FEDERAL REGISTER

Vol. 90 Wednesday,
No. 134 July 16, 2025

Book 1 of 2 Books
Pages 31853–32350

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 90 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 90, No. 134
Wednesday, July 16, 2025

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

14 CFR Part 71

[Docket No. FAA–2024–2738; Airspace Docket No. 24–AAL–99]

RIN 2120–AA66

Amendment of Alaskan Very High Frequency Omnidirectional Range Federal Airways V–444 and V–504 in Alaska

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Alaskan Very High Frequency Omnidirectional Range (VOR) Federal Airways V–444 and V–504. The FAA is taking this action due to the pending decommissioning of the Evansville, AK, Nondirectional Radio Beacon (NDB).

DATES: Effective date 0901 UTC, October 2, 2025. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: A copy of the Notice of Proposed Rulemaking (NPRM), all comments received, this final rule, and all background material may be viewed online at *www.regulations.gov* using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

FAA Order JO 7400.11J, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Policy Directorate, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Steven Roff, Rules and Regulations Group, Policy Directorate, Federal Aviation Administration, 600 Independence Avenue SW, Washington, DC 20597; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it modifies the Air Traffic Service (ATS) route structure as necessary to preserve the safe and efficient flow of air traffic within the National Airspace System.

History

The FAA published an NPRM for Docket No. FAA–2024–2738 in the **Federal Register** (89 FR 106375; December 30, 2024), proposing to amend Alaskan VOR Federal Airways V–444 and V–504 in Alaska. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. Two comments were received with one being in favor of the action and the other being outside the scope of this airspace action.

Incorporation by Reference

Alaskan VOR Federal Airways are published in paragraph 6010 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document amends the current version of that order, FAA Order JO 7400.11J, dated July 31, 2024, and effective September 15, 2024. These amendments will be published in the next update to FAA Order JO 7400.11. FAA Order JO 7400.11J is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11J lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

The FAA is amending to 14 CFR part 71 by modifying Alaskan VOR Federal Airways V–444 and V–504 in Alaska. The FAA is taking these actions due to the pending decommissioning of the Evansville, AK, NDB.

V–444: Prior to this rule, V–444 in Alaska extended between the Barrow, AK, VOR/DME and the intersection of the Northway, AK, VOR/Tactical Air Navigation (VORTAC) 120° (M), 138° (T), and the Gulkana, AK, VOR/DME 062° (M), 079° (T) radials. As amended, V–444 extends between the Bettles, AK, VOR/DME and the intersection of the Northway, AK, VORTAC 120° (M), 138° (T), and the Gulkana, AK, VOR/DME 062° (M), 079° (T) radials.

V–504: Prior to this rule, V–504 extended between the Nenana, AK, VORTAC and the Deadhorse, AK, VOR/DME. As amended, V–504 extends between the Neana VORTAC and the Bettles, AK, VOR/DME.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action of amending Alaskan VOR Federal Airways V–444 and V–504 in Alaska qualifies for categorical exclusion under the National Environmental Policy Act (42 U.S.C. 4321, *et seq.*) paragraph 5–6.5.a of FAA's NEPA implementation policy and procedures which categorically

excludes from further environmental impact review rulemaking actions that designate or modify classes of airspace areas, airways, routes, and reporting points (see 14 CFR part 71, Designation of Class A, B, C, D, and E Airspace Areas; Air Traffic Service Routes; and Reporting Points); and paragraph 5–6.5k, which categorically excludes from further environmental impact review the publication of existing air traffic control procedures that do not essentially change existing tracks, create new tracks, change altitude, or change concentration of aircraft on these tracks. As such, this action is not expected to result in any potentially significant environmental impacts. In accordance with the FAA's NEPA implementation policy and procedures regarding Extraordinary Circumstances, the FAA has reviewed this action for factors and circumstances in which a normally categorically excluded action may have a significant environmental impact requiring further analysis. The FAA has determined that no extraordinary circumstances exist that warrant preparation of an environmental assessment or environmental impact study.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p.389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11J, Airspace Designations and Reporting Points, dated July 31, 2024, and effective September 15, 2024, is amended as follows:

Paragraph 6010(b) Alaskan VOR Federal Airways.

* * * * *

V–444 [Amended]

From Bettles, AK; Fairbanks, AK; Big Delta, AK; Northway, AK; intersection of the Northway 138° and Gulkana 079° radials.

* * * * *

V–504 [Amended]

From Nenana, AK; to Bettles, AK.

* * * * *

Issued in Washington, DC, on July 11, 2025.

Brian Eric Konie,

Manager (A), Rules and Regulations Group.

Renaming of Restricted Areas R–5311A, R–5311B, and R–5311C; Fort Liberty, NC

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action is an administrative change to rename restricted areas R–5311A, R–5311B, and R–5311C, Fort Liberty, NC, and to update the using agency description to reflect the change. This action does not alter airspace boundaries or impose additional operating requirements on users of the affected airspace.

DATES: Effective date 0901 UTC, October 2, 2025.

ADDRESSES: A copy of this final rule and all background material may be viewed online at *www.regulations.gov* using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it updates the information in the airspace descriptions of restricted areas R–5311A, R–5311B, and R–5311C.

History

On February 10, 2025, the Secretary of Defense directed the U.S. Army to change the name of ''Fort Liberty, NC'' by reverting to its previous name, ''Fort Bragg, NC.'' [1] Consequently, this rulemaking action implements the requisite changes to part 73 by updating the airspace descriptions of restricted areas R–5311A, R–5311B, and R–5311C to reflect the new name.

The Rule

This action amends 14 CFR part 73 by updating the airspace titles and using agency descriptions for restricted areas R–5311A, R–5311B, and R–5311C by removing the name ''Fort Liberty, NC'' and replacing it with ''Fort Bragg, NC.''

Additionally, the FAA makes a minor technical amendment to a geographic coordinate in the description of restricted area R–5311A. This amendment to the geographic coordinate corrects a typographical error in the description of restricted area R–5311A and does not change the boundary of the restricted area. The point listed as ''lat. °79°02′29″ W'' is changed to ''lat. 35°07′01″ N, long. 79°02′29″ W'' as intended.

Good Cause for Bypassing Notice and Comment

Under 5 U.S.C. 553, federal agencies engaged in informal rulemaking must provide the public with a notice of proposed rulemaking and an opportunity for public participation. However, 5 U.S.C. 553(b)(B) exempts a rule from these requirements ''when the agency for good cause finds (and incorporates the finding and a brief statement of reasons therefor in the rules issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest.'' Courts have construed these exceptions narrowly, but have nonetheless accepted determinations of good cause that notice and comment is unnecessary in ''those situations in which the administrative rule is a routine determination, insignificant in nature and impact, and inconsequential to the industry and to the public.'' *See*

[1] *See https://www.defense.gov/News/Releases/Release/Article/4062245/secretary-of-defense-pete-hegseth-renames-fort-liberty-to-fort-bragg/.*

Mack Trucks, Inc. v. *EPA,* 682 F.3d 87, 94 (D.C. Cir. 2012). This action consists of administrative name changes and minor technical amendments only. It does not affect the boundaries, altitudes, time of designation, operating requirements, or activities conducted in the restricted areas. Therefore, FAA has determined that good cause exists for why notice and public procedure under 5 U.S.C. 553(b) are unnecessary.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action of making administrative name changes to the geographic location and using agency information of restricted areas R–5311A, R–5311B, and R–5311C qualifies for categorical exclusion under the National Environmental Policy Act (42 U.S.C. 4321, *et seq.*) and in accordance with FAA Order 1050.1G, *FAA National Environmental Policy Act Implementing Procedures,* paragraph B–2.5(a), which categorically excludes from further environmental impact review rulemaking actions that designate or modify classes of airspace areas, airways, routes, and reporting points (see 14 CFR part 71, Designation of Class A, B, C, D, and E Airspace Areas; Air Traffic Service Routes; and Reporting Points); and paragraph B–2.5(d)—Modification of the technical description of special use airspace (SUA) that does not alter the dimensions, altitudes, or times of designation of the airspace (such as changes in designation of the controlling or using agency, or correction of typographical errors). In accordance with FAA's NEPA implementation procedures regarding extraordinary circumstances, the FAA has reviewed this action for factors and circumstances in which a normally categorically excluded action may have a significant environmental impact requiring further analysis. Accordingly, the FAA has determined that no extraordinary circumstances exist that warrant preparation of an environmental assessment or environmental impact statement.

[FR Doc. 2025–13282 Filed 7–15–25; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 95

[Docket No. 31615; Amdt. No. 586]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. This regulatory action is needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

DATES: Effective 0901 UTC, August 07, 2025.

FOR FURTHER INFORMATION CONTACT: Romana B. Wolf, Manager, Flight

Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73099. Telephone (405) 954–1139.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) amends, suspends, or revokes IFR altitudes governing the operation of all aircraft in flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95.

The Rule

The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and free of frequency interference. The reasons and circumstances that create the need for this amendment involve matters of flight safety and operational efficiency in the National Airspace System, are related to published aeronautical charts that are essential to the user, and provide for the safe and efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are impracticable and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95

Airspace, Navigation (air).

Issued in Washington, DC, on July 7, 2024.

Romana B. Wolf,

Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration.

Accordingly, pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows:

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31613; Amdt. No. 4173]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or removes Standard Instrument Approach Procedures (SIAPS) and associated Takeoff Minimums and Obstacle Departure procedures (ODPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective July 16, 2025. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions. The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 16, 2025.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30. 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590–0001.
2. The FAA Air Traffic Organization Service Area in which the affected airport is located;
3. The office of Aeronautical Information Services, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,
4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center at *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Romana B. Wolf, Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73099. Telephone (405) 954–1139.

SUPPLEMENTARY INFORMATION: This rule amends 14 CFR part 97 by establishing, amending, suspending, or removes SIAPS, Takeoff Minimums and/or ODPS. The complete regulatory description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The applicable FAA Forms are 8260–3, 8260–4, 8260–5, 8260–15A, 8260–15B, when required by an entry on 8260–15A, and 8260–15C.

The large number of SIAPs, Takeoff Minimums and ODPs, their complex nature, and the need for a special format make publication in the **Federal Register** expensive and impractical. Further, pilots do not use the regulatory text of the SIAPs, Takeoff Minimums or ODPs, but instead refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA form documents is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAPS, Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure, and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPS, Takeoff Minimums and/or ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and

ODP as amended in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flights safety relating directly to published aeronautical charts.

The circumstances that created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them effective in less than 30 days. For the remaining SIAPs and Takeoff Minimums and ODPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Lists of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC, on July 4, 2025.

Romana B. Wolf,

Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, 14 CFR part 97 is amended by establishing, amending, suspending, or removing Standard Instrument Approach Procedures and/or Takeoff Minimums and Obstacle Departure Procedures effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31614; Amdt. No. 4174]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide for the safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective July 16, 2025. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 16, 2025.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30, 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590–0001;

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The Office of Aeronautical Information Services, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA).

For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center online at *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Romana B. Wolf, Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73099. Telephone (405) 954–1139.

SUPPLEMENTARY INFORMATION: This rule amends 14 CFR part 97 by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (NFDC)/Permanent Notice to Airmen (P–NOTAM), and is incorporated by reference under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, pilots do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained on FAA form documents is unnecessary. This amendment provides the affected CFR sections, and specifies the SIAPs and Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP and Takeoff Minimums and ODP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP and Takeoff Minimums and ODP as modified by FDC permanent NOTAMs.

The SIAPs and Takeoff Minimums and ODPs, as modified by FDC permanent NOTAM, and contained in this amendment are based on criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these changes to SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for these SIAP and Takeoff Minimums and ODP amendments require making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making these SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC, on July 4, 2025.

Romana B. Wolf,

Manager, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Office of Safety Standards, Flight Standards Service, Aviation Safety, Federal Aviation Administration.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, 14 CFR part 97 is amended by amending Standard Instrument Approach Procedures and Takeoff Minimums and ODPs, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, Identified as follows:

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2025–0647]

Special Local Regulation; Charlevoix Venetian Night Boat Parade; Charlevoix, MI

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the Charlevoix Venetian Night Boat Parade; Charlevoix, MI special local regulation on the U.S. navigable waters of Round Lake, Charlevoix, MI on July 26, 2025. Enforcement of this regulation is necessary to protect the safety of life and property on these navigable waters prior to, during, and immediately after the Charlevoix Venetian Night Boat Parade. During the enforcement period listed below, entry into, transiting, or anchoring within the regulated area is prohibited unless authorized by the Captain of the Port Northern Great Lakes or a designated representative.

DATES: The regulations in 33 CFR 100.908 will be enforced from 9:30 p.m. to 11 p.m. on July 26, 2025.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email LT Rebecca Simpson, Chief of Waterways Management, division, U.S. Coast Guard; telephone 906–635–3223, email *ssmprevention@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the established special local regulation in 33 CFR 100.908 for the Charlevoix Venetian Night Boat Parade; Charlevoix, MI from 9:30 p.m. to 11 p.m. on July 26, 2025.

In accordance with the requirements in § 100.908, entry into, transiting, or anchoring within the regulated area is prohibited unless authorized by the Captain of the Port (COTP) Northern Great Lakes or a designated representative. Those seeking permission to enter the regulated area may request permission from the COTP Northern Great Lakes or a designated representative. Vessels and persons granted permission to enter the regulated area must obey all lawful orders or directions of the Captain of the Port Northern Great Lakes or a designated representative. While within the regulated area, all vessels must operate at the minimum speed necessary to maintain a safe course.

In addition to this notice of enforcement in the **Federal Register**, the Coast Guard will provide the maritime community with advance notification of this enforcement period via Broadcast Notice to Mariners or Local Notice to Mariners. If the COTP Northern Great Lakes determines that the regulated area need not be enforced for the full duration stated in this notice, he or she may suspend such enforcement and notify the public of the suspension via Broadcast Notice to Mariners and grant general permission to enter the regulated area.

Dated: July 11, 2025.

J.R. Bendle,

Captain, U.S. Coast Guard, Captain of the Port Northern Great Lakes.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2025–0657]

RIN 1625–AA00

Safety Zone; Little Potato Slough, Stockton, CA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters within a 100-yard radius of the vessels and machinery conducting operations at the site of the vessel CHALEUR in Little Potato Slough near Stockton, CA. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by salvage operations. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port, Sector San Francisco.

DATES: This rule is effective without actual notice from July 16, 2025 through 11 p.m. August 14, 2025. For the purposes of enforcement, actual notice will be used from 1 a.m. July 14, 2025 until July 16, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2025–0657 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email Ensign Saralyn Young, U.S. Coast Guard Sector San Francisco, Waterways Management; telephone 415–399–7443, email *SFWaterways@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule under the authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the vessel CHALEUR is submerged within Little Potato Slough and the Coast Guard, which must oversee salvage operations, did not receive final details of the plan until July 8, 2025. It is impracticable to publish an NPRM because we must establish this safety zone by July 14, 2025.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule is impracticable because prompt action is needed to respond to the potential safety hazards associated with the salvage operations to begin on July 14, 2025.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port (COTP) San Francisco has determined that potential hazards associated with the salvage operations of the vessel CHALEUR beginning July 14, 2025, will be a safety concern for anyone within a 100-yard radius of the barges and vessels in Little Potato Slough. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone during salvage operations.

IV. Discussion of the Rule

This rule establishes a safety zone from 1 a.m. on July 14, 2025, until 11 p.m. on August 14, 2025. The safety zone will cover all navigable waters within 100 yards of vessels and machinery being used in the salvage operations of the vessel CHALEUR. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters while the salvage operations are taking place. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

The Office of Management and Budget (OMB) has not designated this rule a ''significant regulatory action,'' under section 3(f) of Executive Order 12866. Accordingly, OMB has not reviewed it.

This regulatory action determination is based on the size, location, and duration of the safety zone. The amount of vessel traffic through Little Potato Slough during the duration of the zone is not anticipated to interfere with salvage operations. The Coast Guard will issue a Broadcast Notice to Mariners about the safety zone to inform the public.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule will affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit entry within 100 yards of vessels and barges being used in the salvage operations of the vessel CHALEUR. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping

requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.4.

■ 2. Add § 165.T11–210 to read as follows:

§ 165.T11–210 Safety Zone; Little Potato Slough, Stockton, CA.

(a) *Location.* The following area is a safety zone: All waters of Little Potato Slough, from surface to bottom, within 100 yards of the vessels involved in the salvage operations of the vessel CHALEUR at coordinates 38°3′29″ N, 121°30′3″ W.

(b) *Definitions.* As used in the section, ''designated representative'' means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel, or a Federal, State, or local officer designated by or assisting the Captain of the Port (COTP) San Francisco in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) Vessel operators desiring to enter or operate within the safety zone must contact the COTP or the COTP's designated representative to obtain permission to do so. Vessel operators given permission to enter the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative. Persons and vessels may request to enter the safety zone through the 24-hour Command Center at telephone (415) 399–3547.

(d) *Enforcement period.* This section will be enforced from 1 a.m. on July 14, 2025, through 11 p.m. on August 14, 2025.

Dated: July 11, 2025.

Jarod S. Toczko,

Captain, U.S. Coast Guard, Acting Captain of the Port Sector San Francisco.

[FR Doc. 2025–13293 Filed 7–15–25; 8:45 am]

BILLING CODE 9110–04–P

Coast Guard

33 CFR Part 165

[Docket Number USCG–2025–0221]

RIN 1625–AA00

Safety Zone; Rainy Lake, City of Ranier, MN

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain waters of Rainy Lake. This action is necessary to protect personnel, vessels, and the marine environment from potential hazards on these navigable waters near Ranier Beach Park, Ranier, MN, during a fireworks display on August 9, 2025. This proposed rulemaking would prohibit persons and vessels from being in the safety zone unless authorized by the Captain of the Port Duluth or a designated representative.

DATES: This rule is effective from 8 p.m. through 11 p.m. on August 9, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2025–0221 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email LT Zachary Fedak, Waterways Management, Marine Safety Unit Duluth, U.S. Coast Guard; telephone 218–522–0708, email *Zachary.A.Fedak@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On January 6, 2025, an organization notified the Coast Guard that from 10 p.m. to 10:30 p.m. on August 9, 2025, it will be conducting a fireworks display launched from a barge in Rainy Lake approximately 250 yards northwest of Ranier Beach Park in Ranier, MN. In response, on June 4, 2025, the Coast Guard published a notice of proposed rulemaking (NPRM) titled Safety Zone; Rainy Lake, City of Ranier, MN (90 FR 23651). There we stated why we issued the NPRM and invited comments on our proposed regulatory action related to this fireworks display. During the comment period that ended July 7, 2025, we received no comments.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule is impracticable and contrary to the public interest; this regulatory action is necessary to ensure the safety of participants, spectators, and waterway users during the scheduled fireworks display.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under the authority in 46 U.S.C. 70034. The Captain of the Port Duluth (COTP) has determined that potential hazards associated with the fireworks to be used in this August 9, 2025, display will be a safety concern for anyone within a 200-yard radius of the barge. The purpose of this rule is to ensure safety of vessels and the navigable waters in the safety zone before, during, and after the scheduled event.

IV. Discussion of Comments, Changes, and the Rule

As noted above, we received no comments on our NPRM published June 4, 2025. There are no changes in the regulatory text of this rule from the proposed rule in the NPRM.

This rule establishes a safety zone from 8 p.m. through 11 p.m. on August 9, 2025. The safety zone will cover all navigable waters within 200 yards of a barge in Rainy Lake located approximately 250 yards northwest of Ranier Beach Park in Ranier, MN. The duration of the zone is intended to ensure the safety of vessels and these navigable waters before, during, and after the scheduled 10 p.m. to 10:30 p.m. fireworks display. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory

Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

The Office of Management and Budget (OMB) has not designated this rule a ''significant regulatory action,'' under section 3(f) of Executive Order 12866. Accordingly, OMB has not reviewed it.

This regulatory action determination is based on the size, location, duration and time of day of the regulated area. Vessel traffic would be able to safely transit around this safety zone which would impact a small, designated area of Ranier Lake for 3 hours during the evening when vessel traffic is normally low. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule will affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 3 hours that would prohibit entry within 200 yards of a fireworks barge. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

List of Subjects in 33 CFR Part 165

Harbors; Marine safety; Navigation (water); Reporting and recordkeeping requirements; Security measures; Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.4.

■ 2. Add § 165.T09–0221 to read as follows:

§ 165.T09–0221 Safety Zone; Rainy Lake, City of Ranier, MN.

