimens)
396	MIPS CQM	Lung Cancer Reporting (Resection Specimens)
397	Medicare Part B Claims, MIPS CQM	Melanoma Reporting
405	MIPS CQM	Appropriate Follow-up Imaging for Incidental Abdominal Lesions
406	Medicare Part B Claims, MIPS CQM	Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients
430	MIPS CQM	Prevention of Post-Operative Nausea and Vomiting (PONV) - Combination Therapy
440	MIPS CQM	Skin Cancer: Biopsy Reporting Time - Pathologist to Clinician
463	MIPS CQM	Prevention of Post-Operative Vomiting (POV) - Combination Therapy (Pediatrics)
477	MIPS CQM	Multimodal Pain Management

BILLING CODE 4120–01–C

We request comments on the proposal to include MVPs in the analysis used to identify the list of topped out measures impacted by limited measure choice beginning with the CY 2026 performance period/2028 MIPS payment year.

We also request comments on the proposal to continue using an analysis threshold of 75 percent of available quality achievement points in our determination of which measures would be subject to the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year.

We also request comments on the proposed list of topped out measures impacted by limited measure choice and subject to the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year.

(b) Benchmark Methodology for Scoring Administrative Claims-Based Quality Measures in the Quality Performance Category

(i) Background on Scoring Administrative Claims Measures in the Quality Performance Category

Under § 414.1325, we specify that there is no data submission requirement for cost measures or administrative claims measures in the quality performance category as these measures are calculated on behalf of participants by CMS using administrative claims data. CMS calculates MIPS eligible clinicians' performance on these measures using administrative claims data, which includes claims submitted with dates of service during the applicable performance period that are processed no later than 60 days following the close of the applicable performance period. In the CY 2017 Quality Payment Program final rule (81 FR 77130), we finalized a policy that clinicians would be scored on applicable administrative claims-based global or population health (henceforth referred to only as population health measures) in addition to the six required submitted quality measures. We refer readers to the CY 2017 Quality Payment Program final rule and the CY 2021 PFS final rule (81 FR 77130 through 77136 and 85 FR 84871 through 84873, respectively) and § 414.1325(a)(2)(i) for our previously established policies regarding administrative claims measures in the quality performance category.

We have codified our quality performance category scoring policies at § 414.1380(b)(1). Under § 414.1380(b)(1)(i), except as provided under paragraph (b)(1)(i)(C) beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) based on their performance on each measure. At § 414.1380(b)(1)(i)(A)(*2*)(*ii*), each administrative claims-based measure that does not have a benchmark or meet the case minimum requirement is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points.

We also refer readers to the CY 2017, CY 2018, CY 2019 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through

53718, and 83 FR 59841 through 59842, respectively) and CY 2020, CY 2021, and CY 2023 PFS final rules (84 FR 63014 through 63016, 85 FR 84901 through 84904, and 87 FR 70088 through 70090, respectively) for our previously established benchmarking policies.

In the CY 2017 Quality Payment Program final rule (81 FR 77276 through 77282), we finalized that we will use MIPS eligible clinicians' performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or quality measures where we do not have comparable data from the baseline period. In these cases, we will calculate benchmarks using data submitted during the applicable performance period. We defined the baseline period to be the 12-month Calendar Year that is 2 years prior to the performance period for the MIPS payment year.

Moreover, in the CY 2023 PFS final rule (87 FR 70088 through 70090), we finalized beginning with the CY 2023 performance period/2025 MIPS payment year, that we would score administrative claims measures using performance period benchmarks (§ 414.1380(b)(1)(ii)(D)). We stated that we believe that using a performance period benchmark to score these measures would allow for scores that are more reflective of current performance, while adding no additional burden to clinicians.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77277 through 77282), we establish benchmarks as a standardized method to evaluate and compare the performance of quality measures relative to the performance of peers. We use a decile-based approach to create benchmarks, which is done by dividing measure performance rates into deciles, with each decile containing a range of performance rates. CMS assigns measure achievement points based on which benchmark decile range the measure performance rate falls between. CMS assigns partial points to prevent performance cliffs for performance rates near the decile breaks. Additionally, the four administrative claims-based quality measures currently available to MIPS eligible clinicians are inverse measures, meaning the lower the measure performance rate, the higher the measure achievement points. Therefore, lower benchmark deciles are associated with higher performance rates. MIPS eligible clinicians with higher performance rates of administrative claims-based measures (for example, the number of acute unplanned cardiovascular-related admissions per 100 person-years at risk for admission during the measurement period) will have rates that fall into lower benchmark deciles and will score fewer measure points than MIPS eligible clinicians with lower measure performance rates.

TABLE 67: EXAMPLE OF USING DECILE-BASED BENCHMARK AND PARTIAL POINTS TO ASSIGN ACHIEVEMENT POINTS FOR PERFORMANCE ON THE RISK-STANDARDIZED ACUTE CARDIOVASCULAR-RATED HOSPITAL ADMISSION RATES FOR PATIENTS WITH HEART FAILURE UNDER THE MERIT-BASED INCENTIVE PAYMENT SYSTEM ADMINISTRATIVE CLAIMS-BASED QUALITY MEASURE

Benchmark Decile	Example Benchmark Ranges (Performance Rate)	Possible Points
Benchmark Decile 1	81.68-75.77	1.0–1.9
Benchmark Decile 2	75.76-73.44	2.0-2.9
Benchmark Decile 3	73.43-71.92	3.0-3.9
Benchmark Decile 4	71.91-70.81	4.0-4.9
Benchmark Decile 5	70.80-69.72	5.0-5.9
Benchmark Decile 6	69.71-68.79	6.0-6.9
Benchmark Decile 7	68.78-67.72	7.0-7.9
Benchmark Decile 8	67.71-66.51	8.0-8.9
Benchmark Decile 9	66.50-64.97	9.0-9.9
Benchmark Decile 10	64.96 and below	10

Table 67 provides an example of using benchmark deciles along with partial achievement points to assign achievement points for the Risk-standardized Acute Cardiovascular-rated Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System administrative claims-based quality measure under our current methodology. For this measure, that outcome is the number of acute unplanned cardiovascular-related admissions per 100 person-years at risk for admission during the measurement period. Additionally, this measure is an inverse measure. The following formula is used to determine the number of partial points awarded to the MIPS eligible clinician:

Benchmark Decile # + [(performance rate − bottom of benchmark decile range)/(top of benchmark decile range − bottom of benchmark decile range)] = Quality Measure Achievement Points.

For the example measure presented in Table 67, the median performance rate is 69.71, which falls within Benchmark Decile 6. If a MIPS eligible clinician's performance rate for the measure is 73.82, the MIPS eligible clinician's performance rate falls within Benchmark Decile 2, for which the MIPS eligible clinician may receive between 2.0 and 2.9 achievement points. Based on the partial points calculation formula, the clinician would receive 0.83 partial points, resulting in a quality measure score of 2.83 out of 10 achievement points for the administrative claims-based quality measure under this example.

Based on our analysis of quality measure scores for the CY 2022 performance period/2024 MIPS payment year, we observed lower scores for the administrative claims-based quality measures than for the non-administrative claims-based quality measures. Means for administrative claims-based quality measure achievement scores tend to be around 5 to 6 points out of 10, whereas means for non-administrative claims-based measures tend to be around 7 to 9 points out of 10.

There are key factors that may contribute to lower measure scores for the administrative claims-based measures, compared to the other quality measures. First, administrative claims-based quality measures are scored against a performance period benchmark, rather than a benchmark determined based on historical data, which is used, wherever possible, for non-administrative claims-based quality measures. Benchmarks established based on historical data provide MIPS eligible clinicians with helpful performance targets in advance of or during the performance period. Meanwhile, the performance period benchmarks for the administrative claims-based quality measures do not provide information about performance targets before or during the performance period. However, since these measures require no data submission, using performance period benchmarks allows for the calculation of more current and representative measure scores that better track clinician performance and progress over time. We are concerned that the current decile-based, performance period benchmark is a key contributor to lower scores for the administrative claims-based quality measures. Specifically, the current quality benchmark methodology uses a decile range based on linear percentile distributions and assigns 5.0 to 6.9 achievement points to clinicians with measure performance rates within the 50th to 60th percentiles. As a result, clinicians who perform around the median on administrative claims-based measures will receive achievement points below 7.5 points, the equivalent of the performance threshold.

Second, in traditional MIPS, MIPS eligible clinicians are scored on each administrative claims-based quality measure for which the established case minimum is met, and a benchmark can be calculated. Further, not all MIPS eligible clinicians are scored on administrative claims-based quality measures. Therefore, if a clinician is scored on one or multiple administrative claims-based quality measures with measure achievement scores around 5 to 6 points out of 10, these measure scores may have the effect of lowering the MIPS eligible clinician's quality performance category score, especially in comparison to a clinician who is not scored on any administrative claims-based quality measure.

(ii) Background on Scoring Measures in the Cost Performance Category

In the CY 2025 PFS final rule (89 FR 98438 through 98446), we addressed concerns raised by MIPS eligible clinicians about cost performance category scoring having a negative impact on their final MIPS score. We noted how, under the cost scoring methodology for the CY 2017 performance period/2019 MIPS payment year through the CY 2023 performance period/2025 MIPS payment year, a MIPS eligible clinician scoring near the median on a cost measure would need to score perfectly (or nearly perfectly) within the other three performance categories to receive a final score slightly above the performance threshold and to avoid a negative payment adjustment (89 FR 98439 through 98442). To address this concern, we modified the methodology for scoring the cost performance category, as set forth in § 414.1380(b)(2), beginning with the CY 2024 performance period/2026 MIPS payment year (89 FR 98441 through 98446; 89 FR 98563).

The cost scoring methodology we finalized at § 414.1380(b)(2) is now based on standard deviation, median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose average costs attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians that had the measure attributed them, we assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2024 performance period/2026 MIPS payment year, if a MIPS eligible clinician's average costs under the measure is equal to the median costs of all MIPS eligible clinicians attributed the same measure, then we assign the MIPS eligible clinician 7.5 achievement points, based on a performance threshold of 75 as finalized at § 414.1405(b)(9)(iii). For each cost measure, the cut-offs for benchmark ranges are calculated based on standard deviations, expressed in dollars, from the median. We refer readers to Table 68 for an example of how the cost scoring methodology could be implemented for a specific cost measure when the performance threshold is set to 75 points, which is the same example we provided in the CY 2025 PFS final rule (89 FR 98441 and 98442).

TABLE 68: EXAMPLE OF IMPLEMENTATION OF THE PROPOSED COST SCORING METHODOLOGY FOR ASSIGNMENT OF ACHIEVEMENT POINTS FOR PERFORMANCE ON THE SCREENING/SURVEILLANCE COLONOSCOPY COST MEASURE

Benchmark Range	Points	Proposed Methodology for Bottom of Benchmark Range ($)	Example Benchmark Ranges
Benchmark Range 1	1 - 1.9	Median cost + (2.75 x standard deviation)	$1341.93 - $1308.10
Benchmark Range 2	2 - 2.9	Median cost + (2.5 x standard deviation)	$1308.09 - $1.274.26
Benchmark Range 3	3 - 3.9	Median cost + (2.25 x standard deviation)	$1274.25 - $1240.43
Benchmark Range 4	4 - 4.9	Median cost + (2 x standard deviation)	$1240.42 - $1172.75
Benchmark Range 5	5 - 5.9	Median cost + (1.5 x standard deviation)	$1172.74 - $1105.08
Benchmark Range 6	6 – 6.9	Median cost + (1 standard deviation)	$1105.07 - $1037.40
Benchmark Range 7	7 - 7.9	Median cost + (0.5 x standard deviation)	$1037.39 - $902.05
Benchmark Range 8	8 - 8.9	Median cost - (0.5 x standard deviation)	$902.04 - $834.38
Benchmark Range 9	9 - 9.9	Median cost - (1 x standard deviation)	$834.37 - $766.70
Benchmark Range 10	10	Median cost - (1.5 x standard deviation)	$766.69 and below

This modification in our scoring methodology for cost measures aligns the assignment of achievement points for cost measures so that clinicians with costs near the measure's 50th percentile (median) do not receive a disproportionately low score. Our intended goal for this modification to the scoring methodology was to ensure that MIPS eligible clinicians who deliver care at an average cost near the median costs for all MIPS eligible clinicians attributed the measure receive scores at, or very close to, the performance threshold-derived score (89 FR 98442 and 98443). Additionally, this modification addressed MIPS eligible clinicians' concerns that cost measure scoring negatively impacts their final scores more than other performance categories, including disparate negative effects for MIPS eligible clinicians who are scored on the cost performance category compared to clinicians not scored on the cost performance category (89 FR 98443).

(iii) Proposed Modification to Scoring Methodology for Administrative Claims-Based Quality Measures in the Quality Performance Category Beginning With CY 2025 Performance Period/2027 MIPS Payment Year

Given the similarities between scoring cost measures and administrative claims-based quality measures, we are proposing to modify the methodology for scoring the administrative claims-based measures within the quality performance category beginning with the CY 2025 performance period/2027 MIPS payment year. The proposed administrative claims-based quality measure scoring methodology would be based on standard deviation, median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose performance rate under an administrative claims-based measure would be equal to the median performance rate for all MIPS eligible clinicians that are scored on that measure, we would assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2026 performance period/2028 MIPS payment year, the median would have an achievement point value of 7.5, based on a performance threshold of 75 points as proposed in section IV.B.2.b.(2) of this proposed rule. For each administrative claims-based quality measure, the cut-offs for benchmark ranges would be calculated based on standard deviations from the median.

The benchmark ranges, the median, and the performance threshold-derived achievement point values aligned with the median would be dynamic and responsive to changes in performance rates assessed by administrative claims-based quality measures and performance thresholds for each CY performance period/MIPS payment year. The performance threshold-derived point values could change based on the performance threshold established for each performance period/MIPS payment year. The standard deviations from the median used to determine cutoffs for benchmark ranges for each year would be reviewed for any necessary updates on an annual basis based on performance across MIPS eligible clinicians and the performance threshold established for the performance period/MIPS payment year. We would perform analyses when the performance threshold changes to set the benchmark ranges. To determine the benchmark ranges, we would adhere to the following principles: (1) center the majority of performance rates around the performance threshold-derived point value; (2) determine benchmark ranges according to the statistical distribution curve of the performance rate; and (3) distribution of achievement points for administrative claims-based quality measures should be reflective of overall program performance. We refer readers to Table 69 for an example of how the proposed administrative claims-based quality measure scoring methodology could be implemented for a specific quality measure when the performance threshold is set to 75 points.

TABLE 69: EXAMPLE OF IMPLEMENTATION OF THE PROPOSED SCORING METHODOLOGY FOR ASSIGNMENT OF ACHIEVEMENT POINTS FOR PERFORMANCE ON THE RISK-STANDARDIZED ACUTE CARDIOVASCULAR-RATED HOSPITAL ADMISSION RATES FOR PATIENTS WITH HEART FAILURE UNDER THE MERIT-BASED INCENTIVE PAYMENT SYSTEM ADMINISTRATIVE CLAIMS-BASED QUALITY MEASURE

Benchmark Range	Points	Proposed Methodology for Bottom of Benchmark Range	Example Benchmark Ranges (Performance Rate)
Benchmark Range 1	1 - 1.9	Median Performance Rate + (2.75 x standard deviation)	81.77-80.69
Benchmark Range 2	2 - 2.9	Median Performance Rate + (2.5 x standard deviation)	80.68-79.59
Benchmark Range 3	3 - 3.9	Median Performance Rate + (2.25 x standard deviation)	79.58-78.49
Benchmark Range 4	4 - 4.9	Median Performance Rate + (2 x standard deviation)	78.48-76.30
Benchmark Range 5	5 - 5.9	Median Performance Rate + (1.5 x standard deviation)	76.29-74.10
Benchmark Range 6	6 – 6.9	Median Performance Rate + (1 standard deviation)	74.09-71.92
Benchmark Range 7	7 - 7.9	Median Performance Rate + (0.5 x standard deviation)	71.91-67.53
Benchmark Range 8	8 - 8.9	Median Performance Rate - (0.5 x standard deviation)	67.52-65.34
Benchmark Range 9	9 - 9.9	Median Performance Rate - (1 x standard deviation)	65.33-63.15
Benchmark Range 10	10	Median Performance Rate - (1.5 x standard deviation)	63.14 and below

Continuing with the Risk-standardized Acute Cardiovascular-rated Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System administrative claims-based quality measure example, now presented in Table 69 as an example of implementation of the proposed scoring methodology, the median (50th percentile) performance rate would remain 69.71. Under the proposed scoring methodology, for the CY 2025 performance period/2027 MIPS payment year, a MIPS eligible clinician with a performance rate equal to the median performance rate of all MIPS eligible clinicians scored on that measure would receive 7.5 achievement points out of 10 possible achievement points, which falls within the Benchmark Rage 7 in Table 69.

Using the same example as previously presented in section IV.B.1.a.(2)(b)(i) of this proposed rule, we would apply the proposed scoring benchmark methodology as shown in Table 69 to a MIPS eligible clinician with a performance rate for this measure that is 73.82 (a rate of 4.11 above the median rate). Based on the analysis of data in this example, the standard deviation for the example administrative claims-based quality measure would be 4.38. This value for the standard deviation would then be used to calculate the benchmark ranges in Table 69 by plugging in this value for the standard deviation for each benchmark range. For example, ''69.71 + (1 × 4.38)'' would be calculated for ''Median performance rate + (1 standard deviation)'' for the bottom of Benchmark range 6. As shown with the example in Table 69, under our proposed scoring methodology, the MIPS eligible clinician's average performance rate of 73.82 percent would fall within Benchmark Range 6 for the example administrative claims-based quality measure, for which the MIPS eligible clinician may receive between 6.0 and 6.9 achievement points.

In alignment with the cost measure scoring methodology finalized last year (89 FR 98563), this proposed scoring methodology for administrative claims-based quality measures would be based on standard deviation, median, and an achievement point value derived from the performance threshold. For each administrative claims-based quality measure, standard deviations would be used to calculate the benchmark ranges which are then used to determine the measure scores for each MIPS eligible clinician scored on that measure based on their measure performance rate.

Under our proposal to modify the administrative claims-based quality measure scoring methodology for individual measures, we would continue to use our established formula to assign partial achievement points:

Benchmark Range # + [(performance rate − bottom of benchmark range)/(top of benchmark range − bottom of benchmark range)] = Administrative Claims-based Quality Measure Achievement Points.

As a result, using the example shown in Table 69, under our proposed administrative claims-based scoring methodology, the MIPS clinician would receive 6.12 quality measure achievement points (6 + [(73.82 − 74.09)/71.92 − 74.09)] = 6.12). The assignment of 6.12 achievement points under the proposed administrative claims-based quality measure scoring methodology would be closer to the performance threshold equivalent of 7.5 than the assignment of 2.83 achievement points under the current scoring methodology, as discussed in our previous example in section IV.B.1.a.(2)(b)(i) of this proposed rule.

This proposed modification in our scoring methodology for administrative claims-based quality measures would align the assignment of achievement points for such measures so that clinicians with performance rates near the measure's 50th percentile (median) would not receive a disproportionately low score. Based on our analyses utilizing data from the CY 2024 performance period/2026 MIPS payment year, this proposed methodology would increase the mean quality performance category score from 76.75 out of 100 to 80.42 out of 100 (an increase of 3.67 points). Further, this proposed scoring methodology would increase the means for each administrative claims-based quality measure score by amounts ranging from 1.46 to 1.96 points. For example, the mean measure score for the Risk-

Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System administrative claims-based quality measure would increase from 5.59 points out of 10 to 7.05 points out of 10. Our analyses showed that, under our proposed methodology, the mean final score would increase by 1.63 points for MIPS eligible clinicians assessed on at least one administrative claims-based quality measure and receiving a quality performance category score.

Specifically, our analyses support the intended goal for the proposed modification to the scoring methodology: MIPS eligible clinicians who perform near the median performance rate for all MIPS eligible clinicians scored on the administrative claims-based measure would receive scores at, or very close to, the performance threshold-derived score. Additionally, this proposed modification would align the scoring methodologies for administrative claims-based measures in the quality and cost performance categories.

We are also proposing to modify § 414.1380(b)(1)(i) to specify that, except as specified otherwise under paragraph (b)(1)(ii), the number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. We did not propose any modifications to the remainder of the language currently at § 414.1380(b)(1)(i).

We also propose to codify our proposed benchmarking methodology at § 414.1380(b)(1)(ii)(D) to specify that beginning with the CY 2025 performance period/2027 MIPS payment year, for each administrative claims-based quality measure, CMS determines 10 benchmark ranges based on the median performance rate of all MIPS eligible clinicians scored on the measure, plus or minus standard deviations and that CMS awards achievement points based on which benchmark range a MIPS eligible clinician's performance rate for an administrative claims-based quality measure corresponds. We also propose to codify at § 414.1380(b)(1)(ii)(D) that, beginning with the CY 2025 performance period/2027 MIPS payment year, CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose performance rate is equal to the median performance for all MIPS eligible clinicians scored on the measure.

We seek comments on our proposals to modify our scoring methodology for administrative claims-based quality measures. We also request comments on our proposal to codify the scoring methodology for administrative claims-based quality measures in the quality performance category at §§ 414.1380(b)(1)(i) and 414.1380(b)(1)(ii)(D).

2. MIPS Payment Adjustments

a. Background

Section 1848(q)(6)(A) of the Act requires that we specify a MIPS payment adjustment factor for each MIPS eligible clinician for a year. This MIPS payment adjustment factor is a percentage determined by comparing the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. The MIPS payment adjustment factors specified for a year must result in differential payments such that MIPS eligible clinicians with final scores above the performance threshold receive a positive MIPS payment adjustment factor, those with final scores at the performance threshold receive a neutral MIPS payment adjustment factor, and those with final scores below the performance threshold receive a negative MIPS payment adjustment factor.

For previously established policies regarding our determination and application of MIPS payment adjustment factors to each MIPS eligible clinician, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2022 PFS final rule (86 FR 65527 through 65537), CY 2023 PFS final rule (87 FR 70096 through 70102), CY 2024 PFS final rule (88 FR 79373 through 79380), and CY 2025 PFS final rule (89 FR 98448 through 98455).

b. Establishing the Performance Threshold

(1) Statutory Authority and Background

As discussed in this section of the proposed rule, to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years.

Sections 1848(q)(6)(D)(ii) through (iv) of the Act provided special rules, applicable only for certain initial years of MIPS, for our computation and application of the performance threshold for our determination of MIPS payment adjustment factors. These special rules are no longer applicable for establishing the performance threshold beginning with the CY 2022 performance period/2024 MIPS payment year. We refer readers to the CY 2024 PFS proposed rule (88 FR 52596) for further information on these previously applicable requirements as they explain our prior computations of the performance threshold.

In the CY 2025 PFS final rule (89 FR 98448 through 98451), we selected the mean as the methodology for determining the performance threshold for the CY 2025 performance period/2027 MIPS payment year through CY 2027 performance period/2029 MIPS payment year. We codified this policy in our regulation at § 414.1405(g)(2), providing that, for each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b)(10) (89 FR 98448 through 98451; 89 FR 98564). In the CY 2025 PFS final rule, we established the performance threshold for the CY 2025 performance period/2027 MIPS payment year by calculating the mean of the final scores for all MIPS eligible clinicians using CY 2017 performance period/2019 MIPS payment year data (89 FR 98451 through 98455). We also codified this performance threshold in our regulation at § 414.1405(b)(10)(i) (89 FR 98451 through 98455; 89 FR 98564).

We note that, in previous years, we have established the performance threshold for each performance period during the rulemaking cycle immediately preceding the performance period. However, section 1848(q)(6)(D)(i) of the Act does not specify when the Secretary shall compute a performance threshold that would apply for each MIPS payment year. Instead, section 1848(q)(6)(D)(i) of the Act provides the Secretary shall compute a performance threshold for each MIPS payment year based on the

mean or median (selected once every 3 years) of the MIPS final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. We have determined that the performance threshold may be established with respect to the applicable year at any time as long as the performance threshold continues to be based on a prior period specified by the Secretary. In other words, we could establish a performance threshold that would apply to multiple MIPS payment years. We note that we may not always establish the performance threshold for multiple MIPS payment years, but we will consider this as an option as we continue to ensure that the performance threshold is truly reflective of MIPS eligible clinicians' performance in MIPS. Due to several large programmatic changes (such as, transitioning to reporting MVPs and digital quality measures and potential introduction of ''Core Elements'' for selection of quality measures in MVPs) discussed further in sections IV.A.3.b. and IV.A.4.c. of this proposed rule, establishing the same performance threshold for the 2028, 2029, and 2030 payment years would allow us to provide stability and predictability to MIPS eligible clinicians as they adapt to and implement our policy changes for MIPS.

As further discussed under section IV.B.2.b.(2) of this proposed rule, we are proposing to continue using the mean of the final scores for all MIPS eligible clinicians from the CY 2017 performance period/2019 MIPS payment year to establish the performance threshold as 75 points for the CY 2026 performance period/2028 MIPS payment year through the CY 2028 performance period/2030 MIPS payment year. We recognize that our proposal to establish the performance threshold for MIPS payment years 2028, 2029, and 2030 extends beyond the period for which we have established the mean methodology to determine the performance threshold. However, given the current statutory requirement, which allows us to reassess the methodology every three years, there is no requirement that prevents us from setting the methodology for a longer time frame. We plan to reassess the methodology in future rulemaking.

For further information on our current performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53792), CY 2019 PFS final rule (83 FR 59879 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), CY 2022 PFS final rule (86 FR 65527 through 65532), CY 2023 PFS final rule (87 FR 70096 through 70100), CY 2024 PFS final rule (88 FR 79373 through 79380), and CY 2025 PFS final rule (89 FR 98448 through 98455).

We codified the performance thresholds for each of the first 9 years of MIPS at § 414.1405(b)(4) through (10). These performance thresholds are shown in Table 70.

TABLE 70: PERFORMANCE THRESHOLDS FOR THE CY 2017 PERFORMANCE PERIOD/2019 MIPS PAYMENT YEAR THROUGH THE CY 2025 PERFORMANCE PERIOD/ 2027 MIPS PAYMENT YEARS

MIPS Performance Period	2017 MIPS Performance Period	2018 MIPS Performance Period	2019 MIPS Performance Period	2020 MIPS Performance Period	2021 MIPS Performance Period	2022 MIPS Performance Period	2023 MIPS Performance Period	2024 MIPS Performance Period	2025 MIPS Performance Period
Year of MIPS	**Year 1**	**Year 2**	**Year 3**	**Year 4**	**Year 5**	**Year 6**	**Year 7**	**Year 8**	**Year 9**
Performance Threshold	3 points	15 points	30 points	45 points	60 points	75 points	75 points	75 points	75 points
Change from prior year	N/A	12 points	15 points	15 points	15 points	15 points	0 points	0 points	0 points

(2) Proposed Performance Threshold for the CY 2026 Performance Period/2028 MIPS Payment Year Through the CY 2028 Performance Period/2030 MIPS Payment Year

We are proposing to use the mean of 75 points from the CY 2017 performance period/2019 MIPS payment year as it continues to be the most appropriate for establishing the performance threshold for the 2028, 2029, and 2030 MIPS payment years for several reasons. As further described in this section of the proposed rule, these reasons include providing stability and predictability for MIPS eligible clinicians, allowing MIPS eligible clinicians to gain experience with MVPs and other new MIPS policies, and continuing to support solo, small, and rural practices.

TABLE 71: POSSIBLE VALUES FOR THE PERFORMANCE THRESHOLD FOR THE 2028, 2029, AND 2030 MIPS PAYMENT YEARS

MIPS Payment Years	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year	2024 MIPS Payment Year	2025 MIPS Payment Year
Mean	74.65	87.00	85.65	89.47	89.22	82.71	83.18

At the time of this proposed rule, we have data available on MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year through CY 2023 performance period/2025 MIPS payment year. As shown in Table 72, we calculated the mean values of MIPS eligible clinicians' final scores for each year from the CY 2017 performance period/2019 MIPS payment year through the CY 2023 performance period/2025 MIPS payment year. The final scores for the CY 2024 performance period/2026 MIPS payment year were not finalized in time for this proposed rule and, therefore, the mean final score for the CY 2024 performance period/2026 MIPS payment year was not included for consideration as a potential performance threshold value for the 2028, 2029, and 2030 MIPS payment years. As discussed further in this section of the proposed rule, we believe that the mean of 75 points from the CY 2017 performance period/CY 2019 MIPS payment year continues to be the most appropriate option that would provide stability and predictability for MIPS eligible clinicians while still encouraging high quality of care.

First, when looking at the data for purposes of establishing a performance threshold for the 2028 through 2030 MIPS payment years, we did not consider any data from the CY 2019 performance period/2021 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year, as they were impacted by the Public Health Emergency (PHE) for the Coronavirus Disease 2019 (COVID–19), which we discussed in further detail in the CY 2025 PFS final rule (89 FR 98451 through 98453). The geographic differences of COVID–19 incidence rates along with different impacts resulting from Federal, State, and local laws and policy changes implemented in response to the PHE for COVID–19 may have affected which MIPS eligible clinicians were able to submit data for the CY 2019 performance period. This may have led to final scores that were not wholly representative of performance for all MIPS eligible clinicians. Also, for the CY 2020 performance period/2022 MIPS payment year and the CY 2021 performance period/2023 MIPS payment year, we extensively applied our reweighting policies, described under § 414.1380(c)(2)(i), to MIPS eligible clinicians nationwide due to the PHE for COVID–19.

Inherently, these actions, particularly re-weighting the performance categories, skewed the final scores from those years such that they are not an appropriate indicator for future performance of MIPS eligible clinicians. Specifically, we are concerned that the final scores during the PHE for COVID–19 reflect the performance of only MIPS eligible clinicians that may have been less impacted by the pandemic, and do not accurately represent MIPS eligible clinician performance overall during this period. Since the Federal PHE for COVID–19 expired on May 11, 2023,[417] many of the flexibilities and exceptions applied during the PHE for COVID–19, such as the extreme and uncontrollable circumstances reweighting policies described under § 414.1380(c)(2)(i), are no longer being applied in the context of the pandemic. In the interest of establishing a performance threshold using data that is reflective of clinician performance that is not affected by the-PHE for COVID–19, continuing to use data from the CY 2017 performance period/2019 MIPS payment year to establish a performance threshold for the 2028, 2029 and 2030 MIPS payment years will allow us time to gather additional data that is more reflective of clinician performance outside of the PHE for COVID–19. We acknowledge more recent data will be available between CY 2026 performance period/2028 MIPS payment year through CY 2028 performance period/2030 MIPS payment year; however, with the various programmatic changes discussed in this section of the proposed rule, we aim to provide stability and predictability to MIPS eligible clinicians as they transition, implement, and adapt to these changes.

As new MVPs and their related changes are being introduced into the program, and as more MIPS eligible clinicians transition to MVP reporting, we want to provide some stability for MIPS eligible clinicians and allow time for more MVP data to become available. Specifically, in section IV.A.3. of this proposed rule, we discuss several policies to support our goal of phasing out traditional MIPS and fully transitioning to MVP reporting. As stated in the CY 2025 PFS proposed rule, we discussed that we anticipate to fully transition to MVPs by the CY 2029 performance period/2031 MIPS payment year (89 FR 62012). In section IV.A.3.b. of this proposed rule, we are seeking comments in an RFI for a potential policy wherein MVP Participants would select one quality measure from a subset of quality measures in each MVP, referred to as ''Core Elements'' and MVP Participants would select the other three required quality measures and would still have to meet existing MVP reporting requirements. We are considering proposing the Core Elements policy in the CY 2027 PFS proposed rule and proposing the policy for implementation prior to sunsetting traditional MIPS. Further, as discussed in section IV.A.4.c. of this proposed rule, we aim to fully transition to a digital quality measure (dQM) landscape that promotes interoperability and increases the value of reporting quality measure data. As we continue to consider these potential policy changes over the next several years, we aim to provide consistency to MIPS eligible clinicians by maintaining the performance threshold at 75 points for the 2028, 2029, and 2030 MIPS payment years. Meanwhile, we will continue to evaluate how the performance threshold can best reflect clinicians' performance in MIPS.

While the CY 2018 performance period/2020 MIPS payment year's data predate the PHE for COVID–19, we continue to be concerned that an

[417] *https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html.*

increase in the performance threshold will inadvertently harm certain clinician types, specifically small practices and solo practitioners. As we stated in the CY 2024 PFS final rule, we want to consider the impacts of the performance threshold and its related policies on small practices (88 FR 79377). As discussed in the CY 2025 PFS final rule, we have received feedback that many small practices and solo practitioners face challenges in their ability to participate in MIPS, including the costs to implement and maintain certified electronic health record (EHR) technology (CEHRT), staff and training costs, and limited staff capacity to manage the complexity of the program (89 FR 98451 through 98453). As discussed in the CY 2025 PFS final rule, we also learned that increases in the performance threshold add administrative and financial burden for small practices that discourage their participation in MIPS (89 FR 98451 through 98454).

Further, in a survey distributed during the summer of CY 2024, we learned that, of the small practices and solo practitioners that participated in the survey, the three major barriers for submitting MIPS data included: the burden of data collection and submission, lack of administrative support, and high costs associated with participating in the program. The small practices and solo practitioners that responded to the survey indicated that simplified reporting requirements, free technical assistance, and better informational resources may improve their participation in MIPS.

Though we have several policies within MIPS that continue to support small and solo practices, including scoring and reweighting policies, we are interested in understanding how to best support small practices and enhance their ability to successfully participate in MIPS as MIPS continues to evolve (89 FR 98451 through 98453). As such, we continue to perform qualitative analysis through engagement with small practices, third party intermediaries, and other interested parties to gather information about the experience of small practices participating in the program. Maintaining a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years would allow us to continue developing strategies to reduce barriers for small practices and solo practitioners participating in MIPS.

Finally, as discussed in section IV.B.1.a.(2) of this proposed rule, we are continuing to assess how to best address our topped out scoring policy within the quality performance category. Historically, there have been concerns that certain specialties only have topped out measures to report which would make it difficult for them to meet an increased performance threshold even if they perform very well on those measures. Hence, as we continue to evaluate these programs scoring policies, establishing the performance threshold at 75 points will avoid inadvertently harming these clinician types.

Alternatively, we have considered maintaining the performance threshold at 75 points for either: (1) the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year (excluding the CY 2028 performance period/2030 MIPS payment year, which is currently proposed); or (2) only the CY 2026 performance period/2028 MIPS payment year. We also considered raising the performance threshold. However, as previously discussed, based on the data that we have available, we believe that our proposal to set the performance threshold at 75 points for the 2028, 2029, and 2030 payment years provides stability as MIPS enters a period of transition agnostic of our discretion to reassess the performance threshold methodology for the CY 2028 performance period/2030 MIPS payment year. We will reassess the use of the median or mean methodology in future rulemaking in accordance with section 1848(q)(6)(D)(i) of the Act. We refer readers to section IV.B.2.b.(3) of this proposed rule for Request for Information (RFI) on Future MIPS Performance Thresholds for more discussion on establishing the performance threshold for singe versus multiple years and the potentially increasing the performance threshold in future rulemaking.

We refer readers to the section VII.I.5.d.(4)(c) of this proposed rule for an estimate of the percent of MIPS eligible clinicians that would receive a negative payment adjustment for the CY 2026 performance period/2028 MIPS payment year if the performance threshold is set at 75 points as proposed.

Maintaining a performance threshold of 75 points allows additional time for more MVP data to become available, continues to provide opportunities for clinicians to become familiar with the transition to MVPs, and ensures that we continue to support certain clinician types, such as small practices, solo practitioners, rural providers, and clinicians who have several topped out measures. Therefore, we are proposing to establish a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year. We also propose to codify this performance threshold in our regulation by adding § 414.1405(b)(10)(ii).

We request public comments on our proposal to establish a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year. We also request comments on our proposal to codify this performance threshold by adding § 414.1405(b)(10)(ii).

(3) Request for Information on Future MIPS Performance Thresholds

As we consider the potential changes within MIPS while aiming to ensure that the performance threshold reflects clinician performance, we also request public feedback on the following issues:

- Establishing the performance threshold for single versus multiple years (for example, 1, 2, or 3 years at a time) via rulemaking; and
- As we approach later years in MIPS, increasing the performance threshold based on data from a prior period which potentially would provide larger positive MIPS payment adjustments for MIPS eligible clinicians with MIPS final scores higher than such performance threshold.

c. Example of Adjustment Factors

Figure 5 provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor using the statutory formula and based on our proposed policies for the CY 2026 performance period/2028 MIPS payment year. In Figure 5, the performance threshold is set at 75 points, as we have proposed in section IV.B.2.b.(2) of this proposed rule.

For purposes of determining the maximum and minimum range of potential MIPS payment adjustment factors, section 1848(q)(6)(B) of the Act defines the applicable percentage as 9 percent for the CY 2026 performance period/2028 MIPS payment year. We calculate the MIPS payment adjustment factor using a linear sliding scale in accordance with section 1848(q)(6)(F)(i) of the Act. This linear sliding scale is calculated based on MIPS final scores from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the

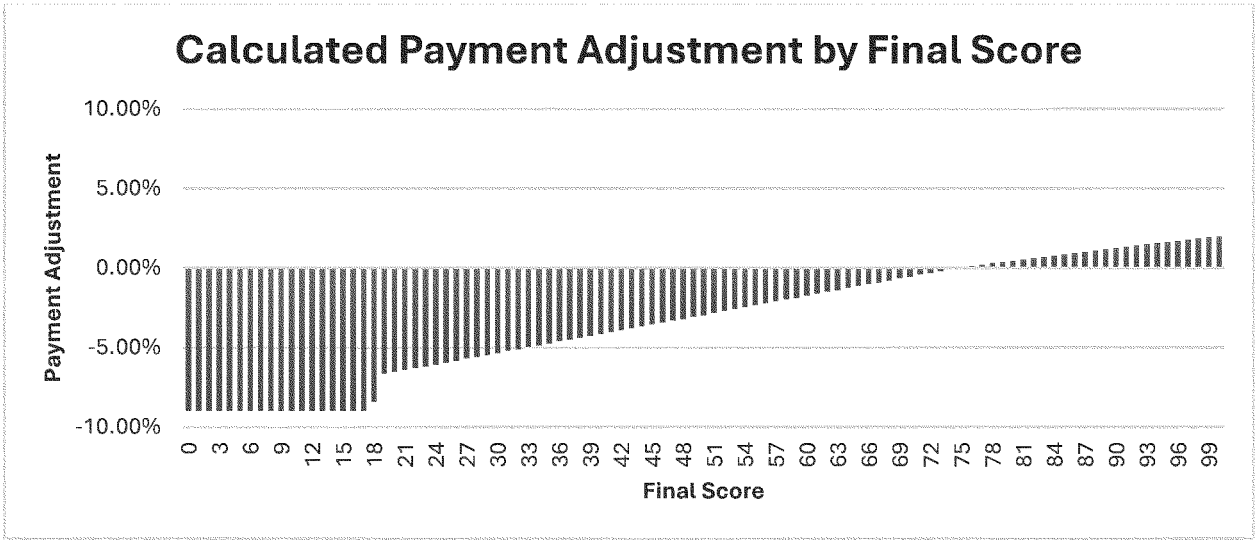
highest positive applicable percentage and resulting in the highest payment adjustment.

However, there are two modifications to this linear sliding scale. First, as specified in section 1848(q)(6)(A)(iv)(II) of the Act, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the proposed performance threshold of 75 points for the CY 2026 performance period/2028 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive a negative MIPS payment adjustment factor equal to 9 percent (the applicable percentage). Second, the linear sliding scale for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0, as required by section 1848(q)(6)(F)(i) of the Act.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent (the applicable percentage). If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS eligible clinicians with a final score equal to 75 points (the performance threshold proposed for the CY 2026 performance period/2028 MIPS payment year) will receive a neutral MIPS payment adjustment.

Beginning with the CY 2023 performance period/2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act is no longer available. For this reason, Figure 5 does not illustrate an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

FIGURE 5: ILLUSTRATIVE EXAMPLE OF MIPS PAYMENT ADJUSTMENT FACTORS BASED ON FINAL SCORES AND PERFORMANCE THRESHOLD FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR



Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 72 illustrates the changes in payment adjustment based on the final policies from the CY 2025 PFS final rule (89 FR 98448 through 98455) for the CY 2025 performance period/2027 MIPS payment year and the proposed policies for the CY 2026 performance period/2028 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 72: ILLUSTRATION OF POINT SYSTEM AND ASSOCIATED ADJUSTMENTS COMPARISON BETWEEN THE CY 2025 PERFORMANCE PERIOD/2027 MIPS PAYMENT YEAR AND THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

2025 Performance Period Final Score Points	MIPS Adjustment for 2025 Performance Period	2026 Performance Period Final Score Points	MIPS Adjustment for 2026 Performance Period
0.0-18.75	Negative 9%	0.0-18.75	Negative 9%
18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
75.00	0% adjustment	75.00	0% adjustment
75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.

3. Review and Correction of MIPS Final Score—Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are required to provide MIPS eligible clinicians with timely confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule, we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories (82 FR 53799 through 53801).

We made performance feedback available for the CY 2019 performance period/2021 MIPS payment year on August 5, 2020; for the CY 2020 performance period/2022 MIPS payment year on August 2 and September 27, 2021; for the CY 2021 performance period/2023 MIPS payment year on August 22, 2022; for the CY 2022 performance period/2024 MIPS payment year on August 10, 2023; and for the CY 2023 performance period/2025 MIPS payment year on August 12, 2024. Although we aim to provide feedback for the CY 2024 performance period/2026 MIPS payment year on or around July 1, 2025, it is possible the release date could be later depending on circumstances. We direct readers to *qpp.cms.gov* for more information.

4. Third Party Intermediaries General Requirements

a. Requirements for CMS-Approved Survey Vendors

(1) Background

The CAHPS for MIPS survey evaluates patients' experiences of care within a group, subgroup, virtual group, or Alternative Payment Model (APM) Entity. The CAHPS for MIPS survey must be administered by a CMS-approved survey vendor for the purposes of reporting (81 FR 28285). CMS-approved survey vendors must undergo the CMS approval process annually, which includes completing the Vendor Participation Form and complying with the Minimum Survey Vendor Business Requirements (81 FR 28288).

We have codified definitions of key terms for the Quality Payment Program, including third party intermediaries such as CMS-approved survey vendors, at § 414.1305. First, we have defined a third party intermediary as meaning an entity that CMS has approved at § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories. Then, we also defined a CMS-approved survey vendor as meaning a survey vendor that is approved by CMS for a particular performance period to administer the CAHPS for MIPS survey and to transmit survey measures data to CMS.

We refer readers to § 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77386), the CY 2018 Quality Payment Program final rule (82 FR 53818 and 53819), the CY 2019 PFS final rule (83 FR 59907 and 59908), the CY 2022 PFS final rule (86 FR 65538 and 65539), and the CY 2025 PFS final rule (89 FR 98459 and 98460) for previously finalized standards and criteria for third party intermediaries including CMS-approved survey vendors.

(2) Proposals To Codify Two Previously Finalized Policies

In the CY 2025 PFS final rule, we finalized a policy to require CMS-approved survey vendors to submit a range of the cost of their services with their application beginning with the CY 2026 performance period/2028 MIPS payment year (89 FR 98459 and 98460). While this policy was finalized as proposed in the CY 2025 PFS final rule, it was not codified in our regulations governing third party intermediaries. To ensure program requirements are clear, we propose to codify this previously finalized policy at § 414.1400(d)(9), with a technical modification to indicate that this requirement begins on January 1, 2026, rather than with the CY 2026 performance period/2028 MIPS payment year. We specifically propose to codify at § 414.1400(d)(9) to provide that, beginning with January 1, 2026, the entity seeking to be a CMS-approved survey vendor must include on its application the range of costs of its third party intermediary services.

In the CY 2024 PFS final rule, we finalized a policy to require organizations to contract with a CMS-approved survey vendor that would administer the CAHPS for MIPS Survey in the Spanish language translation to Spanish-preferring patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines (88 FR 79332 through 79334). While this policy was finalized as proposed in the CY 2024 PFS final rule, it was not codified in our regulations governing third party intermediaries. To ensure program requirements are clear, we propose to codify this previously finalized provision at § 414.1400(d)(3)(iv)(A), with technical modifications to refer more broadly to sub-regulatory guidance that details procedures for administering the CAHPS for MIPS Survey. Specifically, we propose to codify at § 414.1400(d)(3)(iv)(A) to provide that, beginning on January 1, 2024, in addition to administering the survey in English, entities will administer the Spanish survey translation to Spanish-preferring patients using the procedures detailed in sub-regulatory guidance to standardize the CAHPS data collection process for MIPS and to make sure the survey data collected across survey vendors are comparable within the program or model.

We request public comments on these proposals.

(3) Technical Changes

While reviewing the regulations for CMS-approved survey vendors, we identified an area in which language was used to describe survey protocols that is no longer consistent with current practice. We propose to modify § 414.1400(d)(3)(i) by removing the reference to 'mixed -modes' to better align with language typically used in current practice. Specifically, we propose to modify § 414.1400(d)(3)(i) to provide that an entity must have at least 3 years of experience administering surveys in which mail survey administration is followed by survey administration via Computer Assisted Telephone Interview (CATI). We note that this terminology change does not reflect a change in requirements for CMS-approved survey vendors.

We request public comments on this proposal.

(4) CAHPS for MIPS Survey

For the MIPS quality performance category, the CAHPS for MIPS Survey measures patients' experience of care and is administered first through the mail and then by phone interview with non-respondents. The survey is administered in English and Spanish, with additional translations available. The CAHPS for MIPS Survey may only be administered by CMS-approved survey vendors. (81 FR 77116). More details on the CAHPS for MIPS survey can be found here: *https://www.cms.gov/data-research/research/consumer-assessment-healthcare-providers-systems/cahps-mips*.

(5) Proposal To Require Web-Mail-Phone Protocol for Administration of the CAHPS for MIPS Survey

In the CY 2025 PFS proposed rule (89 FR 61869, 62042, and 62043), we included a request for information (RFI) on the potential expansion of the survey modes of the CAHPS for MIPS Survey from a mail-phone protocol to a web-mail-phone protocol. We solicited public comment on this new protocol given positive results found from our 2023 CAHPS for MIPS Web Mode Field Test.[418]

The field test added the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS survey administration, and we found that the addition resulted in a 43 percent response rate compared to 28 percent for the mail-phone protocol from the CY 2022 performance period CAHPS for MIPS Survey (89 FR 62043). In the CY 2025 proposed rule, we outlined details of the field test, including that surveys were administered to a random sample of survey-eligible patients from 20 Medicare Shared Savings Program ACOs between March 6, 2023 and May 31, 2023. These results were compared to survey data collected from the CY 2022 performance period CAHPS for MIPS Survey for the same Medicare Shared Savings Program ACOs.

Although comments in response to the RFI were not included in the 2025 PFS final rule, commenters widely supported an expansion of CAHPS for MIPS survey modes to include a web-based survey protocol, emphasizing that this could help increase response rates. One commenter noted that this is a long overdue update. The CAHPS for MIPS Survey RFI received input from 16 commenters, including medical societies, professional trade associations, Accountable Care Organizations, health care systems, an academic/research institution, and a consumer/patient advocacy organization. Key commenter takeaways included encouraging CMS to:

- Expand the CAHPS for MIPS survey modes to include a web-based option.
- Examine and implement additional changes to improve response rates and reduce burden associated with CAHPS surveys.
- Create additional approaches to assess and reduce any increased costs of survey administration for health care practices.
- Consider the potential impacts of sharing email addresses with vendors on patient privacy and administration burden.

The field test showed an increase in the survey response rate due to the addition of the web-based survey protocol which may lead to more groups meeting case minimum requirements for CAHPS. Additionally, adding a web survey mode increased flexibility for survey respondents, and commenters responded positively to the addition of a web-based survey protocol.

On these bases, we propose to require that, beginning with the CY 2027 performance period/2029 MIPS

[418] Centers for Medicare & Medicaid Services. (June 2024). 2023 CAHPS for MIPS Web Mode Field Test. Available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2893/2023_CAHPS_for_MIPS_WebMode_Field_Test.pdf*.

payment year, CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. We propose to codify this requirement at § 414.1400(d)(10).

In addition, we propose to codify new requirements at §§ 414.1400(d)(3)(v)(A), 414.1400(d)(3)(vi)(A), and 414.1400(d)(3)(vii) to ensure an entity applying to become a CMS-approved survey vendor is capable of administering a web-mail-phone protocol prior to CMS approval. We note that, currently, an entity must apply to be a CMS-approved vendor on an annual basis, demonstrating they meet applicable requirements at § 414.1400. We propose to modify our requirements at § 414.1400(d)(3) to ensure an entity is prepared to administer the web-mail-phone protocol prior to CMS approval. Specifically, we propose that, beginning January 1, 2027, to be a CMS-approved survey vendor an entity must have sufficient experience, capability, and capacity to accurately report CAHPS data by demonstrating that they: (1) use equipment, software, computer programs, systems, and facilities that can send survey invitations via email that include a patient-specific hyperlink to a web survey, collect data via web, and track cases from web surveys through telephone follow-up activities (§ 414.1400(d)(3)(v)(A)); (2) employ a web survey administrator (§ 414.1400(d)(3)(vi)(A)); and (3) have at least 3 years of experience administering surveys in which web survey administration is followed by survey administration via mail survey or Computer Assisted Telephone Interview (CATI) (§ 414.1400(d)(3)(vii)).

If this proposal is finalized, CMS would update the survey administration requirements and associated materials, including the survey vendor application, during the 1-year implementation delay. We note that entities seeking to, or that do, become a CMS-approved survey vendor would need to meet other applicable requirements in § 414.1400, including successfully completing CMS' vendor training(s) as provided at § 414.1400(d)(5).

We refer readers to section V.B.5.b. of this proposed rule for discussion on the burden estimates for this proposal.

We request public comments on this proposal.

(6) Proposal To Sunset Application Requirement at § 414.1400(d)(8)

We propose to modify § 414.1400(d)(8) to sunset its requirement that, to apply to become a CMS-approved survey vendor, the entity must send an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data. Though this requirement was established to ensure accurate reporting, it is ultimately not feasible to implement because an entity cannot collect data until it is approved by CMS, and thus, the entity does not have any data to send to CMS prior to approval. Therefore, submission of a survey data file has not been used as a requirement for approval. We propose to sunset the requirement at § 414.1400(d)(8) so it is only effective from January 1, 2019 (when it was first finalized in the CY 2019 PFS final rule) through December 31, 2025. We propose that this requirement would no longer be in effect beginning with January 1, 2026.

We request public comments on this proposal.

5. Advanced APMs

a. Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables us to advance accountability and encourage improvements in care. Our vision for increased clinician participation in Advanced APMs is aimed at integrating individuals' clinical needs across a spectrum of providers and settings to improve patient care and population health. As we continue to make improvements to the Quality Payment Program, we seek to develop, propose, and implement policies that encourage broad and meaningful clinician participation, including by specialists, in Advanced APMs.

In the CY 2025 PFS final rule, we anticipated that we would propose a comprehensive approach to QP determination in future rulemaking (89 FR 98464). In this section, we are proposing such a comprehensive approach, which includes two parts. First, we propose to add an individual level calculation to Qualifying APM Participant (QP) determinations, as set forth in proposed regulation text at §§ 414.1425(b)(3 and (c)(3), for all eligible clinicians participating in an Advanced APM, such that each eligible clinician would receive both APM Entity level calculation and an individual level calculation. Second, we are re-proposing to expand the scope of the services in the sixth criterion of the definition of ''attribution-eligible beneficiary'' at § 414.1305 to use covered professional services (section 1848(k)(3)(A) of the Act). We believe that, together, these proposals would modernize and improve the QP determination approach across Advanced APMs.

In addition to the above proposals, we further propose to sunset our Advanced APM criterion at § 414.1415(c)(7), which currently limits Medical Home Model participants to 50 clinicians.

Lastly, we propose to modify §§ 414.1455(a)(b)(3)(ii) and (b)(3)(vi) pertaining to the QP Targeted Review process to align with MIPS Targeted Review process set forth at § 414.1385 to ensure that the QP and MIPS Targeted Reviews occur concurrently.

b. QP Determinations

(1) General

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy for QP determinations at § 414.1425. Currently, § 414.1425(b)(1) provides that, for the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the ''snapshot dates'' (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any such snapshot date is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for eligible clinicians in an APM Entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List for more than one APM Entity, but who do not achieve QP status based on any APM Entity-level determinations, we make QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM, we make QP determinations at the individual-level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77440) we established a process to calculate Partial QP status at § 414.1425(d). While to date our Partial QP policies have impacted a small number of eligible clinicians, and thus we have not focused our discussion on this specific policy, we note that any change to QP determinations would likely require conforming changes to the policies for Partial QPs for consistency across the program.

In the CY 2017 Quality Payment Program final rule (81 FR 77450 through 77457), we finalized the payment amount method and patient count method for calculation of Threshold Scores used for QP determinations under the Medicare option and codified these methods at § 414.1435(a) and (b), respectively. The payment amount method is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of ''Attributed beneficiaries'' to ''Attribution-eligible beneficiaries,'' as these terms are defined at § 414.1305, as shown in Figure 6 below.

FIGURE 6: QP DETERMINATION CALCULATION

$$\frac{\text{Attributed beneficiaries}}{\text{Attribution-eligible beneficiaries}}$$

If the Threshold Score (using either the payment amount or patient count method) calculated at the APM Entity or individual eligible clinician level, as applicable, meets or exceeds the relevant QP threshold described at § 414.1430(a), the relevant eligible clinician or clinicians (either the individual eligible clinician or all those on the APM Entity's Participation List) achieve QP status for such year.

Regulation at § 414.1435(b)(3) provides that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4) provides that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups. In the CY 2021 PFS final rule (85 FR 84951 through 84952), we amended § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period are excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list.

An attributed beneficiary is a beneficiary attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. There may be beneficiaries on the most recent available list who do not meet the criteria to be attribution-eligible beneficiaries because the QP performance period does not align with the Advanced APM's performance period or attribution period, or for other reasons. There may also be cases where a beneficiary's status changes, for example by enrolling in a Medicare Advantage Plan. As described in the CY 2017 Quality Payment Program final rule (81 FR 77451), attributed beneficiaries are a subset of attribution-eligible beneficiaries. Therefore, when calculating Threshold Scores for QP determinations, we exclude from the list of attributed beneficiaries any beneficiaries who do not meet the criteria to be attribution-eligible beneficiaries at that point in time.

In the 414.1425(d).

(2) Individual QP Determination

When we initially established our policy in the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445) to make most QP determinations at the APM Entity level, we believed it was the best approach at the time. However, we did not intend for the policy to create potentially conflicting incentives for an APM Entity between the goal for its eligible clinicians to achieve QP status under the Quality Payment Program and the goals of the Advanced APM(s) in which the APM Entity participates.

In the CY 2024 proposed rule (88 FR 52618), we had proposed to address this issue by conducting all QP determinations at the individual level. However, commenters opposed this proposal, citing issues such as administrative burden for APM Entities tracking QP status and Partial QP status and elections at the individual level because of the implications for MIPS reporting. Many further believed that the change may have negative consequences for specialists, the opposite of our intent in making our proposal. In light of comments received, we did not finalize our proposal (88 FR 79403). Since that time, we have continued to examine QP determinations with a desire to right-size the methodology to current and future Advanced APM design, remove barriers to participation, and conduct calculations fairly.

Some commenters on our CY 2024 proposal recommended that we conduct QP determinations at both the APM Entity and individual levels (88 FR 79403). At the time, we indicated that we did not believe that this approach would sufficiently encourage more intensive Advanced APM participation by individual eligible clinicians. However, based on continued examination of QP determinations, including in the time since the publishing of the CY 2025 PFS final rule, we have recognized the importance of individual contribution, particularly for models that are condition-specific or focused on an episode of care. Clinicians in these models are particularly disadvantaged when, as is frequently the case, their APM Entity fails to achieve QP status.

Under our current policy, there is the potential that an eligible clinician who has fully engaged with an Advanced APM may still be unable to earn QP status because it is calculated at the APM Entity level as described at § 414.1425(c)(3). As we have noted earlier, under our current policy we conduct individual determinations, but we only do so in the following specific circumstances: For eligible clinicians who appear on a Participation List for more than one APM Entity, but who do not to achieve QP status based on any APM Entity-level determinations, we make QP determinations at the

individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM, we make QP determinations at the individual-level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2). While these methods exist, individual calculations are not the norm and for an eligible clinician in only a single APM Entity our current policy does not provide for an individual determination.

As such, we are proposing to add a new provision at § 414.1425(b)(3) to add a QP determination at the individual level for all Advanced APM participants, beginning with the 2026 QP Performance Period. Our proposal would not impact our policy at § 414.1425(b)(1) for APM Entity level determinations or our policy at § 414.1425(b)(2) determinations for Affiliated Practitioners as CMS is envisioning that these policies would also remain in effect for 2026 and future QP Performance Periods. Under our proposal, we would amend § 414.1425(b)(3) to add a calculation of Threshold Scores for QP determinations at the individual level for each unique NPI associated with an eligible clinician participating in an Advanced APM based on services furnished across all Tax Identification Numbers (TINs) to which the eligible clinician has reassigned their billing rights. This individual Threshold Score would provide a more specific measurement of each eligible clinician's participation in an Advanced APM. Under our proposal, we would calculate at the APM Entity level as provided in § 414.1425(b)(1) and (2) and the individual level for each eligible clinician as provided in proposed § 414.1425(b)(3) at each of the snapshot dates throughout the QP Performance Period. Under our proposal, an eligible clinician is a QP for a year under the Medicare option if they meet or exceed the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described at § 414.1430(a)(1) and (3) at the APM Entity level, or as an individual eligible clinician as stated at § 414.1425(c)(3) or § 414.1425(c)(4) respectively.

We are proposing a conforming revisions at § 414.1425(c)(3)(i) to ensure that an eligible clinician is a QP for a year under the Medicare Option if beginning with the CY 2026 QP Performance Period, the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(1) and (3). Likewise, an eligible clinician is a QP for the year under the All-Payer Combination Option if the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(1) and (3).

We are proposing a conforming revision to sunset § 414.1425(c)(4) to make clear that the existing policy started with the CY 2017 QP Performance Period and would end with the CY 2025 QP Performance Period, and to preserve in the regulations the history of the applicable policies for specific QP Performance Periods.

We are proposing a revision at § 414.1425(d)(1) and (2) such that an eligible clinician is a partial QP for a year under the Medicare option if they meet or exceed the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(2) and (4) at the APM Entity level or as an individual eligible clinician as stated at § 414.1425(d)(1) or § 414.1425(d)(2) respectively.

We seek public comments on this proposal.

(3) Attribution-Eligible Definition

At § 414.1305, we define an attribution-eligible beneficiary as a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base beneficiary attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

When we finalized the definition of attribution-eligible beneficiary in the CY 2017 Quality Payment Program final rule, (81 FR 77451 through 77452), we intended that this definition would, for purposes of QP determinations, allow us to be consistent across Advanced APMs in how we consider the population of beneficiaries served by an APM Entity. The criteria we used to define attribution-eligible beneficiary were aligned with the attribution methodologies and rules for our contemporaneous Advanced APMs. The first five criteria are conditions that are required for a beneficiary to be attributed to any Advanced APM. The sixth criterion identifies beneficiaries who have received certain services from an eligible clinician who is associated with an APM Entity for any period during the QP Performance Period. We chose to refer to E/M services as the primary basis for purposes of attribution-eligibility because many of the Advanced APMs CMS offered at that time used E/M claims to attribute beneficiaries to their APM Entity groups. Over time, we have updated the list of services that are considered to be E/M services for purposes of identifying attribution-eligible beneficiaries and have published this list as part of the ''2024 Learning Resources for QP Status and APM Incentive Payment'' materials on the Quality Payment Program Resource Library at *qpp.cms.gov*.

We also included an exception in this sixth criterion to allow us to use an alternative approach for Advanced APMs that do not base beneficiary attribution on any E/M services, and thus for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for an E/M service. To date, we have implemented this alternative approach for four Advanced APMs:

- Bundled Payments for Care Improvement Advanced Model.
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track).
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two Sided Risk Arrangement).
- Maryland Total Cost of Care Model (Care Redesign Program).

We have published links to the methodologies we use to identify attribution-eligible beneficiaries for these Advanced APMs in the ''2024 Learning Resources for QP Status and APM Incentive Payment'' materials on the Quality Payment Program Resource Library at *qpp.cms.gov*.

We adopted the general rule with flexibility to apply alternative methods for this criterion to ensure that, for the Advanced APMs for which beneficiary attribution is based on services other than E/M services, the attributed beneficiary population is truly a subset of such Advanced APMs' attribution-eligible beneficiary populations and, ultimately, so that our way of identifying beneficiaries for purposes of Threshold Score calculations for QP determinations would be appropriate for such Advanced APMs. That said, our thought when we developed these approaches was shaped by the form and nature of the Advanced APMs that existed at that time. We believed that, by affording sufficient flexibility within the program, we could both foster innovation in Advanced APMs and simplify our execution of the program. However, with our more narrowly defined default approach to beneficiary attribution (relying on claims for E/M services), we have increasingly needed to exercise the flexibility to identify an alternative approach to attribution eligibility for Advanced APMs that fell into the exception, which meant that we identified several individually tailored ways of performing the beneficiary attribution methodology for specific Advanced APMs. We anticipate that Advanced APMs will continue to evolve and use novel approaches to value-based care that may emphasize a broad range of covered professional services, and in that event the application of our current regulations may result in increased variability among the ways we define attribution-eligible beneficiary when making QP determinations. In the CY 2025 PFS proposed rule (89 FR 62098 through 62101), we proposed to amend the final criterion in the definition of ''attribution-eligible beneficiary'' at § 414.1305 to expand the scope of services used to covered professional services, indicating that we would conduct further analysis. However, as further discussed in the CY 2025 PFS final rule (89 FR 98461 through 98465)-, we did not finalize this proposal.

After continued examination, we are re-proposing to modify the sixth criterion of the definition of ''attribution-eligible beneficiary'' at § 414.1305 to include any beneficiary who has received a covered professional service furnished by the eligible clinician for whom we are making the QP determination, beginning with the 2026 QP Performance Period. In the CY 2025 proposed rule, we described how the proposed approach would result in a QP calculation that, by including beneficiaries receiving any covered professional service, more accurately reflect eligible clinicians' actual participation in Advanced APMs, improve transparency and predictability of the determinations, be more operationally efficient than the current policy, and better align the QP determination methodology with the universe of services to which the Quality Payment Program (including MIPS and APMs) applies.

In response to comments in the CY 2025 PFS final rule, we explained that changes in the composition of APM Entity Participation Lists, services furnished, and attributed beneficiaries all have significant effects on the number of projected versus actual QPs for a QP performance period, which complicates the ability to assess effects of methodological changes to QP determinations (89 FR 98461 through 98465). We also described how any methodology changes can lead to varied QP Threshold Scores for APM Entities within the same Advanced APM, and noted that because QP status is determined based on specific QP payment amount and QP patient count thresholds, only those changes in scores that result in an eligible clinician crossing over a QP threshold percentage contribute to the net estimated change in QP counts (89 FR 98461 through 98465). We further note that the QP thresholds have increased relative to previous years and, effective with the 2025 QP Performance Period are now at 75 percent for the payment amount and 50 percent for the patient count. We note that this change, which occurs by statute, will be responsible for the largest quantitative effect on our QP predictions, largely by reducing the number of QPs relative to the previous, lower thresholds. As such, while the quantitative effects of our proposals may show small changes in the number of QPs relative to status quo, that status quo itself reflects this threshold level change to QP determinations, which is significant in its own right.

In the CY 2025 PFS final rule (89 FR 98463 and 98464), we stated that we believed that our proposal was a better approach than the status quo, and we believed that it should likely be part of a comprehensive approach to QP determinations that would better reflect the current and future state of Advanced APMs. In response to public comments, we did not finalize at that time its proposal to revise the sixth criterion of the definition of ''attribution-eligible beneficiary at § 414.1305. However, at the time we stated that we anticipated to propose a comprehensive approach to QP determination in future rulemaking, including a strategy to address the needs of condition-specific models, and that this proposal might be included as one element of such future proposals. (89 FR 98463 and 98464). CMS has further explored this issue and has determined that we could appropriately address the challenges we have described in this and prior rulemaking by allowing for the overall expansion of the QP determinations, in terms of both the level of the determination as discussed in section (2), and the services included in the QP determinations as discussed in this section.

As we noted earlier in this proposed rule, in our discussion of the proposal to calculate QP status at the individual NPI level, primary care practitioners generally furnish a higher proportion of E/M services than do specialists with the same beneficiary, and as for the Threshold Score calculations described previously, the emphasis on E/M services in our beneficiary attribution policy may have inadvertently encouraged APM Entities to exclude specialists from their Participation Lists. Under our current policy, if one or more eligible clinicians on the APM Entity's Participation List furnish covered professional services to a beneficiary but none of those services are among the E/M services we use for attribution, that beneficiary would not be attribution-eligible, and therefore, would not be included in our QP determination calculation, even though the beneficiary is actually receiving covered professional services from an eligible clinician on the APM Entity's Participation List.

We are re-proposing to change the definition of ''attribution-eligible beneficiary'' at § 414.1305 so that, beginning with QP Performance Period 2026, a single definition using covered professional services would be applied regardless of the Advanced APMs in which the eligible clinician participates. We believe that this complements our proposal to add individual-level calculations to QP determinations. We are also concerned that retention of the current policy where E/M services are the default basis for attribution, and where special processes are required for Advanced APMs that use a different attribution basis, could result in a complex set of unique attribution approaches for Advanced APMs.

We believe that this change would more appropriately recognize the Advanced APM participation of the eligible clinicians for whom these determinations are being made, particularly when considered in conjunction with the proposal to add an individual-level calculation to QP

determinations. We further believe that this proposal would simplify and streamline QP determinations and address the challenges to Advanced APM participation reportedly faced by specialists who are less likely than primary care practitioners to provide E/M services.

We are proposing to modify the sixth criterion in the definition of ''attribution-eligible beneficiary'' at § 414.1305 to provide that, beginning with the 2026 QP Performance Period, an attribution-eligible beneficiary is a beneficiary who during the QP Performance Period has a minimum of one claim for any covered professional service furnished by an eligible clinician who is on the Participation List for the APM Entity at any determination date during the QP Performance Period.

We seek public comments on this proposal.

c. Medical Home Model 50 Eligible Clinician Limit

In the CY 2017 Quality Payment Program final rule (81 FR 77428), we finalized a policy for the Medical Home Model nominal financial risk criterion to set a limit of 50 on the number of eligible clinicians in an organization that participates as an Advanced APM through a Medical Home Model. In the CY 2023 PFS final rule (87 FR 70117), we amended § 414.1415(c)(7) to apply the 50 eligible clinician limit directly to the APM Entity participating in the Medical Home Model, and to no longer look to the parent organization for the APM Entity.

Likewise, in the CY 2017 Quality Payment Program final rule (81 FR 77468) we finalized a policy at § 414.1420(d)(2) and (4) for the Medicaid Medical Home Model nominal financial risk criterion to set a limit of 50 on the number of eligible clinicians in an organization that participates as an Advanced APM through a Medical Home Model. In the CY 2020 PFS final rule (84 FR 63095) we finalized a proposed amendment at § 414.1420(d)(2) and (4) to include Aligned Other Payer Medical Home Models with the existing Medicaid Medical Home Model financial risk and nominal amount standards for Medicaid Medical Home Models.

When we established the medical home model 50 eligible clinician limit in the CY 2017 Quality Payment Program final rule our stated intent was to encourage organizations capable of taking on significant downside risk to participate in Advanced Alternative Payment Models that met the ''Generally applicable financial risk standard'' at § 414.1415(c)(1) (81 FR 77430). Based on our experience operating the Quality Payment Program we note that participation in Advanced APMs has increased, and the necessity of the Medical Home Model 50 eligible clinician limit has lessened. Moreover, we expect that this policy could provide a barrier for participation in models that meet the Medical Home Model definition in the future.

We are proposing to amend our policy at § 414.1415(c)(7) to provide that beginning with the 2026 QP Performance Period we would no longer apply the Medical Home Model 50 eligible clinician limit. Specifically, we propose to modify § 414.1415(c)(7) to sunset that provision and provide that it only applies from the 2023 QP performance Period through the 2025 QP Performance Period.

Additionally, we are proposing a conforming amendment to the Aligned Other Payer Medical Home Model and Medicaid Medical Home Model 50 eligible clinician limit at § 414.1420(d)(8) beginning in the 2026 performance period we would no longer apply the Medical Home Model 50 eligible clinician limit.

We seek public comments on this proposal.

d. Targeted Review of QP Determinations

In the CY 2021 PFS final rule (85 FR 84952), we finalized a policy to provide an opportunity for eligible clinicians to bring to our attention potential clerical errors we may have made that could have resulted in the omission of an eligible clinician from a Participation List used for purposes of QP determinations, and for us to review and make corrections if warranted. We also finalized that, after the conclusion of the time period for targeted review, there would be no further review of our QP determination with respect to an eligible clinician for the QP Performance Period (85 FR 84952). We noted that, consistent with section 1833(z)(4) of the Act, and as provided at § 414.1455(a), there is no right to administrative or judicial review at sections 1869 or 1878 of the Act, or otherwise, of the determination that an eligible clinician is a QP or Partial QP at § 414.1425, or of the determination of the amount of the APM Incentive Payment at § 414.1450.

In the CY 2021 PFS final rule (85 FR 84953), we finalized our proposal to align the timing and procedures for this targeted review process with the MIPS targeted review process as codified at § 414.1385. We noted this alignment would reduce the likelihood of confusion and burden on eligible clinicians and APM Entities. In the CY 2024 PFS proposed rule (88 FR 79380 through 79382; 88 FR 79408), we modified the Targeted Review period for both MIPS and QPs such that we could meet our statutory obligation to apply the differentially higher QP conversion factor beginning on January 1 of each payment year beginning with CY 2026. When we made these updates, we also revised the language in § 414.1385 more generally, including a change from 30 days to 15 days between notification and a response at § 414.1385(a)(5), but we did not make corresponding changes to the QP Targeted Review regulation at § 414.1455.

We recognize that the different language in the current versions of these two sections of regulation could make it appear that our intent is for the MIPS and QP Targeted Review periods to operate differently, and that in fact the inconsistencies could mean that the Targeted Review for both QPs and MIPS participants is not guaranteed to be aligned. Our intent for these Targeted Review periods to be aligned has not changed, and we do not want to give the impression that there is a misalignment between them. Accordingly, we are now proposing to modify the langauge at §§ 414.1455(b)(3)(ii) and 414.1455(b)(3)(vi) to make clear that the same timing requirements that for MIPS Targeted Reviews that are currently specified in at §§ 414.1385(a)(2) and 414.1385(a)(5) also apply for purposes of QP Targeted Reviews. We seek comments on our proposal to modify the language at §§ 414.1455(b)(3)(ii) and 414.1455(b)(3)(vi) to the same timing requirements as that of MIPS Targeted Reviews specified at § 414.1385(a)(2) and 414.1385(a)(5).

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 et seq.), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a ''collection of information'' requirement (as defined under 5 CFR 1320.3(c) of the PRA's implementing regulations) is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether a collection of information should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.

- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comments (see section VI. of this proposed rule) on each of the aforementioned issues for the following sections of this document that contain information collection requirements (ICRs). Comments, if received, will be responded to within the subsequent final rule.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' (BLS) May 2024 National Occupational Employment and Wage Estimates for all salary estimates (*https://www.bls.gov/oes/2024/may/oes_nat.htm*). In this regard, Tables 73 and 74 present BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

We note that the May 2024 BLS data does not include median hourly wage rates for multiple physician occupation types listed in Table 74; in these cases, the BLS identifies that the median wage rate is equal to or greater than $115.00/hr or $239,200 per year. BLS data for prior years, such as the May 2022 and May 2023 data, provide similar notes for median wage rates for occupations that are above the same thresholds ($115.00/hr or $239,200 per year for the May 2022 BLS data (*https://www.bls.gov/oes/2022/may/oes_nat.htm*) and May 2023 BLS data (*https://www.bls.gov/oes/2023/may/oes_nat.htm*)). Therefore, for consistency with previous years for estimating physician wage rates, we have continued to use mean hourly wage rates across our wage estimates.

TABLE 74: NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES (EXCLUDING PHYSICIANS)

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Billing and Posting Clerks	43-3021	23.80	23.80	47.60
Business Operations Specialists	13-1000	43.76	43.76	87.52
Computer System Analysts	15-1211	53.83	53.83	107.66
General and Operations Managers	11-1021	64.00	64.00	128.00
Licensed Practical and Licensed Vocational Nurses	29-2061	30.84	30.84	61.68
Medical and Health Services Managers	11-9111	66.22	66.22	132.44
Secretary/Administrative Assistant	43-6000	22.90	22.90	45.80
Software Quality Assurance Analysts and Testers	15-1253	53.01	53.01	106.02
Training and Development Managers	11-3131	67.59	67.59	135.18

For our purposes, BLS' May 2024 National Occupational Employment and Wage Estimates do not provide an occupation that we could use for ''Physician'' wage data. To estimate a Physician's costs, we used an average conglomerate wage of $299.32/hr as demonstrated below in Table 74.

TABLE 75: National Occupational Employment and Wage Estimates (Physicians)

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Anesthesiologists	29-1211	161.85	161.85	323.70
Family Medicine Physicians	29-1215	123.47	123.47	246.94
General Internal Medicine Physicians	29-1216	126.31	126.31	252.62
Obstetricians and Gynecologists	29-1218	135.16	135.16	270.32
Orthopedic Surgeons, Except Pediatric	29-1242	175.51	175.51	351.02
Pediatric Surgeons	29-1243	216.74	216.74	433.48
Pediatricians, General	29-1221	106.89	106.89	213.78
Physicians, All Other	29-1229	121.86	121.86	243.72
Psychiatrists	29-1223	129.39	129.39	258.78
Surgeons	29-1240	170.56	170.56	341.12
Surgeons, All Other	29-1249	178.50	178.50	357.00
Total				3,292.48
Average Physician Wage (3,292.48/11)				299.32

B. Proposed Information Collection Requirements (ICRs)

1. Ambulatory Specialty Model (42 CFR Part 512 and Section X.D of This Proposed Rule)

In section X.D of this proposed rule, we discuss testing the Ambulatory Specialty Model and propose polices for the model under the authority of the Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. As stated in section 1115A(d)(3) of the Act, Chapter 35 of title 44, United States Code, shall not apply to the testing, evaluation, and expansion of models under section 1115A of the Act. As a result, the information collection requirements contained in this rule are not subject to the requirements of the PRA. However, the anticipated impact is scored below in section VII.I.5. of the Regulatory Impact Analysis.

2. ICRs Regarding the Updates to the Medicare Diabetes Prevention Program (§§ 410.79, 414.84, and 424.205)

In section § 410.79(b), we are proposing to make changes to our regulation Conditions of Coverage. First, we are proposing to amend § 410.79(b) by revising the definitions of ''Extended flexibilities period'' and ''Online'' and adding definitions for three new terms for MDPP, including ''Live Coach interaction,'' ''Online delivery period,'' and ''Online session.'' The definitions will extend virtual delivery flexibilities through December 31, 2029, describe accepted delivery modes for MDPP, and further align MDPP terminology with CDC DPRP Standards.[419] These proposed changes to the definitions aim to remove access barriers for beneficiaries and provide suppliers with more delivery options in response to comments regarding the increasing demand for virtual participation options.

We are also proposing to amend § 410.79(c)(1)(ii) by clarifying that weight measurements used to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within two (2) days of the completion of the MDPP session. Additionally, we propose to amend § 410.79(e)(3)(iii)(C) to revise weight collection requirements for MDPP in response to comments regarding increased flexibility for MDPP participants who may be traveling or unable to obtain weight measurements at home due to mobility and safety considerations. This change allows beneficiaries to self-report weight from a reasonable location outside of an in-person delivery site while maintaining program integrity through existing date-stamp requirements described in § 410.79(e)(3)(iii)(c) which state that the photo or video must clearly document the weight of the MDPP beneficiary as it appears on their digital scaled on the date associated with the billable MDPP session.

Finally, we propose to amend § 410.79 by adding paragraph (f) to test the addition of coverage of an asynchronous, Online delivery modality during the ''Online delivery period'' (until December 31, 2029), and clarify that MDPP suppliers are not required to maintain in-person delivery capability during the Online delivery period. These changes will allow virtual-only organizations to enroll in Medicare as MDPP suppliers, streamline the process to allow for greater delivery of Online sessions, and promote alignment with the 2024 CDC DPRP Standards. We propose edits throughout § 414.84 by revising paragraphs (b)(1) introductory text and (b)(2) introductory text to update language to include all accepted MDPP delivery modes for performance goals in which beneficiaries achieve weight loss milestones. We also propose adding paragraph (c)(3) to indicate payment for Online delivery, including the inclusion of a new Healthcare Common Procedure Coding System (HCPCS) G-code for online delivery. Finally, we propose redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5) respectively and revising the redesignated paragraph (c)(4)(ii) to include a payment rate for a

[419] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures.*

core session or core maintenance session furnished Online during the Online delivery period.

Lastly, we propose amending § 424.205(c)(10) to allow the minimum number of required MDPP core sessions and core maintenance sessions to be delivered Online during the Online delivery period; § 424.205(f)(2)(i) to include the online modality among acceptable session types for session documentation; and § 424.205(f)(5) to update requirements for achieving 5 and 9 percent weight loss measured in accordance with § 410.79(c)(ii). Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions, including the collection of weights.

3. ICR Regarding the Medicare Prescription Drug Inflation Rebate Program Under Sections 11101 and 11102 of the Inflation Reduction Act (IRA)

The following proposed changes will be submitted to OMB for review under control number 0938–TBD (CMS–10930). At this time the control number has yet to be determined, but it will be assigned by OMB upon their clearance of this rule's proposed collection of information request. We expect to set out that number in our subsequent final rule (CMS–1832–F).

In section III.I of this rule, we are proposing to establish a 340B repository and allow 340B covered entities to optionally begin submitting to the 340B repository data elements from 340B identified claims for covered Part D drugs billed to Medicare Part D. We propose to allow covered entities to begin submitting the fields specified by CMS to the 340B repository beginning in 2026 for Part D 340B-identified claims with dates of service on or after January 1, 2026. This testing period would provide data for CMS to conduct usability testing for the 340B repository and allow covered entities to develop and test processes for submitting data elements to the 340B repository. CMS would not use the data submitted for user testing to remove units from Part D inflation rebates for the applicable period beginning on October 1, 2025. We propose that covered entities that choose to submit data to the 340B repository during the testing period beginning in 2026 would submit fields specified by CMS to the 340B repository for Part D 340B-identified claims by a date announced in the future, which would be no sooner than 3 months after the date on which the 340B repository is available for covered entities to report data elements related to Part D 340B-identified claims with dates of service from January 1, 2026 onward. CMS will provide a deadline that CMS believes will allow sufficient time for covered entities to gather, validate, and submit the specified data to the 340B repository. CMS will provide the submission deadline(s) once the Medicare Prescription Drug Inflation Rebate ICR is finalized. During the rest of the testing period, CMS anticipates that covered entities will be expected to report data on a quarterly basis to the 340B repository within 3 months of the end of a given calendar quarter. Covered entities would voluntarily submit this data directly to CMS to be included in the 340B repository. CMS would consider all data elements received by the 340B repository to be associated with Part D 340B identified claims; that is, the 340B repository would not further verify the 340B status of a claim but rather would serve solely to store these data. Under this process, CMS intends to require a certification from covered entities that choose to submit data to the 340B repository that they have submitted data elements for all Part D 340B-identified claims with dates of service during the reporting period and that the data elements from all claims submitted to the 340B repository are from verified 340B claims. CMS would match the stored data elements in the 340B repository to Prescription Drug Event (PDE) transactions for each Part D rebatable drug dispensed during the applicable period. Units associated with PDE transactions that match to data elements stored in the 340B repository would be considered those for which the manufacturer provided a discount under the 340B Program.

The collection established via the new ''340B Repository Data Elements Instructions and Collection ICR Form'' would provide CMS with the opportunity to assess the usability of the data received and the feasibility of CMS using such data to remove 340B units from the total number of units used to calculate the total rebate amount in the future. This data and information is necessary to implement statutory requirements of the Medicare Part D Drug Inflation Rebate Program at section 1860D–14B(b)(1)(B) of the Act which requires that beginning with plan year 2026, CMS shall exclude from the total number of units for a Part D rebatable drug, with respect to an applicable period, those units for which a manufacturer provides a discount under the 340B Program. As stated earlier, we are proposing a testing period for the 340B repository beginning in 2026 on a date announced in the future to allow covered entities to begin submitting the fields specified by CMS to the 340B repository beginning in 2026 for Part D 340B-identified claims with dates of service on or after January 1, 2026.

We estimate that approximately 6,500 covered entities will respond and submit data to the 340B Repository Data Elements Instruction and Collection ICR Form for CY 2026 based on internal CMS analyses of the unique 340B ID numbers in the HRSA OPAIS database that are active (that is, not terminated) with at least one contract pharmacy association listed and based on comments received on the CY 2025 PFS proposed rule from interested parties, including covered entities, requesting and expressing support for the establishment of a 340B repository.

Using the wage rates from Table 73 of this proposed rule, we expect, for a covered entity or its third-party administrator (TPA), a dedicated Software Quality Assurance Analyst and Tester, or team of analysts, 6 hours sampling for each submission and a General and Operations Manager 2 hours reviewing each submission.

In aggregate, we estimate an annual burden of 208,000 hours (26,000 responses × 8 hr/response) at a cost of $23,195,120 (26,000 responses × [(2 hr × $128.00/hr) + (6 hr × $106.02/hr)]).

TABLE 76: SUMMARY OF TOTAL ANNUAL BURDEN FOR ALL COVERED ENTITIES OR TPAs TO COMPLETE 340B REPOSITORY DATA ELEMENTS FORM IN 2026

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
Regarding the Medicare Prescription Drug Inflation Rebate Program under Sections 11101 and 11102 of the Inflation Reduction Act	0938-TBD (CMS-10930)	6,500 Covered Entities or TPAs	26,000 (6,500 x 4 submissions per year)	8	208,000	Varies	23,195,120

4. ICRs Regarding Manufacturers Reporting of Drug Pricing (§§ 414.802, 414.804, and 414.902)

Pending our finalization of the following proposed provisions, the changes will submitted to OMB for review and approval under control number 0938–0921 (CMS–10110) using the standard PRA process. The process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with additional opportunities to review and comment on the changes. The following proposed changes will be submitted to OMB for review under control number 0938–0921 (CMS–10110).

a. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.902)

In the CY 2022 PFS final rule, it was stated that the new provisions finalized in that rule at §§ 414.802 and 414.804 implemented new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this proposed rule, hereinafter is referred to as ''section 401''), which requires manufacturers without a Medicaid National Drug Rebate Agreement (NDRA) to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological (86 FR 65560). In that final rule, we estimated that an additional 568 respondents had products for which they would be required to report ASP data to CMS beginning January 1, 2022 (86 FR 65560), some of which are manufacturers of skin substitutes. Following the implementation of section 401, we estimated 500 respondents, 2,000 responses (500 respondents × 4 responses/yr), 26,000 hours (2,000 responses × 13 hr/response).

In section II.K. of this proposed rule, we are proposing that skin substitutes be paid as incident-to supplies, which are not required to be paid under section 1847A of the Act. Accordingly, if this proposal is finalized, manufacturers of skin substitutes will no longer be required to report ASP data to CMS. Instead, ASP data reporting for manufacturers of skin substitutes would become voluntary. The proposal to shift the payment of skin substitute manufactures to incident-to supplies would decrease the number of manufacturers that are required to report ASP data to CMS each quarter, ultimately decreasing the overall burden of ASP data reporting. Based on the most recent ASP data, 65 skin substitute manufacturers are reporting ASP data. Under the proposal to pay for skin substitute products as incident-to supplies, the number of manufacturers required to report ASP data to CMS would decrease manufacturer burden by minus 65 respondents, minus 260 responses (−65 respondents × 4 responses/yr), and minus 3,380 hours (−260 responses × 13 hr/response) and minus $154,804 (−3,380 hr × $45.80/hr).