(a) *Location.* The following area is a safety zone: All navigable waters of Rainy Lake, from surface to bottom, within a 200-yard radius of the firework barge to be positioned at 48°37′04″ N, 093°20′52″ W. These coordinates are based on World Geodetic System 84.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Duluth (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this

section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF Channel 16. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) *Enforcement period.* This section will be enforced from 8 p.m. to 11 p.m. on August 9, 2025.

John P. Botti,

Commander, U.S. Coast Guard, Captain of the Port Marine Safety Unit Duluth.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2025–0589]

Safety Zone; Fireworks Displays Within the East Coast Guard District; The Wharf, Washington, DC

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a safety zone for a fireworks display at ''The Wharf DC,'' in Washington, DC, to provide for the safety of life on navigable waterways during this event. Our regulation, ''Safety Zones; Fireworks Displays within the East Coast Guard District,'' identifies the precise location. During the enforcement period, vessels may not enter, remain in, or transit through the safety zone unless authorized to do so by the COTP or his representative, and vessels in the vicinity must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

DATES: The regulation in 33 CFR 165.506 will be enforced for the location identified in line no. 1 of table 2 to 33 CFR 165.506(h)(2) from 8:00 p.m. until 10 p.m., on July 20, 2025.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LCDR Kate M. Newkirk, Sector Maryland-NCR, Waterways Management Division, U.S. Coast Guard: telephone 410–576–2596, email *MDNCRMarineEvents@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zone regulation for a fireworks display at The Wharf DC from 8 p.m. to 10 p.m. on July 20, 2025. This action is being taken to provide for the safety of life on navigable waterways during this event. Our regulation, ''Safety Zones; Fireworks Displays within the East Coast Guard District,'' § 165.506, specifies the location of the safety zone for the fireworks show, which encompasses portions of the Washington Channel in the Upper Potomac River. As reflected in 33 CFR 165.23, vessels in the vicinity of the safety zone may not enter, remain in, or transit through the safety zone during the enforcement period unless authorized to do so by the COTP or his representative, and they must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners and marine information broadcasts.

Dated: July 10, 2025.

Patrick C. Burkett,

Captain, U.S. Coast Guard, Captain of the Port, Sector Maryland-National Capital Region.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2024–0542; FRL–12793–03–R5]

Air Plan Approval; Ohio; Second Maintenance Plan for the Ohio Portion of the Campbell-Clermont, KY-OH SO_2 Maintenance Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving, under the Clean Air Act (CAA), the second 10-year maintenance plan submitted to EPA on November 7, 2024, by the Ohio Environmental Protection Agency (Ohio EPA) for the Ohio portion of the Campbell-Clermont Counties, Kentucky-Ohio maintenance area. The Ohio portion of this area consists of Pierce Township in Clermont County, Ohio. The plan addresses the second 10-year maintenance period for the 2010 sulfur dioxide (SO_2) National Ambient Air Quality Standards (NAAQS). EPA is approving Ohio EPA's submittal for the area because it provides for the continued maintenance of the 2010 SO_2 NAAQS through the end of the second 10-year portion of the maintenance period.

DATES: This direct final rule will be effective September 15, 2025, unless EPA receives adverse comments by August 15, 2025. If adverse comments are received, EPA will publish a timely withdrawal of the direct final rule in the **Federal Register** informing the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2024–0542 at *https://www.regulations.gov,* or via email to *arra.sarah@epa.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI, PBI, or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Cecilia Magos, Air and Radiation Division (AR18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–7336, *magos.cecilia@epa.gov.* The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

I. Background

On June 22, 2010 (75 FR 35520), EPA promulgated a new 1-hour primary SO_2 NAAQS of 75 parts per billion (ppb). EPA promulgated designations for this standard in four rounds. On August 5, 2013 (78 FR 47191), EPA designated the Campbell-Clermont Counties, KY-OH area as nonattainment due to the measured violations of the 2010 SO_2 NAAQS. The Ohio portion of the nonattainment area consists of Pierce Township in Clermont County, Ohio. EPA conducted designations for the 2010 SO_2 NAAQS based on monitoring data from the years 2009 to 2011 from the nearby SO_2 monitor in Highland Heights, Campbell County, Kentucky (AQS Site ID: 21–037–3002, coordinates 39.021881, −84.474450).

By April 5, 2015, Ohio and Kentucky were both required to submit a nonattainment State Implementation Plan (SIP) that met the requirements of CAA sections 172(c) and 191–192, and provided for attainment of the 2010 primary SO_2 NAAQS as expeditiously as practicable, but no later than October 4, 2018. Air analysis conducted by Ohio EPA in Clermont County, Ohio found one source, the Walter C. Beckjord plant (Beckjord plant), to be the main contributor of SO_2 monitored violations in the nonattainment area. The 2014 shutdown and later demolition of the Beckjord plant resulted in a significant, permanent, and enforceable reduction in SO_2 emissions affecting the nonattainment area. The monitored SO_2 design value at the nearby Highland Heights monitor for 2012 to 2014 was 72 parts per billion (ppb), below the 2010 SO_2 NAAQS. As a result, Ohio EPA chose to submit a redesignation and maintenance plan request for the Pierce Township, Ohio portion of the Campbell-Clermont, KY-OH nonattainment area to EPA on August 11, 2015. The submission included a plan to provide for maintenance of the 2010 SO_2 NAAQS in the area for the first 10-year period.

On November 21, 2016 (81 FR 83158), EPA redesignated the Ohio portion of the Campbell-Clermont, KY-OH 2010 SO_2 nonattainment area to attainment and approved the associated maintenance plan into the Ohio SIP. The purpose of Ohio EPA's November 7, 2024, submittal is to fulfill the second 10-year planning requirement of CAA section 175A(b) to ensure compliance with the 2010 SO_2 NAAQS through 2036.

II. EPA's Evaluation of the Second Maintenance Plan

Section 175A of the CAA sets forth the elements of a maintenance plan for areas seeking redesignation from nonattainment to attainment. Under section 175A, a State must submit a revision to the SIP that demonstrates the applicable NAAQS will continue to attain for at least 10 years after an area is redesignated to attainment. Section 175A also requires that eight years after the redesignation, the State must submit a revised maintenance plan demonstrating that attainment will continue to be maintained for the 10 years following the initial 10-year period. To address the possibility of future NAAQS violations, the maintenance plan must contain contingency measures deemed necessary to ensure prompt corrections of any future NAAQS violations.

EPA's 1992 Calcagni Memo provides further guidance on the content and requirements of an approvable maintenance plan.[1] Specifically, the maintenance plan should address five requirements: (1) an attainment emissions inventory, (2) a maintenance demonstration, (3) continued air quality monitoring, (4) verification of continued attainment, and (5) contingency measures.

Ohio EPA's November 7, 2024, second 10-year maintenance plan request outlines a plan for continued maintenance of the 2010 SO_2 NAAQS for the Pierce Township, Ohio portion of the Campbell-Clermont, KY-OH maintenance area through 2036. EPA is approving Ohio EPA's November 7, 2024, submittal, which contains Ohio EPA's maintenance plan and all the necessary components, as a revision to the Ohio SIP.

A. Attainment Emissions Inventory

For maintenance plans, a State should develop a comprehensive and accurate inventory of actual emissions for an attainment year that identifies the level of emissions in an area sufficient to maintain the NAAQS. Ohio EPA submitted an attainment emission inventory which addresses the Campbell-Clermont, KY-OH maintenance area's base year emissions and projections of future emissions for point, mobile sources, and other area sources.

Ohio EPA is designating 2016 as its base year inventory for the second 10-year maintenance period. The base year inventory of 2016 represents a comprehensive, accurate, and current inventory of actual emissions that satisfies section 172(c)(3), due to the permanent shutdown of the Beckjord plant in 2014, which led to significant, permanent and enforceable SO_2 emissions reductions in the area. EPA also approved Ohio EPA's redesignation and first maintenance plan in 2016 (81 FR 83158, November 21, 2016). EPA finds using 2016 as the base year to be appropriate for the second 10-year period of the second maintenance plan submittal. The total SO_2 emissions for the Ohio portion of the Campbell-Clermont, KY-OH maintenance area for the 2014 attainment year were 32,610.56 tons per year (tpy). The total SO_2 emissions in the Campbell-Clermont, KY-OH maintenance area for the 2016 base year were 33.08 tpy, with 10.18 tpy from Ohio sources as shown in Table 1 below.

TABLE 1—2016 BASE YEAR SO_2 EMISSIONS FROM THE CAMPBELL-CLERMONT, KY-OH AREA

[tpy]

	EGU point	Non-EGU	Non-road	Other	On-road	Total
Ohio	0.00	0.10	2.83	6.31	0.94	10.18
Kentucky	0.00	2.06	0.85	15.46	4.53	22.90
Area Total	0.00	2.16	3.68	21.77	5.47	33.08

[1] Calcagni, John, Director, Air Quality Management Division, EPA Office of Air Quality Planning and Standards, ''Procedures for Processing Requests to Redesignate Areas to Attainment,'' September 4, 1992. (Calcagni Memo)

B. Maintenance Demonstration

Ohio EPA is demonstrating maintenance through 2036 by showing that future emissions of SO_2 for the Campbell-Clermont, KY-OH area remain at or below attainment year emission levels. For the second maintenance period, 2036 is an appropriate year because it is 10 years beyond the first 10-year maintenance period. Ohio EPA projected the 2036 emissions inventory for the Campbell-Clermont, KY-OH on-road, non-road, and other source SO_2 emissions to 2036 (using 2032 as a surrogate) from the EPA's 2016 version 2 emissions modeling platform (2016 v2 EMP).[2] As emissions have been shown to be decreasing over time, the emissions for 2036 were assumed to be the same as 2032, which is a conservative assumption. Annual emissions data are derived from the 2017 National Emissions Inventory (NEI). EPA recognizes that the 2016v2 EMP was the most recently available emissions modeling platform available at the time of Ohio EPA's SIP development that included projected SO_2 emissions.[3] Consistent with the first 10-year maintenance plan, biogenic emissions are negligible and not included in the inventory summaries.

The first maintenance plan for the area did not establish emission budgets, since the area was first designated nonattainment based on emissions from nearby sources that have since shutdown.[4] Additionally, Ohio EPA conducted a review of U.S. census data to indicate the stagnant population growth in the Pierce Township area and project the 2036 population size. The area saw a decrease in population growth from 14.5% in 2000 to 2010 to 4.7% in 2010 to 2020. Further, according to Ohio EPA, the calculated expected population growth in the first 10-year maintenance plan submittal for the year 2020 was 15,146 for the Pierce Township area.[5] The 2020 U.S. Census data confirmed the actual 2020 population size to be 15,096.[6] Based on limited population growth and the permanent shutdown of sources that had contributed to the nonattainment status of the area, EPA did not consider an updated emissions budget to be necessary as part of the second maintenance plan submittal for the Campbell-Clermont, KY-OH area.

The 2036 second 10-year maintenance period emissions inventory for the Campbell-Clermont, KY-OH maintenance area is summarized in Table 2 below. The maintenance demonstration for the Campbell-Clermont, KY-OH area shows maintenance of the 2010 SO_2 NAAQS by providing emissions information to support the demonstration that future emissions of SO_2 will remain at or below the 2016 base year levels and 2014 attainment year levels, taking into account future source growth and implementation of future controls. Table 2 shows total SO_2 emissions in the Campbell-Clermont, KY-OH area are expected to decrease by 4.31 tpy between 2016 and 2036.

TABLE 2—2016 AND 2036 SECOND MAINTENANCE PERIOD COMBINED CAMPBELL-CLERMONT, KY-OH AREA SO_2 EMISSION INVENTORIES

C. Monitoring Network

The monitoring data for the Campbell-Clermont, KY-OH area is based on air quality data collected from the monitor located in Highland Heights, Campbell County, Kentucky. Monitoring data for the area from the Highland Heights monitor for the Campbell-Clermont, KY-OH area has been certified and recorded in EPA's Air Quality System database. Ohio EPA and Kentucky Division of Air Quality (DAQ) have committed to continue monitoring for SO_2 in the Campbell-Clermont, KY-OH area. Table 3 shows the 99th percentile results of the Campbell-Clermont area Highland Heights monitor, complete, quality-assured data. The overall 2021–2023 design value for the Campbell-Clermont, KY-OH area is 8 ppb, remaining well below the 2010 SO_2 NAAQS level of 75 ppb. For every 3-year period since the 2012–2014 design value period, the Highland Heights monitor has had a design value below the 2010 SO_2 NAAQS.

[2] The inventory documentation for the modeling platform can be found here: *https://www.epa.gov/air-emissions-modeling/2016v2-platform.*

[3] EPA released the 2022v1 Emissions Modeling Platform on October 21, 2024, which included analytic year SO_2 emissions inventories for the years 2026, 2032, and 2038. *See https://www.epa.gov/air-emissions-modeling/2022v1-emissions-modeling-platform.*

TABLE 3—MONITORING DATA FOR THE CAMPBELL-CLERMONT, KY-OH MAINTENANCE AREA

AQS site	Location	Year (ppb)							
		2016	2017	2018	2019	2020	2021	2022	2023
21–037–3002	Campbell County, KY	12	16	9	8	10	9	9.9	4.8

Ohio EPA has committed to consult with Kentucky DAQ to continue the operation of an appropriate monitoring network. Kentucky DAQ is committed to monitoring SO_2 levels according to an EPA approved monitoring plan, as required to ensure maintenance of the 2010 SO_2 NAAQS. Should changes in the location of an SO_2 monitor become necessary, Kentucky DAQ has assured Ohio that it will consult with EPA prior to making changes to ensure the adequacy of the monitoring network and ensure compliance with 40 CFR part 58 and all other federal requirements. Kentucky DAQ has also assured Ohio EPA it will remain obligated to meet monitoring requirements and continue to qualify and assure monitoring data in accordance with 40 CFR part 58, and to enter all data into the Air Quality System (AQS) in accordance with Federal guidelines.

D. Verification of Continued Attainment

The 2014 SO_2 Guidance states each air agency should ensure that it has the legal authority to implement and enforce all measures necessary to attain and maintain the 2010 SO_2 NAAQS. The air agency's submittal should include how it will track progress of the maintenance plan for the area either through air quality monitoring or modeling.

Ohio EPA has the legal authority to enforce and implement the requirements of the maintenance plan for the Ohio portion of the Campbell-Clermont, KY-OH area. This includes the authority to adopt, implement, and enforce any subsequent emission control measures determined to be necessary to correct future SO_2 attainment problems. Also, Ohio EPA will continue to operate an approved SO_2 monitoring network in the Campbell-Clermont, KY-OH area. There are no plans to discontinue operation, relocate, or otherwise change the existing SO_2 monitoring network other than through revisions in the network approved by EPA.

To track future levels of emissions, Ohio EPA will continue to submit air emissions information annually in accordance with EPA's Air Emissions Reporting Rule (AERR) and submit to EPA updated emission inventories for all source categories at least once every three years, consistent with the requirements of 40 CFR part 51, subpart A, and in 40 CFR 51.122.

E. Contingency Plan

Section 175A of the CAA requires that the State adopt a maintenance plan, as a SIP revision, that includes such contingency measures as EPA deems necessary to ensure that the State will promptly correct a violation of the NAAQS that occurs after redesignation of the area to attainment of the NAAQS. The maintenance plan must identify: the contingency measures to be considered and, if needed for maintenance, adopted and implemented; a schedule and procedure for adoption and implementation; and, a timeframe for action by the State. The State should also identify specific indicators to be used to determine when the contingency measures need to be considered, adopted, and implemented. The maintenance plan must include a commitment that the State will implement all measures with respect to the control of the pollutant that were contained in the SIP before redesignation of the area to attainment in accordance with section 175A(d) of the CAA.

Ohio EPA has an active enforcement program to address any future violations and commits to continue operating a comprehensive program to identify violations of the 2010 SO_2 NAAQS. This includes aggressive follow-up for compliance and enforcement, and a commitment to implement necessary corrective actions in the event of a violation. Furthermore, if a new measure or control is already promulgated and scheduled to be implemented at the Federal or State level, and Ohio EPA determines it to be sufficient to address a 2010 SO_2 violation, local measures may be unnecessary. Ohio EPA will submit to EPA an analysis demonstrating the proposed measures are adequate to return the area to attainment.

Fully validated and quality assured SO_2 monitoring data will serve as the primary trigger for any responses to prevent or correct a NAAQS violation in the area. Ohio EPA has established both warning and action level responses, each with specific triggering indicators.

A warning level response will occur when the annual average 99th percentile daily maximum 1-hour SO_2 concentration of 79 ppb occurs in the area in a single calendar year. A warning level response will prompt a study to determine if the trigger indicates a trend toward increasing SO_2 concentrations in the Campbell-Clermont, KY-OH area. The study will help examine if there is a trend towards higher SO_2 values or emissions appear to be increasing and determine the control measures needed to reverse the trend. The implementation of controls will take place as expeditiously as possible but no later than 12 months from the conclusion of the most recent calendar year.

An action level response will occur when the two-year average of the 99th percentile daily maximum 1-hour SO_2 concentration of 76 ppb or greater occurs in the area. Additionally, a violation of the standard, where the three-year average of the 99th percentile daily maximum 1-hour value of SO_2 concentration is 75 ppb or higher, will also prompt an action level response. This response will require Ohio EPA, in conjunction with the metropolitan planning organization or regional council of governments, to determine additional control measures needed to ensure future attainment of the 2010 SO_2 NAAQS. Ohio will select measures that can be implemented within 18 months from the close of the calendar year that prompted an action level response. Ohio may also determine that significant new regulations not currently included as part of the maintenance provisions will be implemented in a timely manner and constitute an action level response.

Ohio EPA has specified the selected contingency measures will be adopted from a comprehensive list of measures deemed appropriate and effective at the time the selection is made. This list of measures will be based on cost-effectiveness, emission reduction potential, economic and social considerations or other factors deemed appropriate by Ohio EPA.

III. What action is EPA taking?

EPA is approving the second 10-year period SO_2 maintenance plan for the Pierce Township, Ohio portion of the

Campbell-Clermont counties, KY-OH 2010 SO_2 NAAQS maintenance area, submitted by Ohio EPA on November 7, 2024. EPA's review of the air quality for the maintenance area indicates continued attainment well below the level of the 2010 SO_2 NAAQS through 2036. EPA's approval of the maintenance plan will satisfy CAA section 175A requirements for the second 10-year maintenance period for the Ohio portion of the Campbell-Clermont, KY-OH area.

We are publishing this action without prior proposal because we view this as a noncontroversial amendment and anticipate no adverse comments. However, in the proposed rules section of this **Federal Register** publication, we are publishing a separate document that will serve as the proposal to approve the state plan if relevant adverse written comments are filed. This rule will be effective September 15, 2025 without further notice unless we receive relevant adverse written comments by August 15, 2025. If we receive such comments, we will withdraw this action before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on the proposed action. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. If we do not receive any comments, this action will be effective September 15, 2025.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rulemaking does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements, Sulfur oxides.

Dated: July 1, 2025.

Cheryl Newton,

Acting Regional Administrator, Region 5.

For the reasons stated in the preamble, title 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In § 52.1870, the table in paragraph (e) is amended under ''Summary of Criteria Pollutant Maintenance Plan'' by revising the entry for ''SO_2 (2010)'' to read as follows:

§ 52.1870 Identification of plan.

[EPA–R09–OAR–2025–0268; FRL–12868–02–R9]

Air Plan Approval; Guam; Base Year Emissions Inventory for the 2010 1-Hour Sulfur Dioxide National Ambient Air Quality Standard for the Piti-Cabras Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking direct final action to approve a revision to Guam's State Implementation Plan (SIP) under section 110(k)(3) of the Clean Air Act (CAA or ''the Act''). This revision concerns the base year emissions inventory for the Piti-Cabras, Guam sulfur dioxide (SO_2) nonattainment area (''Piti-Cabras area'' or NAA) for the 2010 1-hour SO_2 National Ambient Air Quality Standard (NAAQS, ''standard,'' or ''2010 SO_2 NAAQS'').

DATES: This rule is effective October 14, 2025 without further notice, unless the EPA receives adverse comments by August 15, 2025. If we receive such comments, we will publish a timely withdrawal in the **Federal Register** to notify the public that this direct final rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2025–0268 at *https://www.regulations.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Khoi Nguyen, Geographic Strategies and Modeling Section, Planning & Analysis Branch, Air & Radiation Division, EPA Region IX, 75 Hawthorne Street, San Francisco, CA 94105; telephone number: 415–947–4120; email address: *Nguyen.Khoi@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA.

I. Background
II. Guam EPA's Base Year Emissions Inventory for the Piti-Cabras Nonattainment Area
III. The EPA's Evaluation
IV. Public Comment and Final Action
V. Statutory and Executive Order Reviews

I. Background

On June 22, 2010, the EPA published in the **Federal Register** a strengthened, primary 1-hour SO_2 NAAQS, establishing a new standard at a level of 75 parts per billion (ppb), based on the 3-year average of the annual 99th percentile of daily maximum 1-hour average concentrations of SO_2.[1] Following promulgation of a new or revised NAAQS, the EPA is required to designate all areas of the country as either ''attainment,'' ''nonattainment,'' or ''unclassifiable.'' [2] On December 21, 2017, the EPA signed a notice designating six areas in three States and two territories as nonattainment in the third round of SO_2 designations, effective April 9, 2018.[3] With that action, the EPA designated as nonattainment the portion of Guam within a 6.074-km radius centered on UTM Easting 249,601.60 m, and UTM Northing 1,489,602.00 m (UTM Zone 55N).[4]

The Piti-Cabras area is located on the western side of the island of Guam, centered on the Piti and Cabras power plants, which are both owned by Guam Power Authority (GPA). The Piti facility (also referred to as Marianas Energy Company (MEC) by Guam) consists of two baseload electric generating units (8 and 9). Piti 8 and 9 are two 45.2 megawatt (MW) diesel engines. The Cabras facility consists of two baseload electric generating units (1 and 2) that

[1] On June 2, 2010, the EPA signed the final rule titled, ''Primary National Ambient Air Quality Standard for Sulfur Dioxide,'' 75 FR 35520 (June 22, 2010), codified at 40 CFR part 50.

[2] CAA section 107(d)(1).

[3] 83 FR 1098 (January 9, 2018).

[4] For designations technical discussions, see the Technical Support Document, Chapter 11: Intended Round 3 Area Designations for the 2010 1-Hour SO_2 Primary National Ambient Air Quality Standard for Guam. EPA Office of Air and Radiation, December 2017, Section 3, 6–26, available in the docket for this action.

are 66 MW units. These facilities are the primary emitters of SO_2 in the area. Nearby, the Taiwan Electrical and Mechanical Engineering Services (TEMES) power plant (also referred to as ''Piti 7''),[5] and commercial and United States Navy (''Navy'') marine vessel ports are also significant emitters of SO_2. No other sources on or beyond the island were determined to have the potential to cause or contribute to significant impacts within the area of analysis. The Modeling Technical Support Document (TSD) included in the docket for this action accompanied a recent proposed Clean Data Determination for Piti-Cabras and contains more information on the facilities and emissions.[6]

Section 191 of the CAA directs states containing an area designated nonattainment for the 2010 SO_2 NAAQS to develop and submit a nonattainment area SIP to the EPA within 18 months of the effective date of an area's designation as nonattainment. The nonattainment area SIP revision (also referred to as an attainment plan) must meet the requirements of subparts l and 5 of part D, of Title 1 of the CAA, 42 U.S.C. 7401 *et seq.,* and provide for attainment of the NAAQS by the applicable statutory attainment date.[7] To be approved by the EPA, under section 192(a), these nonattainment area SIPs must provide for attainment of the NAAQS as expeditiously as practicable, but no later than five years from the effective date of designation.

The Guam Environmental Protection Agency (Guam EPA) was required to prepare and submit to the EPA a nonattainment area SIP by October 9, 2019, to bring the area into attainment by the attainment date of April 9, 2023. However, Guam EPA failed to submit a complete attainment plan for the area by the October 9, 2019 deadline. On November 3, 2020, the EPA issued a finding that Guam EPA failed to submit the required attainment plan for the Piti-Cabras area.[8] Pursuant to section 179 of the CAA and 40 CFR 52.31, the November 3, 2020 finding triggered sanctions clocks. More specifically, under 40 CFR 52.31, the offset sanction in CAA section 179(b)(2) would be imposed 18 months after December 3, 2020 effective date of the finding, and the highway funding sanction in CAA section 179(b)(1) would be imposed six months after the offset sanction was imposed, unless the EPA determined that a subsequent SIP submission corrected the identified deficiencies before the applicable deadlines.[9]

The finding also started a two-year clock by which the EPA is required under CAA section 110(c) to promulgate a Federal Implementation Plan (FIP) for the area, unless Guam EPA submits, and the EPA approves, a SIP for the area before December 3, 2022.

On December 19, 2024, the EPA issued a finding that the Piti-Cabras nonattainment area failed to attain the 2010 SO_2 NAAQS by the statutory attainment date of April 9, 2023.[10] This finding triggered a requirement for Guam EPA to submit a plan demonstrating attainment of the 2010 SO_2 NAAQS as expeditiously as practicable, but no later than December 19, 2029.[11] In that action, the EPA noted that the Guam's submission of a complete SO_2 attainment plan for the new attainment date in response to this finding of failure to attain would also address the Territory's existing obligations to submit an attainment plan for the 2010 SO_2 NAAQS.

On June 20, 2025, the EPA proposed to determine that the Piti-Cabras area is attaining the 2010 SO_2 NAAQS and qualifies for a Clean Data Determination (CDD) under the EPA's Clean Data Policy.[12] If the EPA finalizes the CDD, it would suspend the requirements for the Piti-Cabras area to submit an attainment demonstration and certain other associated nonattainment planning requirements for so long as the Piti-Cabras area continues to attain the 2010 SO_2 NAAQS. A final CDD would also suspend the EPA's obligation to promulgate a FIP and the sanctions clocks associated with the finding of failure to submit issued on November 3, 2020,[13] with regard to the attainment demonstration, demonstrations for reasonably available control measures and reasonably available control technology (RACM/RACT), reasonable further progress (RFP), emissions limitations and control measures as necessary to provide for attainment, and contingency measures. Guam EPA would still be required to submit an emissions inventory required by CAA section 172(c)(3) and a nonattainment new source review (NNSR) program required by CAA section 172(c)(5).[14]

II. Guam EPA's Base Year Emissions Inventory for the Piti-Cabras Nonattainment Area

Guam EPA submitted the emissions inventory element to the EPA on June 6, 2025.[15] The submittal is titled ''Guam Environmental Protection Agency Piti-Cabras SO_2 State Implementation Plan Emission Inventory Technical Support Document'' (''EI submittal''). In the EI submittal, Guam EPA reviewed and compiled actual emissions from sources of SO_2 in the Piti-Cabras area for the base year emissions inventory requirement. Guam's 2020 base year SO_2 emissions inventory for the Piti-Cabras area, by emission source category, is contained in Table 1 in this document.

Guam EPA estimated SO_2 emissions for point and non-point sources. The point source category was the largest SO_2 emissions source category. In 2020, GPA operated six energy generation units (EGUs) in the NAA, which contributed the majority of point source emissions. Additional point sources consisted of generators and boilers operated by the Department of Defense (DoD)/United States Navy (US Navy). SO_2 emissions from back-up generators operated by other commercial entities were assumed to be negligible due to their likely limited run hours and because, since 2011, Guam territorial law has required all diesel imported for distribution and sale to be ultra low sulfur diesel.[16] In the non-point source categories, port emissions were a significant contributor. The port of Guam receives vessel calls from both commercial and US Navy ships. Accordingly, Guam EPA estimated marine SO_2 emissions from commercial and U.S. Navy ships hoteling in the port. Guam EPA was unable to estimate emissions from other activities at the port, other non-point sources, and on-road and non-road mobile sources due to lack of data. However, we find that the emissions from these sources would have a negligible impact on the total SO_2 emissions in the NAA because of the ultra low sulfur diesel requirement. While exceptions were provided for certain EGUs and U.S. Navy sources, these sources are already reflected in the emissions inventory. In particular, the GPA EGUs are the largest emissions

[5] Piti/TEMES 7 is a 40 MW combustion turbine and is also owned by GPA.

[13] 85 FR 69504.

[14] Guam EPA submitted a SIP revision addressing NNSR on March 13, 2025. The EPA found this submittal complete and proposed to approve it into the SIP on June 18, 2025, 90 FR 25984.

[15] Letter dated June 6, 2025, from Michelle C. R. Lastimoza, Administrator, Guam EPA, to Josh F. W. Cook, Regional Administrator, U.S. Environmental Protection Agency Region 9 (submitted electronically June 6, 2025).

[16] 10 GCA section 49119.

source in the NAA, contributing 98 percent of the estimated annual total SO_2 emissions in 2020.

TABLE 1—ANNUAL SO_2 EMISSIONS IN THE PITI-CABRAS AREA IN 2020

Source category	Source description	Estimated SO_2 emissions 2020 (tons/year)
Point Sources	GPA EGUs	12,274.54
	DoD EGUs	0.0264
	DoD Boilers	9.04
Non-point Sources	Marine Sources	234.31
	Total	12,517.92

Source: EI submittal, Table 8.

All point source emissions were calculated using the EPA's AP–42 emissions factors [17] together with the sulfur content of the fuel, as determined by shipment records, and 2020 annual fuel consumption records (Table 2). For non-point sources, marine emissions from hoteling vessels were estimated using port of Guam annual vessel call reports and EPA emissions factors.[18]

TABLE 2—ANNUAL SO_2 EMISSIONS INVENTORY FOR GPA POWER PLANTS IN THE PITI-CABRAS AREA IN 2020

Guam power authority plant	Nominal power (megawatts)	Fuel sulfur content ($\%_{weight/weight}$)	SO_2 emissions 2020 (tons/year)
Piti 8	44.2	1.74 or 0.99	2791.74
Piti 9	44.2	1.74 or 0.99	2666.84
Cabras 1	66	1.74 or 0.99	3389.2
Cabras 2	66	1.74 or 0.99	3426.55
(TEMES) Piti 7	40	0.001	0.11
Tenjo Vista	26.4	0.001	0.1036
Total	286.80		12,274.54

Source: EI submittal, Table 1.

III. The EPA's Evaluation

We have reviewed Guam EPA's public notice and comment procedures in the EI submittal and find that Guam EPA's EI submittal meets the completeness criteria in 40 CFR part 51 Appendix V, which must be met before formal EPA review.

The EPA's 2014 SO_2 Nonattainment Guidance further describes the statutory elements comprising an SO_2 attainment plan. These requirements include submission of a comprehensive, accurate and current base year emissions inventory of all sources of SO_2 within the nonattainment area, per CAA section 172(c)(3).[19]

Guam EPA selected 2020 for the base year emissions inventory for the Piti-Cabras area, which is appropriate because it is a recent year that is representative of conditions leading to nonattainment. In particular, it is part of the three-year design value period for which the EPA determined that the Piti-Cabras area failed to attain the 2010 SO_2 NAAQS by its original attainment date.[20]

We find the emissions estimation methodologies employed in the EI submittal appropriate as they relied on the EPA's AP–42 and other recommended emissions factors and EPA emissions estimation guidance. All emission calculations, source data, and supporting documentations were included in the EI submittal.

In conclusion, the EPA has evaluated Guam EPA's EI submittal for the Piti-Cabras area and has determined that it was developed in a manner consistent with CAA section 172(c)(3) and with applicable EPA guidance.

IV. Public Comment and Final Action

As authorized in section 110(k)(3) of the Act, the EPA is fully approving the submitted base year emissions inventory based on our determination that it fulfills all relevant requirements. The EPA is approving Guam EPA's EI submittal as meeting the requirements of CAA section 172(c)(3). Specifically, we are finding that the submittal satisfies the base year emissions inventory requirement triggered by the December 19, 2024 finding of failure to attain, as well as the Territory's obligation to submit a base year inventory for the 2010 SO_2 NAAQS stemming from the EPA's designation of the area as nonattainment in 2017. With this final action, the emissions inventory element of the EPA's obligation as to this nonattainment area under the consent decree in *Center for Biological Diversity et al.* v. *Regan,* No. 4:24–cv–01900 (N.D. Cal.), doc. 28, paragraphs 1.c–d, 2, will also be met.

We do not anticipate that anyone will object to this approval, therefore, we are finalizing approval without first

[17] AP–42 is the primary compilation of the EPA's emissions factor information. See *https://www.epa.gov/air-emissions-factors-and-quantification/ap-42-compilation-air-emissions-factors-stationary-sources.*

[18] Ports Emissions Inventory Guidance: Methodologies for Estimating Port-Related and Goods Movement Mobile Source Emissions. Office of Transportation and Air Quality, US EPA (April 2022).

[19] See ''Guidance for 1-Hour SO_2 Nonattainment Area SIP Submissions'' (April 23, 2014).

[20] 89 FR 103819, 103821–89 FR 103822 (December 19, 2024) (''the relevant three-year DV period for the April 9, 2023 attainment date was from 2020–2022'').

proposing it in advance. However, in the Proposed Rules section of this **Federal Register**, we are simultaneously proposing approval of the same emissions inventory submittal. If we receive adverse comments by August 15, 2025, we will publish a timely withdrawal in the **Federal Register** to notify the public that the direct final approval will not take effect and we will address the comments in a subsequent final action based on the proposal. If we do not receive timely adverse comments, the direct final approval will be effective October 14, 2025 without further notice. This will incorporate the submittal into the federally enforceable SIP.

Please note that if the EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, the EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely proposes to approve state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it proposes to approve a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by September 15, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

Air Plan Approval; Connecticut; 2017 Base Year Emissions Inventory for the 2015 8-Hour Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving State Implementation Plan (SIP) revisions submitted by the State of Connecticut that relate to the 2015 8-hour ozone National Ambient Air Quality Standards (NAAQS). The SIP revisions are for the Greater Connecticut and the Connecticut portion of the New York-Northern New Jersey-Long Island, NY–NJ–CT ozone nonattainment areas. This action will approve submittals which include the 2017 base year emissions inventories for these two nonattainment areas for the 2015 Ozone National Ambient Air Quality Standard. This action is being taken under the Clean Air Act (CAA).

DATES: This rule is effective on August 15, 2025.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R01–OAR–2025–0076. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *i.e.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available at *https://www.regulations.gov* or at the U.S. Environmental Protection Agency, EPA Region 1 Regional Office, Air and Radiation Division, 5 Post Office Square—Suite 100, Boston, MA. EPA requests that if at all possible, you contact the contact listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection.

FOR FURTHER INFORMATION CONTACT: Patrick Lillis, Air and Radiation Division (Mail Code 5–MI), U.S. Environmental Protection Agency—Region 1, 5 Post Office Square, Suite 100, Boston, Massachusetts, 02109–3912; telephone number: (617) 918–1067, email address: *lillis.patrick@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

Table of Contents

I. Background
II. Response to Comments
III. Final Action
IV. Statutory and Executive Order Reviews

I. Background

The Notice of Proposed Rulemaking (NPRM) proposed approval of SIP revisions submitted by the State of Connecticut that relate to the 2015 Ozone National Ambient Air Quality Standards. The SIP revisions included the 2017 base year emissions inventories for the Greater Connecticut and the Connecticut portion of the New York–Northern New Jersey–Long Island, NY–NJ–CT ozone nonattainment areas. We proposed to find that the emissions inventories were prepared in accordance with the requirements of CAA sections 172(c)(3) and 182(a)(1). The EPA is now finalizing the proposed approval of Connecticut's 2017 base year emissions inventories for the 2015 Ozone NAAQS.

II. Response to Comments

EPA received four comments during the comment period, all of which are available in the docket for this rulemaking action. Three of the comments urge EPA to take the action proposed: to approve Connecticut's base year emissions inventories. One of these three also raises additional topics outside the scope of the current action. That comment includes recommendations to ''enhance the effectiveness'' of the base year emission inventory. However, those recommendations are not within the scope of EPA's approval. For example, one recommendation is to ensure regular updates to emission inventories. This EPA action concerns a base year inventory submitted in accordance with CAA sections 172(c)(3) and 182(a)(1). The requirement to submit a revised inventory is separate from the base year inventory. See CAA section 182(a)(3)(A). Since this action does not entail any revised inventory, this recommendation is out of scope. Similarly, the other recommendations concerning stronger enforcement mechanism and public awareness campaigns are unrelated to the base year inventory. The fourth comment focuses mainly on a recommendation for reducing ozone levels with catalytic converters that is outside the scope of the current action. In addition, the comments do not assert, or explain how, EPA approval of this action would be erroneous or otherwise inconsistent with the CAA, applicable regulations, or other authorities. As such, the comments require no further response to finalize the action as proposed.

III. Final Action

For the reasons described in our April 7, 2025, notice of proposed rulemaking,[1] EPA is taking final action to approve Connecticut's 2017 base year emissions inventories for the 2015 ozone NAAQS as a revision to the Connecticut SIP.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and

[1] 90 FR 14935.

• Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act (CRA), 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by September 15, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: June 30, 2025.

Mark Sanborn,

Regional Administrator, EPA Region 1.

For the reasons stated in the preamble, the Environmental Protection Agency amends part 52 of chapter I, title 40 of the Code of Federal Regulations to read as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart H-Connecticut

■ 2. Section 52.370 is amended by adding paragraph (c)(137) to read as follows:

§ 52.370 Identification of plan.

* * * * *

(c) * * *

(137) Revisions to the State Implementation Plan submitted by the Connecticut Department of Energy and Environmental Protection on May 3, 2024

(i) [Reserved]

(ii) *Additional materials.*

(A) Letter from the Connecticut Department of Energy and Environmental Protection, dated May 3, 2024, submitting revision to the Connecticut State Implementation Plan.

(B) [Reserved]

■ 3. Section 52.384 is amended by adding paragraph (f) to read as follows:

§ 52.384 Emission inventories.

* * * * *

(f) The State of Connecticut submitted base year emission inventories representing emissions for calendar year 2017 from the Connecticut portion of the NY–NJ–CT moderate 8-hour ozone nonattainment area and the Greater Connecticut marginal 8-hour ozone nonattainment area on May 3, 2024, as revisions to the State's SIP. The 2017 base year emission inventory requirement of section 182(a)(1) of the Clean Air Act, as amended in 1990, has been satisfied for these areas. The inventories consist of emission estimates of volatile organic compounds and nitrogen oxides, and cover point, area, non-road mobile, on-road mobile and biogenic sources. The inventories were submitted as revisions to the SIP in partial fulfillment of obligations for nonattainment areas under EPA's 2015 8-hour ozone standard.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R02–OAR–2024–0256; FRL–12021–01–R2]

Air Plan Approval; New Jersey; Update to Materials Incorporated by Reference

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; administrative change.

SUMMARY: The Environmental Protection Agency (EPA) is updating the regulatory materials incorporated by reference into the New Jersey State Implementation Plan (SIP). The regulations affected by this action have been previously submitted by the New Jersey Department of Environmental Protection (NJDEP) and approved by the EPA in prior rulemakings. The EPA is also notifying the public of corrections to the Code of Federal Regulations (CFR) tables that identify material incorporated by reference into the New Jersey SIP. This update affects the materials that are available for public inspection at the EPA Regional Office.

DATES: This action is effective July 16, 2025.

ADDRESSES: SIP materials whose incorporated by reference into 40 CFR part 52 is finalized through this action are available for inspection at the following locations: online at *https://www.regulations.gov* in the docket for this action, by appointment at the Environmental Protection Agency, Region 2, 290 Broadway, New York, New York 10007–1866. For information on the availability of this material at the EPA Regional Office, please contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document.

FOR FURTHER INFORMATION CONTACT: Linda Longo, Air Programs Branch, Environmental Protection Agency, Region 2 Office, 290 Broadway, 25th Floor, New York, New York 10007–1866, telephone number: (212) 637–3565, email address: *longo.linda@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Each state has a SIP containing the control measures and strategies used to attain and maintain the national ambient air quality standards (NAAQS). The SIP is extensive, containing such elements as air pollution control regulations, emission inventories, monitoring networks, attainment

demonstrations, and enforcement mechanisms.

Each state must formally adopt the control measures and strategies in the SIP after the public has had an opportunity to comment on them and then submit the proposed SIP revisions to the EPA. Once these control measures and strategies are approved by the EPA, and after notice and comment, they are incorporated into the federally approved SIP and are identified in part 55, ''Approval and Promulgation of Implementation Plans,'' Title 40 of the Code of Federal Regulations (40 CFR part 52). The full text of the state regulation approved by the EPA is not reproduced in its entirety in 40 CFR part 52 but is ''incorporated by reference.'' This means that EPA has approved a given state regulation or specified changes to a given regulation with a specific effective date. The public is referred to the location of the full text version should they want to know which measures are contained in each SIP. The information provided allows the EPA and the public to monitor the extent to which a state implements a SIP to attain and maintain the NAAQS and to take enforcement action for violations of the SIP.