TABLE 77: SUMMARY OF TOTAL ANNUAL BURDEN OF INFORMATION COLLECTION REQUEST

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802 and 414.804	0938-1921 (CMS-10110)	(65)	(260)	13	(3,380)	45.80	(154,804)

b. Average Sales Price: Price Concessions and Bona Fide Service Fees (§§ 414.802 and 414.804)

In section III.A of this proposed rule, we are proposing revisions to § 414.804(a)(5) to add additional submission requirements for the reporting of ASP data. Specifically, the submission requirement is being expanded to include (1) reasonable assumptions for calculating the manufacturer's ASP as described at § 414.804 and (2) warranty or certification letter from the recipient of a fee from a manufacturer as evidence that a fee was not passed on as a price concession in accordance with the proposed revised definition of bona fide service fee at § 414.802 and submission requirements at § 414.804.

Currently, in the absence of specific guidance in the Act or Federal regulations, the manufacturer may make

reasonable assumptions in its calculations of the manufacturer's ASP, consistent with the general requirements and intent of the Act, Federal regulations, and its customary business practices. The reasonable assumptions explain the methodology used by the manufacturer to calculate ASP. This proposal would make the reasonable assumptions document, which is currently submitted voluntarily by some manufacturers along with ASP data, to a required component of the quarterly ASP data submission.

The warranty or certification from the recipient of a bona fide service fee is a new document that we are proposing to be required as evidence of whether or not a fee was passed on as a discount (that is, price concession).

The burden associated with these new proposed requirements would be the time and effort required by manufacturers of drugs and biologicals to submit ASP data to CMS quarterly under sections 1847A and 1927 of the Act prepare and submit the reasonable assumption document and warrantee/certification letter to CMS.

We anticipate an increase in burden because, in addition to the current requirement for submission of ASP data each quarter to CMS, all manufacturers would also be required to submit reasonable assumptions and warrantee/certification letters to accompany their ASP data submissions. Reasonable assumptions may vary in terms of the exact information that is provided and are generally updated by each manufacturer every 1 to 3 years depending on changes in the product line and various contract terms and conditions with intermediaries or consultants. With this in mind, we are adding mandatory templates for submitting reasonable assumptions and bona fide service fee warrantee/certifications.

As discussed, we anticipate that the number of manufacturers required to report ASP data to CMS will decrease by minus 65 manufacturers (500 active estimate − 435 proposed estimate) and estimate (as described in the following paragraphs) that it will take 77 hours per year for each respondent.

Based on our review of voluntarily submitted reasonable assumption data, we estimate that it would take 19 hours annually at $45.80/hr for a Secretary/Administrative Assistant (consisting of 10 hr to compile and/or update the information and 5 hours to review the information approximately once annually and 1 hour per quarter (or 4 hr annually) to submit the reasonable assumptions to CMS, including signature, to CMS via ASP Data Collection System.

We estimate the disclosure and submission of the warrantee/certification letter from the recipient of a bona fide service fee is 6 hours annually at $45.80/hr for a Secretary/Administrative Assistant (consisting of 2 hr to review the warrantee/certification letter approximately once per year and 1 hour per quarter (or 4 hr annually)) to submit the warrantee/certification letter including signature, to CMS via the ASP Data Collection System. Although a warrantee/certification letter could be renewed up to every three years depending on the specific terms of each contract, we will use a calculation of once annually to accommodate the burden in most circumstances.

This proposed burden is in addition to the current estimated burden of ASP data submission of 52 hours per year per respondent at $45.80/hr for a Secretary/Administrative Assistant (13 hr per quarter).

The proposed requirements would result in an annual burden of 25 hours (19 hr + 6 hr) per response per year. In aggregate, we estimate a burden of 10,875 hours (435 responses × 25 hr/response) at an annual cost of $498,075 (10,875 hr × $45.80/hr).

TABLE 78: ANNUAL REQUIREMENTS AND BURDEN FOR MANUFACTURERS REPORTING DRUG PRICING INFORMATION FOR PART B

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802 and 414.804	0938-1921 (CMS-10110)	435	4	4.75	19	45.80	378,537
§§ 414.802 and 414.804	0938-1921 (CMS-10110)	435	4	1.5	6	45.80	119,538.00
TOTAL	n/a	435	4	varies	77	45.80	498,075.00

5. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out Shared Savings Program burden estimates under this section of the rule. Please refer to section VII.E. of this proposed rule for a discussion of the impacts associated with the changes to the Shared Savings Program as described in section III.F. of this proposed rule.

6. The Quality Payment Program (42 CFR Part 414 and Section IV. of This Proposed Rule)

The following Quality Payment Program-specific ICRs reflect proposed changes to our currently approved requirements/burden as summarized in section V.B.5.a.(1) in this proposed rule.

Below, we present detailed burden estimates for Quality Payment Program ICRs that are new or revised based on policy proposals in this proposed rule. We also discuss policy proposals for Quality Payment Program ICRs for which we assume there are no burden impacts. Non-rulemaking revisions, due to updated data and assumptions, and the changes due to proposals in this proposed rule, will be submitted to OMB for review under the identified control numbers. This approach for the Quality Payment Program ICRs follows our long-standing process for setting out PRA-related burden in most of our proposed and final rules. It is intended to focus our PRA score on the impact of this rule's proposed policy changes. We refer readers to section VII.I.5. of this proposed rule for the Regulatory Impact Analysis for discussion of this year's proposed policies' impacts to final scores and payment adjustments. For all ICRs, including ICRs where we do not propose any changes to the number of respondents, responses, or time per response, the costs identified in the revised collection of information requests will reflect the updated 2024

wage rate data described in section V.A. of this proposed rule.

For the CY 2026 rulemaking cycle, we simplified our methodology for calculating the total cost of each ICR to be consistent with the approach adopted by other programs. In prior years, we assessed total cost as the number of responses multiplied by cost per response, determining cost per response as the time per wage rate category per response multiplied by the hours per response. For this proposed rule, to calculate the burden, we removed the cost per response measurement from our total cost calculations and, instead, determined cost as a function of hourly wage rates per labor category identified in Tables 73 and 74 of this proposed rule multiplied by the annual hours per labor category. We determine annual hours per labor category by multiplying the annual burden hours per response by the number of annual responses. Accordingly, we have updated our summary calculations of the total change in time and cost of this rulemaking to focus on the estimated incremental burden of this rulemaking.[420]

a. Background

(1) ICRs Regarding the Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)

In section V.B.5.a.(2) of this proposed rule, we discuss changes in the estimated burden for the information collections associated with the Quality Payment Program. The proposed changes to the estimated burden and the information collections for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey, described in section V.B.5.b.(1) of this proposed rule, will be submitted to OMB for review under control number 0938–1222 (CMS–10450). All other changes to burden and information collections for Quality Payment Program ICRs due to proposed policies described in this section of the proposed rule, or the availability of updated data, will be submitted to OMB for review under control number 0938–1314 (CMS–10621). We are not proposing changes to the virtual group election process or burden estimates, currently approved under OMB control number 0938–1343 (CMS–10652).

(a) Summary of Annual Quality Payment Program Burden Estimates

We summarize changes to the Quality Payment Program's estimated burden for ICRs that have related policy proposals in this proposed rule that impact our burden estimates. For only these ICRs with burden implications due to policy proposals in this proposed rule, we also update our burden assumptions based on the most recent data on MIPS participation available at the time of this rulemaking. These updated data sources are described in section V.B 5.a.(4)(b) of this proposed rule.

For ICRs under OMB control number 0938–1314 (CMS–10621), we estimate that the policy proposals in this proposed rule related to five ICRs would result in 2,312 additional responses due to the availability of new MIPS Value Pathways (MVPs). This change reflects the number of historic traditional MIPS submissions we estimate would move to MVP reporting due to the availability of the proposed new MVPs and would need to complete a registration form that is not required with traditional MIPS submissions. Accordingly, we estimate the increase in MVP submissions and registrations, and resulting decrease in traditional MIP submissions would result in an annual decrease of 6,798 hours and $840,757 (see total Policy Change in tables 77, 78, and 79, respectively) beginning with the CY 2026 performance period/2028 MIPS payment year. In addition, we separately estimate changes to annual burden due to the availability of updated MIPS submission data for these five ICRs since our currently approved estimates would result in an additional annual burden decrease of 5,353 responses, 59,372 hours, and $7,119,526 (see total Updated Data in Tables 77, 78, and 79, respectively). Taken together, we estimate a total reduction of 3,041 responses, 66,169 hours, and $7,960,283 (see total of Total Change in Tables 77, 78, and 79, respectively). All time estimates in the referenced tables are rounded to the hour, and all cost estimates are rounded to the dollar. The change in total time and total cost in the referenced tables per ICR are described in section V.B.5.c. of this proposed rule and reflect the sum of changes due to policy proposals and newly available data before this rounding. Accordingly, the total change in time per ICR may not equal the sum of changes due to policy and data adjustments because of this rounding. The Total row estimate per table represents the sum of the *COM007*component ICR rows in that table.

BILLING CODE 4120–01–P

[420] Due to this approach to estimate the change in cost, annual changes to the hourly wages rates as identified by BLS are not identified as a change in cost due to data adjustments. Any changes in cost due to data adjustments in section V.B.5.a.(1)(a) of this proposed rule reflect changes due to the annual hours based on the availability of updated MIPS submission data since our currently approved estimates.

TABLE 79: ANNUAL RESPONSES BEGINNING WITH THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR UNDER OMB CONTROL NUMBER 0938-1314 (CMS-10621)

BILLING CODE 4120–01–C

(2) Summary of Changes for the Quality Payment Program: MIPS

(a) MIPS ICRs With Changes Due to Proposed Policy Provisions

For the six ICRs detailed in tables 78 through 84, we detail proposed changes to our most recent estimates for these ICRs under their associated control numbers based on proposed policy provisions as well as revised burden assumptions based on the updated data available at the time of preparation of this proposed rule; these discussions begin in section V.B.5.b. of this proposed rule.

(b) MIPS ICRs With No Changes to Currently Approved Burden Estimates

We are not updating our burden estimates for the following ICRs under OMB control number 0938–1314 (CMS–10621) because there are no proposed changes to related policies that would affect our currently approved burden estimates, and nor do we have updated available data by which we would revise our currently approved burden estimates for respondents or hours from our currently approved estimates: (1) Nomination of Improvement Activities; (2) Nomination of MVPs; (3) Opt-out of Performance Data Display on Compare Tools for Voluntary Participants; (4) Subgroup Registration; (5) Qualified Clinical Data Registry (QCDR) Full Self-Nomination and other Requirements; (6) QCDR Simplified Self-Nomination and other Requirements; (7) Qualified Registry Full Self-Nomination and other Requirements; (8) Qualified Registry Simplified Self-Nomination and other Requirements; and (9) Third Party Intermediary Plan Audits. Additionally, we are not proposing changes to our burden response and hour estimates for the following ICRs under OMB control number 0938–1222 (CMS–10450): (1) Beneficiary Responses to CAHPS for MIPS Survey; and (2) Group Registration for CAHPS for MIPS Survey. Lastly, we are not proposing changes to our burden estimates for Registration for Virtual Groups under OMB control number 0938–1343 (CMS–10652). Where applicable, we discuss related policy proposals and the reasoning for not impacting our burden estimates per ICR, beginning in section V.B.5.b.(2) of this proposed rule.

(c) MIPS ICRs With Changes Due to Available Data

Separate from the policy proposals in section IV. of this proposed rule and ICRs described in tables 77 through 82, we are updating our burden estimates for the following ICRs for the CY 2026 performance period/2028 MIPS payment year due to the availability of updated data. Since the changes are not derived from this rule's proposed provisions, they are not set out in this proposed rule: (1) Call for Quality Measures; (2) Data Submission for the Improvement Activities Performance Category; (3) Data Submission for the Promoting Interoperability Performance Category; (4) Open Authorization (OAuth) Credentialing and Token Request Process; (5) Quality Payment Program Identity Management Application Process; and (6) Reweighting Applications for Promoting Interoperability and Other Performance Categories.

Where applicable, we discuss any related policy proposals and reasoning for not impacting our burden estimates per ICR, beginning in section V.B 5.d.(2) of this proposed rule.

(d) New MIPS ICRs

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

We are proposing to add a new ICR to reflect submissions for the Alternative Payment Model Performance Pathway (APP), due to the availability of updated data. The APP is an optional MIPS reporting and scoring pathway for MIPS eligible clinicians who are also participants in MIPS APMs, as defined under § 414.1367. Our burden estimates for the APP will focus on submissions by individuals, groups, or non-Shared Savings Program ACO APMs for the APP quality measure set. As there are no related policy proposals in this proposed rule that would affect these estimates, we do not detail the APP burden estimates in this proposed rule.

We are not estimating burden for Shared Savings Program ACOs under the APP. Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Additionally, we are not establishing an ICR for the APP Plus quality measure set. In the CY 2025 PFS final rule (89 FR 98355 through 98371), we established the APP Plus as a new quality measure set designed for APP participants that expands the existing APP measure set and is mandatory for Shared Savings Program ACOs starting in the CY 2025 performance period/2027 MIPS payment year. We continue our assumption from the CY 2025 PFS final rule (89 FR 98549 and 98550) that MIPS eligible clinicians, groups, and APM Entities (excluding Shared Savings Program ACOs) would not elect to submit the APP Plus quality measure set. This assumption is because the APP Plus quality measure set has greater reporting requirements than the APP quality measure set. The APP Plus quality measure set for CY 2026 performance period/2028 MIPS payment year finalized in the CY 2025 PFS final rule (89 FR 98368) requires that MIPS eligible clinicians, groups, or non-Shared Savings Program ACOs actively report five quality measures (via the eCQM, MIPS CQM, and Part B Claims collection types as available per measure for non-Shared Savings Program ACOs per measure) instead of three quality measures in the APP quality measure set that are actively reported via the MIPS CQM, part B Claims and eCQM collection types, as available per measure for non-Shared Savings Program ACOs. We do not believe MIPS eligible clinicians, groups, and APM Entities who are not required to report the APP Plus quality measure set would elect to report APP Plus over APP quality measure set due to the

increased data collection and submission requirements.

(3) Summary of Changes for the Quality Payment Program: Advanced APMs

We are not proposing changes to the following ICRs due to policy proposals in this proposed rule or the availability of updated submission data beyond the wage rate data described in section V.A. of this proposed rule: (1) Partial Qualifying Advanced APM (QP) Elections; (2) Other Payer Advanced APM Determinations: Payer-Initiated Process; (3) Other Payer Advanced APM Determinations: Eligible Clinician-Initiated Process; and (4) Submission of Data for QP Determinations under the All-Payer Combination Option. We discuss related policy proposals and why they do not impact our burden estimates in sections V.B 5.a.(4)(c) and VII.I.5.e.(2)(b) of this proposed rule.

(4) Framework for Understanding the Burden of MIPS Data Submission and Data Considerations

(a) Framework for Understanding the Burden of MIPS Data Submission

Across organizations permitted or required to submit data on behalf of clinicians, there can be variation across the types of data provided, and whether a clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, a MIPS APM participant, or an Advanced APM participant. MIPS eligible clinicians and other clinicians voluntarily submitting data to MIPS for the quality, Promoting Interoperability, and improvement activities performance categories may submit data as the following participation types: individual; group; virtual groups (available only for traditional MIPS); subgroups (available only for MVPs); and APM Entities. Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS. MIPS eligible clinicians are not required to submit any additional data for the cost performance category, as CMS calculates performance on measures specified for this performance category based on claims-data.

Virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted.

For the aforementioned participation types, we assess the same burden per reporting option and assume from our available data that all non-Shared Savings Program ACO APM Entity submissions represent single Taxpayer Identification Number (TIN) APMs. We exclude performance category submissions by Shared Savings Program ACO APM Entities from our MIPS reporting estimates. Per section 1899(e) of the Act, the PRA does not apply to the Shared Savings Program. The regulatory impact analysis in section VII. of this proposed rule discusses impacts to the Shared Savings Program from proposals associated with this proposed rule.

There are three MIPS reporting options: traditional MIPS, MVPs, and the APP. In section V.B.5.c. of this proposed rule, we provide distinct estimates for the traditional MIPS and MVP reporting options for the quality performance category, focusing on changes to our currently approved burden estimates. We do not detail burden estimates for the Promoting Interoperability and improvement activities performance categories because we are not proposing any updates to our burden estimates associated with policy proposals in this proposed rule; for discussion of these proposals relative to burden implications, please see sections V.B.5.d. and V.B.5.e. of this proposed rule. Additionally, we have not separately estimated burden for Traditional MIPS and MVPs for the Promoting Interoperability and improvement activities performance categories. Traditional MIPS and MVPs require reporting on all Promoting Interoperability performance category objectives and measures. Traditional MIPS reporting for the improvement activities performance category typically requires attestation to two improvement activities; however, clinicians, groups, and virtual groups with a special status designation are only required to attest to one improvement activity. MVP participants are required to attest to one improvement activity regardless of special status. For additional details on historic burden assumptions for the improvement activities performance category, we refer readers to the CY 2025 PFS final rule (89 FR 98492). In the related collection of information request (OMB control number 0938–1314 (CMS–10621)), we aggregate submissions across all reporting options. For additional burden historic frameworks, we refer readers to the CY 2024 PFS final rule (88 FR 79422 through 79424) and the CY 2025 PFS proposed rule (89 FR 62111 through 62114).

(b) Summary of Available MIPS Submission Data Sources

Where available, we incorporate updated data into our burden estimates beginning with the CY 2026 performance period/2028 MIPS payment year. These updates include submission data from the CY 2023 performance period/2025 MIPS payment year. To estimate QPs excluded from MIPS reporting requirements, we use the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot for the 2023 QP Performance period.

The available CY 2023 performance period/2025 MIPS payment year data identifies performance category submissions by non-Shared Savings Program ACO APM Entities. We incorporate these estimates alongside our longstanding inclusion of individual, group, and virtual group data.

As detailed in section V.B.5.c.(6) of this proposed rule, we are updating our assessment of estimated MVP quality performance category submissions and registrations, assessing measure level submission trends from the CY 2023 performance period/2025 MIPS payment year (87 FR 70650 through 70701) alongside the MVP inventory finalized in the CY 2025 PFS final rule Appendix 3 (89 FR 98972 through 99057), and the new MVPs proposed in section IV.A.4.a.(1) of this proposed rule. The CY 2023 performance period/2025 MIPS payment year submission data include MVP submissions and registration for the 12 MVPs available at that time for MIPS reporting. Due to the expanded MVP inventory (16 MVPs available for the CY 2024 performance period/2026 MIPS payment year (88 FR 79978 through 80047), 21 MVPs available for the CY 2025 performance period/2027 MIPS payment year (89 FR 98972 through 99057)), and the newly proposed MVPs for the CY 2026 performance period/2028 MIPs payment year, we anticipate increased MVP adoption for the CY 2026 performance period/2028 MIPS payment year and beyond. For this proposed rule, we estimate MVP submissions as a percentage of the total traditional MIPS and MVP submissions from the CY 2023 performance period/2025 MIPS payment year. For details on this analysis, we refer readers to section V.B.5.c.(6) of this proposed rule.

(c) Additional Data Considerations

The accuracy of our estimates of the total burden for data submission for MIPS performance categories may be impacted by several primary factors. First, we are unable to predict with certainty who will be a QP for the CY 2026 performance period/2028 MIPS payment year and later years.

Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2026 performance period/2028 MIPS payment year or later years compared to the CY 2023 performance period/2025 MIPS payment year. Therefore, the actual number of Advanced APM participants and how they elect to submit data may differ from our estimates. However, we believe our estimates are the most appropriate given the available data. We refer readers to section VII.I.5.e.(2)(b) of this proposed rule for a discussion of the potential but unquantifiable burden implications on MIPS-related burden of the proposals to change QP determinations and remove the eligible clinician limit to the Medical Home Model, Aligned Other Payer Medical Home Model, and Medicaid Medical Home Model, presented in section IV.B.5. of this proposed rule.

In section IV.B.5.d. of this proposed rule, we are proposing to make a technical amendment to the language in § 414.1455 that establishes Targeted Review for QPs. This proposal would revise the timeline but not the other established processes for requested a targeted review. We note that information collection requirements, such as targeted reviews, that are imposed after an administrative action are not subject to the PRA under 5 CFR 1320.4(a)(2).

b. ICRs Regarding Third Party Intermediaries

(1) CMS-Approved Survey Vendor Requirements

We refer readers to § 414.1400(d) for the requirements for CMS-approved survey vendors that may submit data on the CAHPS for MIPS Survey. We refer readers to the CY 2024 PFS final rule (88 FR 79433 through 79434) and the CY 2025 PFS final rule (89 FR 98475) for recent burden discussions on this ICR. The following proposed changes (associated with CAHPS survey vendors to submit data for eligible clinicians) will be submitted to OMB for review under control number 0938–1222 (CMS–10450). We will make the revised files available for public review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices, which are expected to publish in the CY 2026 performance period/2028 MIPS payment year.

As discussed in section IV.B.4.a.(5) of this proposed rule, we are proposing to add a web administration mode to the current CAHPS for MIPS Survey administration in addition to the existing mail and phone options. Beginning with the CY 2027 performance period/2029 MIPS payment year, CMS-approved survey vendors would administer the CAHPS for MIPS Survey via a web-mail-phone protocol. During the 1-year implementation delay, we would update the survey administration requirements and associated materials.

For the CY 2027 performance period/2029 MIPS payment year, we are proposing to increase the currently approved burden estimate of 10 hours to complete the vendor application by 1 hour for a total of 11 hours per application. The currently approved burden estimate for the vendor application includes completing the Vendor Attestation Statement, the Vendor Participation Form, and compiling documentation, including the quality assurance plan that demonstrates compliance with the Minimum Survey Vendor Business Requirements. We estimate that it would take applicants an additional 0.5 hours to compile documentation related to the web mode and an additional 0.5 hours to develop a quality assurance plan related to web implementation. We assume that our proposal to add a web administration mode to the current CAHPS for MIPS survey administration would not affect our currently approved estimate of 10 survey vendor applicants. We estimate an annual increase of 10 hours due to this proposed requirement (+1 hr/vendor × 10 vendors) at a cost of +$1,077 (10 hr × $107.66/hr for a computer systems analyst or equivalent).

TABLE 85: PROPOSED ANNUAL REQUIREMENT AND BURDEN ESTIMATES FOR CMS-APPROVED SURVEY VENDORS

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.1400 Quality Payment Program: CAHPS for MIPS Survey	0938-1222 (CMS-10450)	10	10	1	10	107.66	1,077

(2) Full and Simplified Self Nomination for Qualified Clinical Data Registries and Qualified Registries

In section IV.A.4.a.(3) of this proposed rule, we are proposing to provide additional flexibilities to allow third party intermediaries additional time to fully support finalized MVPs. As this proposal does not alter requirements related to the self-nomination process, we are not proposing revisions to our currently approved responses and time per response for both the Full and Simplified Self Nominations for Qualified Registries and Qualified Clinical Data Registries under OMB control number 0938–1314 (CMS–10621).

c. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Changes to Quality Performance Category Submissions

In this section, we estimate the number of submissions for each collection type that requires active reporting by individual clinicians, groups, subgroups (as applicable for MVP reporting), or non-Shared Savings Program ACO APM Entities. This includes Medicare Part B claims measures (individual clinicians only), MIPS Clinical Quality Measures (CQM) and QCDR measures, and electronic Clinical Quality Measures (eCQM). Notably, we do not assess burden for the quality administrative claims collection type, as CMS automatically calculates scores for individual clinicians, groups, subgroups (as applicable for MVP reporting), or non-Shared Savings Program ACO APM Entities that meet requirements to be scored. We assume that the proposal to revise QP determinations in section IV.B.5.b. would not affect MIPS performance category-level data submissions.

Because MIPS eligible clinicians may submit data for multiple collection types for the quality performance category, the estimated numbers of individual clinicians, groups, subgroups (as applicable for MVP reporting), and non-Shared Savings Program ACO APM Entities to collect via the various

collection types are not mutually exclusive and reflect the occurrence of individual clinicians, groups, subgroups (as applicable for MVP reporting) and non-Shared Savings Program ACO APM Entities that collected and submitted data via multiple collection types or reporting options during the CY 2023 performance period/2025 MIPS payment year. We describe our approach for each MIPS reporting option below.

(a) Traditional MIPS

We estimate the number of traditional MIPS submissions for the CY 2026 performance period/2028 MIPS payment year as the sum of estimated traditional MIPS and MVP quality performance submissions from the CY 2023 performance period/2025 MIPS payment year for each actively submitted collection type (Medicare Part B claims measures, MIPS CQMs and QCDR measures, and eCQMs) submitted by individual clinicians, groups, or non-Shared Savings Program APM Entities individual, less the estimated number of submissions we expect to submit MVPs. This analysis is described in section V.B.5.c.(6) of this proposed rule.

(b) MVPs

We estimate the number of MVP submissions for the CY 2026 performance period/2028 MIPS payment year as a percent of the total traditional MIPS and MVP submissions from the CY 2023 performance period/2025 MIPS payment year for each actively submitted collection type (Medicare Part B claims measures, MIPS CQMs and QCDR measures, and eCQMs) by individual clinicians, groups, or non-Shared Savings Program ACO APM Entities, and add our estimate of subgroup submissions described in section V.B.5.c.(6) of this proposed rule. We believe this approach to estimate MVP submissions as a function of historic traditional MIPS and MVP submissions, and not just MVP submissions from a given year, is appropriate to estimate future reporting behaviors because we expect increased adoption due to the annual expansion of and updates to the MVP inventory as summarized in section IV.A.4.a. of this proposed rule. This analysis is described in section V.B.5.c.(6) of this proposed rule.

(c) APM Performance Pathway (APP)

We assume the number of submissions per available collection type that is actively reported by clinicians, groups, or non-Shared Savings Program APM ACO Entities. As we do not expect changes due to policy proposals in this proposed rule, we do not detail these estimates in this proposed rule.

(d) Factors Affecting Quality Performance Category Submission Estimates

Several factors drive our proposed updates to the number of submissions for the Medicare Part B claims measures, MIPS CQMs and QCDR measures, and eCQMs. First, we incorporate updated traditional MIPS and MVP submission data available for the CY 2023 performance period/2025 MIPS payment year. For the CY 2025 PFS final rule (89 FR 98475), our available submission data for the CY 2022 performance period/2024 MIPS payment year included only traditional MIPS submissions. In this proposed rule, we aggregate the submissions for both traditional MIPS and MVPs by collection type and create a new baseline to which we apply our MVP participation estimates for the CY 2026 performance period/2028 MIPS payment year. Please see section V.B 5.a.(4) of this proposed rule for additional details on updates to available data.

Second, we are updating our estimates for MVP participation for the CY 2026 performance period/2028 MIPS payment year. This updated estimate for MVP participation impacts our estimate of the number of estimated clinicians submitting quality data for traditional MIPS using each collection type. As detailed in section V.B.5.c.(6) of this proposed rule, we are updating our estimates to account for the expected increase in MVP participation of 4 percentage points due to the proposed addition of new MVPs in this proposed rule; we associate this incremental effect, all else equal, with proposed policy provisions. With this approach, any increase to our expected MVP participation rate reduces the number of estimated submissions for each quality performance category collection type via traditional MIPS. Similarly, any decrease to our estimated MVP participation rate increases the number of estimated submissions for each quality performance category collection type via traditional MIPS.

(e) Medicare Part B Claims Measure, MIPS CQMs/QCDR Measure, and eCQM Collection Types

Table 84 of this proposed rule identifies our methods to estimate the number of individual clinicians, groups, and non-Shared Savings Program ACO APM Entities that may submit data via each collection type in the CY 2026 performance period/2028 MIPS payment year, separating traditional MIPS and MVP estimates. We identify estimated submissions per collection type from CY 2023 performance period/2025 MIPS payment year data (row a). We estimate that 14 percent of these quality performance category submissions may report via MVPs for the CY 2026 performance period/2028 MIPS payment year (row b). This 14 percent encompasses our estimate that 10 percent of submissions would report the MVPs previously finalized in the CY 2025 PFS final rule (row c), and that 4 percent of submissions would submit the proposed MVPs in this proposed rule (row d). The basis of these assumptions is described in section V.B.5.c.(6) of this proposed rule.

In the following paragraphs, we discuss the impacts to the estimated number of submissions for traditional MIPS, aggregated across individual clinician, group, and non-Shared Savings Program APM Entity submissions where applicable per collection type. We discuss the impacts to the estimated number of submissions for MVPs in section V.B.5.c.(6) of this proposed rule. For each collection type, we assume there is one annual submission or response per respondent.

Medicare Part B Claims Measure Collection Type: In the CY 2025 PFS final rule (89 FR 98479 through 98481), we estimated 12,197 submissions. For the CY 2026 performance period/2028 MIPS payment year we estimate 3,459 fewer submissions for this collection type via traditional MIPS due to the availability of updated submission data and assumptions. Additionally, we estimate that the new MVPs proposed in section IV.A.4.a.(1) of this proposed rule would result in 388 fewer traditional MIPS submissions for this collection type, as the proposed availability of new MVPS could lead clinicians who previously reported via traditional MIPS to report via MVPs. We estimate that there would be approximately 8,350 Medicare Part B claims measure collection type submissions for the CY 2026 performance period/2028 MIPS payment year submitted by individual clinicians. Taken together, we estimate a total decrease of 3,847 submissions (−388 submissions due to proposed policy provisions + −3,459 submissions due to updated data). The net result is 8,350 submissions (12,197 currently approved submissions − 3,847 submissions).

The aforementioned proposed changes apply to OMB control number 0938–1314 (CMS–10621).

MIPS CQM and QCDR Measure Collection Types: In the CY 2025 PFS

final rule (89 FR 98481 through 98483), we estimated 17,008 submissions. For the CY 2026 performance period/2028 MIPS payment year we estimate 1,209 more submissions for collection type via traditional MIPS due to the availability of updated submission data and assumptions. Additionally, we estimate that the new MVPs proposed in section IV.A.4.a.(1) of this proposed rule would result in 810 fewer traditional MIPS submissions for this collection type, as the proposed availability of new MVPS could lead clinicians who previously reported via traditional MIPS to report via MVPs. We estimate that there would be approximately 17,407 MIPS CQM/QCDR measure collection type submissions for the CY 2026 performance period/2028 MIPS payment year (11,266 individual clinicians + 6,132 groups + 9 non-Shared Savings Program ACO APM Entities). This is a total increase of 399 submissions (1,209 submissions due to updated data + −810 submissions due to proposed policy provisions). The net result is 17,407 submissions (17,008 currently approved submissions + 399 submissions). Given the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQMs or QCDR measures.

The aforementioned proposed changes apply to OMB control number 0938–1314 (CMS–10621).

eCQM Collection Type: In the CY 2025 PFS final rule (89 FR 98483 to 98485), we estimated 27,179 submissions. For the CY 2026 performance period/2028 MIPS payment year we estimate 2,129 fewer submissions for this collection type via traditional MIPS due to the availability of updated submission data and assumptions. Additionally, we estimate that that the new MVPs proposed in section IV.A.4.a.(1) of this proposed rule would result in 1,114 fewer traditional MIPS submissions for this collection type, as the proposed availability of new MVPS could lead clinicians who previously reported via traditional MIPS to report via MVP. We estimate that there would be approximately 23,936 eCQM collection type submissions for the CY 2026 performance period/2028 MIPS payment year (approximately 18,282 individual clinicians + 5,647 groups + 7 non-Shared Savings Program ACO APM Entities). This is a total decrease of 3,243 submissions (−2,129 submissions due to updated data + −1,114 submissions due to proposed policy provisions). The net result is 23,936 submissions (27,179 currently approved submissions − 3,243 submissions).

The aforementioned proposed changes apply to OMB control number 0938–1314 (CMS–10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR measure collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 86 are not mutually exclusive. We assume that each response or submission per collection type for traditional MIPS includes six quality measures, and that each response or submission per collection type for MVPs includes four quality measures.

TABLE 86: ESTIMATED NUMBER OF SUBMISSIONS FOR QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE

Burden and Submission Description	Medicare Part B Claims Measure	MIPS CQM/QCDR Measure	eCQM
2026 MIPS Performance Period (Excludes QPs) Before Applying Estimated MVP Submission Rate (a)	9,709	20,241	27,833
Total Estimated MVP Submissions (14%) (b) = (a) × - 0.14 or (c) + (d)	(1,359)	(2,834)	(3,897)
Estimate for CY 2025 Approved MVPs (10 percent) (c)= (a) × -0.10	(971)	(2,024)	(2,783)
Estimate for MVPs Proposed in the CY 2026 Proposed Rule (4 percent) (d) = (b) - (c)	(388)	(810)	(1,114)
2026 MIPS Performance Period (Excludes QPs and Estimated MVP Submissions) (e) = (a) + (b)	8,350	17,407	23,936
2025 MIPS Performance Period from CY 2025 PFS Final Rule (Excludes QPs) (f)	12,197	17,008	27,179
Difference in Number of Submissions (g) = (e) − (f)	(3,847)	399	(3,243)
Change Due to Policies Proposed in the CY 2026 Proposed Rule (h) = (d)	(388)	(810)	(1,114)
Change Due to Availability of Updated Data (i) = (g) – (h)	(3,459)	1,209	(2,129)

(2) Additional Burden Assumptions for the Quality Performance Category

For a discussion of the longstanding burden assumptions and any related limitations associated with the submission of quality performance category data, we refer readers to the CY 2025 PFS final rule (89 FR 98478 and 98479). We refer readers to the CY 2022 PFS final rule for details on MVP quality reporting requirements (86 FR 65411 through 65412).

As described in section IV.A.4.d.(1)(c)(iii) of this proposed rule, for the quality performance category, we are proposing to update the MIPS quality measure inventory for the CY 2026 performance period/2028 MIPS payment year; and revise the definition of a high priority measure. As described in section IV.A.4.b.(2) of this proposed rule, we are proposing to incorporate the updated versions of the MIPS quality measures used in the APP quality measure set. As these proposals would not affect the minimum reporting requirements for the quality performance category under traditional MIPS, MVPs, and the APP quality measure set, we do not anticipate burden changes for the Quality Payment Program. We refer readers to Table Group A of Appendix 1 for the proposed new measures; Table Group C of Appendix 1 for the proposed removed measures; and Table Group D of Appendix 1 for the proposed substantive changes to measures.

In sections V.B.5.c.(3), V.B.5.c.(4), and V.B.5.c.(5) of this proposed rule, we

detail our proposed burden changes per collection type for traditional MIPS, and in section V.B.5.c.(6) for MVPs. As noted in section V.B.5.a.(4) of this proposed rule, we are proposing to revise our estimates described in the CY 2025 PFS final rule and submitted to OSORA for each collection type due to: (1) the availability of updated performance category data; (2) the inclusion of data estimates for non-Shared Savings Program ACO APM Entities; and (3) the new MVPs.

(3) Traditional MIPS Quality Data Submission by Clinicians: Medicare Part B Measure Collection Type

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

The following estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 70149 through 70151) and the CY 2025 PFS final rule (89 FR 98479 through 98481). As with the CY 2025 PFS final rule (89 FR 98479 through 98481), we acknowledge a range of times for computer system analysts to submit quality measure data (minimum, mean, and maximum burden estimates) for this collection type. We continue to apply the maximum burden in our total burden estimates. All changes to the number of quality performance category submissions described below are relative to our currently approved estimate of 12,197 submissions detailed in the CY 2025 PFS final rule (89 FR 98479 through 98481).

Impact of Policy Proposals: We estimate a change of −388 submissions due to the proposal of additional MVPs in this proposed rule. Multiplying the estimated change in submissions (−388) by the time per submission by labor category, we estimate a maximum total change of minus 5,509.60 hours. All estimates encompass time to review measure specifications unless otherwise noted. This change of −5,509.60 hours incorporates the following estimates:

- Minimum of −446.20 hours for computer system analysts (−388 submissions × 1.15 hr/submission (0.15 hr to submit data and 1 hr to review measure specifications)).
- Mean of −795.40 hours for computer system analysts (−388 submissions × 2.05 hr/submission (1.05 hr to submit data and 1 hr to review measure specifications)).
- Maximum of −3,181.60 hours for computer system analysts (−388 submissions × 8.2 hr/submission (7.2 hr to submit data and 1 hr to review measure specifications)).
- −1,164 hours for medical and health service managers (−388 submissions × 3 hr/submission).
- −388 hours for licensed practical nurses (LPNs) (−388 submissions × 1 hr/submission).
- −388 hours for billing clerks (−388 submissions × 1 hr/submission).
- −388 hours for physicians (−388 submissions × 1 hr/submission).

We estimate a maximum annual change of minus $655,228.02 [(−3,181.602 hr × $107.66/hr = −$342,531.06 for computer system analysts) + (−1,164 hr × $132.44/hr = −$154,160.16 for medical and health service managers) + (−388 hr × $61.68/hr = −$23,931.84 for LPNs) + (−388 hr × $47.60/hr = −$18,468.80 for billing clerks) + (−388 hr × $299.32/hr = −$116,136.16 for physicians)].

Impact of Updated Data: We estimate an additional change of −3,459 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (−3,459) by the time per submission identified by labor category in preceding list, we estimate a maximum total change of −49,117.808 hours. This change incorporates the following estimates:

- Minimum of −3,997.85 hours for computer system analysts (−3,459 submissions × 1.15 hr/submission).
- Mean of −7,090.95 hours for computer system analysts (−3,459 submissions × 2.05 hr/submission).
- Maximum of −28,363.80 hours for computer system analysts (−3,459 submissions × 8.2 hr/submission).
- −10,377 hours for medical and health service managers (−3,459 submissions × 3 hr/submissions).
- −3,459 hours for LPNs (−3,459 submissions × 1 hr/submission).
- −3,459 hours for billing clerks (−3,459 submissions × 1 hr/submission).
- −3,459 hours for physicians (−3,459 submissions × 1 hr/submission).

We estimate a maximum annual change of −$5,841,323.994 [(−28,363.80 hr × $107.66/hr = −$3,053,646.71 for computer system analysts) + (−10,377 hr × $132.44/hr = −$1,374,329.88 for medical and health service managers) + (−3,459 hr × $61.68/hr = −$213,351.12 for LPNs) + (−3,459 hr × $47.60/hr = −$164,648.40 for billing clerks) + (−3,459 hr × $299.32/hr = −$1,035,347.88 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy proposals and newly available data would result in a change of minus 3,847 submissions (−388 due to policy proposals + −3,459 due to updated data), a maximum annual burden change of minus 54,627 hours (−5,509.60 hr due to policy proposals + −49,117.80 hr due to updated data, rounded to the hour) and minus $6,496,552 (−$655,228.02 due to policy proposals + −$5,841,323.994 due to updated data). We estimate a total of 8,350 traditional MIPS submissions under the Medicare Part B collection type for the CY 2026 performance period/2028 MIPS payment year. We invite public comments on our estimates and assumptions.

(4) Traditional MIPS Quality Data Submission: MIPS CQM and QCDR Measure Collection Types

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

These estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians, groups, and non-Shared Savings Program ACO APM Entities. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 70149 through 70151) and the CY 2025 PFS final rule (89 FR 98479 through 98483). All estimates encompass time to review measure specifications unless otherwise noted. All changes to the number of quality performance category submissions described below are relative to our currently approved estimate of 17,008 submissions detailed in the CY 2025 PFS final rule (89 FR 98481 through 98483).

Impact of Policy Proposals: We estimate a change of minus 810 submissions due to our proposal to add new MVPs. Multiplying the estimated change in submissions (−810) by the time per submission by labor category, we estimate a total change of −7,357.23 hours. This change of incorporates the following estimates: −3,307.23 hours for a computer system analyst (−810 submissions × 4.083 hr/submission (3 hr to submit data; 1 hr to review measure specifications, and 5 minutes (0.083 hr) to authorize or instruct the qualified registry or QCDR to submit quality measure data on their behalf), −1,620 hours for medical and health service managers (−810 submissions × 2 hr/submission), −810 hours for LPNs (−810 submissions × 1 hr/submission), −810 hours for billing clerks (−810 submissions × 1 hr/submission), and −810 hours for physicians (−810 submissions × 1 hr/submission). We estimate an annual change of

−$901,575.18 [(−3,307.23 hr × $107.66/hr = −$356,056.38 for computer systems analysts) + (−1,620 hr × $132.44/hr = −$214,552.80 for medical and health service managers) + (−810 hr × $61.68/hr = −$49,960.80 for LPNs) + (−810 hr × $47.60/hr = −$38,556.00 for billing clerks) + (−810 hr × $299.32/hr = −$242,499.20 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of +1,209 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (+1,209) by the time per submission identified in the preceding paragraph by labor category, we estimate a total change of +10,981.35 hours. This change incorporates the following estimates: 4,936.347 hours for computer system analysts (+1,209 submissions × 4.083 hr/submission), 2,418 hours for medical and health service managers (+1,209 submissions × 2 hr/submission), 1,209 hours for LPNs (+1,209 submissions × 1 hr/submission), 1,209 hours for billing clerks (+1,209 submissions × 1 hr/submission), and 1,209 hours for physicians (+1,209 submissions × 1 hr/submission). We estimate an annual change of +$1,345,684.44 [(+4,936.347 hr × $107.66/hr = $531,447.12 for computer system analysts) + (+2,418 hr × $132.44/hr = $320,239.92 for medical and health service managers) + (+1,209 hr × $61.68/hr = $74,571.12 for LPNs) + (+1,209 hr × $47.60/hr = $57,548.40 for billing clerks) + (+1,209 hr × $299.32/hr = $361,877.88 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy proposals and newly available data would result in a change of +399 submissions (−810 submissions due to policy proposals + 1,209 submissions due to updated data), an annual burden change of +3,624 hours (−7,357.23 hr due to policy proposals + 10,981.35 hr due to updated data, rounded to the hour) at a cost of +$444,109 (−$901,575.18 due to policy proposals + $1,345,684.44 due to updated data, rounded to the dollar). We estimate a total of 17,407 traditional MIPS submissions under the MIPS CQM/QCDR measure collection types for the CY 2026 performance period/2028 MIPS payment year (11,266 individual clinicians + 6,132 groups + 9 non-Shared Savings Program ACO APM Entities). We invite public comments on our estimates and assumptions.

(5) Traditional MIPS Quality Data Submission: eCQM Collection Type

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

These estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians, groups, and non-Shared Savings Program ACO APM Entities. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 79441 through 79442) and the CY 2025 PFS final rule (89 FR 98483 through 98485). All estimates encompass time to review measure specifications unless otherwise noted. All changes to submissions described below are relative to our currently approved estimate of 27,179 submissions detailed in the CY 2025 PFS final rule (89 FR 98483 through 98485).

Impact of Policy Proposals: We estimate a change of −1,114 submissions due to the proposal of additional MVPs in this proposed rule. Multiplying the estimated change in submissions by the time per submission by labor category, we estimate a total change of −8,912 hours. This change incorporates the following estimates: −3,342 hours for computer system analysts (−1,114 submissions × 3 hr/submission (2 hr to submit data file and 1 hr to review measure specifications)), −2,228 hours for medical and health service managers (−1,114 submissions × 2 hr/submission), −1,114 hours for LPNs (−1,114 submissions × 1 hr/submission), −1,114 hours for billing clerks (−1,114 submissions × 1 hr/submission), and −1,114 hours for physicians (−1,114 submissions × 1 hr/submission). We estimate an annual change of −$1,110,056.44 [(−3,342 hr × $107.66/hr = −$359,799.72 for computer system analysts) + (−2,228 hr × $132.44/hr = −$295,076.32 for medical and health service managers) + (−1,114 hr × $61.68/hr = −$68,711.52 for LPNs) + (−1,114 hr × $47.60/hr = −$53,026.40 for billing clerks) + (−1,114 hr × $299.32/hr = −$333,442.48 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of −2,129 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (−2,129) by the time per submission identified in the preceding paragraph by labor category, we estimate a total change of −17,032 hours. This change incorporates the following estimates: −6,387 hours for computer system analysts (−2,129 submissions × 3 hr/submission), −4,258 hours for medical and health service managers (−2,129 submissions × 2 hr/submission), −2,129 hours for LPNs (−2,129 submissions × 1 hr/submission), −2,129 hours for billing clerks (−2,129 submissions × 1 hr/submission), and −2,129 hours for physicians (−2,129 submissions × 1 hr/submission). We estimate an annual change of −$2,121,463.34 [(−6,387 hr × $107.66/hr = −$687,624.42 for computer system analysts) + (−4,258 hr × $132.44/hr = −$563,929.52 for medical and health service managers) + (−2,129 hr × $61.68/hr = −$131,316.72 for LPNs) + (−2,129 hr × $47.60/hr = −$101,340.40 for billing clerks) + (−2,129 hr × $299.32/hr = −$637,252.28 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions and the availability of updated data would result in a change of −3,243 submissions (−1,114 due to policy proposals + −2,129 due to updated data), an annual burden change of −25,944 hours (−8,912 hr due to policy proposals + −17,032 hr due to updated data) at a cost of −$3,231,520 (−$1,110,056.44 due to policy proposals + −$2,121,463.34 due to updated data, rounded to the dollar). We estimate a total of 23,936 traditional MIPS submissions under the eCQM collection type for the CY 2026 performance period/2028 MIPS payment year (18,282 individual clinicians + 5,647 groups + 7 non-Shared Savings Program ACO APM Entities). We invite public comments on our estimates and assumptions.

(6) ICRs Regarding Burden for MVP Reporting and Registration

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022 PFS final rule (86 FR 65590 through 65592), CY 2023 PFS final rule (87 FR 70155), CY 2024 PFS final rule (88 FR 79443), and CY 2025 PFS final rule (89 FR 98487) for our previously finalized burden assumptions and requirements for submitting quality performance category data for the MVP reporting option.

We refer readers to Appendix 3: MVP Inventory of this proposed rule for updates to the format of the MVP tables. We do not anticipate that the new stratified update to the MVP format would affect reporting burden, as it does not alter the composition of an MVP and

does not affect the general minimum reporting requirements for each MVP.

In section IV.A.4.a. of this proposed rule, we are proposing MVP maintenance updates to our MVP inventory that are aligned with the MVP development criteria (85 FR 84849 through 84854). We are also proposing to add new MVPs to the MVP inventory for the CY 2026 performance period/2028 MIPS payment year.

In the CY 2025 PFS final rule (89 FR 98485 and 98486), we estimated that 10 percent of MIPS eligible clinicians from the CY 2022 performance period/2024 MIPS payment year would move from traditional MIPS reporting to MVP reporting for the CY 2025 performance period/2027 MIPS payment year. For details on prior approaches to estimating MVP reporting, we refer readers to the CY 2022 PFS final rule (86 FR 65588 through 65590), CY 2023 PFS final rule (87 FR 70155 and 70156), and CY 2024 PFS final rule (88 FR 79443 and 79444).

To estimate MVP submissions for the CY 2026 performance period/2028 MIPS payment year, we calculated the average quality measure submission rate for each of the newly proposed MVPs for the CY 2026 performance period/2028 MIPS payment year. For these analyses, we assessed measure submissions in the CY 2023 performance period/2025 MIPS payment year for clinicians with relevant clinical specialties for each MVP. We considered quality reporting trends from all quality performance category reporting options (traditional MIPS, MVPs, and the APP), by clinicians, groups, subgroups, and non-Shared Savings Program ACO APM Entities. The total of these average quality measure submissions for all the proposed MVPs was equivalent to about 4 percent of the total quality performance category submissions in the CY 2023 performance period/2025 MIPS payment year. Adding this incremental change of 4 percentage points to the existing estimate of 10 percent for MVPs established in the CY 2025 PFS final rule (89 FR 98485 and 98486), we estimate that MVP reporting will account for 14 percent of MIPS quality performance category submissions for the CY 2026 performance period/2028 MIPS payment year.

Continuing our approach from the CY 2022 PFS final rule (86 FR 65589 and 65590), CY 2023 PFS final rule (87 FR 70155 and 701566), CY 2024 PFS final rule (88 FR 79443 and 79444), and CY 2025 PFS final rule (89 FR 98486), we assume that number of MVP registrations would equal our estimated MVP quality submissions.

(a) Burden for MVP Registration: Individuals, Groups, Subgroups, and APM Entities

In section IV.A.3.a. of this proposed rule, we are proposing to add a new self-attestation requirement to the MVP registration process requiring each group to attest whether it is either a single-specialty group or multispecialty group meeting the requirements of a small practice. We believe the associated impact of this proposal would be minimal, and that this proposal would not require the burden per registration to exceed the currently approved estimate of 15 minutes per registration. Therefore, we are not proposing to revise the burden per MVP registration under OMB control number 0938–1314 (CMS–10621). We refer readers to section IV.A.3.a. of this proposed rule for additional details on the self-attestation requirement.

As described in section V.B.5.c.(6). of this proposed rule, we estimate that approximately 14 percent of the clinicians that participate in MIPS quality performance category reporting would submit data for the measures and activities in an MVP. For the CY 2026 performance period/2028 MIPS payment year, we assume that the total number of individual clinicians, groups, non-Shared Savings Program ACO APM Entities, and subgroups that would complete the MVP registration process is 8,110. All changes to the MVP registrations described below are relative to our currently approved estimate of 6,285 registrations detailed in the CY 2025 PFS final rule (89 FR 98486 and 98487).

We estimate that the proposal of new MVPs, if finalized, would result in an increase of 2,312 MVP registrations. Using the currently approved estimate of 0.25/hr per registration, we estimate an annual burden change of +578.00 hours (+2,312 registrations × 0.25 hr/registration) at a cost of +$62,227.48 (+578 hr × $107.66/hr for a computer system analyst or equivalent). Additionally, we estimate that the availability of updated data would result in a change of −487 submissions. Using the currently approved estimate of 0.25 hr/registration, we estimate an annual change of −121.75 hours (−487 registrations × 0.25 hr/registration) at a cost of −$13,107.61 (−122 hr × $107.66/hr for a computer system analyst or equivalent) due to the availability of updated data.

Taken together, we estimate that the anticipated changes due to policy provisions and the availability of updated data would result in a change of +1,825 registrations (2,312 registrations due to policy proposals + −487 registrations due to updated data), an annual burden change of +456 hr (578.00 hr due to policy proposals + −121.75 hr due to updated data, rounded to the hour) at a cost of +$49,120 (+$62,227.48 due to policy proposals + −$13,107.61 due to updated data, rounded to the dollar). We estimate a total of 8,110 MVP registrations for the CY 2026 performance period/2028 MIPS payment year. We invite public comments on our estimates and assumptions.

(b) Burden for Subgroup Registration

We are not proposing to revise burden for subgroup registration for the CY 2026 performance period/2028 MIPS payment year based on policy proposals in section IV. of this proposed rule. We previously finalized a requirement for subgroup reporting for multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). In section IV.A.3.a.(3) of this proposed rule, we are proposing to update the MVP group registration process to add the self-attestation process for groups. If a group does not self-attest as a single specialty group or a multispecialty group meeting the requirements of a small practice during MVP registration, clinicians in the group cannot register as a group. Clinicians in such groups could register as subgroups to participate in MVP reporting. However, we are not revising the subgroups' burden relevant to this proposal because we are operationalizing previously finalized policies that would not impact the utilization of subgroups by groups and hence, would not change the way groups choose to organize clinicians in subgroups.

Additionally, we are proposing to maintain the MVP group reporting option for multispecialty groups with a small practice designation in section IV.A.3.a.(3) of this proposed rule. Maintaining the MVP group reporting option would not impact the currently approved burden for subgroup registration because it would not change any requirements related to subgroup registration. As future performance year data becomes available to reflect subgroup reporting trends amid revisions to the MVP inventory, we would evaluate changes to our currently approved burden estimate under OMB control number 0938–1314 (CMS–10621).

(c) Burden for MVP Quality Performance Category Submission

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i). For prior discussions of our related burden estimates, please see the CY 2022 PFS final rule (86 FR 65590 through 65592), CY 2023 PFS final rule (87 FR 70157 through 70159), CY 2024 PFS final rule (88 FR 79444 through 79446), and CY 2025 PFS final rule (89 FR 98487 through 98490).

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621), relative to the currently approved burden estimates detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

We estimate a change to the number of annual MVP quality performance category submissions per collection type from our currently approved burden estimates, beginning with the CY 2026 performance period/2028 MIPS payment year. These estimates include the figures detailed in section V.B.5.c.(1)(e) of this proposed rule plus our currently approved estimate of 20 subgroup submissions (split evenly across the eCQM and MIPS CQM/QCDR measure collection types). These estimates aggregate individual clinician, group, subgroup, and non-Shared Savings Program ACO APM Entity submissions. All estimates encompass time to review measure specifications unless otherwise noted.

(i) Medicare Part B Claims Measure Collection Type

All estimates below presume the maximum submission time. All changes to the estimated number of quality performance category submissions described below are relative to our currently approved estimate of 1,355 submissions detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

Impact of Policy Proposals: We estimate a change of +388 submissions due to the proposal of additional MVPs in this proposed rule. Multiplying the estimated change in submissions (+388) by the time per submission by labor category, we estimate a total change of +3,662.72 hours. This change incorporates the following estimates: 2,118.48 hours for computer system analysts (+388 submissions × 5.46 hr/submission (4.8 hr to submit data + 0.66 hr to review measure specifications), 776 hours for medical and health service managers (+388 submissions × 2 hr/submission), 256.08 hours for LPNs (+388 submissions × 0.66 hr/submission), 256.08 hours for billing clerks (+388 submissions × 0.66 hr/submission), and 256.08 hours for physicians (+388 submissions × 0.66 hr/submission). We estimate an annual change of +$435,483.29 [(2,118.48 hr × $107.66/hr = $228,075.56 for computer system analysts) + (776 hr × $132.44/hr = $102,773.44 for medical and health service managers) + (256.08 hr × $61.68/hr = $15,795.01 for LPNs) + (256.08 hr × $47.60/hr = $12,189.41 for billing clerks) + (256.08 hr × $299.32/hr = $76,649.87 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of −384 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (−384) by the time per submission by labor category, we estimate a total change of −3,624.96 hours. This change incorporates the following estimates, and applies the annual time per labor category identified in the preceding paragraph: −2,096.64 hours for computer system analysts (−384 submissions × 5.46 hr/submission), −768 hours for medical and health service managers (−384 submissions × 2 hr/submission), −253.44 hours for LPNs (−384 submissions × 0.66 hr/submission), −253.44 hours for billing clerks (−384 submissions × 0.66 hr/submission), and −253.44 hours for physicians (−384 submissions × 0.66 hr/submission). We estimate an annual change of −$430,993.76 [(−2,096.64 hr × $107.66/hr = −$225,724.26 for computer system analysts) + (−768 hr × $132.44/hr = −$101,713.92 for medical and health service managers) + (−253.44 hr × $61.68/hr = −$15,632.18 for LPNs) + (−253.44 hr × $47.60/hr = −$12,063.74 for billing clerks) + (−253.44 hr × $299.32/hr = −$75,859.66 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy proposals and newly available data would result in a change of +4 submission (+388 submissions due to policy proposals + −384 submissions due to updated data), an annual burden change of +38 hours (3,662.72 hr due to policy proposals + −3,624.96 hr due to updated data, rounded to the hour) at a cost of +$4,490 ($435,483.29 due to policy proposals + −430,993.76 due to updated data, rounded to the dollar). We estimate a total of 1,359 MVP submissions under the Medicare Part B claims measure collection type for the CY 2026 performance period/2028 MIPS payment year. We invite public comments on our estimates and assumptions.

(ii) MIPS CQM/QCDR Measure Collection Type

All changes to the estimated number of quality performance category submissions described below are relative to our currently approved estimate of 1,900 submissions detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

Impact of Policy Proposals: We estimate a change of +810 submissions due to the proposal of additional MVPs in this proposed rule. Multiplying the estimated change in submissions (+810) by the time per submission by labor category, we estimate a total change of +4,835.70 hours. All estimates encompass time to review measure specifications unless otherwise noted. This change incorporates the following estimates: 2,154.60 hours for computer system analysts (+810 submissions × 2.66 hr/submission (2 hr to submit data and 0.66 hr to review measure specifications)), 1,077.30 hours for medical and health service managers (+810 submissions × 1.33 hr/submission), 534.60 hours for LPNs (+810 submissions × 0.66 hr/submission), 534.60 hours for billing clerks (+810 submissions × 0.66 hr/submission), and 534.60 hours for physicians (+810 submissions × 0.66 hr/submission). We estimate an annual change of $593,079.41 [(2,154.60 hr × $107.66/hr = $231,964.24 for computer system analysts) + (1,077.30 hr × $132.44/hr = $142,677.61 for medical and health service managers) + (534.60 hr × $61.68/hr = $32,974.13 for LPNs) + (534.60 hr × $47.60/hr = $25,446.96 for billing clerks) + (534.60 hr × $299.32/hr = $160,016.47 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of +134 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (+134) by the time per submission by labor category, we estimate a total change of +799.98 hours. This change incorporates the following estimates, and applies the annual time per labor category identified in the preceding paragraph: +356.44 hours for computer system analysts (+134 submissions × 2.66 hr/submission), 178.22 hours for medical and health service managers (+134 submissions × 1.33 hr/submission), 88.44 hours for LPNs (+134 submissions × 0.66 hr/submission), 88.44 hours for billing clerks (+134 submissions × 0.66 hr/submission), and 88.44 hours for physicians (+134 submissions × 0.66 hr/submission). We estimate an annual

change of $98,114.37 [(356.44 hr × $107.66/hr = $38,374.33 for computer system analysts) + (178.22 hr × $132.44/hr = $23,603.46 for medical and health service managers) + (88.44 hr × $61.68/hr = $5,454.98 for LPNs) + (88.44 hr × $47.60/hr = $4,209.74 for billing clerks) + (88.44 hr × $299.32/hr = $26,471.86 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy proposals and newly available data would result in a change of +944 submissions (810 due to policy proposals + 134 due to updated data), an annual burden change of 5,636 hours (4,835.70 hr due to policy proposals + 799.98 hr due to updated data, rounded to the hour) at a cost of +$691,194 ($593,079.41 due to policy proposals + 98,114.37 due to updated data, rounded to the dollar). We estimate a total of 2,844 MVP submissions under the MIPS CQM/QCDR measure collection types for the CY 2026 performance period/2028 MIPS payment year (10 subgroups + 1,834 individuals + 999 groups + 1 non-Shared Savings Program APM ACO entity). We invite public comments on our assumptions and estimates.

(iii) eCQM Collection Type

All changes to the estimated number of quality performance category submissions described below are relative to our currently approved estimate of 3,030 submissions detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

Impact of Policy Proposals: We estimate a change of +1,114 submissions due to the proposal of additional MVPs in this proposed rule. Multiplying the estimated change in submissions (+1,114) by the time per submission by labor category, we estimate a total change of +5,904.20 hours. All estimates incorporate time to review measure specifications unless otherwise noted. This change incorporates the following estimates: 2,216.86 hr for computer system analysts (+1,114 submissions × 1.99 hr/submission (1.33 hr to submit data file and 0.66 hr to review measure specifications)), 1,481.62 hr for medical and health service managers (+1,114 submissions × 1.33 hr/submission), 735.24 hr for LPNs (+1,114 submissions × 0.66 hr/submission), 735.24 hr for billing clerks (+1,114 submissions × 0.66 hr/submission), and 735.24 hr for physicians (1,114 submissions × 0.66 hr/submission). We estimate an annual change of +$735,311.96 [(2,216.86 hr × $107.66/hr = $238,667.15 for computer system analysts) + (1,481.62 hr × $132.44/hr = $196,225.75 for medical and health service managers) + 735.24 hr × $61.68/hr = $45,349.60 for LPNs) + (735.24 hr × $47.60/hr = $34,997.42 for billing clerks) + (735.24 hr × $299.32/hr = $220,072.04 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of −237 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (−237) by the time per submission by labor category, we estimate a total change of −1,256.10 hours. This change incorporates the following estimates, and applies the annual time per labor category identified in the preceding paragraph: −471.63 hr for computer system analysts (−237 submissions × 1.99 hr/submission) + −315.21 hr for medical and health service managers (−237 submissions × 1.33 hr/submission) + −156.42 hr for LPNs (−237 submissions × 0.66 hr/submission) + −156.42 hr for billing clerks (−237 submissions × 0.66 hr/submission) + −156.42 hr for physicians (−237 submissions × 0.66 hr/submission). We estimate an annual change of −$156,435.31 [(−471.63 hr × $107.66/hr = −$50,775.69 for computer systems analysts) + (−315.21 hr × $132.44/hr = −$41,746.41 for medical and health service managers) + (−156.42 hr × $61.68/hr = −$9,647.99 for LPNs) + (−156.42 hr × $47.60/hr = −$7,445.59 for billing clerks) + (−156.42 hr × $299.32/hr = −$46,819.63 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy proposals and newly available data would result in a change of +877 submissions (1,114 due to policy proposals + −237 due to updated data), an annual burden change of +4,648 hours (5,904.20 hr due to policy proposals + −1,256.10 hr due to updated data, rounded to the hour) at a cost of −$578,877 ($735,311.96 due to policy proposals + −$156,435.31 due to updated data, rounded to the hour). We estimate a total of 3,907 MVP submissions using the eCQM collection type for the CY 2026 performance period/2028 MIPS payment year (10 subgroups + 2,977 individuals + 919 groups + 1 non-Shared Savings Program APM ACO entity). We invite public comments on our estimates and assumptions.

(iv) Summation of Medicare Part B Claims Measure, MIPS CQM/QCDR Measure, and eCQM Collection Types

Across the quality performance category collection types for MVPs, we estimate that policy proposals would result in a total change of +2,312 submissions (388 Medicare Part B claims measure submissions + 810 MIPS CQM/QCDR measure submissions + 1,114 eCQM submissions), an annual burden change of +14,402.62 hours (3,662.72 hr for Medicare Part B claims measure submissions + 4,835.70 hr for MIPS CQM/QCDR measure submissions + 5,904.20 hr for eCQM submissions) at a cost of +$1,763,874.66 ($435,483.29 for Medicare Part B claims measure submissions + $593,079.41 for MIPS CQM/QCDR measure submissions + $735,311.96 for eCQM submissions).

Additionally, we estimate that updated data and assumption would result in a total change of −487 submissions (−384 Medicare Part B claims measure submissions + 134 MIPS CQM/QCDR measure submissions + −237 eCQM submissions), an annual burden change of −4,081.08 hours (−3,624.96 hr for Medicare Part B claims measure submissions + 799.98 hr for MIPS CQM/QCDR measure submissions + −1,256.10 hr for eCQM submissions) at a cost of—$489,314.70 (−$430,993.76 for Medicare Part B claims measure submissions + $98,114.37 for MIPS CQM/QCDR measure submissions + −$156,435.31 for eCQM submissions).

Taken together, we estimate that the change in submissions due to proposed policy provisions and newly available data would result in a change of +1,825 submissions (+2,312 submissions due to policy proposals + −487 submissions due to updated data), an annual burden change of +10,322 hours (+14,402.62 hr due to policy proposals + −4,081.08 hr due to updated data, rounded to the hour) at a cost of +$1,274,560 (+$1,763,874.66 due to policy proposals + −$489,314.70 due to updated data, rounded to the dollar). We estimate a total of 8,110 MVP submissions under the Medicare Part B claims measure, MIPS CQM/QCDR measure, and eCQM collection types for the CY 2026 performance period/2028 MIPS payment year (20 subgroups + 6,170 individuals +1,918 groups + 2 non-Shared Savings Program ACO APM entities). We invite public comments on our estimates and assumptions.

(7) Beneficiary Responses to CAHPS for MIPS Survey

In section IV.B.4.a.(5) of this proposed rule, we are proposing to update the CAHPS for MIPS Survey measure by changing from a mail-web protocol to a web-mail-phone protocol. As we are unable to estimate the incremental increase in submissions above our currently approved estimates, we are not proposing to increase our currently approved estimates under OMB control number 0938–1222 (CMS–10450). Additionally, we are proposing to

continue our currently approved estimate of response time per survey of 0.2183 hours (13.1 minutes), as we are not proposing revisions to the survey questions. We invite public comments on these assumptions.

(8) Group Registration for CAHPS for MIPS Survey

In section IV.B.4.a.(5) of this proposed rule, we are proposing to update the CAHPS for MIPS Survey measure by changing from a mail-web protocol to a web-mail-phone protocol. We do not anticipate that this proposal would affect the number of groups registering for the CAHPS for MIPS Survey, nor affect the time to complete each group registration. Therefore, we are not proposing any changes to the requirements and burden estimates that are currently approved by OMB under control number 0938–1222 (CMS–10450).

d. ICRs Regarding Reporting the Promoting Interoperability Performance Category

(1) Background

We refer readers to § 414.1375 for our previously established policies regarding reporting for the Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325 for data submission requirements, and §§ 414.1380(b)(4) and 414.1365(d)(3)(iv) for Promoting Interoperability performance category scoring. For historic assumptions on reporting requirements for the Promoting Interoperability performance category, we refer readers to the CY 2024 PFS final rule (88 FR 79449 through 79451). As identified in section V.B.4., we do not estimate MIPS reporting burden due to requirements of the Shared Savings Program in the collection of information pages.

(2) Submitting Promoting Interoperability Data

In the following paragraphs, we outline proposed changes to the MIPS Promoting Interoperability performance category reporting requirements identified in section IV.A.4.d.(4) of this proposed rule and our assumptions as to why such proposals would not affect burden. For the first three policy proposals, there are similar proposed policies for the Medicare Promoting Interoperability Program in the CY 2026 Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment Systems (IPPS/LTCH PPS) proposed rule (90 FR 18355 through 18361). Our burden assumptions for proposals in this proposed rule affecting the MIPS Promoting Interoperability performance category are consistent with the CY 2026 IPPS/LTCH PPS proposed rule (90 FR 18414 and 18415).

First, beginning with the CY 2026 performance period/2028 MIPS payment year we are proposing to modify the Security Risk Analysis measure to require MIPS eligible clinicians to submit a second attestation (''Yes'' or ''No'') to having conducted security risk management activities as required under the HIPAA Security Rule implementation specification for risk management (codified at 45 CFR 164.308(a)(1)(ii)(B)). This attestation would be in addition to the current requirement under the measure for MIPS eligible clinicians to attest ''Yes'' to having conducted or reviewed a security risk analysis as required under the HIPAA Security Rule. We are not proposing to update the currently approved time per MIPS Promoting Interoperability performance category submission due to the additional attestation, as we believe the currently approved burden of 2.7 hours per MIPS Promoting Interoperability performance category submission is sufficient to absorb the negligible effort of the proposed additional attestation that would be included as a component of the Security Risk Analysis measure.

Second, beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing to modify the High Priority Practices Safety Assurance Factors for EHR Resilience (SAFER) Guide measure by specifying that MIPS eligible clinicians use the version of the SAFER Guides published in January 2025. We are not proposing to modify our burden estimates because the proposed modification of the measure does not alter the core requirement to attest ''Yes'' or ''No.''

Third, beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing to establish the new optional bonus measure Public Health Reporting under Trusted Exchange Framework and Common Agreement (TEFCA). We are not proposing to update the burden estimates because the measure submission is optional and we cannot predict which MIPS eligible clinicians would elect to report this measure and how they would participate in MIPS (individual, group, virtual group, subgroup, or APM Entity (excluding Shared Savings Program Accountable Care Organizations (ACOs)) level). For further discussion regarding the three aforementioned policy proposals, we refer readers to section IV.A.4.d.(4) of this proposed rule.

In sections IV.A.4.d.(4)(f) and IV.A.4.d.(4)(g) of this proposed rule, we are also proposing to: (1) establish a measure suppression policy for the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program, in which an identified suppressed measure would not be included in scoring calculations; and (2) suppress the Electronic Case Reporting measure from scoring calculations for the CY 2025 performance period/2027 MIPS payment year for the MIPS Promoting Interoperability performance category and the EHR reporting period in CY 2025 for the Medicare Promoting Interoperability Program. For further discussion regarding such proposals, we refer readers to sections IV.A.4.d.(4)(f) and IV.A.4.d.(4)(g) of this proposed rule. The exclusion of a measure would only apply to how we score such a measure, and thus MIPS eligible clinicians, eligible hospitals, and CAHs would continue to be required to report the measure. We are not proposing any changes to the burden estimates due to the proposed measure exclusion policy not impacting burden estimates for meeting the requirements of the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program.

Independent of the aforementioned policy proposals, we are proposing to update the currently approved burden estimates for the number of total submissions for the MIPS Promoting Interoperability performance category due to the availability of updated data from the CY 2023 performance period/2025 MIPS payment year. Additionally, we intend to increase the time per MIPS Promoting Interoperability performance category submission by 30 seconds (0.083 hour) in order to account for the addition of the Electronic Prior Authorization measure under the Health Information Exchange objective for the MIPS Promoting Interoperability performance category beginning with the CY 2027 performance period/2029 MIPS payment year. Such measure was established in the CMS Interoperability and Prior Authorization final rule published in the **Federal Register** on February 8, 2024 (89 FR 8758). In this proposed rule, we do not outline the burden estimate updates in this collection of information section due to the burden estimates not being affected by the policy proposals in this proposed rule. The applicable burden changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

e. ICRs Regarding Reporting for the Improvement Activities Performance Category

We refer readers to §§ 414.1355 and 414.1365(c)(3) for our previously established policies regarding reporting for the improvement activities performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1360 for data submission requirements, and §§ 414.1380(b)(3) and 414.1365(d)(3)(iii) for improvement activities performance category scoring. For historic assumptions on reporting requirements for the improvement activities performance category, we refer readers to the CY 2024 PFS final rule (88 FR 79454 and 79455).

In section IV.A.4.d.(3)(b) of this proposed rule, we are proposing changes to the Improvement Activities Inventory for the CY 2026 performance period/2028 MIPS payment year and future years. Consistent with our assumptions in the CY 2023 PFS final rule (87 FR 70211), the CY 2024 PFS final rule (88 FR 79519), and the CY 2025 PFS final rule (89 FR 98492), we believe clinicians performing improvement activities, to comply with previously finalized MIPS policies, will continue to perform the same activities because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified via rulemaking (82 FR 54175).

We refer readers to section VII.I.5.e.(2)(a) of this proposed rule for additional discussion. Independent of these policy proposals, we are updating the number of submissions due to the availability of updated submission data from the CY 2023 performance period/2025 MIPS payment year. While not scored in this rule, the non-policy changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

f. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by Compact Disc or hardcopy. The following policy proposals in section IV.A.4.d.(2) of this proposed rule would not result in the need to add or revise or delete any claims data fields: (1) modify the Total Per Capita Cost (TPCC) measure beginning in the CY 2026 performance period/2028 MIPS payment year; (2) update the operational list of care episode and patient condition groups and codes to reflect coding changes identified through annual maintenance of MIPS cost measures; and (3) adopt an informational-only feedback period of 2 years for new MIPS cost measures. Consequently, we are not proposing changes under the aforementioned OMB control number.

C. Summary of Proposed Annual Burden Estimates

Table 85 sets out the burden for this rulemaking's proposed provisions that are subject to the PRA. It does not score burden adjustments that are strictly based on updated data and are unrelated to any of this rule's proposed provisions.

TABLE 87: PROPOSED ANNUAL REQUIREMENTS AND BURDEN ESTIMATES

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802 and 414.804	0938-1921 (CMS-10110)	(65)	(260)	13	(3,380)	45.80	(154,804)

D. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule to OMB for its review of the rule's information collection requirements. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed previously, please visit the CMS website

at *https://www.cms.gov/regulations-and-guidance/legislation/paperworkreductionactof1995/pra-listing* or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** sections of this proposed rule and identify the rule (CMS–1832–P), the ICR's CFR citation, and OMB control number.

VI. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

In this proposed rule, we are proposing payment and policy changes under the Medicare PFS. Our proposed policies in this rulemaking specifically address: changes to the PFS; and other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; updates and refinements to Medicare Shared Savings Program (Shared Savings Program) requirements; updates to the Quality Payment Program (MIPS and Advanced APMs); changes to payment policies for drugs and biologicals products paid under Medicare Part B, other changes to Medicare Part B payment policies for Rural Health Clinics and Federally Qualified Health Centers, and changes to the regulations associated with the Ambulance Fee Schedule. The policies reflect CMS' stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Medicare Prescription Drug Inflation Rebate Program

Section III.I. of this rule proposes regulations to implement provisions of the Inflation Reduction Act of 2022 (IRA) that establish the Medicare Prescription Drug Inflation Rebate Program. Section 11101 of the IRA adds new section 1847A(i) to the Act, which establishes a requirement for manufacturers to pay Medicare Part B rebates for certain single source drugs and biological products with prices that increase faster than the rate of inflation, beginning on January 1, 2023. Section 11102 of the IRA adds new section 1860D–14B to the Act, which established a requirement for manufacturers to pay Medicare Part D rebates for certain Part D drugs and biological products with prices that increase faster than the rate of inflation, beginning on October 1, 2022.

b. Quality Payment Program

This proposed rule is also necessary to make changes to the Quality Payment Program to move the program forward to focus more on measurement efforts, refine how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and highlight the value of participating in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is a value-based payment program that includes two participation tracks: MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We continue to move the Quality Payment Program forward, including focusing more on alignment between the Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APM) tracks of participation, alignment with broader CMS initiatives, and new options for clinicians to participate in more meaningful ways. We aim to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the MIPS and Advanced APMs for the CY 2026 performance period/2028 MIPS payment year.

2. Discretionary Provisions

a. Drugs and Biological Products Paid Under Medicare Part B

In section III.A.1. of this proposed rule, as part of our continued implementation of section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) (IIJA), which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereinafter, refundable drug), we discuss two applications received for increased applicable percentage.

In section III.A.2 of this proposed rule, we are proposing clarifications to two aspects of the calculation of manufacturer's Average Sales Price (ASP), including price concessions and bona fide service fees (BFSFs). Regarding our proposals for price concessions, we are proposing to add a definition of bundled arrangement at § 414.802 to specify how certain financial benefits, including rebates, discounts or price concessions, are conditional upon certain requirements being met and that these arrangements may involve multiple products or performance metrics. We are also proposing to add subparagraphs at § 414.804(a)(2) to provide manufacturers with additional guidance on how to allocate discounts under bundled arrangements. This guidance states that discounts in a bundled arrangement are allocated proportionately to the dollar value of the units of all drugs or products sold under a bundled arrangement. Lastly, we are proposing to add a new subparagraph at § 414.804(a)(2)(i) to specify that when certain fees vary directly with the amount or price of a manufacturer's drugs, they are considered price concessions.

We are also proposing several changes to the definition of BFSFs at § 414.802 and § 414.804. Regarding our proposals at § 414.802, we are proposing to update the definition to describe the methodology manufacturers must use to calculate fair market value (FMV) for a BFSF. Manufacturers must use a market-based approach if the BFSFs do not vary directly with amount or price of a manufacturer's drug. Alternately, if the fees do vary directly, manufacturers must use a cost-plus approach and FMV must be conducted by an independent third-party valuator and this assessment must be submitted to CMS. We are also proposing a requirement that manufacturers conduct periodic updates of any FMV analyses for service arrangements that are ongoing, at a frequency no less than the renewal frequency of the arrangement, whether or not the FMV is conducted using a market-based or cost-plus approach.

For our proposals at § 414.804 for BFSFs, we are proposing several evidence requirements. Specifically, we are proposing to add a new subparagraph under § 414.804(a)(5) that manufacturers are required to provide sufficient evidence that the BFSF is not passed on in whole or in part to a client or customer of an entity, whether or not the entity takes title to the drug by

providing documentation (such as a certification or warranty from the recipient of the fee). In addition, we are proposing to revise § 414.804(a)(5) to add data submission requirements. Under this revision, manufacturers would be required to submit reasonable assumptions for calculations of the manufacturer's ASP. Lastly, we are proposing some specific, non-exhaustive examples of BFSFs and how they should be considered in the calculation of manufacturer's ASP.

In section III.A.3. of this proposed rule, we propose that preparatory procedures for tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy be included in the payment of the product itself. In addition, we propose that, beginning January 1, 2026 (that is, data reflecting sales beginning on that date), any preparatory procedures for tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy that are paid by the manufacturer be included in the calculation of the manufacturer's ASP.

b. RHCs and FQHCs

In section III.B.2. of this proposed rule, we are proposing changes to the furnishing of Advance Primary Care Management (APCM) services in RHCs and FQHCs. We are proposing to adopt add-on codes for APCM that would facilitate billing for Behavioral Health Integration (BHI) and Psychiatric Collaborative Care Model (CoCM) services when RHCs and FQHCs are providing advanced primary care. We are also proposing to require RHCs and FQHCs to report the individual codes that make up the CoCM HCPCS code, G0512. We are also proposing to require RHCs and FQHCs to report the individual codes that make up the communications technology-based services (CTBS), HCPCS code G0071 as well. In addition, we are proposing to revise § 405.2464(c) and (e) to reflect our proposal on payment of CoCM and CTBS services for RHCs and FQHCs. We are also proposing to adopt services that are established and paid under the PFS and designated as care management services as care coordination services for purposes of separate payment for RHCs and FQHCs. We believe this proposal would improve transparency and efficiency for RHCs and FQHCs since their designation as care management services goes through notice and comment rulemaking. In addition, we are seeking comment on whether the proposed process to align the care coordination services with the care management services paid under the PFS is sustainable moving forward or is there a more effective approach for adopting new care coordination codes established under the PFS as care management codes that would improve transparency and efficiency for RHCs and FQHCs.

In section III.B.3. of this proposed rule, we are proposing the to adopt the definition ''immediate availability'' as including real-time audio and visual interactive telecommunications for the direct supervision permanently for all.

RHC and FQHC services. We are also proposing, on a temporary basis, to facilitate payment for non-behavioral health visits furnished via telecommunication technology using a payment methodology based upon payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. RHCs and FQHCs would continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2026.

c. Ambulatory Specialty Model (ASM)

In section III.D of the preamble of this proposed rule, we discuss the proposed mandatory alternative payment model called the Ambulatory Specialty Model (ASM) which would be tested under the authority at section 1115A of the Act. Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program (CHIP) beneficiaries while reducing program expenditures.

Health care is becoming more fragmented as Medicare beneficiaries are increasingly seeing a greater number of specialists on a more regular basis. We believe there are opportunities to improve coordination between specialists and primary care providers (PCPs) and increase beneficiary engagement in care decisions, particularly with respect to preventing the onset and progression of chronic disease. ASM would test whether rewarding select specialists that furnish a high volume of services related to heart failure or low back pain based on measures of quality, cost, care coordination, and Promoting Interoperability results in enhanced quality of care and reduced costs through more effective upstream chronic condition management for ASM's targeted chronic conditions. We expect that a more targeted approach where clinicians are evaluated: (1) on a set of relevant performance measures they are required to report; and (2) among clinicians furnishing similar sets of services for similar chronic conditions, would produce scores and subsequent payment adjustments that are more reflective of clinician performance. A more targeted approach to measurement would also offer more insight into how clinical decisions and processes, such as care coordination, affect patient outcomes. We believe this insight is necessary to support and incentivize accountable care, increasing beneficiary access to coordinated specialty care.

We believe that ASM's meaningful comparisons of performance to similar specialists furnishing a substantial volume of services related to ASM's targeted chronic conditions when matched with a payment methodology that creates impactful Medicare Part B payment adjustments would encourage quality improvements in specialty care and meaningful engagement with primary care clinicians to both prevent and manage the onset of chronic conditions, all while achieving net savings to Medicare.

We refer readers to section III.D.1 of this proposed rule for more information on our research and rationale for ASM.

d. Effects of Proposals Relating to the Medicare Diabetes Prevention Program Expanded Model

1. Effects on Beneficiaries

We propose to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) address barriers related to weight collection requirements by clarifying that weight measurements used to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within two (2) days of the completion of the MDPP session; (2) allow beneficiaries to self-report weight from a reasonable location outside of an in-person delivery site; (3) extend the flexibilities allowed during the PHE for COVID–19 through December 31, 2029; (4) test the addition of coverage of asynchronous, Online, delivery of MDPP through December 31, 2029; (5) clarify that MDPP suppliers are not required to maintain in-person delivery capability through December 31, 2029; and (6) introduce a new Healthcare Common Procedure Coding System (HCPCS) G-code and payment for Online sessions.

MDPP is a non-pharmacological behavioral intervention consisting of up

to 22 sessions using a Centers for Disease Control and Prevention (CDC) approved National Diabetes Prevention Program (National DPP) curriculum.[421] CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence based DPRP Standards, which are updated every 3 years. The 2024 CDC DPRP Standards replaced the 2021 CDC DPRP Standards in June 2024.[422]

The CY 2021 PFS final rule allowed for increased virtual delivery of MDPP during the PHE for COVID–19 (85 FR 84830). Improvements to MDPP in the CY 2024 final rule included a simplified payment structure to allow for fee-for-service (FFS) payments for beneficiary attendance, while retaining the performance-based payments for diabetes risk reduction (that is, weight loss) (88 FR 79241) and an extension of PHE flexibilities to deliver some or all MDPP sessions via distance learning, until December 31, 2027 (88 FR 79241). Another PHE flexibility extended through the CY 2024 PFS Final rule was for MDPP suppliers to obtain weight measurements for beneficiaries using one of the following options through December 31, 2027: (1) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (2) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary (88 FR 79243). The CY 2025 PFS expanded this flexibility by allowing beneficiaries with the choice to submit one or two (2) photos for self-reporting weight for an MDPP distance learning session (89 FR 98047). Finally, to align with 2024 CDC DPRP Standards, the CY 2025 PFS Final Rule (89 FR 98045) updated the MDPP definition of ''online'' to align with the 2024 CDC DPRP definition for this delivery modality. However, while the CY 2025 PFS Final Rule updated the MDPP definition for online, only in-person, distance learning (synchronous), and in-person with a distance learning component remained accepted delivery modalities for MDPP in CY 2025.

We are proposing to revise the definitions of ''Extended flexibilities period'' and ''Online'' and add definitions for three new terms for MDPP, including ''Live Coach interaction,'' ''Online delivery period,'' and ''Online session.'' These changes will extend virtual delivery flexibilities through December 31, 2029, describe accepted delivery modes for MDPP by including online (asynchronous) delivery, and further align MDPP terminology with CDC DPRP Standards. These proposed changes aim to remove access barriers for beneficiaries and provide MDPP suppliers with more delivery offerings in response to comments regarding the increasing demand for virtual participation options.

Through the CY 2026 PFS, we are proposing to clarify that weight measurements used to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within two (2) days of the completion of the MDPP session. Beneficiaries who participate in MDPP do not currently have the option to submit medical record data as proof of weight. This proposed change is in response to MDPP supplier feedback that the current weight collection requirements discourage individuals with mobility concerns from participating in MDPP due to risk of injury while self-reporting weight from home. For example, some beneficiaries may need to obtain weight at a medical office using a special scale (for example, wheelchair scale) on the same date as their MDPP session. This proposed flexibility may promote safe and consistent collection of weight for MDPP sessions while encouraging model participation.

Additionally, we propose to revise weight collection requirements for MDPP in response to comments regarding increased flexibility for MDPP beneficiaries who may be traveling or unable to obtain weight measurements at home. This change allows beneficiaries to self-report weight from a reasonable location outside of an in-person delivery site while maintaining program integrity through existing date-stamped photo requirements described in 410.79(e)(3)(iii)(c) which state that the photo or video must clearly document the weight of the MDPP beneficiary as it appears on their digital scaled on the date associated with the billable MDPP session. The current weight collection requirements state that beneficiaries self-report weight by submitting date-stamped photo(s) or video of the beneficiary's weight on the scale with the beneficiary visible in their home. This limits beneficiaries from participating by reporting weight from other reasonable locations outside of an in-person delivery site or home, such as a medical office, or hotel if the beneficiary is on vacation but otherwise able to participate in MDPP sessions. This proposed change is expected to remove barriers to weight collection and provide flexibilities that may increase session attendance.