The SIP is a living document which the state can revise as necessary to address the unique air pollution problems in the state. Therefore, the EPA from time to time must take action on proposed revisions containing new and/or revised regulations. A submission from a state can revise one or more rules in their entirety or portions of rules. The state indicates the changes in the submission (such as by using redline/strikethrough text) and the EPA then takes action on the requested changes. The EPA establishes a docket for its actions using a unique Docket Identification Number, which is listed in each action. These dockets and the complete submission are available for viewing on *https://www.regulations.gov.*

On May 22, 1997 (62 FR 27968), the EPA revised the procedures for incorporating by reference, into the CFR, materials approved by the EPA into each state SIP. These changes revised the format for the identification of the SIP in 40 CFR part 52, streamlined the mechanisms for announcing the EPA approval of revisions to a SIP, and streamlined the mechanisms for the EPA's updating of the IBR information contained for each SIP in 40 CFR part 52. The revised procedures also called for the EPA to maintain ''SIP Compilations'' that contain the federally approved regulations and source-specific permits submitted by each state agency. The EPA generally updates these SIP Compilations on an annual basis. Under the revised procedures, the EPA must periodically publish an informational document in the rules section of the **Federal Register** notifying the public that updates have been made to a SIP Compilation for a particular state. The EPA began applying the 1997 revised procedures to New Jersey on July 3, 2017, and is providing this notice in accordance with such procedures. *See* 82 FR 30758 (July 3, 2017).

II. EPA Action

In this action, the EPA is providing notice of an update to the materials incorporated by reference into the New Jersey SIP as of March 31, 2025, and identified in 40 CFR 52.1570(c) and (d). This update includes SIP materials approved by the EPA since the last IBR update. *See,* 82 FR 30758 (July 3, 2017). The EPA is providing notice of the following corrections to 40 CFR 52.1570(c) and (d):

Changes Applicable to Paragraph (c), EPA-Approved New Jersey State Regulations and Laws

A. Revising the following:

(a) Title 7, Chapter 27, Subchapter 7, Sulfur
(b) Title 7, Chapter 27, Subchapter 7.2(k), Commercial fuel exemption
(c) Title 7, Chapter 27, Subchapter 8, Permits and Certificates for minor facilities (and major facilities without an operating permit)
(d) Title 7, Chapter 27, Subchapter 12, Prevention and Control of Air Pollution Emergencies
(e) Title 7, Chapter 27, Subchapter 14, section 14.1, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Definitions
(f) Title 7, Chapter 27, Subchapter 14, section 14.2, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Applicability
(g) Title 7, Chapter 27, Subchapter 14, section 14.3, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/General prohibitions
(h) Title 7, Chapter 27, Subchapter 14, section 14.4, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/General public highway standards
(i) Title 7, Chapter 27, Subchapter 14, section 14.5, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Motor vehicle inspections
(j) Title 7, Chapter 27, Subchapter 14, section 14.6, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Motor vehicle standards
(k) Title 7, Chapter 27, Subchapter 14, section 14.7, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Licensed emissions inspectors
(l) Title 7, Chapter 27, Subchapter 14, section 14.10, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Penalties
(m) Title 7, Chapter 27, Subchapter 14, appendix, Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/appendix
(n) Title 7, Chapter 27, Subchapter 15, Control and Prohibition of Air Pollution from Gasoline-Fueled Motor Vehicles/Definition
(o) Title 7, Chapter 27, Subchapter 16, Control and Prohibition of Air Pollution by Volatile Organic Compounds
(p) Title 7, Chapter 27, Subchapter 17, Control and Prohibition of Air Pollution by Toxic Substances
(q) Title 7, Chapter 27, Subchapter 18, Control and Prohibition of Air Pollution from New or Altered Sources Affecting Ambient Air Quality (Emission Offset Rules)
(r) Title 7, Chapter 27, Subchapter 19 Control and Prohibition of Air Pollution from Oxides of Nitrogen
(s) Title 7, Chapter 27, Subchapter 21, Emission Statements
(t) Title 7, Chapter 27A, Subchapter 3, section 3.10, Civil Administrative Penalties for Violations of Rules Adopted Pursuant to the Act
(u) Title 7, Chapter 27B, Subchapter 4, sections 4.1–4.3 and sections 4.6–4.8, Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles
(v) Title 7, Chapter 27B, Subchapter 5, Air Test Method 5: Testing Procedures for Gasoline-Fueled Motor Vehicles
(w) Title 13, Chapter 20, Subchapters 7.1–7.6, Vehicle Inspections
(x) Title 13, Chapter 20, Subchapter 26, sections 26.2 and 26.11–12 and 26.16–17, Compliance with Diesel Emission Standards and Equipment, Periodic Inspection Program for Diesel Emissions, and Self-Inspection of Certain Classes of Motor Vehicles
(y) Title 13, Chapter 20, Subchapter 32, Inspection Standards and Test Procedures to be Used by Official Inspection Facilities
(z) Title 13, Chapter 20, Subchapter 33, Inspection Standards and Test Procedures to be Used by Licensed Private Inspection Facilities
(aa) Title 13, Chapter 20, Subchapter 43, Enhanced Motor Vehicle Inspection and Maintenance Program
(ab) Title 13, Chapter 20, Subchapter 44, Private Inspection Facility Licensing

(ac) N.J.S.A. 52:13D–14, New Jersey's Conflict of Interest Law
(ad) N.J.S.A. 52:13D–16(a)-(b), New Jersey's Conflict of Interest Law
(ae) N.J.S.A. 52:13D–21(n), New Jersey's Conflict of Interest Law

B. Removing the following:
(a) Title 7, Chapter 27, Subchapter 8, Permits and Certificates, Hearings, and Confidentiality
(b) Title 7, Chapter 27, section 8.1, Definitions
(c) Title 7, Chapter 27, section 8.2, Applicability
(d) Title 7, Chapter 27, section 8.11, Permits and Certificates, Hearings, and Confidentiality
(e) Title 7, Chapter 27, Subchapter 30, Clean Air Interstate Rule (CAIR) NOx Trading Program
(f) Title 7, Chapter 27, Subchapter 31, NOx Budget Program
(g) Title 7, Chapter 27, Subchapter 34, TBAC Emissions Reporting

C. No changes to the following:
(a) Title 7, Chapter 26, Subchapter 2A
(b) Title 7, Chapter 27, Subchapter 1
(c) Title 7, Chapter 27, Subchapter 2
(d) Title 7, Chapter 27, Subchapter 3
(e) Title 7, Chapter 27, Subchapter 4
(f) Title 7, Chapter 27, Subchapter 5
(g) Title 7, Chapter 27, Subchapter 6
(h) Title 7, Chapter 27, Subchapter 9
(i) Title 7, Chapter 27, Subchapter 10
(j) Title 7, Chapter 27, Subchapter 11
(k) Title 7, Chapter 27, Subchapter 13
(l) Title 7, Chapter 27, Subchapter 23
(m) Title 7, Chapter 27, Subchapter 24
(n) Title 7, Chapter 27, Subchapter 25
(o) Title 7, Chapter 27, Subchapter 26
(p) Title 7, Chapter 27, Subchapter 29
(q) Title 7, Chapter 27B, Subchapter 3
(r) Title 13, Chapter 20, Subchapter 24, section 20
(s) Title 13, Chapter 20, Subchapter 28, sections 28.3, 28.4 and 28.6
(t) Title 13, Chapter 20, Subchapter 29, sections 29.1, 29.2 and 29.3
(u) Title 13, Chapter 20, Subchapter 45
(v) Title 13, Chapter 21, Subchapter 5, section 5.12
(w) Title 13, Chapter 21, Subchapter 15, sections 15.8 and 15.12
(x) Title 16, Chapter 53
(y) Title 39, Chapter 8, Subchapter 1
(z) Title 39, Chapter 8, Subchapter 2
(aa) Title 39, Chapter 8, Subchapter 3

Changes Applicable to Paragraph (d), EPA-Approved New Jersey Source-Specific Provisions

A. Adding the following:
(a) Transcontinental Gas Pipelines Corp., LNG Station 240, PI 02626
(b) Joint Base McGuire-Dix-Lakehurst (Lakehurst, NJ), BOP 15001
(c) Gerdau Ameristeel Sayreville, PI 18052, BOP 150001, U2, 2
(d) CMC Steel New Jersey, PI 18052, BOP 180001, U2, 2
(e) Paulsboro Refinery, PI 55829, BOP 180002, U900
(f) Buckeye Port Reading Terminal, PI 17996, BOP 160001, U8
(g) Buckeye Pennsauken Terminal, PI 51606, BOP 130002, U1
(h) Phillips 66 Company Linden, PI 41805, BOP 170004, U16
(i) CMC Steel, PI 18052, BOP 150002, U1

B. No changes to the following:
(a) Johnson Matthey
(b) Sandoz Pharmaceuticals Corporation
(c) PSEG Fossil Hudson Generation Station
(d) Conoco Phillips (Facility is now Phillips 66.)
(e) Vineland Municipal Electric Utility—Howard M. Down
(f) BL England Generating Station (Facility is now RC Cape May.)
(g) Atlantic States Cast Iron Pipe Company
(h) Trigen-Trenton Energy Co
(i) PSE&G Nuclear Hope Creek and Salem Generating Stations Cooling Tower
(j) Co-Steel Corp of Sayreville (Formerly New Jersey Steel Corporation)

III. Good Cause Exemption

The EPA has determined that this action falls under the ''good cause'' exemption in section 553(b)(3)(B) of the Administrative Procedure Act (APA) which, upon finding ''good cause,'' authorizes agencies to dispense with public participation and section 553(d)(3) which allows an agency to make an action effective immediately (thereby avoiding the 30-day delayed effective date otherwise provided for in the APA). This administrative action simply codifies provisions which are already in effect as a matter of law in Federal and approved state programs, makes typographical/ministerial revisions to the tables in the CFR, and makes ministerial changes to the prefatory heading to the tables in the CFR. Under section 553(b)(3)(B) of the APA, an agency may find good cause where procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Public comment for this administrative action is ''unnecessary'' and ''contrary to the public interest'' since the codification (and corrections) only reflect existing law. Immediate notice of this action in the **Federal Register** benefits the public by providing the public notice of the updated New Jersey SIP Compilation and notice of corrections to the New Jersey ''Identification of Plan'' portion of the CFR. Further, pursuant to section 553(d)(3), making this action immediately effective benefits the public by immediately updating both the SIP Compilation and the CFR ''Identification of plan'' section (which includes table entry corrections).

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of regulations promulgated by New Jersey, previously approved by the EPA and federally effective as of March 31, 2025, contained in New Jersey SIP Compilation. The EPA has made, and will continue to make, these materials generally available through *https://www.regulations.gov* and at the EPA Region 2 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Review

Under the Clean Air Act (CAA), the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this final rule and notification of administrative change does not impose additional requirements beyond those imposed by the State law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866:
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

• Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;

• Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and

• Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications, and it will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

This action is subject to the Congressional Review Act (CRA), and the EPA will submit a rule report to each House of the Congress and the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by September 15, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference.

Authority: 42 U.S.C. 7401 *et seq.*

Michael Martucci,

Regional Administrator, Region 2.

For the reasons stated in the preamble, the EPA amends 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart FF—New Jersey

■ 2. In § 52.1570, revise paragraphs (b)(1) and (3), (c), and (d) to read as follows:

§ 52.1570 Identification of plan.

* * * * *

(b) * * *

(1) Material listed in paragraphs (c) and (d) of this section with an EPA approval date as of March 31, 2025, was approved for incorporation by reference by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Material is incorporated as it exists on the date of the approval and notification of any change in the material will be published in the **Federal Register**. Entries in paragraphs (c) and (d) of this section with the EPA approval dates after March 31, 2025, have been approved by EPA for inclusion in the State implementation plan and for incorporation by reference into the plan as it is contained in this section, and will be considered by the Director of the Federal Register for approval in the next update to the SIP compilation.

* * * * *

(3) Copies of the materials incorporated by reference into the state implementation plan may be inspected at the Environmental Protection Agency, Region 2, Air Programs Branch, 290 Broadway, New York, New York 10007. To obtain the material, please call the Regional Office at 212–637–3322. You may view material with an approval date as of March 31, 2025, at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *https://www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

(c) *EPA approved regulations.*

EPA-APPROVED NEW JERSEY STATE REGULATIONS AND LAWS

State citation	Title/subject	State effective date	EPA approval date	Comments
Title 7, Chapter 26, Subchapter 2A.	Additional, Specific Disposal Regulations for Sanitary Landfills.	June 1, 1987	June 29, 1990, 55 FR 26687.	
Title 7, Chapter 27, Subchapter 1.	General Provisions	May 1, 1956	May 31, 1972, 37 FR 10880.	
Title 7, Chapter 27, Subchapter 2.	Control and Prohibition of Open Burning.	June 8, 1981	September 30, 1981, 46 FR 47779.	
Title 7, Chapter 27, Subchapter 3.	Control and Prohibition of Smoke from Combustion of Fuel.	October 12, 1977	January 27, 1984, 49 FR 3463.	
Title 7, Chapter 27, Subchapter 4.	Control and Prohibition of Particles from Combustion of Fuel.	April 20, 2009	August 3, 2010, 75 FR 45483.	
Title 7, Chapter 27, Subchapter 5.	Prohibition of Air Pollution	October 12, 1977	January 27, 1984, 49 FR 3463.	
Title 7, Chapter 27, Subchapter 6.	Control and Prohibition of Particles from Manufacturing Processes (except section 6.5).	May 23, 1977	January 26, 1979, 44 FR 5425.	Section 6.5, ''Variances,'' is not approved (40 CFR 52. 52.1587(c)(20) and 52.1604(a)). Any State-issued variances must be formally incorporated as SIP revisions if EPA is to be bound to their provisions (40 CFR 52.1604(a)).
Title 7, Chapter 27, Subchapter 7.	Sulfur	March 1, 1967	May 31, 1972, 37 FR 10880.	Subchapter 7.2(k) is no longer approved due to EPA action on August 1, 2022, 87 FR 46890.
Title 7, Chapter 27, Subchapter 7.2(k).	Commercial fuel exemption.	November 6, 2017	August 1, 2022, 87 FR 46890.	
Title 7, Chapter 27, Subchapter 8.	Permits and Certificates for minor facilities (and major facilities without an operating permit).	August 23, 2018	February 28, 2025, 90 FR 10872.	• Section 8.1 was previously approved into the State's Federally approved SIP on November 28, 2023 (88 FR 83036). • The following provisions are not approved: (1) five odor provisions at 8.2(d)(3)(ii)(2), 8.2(e)(2)(ii), 8.3(j), 8.4(k)(2), and 8.4(q); as well as (2) an affirmative defense provision at 8.3(n).

EPA-APPROVED NEW JERSEY STATE REGULATIONS AND LAWS—Continued

State citation	Title/subject	State effective date	EPA approval date	Comments
Title 7, Chapter 27, Subchapter 9.	Sulfur in Fuels	September 20, 2010 ..	January 3, 2012, 77 FR 19.	Sulfur dioxide ''bubble'' permits issued by the State pursuant to section 9.2 and not waived under the provisions of section 9.4 become applicable parts of the SIP only after receiving EPA approval as a SIP revision.
Title 7, Chapter 27, Subchapter 10.	Sulfur in Solid Fuels	April 20, 2009	August 3, 2010, 75 FR 45483.	Notification of ''large zone 3 coal conversions'' must be provided to EPA (40 CFR 52.1601(b)).
Title 7, Chapter 27, Subchapter 11.	Incinerators	August 15, 1968	May 31, 1972, 37 FR 10880.	
Title 7, Chapter 27, Subchapter 12.	Prevention and Control of Air Pollution Emergencies.	May 20, 1974	May 30, 2018, 83 FR 24661.	
Title 7, Chapter 27, Subchapter 13.	Ambient Air Quality Standards.	June 25, 1985	November 25, 1986, 51 FR 42565.	
Title 7, Chapter 27, Subchapter 14, section 14.1.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Definitions.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.2.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Applicability.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.3.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/General prohibitions.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.4.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/General public highway standards.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.5.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Motor vehicle inspections.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.6.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Motor vehicle standards.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.7.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Licensed emissions inspectors.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, section 14.10.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/Penalties.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 14, appendix.	Control and Prohibition of Air Pollution from Diesel-Powered Motor Vehicles/appendix.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 15.	Control and Prohibition of Air Pollution from Gasoline-Fueled Motor Vehicles/Definition.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27, Subchapter 16.	Control and Prohibition of Air Pollution by Volatile Organic Compounds.	January 16, 2018	November 28, 2023, 88 FR 83036.	
Title 7, Chapter 27, Subchapter 17.	Control and Prohibition of Air Pollution by Toxic Substances.	January 16, 2018	November 28, 2023, 88 FR 83036.	
Title 7, Chapter 27, Subchapter 18.	Control and Prohibition of Air Pollution from New or Altered Sources Affecting Ambient Air Quality (Emission Offset Rules).	November 6, 2017	November 28, 2023, 88 FR 83036.	
Title 7, Chapter 27, Subchapter 19.	Control and Prohibition of Air Pollution by Oxides of Nitrogen.	January 16, 2018	November 28, 2023, 88 FR 83036.	Subchapter 19 is approved into the SIP except for the following provisions: (1) Phased compliance plan through repowering in section 19.21 that allows for implementation beyond May 1, 1999; and (2) phased compliance plan through the use of innovative control technology in section 19.23 that allows for implementation beyond May 1, 1999.

EPA-APPROVED NEW JERSEY STATE REGULATIONS AND LAWS—Continued

State citation	Title/subject	State effective date	EPA approval date	Comments
Title 7, Chapter 27, Subchapter 21.	Emission Statements	January 16, 2018	November 28, 2023, 88 FR 83036.	Section 7:27–21.3(b)(1) and 7:27–21.3(b)(2) of New Jersey's Emission Statement rule requires facilities to report on the following pollutants to assist the State in air quality planning needs: Hydrochloric acid, hydrazine, methylene chloride, tetrachloroethylene, 1, 1, 1 trichloroethane, carbon dioxide and methane. EPA will not take SIP-related enforcement action on these pollutants.
Title 7, Chapter 27, Subchapter 23.	Prevention of Air Pollution from Architectural Coatings.	December 29, 2008 ...	December 22, 2010, 75 FR 80340.	
Title 7, Chapter 27, Subchapter 24.	Prevention of Air Pollution from Consumer Products.	December 29, 2008 ...	December 22, 2010, 75 FR 80340.	
Title 7, Chapter 27, Subchapter 25.	Control and Prohibition of Air Pollution by Vehicular Fuels.	December 29, 2008 ...	December 22, 2010, 75 FR 80340.	
Title 7, Chapter 27, Subchapter 26.	Prevention of Air Pollution from Adhesives, Sealants, Adhesive Primers and Sealant Primers.	December 29, 2008 ...	December 22, 2010, 75 FR 80340.	
Title 7, Chapter 27, Subchapter 29.	Low Emission Vehicle (LEV) Program.	January 17, 2006	February 13, 2008, 73 FR 8200.	In section 29.13(g), Title 13, Chapter 1, Article 2, section 1961.1 of the California Code of Regulations relating to greenhouse gas emission standards, is not incorporated into the SIP.
Title 7, Chapter 27A, Subchapter 3, section 3.10.	Civil Administrative Penalties for Violations of Rules Adopted Pursuant to the Act.	January 16, 2018	November 28, 2023, 88 FR 83036.	
Title 7, Chapter 27B, Subchapter 3.	Air Test Method 3: Sampling and Analytic Procedures for the Determination of Volatile Organic Compounds from Source Operations.	June 20, 1994	August 7, 1997, 62 FR 42412.	
Title 7, Chapter 27B, Subchapter 4, section 4.1.	Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27B, Subchapter 4, section 4.2.	Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27B, Subchapter 4, section 4.3.	Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27B, Subchapter 4, section 4.6.	Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27B, Subchapter 4, section 4.7.	Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27B, Subchapter 4, section 4.8.	Air Test Method 4: Testing Procedures for Diesel-Powered Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 7, Chapter 27B, Subchapter 5.	Air Test Method 5: Testing Procedures for Gasoline-Fueled Motor Vehicles.	October 3, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 7.1.	Vehicle Inspections	April 26, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 7.2.	Vehicle Inspections	April 26, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 7.3.	Vehicle Inspections	April 26, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 7.4.	Vehicle Inspections	April 26, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 7.5.	Vehicle Inspections	April 26, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 7.6.	Vehicle Inspections	April 26, 2016	May 9, 2018, EPA approval finalized at 83 FR 21174.	
Title 13, Chapter 20, Subchapter 24, section 20.	Motorcycles	October 19, 2009	March 15, 2012, 77 FR 15263.

[FR Doc. 2025–13333 Filed 7–15–25; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2024–0331; FRL–12856–01–OCSPP]

Triclopyr; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes a tolerance for residues of triclopyr, including its metabolites and degradates, in or on orange subgroup 10–10A. UPL Chile S.A. requested this tolerance under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective July 16, 2025. Objections and requests for hearings must be received on or before September 15, 2025, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2024–0331, is available online at *https://www.regulations.gov* or in-person at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and the OPP Docket is (202) 566–1744. For the latest status information on EPA/DC services, docket access, visit *https://www.epa.gov/.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is EPA's authority for taking this action?

EPA is issuing this rulemaking under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a. FFDCA section 408(b)(2)(A)(i) allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' FFDCA section 408(b)(2)(A)(ii) defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. FFDCA section 408(b)(2)(C) requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . .''

C. How can I get electronic access to other related information?

You may access a frequently updated electronic version of EPA's tolerance regulations at 40 CFR part 180 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40.*

D. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2024–0331 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before September 15, 2025. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2024–0331, by one of the following methods:

•*Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments.

Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

•*Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.

•*Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

II. Petitioned-For Tolerance

In the **Federal Register** of January 13, 2025 (90 FR 2661) (FRL–11682–11–OCSPP), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of pesticide petition (PP4E9105) by UPL Chile S.A. (El Rosal 4610, Huechuraba Santiago, Chile, Postal Code: 8590724). The petition requests that EPA amend 40 CFR 180.417 by establishing a tolerance for residues of triclopyr, [(3,5,6-trichloro-2- pyridinyl)oxy]acetic acid, including its metabolites and degradates, in or on imported commodities in orange subgroup 10–10A at 0.07 parts per million (ppm). That document referenced a summary of the petition prepared by Exponent, Inc. on behalf of UPL Chile S.A., the petitioner, which is available in docket ID number EPA–HQ–OPP–2024–0331 at *https://www.regulations.gov.* There were no comments received in response to the notice of filing.

Based upon review of the data supporting the petition and in accordance with its authority under FFDCA section 408(d)(4)(A)(i), EPA is establishing a tolerance at a different level than petitioned for. The reason for this change is explained in Unit IV.C.

III. Final Tolerance Action

Consistent with FFDCA section 408(b)(2)(D), and the factors specified therein, EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for triclopyr including exposure resulting from the tolerances established by this action. EPA's assessment of exposures and risks associated with triclopyr follows.

In an effort to streamline its publications in the **Federal Register**, EPA is not reprinting sections that repeat what has been previously published for tolerance rulemakings for the same pesticide chemical. Where scientific information concerning a particular chemical remains unchanged, the content of those sections would not vary between tolerance rulemakings, and EPA considers referral back to those sections as sufficient to provide an explanation of the information EPA considered in making its safety determination for the new rulemaking.

EPA has previously published tolerance rulemakings for triclopyr in which EPA concluded, based on the available information, that there is a reasonable certainty that no harm would result from aggregate exposure to triclopyr and established tolerances for residues of that chemical. EPA is incorporating previously published sections from these rulemakings as described further in this rulemaking, as they remain unchanged.

A. *Aggregate Risk and Determination of Safety.* EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing dietary exposure estimates to the acute population-adjusted dose (aPAD) and chronic population-adjusted dose (cPAD). Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated total food, water, and residential exposure to the appropriate PODs to ensure that an adequate margin of exposure (MOE) exists.

Acute dietary risks are below the Agency's level of concern of 100% of the aPAD; they are 88% of the aPAD for females 13–49 years old and 15% of the aPAD for all infants, the most highly exposed population subgroup. No acute residential or recreational exposures are expected, so the acute aggregate risk is equivalent to the acute dietary risk and is not of concern. Chronic dietary risks are below the Agency's level of concern of 100% of the cPAD; they are 63% of the cPAD for all infants <1 year old, the most highly exposed population subgroup. No long-term residential exposures are expected, so the chronic aggregate risk is equivalent to the chronic dietary risk and is not of concern.

For the short-term aggregate risk assessment, potential residential exposures were combined with food and drinking water exposures. Specifically, the short-term aggregate assessment for adults combines dietary (food + drinking water) exposures with handler inhalation exposures resulting from the registered turf use and the MOE is 420. For children 1 to <2 years old, the short-term aggregate assessment combines dietary (food + drinking water) exposure with potential post-application incidental oral exposure resulting from the registered turf use and the MOE is 125. For children 3 to <6 years old, the short-term aggregate assessment combines dietary (food + drinking water) exposure with potential post-application inhalation and incidental oral swimmer exposure resulting from the registered aquatic use and the MOE is 380. As the short-term aggregate MOEs are greater than 100, the risks are not of concern.

Although there are intermediate-term residential exposures, intermediate-term aggregate risk was not separately assessed since (1) the short- and intermediate-term points of departure are the same and (2) the short-term aggregate risk assessment provides a worst-case estimate of residential exposure. For these reasons, the short-term aggregate risk assessment is protective of intermediate-term exposures.

As stated in Unit III.A. of the February 25, 2016, final rule, EPA has determined that an aggregate exposure risk assessment for cancer risk is not required based on weight-of-evidence conclusions on the marginal evidence of carcinogenicity in two adequate rodent carcinogenicity studies and the use of the chronic RfD which will adequately account for any potential carcinogenic effects.

B. *Toxicological Profile.* For a discussion of the Toxicological Profile of triclopyr, see Unit III.A. of the final rule published in the **Federal Register** of February 25, 2016 (81 FR 9353) (FRL–9941–87).

C. *Toxicological Points of Departure/Levels of Concern.* Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level, generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD), and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability

of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/assessing-human-health-risk-pesticides.*

A summary of the toxicological endpoints and points of departure for triclopyr used for human risk assessment can be found in the document, ''Triclopyr: Section 3 Human Health Risk Assessment for Tolerances without U.S. Registration on Orange Subgroup 10–10A'' in docket ID number EPA–HQ–OPP–2024–0331.

D. *Exposure Assessment.* For a summary of the assumptions used in EPA's exposure assessments for triclopyr, see Unit III.C. of the February 25, 2016, final rule and the updates described below.

EPA's dietary exposure assessments have been updated to include the additional exposures from the petitioned-for tolerance. Acute and chronic dietary (food and drinking water) exposure and risk assessments were conducted using the Dietary Exposure Evaluation Model software using the Food Commodity Intake Database (DEEM–FCID) Version 4.02. This software uses 2005–2010 food consumption data from the USDA's National Health and Nutrition Examination Survey, What We Eat in America (NHANES/WWEIA). The acute dietary exposure assessment was unrefined, using tolerance-level residues for all registered and proposed commodities. The chronic dietary exposure assessment was slightly refined, using tolerance-level residues for all commodities except milk. An anticipated residue (AR) calculated from a livestock feeding study was used for milk. Default processing factors were used to estimate residues in processed commodities. Drinking water was incorporated directly into the dietary assessment. The acute and chronic dietary exposure assessments assumed 100% crop treated for all registered and proposed commodities.

Section 408(b)(2)(E) of FFDCA authorizes EPA to use available data and information on the anticipated levels of pesticide residues in food and the actual levels of pesticide residues that have been measured in food. If EPA relies on such information, EPA must require pursuant to FFDCA section 408(f)(1) that data be provided 5 years after the tolerance is established, modified, or left in effect, demonstrating that the levels in food are not above the levels anticipated. For the present action, EPA will issue such data call-ins as are required by FFDCA section 408(b)(2)(E) and authorized under FFDCA section 408(f)(1). Data will be required to be submitted no later than 5 years from the date of issuance of this tolerance.

EPA revised the triclopyr drinking water assessment since the February 25, 2016, final rule using current models, newly submitted studies, and changes in labels. The estimated drinking water concentrations (EDWCs) were higher for surface water sources than for ground water sources. The acute dietary exposure assessment used the highest 1-in-10-year acute EDWC of 758 parts per billion (ppb) of triclopyr and the chronic dietary exposure assessment incorporated the highest 1-in-10-year chronic EDWC of 396 ppb of triclopyr. As the current action is for a tolerance without a corresponding U.S. registration (*i.e.,* an import tolerance), there will be no effect on the EDWCs, and the previously provided EDWCs are still adequate for use. The drinking water models and their descriptions are available at the EPA internet site: *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/models-pesticide-risk-assessment.*

The residential exposure assessment used the same assumptions as described in the February 25, 2016, final rule. As this action is for an import tolerance, it does not impact the domestic use pattern and does not involve applications by homeowners or commercial applicators in residential settings. Therefore, no new residential exposure is expected.

Cumulative exposures. Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, EPA has not made a common mechanism of toxicity finding as to triclopyr and any other substances. 3,5,6-trichloro-2-pyridinol, commonly known as TCP, is a metabolite of triclopyr, chlorpyrifos, and chlorpyrifos-methyl. Risk assessment of TCP was conducted in 2002, which concluded that the acute and chronic dietary aggregate exposure estimates are below EPA's level of concern. As TCP is not a residue of concern in plants and this action is for an import tolerance with no impact on the domestic use pattern, this action will not result in any additional exposure to TCP. The results of the 2002 TCP assessment are still considered valid. For the purposes of this action, EPA has not assumed that triclopyr has a common mechanism of toxicity with other substances.

E. *Safety Factor for Infants and Children.* Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act Safety Factor (FQPA SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

EPA continues to conclude that there is reliable data showing that the safety of infants and children would be adequately protected if the Food Quality Protection Act (FQPA) safety factor were reduced from 10X to 1X. The reasons for that decision are articulated in Unit III. of the final rule published in the **Federal Register** of February 28, 2024 (89 FR 14591) (FRL–11763–01).

Therefore, based on the risk assessments and information described above, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to triclopyr residues. More detailed information on this action can be found in the document titled ''Triclopyr: Section 3 Human Health Risk Assessment for Tolerances without U.S. Registration on Orange Subgroup 10–10A'' in docket ID number EPA–HQ–OPP–2024–0331.

IV. Other Considerations

A. Analytical Enforcement Methodology

For information about the analytical enforcement methodology, see Unit IV.A. of the February 25, 2016, final rule.

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex has not established any MRLs for triclopyr.

C. Revisions to Petitioned-For Tolerance

EPA is establishing the tolerance for residues of triclopyr in or on orange subgroup 10–10A at 0.1 ppm instead of the petitioned-for 0.07 ppm in order to

harmonize with the existing European Union (EU) MRLs for triclopyr in oranges and mandarins. The petition requested that EPA establish the tolerance at 0.07 ppm consistent with the European Food Safety Authority (EFSA) Reasoned Opinion ''Modification of the existing maximum residue levels for triclopyr in oranges, lemons and mandarins,'' dated July 27, 2022. The EFSA Reasoned Opinion concluded that the submitted data were sufficient to derive MRLs of 0.07 mg/kg for oranges and mandarins, but it did not determine whether the existing MRLs of 0.1 mg/kg for these commodities should be maintained or lowered. The EU subsequently maintained the existing MRLs of 0.1 mg/kg in Commission Regulation (EU) 2023/679, dated March 23, 2023. There are no Codex, Canadian, or Mexican MRLs for triclopyr. Thus, to harmonize with the EU MRLs, EPA is establishing the tolerance at 0.1 ppm, which is sufficient to cover the residues expected on the imported commodities in orange subgroup 10–10A and which EPA has determined is safe. A revised petition was submitted by UPL Chile S.A. to support this change to the petitioned-for tolerance.

V. Conclusion

Therefore, a tolerance is established for residues of triclopyr, [(3,5,6-trichloro-2-pyridinyl)oxy]acetic acid, including its metabolites and degradates, in or on orange subgroup 10–10A at 0.1 ppm.

VI. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review

This action is exempt from review under Executive Order 12866 (58 FR 51735, October 4, 1993), because it establishes or modifies a pesticide tolerance or a tolerance exemption under FFDCA section 408 in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866.

B. Executive Order 14192: Unleashing Prosperity Through Deregulation

Executive Order 14192 (90 FR 9065, February 6, 2025) does not apply because actions that establish a tolerance under FFDCA section 408 are exempted from review under Executive Order 12866.

C. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA 44 U.S.C. 3501 *et seq.,* because it does not contain any information collection activities.

D. Regulatory Flexibility Act (RFA)

Since tolerance actions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the RFA, 5 U.S.C. 601 *et seq.,* do not apply to this action.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more (in 1995 dollars and adjusted annually for inflation) as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any State, local, or Tribal governments or on the private sector.

F. Executive Order 13132: Federalism

This action does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it will not have substantial direct effects on the states, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it will not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and the Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because tolerance actions like this one are exempt from review under Executive Order 12866. However, EPA's 2021 *Policy on Children's Health* applies to this action. This rule finalizes tolerance actions under the FFDCA, which requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . .'' (FFDCA 408(b)(2)(C)). The Agency's consideration is summarized in Unit III.E.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211 (66 FR 28355) (May 22, 2001) because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer Advancement Act (NTTAA)

This action does not involve technical standards that would require Agency consideration under NTTAA section 12(d), 15 U.S.C. 272.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.,* and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: July 14, 2025.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

For the reasons set forth in the preamble, 40 CFR chapter I is amended as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.417, amend the table in paragraph (a)(1) by adding in alphabetical order the entry ''Orange subgroup 10–10A [1]'' and adding footnote 1 to read as follows:

§ 180.417 Triclopyr; tolerance for residues.

(a) * * *

(1) * * *

TABLE 1 TO PARAGRAPH (a)(1)

Commodity	Parts per million
* * * * *	
Orange subgroup 10–10A [1]	0.1
* * * * *	

[1] There are no U.S. registrations for these commodities as of July 16, 2025.

* * * * *

[FR Doc. 2025–13317 Filed 7–15–25; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2024–0217; 12852–01–OCSPP]

Acetamiprid; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of acetamiprid in or on multiple spice commodities that are identified and discussed in this document. Under the Federal Food, Drug, and Cosmetic Act (FFDCA), the American Spice Trade Association submitted a petition to EPA requesting that EPA establish a maximum permissible level for residues of this pesticide in or on these commodities.

DATES: This rule is effective on July 16, 2025. Objections and requests for hearings must be received on or before September 15, 2025 and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of this document).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2024–0217, is available at *https://www.regulations.gov.* Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–2427; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document might apply to them:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is EPA's authority for taking this action?

EPA is issuing this rulemaking under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a. FFDCA section 408(b)(2)(A)(i) allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' FFDCA section 408(b)(2)(A)(ii) defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. FFDCA section 408(b)(2)(C) requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . .''

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. If you fail to file an objection to the final rule within the time period specified in the final rule, you will have waived the right to raise any issues resolved in the final rule. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2024–0217 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before September 15, 2025.

The EPA's Office of Administrative Law Judges (OALJ), in which the Hearing Clerk is housed, urges parties to file and serve documents by electronic means only, notwithstanding any other particular requirements set forth in other procedural rules governing those proceedings. See ''Revised Order Urging Electronic Filing and Service,'' dated June 22, 2023, which can be found at *https://www.epa.gov/system/files/documents/2023-06/2023-06-22%20-%20revised%20order%20urging%20electronic%20filing%20and%20service.pdf.* Although the EPA's regulations require submission via U.S. Mail or hand delivery, the EPA intends to treat submissions filed via electronic means as properly filed submissions; therefore, the EPA believes the preference for submission via electronic means will not be prejudicial. When submitting documents to the OALJ electronically, a person should utilize the OALJ e-filing system at *https://yosemite.epa.gov/oa/eab/eab-alj_upload.nsf.*

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute. If you wish to include CBI in your request, please follow the applicable instructions at *https://www.epa.gov/dockets/commenting-epa-dockets#rules* and clearly mark the information that you claim to be CBI. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice.

II. Petitioned-For Tolerance

In the **Federal Register** of July 1, 2024 (89 FR 54398 (FRL–11682–05–OCSPP)), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 3F9085) by the American Spice Trade Association. The petition requested that 40 CFR part 180 be amended by establishing tolerances

for residues of the insecticide acetamiprid in or on pepper, black at 0.1 parts per million (ppm) and the following spices at 2.0 ppm: ambrette, seed; angelica, seed; angelica, dahurian, seed; anise, seed; annatto, seed; candlebush; caraway, black, seed; caraway, seed; celery, seed; chervil, seed; chinese nutmeg tree; coriander, seed; cubeb, seed; culantro, seed; cumin, seed; dill, seed; fennel, seed; fennel flower, seed; fenugreek, seed; grains of paradise, seed; guarana; honewort, seed; lovage, seed; mahaleb; malabar tamarind; milk thistle; mustard, black, seed; mustard, brown, seed; mustard, white, seed; nutmeg; poppy seed; sesame seed; and wattle seed. That document referenced a summary of the petition that was prepared by the petitioner and included in the docket. No comments were received in response to that notice of filing.

III. Final Tolerance Action

A. Aggregate Risk Assessment and Determination of Safety

Consistent with FFDCA section 408(b)(2)(D), and the factors specified therein, EPA has reviewed the available scientific data and other relevant information in support of this action. Based upon review of the data supporting the petition and in accordance with its authority under FFDCA section 408(d)(4)(A)(i), EPA is establishing tolerances that vary from what the petitioner sought. Specifically, EPA is establishing tolerance values that are consistent with Organization for Economic Cooperation and Development (OECD) rounding class practice. EPA is also correcting commodity definitions for several commodities. The reasons for these changes are explained in Unit IV.C.

EPA has determined that it has sufficient data to assess the hazards of and to make a determination on aggregate exposure for acetamiprid, including exposure resulting from the tolerances established by this action. EPA's assessment of exposures and risks associated with acetamiprid is summarized in this unit.

In an effort to streamline its publications in the **Federal Register**, EPA is not reprinting discussions that previously published in other tolerance rulemakings for the same pesticide chemical. Where scientific information concerning a particular chemical remains unchanged, the content of those sections would not vary between tolerance rulemaking, and EPA considers referral back to those sections as sufficient to provide an explanation of the information EPA considered in making its safety determination for this new rulemaking.

For acetamiprid, EPA previously published a tolerance rulemaking in the **Federal Register** of February 14, 2020 (85 FR 8433 (FRL–10004–12)), in which EPA concluded, based on the available information, that there is a reasonable certainty that no harm would result from aggregate exposure to acetamiprid and established tolerances for residues of that chemical. EPA is incorporating previously published sections from that rulemaking as described further in this rulemaking, as they remain unchanged. Specific information on the risk assessment conducted in support of this action, including on the studies received and the nature of the adverse effects caused by acetamiprid, can be found in the document titled ''Acetamiprid. Human Health Risk Assessment for Proposed Tolerances for Residues, Without U.S. Registrations on Pepper, Black and Spices in Crop Group 26 that Overlap with the Codex Crop Subgroup of Spices, Seed'' (hereinafter ''Acetamiprid Human Health Risk Assessment''), which is available in the docket for this action.

B. Toxicological Profile

For a discussion of the toxicological profile of acetamiprid, see Unit III.A. in the final rule of February 14, 2020.

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern (LOCs) to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level, generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD), and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see *https://www2.epa.gov/pesticide-science-and-assessing-pesticide-risks/assessing-human-health-risk-pesticides.*

More detailed information on the toxicological endpoints for acetamiprid used for human health risk assessment can be found in the Acetamiprid Human Health Risk Assessment.