We propose to test the addition of coverage of an asynchronous, Online delivery modality during the Online delivery period (until December 31, 2029). This change will allow virtual-only organizations to enroll in Medicare as MDPP suppliers, streamline the process to allow for greater delivery of Online sessions, and promote alignment with the 2024 CDC DPRP Standards, which support asynchronous delivery. To date, MDPP suppliers have commented that the exclusion of the asynchronous modality significantly limits program participation among Medicare beneficiaries. Advocacy group members pursued legislation that would require CMS to open the MDPP to suppliers of asynchronous online MDPP programs through the PREVENT DIABETES Act [H.R. 7856] [423] in April 2024. Although this bill was not enacted into law, suppliers continue to encourage CMS to meet the demand for asynchronous delivery of MDPP. To facilitate the ability of MDPP suppliers to deliver the program through an asynchronous, Online delivery modality, we propose to clarify that MDPP suppliers are not required to maintain the ability to deliver the program in-person during the Online delivery period. This will allow for virtual-only organizations to enroll in Medicare as MDPP suppliers and streamline the process to allow for greater asynchronous delivery. Additionally, beneficiary focus groups indicate that among beneficiaries who participate in MDPP via distance learning or in-person with a distance learning component (hybrid), most expressed their satisfaction by citing the flexibility the choices provided when faced with challenges such as inclement weather or travel restrictions that made in-person participation difficult.[424] This extended flexibility is expected to promote beneficiary access to the Set of MDPP services, since suppliers may deliver the Set of MDPP services to beneficiaries across state lines, reaching beneficiaries who do not live near an in-person delivery site.

We propose edits throughout § 414.84 by revising paragraphs (b)(1)

[421] *https://www.cdc.gov/diabetes/prevention/resources/curriculum.html.*

[422] Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. *https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures.*

[423] H.R. 7856 (118th): PREVENT DIABETES Act, *https://www.govtrack.us/congress/bills/118/hr7856/text.*

[424] RTI International. Evaluation of the Medicare Diabetes Prevention Program. March 2025. *https://www.cms.gov/priorities/innovation/data-and-reports/2025/mdpp-finalevalrpt.*

introductory text and (b)(2) introductory text to update language to include all accepted MDPP delivery modes for performance goals in which beneficiaries achieve weight loss milestones. We also propose adding paragraph (c)(3) to describe the proposed payment for Online delivery, including the inclusion of a new HCPCS G-code for the Set of MDPP services delivered Online. Finally, we propose redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5) respectively and revising the redesignated paragraph (c)(4)(ii) to include a payment rate for a core session or core maintenance session furnished Online during the Online delivery period.

Lastly, we propose amending § 424.205(c)(10) to allow the minimum number of required MDPP core sessions and core maintenance sessions to be delivered Online during the Online delivery period; § 424.205(f)(2)(i) to include the online modality among acceptable session types for session documentation; and § 424.205(f)(5) to update requirements for achieving five and nine percent weight loss measured in accordance with § 410.79(c)(ii). Overall, these modifications address MDPP supplier and beneficiary needs based upon available monitoring and evaluation data received to date, feedback from existing MDPP suppliers, and feedback from beneficiary focus groups. The proposed changes are also in response to comments from interested parties made through public comments in response to prior rulemaking. These proposed changes are aimed towards increasing access and participation in this prevention-focused program, empowering beneficiaries, and promoting further alignment between MDPP and the CDC DPRP Standards.

The policy changes proposed for MDPP in the CY 2026 PFS are expected to have a significant impact on beneficiaries' access to MDPP services. Aligning with 2024 CDC DPRP Standards for MDPP delivery modes may help expand beneficiary access and increase the number of MDPP eligible organizations that enroll in Medicare as MDPP suppliers. Additionally, the proposed changes to weight collection requirements and the inclusion of online delivery will increase flexibility for both MDPP suppliers and beneficiaries and may help increase access for beneficiaries who lack transportation or live in geographic areas without access to an in-person delivery site.

2. Effects on the Market

We anticipate that the policy changes proposed in this rulemaking are likely to result in a greater number of MDPP suppliers and increased beneficiary access to the Set of MDPP services. We anticipate that our proposal will result in the delayed onset and reduction of the incidence of diabetes among eligible Medicare beneficiaries.

As of May 2025, there are approximately 1,253 nationally recognized in-person organizations that are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes DPRP status.[425] However, only 330 (26 percent) of these eligible in-person organizations are participating in MDPP.[426] Aligning with CDC DPRP delivery modes, particularly allowing asynchronous, Online delivery, is expected to help increase recruitment of new DPRP organizations, MDPP suppliers, and beneficiaries.

3. Payment for MDPP Services

Regulations at § 414.84 specify that MDPP suppliers may be eligible to receive payments for furnishing MDPP services and meeting performance targets related to MDPP beneficiary weight loss and attendance.

We anticipate that the inclusion of asynchronous, Online delivery will have minimal impact on total payment for MDPP services, as current performance payments for 5 percent weight loss achieved from baseline weight (G9880) and 9 percent weight loss achieved from baseline weight (G9881) will remain the same regardless of delivery modality for MDPP. For each beneficiary, MDPP suppliers must either bill claims with G9886, G9887, a combination of G9886 and G9887, or GXXXX. The proposed GXXXX for behavioral counseling for diabetes prevention, online, 60 minutes ($18) is for the Set of MDPP services delivered Online, asynchronously. The existing G9886, behavioral counseling for diabetes prevention, in-person, group, 60 minutes, and G9887, behavioral counseling for diabetes prevention, distance learning, 60 minutes are delivered synchronously. Therefore, we are proposing that for each MDPP beneficiary, suppliers may not bill for the Set of MDPP services that were delivered through a combination of synchronous and asynchronous delivery modalities, inclusive of make-up sessions. In order to evaluate the efficacy of the Online delivery modality during the Online Delivery Period, beneficiary outcomes from synchronous (that is, In-person, distance learning, or In-person with a distance learning component) delivery of the Set of MDPP services must be compared to beneficiary outcomes from asynchronous (that is, Online), therefore, these modalities must be delivered separately for individual beneficiaries in order to evaluate whether Online results, including weight loss, are similar to in-person and distance learning delivery modalities.

The total maximum payment per beneficiary for MDPP for in-person or distance learning delivery will remain unchanged by our proposals. The total maximum payment per beneficiary for online delivery of MDPP will be $619.

4. Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

The following table shows the estimated impact (in millions) on Medicare spending for allowing asynchronous, online delivery of the MDPP benefit:

[425] Centers for Disease Control and Prevention. Diabetes Prevention Recognition Program Application. Registry of All Recognized Organizations. *https://dprp.cdc.gov/Registry.*

[426] *Medicare Provider Enrollment, Chain, and Ownership System (PECOS), Centers for Medicare & Medicaid Services | CMS (.gov), accessed May 1, 2025).*

TABLE 86: ESTIMATED IMPACT (IN MILLIONS) OF THE PROPOSED CHANGE ON MEDICARE SPENDING

	Year								
	2026	2027	2028	2029	2030	2031	2032	2033	2034
Gross Medicare Impacts	-$1	-$4	-$7	-$9	-$11	-$11	-$11	-$10	-$8
Performance Payments	$6	$11	$2	$2	$0	$0	$0	$0	$0
Total Impact	$5	$6	-$5	-$7	-$11	-$11	-$11	-$10	-$8

(b) Assumptions/Notes

- While we propose several changes to the existing MDPP expanded model for CY 2026, these changes should not lead to significantly different impacts on Medicare spending. The previous table provides projected impacts to Medicare fee for service spending resulting from allowing asynchronous, Online, delivery of MDPP without requiring providers to maintain an in-person delivery option.
- The assumed annual cost of diabetes from the initial certification of MDPP was trended forward using USPCC FFS PMPM spending assumptions included in the 2024 Trustees Report.
- Average per beneficiary MDPP payments for the asynchronous, online, delivery were assumed to be less than the in-person or Distance Learning benefit due to the reduced payment rate for session attendance. In 2025, the maximum total payment for completion of MDPP with weight loss is $795. The proposed maximum payment for the asynchronous, online, delivery of MDPP is $619. Average per beneficiary MDPP payments were trended forward using a projected annual increase of 2.4 percent, consistent with the long-range CPI–U assumption included in the 2024 Trustees Report.
- The above impacts assume that there are 15,000 new beneficiaries in 2026; 25,000 new beneficiaries in 2027; tapering off to 5,000 new beneficiaries in years 2028 and 2029. It is anticipated that the number of new beneficiaries in 2026 and 2027 may be higher due to pent up demand for the Online delivery modality. Additionally, it may take up to 90 days for approval of a Medicare enrollment application for those organizations newly enrolling as MDPP suppliers with an Online organization code, leading to lower uptake of the model in 2026 compared to 2027. There is a high degree of uncertainty with respect to the potential utilization of the asynchronous benefit. The CMS Office of Communications (OC) sends emails to a distribution list made up of potential MDPP participants twice every year. The emails contain a link to a website where more information relating to MDPP is available. OC reviews Medicare fee for service claims data to exclude beneficiaries that would be ineligible to participate in MDPP (ESRD patients or beneficiaries with a diabetes diagnosis) to develop the distribution list. In the last email distribution, approximately 11.8 million emails were sent. Of those receiving the email, about 86,000 recipients followed the link. With little information about the potential interest in the asynchronous benefit from the supplier and beneficiary sides, utilization was assumed to be up to 20 percent in the first year and up to just over half of the number of email recipients who followed the email link during the four years of the asynchronous test.
- To evaluate the reduction in diabetes rates, the effectiveness of the asynchronous, online, benefit is assumed to be equal to that of the in-person benefit. This assumption is revisited in the sensitivity analysis section.

(c) Sensitivity Analysis

The following table shows projected 10-year financial impacts (in millions) of delivering the asynchronous online benefit from 2026–2029 at various levels of effectiveness with respect to the in-person benefit. It also provides the first year in which the accumulated savings is greater than the performance payments.

TABLE 87: 10-YEAR COST IMPACTS (IN MILLIONS) OF ONLINE DELIVERY OF MDPP SERVICES AND BREAK-EVEN POINT

Effectiveness Relative to In-Person	10-Year Impact	Break-Even Year
100%	−$56	2029
75%	−$36	**2030**
50%	−$16	**2031**

As indicated in the table, asynchronous, online, delivery of MDPP services is estimated to produce savings over the next 10 years even when it is 50 percent as effective as the in-person delivery.

As for the Medicare Diabetes Prevention Program, given that we tried to align this rulemaking as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rulemaking impacts only enrolled MDPP suppliers and eligible beneficiaries who have started MDPP or are interested in enrolling in MDPP. We invite public comments on our regulatory impact analysis for our MDPP proposal.

e. Medicare Shared Savings Program

In section III.F. of this proposed rule, we are proposing modifications to the Shared Savings Program regulations to allow for timely improvements to program policies and operations. The proposed changes to the Shared Savings Program include the following.

We are proposing changes to limit participation in a one-sided model to an ACO's first agreement period under the BASIC track's glide path (if eligible), for a maximum of 5 performance years instead of 7 performance years. Under

the proposed modifications, ACOs inexperienced with performance-based risk Medicare ACO initiatives (defined in § 425.20) would progress more rapidly to higher levels of risk and potential reward under Level E of the BASIC track or the ENHANCED track (if eligible), compared to existing policies. The proposed changes would apply to agreement periods beginning on or after January 1, 2027.

We are also proposing modifications to the Shared Savings Program eligibility and financial reconciliation requirements in connection with the statutory requirement that ACOs have at least 5,000 assigned Medicare FFS beneficiaries to: (1) require ACOs applying to enter a new agreement period beginning on or after January 1, 2027, to have at least 5,000 assigned beneficiaries in benchmark year (BY) 3, while allowing an ACO to have fewer than 5,000 assigned beneficiaries in BY1, BY2, or both; (2) establish safeguards to reduce the risk that ACOs owe shared losses payments, or are owed shared savings payments by the program, based on normal variation in beneficiary expenditures by (i) requiring that an ACO applying to enter a new agreement period that has fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, may only enter the BASIC track, and (ii) capping shared savings or shared losses at a lesser amount if an ACO, at any time during the agreement period, has fewer than 5,000 assigned beneficiaries in any of the three BYs; as well as (3) exclude ACOs that fall below 5,000 assigned beneficiaries in any benchmark year from being eligible to leverage existing policies that provide certain low revenue ACOs participating in the BASIC track with increased opportunities to share in savings.

We are proposing changes to the Shared Savings Program's quality performance standard and other quality reporting requirements, including to: (1) revise the definition of a beneficiary eligible for Medicare CQMs at § 425.20 for performance year 2025 and subsequent performance years so that the population identified for reporting within the Medicare CQM collection type would have greater overlap with the beneficiaries that are assignable to an ACO; (2) remove the health equity adjustment applied to an ACO's quality score beginning in performance year 2025 and revise the terminology used to describe the health equity adjustment and other related terms for performance years 2023 and 2024; (3) update the APP Plus quality measure set for Shared Savings Program ACOs including the removal of Quality ID: 487 Screening for Social Drivers of Health; and (4) implement a web-mail-phone protocol and discontinue the mail-phone protocol for the CAHPS for MIPS Survey beginning with 2027.

We are proposing changes to expand the application of the Shared Savings Program's quality and finance extreme and uncontrollable circumstances (EUC) policies to an ACO that is affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, for performance year 2025 and subsequent performance years.

We are proposing changes to other programmatic areas, including: proposed changes to Shared Savings Program eligibility requirements and change request procedures to: (1) require ACOs that experience certain ACO participant CHOWs outside of the change request cycle to update their certified ACO participant list to reflect such ACO participant's CHOW; and (2) require ACOs to submit changes which occur during the performance year to the ACO's SNF affiliate list, if a SNF affiliate undergoes a CHOW resulting in a new TIN. We are proposing updates to the beneficiary assignment methodology to revise the definition of primary care services to align with payment policy changes and include, among other services for the purposes of beneficiary assignment, new behavioral health integration and psychiatric collaborative care model add-on services when these services are furnished with advanced primary care management services. We are proposing changes to the Shared Savings Program's regulations specifying the financial benchmarking methodology applicable for agreement periods beginning on January 1, 2025, and in subsequent years, to rename the ''health equity benchmark adjustment'' (HEBA) the ''population adjustment.'' Finally, we are proposing changes to revise the Shared Savings Program's quality reporting monitoring policies.

f. Changes to the Regulations Associated With the Ambulance Fee Schedule

As outlined in section III.H. of this proposed rule, section 3203 of the American Relief Act of 2025 and most recently, section 2203 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons sets forth in those subsections through September 30, 2025. The ambulance extender provisions are enacted through legislation that is self-implementing. We are proposing only to revise dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

B. Overall Impact

We have examined the impacts of this proposed rule as required by Executive Order 12866, Regulatory Planning and Review (September 30, 1993), Executive Order 14192, ''Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354); section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4); and Executive Order 13132, Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity).

A regulatory impact analysis (RIA) must be prepared for regulatory actions that are significant under section 3(f)(1) of Executive Order 12866. ased on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1)). Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at *https://www.sba.gov/document/support-table-size-standards* (refer to the 620000 series).) Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other suppliers, and providers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, Medicare payment is made under the PFS for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this rulemaking will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately $187 million. This rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this rulemaking does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which, together with the information provided in the rest of this rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this rule; details the costs and benefits of this rulemaking; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we discussed various changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services and to implement provisions of the statute. We provide information for each policy change in the relevant sections of this proposed rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this rule. The relevant sections of this rulemaking describe significant alternatives we considered, if applicable.

C. Executive Order 14192, ''Unleashing Prosperity Through Deregulation''

Executive Order 14192, titled ''Unleashing Prosperity Through Deregulation'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations.''

D. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compare payment rates for CY 2025 with payment rates for CY 2026 using CY 2024 Medicare utilization. The payment impacts described in this rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS).

As required by section 1848(d)(1)(A) of the Act, beginning in CY 2026, there will be two separate conversion factors (CFs): one for items and services furnished by a qualifying APM participant as defined in section 1833(z)(2) of the Act (referred to as the qualifying APM conversion factor) and another for other items and services (referred to as the nonqualifying APM conversion factor), equal to the respective conversion factor for the previous year (or, for CY 2026, equal to the single conversion factor for CY 2025) multiplied by the update established under section 1848(d)(20) of the Act for such respective conversion factor for such year. As specified by section 1848(d)(20) of the Act, the update to the qualifying APM conversion factor for CY 2026 is 0.75 percent while the update to the nonqualifying APM conversion factor for CY 2026 is 0.25 percent. To calculate the estimated CY 2026 PFS conversion factors, we took the CY 2025 conversion factor and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs, then multiplied by the qualifying APM and nonqualifying APM updates specified by section 1848(d)(20) of the Act, then applied the one-year increase of 2.50 percent for CY 2026 established by statute. We estimate the CY 2026 PFS qualifying APM CF to be 33.5875 which reflects a 0.55 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.75 percent update adjustment factor specified under section 1848(d)(20) of the Act. We estimate the CY 2026 PFS nonqualifying APM CF to be 33.4209 which reflects a 0.55 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.25 percent update adjustment factor specified under section 1848(d)(20) of the Act. We estimate the CY 2026 anesthesia qualifying APM CF to be 20.6754 and the CY 2026 anesthesia nonqualifying APM CF to be 20.5728, reflecting the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

BILLING CODE 4120–01–C

Table 92 shows the impact on PFS payment for physicians' services based on the proposed policies included in this rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 92 (CY 2026 PFS Estimated Impact on Total Allowed Charges by Specialty).

In recent years, we have received requests from interested parties to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented us with high-level information suggesting that Medicare payment policies are directly responsible for consolidating privately owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in healthcare delivery, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in the CY 2023 PFS final rule (87 FR 69429 through 69438). As part of our holistic review of how best to update our data and offer interested parties additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2026 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

Some of the proposed policies in this rule are estimated to have significant differential effects depending on the site of service, especially the proposed changes to the allocation of indirect PE in the facility setting. Therefore, we are publishing the impact tables including a

facility/non-facility breakout of payment changes, as we believe that displaying the total impact by specialty alone, without the setting of care context, could be misleading for interested parties. The following is an explanation of the information represented in Table 92.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Setting): Identifies the facility or non-facility setting for which data are shown.
- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2024 utilization and CY 2025 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column D (Impact of Work RVU Changes): This column shows the estimated CY 2026 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- Column E (Impact of PE RVU Changes): This column shows the estimated CY 2026 impact on total allowed charges of the changes in the PE RVUs.
- Column F (Impact of MP RVU Changes): This column shows the estimated CY 2026 impact on total allowed charges of the changes in the MP RVUs.
- Column G (Combined Impact): This column shows the estimated CY 2026 combined impact on total allowed charges of all the changes in the previous columns. Column G may not equal the sum of columns D, E, and F due to rounding.

BILLING CODE 4120–01–C

2. CY 2026 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty-level impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for most specialties in the office-based setting, including surgical specialties, primary care specialties, behavioral health specialties, and those who furnish highly technical services outside of the hospital setting reflect significant increases relative to most of those same specialties in the facility setting. These increases can largely be attributed to, the proposed adjustment to indirect PE allocation in the facility setting. To a lesser degree, projected increases for some specialties, especially in primary care and behavioral health are driven by the redistributive effects of the proposed efficiency adjustment to work RVUs and the third year of the behavioral health work update. Increases are also due to proposed increases in valuation for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from supply and equipment pricing updates. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the Clinical Lab Fee Schedule. Therefore, the estimated 1 percent increase for CY 2026 is only applicable to approximately 17 percent of the Medicare payment to these entities.

The estimated impacts for specialties in the hospital-based setting are driven primarily by the proposed adjustment to indirect PE allocation in the facility setting and the proposed efficiency adjustment. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized supply and equipment pricing updates. The estimated impacts also reflect decreased payments due to continued implementation of previously finalized code-level reductions that are being phased in over several years.

We note that several specialties appear on the specialty impacts table with both the largest projected increases in payment as well as the largest projected decreases in payment, split across the site of service differential.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 92), including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically, the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 92 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty and compared to the same summed total from the previous calendar year. Therefore, they are averages and may not necessarily represent what is happening to the particular services furnished by a single practitioner within any given specialty.

As discussed previously, we have reviewed our suite of public use files and have worked on new ways to offer interested parties additional information that addresses concerns about the lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2024 utilization data, Total RVUs change between −2 percent and 2 percent for roughly 25 percent of practitioners, representing approximately 32 percent of the changes in Total RVUs for all practitioners, with variation by specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule (see *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*).

The specialty impacts displayed in Table 92 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from proposed policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) of the Act (such as the proposed The specialty impacts displayed in Table 92 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from proposed policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) of the Act (such as the proposed efficient adjustment or the proposed changes to indirect PE allocation in the facility setting) but does not include any changes in spending which result from proposed policies that are not subject to the statutory budget neutrality adjustment, and therefore, have a neutral impact across all specialties. The 0.75 percent and 0.25 percent updates to the CY 2026 qualifying APM and APM and nonqualifying APM conversion factors, respectively, as well as the single year increase of 2.50 percent to the conversion factor for CY 2026, are statutory changes that take place outside of BN, and therefore, are not captured in the specialty impacts displayed in Table 92.

b. Impact

Column G of Table 92 displays the estimated CY 2025 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under ''downloads'' on the CY 2026 PFS proposed rule website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/*. We selected these procedures for the sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and non-facility rates are shown. For an explanation of facility and non-facility PE, we refer readers to Addendum A on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/*.

c. Estimated Impacts Related to the Proposed Efficiency Adjustment

In section II.E.2.b of this proposed rule, we propose to apply an efficiency adjustment to the work RVU and corresponding intraservice portion of physician time for non-time-based services as we expect these kinds of services to accrue efficiencies over time. As proposed, this would generally apply to all codes except time-based codes, including but not limited to, E/M services, care management services, behavioral health services, services on the CMS telehealth list, and maternity codes with a global period of MMM. This efficiency adjustment policy, as proposed, would apply to all codes that aren't otherwise excluded. Included code families represent the procedures, diagnostic tests, and radiology services that CMS expects to accrue efficiencies over time as changes in medical practice occur, including changes in clinician expertise, workflows, and technology.

The proposed efficiency adjustment for CY 2026 is calculated as the sum of the final productivity adjustments used in the Medicare Economic Index (MEI) for the prior five years (2021 through 2025). The MEI is a measure of input price inflation faced by physicians and practitioners furnishing physicians' services such as physician's own time, non-physician employees' compensation, office rent, medical equipment, and more. The MEI productivity adjustment reflects the most recent historical estimate of the 10-year moving average growth of private nonfarm business total factor productivity, as calculated by the Bureau of Labor Statistics. Every year, the productivity adjustment is calculated by the CMS Office of the Actuary (OACT) based on the most recent historical data published by BLS at the time of the PFS final rule. Beginning in CY 2026, we are proposing a 5-year look-back period to calculate the initial efficiency adjustment. See section II.E.2.b of this rule for more information on the proposed methodology. This calculation results in a proposed efficiency adjustment of 2.5 percent for CY 2026.

Generally, specialties that bill more often for timed codes, such as family practice, clinical psychologists, clinical social workers, geriatrics, and psychiatry would likely see an increase in RVUs; while specialties that bill more often for procedures, diagnostic imaging, and radiology services (such as radiation oncology, radiology, and some surgical specialties), would likely see a decrease in RVUs. This proposed efficiency adjustment will decrease the work RVU for many services across most specialty types to reflect the efficiency gains that have taken place over time. Since this proposal will reduce the work RVU for affected services, we project that there will be a net increase to the conversion factor as required under our budget neutrality provisions. We estimate that almost all specialties will experience no more than +1 or −1 percent change in RVUs as a result of this proposed policy, although the effect on individual services may be greater.

d. Estimated Impacts Related to the Proposed Site of Service Payment Differential

In section II.B. of this proposed rule, we are proposing to, for each service valued in the facility setting, reduce the portion of the facility PE RVUs allocated based on work RVUs to half the amount allocated to non-facility PE RVUs for CY 2026.

Overall, specialties that practice primarily in the non-facility setting will see an increase in PE RVUs as a result of this redistribution. Specialties that perform services primarily in the facility setting will see a decrease in PE RVUs as a result of the proposed reduction to facility indirect PE. Overall, this proposed methodology change to indirect PE allocation would not affect the conversion factor, as all changes in valuation would be contained within the development of PE RVUs and redistribute PE RVUs from the facility to the non-facility setting.

E. Impact of Changes Related to Telehealth Services

We are proposing the addition of several codes to the Medicare Telehealth Services List, including HCPCS codes G0473 and G0545, and CPT codes 90849, 92622, and 92623. We are also proposing to remove HCPCS code G0136 from the Medicare Telehealth Services List. We are proposing certain telecommunications technology-related flexibilities, including that we will continue to use a definition of direct supervision that allows ''immediate availability'' of the supervising practitioner using real-time audio and video interactive telecommunications for services without a 010 or 090 global period indicator. We are also proposing to eliminate the telehealth frequency limitations for subsequent nursing facility and inpatient hospital visits. While we note that certain other Medicare telehealth flexibilities related to the Public Health Emergency (PHE) for the Coronavirus Disease 2019 (COVID–19) (PHE for COVID–19)

PHE for COVID–19 are expiring, including the removal of statutory geographic and location limitations for most Medicare telehealth services, the beneficiary's home continues to be a permissible originating site for certain types of services including those furnished for the diagnosis, evaluation, or treatment of a mental health disorder, including a Substance Use Disorder (SUD), and for monthly End Stage Renal Disease (ESRD) related clinical assessments described in section 1881(b)(3)(B). However, expiration of certain flexibilities for Medicare telehealth services is not expected to impact broader utilization of these services because reasonable and necessary services for the diagnosis or treatment of an illness or injury continue to be covered. Despite the fact that some services will no longer be furnished under telehealth, we expect that they will continue to be furnished in-person. We therefore anticipate that our provisions will result in continued utilization of services that can be furnished as Medicare telehealth services during CY 2026 at levels comparable to observed utilization of these services during CY 2025.

F. Other Provisions of the Proposed Rule

1. Impact of Changes Related to Medicare Part B Payment for Skin Substitutes When Used During a Covered Application Procedure Under the PFS in the Non-Facility Setting

As discussed in detail in section II.K.D. of this proposed rule, starting January 1, 2026, we are proposing to pay for the provision of certain groups of skin substitute products used during a covered application procedure (CPT codes 15271 through 15278) as supplies. These skin substitutes will be paid as incident-to supplies under the PFS in the non-facility setting in accordance with section 1861(s)(2)(A) of the Act. While costs associated with supplies are usually bundled into the PE RVUs for particular services in non-facility settings, these products have been paid separately for many years in the non-facility setting, where the majority of these products are currently used.

As discussed in detail in section II.K. of this proposed rule, in light of our careful review of the applicable statutory provisions governing products paid under the ASP methodology under 1847A of the Act, the different FDA regulatory frameworks used for these products, and the skyrocketing increase in Medicare spending for such products, we are proposing to pay separately for specific skin substitute products (other than products licensed under section 351 of the PHS Act, which will continue to be paid as biologicals under the ASP methodology in section 1847A of the Act) that are eligible for Medicare coverage during a covered application procedure in the non-facility setting as incident-to supplies in accordance with section 1861(s)(2)(A) of the Act. To reflect relevant product characteristics, we propose to group skin substitutes that are not drugs or biologicals (that is, biological products licensed under section 351 of the PHS Act) using three CMS payment categories based on FDA regulatory pathways (PMAs, 510(k)s, and 361 HCT/Ps) to set payment rates. We believe that our proposal to pay for these supplies as incident-to supplies under the PFS, valued in groups by how the products are used, better aligns payment with the resources involved in the provision of these incident-to supplies during a covered application procedure and will generate payment stability over time. We estimate that

under this proposal, which assumes a single rate of approximately $125.38 for CY 2026, there would be an estimated savings of $9.4 billion.

Because the resources involved in provision of these supplies were not previously incorporated into RVUs under the PFS, the costs are not accounted for when we compare the RVUs for physicians' services from 1 year to the next. In other words, changes in payment rates for these particular codes will be incorporated into PFS relativity once we use claims data from 2026, should the policy be finalized. Under the usual methodology, that means that changes in rates for these services between CY 2027 and CY 2028 would have an impact on the development of PE RVUs for other services. Over time, we anticipate that our proposal will continue to result in significant overall price reductions since grouped valuation instead of product-specific pricing should result in downward pricing pressure in the market. Additionally, we do not anticipate an impact to beneficiaries' access to appropriate care.

2. Drugs and Biological Products Paid Under Medicare Part B

a. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023, 2024, and 2025 PFS final rules, we finalized several policies to implement the provision. in December of 2024, CMS sent discarded drug refund reports for CY 2023 ''new refund quarters,'' as defined at § 414.902. The total refunds owed for these quarters in amounts to over $139 million, which was deposited into the Supplementary Medical Insurance (SMI) trust fund, as required by law. In section III.A.1 of this proposed rule, we discuss two applications (CMS 10835, OMB 0938–1435) for increased applicable percentage which will have no impact on Medicare spending.

b. Average Sales Price: Price Concessions and Bona Fide Service Fees (§§ 414.804 and 414.802)

In section III.A.2 of this proposed rule, we are proposing clarifications to two aspects of the calculation of manufacturer's Average Sales Price (ASP), including price concessions and bona fide service fees (BFSFs). Both price concessions and BFSFs have direct implications on the manufacturer's ASP. For example, if a manufacturer currently classifies an amount paid to an entity to be a bona fide service fee but must reclassify the amount as a price concession under these proposed changes, the manufacturer's ASP would theoretically decrease. The resulting payment limit for the drug, typically ASP plus six percent, would also decrease. The opposite would also be true; that is, if a manufacturer considers an amount paid to an entity a price concession but then determines the amount to be a bona fide service fee, the manufacturer's ASP would increase. Therefore, we anticipate that these proposals may have an impact on Medicare spending. The reclassification of certain fees could increase or decrease the ASP for such drugs. We anticipate that the proposed policy would likely result in more amounts to be considered price concessions (instead of BFSFs) resulting in decreases in ASP. If this occurs, there would be decreased spending on affected drugs. However, since details of arrangements and terms that manufacturers have with other entities are often not known to CMS, we are not able to quantify the possible changes in the payment limits for separately paid drugs under Medicare Part B as under these proposals.

c. Impacts Related to Autologous Cell-Based Immunotherapy and Gene Therapy Payment

In section III.A.4. of this proposed rule, we propose that preparatory procedures for tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy be included in the payment of the product itself. Since the payment for preparatory procedures is an extension of current policy for a subset of these products, Chimeric Antigen Receptor (CAR) T-cell therapies, and these products are furnished to very few beneficiaries, we do not anticipate the proposed policy to have a significant financial impact. In addition, we propose that, beginning January 1, 2026 (that is, data reflecting sales beginning on that date), any preparatory procedures for tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy that are paid by the manufacturer be included in the calculation of the manufacturer's ASP. Because we have little information about how manufacturers currently factor in the cost of tissue procurement into pricing these products, we cannot predict the exact financial impact on Medicare payment. However, given that the cost of tissue procurement is typically a very small fraction of the overall cost of the product, we anticipate that any financial impact will not be substantial.

3. Impacts Related to Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this proposed rule, to continue alignment with the PFS and goals associated with APCM services, we propose to adopt the add-on codes for APCM that would facilitate billing for BHI and CoCM services when RHCs and FQHCs are providing advanced primary care. We are also proposing to require RHCs and FQHCs to report individual codes that make up HCPCS code G0512. We are also proposing to require RHCs and FQHCs to report the individual codes that make up the communications technology-based services (CTBS), HCPCS code G0071. In addition, we are proposing to revise § 405.2464(c) and (e) to reflect our proposal on payment of CoCM and CTBS services for RHCs and FQHCs. We are also proposing to adopt services that are established and paid under the PFS and designated as care management services as care coordination services for purposes of separate payment for RHCs and FQHCs. In terms of estimated impacts to the Medicare program, we believe that the proposals discussed in section III.B.2 of this proposed rule will have a negligible impact on Medicare spending.

In section III.B.3 of this proposed rule, we are proposing the policy to adopt the definition ''immediate availability'' as including real-time audio and visual interactive telecommunications for the direct supervision permanently for all RHC and FQHC services. We are also proposing, on a temporary basis, to facilitate payment for non-behavioral health visits furnished via telecommunication technology using a payment methodology based upon payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. RHCs and FQHCs would

continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2026. We believe these RHC/FQHC proposals related to telecommunication technology will have a negligible impact on Medicare spending.

4. Ambulatory Specialty Model (ASM)

a. Scale of the Model

As we discuss in sections III.D.2.c.(4) and III.D. l of this proposed rule, there is no one-size-fits-all approach to designing, implementing, and evaluating Innovation Center models. Each payment and service delivery model tested by the Innovation Center is unique in its goals, and thus its design. Models vary in size to accommodate various design features and satisfy a variety of priorities. Decisions made regarding the features and design of the model strongly influence the extent to which the evaluation will be able to accurately assess the effect of a given model test and produce clear and replicable results.

The Innovation Center conducts analyses to determine the ideal number of participants for each model for evaluation purposes. This analysis considers a variety of factors including the target population (for example, Medicare beneficiaries with select chronic conditions), model eligibility (for example, participant eligibility criteria for inclusion in the model), participant enrollment strategy (for example, mandatory versus voluntary) and, the need to test effects on subgroups. Model size can also be influenced by the type and size of hypothesized effect on beneficiary outcomes, such as quality of care, or the target level of model savings. The smaller the expected impact a model is hypothesized to achieve, the larger a model needs to be for CMS to have confidence in the observed impacts.

An insufficient number of participants increases the risk that the evaluation will be imprecise in detecting the true effect of a model, potentially leading, for example, to a false negative or false positive result. The goal is to design a model that is sufficiently large to achieve adequate precision but not so large as to waste CMS's limited resources. These decisions affect the quality of evidence CMS can present regarding the impacts of a model on quality of care, utilization, and spending.

In the case of ASM, in this proposed rule we have determined the sample size necessary for a minimum estimated savings impact of 3.5 percent. While savings higher than 3.5 percent would require a smaller sample size from an evaluation perspective, if we were to reduce the size of ASM and if the actual savings are at or just below the 3.5 percent level, then we would increase the risk of being unable to detect whether ASM resulted in savings.

As proposed, we expect that ASM would include approximately 25 percent of all CBSAs and metropolitan divisions. As proposed at § 512.710(f), a CBSA or metropolitan division must have at least one clinician of the required specialty types who furnished at least 20 eligible episodes between January 1, 2024 and December 31, 2024 to be eligible for selection into ASM. We performed a simulation based on our proposed policies. We simulated the random selection of CBSAs and metropolitan divisions using CY 2023 data based on the methodology proposed at § 512.710(f), which would allow us to detect the minimum estimated savings impact of 3.5 percent described earlier in this section of this proposed rule.

Based on this simulation, we expect to have approximately 3,400 ASM heart failure participants billing under 1,160 TINs and approximately 5,200 ASM low back pain participants billing under 2,400 TINs in the simulated mandated geography areas. Within the ASM heart failure cohort, we expect ASM to include approximately 164,000 unique heart failure episodes, 162,600 unique beneficiaries triggering episodes, and $1.6 billion in total episode FFS spending (Medicare Part A and Part B only) of allowed charges for each ASM performance year. Within the ASM low back pain cohort, we expect ASM to include approximately 441,000 unique low back pain episodes, 398,500 unique beneficiaries triggering episodes, and $1.2 billion in total episode FFS spending of allowed charges for each ASM performance year. To determine the number of ASM participants in each ASM cohort, we counted the number of clinicians in mandatory geographic areas (as described at § 512.710(f)) with the proposed specialty types (as described at § 512.710(d)) that furnished at least 20 episodes related to the ASM's cohort targeted chronic condition in CY 2023 (as described at § 512.710(e)). Similarly, to determine episode count, beneficiary count, and total spending estimates, we drew upon the historical data of ASM participants in the simulated mandatory geographic areas selected for participation.

We welcome public comments on the proposed scale of ASM.

b. Effects on ASM Participants

ASM would not alter the way ASM participants bill Medicare. Therefore, we believe that there will be no additional burden for ASM participants related to billing practices.

We believe the audit and retention policies of ASM are generally consistent with existing policies under Medicare. Additionally, the monitoring requirements for ASM are consistent with the monitoring and evaluation requirements already in place under 42 CFR 405.1110(b) for participants in models tested under section 1115A of the Act. Therefore, we believe the audit and retention policies and the monitoring and evaluation requirements do not add additional regulatory burden on ASM participants.

We do not believe that the model evaluation for ASM would include beneficiaries or clinicians completing surveys.

We estimated the administrative costs of adjusting to and complying with the measure reporting requirements for ASM to be approximately $3,077.36 per ASM participant per year. We believe the burden estimate for submitting data to meet the proposed quality, improvement activities, and Promoting Interoperability measure reporting requirements in sections III.D.2.d.(2), III.D.2.d.(4), and III.D.2.d.(5) of this proposed rule would apply to ASM participants that are and are not considered small entities (see section VI.E.7.b.(1). of this proposed rule for further discussion on the estimated effects of ASM on small businesses). To estimate the costs per ASM participant, we estimate the burden for submitting data in the quality, improvement activities, and Promoting Interoperability ASM performance categories generally using the same assumptions for time and labor categories for the staffing that the Quality Payment Program uses for MVP submissions in section V of this proposed rule. As discussed in section III.D.2.d.(1).(b) of this proposed rule, ASM participants would not need to submit data for the cost ASM performance category and the administrative claims measures in the quality ASM performance category. Therefore, we did not estimate burden for the administrative claims measures in the cost and quality ASM performance categories.

To estimate the burden for submitting quality measure data for an ASM cohort as described in section III.D.2.d.(2) of this proposed rule, we assume 50 percent of the ASM participants would submit data on quality measures using

the eCQM collection type, and the remining 50 percent of the ASM participants would submit data using the MIPS CQM collection type. For an ASM participant to submit a quality measure using the eCQM collection type, we assume it would take a total of 5.3 hours [1.33 hours for a computer system analyst to submit data, 1.33 hours for a Medical and Health Services Manager to review the measure specifications, and 0.66 hours each for a computer system analyst, Licensed Practical Nurse (LPN), billing clerk, and physician to review the measure specifications]. For an ASM participant to submit a quality measure using the MIPS CQM collection type, we assume it would take a total of 5.97 hours [2 hours for a computer system analyst to submit data, 1.33 hours for a Medical and Health Services Manager to review the measure specifications, and 0.66 hours each for a computer system analyst, LPN, billing clerk, and physician to review the measure specifications]. To calculate the estimated cost, we used the May 2024 wage rate data from the U.S. Department of Labor (*https://www.bls.gov/oes/current/oes_nat.htm*) and doubled the mean hourly wage to account for overhead and benefits. Accounting for overhead and benefits, we used salary estimates of $107.66/hr for a computer systems analyst, $132.44/hr for a Medical and Health Services Manager, $61.68/hr for a LPN, $47.60/hr for a billing clerk, and $296.74/hr for a physician. We estimate it would require ASM participants approximately 21.2 hours (4 eCQM measures x 5.3 hours) to submit data using the eCQM collection type or 23.88 hours (4 MIPS CQMs x 5.97 hours) to submit data using the MIPS CQM collection type for the required four quality data measures once annually. We estimate it would cost $658.37 (1.33 hours × $107.66/hr + 1.33 hours × $132.44/hr + 0.66 hours × $61.68/hr + 0.66 hours × $47.60/hr + 0.66 hours × $296.74/hr) per measure to submit quality data using the eCQM collection type and $730.50 (2 hours × $107.66/hr + 1.33 hours × $132.44/hr + 0.66 hours × $61.68/hr + 0.66 hours × $47.60/hr + 0.66 hours × $296.74/hr) per measure to submit quality data using the MIPS CQM collection type. Therefore, we estimate the total annual cost for an ASM participant to submit the required measures in the quality ASM performance category using the eCQM collection type would be $2,633.48 (4 eCQM measures × $658.37) or $2,922 (4 MIPS CQM measures × $730.50) using the MIPS CQM collection type.

We also estimate that data submission of the proposed improvement activities discussed in section III.D.2.d.(4). of this proposed rule would take 0.083 hours (or 5 minutes) and would be required once annually per ASM participant. Data submission for the Promoting Interoperability measures discussed in section III.D.2.d.(5). of this proposed rule would take 2.7 hours and would occur once annually per ASM participant. We used the salary estimate of $107.66/hr for a computer systems analyst to estimate burden for submitting data in the Promoting Interoperability and improvement activities ASM performance categories. For an ASM participant to submit data for the improvement activities ASM performance category, we estimate it would cost $8.94 ($107.66/hr × 0.083 hours × 1 submission). For data submission for the Promoting Interoperability ASM performance category, we estimate it would cost $290.68 ($107.66/hr × 2.7 hours × 1 submission). We estimate that the burden for collecting and reporting quality, improvement activities, and Promoting Interoperability measures for an ASM participant submitting data using the eCQM collection type would be 23.983 hours (21.2 hours + 0.083 hours + 2.7 hours) at a cost of $2,933.10 ($2,633.48 + $8.94 + $290.68) and 26.663 hours (23.88 hours + 0.083 hours + 2.7 hours) at a cost of $3,221.62 ($2,922 + $8.94 + $290.68) for an ASM participate submitting data using the MIPS CQM collection type. We estimate approximately 7,622 ASM participants that would report data, therefore, the total burden estimate for all ASM participants collecting and reporting the measures in the quality, improvement activities, and Promoting Interoperability performance categories would be approximately 193,012 hours (23.983 hours × 3,811 ASM participants + 26.663 hours × 3,811 ASM participants) at a cost of $23,455,621 ($2,933.10 × 3,811 ASM participants + $3,221.62 × 3,811 ASM participants).

Additionally, we assume that approximately 50 percent of ASM participants that are currently not participating in MIPS would need to submit a one-time registration to access the CMS Enterprise Portal User Account (EUA). We estimate that it would take approximately 1 hour for an ASM participant or their representative to submit the registration for EUA. We used the salary estimate of $107.66/hr for a computer systems analyst to submit the registration for EUA access. Therefore, we estimate it would cost $107.66 ($107.66/hr × 1 hour) per registration. We estimate approximately 530 ASM participants would submit the application for EUA access. Therefore, the total burden estimate for ASM participants submitting the registration for EUA access would be approximately 530 hours at a cost of $ 57,059.80 (530 hours × $107.66/hr). We note that we did not include the estimated burden for submitting the registration for EUA access in calculating the total estimated burden per ASM participant as this submission does not occur annually.

We welcome public comments on our proposed estimated burden impacts on ASM participants.

c. Effects on Small Entities

As described in section VI.H of this proposed rule, the RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. HHS uses an RFA threshold of at least a 5 percent impact on the affected entities within an identified industry to determine whether a proposed rule is likely to have ''significant'' impacts on small entities.[427] Approximately 95 percent of practitioners, other suppliers, and providers are considered small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities. Although many ASM participants may be small entities as that term is used in the RFA, the proportion of revenue from Medicare Part B covered professional services to which ASM would adjust payments would represent a small fraction of revenue generated by the ASM participant.

Our analysis assumed that ASM would include only Medicare FFS beneficiaries receiving services from ASM participants. During 2024, 53.3 percent of Medicare beneficiaries with both Medicare Part A and Part B coverage on average are estimated to be enrolled in Medicare Advantage plans.[428] ASM participants may also

[427] Office of Advocacy, Small Business Administration. (2012). A Guide for Government Agencies, How to Comply with the Regulatory Flexibility Act, Implementing the President's Small Business Agenda and Executive Order 13272, Retrieved from *www.sba.gov/sites/default/files/rfaguide_0512_0.pdf* (accessed March 18, 2019).

[428] This figure comes from the 2024 Medicare Trustees Report, Table IV.C1, p157 from the footnote that has the A and B share.

serve patients with other coverage, such as Medicaid or commercial insurance. Given that ASM would only adjust payments to Medicare Part B payments for covered professional services based on performance—not other revenue from other payers like Medicare Advantage and commercial insurance that we expect to be about 50 to 60 percent of total revenue combined—we expect that the anticipated average impact of revenue based solely on Medicare Part B payments for covered professional services to be less than 1 percent. Therefore, we determine that the proposed provisions of ASM would not have a greater than 5 percent impact on total revenues on a substantial number of small entities.

As discussed earlier in section VI.E.b.(1). of this proposed rule, we believe that burden estimate of reporting the required measures and activities for ASM would be the same for ASM participants regardless of their small business status.

We welcome public comments on our analysis that estimates no differential impact of ASM on small entities.

d. Effects on the Medicare Program

(1) Overview

Under the current Medicare FFS payment system, services are paid on a per service basis to clinicians through the PFS. As a proposed mandatory model, ASM would test whether rewarding clinicians based on measures of quality, cost, care coordination, and CEHRT interoperability results in enhanced quality of care and reduced costs through more effective upstream chronic condition management. As proposed, ASM would test adjusting Medicare Part B covered professional services claims of an ASM participant according to a payment adjustment that is determined by an ASM participant's performance on a set of measures they must report (see sections III.D.2.d and III.D.2.f of this proposed rule). For each ASM participant, the payment adjustment amount would be determined as proposed at § 512.750.

ASM is not a total cost of care model. ASM participants would still bill traditional FFS Medicare for services as usual.

(2) Data and Methods

A simulation based on the proposed policies was created to estimate the financial impacts of ASM. The simulation relied upon simulated final scores and ASM payment adjustments, as well as assumptions derived from EBCM episodes related to ASM's targeted chronic conditions from CY 2023 and Medicare FFS claims data. We reviewed these assumptions and determined them to be reasonable for the estimates.

We simulated an ASM final score based on the methodology described in sections III.D.2.d and III.D.2.e of this proposed rule.

For scoring the quality ASM performance category, we first made assumptions on who would report based on whether clinicians were engaged in the CY 2023 MIPS performance period/2025 MIPS payment year and submitted data. We believe that historical engagement and submission of data to MIPS would be an appropriate predictor of an ASM's participant likelihood to submit data to meet ASM's requirements. For clinicians we identified as engaged, we assumed the ASM participants would report all required quality measures (meeting data completeness requirements and case minimum requirements) as discussed in section III.D.2.d.(2). For ASM participants who were eligible for the 2023 MIPS performance period/2025 MIPS payment year, we generally assigned participants as engaged or not engaged based on their 2023 MIPS participation. We carved out an exception for clinicians who were labeled ''not engaged'' in MIPS but had MIPS final scores of 75 as we believe most of these clinicians received extreme and uncontrollable circumstances approval (which would result in a final score of 75 points equal to the MIPS performance threshold).[429] For these participants, we cleared the engaged status flag. For ASM participants who did not have a populated engaged status flag (either because they were not eligible for CY 2023 MIPS performance period/2025 MIPS payment year or because we cleared their engaged status flag as described earlier), we randomly assigned engaged and not engaged flags, based on practice size, to mimic the proportion of ASM participants who were engaged and not engaged in the CY 2023 MIPS performance period/2025 MIPS payment year. This process resulted in all ASM participants receiving an engaged or not engaged assumption for the purpose of simulating a final score and payment adjustment.

In calculating a quality ASM performance category score for engaged participants (and we assumed participants would submit all quality measures meeting data completeness and case minimum requirements), we did not have adequate historical MIPS performance data for the proposed measures in sections III.D.2.d.(2).(b) and III.D.2.d.(2).(c). Therefore, we randomly assigned measure achievement points for each proposed ASM measure. The values ranged from 1 to 10 based on decile benchmarks to simulate performance using benchmarks based on ASM participants only. We recognize that this method may not accurately assign performance for an individual. However, we believe it approximates the relative differences within a benchmark distribution and represents the best available approach given that most ASM participants that previously participated in MIPS did not submit the proposed quality ASM performance category measures in MIPS.

For the ASM participants we identified as not engaged and assumed would not submit quality measures, we assigned a score of zero for the quality ASM performance category. Ultimately, these non-engaged ASM participants received an ASM final score of zero in our model for not meeting the required minimum data submission requirements, as discussed in section III.D.2.e.(2).

For the cost ASM performance category score proposed in section III.D.2.d.(3), we assigned measure achievement points and calculated a cost ASM performance category score using heart failure and low-back pain episode-based cost measure files based on CY 2023 administrative claims data.

To simulate the improvement activity ASM performance category score and scoring adjustment that is proposed in section III.D.2.d.(4).(d), we relied on the same engagement assumptions that we used for the quality ASM performance category. We assumed that engaged ASM participants would also report all the required improvement activities. These ASM participants would have an improvement activities ASM performance category score of 100 percent and would not have any negative ASM improvement activities scoring adjustment. For ASM participants we identified as not engaged, we assigned an ASM performance category score of zero and an improvement activities ASM performance category scoring adjustment of negative 20 points.

For the Promoting Interoperability ASM performance category, we calculated the Promoting Interoperability ASM performance category score and scoring adjustment discussed in section III.D.2.d.(5).(e) using proxies for the Promoting Interoperability ASM performance category score. Our primary proxy for

[429] We also excluded one participant, who was facility-based, who had a score greater than 75.

the Promoting Interoperability ASM performance category score was to use the CY 2023 MIPS performance period/2025 MIPS payment year Promoting Interoperability performance category score where it was available. The Promoting Interoperability ASM performance category scoring adjustment was calculated using the formula discussed in III.D.2.e.(1). of this proposed rule. If an ASM participant was not eligible for the 2023 MIPS performance period/2025 MIPS payment year, we assumed that the Promoting Interoperability ASM performance category score would be 100, as over half of potential ASM participants that were eligible in the CY 2023 MIPS performance period/2025 MPS payment year and reported Promoting Interoperability information had a Promoting Interoperability performance category score of 100. ASM participants with a Promoting Interoperability ASM performance category score of 100 would not have a negative scoring adjustment for the Promoting Interoperability ASM performance category. For ASM participants who were in the CY 2023 MIPS performance period/2025 MIPS payment year but did not have a 2023 MIPS Promoting Interoperability performance category score because the performance category was reweighted, we assumed these participants may not have CEHRT and thus may not be able to report measures for the Promoting Interoperability ASM performance category. For these ASM participants, we assumed a Promoting Interoperability ASM performance category score of 0 which translates into a Promoting Interoperability ASM performance category scoring adjustment of negative 10 points. We anticipate that these clinicians could use CEHRT in the future and that we may be overestimating the number of ASM participants without CEHRT.

Finally, we simulated a final score for each ASM participant using the formula proposed in section III.D.2.e. of this proposed rule. As described in this same section, we utilized scores for the quality and cost ASM performance categories and the scoring adjustments for the improvement activities and Promoting Interoperability ASM performance categories. We also calculated a complex patient scoring adjustment, described in section III.D.2.e.(3). of this proposed rule, and applied a small practice scoring adjustment, described in section III.D.2.e.(4). of this proposed rule, using variables in the Quality Payment Program final eligibility file for the CY 2023 MIPS performance period/2025 MIPS payment year. As described earlier in this section, any ASM participants who we assumed would not be engaged, were assigned a final score of zero points.

Using the simulated final scores for ASM participants, we simulated the resulting payment adjustments using the methods described in section III.D.2.f of this proposed rule. We used Medicare Part B paid amounts from claims for covered professional services in CY 2023 to calculate each ASM incentive pool. For each ASM cohort, we calculated the scaling factor and the resulting ASM payment adjustment factor and ASM payment multiplier for each ASM participant based on their final score and the proposed logistic exchange function with a midpoint at the median final score for the applicable ASM cohort.

We seek comments on our methods to estimate an ASM final score, ASM payment adjustment factor, and ASM payment multiplier for each ASM participant.

(3) Medicare Estimates

In this proposed rule, we summarize the estimated impact of ASM in Table 93. We estimate a net impact of $155.5 million in net savings to the Medicare program due to ASM from January 1, 2029 through December 31, 2033.

The estimated impact reflects the proposed provisions described in this proposed rule. To summarize relevant proposed provisions, we propose a model test period covering five ASM performance years from January 1, 2027 through December 31, 2031 with payment adjustments occurring in corresponding ASM payment years from January 1, 2029 through December 31, 2033. As discussed earlier in this section of this proposed rule, we propose that ASM would operate in 25 percent of all CBSAs and metropolitan divisions. We also propose a payment methodology at § 512.750 under which ASM participants would be subject to a maximum risk level for each ASM payment year, which we propose would range from 9 percent to 12 percent over the ASM test period, and under which an ASM participant would receive an ASM payment adjustment factor based on their final score and the amount of each ASM incentive pool redistributed to each ASM cohort in the form of scaled payment adjustments.

The estimated impact uses Medicare Part B paid amounts for covered professional services attributed to the simulated ASM participants in CY 2023 to determine the baseline spending. We trended the baseline spending in CY 2023 forward to the ASM payment years (CY 2029 through CY 2033) using the trend assumptions underlying the 2024 Medicare Trustees Report. We calculated the financial impact percentage as the downward ASM risk level (that is, the percentage of ASM participant spending at risk for each ASM participant for a given ASM payment year) multiplied by 15 percent (that is, the average amount of the ASM incentive pool that would not be distributed to ASM participants in the form of payment adjustments). We applied this financial impact percentage to the trended baseline spending for each ASM payment year. The estimates in Table 93 do not account for behavioral effects that could occur as a result of implementing ASM. We refer readers to the sensitivity analysis later in this section of this proposed rule for further discussion on potential behavioral effects on spending as a result of ASM.

Thus, we estimate that the Medicare program would save $155.5 million over ASM's model test period. This estimate excludes changes in beneficiary cost sharing liability to the extent it is not a Federal outlay under the policy.

TABLE 93: ESTIMATES OF MEDICARE PROGRAM SAVINGS (MILLIONS $) FOR THE AMBULATORY SPECIALTY MODEL (Starting January 1, 2029)

Year	2029	2030	2031	2032	2033	Total
Baseline Spending ($M)	$2,171.3	$2,235.9	$2,302.4	$2,368.5	$2,439.1	$11,517.2
Financial Impact (%)	-1.35%	-1.35%	-1.50%	-1.65%	-1.80%	-1.54%
Financial Impact ($M)	-$29.3	-$30.2	-$34.5	-$39.1	-$43.9	-$177.0

We welcome public comments on our estimated impact of ASM on the Medicare program.

(i) Sensitivity Analysis

ASM participants would receive payment adjustments based on their final scores. We expect these payment adjustments to incentivize participants to improve their ASM performance category scores, which could impact costs. The degree to which the participants would be incentivized to alter their behavior would depend on the magnitude of the payment adjustments, and the magnitude of the payment adjustment, including whether it is positive or negative, depends on the distribution of final scores used in the payment adjustment calculation. Since that distribution is unknown, we have not incorporated behavioral effects into the estimate.

There is evidence that shows that delivering higher-value care could lead to savings for Medicare. For example, better adherence to clinical guidelines for heart failure patients under ASM could reduce the number of hospitalizations that occur among ASM beneficiaries. Since hospitalizations and associated costs comprise a large share of total heart failure patient spending, such changes could reduce spending significantly. Similarly, improved adherence to clinical guidelines for low back pain could lead to lower rates of imaging service use, fewer invasive surgeries, and lower spending among ASM beneficiaries. However, it is unknown how well these changes in care patterns could ultimately be implemented.

Alternatively, some of the quality measures used in determining final scores could motivate ASM participants to deliver more services than they would have absent the model. For example, preventive care and screening metrics for BMI and depression could incentivize participants to provide more care for some patients with low back pain, and metrics on controlling high blood pressure could have a similar effect. Another consideration is that ASM participants could react to negative payment adjustments with adverse behavior (for example, increasing coding intensity) to help offset revenue losses.

To explore the potential financial impacts of these behavioral effects, we adjusted the original impact estimates under several illustrative scenarios using different amounts of behavioral effects, measured in percent change in spending. Table 94 shows estimated financial impacts on total Medicare Parts A and B spending from heart failure and low back pain episodes attributed to our simulated ASM participants based on the estimated behavioral effect levels. The estimated financial impacts presented in Table 94 present one set of assumptions on the behavioral effect on spending; the behavioral impact on spending could be larger in magnitude than the illustrative scenarios here. The resulting financial impact estimates (in millions of dollars) of each scenario in Table 94 represent the total estimated impact across ASM's test period.

TABLE 94: ASM FINANCIAL IMPACT BY ILLUSTRATIVE BEHAVIORAL EFFECTS ON SPENDING, CY 2029 THROUGH CY 2033

Behavioral Effect	Adjusted Financial Impact ($M)
-2%	-$526.7
-1%	-$351.9
0%	**−$177.0***
1%	-$2.2
2%	$172.7

* The adjusted financial impact without any behavioral effects is equal to the total estimated financial impact during ASM's test period included in Table 95.

We welcome public comments on our sensitivity analysis related to the estimated financial impacts of ASM.

d. Effects on the Market

There could be spillover effects in the non-Medicare market, because of the implementation of ASM. Testing changes in Medicare payment policy may have implications for non-Medicare payers. For example, non-Medicare patients may benefit if participating providers and suppliers introduce system-wide changes that improve the coordination and quality of health care. Other payers may also be developing payment models and may align their payment structures with CMS or may be waiting to utilize results from CMS' evaluations of payment models. Because there is uncertainty whether and how this evidence applies to a test of these new payment models, our analyses assume that spillover effects on non-

Medicare payers would not occur, although this assumption is subject to considerable uncertainty. We solicit comments on this assumption and evidence on how this rulemaking would impact non-Medicare payers and patients.

We welcome public comments on our impact of ASM on the market.

5. Impact of Provisions for Medicare Prescription Drug Inflation Rebate Program

In this proposed rule, we are proposing to codify new policies to implement the Medicare Part B Drug Inflation Rebate Program, including CMS' method for calculating the payment amount in the payment amount benchmark quarter if a published payment limit is equal to zero or negative. Additionally, we are proposing to codify revised and new policies to implement the Medicare Part D Drug Inflation Rebate Program, including but not limited to, a claims-based methodology to remove 340B units beginning January 1, 2026 in accordance with § 428.203(b)(2) and the establishment of a Part D claims data 340B repository.

We expect the proposed policies regarding the Medicare Part B Drug Inflation Rebate Program will reduce the amount of rebates collected from Medicare Part B drugs as the proposed policies exclude certain drugs and biologicals and certain billing and payment codes from the definition of a Part B rebatable drug. The magnitude of the reduction cannot be calculated due to a lack of calculated Part B drug inflation rebates. We do not expect the proposed policies regarding the Medicare Part D Drug Inflation Rebate Program to have a material impact on the calculation of total rebates in aggregate, as these proposals are refinements to regulatory requirements and do not otherwise change the scope of rebatable drugs.

In the CY 2025 PFS final rule (89 FR 98593), CMS finalized the proposal at § 428.203(b)(2)(i) to exclude from the total number of units determined under § 428.203(a) units for which a manufacturer provided a discount under the 340B Program (''340B units''), as well as the proposal at § 428.203(b)(2)(ii) to determine the total number of 340B units by using data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period. However, after consideration of the data limitations of the proposed estimation methodology and public comments, CMS did not finalize the proposed estimation methodology for the applicable period that begins on October 1, 2025. Instead, CMS stated that it would explore avenues to implement section 1860D–14B(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program starting January 1, 2026, through the establishment of a 340B repository. CMS is not reproposing the estimation methodology proposed in the CY 2025 PFS proposed rule, but did consider this estimation percentage as an alternative to the proposal this year, as described in section III.E.3.c.iii. of this proposed rule titled ''Alternative Policy Considered''. CMS therefore is proposing in this rule instead, in accordance with § 428.203(b)(2), a claims-based methodology to remove 340B units beginning January 1, 2026, and is proposing the establishment of a Part D claims data 340B repository. As CMS describes in section III.E.3.c.iv. of this proposed rule a 340B repository will not be operational until after the statutory requirement to remove 340B units goes into effect (that is, January 1, 2026). CMS is therefore proposing a claims-based methodology to remove 340B units from rebate calculations beginning on January 1, 2026.

We do not anticipate our inflation rebate proposed policies will result in an incrementally significant financial impact on the Medicare program relative to a baseline that reflects the status quo in the absence of any modifications to inflation rebate regulations at parts 427 and 428 as these proposed policies are refinements to regulatory requirements.

6. Medicare Shared Savings Program

a. General Impacts

As of January 1, 2025, 11.2 million Medicare beneficiaries receive care from a healthcare provider in one of the 477 ACOs participating in the Shared Savings Program.[430] The policies in this proposed rule are designed, in part, to further improve the quality of care furnished by ACOs by revising the quality performance standard and reporting requirements, encourage more ACOs to move to a two-sided risk model, and promote the continued integrity and fairness of Shared Savings Program financial calculations.

The ACOs in the program in performance year 2023 combined to cover $128 billion in benchmark target spending. Actual ACO spending totaled approximately $123 billion—about $5.2 billion below combined benchmark. After accounting for $3.1 billion in net shared savings to ACOs, the remaining difference of $2.1 billion would represent federal savings from the program if benchmarks proved to be a perfect counterfactual in aggregate. The Regulatory Impact Analysis in the December 2018 final rule (see 83 FR 68044 through 68050) provided evidence that the benchmarks for performance year 2016 combined to represent a lower spending target than the theoretical counterfactual for estimating what spending would have been in the total FFS Medicare Program had ACOs not been present that year. Evidence included all of the following:

- Lower combined market level spending trends observed for cohorts of Hospital Referral Regions (HRRs) with significant ACO formation relative to other HRRs without material ACO activity.
- Spillover effects on spending outside of ACO benchmarks, including non-assigned beneficiaries served by ACO providers and suppliers.
- Program design elements that restrained benchmark levels, including rebasing with agreement periods of only 3 years, feedback of communal ACO effects on national trends used to update benchmarks, and restrictions on risk adjustment.

The Regulatory Impact Analysis in the December 2018 final rule (83 FR 68048) estimated that ACOs may have been responsible for half of the 1.2 percent difference in spending trend observed between national average and the subset of HRRs with minimal ACO activity through 2016. This scaled impact represented about four times the gross savings measured relative to benchmarks, or about 0.5 percent net savings across the entire FFS program after accounting for shared savings payments despite benchmarks only officially showing roughly equivalent overall reductions in spending relative to benchmark compared to total outlays from shared savings payments. Since 2016, changes to the Shared Savings Program have potentially moved the benchmarks closer to what the spending would have been in the absence of the program.

Updating that study to compare more recent trends for markets with varying levels of ACO activity requires updates to the initial study approach, as ACOs have become active in an increasing majority of markets across the nation. There no longer exists a sufficient number of HRRs with nominal ACO

[430] See ''Shared Savings Program Fast Facts—As of January 1, 2025'', available at *https://www.cms.gov/files/document/2025-shared-savings-program-fast-facts.pdf.*

penetration in 2023 to construct a de facto counterfactual similar to the study in the December 2018 final rule. An alternate method, however, continues to show spending trends inversely correlated with ACO penetration over time. Roughly five percent of beneficiaries live in HRRs with ACO penetration consistently below the national average by 10 percentage points or more over the 2013 to 2023 time series (''Lagging'') while about 9 percent of beneficiaries live in HRRs with ACO penetration 10 percentage points or more above the national average over the same period (''Leading''). Relative to the 2011 base year immediately preceding the Shared Savings Program's introduction, growth in average unadjusted per capita spending in 2023 for Lagging and Leading markets was 4.3 percent higher and 3.9 percent lower than the national average. The divergence in spending growth was even wider after HCC risk adjustment: 5.3 percent higher for Lagging markets and 4.6 percent lower for Leading markets.

These market trends potentially overstate the impact that ACOs may have had on program spending in 2023. The portion of the difference in spending growth driven by risk adjustment may reflect efforts by ACOs to increase coding intensity. Leading markets may exhibit higher participation rates in CMMI models. ACO participation may naturally flock to markets with lower trend for exogenous reasons. Still, conservatively assuming only 35 percent of the unadjusted trend gap is causally related to Shared Savings Program ACOs would roughly validate the $5.2 billion gross savings indicated by comparing aggregate program benchmarks to actual ACO spending in 2023, and the roughly $2 billion in net savings to FFS Medicare. A more optimistic estimate, assuming Shared Savings Program ACOs were responsible for 50 percent of the risk-adjusted spending growth difference (mirroring assumptions used in the December 2018 final rule), would imply net savings roughly three times greater, or roughly $6 billion net savings for FFS Medicare.

A study of benchmark performance for cohorts of ACOs that participated in both performance year 2022 and performance year 2023 (with related details in Table 95) reveals that the BASIC track is the primary driver of net savings (as measured by program benchmark target spending less actual spending and shared savings payments). Twenty-five ACOs moved from a one-sided model of the BASIC track (Level A or B) to a two-sided model of the BASIC track (Level C, D or E) over performance year 2022 to 2023 and showed the highest rates of net savings to the program at 2.4 percent of benchmark. One hundred six ACOs remained in two-sided models of the BASIC track (Levels C, D or E) over that same two-year period and reached 2.3 percent net savings. Both cohorts showed the lowest average unadjusted per capita spending trend over this two-year period at about 6 percent. One hundred thirty-nine ACOs remained in one-sided models of the BASIC track (Level A or B) over both years and saw net savings grow from 1.4 percent to 1.7 percent by 2023. The 135 ACOs that remained in the ENHANCED track over these 2 years showed 1.3 percent net savings in 2023, up slightly from 1.2 percent for 2022. Findings are compared for each cohort in the study in Table 95.

TABLE 95: WEIGHTED AVERAGE FINANCIAL PERFORMANCE BY ACO COHORT DEFINED BY PATH OF PARTICIPATION OVER PY 2022 TO PY 2023 ($ BILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

Participation Pathway From PY22 to PY23	ACO Count	Benchmark ($B) [A]	Gross Savings % of Benchmark [B]		Shared Savings % of Benchmark [C]		Net Difference % of Benchmark [D]		Unadjusted Per Capita Spending Growth 2022 to 2023 [E]
			2022	2023	2022	2023	2022	2023	
BASIC AB->AB	139	34	-2.2%	-2.7%	0.8%	1.0%	-1.4%	-1.7%	1.08
BASIC AB->CDE	25	5	-4.3%	-4.4%	1.6%	2.1%	-2.7%	-2.4%	1.06
BASIC CDE->CDE	106	26	-3.8%	-4.4%	1.8%	2.2%	-2.0%	-2.3%	1.06
BASIC->ENHANCED	10	5	-5.0%	-6.9%	2.2%	5.1%	-2.8%	-1.8%	1.13
ENHANCED->ENHANCED	135	48	-4.6%	-5.0%	3.4%	3.7%	-1.2%	-1.3%	1.07

Notes: "Participation Pathway" are the following groups of ACOs, identified by the track/level of their participation in PY 2022 and PY 2023: "BASIC AB->AB" are ACOs that remained in a one-sided model of the BASIC track (Level A or B) for PY 2022 and PY 2023; "BASIC AB->CDE" are ACOs that participated in a one-sided model of the BASIC track (Level A or B) for PY 2022, and advanced to a two-sided model of the BASIC track (Level C, D, or E) for PY 2023; "BASIC CDE->CDE" are ACOs that remained in two-sided models of the BASIC track (Levels C, D or E) for PY 2022 and PY 2023; "BASIC->ENHANCED" are ACOs that participated in the BASIC track in PY 2022, and entered a new agreement period to participate in the ENHANCED track for PY 2023; and "ENHANCED->ENHANCED" are ACOs that remained in the ENHANCED track for PY 2022 and PY 2023.

"Benchmark" [A] is the total PY 2023 benchmark spending for each cohort, in billions of dollars.

"Gross Savings % of Benchmark" [B] is the percentage that a cohort's combined spending deviated from their combined benchmark spending (a negative percentage implies savings).

"Shared Savings % of Benchmark" [C] is the cohort's combined shared savings (and losses) paid to (from) ACOs expressed as a percentage of benchmark.

"Net Difference % of Benchmark" [D] is the sum of "Gross Savings % of Benchmark" [B] and "Shared Savings % of Benchmark" [C] and represents the portion of gross savings (as measured by program benchmarks) retained by the program.

"Unadjusted Per Capita Spending Growth 2022 to 2023" [E] is the combined average per capita spending for the cohort in 2023 divided by the corresponding average for the same cohort in 2022.

We will continue to study program data as it emerges, including the extent that new ACOs serving higher spending populations of beneficiaries enter the program and drive down spending in the BASIC track, and whether ACOs with lower relative spending migrating to the ENHANCED track are able to demonstrate materially lower spending trend after multiple years under that higher incentive arrangement.

Two proposed changes to Shared Savings Program policies, described in this proposed rule, are estimated to have a material impact on overall program spending. First, we anticipate that there may be an incremental cost for the proposal to allow only 5 performance years in a one-sided model (down from 7 performance years under the current regulations) for ACOs that are inexperienced with performance-based risk Medicare ACO initiatives, with no prior participation in the Shared Savings Program, applying to enter an agreement period beginning on or after January 1, 2027. The cost would depend on the frequency that the extra two performance years in a one-sided model would have proven essential for certain ACOs serving higher-cost populations of beneficiaries to transition to performance-based risk and remain in the Shared Savings Program for multiple agreement periods. We have already implemented Shared Savings Program changes to increase participation from this general type of ACO, including ending negative regional adjustments to benchmarks, implementing the health equity benchmark adjustment (proposed in this rule to be renamed ''population adjustment''), and providing a prior savings adjustment to the rebased benchmark. However, some ACOs remaining under a one-sided model throughout their first agreement period would likely face significant uncertainty in predicting how these policies may or may not help provide margin for their rebased benchmark at the start of a potential second agreement period. Some such ACOs may find that uncertainty an insurmountable hurdle to renewing their participation in the Shared Savings Program directly into performance-based risk in the first year of their second agreement period. On the other hand, there is a potential for improved care management and increased savings from other ACOs that successfully manage the transition to performance-based risk earlier than they would have, if they had access to 7 performance years instead of 5 performance years of one-sided model participation in the Shared Savings Program. On net, we project the eventual termination of participation by some ACOs will involve a marginally greater reduction in program savings compared to the potential increase in efficiency from earlier transition to performance-based risk from other ACOs, leading to $370 million higher spending over 10 years, ranging from $50 million lower spending to $920 million higher spending at the 10th and 90th percentiles, respectively. The annual and 10-year total projections for this proposal are detailed in Table 96.

TABLE 96: PROJECTED IMPACT OF REDUCING NEW AND RISK INEXPERIENCED ACOS ELIGIBILITY TO 5 YEARS FROM THE CURRENT 7 YEARS ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	Total
Impact Estimate	0	0	0	0	20	40	80	90	70	70	**370**
Estimate Range:											
Low Estimate (10th Percentile)	0	-10	-20	-40	-40	-20	0	0	10	10	**-50**
High Estimate (90th Percentile)	0	10	10	50	80	130	180	200	160	140	**920**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The second area of material impact on program spending is from the proposals to allow ACOs to enter a new agreement period in the BASIC track when an ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, in combination with the proposal to cap the shared savings or shared losses at a lesser amount for ACOs with fewer than 5,000 assigned beneficiaries in any of the three benchmark years. These proposals are expected to marginally increase participation by ACOs that would have otherwise been unable to satisfy the 5,000 assigned beneficiary minimum in BY1, BY2, or both, and to do so under an alternative cap that would provide a safeguard against excessive payments if assignment were to grow dramatically during the agreement period despite very low assignment in one or more benchmark years. The alternative cap is also anticipated to generate savings from ACOs that would have otherwise changed composition during the agreement period and exhibited reduced assignment in one or more benchmark years in ways that could have produced excessive shared savings payments due to random variation. The annual and 10-year total projections for this proposal are detailed in Table 97.

TABLE 97: PROJECTED IMPACT FOR ALLOWING ACOS TO ENTER NEW AGREEMENT PERIOD DESPITE EITHER BY1 AND/OR BY2 ASSIGNMENT BELOW 5,000 COMBINED WITH ALTERNATIVE CAP ON SHARED SAVINGS / SHARED LOSSES FOR ACOS WITH FEWER THAN 5,000 ASSIGNED BENEFICIARIES IN ANY BY ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	Total
Impact Estimate	0	0	−10	−10	−30	−50	−70	−80	−70	−70	**−390**
Estimate Range:											
Low Estimate (10th Percentile)	0	−10	−10	−30	−50	−90	−100	−120	−100	−110	**−540**
High Estimate (90th Percentile)	0	0	0	0	−10	−30	−30	−40	−40	−40	**−250**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The remaining proposed changes to the Shared Savings Program regulations, as described in section VII.A.2.e. of this proposed rule, are not estimated to have an impact on program spending at the aggregate level.

The combined impacts for all Shared Savings Program provisions are shown in Table 98. Because estimates are rounded to the nearest $10 million, and because the percentiles are independently sorted for each year and for the 10-year totals, the annual estimates may not sum to exactly match the total 10-year estimates.

TABLE 98: Projected Impact of Medicare Shared Savings Program Provisions (Individually Shown in Tables 96 and 97) ($ Millions; Negative Values Represent Savings to the Program)

	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	Total
Impact Estimate	0	0	-10	-10	-10	-10	10	10	0	0	**-20**
Estimate Range:											
Low Estimate (10th Percentile)	0	−20	−30	−70	−90	−110	−100	−120	−90	−100	**−590**
High Estimate (90th Percentile)	0	10	10	50	70	100	150	160	120	100	**670**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10 year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10 year totals.

b. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the new proposed policies described in section III.F. of this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following proposed policies require the use of our authority under section 1899(i) of the Act: the proposal to change the requirements for ACOs' progression to performance-based risk under the program's participation options (described in section III.F.2. of this proposed rule); the proposal to potentially apply an alternative loss recoupment limit, in conducting financial reconciliation for each performance year, for an ACO with fewer than 5,000 assigned beneficiaries in any BY, for agreement periods beginning on or after January 1, 2027 (described in section III.F.4.c. of this proposed rule); the proposal to exclude ACOs that fall below 5,000 assigned beneficiaries in any BY from being eligible to benefit from the policies providing certain low revenue ACOs participating in the BASIC track with additional opportunities to share in savings, for agreement periods beginning on or after January 1, 2027 (described in section III.F.4.c. of this proposed rule); and the proposal to mitigate shared losses for an ACO determined to be affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, for performance year 2025 and subsequent performance years (described in section III.F.7.c. of this proposed rule). When considered together, these changes to the Shared Savings Program's payment methodology are expected to improve the quality and efficiency of items and services furnished under the Medicare program by hastening the transition to performance-based risk while improving protections against excessive liabilities both for shared losses charged to participants and shared savings paid by the program. These changes are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies we have adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule, we estimated that the projected impact of the payment methodology that incorporates all policies finalized by that final rule would result in $4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excluded the policies that we have enacted relying on section 1899(i)(3) of the Act as authority (*see* 87 FR 70195 and 70196). The marginal impact of the proposed changes in the CY 2024 PFS final rule were estimated to lower net spending by $330 million over the subsequent 10-year period for all new policies combined, including the cap an ACO's regional service area risk score growth, the addition of a new third step to the

beneficiary assignment methodology, and the revised approach to identify the assignable beneficiary population (88 FR 79496). The marginal impact of the changes in the CY 2025 PFS final rule were estimated to lower net spending by an additional $200 million in total through 2034 (89 FR 98527). The marginal impact of the changes in this proposed rule is estimated to be a $20 million reduction in net spending. The cumulative impact of all policies (including those in this proposed rule) is estimated to result in more than $4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the policies we have enacted relying on section 1899(i)(3) of the Act as authority. Therefore, we estimate that program expenditures associated with the implementation of the provisions in this proposed rule would not be greater than those that would result under the statutory payment model, consistent with the requirements of section 1899(i)(3)(B) of the Act.

We will continue to reexamine this projection in the future to ensure that an alternative payment model does not result in additional program expenditures and so continues to satisfy the requirement under section 1899(i)(3)(B) of the Act. Additional Shared Savings Program data beginning to accumulate after the end of the PHE for COVID–19, along with emerging information on the characteristics of, and performance trends for, new entrants in the Shared Savings Program for agreement periods beginning on January 1, 2024, and January 1, 2025, are anticipated to gradually improve our ability to reevaluate program impacts in a comprehensive fashion. If we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake notice and comment rulemaking to adjust the payment model to ensure continued compliance with the statutory requirements.

7. Changes to the Regulations Associated With the Ambulance Fee Schedule

As outlined in section III.H. of this proposed rule, section 3203 of the American Relief Act of 2025 and most recently, section 2203 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons sets forth in those subsections through September 30, 2025. The ambulance extender provisions are enacted through legislation that is self-implementing. We are proposing only to revise dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions. We have estimated the cost of these provisions to be $20 million in FY 2025 and $10 million in FY 2026 and the Congressional Budget Office (CBO)'s estimated cost of these provisions was $36 million in FY 2025 and $27 million in FY 2025 to 2029 *(https://www.cbo.gov/system/files/2025-03/hr1968.pdf, page 4).*

8. Updates to the Quality Payment Program

In this section of this proposed rule, we estimated the impacts of the Quality Payment Program policies. We estimated participation, final scores, and payment adjustments for eligible clinicians participating through MIPS, and the Advanced APMs, and MVPs. We also presented the impacts on the number of expected Qualified Participants (QPs) and associated APM Incentive Payments that result from our proposed policies, relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

a. Overall Impact Modeling Approach and Data Assessment

(1) MIPS Impact Modeling Approach

For this proposed rule, we used a similar modeling approach as the CY 2025 PFS final rule (89 FR 97710 through 99057). We created two MIPS impact models: a baseline and a proposed policy model. Our baseline model includes previously finalized policies that are in effect for the CY 2025 performance period/2027 MIPS payment year and in the absence of any of the new policies in this proposed rule. Examples of previously finalized policies included in the baseline model are updated QP and partial QP thresholds and the previously finalized list of MVPs. Please refer to CY2025 PFS final rule for a comprehensive, detailed discussion of finalized policies (89 FR 97710).

The policies model builds on the baseline model and incorporates the new MIPS policies we are proposing for the CY 2026 performance period/2028 MIPS payment year included in this proposed rule. By comparing the baseline model to the proposed policies model, we are able to estimate the impact of the specific policies in this proposed rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This approach enables our model to align as much as possible with actual MIPS scoring and minimize differences between our projections and actual policy implementation. Our model's limitations are outlined later in this impact analysis.

(2) Data Used To Estimate Future MIPS Performance

In the CY 2025 PFS final rule (89 FR 98531), we explained our decision to use CY 2022 performance period submissions data. We noted that using CY 2022 performance data presents the most current data and aligns participation, final scoring, and payment adjustment analysis around the same common data set. For this proposed rule, CY 2023 performance data is the most recently available data for us to construct a model simulation for this proposed rule.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

Beginning with QP Performance Period 2017 (payment year 2019), through the Medicare Option, eligible clinicians who are determined to have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs are QPs for the applicable QP performance period and the corresponding payment year. In payment years 2019 through 2024, these QPs received a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the base year (the calendar year immediately preceding the payment year). In payment year 2025, eligible clinicians who attained QP status for QP Performance Period 2023 will receive a lump-sum APM Incentive Payment equal to 3.5 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. In payment year 2026, eligible clinicians who attained QP status in QP Performance Period 2024 will receive a lump-sum APM Incentive Payment equal to 1.88 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2025.

Beginning with QP Performance Period 2019 (payment year 2021), in addition to the Medicare Option, the All-Payer Combination Option also affords eligible clinicians an opportunity at QP status. The All-Payer Combination Option allows eligible clinicians to become QPs by assessing a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a given QP Performance Period are not subject to MIPS reporting requirements and payment adjustments for the contemporaneous MIPS performance period/payment year. Eligible clinicians who do not become QPs but who meet a lower threshold requirement to become Partial QPs for the year may elect whether or not to report to MIPS. If they elect to report, they are scored in and receive a payment adjustment under MIPS. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Separately from the APM Incentive Payment, beginning in payment year 2026, there are two separate PFS CFs—one for eligible clinicians who are QPs for the year (the qualifying APM CF), and the other for all non-QP eligible clinicians and other suppliers paid under the PFS (the non-qualifying APM CF). The update to the qualifying APM CF for a year is 0.75 percent, whereas the update to the non-qualifying APM CF for a year is 0.25 percent. For payment year 2026, under current law, both an APM Incentive Payment and the qualifying APM CF will apply. This means that eligible clinicians who attained QP status for QP Performance Period 2024 will receive a lump-sum payment of 1.88 percent of their 2025 covered professional services paid claims as described above, and additionally their 2026 covered professional services claims will be paid using the physician fee schedule rates that are established using the 0.75 percent QP APM CF.

In addition, the thresholds to achieve QP status beginning in the 2026 QP Performance Period (2028 payment year) will increase from 50 percent to 75 percent for the payment amount, and from 35 percent to 50 percent for the patient count. Overall, we estimated that for the 2026 QP Performance Period, between 375,000 and 482,200 eligible clinicians will become QPs, and therefore will be excluded from MIPS reporting requirements and payment adjustments.

In addition, the thresholds to achieve QP status beginning in the 2026 QP Performance Period will increase to 75 percent for the payment amount, and 50 percent for the patient count. Overall, we estimated that for the 2026 QP Performance Period, between 375,000 and 482,200 eligible clinicians will become QPs, and therefore be excluded from MIPS reporting requirements and payment adjustments.

In section IV.A.4.m.(2) of the CY2026 PFS proposed rule, we proposed to modify the definition of ''attribution-eligible beneficiary'' to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination. However, we are not finalizing this proposal and therefore no impact of this policy is included in the estimated number of QPs provided above.

We projected the number of eligible clinicians who will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2026 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2026 QP Performance Period. The projections also reflect an estimated number of eligible clinicians who will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2026 QP Performance Period:

- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- States Advancing All-Payer Health Equity Approaches and Development (AHEAD) Model
- Enhancing Oncology Model (EOM);
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track); and
- Transforming Episode Accountability Model (TEAM)

We used the Participation Lists and Affiliated Practitioner Lists, as applicable (see § 414.1425(a) for information on the APM Participant Lists used for QP determinations) for the 2024 QP performance period third snapshot QP determination date to estimate the number of QPs for the 2026 QP Performance Period. For models starting in the 2026 QP Performance Period we estimated performance based on projected participation. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries were attribution eligible through the APM Entity.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2026 Performance Period/2028 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Proposed Policies Models

For this proposed rule, we applied the same assumptions as in the CY 2025 PFS final rule (89 FR 98532) to estimate our initial population of clinicians using 2023 performance data. Specifically, we used the CY 2023 final reconciled eligibility determination file, same as the 2022 file described in the CY 2025 PFS final rule (88 FR 79505). This file reconciles eligibility from two determination periods and aligns with the CY 2023 performance period submissions data on which we based this model. Our analysis included 1,889,733 clinicians with PFS claims in this initial population. This initial population of clinicians was used to determine eligibility using the methodology described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians After Applying Eligibility Assumptions

(a) Methods and Assumptions Used To Estimate Eligibility

After identifying the clinician population with PFS claims, we applied the same eligibility assumptions and determination process described in the CY 2025 PFS final rule (89 FR 97710). We are not proposing any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and proposed policies model.

For our impact analysis model, we established the ''required eligibility'' category, which means the clinician exceeds the low-volume threshold in all 3 criteria (§§ 414.1305 and 414.1310(b)(1)(iii)) and is subject to a MIPS payment adjustment. We based this estimate on the CY 2023 performance period data described in this section of this proposed rule, which includes the 3 low volume criteria. Within the eligible clinicians, we divided them into two groups-

clinicians who report MIPS data and clinicians who do not report MIPS data.

Our next two eligibility assumptions concern clinicians in groups, who may voluntarily participate in MIPS, but are not required to participate. First, we estimate group eligibility. These are the clinicians who have a group submission, and their group exceeds the low-volume threshold in all 3 criteria. Next, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in at least 1 criterion, but not all 3, may elect to opt in. Based on the number of individuals who opted in to MIPS for the CY 2023 performance period/2025 MIPS payment year, our model estimates that these clinicians will continue to opt in to MIPS.

After applying the process outlined in this section of this proposed rule, we then estimate the number of ''Potentially MIPS Eligible'' clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These clinicians are potentially eligible; however, they do not choose to report to MIPS.

Finally, we estimated the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. First, we estimated the number of clinicians who are below all 3 low-volume criteria (both as an individual and as a group) using the CY 2023 performance data as outlined in this section of this proposed rule.