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to acetamiprid, EPA considered exposure under the petitioned-for tolerances as well as all existing acetamiprid tolerances in 40 CFR 180.578. EPA assessed dietary exposures from acetamiprid in food as follows:

i. *Acute exposure.* Quantitative acute dietary exposure and risk assessments are performed for a food-use pesticide, if a toxicological study has indicated the possibility of an effect of concern occurring as a result of a 1-day or single exposure. Such effects were identified in the toxicological studies for acetamiprid. In estimating acute dietary exposure, EPA used the Dietary Exposure Evaluation Model software with the Food Commodity Intake Database (DEEM–FCID) Version 4.02. This software uses 2005–2010 food consumption data from the U.S. Department of Agriculture's (USDA's) National Health and Nutrition Examination Survey, What We Eat in America, (NHANES/WWEIA). As to residue levels in food, the acute dietary exposure assessment used tolerance-level residues, 100 percent crop treated (PCT), and empirical and default processing factors.

ii. *Chronic exposure.* In conducting the chronic dietary exposure assessment, EPA likewise used DEEM–FCID, Version 4.02, which incorporates 2005–2010 consumption data from USDA's NHANES/WWEIA. As to residue levels in food, the chronic dietary exposure assessment used tolerance-level residues except for milk and apple juice, for which EPA used Pesticide Data Program monitoring data; 100 PCT; and empirical and default processing factors. The chronic assessment also accounted for potential residues from the food handling establishment (FHE) use of acetamiprid. For commodities that would only have residues resulting from the FHE use, EPA used a residue value of one-half of the existing FHE tolerance and a PCT estimate of 4.65%.

iii. *Cancer.* EPA has concluded that acetamiprid is not likely to be carcinogenic to humans. Therefore, a dietary exposure assessment for the purpose of assessing cancer risk is unnecessary.

iv. *Anticipated residue and PCT information.* FFDCA section 408(b)(2)(E) authorizes EPA to use available data and information on the anticipated residue levels of pesticide residues in food and the actual levels of pesticide residues that have been measured in food. If EPA relies on such information, EPA must require pursuant to FFDCA section 408(f)(1) that data be provided 5 years after the tolerance is established, modified, or left in effect, demonstrating that the levels in food are not above the levels anticipated. For the present action, EPA will issue such data call-ins as are required by FFDCA section 408(b)(2)(E) and authorized under FFDCA section 408(f)(1). Data will be required to be submitted no later than 5 years from the date of issuance of these tolerances.

FFDCA section 408(b)(2)(F) states that EPA may use data on the actual percent of food treated for assessing chronic dietary risk only if:

- *Condition a:* The data used are reliable and provide a valid basis to show what percentage of the food derived from such crop is likely to contain the pesticide residue.
- *Condition b:* The exposure estimate does not underestimate exposure for any significant subpopulation group.
- *Condition c:* Data are available on pesticide use and food consumption in a particular area and the exposure estimate does not understate exposure for the population in such area.

In addition, EPA must provide for periodic evaluation of any estimates used. To provide for the periodic evaluation of the estimate of PCT as required by FFDCA section 408(b)(2)(F), EPA may require registrants to submit data on PCT.

The acute and chronic assessments assumed 100 PCT for agricultural uses and the PCT estimate of 4.65% for the FHE use.

EPA estimates the percent of commodities treated in FHEs for uses of active ingredients based on the best available information. This includes survey information on pesticide usage related to the number of facilities being treated, product forms used (*e.g.,* liquids and aerosols), and treatment schedule by FHE segments (*e.g.,* warehouse, food processor, distributor, and restaurant). EPA also incorporated the best available information related to the transfer of commodities between various segments of FHEs and the percent of food consumed by location, either in the home or outside the home.

All information currently available has been considered and EPA has concluded that for any active ingredient, including acetamiprid, there is at most a 4.65% likelihood that a food commodity could contain potential residues resulting from one or more treatments while in the FHE channel of trade. Similar to estimates of agricultural use, this estimate should be reconsidered in 5 years.

EPA believes that the three conditions discussed in Unit III.C.1.iv. have been met. With respect to Condition a, PCT estimates are derived from Federal and private market survey data, which are reliable and have a valid basis. EPA is reasonably certain that the percentage of the food treated is not likely to be an underestimation. As to Conditions b and c, regional consumption information and consumption information for significant subpopulations is taken into account through EPA's computer-based model for evaluating the exposure of significant subpopulations including several regional groups. Use of this consumption information in EPA's risk assessment process ensures that EPA's exposure estimate does not understate exposure for any significant subpopulation group and allows EPA to be reasonably certain that no regional population is exposed to residue levels higher than those estimated by the Agency. Other than the data available through national food consumption surveys, EPA does not have available reliable information on the regional consumption of food to which acetamiprid may be applied in a particular area.

2. *Dietary exposure from drinking water.* The Agency used screening level water exposure models in the dietary exposure analysis and risk assessment for acetamiprid in drinking water. These simulation models take into account data on the physical, chemical, and fate/transport characteristics of acetamiprid. Further information regarding EPA drinking water models used in pesticide exposure assessment can be found at *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/models-pesticide-risk-assessment.*

Based on the Pesticide in Water Calculator and Provisional Cranberry Model, the estimated drinking water concentrations of acetamiprid for acute exposures are 88.1 parts per billion (ppb) in surface water and 211 ppb in ground water, and for chronic exposures are 12.7 ppb in surface water and 175 ppb in ground water.

Modeled estimates of drinking water concentrations were directly entered into the dietary exposure model. For the acute dietary risk assessment, the water concentration value of 211 ppb was used to assess the contribution from drinking water. For the chronic dietary risk assessment, the water concentration of value 175 ppb was used to assess the contribution from drinking water.

3. *From non-dietary exposure.* The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (*e.g.,* for lawn and garden pest control, indoor pest control, termiticides, and flea and tick control on pets). There are no new proposed residential uses for acetamiprid at this time. However, acetamiprid is currently registered for uses that could result in residential handler and post-application exposures, including gardens and trees, spot-on pet treatment, fly control, indoor crack/crevice, mattresses for bed bug control, and animal barns. For a summary of these exposures, see Unit III.C.3. in the final rule of February 14, 2020.

4. *Cumulative effects from substances with a common mechanism of toxicity.* FFDCA section 408(b)(2)(D)(v) requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency considers ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.''

EPA has not found acetamiprid to share a common mechanism of toxicity with any other substances, and acetamiprid does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that acetamiprid does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's website at *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides.*

D. Safety Factor for Infants and Children

1. *In general.* FFDCA section 408(b)(2)(C) provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act (FQPA) Safety Factor (SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to

EPA support the choice of a different factor.

2. *Prenatal and postnatal sensitivity.* Evidence of qualitative susceptibility was observed in the 2-generation reproductive toxicity study, with the offspring effects (reductions in pup weights, reduction in litter size and viability, delays in weaning indices and the age to attain vaginal opening and preputial separation) considered more severe than the observed decrease in parental body weights. Qualitative susceptibility was also seen in the developmental neurotoxicity study with offspring effects (decreased pup weight, pre-weaning survival, and decreased startle response) occurring in the presence of marginal parental body weight decreases.

3. *Conclusion.* EPA has determined that reliable data show the safety of infants and children would be adequately protected if the FQPA SF were reduced to 1X for all scenarios, with the exception of the assessment of inhalation exposure. The default FQPA 10X SF remains in place for assessing inhalation exposure due to the lack of a subchronic inhalation study. That decision is based on the following findings:

i. The toxicity database for acetamiprid is complete with the exception of a subchronic inhalation study.

ii. Acetamiprid produced signs of neurotoxicity in the high dose groups of the acute and developmental neurotoxicity studies in rats and the subchronic toxicity study in mice. However, no neurotoxic findings were reported in the subchronic neurotoxicity study in rats. Additionally, there are clear NOAELs identified for the neurotoxicity effects observed in the guideline studies. The doses and endpoints selected for risk assessment are protective and account for all adverse toxicological effects observed in the database.

iii. No quantitative or qualitative evidence of increased susceptibility of fetuses to *in utero* exposure to acetamiprid was observed in the developmental toxicity study in either rats or rabbits. Although increased qualitative susceptibility was seen in the reproduction toxicity and the DNT study, the degree of concern for the effects is low. There are clear NOAELs for the offspring effect and regulatory doses were selected to be protective of these effects. No other residual uncertainties were identified with respect to susceptibility. The endpoints and doses selected for acetamiprid are protective of adverse effects in both offspring and adults.

iv. There are no residual uncertainties identified in the exposure databases. The acute dietary food exposure assessment was performed based on 100 PCT and tolerance-level residues, and the chronic dietary exposure assessment was slightly refined using 100 PCT and tolerance-level residues for most agricultural commodities, with a PCT estimate of 4.65% used for commodities that would only have residues resulting from the FHE use. EPA made conservative (protective) assumptions in the ground and surface water modeling used to assess exposure to acetamiprid in drinking water. EPA used similarly conservative assumptions to assess post-application exposure of children as well as incidental oral exposure of toddlers. These assessments will not underestimate the exposure and risks posed by acetamiprid.

E. Aggregate Risks and Determination of Safety

EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing aggregate exposure estimates to the acute Population Adjusted Dose (aPAD) and chronic PAD (cPAD). For linear cancer risks, EPA calculates the lifetime probability of acquiring cancer given the estimated aggregate exposure. Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the appropriate PODs to ensure that an adequate margin of exposure (MOE) exists. Where different routes of exposure have different levels of concern, the Agency uses the aggregate risk index (ARI) approach for calculating short-, intermediate-, and long-term aggregate risk estimates.

1. *Acute dietary risk.* The acute dietary risk estimates for acetamiprid are not of concern. Using the exposure assumptions discussed in this unit for acute exposure, EPA has concluded that acute exposure to acetamiprid from food and water is 75% of the aPAD for children 1 to 2 years old, the population group receiving the greatest exposure.

2. *Chronic dietary risk.* The chronic dietary risk estimates for acetamiprid are not of concern. Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that chronic exposure to acetamiprid from food and water is 31% of the cPAD for all infants <1 year old, the population group receiving the greatest exposure.

3. *Short-term risk.* Short-term aggregate exposure takes into account short-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

Acetamiprid is currently registered for uses that could result in short-term residential exposure, and the Agency has determined that it is appropriate to aggregate chronic exposure through food and water with short-term residential exposures to acetamiprid.

Using the exposure assumptions described in this unit for short-term exposures, EPA used the ARI approach for calculating the exposure estimates. Estimates greater than or equal to 1.0 are not of concern. For all lifestages, the ARIs are greater than the target ARI of 1.0, and are not of concern. The ARIs ranged from 1.4 to 5.3. Children 1 to < 2 years old exposed to bed bug treatments indoors resulted in the lowest aggregate ARI of 1.4.

4. *Intermediate-term risk.* Intermediate-term aggregate exposure takes into account intermediate-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

An intermediate-term adverse effect was identified, and intermediate-term exposure is expected; however, since the same endpoint and POD were selected for short- and intermediate term durations, short-term exposure and risk estimates are considered protective of potential intermediate-term exposure and risk.

5. *Long-term risk.* For both adults and children, worst-case long-term scenarios reflect post-application exposure to pets treated with spot-on products. The long-term aggregate risk estimates are not of concern.

6. *Aggregate cancer risk for U.S. population.* Based on the lack of evidence of carcinogenicity in two adequate rodent carcinogenicity studies, acetamiprid is not likely to be carcinogenic to humans.

7. *Determination of safety.* Based on these risk assessments, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to acetamiprid residues.

IV. Other Considerations

A. Analytical Enforcement Methodology

Approved tolerance enforcement methods for acetamiprid residues in crops are available, including methods using gas chromatography with electron capture detection (GC/ECD) analysis for vegetables and non-citrus fruits, high-performance liquid chromatography with ultraviolet detection (HPLC/UV) analysis for citrus fruits only, and HPLC with tandem mass spectrometric

detection (LC/MS/MS) analysis for vegetables and non-citrus fruits. An approved HPLC/UV tolerance enforcement method for livestock matrices is available.

The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755–5350; telephone number: (410) 305–2905; email address: *residuemethods@epa.gov.*

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex Alimentarius is a joint United Nations Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level.

The tolerance levels established in this action are harmonized with the established Codex MRLs for all commodities.

C. Revisions to Petitioned-For Tolerances

Based upon review of the data supporting the petition, EPA is establishing tolerances that vary from what the petitioner requested. Specifically, EPA is correcting commodity definitions for the following commodities: ''caraway, black, seed'' and ''caraway, seed'' to ''caraway, black''; ''cumin, seed'' to ''cumin''; ''fennel, seed'' to ''fennel, common, seed''; ''grains of paradise, seed'' to ''grains of paradise''; ''malabar tamarind'' to ''tamarind, seed''; ''mustard, black, seed'', ''mustard, brown, seed'', and ''mustard, white, seed'' to ''mustard, seed''; and ''wattle seed'' to ''wattleseed''.

EPA is also establishing tolerance values that are consistent with OECD rounding class practice by dropping trailing zeroes. EPA is establishing tolerances at 2 ppm, rather than the requested 2.0 ppm, for the following spices: ambrette, seed; angelica, seed; angelica, dahurian, seed; anise, seed; annatto, seed; candlebush; caraway, black; celery, seed; chervil, seed; chinese nutmeg tree; coriander, seed; cubeb, seed; culantro, seed; cumin; dill, seed; fennel, common, seed; fennel flower, seed; fenugreek, seed; grains of paradise; guarana; honewort, seed; lovage, seed; mahaleb; tamarind, seed; milk thistle; mustard, seed; and wattleseed.

V. Conclusion

Therefore, tolerances are established for residues of acetamiprid, in or on pepper, black at 0.1 ppm and the following spices at 2 ppm: ambrette, seed; angelica, seed; angelica, dahurian, seed; anise, seed; annatto, seed; candlebush; caraway, black; celery, seed; chervil, seed; chinese nutmeg tree; coriander, seed; cubeb, seed; culantro, seed; cumin; dill, seed; fennel, common, seed; fennel flower, seed; fenugreek, seed; grains of paradise; guarana; honewort, seed; lovage, seed; mahaleb; milk thistle; mustard, seed; nutmeg; poppy seed; sesame, seed; tamarind, seed and wattleseed.

VI. Statutory and Executive Order Reviews

Additional information about these statutes and executive orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review

This action is exempt from review under Executive Order 12866 (58 FR 51735, October 4, 1993), because it establishes or modifies a pesticide tolerance or a tolerance exemption under FFDCA section 408 in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866.

B. Executive Order 14192: Unleashing Prosperity Through Deregulation

Executive Order 14192 (90 FR 9065, February 6, 2025) does not apply because actions that establish a tolerance under FFDCA section 408 are exempted from review under Executive Order 12866.

C. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA 44 U.S.C. 3501 *et seq.,* because it does not contain any information collection activities.

D. Regulatory Flexibility Act (RFA)

Since tolerance actions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerances in this final rule, do not require the issuance of a proposed rule, the requirements of the RFA, 5 U.S.C. 601 *et seq.,* do not apply to this action.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more (in 1995 dollars and adjusted annually for inflation) as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or on the private sector.

F. Executive Order 13132: Federalism

This action does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it will not have substantial direct effects on tribal governments, on the relationship between the federal government and the Indian tribes, or on the distribution of power and responsibilities between the federal government and Indian tribes.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because tolerance actions like this one are exempt from review under Executive Order 12866. However, EPA's 2021 Policy on Children's Health applies to this action. This rule finalizes tolerance actions under the FFDCA, which requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . . '' (FFDCA 408(b)(2)(C)). The Agency's consideration is summarized in Unit III.D.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211 (66 FR 28355) (May 22, 2001) because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer Advancement Act (NTTAA)

This action does not involve technical standards that would require Agency consideration under NTTAA section 12(d), 15 U.S.C. 272.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.,* and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: July 2, 2025.

Charles Smith,

Director, Registration Division Office of Pesticide Programs.

For the reasons set forth in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. Amend § 180.578, by:

■ a. Adding the heading ''Table 1 to Paragraph (a)(1)'' to the table in paragraph (a)(1);

■ b. Adding the following commodities in alphabetical order to the table in paragraph (a)(1): ''ambrette, seed''; ''angelica, seed''; ''angelica, dahurian, seed''; ''anise, seed''; ''annatto, seed''; ''candlebush''; ''caraway, black''; ''celery, seed''; ''chervil, seed''; ''chinese nutmeg tree''; ''coriander, seed''; ''cubeb, seed''; ''culantro, seed''; ''cumin''; ''dill, seed''; ''fennel, common, seed''; ''fennel flower, seed''; ''fenugreek, seed''; ''grains of paradise''; ''guarana''; ''honewort, seed''; ''lovage, seed''; ''mahaleb''; ''milk thistle''; ''mustard, seed''; ''nutmeg''; ''pepper, black''; ''poppy seed''; ''sesame, seed''; ''tamarind, seed''; ''wattleseed''; and

■ c. Adding an end note 2 to the table in paragraph (a)(1).

The additions read as follows:

§ 180.578 Acetamiprid; tolerances for residues.

(a) * * *

(1) * * *

TABLE 1 TO PARAGRAPH (a)(1)

Commodity	Parts per million
* * * * *	
Ambrette, seed[2]	2
Angelica, seed[2]	2
Angelica, dahurian, seed[2]	2
Anise, seed[2]	2
Annatto, seed[2]	2
* * * * *	
Candlebush[2]	2
* * * * *	
Caraway, black[2]	2
Celery, seed[2]	2
* * * * *	
Chervil, seed[2]	2
Chinese nutmeg tree[2]	2
* * * * *	
Coriander, seed[2]	2
* * * * *	
Cubeb, seed[2]	2
Culantro, seed[2]	2
Cumin[2]	2
Dill, seed[2]	2
* * * * *	
Fennel flower, seed[2]	2
Fennel, common, seed[2]	2
Fenugreek, seed[2]	2
* * * * *	
Grains of paradise[2]	2
* * * * *	
Honeywort, seed[2]	2
* * * * *	
Lovage, seed[2]	2
Mahaleb[2]	2
Milk, thistle[2]	2
Mustard, seed[2]	2
Nutmeg[2]	2
* * * * *	
Pepper, black[2]	0.1
Poppy, seed[2]	2
* * * * *	
Sesame, seed[2]	2
* * * * *	
Tamarind, seed[2]	2
* * * * *	
Wattleseed[2]	2

[1] There are no U.S. registrations as of February 10, 2010, for the use of acetamiprid on dried tea.

[2] There are no U.S. registrations for these commodities as of July 16, 2025.

[FR Doc. 2025–13289 Filed 7–15–25; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[RTID 0648–XF039; Docket No. 250312–0037]

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod by Catcher/Processors Using Trawl Gear in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting retention of Pacific cod by catcher/processors using trawl gear in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary because the 2025 total allowable catch of Pacific cod allocated to catcher/processors using trawl gear in the Central Regulatory Area of the GOA has been or will be reached.

DATES: Effective 1200 hours, Alaska local time (A.l.t.), July 14, 2025, through 2400 hours, A.l.t., December 31, 2025.

FOR FURTHER INFORMATION CONTACT: Abby Jahn, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the GOA (FMP) prepared and recommended by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2025 total allowable catch (TAC) of Pacific cod allocated to catcher/processors using trawl gear in the Central Regulatory Area of the GOA is 626 metric tons as established by the final 2025 and 2026 harvest specifications for groundfish of the GOA (90 FR 12468, March 18, 2025).

In accordance with § 679.20(d)(2), the Administrator, Alaska Region, NMFS

(Regional Administrator), has determined that the 2025 TAC of Pacific cod allocated to catcher/processors using trawl gear in the Central Regulatory Area of the GOA has been or will be reached. Therefore, NMFS is prohibiting retention of Pacific cod caught by catcher/processors using trawl gear in the Central Regulatory Area of the GOA and requiring that Pacific cod caught by catcher/processors using trawl gear in the Central Regulatory Area of the GOA be treated in the same manner as prohibited species in accordance with § 679.21(a)(2) for the remainder of the year. This action is necessary to prevent exceeding the 2025 TAC of Pacific cod allocated to catcher/processors using trawl gear in the Central Regulatory Area of the GOA.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b) of the Magnuson-Steven Act, and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest, as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay prohibiting the retention of Pacific cod by catcher/processors using trawl gear in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data on Pacific cod harvest by catcher/processors in the Central Regulatory Area of the GOA only became available as of July 11, 2025.

The Assistant Administrator for Fisheries, NOAA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: July 14, 2025.

Kelly Denit,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2025–13303 Filed 7–14–25; 4:15 pm]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 90, No. 134
Wednesday, July 16, 2025

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R08–OAR–2020–0098; FRL–12594–01–R8]

Air Plan Approval; State of Utah; Utah $PM_{2.5}$ State Implementation Plan Revisions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve, through parallel processing, a State Implementation Plan (SIP) submission from the State of Utah with revisions to Utah Administrative Code (UAC), Utah State SIP, and the best available control measures/best available control technologies (BACM/BACT) determinations for five facilities found in the Salt Lake City, Utah nonattainment area (NAA) for the 2006 24-hour fine particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 microns ($PM_{2.5}$) National Ambient Air Quality Standard (NAAQS) (State of Utah draft dated May 20, 2025). The EPA is taking this action pursuant to the Clean Air Act (CAA or the Act).