Next, we estimated the number of QPs (not MIPS eligible). Also in this proposed rule, we estimated a range of QPs. For the purposes of our impact analysis, we estimate a specific number of QPs because a specific number of clinicians is needed to simulate the impacts of our proposed policies on participation, final scores, and payment adjustments. Finally, we estimate the number of clinicians who are excluded for other reasons, for example, they are in a clinician type that is not MIPS eligible or newly enrolled in Medicare.

After applying these assumptions to our initial population, we estimate that there will be 607,419 MIPS eligible clinicians with ~$51.84 billion in allowed charges in CY2026.

(b) MIPS Eligibility Estimates

For the impact analysis, we use the estimated population of 607,419 MIPS eligible clinicians described previously in this section of this proposed rule. Table 99 summarizes our eligibility estimates for the policies model after applying our assumptions outlined in this section of this proposed rule.

BILLING CODE 4120–01–P

TABLE 99: ESTIMATION OF MIPS ELIGIBILITY STATUS FOR CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR USING THE CY 2026 PFS PROPOSED RULE ASSUMPTIONS**

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians *	Number of Clinicians	PFS allowed charges ($ in mil)**
MIPS Eligible Clinicians			
MIPS eligible (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS	98,485	$28,689
MIPS eligible	Did not Report to MIPS	38,784	$11,172
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Had a group submission	465,291	$11,705
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Opted-in To MIPS	4,812	$275
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		**607,419**	**$51,843**
Not MIPS Eligible Clinicians			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible; Do not opt-in	176,052	$5,484
Potentially MIPS Eligible	Group Eligible; Did not Report	472,842	$10,966
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	130,002	$810
Excluded for other reasons (Non-eligible clinician type, newly enrolled)	Not applicable	62,084	$549
Qualified Participant (QP)***	Not applicable	441,334	$20,836
Total Number of Clinicians Not MIPS Eligible		1,282,314	**$38,644**
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,**889,733**	**$90,487**

* Participation excludes facility-based clinicians who do not have scores in the 2023 MIPS submission data.
** Allowed charges estimated in 2023 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.
*** Our QP estimate differs from that reported in section VII.I.5.b. of this proposed rule because, for purposes of establishing the population used in our modeling, we estimate an absolute number of QPs rather than a range.

BILLING CODE 4120–01–C

d. Modeling Approach and Methods for MIPs Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this proposed rule, we present several proposals that impact the measures and activities, the performance category scores, final scores, and MIPS payment adjustments for MIPS eligible clinicians. In section VII.I.5.d(3). of this proposed rule, we outline these changes in more detail and describe our methodology to estimate MIPS payment adjustments for the CY 2026 performance period/2028 MIPS payment year. We then present the impact of the policies in the CY 2026 performance period/2028 MIPS payment year and compare select metrics to the baseline model. By comparing model outputs in the baseline model to the proposed policies model, we are able to observe the impact of the policies for the CY 2026 performance period/2028 MIPS payment year.

MIPS eligible clinicians' final scores are calculated based on the clinicians' performance on measures and activities specified under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity and via traditional MIPS, the APM Performance Pathway (APP), or MVP reporting options. MIPS APM participants can participate in the APP

as an individual, group, virtual group, or APM Entity and are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. Our simulation applies the proposed and baseline policies to the existing MIPS scoring engine.

In the CY 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MIPS Value Pathways beginning in the CY 2023 performance period/2025 MIPS payment year.

(2) Methodology To Assess Impact for MIPS Value Pathways

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register prior to submitting an MVP. We assessed whether to use CY 2024 MVP registration data to estimate MVP participation and policy impact, but elected not to simulate the impact for MVP because we do not presently have sufficient MVP scoring data for modeling and simulation, as we only have 1 year of MVP data from the CY 2023 performance period/2025 MIPS payment year. Our model is based on CY 2023 performance data, which contains only one year of MVP scores, and this is insufficient for conducting reconciliation between multiple years, which introduces uncertainty and complexity into our model. As more MVP scoring data becomes available in the future, we will reassess our methodology for estimating MVP participation, final scores, and payment adjustments.

(3) Methodology To Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we generally use the CY 2023 performance data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2026 performance period/2028 MIPS payment year for the baseline and policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, improvement activities, and Promoting Interoperability performance categories, and the application of our final scoring policies.

(a) Methodology To Estimate the Quality Performance Category Score

We used the CY 2025 PFS final rule final policies model as the starting point of our baseline model. Since there are no previously finalized policies impacting the quality performance category that were not already included in the CY 2024 PFS final rule policies model, we did not make any modifications to the quality performance category and the baseline model is identical to the CY 2025 PFS final rules policies model with respect to the quality category.

Our policies model incorporates the following policies from this proposed rule as outlined in section IV.B. of this proposed rule:

In section IV.B.1.a.(2)(a) of this proposed rule, to facilitate fairer scoring, we are proposing to remove the scoring cap and change the benchmarking approach for certain topped out measures applicable to clinicians facing both limited measure choice and limited scoring opportunities. We did not simulate the addition of quality measures described in section IV.A.4.d.(1)(c)(i) of this proposed rule since we use existing quality measure data from the CY 2023 performance period, which does not include new measures. We did not simulate the removal of quality measures described in section IV.A.4.d.(1)(c)(ii) of this proposed rule since we cannot predict how clinician behavior and measure selection will change in response.

In section IV.B.1.a.(2(b)(3) of this proposed rule, we are proposing to modify the methodology for scoring the administrative claims-based measures within the quality performance category. The proposed administrative claims-based quality measure scoring methodology would be based on the standard deviation, the median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose performance rate under an administrative claims-based measure would be equal to the median performance rate for all MIPS eligible clinicians that are scored on that measure, we would assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2026 performance period/2028 MIPS payment year, the median would have an achievement point value of 7.5, based on a performance threshold of 75 points as proposed in section IV.B.2.b.(2) of this proposed rule. For each administrative claims-based quality measure, the cut-offs for benchmark ranges would be calculated based on standard deviations from the median. This policy is incorporated into our model based on the specifications explained in section IV.B.1.a.(2(b)(3) of this proposed rule.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a methodology similar to the methodology described in the CY 2025 PFS final rule (89 FR 98531) for the baseline and the proposed policies RIA models with the modifications described below.

For this proposed rule, the baseline policies RIA model used the same methodology as the final policies RIA model in the CY 2025 PFS final rule (89 FR 98530). The policies RIA model incorporated and implemented the following changes:

- In section IV.A.4.(d).(2).(c). of this proposed rule, we are proposing to modify the Total Per Capita Cost (TPCC) measure. We are also proposing to update the operational list of care episodes and patient condition groups and codes to reflect coding changes identified through our annual maintenance process for MIPS cost measures. We incorporated measure. test data with the specifications for the modified measures.
- In section IV.A.4.(d).(2).(d). of this proposed rule, we are proposing to adopt a 2-year informational-only feedback period for newly implemented MIPS cost measures, which we are also proposing to codify at § 414.1380(b)(2).

(c) Methodology To Estimate the Promoting Interoperability Performance Category Score

In section IV.A.4.d.(4). of this proposed rule, we are proposing modifications to two measures and adoption of one new optional bonus measure: Public Health Reporting Under TEFCA Measure. However, we did not estimate Promoting Interoperability performance category score impacts because, after conducting an assessment of the proposed policies, we determined that there is insufficient data to model the impact of adding a new, optional bonus measure on the Promoting Interoperability performance category scores, and therefore, did not incorporate it into our model.

(d) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline and policies model we used the same method to estimate the improvement activities performance

category score as described in the CY 2025 PFS final rule (89 FR 79508) including alignment with the clarification provided regarding IA automatic weighting for APM participants (89 FR 79366).

In section IV.A.4.d.(3).(b). of this proposed rule, we propose to amend § 414.1355(c)(7) by adding a new subcategory, ''Advancing Health and Wellness'' (AHW), to replace the ''Achieving Health Equity'' subcategory.'' We proposed adding three new Improvement Activities while removing eight existing ones. However, the three new measures were not included in the RIA model because we lack historical benchmark data to estimate their potential impact. Additionally, the eight measures being removed were also excluded from the RIA model, as the models cannot predict how clinicians will alter their behavior once these measures are removed.

(e) Methodology To Estimate the Complex Patient Bonus Points

This proposed rule does not include proposals to modify the complex patient bonus. Therefore, for the baseline and proposed policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(f) Methodology To Estimate the Final Score

We are not proposing any changes to how we calculate the MIPS final score. Our baseline and proposed policies models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For both models, after adding any applicable complex patient bonus, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a MIPS eligible clinician was approved for reweighting of one or more performance category to zero percent of their final score, and the category's weight redistributed to other performance category(ies), for the CY 2023 performance period/2025 MIPS payment year (which was the data source used in our model) in accordance with our reweighting policies under § 414.1380(c)(2), then we continue to apply that reweighting in our model by assigning them a neutral score equal to the performance threshold if all categories were reweighted or assigning the applicable weights to the categories which were reweighted.

Although it is unlikely (but possible) that the exact same clinicians will apply for and receive reweighting in both the CY 2023 performance period/2025 MIPS payment year (which our data is based on) and the CY 2026 performance period/2028 MIPS payment year (which we are simulating), we believe that this assumption accurately reflects future clinician behavior for two reasons. First, while the exact same MIPS eligible clinicians may not receive reweighting in 2 different years, we believe that this assumption allows us to quantify the impact of the reweighting on a population level. In other words, even if the same clinicians do not apply for and receive reweighting in these 2 different years, the absolute number of reweighting and the characteristics of practices that receive reweighting are likely to remain similar. Secondly, if we were to not assign reweighting to those MIPS eligible clinicians, many of them would receive a very low final score because they did not submit data for one or more performance categories during the year in which they received reweighting. We do not believe that it is a realistic assumption that, in the absence of reweighting, those clinicians will continue not to submit data. For these reasons, we assume that clinicians who received reweighting in the CY 2023 performance period/2025 MIPS payment year are also approved for reweighting in the CY 2026 performance period/2028 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(g) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and proposed policies models, we applied the hierarchy as finalized in the CY 2023 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculate the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we apply the performance threshold of 75 points finalized in the CY 2025 PFS final rule. In section IV.B.2.b.(2) of this proposed rule, we are proposing to again set the performance threshold at 75. Therefore, for both the baseline and proposed policies models we used a performance threshold of 75 to calculate the exchange function used for MIPS payment adjustments. We note that the results of this exchange are not identical between the baseline and proposed policies models. This is due to the scaling factor used to determine positive adjustments is dependent on the total dollar amount of negative payment adjustments and those adjustments differ as final scores are not identical between both models.

For both the baseline and proposed policies models, we use these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in section VII.I.5.d.(3). of the proposed rule, we create a baseline and proposed policies simulation. Using this simulation, we estimate the impact of the policies of this proposed rule.

(a) Impact on Clinician Eligibility

In section VII.E.17.c.(2). of this proposed rule, we noted that we do not modify clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact on Clinician's Final Scores

Table 100 shows the median final score by practice size and the percentage of MIPS eligible clinicians of each practice size with a positive, neutral, or negative adjustment.

BILLING CODE 4120–01–P

TABLE 100: CY 2026 FINAL SCORE ESTIMATES BY PRACTICE SIZE

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline					
1) Solo	17,074	75.00	32.88%	17.98%	49.14%
a) Engaged***	8,131	87.63	68.86%	7.77%	23,37
b) Non-Reporting****	8,934	21.95	0.11%	27.27%	72.62%
2) 2-15	66,808	87.21	66.19%	12.54%	21.27%
3) 16-99	116,647	87.37	76.37%	7.17%	16.45%
4) 100+	406,890	88.46	90.68%	1.19%	8.14%
Overall	607,419	87.96	83.61%	4.06%	12.33%
Proposed Policies					
1) Solo	17,074	75.00	32.85%	17.99%	49.16%
a) Engaged	8,131	87.70	68.92%	7,76%	23.32%
b) Non-Reporting	8,943	21.99	0.11%	27.27	72.62%
2) 2-15	66,808	87.53	66.39%	12.57%	21.04%
3) 16-99	116,647	88.32	77.23%	7.06%	15.71%
4) 100+	406,890	89.89	91.04%	1.18%	7.78%
Overall	607,419	89.47	84.04%	4.03%	11.92%

The median final score includes clinicians who receive reweighting for all MIPS performance categories our policies at § 414.1380(c)(2). These clinicians who have all performance categories reweighted are assigned a score of 75 (neutral payment adjustment) in our model.

*** An engaged clinician refers to a MIPS-eligible clinician who self-reports at least one measure, attestation, or activity.

****A non-reporting clinician was a clinician who was required to report but didn't actively self-report at least one measure, attestation, or activity.

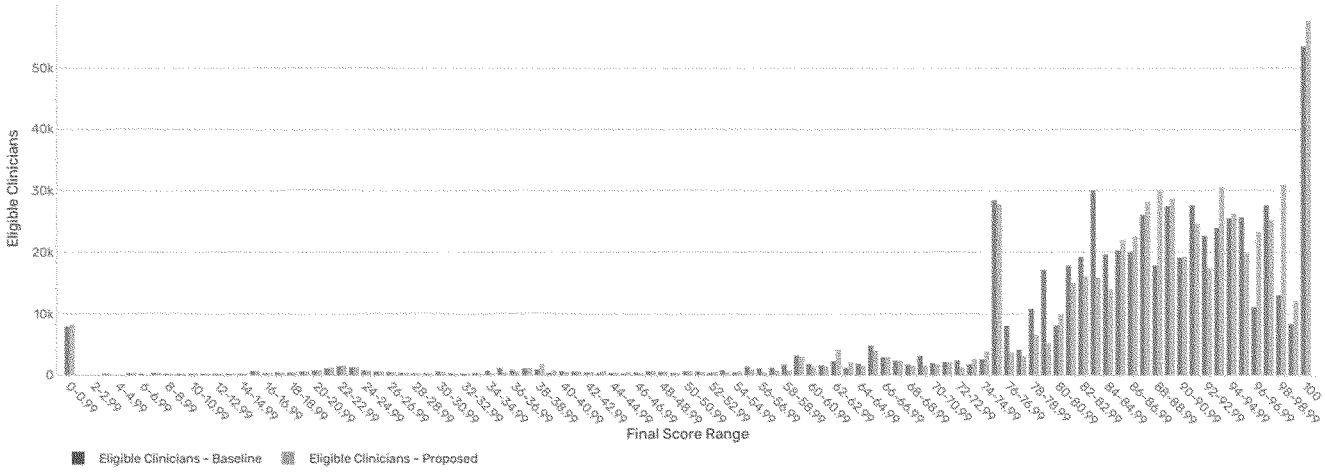
The overall median final score is 87.96 in our baseline model and 89.47 in our proposed policies model, a slight increase for all practice sizes. There is a slight increase in the percentage of clinicians receiving a positive payment adjustment, we project that, overall, 83.61 percent of MIPS eligible clinicians will receive a positive adjustment in our baseline model, and 84.04 percent of MIPS eligible clinicians will receive a positive adjustment in our policies model. This slight increase is largely due to our proposed policies in the quality category, including the change to the administrative claims based quality measure scoring methodology and the updated topped out measure policy discussed in section IV.B.1.a.(2). of this proposed rule. Table 101 shows the median quality category score for MIPS eligible clinicians who are scored on the quality performance category for our baseline and proposed policies model. There is a noticeable difference in median quality category scores between our two models. This is true across almost all practice sizes, except for solo practitioners. The overall median quality category score is 78.78 in our baseline model and 83.76 in our policies model.

TABLE 101: CY 2026 QUALITY SCORE ESTIMATES BY PRACTICE SIZE

Practice Size	MIPS Eligible Clinicians Receiving Quality Score	Total Number of MIPS Eligible Clinicians	Proportion of MIPS Eligible Clinicians Receiving Quality Score	Median Quality Score Estimate
Baseline				
1) Solo	13,862	17,074	81.19%	29.94%
a) Engaged*	7,386	8,131	90.62%	82.59%
b) Non-Reporting**	6,494	8,943	72.62%	0%
2) 2-15	56,708	66,808	84.88%	83.43%
3) 16-99	99,123	116,647	84.98%	80.10%
4) 100+	381,902	406,890	93.86%	78.47%
Overall	551,595	607,419	90.81%	78.78%
Proposed Policies				
1) Solo	13,863	17,074	81.19%	29.96%
a) Engaged	7,369	8,131	90.63%	84.02%
b) Non-Reporting	6,494	8,943	72.62%	0%
2) 2-15	56,713	66,808	84.89%	84.58%
3) 16-99	99,333	116,647	85.16%	82.44%
4) 100+	382,671	406,890	94.05%	84.00%
Overall	552,580	607,419	90.97%	83.76%

Figure 7 shows the distribution of final scores for all MIPS eligible clinicians. Note that there is a noticeable size of MIPS eligible clinicians with a final score of 75. MIPS eligible clinicians whom we approved for reweighting of all MIPS performance categories in accordance with our reweighting policies at § 414.1380(c)(2) are assigned a final score of exactly the performance threshold (75). Overall, the distribution is left skewed, indicating that many more clinicians would receive final scores on the higher side.

FIGURE 7: Count of MIPS Eligible Clinicians by Final Score



BILLING CODE 4120–01–C

(i) Impact to Small and Solo Practices

Solo practitioners account for 17,074 MIPS eligible clinicians or 2.81 percent of all MIPS eligible clinicians in both the baseline and proposed policies models. The median final score for all solo practitioners is exactly equal to the performance threshold (75) in both the baseline and proposed policies model. The portion of all solo practitioners receiving a positive adjustment are almost the same between the baseline and the proposed policies models (32.85 percent baseline vs 32.88 proposed policies).

Solo practitioners have a lower overall median final score than other practice sizes. This is largely due to the fact that many of these solo practitioners do not actively submit data to MIPS despite being MIPS eligible clinicians. Our 2022 analysis indicates that 49.12 percent of solo practitioners submit data to MIPS compared to 94.07 percent of all clinicians. For solo practitioners who submit data, the median final score is 87.63 in the baseline and 87.70 in the proposed policies model. In contrast,

those who did not report data to MIPS have a median final score of to 21.95 in the baseline model and 21.99 in the proposed model. These findings indicate that the lower final scores among solo practitioners are likely, and largely, due to not reporting data to MIPS.

Table 102 shows that, even among engaged solo practitioners, the percentage receiving a positive payment adjustment is lower than that of clinicians from medium or large practices, while being comparable to those from small practices. Similarly, even for engaged solo practitioners, a higher proportion of them face negative payment adjustments compared to those in other practice sizes Figure 8 shows the distribution of final scores for solo practitioners. Both box plots show similar final score distributions, and both baseline and proposed policies models show a large distance between the lower and upper quartiles. Figure 9 shows the final score distribution for all MIPS eligible clinicians between the baseline and the proposed policies models. These models show similar final score distributions, with the proposed policies model showing slightly higher scores. The upper quartile of is 94.25 in the baseline model and 95.82 in the proposed policies model. The distance between lower and upper quartiles is substantially narrower for all MIPS eligible clinicians than it is for solo practitioners. Figure 10 shows the distribution of final scores for solo practitioners who actively submit data to MIPS. This distribution is similar to the distribution of final scores in all MIPS eligible clinicians.

Additionally, the upper quartile is at 95.86 in the baseline and at 96.07 in the proposed policies model, which are slightly higher than that for all MIPS eligible clinicians. This suggests that, while many solo practitioners do not submit data to MIPS, those who do submit MIPS data tend to perform comparably to all MIPS eligible clinicians. This further supports the idea that the primary reason for low final scores among solo practitioners is the high number of them who do not submit MIPS data.

BILLING CODE 4120–01–P

FIGURE 8: Distribution of Final Scores for Solo Practitioners

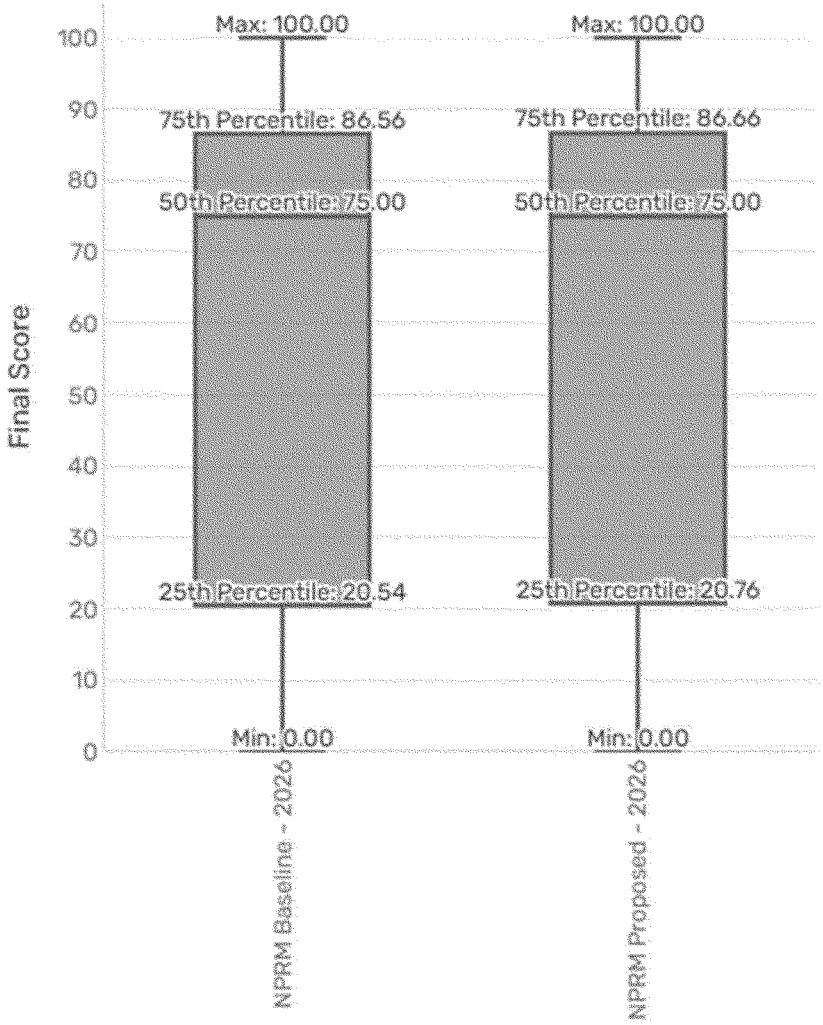


FIGURE 9: Distribution of Final Scores for All MIPS Eligible Clinicians

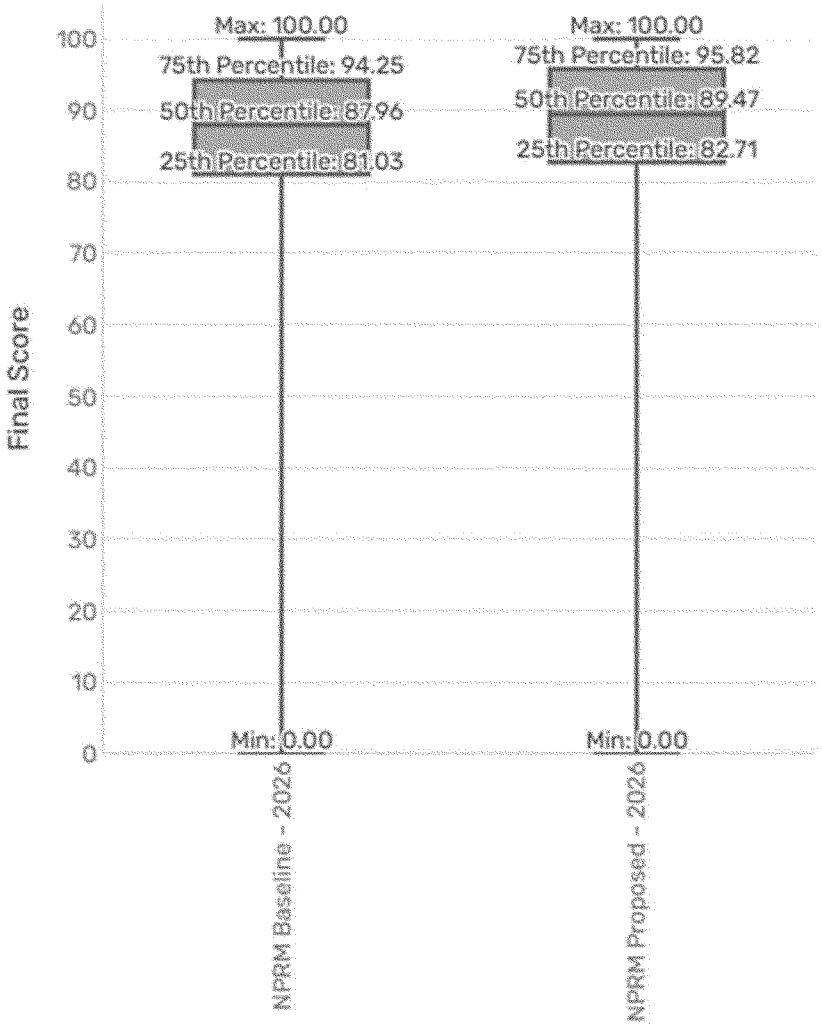

FIGURE 10: Distribution of Final Scores for Solo Practitioners who Submit Data

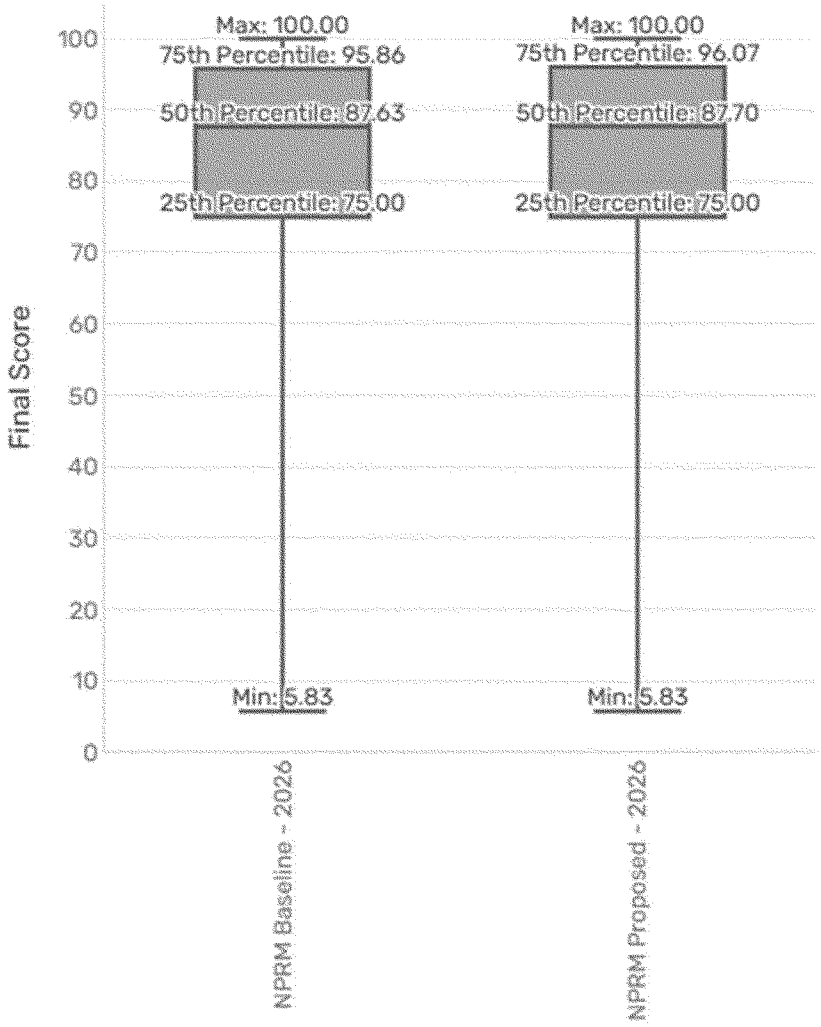

Small practices, defined at § 414.1305 as groups with 2 to 15 clinicians, have a median final score of 87.21 in the baseline and 87.53 in the policies model. This is slightly lower than the overall median final scores of 87.96 in the baseline model and 89.47 in the proposed policies model. Among small practices that submit data (Table D–B24), the median final score is 91.67 in the proposed policies model and 91.23 in the baseline model. They are higher than the median final score for all MIPS eligible clinicians who submit data, which are 90.10 in the proposed policy model and 89 in the baseline model. This indicates that small practices that submit MIPS data perform slightly better than it is for all MIPS eligible clinicians. Table 102 shows the percentage of clinicians, by practice size, either do or do not submit data to MIPS and their corresponding median final scores. Note that, in the proposed policies model, the median final scores for medium and large practice clinicians who do not submit data are 75. This indicates that many medium or large practice clinicians who do not submit data to MIPS have been approved for reweighting of all of their MIPS performance categories under our policies at § 414.1380(c)(2). In contrast, the median final scores for solo and small practice clinicians, who do not submit data are 21.99 and 27.65, respectively. This indicates that many of them either not being eligible for or not applying for our reweighting policies. Over 90 percent of the medium and large practice clinicians submit data to MIPS. It is possible that the 10 percent or less MIPS eligible clinicians who do not submit data to MIPS are primarily those who have received reweighting under our policies at § 414.1380(c)(2).

TABLE 102: PERCENTAGE OF MIPS ELIGIBLE CLINICIANS WHO SUBMIT DATA AND MEDIAN FINAL SCORE

	Percentage of MIPS Eligible Clinicians who Submit Data (by practice size)	Median Final Score of MIPS Eligible Clinicians who Submit Data	Median Final Score of MIPS Eligible Clinicians who Do not submit data.
Baseline			
1) Solo	47.62%	87.63	21.95
2) Small (2-15)	79.31%	91.23	28.21
3) Medium (16-99)	90.14%	89.02	75
4) Large(100+)	98.70%	88.65	75
Overall	93.49%	89.00	75
Proposed Policies			
1) Solo	47.62%	87.70	21.99
2) Small (2-15)	79.31%	91.67	27.65
3) Medium (16-99)	90.34%	89.91	75
4) Large(100+)	98.71%	90.06	75
Overall	93.53%	90.10	75

(ii) Impact to Rural Providers

In our data we assign rural practitioners a special status. Impact assessment of this group of clinicians indicates that their final scores are similar to the overall MIPS eligible clinicians. Table 103 shows the median final score and the percentage of eligible clinicians with a positive, neutral, or negative adjustment by practice size for rural practitioners.

TABLE 103: CY 2026 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR RURAL PRACTITIONERS ONLY

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline					
1) Solo	2,306	75.00	37.73%	14.92%	47.35%
a) Engaged*	1,251	86,78	69.54%	5.36%	25.10%
b) Non-Reporting**	1,055	21.44	0.00%	26.26%	73.73%
2) 2-15	10,112	88.61	71.78%	8.24%	19.99%
3) 16-99	20,427	87.31	79.62%	4.04%	16.34%
4) 100+	36,288	86.34	90.66%	0.41%	8.93%
Overall	69,133	86.42	82.87%	3.11%	14.02%
Proposed Policies					
1) Solo	2,306	75.00	37.77%	14.92%	47.31%
a) Engaged	1,251	86.78	69.62%	5.36%	25.02%
b) Non-Reporting	1,055	21.57	0.00%	26.26%	73.74%
2) 2-15	10,112	89.11	71.94%	8.24%	19.82%
3) 16-99	20,430	88.63	81.57%	4.06%	14.37%
4) 100+	36,283	87.74	90.67%	0.40%	8.94%
Overall	69,131	87.80	83.47%	3.11%	13.41%

*An engaged clinician refers to a MIPS-eligible clinician who self-reports at least one measure, attestation, or activity.

**A non-reporting clinician was a clinician who was required to report but didn't actively self-report at least one measure, attestation, or activity.

The overall median final score for rural practitioners is 86.42 in our baseline model and 87.80 in our policies model. This is slightly lower than the median final score for all MIPS eligible clinicians, which is 87.96 in our baseline model and 89.47 in our policies model. According to the results from the proposed policies model, large practice rural clinicians (100+) have a slightly lower median final score (87.74) than it (89.89) is for all MIPS eligible clinicians practicing in large practices.

(iii) Impact to Safety Net Providers

(a) Updated Definition of Safety Net Providers

In the CY 2022 PFS final rule (87 FR 70094), we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS eligible clinicians Hierarchical Conditions Categories risk score and social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

In the 2024 PFS final rule (88 FR 79513), we compared the performance of clinicians who received the complex patient bonus with our overall population. As we further developed our model, we decided to adopt a more precise definition of safety net providers. We believe that by narrowing our definition of safety net providers to clinicians fall in the top 20 percentile for their percent share of patients who are dually eligible for Medicare and Medicaid, we can identify providers who care for a large proportion of socially vulnerable individuals.

Table 104 shows the final score estimates for safety net providers under this new definition. Safety net have higher median final scores (92.43 in the proposed model) than the overall population of MIPS eligible clinicians (89.47 in the proposed model). Safety net solo providers who submit data have a slightly higher median final score (89.66 in the proposed model) than that from the overall solo population who submit data (87.70 in the proposed model). However, only 42.89 percent of safety net solo and 71.14 percent of safety net small practice providers submit data compared to 47.62 percent and 79.31 percent of the overall solo and small practice providers, respectively.

TABLE 104: CY 2026 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR *SAFETY NET PRACTITIONERS ONLY*

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment

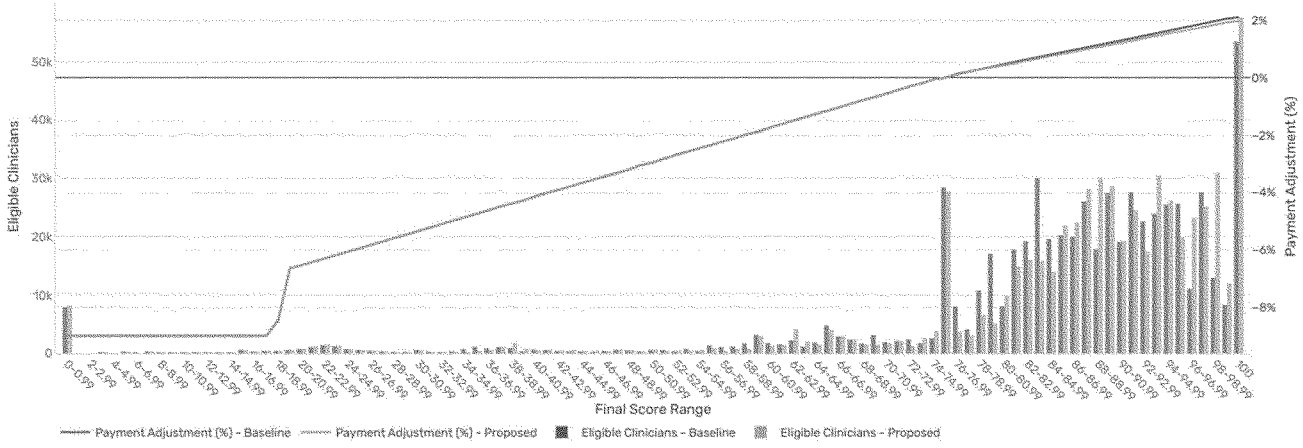
(c) Impact to MIPS Eligible Clinicians' Payment Adjustments

We are not proposing to increase the performance threshold in this proposed rule and are proposing to set the performance threshold at 75 points for a period of 3 years. However, as we get consistent and more data as the program evolves, we will continue to gauge whether the performance threshold should be increased in future years.

Figure 106 shows that the payment adjustments are very similar between the baseline and proposed policies model. This is because we made minimal changes to our proposed policies. Although payment adjustments are slightly higher in the baseline model. In the baseline model, we project redistributing $464 million, and in the proposed policies model, we project redistributing $463 million. This decrease is due to the slightly higher proportions of clinicians receiving positive payment adjustments in the proposed policies model (84.05 percent) than it is in the baseline model (83.61 percent). As the proportion of MIPS eligible clinicians receiving a positive payment adjustment increases, the portion of clinicians receiving a negative payment adjustment decreases accordingly (11.92 percent in the proposed policies model vs. 12.33 percent in the baseline model). As the proportion of MIPS eligible clinicians receiving negative payment adjustments decreases, the budget neutral funds available for redistribution also decrease.

FIGURE 11: Final Score Distribution and Payment Adjustment



We also report the median positive and negative payment adjustments by practice size in Table 106.

TABLE 106: CY 2026 MEDIAN POSITIVE AND NEGATIVE PAYMENT ADJUSTMENT ESTIMATES BY PRACTICE SIZE

Practice Size	Median Positive Payment Adjustment*	Median Negative Payment Adjustment*
Baseline		
Solo (1)	1.52%	-6.58%
a) Engaged**	1.52%	-3.02%
b) Non-Reporting***	0.13%	-9.00%
Small (2-15)	1.51%	-5.97%
Medium (16-99)	1.35%	-1.77%
Large (>99)	1.25%	-1.46%
Overall	1.28%	-1.93%
Proposed Policies Model		
Solo (1)	1.44%	-6.55%
a) Engaged	1.45%	-3.04%
b) Non-Reporting	0.09%	-9.00%
Small (2-15)	1.44%	-6.08%
Medium (16-99)	1.32%	-1.78%
Large (>99)	1.27%	-1.44%
Overall	1.30%	-1.88%

Final score above the performance threshold. The median negative adjustment is defined as the medium payment adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal the performance threshold.

**An engaged clinician refers to a MIPS-eligible clinician who self-reports at least one measure, attestation, or activity.

***A non-reporting clinician was a clinician who was required to report but didn't actively self-report at least one measure, attestation, or activity.

The overall median negative payment adjustment in the proposed policies model is slightly lower than it is in the baseline model. That is because the proposed policies model has a higher mean final score than the baseline model (89.47 proposed vs. 87.96 baseline). In Table 107, we report the proportion of MIPS eligible clinicians who either did or did not submit data with the maximum negative adjustment (−9 percent).

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting payment adjustments, we are proposing several policies that, if finalized, will impact burden. In section V.B.5. of this proposed rule, we separately estimate the burden impacts of policy proposals, and the associated updated data sources. In Table 107, we summarize the incremental burden of the proposed policy provisions for these ICRs by year and OMB control number.

TABLE 107: INCREMENTAL ESTIMATED BURDEN FROM ASSOCIATED PROPOSED POLICIES

PRA Package(s)	Performance Year	Burden Description and Associated Provisions	Burden Hours	Burden Dollars
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for Traditional MIPS Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR due to the proposal of additional MVPs**	(5,510)	($655,228)
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for Traditional MIPS Quality Data Submission by Clinicians: MIPS CQM/QCDR Collection Type ICR due to the proposal of additional MVPs**	(7,357)	($901,575)
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for Traditional MIPS Quality Data Submission by Clinicians: eCQM Collection Type ICR due to the proposal of additional MVPs**	(8,912)	($1,110,056)
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for MVP registration ICR due to the proposal of additional MVPs**	578	$62,227
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for MVP Quality Submission ICR submissions due to the proposal of additional MVPs**	14,403	$1,763,875
	CY 2026 performance period/ 2028 MIPS payment year*	Annual total change in burden due to policy proposals**	(6,798)	($840,757)
	CY 2026 performance period/ 2028 MIPS payment year	Annual total burden for relevant ICRs***	520,708	$63,731,976
0938-1222 (CMS-10450)	CY 2027 performance period/ 2029 MIPS payment year	Annual burden change for CAHPS for MIPS Vendor Registration due to the proposal of the additional web mode**	10	$1,077
0938-1222 (CMS-10450)	CY 2027 performance period/ 2029 MIPS payment year	Annual total burden for relevant ICR***	110	$11,843
	CY 2027 performance period/ 2029 MIPS payment year	Annual total change in burden due to policy proposals**	(6,788)	($839,680)

* Initial performance year affected by this policy. We presume the same annual burden also applies to the CY 2027 performance period/2029 MIPS payment year. Accordingly, these estimates are included in the annual total change in burden for the CY 2027 performance period/2029 MIPS payment year displayed in this table.

** Change in hours relative to estimates for the currently approved under OMB control number 0938-1222 (CMS-10450) and as currently submitted for OMB approval under 0938-1314 (CMS-10621). Change in cost represents change in hours multiplied by the related wage rates.

*** This calculation is the total annual burden estimate for the referenced ICR per control number in this table, inclusive of the currently approved estimates and changes due to both policy and data adjustments.

BILLING CODE 4120–01–C

(2) Additional Impacts to Clinicians

We provide additional burden discussions for policy proposals that we are unable to quantify.

(a) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.4.d(3)(b)(ii) of this proposed rule, we are proposing changes to the Improvement Activities Inventory beginning with the CY 2026 performance period/2028MIPS payment year. We do not expect these changes to affect our burden estimates for the number of estimated respondents or response time, as most of the improvement activities in the Improvement Activities Inventory remain unchanged for the CY 2026 performance period/2028 MIPS payment year. We refer readers to section IV.A.4.d.(3).(b).(ii). of this proposed rule for details on the proposed changes to the Improvement Activities Inventory.

(b) Qualifying Alternative Payment Model (APM) Participant (QP) Determinations

In section IV.B.5.b. of this proposed rule, we are proposing the following policies related to QP determinations: (1) to add a QP determination at the individual level for all Advanced APM participants; and (2) to update the definition of ''attribution-eligible beneficiary'' at § 414.1305. It is difficult to project the impact of these policy proposals as year-over-year participation changes have historically had outsized impacts on our projections. For example, ACOs frequently add or remove participants as part of their operations. These changes in participation make it difficult to project how these proposals will impact clinicians who are determined to be QPs, Partial QPs, or previously reported MIPS (at the individual, group, subgroup, or APM Entity level), if at all. Accordingly, we have not proposed to adjust our estimates related to performance category submissions due to these policy proposals. For details on these proposals, see section IV.B.5.b. of this proposed rule. Additionally, we are proposing to remove the current 50 clinician limit from the Medical Home Model, the Aligned Other Payer Medical Home Model, and the Medicaid Medical Home model. Where there are no APMs meeting the definition of these three models in the CY 2026 performance period/2028 MIPS payment year, we do not anticipate any reporting impact for these proposals. For details on these proposals, see section IV.B.5.c. of this proposed rule.

(c) Ambulatory Specialty Model

In section III.D. of this proposed rule, the Innovation Center is proposing to test a new mandatory model titled the Ambulatory Specialty Model (ASM). The ASM leverages a framework similar to the MVP framework and shares some quality and cost measures with those in the Advancing Care for Heart Disease MVP and the Rehabilitative Support for Musculoskeletal Care MVP. Review section III.D of this proposed rule for additional details on the proposed model requirements and correlation to the existing MVP framework.

At this time, we are unable to determine how many clinicians or practices will register for and submit the Advancing Care for Heart Disease MVP and the Rehabilitative Support for Musculoskeletal Care MVPs for the CY 2026 performance period/2028 MIPS payment year. Similarly, we cannot assess at which participation levels clinicians or practices identified for MVP reporting under the ASM model have reported MIPS in the past (for example, eligibility requirements and special statuses, participation at the individual, group, subgroup, virtual group, or APM Entity level, or reporting via traditional MIPS, the APM Performance Pathway (APP), or MVPs). We refer readers to section VII.G.1. of this proposed rule for a more detailed discussion of impacts of the ASM proposal.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2023 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2026 performance period/2028 MIPS payment year.

As discussed in section V.B.8. of this proposed rule, we are unable to predict which specific MIPS eligible clinicians will receive reweighting for one or more performance categories under policies at § 414.1380(c)(2) in the CY 2026 performance period/2028MIPS payment rear. On this basis, we assumed that those MIPS eligible clinicians for whom we approved reweighting of one or more performance categories under our policies are representative of the number and attributes of MIPS eligible clinicians who will receive reweighting under these policies in the future.

In addition to the limitations described throughout the methodology sections, to the extent that there are year-to-year changes in the data submission, volume, and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 108.

F. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we exercise agency discretion, presents rationale for our policies, and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we presented above the estimated impact on total allowed charges by specialty.

1. Alternatives Considered Related to the Use of the Relationship Between OPPS APC Payment Rates to Establish PE RVUs for Radiation Oncology Treatment Delivery (CPT codes 77387, 77402, 77407, 77412, and 77417) and Superficial Radiation Treatment (CPT codes 77X05, 77X07, 77X08, and 77X09)

As we discuss in sections II.B and II.E. of this proposed rule, we are proposing to utilize the relationship between OPPS APC payment rates to establish PE RVUs for Radiation Oncology Treatment Delivery and Superficial Radiation Treatment services. As we considered the most accurate approach to developing PE RVUs for these code families, an alternative we considered was the following approach:

Step 1: Estimate the share of direct costs for all services in the radiology-therapeutic cost center using the hospital cost reports.

Step 2: For each service in an APC, calculate the weighted geometric mean of the OPPS total costs. The weights are PFS non-facility volume.

Step 3: Multiply the result of step 2 by the result of step 1.

We did not select this alternative because the use of cost report data to calculate the share of direct costs may reflect an imprecise accounting of direct costs. In addition, the percentage of direct costs is imprecise for a particular service. We are therefore unable to confirm the precision of the estimate of the direct costs for these services, which is a necessary step in this calculation. We refer the reader to the RAND Corporation (''RAND'') report prepared for CMS, entitled *Practice Expense Methodology and Data Collection Research and Analysis,* available at *https://www.rand.org/pubs/research_reports/RR2166.html.*[431]

2. Alternatives Considered Related to the Use of the Relationship Between OPPS APC Payment Rates to Establish PE RVUs for Radiation Oncology Treatment Delivery (CPT codes 77387, 77402, 77407, 77412, and 77417) and Superficial Radiation Treatment (CPT codes 77X05, 77X07, 77X08, and 77X09)

As we discuss in sections II.B. and II.E. of this proposed rule, we are proposing to utilize the relationship between OPPS APC payment rates to establish PE RVUs for Radiation Oncology Treatment Delivery and

[431] Burgette, Lane F., Jodi L. Liu, Benjamin M. Miller, Barbara O. Wynn, Stephanie Dellva, Rosalie Malsberger, Katie Merrell, et al. ''Practice Expense Methodology and Data Collection Research and Analysis.'' RAND Corporation, April 11, 2018. *https://www.rand.org/pubs/research_reports/RR2166.html.*

Superficial Radiation Treatment services. As we considered the most accurate approach to developing PE RVUs for these code families, an alternative we considered was the following approach:

Step 1: Estimate the share of direct costs for all services in the radiology-therapeutic cost center using the hospital cost reports.

Step 2: For each service in an APC, calculate the weighted geometric mean of the OPPS total costs. The weights are PFS non-facility volume.

Step 3: Multiply the result of step 2 by the result of step 1.

We did not select this alternative because the use of cost report data to calculate the share of direct costs may reflect an imprecise accounting of direct costs. In addition, the percentage of direct costs is imprecise for a particular service. We are therefore unable to confirm the precision of the estimate of the direct costs for these services, which is a necessary step in this calculation. We refer the reader to the RAND Corporation (''RAND'') report prepared for CMS, entitled *Practice Expense Methodology and Data Collection Research and Analysis,* available at *https://www.rand.org/pubs/research_reports/RR2166.html.*[432]

2. Alternatives Considered for Adjusting RVUs To Match PE Share in the American Medical Association's (AMA) Physician Practice Information (PPI) and Clinician Practice Information (CPI) Surveys

As discussed in section II.B. of this proposed rule, ''(5) PE RVU Methodology,'' Steps 3, 10, and 18, and ''3. Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)'', we hold the work RVUs constant and adjust the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the Medicare Economic Index (MEI) cost shares are updated, we would typically propose to modify steps 3 and 10 described in section II.B. of this proposed rule to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the updated MEI cost share weights, as previously described in the CY 2014 PFS final rule (78 FR 74236 and 74237), and to recalibrate the relativity adjustment that we apply in step 18 described in section II.B. of this proposed rule. The most recent recalibration was done for the CY 2014 RVUs. Of note, although we did not propose to for CY 2023, we considered using the rebased and revised 2017-based MEI cost share weights to adjust the aggregate pools of PE RVUs and the relativity adjustment to reflect more recent data, shifting over a 4-year transition to reach the proportions of work, PE, and MP. We refer readers to a detailed discussion of this alternative considered in sections II.B. and V.I. of the CY 2023 PFS final rule (87 FR 69414 through 69415 and 70212 through 70217) for awareness regarding potential future rulemaking.

As an alternative to adjusting the aggregate pools of direct and indirect PE costs and using a relativity adjustment based on the currently used 2006-based MEI, we considered 3 different alternatives related to the weights from the American Medical Association's (AMA) Physician Practice Information (PPI) and Clinician Practice Information (CPI) Surveys, as discussed in detail in section II.B. of this proposed rule, for purposes of adjusting the RVUs to match PE share from the surveys for CY 2026:

- Full implementation of the updated PPI and CPI Survey PE/HR data, while maintaining the current cost shares (2006-based MEI) (to allow for isolated comparison to the CY 2025 Final Rule impacts).
- Full implementation of the updated shares, as reported by the AMA, while maintaining the current PE/HR data (to allow for isolated comparison to the CY 2025 Final Rule impacts).
- Full implementation of updated shares, weighted by Medicare RVUs, while maintaining the current PE/HR data (to allow for isolated comparison to the CY 2025 Final Rule impacts).

Likely due in part to lower-than-expected response rates, more Medicare specialties were grouped together in the updated PPI and CPI Survey data than the original PPI Survey. The AMA and Mathematica's decision to group together more specialties is a consequential decision alone, therefore, we are displaying the estimated specialty-level impacts that would result from mapping the current PE/HR data to the updated specialty groupings reported in the new PPI and CPI Surveys. To do so, we calculated direct and indirect PE/HR values using the existing data (which primarily come from the 2007–08 PPI Survey) and volume-weighted averages of these existing PE/HR values within each of the new specialty groupings. While this is not an alternative we considered implementing, we believe it is important to display the redistributive impacts of mapping the old PE/HR information to the new specialty groupings for interested parties to consider.

For purposes of displaying impacts for these alternatives considered, we used the estimated impacts from the CY 2025 PFS final rule as a base and comparison rather than the proposed CY 2026 impacts due to the significant redistributive impacts of the policy proposals for CY 2026. We believe that displaying these alternatives considered relative to CY 2025 provides a more stable base to isolate changes related to the alternatives themselves and allows the public to meaningfully comment on the alternatives considered, as opposed to the interaction of these alternatives with the redistributions attributable to the CY 2026 policy proposals.

Table 108 illustrates the estimated specialty-specific impacts under each alternative considered, relative to the CY 2025 PFS final rule estimated impacts as a baseline. The following is an explanation of the information represented in Table 108.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.
- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2023 utilization and CY 2024 rates. Reminder: CY 2025 Estimated Impacts are used as a baseline for these alternatives considered, therefore, this column matches Column C of Table 111 in the CY 2025 PFS final rule (89 FR 98503 through 98507).
- Column D (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges of all the changes finalized for CY 2025. Reminder: this column matches Column D of Table 111 in the CY 2025 PFS final rule (89 FR 98503 through 98507).
- Column E (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges that would result from mapping the current PE/HR data to the updated specialty groupings reported in the new PPI and CPI Surveys.
- Column F (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges that would result if we

[432] Burgette, Lane F., Jodi L. Liu, Benjamin M. Miller, Barbara O. Wynn, Stephanie Dellva, Rosalie Malsberger, Katie Merrell, et al. ''Practice Expense Methodology and Data Collection Research and Analysis.'' RAND Corporation, April 11, 2018. *https://www.rand.org/pubs/research_reports/RR2166.html.*

implemented the new PE/HR data from the new PPI and CPI Surveys. Because these changes are solely within practice expense, there would be no impact to the estimated conversion factor and would result only in the redistribution of PE RVUs.

- Column G (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges that would result if we implemented updated cost share weights as reported by the AMA, to adjust the RVUs to match the PE share from the surveys, relative to the impacts for the CY 2025 PFS final rule, while maintaining the current PE/HR data. This results in changes to the work RVU pool, and therefore, yields a different estimated conversion factor.
- Column H (Combined Impact): This column shows the estimated CY 2025 combined impact on total allowed charges that would result if we implemented updated cost share weights derived by CMS from the AMA's PPI and CPI Surveys, weighted by Medicare RVUs, to adjust the RVUs to match the PE share from the surveys, relative to the impacts for the CY 2025 PFS final rule, while maintaining the current PE/HR data. This results in changes to the work RVU pool, and therefore, yields a different estimated conversion factor.

As stated previously, the AMA's new specialty groupings in the updated PPI and CPI Surveys result in consequential redistributions shown in Column E, with estimated specialty-level impacts ranging from −13 percent (facility-based Radiation Oncology and Radiation Therapy Centers) to +7 percent (Nurse Anesthetist, and non-facility Nephrology).

Relative to the CY 25 PFS final rule baseline, adopting the PE/HR data from the new PPI and CPI Surveys would result in large specialty-level impacts shown in Column F. New data such as these would typically be phased in over multiple years to reduce year-on-year changes. After fully phasing in the changes, adopting the new PPI/CPI data would result in specialty-level impacts with negative impacts as low as −16 percent for facility-based Radiation Oncology and Radiation Therapy Centers and increases as large as +18% non-facility Oral/Maxillofacial Surgery. Of note, the AMA did not provide updated PE/HR data for the IDTF specialty, so this scenario retains the current PE/HR values for that specialty.

In addition to updated PE/HR data for PFS ratesetting, the information from the PPI and CPI Surveys could be used to develop new cost share weights to adjust the aggregate pools of PE RVUs and the relativity adjustment to reflect more recent data, to reach the proportions of work, PE, and MP reported in the new surveys. The AMA has reported work, PE, and MP shares

of 60.8 percent, 37.0 percent, and 2.3 percent, respectively, in the new PPI Survey data.[433] As discussed in detail in section II.B. of this proposed rule, we have numerous concerns with the cost shares as reported by the AMA in the PPI Survey data. It is our understanding that these PPI Survey cost shares ignore non-physician specialties that were surveyed in the CPI Survey, even though those specialties are included in PFS ratesetting, and therefore derive payment from the same pools of work, PE, and MP as the physician specialties included in the PPI Survey. Additionally, it seems that the AMA calculated specialty-level shares and averaged these shares across specialties, which is mathematically different than estimating the share of total work, PE, and MP across all specialties. (That is, the average of shares does not need to equal shares of the total.) This represents a change from how the cost shares are currently calculated by the MEI and we believe this methodology runs counter to the goal of adjusting the aggregate pools of PE RVUs and the relativity adjustment to reach the proportions of work, PE, and MP. Despite our concerns, we are displaying the specialty-level impacts of incorporating these new cost shares, as directly reported by the AMA, in column G, which would result in specialty impacts ranging from −7 percent (facility-setting Hand Surgery) to +18 percent (for facility-setting Clinical Social Worker).

Due to our concerns with the AMA's methodology for reporting cost shares, we developed cost shares that account for both the PPI and CPI Survey data into an estimate of total shares across physician and non-physician specialties using weights from Medicare volumes. Using either PFS RVUs or physician time file time-weighted shares yields similar results, with an estimated 54.4 percent or 54.8 percent work share, respectively. To do this, we multiplied the specialty-level estimates of work, PE, and MP by, for example, total PFS RVUs for the specialty grouping, added these amounts across specialty groupings, and calculated the shares of these sums. As a result, we calculate cost shares of total work, PE, and MP to be 54.4 percent, 43.8 percent, and 1.7 percent, respectively, when using PFS RVUs to weight the specialty-level values reported in the PPI and CPI Surveys. We display the specialty-level impacts of using these cost shares derived by through this methodology, while retaining current PE/HR values results, in Column H, which range from −9 percent to 11 percent (for non-facility Interventional Radiology and facility-setting Clinical Social Worker specialties, respectively).

Because of the significant redistributive effects of all the alternatives considered, as well as the concerns with the underlying PPI and CPI Survey data, we are proposing to delay these adjustments to allow public comments on the PPI and CPI Surveys discussed in section II.B. of this proposed rule, and to maintain use of the current 2006-based MEI cost share weights. Because there are significant concerns with the PPI and CPI Survey data, outlined in detail in section II.B. of this proposed rule, and significant time has elapsed since the last recalibration of the cost share weights, we believe it is important to allow public comment on the use of the PPI and CPI Survey data, as well as the updated 2017-based MEI, discussed in detail in the CY 2023 PFS final rule, before we incorporate any updated cost shares into PFS ratesetting. Of note, the 2017-based MEI cost shares, the PPI Survey cost shares as reported by the AMA, and the cost shares derived by CMS from the PPI and CPI Survey data result in drastically different PE shares, and the current 2006-based MEI cost shares fall in the middle of the them, therefore, we continue to believe that proposing to delay the implementation of any alternative cost share weights is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. Similarly, we are proposing to delay the implementation of any updated cost share weights for use in the practice expense (PE) Geographic Practice Cost Index (GPCI) for CY 2026 to allow public comment on all considerations before we incorporate any updated cost share weights into the PE GPCIs. We refer readers to the section below, and section II.N. of this proposed rule for more discussion on alternatives considered regarding this proposal.

3. Alternatives Considered for the Practice Expense (PE) Geographic Practice Cost Index (GPCI)

As discussed in section II.N. of this proposed rule, we use the MEI cost share weights to weight the four components of the PE GPCI: employee wages, office rent, purchased services, and medical equipment, supplies, and other miscellaneous expenses. As the MEI cost shares are updated, we have historically updated the GPCI cost share weights to make them consistent with the most recent update to the MEI. Due to the concurrent GPCI update and rebasing and revision of the MEI for CY 2023, we proposed to maintain the use of the current 2006-based MEI cost share weights for the CY 2023 GPCIs instead of the updated 2017-based MEI, to allow interested parties the opportunity to review and comment on the rebased and revised MEI cost share weights. Similarly, we are proposing to delay the implementation of any updated cost share weights for the CY 2026 GPCIs due to the consideration of the AMA's PPI and CPI Survey data.

Additionally, we have received data from the AMA's PPI and CPI Surveys, however, these data lack the specific breakdown of practice expense that we would need to consider its use to weight the four components of the PE GPCI for CY 2026, including Office Rent and Purchased Services, which are not explicitly described in the PPI and CPI Survey data. Because the Survey data lacks constituent components of the PE GPCI, we considered possible derivations of weights from the PPI and CPI Survey for use in the PE GPCI for consideration in possible future rulemaking. Because the derivation of these weights required mapping and methodology proposals discussed below, we did not consider their use in the CY 2026 PE GPCI update and did not develop CY 2026 PE GPCIs based on these weights for display purposes but are displaying the derived weights for possible consideration in future rulemaking. We did not believe it would be beneficial to display the resulting CY 2026 PE GPCIs from these derived weights because the PE GPCI values would inevitably look different if/when we propose to update the weights due to the underlying updated data.

For the derived weights, we started with a possible mapping of the PPI and CPI Survey direct (labor, supplies and equipment) and indirect PE (administrative, overhead, information technology and other) data to the four components of the PE GPCI based, as shown below in Table 109.

[433] *https://www.ama-assn.org/system/files/table-1-results-from-ppi.pdf.*

TABLE 109: PROPOSED MAPPING FOR PPI AND CPI SURVEY DATA CATEGORIES TO THE PE GPCI COMPONENTS

	PE GPCI Component			
	Employee Wages	Purchased Services	Office Rent	Supplies and Equipment
Clinical Labor	100%	0%	0%	0%
Supplies	0%	0%	0%	100%
Equipment	0%	0%	0%	100%
Administrative	0%	50%	50%	0%
Overhead	0%	50%	50%	0%
Information Technology	0%	100%	0%	0%
Other	0%	50%	50%	0%

Secondly, we combined the PPI and CPI Survey data and weighted the data by RVUs to develop a combined PPI and CPI Survey ''All'' line, analogous to the AMA's PPI Survey results ''All'' line,[434] which was not provided for the CPI Survey data.[435] We then used the calculated direct and indirect totals from the PPI and CPI Survey data (weighted them by total RVUs) for each PE GPCI element based on the proposed mapping for the 4 PE GPCI components above to derive new weights for each of the 4 PE GPCI components, as shown below in Table 110.

TABLE 110: ALTERNATIVE DERIVED WEIGHTS FROM THE PPI AND CPI SURVEY DATA

		Weights of the Four PE GPCI Components		
Proposed Map to PE Shares*	Calculated Direct/Indirect Total	New Weights Derived from PPI and CPI Surveys	Current Weights under the 2006-based MEI	Weights under the 2017-based MEI
Employee Wages	38.78	25.476%	36.917%	49.776%
Purchased Services	53.76	35.317%	18.053%	26.245%
Office Rent	46.35	30.449%	22.799%	11.117%
Supplies & Equipment**	13.34	8.764%	22.231%	12.862%
Total	152.22	100%	100%	100%

*weighted by total RVUs

**CMS assumes a national market for such items and therefore assigns a value of 1.00 for this component in each PFS locality, therefore, a decrease in its share of the PE GPCI would possibly lead to more variation in the resulting PE GPCI across payment areas.

We welcome comments on the weights displayed above in Table 110, and any alternative methodologies to weight and or map the PPI and CPI Survey data to derive weights used to weight the four components of the PE GPCI for possible consideration in future rulemaking. Because any alternative derivation or weighting methodology for the PPI and CPI Survey data would result in different shares than displayed above, we do not believe that displaying the resulting CY 2026 PE GPCI based on these shares would be beneficial until we provide opportunity for the public to comment on this methodology. Additionally, because CY 2026 is a GPCI update, there would be a confounding effect of these updated shares due to the implementation of updated data required for a triennial GPCI update.

4. Alternatives Considered for Changes Related to Medicare Part B Payment for Skin Substitutes When Used During a Covered Application Procedure in the Non-Facility Setting

As discussed in detail in section II.K.D. of this proposed rule, starting January 1, 2026, we are proposing to pay for the provision of certain groups of skin substitute products used during a covered application procedure (CPT codes 15271 through 15278) as supplies. These skin substitutes will be paid as incident-to supplies under the PFS in the non-facility setting in accordance with section 1861(s)(2)(A) of the Act. While costs associated with supplies are usually bundled into the PE RVUs for particular services in non-facility settings, these products have been paid separately for many years in the non-

[434] *https://www.ama-assn.org/system/files/table-1-results-from-ppi.pdf.*

[435] *https://www.ama-assn.org/system/files/table-1-results-from-cpi-final.pdf.*

facility setting, where the majority of these products are currently used.

CMS considered several alternative approaches to calculate changes in spending. Each alternative relies on the same underlying data on skin substitute product volume—2024 volume measured in billing units for skin product HCPCS codes included in analysis as described above. The alternatives and corresponding spending change estimates vary in terms of the rate(s) applied to this fixed volume. Each alternative results in a corresponding saving estimate relative to the status quo spending at 2024 volumes and payment rates of $10.3B.

All alternatives considered by CMS share some common features. Quarterly 2024 rates start with the ASP for skin substitute product HCPCS codes included in the October 2024 ASP pricing file or, for other codes, the OPPS geometric mean cost for the HCPCS code prior to OPPS packaging rules or, for all other codes, the average payment per billing unit in calendar year 2024 professional claims. These values were then applied to volume shares calculated in different ways to calculate annual rates.

We estimate that under this proposal, which assumes a single rate of approximately $125.38, there would be an estimated savings of $9.4 billion. The first alternative, which assumes a single rate of $65.85 calculated using outpatient facility volume shares, yields savings of $9.79 billion, or a 95% reduction from the status quo. Finally, another approach applies the PMA-based rate ($259.47) and another rate, $125.38, calculated using data from HCT/P products and outpatient facility volume shares only, to HCT/P and 510(k) products. Savings under this approach were $9.29 billion, a 90% reduction in spending relative to the status quo.

5. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. In section IV.A.4.g.(2).(c). of this proposed rule, we propose to set the performance threshold to 75 points for the CY 2026 MIPS performance period/CY 2028 MIPS payment year through CY 2028 MIPS performance period/CY 2030 MIPS payment. We refer readers to section IV.B.2.b.(2). of this proposed rule for discussion of this policy and alternatives considered.

6. Alternatives Considered Related to the Ambulatory Specialty Model

In section III.D of this proposed rule, we discuss the proposed mandatory ASM. As proposed, we would test whether ASM leads to improved chronic condition management, higher quality care, and reduced costs by incentivizing ASM participants with the opportunity for positive payments adjustments to Medicare Part B covered professional services payments based on their performance on data reported on quality, cost, improvement activities, and CEHRT interoperability.

Throughout this proposed rule, we have identified our proposed policies and alternatives that we have considered and provided information as to the effects of these alternatives and the rationale for each of the proposed policies. This proposed rule provides descriptions of the requirements that we would mandate, identifies the payment methodology to be tested, and presents rationales for our decisions and, where relevant, alternatives that we considered. For example, we considered defining an ASM participant as a subgroup within a TIN comprised of NPIs that individually meet the proposed ASM participant eligibility criteria for a given ASM performance year and would report the required measures and activities as a subgroup within the TIN. Another example is that we considered an alternative scoring approach where each of the four proposed ASM performance categories would be weighted to produce a final score, instead of the proposed negative scoring adjustments to the final score computed from quality and cost ASM performance category scores based on performance within the improvement activities and Promoting Interoperability ASM performance categories.

We note that the impact estimates summarized in this section of this proposed rule are based on the proposed policies identified throughout the preamble.

We welcome comments on our proposals and on the alternatives that we have identified in this rule.

G. Impact on Beneficiaries

1. Medicare Shared Savings Program Provisions

As noted previously in the CY 2025 PFS final rule (89 FR 98551), the health equity benchmark adjustment finalized in that rule (proposed in this rule to be renamed the ''population adjustment'') will mainly provide upwards adjustments to benchmarks for—and likely draw increased participation from—new ACOs with particular focus on coordinating care for beneficiaries in underserved communities. New ACOs of this type are therefore projected to ultimately increase assignment to Shared Savings Program ACOs by roughly 500,000 beneficiaries per year, ranging from 50,000 to 1.0 million at the low and high ends of this projection range. Beyond retaining this impact via the renamed ''population adjustment,'' the benchmark proposal in this rule is not expected to have a material net impact on overall program participation or the number of beneficiaries receiving care management from ACOs.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in MIPS (as shown in Table 111). In performance year 2023, ACOs scored better than comparable MIPS groups [436] on all three eCQMs in the APP quality measure set, and the difference was statistically significant for Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs also performed better than comparable MIPS groups on one of the MIPS CQMs in the APP quality measure set: Quality ID: 236 Controlling High Blood Pressure. ACOs also performed better than comparable MIPS groups on eight of the ten patient experience survey measures that contribute to Quality ID: 321 Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS, and for three of these summary survey measures the difference was statistically significant ($p < .05$): CAHPS–1 Getting Timely Care, Appointments, and Information; CAHPS–2 How Well Providers Communicate; and CAHPS–3 Patient's Rating of Provider.

We note there are key differences between the Shared Savings Program and MIPS that limit our analysis of ACOs' performance on the eCQMs/MIPS CQMs and the CAHPS for MIPS Summary Survey Measures compared to MIPS groups. Specifically, Shared Savings Program ACOs are required to report the eCQMs/MIPS CQMs included in the APP quality measure set; whereas MIPS groups can choose which eCQMs and MIPS CQMs they report on and tend to choose those they will perform well on. Shared Savings Program ACOs are required to administer the CAHPS for MIPS Survey, while it is optional for MIPS groups. A large number of MIPS groups do not administer the CAHPS for MIPS Survey as they are less likely to meet the minimum sample size required

[436] Quality Payment Program measurement data are for MIPS groups that have 16 or more clinicians. The mean number of beneficiaries for MIPS groups with 16 or more clinicians is 13,457.

to administer the survey, coupled with the tendency of MIPS groups to choose measures they will perform well on.

TABLE 111: PY 2023 QUALITY MEASURES THAT SHARED SAVINGS PROGRAM ACOs PERFORMED BETTER ON THAN COMPARABLE MIPS GROUPS

Quality #	Measure Title	Difference in Mean ACO and MIPS Group Performance Rates for PY 2023 (%)[1]
	eCQMs	
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	-7.07[2]
134	Preventive Care and Screening: Screening for Depression and Follow-Up Plan	5.21
236	Controlling High Blood Pressure	5.94[3]
	MIPS CQMs	
236	Controlling High Blood Pressure	1.13
321	**CAHPS for MIPS**	0.44
CAHPS-1	Getting Timely Care, Appointments, and Information	2.06[3]
CAHPS-2	How Well Providers Communicate	0.62[3]
CAHPS-3	Patient's Rating of Provider	0.80[3]
CAHPS-4	Access to Specialists	0.98
CAHPS-5	Health Promotion and Education	1.14
CAHPS-7	Health Status and Functional Status	1.24
CAHPS-8	Care Coordination	0.74
CAHPS-11	Stewardship of Patient Resources	0.09

Notes:
[1]The numbers in this column represent the mean ACO performance rate minus the mean MIPS group performance rate for each measure.
[2] This is an inverse measure, and lower number indicates better quality performance.
[3] Indicates statistically significant differences between ACOs and comparable MIPS groups ($p < 0.05$).

Additionally, ACOs showed improvement for nine of the ten CMS Web Interface measures and statistically significant improvement for seven out of the ten measures, in performance year 2023 relative to performance year 2022 (as shown in Table 112).

TABLE 112: CMS WEB INTERFACE MEASURES WITH STATISTICALLY SIGNIFICANT IMPROVEMENT AMONG SHARED SAVINGS PROGRAM ACOS BETWEEN PY 2022 AND PY 2023

Quality #	Measure Title	Difference in Mean ACO Performance Rates between PY 2022 and PY 2023 (%)[1]
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	-0.87[2,3]
112	Breast Cancer Screening	2.29[3]
113	Colorectal Cancer Screening	1.82[3]
134	Preventive Care and Screening: Screening for Depression and Follow-Up Plan	4.00[3]
226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	0.02
236	Controlling High Blood Pressure	1.64[3]
318	Falls: Screening for Future Fall Risk	1.59[3]
370	Depression Remission at Twelve Months	0.37
438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	0.68[3]

Notes:
[1]The numbers in this column represent the mean ACO performance rate in PY 2023 minus the mean ACO performance rate in PY 2022 for each measure.
[2] This is an inverse measure, and lower number indicates better quality performance.
[3] Indicates statistically significant differences between ACOs' mean performance rates between PY 2022 and PY 2023 ($p < 0.05$).

We anticipate that ACOs will continue to improve the quality of care for the Medicare beneficiaries they serve, which will be reflected through the reporting of Medicare CQMs beginning in performance year 2024 and through their performance on Quality ID: 321 CAHPS for MIPS. We also anticipate that ACOs will continue to improve the quality of care for their all payer/all patient population, which will be reflected through the reporting of eCQMs/MIPS CQMs.

Increased participation in the Shared Savings Program would extend ACO care coordination to additional beneficiaries which can help improve the quality of care they receive.

2. Quality Payment Program

There are several changes in this proposed rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate the policies in this proposed rule would improve the quality and value of care provided to Medicare beneficiaries.

For example, several of the new quality measures include patient-reported outcome-based measures, which could be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and could also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which would not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors frequently of interest to patients when making decisions about treatment.

3. Ambulatory Specialty Model

We anticipate that ASM will have no impact on cost to beneficiaries. Like MIPS, ASM payment adjustments would not affect Medicare beneficiary coinsurance amounts. The coinsurance would be calculated based on the Medicare allowed amounts before any ASM payment adjustment multipliers are applied to Medicare Part B payments for covered professional services.

H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rulemaking, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's rule will be the number of reviewers of this year's proposed rule. We acknowledged that this assumption may understate or overstate the costs of reviewing this rulemaking. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the final rule. For these reasons, we believe that the number of commenters will be a fair estimate of the number of reviewers of this year's final rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this final rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rulemaking.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimated that the cost of reviewing this rulemaking is $113.42, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this proposed rule. For each facility that reviews the rule, the estimated cost is $907.36 (8.0 hours × $113.42). Therefore, we estimated that

the total cost of reviewing this regulation is $6,333,373 ($907.36 × 6,980 reviewers on this year's proposed rule).

I. Accounting Statement

As required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*), in Tables 113 through 115 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2025 to CY 2026 based on the FY 2026 President's Budget baseline.

TABLE 113: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

CATEGORY	TRANSFERS
CY 2026 Annualized Monetized Transfers	Estimated increase in expenditures of $0.4 billion for PFS CF update.
Bearers of Transfer Gain	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 114: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

CATEGORY	TRANSFER
CY 2026 Annualized Monetized Transfers of beneficiary cost coinsurance.	$0.1 billion
Bearers of Transfer Gain	Beneficiaries to Federal Government.

TABLE 115: ACCOUNTING STATEMENT FOR PROVISIONS FOR MEDICARE SHARED SAVINGS PROGRAM (CYS 2026-2035) ($ MILLIONS)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
BENEFITS				
Annualized monetized: Discount rate: 3%	-$2.2 million	-$70.1 million	$72.9 million	Tables 96 and 97; summarized in total in Table 98
Annualized monetized: Discount rate: 7%	-$2.5 million	-$66.2 million	$67.5 million	Tables 96 and 97; summarized in total in Table 98

Notes: Negative values reflect reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Mehmet Oz, Administrator of the Centers for Medicare & Medicaid Services, approved this document on July 9, 2025.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, and X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 427

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR part 428

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy,

and Reporting and recordkeeping requirements.

42 CFR Part 512

Administrative practice and procedure, Health care, Health facilities, Health insurance, Intergovernmental relations, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.2401(b) is amended by adding the definition of ''Direct Supervision'' in alphabetical order to read as follows:

§ 405.2401 Scope and definitions.

* * * * *

(b) * * *

* * * * *

Direct Supervision means that the physician (or other supervising practitioner) must be present in the RHC or FQHC and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. The presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

* * * * *

§ 405.2463 [Amended]

■ 3. Section 405.2463 is amended by revising paragraph (b)(3) by removing the date ''January 1, 2026'' and adding in its place the date ''October 1, 2025''.

■ 4. Section 405.2464 is amended by—

■ a. Revising paragraph (c)(2);

■ b. Adding paragraph (c)(8); and

■ c. Revising paragraph (e);

The revisions and addition read as follows:

§ 405.2464 Payment rate.

* * * * *

(c) * * *

* * * * *

(2) For psychiatric collaborative care model (CoCM) services furnished between January 1, 2018, and December 31, 2025, payment is based on the average of the national non-facility PFS payment rate set for each psychiatric CoCM service and updated annually based on the PFS amounts.

* * * * *

(8) For CoCM services furnished on or after January 1, 2026, payment is based on the PFS national non-facility payment rate.

* * * * *

(e) *Payment for communication technology-based and remote evaluation services.*

(1) For communication technology-based and remote evaluation services furnished between January 1, 2019, and December 31, 2025, payment to RHCs and FQHCs is at the rate set for each of the RHC and FQHC payment codes for communication technology-based and remote evaluation services.

(2) For communication technology-based services furnished on or after January 1, 2026, payment to RHCs and FQHCs is based on the PFS national non-facility payment rate.

(3) For remote evaluation services furnished on or after January 1, 2026, payment to RHCs and FQHCs is based on the PFS national non-facility payment rate.

* * * * *

§ 405.2469 [Amended]

■ 6. Section 405.2469 is amended in paragraph (d) by removing the date ''January 1, 2025'' and adding in its place the date ''October 1, 2025''.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 7. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 8. Section 410.15(a) is amended by—

■ a. In paragraph (a), in the definition of ''First annual wellness visit providing personalized prevention plan services'', removing paragraph (xiii) and redesignating paragraph (xiv) as (xiii); and

■ b. In paragraph (a), in the definition of ''Subsequent annual wellness visit providing personalized prevention plan services'', removing paragraph (xi) and redesignating paragraph (xii) as (xi).

■ 9. Section 410.26 is amended by revising paragraphs (a)(2) and (c)(2) to read as follows:

§ 410.26 Services and supplies incident to a physician's professional services: Conditions.

(a) * * *

(2) Direct supervision means, except as provided in paragraphs (a)(2)(i) and (ii) of this section, the level of supervision by the physician (or other practitioner) of auxiliary personnel as defined in § 410.32(b)(3)(ii). The presence of the physician (or other practitioner) required for direct supervision may include virtual presence through audio/video real-time communications technology (excluding audio-only) for services without a 010 or 090 global surgery indicator.

* * * * *

(c) * * *

(2) Physical therapy, occupational therapy and speech-language pathology services provided incident to a physician's professional services are subject to the provisions established in §§ 410.59(a)(3)(iii), 410.60(a)(3)(iii), and 410.62(a)(3)(iii).

■ 10. Section 410.32 is amended by revising paragraph (b)(3)(ii) to read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(3) * * *

(ii) Direct supervision in the office setting means that the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. The presence of the physician (or other practitioner) required for direct supervision may include virtual presence through audio/video real-time communications technology (excluding audio-only) for services without a 010 or 090 global surgery indicator.

* * * * *

■ 11. Section 410.62 is amended by revising paragraph (a) to read as follows:

§ 410.62 Outpatient speech-language pathology services: Conditions and exclusions.

(a) *Basic rule.* Except as specified in paragraph (a)(3)(iii) of this section, Medicare Part B pays for outpatient speech-language pathology services only if they are furnished by an individual who meets the qualifications for a speech-language pathologist in § 484.115 of this chapter and only under the following conditions:

* * * * *

■ 12. Section 410.79 is amended—

■ a. In paragraph (b) by—

■ i. Revising the definitions of ''Extended flexibilities period'' and ''Online;''
■ ii. Adding the definitions of ''Live Coach interaction,'' ''Online delivery period'' and ''Online session;'' in alphabetical order.
■ b. Revising paragraphs (c)(1)(ii) and (e)(3)(iii)(C); and
■ c. Adding paragraph (f).

The revisions and additions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(b) * * *

Extended flexibilities period refers to the 6-year period (January 1, 2024 to December 31, 2029) for the Extended flexibilities to apply.

* * * * *

Live Coach interaction refers to the bi-directional communication between the Coach and beneficiary.

* * * * *

Online means sessions that are delivered 100 percent through the internet via phone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI)) Coach teaching the content.

Online delivery period refers to the 4-year period (January 1, 2026 to December 31, 2029) to test an asynchronous delivery modality of the set of MDPP services. During this time, MDPP suppliers may deliver the Set of MDPP services through the online modality.

Online session refers to an MDPP session that is not furnished in person or via distance learning and that is furnished in a manner consistent with the DPRP standards for online sessions.

* * * * *

(c) * * *

(1) * * *

(ii)Weight measurements used to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within two (2) days of the MDPP session.

(e) * * *

(3) * * *

(iii) * * *

(C) Self-reported weight measurements from the digital scale of the MDPP beneficiary. Self-reported weights must be obtained during live, synchronous online video technology, such as video chatting or video conferencing, wherein the MDPP coach observes the beneficiary weighing themselves and views the weight indicated on the digital scale, or the MDPP supplier receives two date-stamped photos or a video recording of the beneficiary's weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. Photo or video must clearly document the weight of the MDPP beneficiary as it appears on the digital scale on the date associated with the billable MDPP session. If choosing to submit two photos, one photo must show the beneficiary's weight on the digital scale, the second photo must show the beneficiary visible in their home or other reasonable location outside of an in-person delivery site, and both photos must be date-stamped.

* * * * *

(f) *MDPP online delivery.*

(1) Notwithstanding paragraphs (a) through (e) of this section, the policies described in this paragraph (f) apply during the online delivery period.

(2) During the online delivery period, MDPP suppliers are not required to maintain in-person delivery capabilities of the set of MDPP services, as applicable during the online delivery period.

(i) Online sessions must be furnished in a manner consistent with the DPRP Standards regarding program format, coach interaction, and program intensity and duration to qualify for payment. Online sessions must be delivered 100 percent through the internet via phone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI) Coach teaching the content.

(A) Live Coach interaction must be offered to each participant during weeks when the beneficiary has engaged with content. E-mails and text messages can count toward the requirements for Live Coach interaction if there is bi-directional communication (that is, organizations may not simply send out an announcement via text or e-mail and count that as live Coach interaction; the beneficiary must have the ability to respond to and get support from the live Coach) between the Coach and participant. Chat bots and AI forums do not count as live Coach interaction. Coaches are required to track participant engagement and completion of online modules. Proactive outreach must be used to encourage Online session completion and beneficiary weight reporting.

(1) MDPP suppliers may not require that beneficiaries initiate interactions with the Coach and MDPP suppliers may not use AI or Machine Learning (ML) to replace Live Coach interaction.

(B) Beneficiaries must submit weight measurements on the date in which the Online session is completed. MDPP suppliers must ensure safeguards are in place to ensure the accuracy of beneficiary weight measurements.

(C) For MDPP beneficiaries, MDPP suppliers may not bill for Online Sessions as well as In-Person or Virtual Sessions during the Online delivery period. The Set of MDPP services must be delivered to individual beneficiaries as Online sessions or fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component).

(D) MDPP suppliers must ensure that MDPP beneficiaries engage with and understand the content of each Online session. MDPP suppliers may use one or more of the following to ensure engagement and understanding: videos/presentations, email, video conferencing; knowledge checks (multiple choice or short answer); participant contributions to group discussions on a community board; or beneficiary responses to the Coach via email, text message, or in-app messaging.

(ii) [Reserved]

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 13. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 14. Section 414.84 is amended by—
■ a. Revising paragraphs (b)(1) introductory text and (b)(2) introductory text;
■ b. Redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5);
■ c. Adding new paragraph (c)(3); and
■ d. Revising newly redesignated paragraph (c)(4)(ii).

The revisions and addition read as follows:

§ 414.84 Payment for MDPP services.

* * * * *

(b) * * *

(1) *Performance Goal 1: Achieves the required minimum 5-percent weight loss.* CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves the required minimum weight loss as measured in accordance with § 410.79(c)(ii) or described in § 410.79(e)(3)(iii) during a core session or core maintenance session furnished

by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(2) *Performance Goal 2: Achieves 9-percent weight loss.* CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves at least a 9-percent weight loss as measured in accordance with § 410.79(c)(ii) or described in § 410.79(e)(3)(iii) during a core session or core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(c) * * *

(3) For the duration of online delivery described in § 410.79(f), the online HCPCS G-code applies for any Set of MDPP services that are delivered online, as described in § 410.79(b).

(4) Medicare pays for up to 22 sessions in a 12-month period. The amount of this payment is determined as follows:

(i) * * *

(ii) For a core session or core maintenance session furnished January 1, 2026 through December 31, 2026, $18.

* * * * *

■ 15. Section 414.610 is amended by—

■ a. Revising paragraph (c)(1)(ii) introductory text; and

■ b. In paragraph (c)(5)(ii) removing the date ''December 31, 2024'' and adding in its place the date ''September 30, 2025''.

§ 414.610 Basis of payment.

* * * * *

(c) * * *

(1) * * *

(ii) For services furnished during the period July 1, 2008 through September 30, 2025, ambulance services originating in.

* * * * *

■ 16. Section 414.802 is amended by—

■ a. Adding a definition of biological in alphabetical order;

■ b. Revising the definition of Bona fide service fees;

■ c. Adding the definition of bundled arrangement in alphabetical order; and

These additions and revision read as follows:

§ 414.802 Definitions.

* * * * *

Biological means a product licensed under section 351 of the Public Health Service Act.

Bona fide service fees means fees paid by a manufacturer to an entity, that must meet all of the following characteristics:

(1) Represent fair market value as determined according to methods in paragraph (1)(i) or (ii) of this paragraph. Fair market value analyses for service arrangements that are ongoing must be updated at a frequency no less than the renewal frequency of the agreement.

(i) For fees paid by a manufacturer to an entity that do not vary directly with the amount of drug sold or price of a manufacturer's drug, fair market value must be determined either based on comparable market transactions that generally reflect current market conditions or the cost of the service plus a reasonable markup to the total cost.

(ii) For fees paid by a manufacturer to an entity that vary directly with the amount of drug sold or price of a manufacturer's drug, the fair market value must be determined by using the cost of the service and adding a reasonable markup to the total cost. If any material portion of cost data is not available, manufacturers should follow a market-based approach based on verifiable market data until such time as sufficient cost data becomes available. The fair market value assessment must be conducted by an independent third-party valuator.

(2) For a bona fide, itemized service actually performed on behalf of the manufacturer.

(3) For a service that the manufacturer would otherwise perform (or contract for) in the absence of the service arrangement.

(4) The fee must not be passed on in whole or in part to an affiliate, client, or customer of an entity whether or not the entity takes title to the drug.

Bundled arrangement means an arrangement regardless of physical packaging under which the rebate, discount, or other price concession is conditioned upon the purchase of the same drug or biological or other drugs or biologicals or another product or some other performance requirement (for example, the achievement of market share, inclusion or tier placement on a formulary, purchasing patterns, prior purchases), or where the resulting discounts or other price concessions are greater than those which would have been available had the bundled drugs or biologicals been purchased separately or outside the bundled arrangement.

* * * * *

Drug means a drug or a biological, and for purposes of applying section 1847A(f) of the Act, includes an item, service, supply, or product that is payable under Medicare Part B as a drug or biological.

* * * * *

■ 17. Section 414.804 is amended by—

■ a. Adding paragraphs (a)(2)(i)(f), (iii) and (iv); and

■ b. Revising paragraph (a)(5).

The additions and revision read as follows:

§ 414.804 Basis of payment.

(a) * * *

(2) * * *

(i) * * *

(F) Fees paid by a manufacturer to an entity that vary directly with the amount of the manufacturer's drug sold or price of a manufacturer's drug unless it meets the definition of bona fide service fee under § 414.802.

* * * * *

(iii) The discounts in a bundled arrangement as defined at § 414.802, including those discounts resulting from a contingent arrangement, are allocated proportionately to the dollar value of the units of all drugs or products sold under the bundled arrangement.

(iv) For bundled arrangements where multiple drugs are discounted, the aggregate value of all the discounts in the bundled arrangement must be proportionally allocated across all the drugs or products in the bundle.

* * * * *

(5) *Submission requirements.* Manufacturers must submit the following to CMS within 30 days of the close of the quarter: The manufacturer's average sales price must be calculated by the manufacturer every calendar quarter and submitted to CMS within 30 days of the close of the quarter. The first quarter submission must be submitted by April 30, 2004. Subsequent reports are due not later than 30 days after the last day of each calendar quarter.

(i) The manufacturer's average sales price, which must be calculated by the manufacturer every calendar quarter. The first quarter submission must be submitted by April 30, 2004.

(ii) Effective January 1, 2026, reasonable assumptions for calculations of the manufacturer's ASP, consistent with the general requirements and intent of the Act, Federal regulations, and its customary business practices including documentation of the methodology used to determine fair market value and periodic reviews of fair market value.

(iii) Effective January 1, 2026, certification letter from the recipient of a bona fide service fee (as defined under § 414.802) as evidence that the fee is not passed on in whole or in part to an affiliate, client or customer of the recipient of the fee, whether or not the entity takes title to the drug.

* * * * *

■ 18. Section 414.902 is amended by adding the definition of ''biological'' in alphabetical order to read as follows:

§ 414.902 Definitions.

* * * * *

Biological means a product licensed under section 351 of the Public Health Service Act.

* * * * *

■ 19. Section 414.1305 is amended by—

■ a. Revising paragraph (6) of the definition for ''Attribution-eligible beneficiary''; and

■ b. Revising the definitions of ''Multispecialty group'', ''MVP participant'', and ''Single specialty group.

The revisions read as follows:

§ 414.1305 Definitions.

Attribution-eligible beneficiary

* * *

(6) Has a minimum of one claim for any covered professional service furnished by an eligible clinician who is on the Participation List for an Advanced APM Entity at any determination date during the QP Performance Period.

* * * * *

Multispecialty group means a group as defined at § 414.1305 that consists of clinicians in two or more specialty types or clinicians involved in multiple foci of care.

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, multispecialty group that meets the requirements of a small practice, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Single specialty group means a group that consists of one specialty type or consists of clinicians involved in a single focus of care.

* * * * *

■ 20. Section 414.1355 is amended by revising paragraph (c)(7) to read as follows:

§ 414.1355 Improvement activities performance category

* * * * *

(c) * * *

(7) Advancing health and wellness, such as MIPS eligible clinicians demonstrating involvement in preventive care and health promotion.

* * * * *

■ 21. Section 414.1365 is amended by adding paragraph (b)(2)(iv) to read as follows:

§ 414.1365 MIPS Value Pathways.

* * * * *

(b) * * *

(2) * * *

(iv) *Self-attestation requirement.* Beginning with the CY 2026 performance period/2028 MIPS payment year, a group registering for MVP reporting at the group level must attest to being either a single-specialty group or a multispecialty group that meets the requirements of a small practice, as defined at § 414.1305.

* * * * *

■ 22. Section 414.1380 is amended by—

■ a. Revising paragraphs (b)(1)(i) introductory text, (b)(1)(ii)(D), and (b)(2)(iii) introductory text;

■ c. Adding paragraph (b)(2)(vi);

■ d. Revising paragraph (b)(4)(ii)(C); and

■ e. Adding paragraph (b)(4)(iii).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(i) *Measure achievement points.* For the CY 2017 through 2022 performance periods/2019 through 2024 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section.

(A) Except as provided under paragraph (b)(1)(i)(C) of this section, beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) for each such measure.

(B) Except as specified otherwise under paragraph (b)(1)(ii) of this section, the number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points.

(C) Beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(ii) * * *

(D) Beginning with the CY 2023 performance period/2025 MIPS payment year, CMS calculates a benchmark for an administrative claims quality measure using the performance on the measures during the current performance period.

(E) Beginning with the CY 2025 performance period/2027 MIPS payment year, for each administrative claims-based quality measure, CMS determines 10 benchmark ranges based on the median performance rate of all MIPS eligible clinicians scored on the measure, plus or minus standard deviations.

(*1*) CMS awards achievement points based on which benchmark range a MIPS eligible clinician's performance rate for an administrative claims-based quality measure corresponds; and

(*2*) CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose performance rate is equal to the median performance for all MIPS eligible clinicians scored on the measure.

(2) * * *

(iii) Excluding cost measure scores calculated for informational-only purposes as provided in paragraph (b)(2)(vi) of this section, the cost performance category score is the sum of the following, not to exceed 100 percent:

* * * * *

(vi) Beginning with the 2028 MIPS payment year, CMS calculates a score for each new cost measure in accordance with the scoring policy set forth in this paragraph (b)(2) of this section for informational-only purposes during the measure's informational-only feedback period.

(A) For the purposes of this paragraph (b)(2)(vi) of this section, the following terms have the following meanings.

(*1*) *New cost measure* means a measure that CMS has newly specified for the MIPS cost performance category for a performance period under § 414.1350 beginning with the 2028 MIPS payment year. This term excludes any cost measures that CMS has specified for the MIPS cost performance category prior to the 2028 MIPS payment year or CMS modifies at any time.

(*2) Informational-only feedback period* means a 2-year period beginning with the first day of the first performance period and ending with the final day of the second performance period for the two applicable MIPS payment years for which CMS initially has specified the new cost measure.

(B) During a new cost measure's informational-only feedback period, CMS does not include any scores for the new cost measure calculated for informational-only purposes under paragraph (b)(2)(vi) of this section in CMS's calculation of a MIPS eligible clinician's cost performance category score under paragraph (b)(2)(iii) of this section or a MIPS eligible clinician's MIPS final score under paragraph (c) of this section.

(C) During a new cost measure's informational-only feedback period, CMS confidentially provides each MIPS eligible clinician their measure score under paragraph (b)(2)(vi) of this section for informational-only purposes. CMS also provides performance feedback to the MIPS eligible clinician in accordance with section 1848(q)(12) of the Act.

(D) Upon completion of a new cost measure's informational-only feedback period, CMS includes its calculation of any scores for the cost measure in CMS's calculation of a MIPS eligible clinician's cost performance category score under paragraph (b)(2)(iii) of this section and a MIPS eligible clinician's MIPS final score under paragraph (c) of this section.

(3) * * *

(4) * * *

(ii) * * *

(C)(*1*) For the 2019 performance period/2021 MIPS payment year through the 2022 performance period/2024 MIPS payment year, each optional measure is worth 5 or 10 bonus points, as specified by CMS.

(*2*) For the 2023 performance period/2025 MIPS payment year and subsequent years, each optional measure is worth 5 bonus points, as specified by CMS.

(*3*) Beginning with the CY 2026 performance period/2028 MIPS payment years, the total number of bonus points available to be earned when reporting one bonus measure, more than one bonus measure, or all bonus measures is a total of 5 bonus points.

(iii) Beginning with the CY 2026 performance period/2028 MIPS payment year, if certain circumstances occur that impact CMS's assessment of the performance of MIPS eligible clinicians on a measure specified for the Promoting Interoperability performance category under § 414.1375(b), CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS's calculation of the Promoting Interoperability performance category objective score under paragraph (b)(4) of this section or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. CMS determines whether certain circumstances exist warranting suppression of a measure based on CMS's consideration of one or more of the following factors:

(A) The nature, breadth, and duration of the circumstances' effect on MIPS eligible clinicians' ability to fulfill the measure requirement.

(B) The availability of certified health IT modules to fulfill the measure.

(C) The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.

(D) Out-of-date or conflicting technical standards.

(E) Technical and operational capacity of required partners.

(F) Other factors as determined by CMS.

* * * * *

■ 23. Section 414.1400 is amended by—

■ a. Revising paragraph (b)(1)(ii);

■ b. In paragraph (d)(3) introductory text, removing the phrase ''including:'' and adding in its place the phrase ''including all of the following:'';

■ c. Revising paragraph (d)(3)(i);

■ d. In paragraphs (d)(3)(ii) and (iii), removing the '';'' and adding in its place ''.'';

■ e. Redesignating paragraphs (d)(3)(iv) through (vi) as paragraphs (d)(3)(iv) through (vi) introductory text;

■ f. Adding paragraphs (d)(3)(iv)(A) and (B), (d)(3)(v)(A) and (B), (d)(3)(vi)(A) and (B), and (d)(3)(vii).

■ g. Revising paragraph (d)(8); and

■ h. Adding paragraphs (d)(9) and (d)(10).

The revisions and additions read as follows:

§ 414.1400 Third party intermediaries.

* * * * *

(b) * * *

(1) * * *

(ii)(A) Beginning with the CY 2023 performance period/2025 MIPS payment year through the CY 2025 performance period/2027 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data.

(B) Beginning with the CY 2026 performance period/2028 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data no later than 1 year after finalization of the MVP in accordance with the current requirement.

(*1*) QCDRs and qualified registries may also support the APP.

(*2*) A QCDR or qualified registry must support all measures and activities included in the MVP with the following exceptions:

(*i*) If an MVP is intended for reporting by multiple specialties, a QCDR or a qualified registry are required to report those measures pertinent to the specialty of its MIPS eligible clinicians.

(*ii*) If an MVP includes a QCDR measure, it is not required to be reported by a QCDR other than the measure owner.

* * * * *

(d) * * *

(3) * * *

(i) At least 3 years of experience administering surveys in which mail survey administration is followed by survey administration via Computer Assisted Telephone Interview (CATI);

(iv) * * *

(A) Beginning January 1, 2024, in addition to administering the survey in English, entities must administer the Spanish survey translation to Spanish-preferring patients using the procedures detailed in subregulatory guidance to standardize the CAHPS data collection process for MIPS and to make sure the survey data collected across survey vendors are comparable within the program or model;.

(B) [Reserved]

(v) * * *

(A) Beginning January 1, 2027, use equipment, software, computer programs, systems, and facilities that can send survey invitations via email that include a patient-specific hyperlink to a web survey, collect data via web, and track cases from web surveys through telephone follow-up activities.

(B) [Reserved]

(vi) * * *

(A) Beginning January 1, 2027, employment of a web survey administrator.

(B) [Reserved]

(vii) Beginning January 1, 2027, at least 3 years of experience administering surveys in which web survey administration is followed by survey administration via mail survey or Computer Assisted Telephone Interview (CATI).

* * * * *

(8) From January 1, 2019 through December 31, 2025, the entity has sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

(9) Beginning with January 1, 2026, the entity seeking to be a CMS-approved survey vendor must include on its application the range of costs of its third-party intermediary services.

(10) Beginning with the CY 2027 performance period/2029 MIPS payment year, the CMS-approved survey vendor must administer the survey via a web-mail-phone protocol.

* * * * *

■ 24. Section 414.1405 amended by adding paragraph (b)(10)(ii) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(10) * * *

(i) * * *

(ii) The performance threshold for the 2028 through 2030 MIPS payment years is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

§ 414.1415 [Amended]

■ 25. Section 414.1415 is amended in paragraph (c)(7) by removing the phrase ''2023 QP Performance Period, notwithstanding'' and adding in its place the phrase ''2023 QP Performance Period and ending with the 2025 QP Performance Period, notwithstanding''.

§ 414.1420 [Amended]

■ 26. Section 414.1420 is amended in paragraph (d)(8) by removing the phrase ''2023 QP Performance Period, notwithstanding'' and adding in its place the phrase ''2023 QP Performance Period and ending with the 2025 QP Performance Period, notwithstanding''.

* * * * *

■ 27. Section 414.1425 is amended by—

(a) Adding paragraph (b)(3); and

(b) Revising paragraphs (c)(3), (c)(4), (d)(1) and (2).

The addition and revisions read as follows:

§ 414.1425 Qualifying APM participant determination: In general.

* * * * *

(b) * * *

(3) For QP Performance Periods beginning with 2026, except for paragraphs (b)(1) and (b)(2) of this section and as set forth in § 414.1440, for purposes of the QP determinations, CMS performs QP determinations for the eligible clinicians three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination dates: March 31, June 30, and August 31. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a date (March 31, June 30, or August 31) CMS uses based on participation in the Advanced APM.

(c) * * *

(3) An eligible clinician is a QP for a year under the Medicare Option if:

(i) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, the eligible clinician is in an APM Entity group that achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(1) and (3). An eligible clinician is a QP for the year under the All-Payer Combination Option if the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(1) and (3).

(ii) Beginning with the CY 2026 QP Performance Period, the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(1) and (3). An eligible clinician is a QP for the year under the All-Payer Combination Option if the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(1) and (3).

(4) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, notwithstanding paragraph (c)(3) of this section, an eligible clinician is a QP for a year if—

(i) The eligible clinician is included in more than one APM Entity group and none of the APM Entity groups in which the eligible clinician is included meets the QP payment amount threshold or the QP patient count threshold, or the eligible clinician is an Affiliated Practitioner; and

(ii) CMS determines that the eligible clinician individually achieves a Threshold Score that meets or exceeds the QP payment amount threshold or the QP patient count threshold.

* * * * *

(d) * * *

(1) An eligible clinician is a Partial QP for a year under the Medicare Option if:

(i) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, the eligible clinician is in an APM Entity group that achieves Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(2) and (4). An eligible clinician is a Partial QP for the year under the All-Payer Combination Option if the eligible clinician achieves individually, or as part of an APM Entity group, a Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(2) and (4).

(ii) Beginning with the CY 2026 QP Performance Period, the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(2) and (4). An eligible clinician is a Partial QP for the year under the All-Payer Combination Option if the eligible clinician achieves individually, or as part of an APM Entity group, a Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(2) and (4).

(2) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, notwithstanding paragraph (d)(1) of this section, an eligible clinician is a Partial QP for a year if—

(i) The eligible clinician is included in more than one APM Entity group and none of the APM Entity groups in which the eligible clinician is included meets the corresponding QP or Partial QP threshold, or the eligible clinician is an Affiliated Practitioner; and

(ii) CMS determines that the eligible clinician individually achieves a

Threshold Score that meets or exceeds the corresponding Partial QP Threshold.

* * * * *

■ 28. Section 414.1455 is amended by revising paragraph (b)(3)(ii) and (vi) to read as follows:

§ 414.1455 Limitation on review.

* * * * *

(b) * * *

(3) * * *

(ii) All requests for targeted review must be submitted during the targeted review request submission period as described at § 414.1385(a)(2). The targeted review request submission period may be extended as specified by CMS.

* * * * *

(vi) A request for targeted review may include additional information in support of the request at the time it is submitted. CMS may also request additional information from the requestor. If CMS requests additional information relating to the eligible clinician or the APM Entity group that is the subject of a request for targeted review, responsive information must be provided and received by CMS within 15 days of the request. If CMS does not receive a timely response to a request for additional information, CMS may make a final decision on the targeted review request based on the information available.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 29. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 30. Section 424.205 is amended by revising paragraphs (c)(10), (f)(2)(i), and (f)(5) to read as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(c) * * *

(10) Except as allowed under paragraph (d)(8) of this section, the MDPP supplier must offer an MDPP beneficiary no fewer than all of the following:

(i) 16 in-person, distance learning, or online core sessions no more frequently than weekly for the first 6 months of the MDPP services period, which begins on the date of attendance at the first such core session.

(ii) One in-person, distance learning, or online core maintenance session each month during months 7 through 12 (6 months total) of the MDPP services period.

* * * * *

(f) * * *

(1) * * *

(ii) Basic beneficiary information for each MDPP beneficiary in attendance, including but not limited to beneficiary name, MBI, and age.

* * * * *

(2) * * *

(i) Documentation of the type of session (in-person, distance learning, or online).

* * * * *

(5) The MDPP supplier's records must include an attestation from the MDPP supplier that, as applicable, the MDPP beneficiary for which it is submitting a claim—

(i) Has achieved required minimum weight loss as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(ii) Has achieved required minimum weight loss as measured in accordance with § 410.79(c)(ii) during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(iii) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

(iv) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(c)(ii) during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 31. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 32. Section 425.20 is amended by revising paragraph (1)(ii) in the definition of ''Beneficiary eligible for Medicare CQMs'' to read as follows:

§ 425.20 Definitions.

* * * * *

Beneficiary eligible for Medicare CQMs * * *

(1) * * *

(ii)(A) For performance year 2024, had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(B) For performance year 2025 and subsequent performance years, had at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

* * * * *

■ 33. Section 425.110 is amended by revising paragraph (a)(2) and adding paragraph (a)(3) to read as follows:

§ 425.110 Number of ACO professionals and beneficiaries.

(a) * * *

(2) For agreement periods beginning before January 1, 2027, CMS deems an ACO to have initially satisfied the requirement to have at least 5,000 assigned beneficiaries as specified in paragraph (a)(1) of this section if 5,000 or more beneficiaries are historically assigned to the ACO participants in each of the 3 benchmark years, as calculated using the assignment methodology set forth in subpart E of this part. In the case of the third benchmark year, CMS uses the most recent data available to estimate the number of assigned beneficiaries.

(3) For agreement periods beginning on or after January 1, 2027, CMS determines whether an ACO has 5,000 or more beneficiaries historically assigned to the ACO participants in each of the 3 benchmark years, as calculated using the assignment methodology set forth in subpart E of this part. CMS uses the most recent data available to estimate the number of assigned beneficiaries in the third benchmark year.

(i) CMS deems an ACO to have initially satisfied the requirement to have at least 5,000 assigned beneficiaries as specified in paragraph (a)(1) of this section if 5,000 or more beneficiaries are historically assigned to the ACO participants in the third benchmark year.

(ii) If an ACO has fewer than 5,000 assigned beneficiaries in either the first benchmark year, the second benchmark year, or both, the ACO may only participate under the BASIC track in accordance with § 425.600(h)(3).

* * * * *

■ 34. Section 425.118 is amended by—

■ a. Redesignating paragraph (b)(3) as paragraph (b)(4);
■ b. Adding new paragraph (b)(3); and
■ c. In newly redesignated paragraph (b)(4) adding paragraph (b)(4)(iii).

The additions read as follows:

§ 425.118 Required reporting of ACO participants and ACO providers/suppliers.

* * * * *

(b) * * *

(3) *Change of ownership for ACO participant.* No later than 30 days after an ACO participant has undergone a change of ownership that has resulted in a change to its Medicare enrolled TIN, whereby the surviving Medicare enrolled TIN has no Medicare billing claims history, the ACO must submit a change request to CMS.

(i) The change request and supporting documentation must be submitted in the form and manner specified by CMS.

(ii)(A) CMS has sole discretion to approve the change request.

(B) If CMS approves the change request, the ACO participant TIN is updated in the ACO participant list in the form and manner specified by CMS.

(4) * * *

(iii) In alignment with changes approved under paragraph (b)(3) of this section, CMS adjusts the ACO's assignment, performance year financial calculations, and the requirement that the ACO submit quality data under § 425.508 and § 425.510 on behalf of eligible professionals that bill under the TIN of an ACO participant. When processed during applicable Quality Payment Program snapshot dates for the relevant Performance Period, the adjustment includes the surviving Medicare enrolled TIN with no Medicare billing claims history on the ACO participant list as the change becomes effective during the performance year.

* * * * *

■ 35. Section 425.224 is amended by revising paragraph (b)(1)(ii)(A) to read as follows:

§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.

* * * * *

(b) * * *

(1) * * *

(ii) * * *

(A) Whether the ACO demonstrated a pattern of failure to meet both the quality performance standard and alternative quality performance standard (if applicable) or met any of the criteria for termination under § 425.316(c)(1)(ii), (c)(2)(ii), or (c)(3)(ii).

* * * * *

■ 36. Section 425.316 is amended by revising paragraph (c)(2) introductory text and adding paragraph (c)(3) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(c) * * *

(2) *For performance years beginning on or after January 1, 2021 and before January 1, 2026.*

* * * * *

(3) *For performance years beginning on or after January 1, 2026.*

(i) If the ACO fails to meet both the quality performance standard and the alternative quality performance standard, CMS may take one or more of the actions prior to termination specified in § 425.216. Depending on the nature and severity of the noncompliance, CMS may forgo pre-termination actions and may immediately terminate the ACO's participation agreement under § 425.218.

(ii) CMS terminates an ACO's participation agreement under any of the following circumstances:

(A) The ACO fails to meet both the quality performance standard and the alternative quality performance standard for 2 consecutive performance years within an agreement period.

(B) The ACO fails to meet both the quality performance standard and the alternative quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order.

(C) A renewing ACO or re-entering ACO fails to meet both the quality performance standard and the alternative quality performance standard for the last performance year of the ACO's previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the previous agreement period.

(D) A renewing ACO or re-entering ACO fails to meet both the quality performance standard and the alternative quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period.

* * * * *

■ 37. Section 425.400 is amended by revising paragraph (c)(1)(ix) introductory text and adding paragraph (c)(1)(x) to read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(ix) For the performance year starting on January 1, 2025, as follows:

* * * * *

(x) For the performance year starting on January 1, 2026, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 96160 and 96161 (codes for administration of health risk assessment).

(*2*) 96202 and 96203 (codes for caregiver behavior management training).

(*3*) 97550, 97551, and 97552 (codes for caregiver training services).

(*4*) 98016 (code for virtual check-in).

(*5*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(*6*) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a skilled nursing facility (SNF)).

(*7*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*8*) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(*9*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(x)).

(*10*) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(*11*) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(*12*) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(*13*) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(*14*) 99439 (code for non-complex chronic care management).

(*15*) 99452 (code for interprofessional consultation service).

(*16*) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(*17*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(*18*) 99495 and 99496 (codes for transitional care management services).

(*19*) 99497 and 99498 (codes for advance care planning; services

identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(*1*) G0019 and G0022 (codes for community health integration services).

(*2*) G0023 and G0024 (codes for principal illness navigation services).

(*3*) G0101 (code for cervical or vaginal cancer screening).

(*4*) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(*5*) G0402 (code for the Welcome to Medicare visit).

(*6*) G0438 and G0439 (codes for the annual wellness visits).

(*7*) G0442 (code for alcohol misuse screening service).

(*8*) G0443 (code for alcohol misuse counseling service).

(*9*) G0444 (code for annual depression screening service).

(*10*) G0463 (code for services furnished in electing teaching amendment (ETA) hospitals).

(*11*) G0506 (code for chronic care management).

(*12*) G0537 and G0538 (codes for cardiovascular risk assessment and risk management services).

(*13*) G0539 and G0540 (codes for individual behavior management/modification caregiver training services).

(*14*) G0541, G0542, and G0543 (codes for direct care caregiver training services).

(*15*) G0544 (code for post-discharge telephonic follow-up contacts intervention).

(*16*) G0556, G0557, and G0558 (codes for advanced primary care management services).

(*17*) G0560 (code for safety planning interventions).

(*18*) G2010 (code for the remote evaluation of patient video/images).

(*19*) G2012 and G2252 (codes for virtual check-in).

(*20*) G2058 (code for non-complex chronic care management).

(*21*) G2064 and G2065 (codes for principal care management services).

(*22*) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(*23*) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(*24*) G2214 (code for psychiatric collaborative care model).

(*25*) G3002 and G3003 (codes for chronic pain management).

(*26*) GPCM1 and GPCM2 (codes for behavioral health integration add-on when furnished with advanced primary care management services).

(*27*) GPCM3 (code for psychiatric collaborative care model add-on when furnished with advanced primary care management services).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(x)(A) of this section or a HCPCS code specified in paragraph (c)(1)(x)(B) of this section, when the assignment window or expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 38. Section 425.512 is amended by—

■ a. In paragraph (a)(3)(i), removing the phrase ''quality performance score'' and adding in its place the phrase ''quality score'';

■ b. In paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(*1*), (a)(5)(i)(B)(*1*), (a)(5)(i)(C)(*1*), and (a)(7), removing the phrase ''health equity adjusted quality performance score'' and adding in its place the phrase ''quality score'';

■ c. Revising and republishing paragraph (b);

■ d. Revising paragraph (c)(1) introductory text;

■ e. Adding paragraph (c)(1)(iii);

■ f. In paragraphs (c)(2)(i), (c)(2)(ii), and (c)(3)(i), removing the phrase ''quality performance score'' and adding in its place the phrase ''quality score''; and

■ g. In paragraphs (c)(3)(ii), (c)(3)(iii), and (c)(3)(iv), removing the phrase ''health equity adjusted quality performance score'' and adding in its place the phrase ''quality score''.

The revisions and addition read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

* * * * *

(b) *Calculation of an adjustment to an ACO's quality score for performance years 2023 and 2024*—

(1) *For performance year 2023.* For an ACO that reports the three eCQMs/MIPS CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and administers the CAHPS for MIPS survey, CMS calculates the ACO's quality score as the sum of the ACO's MIPS quality performance category score for all measures in the APP quality measure set and the ACO's population and income adjustment bonus points calculated in accordance with paragraph (b)(3) of this section. The sum of these values may not exceed 100 percent.

(2) *For performance year 2024.* For an ACO that reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's quality score as the sum of the ACO's MIPS quality performance category score for all measures in the APP quality measure set and the ACO's population and income adjustment bonus points calculated in accordance with paragraph (b)(3) of this section. The sum of these values may not exceed 100 percent.

(3) *Calculation of ACO's population and income adjustment bonus points.* CMS calculates the ACO's bonus points as follows:

(i) For each measure that an ACO is required to report for the applicable performance year, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

(ii) CMS assigns values to the ACO for its performance on each measure as follows:

(A) Values of four, two, or zero for each measure for which the ACO's performance places it in the top, middle, or bottom third of ACO measure performers, respectively.

(B) Values of zero for each measure that CMS does not evaluate because the measure is unscored or the ACO does not meet the case minimum or the minimum sample size for the measure.

(iii) CMS sums the values assigned to the ACO according to paragraph (b)(3)(ii) of this section, to calculate the ACO's measure performance scaler.

(iv) CMS calculates a multiplier for the ACO.

(A) (*1*) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year based on the highest of either of the following:

(*i*) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85. An ACO's assigned beneficiaries without an available numeric ADI national percentile rank are excluded from the calculation of the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85.

(*ii*) The proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(*2*) CMS calculates the proportions specified in paragraph (b)(3)(iv)(A)(*1*)(*ii*) of this section as follows:

(*i*) For performance year 2023, the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries' person years.

(*ii*) For performance year 2024, the proportion of the ACO's assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries.

(B) If the proportion determined in accordance with paragraph (b)(3)(iv)(A) of this section is lower than 20 percent, the ACO is ineligible for bonus points.

(v) Except as specified in paragraph (b)(3)(iv)(B) of this section, CMS calculates the ACO's bonus points as the product of the measure performance scaler determined under paragraph (b)(3)(iii) of this section and the multiplier determined under paragraph (b)(3)(iv) of this section. If the product of these values is greater than 10, the value of the ACO's bonus points is set equal to 10.

(4) *Use of ACO's quality score.* The ACO's quality score, determined in accordance with paragraphs (b)(1) through (3) of this section, is used as follows:

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(*1*), (a)(5)(i)(B), and (a)(7) of this section.

(ii) In determining the final sharing rate for calculating shared savings payments under the BASIC track in accordance with § 425.605(d), and under the ENHANCED track in accordance with § 425.610(d), for an ACO that meets the alternative quality performance standard by meeting the criteria specified in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iii) In determining the shared loss rate for calculating shared losses under the ENHANCED track in accordance with § 425.610(f), for an ACO that meets the quality performance standard established in paragraphs (a)(2), (a)(4)(i), and (a)(5)(i) of this section or the alternative quality performance standard established in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iv) In determining the quality score for an ACO affected by extreme and uncontrollable circumstances as described in paragraphs (c)(3)(ii) and (iii) of this section.

(c) * * *

(1) CMS determines the ACO was affected by an extreme and uncontrollable circumstance based on any of the following:

* * * * *

(iii) For performance year 2025 and subsequent performance years, the ACO, as defined at § 425.20, is affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program.

* * * * *

■ 39. Section 425.600 is amended by—

■ a. In paragraph (a)(4)(i)(C)(*1*), removing the phrase ''paragraph (g)(1) of this section'' and adding in its place the phrase ''paragraphs (g)(1) or (h)(1) of this section'';

■ b. In paragraph (a)(4)(i)(C)(*2*)(*iii*), removing the phrase ''paragraph (h)(2)(i) of this section'' and adding in its place the phrase ''paragraph (i)(2)(i) of this section'';

■ c. In paragraph (a)(4)(ii), removing the phrase ''paragraph (d) or paragraph (g)(2) of this section'' and adding in its place the phrase ''paragraphs (d), (g)(2) or (h) of this section'';

■ d. Revising paragraph (g) introductory text;

■ e. Redesignating paragraph (h) as paragraph (i); and

■ f. Adding new paragraph (h).

The revision and addition read as follows:

§ 425.600 Selection of risk model.

* * * * *

(g) For agreement periods beginning on or after January 1, 2024 and before January 1, 2027, CMS determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

* * * * *

(h) For agreement periods beginning on or after January 1, 2027, CMS determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

(1) If an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track's glide path at any of the levels of risk and potential reward under paragraphs (a)(4)(i)(A)(*1*) through (*5*) of this section, or the ENHANCED track under paragraph (a)(3) of this section, except as otherwise specified in paragraph (h)(3) of this section.

(i) An ACO that is inexperienced with performance-based risk Medicare ACO initiatives may participate under the BASIC track's glide path for a maximum of one agreement period, as specified in paragraph (a)(4)(i)(C) of this section.

(ii) An ACO that enters an agreement period under the BASIC track's glide path at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(*1*) through (*5*) of this section is deemed to have completed one agreement period under the BASIC track's glide path. For the purpose of determining the ACO's prior participation in the BASIC track's glide path, CMS considers whether the ACO satisfies either of the following:

(A) The ACO is the same legal entity as a current or previous ACO that previously entered into a participation agreement for participation in the BASIC track's glide path.

(B) For a new ACO identified as a re-entering ACO, the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track's glide path.

(iii) An ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives but is not eligible to enter the BASIC track's glide path, in accordance with this paragraph, may enter BASIC track Level E under paragraph (a)(4)(i)(A)(*5*) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section, except as otherwise specified in paragraph (h)(3) of this section.

(2) If an ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(*5*) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section, except as otherwise specified in paragraph (h)(3) of this section.

(3) If an ACO is determined to have fewer than 5,000 assigned beneficiaries in either the first benchmark year, the second benchmark year, or both, in accordance with § 425.110(a)(3), the ACO may only enter the BASIC track. The ACO may enter a level of risk and potential reward under the BASIC track in accordance with the requirements of this paragraph, as follows:

(i) An ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives may enter the BASIC track's glide path at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(*1*) through (*5*) of this section (if eligible in accordance with paragraph (h)(1) of this section), or BASIC track Level E under paragraph (a)(4)(i)(A)(*5*)

of this section for all performance years of the agreement period.

(ii) An ACO determined to be experienced with performance-based risk Medicare ACO initiatives may enter BASIC track Level E under paragraph (a)(4)(i)(A)(*5*) of this section for all performance years of the agreement period.

* * * * *

■ 40. Section 425.605 is amended by—

■ a. In paragraph (b)(2)(ii)(E), removing the reference ''§ 425.600(h)(2)'' and adding in its place the reference ''§ 425.600(i)(2)'';

■ b. In paragraph (d)(1) introductory text, removing the references ''§ 425.600(d) or § 425.600(g)'' and adding in its place the references ''§ 425.600(d), (g), or (h)'';

■ c. In paragraphs (d)(1)(i)(A)(*3*)(*ii*), (d)(1)(i)(A)(*4*)(*ii*), (d)(1)(ii)(A)(*3*)(*ii*), (d)(1)(ii)(A)(*4*)(*ii*), (d)(1)(iii)(A)(*3*)(*ii*), (d)(1)(iii)(A)(*4*)(*ii*), (d)(1)(iv)(A)(*3*)(*ii*), (d)(1)(iv)(A)(*4*)(*ii*), (d)(1)(v)(A)(*3*)(*ii*), and (d)(1)(v)(A)(*4*)(*ii*), removing the phrase ''health equity adjusted quality performance score calculated according to § 425.512(b)'' and adding in its place the phrase ''quality score calculated according to § 425.512'';

■ d. Revising paragraph (d)(2);

■ e. Adding paragraph (f)(2)(ii);

■ f. Revising paragraph (f)(3) introductory text;

■ g. Removing the punctuation ''; and'' at the end of paragraph (f)(3)(i) and adding in its place a period;

■ h. Adding paragraph (f)(3)(iii);

■ i. Redesignating paragraph (f)(4) as paragraph (f)(5);

■ j. Adding new paragraph (f)(4); and

■ k. Adding paragraphs (h)(1)(v) and (i).

The revisions and additions read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

* * * * *

(d) * * *

(2) If the ACO enters the BASIC track at Level E as specified under § 425.600(d), (g), or (h), the level of risk and reward specified in paragraph (d)(1)(v) of this section applies to all performance years of an ACO's agreement period.

* * * * *

(f) * * *

(2) * * *

(ii) For performance year 2025 and subsequent performance years, for an ACO as defined at § 425.20 that is determined to be affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, for any month of the performance year that is affected, CMS considers 100 percent of the ACO's assigned beneficiaries to reside in an affected area.

(3) CMS applies determinations made under the Quality Payment Program with respect to all of the following (as applicable):

* * * * *

(iii) The time period during which the ACO was affected by a cyberattack, including ransomware/malware.

(4) CMS determines the time period during which an ACO is affected by a cyberattack, including ransomware/malware, as follows:

(i) CMS uses the start and end date indicated on an ACO's application to the Quality Payment Program for an extreme and uncontrollable circumstance exception due to a cyberattack, including ransomware/malware, or the start date indicated on the application and an end date subsequently provided by the ACO in the form and manner as specified by CMS.

(ii) Except as specified in paragraph (f)(4)(iii) of this section, if no end date is indicated on the ACO's application or otherwise provided to CMS in a form and manner specified by CMS, described in paragraph (f)(4)(i) of this section, CMS applies a 90-day duration for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

(iii) If the start date indicated on the ACO's application described in paragraph (f)(4)(i) of this section is less than 90 days before the end of the performance year and no end date is indicated on the ACO's application or otherwise provided to CMS in the form and manner specified by CMS, described in paragraph (f)(4)(i) of this section, CMS applies an end date of December 31st of the performance year for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

* * * * *

(h) * * *

(1) * * *

(v) For agreement periods beginning on or after January 1, 2027, the ACO has at least 5,000 assigned beneficiaries in each of the ACO's benchmark years.

* * * * *

(i) *Calculation of performance payment limit and loss recoupment limit.*

(1) The performance payment limit is a percentage of the ACO's updated benchmark, as determined under § 425.601 or § 425.652.

(i) CMS calculates the performance payment limit as follows, except as specified in paragraph (i)(1)(ii) of this section:

(A) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the performance year.

(B) Calculates the product of the percentage specified in paragraph (d)(1)(i)(B)(*2*), (d)(1)(ii)(B)(*2*), (d)(1)(iii)(B)(*2*), (d)(1)(iv)(B)(*2*), and (d)(1)(v)(B)(*2*) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(1)(i)(A) of this section.

(ii) For agreement periods beginning on or after January 1, 2027, if the ACO has fewer than 5,000 assigned beneficiaries in benchmark year (BY) 1, BY2 or BY3, in conducting financial reconciliation for each performance year, CMS determines whether to apply an alternative performance payment limit, rather than the performance payment limit specified in paragraph (d)(1)(i)(B)(*2*), (d)(1)(ii)(B)(*2*), (d)(1)(iii)(B)(*2*), (d)(1)(iv)(B)(*2*), and (d)(1)(v)(B)(*2*) of this section, as applicable, as follows:

(A) CMS calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries.

(B) CMS calculates the product of the percentage specified in paragraph (d)(1)(i)(B)(*2*), (d)(1)(ii)(B)(*2*), (d)(1)(iii)(B)(*2*), (d)(1)(iv)(B)(*2*), and (d)(1)(v)(B)(*2*) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(1)(ii)(A) of this section.

(C) The performance payment limit is set to the lesser of the amount calculated under paragraph (i)(1)(i)(B) of this section and the alternative amount calculated under paragraph (i)(1)(ii)(B) of this section.

(2) The loss recoupment limit is a percentage of total Medicare Parts A and B fee-for-service revenue of the ACO participants in the ACO (revenue-based loss recoupment limit) not to exceed a percentage of the ACO's updated benchmark as determined under § 425.601 or § 425.652 (benchmark-based loss recoupment limit).

(i) CMS calculates the benchmark-based loss recoupment limit as follows, except as specified in paragraph (i)(2)(ii) of this section:

(A) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the performance year.

(B) Calculates the product of the percentage used to calculate the benchmark-based loss recoupment limit specified in paragraph (d)(1)(iii)(D)(*2*), (d)(1)(iv)(D)(*2*), and (d)(1)(v)(D)(*2*) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(2)(i)(A) of this section.

(ii) For agreement periods beginning on or after January 1, 2027, if the ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2 or BY3, in conducting financial reconciliation for each performance year, CMS determines whether to apply an alternative loss recoupment limit, as follows:

(A) CMS calculates an alternative benchmark-based loss recoupment limit:

(*1*) CMS calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries.

(*2*) CMS calculates the product of the percentage used to calculate the benchmark-based loss recoupment limit specified in paragraph (d)(1)(iii)(D)(*2*), (d)(1)(iv)(D)(*2*), and (d)(1)(v)(D)(*2*) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(2)(ii)(A)(*1*) of this section.

(B) The loss recoupment limit is set to the revenue-based loss recoupment limit specified in paragraph (d)(1)(iii)(D)(*1*), (d)(1)(iv)(D)(*1*), or (d)(1)(v)(D)(*1*) of this section, as applicable, not to exceed the lower of the benchmark-based loss recoupment limit amount calculated under paragraph (i)(2)(i)(B) of this section or the alternative benchmark-based loss recoupment limit amount calculated under paragraph (i)(2)(ii)(A)(*2*) of this section.

■ 41. Section 425.610 is amended by—

■ a. In paragraphs (d)(3)(ii), (d)(4)(ii), (f)(3)(i)(A), and (f)(4)(i)(A), removing the phrase ''health equity adjusted quality performance score calculated according to § 425.512(b)'' and adding in its place the phrase ''quality score calculated according to § 425.512'';

■ b. Adding paragraph (i)(2)(ii);

■ c. Revising paragraph (i)(3) introductory text;

■ d. Removing the punctuation ''; and'' at the end of paragraph (i)(3)(i) and adding in its place a period;

■ e. Adding paragraph (i)(3)(iii);

■ f. Redesignating paragraph (i)(4) as paragraph (i)(5); and

■ g. Adding new paragraphs (i)(4) and (l).

The revisions and additions read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

* * * * *

(i) * * *

(2) * * *

(ii) For performance year 2025 and subsequent performance years, for an ACO as defined at § 425.20 that is determined to be affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, for any month of the performance year that is affected, CMS considers 100 percent of the ACO's assigned beneficiaries to reside in an affected area.

(3) CMS applies determinations made under the Quality Payment Program with respect to all of the following (as applicable):

* * * * *

(iii) The time period during which the ACO was affected by a cyberattack, including ransomware/malware.

(4) CMS determines the time period during which an ACO is affected by a cyberattack, including ransomware/malware, as follows:

(i) CMS uses the start and end date indicated on an ACO's application to the Quality Payment Program for an extreme and uncontrollable circumstance exception due to a cyberattack, including ransomware/malware, or the start date indicated on the application and an end date subsequently provided by the ACO in the form and manner as specified by CMS.

(ii) Except as specified in paragraph (i)(4)(iii) of this section, if no end date is indicated on the ACO's application or otherwise provided to CMS in a form and manner specified by CMS, described in paragraph (i)(4)(i) of this section, CMS applies a 90-day duration for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

(iii) If the start date indicated on the ACO's application described in paragraph (i)(4)(i) of this section is less than 90 days before the end of the performance year and no end date is indicated on the ACO's application or otherwise provided to CMS in the form and manner specified by CMS, described in paragraph (i)(4)(i) of this section, CMS applies an end date of December 31st of the performance year for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

* * * * *

(l) *Calculation of performance payment limit and loss recoupment limit.*

(1) The performance payment limit and the loss recoupment limit are a percentage of the ACO's updated benchmark.

(2) CMS calculates the performance payment limit and loss recoupment limit as follows, except as specified in paragraph (l)(3) of this section:

(i) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the performance year.

(ii) Calculates the product of the percentage used to calculate the performance payment limit specified in paragraph (e)(2) of this section or the loss recoupment limit specified in paragraph (g) of this section and the ACO's total benchmark expenditures calculated according to paragraph (l)(2)(i) of this section.

(3) For agreement periods beginning on or after January 1, 2027, if the ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2 or BY3, in conducting financial reconciliation for each performance year, CMS determines whether to apply an alternative performance payment limit or alternative loss recoupment limit, rather than the performance payment limit specified in paragraph (e)(2) of this section or the loss recoupment limit specified in paragraph (g) of this section, as follows:

(i) CMS calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries.

(ii) CMS calculates the product of the percentage used to calculate the performance payment limit specified in paragraph (e)(2) of this section or the loss recoupment limit specified in paragraph (g) of this section and the ACO's total benchmark expenditures calculated according to paragraph (l)(3)(i) of this section.

(iii) The performance payment limit or loss recoupment limit is set equal to the lesser of the amount calculated under paragraph (l)(2)(ii) of this section or the alternative amount calculated under paragraph (l)(3)(ii) of this section.

■ 42. Section 425.612 is amended by revising paragraph (a)(1)(i)(B) to read as follows:

§ 425.612 Waivers of payment rules or other Medicare requirements.

(a) * * *

(1) * * *

(i) * * *

(B)*(1)* A list of SNFs, including the Medicare-enrolled TIN and the CCN, with whom the ACO will partner along with executed written SNF affiliate agreements between the ACO and each listed SNF.

(*2*) An ACO must notify CMS no later than 30 days after the change of ownership of a SNF affiliate, identified in accordance with paragraph (a)(1)(i)(B)(*1*) of this section, that has resulted in a change to the Medicare enrolled TIN of the SNF affiliate. Such notice and supporting documentation must be submitted in the form and manner specified by CMS.

* * * * *

§ 425.652 [Amended]

■ 43. Section 425.652 is amended by—

■ a. In paragraph (a)(8)(ii)(A), removing the phrase ''health equity benchmark adjustment (HEBA)'' and adding in its place the phrase ''population adjustment'';

■ b. In paragraphs (a)(8)(ii)(B) introductory text, (a)(8)(ii)(B)(*2*), (a)(9)(v), and (a)(9)(vi), removing the phrase ''HEBA'' and adding in its place the phrase ''population adjustment''; and

■ c. In paragraph (a)(9)(v), removing the phrase ''HEBA scaler used in calculating the HEBA under § 425.662(b)(2)'' and adding in its place the phrase ''scaler used in calculating the population adjustment under § 425.662(b)(2)''.

§ 425.658 [Amended]

■ 44. Section 425.658 is amended in paragraph (d) by removing the phrase ''HEBA'' and adding in its place the phrase ''population adjustment''.

■ 45. Section 425.662 is amended by—

■ a. Revising the section heading and paragraph (a);

■ b. In paragraph (b) introductory text, removing the phrase ''health equity benchmark adjustment'' and adding in its place the phrase ''population adjustment'';

■ c. In paragraph (b)(2), removing the phrase ''Calculates the HEBA scaler'' and adding in its place the phrase ''Calculates a scaler''; and

■ d. Revising paragraphs (b)(3), (b)(4), and (c).

The revisions read as follows:

§ 425.662 Calculating the population adjustment to the historical benchmark.

(a) *General.* For agreement periods beginning on January 1, 2025, and in subsequent years, CMS calculates the population adjustment to the historical benchmark.

(b) * * *

(3) Determines the ACO's eligibility for the population adjustment based on the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D low-income subsidy (LIS) or dually eligible for Medicare and Medicaid. An ACO is only eligible for the population adjustment if this proportion is greater than or equal to 15 percent. An ACO with a proportion less than 15 percent is ineligible to receive the population adjustment.

(4) Calculates the population adjustment. If the ACO is eligible for the population adjustment as determined in paragraph (b)(3) of this section, the adjustment is equal to the product of the scaler calculated in paragraph (b)(2) of this section and the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

(c) *Applicability of the population adjustment.* CMS compares the population adjustment determined in paragraph (b)(4) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), and the per capita prior savings adjustment determined in § 425.658(c), if any, to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8)(ii).

* * * * *

§ 425.672 [Amended]

■ 46. Section 425.672 is amended in paragraph (c)(2)(iv) by removing the phrase ''and calculating the HEBA scaler'' and adding in its place the phrase ''and calculating the scaler''.

PART 427—MEDICARE PART B DRUG INFLATION REBATE PROGRAM

■ 47. The authority citation for part 427 continues to read as follows:

Authority: 42 U.S.C. 1395w–3a(i), 1302, and 1395hh.

■ 48. Section 427.20 is amended by removing the definition of ''Billing and payment code FDA approval or licensure date''.

■ 49. Section 427.302 is amended by revising paragraphs (c) introductory text, (c)(5), (c)(6), (d)(1)(i) and (ii) to read as follows.

§ 427.302 Calculation of the per unit Part B rebate amount.

* * * * *

(c) *Identification of the payment amount benchmark quarter.* For each Part B rebatable drug, CMS identifies the applicable payment amount benchmark quarter as set forth in paragraphs (c)(1) through (6) of this section, as applicable, subject to paragraphs (c)(4) and (6) of this section, using the earliest first marketed date of any NDC ever marketed under any FDA application under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have been marketed, and using the earliest approval or licensure date of any FDA application under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have been marketed.

(5) If the data needed to calculate the payment amount in the payment amount benchmark quarter described in and determined under § 427.302(d)(1) are not available, CMS uses the third full calendar quarter after a drug is assigned a billing and payment code as the payment amount benchmark quarter, no earlier than the calendar quarter beginning July 1, 2021, or the third full calendar quarter after such drug's first marketed date, whichever is later.

(6) For a Part B rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case such Part B rebatable drug is no longer considered to be a selected drug, for each applicable quarter beginning after the price applicability period with respect to such drug, the payment amount benchmark quarter is the calendar quarter beginning January 1 of the last year during such price applicability period with respect to such selected drug.

(d) * * *

(1) For a Part B rebatable drug, subject to paragraphs (d)(1)(i) and (ii) of this section and except as provided in paragraph (d)(2) of this section, CMS identifies the payment amount in the payment amount benchmark quarter using the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter.

(i) If a published payment limit is not available for the applicable payment amount benchmark quarter, CMS calculates the payment amount in the payment amount benchmark quarter using positive ASP or positive WAC

data from the ASP Data Collection System.

(ii) If a published payment limit is not available and neither positive ASP nor positive WAC data are available in the ASP Data Collection System, CMS calculates the payment amount in the payment amount benchmark quarter using WAC data from other public sources.

* * * * *

■ 50. Section 427.501 is amended by adding paragraph (c)(3) to read as follows:

§ 427.501 Rebate Reports and reconciliation.

* * * * *

(c) * * *

(3) The manufacturer's rebate amount due is reported as a dollar amount rounded to the nearest cent.

■ 51. Section 427.502 is amended by revising paragraph (c)(1)(ii) to read as follows:

§ 427.502 Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024.

* * * * *

(c) * * *

(1) * * *

(i) * * *

(ii) Within 9 months after issuance of the single Rebate Report, CMS performs one regular reconciliation for the applicable calendar quarters in calendar year 2024 in order to include revisions to the information used, determined under § 427.501(b)(1), to calculate the rebate amount. Such reconciliation is as determined under § 427.501(d) inclusive of a preliminary reconciliation and a report with the reconciled rebate amount.

PART 428—MEDICARE PART D DRUG INFLATION REBATE PROGRAM

■ 52. The authority citation for part 428 continues to read as follows:

Authority: 42 U.S.C. 1395w–114b, 1302, and 1395hh.

■ 53. Section 428.401 is amended by adding paragraph (c)(3) to read as follows:

§ 428.401 Rebate Reports and reconciliation.

* * * * *

(c) * * *

(1) * * *

(2) * * *

(3) The manufacturer's rebate amount due is reported as a dollar amount rounded to the nearest cent.

■ 54. Section 428.402 is amended by revising paragraphs (c)(1)(ii) and (c)(2)(ii) to read as follows:

§ 428.402 Rebate Reports for applicable periods beginning October 1, 2022, and October 1, 2023.

* * * * *

(c) * * *

(1) * * *

(i) * * *

(ii) The rebate amount is reconciled within 21 months after the Rebate Report set forth in paragraph (c)(1) of this section is issued to include the information set forth in § 428.401(d)(1)(i)(A) through (G).

(2) * * *

(i) * * *

(ii) The rebate amount is reconciled within 9 months after the Rebate Report and within 33 months after the Rebate Report specified in paragraph (b)(2) of this section is issued to include the information determined under § 428.401(d)(1)(i)(A) through (G).

■ 55. Section 428.405(a)(1) is amended to read as follows:

§ 428.405 Deadline and process for payment of rebate amount.

(a) * * *

(1) Upon receipt of a rebate amount, payment is due no later than 11:59 p.m. Pacific Time (PT) on the 30th calendar day after the date of receipt of information regarding the rebate amount on—

PART 495—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 56. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 57. Section 495.24 by adding paragraph (f)(3) to read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

* * * * *

(f) * * *

(3) Beginning with the EHR reporting period in CY 2026, if certain circumstances occur that impact CMS's assessment of the performance of eligible hospitals and CAHs on a measure selected as described in paragraph (f)(1)(i)(A) of this section, CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS's calculation of the objective score in paragraph (f)(1)(i)(D) of this section or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. CMS determines whether certain circumstances exist warranting suppression of a measure based on CMS's consideration of one or more of the following factors:

(i) The nature, breadth, and duration of the circumstance's effect on eligible hospitals' and CAHs' ability to fulfill the measure requirement.

(ii) The availability of certified health IT modules to fulfill the measure.

(iii) The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.

(iv) Out-of-date or conflicting technical standards.

(v) Technical and operational capacity of required partners.

(vi) Other factors as determined by CMS.

* * * * *

■ 58. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 59. Adding subparts F and G to part 512 to read as follows:

Subpart F—[Reserved]

Subpart G—Ambulatory Specialty Model (ASM)

General
512.700 Basis and scope.
512.705 Definitions.
512.710 Participant eligibility and selection.
Performance Categories and Scoring
512.715 Overview of performance assessment.
512.720 Data submission requirements.
512.725 Quality ASM performance category.
512.730 Cost ASM performance category.
512.735 Improvement activities ASM performance category.
512.740 Promoting Interoperability ASM performance category.
512.745 Final scoring.
Payment and Timely Error Notice Process
512.750 Payment adjustment.
512.755 Timely error notice.
Data Sharing, Waivers, Safe Harbor, and Compliance
512.760 Data sharing with ASM participants.
512.765 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.
512.770 ASM beneficiary incentives.
512.771 Collaborative care arrangements.
512.775 Medicare program waivers.
512.780 Extreme and uncontrollable circumstances.

Subpart G—Ambulatory Specialty Model (ASM)

§ 512.700 Basis and scope of subpart.

(a) *Basis.* This subpart implements the test of the Ambulatory Specialty Model (ASM) under section 1115A of the Act.

(b) *Scope.* This subpart sets forth the following:

(1) The method for selecting ASM participants.

(2) The methodology for ASM participant performance assessment and scoring for purposes of the improvement activities ASM performance category, quality ASM performance category, cost ASM performance category, and Promoting Interoperability ASM performance category, including beneficiary inclusion and episode-based cost measures.

(3) Data submission for applicable ASM performance categories.

(4) The schedule and methodologies for payment adjustments.

(5) Appeals process.

(6) Data sharing with ASM participants.

(7) ASM beneficiary incentives.

(8) Collaborative care arrangements.

(9) Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

(10) Medicare program waivers.

(11) Except as specifically noted in this subpart, the regulations under this subpart do not affect the applicability of other provisions affecting providers and suppliers under Medicare fee for service, including the applicability of provisions regarding payment, coverage, or program integrity.

(c) *Applicability.* Except as otherwise specified in this subpart, ASM participants are subject to the standard provisions for Innovation Center models specified in subpart A of this part 512 and in subpart K of part 403 of this chapter.

§ 512.705 Definitions.

For purposes of this part, the terms in this part have the same meanings as 42 CFR §§ 512.110 and 414.1300 unless otherwise stated.

ASM beneficiary means a Medicare FFS beneficiary who is being treated by an ASM participant for a targeted chronic condition.

ASM cohort means a group of ASM participants who treat the same ASM targeted chronic condition, specifically the ASM heart failure cohort and the ASM back pain cohort.

ASM data sharing agreement means an agreement between the ASM participant, and CMS that includes the terms and conditions for any beneficiary-identifiable data being shared with the ASM participant under § 512.760(e).

ASM heart failure cohort refers to all ASM heart failure participants.

ASM low back pain cohort refers to all ASM low back pain participants.

ASM heart failure participant means an ASM participant who meets the ASM participant eligibility criteria related to heart failure.

ASM incentive pool means a fixed percentage of the total amount of Medicare Part B covered professional services claims paid to ASM participants with final scores within an ASM cohort during an ASM performance year that would be distributed in the form of scaled payment adjustments during an ASM payment year. CMS calculates an ASM incentive pool for each ASM cohort for each ASM payment year as described at § 512.750(c)(1)(iii).

ASM low back pain participant means an ASM participant who meets the ASM participant eligibility criteria related to low back pain.

ASM participant means an individual clinician who, for at least one ASM performance year, satisfies the ASM participant eligibility criteria and has been selected for participation in the model as described at § 512.710(g).

ASM participant eligibility criteria means the set of criteria defined at § 512.710(b) that CMS uses to determine whether a clinician is selected to participate in ASM.

ASM payment adjustment factor means a percent value based on an ASM participant's final score as described at § 512.750(c)(1) that CMS uses in calculating adjustments to the ASM participant's Medicare Part B payments for covered professional services during an ASM payment year.

ASM payment multiplier means the numerical value equal to 1 plus the ASM payment adjustment factor determined for an ASM participant for an applicable ASM payment year as described at § 512.750(c).

ASM payment year means a calendar year in which CMS applies the ASM payment multiplier to Medicare Part B payments based on the final score achieved by that ASM participant for the ASM performance year 2 years prior.

ASM performance category means a group of applicable measures or activities used to assess ASM participant's performance on quality, cost, improvement activities, or Promoting Interoperability.

ASM performance category score means the assessment of each ASM participant's performance on the applicable measures and activities for a performance category during an ASM performance year based on the performance standards described at §§ 512.715, 512.725, 512.730, 512.735, and 512.740.

ASM performance report means the notification that CMS provides to the ASM participant for each ASM performance year, which contains the information specified at § 512.745(b).

ASM performance year means a 12-month period beginning on January 1 and ending on December 31 of each year during the first 5 calendar years of ASM test period.

ASM redistribution percentage means a percentage of Medicare Part B covered professional services payments to ASM participants during an ASM performance year that CMS distributes in the form of payment adjustment to ASM participants during an ASM payment year as described at § 512.750(c)(1)(iii).

ASM risk level the magnitude of the maximum positive or negative net payment adjustment percentage to which an ASM participant would be subject to during an ASM payment year as described at § 512.750(c)(1)(i).

ASM targeted chronic condition means a medical condition that is a core focus of ASM; that is, heart failure or low back pain.

ASM test period means the 7-year period from January 1, 2027, to December 31, 2033, that includes all ASM performance years and ASM payment years.

ASTP/ONC stands for the Assistant Secretary for Technology Policy/Office of the National Coordinator on Health Information Technology.

CY means calendar year.

CEHRT stands for Certified Electronic Health Records Technology that meets the requirements set forth in § 414.1305 of this chapter, except all instances of references to Merit-based Incentive Payment System (MIPS) are to be replaced with references to ASM.

Clinician has the same meaning as ''eligible professional'' as defined in section 1848(k)(3) of the Act, as identified by a unique TIN and NPI combination.

CMS EHR Certification ID means the identification number that represents the combination of Certified Health Information Technology that is owned and used by providers and hospitals to provide care to their patients and is generated by the Certified Health IT Product List.

Collaborative care arrangement means an arrangement that meets all of the requirements set forth in § 512.771.

Core Based Statistical Area (CBSA) means a statistical geographic area, based on the definition as identified by the Office of Management and Budget in the OMB Bulletin 23–01 issued on July 21, 2023, with a population of at least 10,000, which consists of a county or counties anchored by at least one core (urbanized area or urban cluster), plus adjacent counties having a high degree of social and economic integration with the core (as measured through commuting ties with the counties containing the core).

Covered entity has the meaning set forth at 45 CFR 160.103.

Covered professional services means ''covered services'' and has the meaning set forth in § 512.110 of this chapter.

CQM stands for Clinical Quality Measures.

Days means calendar days unless otherwise specified by CMS.

Dually eligible Medicare beneficiary means a beneficiary enrolled in both Medicare and full Medicaid benefits.

eCQM stands for Electronic Clinical Quality Measures.

EBCM stands for episode-based cost measure and means the standardized Medicare-allowed cost for the items and services furnished to a patient during an episode of care, based on FFS claims and Medicare Part D claims data.

EHR stands for Electronic Health Record and means a ''Base EHR,'' as defined at 45 CFR 170.102.

Exchange function means the function used to translate an ASM participant's final score into an ASM payment adjustment factor as described at § 512.750(c)(1)(ii).

Episode means all the relevant health care services a patient receives during a specified period for the treatment of a physical or behavioral health condition.

FFS stands for fee-for-service.

Final score means a composite assessment (using a scoring scale of zero to 100) for each ASM participant for an ASM performance year determined using the methodology for assessing the total performance of an ASM participant according to performance standards for applicable measures and activities for each ASM performance category as described in § 512.745.

HCC risk score stands for Hierarchical Condition Category risk score and means the risk score assigned to a Medicare beneficiary pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act.

Health-related social need means an unmet, adverse social condition that can contribute to poor health outcomes and is a result of underlying social determinants of health, which refer to the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.

Improvement activities mean activities relating to care coordination, integration of specialty and primary care, and addressing health-related social needs of patients.

Mandatory geographic area means a CBSA or metropolitan division as defined by the Office of Management and Budget and selected by CMS under the terms of § 512.710(f).

Meaningful EHR user means an ASM participant who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability ASM performance category for a performance period in the form and manner specified by CMS, does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, and engages in activities related to supporting providers with the performance of CEHRT.

Measure achievement points mean numerical values assigned to an ASM participant's reported performance data, that CMS uses to calculate an ASM performance category score.

Metropolitan division means—(1) A county or group of counties (or equivalent entities) delineated within a larger metropolitan statistical area, provided that the larger metropolitan statistical area contains a single core with a population of at least 2.5 million and other criteria are met; and

(2) Consists of one or more main or secondary counties that represent an employment center or centers, plus adjacent counties associated with the main/secondary county or counties through commuting ties.

Metropolitan statistical area means the county or counties (or equivalent entities) associated with at least one urban area of at least 50,000 population, plus adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties.

MIPS stands for the Merit-based Incentive Payment System.

NPI stands for National Provider Identifier.

ONC–ACB stands for ONC-Authorized Certification Bodies.

Physician has the meaning set forth in section 1861(r) of the Act.

Primary care services has the meaning set forth in section 1842(i)(4) of the Act.

Risk indicator refers to hierarchical condition category (HCC) risk scores under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act or the proportion of beneficiaries with dual eligible status used in calculating the complex patient scoring adjustment as defined at § 512.745(a)(3).

SAFER stands for Safety Assurance Factors for EHR Resilience.

Scaling factor means a numerical value calculated by CMS to ensure that the total estimated payment adjustments in an ASM payment year are equal to the ASM incentive pool for the applicable ASM payment year as described at § 512.750(c)(1)(iv).

Small practice means a practice consisting of 15 or fewer clinicians at the time we identify ASM participants for an ASM performance year as described at § 512.710(g).

Specialty type means a medical specialty as determined by the specialty code indicated on the plurality of a clinician's Medicare Part B claims.

Solo practitioner means a practice consisting of 1 clinician at the time we identify ASM participants for an ASM performance year as described at § 512.710(g).

Submission type means the mechanism by which the ASM submitter submits data to CMS in the form and manner specified by CMS, including, but not limited to all of the following:

(1) Direct.

(2) Log in and upload.

(3) Log in and attest.

Third-party intermediary has the meaning set forth in § 414.1305 of this chapter.

TIN stands for Taxpayer Identification Number.

Topped out measure has the meaning of either topped out process measure or topped out non-process measure set forth in § 414.1305 of this chapter.

U.S. Territories has the meaning set forth in § 512.110 of this chapter.

§ 512.710 Participant eligibility and selection.

(a) *Mandatory ASM participation.*

(1) Unless otherwise specified, any clinician who meets all ASM participant eligibility criteria as specified in paragraph (b) of this section and furnishes covered services that begin on or after January 1 and end on or before December 31 of any applicable ASM performance year within the ASM test period is considered an ASM participant for the duration of the model.

(i) 2027 ASM performance year: ASM participants are measured for performance and exempted from MIPS participation, if applicable, during CY 2027; report and are scored during CY 2028; and receive payment adjustments for CY 2027 performance in CY 2029;

(ii) 2028 ASM performance year: ASM participants meeting ASM eligibility criteria for the 2028 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2028; report and are scored during CY 2029; and receive payment adjustments for CY 2028 performance in CY 2030;

(iii) 2029 ASM performance year: ASM participants meeting ASM

eligibility criteria for the 2029 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2029; report and are scored during CY 2030; and receive payment adjustments for CY 2029 performance in CY 2031;

(iv) 2030 ASM performance year: ASM participants meeting ASM eligibility criteria for the 2030 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2030; report and are scored during CY 2031; and receive payment adjustments for CY 2030 performance in CY 2032; and

(v) 2031 ASM performance year: ASM participants meeting ASM eligibility criteria for the 2031 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2031; report and are scored during CY 2032; and receive payment adjustments for CY 2031 performance in CY 2033.

(2) For any ASM performance year within the ASM test period that an ASM participant does not meet the criteria for mandatory participation set forth in this section, such ASM participant is not subject, for the applicable ASM performance year, to §§ 512.715, 512.720, 512.745, and 512.750. The ASM participant is no longer eligible for the waivers as described at § 512.775 and is instead subject to MIPS reporting obligations, if applicable.

(b) *ASM participant eligibility criteria.* CMS uses the following set of criteria to determine whether a clinician is an ASM participant:

(1) Is a clinician who bills claims under the Medicare Physician Fee Schedule.

(2) Is identified by TIN/NPI as a selected specialty type as described at paragraph (d) of this section.

(3) Meets the EBCM episode volume threshold applicable to an ASM targeted chronic condition as described at paragraph (e) of this section.

(4) Is located in one of the mandatory geographic areas selected in accordance with paragraph (f) of this section.

(c) *Participant exclusion due to change in TIN during an ASM performance year.*

(1) An ASM participant who stops assigning billing rights to the TIN used to identify the ASM participant and begins assigning billing rights to a new TIN during an applicable ASM performance year must notify CMS of the change in a form and manner determined by CMS within 30 days of such change.

(2) An ASM participant who notifies CMS of a change in TIN during an ASM performance year is not subject, for the applicable ASM performance year, to §§ 512.715, 512.720, 512.745, and 512.750. The ASM participant is no longer eligible for the waivers as described at § 512.775 and is instead subject to MIPS reporting obligations, if applicable.

(d) *Specialty type.* ASM participants have one of the following Medicare Part B specialty codes indicated on the plurality of their Medicare Part B claims:

(1) Heart failure specialty type—

(i) Cardiology.

(ii) [Reserved]

(2) Low back pain specialty type—

(i) Anesthesiology.

(ii) Interventional Pain Management.

(iii) Neurosurgery.

(iv) Orthopedic Surgery.

(v) Pain Management.

(vi) Physical Medicine and Rehabilitation.

(e) *EBCM episode volume.* To determine if a clinician meets the ASM participant eligibility criterion defined in paragraph (b)(1)(iii) of this section, CMS uses the volume of EBCM episodes related to ASM targeted chronic conditions that are attributed to a clinician using the applicable EBCM specifications and attribution methodology.

(1) *Heart failure EBCM.* Clinicians who have a specialty designation type described at § 512.710(d)(1) and 20 or more heart failure EBCM episodes attributed in accordance with the heart failure episode-based cost measure as specified under MIPS during the calendar year 2 years prior to the applicable ASM performance year meet the ASM participant eligibility criterion defined in paragraph (b)(1)(iii) of this section.

(2) *Low back pain EBCM.* Clinicians who have a specialty designation type described at § 512.710(d)(2) and 20 or more low back pain EBCM episodes attributed in accordance with the low back pain episode-based cost measure as specified under MIPS during the calendar year 2 years prior to the applicable ASM performance year meet the ASM participant eligibility criterion defined in paragraph (b)(1)(iii) of this section.

(f) *Mandatory geographic areas.* CMS uses a stratified random sampling methodology described in paragraphs (f)(2) and (f)(3) of this section to select CBSA and metropolitan divisions (in cases where CBSA divide large metropolitan statistical areas into metropolitan divisions) from which CMS identifies clinicians for participation in ASM.

(1) *Exclusions.* CMS excludes from the selection of CBSAs and metropolitan divisions applicable areas that meet any of the following criteria:

(i) Areas that did not have at least one attributed episode between January 1, 2024 and December 31, 2024 for each of the episode-based cost measures described in paragraph (e) of this section and used in the ASM participant eligibility criteria described in paragraph (b) of this section.

(ii) Areas located entirely in U.S. Territories.

(2) *CBSA and metropolitan division stratification process.* Prior to sampling CBSAs and metropolitan divisions, CMS stratifies CBSAs and metropolitan divisions, excluding those described in paragraph (f)(1) of this section, into six mutually exclusive strata based on three CBSA/metropolitan division-level characteristics (average total Part A and Part B episode spending, volume of eligible episodes, and metropolitan division status) as follows. ''Average total episode spending'' as the term is used below, is measured using the average total Part A and Part B episode spending using claims data from January 1, 2024 to December 31, 2024 relating to heart failure and low back pain episodes, as specified under the episode-based cost measures described in § 512.710(e). Values below the median are characterized as ''Low'' average total episode spending. Values at or above the median are characterized as ''High'' average total spending. ''Eligible episode volume'' as the term is used below, is measured as the total count of eligible heart failure and low back pain episodes, as specified under the episode-based cost measures described in § 512.710(e), in a CBSA between January 1, 2024 and December 31, 2024. CMS categorizes CBSAs with values below the median as ''Low;'' CBSAs at-or-above the median and below the 95th percentile as ''High;'' and CBSAs at-or-above the 95th percentile as ''Very High.''.

(i) CBSAs with ''Low'' average total episode spending and ''Low'' eligible episode volume.

(ii) CBSAs with ''Low'' average total episode spending and ''High'' eligible episode volume.

(iii) CBSAs with ''High'' average total episode spending (as defined below) and ''Low'' eligible episode volume.

(iv) Eligible CBSAs with ''High'' average total episode spending and ''High'' eligible episode volume.

(v) Eligible CBSAs with ''Very High'' eligible episode volume.

(vi) Eligible metropolitan divisions.

(3) *Sampling of CBSAs and metropolitan divisions.* CMS selects approximately 40 percent of CBSAs and metropolitan divisions from each

stratum to select the mandatory geographic areas. If 40 percent of a given stratum does not result in a whole number of CBSAs or metropolitan divisions, CMS rounds up to the next whole number to ensure that at least 40 percent of areas from each stratum are selected.

(4) *Assignment of CBSA or metropolitan division code to clinicians.* CMS assigns a CBSA or a metropolitan division code to every TIN/NPI with attributed EBCM episodes related to ASM targeted chronic conditions for the applicable calendar year as described in paragraph (e) of this section to determine ASM participation eligibility for an applicable ASM performance year:

(i) CMS assigns each attributed EBCM episode a ZIP Code, which represents the service location where the attributed TIN/NPI encounters the beneficiary attributed to the episode the most, based on the plurality of Part B claims used to construct the episode. If the ZIP Codes representing service location where the attributed TIN/NPI appears in equal number in the Part B claims used to construct the episode, then CMS assigns the ZIP Code based on the ZIP Code that represents:

(A) The Part B claim with the highest total cost indicated by the total standardized allowed amount; or

(B) The Part B claim with most recent date.

(ii) CMS assigns each attributed EBCM episode a CBSA or metropolitan division code based on the ZIP Code assigned to the episode as described in paragraph (f)(4)(i) of this section. If the ZIP Code assigned to the EBCM episode is in multiple CBSAs or metropolitan divisions, then CMS assigns the EBCM episode the CBSA or metropolitan division code where the ZIP Code has:

(A) The highest proportion of total addresses; or

(B) The highest proportion of business addresses.

(iii) CMS assigns each TIN/NPI combination a single CBSA or metropolitan division code based on the most common CBSA or metropolitan division code assigned to episodes attributed to the TIN/NPI as described in paragraph (f)(4)(ii) of this section. If the TIN/NPI has equal number of episodes across multiple CBSAs or metropolitan divisions, then CMS assigns the TIN/NPI a CBSA or metropolitan division with the CBSA or metropolitan division that has either of the following:

(A) The highest total risk-adjusted episode spending across all episodes assigned to the CBSA or metropolitan division; or

(B) Episodes with more recent dates.

(g) *Selection and notification process for ASM participants.* For each ASM performance year, CMS identifies all clinicians furnishing covered services using the ASM participant eligibility criteria specified in paragraph (b) of this section and applicable data from 2 calendar years prior to each ASM performance year. Any clinician selected for participation for any year of the model is considered an ASM participant for the remainder of the ASM test period.

(1) *2027 ASM performance year only—*

(i) *Preliminarily eligible ASM participants.* Using applicable data from calendar year 2024, CMS identifies all clinicians who meet the ASM participant eligibility criteria for participation starting in the 2027 ASM performance year/2029 ASM payment year. The clinicians identified as preliminarily eligible ASM participants are made public in a form and manner determined by CMS.

(ii) *Final ASM participants.* CMS identifies the final ASM participants selected for participation starting in the 2027 ASM performance year/2029 ASM payment year by confirming that the preliminarily eligible ASM participants identified under paragraph (g)(1)(i) of this section meet the ASM participant eligibility criteria using applicable data from calendar year 2025. The clinicians selected as ASM participants starting the 2027 ASM performance year/2029 ASM payment year is made public in a form and manner determined by CMS.

(2) *2028 ASM performance year and subsequent years.*

(i) Beginning with the 2028 ASM performance year/2030 ASM payment year, CMS determines if the previously selected ASM participants continue to meet the ASM participant eligibility criteria for the upcoming ASM performance year/ASM payment year using applicable data from the calendar year 2 years prior to the applicable ASM performance year. An ASM participant who does not meet the ASM participant eligibility criteria for the upcoming ASM performance year/ASM payment year is not subject to provisions described at § 512.710(a)(2), and must, if applicable, participate in MIPS. The final ASM participants selected for participation for each applicable ASM performance year is made public in a form and manner determined by CMS.

(ii) Beginning with the 2028 ASM performance year/2030 ASM payment year and prior to the start of each ASM performance year, CMS determines if additional clinicians not previously identified as ASM participants meet the ASM participant eligibility criteria for the upcoming ASM performance year/ASM payment year using applicable data from the calendar year 2 years prior to the applicable ASM performance year. The final ASM participants selected for participation for each applicable ASM performance year is made public in a form and manner determined by CMS.

§ 512.715 Overview of performance assessment.

(a) *General.* As further described in §§ 512.725, 512.730, 512.735, and 512.740:

(1) An ASM participant receives a specific number of points for its performance on each measure or activity within an ASM performance category.

(2) CMS assigns the total amount of points an ASM participant may receive for its performance on a measure or activity.

(3) CMS calculates a final score as described at § 512.745 using the points received across all four ASM performance categories.

(b) *Data sources.*

(1) CMS uses Medicare claims data and Medicare administrative data reported to calculate measure scores included in the quality and cost ASM performance categories under §§ 512.725 and 512.730.

(2) CMS uses model-specific data reported under § 512.720 to calculate applicable measure or activity scores for the quality, improvement activities, and Promoting Interoperability ASM performance categories under §§ 512.725, 512.735, and 512.740.

§ 512.720 Data submission requirements.

(a) *Applicable performance categories and data submission requirements.*

(1) Except as provided in paragraph (a)(2) of this section, as applicable, ASM participants must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability ASM performance categories described in §§ 512.725(b) and 512.725(c), 512.735(b), and 512.740 in accordance with this section. The data may also be submitted on behalf of the ASM participant by a third-party intermediary.

(i) For the quality ASM performance category, a data submission must include numerator and denominator data for at least one applicable quality measure described in §§ 512.725(b) or 512.725(c) that is not an administrative claims-based collection type and meets the data completeness requirement as specified at § 512.725(f).

(ii) For the improvement activities ASM performance category, a data

submission must include an attestation of meeting the specifications of each required improvement activity described in § 512.735(c).

(iii) For the Promoting Interoperability ASM performance category, a data submission must include all of the following elements:

(A) Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS at § 512.740(b).

(B) Required attestation statements, as specified by CMS at § 512.740(b).

(C) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL).

(D) The start date and end date for the applicable performance period as set forth in § 512.740(a).

(2) There are no data submission requirements for the cost ASM performance category measures and activities described under § 512.730(b) or administrative claims-based quality measures as described in § 512.725(b) or § 512.725(c). Performance in the cost ASM performance category and administrative claims-based quality measures are calculated by CMS using administrative claims data, which includes claims submitted with dates of service during the applicable performance period that are processed no later than 60 days following the close of the applicable performance period.

(b) *Data submission types for ASM participants.* An ASM participant must submit their data using the following:

(1) For the quality ASM performance category, the direct and login and upload submission types.

(2) For the improvement activities and Promoting Interoperability ASM performance categories, the direct, login and upload, or login and attest submission types.

(c) *Use of multiple data submission types.* ASM participants may submit their data using multiple data submission types for any ASM performance category described in paragraph (a)(1) of this section provided that the ASM participant uses the same identifier for all ASM performance categories and all data submissions.

(d) *Data submission deadlines.* The data submission deadline is March 31st of the calendar year following the close of the applicable ASM performance year or a later date as specified by CMS for the direct, login and upload, and login and attest submission types.

(e) *Treatment of multiple data submissions—*

(1) For multiple data submissions received in the quality and improvement activities ASM performance categories in accordance with paragraphs (a)(1)(i) and (ii) of this section for an individual ASM participant from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS calculates and scores each submission received and assign the highest of the scores. For multiple data submissions received for an individual ASM participant from one or multiple submitters in the same organization, CMS scores the most recent submission.

(2) For multiple data submissions received for the Promoting Interoperability ASM performance category in accordance with paragraph (a)(1)(iii) of this section, CMS calculates a score for each data submission received and assigns the highest of the scores.

§ 512.725 Quality ASM performance category.

(a) *ASM performance year for quality measures.* Beginning with 2029 ASM payment year, the ASM performance year for quality measures is the full calendar year from January 1 to December 31 that occurred 2 years prior to the applicable ASM payment year, except as otherwise specified for administrative claims-based measures.

(b) *Quality measures for ASM heart failure cohort.* CMS uses the following quality measures, as specified by CMS for the MIPS quality performance category unless otherwise stated, to assess performance for ASM heart failure participants in the quality ASM performance category:

(1) Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System (MIPS Q492).

(2) Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q008).

(3) Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q005).

(4) Controlling High Blood Pressure (MIPS Q236)

(5) Functional Status Assessments for Heart Failure (MIPS Q377).

(c) *Quality measures for ASM low back pain cohort.* CMS uses the following quality measures, as specified by CMS for the MIPS quality performance category unless otherwise stated, to assess performance for ASM low back pain participants in the quality ASM performance category:

(1) Magnetic Resonance Imaging (MRI) Lumbar Spine for Low Back Pain (non-MIPS, administrative claims-based measure in development)

(2) Use of High-Risk Medications in Older Adults (MIPS Q238).

(3) Preventive Care and Screening: Screening for Depression and Follow-Up Plan (MIPS Q134).

(4) Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (MIPS Q128).

(5) Functional Status Change for Patients with Low Back Impairments (MIPS Q220).

(d) *Removal, addition, and maintenance of technical specifications of quality measures.* CMS uses notice and comment rulemaking to communicate any changes to the quality measures described in paragraphs (b) and (c) of this section.

(e) *Data submission criteria for the quality ASM performance category.*

(1) CMS uses quality measures as described in paragraphs (b) and (c) of this section with the following data collection types:

(i) MIPS CQMs.

(ii) eCQMs.

(iii) Administrative claims-based.

(2) *Data submission requirements.*

(i) An ASM heart failure participant must submit data on all quality measures specified in paragraph (b) of this section using MIPS CQMs or eCQMs.

(ii) An ASM low back pain participant must submit data on all quality measures specified in paragraph (c) of this section using MIPS CQMs or eCQMs, unless otherwise stated.

(iii) For eCQMs, the submission of data requires the utilization of CEHRT, as defined at § 414.1305.

(3) An ASM participant is not required to submit data for the calculation of administrative claims-based measures so long as data submission requirements as specified at § 512.720(a)(1)(i) are met.

(f) *Data completeness requirement for the quality ASM performance category.*

(1) Except as specified at paragraph (e)(3) of this section and for each required measure specified in paragraphs (b) or (c) of this section, ASM participants must submit data on at least 75 percent of the ASM participant's patients that meet the measure's denominator criteria, regardless of payer.

(2) ASM participants receive zero measure achievement points for each measure required in paragraphs (b) or (c) of this section that does not meet the data completeness requirement, as specified at paragraph (f)(1) of this section.

(3) CMS excludes from an ASM's participant total measure achievement

points and total available measure achievement points any measures required under paragraphs (b) or (c) of this section that meet the respective measure's data completeness requirement, but do not have a benchmark.

(g) *Minimum case requirements.*

(1) Unless otherwise specified by CMS, the minimum case requirement for each quality measure required in paragraphs (b) or (c) of this section is 20 cases.

(2) CMS excludes from an ASM's participant total measure achievement points and total available measure achievement points any measures required under paragraphs (b) or (c) of this section that meet the respective measure's data completeness requirement as specified at paragraph (f)(1) of this section but do not meet the measure's case minimum requirement as specified at paragraph (g)(1) of this section.

(h) *Quality measure achievement points and quality ASM performance category scoring.* Unless a different scoring weight is assigned by CMS, performance in the quality ASM performance category comprises of 50 percent of a ASM participant's final score for each ASM payment year.

((1) *Measure achievement points.*

(i) For each ASM performance year, ASM participants receive between 1 and 10 measure achievement points (including partial points) for each required measure as specified in paragraphs (b) or (c) of this section on which data is submitted in accordance with paragraph (e) of this section that does all of the following:

(A) Has a benchmark specified in paragraph (h)(2) of this section.

(B) Meets the case minimum requirements specified in paragraph (g) of this section.

(C) Meets the data completeness criteria specified in paragraph (f) of this section.

(D) For each administrative claims-based measure with a benchmark as described at paragraph (h)(2)(iii) of this section and meets the case minimum requirement at paragraph (g) of this section.

(ii) The number of ASM measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution.

(iii) ASM participants receive zero ASM measure achievement points for each measure required in paragraphs (b) or (c) of this section on which no data is submitted in accordance with § 512.720.

(iv) ASM participants who submit data in accordance with paragraphs (e) through (g) of this section on a single required measure via multiple applicable collection types are scored only on the data submission with the greatest number of measure achievement points.

(2)(i) *Benchmarks.* Except as provided in paragraph (h)(2)(iii) of this section, CMS bases benchmarks on an ASM participant's performance by collection type, from one following data sources:

(A) Reported by ASM participants, to the extent feasible, during the ASM performance year.

(B) A previous ASM performance year, if available.

(C) Another period determined by CMS.

(ii) Each benchmark must have a minimum of 20 ASM participants who reported the measure having met the following criteria:

(A) The case minimum requirements in paragraph (g) of this section.

(B) The data completeness requirement as specified in paragraph (f) of this section.

(C) A performance rate that is greater than zero.

(iii) CMS calculates a benchmark for an administrative claims quality measure using the performance on the measure during the current ASM performance year.

(iv) CMS determines a benchmark using decile categories based on the applicable period of data used to determine the measure's benchmark.

(3) *Topped out measures.* CMS identifies topped out measures in the benchmarks for each ASM performance year based on within-model performance on each measure.

(4) *Calculation of the quality ASM performance category score—*

(i) Unless otherwise specified by CMS, an ASM participant's quality ASM performance category score is the sum of all measure achievement points assigned for the applicable measures for the quality ASM performance category.

(A) The sum is divided by the total available measure achievement points.

(B) The quality ASM performance category score cannot exceed 100 percentage points.

(ii) For each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 512.720(d), performance is based on data for 9 consecutive months of the applicable ASM performance year.

(A) Significant changes or errors means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure specifications.

(B) CMS publishes a list of all measures scored in a form and manner specified by CMS.

(C) If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from an ASM participant's total measure achievement points and total available measure achievement points.

(iii) An ASM participant does not receive a quality ASM performance category score if the ASM participant meets the quality ASM performance category data submission requirements specified at § 512.720(a)(1)(i) but does not meet the case minimum requirements specified in paragraph (g) of this section for any required quality ASM performance category measure specified in paragraphs (b) or (c) of this section, as applicable, that has a benchmark as specified in paragraph (h)(2) of this section.

§ 512.730 Cost ASM performance category.

(a) *ASM performance year for cost performance measures.* Beginning with the 2029 ASM payment year, the ASM performance year for cost measures is the full calendar year from January 1 to December 31 that occurred 2 years prior to the applicable ASM payment year.

(b) *Cost measures.* For purposes of assessing performance of ASM participants on the cost ASM performance category, CMS—

(1) For ASM heart failure participants, assess and score the participants on the Heart Failure EBCM (COST_HF_1), as specified under MIPS.

(2) For ASM low back pain participants, assess and score the participants on the Low Back Pain EBCM (COST_LBP_1), as specified under MIPS.

(c) *Adding or removing cost measures.* CMS may add new cost measures to, or remove existing cost measures from, the cost ASM performance category through notice and comment rulemaking.

(d) *Minimum case requirements.* Unless otherwise specified by CMS, the minimum case requirement for each cost measure is 20 cases.

(1) Each cost measure is attributed at the TIN/NPI level according to the

measure specification for the applicable ASM performance year.

(2) An ASM participant must meet the minimum case volume to be scored on a cost measure.

(e) *Cost measure achievement points and cost ASM performance category scoring.* Unless a different scoring weight is assigned by CMS, performance in the cost ASM performance category comprises 50 percent of an ASM participant's final score for each ASM performance year.

(1) *ASM measure achievement points.* (i) For each cost measure attributed to an ASM participant, the ASM participant receives one to ten achievement points (including partial points) based on the ASM participant's performance on the cost measure during the ASM performance year compared to the cost measure's benchmark.

(ii) Achievement points are awarded based on which benchmark range the ASM participant's performance on the measure is in.