DATES: Written comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R08–OAR–2020–0098, to the Federal Rulemaking Portal: *https://www.regulations.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *https://www.regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

Docket: All documents in the docket are listed in the *https://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available electronically in *https://www.regulations.gov.* Please email or call the person listed in the **FOR FURTHER INFORMATION CONTACT** section if you need to make alternative arrangements for access to the docket.

FOR FURTHER INFORMATION CONTACT: Crystal Ostigaard, Air and Radiation Division, EPA, Region 8, Mailcode 8ARD–IO, 1595 Wynkoop Street, Denver, Colorado, 80202–1129, telephone number: (303) 312–6602, email address: *ostigaard.crystal@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document wherever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

Table of Contents

I. Background
II. EPA's Evaluation of the May 20, 2025 Draft SIP Submission
III. Proposed Action
IV. Incorporation by Reference
V. Statutory and Executive Order Reviews

I. Background

A. Statutory and Regulatory Background for EPA's Regulation of $PM_{2.5}$

Under section 109 of the Act, the EPA has promulgated NAAQS for certain pollutants, including $PM_{2.5}$ (40 CFR 50.2(b)). Once the EPA promulgates a NAAQS, section 107 of the Act specifies a process for the designation of each area within a state, generally as either an attainment area (an area attaining the NAAQS) or as a NAA (an area not attaining the NAAQS, or that contributes to nonattainment of the NAAQS in a nearby area). For $PM_{2.5}$, certain areas have also been designated ''unclassifiable.'' These various designations, in turn, trigger certain state planning requirements.

For all areas, regardless of designation, section 110 of the Act requires that each state adopt and submit for EPA approval, a plan to provide for implementation, maintenance, and enforcement of the NAAQS. This plan is commonly referred to as a SIP. CAA section 110 contains requirements that a SIP must meet to gain EPA approval.[1] For NAAs, SIPs must meet additional requirements in part D of title I of the Act.

On October 17, 2006 (71 FR 61144), the EPA revised the level of the 24-hour $PM_{2.5}$ NAAQS, lowering the primary and secondary standards from the 1997 standard of 65 micrograms per cubic meter ($\mu g/m^3$) to 35 $\mu g/m^3$. On November 13, 2009 (74 FR 58688), the EPA designated three NAAs in Utah for the 2006 24-hour $PM_{2.5}$ NAAQS of 35 $\mu g/m^3$. These are the Salt Lake City; Provo; and Logan, Utah-Idaho [2] NAAs.

The EPA originally issued a rule in 2007 [3] regarding implementation of the 2006 24-hour $PM_{2.5}$ NAAQS for the NAA plan requirements specified in CAA title I, part D, subpart 1. Under subpart 1, Utah was required to submit an attainment plan for each area no later than three years from the date of nonattainment designation. These plans needed to provide for the attainment of the $PM_{2.5}$ standards as expeditiously as practicable, but no later than five years from the date the areas were designated nonattainment.

In 2013, the U.S. Court of Appeals for the District of Columbia held that the EPA should have implemented the 2006

[1] EPA's approval of a SIP has several consequences. For example, after the EPA approves a SIP, the EPA and citizens may enforce the SIP's requirements in federal court under section 113 and section 304 of the Act; in other words, the EPA's approval of a SIP makes the SIP ''federally enforceable.'' Also, once the EPA has approved a SIP, a state cannot unilaterally change the federally enforceable version of the SIP. Instead, the state must first submit a SIP revision to the EPA and gain EPA's approval of that revision.

[2] The Logan, Utah-Idaho NAA was redesignated to attainment for the 2006 24-hour $PM_{2.5}$ NAAQS on May 19, 2021 (86 FR 27035).

[3] 72 FR 20586 (Apr. 25, 2007).

$PM_{2.5}$ 24-hour standards, as well as the other $PM_{2.5}$ NAAQS, based on both subpart 1 and subpart 4 of CAA title I, part D.[4] Under subpart 4, all NAAs are initially classified as Moderate, and Moderate area attainment plans must address the requirements of subpart 4 as well as subpart 1. Additionally, subpart 4 sets a different SIP submittal due date and attainment year. For a Moderate area, the attainment SIP is due 18 months after designation and the attainment year is as expeditiously as practicable, but no later than the end of the sixth calendar year after designation.

On June 2, 2014 (79 FR 31566), the EPA finalized the Identification of Nonattainment Classification and Deadlines for Submission of State Implementation Plan (SIP) Provisions for the 1997 Fine Particulate ($PM_{2.5}$) National Ambient Air Quality Standard (NAAQS) and 2006 24-hour $PM_{2.5}$ NAAQS. This rule classified the areas that were designated as Moderate in 2009 as nonattainment and set the attainment SIP submittal due date for those areas to December 31, 2014. Additionally, this rule established the Moderate area attainment date of December 31, 2015.

On August 24, 2016 (81 FR 58010), the EPA finalized the Fine Particulate Matter National Ambient Air Quality Standards: State Implementation Plan Requirements (''$PM_{2.5}$ Requirements Rule''), which partially addressed the 2013 National Resources Defense Council (*NRDC)* decision. The final $PM_{2.5}$ Requirements Rule details how air agencies can meet the SIP requirements under subparts 1 and 4 that apply to areas designated nonattainment for any $PM_{2.5}$ NAAQS, such as: general requirements for attainment plan due dates and attainment demonstrations; provisions for demonstrating reasonable further progress (RFP); quantitative milestones; contingency measures; nonattainment new source review (NNSR) permitting programs; and reasonable available control measures (RACM) (including reasonably available control technologies (RACT)). The statutory attainment planning requirements of subparts 1 and 4 were established to ensure that the following goals of the CAA are met: (i) that states implement measures that provide for attainment of the $PM_{2.5}$ NAAQS as expeditiously as practicable; and (ii) that states adopt emissions reduction strategies that will be the most effective at reducing $PM_{2.5}$ levels in NAAs.

If an area is reclassified from Moderate to Serious, the area will then be subject to Serious $PM_{2.5}$ CAA requirements under subpart 1 and subpart 4, and the CAA requires the state to submit the following Serious area SIP elements: (1) CAA section 172(c)(3); (2) CAA sections 172(c)(1) and 189(b)(1)(B); (3) CAA section 188(c)(2); (4) CAA section 172(c)(2); (5) CAA section 189(c); (6) CAA section 189(e); (7) CAA section 172(c)(9); and (8) CAA section 302(j) and CAA section 189(b)(3).

Serious area 2006 24-hour $PM_{2.5}$ plans must also satisfy the general requirements applicable to all SIP submissions under section 110 of the CAA, including the requirement to provide necessary assurances that the implementing agencies have adequate personnel, funding, and authority under CAA section 110(a)(2)(E), and the requirements concerning enforcement in CAA section 110(a)(2)(C).

B. Utah's PM2.5 Attainment Status and SIP Development

After the November 13, 2009 designation of nonattainment for the 2006 24-hour $PM_{2.5}$ NAAQS, Utah developed draft $PM_{2.5}$ attainment plans intended to meet the requirements of subpart 1. Utah submitted these revised 2006 24-hour $PM_{2.5}$ attainment plans for the Salt Lake City and Provo NAAs on December 14, 2012.

After the court's 2013 decision, Utah amended its attainment plans to address the requirements of subpart 4. On December 16, 2014, Utah Division of Air Quality (UDAQ) withdrew all prior Salt Lake City and Provo 2006 24-hour $PM_{2.5}$ Moderate SIP attainment plan submissions and submitted a subpart 1 and subpart 4 Salt Lake City and Provo 2006 24-hour $PM_{2.5}$ Moderate SIP. Additionally, the State of Utah submitted various revisions to the UAC Title R307 (Environmental Quality) area source rules in multiple submissions: February 2, 2012; May 9, 2013; June 8, 2013; February 18, 2014; April 17, 2014; May 20, 2014; July 10, 2014; and August 6, 2014. These area source rules were either new or revised to meet RACM/RACT for the Salt Lake City and Provo 2006 24-hour $PM_{2.5}$ SIPs. The EPA acted on these submittals, along with the area source rule revisions in the December 16, 2014, submission, on February 25, 2016 (81 FR 9343), October 19, 2016 (81 FR 71988), October 2, 2019 (84 FR 52368), and February 26, 2020 (85 FR 10989).

On January 19, 2017, the State of Utah submitted revisions to their Part H.11, 12, and 13 emission limits section of the Utah 2006 24-hour $PM_{2.5}$ SIP and revised R307–110–17. R307–110–17 incorporation by reference (IBR) section IX., Control Measures for Area and Point Sources, Part H, Emission Limits; which formally incorporates the Salt Lake City and Provo 2006 24-hour $PM_{2.5}$ Part H.11, 12, and 13 emission limits into Utah's State regulations. This was undertaken by UDAQ to correlate any overlapping limits between the 2006 24-hour $PM_{2.5}$ Part H.11, 12, and 13, to the coarse particulate matter (PM_{10}) Part H.1, 2, 3, and 4.

On May 10, 2017 (82 FR 21711), the EPA published a final rule reclassifying the Salt Lake City and Provo areas to ''Serious'' nonattainment status, based on the EPA's determination that the areas could not practicably attain the 2006 24-hour $PM_{2.5}$ standards by the December 31, 2015 attainment date. This reclassification became effective on June 9, 2017. The reclassification was based on the EPA's evaluation of ambient air quality data from the 2013–2015 period, indicating that it was not practicable for some of the monitoring sites in the Salt Lake City and Provo areas to show $PM_{2.5}$ design values at or below the level of the 2006 24-hour $PM_{2.5}$ NAAQS by December 31, 2015.

On March 23, 2018, the State of Utah submitted quantitative milestone reports for the Salt Lake City and Provo 2006 24-hour $PM_{2.5}$ NAAs, meeting its due date of no later than 90 days after the December 31, 2017, milestone date. On October 24, 2018, the EPA determined that the 2017 quantitative milestone reports for the Salt Lake City and Provo 2006 24-hour $PM_{2.5}$ NAAs were adequate.[5]

After the Serious reclassification, UDAQ revised certain area source rules in UAC section R307–200 and R307–300 Series and submitted these revisions on April 19, 2018, May 21, 2020, and July 21, 2020. On February 4, 2019, the State of Utah submitted the Serious 2006 24-hour $PM_{2.5}$ SIP for the Salt Lake City NAA which included the BACM/BACT analysis for the Provo Serious 2006 $PM_{2.5}$ NAA. The analysis was based on the emission limits submitted on January 19, 2017, for only Part H.13. On February 15, 2019, Utah submitted the Serious 2006 24-hour $PM_{2.5}$ SIP for the Salt Lake City NAA, which included revisions to Utah SIP Part H.11 and 12, and the accompanying BACM/BACT analysis. The February 4, 2019 and February 15, 2019, submission included BACM/BACT analyses for on-road, off-road, and area source rules; some of

[4] *Nat. Res. Def. Council* v. *EPA,* 706 F.3d 428, 437 (D.C. Cir. 2013) (*NRDC*) or 2013 National Resources Defense Council (NRDC) decision.

[5] The state's quantitative milestone reports and the adequacy determination letter from the EPA Administrator to the Governor of Utah are in the docket for this action.

these area source rules were revised and others were deemed BACM/BACT without revising.[6]

Applying the Clean Data Policy,[7] on April 10, 2019 (84 FR 14267) and September 27, 2019 (84 FR 51055), the EPA finalized a determination that the obligation to submit any remaining attainment-related SIP revisions arising from classification of the Provo and Salt Lake City area, as Moderate NAAs and the subsequent reclassification as Serious NAAs for the 2006 24-hour $PM_{2.5}$ NAAQS does not apply for so long as the area continues to attain the 2006 24-hour $PM_{2.5}$ NAAQS.[8] The attainment-related SIP revisions that were suspended include: an attainment demonstration (Moderate and Serious), provisions demonstrating timely implementation of RACM/RACT (Moderate), an RFP plan (Moderate and Serious), quantitative milestones and quantitative milestone reports (Moderate and Serious), and contingency measures (Moderate and Serious). The only remaining attainment-related SIP elements for EPA action include baseline emission inventories, NNSR, and BACM/BACT.

C. Requirements for BACM/BACT

For any Serious 2006 24-hour $PM_{2.5}$ NAA, section 189(b)(1)(B) of the Act requires that a state submit provisions to assure that BACM/BACT for the control of $PM_{2.5}$ and $PM_{2.5}$ precursors shall be implemented no later than four years after the date the area is reclassified as a Serious area. The EPA defines BACM (including BACT) as, among other things, the maximum degree of emissions reduction achievable for a source or source category, which is determined on a case-by-case basis considering energy, economic and environmental impacts, and other costs.[9] We consider BACM a control level that goes beyond existing RACM-level controls, for example by expanding the use of RACM controls or by requiring preventative measures instead of remediation.[10] The level of stringency generally refers to the overall level of emissions reductions of a control measure or technology, or of such measures and technologies combined.

The $PM_{2.5}$ Requirements Rule explains that BACM/BACT are generally independent requirements, to be determined without regard to the specific attainment analysis (*i.e.,* attainment demonstration) for the area.[11] The EPA found it reasonable to interpret the statute as requiring a different analysis for determining BACM/BACT, *i.e.,* that while RACM emphasizes the attainment needs of the area, BACM has a greater emphasis on identifying measures that are feasible to implement. The Addendum to the General Preamble noted that the test for BACM puts a ''greater emphasis on the merits of the measure or technology alone,'' rather than on ''flexibility in considering other factors,'' in contrast to the approach for RACM/RACT.[12]

Section 189(b)(1)(B) of the Act allows states, in appropriate circumstances, to delay implementation of BACM until four years after reclassification. Because the EPA reclassified the Provo and Salt Lake City areas as Serious NAAs for the 2006 24-hour $PM_{2.5}$ NAAQS effective June 9, 2017 (82 FR 21711; May 10, 2017), the date four years after reclassification is June 9, 2021. In this case, however, all BACM for direct $PM_{2.5}$ and $PM_{2.5}$ precursors in the Salt Lake City area must be, and was, implemented no later than December 31, 2019, which is the outermost statutory attainment date for the Salt Lake City area under section 188(c)(2).[13]

Under the $PM_{2.5}$ Requirements Rule, control measures that can be implemented in whole or in part by the end of the fourth year after an area's reclassification to Serious are considered BACM, and control measures that can only be implemented after this period but before the attainment date are considered ''additional feasible measures.'' [14] The EPA has defined ''additional feasible measures'' as ''those measures and technologies that otherwise meet the criteria for BACM/BACT but that can only be implemented in whole or in part beginning 4 years after reclassification of an area, but no later than the statutory attainment date of the area.'' [15] Given that the statutory attainment date is less than three years from the effective date of the reclassification of the Provo and Salt Lake City areas, additional feasible measures are not required in this case.

The Addendum and the $PM_{2.5}$ Requirements Rule explain that the BACM/BACT selection process for implementation of the 2006 24-hour $PM_{2.5}$ NAAQS is designed to take into account the local facts and circumstances and the nature of the air pollution problem in a given NAA. The following steps are used in determining BACM/BACT: (1) Develop a comprehensive emission inventory of the sources of directly emitted $PM_{2.5}$ and $PM_{2.5}$ precursors; (2) Identify existing and potential control measures for the sources in the inventory; (3) Evaluate the technological feasibility of potential control measures; (4) Evaluate the economic feasibility of potential control measures; and (5) Determine the earliest date by which a control measure or technology can be implemented in whole or in part.[16]

Additionally, the information found within this action, coupled with the statutory and regulatory requirements, support the EPA's decision that BACT or lowest achievable emission rate (LAER) provisions for new sources (as distinct from BACT for existing sources), or best available retrofit technology (BART) for existing sources, could potentially qualify as BACM or BACT for purposes of meeting the Serious area attainment plan requirements.[17] However, as discussed further in the $PM_{2.5}$ Requirements Rule, it is not appropriate for a state to assume that just because a certain control technology was determined to meet BACT, LAER or BART criteria for a new source sometime in the past, that such a control will also automatically meet the criteria for BACM or BACT or additional feasible measures for attainment planning purposes. This is because the regulated pollutant or source applicability may differ and the analyses may be conducted years apart. Thus, a state may not simply rely on

[6] On November 6, 2020, (85 FR 71023), the EPA proposed approval of the redesignation requests, maintenance plans, and the Moderate and Serious $PM_{2.5}$ SIP submissions including BACM/BACT determinations.

[7] The EPA codified the Clean Data Policy in the $PM_{2.5}$ Requirements Rule for the implementation of current and future $PM_{2.5}$ NAAQS. See 81 FR at 58161; 40 CFR 51.1015(a).

[8] 40 CFR 51.1015(a) and (b).

[9] State Implementation Plans for Serious PM_{10} Nonattainment Areas, and Attainment Date Waivers for PM_{10} Nonattainment Areas Generally; Addendum to the General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990 (''Addendum''), August 16, 1994; 59 FR 41998, 42010, 42013 (Aug. 16, 1994). The General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990 (''General Preamble'') was published at 57 FR 13498 (Apr. 16, 1992).

[10] *Id.* at 42011, 42013.

[11] 81 FR at 58081.

[12] 59 FR at 42011.

[13] CAA section 189(b)(1)(B) establishes an outermost deadline (''no later than four years after the date the area is reclassified'') and does not preclude an earlier implementation deadline for BACM where necessary to satisfy the attainment requirements of the Act.

[14] 40 CFR 51.1010(a)(4)(ii). ''Additional feasible measures'' may be necessary in certain circumstances to implement the requirements of CAA section 172(c)(6), which states that NAA plans shall include enforceable emission limitations and such other control measures, means or techniques, as well as schedules and timetables for compliance, as may be necessary or appropriate to provide for attainment of the NAAQS by the applicable attainment date.

[15] 40 CFR 51.1000.

[16] Addendum at 42012–42014; 81 FR at 58084–58085.

[17] See 81 FR at 58086.

prior BACT, LAER or BART analyses for the purposes of showing that a source has also met BACT for the relevant 2006 24-hour $PM_{2.5}$ NAAQS. Rather, the EPA expects that in Step 2 (discussed above) of the BACM/BACT determination process, the state would identify such measures as ''existing measures'' that should be further evaluated as potential BACM or BACT, or additional feasible measures. At the same time, the EPA notes that the presence of previously installed control technology, and the technical and economic considerations that would be associated with upgrading to a measure that achieves greater reductions, is something that should be considered in the assessments of technological and economic feasibility of the newer measure.[18]

Once these analyses are complete, a state must use this information to develop enforceable control measures and submit them to the EPA for evaluation under CAA section 110. We use these steps from the Addendum and the $PM_{2.5}$ Requirements Rule, as guidelines in our evaluation of the BACM measures and related analyses in the Provo and Salt Lake City 2006 24-hour $PM_{2.5}$ Serious SIP.

D. What is parallel processing? [19]

Parallel processing refers to a process that utilizes concurrent state and Federal proposed rulemaking actions to process state SIP submissions in less time than the standard process. During parallel processing, generally, the state submits a copy of the proposed regulation or other revisions to the EPA before conducting its public hearing and completing its public comment process under state law. The EPA reviews this proposed state action and prepares a notice of proposed rulemaking under Federal Law. In some cases, the EPA's notice of proposed rulemaking is published in the **Federal Register** during the same time frame that the state is holding its public hearing and conducting its public comment process. The state and the EPA then provide for concurrent public comment periods on both the state action and Federal action. If, after completing the state and EPA's public comment process, the state changes its final submittal from the proposed submittal, the EPA evaluates those changes and decides on whether to publish another notice of proposed rulemaking in light of those changes or to proceed to taking the final action on its proposed action and describe the state's changes in its final rulemaking action. Any final rulemaking action by the EPA will occur only after the final submittal has been adopted by the state and formally provided to the EPA. Parallel processing is designed to require less time than the standard process, in which a state completes its entire state process before submitting a final SIP package to the EPA, only after which the EPA proposes action on the state submission, seeks public comment, and takes final action.