(2) *Benchmarks*

(i) CMS bases cost measure benchmarks on cost measure performance during the ASM performance year.

(A) Each benchmark must have a minimum of 20 ASM participants who meet the minimum case volume specified in paragraph (d) of this section for CMS to determine a benchmark for the cost measure.

(B) If a benchmark is not determined for a cost measure, then the measure is not scored.

(ii) CMS determines 10 benchmark ranges based on the median cost of all ASM participants attributed the measure, plus or minus standard deviations. CMS awards achievement points based on which benchmark range an ASM participant's measure score corresponds.

(3) *Calculation of the cost ASM performance category score.* Except as otherwise specified in paragraph (e)(3)(i) of this section, the cost ASM performance category score is the sum of the total number of achievement points earned by the ASM participant divided by the total number of available achievement points, not to exceed 100 percent.

(i) An ASM participant does not receive a cost ASM performance category score if the ASM participant is not attributed the required cost measure for the ASM performance year specified in paragraph (b) of this section because the ASM participant has not met the case minimum specified in paragraph (d) of this section for the required cost measure or if a benchmark has not been created for a required cost measure as specified in paragraph (e)(2) of this section.

(ii) If data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the ASM performance year, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the ASM participant's cost ASM performance category score and a cost ASM performance category score is not calculated.

(A) Significant changes or errors means changes to or errors in a measure that are outside the control of the clinician and its agents, and that CMS determines may result in patient harm or misleading results.

(B) Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure specifications.

(C) CMS empirically assesses the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance.

§ 512.735 Improvement activities ASM performance category.

(a) *ASM performance year for improvement activities.* Beginning with the 2029 ASM payment year, the ASM performance year for improvement activities is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable ASM payment year, up to and including the full calendar year.

(b) *Improvement activities.* CMS uses the improvement activities specified in paragraph (c) of this section to evaluate performance of ASM participants in the improvement activities ASM performance category.

(c) *Improvement activities specifications.*

(1) *Improvement Activity 1 (IA–1): Connecting to Primary Care and Ensuring Completion of Health-Related Social Needs Screening.* An ASM participant must have evidence of processes, workflows, or technology that require the ASM participant to do all of the following:

(i) Confirm the ASM beneficiary has access to primary care services and, if not, assist the ASM beneficiary in finding a clinician who provides primary care services.

(ii) Communicate relevant information back to the ASM beneficiary's primary care provider following the ASM beneficiary's visit with the ASM participant.

(iii) Determine whether the ASM beneficiary has received an annual health-related social needs screening in the primary care setting and, if not, encourage the primary care services provider to conduct the screening or allow the ASM participant to conduct the health-related social needs screening.

(2) *Improvement Activity 2 (IA–2): Establishing Communication and Collaboration Expectations with Primary Care using Collaborative Care Arrangements.* An ASM participant must do all of the following:

(i) Have at least one executed collaborative care arrangement between a primary care practice with which the ASM participant shares ASM beneficiaries.

(ii) The collaborative care arrangement must include collaborative efforts related to at least three of the following five elements:

(A) Data sharing, which includes setting expectations for bi-directional sharing of patient information between the parties to the collaborative care arrangement, including but not limited to test results, treatment plans, and follow-up recommendations.

(B) Co-management, which includes defining co-management approaches, where the parties to the collaborative care arrangement work together to furnish complementary care for patients with complex or chronic conditions.

(C) Transitions in care planning, which includes defining protocols for seamless transitions of care between ASM participants, the primary care practice, or different care settings.

(D) Closed-loop communication, such as clearly articulated processes enforcing parameters on how ASM beneficiaries may be referred between the parties to the collaborative care arrangement.

(E) Care coordination integration comprised of structured processes to embed care coordination processes into the ASM participant's practice workflow.

(d) *Scoring for improvement activities ASM performance category.*

(1) *ASM measure achievement points.* ASM participants receive 10 ASM measure achievement points for attesting ''yes'' for each improvement activity specified in paragraph (c) in compliance with the data submission requirements at § 512.720.

(2) *Calculation of the improvement activities ASM performance category*

score. Unless otherwise specified by CMS, CMS sums the total achievement points for all submitted improvement activities and divides this sum by the total number of available achievement points for the required improvement activities as specified in paragraph (c) of this section, not to exceed 100 percent.

§ 512.740 Promoting Interoperability ASM performance category.

(a) *ASM performance year for the Promoting Interoperability ASM performance category.* Beginning with the 2029 ASM payment year, the ASM performance year for Promoting Interoperability measures is the minimum of a continuous 180-day period within the calendar year that occurs 2 years prior to the applicable ASM payment year, up to and including the full calendar year.

(b) *Reporting for the Promoting Interoperability ASM performance category.* To earn an ASM performance category score greater than zero for the Promoting Interoperability ASM performance category for inclusion in the final score, an ASM participant must be a meaningful EHR user and meet the following criteria:

(1) *CEHRT.* Use CEHRT as defined at § 414.1305 for the ASM performance year.

(2) *ASM Promoting Interoperability objectives and measures.* Report on the following MIPS Promoting Interoperability measures, as specified by CMS through rulemaking:

(i) An ASM Participant must report both of the following measures or claim an exclusion or exclusions to fulfill the e-Prescribing objective:

(A) e-Prescribing (Measure ID #: PI_EP_1).

(B) Query of PDMP (Measure ID # PI_EP_2).

(ii) An ASM Participant must fulfill the Health Information Exchange objective through one of the following three options:

(A) Report the Support Electronic Referral Loops by Sending Health Information (Measure ID # PI_HIE_1) and Support Electronic Referral Loops by Receiving and Reconciling Health Information (Measure ID # PI_HIE_4).

(B) Health Information Exchange (HIE) Bi-Directional Exchange (Measure ID # PI_HIE_5).

(C) Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) (Measure ID # PI_HIE_6).

(iii) An ASM Participant must fulfill the Provider to Patient Exchange objective by reporting the Provide Patients Electronic Access to Their Health Information measure (Measure ID # PI_PEA_1).

(iv) An ASM Participant must fulfill the Public Health and Clinical Data Exchange objective by reporting both measures:

(A) Immunization Registry Reporting (Measure ID # PI_PHCDDR_1).

(B) Electronic Case Reporting (Measure ID PI_PHCDRR_3).

(3) *Reporting ASM Promoting Interoperability objectives and measures.* Comply with the following reporting requirements:

(i) For each measure reported pursuant to paragraph (b)(2) of this section, report the numerator (of at least one) and denominator, or yes/no statement, or an exclusion for each measure that includes an option for an exclusion.

(ii) Report that the ASM participant completed the actions included in the MIPS Promoting Interoperability Security Risk Analysis measure (Measure ID # PI_PPHI_1) within the calendar year of the ASM performance year.

(iii) Submit an affirmative attestation regarding the ASM participant's completion of the annual self-assessment checklist under the MIPS Promoting Interoperability High Priority Practices Guide of the SAFER Guides measure (Measure ID # PI_PPHI_2) within the calendar year of the ASM performance year.

(4) *Supporting use of CEHRT.* ASM participants must support the use of CEHRT by fulfilling the following requirements:

(i) *Supporting the use and performance of CEHRT.* To fulfill ASM requirements to engage in activities related to supporting clinicians with the performance of CEHRT, the ASM participant:

(A) Must attest by providing all of the following:

(*1*) Acknowledgement of the requirement to cooperate in good faith with ONC direct review of the ASM participant's health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received.

(*2*) If requested, cooperation in good faith with ONC direct review of the ASM participant's health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets, or can be used to meet, the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the ASM participant in the field.

(B) May attest to the following objectives and measures:

(*1*) Acknowledgement of the option to cooperate in good faith with ONC–ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC–ACB surveillance is received.

(*2*) If requested, cooperation in good faith with ONC–ACB surveillance of the ASM participant's health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meet, or can be used to meet, the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the ASM participant in the field.

(c) *Scoring the Promoting Interoperability ASM performance category.*

(1) *ASM measure achievement points.*

(i) An ASM participant earns a score for each measure by fulfilling the reporting requirements specified at paragraph (b) of this section. Score amounts are set forth in the MIPS measure specifications.

(ii) If an exclusion is reported for a measure, the points available for that measure are redistributed to another measure as set forth in the MIPS measure specifications.

(2) *Promoting Interoperability ASM performance category score.* Unless otherwise specified by CMS, CMS sums the scores for each of the required measures and divides this sum by the total number of available Promoting Interoperability points. The Promoting Interoperability ASM performance category score cannot exceed 100 percent.

§ 512.745 Final scoring.

(a) *Final score calculation.* CMS calculates a final score of 0 to 100 points using the formula specified at paragraph (a)(5) of this section for each ASM participant that meets the requirements to receive a final score as specified in paragraph (a)(2) of this section.

(1) *ASM performance category weights and scoring adjustments.* CMS calculates the final score using the ASM performance category weights and scoring adjustments as follows:

(i) Quality ASM performance category weight is 50 percent.

(ii) Cost ASM performance category weight is 50 percent.

(iii) The improvement activities ASM performance category has a scoring adjustment that is applied to the final score without weighting.

(A) ASM participants that achieve a 100 percent score for the improvement activities ASM performance category do not receive an improvement activities ASM performance category scoring adjustment to final score.

(B) ASM participants that receive a 50 percent improvement activities ASM performance category score receive an improvement activities ASM performance category scoring adjustment of negative 10 points to the final score.

(C) ASM participants that receive a zero percent improvement activities ASM performance category score receive an improvement activities ASM performance category scoring adjustment of negative 20 points to the final score.

(iv) The Promoting Interoperability ASM performance category has a scoring adjustment that is applied to the final score without weighting.

(A) To determine the Promoting Interoperability ASM performance category scoring adjustment as described in paragraph (a)(1)(iv) of this section, the Promoting Interoperability ASM performance category score is multiplied by 100, the product is then subtracted from 100 and divided by the maximum negative Promoting Interoperability ASM performance category scoring adjustment of 10 points.

(B) The maximum Promoting Interoperability ASM performance category scoring adjustment is negative 10 points.

(2) *Requirements to receive a final score.* Except as described at § 512.780(c)(1), CMS determines whether an ASM participant receives a final score for the applicable ASM performance year depending on the data submitted by the ASM participant.

(i) Except as described in paragraph (a)(2)(iii) of this section, CMS calculates a final score greater than zero but not exceeding 100 as described in paragraph (a) of this section for the applicable ASM performance year for all ASM participants that meet the quality ASM performance category data submission requirements as specified at § 512.720(a)(1)(i).

(ii) CMS assigns a final score of zero for the applicable ASM performance year to all ASM participants who do not meet the quality ASM performance category data submission requirements as specified at § 512.720(a)(1)(i).

(iii) CMS does not assign a final score for the applicable ASM performance year to ASM participants who do all of the following:

(A) Meet the quality ASM performance category data submission requirements as specified at § 512.720(a)(1)(i).

(B)(*1*) Do not receive a quality ASM performance category score under § 512.725(h)(4)(iii); or

(*2*) Do not receive a cost ASM performance category score under § 512.730(e)(3)(i).

(3) *Complex patient scoring adjustment.* CMS adds a complex patient scoring adjustment to the final score for the ASM performance year, if applicable, if an ASM participant meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section and the criteria defined in paragraph (a)(3)(i) of this section for the applicable ASM performance year.

(i) The complex patient scoring adjustment is limited to ASM participants with a risk indicator at or above the risk indicator calculated median for their ASM cohort. To determine the median for the respective risk indicator (HCC and dual proportion) for each ASM cohort, risk indicators associated to an ASM participant in the corresponding ASM cohort from the calendar year preceding the applicable ASM performance year, for all ASM participants within an ASM cohort who meet the data submission requirements for the quality ASM performance category at § 512.725(a)(1)(i) are used.

(ii) Beginning with the 2027 ASM performance year, for ASM participants, the complex patient scoring adjustment components are calculated as follows for the specific risk indicators:

(A) Medical complex patient scoring adjustment component = 1.5 + 4 * associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS in accordance with section 1853(a)(1) of the Act) seen by the ASM participant.

(B) Social complex patient scoring adjustment component = 1.5 + 4 * associated dual proportion standardized score.

(C) The components specified in paragraphs (a)(3)(ii)(A) and (B) of this section are added together to calculate one overall complex patient scoring adjustment. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score—risk indicator mean)/risk indicator standard deviation.

(iii) The complex patient scoring adjustment cannot exceed 10 and cannot be below zero.

(4) *Small practice scoring adjustment.*

(i) *Scoring adjustment for an ASM participant that is in a small practice and is not a solo practitioner.* CMS add 10 points to the final score of an ASM participant that meets all of the following:

(1) Is in a small practice.

(2) Is not a solo practitioner.

(3) Meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section for an applicable ASM performance year.

(ii) *Scoring adjustment for ASM participant that is a solo practitioner.* CMS adds 15 points to the final score of an ASM participant that is a solo practitioner and meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section for an applicable ASM performance year.

(5) *Final score formula.* Final score = [quality ASM performance category score × quality ASM performance category weight) + (cost ASM performance category score × cost ASM performance category weight)] × 100 + improvement activities ASM performance category scoring adjustment + Promoting Interoperability ASM performance category scoring adjustment + complex patient scoring adjustment + small practice scoring adjustment. The final score cannot be below zero points or exceed 100 points.

(b) *ASM performance report.* For each ASM performance year, CMS provides each ASM participant with an ASM performance report, in a form and manner determined by CMS, containing all of the following:

(1) The ASM participant's score for each ASM performance category.

(2) The ASM participant's complex patient scoring adjustment under paragraph (a)(3) of this section, as applicable.

(3) The ASM participant's small practice or solo practitioner scoring adjustment under paragraph (a)(4) of this section, as applicable.

(4) The ASM participant's final score, as applicable.

(5) The ASM payment adjustment factor under § 512.750(c)(1).

(6) The ASM payment multiplier under § 512.750(c).

§ 512.750 Payment adjustment.

(a) *General.* Except as described in paragraph (f) of this section, for covered professional services furnished by an ASM participant during an ASM payment year, CMS, in accordance with

paragraph (d) of this section, multiplies the amount otherwise paid under Part B for such covered professional services by the ASM payment multiplier calculated for the ASM participant calculated under paragraph (c) of this section for the corresponding ASM performance year.

(b) *Comparison of ASM participant performance.* For the purpose of determining ASM payment adjustment factors and ASM payment multipliers applicable to adjustments to Part B payments for covered professional services in the corresponding ASM payment year, CMS separately compares final scores of ASM participants in each ASM cohort for the corresponding ASM performance year.

(c) *ASM payment multiplier.* Unless otherwise specified under paragraph (d) of this section, for each ASM participant within an ASM cohort for the applicable ASM payment year, CMS calculates an ASM payment multiplier as 1 plus the ASM payment adjustment factor determined under paragraph (c)(1) of this section.

(1) *ASM payment adjustment factor.* For each ASM participant with a final score greater than zero as described at § 512.745(a)(2)(i) within an ASM cohort for the applicable ASM performance year, CMS calculates an ASM payment adjustment factor using the formula: ASM payment adjustment factor = [(ASM risk level as described in paragraph (c)(1)(i) of this section) × (ASM participant's transformed final score as described in paragraph (c)(1)(ii) of this section) × (scaling factor applicable to the ASM incentive pool as described in paragraph (c)(1)(iv) of this section)]—ASM risk level as described in paragraph (c)(1)(i) of this section. For each ASM participant with a final score equal to zero as described at § 512.745(a)(2)(ii) within an ASM cohort for the applicable ASM payment year, CMS calculates an ASM payment adjustment factor equal to the negative of the applicable ASM level risk level as described in paragraph (c)(1)(i) of this section.

(i) *ASM risk level.* CMS sets an ASM risk level that is the magnitude of the maximum downside and upside risk to which an ASM participant would be subject to during an ASM payment year.

(A) For the 2029 *ASM payment* year, the ASM risk level is 9 percent.

(B) For the 2030 ASM payment year, the ASM risk level is 9 percent.

(C) For the 2031 ASM payment year, the ASM risk level is 10 percent.

(D) For the 2032 ASM payment year, the ASM risk level is 11 percent.

(E) For the 2033 ASM payment year, the ASM risk level is 12 percent.

(ii) *Exchange function and transformed final score.* CMS uses a logistic exchange function with a midpoint set at the median final score of the applicable ASM cohort from the applicable ASM performance year to transform each ASM's participant final score into a numerical value.

(iii) *Incentive pool.* CMS calculates an ASM incentive pool for each ASM cohort for an applicable ASM payment year using the formula: ASM incentive pool = (Sum of Medicare Part B payments for covered professional services paid to ASM participants with final scores in an ASM cohort during the applicable ASM performance year) × (ASM risk level as defined in paragraph (c)(1)(i) of this section) × (ASM redistribution percentage). The ASM redistribution percentage is set at 85 percent.

(iv) *Scaling factor.* CMS calculates a scaling factor for each ASM incentive pool for the applicable ASM payment year that ensures the estimated total payment adjustments would equal the ASM incentive pool. The scaling factor is calculated by dividing the total amount in the ASM incentive pool by the sum of all ASM participant's transformed final scores, multiplied by their respective total Medicare Part B covered professional services payments from the applicable ASM performance year and the applicable ASM risk level as specified under paragraph (c)(1)(i) of this section.

(2) [Reserved]

(d) *No payment adjustments.* CMS assigns an ASM payment adjustment factor of 0 and an ASM payment multiplier of 1 for the applicable ASM payment year that results in no payment adjustment to an ASM participant who does not receive a final score under § 512.745(a)(2)(iii) for the corresponding ASM performance year.

(e) *Notification of ASM payment adjustments to ASM participants.* CMS notifies each ASM participant of their ASM payment adjustment factor and corresponding ASM payment multiplier for the applicable ASM payment year in the ASM performance report under § 512.745(b) provided to each ASM participant for the applicable ASM performance year.

(f) *Change in ASM participant TIN affiliation after ASM performance year and before the end of corresponding ASM payment year.*

(1) CMS adjusts payments to the different TIN using the ASM payment multiplier calculated for the ASM participant based on their performance in the corresponding ASM performance year for an NPI who meets all of the following:

(i) Is an ASM participant with a final score for an ASM performance year.

(ii) Submits Part B covered professional service claims during an ASM payment year using a different TIN than the TIN CMS identified them as an ASM participant for that ASM performance year and to which the ASM participant began assigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year.

(2) CMS adjusts claims using the highest ASM payment multiplier from all the TIN and NPI combinations that identified the NPI as an ASM participant for the corresponding ASM performance year for an NPI who meets all of the following:

(i) CMS identifies as an ASM participant under multiple TINs for a given ASM performance year.

(2) Submits Part B covered professional service claims during an ASM payment year under a TIN by which CMS did not identify the ASM participant and to which the ASM participant began assigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year.

§ 512.755 Timely error notice process.

(a) *General.* Subject to the limitations on review in § 512.170, an ASM participant may submit a written timely error notice for one or more calculations made and issued by CMS within the ASM performance report if the ASM participant believes an error occurred in calculations due to data quality, misapplication of methodology, or other issues.

(b) *Requirements.* If an ASM participant believes the ASM performance report contains a calculation error as described in paragraph (a) of this section, the ASM participant must submit a written timely error notice, in a form and manner specified by CMS, documenting the calculation error within 30 calendar days of issuance of the ASM performance report, unless specified by CMS.

(1) If the ASM participant does not provide such written timely error notice in accordance with paragraph (a) of this section, then the ASM performance report is deemed final 30 calendar days after its issuance.

(2) Only an ASM participant may submit a written timely error notice described in this section.

(3) *Sufficiency of information in written timely error notice.*

(i) CMS determines if the written timely error notice meets the requirements of this section and

contains sufficient information to substantiate the request.

(ii) If the request is not compliant with the requirements of this section or requires additional information—

(A) CMS follows up with the ASM participant to request additional information in a form and manner as specified by CMS;

(B) The ASM participant must respond within 10 calendar days of CMS' request for additional information in a form and manner as specified by CMS; and

(C) If an ASM participant does not respond in accordance with paragraph (b)(3)(ii)(B) of this section, then the ASM performance report is deemed final.

(c) *Process.* If CMS receives a written timely error notice within 30 calendar days of the issuance of the ASM performance report that CMS determines meets the requirements of paragraph (b) of this section, CMS issues an initial determination in writing within 30 calendar days of receipt to either confirm that there was an error in the calculation or verify that the calculation is correct. CMS reserves the right to extend the time for providing its initial final determination upon written notice to the ASM participant.

(d) *Reconsideration request.* An ASM participant who wishes to dispute an initial determination made in accordance with paragraph (c) may invoke the reconsideration review process pursuant to § 512.190.

§ 512.760 Data sharing with ASM participants.

(a) *General.* CMS shares certain beneficiary-identifiable data as described in paragraphs (b), (c), (e) and (f) of this section and certain aggregate data as described in paragraph (d) of this section with ASM participants regarding ASM beneficiaries and performance under the model.

(b) *Beneficiary-identifiable data.* CMS shares beneficiary-identifiable data with ASM participants as follows:

(1) CMS makes available certain beneficiary-identifiable data described in paragraphs (b)(5)(i) and (b)(5)(ii) of this section for ASM participants to request for purposes of conducting health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on behalf of their patients who are ASM beneficiaries.

(2) An ASM participant that wishes to receive beneficiary-identifiable data for its ASM beneficiaries must do all of the following:

(i) Submit a formal request for the data, on at least an annual basis in a manner and form and by a date specified by CMS, which identifies the data being requested and attests that—

(A) The ASM participant is requesting this beneficiary-identifiable data as part of a covered entity, as defined at 45 CFR 160.103;

(B) The ASM participant's request reflects the minimum data necessary, as set forth in paragraph (c) of this section, for the ASM participant to conduct activities described in the first or second paragraph of the definition of health care operations at 45 CFR 164.501; and

(C) The ASM participant's use of beneficiary-identifiable data is limited to developing processes and engaging in appropriate activities related to coordinating care, improving the quality and efficiency of care, and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all ASM beneficiaries under the care of the ASM participant, and that these data are not to be used to reduce, limit or restrict care for specific Medicare beneficiaries.

(ii) To the extent practicable, limit the request to ASM beneficiaries—

(A) Whose claims were used to determine the requesting ASM participant's eligibility for ASM participation or to whom the requesting ASM participant provided care during an applicable ASM performance year; and

(B) Who requested to restrict having their claims data shared with the ASM participant as provided in paragraph (f)(1) of this section, and whose request was approved.

(iii) Sign and submit a data sharing agreement with CMS as set forth in paragraph (e)(1) of this section.

(3) CMS shares beneficiary-identifiable data with an ASM participant on the condition that the ASM participant and other individuals or entities performing functions or services related to the ASM participant's activities, including but not limited to non-ASM participant parties in collaborative care arrangements with ASM participants, comply with all appliable laws addressing the appropriate use of data and the confidentiality and privacy of individually identifiable health information and the terms of the data sharing agreement described in paragraph (e)(1) of this section.

(4) CMS omits from the beneficiary-identifiable data any information that is subject to the regulations in 42 CFR part 2 governing the confidentiality of substance use disorder patient records.

(5) The beneficiary-identifiable data includes, when available, the following information:

(i) Unrefined (raw) Medicare Parts A, B, and D beneficiary-identifiable claims data used to determine ASM participant eligibility for an applicable ASM performance year; and

(ii) Unrefined (raw) Medicare Parts A, B, and D beneficiary-identifiable claims data for ASM beneficiaries who trigger an applicable EBCM episode with the ASM participant during the applicable ASM performance year.

(c) *Minimum necessary data.* The ASM participant must limit its request for beneficiary-identifiable data under paragraph (b) of this section to the minimum necessary to accomplish the permitted use of the data. The minimum necessary Medicare Parts A, B, and D data elements may include, but are not limited to the following:

(1) Medicare beneficiary identifier (ID).

(2) Procedure code.

(3) Sex or Gender.

(4) Diagnosis code.

(5) Claim ID.

(6) The from and through dates of service.

(7) The provider or supplier ID.

(8) The claim payment type.

(9) Date of birth and death, if applicable.

(10) Tax identification number.

(11) National provider identifier.

(d) *Aggregated data feedback.* CMS shares aggregated data on one or more select indicators of the ASM participant's performance, de-identified in accordance with 45 CFR 164.514(b), in a form and manner to be specified by CMS, when available, with ASM participants.

(e) *ASM data sharing agreement.*

(1) To retrieve the beneficiary-identifiable data specified in paragraphs (b) and (c) of this section, the ASM participant must complete and submit, on at least an annual basis, a signed ASM data sharing agreement, to be provided in a form and manner and by a date specified by CMS, under which the ASM participant agrees, at a minimum to do all of the following:

(i) Comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA regulations, including but not limited to 45 CFR part 164, subparts A and E, and the requirements of ASM set forth in this part.

(ii) Comply with additional privacy, security, breach notification, and data retention requirements specified by CMS in the ASM data sharing agreements.

(iii) Contractually bind any and all downstream recipients of this beneficiary-identifiable data, such as other individuals or entities performing functions or services related to the ASM participant's data sharing activities, including those that meet the definition of a business associate as defined at 45 CFR 160.103 and non-ASM participant parties to collaborative care arrangements described at § 512.771, to the same terms and conditions to which the ASM participant is itself bound in its data sharing agreement with CMS as a condition of the business associate's or non-ASM participant parties' receipt of the beneficiary-identifiable data obtained by the ASM participant.

(iv) That if the ASM participant or any downstream recipient misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the data sharing agreement, CMS may do any or all of the following:

(A) Deem the ASM participant ineligible to obtain the beneficiary-identifiable data under paragraph (b) of this section for any amount of time.

(B) Subject the ASM participant to additional sanctions and penalties available under applicable law.

(v) An ASM participant must comply with all applicable laws and the terms of the data sharing agreement to obtain beneficiary-identifiable data.

(2) CMS shares beneficiary-identifiable data with an ASM participant on the condition that the ASM participant and other individuals or entities performing functions or services related to the ASM participant's data sharing activities, including business associates as defined at 45 CFR 160.103 of the ASM participant and non-ASM participant parties to collaborative care arrangements described at § 512.771, comply with all relevant laws governing the use of data and the privacy and security of individually identifiable health information and the terms of the data sharing agreement described in paragraph (e)(1) of this section.

(f) *Request to restrict data sharing.*

(1) ASM participants must provide ASM beneficiaries the opportunity to request restriction of claims data sharing in accordance with 45 CFR 164.522.

(2) The opportunity to request restrictions of claims data shared with an ASM participant under paragraph (f)(1) of this section does not apply to the aggregate de-identified data CMS provides to ASM participants under paragraph (d) of this section.

(g) *Data custodian.* An ASM participant must designate and provide the contact information for, in a form and manner identified by CMS, a data custodian who is responsible for ensuring compliance with privacy and security requirements, including all applicable laws and terms of the ASM data sharing agreement, and for notifying CMS of any incidents relating to unauthorized disclosures of beneficiary-identifiable data.

§ 512.765 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

(a) *Application of the CMS-sponsored Model Arrangements Safe Harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (§ 1001.952(ii)(1)) is available to protect remuneration furnished in the form of collaborative care arrangements that meet all safe harbor requirements set forth in §§ 1001.952(ii) and 512.771.

(b) *Application of the CMS-sponsored Model Patient Incentives Safe Harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (§ 1001.952(ii)(2)) is available to protect remuneration furnished in ASM in the form of ASM beneficiary engagement incentives that meet all safe harbor requirements set forth in §§ 1001.952(ii) and 512.770.

§ 512.770 ASM beneficiary incentives.

(a) *ASM beneficiary incentives.* ASM participants may choose to provide in-kind patient engagement incentives, including but not limited to items of technology or services, to ASM beneficiaries, subject to the following conditions:

(1) *Provision of incentive.*

(i) The incentive must be provided directly by the ASM participant or by an agent of the ASM participant under the ASM participant's direction and control to an ASM beneficiary who is an established patient of the ASM participant.

(ii) The ASM participant must be solely responsible for any costs associated with the provision of the incentive, including but not limited to, the retail value of the item or services offered as the ASM beneficiary incentive.

(2) The item or service provided must be reasonably connected to medical care provided by the ASM participant to an ASM beneficiary for an ASM targeted chronic condition.

(3) The item or service must be a preventive care item or service or an item or service that advances a clinical goal, as specified in paragraph (d) of this section, for an ASM beneficiary by engaging the ASM beneficiary in better managing an ASM targeted chronic condition.

(4) The item or service must not be tied to the receipt of items or services outside the services furnished by the ASM participant to the ASM beneficiary.

(5) The item or service must not be tied to the receipt of items or services from a particular provider or supplier.

(6) The availability of the items or services must not be advertised or promoted, except that an ASM beneficiary may be made aware of the availability of the items or services at the time the ASM beneficiary could reasonably benefit from them.

(7) The cost of the items or services must not be shifted to any Federal health care program, as defined at section 1128B(f) of the Act.

(8) The totality of items or services, including technology as described at paragraph (b) of this section, provided to an ASM beneficiary may not exceed $1,000 in retail value for any one ASM beneficiary.

(b) *Technology provided to an ASM beneficiary.* ASM beneficiary incentives involving technology are subject to the following additional conditions:

(1) Items or services involving technology provided to a ASM beneficiary must be the minimum necessary to advance a clinical goal, as listed in paragraph (d) of this section, for an ASM beneficiary.

(2) Items of technology exceeding $75 in retail value must—

(i) Remain the property of the ASM participant; and

(ii) Be retrieved from the ASM beneficiary—

(A) Upon the end of their care relationship with the ASM participant, with documentation of the ultimate date of retrieval. The ASM participant must document all retrieval attempts. In cases when the item of technology is not able to be retrieved, the ASM participant must determine why the item was not retrievable. If it was determined that the item was misappropriated, then the ASM participant must take steps to prevent future beneficiary incentives for that ASM beneficiary. Following this process, documented, diligent, good faith attempts to retrieve items of technology is deemed to meet the retrieval requirement; or

(B) If the provided technology breaks or is otherwise rendered unusable for its intended purposes, with documentation of the ultimate date of retrieval. The ASM participant may replace the unusable unit with the same or similar

technology, to the extent practicable, that meets the requirements of paragraphs (a) and (b) of this section.

(c) *Documentation of ASM beneficiary incentives.* In addition to requirements at § 512.135 of this part ASM participants must do all of the following:

(1) Maintain documentation of items and services furnished as beneficiary incentives that exceed $75 in retail value.

(2) The documentation must be established contemporaneously with the provision of the items and services with a record established and maintained to include at least the following:

(i) The date the incentive is provided.

(ii) The identity of the ASM beneficiary to whom the item or service was provided.

(3) The documentation regarding items of technology exceeding $75 in retail value must also include contemporaneous documentation of any attempt to retrieve technology at the end of an episode, or why the items were not retrievable, as described in paragraph (b)(2)(ii) of this section.

(4) The ASM participant must retain and provide access to the required documentation.

(d) Clinical goals of *ASM.* The following are the clinical goals of ASM, which may be advanced through ASM beneficiary incentives:

(1) Promoting preventive care through improved management of ASM targeted chronic conditions.

(2) Empowering patients to actively participate and be accountable for quality and whole health outcomes.

(3) Facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.

§ 512.771 Collaborative care arrangements.

(a) *General.* Collaborative care arrangements must meet all of the following:

(1) Be in writing, signed by both parties, and contain the effective date of the arrangement.

(2) Be exclusively between the ASM participant and the primary care practice with whom the ASM participant shares at least one established patient who is an ASM beneficiary.

(3) The collaborative care arrangement must be entered into for the purpose of either of the following:

(i) Furthering the ASM participant's performance in the improvement activities ASM performance category at § 512.735.

(ii) Advancing the clinical goals of ASM as described in paragraph (b) of this section.

(4) Participation in a collaborative care arrangement must be voluntary and without penalty for nonparticipation.

(5) Both parties to the collaborative care arrangement must comply with all applicable statutes, regulations, and guidance, including without limitation the following:

(i) Federal criminal laws.

(ii) The False Claims Act (31 U.S.C. 3729 *et seq.*).

(iii) The anti-kickback statute (42 U.S.C. 1320a–7b(b)).

(iv) The civil monetary penalties law (42 U.S.C. 1320a–7a).

(v) The physician self-referral law (42 U.S.C. 1395nn).

(6) The opportunity to enter into a collaborative care arrangement, and the amount of any payment or other remuneration under a collaborative care arrangement, must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business generated by, between, or among the parties to the collaborative care arrangement or any other person.

(7) Any payment or other remuneration between the parties set forth in a collaborative care arrangement must not exceed fair market value and must be determined in accordance with a methodology that is solely based on the purposes identified at paragraphs (b)(2)(i) and (ii) of this section.

(8) Any payment or other remuneration set forth in the collaborative care arrangement must be solely between the parties to the arrangements. Any payment between the parties must be made by check, electronic funds transfer, or another traceable cash transaction.

(9) Both parties to the collaborative care arrangement must retain the ability to make decisions in the best interests of ASM beneficiaries, including the selection of clinicians, devices, supplies, and treatments.

(10) The collaborative care arrangement must not do either of the following:

(i) Induce any party to reduce or limit medically necessary services to any Medicare beneficiary.

(ii) Reward the provision of items and services that are medically unnecessary.

(11) ASM participants must maintain contemporaneous documentation, in accordance with § 512.135, regarding all collaborative care arrangements entered into, including the following:

(i) The relevant written agreements.

(ii) The date and amount of any payments between the parties.

(iii) A description of the methodology and accounting formula for determining the amount of any payments between the parties.

(12) The collaborative care arrangement must stipulate that any non-ASM participant party is considered a downstream recipient for CMS data sharing purposes, and must require the non-ASM participant party to comply with applicable data sharing requirements at § 512.760.

(13) Any non-ASM participant party to a collaborative care arrangement must be a downstream participant subject to the standard provisions for Innovation Center models specified in subpart A of this part 512.

(b) *Clinical goals of ASM.* The following are the clinical goals of ASM, which may be advanced through collaborative care arrangements:

(1) Promoting preventive care through improved management of ASM targeted chronic conditions.

(2) Empowering patients to actively participate and be accountable for quality and whole health outcomes.

(3) Facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.

§ 512.775 Medicare program waivers.

(a) *Medicare payment waivers.* Unless otherwise specified in § 512.710(a)(2), CMS waives the requirements of section 1848(q) of the Act, and its implementing regulations, for an ASM participant for each ASM performance year that the ASM participant meets the ASM eligibility criteria set forth in § 512.710(b)(1).

(b) *Waiver of certain telehealth requirements.*

(1) *Waiver of the geographic site requirements.* Except for the geographic site requirements for a face-to-face encounter for home health certification, CMS waives the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act for ASM participants and ASM beneficiaries solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are medically appropriate for treatment of an ASM targeted chronic condition.

(2) *Waiver of the originating site requirements.* Except for the originating site requirements for a face-to-face encounter for home health certification, CMS waives the originating site requirements under section 1834(m)(4)I(ii)(I) through (VIII) of the Act for episodes to permit a telehealth visit to originate in the beneficiary's

home or place of residence solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are medically appropriate for treatment of an ASM targeted chronic condition.

(3) *Waiver of selected payment provisions.* CMS waives payment requirements as follows:

(i) Under section 1834(m)(2)(A) of the Act so that the facility fee normally paid by Medicare to an originating site for a telehealth service is not paid if the service is originated in the beneficiary's home or place of residence.

(ii) Under section 1834(m)(2)(B) of the Act to allow the distant site payment for telehealth home visit HCPCS codes unique to ASM.

(4) *Other requirements.* All other requirements for Medicare coverage and payment of telehealth services continue to apply, including the list of specific services approved to be furnished by telehealth.

§ 512.780 Extreme and uncontrollable circumstances.

(a) *General rule.* Except as specified in paragraph (b) of this section, CMS—

(1) Applies determinations made under the Quality Payment Program for whether an extreme and uncontrollable circumstance has occurred and the affected area during the ASM performance year; and

(2) Has sole discretion to determine the period during which an extreme and uncontrollable circumstance occurred.

(b) *Additional criteria.*

(1) CMS has sole discretion to determine, based on information known to the agency prior to the beginning of the relevant ASM payment year, that data for an ASM participant are inaccurate, unusable, or otherwise compromised due to circumstances outside of the control of the clinician and its agents, including third-party intermediaries.

(2) CMS notifies ASM participants of the following:

(i) Its determination that the circumstances described at paragraph (b)(1) of this section exist; and

(ii) The impact of the circumstances described in paragraph (b)(1) of this section upon scoring methodology for affected ASM participants in a form and manner determined by CMS.

(c) *Impact on final scores.*

(1) Except as described in paragraph (c)(2) of this section, an ASM participant who CMS identified as having been affected by a circumstance described in paragraphs (a) or (b) of this section is exempt from meeting data submission requirements identified at § 512.720 and does not receive a final score, resulting in a neutral payment adjustment for the corresponding ASM payment year.

(2) In the event that an ASM participant who CMS identified as having been affected by a circumstance described in paragraph (a) or (b) of this section submits data in accordance with the data submission requirements at § 512.720, CMS assigns the ASM participant a final score using the methodology described at § 512.745 for the applicable ASM performance year.

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

Note: The following Appendices will not appear in the Code of Federal Regulations.

APPENDIX 1: MIPS QUALITY MEASURES

Note: Except as otherwise noted in this proposed rule, previously finalized measures and specialty measure sets will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years. Previously finalized measures and specialty sets are in the CY 2017 through CY 2025 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, 87 FR 70250 through 70633, 88 FR 79556 through 79964, and 89 FR 98599 through 98957. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a Consensus-Based Entity (CBE) are shown in Table A of this Appendix as follows: CBE #/eCQM CBE #.

Table Group A: New MIPS Quality Measures Proposed for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

A.1. Patient Reported Falls and Plan of Care

CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients (or caregivers as appropriate) with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at every visit.
Measure Steward:	American Academy of Neurology
Numerator:	Patients (or caregivers as appropriate) that reported a fall occurred since the last visit and those that fell had a plan of care for falls documented at every visit.
Denominator:	Patients with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke.
Exclusions:	None
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We are proposing this process measure because it addresses patient safety in an at-risk population by ensuring patients with an active diagnosis of a neurological disorder are screened for falls and have a falls plan of care established. Studies that focus on the rate of falls for common neurological conditions indicate falls are an issue for neurology patients with symptomology that affects movement and balance, necessitating the need to ensure these patients are screened for falls and an appropriate plan of care is established. According to the World Health Organization (WHO), falls are the second leading cause of mortality worldwide.[437] [438] Studies have revealed that patients with neurodegenerative conditions like dementia or cognitive impairment have a 2–8-fold higher chance of falls when compared to those with normal cognition.[439] [440] [441] Additionally, patients with Parkinson's disease (PD) have a five times higher risk of fall-related injuries.[442] [443] Fall incidence is reported 2–4 times higher in patients with neurological disorders than in healthy subjects of similar age, and 46 percent of neurological patients reveal having had one or more falls per year.[444] [445] [446] [447] This measure is predicated on evidence-based clinical guidelines that recommend exercise interventions to prevent falls in community-dwelling adults 65 years or older who are at an increased risk for falls.[448] The measure would enhance compliance with the clinical guidelines by incentivizing clinicians to assess falls and develop an appropriate care plan to help reduce fall incidence, thereby improving patient safety and outcomes. The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee recommended this measure, which has been fully developed and tested at the clinician level with high reliability based upon signal-to-noise scores and adequate face validity. Testing of measure performance indicated a gap in care, with a median performance rate of 89 percent, which allows room for improvement among clinicians treating this patient population. This measure was previously available in MIPS as a QCDR measure (AAN34), which was in the previously finalized Neurodegenerative Conditions MVP, and substantiates the feasibility for implementation in MIPS. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure could be added to the Quality Care for Patients with Neurologic Conditions MVP in the future and would fill a current quality measure inventory gap within the neurological clinical topic area. Additionally, it would provide a specialty specific measure for the MIPS Neurology specialty set under Table B.23 of this Appendix. A.2. Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR)[449]

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The number of prevalent dialysis patients in a practitioner group who are under the age of 75 and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Numerator 1 - "Patients who were on dialysis and had documentation of status at the end of the year." Numerator 2 - "The ratio of the observed number of waitlist events in a practitioner group to the model-based expected number of waitlist events."
Denominator:	Denominator 1 - "Patients age less than 75 years who are on dialysis during the performance period prior." Denominator 2 - "The denominator for the Prevalent Standardized Waitlist Ratio (PSWR) is the total number of patients on dialysis under the age of 75 in the practitioner group according to each patient's treatment history each year."
Exclusions:	Patients admitted to a skilled nursing facility (SNF) during the period of evaluation. Patients in hospice in the year before or during the period of evaluation. Patients with a diagnosis for dementia in the year before or during the period of evaluation. The noted exclusions represent conditions for which transplant waitlist candidacy is highly unlikely, and which can be identified readily with available data. Patients who were attributed to dialysis practitioner groups with fewer than 11 patients or 2 expected events are not excluded from the measure. If a provider cannot be matched to a TIN, patients will be grouped into a separate 'null' TIN and still included in the models but are not summarized to any valid individual TINs. All patients who meet the denominator inclusion criteria are included and used to model a given dialysis practitioner group's expected waitlist rate. If a dialysis practitioner group has fewer than 11 patients or 2 expected events, then the dialysis practitioner group is excluded from reporting outcomes.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

[449] The measure title was revised from the MERIT submission to include 'kidney transplant' for clarity.

Rationale:	Starting with the CY 2025 performance period/2027 MIPS payment year, we finalized measure Q510: First Year Standardized Kidney Transplant Waitlist Ratio (FYSWR) and measure Q511: Percentage of Prevalent Patients Waitlisted for Kidney Transplant (PPPW) and Percentage of Prevalent Patients Waitlisted for Kidney Transplant in Active Status (aPPPW) (89 FR 98616 through 98623). Both measures track dialysis patients who are under the age of 75 in a practitioner group and on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Measure Q510 tracks the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant for patients within the first year after dialysis initiation, with the objective of providing access to kidney transplant in a timely manner within that first year after starting dialysis, which is associated with improved outcomes. Measure Q511 tracks the number of patients on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant for all dialysis patients in a dialysis practitioner or group practice to encourage ongoing attention to transplantation as a treatment option. Measure Q511 also assesses the waitlist each month for active status of patients on the kidney transplant waitlist, which encourages ongoing optimization of health to maintain active status and ensure patients are ready to accept a kidney when a match becomes available. Measure Q511 works in tandem with measure Q510 to assess both initial and on-going care. We are proposing the PSWR process measure for the CY 2026 performance period/2028 MIPS payment year because it builds on the previous measures (Q510 and Q511) by assessing new placement on the kidney or kidney-pancreas transplant waitlist or receipt of a living donor transplant for all dialysis patients. End-stage renal disease (ESRD) affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures.[450] While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant.[451] This measure assesses whether patients who are on dialysis and found to be an expected waitlist event based upon the Cox model, were placed on either the kidney or kidney-pancreas transplant waitlist or received a living donor kidney transplant. Data submitted by the measure developer indicates a performance gap for a process that can be directly linked to improved patient outcomes. National and large regional studies provide strong empirical support for the association between processes within the clinical scope and control of dialysis practitioners followed by subsequent patient transplant wait listing. For example, clinical assessments, provisions and/or referrals made by a dialysis practitioner are contributing factors for consideration in patient transplant wait listing. In one large regional study conducted on facilities in the State of Georgia, a standardized dialysis facility referral ratio was developed, adjusted for age, demographics, and comorbidities.[452] There was substantial variability across dialysis facilities in referral rates, and a Spearman correlation performed between ranking on the referral ratio and dialysis facility waitlist rates was highly significant ($r=0.35$, $p<0.001$).[453] A national study using registry data (United States Renal Data System) from 2005-2007 examined the association between whether patients were informed about kidney transplantation based on reporting on the Medical Evidence Form 2728 (*https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf*) and subsequent access to kidney transplantation (wait listing or receipt of a live donor transplant).[454] Approximately 30 percent of patients were uninformed about kidney transplantation, which was associated with half the rate of access to transplantation compared to patients who were informed.[455] In a related survey study of 388 hemodialysis patients, whether provision of information about transplantation by nephrologists or dialysis staff occurred was directly confirmed with patients. The provision of such information was associated with a nearly threefold increase in the likelihood of waitlisting.[456] The intent of this measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist, or receipt of a living donor transplant for patients on dialysis, with the objective of improving their overall health. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. Waitlisting is a direct step in the process of transplantation which drives quality by progressing patients towards the goal of transplantation and better health outcomes. A measure focusing on the outcome of waitlisting is appropriate for several reasons. First, in preparing patients for suitability for waitlisting, dialysis practitioners optimize their health and functional status, improving their overall health state. Second, waitlisting is a necessary step prior to potential receipt of a deceased donor kidney transplant (receipt of a living donor kidney is also accounted for in the measure), which is known to be beneficial for survival and quality of life.[457] Third, dialysis practitioners exert substantial control over the processes that result in waitlisting. This includes proper education of dialysis patients on the option for transplant, referral of appropriate patients to a transplant center for evaluation and assisting patients with completion of the transplant evaluation process, in order to increase their candidacy for transplant waitlisting. These types of activities are included as part of the conditions for coverage for Medicare certification of ESRD dialysis facilities. Finally, wide regional and facility variations in waitlisting rates highlight substantial room for improvement for this measure.[458] [459] [460] [461] Additionally, this measure focuses specifically on the population of prevalent patients

Category	Description
	on dialysis, examining for the occurrence of new waitlisting or living donor transplant events. This would evaluate and encourage rapid attention from dialysis practitioner groups to the optimization of health of patients to ensure early access to the waitlist, which has been demonstrated to be particularly beneficial.[462] [463] [464] [465] Given that many patients may not be ready for transplant candidacy immediately following initiation of dialysis, this measure encourages ongoing attention to transplant candidacy throughout a patient's time on dialysis. The PRMR did not reach consensus for this measure with concerns regarding exclusions for patients opting out of waitlisting and attribution. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies suggest a significant positive correlation between the clinician activities and the addition of patients to a transplant waitlist, which are necessary for patients to receive the improved outcomes associated with kidney transplants. A.3. Diagnostic Delay of Venous Thromboembolism in Primary Care

Category	Description
CBE # / eCQM CBE #:	N/A / 3749e
Quality #:	TBD
Description:	Percentage of episodes for patients 18 years of age and older with documented Venous Thromboembolism (VTE) symptoms in the primary care setting and who had a diagnosis of VTE that occurs >24 hours and within 30 days following the index primary care visit where symptoms for the VTE were first present.
Measure Steward:	Brigham and Women's Hospital
Numerator:	All qualified VTE encounters in which the VTE diagnosis occurs greater than 24 hours and within 30 days following the index PCP visit.
Denominator:	All Qualified VTE Encounters in which the patient was aged 18 or older at the start of the Qualified VTE Encounter.
Exclusions:	Exclude qualified VTE encounter with a hospice care service documented within previous 90 Days Exclude qualified VTE encounter with a palliative care service documented within previous 90 Days Exclude qualified VTE encounter with another qualified VTE encounter documented within previous 6 months
Measure Type:	Intermediate Outcome
High Priority Measure:	Yes
Collection Type:	eCQM
Measure-Specific Case Minimum/Performance Period:	This eCQM is intended to be reported by integrated health systems with access to both ambulatory and inpatient documentation.

Category	Description
Rationale:	We are proposing this intermediate outcome measure because measuring and reporting delayed VTE diagnosis rates would inform health care providers and facilities about opportunities to improve care, strengthen incentives for quality improvement, and ultimately improve the quality of care received by patients. This measure has the potential to lower health care costs associated with VTE by providing ongoing patient outcome data that can be used to improve VTE diagnostic performance and to reduce complications associated with delayed diagnosis and treatment. This eCQM is intended to be reported by integrated health systems with access to both ambulatory and inpatient documentation. VTE is a serious, preventable public health problem affecting approximately 300,000–600,000 individuals in the U.S. each year.[466] Without timely and adequate treatment, the likelihood of significant complications increases.[467] VTE (pulmonary embolism and deep vein thrombosis) has a 30-day mortality rate as high as 23 percent[468] [469] and because signs and symptoms of VTE can be non-specific, timely diagnosis of VTE is difficult, leading to missed VTE diagnosis. Two studies of autopsies in large hospitals found that 9-12 percent had VTE, and 84-91 percent were undiagnosed at the time of death.[470] [471] In addition to concerns over patient safety, VTE events are costly to healthcare systems. One study estimated that costs associated with VTE complications ranged from $426-$41,133 across literature, imposing a financial burden on healthcare systems.[472] Timely diagnosis of VTE events may prevent resulting adverse events from occurring, with the potential to save healthcare costs and reduce the mortality rate. Empirical evidence supports a marked difference in mortality between patients who receive immediate diagnosis and treatment of VTE and those who are left undiagnosed.[473] VTEs are associated with a high 30-day mortality rate[474] and delays in VTE diagnosis are associated with higher rates of complications and an increased risk of mortality.[475] Earlier diagnosis of VTE may reduce the morbidity and mortality associated with the dangerous condition[476] [477] and could promote positive patient outcomes. This evidence supports this measure by highlighting the increased morbidity and mortality associated with the delayed diagnosis of VTE, which affirms the potential value of this measure to reduce any delay in VTE diagnosis. This measure could be added to the Value in Primary Care MVP in the future and could be a potential addition to the MIPS Family Medicine, Geriatrics, and Internal Medicine specialty sets under Tables B.13, B.16, and B.19 of this Appendix. The PRMR Clinician Recommendation Committee recommends this measure with the condition that implementation burdens are addressed for facilities with less sophisticated EHRs. This measure was endorsed by the CBE as CBE 3749e. While concerns were discussed regarding EHR implementation, we have determined the measure is feasible for implementation in MIPS as an eCQM by integrated health systems, and this measure is an important clinical topic for primary care clinicians to facilitate timely diagnosis of VTE. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2025-02/PRMR-2024-2025-MUC-Recommendations-Report-Final.pdf*.

A.4. Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of adult patients with risk factors for type 2 diabetes who are due for glycemic screening for whom the screening process was completed during the measurement period.
Measure Steward:	American Medical Association
Numerator:	Patients who had a glycemic screening test performed during the measurement period.
Denominator:	All patients with at least two outpatient clinical encounters or one preventive clinical encounter during the measurement period who have the following risk factors for type 2 diabetes: - Most recent BMI ≥25 kg/m2 (BMI ≥23 kg/m2 for Asian patients) during measurement period, AND - Age 35-70 at start of measurement period.
Exclusions:	- Patient's pregnancy overlaps measurement period. - Patient with diagnosis of advanced illness or limited life expectancy overlaps measurement period. - Patient with diagnosis of diabetes overlaps 2-year look-back period. - Patient with diagnosis of prediabetes overlaps 2-year look-back period. - Patient with glycemic screening performed during 2-year look-back period.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	eCQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We are proposing this eCQM because it captures a critical process to identify patients with prediabetes who may benefit from interventions to prevent type 2 diabetes and patients with undiagnosed type 2 diabetes. Regular glycemic screening is a critical first step to identifying patients with prediabetes and helping patients avoid the disability and costs associated with progression to type 2 diabetes. The Centers for Disease Control and Prevention (CDC) estimates that approximately 98 million American adults have prediabetes.[478] They note that more than 80 percent of adults with prediabetes are not aware that they have the condition.[479] This measure aligns with current United States Preventive Services Task Force (USPSTF) clinical guidelines for pre-diabetes screening, which recommends screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who are overweight or have obesity.[480] An estimated 13 percent of all U.S. adults (18 years or older) have diabetes, and 34.5 percent meet criteria for prediabetes. Diabetes is the leading cause of kidney failure and new cases of blindness among adults in the U.S. It is also associated with increased risks of cardiovascular disease, nonalcoholic fatty liver disease, and nonalcoholic steatohepatitis and was estimated to be the seventh leading cause of death in the U.S. in 2017. Screening asymptomatic adults for prediabetes and type 2 diabetes may allow earlier detection, diagnosis, and treatment, with the goal of improving health outcomes.[481] This fully tested and developed measure would fill a gap in MIPS, which does not have any related measures that examine the rate of screening for abnormal glucose metabolism in patients at risk for diabetes. This measure would ensure timely identification of patients with prediabetes for early intervention and may be a potential future addition to the Value in Primary Care MVP. The PRMR Clinician Recommendation Committee recommended this measure. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As mentioned above, this measure aligns with USPSTF evidence-based clinical guidelines.[482] The measure was found during the MERIT submission process to be feasible as an eCQM at the clinician level with high levels of agreement for data element testing of a similar non-MIPS eCQM. Additionally, measure testing demonstrates adequate measure score reliability, high face validity, and median performance scores that indicate significant room for improvement among clinicians. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2025-02/PRMR-2024-2025-MUC-Recommendations-Report-Final.pdf*.

A.5. Hepatitis C Virus (HCV): Sustained Virological Response (SVR)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive/detectable HCV RNA test result.
Measure Steward:	American Gastroenterological Association
Numerator:	All patients aged greater than or equal to 18 years at the time of the eligible encounter with an eligible encounter and positive/detectable HCV RNA test result in the denominator identification period who have a subsequent negative/undetectable HCV RNA test result 20 weeks to 12 months after first positive/detectable HCV RNA test result identified in the denominator identification period.
Denominator:	All patients aged >= 18 years with an active Hepatitis C Virus diagnosis at the time of the eligible encounter within the denominator identification period.
Exclusions:	Patients receiving hospice or palliative care or who died during the measurement period.
Measure Type:	Outcome
High Priority Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We are proposing this outcome measure because achieving SVR is the first step toward reducing future HCV morbidity and mortality. Once achieved, SVR is associated with long-term clearance of HCV infection, which is regarded as a virologic "cure," as well as with improved morbidity and mortality. Patients who achieve SVR usually have an improvement in liver histology and clinical outcomes. This measure is supported by American Association for the Study of Liver Diseases/Infectious Diseases Society of America (AASLD-IDSA) HCV Guidance Panel clinical guidelines that strongly recommend universal direct-acting antiviral treatment for all patients with acute or chronic HCV infections.[483] Additional evidence from cohort studies evaluated the association between SVR after antiviral therapy and mortality or complications of chronic HCV infection. SVR was associated with decreased risk for all-cause mortality, liver-related mortality, and other complications of end-stage liver disease versus no SVR.[484] This measure could be added to the Gastroenterology Care and Prevention and Treatment of Infectious Disorders Including Hepatitis and HIV MVPs in the future and would fill a current quality measure inventory gap within the Hepatitis C clinical topic area. In addition, it would provide a specialty specific outcome measure for the MIPS Gastroenterology and Infectious Disease specialty sets under Tables B.14 and B.18 of this Appendix. The PRMR Clinician Recommendation Committee recommended this measure without conditions. Testing was completed at the clinician level with a small sample size due to accessibility to data. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As mentioned above, this measure aligns with AASLD-IDSA HCV Guidance Panel evidence-based clinical guidelines. The measure was found during the MERIT submission process to be feasible at the clinician level and data element testing was completed showing exact data element agreement values of 52 percent, indicating moderate reliability. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2025-02/PRMR-2024-2025-MUC-Recommendations-Report-Final.pdf.*

Table Group B: Modifications to Previously Finalized Specialty Measure Sets Proposed for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

We are proposing to modify the below previously finalized specialty measure sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D of this Appendix. In the first column, existing measures with substantive changes described in Table Group D of this Appendix are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). The Indicator column includes a ''high priority type'' in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. Additionally, eCQMs that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE #/eCQM CBE #.

Under § 414.1305, a high priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related[485] quality measure. Further details of these types of measures may be found in the CMS Measures Management System Hub (*https://mmshub.cms.gov/*).

We request comments on proposed measure additions and/or proposed measure removals under applicable specialty sets in Table Group B of this Appendix. Previously finalized measures that have no substantive changes are not open for comment under this proposed rule.

The following specialty sets are not open for comment as they have no proposed modifications (addition and/or removal tables), and no proposed substantive changes to previously finalized measures for the CY 2026 performance period/2028 MIPS payment year: Electrophysiology Cardiac Specialist, Dentistry, Diagnostic Radiology, and Pathology.

The following specialty sets have no proposed modifications but have proposed substantive changes to previously finalized measures that are open for comment under Table Group D of this Appendix: Hospitalists, Radiation Oncology, and Optometry.

The remaining specialty sets have proposed modifications and are open for comment.

[485] Note that under Section IV.A.4.d.(1)(b) of this proposed rule, the term ''health equity'' is proposed for removal from the definition of a high priority measure.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Allergy/Immunology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Anesthesiology specialty set.

B.2. Anesthesiology

PREVIOUSLY FINALIZED MEASURES IN THE ANESTHESIOLOGY SPECIALTY SET

B.3. Audiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE AUDIOLOGY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.4a. Cardiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Cardiology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.4a. Cardiology

* § ! (Outcome)	N/A / N/A	441	N/A	MIPS CQM	Intermediate Outcome	**Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control):** The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) – Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated.	Wisconsin Collaborative for Healthcare Quality
*	3620 / N/A	493	N/A	MIPS CQM	Process	**Adult Immunization Status**: Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance
! (Outcome)	3665/ N/A	495	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13–item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.4a. Cardiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE CARDIOLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	322	N/A	MIPS CQM	Efficiency	**Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients:** Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), multigated acquisition scan (MUGA), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period.	American College of Cardiology Foundation	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set has no proposed changes.

B.4b. Electrophysiology Cardiac Specialist

§ ! (Outcome)	2474 / N/A	392	N/A	MIPS CQM	Outcome	**Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation:** Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation. This measure is submitted as four rates stratified by age and gender: • Submission Age Criteria 1: Females 18-64 years of age • Submission Age Criteria 2: Males 18-64 years of age • Submission Age Criteria 3: Females 65 years of age and older • Submission Age Criteria 4: Males 65 years of age and older	American College of Cardiology Foundation
! (Outcome)	N/A / N/A	393	N/A	MIPS CQM	Outcome	**Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision:** Infection rate following CIED device implantation, replacement, or revision.	American College of Cardiology Foundation

B.5. Certified Nurse Midwife

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Certified Nurse-Midwife specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Certified Nurse Midwife specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.5. Certified Nurse-Midwife

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE CHIROPRACTIC MEDICINE SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.7. Clinical Social Work

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Clinical Social Work specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Clinical Social Work specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.7. Clinical Social Work

American Psychiatric Association

B.7. Clinical Social Work

MEASURES PROPOSED FOR ADDITION TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	3665 / N/A	495	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We are proposing to include this measure in the Clinical Social Work specialty set as we agree with interested parties' feedback that this measure is clinically relevant to this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings.[486] Inclusion of this measure can help ensure that more specialist types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models[487] and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and would promote more universal adoption of best practices to support shared decision making.[488] Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as

[486] Frosch, D. L., May, S. G., Rendle, K. A., Tietbohl, C., & Elwyn, G. (2012). Authoritarian Physicians and Patients' Fear of Being Labeled 'Difficult' Among Key Obstacles to Shared Decision Making. Health Affairs (Project Hope), 31(5), 1030–1038. https://doi.org/10.1377/hlthaff.2011.0576.

B.7. Clinical Social Work

MEASURES PROPOSED FOR **ADDITION** TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								decreased strain on family members or other caregivers.[489] The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.7. Clinical Social Work

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE CLINICAL SOCIAL WORK SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.8. Dentistry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set has no proposed changes.

B.8. Dentistry

PREVIOUSLY FINALIZED MEASURES IN THE DENTISTRY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
! (Outcome)	N/A / N/A	378	CMS 75v14	eCQM	Outcome	**Children Who Have Dental Decay or Cavities:** Percentage of children, 1 - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.	Centers for Medicare & Medicaid Services
	N/A / N/A	379	CMS 74v15	eCQM	Process	**Primary Caries Prevention Intervention as Offered by Dentists:** Percentage of children, 1 – 20 years of age, who received two fluoride varnish applications during the measurement period as determined by a dentist.	Centers for Medicare & Medicaid Services

B.9. Dermatology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Dermatology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Dermatology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.9. Dermatology

American Academy of Dermatology

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set has no proposed changes.

B.10. Diagnostic Radiology

	N/A / N/A	317	CMS22 v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services
! (Appropriate Use)	N/A / N/A	331	N/A	MIPS CQM	Process	**Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse):** Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
! (Appropriate Use)	N/A / N/A	332	N/A	MIPS CQM	Process	**Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use):** Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
! (Efficiency)	N/A / N/A	415	N/A	MIPS CQM	Efficiency	**Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older:** Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.	American College of Emergency Physicians
! (Efficiency)	N/A / N/A	416	N/A	MIPS CQM	Efficiency	**Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 through 17 Years:** Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.	American College of Emergency Physicians

B.11. Emergency Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE EMERENCY MEDICINE SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.12. Endocrinology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Endocrinology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Endocrinology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.12. Endocrinology

PREVIOUSLY FINALIZED MEASURES IN THE ENDOCRINOLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
§ ! (Outcome)	0059 / N/A	001	CMS122v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Intermediate Outcome	**Diabetes: Glycemic Status Assessment Greater Than 9%:** Percentage of patients 18-75 years of age with diabetes who had a glycemic status assessment (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) > 9.0% during the measurement period.	National Committee for Quality Assurance
	0046 / N/A	039	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	**Screening for Osteoporosis for Women Aged 65-85 Years of Age:** Percentage of women aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) test to check for osteoporosis.	National Committee for Quality Assurance
* §	0055 / N/A	117	CMS131v14	eCQM, MIPS CQM	Process	**Diabetes: Eye Exam:** Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.	National Committee for Quality Assurance
§	0066 / N/A	118	N/A	MIPS CQM	Process	**Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy – Diabetes or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%):** Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB therapy.	American Heart Association

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ENDOCRINOLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Family Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A / 3749e	TBD	CMS11 73v1	eCQM	Intermediate Outcome	**Diagnostic Delay of Venous Thromboembolism in Primary Care:** Percentage of episodes for patients 18 years of age and older with documented Venous Thromboembolism (VTE) symptoms in the primary care setting and who had a diagnosis of VTE that occurs >24 hours and within 30 days following the index primary care visit where symptoms for the VTE were first present.	Brigham and Women's Hospital	We are proposing to include this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinician type. Family physicians provide preventive care, diagnose and treat acute and chronic illness, and manage chronic diseases.[490] Venous thromboembolism (VTE) is a serious and preventable health problem that requires timely diagnosis and treatment in order to reduce morbidity and mortality.[491] Due to this specialist's broad scope of care, patients often present to them first with non-specific symptoms prior to being diagnosed.[492] This measure is currently specified for primary care and intended to improve early recognition which can reduce adverse patient outcomes. The measure addresses a gap in MIPS for the treatment of patients with venous thromboembolism, specifically the commonly missed or delayed diagnosis in primary care requiring timely and adequate treatment. Including this measure in this specialty set can potentially improve diagnostic performance leading to a reduction in patient complications, decreased patient mortality and morbidity, and lowered health care costs.[493] Enhancing the family medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of VTE diagnosis and treatment. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

[490] The American Academy of Family Physicians (AAFP). Primary Care website. https://www.aafp.org/about/policies/all/primary-care.html#:~:text=Primary%20care%20physicians%20specifically%20are,a%20partner%20in%20health%20care.

B.13. Family Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	TBD	CMS11 54v1	eCQM	Process	**Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes:** Percentage of adult patients with risk factors for type 2 diabetes who are due for glycemic screening for whom the screening process was initiated during the measurement period.	American Medical Association	We are proposing to include this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinician type. Family medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations and conditions. This measure focuses on patients with risk factors for developing type 2 diabetes and enhances early detection and prevention of diabetes. Regular glycemic screening is an important first step to identifying patients with prediabetes and help patients avoid the disability and the cost associated with progression to type 2 diabetes.[494] This measure aligns with national USPSTF guidelines and recommendations of screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity.[495] Nearly 98 million people have prediabetes, but more than 8 in 10 adults don't know they have it[496] reinforcing the importance of identifying patients with prediabetes and identifying patients with undiagnosed type 2 diabetes. Enhancing the family medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of glucose screening in patients at risk for diabetes. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.13. Family Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQM	Outcome	**Hepatitis C Virus (HCV): Sustained Virological Response (SVR):** Percentage of patients aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive/detectable HCV RNA test result.	American Gastroenterological Association	We are proposing to include this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinician type. Family medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations. Family physicians diagnose and treat acute illness, provide preventive care, and manage chronic illness.[497] Due to their broad scope of care, this specialty may treat patients with active hepatitis C (HCV) and assist in managing the disease. This quality measure aligns with clinical guidelines of the U.S. Preventive Services Task Force (USPSTF) and achieving Sustained Virological Response (SVR) is the first step toward reducing future HCV morbidity and mortality.[498] The American Academy of Family Physicians have advocated for increased management of HCV within primary care along with family medicine residency program directors working over the past 5 years to build capacity for HCV treatment within the specialty by training future generations of family medicine physicians.[499] Enhancing the family medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of proper management of patients with HCV. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	443	N/A	MIPS CQM	Process	**Non-Recommended Cervical Cancer Screening in Adolescent Females:** The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Gastroenterology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

MEASURES PROPOSED FOR ADDITION TO THE GASTROENTEROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQM	Outcome	**Hepatitis C Virus (HCV): Sustained Virological Response (SVR):** Percentage of patients aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive/detectable HCV RNA test result.		We are proposing to include this measure in the Gastroenterology specialty set as we agree with interested parties this measure is clinically relevant to this specialty type. The measure is stewarded by the American Gastroenterological Association and its addition to this specialty set would be feasible given the high rates that this specialty assesses, treats, and manages diseases that affect the organs in the digestive system, including the liver.[500] Enhancing the gastroenterology related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this specialty set and its addition would elevate the importance of providing standard care to patients living with the hepatitis C (HCV liver disease.[501] This measure is based on evidenced-based guidance for HCV management and would help ensure patients with HCV are receiving the best possible care, thus improving patient safety, and reducing future HCV morbidity and mortality.[502] The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE GASTROENTEROLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	185	N/A	MIPS CQM	Process	**Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use:** Percentage of patients aged 18 years and older receiving a surveillance colonoscopy, with a history of prior adenomatous polyp(s) in previous colonoscopy findings, which had an interval of 3 or more years since their last colonoscopy.	American Gastroenterological Association	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.15. General Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed General Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.16. Geriatrics

MEASURES PROPOSED FOR **ADDITION** TO THE GERIATRICS SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
§	N/A / N/A	226	CMS13 8v14	Medicare Part B Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	We are proposing to include this measure in the Geriatrics specialty set as this measure is clinically relevant to this clinician type. Tobacco use is the leading preventable cause of disease, disability, and death in the U.S. cigarette smoking results in more than 480,000 premature deaths each year and accounts for approximately 1 in every five deaths.[503] There is an increase in smoking-related deaths in people over the age of 60 years, where this population's smoking-related mortality is largely caused by lung cancer.[504] Smoking can also reduce efficacy of vaccines and increase the risk for infections in the older patient population.[505] Older adults who quit smoking experience positive effects on their health such as reduced cognitive decline and better quality of life.[506] Due to the harmful effect tobacco use can have on patients' health, clinicians should engage with their patients to screen for tobacco use and, if positive, provide tobacco cessation counseling annually.[507] This measure was previously included in this specialty set and removed beginning with the CY 2024 performance period/2026 MIPS payment year due to being included as a component of the previously finalized MIPS quality measure 497: Preventive Care and Wellness (composite) making them duplicative. However, we agree with interested parties' feedback that all components of measure Q497 do not apply to this patient population, most

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								specifically Body Mass Index (BMI). We are proposing to add this component measure to this specialty set due to the importance of the clinical concept to this specialty where the complete composite measure would not be applicable. Enhancing the geriatrics related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of preventive care and screening for tobacco use.

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE GERIATRICS SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	497	N/A	MIPS CQM	Process	**Preventive Care and Wellness (composite):** Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).	Centers for Medicare & Medicaid Services	We are proposing to remove this measure from the Geriatrics specialty set as we agree with interested parties' feedback that the age and sex appropriate preventive screenings included in all the components of this composite measure are not applicable to this patient population. Specifically, we agree with their concern that the parameters within this composite measure's Body Mass Index (BMI) component may not be appropriate for use in older adults.[508] Observational studies suggest that older adults with BMI in the 27-32 range are at lowest risk of adverse outcomes.[509] Additionally, in older adults a higher BMI classification may be associated with lower mortality risks, demonstrating the potential need for age-specific BMI cut-points in older adults.[510]

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE GERIATRICS SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. We request comments on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.17. Hospitalists

PREVIOUSLY FINALIZED MEASURES IN THE HOSPITALISTS SPECIALTY SET

* § ! (Patient Safety)	N/A / N/A	130	CMS68 v15	eCQM, MIPS CQM	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services

B.18. Infectious Disease

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Infectious Disease specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Infectious Disease specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.18. Infectious Disease

PREVIOUSLY FINALIZED MEASURES IN THE INFECTIOUS DISEASE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
§ ! (Appropriate Use)	0069 / N/A	065	CMS154v14	eCQM, MIPS CQM	Process	**Appropriate Treatment for Upper Respiratory Infection (URI):** Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic order.	National Committee for Quality Assurance
§ ! (Appropriate Use)	N/A / N/A	066	CMS146v14	eCQM, MIPS CQM	Process	**Appropriate Testing for Pharyngitis:** The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order on or within 3 days after the episode date and a group A Streptococcus (Strep) test in the 7-day period from three days prior to the episode date through 3 days after the episode date.	National Committee for Quality Assurance
* § ! (Patient Safety)	N/A / N/A	130	CMS68v15	eCQM, MIPS CQM	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
*	N/A / N/A	176	N/A	MIPS CQM	Process	**Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy:** If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.	American College of Rheumatology
§	N/A / 3755c	205	CMS1188v3	eCQM, MIPS CQM	Process	**Sexually Transmitted Infection (STI) Testing for People with HIV:** Percentage of patients 13 years of age and older with a diagnosis of HIV who had tests for syphilis, gonorrhea, and chlamydia performed within the performance period.	Health Resources and Services Administration

B.18. Infectious Disease

PREVIOUSLY FINALIZED MEASURES IN THE INFECTIOUS DISEASE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
§	N/A / N/A	226	CMS13 8v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the 6 months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance
§	N/A / N/A	240	CMS11 7v14	eCQM	Process	**Childhood Immunization Status:** Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DtaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (HepB); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (HepA); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.	National Committee for Quality Assurance
§ ! (Outcome)	NA / N/A	338	CMS31 4v3	eCQM, MIPS CQM	Outcome	**HIV Viral Suppression:** Percentage of patients, regardless of age, diagnosed with HIV prior to or during the first 90 days of the performance period, with an eligible encounter in the first 240 days of the performance period, whose last HIV viral load test result was less than 200 copies/mL during the performance period.	Health Resources and Services Administration
§ ! (Efficiency)	N/A / N/A	340	CMS11 57v2	eCQM, MIPS CQM	Process	**HIV Annual Retention in Care:** Percentage of patients, regardless of age, with a diagnosis of Human Immunodeficiency Virus (HIV) before or during the first 240 days of the performance period who had at least two eligible encounters or at least one eligible encounter and one HIV viral load test that were at least 90 days apart within the performance period	Health Resources and Services Administration
	N/A / N/A	387	N/A	MIPS CQM	Process	**Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users:** Percentage of patients, regardless of age, who are active injection drug users who received screening for HCV infection within the 12-month reporting period.	American Gastroenterological Association

B.18. Infectious Disease

Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
* §	N/A / N/A	394	N/A	MIPS CQM	Process	**Immunizations for Adolescents:** The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the Human Papillomavirus (HPV) vaccine series by their 13th birthday.	National Committee for Quality Assurance
§	N/A / N/A	475	CMS349v8	eCQM	Process	**HIV Screening:** Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human Immunodeficiency Virus (HIV).	Centers for Disease Control and Prevention
*	3620 / N/A	493	N/A	MIPS CQM	Process	**Adult Immunization Status**: Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13–item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.18. Infectious Disease

MEASURES PROPOSED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQM	Outcome	**Hepatitis C Virus (HCV): Sustained Virological Response (SVR):** Percentage of patients aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive/detectable HCV RNA test result.	American Gastroenterological Association	We are proposing to include this measure in the Infectious Disease specialty set as this measure is clinically relevant to this specialty type. Clinicians in this specialty are skilled in the diagnosis, treatment, and management of acute and chronic infections. Enhancing the infectious disease related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this specialty set and its addition would elevate the importance of providing standard care to patients living with hepatitis C (HCV) liver disease.[511] This measure is based on evidence-based guidance for HCV management and would help ensure patients with HCV are receiving the best possible care, thus improving patient safety, and reducing future HCV morbidity and mortality.[512] The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

[511] See footnote Bhattacharya et al., 2023.

[512] See footnote Bhattacharya et al., 2023.

B.18. Infectious Disease

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INFECTIOUS DISEASE SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Internal Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES IN THE INTERNAL MEDICINE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
§ ! (Outcome)	0059 / N/A	001	CMS122v 14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Intermediate Outcome	**Diabetes: Glycemic Status Assessment Greater Than 9%:** Percentage of patients 18-75 years of age with diabetes who had a glycemic status assessment (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) > 9.0% during the measurement period.	National Committee for Quality Assurance
§	0081 / 0081e	005	CMS135v 14	eCQM, MIPS CQM	Process	**Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD):** Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.	American Heart Association
§	0067 / N/A	006	N/A	MIPS CQM	Process	**Coronary Artery Disease (CAD): Antiplatelet Therapy:** Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.	American Heart Association

B.19. Internal Medicine

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	TBD	CMS11 54v1	eCQM	Process	**Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes:** Percentage of adult patients with risk factors for type 2 diabetes who are due for glycemic screening for whom the screening process was initiated during the measurement period.	American Medical Association	We are proposing to include this measure in the Internal Medicine specialty set as this measure is clinically relevant to this clinician type. Internal medicine clinicians treat a broad and comprehensive scope of illnesses affecting adults, specializing in health promotion, disease prevention, and diagnosis and treatment of chronic illness, including patients with diabetes.[513] Due to their broad scope of care, this specialty can be crucial in early detection of patients at risk for developing type 2 diabetes.[514] Regular glycemic screening and timely identification of prediabetics helps patients avoid the disability and the cost associated with progression to type 2 diabetes.[515] This measure aligns with national USPSTF evidence-based guidelines and recommendations of screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity.[516] Nearly 98 million people have prediabetes, but more than 8 in 10 adults don't know they have it[517] reinforcing the importance of identifying patients with prediabetes and identifying patients with undiagnosed type 2 diabetes. Enhancing the internal medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of glucose screening in patients at risk for diabetes. The measure being

B.19. Internal Medicine

MEASURES PROPOSED FOR **ADDITION** TO THE INTERNAL MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQM	Outcome	**Hepatitis C Virus (HCV):** Sustained Virological Response (SVR): Percentage of patients aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive/detectable HCV RNA test result.	American Gastroenterological Association	We are proposing to include this measure in the Internal Medicine specialty set as this measure is clinically relevant to this clinician type. Internal medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations. Internal medicine clinicians diagnose and treat acute illness, provide preventive care, and manage chronic illness.[518] Due to their broad scope of care, this specialty may treat patients with active hepatitis C (HCV) and assist in managing the disease. This quality measure aligns with clinical guidelines of the USPSTF and achieving Sustained Virological Response (SVR) is the first step toward reducing future HCV morbidity and mortality.[519] Enhancing the internal medicine related measure inventory could help to ensure broad specialty coverage by having measures

[518] See footnote ACP, 2025.

B.19. Internal Medicine

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of proper management of patients with HCV. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	443	N/A	MIPS CQM	Process	**Non-Recommended Cervical Cancer Screening in Adolescent Females:** The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Interventional Radiology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.20. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES IN THE INTERVENTIONAL RADIOLOGY SPECIALTY SET

(Care Coordination)	N/A / N/A	374	CMS 50v14	eCQM, MIPS CQM	Process	**Closing the Referral Loop: Receipt of Specialist Report:** Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services
! (Outcome)	N/A / N/A	413	N/A	MIPS CQM	Intermediate Outcome	**Door to Puncture Time for Endovascular Stroke Treatment:** Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less.	Society of Interventional Radiology
* ! (Outcome)	N/A / N/A	420	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Varicose Vein Treatment with Saphenous Ablation: Outcome Survey:** Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.	Society of Interventional Radiology
	N/A / N/A	421	N/A	MIPS CQM	Process	**Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal:** Percentage of patients in whom a retrievable IVC filter is placed who, within 3 months post-placement, have a documented assessment for the appropriateness of continued filtration, device removal or the inability to contact the patient with at least two attempts.	Society of Interventional Radiology
! (Patient Safety)	N/A / N/A	465	N/A	MIPS CQM	Process	**Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries:** The percentage of patients with documentation of angiographic endpoints of embolization AND the documentation of embolization strategies in the presence of unilateral or bilateral absent uterine arteries.	Society of Interventional Radiology

B.20. Interventional Radiology

MEASURES PROPOSED FOR **ADDITION** TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Care Coordination)	N/A / N/A	024	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	**Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older:** Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.	National Committee for Quality Assurance	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this measure is highly relevant to this specialty as they often play a critical role in treating fractures, including vertebral compression fractures associated with osteoporosis. Effective communication with the physician managing ongoing care ensures a seamless transition from procedural intervention to long-term management, optimizing recovery and preventing complications.[520] Additionally, osteoporosis management is directly connected to many fracture conditions treated by interventional radiologists; ensuring appropriate post-fracture care, including evaluation and treatment for osteoporosis, helps reduce the risk of recurrent fractures.[521] This specialty has become increasingly involved in management of fractures that result from benign conditions like osteoporosis by using interventional techniques, such as image-guided osteoplasty and screw-mediated osteosyntheses.[522] Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES PROPOSED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* § ! (Patient Safety)	N/A / N/A	130	CMS68 v15	eCQM, MIPS CQM	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is highly relevant to IR because accurate medication documentation is critical for ensuring patient safety during minimally invasive procedures. Many IR procedures, such as angiography, biopsies, or embolization, require careful consideration of a patient's current medications to assess risks like bleeding or contrast allergies.[523] This specialty also often admits patients and needs to ensure they receive their home medications while admitted. Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule.

[523] Alghamdi, D. S., Alhrasen, M., Kassem, A., Alwagdani, A., Tourkmani, A. M., Alnowaiser, N., Al Barakah, Y., & Alotaibi, Y. K. (2023). BMJ Open Quality, 12(2), e002121. https://doi.org/10.1136/bmjoq-2022-002121.

B.20. Interventional Radiology

MEASURES PROPOSED FOR **ADDITION** TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
§ ! (Outcome)	N/A / N/A	355	N/A	MIPS CQM	Outcome	**Unplanned Reoperation within the 30-Day Postoperative Period:** Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period.	American College of Surgeons	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is highly relevant to IR as it reflects important facets of procedural success and patient safety. This measure directly addresses procedure-specific outcomes, particularly for complex interventions such as embolization or vascular access. Adding this measure to this specialty set can support positive outcomes for IR procedures. Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES PROPOSED FOR **ADDITION** TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A / N/A	356	N/A	MIPS CQM	Outcome	**Unplanned Hospital Readmission within 30 Days of Principal Procedure:** Unplanned Hospital Readmission within 30 Days of Principal Procedure.	American College of Surgeons	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that interventional radiologists commonly complete surgical procedures where appropriate management through supportive care can help decrease avoidable 30-day reoperation due to surgical complications. This measure reflects important facets of procedural success and patient safety directly addressing procedure-specific outcomes, particularly for complex interventions such as embolization or vascular access. This measure would "help encourage appropriate management and avoidance of unnecessary and costly procedures." Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

MEASURES PROPOSED FOR **ADDITION** TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
* ! (Outcome)	N/A / N/A	357	N/A	MIPS CQM	Outcome	**Surgical Site Infection (SSI):** Percentage of patients aged 18 years and older who had a surgical site infection (SSI).	American College of Surgeons	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as the measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is important for this specialty as it impacts patient safety and procedural success. This quality measure ensures proper precautions are taken to minimize infection risk, such as utilizing proper skin preparations, sterile techniques, and pre-procedural antibiotics, considering the importance of these interventions. To help keep complications to a minimum, it's crucial for all radiologists to understand and adhere to sterile techniques for better patient care. By following strict aseptic and sterile techniques, radiologists can minimize IR procedure complications.[524] Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES PROPOSED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Patient Experience)	N/A / N/A	358	N/A	MIPS CQM	Process	**Patient-Centered Surgical Risk Assessment and Communication:** Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.	American College of Surgeons	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is key to this specialty to ensure proper risk assessments and communication are prioritized prior to IR procedures. Patients undergoing IR procedures should receive a thorough preoperative evaluation. The addition of this measure to this specialty set helps ensure clinicians adhere to these practices to guide them to implement the most appropriate management plan, avoid unnecessary procedures, and prevent complications to achieve a successful outcome.[525] This would help ensure personalized risks of postoperative complications are appropriately assessed prior to procedures using a clinical data-based, patient-specific risk calculator and discussed with the patient. Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

Patient Evaluation and Preparation in Vascular and Interventional Radiology: What Every Interventional Radiologist Should Know (Part 1: Patient Assessment and Laboratory Tests). Cardiovascular and Interventional Radiology, 39(3), 325–333. https://doi.org/10.1007/s00270-015-1228-7.

B.20. Interventional Radiology

MEASURES PROPOSED FOR **ADDITION** TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	0053 / N/A	418	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	**Osteoporosis Management in Women Who Had a Fracture:** The percentage of women 50-85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture.	National Committee for Quality Assurance	We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this measure is highly relevant to this specialty as they often play a critical role in treating fractures, including vertebral compression fractures associated with osteoporosis. Effective communication with the physician managing ongoing care ensures a seamless transition from procedural intervention to long-term management, optimizing recovery and preventing complications.[526] Additionally, osteoporosis management is directly connected to many fracture conditions treated by interventional radiologists; ensuring appropriate post-fracture care, including evaluation and treatment for osteoporosis, helps reduce the risk of recurrent fractures.[527] This specialty has become increasingly involved in management of fractures that result from benign conditions like osteoporosis by using interventional techniques, such as image-guided osteoplasty and screw-mediated osteosyntheses.[528] Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERVENTIONAL RADIOLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.21. Mental/Behavioral Health and Psychiatry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Mental/Behavioral Health and Psychiatry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Mental/Behavioral Health and Psychiatry specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.21. Mental/Behavioral Health and Psychiatry

PREVIOUSLY FINALIZED MEASURES IN THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
	N/A / N/A	009	CMS12 8v14	eCQM	Process	**Antidepressant Medication Management:** Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported. a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks). b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).	National Committee for Quality Assurance
* § ! (Patient Safety)	N/A / N/A	130	CMS68 v15	eCQM, MIPS CQM	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	134	CMS2v 15	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.	Centers for Medicare & Medicaid Services
! (Patient Safety)	N/A / N/A	181	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	**Elder Maltreatment Screen and Follow-Up Plan:** Percentage of patients aged 60 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.	Centers for Medicare & Medicaid Services

American Psychiatric Association

B.21. Mental/Behavioral Health and Psychiatry

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Nephrology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.22. Nephrology

PREVIOUSLY FINALIZED MEASURES IN THE NEPHROLOGY SPECIALTY SET

PREVIOUSLY FINALIZED MEASURES IN THE NEPHROLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
	N/A / N/A	510	N/A	MIPS CQM	Process	**First Year Standardized Kidney Transplant Waitlist Ratio (FYSWR):** The number of newly initiated patients on dialysis in a practitioner group who are under the age of 75 and were either listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis	Centers for Medicare & Medicaid Services
	N/A / N/A	511	N/A	MIPS CQM	Process	**Percentage of Prevalent Patients Waitlisted for Kidney Transplant (PPPW) and Percentage of Prevalent Patients Waitlisted for Kidney Transplant in Active Status (aPPPW):** The measure tracks dialysis patients who are under the age of 75 in a practitioner group and on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). This measure is a risk-adjusted percentage of waitlist events among dialysis patients.	Centers for Medicare & Medicaid Services

B.22. Nephrology

MEASURES PROPOSED FOR **ADDITION** TO THE NEPHROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	TBD	N/A	MIPS CQM	Process	**Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR):** The number of prevalent dialysis patients in a practitioner group who are under the age of	Centers for Medicare & Medicaid Services	We are proposing to include this measure in the Nephrology specialty set as this measure is clinically relevant to this clinician type. The maintenance of end stage renal disease patients in active status on the waitlist is additionally important given demonstrated disparities and positive association with subsequent

B.22. Nephrology

MEASURES PROPOSED FOR **ADDITION** TO THE NEPHROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
						75 and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis.		transplantation.[529] This measure focuses specifically on the outcome of waitlisting for patients on dialysis and is appropriate to this specialty as nephrologists are at the forefront of caring for this patient population. Nephrologists exert substantial control over processes that result in waitlisting and optimizing the health of patients to ensure early access to the waitlist, which has been demonstrated to be particularly beneficial.[530] These processes include proper education of dialysis patients on the option for transplant, referral of appropriate patients to a transplant center for evaluation, and assisting patients with completion of the transplant evaluation process.[531] These activities address the specific healthcare needs of patients on dialysis and are directed by dialysis practitioners aiming to achieve suitability for kidney transplantation.[532] Enhancing the nephrology related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of appropriate treatment for patients on dialysis. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule.

B.22. Nephrology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE NEPHROLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Neurology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

Centers for Medicare & Medicaid Services
! (Patient Experience)	N/A / N/A	386	N/A	MIPS CQM	Process	**Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences:** Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequently as clinically indicated (i.e., rapid progression).	American Academy of Neurology
§	2152 / N/A	431	N/A	MIPS CQM	Process	**Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13–item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.23. Neurology

MEASURES PROPOSED FOR **ADDITION** TO THE NEUROLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**

! (Outcome)	3665 / N/A	495	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We are proposing to include this measure in the Neurology specialty set as we agree with interested parties' feedback that this measure is clinically relevant to this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings.[533] Inclusion of this measure can help ensure that more specialist types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models[534] and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and would promote more universal adoption of best practices to support shared decision making.[535] Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers.[536] The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.
! (Safety)	TBD	TBD	N/A	MIPS CQM	Process	**Patient Reported Falls and Plan of Care:** Percentage of patients (or caregivers as	American Academy of Neurology	We are proposing to include this measure in the Neurology specialty set as this measure is clinically relevant to this clinician type. Neurologists are medical doctors who specialize in diagnosing and treating

MEASURES PROPOSED FOR ADDITION TO THE NEUROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
						appropriate) with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at every visit.		patients with neurologic disorders whose incidence of falls is reported as 2 to 4 times higher than in healthy subjects of similar age.[537] Several studies address the negative impact falls have on expediting neurologic morbidity and slowing progress toward recovery.[538] Falls can negatively impact quality of life. This stresses the importance of prioritizing falls assessment and promoting strategies that aim at preventing or reducing the incidence of falls in the neurologic patient population.[539] Enhancing the neurology related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and could elevate the importance of addressing a patient's increased falls risk when diagnosed with a neurologic condition.

§	N/A / N/A	239	CMS15 5v14	eCQM	Process	**Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents:** Percentage of patients 3-17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. ● Percentage of patients with height, weight, and body mass index (BMI) percentile documentation ● Percentage of patients with counseling for nutrition ● Percentage of patients with counseling for physical activity.	National Committee for Quality Assurance
§	2152 / N/A	431	N/A	MIPS CQM	Process	**Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance

B.25. Nutrition/Dietician

MEASURES PROPOSED FOR **ADDITION** TO THE NUTRITION/DIETICIAN SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Care Coordination)	N/A / N/A	288	N/A	MIPS CQM	Process	**Dementia: Education and Support of Caregivers for Patients with Dementia:** Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	We are proposing to include this measure in the Nutrition/ Dietician specialty set as this measure is clinically relevant to this clinician type. We agree with interested parties' feedback that Registered Dietician Nutritionists (RDNs) are uniquely qualified to offer essential education and support to caregivers regarding feeding assistance, managing behavioral challenges related to food, and addressing palliative food and fluid needs especially with patients diagnosed with dementia.[540] RDNs can also help caregivers to recognize declines in a patient's physical capacity and advise them on identifying malnutrition risks, developing tailored interventions that support both the patient and caregiver, and assist in planning appropriate adjustments to nutritional care plans and feeding techniques as the disease progresses.[541] This specialty is integral to the process of enhancing the quality of life and nutritional status of older adults through individualized nutrition approaches.[542] Malnutrition is a critical concern in dementia care and can exacerbate symptoms and increase mortality rates.[543] These efforts align with best practices in dementia care, ensuring comprehensive and compassionate management.[544] Given RDNs role in educating and supporting caregivers in dementia care, their involvement ensures a holistic approach to care by addressing both the nutritional and behavioral needs of patients, ultimately improving the quality of life for individuals

B.25. Nutrition/Dietician

MEASURES PROPOSED FOR ADDITION TO THE NUTRITION/DIETICIAN SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
								with dementia.[545] Enhancing the nutrition/dietician related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of assessing and addressing nutrition challenges experienced by patients with dementia. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule.

B.25. Nutrition/Dietician

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE NUTRITION/DIETICIAN SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.26. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Obstetrics/Gynecology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.26. Obstetrics/Gynecology

American Psychiatric Association

B.26. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	443	N/A	MIPS CQM	Process	**Non-Recommended Cervical Cancer Screening in Adolescent Females:** The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Oncology/Hematology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

*	3620 / N/A	493	N/A	MIPS CQM	Process	**Adult Immunization Status**: Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance
! (Outcome)	3665 / N/A	495	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13–item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia
! (Appropriate Use)	N/A / N/A	506	N/A	MIPS CQM	Process	**Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy:** Percentage of patients, aged 18 years and older, with a diagnosis of metastatic non-small cell lung cancer (NSCLC) or squamous cell carcinoma of head and neck (HNSCC) on first-line immune checkpoint inhibitor (ICI) therapy, who had a positive PD-L1 biomarker expression test result prior to giving ICI therapy.	Society for Immunotherapy of Cancer (SITC)
	N/A / N/A	507	N/A	MIPS CQM	Process	**Appropriate Germline Testing for Ovarian Cancer Patients:** Percentage of patients, aged 18 and older, diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis.	American Society of Clinical Oncology

B.27a. Oncology/Hematology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. We request comments on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.27b. Radiation Oncology

PREVIOUSLY FINALIZED MEASURES IN THE RADIATION ONCOLOGY SPECIALTY SET

§ ! (Appropriate Use)	N/A / N/A	102	CMS 129v15	eCQM, MIPS CQM	Process	**Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients:** Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.	Centers for Medicare & Medicaid Services
* § ! (Patient Experience)	0384 / 0384e	143	CMS 157v14	eCQM, MIPS CQM	Process	**Oncology: Medical and Radiation – Pain Intensity Quantified:** Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.	American Society of Clinical Oncology
* ! (Patient Experience)	0383 / N/A	144	N/A	MIPS CQM	Process	**Oncology: Medical and Radiation – Plan of Care for Pain:** Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.	American Society of Clinical Oncology
§	N/A / N/A	226	CMS 138v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance

B.28. Ophthalmology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Ophthalmology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Ophthalmology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups ("provider") and assesses each provider's complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.	Centers for Medicare & Medicaid Services

B.30. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.31. Otolaryngology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Otolaryngology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PEDIATRICS SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.34. Physical Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Physical Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.35. Physical Therapy/Occupational Therapy

MEASURES PROPOSED FOR **ADDITION** TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	N/A / N/A	317	CMS22 v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services	We are proposing to include this measure in the Physical Therapy/Occupational Therapy specialty set as we agree with interested parties' feedback that adding this measure to this specialty set would help to broaden the patient population being screened for high blood pressure. Hypertension (HTN) is among the leading global preventable risk factors for cardiovascular disease and premature mortality.[546] Early detection and effective management of HTN have demonstrated significant reductions in mortality, morbidity rate, and health care costs. improves detection rates and medical management.[547] The physical therapist/ occupational therapist specialists may serve as the first point of contact into the health care system, thereby necessitating a need for routine blood pressure (BP) monitoring.[548] Leading physical therapy professional organizations include statements in their guidelines that suggest that physical therapists have a duty to provide a standard of care that protects the safety and optimizes the overall health of patients under their care.[549] Interdisciplinary care is vital, and it should be the responsibility of all clinician types to address health promotion and wellness, and prevention, delay, or management of acute or chronic diseases and conditions. Enhancing the physical therapy/occupational therapy related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This

B.35. Physical Therapy/Occupational Therapy

MEASURES PROPOSED FOR **ADDITION** TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
								measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of early detection of HTN across specialists. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

B.35. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.36. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Plastic Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

American College of Surgeons

B.36. Plastic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PLASTIC SURGERY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.37. Podiatry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Podiatry specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.38. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET

Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.39. Pulmonology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Pulmonology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

MEASURES PROPOSED FOR **ADDITION** TO THE PULMONOLOGY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
						their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.		gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models[551] and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and would promote more universal adoption of best practices to support shared decision making.[552] Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers.[553] The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.

[552] See footnote National Consensus Project for Quality Palliative Care, 2018.
[553] See footnote Meier, 2011.

B.39. Pulmonology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PULMONOLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.40. Rheumatology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Rheumatology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.40. Rheumatology

B.41. Skilled Nursing Facility

MEASURES PROPOSED FOR ADDITION TO THE SKILLED NURSING FACILITY SPECIALTY SET								
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	3665 / N/A	495	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:** The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We are proposing to include this measure in the Skilled Nursing Facility specialty set as we agree with interested parties' feedback that this measure is clinically relevant to this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings.[554] Inclusion of this measure can help ensure that more specialist types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models[555] and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and would promote more universal adoption of best practices to support shared decision making.[556] Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers.[557]

American Academy of Neurology

B.42. Speech Language Pathology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.43. Thoracic Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Thoracic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Thoracic Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.43. Thoracic Surgery

PREVIOUSLY FINALIZED MEASURES IN THE THORACIC SURGERY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
* ! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	**Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
* § ! (Patient Safety)	N/A / N/A	130	CMS 68v15	eCQM, MIPS CQM	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
! (Outcome)	0129 / N/A	164	N/A	MIPS CQM	Outcome	**Coronary Artery Bypass Graft (CABG): Prolonged Intubation:** Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require postoperative intubation > 24 hours.	Society of Thoracic Surgeons
! (Outcome)	0114 / N/A	167	N/A	MIPS CQM	Outcome	**Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure:** Percentage of patients aged 18 years and older undergoing isolated CABG surgery (without pre-existing renal failure) who develop postoperative renal failure or require dialysis.	Society of Thoracic Surgeons

B.43. Thoracic Surgery

PREVIOUSLY FINALIZED MEASURES IN THE THORACIC SURGERY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
! (Outcome)	0115 / N/A	168	N/A	MIPS CQM	Outcome	**Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration:** Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require a return to the operating room (OR) for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization.	Society of Thoracic Surgeons
§	N/A / N/A	226	CMS 138v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance
! (Outcome)	N/A / N/A	356	N/A	MIPS CQM	Outcome	**Unplanned Hospital Readmission within 30 Days of Principal Procedure:** Percentage of patients aged 18 years and older who had an unplanned hospital readmission within 30 days of principal procedure.	American College of Surgeons
! (Patient Experience)	N/A / N/A	358	N/A	MIPS CQM	Process	**Patient-Centered Surgical Risk Assessment and Communication:** Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.	American College of Surgeons
* ! (Care Coordination)	N/A / N/A	374	CMS 50v14	eCQM, MIPS CQM	Process	**Closing the Referral Loop: Receipt of Specialist Report:** Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services

B.43. Thoracic Surgery

PREVIOUSLY FINALIZED MEASURES IN THE THORACIC SURGERY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
§ ! (Outcome)	0119 / N/A	445	N/A	MIPS CQM	Outcome	**Risk-Adjusted Operative Mortality for Coronary Artery Bypass Graft (CABG):** Percent of patients aged 18 years and older undergoing isolated CABG who die, including both all deaths occurring during the hospitalization in which the CABG was performed, even if after 30 days, and those deaths occurring after discharge from the hospital, but within 30 days of the procedure.	Society of Thoracic Surgeons

B.43. Thoracic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE THORACIC SURGERY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.44. Urgent Care

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Urgent Care specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Urgent Care specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.44. Urgent Care

PREVIOUSLY FINALIZED MEASURES IN THE URGENT CARE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
§ ! (Appropriate Use)	0069 / N/A	065	CMS154v14	eCQM, MIPS CQM	Process	**Appropriate Treatment for Upper Respiratory Infection (URI):** Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic order.	National Committee for Quality Assurance
§ ! (Appropriate Use)	N/A / N/A	066	CMS146v14	eCQM, MIPS CQM	Process	**Appropriate Testing for Pharyngitis:** The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order on or within 3 days after the episode date and a group A Streptococcus (Strep) test in the seven-day period from three days prior to the episode date through three days after the episode date.	National Committee for Quality Assurance
§ ! (Appropriate Use)	0058 / N/A	116	N/A	MIPS CQM	Process	**Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis:** The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.	National Committee for Quality Assurance
* § ! (Patient Safety)	N/A / N/A	130	CMS68v15	eCQM, MIPS CQM	Process	**Documentation of Current Medications in the Medical Record:** Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
§	N/A / N/A	226	CMS138v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance

B.44. Urgent Care

PREVIOUSLY FINALIZED MEASURES IN THE URGENT CARE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
	N/A / N/A	317	CMS22 v14	Medicare Part B Claims Measure, eCQM, MIPS CQM	Process	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services
! (Appropriate Use)	N/A / N/A	331	N/A	MIPS CQM	Process	**Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse):** Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
! (Appropriate Use)	N/A / N/A	332	N/A	MIPS CQM	Process	**Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use):** Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
§	2152 / N/A	431	N/A	MIPS CQM	Process	**Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance
! (Appropriate Use)	0657 / N/A	464	N/A	MIPS CQM	Process	**Otitis Media with Effusion: Systemic Antimicrobials – Avoidance of Inappropriate Use:** Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.	American Academy of Otolaryngology – Head and Neck Surgery Foundation

B.44. Urgent Care

PREVIOUSLY FINALIZED MEASURES IN THE URGENT CARE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
*	N/A / N/A	488	N/A	MIPS CQM	Process	**Kidney Health Evaluation:** Percentage of patients aged 18-85 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the performance period.	National Kidney Foundation

B.44. Urgent Care

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE URGENT CARE SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.45. Urology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Urology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.45. Urology

PREVIOUSLY FINALIZED MEASURES IN THE UROLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**
* ! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure, MIPS CQM	Process	**Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
	N/A / N/A	048	N/A	MIPS CQM	Process	**Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance
! (Patient Experience)	N/A / N/A	050	N/A	MIPS CQM	Process	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance
§ ! (Appropriate Use)	N/A / N/A	102	CMS129v15	eCQM, MIPS CQM	Process	**Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients:** Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.	Centers for Medicare & Medicaid Services

B.45. Urology

PREVIOUSLY FINALIZED MEASURES IN THE UROLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**

Large Urology Group Practice Association and Oregon Urology Institute
! (Appropriate Use)	N/A/ N/A	481	CMS646v6	eCQM	Process	**Intravesical Bacillus-Calmette -Guerin for Non-Muscle Invasive Bladder Cancer**: Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.	Oregon Urology
*	N/A / N/A	488	CMS951v4	eCQM, MIPS CQM	Process	**Kidney Health Evaluation:** Percentage of patients aged 18-85 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the performance period.	National Kidney Foundation
* ! (Outcome)	2483 / N/A	503	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	**Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** The Patient Activation Measure® (PAM®) is a 10 – or 13–item questionnaire that assesses an individual´s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia

B.45. Urology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE UROLOGY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	**Adult COVID-19 Vaccination Status:** Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

B.46. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Vascular Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an * in the Indicator column.

B.46. Vascular Surgery

(Outcome)	N/A / N/A	441	N/A	MIPS CQM	Intermediate Outcome	**Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control):** The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated.	Wisconsin Collaborative for Healthcare Quality

B.46. Vascular Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE VASCULAR SURGERY SPECIALTY SET Note: In this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title And Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	487	N/A	MIPS CQM	Process	**Screening for Social Drivers of Health:** Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS CQM	Process	**Connection to Community Service Provider:** Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

Table Group C: Previously Finalized Quality Measures Proposed for Removal for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

In this proposed rule, we are proposing to remove 10 previously finalized MIPS quality measures for the CY 2026 performance period/2028 MIPS payment year and future years. These measures are discussed in detail in the removal tables below.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discuss our incremental approach to removing process measures. Further considerations are given in the evaluation of the measure's performance data to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion we use for the removal of measures includes extremely topped-out measures, which refers to measures topped out with an average (mean) performance rate between 98–100 percent. For a measure proposed for removal due to criteria relating to the benchmark and performance data, further information regarding 2025 MIPS benchmarking data can be located at *https://qpp.cms.gov/benchmarks.*

As codified at 414.1330(c) in the CY 2024 PFS final rule (89 FR 98561), we list 12 criteria used to determine the removal of a quality measure.

(i) If the Secretary determines that the quality measure is no longer meaningful, such as measures that are topped out.

(ii) If a measure steward is no longer able to maintain the quality measure.

(iii) If the quality measure reached extremely topped out status.

(iv) If the quality measure does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.

(v) If the quality measure is duplicative.

(vi) If the quality measure is not updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice.

(vii) If the quality measure is a process measure.

(viii) If the quality measure addresses a measurement gap.

(ix) If the quality measure is a patient-reported outcome.

(x) If the quality measure is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.

(xi) The robustness of the quality measure.

(xii) Consideration of the quality measure in developing MIPS Value Pathways (MVPs).

We request comments on these measure removals.

C.1. Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	185
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older receiving a surveillance colonoscopy, with a history of prior adenomatous polyp(s) in previous colonoscopy findings, which had an interval of 3 or more years since their last colonoscopy.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286). This measure's continued topped-out status is based on the current 2025 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.2. Sentinel Lymph Node Biopsy for Invasive Breast Cancer

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	264
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	The percentage of clinically node negative (clinical stage T1N0M0 or T2N0M0) breast cancer patients before or after neoadjuvant systemic therapy, who undergo a sentinel lymph node (SLN) procedure.
Measure Steward:	American Society of Breast Surgeons
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) at the measure steward's request because it is not aligned with current clinical guidelines and would no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.3. Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	290
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.31 percent and as such is considered extremely topped out. The average performance rate is based on the current 2025 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*. For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.4. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	322
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), multigated acquisition scan (MUGA), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this inverse measure, 0.03 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). For an inverse measure, a lower calculated performance rate indicates better clinical care or control. The average performance rate is based on the current 2025 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*. For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.5. Overuse of Imaging for the Evaluation of Primary Headache

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	419
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this inverse measure, 0.55 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). For an inverse measure, a lower calculated performance rate indicates better clinical care or control. The average performance rate is based on the current 2025 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*. For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.6. Perioperative Temperature Management

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	424
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients, regardless of age, who undergo surgical or therapeutic procedures under general or neuraxial anesthesia of 60 minutes duration or longer for whom at least one body temperature greater than or equal to 35.5 degrees Celsius (or 95.9 degrees Fahrenheit) was achieved within the 30 minutes immediately before or 15 minutes immediately after anesthesia end time.
Measure Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance on this measure, 98.55 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate is based on the current 2025 MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*. For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.7. Non-Recommended Cervical Cancer Screening in Adolescent Females

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	443
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the measure steward would no longer maintain the measure.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.8. Screening for Social Drivers of Health

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	487
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 87 FR 70253 through 70259) because it is a process measure that no longer addresses a priority area and would no longer be considered a high-priority measure. In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (83 FR 59763 through 59765) rule, we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 77101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.1330(c)(1)(vii) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure. Additionally, we seek to align with other quality programs. As indicated in the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes proposed rule, the Screening for Social Drivers of Health (SDoH) measure is proposed for removal beginning with the CY 2024 reporting period/FY 2026 payment determination from the Hospital Inpatient Quality Reporting (IQR) (90 FR 18336) and PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Programs (90 FR 18345). Further alignment is also proposed for the Inpatient Rehabilitation Facility (IRF) and Long-Term Care Hospital (LTCH) settings through proposed removal of SDoH related elements from standardized patient assessment reporting (90 FR 18550 through 18551). Therefore, proposing to remove this measure aligns with the CMS Quality Measure Development Plan[558] through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

[558] CMS. (2016). CMS Quality Measure Development Plan: Supporting the Transition to the Merit-based Incentive Payment System (MIPS) and Alternative Payment Models (APMs). cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/final-mdp.pdf.

C.9. Connection to Community Service Provider

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	498
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.
Measure Steward:	OCHIN
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 88 FR 79574 through 79577) because it is a process measure that no longer addresses a priority area and would no longer be considered a high-priority measure. In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (83 FR 59763 through 59765), we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 77101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.1330(c)(1)(vii) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure. Additionally, we seek to align with other quality programs. As indicated in the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes proposed rule, the Screen Positive Rate for Social Drivers of Health (SDoH) measure is proposed for removal beginning with the CY 2024 reporting period/FY 2026 payment determination from the Hospital Inpatient Quality Reporting (IQR) (90 FR 18336) and PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Programs (90 DR 18345). Further alignment is also proposed for the Inpatient Rehabilitation Facility (IRF) and Long-Term Care Hospital (LTCH) settings through proposed removal of SDoH related elements from standardized patient assessment reporting (90 FR 18550 through 18551). Therefore, proposing to remove this measure aligns with the CMS Quality Measure Development Plan[559] through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers, and reduce clinician burden of data collection as feasible.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

[559] See footnote CMS, 2016.

C.10. Adult COVID-19 Vaccination Status

Category	Description
CBE# / eCQM CBE #:	N/A / N/A
Quality #:	508
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We are proposing the removal of this quality measure from MIPS (finalized in 89 FR 98608 through 98613) because it is a process measure, and we seek to align with other Medicare programs. In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (83 FR 59763 through 59765) rule, we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 77101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.1330(c)(1)(vii) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure. Additionally, we seek to align with other quality programs. As indicated in the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes proposed rule, inpatient measure COVID–19 Vaccination Coverage Among Healthcare Personnel Measure is being proposed for removal (90 FR 18336 through 18337). This measure is also being proposed for removal in the Medicare Program; Inpatient Rehabilitation Facility Prospective Payment System for Federal Fiscal Year 2026 and Updates to the IRF Quality Reporting Program Proposed Rule (90 FR 18549 through 18550). We seek to align with these proposals to streamline clinical topics assessed across Medicare quality reporting programs.
In the Circumstance the Measure Was Retained:	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

Table Group D: Proposed Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

The D Tables within this proposed rule provide the substantive changes proposed for the MIPS quality measures in CY 2026. Three measures have proposed substantive changes that would result in a new benchmark. All measures with substantive changes are discussed in detail in the tables below.

We note that some MIPS quality measures available in traditional MIPS and MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in the 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group D.

The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2026 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2026 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2027. The 2026 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types on the Quality Payment Program website at *https://qpp.cms.gov.* In addition, eCQMs that are endorsed by a CBE are shown in Table D of this Appendix as follows: CBE #/eCQM CBE #.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2026

Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has been added to all 2026 quality measure specifications in the form of a revised 'Instructions Note' to clearly identify if telehealth encounters are allowed for denominator eligibility regardless of changes in coding or billing practices that may occur. Eligibility of telehealth encounters would be based on the intent of the measure and those settings that are appropriate for inclusion.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We request comments on these substantive changes.

D.1 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation

Substantive Change:	**The measure description is revised to read:** Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more visits during the measurement period. **The measure numerator is revised to read:** Patients who have an optic nerve head evaluation during one or more visits during the measurement period.

Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to revise the measure description and numerator by revising the language from "within 12 months" to "during the measurement period" to clarify the timeframe during which an optic nerve head evaluation should be completed. This clarification would ensure the numerator's quality action is assessed consistently and during the appropriate timeframe.
	Description
CBE # / eCQM CBE #:	N/A / 0086e
Quality #:	012
CMS eCQM ID:	CMS143v14
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more visits within 12 months.

D.2 Advance Care Plan

	Description
CBE # / eCQM CBE #:	0326 / N/A
Quality #:	047
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.
Substantive Change:	**Modified collection type:** MIPS CQM
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to remove the Medicare Part B Claims collection type as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate, 100 percent, and topped-out status is based on the current MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks.* However, the benchmarking data continues to show a gap for the MIPS CQM collection type and as such, we are proposing to retain that collection type.

D.3 Diabetes: Eye Exam

	Description
CBE # / eCQM CBE #:	0055 / N/A
Quality #:	117
CMS eCQM ID:	CMS131v14
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	**Modified collection type:** eCQM collection type. **Updated denominator exclusion: Added:** Exclude patients who have bilateral absence of eyes any time during the patient's history through the end of the measurement period. **The measure numerator is revised to read:** Patients with an eye screening for diabetic retinal disease. This includes patients with diabetes who had one of the following: - A diagnosis of retinopathy in any part of the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period - No diagnosis of retinopathy in any part of the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period or the year prior to the measurement period - An autonomous eye exam in the measurement period - A retinal exam finding with a retinopathy severity level in any part of the measurement period - A retinal exam finding with no retinopathy severity level in the year prior to the measurement period
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to remove the MIPS CQM collection type as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate, 94.57 percent, and topped-out status is based on the current MIPS benchmarking data located at *https://qpp.cms.gov/benchmarks*. However, the benchmarking data continues to show a gap for the eCQM collection type and as such, we are proposing to retain that collection type. Additionally, for the eCQM collection type, we are proposing to exclude patients who are missing both eyes as they would not qualify for an eye exam, and revising the numerator to allow for an autonomous eye exam to meet the numerator quality action as this is an acceptable standard of care in diabetic patients and would meet measure intent.[560]

[560] Wolf, R. M., Channa, R., Lehmann, H. P., Abramoff, M. D., & Liu, T. Y. A. (2024). Clinical Implementation of Autonomous Artificial Intelligence Systems for Diabetic Eye Exams: Considerations for Success. *Clinical Diabetes: A Publication of the American Diabetes Association*, *42*(1), 142–149. https://doi.org/10.2337/cd23-0019.

D.4 Documentation of Current Medications in the Medical Record

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	130
CMS eCQM ID:	CMS68v15
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.
Substantive Change:	**Updated denominator exception: For the eCQM collection type: Removed:** Medical Reason value set and replaced with "Acute Health Crisis" direct reference code (DRC).
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to replace the medical reason value set with the Acute Health Crisis DRC for the eCQM collection type as this code better represents the intent of the denominator exception.

D.5 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	134
CMS eCQM ID:	CMS2v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
Substantive Change:	**Updated guidance: For the eCQM collection type: Revised:** Pharmacological interventions (prescribed or active depression medication). **Revised:** Follow-Up Plan: While there are many validated depression screening tools, they are not necessarily diagnostic tools. Patients with elevated depression screening scores should be followed by a clinician to evaluate whether a depression diagnosis is appropriate, but a medication and/or referral are not always indicated for a positive score. In these cases, a follow up plan is appropriate. **Added:** The measure is not prescriptive in the specific screening tool being used and provides no hierarchy for acceptance of one tool over another. In the case where two screenings are documented on the same date/time with different results (one positive and one negative), the measure only assesses the most recent screening. Since both screenings are both considered the most recent, the patient will be captured in the numerator if the positive screening result also includes documentation of an intervention following the positive screen. **Updated numerator: For the eCQM collection type: Added:** Or an active depression medication overlaps the date of the qualifying encounter.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to revise the guidance and numerator for the eCQM collection type to clarify that pharmacological interventions include prescribed or active depression medications. We are proposing to update the guidance for determining the appropriate plan of care in instances where the screening tool doesn't adequately establish a diagnosis of depression. Additionally, we are proposing to add guidance to clarify instances of multiple screenings, which aligns with current measure logic. These clarifications would ensure the numerator action is appropriately and consistently assessed.

D.6 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care

	Description
CBE # / eCQM CBE #:	0563 / N/A
Quality #:	141
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.
Substantive Change:	**Updated numerator definition: For all collection types: Added:** timing for documenting the plan of care.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We are proposing to update the numerator definition for all collection types to clarify the timing of when the care plan must be documented in the patient's medical record after the IOP is assessed. This would ensure timely and optimal patient care and consistent assessment across clinicians for measure performance.

D.7 Oncology: Medical and Radiation – Pain Intensity Quantified

	Description
CBE # / eCQM CBE #:	0384 / 0384e
Quality #:	143
CMS eCQM ID:	CMS157v14
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	**Updated denominator criteria: For the MIPS CQM collection type: Added:** Patient on oral chemotherapy on or within 30 days before denominator eligible encounter. **Updated guidance: For the eCQM collection type: Removed:** Telehealth from language.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to add oral chemotherapy to the denominator criteria to align with the eCQM version of the measure that includes SNOMED codes for oral chemotherapy, ensuring that patients on oral chemotherapy are included in the eligible patient population. We are proposing to remove 'telehealth' from the eCQM guidance to align with coding guidelines for radiation treatment management codes.

D.8 Oncology: Medical and Radiation - Plan of Care for Pain

	Description
CBE # / eCQM CBE #:	0383 / N/A
Quality #:	144
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Substantive Change:	**Updated denominator criteria: Added:** Patient on oral chemotherapy during the performance period.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to add oral chemotherapy to the denominator criteria to align with the eCQM version of the measure that includes SNOMED codes for oral chemotherapy, ensuring that patients on oral chemotherapy are included in the eligible patient population.

D.9 Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	176
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	**Updated denominator instructions: Added:** new biologic and/or immune response modifiers. - Adalimumab-ryvk (Simlandi), - Rituximab (Rituxan), - Tocilizumab-aazg (Tyenne) - Tocilizumab-bavi (Tofidence), - Ustekinumab (Pyzchiva) - Ustekinumab (Selarsdi) - Ustekinumab (Wezlana) **Revised:** The list of biologic and/or immune response modifier therapies are subject to change as new therapies are approved by the FDA. Newly approved biologic and/or immune response modifier therapies requiring TB testing prior to the first course of therapy would be eligible for inclusion within the Denominator even if not listed above.
Measure Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to update the list of medications used in the measure to identify denominator eligible patients by adding new biologic and/or immune response modifiers to the existing list in the denominator instructions. This expansion would provide an up-to-date list of appropriate biologic and/or immune response modifiers that clinicians may have prescribed for their patients, thereby ensuring that as many of the appropriate patients are identified in the denominator of this measure as possible. Additionally, we are proposing to revise language within the denominator instructions that would clarify the medication list is not exhaustive and any medication that requires TB testing prior to treatment would be appropriate for inclusion.

D.10 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

	Description
CBE # / eCQM CBE #:	0565 / 0565e
Quality #:	191
CMS eCQM ID:	CMS133v14
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	**Updated denominator exclusion: For the eCQM collection type:** Significant ocular conditions include: Amblyopia, Burn Confined to Eye and Adnexa, Cataract Secondary to Ocular Disorders, congenital cataract, mature or hypermature cataract, posterior polar cataract, central corneal ulcer, certain types of iridocyclitis, choroidal degenerations, choroidal detachment, choroidal hemorrhage and rupture, cloudy cornea, corneal edema, disorders of cornea including corneal opacity, degeneration of macula and posterior pole, degenerative disorders of globe, diabetic macular edema, diabetic retinopathy disorders of optic chiasm, disorders of visual cortex, disseminated chorioretinitis and disseminated retinochoroiditis, focal chorioretinitis and focal retinochoroiditis, glaucoma, hereditary dystrophies (choroidal, corneal, retinal), hypotony of eye, injury to optic nerve and pathways, macular scare of posterior polar, Morgagnian cataract, nystagmus and other irregular eye movements, open wound of eyeball, optic atrophy, optic neuritis, pathologic myopia, posterior lenticonus, prior penetrating keratoplasty, purulent endophthalmitis, retinal detachment with retinal defect, retinal vascular occlusion, retrolental fibroplasias, scleritis, separation of retinal layers, traumatic cataract, uveitis, vascular disorders of iris and ciliary body.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We are proposing to update the denominator exclusion for the eCQM collection type to include the list of diagnoses that qualify as significant ocular conditions[561] [562] for the purposes of this measure. This clarification would ensure appropriate patients are consistently identified as denominator eligible and assessed for the numerator action across submitting clinicians for measure performance.

[561] Mangione, C. M., Orav, J., Lawrence, M. G., Phillips, R.S., Seddon, J.M., & Goldman, L. (1995). Prediction of Visual Function After Cataract Surgery: A Prospectively Validated Model. *Archives of Ophthalmology, 113*(10), 1305-1311. https://doi.org/10.1001/archopht.1995.01100100093037.

[562] Steinberg, E. P., Tielsch, J. M., Schein, O. D., Javitt, J. C., Sharkey, P., Cassard, S. D., … Damiano, A. M. (1994). National Study of Cataract Surgery Outcomes: Variation in 4-month Postoperative Outcomes as Reflected in Multiple Outcome Measures. *Ophthalmology, 101*(6), 1131-1141. https://doi.org/10.1016/s0161-6420(94)31210-3.

D.11 Dementia: Cognitive Assessment

	Description
CBE # / eCQM CBE #:	N/A / 2872e
Quality #:	281
CMS eCQM ID:	CMS149v14
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
Substantive Change:	**The measure description is revised to read:** Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within the 12 months preceding a dementia encounter during the measurement period. **Updated guidance: Revised:** The measure requires a diagnosis of dementia be present before the routine assessment of cognition is performed once during the measurement period or the 12 months prior. **The measure numerator is revised to read:** Patients for whom an assessment of cognition is performed and the results reviewed at least once within the 12 months preceding a dementia encounter during the measurement period.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to revise the measure description, guidance, and numerator statement to clarify the timing of the routine assessment of cognition and review of the results to ensure that the patient had a diagnosis of dementia at the time of assessment. This revision better aligns with the intent of the measure and would ensure the numerator's quality action is attributable to the denominator eligible criteria.

D.12 Surgical Site Infection (SSI)

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	357
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older who had a surgical site infection (SSI).
Substantive Change:	**Updated instructions: Added:** All sites of the primary procedure and integral procedures performed during that trip to the operating room should be evaluated as part of this measure for possible wound occurrences. If more than one SSI is observed, assign the SSI at the deepest level (superficial, deep or organ/space) that occurs within a 30-day postoperative timeframe.
Measure Steward:	American College of Surgeons
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We are proposing to update the measure instructions to clarify how to handle multiple procedures during a single encounter. By assigning the SSI at the deepest level (superficial, deep, or organ/space) in situations where more than one SSI is observed within a 30-day postoperative timeframe, the most adverse surgical outcome is captured as an indicator of the quality of care provided.

D.13 Closing the Referral Loop: Receipt of Specialist Report

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	374
CMS eCQM ID:	CMS50v14
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.
Substantive Change:	**Updated guidance: For the eCQM collection type: Added:** A procedural report received from a specialist for an exam or procedure conducted (e.g., diabetic eye exam, colonoscopy) can satisfy the numerator requirement and successfully close the referral loop. A separate consultant note or consultant report is not required to close the referral loop in these circumstances. **The measure numerator is revised to read: For the eCQM collection type:** Number of patients with a referral on or before October 31, for which the referring clinician received a report from the first clinician to whom the patient was referred.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to update the guidance and numerator for the eCQM collection type to align with current measure logic, which requires a report from the referral. These updates allow for improved electronic implementation of the measure.

D.14 Functional Status Assessment for Total Hip Replacement

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	376
CMS eCQM ID:	CMS56v14
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300 – 425 days after the surgery.
Substantive Change:	**Updated denominator exclusion: Revised:** Exclude patients with one or more specific lower body fractures indicating trauma in the 48 hours before or at the start of the total hip arthroplasty.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to update the denominator exclusion regarding one or more specific lower body fractures by increasing the timeframe to 48 hours prior to the start of THA. Trauma occurring in the 48 hours leading up to a total hip replacement can potentially affect the outcome of the surgery, depending on factors such as the severity of the trauma or the need to stabilize and/or adequately assess the condition of the patient. This extended timeframe would ensure patients undergoing THA are prepared for the procedure and not in an emergent situation.

D.15 Cataract Surgery: Difference Between Planned and Final Refraction

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	389
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older who had cataract surgery performed and who achieved a final refraction within +/- 1.0 diopters of their planned (target) refraction.
Substantive Change:	**Updated numerator note: Added:** It would be expected that the planned (target) refraction be assessed and documented within 90 days prior to the denominator eligible procedure.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We are proposing to add a numerator note to the measure, which would ensure that only those patients with recently obtained planned (target) refractions are considered for numerator compliance. As refractions may change over time, it is essential that patients undergoing cataract surgery have current and accurate results for appropriate ophthalmic evaluations, which would be used by the ophthalmologist to counsel the patient about target postoperative refractive options and formulation of a care plan that would achieve the documented target refraction.[563]

[563] Miller, K. M., Oetting, T. A., Tweeten, J. P., Carter, K., Lee, B. S., Lin, S., Nanji, A. A., Shorstein, N. H., Musch, D. C., & American Academy of Ophthalmology Preferred Practice Pattern Cataract/Anterior Segment Panel (2022). Cataract in the Adult Eye Preferred Practice Pattern. *Ophthalmology*, *129*(1), P1–P126. https://doi.org/10.1016/j.ophtha.2021.10.006.

D.16 Immunizations for Adolescents

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	394
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the Human Papillomavirus (HPV) vaccine series by their 13th birthday.
Substantive Change:	**The measure description is revised to read:** The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the Human Papillomavirus (HPV) vaccine series by their 13th birthday. **The measure numerator is revised to read: For Submission Criteria 1:** Adolescents who had one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B) on or between the patient's 10th and 13th birthdays. **Updated numerator options: Revised: For Submission Criteria 1:** **Performance Met:** Patient had one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B) on or between the patient's 10th and 13th birthdays. **Performance Not Met:** Patient did not have one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B), on or between the patient's 10th and 13th birthdays.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to revise the measure description and numerator to add the pentavalent serogroup meningococcal vaccine as numerator compliant for patients for which it is suggested. This update reflects recommendations of the CDC Advisory Committee on Immunization Practices that children may receive pentavalent vaccine starting at age 10 (*https://www.cdc.gov/mmwr/volumes/73/wr/mm7315a4.htm*).

D.17 Osteoporosis Management in Women Who Had a Fracture

	Description
CBE # / eCQM CBE #:	0053 / N/A
Quality #:	418
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	The percentage of women 50-85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture.
Substantive Change:	**The measure numerator note is revised to read: For all collection types:** For the purposes of submitting this measure, Central Dual Energy X-Ray Absorptiometry (DXA), the most common measurement for measuring bone mineral density (BMD), spinal densitometry X-ray, and Peripheral Dual-energy X- Ray Absorptiometry (DXA) would meet performance and the intent of the measure. Therefore, 3095F would be submitted in the instances those screening modalities are utilized.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to revise the list of tests for measuring BMD by removing CT bone density axial and ultrasonography for densitometry as meeting performance. These changes would ensure testing required for numerator compliance is better aligned with guidelines and best practices.[564]

[564] USPSTF. (2025). Osteoporosis to Prevent Fractures: Screening. https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/osteoporosis-screening.

D.18 Varicose Vein Treatment with Saphenous Ablation: Outcome Survey

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	420
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.
Substantive Change:	**The measure denominator is revised to read:** All patients who are treated for varicose veins with saphenous ablation and who receive an outcomes survey within 180 days after treatment. **The measure numerator is revised to read:** Patients whose outcome survey score improved when assessed within 180 days following treatment. **Updated numerator options: Added:** Denominator Exception: Documentation of at least two attempts to follow up with patient within 180 days of treatment Performance Not Met: No documentation of at least two attempts to follow up with patient within 180 days of treatment Performance Not Met: Patient follow up more than 180 days after treatment **Removed:** Denominator Exception: Patient survey results not available
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We are proposing to update the measure's timeframe for assessing patient outcomes to anytime within 6 months following the treatment. While the ideal assessment time is 3-6 months following the treatment, trials have shown improvement occurred fairly quickly before slowing and plateauing at about six months.[565] Therefore, it is reasonable a patient may show improved scores sooner than 3 months, and this revision would allow flexibility in workflow while ensuring quality outcomes are achieved. Additionally, we are also proposing to update the numerator options to ensure patients were not lost to follow-up without a reasonable attempt made. By replacing the exception for patient survey results not available, we would require documentation that the patient was actively sought for follow-up.

[565] Gibson, K., Morrison, N., Kolluri, R., Vasquez, M., Weiss, R., Cher, D., Madsen, M., & Jones, A. (2018). Twenty-four Month Results from a Randomized Trial of Cyanoacrylate Closure Versus Radiofrequency Ablation for the Treatment of Incompetent Great Saphenous Veins. *Journal of Vascular Surgery. Venous and Lymphatic Disorders*, *6*(5), 606–613. https://doi.org/10.1016/j.jvsv.2018.04.009.

D.19 Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	441
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated
Substantive Change:	**The measure description is revised to read:** The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 130/80 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated – AND • High Intensity Statin Use Unless Contraindicated **Updated denominator criteria: Removed:** coding for arterial embolism and thrombosis from CAD Risk-Equivalent Conditions. **The measure numerator is revised to read: For all Submission Criteria:** The number of IVD patients who meet ALL of the following targets: • Most recent BP is less than or equal to 130/80 mm Hg • Most recent tobacco status is Tobacco Free (NOTE: If there is No Documentation of Tobacco Status the patient is not compliant for this measure) • Daily Aspirin or Other Antiplatelet Unless Contraindicated • High Intensity Statin Use Unless Contraindicated **Updated numerator note: Added: For all Submission Criteria: Component 4:** Valid High Intensity statins include Atorvastatin 40-80 mg and Rosuvastatin 20-40 mg. **Updated numerator options: Revised: For all Submission Criteria:** **Component 1:** require blood pressure to be less than or equal to 130/80 mm Hg. **Component 4:** require use of high intensity statin therapy.
Measure Steward:	Wisconsin Collaborative for Healthcare Quality
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We are proposing to update multiple components of this measure to align with the AHA/ACC/ACCP/ASPC/NLA/PCNA Guidelines (*https://www.ahajournals.org/doi/10.1161/CIR.0000000000001168*). We are proposing to revise normal blood pressure measurement from 140/90 to 130/80 and switch from Statin Use Unless Contraindicated to High Intensity Statin Use Unless Contraindicated. Given that the diagnoses included in the measure represent the highest level of cardiovascular risk, and given current guidelines, the measured population is best served by being held to a lower blood pressure measurement and by being on a high-intensity statin to reduce the risk of a major cardiac event. We are also proposing to remove coding for arterial embolism and thrombosis from the CAD Risk-Equivalent Conditions denominator criteria as these conditions do not share the same pathophysiology or treatment goals and therefore misalign with the intent of the measure.

D.20 Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

	Description
CBE # / eCQM CBE #:	1858 / N/A
Quality #:	450
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 to 70 with stage I (T1c) – III HER2 positive breast cancer for whom appropriate treatment is initiated.
Substantive Change:	**Updated denominator criteria: Revised:** AJCC stage at breast cancer diagnosis = I (IA or IB) and T-Stage at breast cancer diagnosis = T1c. **Updated denominator note: Added:** The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters and one is with a different provider on the same day.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to revise the denominator criteria for T-stage breast cancer to ensure patients with T1mic, TX, T0 and Tis are not inadvertently included in the denominator eligible population as HER2-targeted therapy is typically not indicated.[566] [567] We are also proposing to add a denominator note to clarify the encounter requirement to require and reflect two separate encounters occurring on different days with the same reporting provider or group.

[567] Johnson, K. C., Quiroga, D., Sudheendra, P., & Wesolowski, R. (2022). Treatment of Small (T1mic, T1a, and T1b) Node-negative HER2+ Breast Cancer - A Review of Current Evidence For and Against the Use of Anti-HER2 Treatment Regimens. *Expert Review of Anticancer Therapy*, *22*(5), 505–522. https://doi.org/10.1080/14737140.2022.2063844.

D.21 RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who Receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy

	Description
CBE # / eCQM CBE #:	1859 / N/A
Quality #:	451
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed.
Substantive Change:	**Updated denominator note: Added:** The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters, and one is with a different provider on the same day.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to add a denominator note to clarify the encounter requirement to require and reflect two separate encounters occurring on different days with the same reporting provider or group.

D.22 Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)

	Description
CBE # / eCQM CBE #:	0210 / N/A
Quality #:	453
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.
Substantive Change:	**Updated denominator criteria: Added:** coding to allow telehealth as denominator eligible. **Updated denominator note: Added:** The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters and one is with a different provider on the same day.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to add telehealth coding as denominator eligible for this measure as it is appropriate for patients seen via telehealth to be included in the denominator for assessment of performance. We are also proposing to add a denominator note to clarify implementation of the denominator criteria encounter requirement, which would ensure the denominator eligible patient population is appropriately identified and consistent across clinician submissions.

D.23 Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better)

	Description
CBE # / eCQM CBE #:	0216 / N/A
Quality #:	457
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who died from cancer, and admitted to hospice and spent less than 3 days there.
Substantive Change:	**Updated denominator criteria: Added:** coding to allow telehealth as denominator eligible. **Updated denominator note: Added:** The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters and one is with a different provider on the same day.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We are proposing to add telehealth coding as denominator eligible for this measure as it is appropriate for patients seen via telehealth to be included in the denominator for assessment of performance. We are also proposing to add a denominator note to clarify implementation of the denominator criteria encounter requirement, which would ensure the denominator eligible patient population is appropriately identified and consistent across clinician submissions.

Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)

D.24

	Description
CBE # / eCQM CBE #:	3493 / N/A
Quality #:	480
CMS eCQM ID:	N/A
Current Collection Type:	Administrative Claims
Current Measure Description:	This measure is a re-specified version of the measure, "Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)" (National Quality Forum 1550), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups ("provider") and assesses each provider's complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.
Substantive Change:	**Updated denominator exclusion: Removed:** COVID exclusion
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We are proposing to exclude admissions with either a principal or secondary diagnosis of COVID–19 present on admission from the measure denominator due to the end of the public health emergency (PHE). This proposed change aligns this measure with language proposed under the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes proposed rule (90 FR 18292).

D.25 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MCC)

	Description
CBE # / eCQM CBE #:	3597 / N/A
Quality #:	484
CMS eCQM ID:	N/A
Current Collection Type:	Administrative Claims
Current Measure Description:	The measure is a risk-standardized rate of acute, unplanned hospital admissions for the Merit-based Incentive Payment System (MIPS) among Medicare Fee-for-Service (FFS) patients aged 65 years and older with multiple chronic conditions (MCCs); i.e., two or more of nine qualifying chronic conditions. The measure is adjusted for age, chronic condition categories, and other clinical and frailty risk factors present at the start of the 12-month measurement period as well as social risk factors. The measure attributes admissions to MIPS participating clinicians and/or clinician groups, as identified by their National Provider Identifiers (NPIs) and/or Taxpayer Identification Number (TIN) and assesses each clinician's or clinician group's admission rate.
Substantive Change:	**Update denominator** exclusion**: Remove**: Patients assigned to clinician who achieve Qualifying Advanced Alternative Payment Model Participant (QP) status and therefore do not participate in MIPS.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We are proposing to revise the denominator eligible patient population by removing the denominator exclusion regarding QP status. When the MIPS MCC measure was proposed in the CY 2022 PFS proposed rule (86 FR 39270 through 39271) and finalized in the final rule (86 FR 65264 through 65265), there was a parallel proposal to remove the ACO MCC measure from the Medicare Shared Saving Plan (SSP) APM Performance Pathway (APP) measure set and replace it with the MIPS MCC measure. With a MIPS measure now in place, and consistent with the initial intent, we are proposing removing this exclusion to broaden the scope of the measure and account for all MIPS participants, particularly those in APM entities who may have QP status.

D.26 Kidney Health Evaluation

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	488
CMS eCQM ID:	CMS951v4
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients aged 18-85 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the performance period.
Substantive Change:	**Updated guidance: For the eCQM collection type: Added:** The Urine Albumin-Creatinine Ratio (uACR) requirement can be met with a documented Urine Albumin and Urine Creatine less than or equal to four days apart. A calculation of uACR is not required to meet this measure, but it is intended to for the uACR to be calculated for the purposes of kidney health evaluation. If the Urine Albumin and Urine Creatine tests have different units of measure, they should be converted to the same unit of measure for the purposes of calculating uACR. The Urine Albumin Creatinine Ratio Test requirement can be met if the lab result is received as a quantitative value or as an undetectable result. Undetectable results can be coded using values in the "Undetectable Lab Result Value" value set. **The measure numerator is revised to read: For the eCQM collection type:** Patients who received a kidney health evaluation during the measurement period. Kidney health evaluation is defined by an eGFR AND uACR within the measurement period OR an eGFR and a Urine Albumin and Urine Creatine result documented less than or equal to four days apart.
Measure Steward:	National Kidney Foundation
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to update the guidance and the numerator for the eCQM collection type to clarify how the uACR requirement may be met in instances where the lab results are non-quantitative, that is, undetectable or the Urine Albumin and Urine Creatine tests are run separately. This would ensure the measure logic is appropriately assessing clinicians as numerator compliant when the intent of the measure has been met.

D.27 Adult Immunization Status

	Description
CBE # / eCQM CBE #:	3620 / N/A
Quality #:	493
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
Substantive Change:	**The measure description is revised to read:** Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; pneumococcal; and hepatitis B**.** **Updated instructions:** **Added:** Performance Rate 5 for reporting of hepatitis B vaccine series. **Revised:** Percentage of patients (50 years of age and older on the date of the encounter) who received 2 doses of the herpes zoster recombinant vaccine anytime on or after the patients' 50th birthday. **Updated denominator: Added: Submission Criteria 5:** Patients 19 years of age or older on the date of the encounter with a visit during the measurement period. **Updated denominator criteria: Added: Submission Criteria 5:** Patients age 19 and older on the date of the encounter AND Patient encounter during the performance period AND NOT DENOMINATOR EXCLUSION: In hospice or using hospice services during the measurement period. **Updated numerator: Revised: Submission Criteria 3:** Patients in Denominator 3 who received 2 doses of the herpes zoster recombinant vaccine on October 1, 2017, through the end of the measurement period. **Added: Submission Criteria 5:** Patients in Denominator 5 who were administered a hepatitis B vaccine series on or after their 19th birthday and before the end of the measurement period. **Updated numerator instructions: Added: Submission Criteria 5:** In order to meet criteria for this numerator, patients must have one of the following: 1) at least three doses of the childhood hepatitis B vaccine with different dates of service on or before their 19th birthday; 2) at least two doses of the recommended two-dose adult hepatitis B vaccine administered at least 28 days apart; 3) at least three doses of any other recommended adult hepatitis B vaccine administered on different dates of service; and 4) received a hepatitis B surface antigen, hepatitis B surface antibody, or total antibody to hepatitis B core antigen test with a positive result. **Updated numerator note: Added: Submission Criteria 5:** Patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. **Updated numerator options: Revised: Submission Criteria 3:** **Performance Met:** Patient received at least two doses of the herpes zoster recombinant vaccine (at least 28 days apart) on October 20, 2017, through the end of the measurement period. **Performance Not Met:** Patient did not receive two doses of the herpes zoster recombinant vaccine (at least 28 days apart) on October 20, 2017, through the end of the measurement period. **Added: Submission Criteria 5:** **Performance Met:** Patient received recommended doses of hepatitis B vaccination based on age. **Denominator Exception:** Patient has a history of hepatitis B illness or received a hepatitis B surface antigen, hepatitis B surface antibody, or total antibody to hepatitis B core antigen test with a positive result any time before or during the measurement period. **Denominator Exception:** Documentation of medical reason(s) for not administering hepatitis B vaccine (e.g., prior anaphylaxis due to the hepatitis B vaccine). **Denominator Exception:** Documentation that patient is a Medicare Fee-For-Service beneficiary and without additional supplementary insurance coverage for whom Hep B vaccination is not reimbursable under current Medicare Part B coverage rules. **Performance Not Met:** Patient did not receive recommended doses of hepatitis B vaccination based on age.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process

	Description
Rationale:	We are proposing to revise the measure to include the Hepatitis B vaccine in the list of routine vaccinations of adults aged 19 years and older based on updated recommendations of the Advisory Committee on Immunization Practices. The literature shows that approximately 50 percent of acute hepatitis B cases reported in 2019 occurred among persons aged 30–49 years due to low HepB vaccination coverage among adults aged greater than or equal to 9 years. Furthermore, an estimated 2 percent to 6 percent of acute hepatitis B viral infections have been found to lead to chronic hepatitis B among adults (*https://www.cdc.gov/mmwr/volumes/71/wr/mm7113a1.htm*). In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.

D.28 Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	500
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.
Substantive Change:	**Updated Instructions: Revised:** This measure is to be submitted once per performance period for acute PVD in either eye. For the purpose of submitting this measure, only unique occurrences with an onset of acute PVD diagnosed within the current performance period will be denominator eligible, with the most recent occurrence (if there is more than one occurrence) being used for performance calculation.
Measure Steward:	American Society of Retina Specialists
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to update the measure submission frequency to once per performance period as simultaneous or very close-in-time bilateral PVDs are rare.[568] In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.

[568] Retina Specialist. (2021). Five Evidence-based Answers for PVD, Retinal Breaks. https://www.retina-specialist.com/article/five-evidencebased-answers-for-pvd-retinal-breaks.

D.29 Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	501
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks.
Substantive Change:	**Updated Instructions: Revised:** This measure is to be submitted once per performance period for acute PVD and acute vitreous hemorrhage in either eye. For the purpose of submitting this measure, only unique occurrences with an onset of acute PVD and acute vitreous hemorrhage diagnosed within the current performance period will be denominator eligible, with the most recent occurrence (if there is more than one occurrence) being used for performance calculation.
Measure Steward:	American Society of Retina Specialists
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to update the measure submission frequency to once per performance period as simultaneous or very close-in-time bilateral PVDs are rare.[569] In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.

[569] See footnote Retina Specialist, 2021.

D.30 Gains in Patient Activation Measure (PAM ®) Scores at 12 Months

	Description
CBE # / eCQM CBE #:	2483 / N/A
Quality #:	503
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The Patient Activation Measure® (PAM ®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.
Substantive Change:	**Updated instructions: Removed:** Submission Criteria 4 and Performance Rate 3. **Updated denominator exclusion: Added: For all submission criteria:** Diagnosis of Delirium and Psychoactive substance abuse. **Updated denominator: Removed:** Submission Criteria 4. **Updated numerator: Removed:** Submission Criteria 4.
Measure Steward:	Insignia Health, LLC, a wholly owned subsidiary of Phreesia
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We are proposing to remove Performance Rate 3 that measures the average change between baseline PAM® score and the percentage of patients 14 years and older who achieved a net increase of 6 points in a 4 to 12 month period as it is not technologically feasible to calculate using the existing submission JavaScript Object Notation (JSON) structure. As a result, the submission of data for the Submission Criteria 4 would not be required when reporting this measure. We are also proposing to exclude patients with a diagnosis of delirium and/or psychoactive substance abuse from the denominator of submission criteria 1, 2 and 3. This exclusion would ensure appropriate patients would be included in the denominator of the measure.

Table Group DD: Proposed Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MVPs for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MVPs only while removed from traditional MIPS: Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79897 through 79902). We note that some MIPS quality measures available only in MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in the 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) is also specified as a collection type available for such measures described in Table Group DD.

Table Group DD within this proposed rule provides substantive changes proposed for the CY 2026 performance period/2028 MIPS payment year for MIPS quality measures available only in a relevant MVP. One of the aforementioned MIPS quality measures, Q112, has substantive changes under Table Group DD. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD–10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2026 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2026 CPT and ICD–10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2027. The 2026 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at *https://qpp.cms.gov.*

Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE #/eCQM CBE #.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but it is important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2026 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We request comments on these substantive changes.

DD.1. Breast Cancer Screening

	Description
CBE # / eCQM CBE #:	2372 / N/A
Quality #:	112
CMS eCQM ID:	CMS125v14
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of women 40 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	**Updated description: For the eCQM collection type: Revised:** women 40-74 years of age. **Updated stratification: For the eCQM collection type: Added:** Report a total rate, and each of the following age strata: Stratum 1: Patients age 42-51 by the end of the measurement period Stratum 2: Patients age 52-74 by the end of the measurement period **Updated definition: For the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types: Added:** Reviewed – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the mammography report and discussed the findings with the patient. The mammography report may also be provided by the patient for the clinician's review / discussion during the visit and should be documented in the medical record.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing making these changes to align with the latest clinical guidelines. We are proposing adding a new rate to the measure to ensure continued benchmarking for the previously existing rate and to ensure continuous, undisrupted monitoring of performance across the specified age bands. Additionally, we are proposing to add a definition for reviewed to the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types to clarify the requirement for meeting the quality action. This would ensure the intent of measure is being met and numerator compliance is consistently assessed across all submissions.

DD.2. Colorectal Cancer Screening

	Description
CBE # / eCQM CBE #:	0034 / N/A
Quality #:	113
CMS eCQM ID:	CMS130v14
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	**Updated definition: For the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types: Added:** Reviewed – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the mammography report and discussed the findings with the patient. The mammography report may also be provided by the patient for the clinician's review / discussion during the visit and should be documented in the medical record.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We are proposing to add a definition for reviewed to the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types to clarify the requirement for meeting the quality action. This would ensure the intent of measure is being met and numerator compliance is consistently assessed across all submissions.

APPENDIX 2: IMPROVEMENT ACTIVITIES

In this proposed rule, beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing to add three new improvement activities (as specified in Table F-B1), modify seven previously finalized improvement activities (as specified in Table F-B2), and remove eight previously finalized improvement activities (as specified in Table F-B3). We are also proposing to add a new activity subcategory and remove a subcategory. These proposals are discussed in section IV.A.4.d of this proposed rule and in more detail below. We request comments on our proposals.

Except as otherwise noted in this proposed rule, previously finalized improvement activities will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years.

TABLE F-B1: New Improvement Activities Proposed for Adoption Beginning with the CY 2026 Performance Period/2028 MIPS Payment Year

New Improvement Activity	
Proposed Activity ID:	**IA_PM_XX**
Proposed Subcategory:	Population Management
Proposed Activity Title:	Improving Detection of Cognitive Impairment in Primary Care
Proposed Activity Description:	To increase the detection rate of cognitive impairment, particularly in early stages, the MIPS eligible primary care clinician must perform the following activities: ● Determine his/her baseline detection rates for mild cognitive impairment (MCI), dementia, and cognitive impairment at either stage using the tool provided for this Improvement Activity ● If any of the three rates are below 1.0: ++Increase the uptake of the Annual Wellness Visit ++Ensure that each Annual Wellness Visit contains a structured cognitive assessment ++Include a question about subjective memory concerns to the collection of vital signs during intake for patients 65+, and conduct a structured cognitive assessment in those with concerns ● Remeasure detection rates for MCI, dementia, and cognitive impairment at either stage quarterly This Improvement Activity should only focus on Medicare patients aged 65 and older, given the strong correlation of cognitive impairment with age.
Rationale:	Recent publications of phase three trial results reported that two amyloid-targeting drugs were able to significantly reduce the speed of cognitive decline in patients with early-stage Alzheimer's disease, the most common cause of dementia. One drug, lecanemab, is now FDA-approved for treatment of mild cognitive impairment (MCI) and mild dementia due to Alzheimer's disease, and the other drug, donanemab, is awaiting the FDA's decision. These drugs are only indicated in early disease stages, lending renewed urgency to the problem of delayed and missed diagnosis of cognitive decline while, today, cognitive decline is usually detected in advanced stages.[1,2] For example, Thoits et al. found that about 79 percent of randomly selected patients, who were newly diagnosed at a memory clinic, had moderate or severe dementia.[3] Such delayed diagnoses have long taken away from patients and families the opportunity to adopt lifestyle changes to reduce the speed of decline,[4] start symptomatic medication treatment, and consider measures to increase physical and financial safety and security.[5] But now failing to detect early-

	stage Alzheimer's disease will deprive patients of the prospect to alter the course of this devastating illness. Unfortunately, limited data exist for the degree of missed diagnoses of MCI, the stage at which Alzheimer's disease would ideally be treated.[6] White et al. used data from the Health and Retirement Study (HRS) to determine that 11.4 percent of subjects with incident MCI reported receiving a timely diagnosis,[7] and Savva et al. analyzed neuropsychiatric testing data from the Aging, Demographics and Memory Study ADAMS data to conclude that 15 percent of participants with a Clinical Dementia Rating of 0.5, a score reflective of MCI, were aware of a diagnosis of cognitive impairment.[8] Only nine percent of expected MCI cases are diagnosed in the U.S. Medicare population.[9] More research has been conducted on dementia detection rates. One study linked Medicare claims data to information on 417 patients with a clinical diagnosis of Alzheimer's disease in the Consortium to Establish a Registry for Alzheimer's Disease (CERAD) data and reported that only around 75 percent of patients had a corresponding diagnosis in claims data in the period from 1991 to 1999,[10] a number similar to the 85 percent reported by Lee et al. for the 2007 to 2012 period of the same data.[11] Zhu et al. published a dementia prevalence of 12.9 percent based on cognitive tests and of 12.4 percent based on diagnosis codes in the 20 percent Medicare sample in 2012.[12] Jutkowitz et al. found considerably lower dementia diagnosis rates of 5.6 percent and 6.5 percent in 2014 and 2016, respectively, in a convenience sample of three Medicare Advantage Plans.[13] Our own data suggest a slightly higher rate of dementia diagnoses than expected, although some of that could be miscoding of MCI as dementia, and the overall detection rate of cognitive impairment remains far lower than expected, especially for minority and low SES patients.[14] In summary, there is substantial evidence that cognitive impairment remains underdiagnosed, particularly in early stages. Measuring diagnosis rates in primary care and comparing those to expected rates given the demographic composition of a clinician's panel can identify gaps in diagnosis and point primary care clinicians towards efforts to proactively inquire about cognitive concerns and follow up on subjective memory complaints, particularly in high-risk and disadvantaged populations. The Medicare Annual Wellness Visit provides an opportunity to do so, but this benefit remains underutilized. A 2020 study found that only one-half of beneficiaries took advantage of it, and fewer than one-third reported having a structured cognitive assessment.[15] A recent expert group recommended several steps to routinely incorporate brief cognitive assessment into primary care workflows.[16] Thus, steps can be taken at both the individual clinician and the organizational level to detect cognitive impairment more frequently and earlier so that patients can potentially benefit from disease-modifying treatments.
New Improvement Activity	
Proposed Activity ID:	**IA_PM_XX**
Proposed Subcategory:	Population Management
Proposed Activity Title:	Integrating Oral Health Care in Primary Care
Proposed Activity Description:	MIPS eligible clinicians that practice primary care will include an oral health risk assessment and intraoral screening as part of a patient's primary care management. The MIPS eligible clinician will provide education and counseling to the patient to include the importance of oral health and the impact of oral health on systemic diseases. For patients without a dental home and/or those with oral health needs, a dental referral will be provided.

	To receive credit for this activity, a MIPS eligible clinician must complete two Smiles for Life (https://www.smilesforlifeoralhealth.org) trainings: ("The Oral Examination" and "Geriatric Oral Health"). These are one-time, free, online training 60-minute certification courses. Smiles for Life oral health education has been adopted by Medicaid in several states to improve oral health access, outcomes, and referrals for children through educating medical providers. The MIPS eligible clinician must include one or more of the following activities in addition to completing the training: ○ Create a dental referral network list by specialty and accepted insurances. ○ Include applicable oral health screening questions in the patient health intake forms (dentist of record, date of the last dental exam, and personal oral hygiene routine). ○ Identify an applicable caries risk assessment tool to be used. ○ Include intraoral health screening and referral to dental provider as part of a patient's primary care management. ○ Provide education and counseling to patients about the importance of oral health and impact on systemic disease. ○ Refer patients without a dental home and/or those who have untreated dental disease indicated by health history, caries risk assessment, Intraoral health screening, medications and/or concerns reported by patient. ○ Include a description of the findings found in all dental referrals. ++ Documents with appropriate procedure and diagnostic codes to track services provided and referrals to validate performance of the improvement activity.
Rationale:	Oral health is closely related to overall health. According to the Centers for Disease Control and Prevention (CDC), approximately 35 percent of American adults did not see a dentist in the past year.[17] The Kaiser Family Foundation (KFF) identified nearly half of all people on Medicare have no dental coverage, and the CDC identified one out of six adults 65 or older are completely edentulous (have lost all their teeth), which can greatly impact nutrition.[18,19] Moreover, a significant portion of the Medicare population has or is at risk for chronic health conditions, which can be further complicated by poor oral health. Dental issues can be early indicators of systematic diseases, such as Alzheimer's, and may also lead to severe health complications such as diabetes and cardiovascular disease, all of which have a significant impact on the Medicare population. For example, researchers have concluded that periodontal disease "might be a modifiable risk factor" for Alzheimer's disease. Moreover, Medicare spends $520 million annually on dental-related emergency department. If these issues were caught and managed early, many of those expenditures could be avoided. With nearly two-thirds of the older adult population in the United States experiencing periodontitis, the WHO has suggested that integrating age-appropriate oral health concerns into general medicine may lead to improvements in older adults' oral health conditions and improve quality of life.[20] As patients visit their primary care office for medical treatment, there is an opportunity for primary care providers to address oral health by assessing oral health risk and reinforcing at-home care messaging, creating an access point for patients who might not otherwise seek dental care. By including quick oral evaluations during routine medical exams, medical providers can ensure comprehensive patient care and early interventions for potential health issues. There is growing evidence that health outcomes improve when dental assessments by medical professionals are integrated into care.[21]This medical-dental integration (MDI) activity can positively address the oral health needs of a high-risk and

	medically complex population by increasing access, and promoting comprehensive, continuous patient care. Oral health assessment activities do not require extensive time, training, or resources to complete. An oral health assessment can be done in five minutes. Training through the Smiles for Life curriculum offers a course on oral health assessments (titled: "The Oral Examination") and is a one-time, free, online certification. Smiles for Life oral health education has been adopted by Medicaid programs in several states to improve oral health access, outcomes, and referrals for children through educating medical providers. Billable and diagnostic codes exist along with an American Dental Association CAMBRA risk assessment form readily available for adoption. Reporting is minimal and involves documentation of the codes indicated below and pulling a report on those codes from the EHR. Additional research about HEENT (head, eyes, ears, nose, and throat) assessment expanded to HEENOT (head, ears, eyes, nose, oral, and throat) through integration of an interprofessional educational (IPE) activity developed for University of Colorado NP and dental students has been published.[22] Creating a referral network of dental providers and completing referrals to these providers will ensure that oral health assessments result in patients getting the additional care they need. To complete this activity, medical providers will be required to implement a process, contact local providers, and assess their capacity.
New Improvement Activity	
Proposed Activity ID:	IA_PSPA_XX
Proposed Subcategory:	Patient Safety and Practice Assessment
Proposed Activity Title:	Patient Safety in Use of Artificial Intelligence (AI)
Proposed Activity Description:	Develop a new data-collection field within patient safety reporting systems for AI-attributable events, which would include both actual harm as well as near misses. When an event is identified, a process to identify the cause and plan for future mitigation is documented. AI-attributable events are defined broadly to include not only automated or semi-automated devices, but any electronic tool that is being used to support clinical decision making.
Rationale:	AI is transforming healthcare and carries with it the promise of faster and potentially more accurate diagnoses and improved health outcomes, but also potential issues that could put individuals' safety at risk. Misdiagnosis and/or failure to properly treat illness as a result of AI errors may jeopardize the health and safety of patients. With broadly collected data on adverse patient outcomes (and near-misses) attributable to AI, MIPS eligible clinicians will be better equipped to identify patterns that can inform decisions to modify use of specific AI tools to optimize care for individual patient populations. This proposed new activity—with a focus on both data-collection and processes to identify causes of adverse events and near-misses to plan for future safety improvement—has a high potential to improve patient care. Defining AI-attributable events broadly to include not only automated or semi-automated devices, but any electronic tool that is being used to support clinical decision making, will likely lead to widely applicable improvements in patient safety, both in patients' experience of care and outcomes.

In this proposed rule, we propose to modify **seven** previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year as specified in Table F-B2 below.

Specifically, we propose to reassign **five** previously finalized improvement activities currently specified for the Achieving Health Equity subcategory to other subcategories that better fit their intended purpose. We also propose to reassign **one** previously finalized improvement activity to the proposed new subcategory Advancing Health and Wellness. Finally, we propose several modifications to **one** previously finalized improvement activity, IA_BMH_1.

We refer readers to our discussion in section IV.A.4.d.(3)(b)(vii) of this proposed rule and in more detail below.

TABLE F-B2: Changes to Previously Finalized Improvement Activities for the CY 2026 Performance Period/2028 MIPS Payment Year and for Future Years

Current Improvement Activity	
Current Activity ID:	**IA_BMH_1**
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Diabetes screening
Current Activity Description:	Diabetes screening for people with schizophrenia or bipolar disease who are using antipsychotic medication.
Proposed change and rationale:	We propose to modify this activity to broaden the relevant patient population by requiring a comprehensive physical health screening on all patients taking anti-psychotic medications. This proposed modification would encompass a broader range of health conditions that may be impacted by antipsychotic medications, beyond just diabetes. To better reflect the substantive modifications, we are proposing for this activity, we also propose to modify this activity's current title, "Diabetes screening" to change it to "Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring". Antipsychotic medications are an important tool for treating a wide range of mental health disorders including schizophrenia, bipolar disease, major depressive disorder, post-traumatic stress disorder, and for agitation associated with dementia due to Alzheimer's disease. In the U.S., approximately 3.8 million citizens reported taking antipsychotics in a 2013-2018 National Health and Nutrition Examination Survey (NHANES).[1] Antipsychotic use is increasing – the Agency for Healthcare Research and Quality (AHRQ) found that 6.1 million people obtained at least one prescription for antipsychotics in 2018, a 22.3 percent increase from 2013.[2] A large percentage of this growth may be due to the substantial increase in the use of these medications for off -label conditions. Inappropriate use of antipsychotics in nursing homes and long-term care facilities is a public health concern. CMS' National Partnership to Improve Dementia Care in Nursing Homes recent antipsychotic medication use data report indicates 14.5 percent of residents who are not diagnosed with schizophrenia, Huntington's Disease, or Tourette's Syndrome were prescribed antipsychotics in 2021 Q4.[3] These patients should also be considered for routine monitoring and assessment for antipsychotic-associated physical health conditions. Antipsychotic medications are effective in managing symptoms of psychiatric conditions; however, adverse health effects such as obesity, diabetes, metabolic

	syndrome, cardiovascular disease, and medication-induced movement disorders such as tardive dyskinesia (TD) may be induced or exacerbated by their use. Physical health conditions associated with antipsychotic medications may substantially impact healthcare system costs, and effective assessment and monitoring is important for achieving improved beneficiary health outcomes. Metabolic adverse conditions can significantly influence risk for morbidity and mortality with long-term use. TD diagnoses diminish physical wellness and social functioning, and adversely affect patients' health-related quality of life.[5] Cost analysis of treatment by the U.S. Department of Veterans Affairs (VA) for patients with schizophrenia who developed diabetes showed an average marginal cost of $3,100. An evaluation of children and adolescents treated with antipsychotic medications through Medicaid showed that patients who experienced cardiometabolic adverse events incurred 34 percent higher total care costs over time. A Medicaid claims analysis for adults with schizophrenia found mean total care costs for patients with incident cardiometabolic conditions were about $1,249 higher than costs incurred by those without these conditions.[6] A retrospective analysis demonstrated that patients with TD had more inpatient admissions (55.5 percent vs. 26.1 percent), emergency room visits (61.5 percent vs. 50.6 percent), and total healthcare costs ($54,656 vs. $28,777) than patients treated for schizophrenia, bipolar disorder, major depressive disorder, or other psychiatric disorders without a diagnosis of TD.[7] The American Psychiatric Association, American Diabetes Association, American Association of Clinical Endocrinologists, and North American Association for the Study of Obesity have developed clinical guidelines recommending laboratory tests and physical examinations for initial evaluations and subsequent monitoring during treatment.[8,9] Routine components of antipsychotic assessment and monitoring include: + Personal and family history of obesity, diabetes, dyslipidemia, hypertension, or cardiovascular disease; +Body Mass Index (BMI); +Waist circumference; +Blood pressure; +Fasting plasma glucose; +Fasting lipid profile; and +Clinical assessment of abnormal movements, such as through the Abnormal Involuntary Movement Scale (AIMS). Additional monitoring is also indicated in specific situations; for example, electrocardiogram for patients with cardiac risk factors before treatment with specific antipsychotics or use of other medications that can affect QTc interval, or prolactin level if indicated on the basis of clinical history.[10] While clinical examination and testing for physical health conditions associated with antipsychotic medications are recommended for baseline assessment and routine monitoring and are critical to reduce morbidity, mortality, and costs associated with these conditions, evidence demonstrates clinical gaps in care: • In a quality improvement study, a random sample of 30 patient records of adult patients on antipsychotic medications from a psychiatry outpatient clinic between October 2016 and September 2017 found only one patient had documentation of an AIMS examination.[11] • An analysis of more than 120,000 patient electronic medical records at a large public outpatient mental health center found that only half of the antipsychotic prescribed patients had AIMS information recorded, and only one percent of this

	subset had an AIMS result identifying TD, far below the generally established prevalence estimates of seven percent exposed to second generation antipsychotics, 30 percent exposed to first generation antipsychotics, and 20 percent with unknown first- and second-generation antipsychotic exposure.[12] • In a quality improvement study, analysis found only one (2.9 percent) study subject met standards for compliance with TD assessments.[13] • A retrospective study of patients prescribed second generation antipsychotics in a Federally Qualified Health Center found baseline glucose and lipid monitoring rates of 50 percent and 23 percent, respectively; three month monitoring rates of 37 percent and 26 percent, respectively; and annual rates of 71 percent and 40 percent, respectively.[14] • A survey-based study found metabolic monitoring rates for patients prescribed atypical antipsychotic medications was nine percent for youth in their first year of medication use and 58.9 percent in subsequent years on medication.[15] • A study of 32 Veterans Affairs facilities found low rates of metabolic monitoring at baseline and follow up (67 percent versus 49 percent for weight, 46 percent versus 27 percent for glucose or hemoglobin A1c, and 32 percent versus 16 percent for LDL.[16] • A retrospective cohort including over 23,000 patients on second-generation antipsychotics reported baseline lipid testing rates of 10.5 percent and glucose testing rates of 21.8 percent after the 2004 ADA consensus statement was issued.[17] • Studies have shown less than 30 percent of patients receiving baseline glucose testing and less than 10 percent receiving baseline lipid testing.[18]Several quality improvement studies have demonstrated real-world implementation of interventions that go beyond common clinical practice. Specifically, evidence from these studies demonstrates that the implementation of quality improvement interventions described in this improvement activity have contributed to improvements in beneficiary care and health outcomes: • Quality improvement projects focused on the use of collaborative practice agreements or enhanced movement disorder screening services increased AIMS screening.[19] In addition, projects focused on improving metabolic monitoring through collaborative agreements increased overall referral rates,[20] improved compliance with monitoring,[21] and improved HbA1c.[22] Studies have also demonstrated pharmacist-physician collaborative care models for other clinical areas, such as hypertension, have resulted in lower downstream medical expenditures compared to standard of care.[23] • AIMS education sessions demonstrated improved understanding of screening,[24] and rates of screening.[25,26,27,28] • Implementation of EHR-integrated alerts demonstrated increased rates of cardiometabolic monitoring, documentation,[29,30,31,32] thyroid testing, and ECG testing.[33] • Standardized data collection protocols increased cardiometabolic monitoring [34,35,36,37] and AIMS screening rates.[38,39,40] This improvement activity can be linked to existing and related MIPS measures across Performance Categories: • MIPS Quality measures: o Q001 Diabetes: HbA1c Poor Control (>9%) o Q317 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented o Q383 Adherence to Antipsychotic Medications for Individuals with Schizophrenia o Q502 Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder • MIPS Cost measures: o Psychoses and Related Conditions

	o Movement Disorders (currently under development) • MIPS Value Pathways o Quality Care in Mental Health o Substance Use Disorders Regarding CMS' optional Improvement Activity acceptance criteria, as listed in the CY 2024 Call for Improvement Activities (*https://qpp.cms.gov/resources/document/e18576b5*),[41] this Improvement Activity aligns in multiple areas: Alignment with Patient-Centered Medical Homes: Components of this Improvement Activity align with the principles of the patient-centered medical home (PCMH). Collaborative practice agreements promote coordination between practitioners to provide whole-person care, and have supported achievement of PCMH objectives.[42] Support for the patient's family or personal caregiver: This Improvement Activity supports patients' families and caregivers. Studies have demonstrated that 23.5 percent of TD caregivers report severe impact of TD in their own lives, which includes activity and work impairment caused by TD-related caregiving.[43] A survey study found caregivers reported that TD impacted their ability to continue usual activities (50%), be productive (58.3%), socialize (55.6%), or take care of themselves (50%).[44] Caregivers for patients with schizophrenia have noted significant strains[45] and the need to fulfill a mediator role between the patient and the provider; improved assessment and monitoring could contribute to reductions in stress pertaining to the impact of physical health conditions associated with antipsychotic medications and burden of obesity, diabetes, and movement disorders. Responds to a Public Health Emergency as determined by the Secretary: While this Improvement Activity does not respond to a current public health emergency, we believe improving assessment and monitoring of physical health conditions associated with antipsychotic medications aligns with Centers for Medicare & Medicaid Services strategies to mitigate impacts of inappropriate antipsychotic use in nursing home settings and among patients with dementia.[46] Patients exposed to long-term use of inappropriate antipsychotics are at risk for cardiometabolic conditions and movement disorders and improved assessment and monitoring can mitigate the impact of these conditions on beneficiaries' overall health. Addresses improvements in practice to reduce health care disparities: This Improvement Activity focuses on areas of healthcare inequity, and its implementation can support reduction of health disparities. African Americans are more often prescribed older medications that increase risk for TD and extrapyramidal physical health conditions.[47,48,49] TD is also of particular concern for older adults treated with antipsychotics, where its prevalence is five to six times higher than that of younger patients due in part to off-label prescription of antipsychotics for dementia-related behavioral and psychological disorders. Older adults are at further risk as only one month of antipsychotic exposure is required to diagnose TD, compared with three months in younger adults.[50] Further, Medicaid members are disproportionately impacted by TD, and nearly one in eight Medicaid members receiving antipsychotics developed TD within a year of treatment.[51] Focus on meaningful actions from the person and family's point of view: Improving assessments and monitoring for antipsychotic medication use is a meaningful person- and family-centered activity. Medication-induced movement disorders such as TD have a significant impact on patient wellbeing. Studies have demonstrated that 50 percent to 60 percent of TD patients believed self-

	conscious or embarrassed by their condition, with moderate to severe movements being intolerable, painful, physically disabling, and in some scenarios eventuating in depression and suicide.[52] TD is further associated with poorer quality of life, stigma, increased mortality, and medication non-adherence.[53,54] Representative of activities that multiple individual MIPS eligible clinicians or groups could perform: This Improvement Activity is relevant to and can be performed by a variety of MIPS eligible clinician specialty types, including: • Primary care physicians, including nurse practitioners, medical assistants, and physician assistants treating patients prescribed antipsychotic medications • Psychiatrists and advanced practice providers (for example, nurse practitioners, medical assistants, and physician assistants) treating patients with a wide range of mental health conditions from schizophrenia, to depression, to PTSD and more, who are prescribed antipsychotic medications • Neurologists and advanced practice providers (for example, nurse practitioners, medical assistants, and physician assistants) responsible for monitoring patients on antipsychotic medications who are at-risk for medication-induced movement disorders
Proposed Revised Activity Title:	Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring
Proposed Revised Activity Description:	MIPS eligible clinicians must implement at least one process improvement during treatment of patients taking anti-psychotic medication related to one or more component(s) of appropriate antipsychotic medication assessment and monitoring. Components include: • Personal and family history of obesity, diabetes, dyslipidemia, hypertension, or cardiovascular disease; • Body Mass Index (BMI); • Waist circumference; • Blood pressure; • Fasting plasma glucose; • Fasting lipid profile; • Clinical assessment of abnormal movements, such as through the Abnormal Involuntary Movement Scale (AIMS). Process improvements must include at least one of the following types of activities: • Establishing and disseminating educational materials (for example, online or in-person training sessions) to educate clinical teams about physical health monitoring and protocols for monitoring (for example, AIMS assessment for medication-induced movement disorders); • Creating and implementing monitoring templates and protocols (for example, EHR-integrated flags), to standardize collection and documentation of one or more components of physical health monitoring; or • Establishing collaborative service agreements with an enhanced monitoring service, (for example, pharmacist-led monitoring clinic) to monitor for antipsychotic associated physical health condition and either adjust medications (for example, diabetes medications) based on laboratory results or refer patients for further assessments (for example, AIMS)."
We propose modifying the following improvement activities by reassigning in which subcategory they are beginning with the CY 2026 performance period/2028 MIPS payment year. We are proposing to reassign the following five improvement activities to new subcategories: IA_AHE_1, Enhance Engagement of Medicaid and Other Underserved Populations; IA_AHE_3, Promote use of Patient-Reported Outcome Tools; IA_AHE_6, Provide Education Opportunities for New Clinicians; IA_AHE_7,	

Comprehensive Eye Exams; and IA_AHE_10, Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data.

Specifically, we propose to reassign: IA_AHE_1 and IA_AHE_6 to the Expanded Practice Access subcategory; IA_AHE_3 and IA_AHE_7 to the Beneficiary Engagement subcategory; IA_AHE_10 is to the Patient Safety and Practice Assessment subcategory.

We also propose to reassign the IA_PM_13, Chronic Care and Preventative Care Management for Empaneled Patients, to the proposed new subcategory, Advancing Health and Wellness.

These activities are being proposed for reassignment to designated subcategories based on the description and rationale for each as well as based on which subcategory best fits the individual activity's purpose.

In this proposed rule, we are proposing to remove **eight** previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year. These changes are discussed in section IV.A.4.d.(3)(b)(viii) of this proposed rule and in more detail below. Specifically, as we propose to remove each of these eight improvement activities in accordance with our policy at § 414.1355(d), specifically under Factor 7 (Activity is obsolete) (§ 414.1355(d)(7).

TABLE F-B3: Improvement Activities Being Removed for the CY 2026 Performance Period/2028 MIPS Payment Year and for Future Years

Current Improvement Activity	
Current Activity ID:	**IA_AHE_5**
Current Subcategory:	Achieving Health Equity
Current Activity Title:	MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
Current Activity Description:	Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	**IA_AHE_8**
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Create and Implement an Anti-Racism Plan
Current Activity Description:	Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools. The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one. The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization's plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The MIPS eligible clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf.

Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	**IA_AHE_9**
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
Current Activity Description:	Create or improve, and then implement, protocols for identifying and providing appropriate support to: (a) patients with or at risk for food insecurity, and (b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following: ● Use Malnutrition Quality Improvement Initiative (MQii) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices. ● Update and use clinical decision support tools within the MIPS eligible clinician's electronic medical record to align with the new food insecurity and nutrition risk protocols. ● Update and apply requirements for staff training on food security and nutrition. ● Update and provide resources and referral lists, and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening. Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	**IA_AHE_11**
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients
Current Activity Description:	Create and implement a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population. The plan may include an analysis of sexual orientation and gender identity (SO/GI) data to identify disparities in care for LGBTQ+ patients. Actions to implement this activity may also include identifying focused goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on

	SO/GI terminology (including as supported by certified health IT and the Office of the National Coordinator for Health Information Technology US Core Data for Interoperability [USCDI]), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SO/GI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	**IA_AHE_12**
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Practice Improvements that Engage Community Resources to Address Drivers of Health
Current Activity Description:	Select and screen for drivers of health that are relevant for the eligible clinician's population using evidence-based tools. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded questions/fields for the capture of data. After screening, address identified drivers of health through at least one of the following: ● Develop and maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or ● Work with community partners to provide and/or update a community resource guide for to patients who are found to have and/or be at risk in one or more areas of drivers of health; or ● Record findings of screening and follow up within the electronic health record (EHR); identify screened patients with one or more needs associated with drivers of health and implement approaches to better serve their holistic needs through meaningful linkages to community resources. Drivers of health (also referred to as social determinants of health [SDOH] or health-related social needs [HSRN]) prioritized by the practice might include, but are not limited to, the following: food security; housing stability; transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	**IA_PM_26**
Current Subcategory:	Population Management
Current Activity Title:	Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B

Current Activity Description:	Demonstrate that the MIPS eligible clinician's practice has achieved and/or maintained a vaccination rate of 60 percent of clinical practice staff for COVID-19, and 80 percent for influenza. Demonstrate vaccination, immunity, or non-responder status to hepatitis B for 95 percent of clinical practice staff. Vaccination recommendations are from Centers for Disease Control and Prevention; staff with contraindications to the vaccinations, as determined by the CDC, are excluded from the requirements. Vaccines and Immunizations | CDC.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being. Additionally, we are proposing to remove this activity to align with recent FDA and CDC guidance, updating vaccination recommendations since the expiration of the COVID-19 Public Health Emergency (PHE).[1,2]
Current Improvement Activity	
Current Activity ID:	**IA_PM_6**
Current Subcategory:	Population Management
Current Activity Title:	Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
Current Activity Description:	Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	**IA_ERP_3**
Current Subcategory:	Emergency Response and Preparedness
Current Activity Title:	COVID-19 Clinical Data Reporting with or without Clinical Trial
Current Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data would be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U.S. National Library of Medicine website at https://clinicaltrials.gov/ct2/results?cond=COVID-19. In addition, examples of COVID-19 clinical data registries may be found on the National Institute of Health website at https://search.nih.gov/search?utf8=%E2%9C%93&affiliate=nih&query=COVID19+registrie

	s&commit=Search. For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publicly available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS-eligible clinician may submit the data using any standard or format that is supported by the clinician's health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.
Removal Rationale:	We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being. Additionally, we are proposing to remove this activity to align with recent FDA and CDC guidance, updating vaccination recommendations since the expiration of the COVID-19 Public Health Emergency (PHE).[1,2]

Appendix 3: MVP Inventory

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains two groups of proposed MVP tables: Group A: proposed new MVPs and Group B: proposed modifications to previously finalized MVPs. Group A includes six newly proposed MVPs. Group B includes 21 previously finalized MVPs with proposed modifications.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category relevant to the clinical specialty of the MVP. In addition, each MVP includes a foundational layer comprised of population health measures and Promoting Interoperability performance category objectives and measures. The foundational layer is the same for all MVPs.

We inadvertently omitted the Promoting Interoperability performance category optional ONC–ACB Surveillance Attestation from the MVP foundational layer in previous PFS final rule tables in Appendix 3. The ONC–ACB Surveillance Attestation has been an optional attestation for the Promoting Interoperability performance category since the first MIPS performance period in CY 2017 (81 FR 77019 through 77028). In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described under § 414.1375(b). For these reasons, we have added the optional ONC–ACB Surveillance Attestation described under § 414.1375(b)(3) to the foundational layer for all MVPs.

MVP Development: Performance Category Sources

The MVP tables contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities included in the MVP tables are located on the Quality Payment Program (QPP) website and are as follows:

- Existing MIPS quality measures are in the 2025 MIPS Quality Measures List.[570] See Appendix 1: MIPS Quality Measures of this proposed rule for any proposed additions (Table Group A), proposed removals (Table Group C), or proposed modifications to existing quality measures (Table Groups D and DD).
- Existing QCDR measures are based on the most recent publication of the 2025 QCDR Measure Specification file.[571] We plan to modify the list of 2026 QCDR measures around December 2025.
- Existing improvement activities are in the 2025 Improvement Activities Inventory and the 2025 MIPS Data Validation

[570] See the 2025 MIPS Quality Measures List: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3125/2025–MIPS-Quality-Measures-List.xlsx.*

[571] See the 2025 QCDR Measure Specification file: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3108/2025_QCDR_Measure_Specifications_PUB.xlsx* for QCDR measures.

Criteria.[572] See Appendix 2: Improvement Activities of this proposed rule for any proposed additions (Table Group A), proposed modifications to existing improvement activities (Table Group B), or proposed removals (Table Group C).

- Existing cost measures are in the 2025 Cost Measures Inventory.[573] See Appendix 4: MIPS Cost Measures of this proposed rule for any proposed modifications to existing cost measures (Group A).
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.[574] See section IV.A.4.d.(4) of this proposed rule for any proposed new or modifications to existing Promoting Interoperability measures.
- For further details on the population health measures (attributed to the quality performance category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).

MVP Development: Measure and Improvement Activities Updates and MVP Format Update

- We have reformatted the MVP tables to stratify quality measures by clinical conditions and/or episodes of care for each MVP identified as ''Clinical Groupings.'' When applicable, an ''Advancing Health and Wellness'' and/or ''Experience of Care'' clinical grouping is included for cross-cutting quality measures. This new stratified format offers a streamlined set of quality measures to aid clinicians in selecting the most clinically relevant measures applicable to their clinical area and identifies when quality and cost measures are linked.
- See Appendix 1: MIPS Quality Measures (Table Group C) of this proposed rule for proposed removals of MIPS quality measures. The following MIPS quality measures were included in previously finalized MVPs and are being proposed for removal from MIPS: Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use, Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer, Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease, Q322: Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients, Q419: Overuse of Imaging for the Evaluation of Primary Headache, Q424: Perioperative Temperature Management, Q443: Non-Recommended Cervical Cancer Screening in Adolescent Females, Q487: Screening for Social Drivers of Health, Q498: Connection to Community Service Provider, and Q508: Adult COVID–19 Vaccination Status.
- See Appendix 2: *Improvement Activities* (Table Group C) of this proposed rule for proposed removals of improvement activities. The following improvement activities were included in previously finalized MVPs and are being proposed for removal from MIPS: IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA_AHE_8—Create and Implement an Anti-Racism Plan, IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHE_11—Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_ERP_3: COVID–19 Clinical Data Reporting with or without Clinical Trial IA_PM_6: Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities (Use of toolset or other resources to close healthcare disparities across communities), and IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.
- The following improvement activities are being removed from previously finalized MVPs as finalized in the CY 2025 PFS rule (89 FR 98411) beginning with the CY 2026 performance period/2028 MIPS payment year: IA_BMH_8: Electronic Health Record Enhancements for BH data capture, IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, and IA_PM_12: Population empanelment.
- The following improvement activity is being modified as finalized in the CY 2025 PFS rule (89 FR 98411) beginning with the CY 2026 performance period/2028 MIPS payment year: IA_BE_4: Engagement of Patients through Implementation of New Patient Portal.
- The Achieving Health Equity (AHE) improvement activities subcategory is being proposed for removal from MIPS. See Appendix 2: *Improvement Activities* (Table Groups B and C) of this proposed rule for any proposed modifications or removals to existing AHE subcategorized improvement activities.
- We propose to no longer list IA_PCMH: Electronic submission of Patient Centered Medical Home Accreditation in each newly proposed or previously finalized MVP table. However, in accordance with § 414.1380(b)(3)(ii), MIPS eligible clinicians in a practice that are certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, may attest to this activity and receive an improvement activities performance category score of 100 percent (81 FR 77179 through 77180).
- We have updated this appendix to include QCDR measures undergoing modifications planned by the QCDR measure stewards. When applicable and substantive in nature, we provide a brief overview of the planned modifications within applicable MVPs. Since QCDR measures are exempt from public notice and comment, this overview allows for transparency with interested parties and an opportunity to comment on all aspects of each MVP prior to finalization. Final decisions to modify QCDR measure specifications are determined by QCDR measure stewards, separate from rulemaking, but may impact decisions as finalized in the final rule.

MVP Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables (Group A and Group B) below:

- Quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.
- New proposed MIPS quality and Promoting Interoperability measures proposed for inclusion in an MVP beginning with the CY 2026 performance period/2028 MIPS payment year and future years are identified with a caret symbol (−). See Appendix 1: MIPS Quality Measures: Table Group A of this proposed rule for further information regarding new MIPS quality measures. See section IV.A.4.d.(4) of this proposed rule for further information regarding new MIPS Promoting Interoperability performance category measures.
- Existing measures and improvement activities with proposed revisions are identified with a single asterisk (*). See Appendix 1:

MIPS Quality Measures: Tables Group D and DD of this proposed rule for further information regarding proposed revisions to MIPS quality measures. See Appendix 2: Improvement Activities: Table Group B of this proposed rule for further information regarding proposed revisions to improvement activities. See Appendix 4:

[572] See the 2025 Improvement Activities Inventory: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3131_duplicate/2025-Improvement-Activities-Inventory.zip* and 2025 MIPS Data Validation Criteria: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3203/2025–MIPS-Data-Validation-Criteria.zip*. for improvement activity details.

[573] See the 2025 Cost Measures Inventory: *https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2025*.

[574] See the 2025 Promoting Interoperability Measure Specifications: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3122/2025–MIPS-Promoting-Interoperability-Measure-Specifications.zip*. for Promoting Interoperability measure details.

MIPS Cost Measures: Group A of this proposed rule for further information regarding proposed revisions to cost measures. See section IV.A.4.d.(4) of this proposed rule for further information regarding proposed revisions to Promoting Interoperability measures. We intend to include existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions are finalized beginning with the CY 2026 performance period/2028 MIPS payment year, unless changes were required to continue to meet programmatic standards for inclusion.

- Quality measures and improvement activities identified with a double asterisk (**) can only be submitted when included in an MVP.
- Improvement activities that include an advancing health and wellness component are identified with an exclamation point (!) preceding the improvement activity ID.
- Quality measures considered high priority and/or outcome measures (as defined in § 414.1305) are identified in the Quality section of the new MVP table format. Further details of these types of measures are in the CMS Measures Management System Hub.[575] See section IV.A.4.d.(1)(b) of this proposed rule for further information regarding proposed revisions to the definition of a high priority measure.
- Quality measure collection types are identified in parentheses after each quality measure title.

Foundational Layer

Each MVP contains a foundational layer, which includes the entire set of Promoting Interoperability measures and two population health measures. The two population health measures are considered outcome measures as identified with a double exclamation mark (!!). The foundational layer is the same for all MVPs as listed in Table 1.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.
Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Table 1: MVP Foundational Layer

Population Health Measures	Promoting Interoperability
(‼) **Q479:** Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Systems (MIPS) Groups (Collection Type: Administrative Claims) (*)(‼) **Q484:** Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Collection Type: Administrative Claims)	(*) **PI_PPHI_1:** Security Risk Analysis (*) **PI_PPHI_2:** High Priority Practices Safety Assurance Factors for EHR Resilience Guide (SAFER Guide) **PI_EP_1:** e-Prescribing **PI_EP_2:** Query of Prescription Drug Monitoring Program (PDMP) **PI_PEA_1:** Provide Patients Electronic Access to Their Health Information **PI_HIE_1:** Support Electronic Referral Loops By Sending Health Information AND **PI_HIE_4:** Support Electronic Referral Loops By Receiving and Reconciling Health Information OR **PI_HIE_5:** Health Information Exchange (HIE) Bi-Directional Exchange OR **PI_HIE_6:** Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) **PI_PHCDRR_1:** Immunization Registry Reporting **PI_PHCDRR_2:** Syndromic Surveillance Reporting (Optional) **PI_PHCDRR_3:** Electronic Case Reporting **PI_PHCDRR_4:** Public Health Registry Reporting (Optional) **PI_PHCDRR_5:** Clinical Data Registry Reporting (Optional) (^)(+) **PI_PHCDRR_X:** Public Health Reporting Under TEFCA (Optional) **PI_ONCACB_1:** ONC-ACB Surveillance Attestation (Optional) **PI_INFBLO_1:** Actions to Limit or Restrict Compatibility or Interoperability of CEHRT Attestation **PI_ONCDIR_1:** ONC Direct Review Attestation

Group A: New MVPs Proposed for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

A.1 Diagnostic Radiology MVP

The proposed Diagnostic Radiology MVP assesses meaningful outcomes in diagnostic radiology. This MVP would be most applicable to clinicians who treat patients within the practice of diagnostic radiology.

Quality Measures

We are proposing to include six MIPS quality measures and three QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of diagnostic radiology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in diagnostic radiology:

- Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy: This MIPS quality measure focuses on increasing clinician awareness of patient exposure to radiation in an effort to reduce potential harmful effects by requiring radiation exposure indices to be documented in all final reports.
- Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed

Tomography (CT) and Cardiac Nuclear Medicine Studies : This MIPS quality measure focuses on reducing the rate of unnecessary or repeat imaging studies by requiring clinicians to review and document a count of known CT and cardiac nuclear medicine studies the patient received within a 12-month period prior to the current study.

- Q364: Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines: This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients who have incidental pulmonary nodules found during CT imaging to either avoid unnecessary follow-up scans or identify early malignancies.
- Q405: Appropriate Follow-up Imaging for Incidental Abdominal Lesions: This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients for whom incidental abdominal lesions are found during imaging studies to avoid unnecessary and costly follow-up procedures.
- Q406: Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients: This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients for whom incidental thyroid nodules are found during imaging studies to avoid unnecessary and costly follow-up procedures.
- Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level): This MIPS quality measure provides a method for monitoring and assessing appropriate radiation dose thresholds encouraging overall reductions in radiation dosage, an intermediate outcome directly and proportionally related to cancer prevention.
- QMM17: Appropriate Follow-up Recommendations for Ovarian-Adnexal Lesions using the Ovarian-Adnexal Reporting and Data System (O–RADS): This QCDR measure assesses for the use of standardized reporting of findings leading to more consistent treatment recommendations, while also decreasing cost and inappropriate resource consumption.
- QMM18: Use of Breast Cancer Risk Score on Mammography: This QCDR measure ensures final reports for screening mammograms accurately include the breast cancer risk score and appropriate follow-up recommendations. This can be utilized to guide subsequent testing and treatment recommendations improving overall health outcomes.
- QMM26: Screening Abdominal Aortic Aneurysm Reporting with Recommendations: This QCDR measure ensures appropriate follow-up for an abdominal aortic aneurysm is documented in the final report by requiring radiologists to report recommendations consistently and in accordance with current guidelines, with direct communication as required. This QCDR measure has planned modifications including updates to the Society of Vascular Surgery guidelines referenced in the specification and modifications to denominator exceptions to address when screening is negative for abdominal aortic aneurysm (AAA), however, significant risk factors are present warranting future screening.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in diagnostic radiology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BMH_12: Promoting Clinician Well-Being
- IA_CC_7: Regular training in care coordination
- IA_CC_8: Implementation of documentation improvements for practice/process improvements
- IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA_CC_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_2: Participation in MOC Part IV
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_12: Participation in private payer CPIA

Cost Measures

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of diagnostic radiology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in diagnostic radiology and aligns with other measures and activities within this MVP:

- MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing diagnostic radiology care in inpatient hospitals.

We request comment on the measures and activities included in this MVP.

Table A.1: Diagnostic Radiology MVP Clinical Groupings

Diagnostic Radiology MVP				
Clinical Grouping	**Quality**			**Cost**
	Measure	**Outcome**	**High Priority**	
General Diagnostic Radiology	**Q145:** Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy (Collection Type: MIPS CQM, Medicare Part B Claims)	No	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies (Collection Type: MIPS CQM)	No	Yes	
	Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) (Collection Type: eCQM)	No	No	
Body Imaging (Thoracic/Abdominal)	**Q364:** Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines (Collection Type: MIPS CQM)	No	Yes	N/A
	Q405: Appropriate Follow-up Imaging for Incidental Abdominal Lesions (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	
	Q406: Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	
	QMM17: Appropriate Follow-up Recommendations for Ovarian-Adnexal Lesions using the Ovarian-Adnexal Reporting and Data System (O-RADS) (Collection Type: QCDR)	No	Yes	
Advancing Health and Wellness	**QMM18:** Use of Breast Cancer Risk Score on Mammography (Collection Type: QCDR)	No	Yes	N/A
	(*) QMM26: Screening Abdominal Aortic Aneurysm Reporting with Recommendations (Collection Type: QCDR)	No	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician

Diagnostic Radiology Improvement Activities

- **IA_BE_6**: Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!) IA_BMH_12**: Promoting Clinician Well-Being
- **IA_CC_7**: Regular training in care coordination

- **IA_CC_8**: Implementation of documentation improvements for practice/process improvements
- **IA_CC_12**: Care coordination agreements that promote improvements in patient tracking across settings
- **IA_CC_19**: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(**) IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1**: Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_2**: Participation in MOC Part IV
- **IA_PSPA_7**: Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12**: Participation in private payer CPIA

A.2 Interventional Radiology MVP

The proposed Interventional Radiology MVP assesses meaningful outcomes in interventional radiology. This MVP would be most applicable to clinicians who treat patients within the practice of interventional radiology.

Quality Measures

We are proposing to include six MIPS quality measures and four QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of interventional radiology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in interventional radiology:

- **Q145**: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy: This MIPS quality measure focuses on increasing clinician awareness of patient exposure to radiation in an effort to reduce potential harmful effects by requiring radiation exposure indices to be documented in all final reports.
- **Q374**: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receival from the referred clinician, closing the communication loop.
- **Q413**: Door to Puncture Time for Endovascular Stroke Treatment: This MIPS quality measure assesses for timely endovascular stroke treatment in ischemic stroke patients. Ensuring a door to puncture time of 90 minutes or less, gives stroke patients the best chance at functional recovery and improved health outcomes.
- **Q420**: Varicose Vein Treatment with Saphenous Ablation: Outcome Survey: This MIPS quality measure motivates clinicians to objectively quantify changes in quality of life after an ablation, the ultimate way to assess success of saphenous ablation for varicose veins.
- **Q421**: Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal: This MIPS quality measure focuses on clinicians providing timely follow-up for patients with retrievable IVC filters to increase awareness of the potential harms of inappropriate continued inferior vena cava filtration in patients with retrievable filters.
- **Q465**: Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries: This MIPS quality measure promotes successful treatment by ensuring documentation of delineation of all uterine arterial supply with

embolization where possible, and appropriate embolization endpoints achieved which are indications of treatment efficacy.

- **RCOIR12**: Tunneled Hemodialysis Catheter Clinical Success Rate: This QCDR measure evaluates whether a tunneled central venous catheter has been successfully placed (or replaced) and ready for use within 72 hours after placement. This would ensure the catheter is operational and functional as quickly as possible and is tunneled to reduce complications.
- **RCOIR13**: Percutaneous Arteriovenous Fistula for Dialysis - Clinical Success Rate: This QCDR measure evaluates success of percutaneous fistula creation for patients on maintenance hemodialysis, promoting the use of new technology with the potential to yield positive results such as fewer procedural complications.
- **RPAQIR14**: Arteriovenous Graft Thrombectomy Clinical Success Rate: This QCDR measure assesses clinical success of arteriovenous graft thrombectomy. Successful removal of a thrombosis supports continued use of the arteriovenous graft, reducing the need for additional vascular access procedures and allowing adequate dialysis to be performed.
- **RPAQIR15**: Arteriovenous Fistulae Thrombectomy Clinical Success Rate: This QCDR measure assesses clinical success of arteriovenous fistula thrombectomy. Arteriovenous fistulas can provide rapid extracorporeal blood flow that is necessary for hemodialysis and when feasible, are the preferred type of vascular access for chronic hemodialysis.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 19 improvement activities that reflect actions and processes undertaken by clinicians who specialize in interventional radiology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. The following improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care within interventional radiology and are proposed for inclusion in this MVP:

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_17:** Patient Navigator Program
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes

- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **IA_EPA_X:** Provide Education Opportunities for New Clinicians
- **IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization.
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_25:** Cost Display for Laboratory and Radiographic Orders

Cost Measures

We are proposing to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of interventional radiology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in interventional radiology and aligns with other measures and activities within this MVP:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing interventional radiology care in inpatient hospitals.
- **COST_HAC_1:** Hemodialysis Access Creation: This MIPS episode-based cost measure assesses costs associated with the creation of graft or fistula access for long-term hemodialysis.
- **COST_IHCI_1:** Intracranial Hemorrhage or Cerebral Infarction**:** This MIPS episode-based cost measure assesses costs associated with the inpatient treatment for cerebral infarction or intracranial hemorrhage.

We request comment on the measures and activities included in this MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.2: Interventional Radiology MVP Clinical Groupings

Interventional Radiology MVP				
Clinical Grouping	**Quality**			**Cost**
	Measure	**Outcome**	**High Priority**	
Vascular	**(*) Q420:** Varicose Vein Treatment with Saphenous Ablation: Outcome Survey (Collection Type: MIPS CQM)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q421: Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal (Collection Type: MIPS CQM)	No	No	
	Q465: Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries (Collection Type: MIPS CQM)	No	Yes	
Dialysis-Related	**RCOIR12:** Tunneled Hemodialysis Catheter Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician **COST_HAC_1:** Hemodialysis Access Creation

	(*) Q374: Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM)	No	No	

Interventional Radiology Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **(!) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements

- **(!) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_17:** Patient Navigator Program
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(*)(!) IA_EPA_X:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization.
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_25:** Cost Display for Laboratory and Radiographic Orders

A.3 Neuropsychology MVP

The proposed Neuropsychology MVP focuses on the clinical specialty of providing treatment and management of neuropsychological care. This MVP would be most applicable to clinicians who treat patients within the practice of neuropsychology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants.

Quality Measures

We are proposing to include six MIPS quality measures and three QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of neuropsychology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in neuropsychology:

- **Q282**: Dementia: Functional Status Assessment: This MIPS quality measure evaluates for the performance of a functional status assessment for patients diagnosed with dementia.
- **Q286**: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia: This MIPS quality measure assesses for the discussion of safety concerns with either the patients diagnosed with dementia or their caregivers. There are two domains of safety that should be addressed to meet performance of the measure which include dangerousness to self or others and environmental risks. If a risk is discovered, it is anticipated that the clinician would document mitigation recommendations to promote safety outcomes for these patients.
- **Q288**: Dementia: Education and Support of Caregivers for Patients with Dementia: This MIPS quality measure ensures clinician communication of education on dementia disease management and health behavior with the added support of referrals to additional support resources for patients diagnosed with dementia and their caregivers.
- **MBHR13**: Social Role Functioning Assessment utilizing PROMIS Adult Ability to Participate in Social Roles and Activities: This QCDR measure ensures patients who report concerns related to their psychosocial function are assessed, and a follow-up plan is documented for those patients who may have difficulty with social role function and their ability to effectively participate in one's usual role.

• **MBHR15:** Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment: This QCDR measure ensures patients are referred for evaluation due to concerns for cognitive changes or difficulties receive a standardized valid assessment of cognition with results documented, including documentation of provider's consideration of relevant cultural-linguistic and demographic factors that may have affected assessment and resulting assessment.

• **MBHR18**: Provision of Feedback Following a Cognitive or Mental Status Assessment with Documentation of Understanding of Test Results and Subsequent Healthcare Plan with Timely Transmission of Results: This QCDR measure ensures patients who receive a standardized cognitive or mental status assessment engage in a post-evaluation feedback session(s) so they may better understand their medical condition and prognosis. This drives improved health outcomes through improved patient participation in treatment planning and assists them with making necessary lifestyle adjustments.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in neuropsychology. The quality measures below assess for age-specific screenings and follow-up actions for select measures:

- **Q130**: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q134**: Preventive Care and Screening: Screening for Depression and Follow-Up Plan : This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q181**: Elder Maltreatment Screen and Follow-up Plan: This MIPS quality measure ensures routine screening for potential elder maltreatment and is an essential strategy for guarding older adults from abuse and neglect.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 10 improvement activities that reflect actions and processes undertaken by clinicians who specialize in neuropsychology, as well as activities that promote advancing health and wellness, engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_22:** Improved Practices that Engage Patients Pre-Visit
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_EPA_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_21:** Advance Care Planning

Cost Measures

We are proposing to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of neuropsychology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in neuropsychology, including:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in neuropsychology care in inpatient hospitals.
- **TPCC_1:** Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers. Neuropsychologists are included in attribution for the TPCC measure as they may provide broad, ongoing care to their patients, which is in line with the intent of the TPCC measure.

We request comment on the measures and activities included in this MVP.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.3: Neuropsychology MVP Clinical Groupings

Neuropsychology MVP				
Clinical Grouping	**Quality**			**Cost**
	Measure	**Outcome**	**High Priority**	
Neurodegenerative Disorders	**Q282:** Dementia: Functional Status Assessment (Collection Type: MIPS CQM)	No	No	**MSPB_1**: Medicare Spending Per Beneficiary (MSPB) Clinician **(*) TPCC_1:** Total Per Capita Cost
	Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia (Collection Type: MIPS CQM)	No	Yes	
	Q288: Dementia: Education and Support of Caregivers for Patients with Dementia (Collection Type: MIPS CQM)	No	Yes	
General Neuropsychology	**MBHR13**: Social Role Functioning Assessment utilizing PROMIS Adult Ability to Participate in Social Roles and Activities (Collection Type: QCDR)	No	No	**MSPB_1**: Medicare Spending Per Beneficiary (MSPB) Clinician **(*) TPCC_1:** Total Per Capita Cost
Advancing Health and Wellness	**(*) Q130:** Documentation of Current Medications in the Medical Record (Collection Type: eCQM, MIPS CQM)	No	Yes	**MSPB_1**: Medicare Spending Per Beneficiary (MSPB) Clinician **(*) TPCC_1:** Total Per Capita Cost
	(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
	Q181: Elder Maltreatment Screen and Follow-up Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	
Experience of Care	**MBHR15**: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment (Collection Type: QCDR)	No	Yes	**MSPB_1**: Medicare Spending Per Beneficiary (MSPB) Clinician **(*) TPCC_1:** Total Per Capita Cost
	MBHR18: Provision of Feedback Following a Cognitive or Mental Status Assessment with Documentation of Understanding of Test Results and Subsequent Healthcare Plan with Timely Transmission of Results (Collection Type: QCDR)	No	Yes	

Neuropsychology Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **(!) IA_BE_16:** Promote Self-management in Usual Care

- IA_BE_22: Improved Practices that Engage Patients Pre-Visit
- IA_BMH_7: Implementation of Integrated Patient Centered Behavioral Health Model
- (!) IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- (*) IA_EPA_X: Enhance Engagement of Medicaid and Other Underserved Populations
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_21: Advance Care Planning

A.4 Pathology MVP

The proposed Pathology MVP focuses on assessing meaningful outcomes in pathology. This MVP would be most applicable to pathology clinicians.

Quality Measures

We are proposing to include seven MIPS quality measures and seven QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of pathology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in pathology:

- Q249: Barretts Esophagus: This MIPS quality measure assesses appropriate and complete final report documentation to ensure accurate diagnoses.
- Q250: Radical Prostatectomy Pathology Reporting: This MIPS quality measure ensures that pathology reports include all appropriate information as having a complete set of pathology descriptors is crucial for staging and subsequent therapeutic decisions.
- Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens): This MIPS quality measure encourages pathologists to further classify tumors into a more specific histologic subtype thereby reducing the use of the term non-small-cell lung cancer not otherwise specified (NSCLC–NOS) and furnishing uniform terminology and diagnostic criteria based on an integrated multidisciplinary platform.
- Q396: Lung Cancer Reporting (Resection Specimens): This MIPS quality measure assesses for standardized final reports for lung biopsy and cytology specimens with a diagnosis of primary non-small cell lung cancer allowing for classification to be based on an integrated multidisciplinary platform.
- Q397: Melanoma Reporting: This MIPS quality measure assesses final reports to ensure alignment with guidelines and inclusion of all appropriate tumor characteristics for more precise staging, improving treatment outcomes.
- Q440: Skin Cancer: Biopsy Reporting Time—Pathologist to Clinician: This MIPS quality measure ensures timely reporting of pathology results to mitigate delays in treatment.
- Q491: Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status: This MIPS quality measure assesses for guideline recommended MMR/MSI testing for patients considering checkpoint inhibitor therapy, which aims to improve health outcomes by making care more targeted.
- CAP30: Urinary Bladder Cancer: Complete Analysis and Timely Reporting: This QCDR measure assesses all pathology cancer reports to ensure they are complete, contain all necessary data elements and are returned within a maximum of two business days. By mandating a thorough report in a timely fashion, this measure encourages appropriate and quick treatment.
- CAP34: Molecular Assessment: Biomarkers in Non-Small Cell Lung Cancer: This QCDR measure ensures pathology reports for non-small cell lung cancer (NSCLC) contain impression or recommendation for biomarker mutation testing. Accurate reporting allows patients to receive matched targeted therapy.
- CAP40: Squamous Cell Skin Cancer: Complete Reporting: This QCDR measure assesses pathology reports for completeness of histologic findings, including margin status degree of differentiation/histologic grade, depth or level of invasion, presence of perineural invasion, tumor diameter, and presence of lymphovascular invasion which are vital in creating treatment and follow-up plans.
- QMM21: Incorporating results of concurrent studies into Final Reports for Bone Marrow Aspirate of patients with Leukemia, Myelodysplastic syndrome, or Chronic Anemia: This QCDR measure ensures that all final bone marrow reports contain results of concurrent studies performed as well as an interpretation of those results, thereby improving patient outcomes and continuity of care.
- QMM25: Use of Structured Reporting for Urine Cytology Specimens: This QCDR measure ensures uniformity and reproducibility in the reporting of urine cytology through standardization by requiring use of The Paris System.
- QMM29: Use of Appropriate Classification System for Lymphoma Specimen: This QCDR measure encourages precise classification of lymphoma by ensuring results are accurately and effectively interpreted by the treating clinician.
- QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodule(s): This QCDR measure encourages results from FNA of thyroid nodules are properly and uniformly categorized by using the Bethesda System for Reporting Thyroid Cytopathology.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 13 improvement activities that reflect actions and processes undertaken by clinicians who specialize in pathology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA_BE_X: Promote Use of Patient-Reported Outcome Tools
- IA_BMH_12: Promoting Clinician Well-Being
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA_CC_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_2: Participation in MOC Part IV

- **IA_PSPA_12:** Participation in private payer CPIA
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **IA_ PSPA_X:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

Cost Measures

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of pathology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in pathology and align with other measures and activities within this MVP:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing pathology care in inpatient hospitals.

We request comment on the measures and activities included in this MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component

Table A.4: Pathology MVP Clinical Groupings

Pathology MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Pathology	**Q249**: Barrett's Esophagus (Collection Type: Medicare Part B Claims, MIPS CQM)	No	No	N/A
	Q250: Radical Prostatectomy Pathology Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	No	No	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens) (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	N/A
	Q396: Lung Cancer Reporting (Resection Specimens) (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q397: Melanoma Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	N/A
	Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician (Collection Type: MIPS CQM)	No	Yes	

Pathology MVP				
Clinical Grouping	Quality			Cost

- **(*) IA_ PSPA_X:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

A.5 Podiatry MVP

The proposed Podiatry MVP focuses on assessing meaningful outcomes in foot and ankle care for patients with chronic conditions, wound/ulcers, and general care for the podiatry patient. This MVP would be most applicable to podiatry clinicians, including NPPs such as nurse practitioners and physician assistants.

Quality Measures

We are proposing to include 7 MIPS quality measures and 10 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of podiatry. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in podiatry:

- **Q126**: Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation: This MIPS quality measure ensures patients diagnosed with diabetes mellitus have a lower extremity neurological exam performed at least once every 12 months.
- **Q127**: Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear: This MIPS quality measure ensures patients diagnosed with diabetes mellitus are evaluated for proper footwear and sizing at least once every 12 months.
- **Q374**: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receival from the referred to clinician, closing the communication loop.
- **REGCLR5**: Offloading with Remote Monitoring: This QCDR measure evaluates patient compliance with prescribed off-loading via remote monitoring and compliance being demonstrated as complete healing of the ulcer within 10 weeks. The monitoring of patient adherence enables the clinician to intervene when a patient is non adherent.
- **REGCLR8**: Monitor and Improve Treatment Outcomes in Chronic Wound Healing: This QCDR measure ensures patients with chronic non-healing wounds are re-assessed and experience an improved healing rate after a change in treatment plan based upon information learned from the re-assessment. Improved wound healing rates may reduce spending on advanced treatments.
- **USWR22**: Nutritional Assessment and Intervention Plan in patients with Wounds and Ulcers: This QCDR measure ensures patients with wounds and/or ulcers complete a validated nutritional assessment and receive an appropriate intervention plan based on the results. Evidence suggests that oral nutritional supplements, particularly with high protein content, can reduce the risk of developing pressure ulcers.
- **USWR32**: Adequate Compression at each visit for Patients with Venous Leg Ulcers (VLUs) appropriate to arterial supply: This QCDR measure assesses for adequate

compression at each visit for treating patients with venous leg ulcers. This measure establishes the requirement of safe, effective, and consistent compression treatment of VLUs.

- **USWR33**: Diabetic Foot Ulcer (DFU) Healing or Closure: This QCDR measure evaluates achieved healing or closure of diabetic foot ulcers within 6 months stratified by the Wound Healing Index (WHI). Reporting of healing rates stratified by the WHI makes it possible to see individual variations in quality between clinicians and compare performance based on similar wound severity.
- **USWR34**: Venous Leg Ulcer (VLU) Healing or Closure: This QCDR measure evaluates achieved healing or closure of venous leg ulcers (VLU) within 12 months stratified by the Wound Healing Index (WHI). Reporting VLU healing stratified by the WHI enables honest reporting of VLU healing rates and fair comparison of clinician performance.
- **USWR35**: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer: This QCDR measure assesses for adequate off-loading for diabetic foot ulcers during patient visits. Adequate off-loading increases the likelihood of DFU healing.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in podiatry care. The measures assess for age-specific screenings and follow-up actions for select measures:

- **Q155**: Falls: Plan of Care: This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.
- **Q226**: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- **Q317**: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure ensures all adult patients are screened for high blood pressure and have a recommended follow-up plan if blood pressure is elevated or hypertensive.
- **Q358**: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures patients receive a personalized surgical risk assessment completed using a validated risk calculator or multi-institutional clinical data prior to the surgery with discussion of the identified risks with the surgeon.
- **MEX5**: Hammer Toe Outcome: This QCDR measure addresses pain caused by toe deformity and ensures appropriate intervention for pain reduction. Lesser toe deformities are common and can have a significant impact on the function of the foot and quality of life. Appropriate intervention can result in improvements in activities of daily living and quality of life.
- **REGCLR1**: Heel Pain Treatment Outcomes for Adults: This QCDR measure addresses heel pain and ensures appropriate intervention for pain reduction. Clinical practice guideline suggests that treatment needs to be properly tailored to the patient based upon the cause of the pain.
- **REGCLR3**: Bunion Outcome - Adult and Adolescent: This QCDR measure addresses bunion pain and ensures appropriate intervention for pain reduction. Alleviation of bunion pain can result in improvement in activities of daily living and quality of life.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 10 improvement activities that reflect actions and

processes undertaken by clinicians who specialize in podiatry care, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship

Cost Measures

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of podiatry care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in podiatry and align with other measures and activities within this MVP:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing podiatry care in inpatient hospitals.

We request comment on the measures and activities included in this MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

A.6 Vascular Surgery MVP

The proposed Vascular Surgery MVP focuses on the clinical specialty of surgery. This MVP would be most applicable to clinicians who treat patients within the surgical settings of vascular surgery, including NPPs such as nurse practitioners, and physician assistants.

Quality Measures

We are proposing to include 13 MIPS quality measures and 4 QCDR measures within the quality performance category of this MVP, which are specific to the clinical specialty of surgery. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care provided by clinicians who specialize in surgery:

- **Q259**: Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post- Operative Day #2): This MIPS quality measure ensures patients are selected appropriately for these procedures to limit experience of major complications, evidenced by discharge home no later than post-operative day number 2.
- **Q344**: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post- Operative Day #2): This MIPS quality measure ensures patients are selected appropriately for these procedures to limit experience of major complications, evidenced by discharge home no later than post-operative day number 2.

- Q355: Unplanned Reoperation within the 30-Day Postoperative Period: This MIPS quality measure evaluates for an unplanned reoperation within 30 days of a denominator eligible procedure.

- Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure: This MIPS quality measure ensures evaluation of any unexpected surgical complications or adverse outcomes evidenced by unplanned hospital re-admission within 30 days of the principal surgical procedure.
- Q357: Surgical Site Infection (SSI): This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.
- Q374: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receival from the referred to clinician, closing the communication loop.
- RCOIR12: Tunneled Hemodialysis Catheter Clinical Success Rate: This QCDR measure ensures patients with tunneled central venous access catheter insertions or replacements for ESRD on maintenance dialysis receive full dialysis treatment as prescribed within 72 hours of catheter placement or exchange.
- RCOIR13: Percutaneous Arteriovenous Fistula for Dialysis—Clinical Success Rate: This QCDR measure ensures percutaneous created arteriovenous fistulas for patients on dialysis are deemed ready for use with at least 2 16-gauge needles for 3 consecutive dialysis treatments at prescribed blood flow rates.
- RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate: This QCDR measure ensures clinical success of arteriovenous graft (AVG) thrombectomies for patients on maintenance dialysis evidenced by successful first dialysis treatment following the thrombectomy with needles using that access.
- RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate: This QCDR measure ensures clinical success of arteriovenous fistulae (AVF) thrombectomies for patients on maintenance dialysis evidenced by successful first dialysis treatment following the thrombectomy with needles using that access.

The following broadly applicable MIPS quality measures are relevant to clinicians who treat patients in surgical settings. The measures assess for age-specific screenings and follow-up actions for select measures:

- Q001: Diabetes: Glycemic Status Assessment Greater Than 9%: This inverse outcome MIPS quality measure assesses diabetic patients for poor control of their HbA1c.
- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- Q321: CAHPS for MIPs Clinician/Group Survey: This survey would provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.
- Q358: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures patients receive a personalized surgical risk assessment completed using a validated risk calculator or multi-institutional clinical data prior to the surgery with discussion of the identified risks with the surgeon.
- Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 16 improvement activities that reflect actions and processes undertaken by surgical care clinicians, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA_BE_1: Use of certified EHR to capture patient reported outcomes
- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_12: Use evidence-based decision aids to support shared decision-making.
- IA_BE_X: Promote Use of Patient-Reported Outcome Tools
- IA_CC_15: PSH Care Coordination
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_EPA_3: Collection and use of patient experience and satisfaction data on access
- IA_EPA_X: Provide Education Opportunities for New Clinicians
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_2: Anticoagulant Management Improvements
- IA_PM_5: Engagement of community for health status improvement
- IA_PM_11: Regular Review Practices in Place on Targeted Patient Population Needs
- IA_PM_15: Implementation of episodic care management practice improvements
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization.

Cost Measures

We are proposing to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical specialty of surgical care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in surgical care and align with other measures and activities within this MVP:

- COST_CCLI_1: Revascularization For Lower Extremity Chronic Critical Limb Ischemia: This MIPS episode-based cost measure assesses costs associated with elective revascularization surgery for lower extremity chronic critical limb ischemia.
- COST_HAC_1: Hemodialysis Access Creation: This MIPS episode-based cost measure assesses costs associated with the creation of graft or fistula access for long-term hemodialysis.
- MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients within vascular surgery.

We request comment on the measures and activities included in this MVP.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

Vascular Surgery Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_15:** PSH Care Coordination
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(*)(!) IA_EPA_X:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

- IA_PM_2: Anticoagulant Management Improvements
- (!) IA_PM_5: Engagement of community for health status improvement
- IA_PM_11: Regular Review Practices in Place on Targeted Patient Population Needs
- IA_PM_15: Implementation of episodic care management practice improvements
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization

Group B: Modifications to Previously Finalized MVPs for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

The B.1 table, followed by a list of improvement activities, represents the measures and activities finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP (89 FR 99006 through 99009) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat patients within the practice of emergency medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix[576], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measure[577]:

- **HCPR24**: Appropriate Utilization of Vancomycin for Cellulitis: This QCDR measure is undergoing modifications to clarify the numerator and add definitions for patients with known Methicillin-resistant Staphylococcus aureus (MRSA) infection or risks for MRSA infection.

Improvement Activities

- For the reasons stated in the introduction of this appendix[578], we propose removing three improvement activities: **IA_AHE_12**: Practice Improvements that Engage Community Resources to Address Drivers of Health, **IA_CC_2**: Implementation of improvements that contribute to more timely communication of test results, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Clinical Groupings

[578] Ibid.

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Infectious Disease/ Antibiotic Stewardship	**Q065:** Appropriate Treatment for Upper Respiratory Infection (URI) (Collection Type: eCQM, MIPS CQM)	No	Yes	**COST_EDV_1:** Emergency Medicine
	Q116: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis (Collection Type: MIPS CQM)	No	Yes	
	Q331: Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse) (Collection Type: MIPS CQM)	No	Yes	
	(*) HCPR24: Appropriate Utilization of Vancomycin for Cellulitis (Collection Type: QCDR)	No	Yes	
Trauma	**Q415:** Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older (Collection Type: MIPS CQM)	No	Yes	**COST_EDV_1:** Emergency Medicine
	Q416: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years (Collection Type: MIPS CQM)	No	Yes	
Orthopedic Emergencies	**ACEP52:** Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Acute Atraumatic Low Back Pain (Collection Type: QCDR)	No	Yes	**COST_EDV_1:** Emergency Medicine
	ECPR46: Avoidance of Opiates for Low Back Pain or Migraines (Collection Type: QCDR)	No	Yes	
Experience of Care	**Q321:** CAHPS for MIPs Clinician/Group Survey (Collection Type: CAHPS Survey Vendor)	No	Yes	**COST_EDV_1:** Emergency Medicine
	ACEP50: ED Median Time from ED arrival to ED departure for all Adult Patients (Collection Type: QCDR)	Yes	Yes	

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!) IA_BMH_12:** Promoting Clinician Wellbeing
- **(**) IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(!) IA_PSPA_15:** Implementation of an ASP

B.2: Advancing Cancer Care MVP

The B.2 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Cancer Care MVP (89 FR 99009 through 99015) with

modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Cancer Care MVP focuses on the clinical specialty of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practice of oncology and hematology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding two QCDR measures:

- **PIMSH15**: Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents in the Infusion Center - Avoidance of Overuse (Lower Score - Better): This QCDR measure is an inverse measure (lower score is better) that ensures clinicians follow clinical guidelines for patients treated with low- or minimal-emetic-risk antineoplastic agents by assessing for inappropriate pre-treatment antiemetic therapy.
- **PIMSH16**: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents in the Infusion Center: This QCDR measure ensures clinicians follow clinical guidelines for patients treated with high- or moderate-emetic-risk antineoplastic agents by assessing for appropriate pre-treatment antiemetic therapy, which could result in improved control of nausea and vomiting in patients.

For the reasons stated in the introduction of this appendix[579], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measure[580]:

- **PIMSH13:** Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy: This QCDR measure is undergoing modifications to add a denominator note to clarify the appropriate timeframe for the denominator eligible diagnosis ensuring consistent denominator eligible identification.

Improvement Activities

- For the reasons stated in the introduction of this appendix[581], we propose removing three improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_CC_1**: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

	Q321: CAHPS for MIPs Clinician/Group Survey (Collection Type: CAHPS Survey Vendor)	No	Yes	
	(*) Q453: Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better) (Collection Type: MIPS CQM)	No	Yes	
	(*) Q457: Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better) (Collection Type: MIPS CQM)	Yes	Yes	
	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS CQM)	Yes	Yes	
	(*) Q503: Gains in Patient Activation Measure (PAM) Scores at 12 Months (Collection Type: MIPS CQM)	Yes	Yes	

Advancing Cancer Care Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **IA_BE_24:** Financial Navigation Program
- **(!) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_13:** Practice Improvements to Align with OpenNotes Principles
- **IA_CC_17:** Patient Navigator Program
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high-risk patients
- **IA_PM_15:** Implementation of episodic care management practice improvements
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **IA_PSPA_16:** Use of decision support —ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

B.3: Advancing Care for Heart Disease MVP

The B.3 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Care for Heart Disease MVP (89 FR 99015 through 99019) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Care for Heart Disease MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. This MVP would be most applicable to clinicians who treat patients within the practice cardiology, internal medicine and family medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix[582], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix[583], we propose removing three improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_AHE_12**: Practice Improvements that Engage Community Resources to Address Drivers of Health, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS CQM)	Yes	Yes	
	(*) Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months (Collection Type: MIPS CQM)	Yes	Yes	

Advancing Care for Heart Disease Improvement Activities

- **(*)(!) IA_AHW_X:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **IA_BE_24:** Financial Navigation Program
- **IA_BE_25:** Drug Cost Transparency
- **(!) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **(**) IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_4:** Administration of the AHRQ Survey of Patient Safety Culture
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

B.4: Advancing Rheumatology Patient Care MVP

The B.4 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Rheumatology Patient Care MVP (89 FR 99019 through 99023) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions. This MVP would be most applicable to clinicians who treat patients within the practice rheumatology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding two QCDR measures:

- ACR10: Hepatitis B Safety Screening: This QCDR measure improves patient safety by ensuring that a hepatitis B screening is documented in the medical record for all patients newly initiating a biologic or new synthetic immunosuppressive drug.
- ACR16: Rheumatoid Arthritis Patients with Low Disease Activity or Remission: This QCDR measure assesses clinician performance based on the risk-adjusted proportion of patients with rheumatoid arthritis who have low disease activity or are in remission based on the last recorded disease activity score as assessed using an ACR-preferred tool.
- For the reasons stated in the introduction of this appendix,[584] we propose removing Q487: Screening for Social Drivers of Health. We also propose removing one QCDR measure as this measure is proposed for removal from MIPS:
- UREQA2: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy

Modifications are being considered for the following QCDR measure: [585]

- ACR12: Disease Activity Measurement for Patients with PsA: This QCDR measure is undergoing modifications to modify the denominator adding telehealth as denominator eligible.

Improvement Activities

For the reasons stated in the introduction of this appendix,[586] we propose removing one improvement activity: IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

Symbol Key

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

- **(!) IA_BMH_2:** Tobacco use
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

B.5 Complete Ophthalmologic Care MVP

The B.5 table, followed by a list of improvement activities, represents the measures and activities finalized within the Complete Ophthalmologic Care MVP (89 FR 98974 through 98979) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. This MVP would be most applicable to clinicians who treat patients within the practice of ophthalmology and optometry, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix[587], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measures[588]:

- **IRIS2**: Glaucoma – Intraocular Pressure Reduction: This QCDR measure is undergoing modifications to revise the denominator by removing the requirement for "documentation of the severity of their glaucoma" to determine denominator eligibility.
- **IRIS13**: Diabetic Macular Edema - Loss of Visual Acuity: This QCDR measure is undergoing modifications to revise the denominator by removing the requirement for "2 visual acuity values with at least one on or after date of treatment" to determine denominator eligibility.

Improvement Activities

[587] See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update

[588] Ibid.

For the reasons stated in the introduction of this appendix[589], we propose removing two improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.5: Complete Ophthalmologic Care MVP Clinical Groupings

Complete Ophthalmologic Care MVP				
Clinical Grouping	**Quality**			**Cost**
	Measure	**Outcome**	**High Priority**	
Cataract	**(*) Q191:** Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery (Collection Type: eCQM, MIPS CQM)	Yes	Yes	**COST_IOL_1** Cataract Removal with Intraocular Lens (IOL) Implantation
	Q303: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery (Collection Type: MIPS CQM)	Yes	Yes	
	Q304: Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery (Collection Type: MIPS CQM)	No	Yes	
	(*) Q389: Cataract Surgery: Difference Between Planned and Final Refraction (Collection Type: MIPS CQM)	Yes	Yes	
	IRIS54: Complications After Cataract Surgery (Collection Type: QCDR)	Yes	Yes	
	IRIS61: Visual Acuity Improvement Following Cataract Surgery and Minimally Invasive Glaucoma Surgery (Collection Type: QCDR)	Yes	Yes	
General Ophthalmology	**(*) Q117:** Diabetes: Eye Exam (Collection Type: eCQM, MIPS CQM)	No	No	**COST_IOL_1** Cataract Removal with Intraocular Lens (IOL) Implantation
	(*) Q374: Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM)	No	Yes	
Retinal Disease	**Q019:** Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care (Collection Type: eCQM)	No	Yes	N/A
	Q384: Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery (Collection Type: MIPS CQM)	Yes	Yes	

[589] Ibid.

Complete Ophthalmologic Care MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
	Q385: Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery (Collection Type: MIPS CQM)	Yes	Yes	
	Q499: Appropriate screening and plan of care for elevated intraocular pressure following intravitreal or periocular steroid therapy (Collection Type: MIPS CQM)	No	No	
	(*) Q500: Acute posterior vitreous detachment appropriate examination and follow-up (Collection Type: MIPS CQM)	No	No	
	(*) Q501: Acute posterior vitreous detachment and acute vitreous hemorrhage appropriate examination and follow-up (Collection Type: MIPS CQM)	No	No	
	(*) IRIS13: Diabetic Macular Edema - Loss of Visual Acuity (Collection Type: QCDR)	Yes	Yes	
	IRIS58: Improved Visual Acuity after Vitrectomy for Complications of Diabetic Retinopathy within 120 Days (Collection Type: QCDR)	Yes	Yes	
Glaucoma	**(*) Q012:** Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation (Collection Type: eCQM)	No	No	N/A
	(*) Q141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care (Collection Type: Medicare Part B Claims, MIPS CQM)	Yes	Yes	
	(*) IRIS2: Glaucoma – Intraocular Pressure Reduction (Collection Type: QCDR)	Yes	Yes	
	IRIS39: Intraocular Pressure Reduction Following Trabeculectomy or an Aqueous Shunt Procedure (Collection Type: QCDR)	Yes	Yes	
Advancing Health and Wellness	**(*) Q130:** Documentation of Current Medications in the Medical Record (Collection Type: eCQM, MIPS CQM)	No	Yes	**COST_IOL_1** Cataract Removal with Intraocular Lens (IOL) Implantation
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
Experience of Care	**(*) Q503:** Gains in Patient Activation Measure (PAM) Scores at 12 Months (PAM Performance Measure, PAM-PM) (Collection Type: MIPS CQM)	Yes	Yes	**COST_IOL_1** Cataract Removal with Intraocular Lens (IOL) Implantation

- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements

B.6: Coordinating Stroke Care To Promote Prevention and Cultivate Positive Outcomes MVP

The B.6 table, followed by a list of improvement activities, represents the measures and activities finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP (89 FR 99023 through 99025) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or that have had a stroke. This MVP would be most applicable to clinicians who treat patients within the practice of neurology, neurosurgical, and vascular surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix,[590] we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix,[591] we propose removing three improvement activities: IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.6: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Clinical Groupings

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Stroke Prevention	**Q236:** Controlling High Blood Pressure (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	Yes	Yes	**COST_IHCI_1:** Intracranial Hemorrhage or Cerebral Infarction
	Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy (Collection Type: MIPS CQM)	No	No	
	Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) (Collection Type: MIPS CQM)	Yes	No	
	Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Collection Type: eCQM, MIPS CQM)	No	No	
	(*) Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) (Collection Type: MIPS CQM)	Yes	Yes	
Stroke Care	**Q187:** Stroke and Stroke Rehabilitation: Thrombolytic Therapy (Collection Type: MIPS CQM)	No	No	**COST_IHCI_1:** Intracranial Hemorrhage or Cerebral Infarction
	Q413: Door to Puncture Time for Endovascular Stroke Treatment (Collection Type: MIPS CQM)	Yes	Yes	
Experience of Care	**(*) Q047**: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**COST_IHCI_1:** Intracranial Hemorrhage or Cerebral Infarction
	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS CQM)	Yes	Yes	

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes Improvement Activities

- **(*)(!) IA_AHW_X:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_25:** Drug Cost Transparency
- **(!) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_10:** Care transition documentation practice improvements
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(*) IA_EPA_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_7**: Use of QCDR data for ongoing practice assessment and improvements

B.7: Dermatological Care MVP

The B.7 table, followed by a list of improvement activities, represents the measures and activities finalized within the Dermatological MVP (89 FR 98979 through 98984) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP would be most applicable to clinicians who treat patients within the practice of dermatology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding two MIPS quality measures:

- **Q047**: Advance Care Plan : This MIPS quality measure provides a meaningful assessment for patients undergoing dermatological care.
- **Q238:** Use of High-Risk Medications in Older Adults: This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.
- For the reasons stated in the introduction of this appendix[592], we propose removing **Q487**: Screening for Social Drivers of Health. We also propose removing one MIPS quality measure and two QCDR measures.
- **Q130:** Documentation of Current Medications in the Medical Record.
- **AAD17**: Continuation of Anticoagulation Therapy in the Office-based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures.
- **AAD18**: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection.

Improvement Activities

For the reasons stated in the introduction of this appendix[593], we propose removing one improvement activity: **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.7: Dermatological Care MVP Clinical Groupings

[592] See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update
[593] Ibid.

Dermatological Care MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Skin Cancer	**Q397:** Melanoma Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**COST_MR_1:** Melanoma Resection
	Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician (Collection Type: MIPS CQM)	No	Yes	
	Q509: Melanoma: Tracking and Evaluation of Recurrence (Collection Type: MIPS CQM)	No	No	
	AAD6: Skin Cancer: Biopsy Reporting Time – Clinician to Patient (Collection Type: QCDR)	No	Yes	
	AAD12: Melanoma: – Appropriate Surgical Margins (Collection Type: QCDR)	Yes	Yes	
	AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures (Collection Type: QCDR)	No	Yes	
Inflammatory Conditions	**(*) Q176:** Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy (Collection Type: MIPS CQM)	No	Yes	N/A
	Q486: Dermatitis – Improvement in Patient-Reported Itch Severity (Collection Type: MIPS CQM)	Yes	Yes	
	Q410: Psoriasis: Clinical Response to Systemic Medications (Collection Type: MIPS CQM)	Yes	Yes	
	Q485: Psoriasis – Improvement in Patient-Reported Itch Severity (Collection Type: MIPS CQM)	Yes	Yes	
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	**COST_MR_1:** Melanoma Resection
Experience of Care	**(+)(*) Q047:** Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**COST_MR_1:** Melanoma Resection
	(*) Q503: Gains in Patient Activation Measure (PAM) Scores at 12 Months (PAM Performance Measure, PAM-PM) (Collection Type: MIPS CQM)	Yes	Yes	
	AAD8: Chronic Skin Conditions: Patient Reported Quality-of-Life (Collection Type: QCDR)	No	Yes	N/A
Advancing Health and Wellness	**(+) Q238:** Use of High-Risk Medications in Older Adults (Collection Type: eCQM, MIPS CQM))	No	Yes	N/A

Dermatological Care Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(*) IA_EPA_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(*)(!) IA_EPA_X:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_8:** Use of Patient Safety Tools

B.8: Focusing on Women's Health MVP

The B.8 table, followed by a list of improvement activities, represents the measures and activities finalized within the Women's Health MVP (89 FR 99025 through 99029) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Focusing on Women's Health MVP focuses on the clinical specialty of providing treatment and management of women's health. This MVP would be most applicable to clinicians who treat patients within the practice of gynecology, obstetrics, and urogynecology, including nonphysician practitioners (NPPs) such as certified nurse-midwives, nurse practitioners, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix[594], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix[595], we propose removing four improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_AHE_12**: Practice Improvements that Engage Community Resources to Address Drivers of Health, **IA_PM_6**: Use of toolsets or other resources to close healthcare disparities across communities, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.8: Focusing on Women's Health MVP Clinical Groupings

[594] See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update
[595] Ibid.

Focusing on Women's Health MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Obstetrics	**Q335:** Maternity Care: Elective Delivery (Without Medical Indication) at < 39 Weeks (Overuse) (Collection Type: MIPS CQM)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q336: Maternity Care: Postpartum Follow-up and Care Coordination (Collection Type: MIPS CQM)	No	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician **(*) TPCC_1:** Total Per Capita Cost
	Q496: Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument (Collection Type: MIPS CQM)	No	No	**(*) TPCC_1:** Total Per Capita Cost
Gynecology	**Q422:** Performing Cystoscopy at the Time of Hysterectomy for Pelvic Organ Prolapse to Detect Lower Urinary Tract Injury (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair (Collection Type: MIPS CQM)	Yes	Yes	
	Q448: Appropriate Workup Prior to Endometrial Ablation (Collection Type: MIPS CQM)	No	Yes	
Advancing Health and Wellness	**Q039:** Screening for Osteoporosis for Women Aged 65-85 Years of Age (Collection Type: Medicare Part B Claims, MIPS CQM)	No	No	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician **(*) TPCC_1:** Total Per Capita Cost
	Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older (Collection Type: MIPS CQM)	No	No	
	(*)(**) Q112: Breast Cancer Screening (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
	(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	No	No	

Focusing on Women's Health MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
	(Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)			
	Q309: Cervical Cancer Screening (Collection Type: eCQM)	No	No	
	Q310: Chlamydia Screening in Women (Collection Type: eCQM)	No	No	
	Q400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation (Collection Type: MIPS CQM)	No	No	
	Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling (Collection Type: MIPS CQM)	No	No	
	Q475: HIV Screening (Collection Type: eCQM)	No	No	
	(*) Q493: Adult Immunization Status (Collection Type: MIPS CQM)	No	No	
	UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level (Collection Type: QCDR)	Yes	Yes	

Focusing on Women's Health Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!) IA_BE_16:** Promote Self-management in Usual Care
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **IA_BMH_11:** Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- **(!) IA_BMH_14:** Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- **(!) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(*) IA_EPA_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **(!) IA_PM_23:** Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

B.9: Gastroenterology Care MVP

The B.9 table, followed by a list of improvement activities, represents the measures and activities finalized within the Gastroenterology Care MVP (89 FR 98984 through 98989) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP would be most applicable to clinicians who treat patients within the practice of gastroenterology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality and

cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding one new MIPS quality measure:

- **TBD: Hepatitis C Virus (HCV)**: Sustained Virological Response (SVR)**:** This proposed MIPS quality measure captures an important outcome for this patient population.
- For the reasons stated in the introduction of this appendix[596], we propose removing two MIPS quality measures: **Q185**: Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use and **Q487**: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measures[597]:

- **GIQIC26**: Screening Colonoscopy Adenoma Detection Rate: This QCDR measure is undergoing modifications to update the denominator exclusions to reflect any non-colonoscopy colorectal cancer screening test.
- **NHCR4**: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation: This QCDR measure is undergoing modifications to update the numerator to reflect numerator compliance for the clinical scenario of a patient referred for polyp or mass removal.

Improvement Activities

For the reasons stated in the introduction of this appendix[598], we propose removing two improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Cost Measures

We propose adding one MIPS cost measure:

- **COST_LGH_1**: Lower Gastrointestinal Hemorrhage: This MIPS episode-based cost measure assesses costs associated with inpatient non-surgical treatment for acute bleeding in the lower gastrointestinal tract.

Symbol Key:

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.
Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

Experience of Care	**(*) Q503:** Gains in Patient Activation Measure (PAM) Scores at 12 Months (PAM Performance Measure, PAM-PM) (Collection Type: MIPS CQM)	Yes	Yes	**COST_SSC_1:** Screening/Surveillance Colonoscopy **(*) TPCC_1:** Total Per Capita Cost

Gastroenterology Care Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_7:** Regular training in care coordination
- **(!) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_10:** Care transition documentation practice improvements
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(*)(!) IA_EPA_X:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

B.10: Improving Care for Lower Extremity Joint Repair MVP

The B.10 table, followed by a list of improvement activities, represents the measures and activities finalized within the Improving Care for Lower Extremity Joint Repair MVP (89 FR 99029 through 99031) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat patients within the practice of orthopedic surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix[599], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix[600], we propose removing two improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

B.11: Optimal Care for Kidney Health MVP

The B.11 table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Kidney Health MVP (89 FR 99031 through 99035) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Optimal Care for Kidney Health MVP focuses on the clinical specialty of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This MVP would be most applicable to clinicians who treat patients within the practice of nephrology. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding one new MIPS quality measure:

- **TBD: Prevalent Standardized** Kidney Transplant **Waitlist Ratio (PSWR)**: This proposed MIPS quality measure captures an additional population of patients on transplant list beyond their first year of dialysis.
- For the reasons stated in the introduction of this appendix[601], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix[602], we propose removing three improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk

[601] See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update

[602] Ibid.

Identification and Treatment Protocols, **IA_CC_2**: Implementation of improvements that contribute to more timely communication of test results, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:
Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.
Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.11: Optimal Care for Kidney Health MVP Clinical Groupings

Optimal Care for Kidney Health MVP				
Clinical Grouping	**Quality**			**Cost**
	Measure	**Outcome**	**High Priority**	
General Nephrology	**(*)Q001**: Diabetes: Glycemic Status Assessment Greater Than 9% (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	Yes	Yes	**COST_AKID_1**: Acute Kidney Injury Requiring New Inpatient Dialysis
	Q236: Controlling High Blood Pressure (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	Yes	Yes	**COST_CKD_1:** Chronic Kidney Disease (CKD) **COST_ESRD_1:** End-Stage Renal Disease **COST_KTM_1:** Kidney Transplant Management **(*) TPCC_1:** Total Per Capita Cost
	(*) Q488: Kidney Health Evaluation (Collection Type: eCQM, MIPS CQM)	No	No	**(*) TPCC_1:** Total Per Capita Cost
	Q489: Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy (Collection Type: MIPS CQM)	No	No	**COST_CKD_1:** Chronic Kidney Disease (CKD) **COST_ESRD_1:** End-Stage Renal Disease **(*) TPCC_1:** Total Per Capita Cost
Dialysis/Transplant	**Q482:** Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate (Collection Type: MIPS CQM)	Yes	Yes	**COST_CKD_1:** Chronic Kidney Disease (CKD) **COST_ESRD_1:**

Optimal Care for Kidney Health MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
				End-Stage Renal Disease **(*) TPCC_1:** Total Per Capita Cost
	Q510: First Year Standardized Waitlist Ratio (FYSWR) (Collection Type: MIPS CQM)	Yes	No	**COST_ESRD_1:** End-Stage Renal Disease **(*) TPCC_1:** Total Per Capita Cost
	Q511: Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) (Collection Type: MIPS CQM)	Yes	No	
	(^)(+) TBD: Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR) (Collection Type: MIPS CQM)	No	No	
Advancing Health and Wellness	**(*) Q130:** Documentation of Current Medications in the Medical Record (Collection Type: eCQM, MIPS CQM)	No	Yes	**COST_AKID_1:** Acute Kidney Injury Requiring New Inpatient Dialysis **COST_CKD_1:** Chronic Kidney Disease (CKD) **COST_ESRD_1:** End-Stage Renal Disease **COST_KTM_1:** Kidney Transplant Management **(*) TPCC_1:** Total Per Capita Cost
	(*) Q493: Adult Immunization Status (Collection Type: MIPS CQM)	No	No	
Experience of care	**(*) Q047:** Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**COST_AKID_1:** Acute Kidney Injury Requiring New Inpatient Dialysis **COST_CKD_1:** Chronic Kidney Disease (CKD) **COST_ESRD_1:** End-Stage Renal Disease **COST_KTM_1:** Kidney Transplant Management **(*) TPCC_1:** Total Per Capita Cost
	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS CQM)	Yes	Yes	
	(*) Q503: Gains in Patient Activation Measure (PAM) Scores at 12 Months (Collection Type: MIPS CQM)	Yes	Yes	

Optimal Care for Kidney Health Improvement Activities

- (*)(!) IA_AHW_X: Chronic Care and Preventative Care Management for Empaneled Patients
- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_14: Engage Patients and Families to Guide Improvement in the System of Care
- IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- (!) IA_BE_16: Promote Self-management in Usual Care
- (*)(!) IA_BE_X: Promote Use of Patient-Reported Outcome Tools
- IA_CC_13: Practice Improvements to Align with OpenNotes Principles
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_11: Regular Review Practices in Place on Targeted Patient Population Needs
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_16: Use of decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs

B.12: Optimal Care for Patients With Urologic Conditions MVP

The B.12 table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Urologic Conditions MVP (89 FR 98989 through 98994) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence, bladder cancer, and prostate cancer. This MVP would be most applicable to clinicians who treat patients within the practices of urology, general urologists, urology oncologists, and urology care for women, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

- For the reasons stated in the introduction of this appendix,[603] we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

- For the reasons stated in the introduction of this appendix,[604] we propose removing three improvement activities: IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B, and IA_PSPA_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

[603] See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

- **IA_PSPA_21:** Implementation of fall screening and assessment programs

B.13: Patient Safety and Support of Positive Experiences with Anesthesia MVP

The B.13 table, followed by a list of improvement activities, represents the measures and activities finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP (89 FR 99035 through 99037) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing the quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. The measures are used for a variety of surgical procedures that anesthesiologists deliver care for, and are broadly applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings, including NPPs such as certified registered nurse anesthetists (CRNAs) and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

- For the reasons stated in the introduction of this appendix[605], we propose removing two MIPS quality measures: **Q424**: Perioperative Temperature Management and **Q487**: Screening for Social Drivers of Health.

Improvement Activities

[605] See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update

For the reasons stated in the introduction of this appendix[606], we propose removing two improvement activities: **IA_CC_2**: Implementation of improvements that contribute to more timely communication of test results and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:
Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.13: Patient Safety and Support of Positive Experiences with Anesthesia MVP Clinical Groupings

Patient Safety and Support of Positive Experiences with Anesthesia MVP				
Condition	**Quality**			**Cost**
	Measure	**Outcome**	**High Priority**	
Sedation/General Anesthesia	**Q404:** Anesthesiology Smoking Abstinence (Collection Type: MIPS CQM)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q430: Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy (Collection Type: MIPS CQM)	No	Yes	
	Q463: Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics) (Collection Type: MIPS CQM)	No	Yes	
	ABG44: Low Flow Inhalational General Anesthesia (Collection Type: QCDR)	No	Yes	
	EPREOP31: Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases (Collection Type: QCDR)	Yes	Yes	
Pain Management	**Q477**: Multimodal Pain Management (Collection Type: MIPS CQM)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
Experience of Care	**AQI48:** Patient-Reported Experience with Anesthesia (Collection Type: QCDR)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician

Patient Safety and Support of Positive Experiences with Anesthesia Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_22:** Improved practices that engage patients pre-visit
- **(!) IA_BMH_2:** Tobacco use
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes

[606] Ibid.

- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_16: Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs

B.14: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

The B.14 table, followed by a list of improvement activities, represents the measures and activities finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP (89 FR 99038 through 99040) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on the clinical specialty of promoting quality care for patients suffering from infectious disorders. This MVP would be most applicable to clinicians who treat patients within the practices of infectious disease and immunology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding one new MIPS quality measure:

- TBD: Hepatitis C Virus (HCV): Sustained Virological Response (SVR): This proposed MIPS quality measure that captures important outcome for this patient population.

For the reasons stated in the introduction of this appendix,[607] we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

- For the reasons stated in the introduction of this appendix,[608] we propose removing four improvement activities: IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_PM_6: Use of toolsets or other resources to close healthcare disparities across communities, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis.

Cost Measures

We propose adding three additional MIPS cost measures:

- COST_RIH_1: Respiratory Infection Hospitalization: This MIPS episode-based cost measure assesses costs associated with inpatient treatment for a respiratory infection.
- COST_S_1: Sepsis: This MIPS episode-based cost measure assesses costs associated with inpatient medical treatment for sepsis.
- MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care for acute infections in inpatient hospitals.

- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship
- **(!) IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

B.15: Pulmonology Care MVP

The B.15 table, followed by a list of improvement activities, represents the measures and activities finalized within the Pulmonology Care MVP (89 FR 98994 through 98998) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP would be most applicable to clinicians who specialize in pulmonology and sleep medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on

the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix,[609] we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

[609] See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.*

Improvement Activities

For the reasons stated in the introduction of this appendix,[610] we propose removing three improvement activities: IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

	(*) Q503: Gains in Patient Activation Measure (PAM) Scores at 12 Months (PAM Performance Measure, PAM-PM) (Collection Type: MIPS CQM)	Yes	Yes	

Pulmonology Care Improvement Activities

- **(*)(!) IA_AHW_X:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_23:** Integration of patient coaching practices between visits
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements

B.16: Quality Care for Patients With Neurological Conditions MVP

The B.16 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for Patients with Neurological Conditions MVP (89 FR 99040 through 99044) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care for Patients with Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from neurological conditions. This MVP would be most applicable to clinicians who specialize in neurology care, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding one new MIPS quality measure:

•TBD: Patient reported falls and plan of care: This proposed MIPS quality measure captures falls assessment and care plan specific to patients with neurological conditions.

For the reasons stated in the introduction of this appendix [611], we propose removing Q487: Screening for Social Drivers of Health. We also propose removing three additional MIPS quality measures:

- Q155: Falls: Plan of Care
- Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease
- Q419: Overuse of Imaging for the Evaluation of Primary Headache

Improvement Activities

- For the reasons stated in the introduction of this appendix [612], we propose removing three improvement activities: IA_BMH_8: Electronic Health Record Enhancements for BH data capture, IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

Symbol Key:

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

[611] See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.*

	(^)(+) TBD: Patient reported falls and plan of care (Collection Type: MIPS CQM)	No	Yes	
Experience of Care	**(*) Q047:** Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician

Quality Care for Patients with Neurological Conditions MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS CQM)	Yes	Yes	
	(*) Q503: Gains in Patient Activation Measure (PAM) Scores at 12 Months (PAM Performance Measure, PAM-PM) (Collection Type: MIPS CQM)	Yes	Yes	

Quality Care for Patients with Neurological Conditions Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_24:** Financial Navigation Program
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **(!) IA_BMH_4:** Depression screening
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_ PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

B.17: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

The B.17 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP (89 FR 99044 through 99047) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on the clinical specialty of providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL) and otitis media. This MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding one additional QCDR measure:

- **AA016**: Age-Related Hearing Loss: Audiometric Evaluation: This QCDR measure ensures patients who failed a hearing screening and/or who report suspected hearing loss receive, are ordered, or are referred for a comprehensive audiometric evaluation in a timely fashion.

For the reasons stated in the introduction of this appendix[613], we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

- For the reasons stated in the introduction of this appendix[614], we propose removing three improvement activities: IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

[613] See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.*

Sleep Disorders	**Q277:** Sleep Apnea: Severity Assessment at Initial Diagnosis (Collection Type: MIPS CQM)	No	No	N/A
General Otolaryngology	**Q331:** Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse) (Collection Type: MIPS CQM)	No	Yes	N/A
	Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use) (Collection Type: MIPS CQM)	No	Yes	
	(+) AAO16: Age-Related Hearing Loss: Audiometric Evaluation (Collection Type: QCDR)	No	Yes	
Surgical	**Q355:** Unplanned Reoperation within the 30 Day Postoperative Period (Collection Type: MIPS CQM)	Yes	Yes	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(*) Q357: Surgical Site Infection (SSI) (Collection Type: MIPS CQM)	Yes	Yes	
Advancing Health and Wellness	**(**) Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	

Quality Care for the Treatment of Ear, Nose, and Throat Disorders Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

B.18: Quality Care in Mental Health and Substance Use Disorders MVP

The B.18 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care in Mental Health and Substance Use Disorders MVP (89 FR 99047 through 99049) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care in Mental Health and Substance Use Disorders MVP focuses on the clinical specialty of promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

- For the reasons stated in the introduction of this appendix[615], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix[616], we propose removing five improvement activities: **IA_AHE_5**: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_AHE_12**: Practice Improvements that Engage Community Resources to Address Drivers of Health, **IA_PM_6**: Use of toolsets or other resources to close healthcare disparities across communities, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

Experience of Care	**(*) Q502:** Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder (Collection Type: MIPS CQM)	Yes	Yes	**COST_DEP_1:** Depression **COST_PRC_1:** Psychoses/Related Conditions **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician

Mental Health and Substance Use Improvement Activities

- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_23:** Integration of patient coaching practices between visits
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **(!) IA_BMH_2:** Tobacco use
- **(!) IA_BMH_5:** MDD prevention and treatment interventions
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **(!) IA_BMH_14:** Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- **(!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(*) IA_EPA_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!) IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

B.19: Rehabilitative Support for Musculoskeletal Care MVP

The B.19 table, followed by a list of improvement activities, represents the measures and activities finalized within the Rehabilitative Support for Musculoskeletal Care MVP (89 FR 99049 through 99054) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Rehabilitative Support for Musculoskeletal Care MVP focuses on the clinical specialty of promoting quality care for patients. This MVP would be most applicable to clinicians and NPPs who specialize in providing rehabilitative support for musculoskeletal care such as chiropractic, physiatry, physical therapy and occupational therapy, as well as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

We propose adding two additional MIPS quality measures based on maintenance requests and providing meaningful and comprehensive assessment of the clinical care for clinicians providing musculoskeletal care to patients:

- **Q134**: Preventive Care and Screening: Screening for Depression and Follow-Up Plan
- **Q182**: Functional Outcome Assessment

For the reasons stated in the introduction of this appendix[617], we propose removing one MIPS quality measure: **Q487**: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measures[618]:

- **MSK6**: Patients Suffering From a Neck Injury who Improve Pain: This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK7:** Patients Suffering From an Upper Extremity Injury who Improve Pain: This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK8:** Patients Suffering From a Back Injury who Improve Pain: This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK9**: Patients Suffering From a Lower Extremity Injury who Improve Pain: This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."

Improvement Activities

We propose adding three additional improvement activities that address maintenance requests from the public, as well as address the priority area of advancing health and wellness:

- **IA_BE_15**: Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- **IA_BE_16**: Evidenced-based techniques to promote self-management into usual care
- **IA_AHW_X**: Chronic Care and Preventative Care Management for Empaneled Patients
- For the reasons stated in the introduction of this appendix[619], we propose removing four improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_AHE_12**: Practice Improvements that Engage Community Resources to Address Drivers of Health, **IA_CC_1**: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with proposed revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

	Measure	Outcome	High Priority	
	(+)(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
	Q155: Falls: Plan of Care (Collection Type: MIPS CQM)	No	Yes	

Rehabilitative Support for Musculoskeletal Care Improvement Activities

- **(+)(*)(!) IA_AHW_X:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(+) IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- **(+)(!) IA_BE_16:** Promote Self-management in Usual Care
- **(*)(!) IA_BE_X:** Promote Use of Patient-Reported Outcome Tools
- **(!) IA_BMH_12:** Promoting Clinician Well-Being
- **(!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_CC_8**: Implementation of documentation improvements for practice/process improvements
- **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(*)(!) IA_EPA_X:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

B.20: Surgical Care MVP

The B.20 table, followed by a list of improvement activities, represents the measures and activities finalized within the Surgical Care MVP (89 FR 98998 through 99005) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Surgical Care MVP focuses on the clinical theme of surgery. This MVP would be most applicable to clinicians who specialize in general surgery, neurosurgery, and cardiothoracic surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix[620], we propose removing two MIPS quality measures: **Q264**: Sentinel Lymph Node Biopsy for Invasive Breast Cancer and **Q487**: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix[621], we propose removing two improvement activities: **IA_AHE_9**: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and **IA_PM_26**: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with proposed revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.

B.21: Value in Primary Care MVP

The B.21 table, followed by a list of improvement activities, represents the measures and activities finalized within the Value in Primary Care MVP (89 FR 99054 through 99057) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Value in Primary Care MVP focuses on the clinical theme of promoting quality care for patients to reduce the risk of diseases, disabilities, and death. This MVP would be most applicable to clinicians who specialize in preventive medicine, internal medicine, family medicine and geriatrics, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

Quality Measures

For the reasons stated in the introduction of this appendix,[622] we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

[622] See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.*

Improvement Activities

For the reasons stated in the introduction of this appendix,[623] we propose removing four improvement activities: IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, and IA_PM_26: Vaccine Achievement for Practices Staff: COVID–19, Influenza, and Hepatitis B.

[623] Ibid.

APPENDIX 4: MEASURES FOR MIPS COST PERFORMANCE CATEGORY

We refer readers to section IV. A.4.d.(2).(a). and (b). of this proposed rule for more information regarding the statutory authority for and existing policies pertaining to the specification of measures for the cost performance category.

Except as otherwise noted in this proposed rule, previously finalized cost measures will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years. Previously finalized measures and specialty sets are set forth in Table 75 in the CY 2025 PFS final rule (89 FR 98406).

The Group A Table(s) within this proposed rule set forth our proposals to modify one or more measures specified for the MIPS cost performance category beginning with the CY 2026 performance period/ 2028 MIPS payment year.

We are proposing modification(s) to the cost measure(s) set forth in the Group A Table(s) consistent with the criteria we established in the CY 2022 PFS final rule for determining whether a proposed change to a cost measure would be substantive (86 FR 65459 and 65460).

Group A: Proposal(s) to Modify MIPS Cost Measures Beginning with the CY 2026 Performance Period/ 2028 MIPS Payment Year

A.1. Total Per Capita Cost (TPCC)

Category	Description
CBE # :	3575
MIPS # :	TPCC_1
Current Measure Description:	TPCC assesses the overall cost of care delivered to a patient with a focus on the primary care they receive from their provider(s). The measure is payment-standardized, risk-adjusted, and specialty-adjusted.
Measure Case Minimum	20 beneficiaries as set forth in § 414.1350(c)(1)
Measure Steward:	Centers for Medicare & Medicaid Services (CMS)
Measure Type:	Population-based cost measure

Category	Description
Proposed Substantive Change(s):	**Initiating a candidate event would be modified as follows:** ● Proposed Modifications to Measure Specifications for Triggering a Candidate Event: ++ A candidate event would be initiated by two claims for outpatient evaluation and management (E/M) services indicative of primary care. The second service used to initiate a candidate event would have to be another E/M primary care service or another general primary care service from the **same** clinician group (TIN) within 90 days. ++ **Both the first and second service** would have to be provided by a clinician (TIN-NPI) that has not been excluded from the measure based on specialty exclusion criteria. ● How Proposed Modifications Would Substantively Change Current Measure Specifications: ++ The current methodology requires that, in addition to the initial outpatient E/M service, at least one of the following services should be billed to confirm the candidate event: (1) another primary care service from any clinician group within 3 days, or (2) a second E/M primary care service OR another primary care service from the same clinician group within 90 days. This proposed modification would revise the current methodology to remove the option for the second candidate event service to be provided by a different clinician group. ++ The current methodology only requires the first service be provided by a clinician that has not been excluded attribution based on the specialty exclusion criteria. This proposed modification would revise the current methodology to require both the first and second service be provided by a clinician that is not excluded by the specialty exclusion criteria. **Criteria for removing a clinician and their candidate events from attribution would be modified as follows:** ● Proposed Modification for Exclusion: We propose to remove clinicians and their candidate events from attribution for the TPCC measure if a clinician is: (1) an advanced care practitioner (that is, Nurse Practitioner, Physician Assistant, Certified Clinical Nurse Specialist), and (2) part of a clinician group where all other non-advanced care practitioners are excluded based on specialty criteria. ● How Proposed Modifications Would Substantively Change Current Measure Specifications: The current methodology only excludes clinicians and their candidate events if a clinician meets service category thresholds for billing certain services (that is, global surgery, anesthesia, therapeutic radiation, or chemotherapy services) or if the specialty code on a clinician's Medicare Part B claims is one of the specialties excluded from TPCC attribution. The current methodology does not exclude advanced care practitioners from attribution based on their specialty, which is identified by the specialty code on their Medicare Part B claims. This proposed modification would exclude advanced care practitioners from attribution if all other non-advanced care practitioners in their TIN are excluded based on the specialty exclusion criteria. Except as noted herein, we propose to retain all remaining specifications for the TPCC measure without modification. These proposed modifications are also available for review in the revised TPCC measure specifications available for download here: *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures*

Rationale	The TPCC measure assesses the overall cost of care provided to a Medicare beneficiary, focusing on MIPS eligible clinicians, subgroups, and clinician groups who provide primary care-type services. Given its broad scope, it includes all Medicare Parts A and B costs that occur during the time period attributed to the clinician or clinician group within the performance period. The measure assesses primary care, internal medicine, and other physicians, who frequently manage patients with chronic or ongoing care needs, and non-physician clinicians (such as, Physician Assistants, Nurse Practitioners, and Certified Clinician Nurse Specialists) who provide primary care and related services. We are proposing to modify the TPCC measure's candidate event logic to require that both services in a candidate event are provided by the same clinician group and by a clinician with a specialty included in measure attribution. This modification would result in MIPS eligible clinicians only being attributed the costs of care for beneficiaries that have had at least two qualifying services from their clinician group, and where both services were provided by a clinician that would not be excluded from measure attribution due to the specialty exclusion. The proposed modification would more strongly demonstrate that there is an ongoing care relationship. With this proposed modification, a MIPS eligible clinician would only be attributed beneficiaries that they or their clinician group have seen at least twice, and when both candidate event services are provided by clinicians who are not excluded from TPCC based on the specialty exclusion criteria. We are also proposing to modify the TPCC measure's specifications to exclude certain clinicians and clinician groups from attribution. Currently, the measure does not exclude advanced care practitioners (that is, Physician Assistants, Nurse Practitioners, and Certified Clinician Nurse Specialists) from measure attribution based on their specialty. Advanced care practitioners often provide primary care and ongoing care management services. However, some advanced care practitioners participate in MIPS through clinician groups that provide specialty care that would otherwise be excluded from the measure. In these instances, an advanced care practitioner may bill services (such as, office visits) to support specialized care that are unlikely to be indicative of primary care or ongoing care management relationships. Since specialty codes on Medicare Part B claims do not include information about sub-specialization for advanced care practitioners, we would use information about their clinician group to exclude certain advanced care practitioners in specialty settings (that is, clinician groups where all physicians are excluded based on the specialty exclusion criteria). This proposed modification would limit instances in which the TPCC measure would be used to assess or evaluate costs potentially associated with highly specialized clinician groups solely due to the billing patterns of advanced care practitioners within the clinician group. Additionally, we are not proposing any modifications to the TPCC case minimum of 20 beneficiaries, as set forth in § 414.1350(c)(1). This case minimum was originally established in the CY 2017 QPP final rule (81 FR 77170) and maintained in the CY 2020 PFS final rule (84 FR 62978). We based this case minimum on our interest to ensure that the majority of TINs and TIN-NPIs that were measured met a threshold of 0.4 reliability and to balance our interest in ensuring moderate reliability without limiting participation. The relationship between reliability thresholds and case minimums was further discussed in the CY 2022 PFS final rule (86 FR 65453 through 65455), establishing again that a mean reliability of 0.4 for the majority of TIN and TIN-NPIs would be used as a sufficient threshold to ensure a measure is performing as intended. We tested the reliability of the TPCC measure with the proposed modifications applied. Our testing demonstrated that

Category	Description
	mean reliability would remain high at approximately 0.9 for TINs and TIN-NPIs at the 20 beneficiary case minimum. Additionally, 100% of TINs and TIN-NPIs would exceed the 0.4 mean reliability threshold. Therefore, we would maintain the existing case minimum of 20 cases as set forth in § 414.1350(c)(1). Prior to proposing modifications to a cost measure through the notice-and-comment rulemaking process, we have historically subjected existing cost measures for which we are considering substantive changes to the pre-rulemaking process outlined by section 1890A of the Act. Section 1848(r)(10) provides that the pre-rulemaking requirements in 1890A of the Act are not required to apply to the selection of MIPS cost measures; however, we have found that the pre-rulemaking process provides a comprehensive review of measures from multi-stakeholder workgroups and have accordingly elected for such measures to be reviewed utilizing this process, as detailed in the Measure Management System (MMS) Blueprint: *https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/overview*. For TPCC, we comprehensively reevaluated the measure in use in MIPS in accordance with the process outlined in the MMS Blueprint: *https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance/comprehensive-reevaluation*. During this process, we held two public comment periods and convened a Technical Expert Panel (TEP) twice to discuss modifications. We have received robust feedback from the public about the potential modifications during this comprehensive reevaluation process and through other cost measure public comment opportunities, such as the CY 2025 PFS rule. Following the completion of the comprehensive reevaluation process, we opted not to subject the TPCC measure with these proposed modifications to the pre-rulemaking process. We considered (i) the high volume of feedback received to date on the modifications; (ii) that the scope of the modifications does not impact the intent of the measure or negatively impact measure testing results; and (iii) that there is a tradeoff in delaying updates by a year to submit the measure to the pre-rulemaking process. Based on these considerations, we are proposing modifications to the TPCC measure through notice-and-comment rulemaking without having subjected the measure to the pre-rulemaking process. More information about the feedback we received from interested parties and technical expert panel(s) on the TPCC measure, and analyses that contributed to identifying the TPCC modifications, is available in the Cost measure comprehensive reevaluation (2023-2024) section of the QPP Cost Measures Information Page: *https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/current*.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List July 10, 2025

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