In this case, however, the EPA's and Utah's processes have not been perfectly concurrent. The State submitted the draft SIP revisions on May 20, 2025, with a public comment period starting March 1 and going through March 31, 2025, with a public hearing held online at 2:00 p.m. on March 13, 2025. The State's intention is to submit its final SIP revisions in July 2025. After Utah submits these formal SIP revisions, the EPA will evaluate the submittal. If the State changes the formal submittal from the proposed submittal, the EPA will evaluate those changes for significance. If the EPA finds any such changes to be significant, then the Agency intends to determine whether to re-propose the actions based on the revised submission or to proceed to take final action on the submittal as changed by the State. Although the EPA was unable to have a concurrent public comment process with the State, parallel processing allows the EPA to begin to take action on the State's proposed submittal in advance of a formal and final submission.

II. EPA's Evaluation of the May 20, 2025 Draft SIP Submission

A. BACM/BACT Revisions

1. BACM/BACT Analysis in the Serious $PM_{2.5}$ SIP

The UDAQ's BACM/BACT process and control measure evaluations for the identified sources are described in detail in their draft May 20, 2025 submission.[20] For each identified source, UDAQ identified its adopted control measures and potential additional control measures based on measures implemented in other areas, measures identified in EPA regulations or guidance (*e.g.,* in control technique guidelines (CTGs), alternative control technique documents (ACTs), new sources performance standards (NSPSs), or in the EPA's ''Cost Analysis Models/Tools for Air Pollution Regulations''), or measures identified in prior EPA rulemaking documents (*e.g.,* recommendations in SIP actions).[21] UDAQ evaluated these potential additional control measures to determine whether implementation of the measures would be technologically and economically feasible in the Salt Lake City area. Based upon their evaluation, UDAQ determined BACM/BACT to be the existing controls for all five facilities listed below.

In the following sections, we review key components of UDAQ's demonstrations concerning BACM/BACT for the identified sources of direct $PM_{2.5}$, nitrogen oxide (NO_X), volatile organic compounds (VOC), sulfur dioxide (SO_2), and ammonia (NH_3) emissions in the Salt Lake City NAA: (1) Big West Oil LLC Refinery; (2) Chevron Products Company—Salt Lake Refinery; (3) Hexcel Corporation: Salt Lake Operations; (4) Holly Frontier Sinclair Woods Cross Refinery; and (5) Tesoro Refining and Marketing Company LLC Marathon Refinery: Salt Lake City Refinery.

2. EPA's Evaluation and Conclusion of UDAQ's BACM/BACT Demonstrations for Identified Sources in the Salt Lake City NAA

EPA reviewed UDAQ's analysis and determination in the May 20, 2025 draft submission that the five major stationary source control measures represent BACM/BACT for direct $PM_{2.5}$ and $PM_{2.5}$ precursors within the Provo and Salt Lake City NAAs. As a result, the EPA proposes to determine that UDAQ's Utah SIP Part H emission limits provide for the implementation of BACM/BACT for the five major stationary sources of direct $PM_{2.5}$ and $PM_{2.5}$ precursors. Additional detail can be found in our technical support document (TSD) located in the docket for this action.

We are proposing to approve, through parallel processing, the May 20, 2025 draft submission of revisions to Utah SIP section IX.H.11. and 12. and to find that the May 20, 2025 draft submission provides for the implementation of BACM/BACT for all sources of direct $PM_{2.5}$ and $PM_{2.5}$ precursors as expeditiously as practicable, for purposes of the 2006 24-hour $PM_{2.5}$ NAAQS in the Salt Lake City area, in accordance with the requirements of CAA section 189(b)(1)(B) and 40 CFR 51.1010. Additional detail can be found in the TSD within the docket.

[18] *Id.*

[19] 40 CFR part 51, appendix V, section 2.3.1.

[20] On November 6, 2020, (85 FR 71023), the EPA proposed approval of the redesignation requests, maintenance plans, and the Moderate and Serious $PM_{2.5}$ SIP submissions including BACM/BACT determinations for all other sources (which included on-road mobile sources, off-road mobile sources, area sources, and major stationary sources).

[21] The Cost Analysis Models/Tools for Air Pollution Regulations can be found at *https://www.epa.gov/economic-and-cost-analysis-air-pollution-regulations/cost-analysis-modelstools-air-pollution.*

B. Utah's Additional SIP Revisions in the May 20, 2025 Draft Submission

When certain sections of the Utah state SIP are amended by the Utah Air Quality Board (UAQB), those sections must be incorporated into the Utah Air Quality Rules in the UAC. Utah incorporates its state SIP sections within UAC section R307–110. These rules are amended as needed to change the effective dates to match the UAQB approval date of various amendments to the Utah state SIP. For this proposed action, we are also proposing to approve into the federally approved SIP, through the parallel process based on the information in the May 20, 2025 UDAQ submission, section IX., Control Measures for Area and Point Sources, Part H, Emission Limits,[22] which incorporates all the emission limits in the Utah state SIP section IX.H.11. and 12. Additionally, we are proposing to approve into the federally approved SIP the revisions within Utah SIP sections 11. and 12. through the parallel process based on the information May 20, 2025 UDAQ submission. In section I.C. above, we discuss the process of this type of action.

1. R307–110–17

Section R307–110–17 incorporates the amendments to Utah State SIP section IX., Control Measures for Area and Point Sources, Part H, Emission Limits into the UAC. This is a ministerial provision, which only revises the effective date within the rule to May 7, 2025, and does not by itself change any state SIP control measures.

2. Utah State SIP Section IX.H.11

Utah State SIP section IX.H.11. (General Requirements: Control Measures for Area and Point Sources, Emission Limits and Operating Practices, $PM_{2.5}$) establishes general requirements for recordkeeping, reporting, good combustion practices for emission minimization, and monitoring for the stationary sources subject to emission limits under Utah State SIP sections IX.H.12. and 13., except as otherwise outlined in individual conditions in sections IX.H.12. and 13. Additionally, this section establishes general refinery requirements, addressing limitations on emitting units common to the refineries in the NAAs. These general refinery requirements include limits at fluid catalytic cracking units, limits on refinery fuel gas and heat exchangers, requirements on tank degassing, restrictions on liquid fuel oil consumption, requirements for leak detections and repairs, and requirements for hydrocarbon flares. Furthermore, section IX.H.11. controls VOCs through catalytic oxidation at internal combustion engines and natural gas combustion turbines.

UDAQ revised IX.H.11.c. where subsections 'iv' and 'v' were created. These two subsections describe how each source under IX.H.12. and 13. are required to comply with all applicable recordkeeping and reporting sections of the facilities' most recently, federally, approved title V permit, which includes submissions of annual compliance certifications and bi-annual monitoring reports, unless a more stringent requirement is found under IX.H.12. and/or 13. Additionally, subsection 'v' requires that each source complies with applicable recordkeeping and reporting found in 40 CFR part 60 and 40 CFR part 63.

Additionally, UDAQ revised subsection IX.H.11.g.vii.B. and created two other subsections under IX.H.11.g. which includes IX.H.11.g.viii. and IX.H.11.g.ix. Subsection IX.H.11.g.vii.B. revised a reference of 40 CFR 80.510 to 1090.305. The two subsections that were created, create good combustion practices, and recordkeeping and reporting requirements specific to refineries located in the $PM_{2.5}$ NAAs. To ensure minimization of emissions, each owner/operator shall operate all combustion units in accordance with good combustion practices and maintain all combustion units following the manufacturer's recommendations. The additional recordkeeping and reporting requirements for refineries are in addition to IX.H.11.c. and each refinery shall comply with the listed requirements until such time as a title V operating permit is federally approved:

(a) All required monitoring data and support information required by IX.H.11 and IX.H.12 shall be retained by the source for a period of five years from the date of monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records, all original strip-charts or appropriate readings for continuous monitoring instrumentation, and copies of all reports required by IX.H.11 and IX.H.12.

(b) Monitoring reports, if applicable, shall be submitted to UDAQ as specified in IX.H.11.e. and IX.H.11.f.

The detailed analysis of our parallel process on the May 20, 2025 submission of draft revisions to Utah State SIP section IX.H.11., can be found in our TSD in the docket.

3. Utah State SIP Section IX.H.12

Utah State SIP section IX.H.12. (Source-Specific Emission Limitations in Salt Lake City—UT $PM_{2.5}$ Nonattainment Area) establishes specific emission limitations for 17 sources. These sources are ATK Launch Systems Inc. Promontory, Big West Oil LLC Refinery, Chemical Lime Company (LHoist North America), Chevron Products Company—Salt Lake Refinery, Compass Minerals Ogden Inc., Holly Frontier Sinclair Woods Cross Refinery, Kennecott Utah Copper (KUC): Mine, Kennecott Utah Copper (KUC): Power Plant, Kennecott Utah Copper: Smelter and Refinery, Nucor Steel Mills, PacifiCorp Energy: Gadsby Power Plant, Tesoro Refining and Marketing Company LLC Marathon Refinery: Salt Lake City Refinery, The Proctor & Gamble Paper Products Company, Utah Municipal Power Association: West Valley Power Plant, University of Utah: University of Utah Facilities, and Hill Air Force Base. Major stationary sources were identified based on their potential to emit (PTE) of 70 tpy or more of $PM_{2.5}$, NO_X, SO_2, VOC, and/or NH_3. With this draft submittal, UDAQ is completing major revisions to emission limitations for the following five sources in section IX.H.12.: (1) IX.H.12.b. Big West Oil LLC Refinery; (2) IX.H.12.d. Chevron Products Company—Salt Lake Refinery; (3) IX.H.12.f. Hexcel Corporation: Salt Lake Operations; (4) IX.H.11.g. Holly Frontier Sinclair Woods Cross Refinery; and (5) IX.H.12.m. Tesoro Refining and Marketing Company LLC Marathon Refinery: Salt Lake City Refinery. A summary of the proposed new emission limits is outlined below.

The detailed analysis of our parallel process on the May 20, 2025 submission of draft revisions and BACM/BACT analyses to Utah state SIP section IX.H.12., can be found in our TSD in the docket.

4. EPA's Evaluation and Conclusion of Utah's Additional SIP Revisions in the May 20, 2025 Draft Submission

We are proposing to approve, through parallel processing, the May 20, 2025 draft submission of revisions to the federally approved Utah SIP as listed in the Utah state SIP section IX.H.11. and 12. We are also proposing to find that the May 20, 2025 draft submission provides for the implementation of BACM/BACT for the five sources of direct $PM_{2.5}$ and $PM_{2.5}$ precursors listed above as expeditiously as practicable, for purposes of the 2006 24-hour $PM_{2.5}$ NAAQS in the Salt Lake City area, in accordance with the requirements of CAA section 189(b)(1)(B) and 40 CFR

[22] Utah's SIP for R307 series rules are located at: *https://deq.utah.gov/air-quality/air-quality-laws-and-rules;* and section IX.H. are located at: *https://deq.utah.gov/air-quality/sections-state-implementation-plan-sip.*

51.1010. Additional detail can be found within the TSD in the docket.

C. Did Utah follow the proper procedures for adopting their action?

Section 110(k) of the CAA addresses our actions on submissions of revisions to a SIP. The Act also requires states to observe procedural requirements in developing implementation plans and plan revisions for submission. Section 110(a)(2) of the Act provides that each implementation plan submitted by a state must be adopted after reasonable notice and public hearing. Section 110(l) of the Act similarly provides that each revision to an implementation plan submitted by a state under the Act must be adopted by the state after reasonable notice and public hearing.

We also must determine whether a submittal is complete and therefore warrants further review and action.[23] Our completeness criteria for SIP submittals is set out at 40 CFR part 51, appendix V. A submittal is deemed complete by operation of law under section 110(k)(1)(B) of the Act if a completeness determination is not made within six months after receipt of the submission.

On May 20, 2025, UDAQ submitted to the EPA for parallel processing a draft SIP revision based upon draft revisions to the Utah state SIP section IX.H.11. and 12., and R307–110–17. The comment period at the State level began March 1 and ended March 31, 2025, with a public hearing held online at 2:00 p.m. on March 13, 2025. UDAQ requested this parallel processing so as not to delay action on the 2006 24-hour $PM_{2.5}$ redesignations for the Salt Lake City and Provo NAAs. UDAQ is planning on submitting its final SIP revision early in July 2025. After the State formally submits these final revisions, the EPA will evaluate the final submittal for any changes between the proposed and final versions. As discussed above in section I.C., the EPA will determine if any changes to the draft submission would warrant another proposed rule, or if on the other hand the agency may proceed with a final action. This formal submission from the State of Utah will accompany either the final rule or the new proposed rule under this docket number.

III. Proposed Action

As mentioned in the sections above, we are proposing to approve, through parallel processing, Utah's draft May 20, 2025 submission to revise the federally approved Utah SIP based upon revisions to the Utah state SIP sections IX.H.11. and 12., and the accompanying R307–110–17. Additionally, the EPA is proposing to approve for incorporation into the federally approved Utah SIP the five major stationary sources BACM/BACT analyses/updates for the Salt Lake City 2006 24-hour $PM_{2.5}$ NAA that were submitted as a draft on May 20, 2025.

IV. Incorporation by Reference

In this document, the EPA is proposing to include regulatory text in an EPA final rule that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference R307–110–17 and Utah state SIP section IX.H.11. and 12, as discussed in sections I. and II. of this preamble. The EPA has made, and will continue to make, these materials generally available through *https://www.regulations.gov* and at the EPA Region 8 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Greenhouse gases, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2025–0292; FRL–12825–01–R9]

Determination of Attainment by the Attainment Date and Clean Data Determination; California, San Joaquin Valley 1997 Annual $PM_{2.5}$ Fine Particulate Matter Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to determine that the San Joaquin Valley, California fine particulate matter ($PM_{2.5}$) nonattainment area attained the 1997 annual $PM_{2.5}$ national ambient air

quality standards (NAAQS) by the December 31, 2024 applicable attainment date. This proposed determination is based on ambient air quality monitoring data from 2022 through 2024. We are also proposing to make a clean data determination (CDD) based on the 2022 through 2024 data and our evaluation of preliminary air quality monitoring data from 2025. We are taking comments on this proposal and plan to follow with a final action.

DATES: Comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2025–0292 at *https://www.regulations.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Ashley Graham, Geographic Strategies and Modeling Section (AIR–2–2), EPA Region IX, 75 Hawthorne Street, San Francisco, CA 94105; telephone number: (415) 972–3877; email address: *graham.ashleyr@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA.

I. Background

A. $PM_{2.5}$ NAAQS

The Clean Air Act (CAA) requires the EPA to establish primary and secondary NAAQS for certain pervasive pollutants that ''may reasonably be anticipated to endanger public health and welfare.'' [1] The primary NAAQS is designed to protect public health with an adequate margin of safety, and the secondary NAAQS is designed to protect public welfare and the environment. The EPA has set standards for six common air pollutants, referred to as criteria pollutants. These standards represent the air quality levels an area must meet to comply with the CAA.

$PM_{2.5}$ can be particles emitted by sources directly into the atmosphere as a solid or liquid particle (''primary $PM_{2.5}$'' or ''direct $PM_{2.5}$'') or can be particles that form in the atmosphere as a result of various chemical reactions from $PM_{2.5}$ precursor emissions emitted by sources (''secondary $PM_{2.5}$''). The EPA established each of the $PM_{2.5}$ NAAQS after considering substantial evidence from numerous health studies demonstrating that serious health effects are associated with exposures to $PM_{2.5}$ concentrations above such levels. Epidemiological studies have shown statistically significant correlations between elevated $PM_{2.5}$ levels and premature mortality. Other important health effects associated with $PM_{2.5}$ exposure include aggravation of respiratory and cardiovascular disease (as indicated by increased hospital admissions, emergency room visits, absences from school or work, and restricted activity dates), changes in lung function and increased respiratory symptoms, and new evidence for more subtle indicators of cardiovascular health. Individuals particularly sensitive to $PM_{2.5}$ exposure include older adults, people with heart and lung disease, and children.[2]

On July 18, 1997, the EPA revised the NAAQS for particulate matter by establishing new NAAQS for particles with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers ($PM_{2.5}$).[3] The EPA established primary and secondary annual and 24-hour standards for $PM_{2.5}$.[4] The EPA set the annual primary and secondary standards at 15.0 micrograms per cubic meter ($\mu g/m^3$), based on a three-year average of annual mean $PM_{2.5}$ concentrations.[5] The EPA has since strengthened the primary annual $PM_{2.5}$ NAAQS;[6] however, the 1997 primary annual $PM_{2.5}$ NAAQS remains in effect in areas designated nonattainment for that NAAQS.[7]

B. The San Joaquin Valley $PM_{2.5}$ Nonattainment Area

Following promulgation of a new or revised NAAQS, the EPA is required under CAA section 107(d) to designate areas throughout the nation as attainment, nonattainment, or unclassifiable for the NAAQS. Effective April 5, 2005, the EPA established the initial air quality designations for the 1997 annual $PM_{2.5}$ NAAQS, using air quality monitoring data for the three-year periods of 2001–2003 and 2002–2004.[8] The EPA designated the San Joaquin Valley as nonattainment for the 1997 annual $PM_{2.5}$ NAAQS.[9]

The San Joaquin Valley $PM_{2.5}$ nonattainment area encompasses over 23,000 square miles and includes all or part of eight counties: San Joaquin, Stanislaus, Merced, Madera, Fresno, Tulare, Kings, and the valley portion of Kern.[10] The area is home to four million people and is one of the nation's leading agricultural regions. Stretching over 250 miles from north to south and averaging 80 miles wide, it is partially enclosed by the Coast Mountain range to the west, the Tehachapi Mountains to the south, and the Sierra Nevada range to the east.

The California Air Resources Board (CARB) is the state agency responsible for the adoption and submission to the EPA of California state implementation plan (SIP) submissions. Under

[1] CAA section 108(a).

[3] 62 FR 38652.

[4] For a given air pollutant, ''primary'' NAAQS are those determined by the EPA as requisite to protect the public health, allowing an adequate margin of safety, and ''secondary'' standards are those determined by the EPA as requisite to protect the public welfare from any known or anticipated adverse effects associated with the presence of such air pollutant in the ambient air. See CAA section 109(b).

[5] 40 CFR 50.7.

[6] 78 FR 3086 (January 15, 2013) and 89 FR 16202 (February 7, 2024).

[7] 40 CFR 50.13(d).

[8] 70 FR 944 (January 5, 2005).

[9] 40 CFR 81.305.

[10] For a precise description of the geographic boundaries of the San Joaquin Valley nonattainment area, see 40 CFR 81.305.

California law, air districts in California are generally responsible for the development of regional air quality plans. For the San Joaquin Valley area, the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD or ''District'') develops and adopts air quality management plans to address CAA planning requirements applicable to the region. The District then submits such plans to CARB for adoption and submission to the EPA as proposed revisions to the California SIP.

The EPA approved most of the elements of the State's attainment plan for the San Joaquin Valley for the 1997 annual $PM_{2.5}$ NAAQS on December 14, 2023, including the State's demonstration that the area would attain the NAAQS by December 31, 2023.[11] On May 23, 2024, the State of California transmitted a letter to the EPA requesting that the EPA grant a one-year extension under CAA section 172(a)(2)(C) of the applicable ''Serious'' area attainment date for the San Joaquin Valley from December 31, 2023, to December 31, 2024.[12] In its request, the State certified that it has complied with all requirements and commitments pertaining to the area in the approved implementation plan and that certified monitoring data for the San Joaquin Valley for 2023 were below the level of the 1997 annual $PM_{2.5}$ NAAQS. On November 19, 2024, the EPA granted the State's request and extended the applicable attainment date to December 31, 2024.[13]

C. Clean Air Act Requirement for a Determination of Attainment

Sections 179(c) and 188(b)(2) of the CAA require that within six months following the applicable attainment date, the EPA shall determine whether a $PM_{2.5}$ nonattainment area attained the standard based on the area's design value[14] as of that date.[15] This determination, also referred to as a determination of attainment by the attainment date (DAAD), is based on certified data leading up to the attainment date, *i.e.,* in this case, data for 2022–2024. Section 179(c)(2) of the CAA requires the EPA to publish the determination in the **Federal Register**.

D. The EPA's Clean Data Policy

Under the EPA's longstanding Clean Data Policy, which was reaffirmed in the $PM_{2.5}$ Implementation Rule at 40 CFR 51.1015, when an area has attained the relevant $PM_{2.5}$ standard(s), the EPA may issue a CDD (also sometimes referred to as a determination of attainment for the purposes of the Clean Data Policy) after notice and comment rulemaking determining that a specific area is attaining the relevant standard(s). A CDD is not linked to any particular attainment deadline and is not necessarily equivalent to a determination that an area has attained the standard by its applicable attainment deadline (i.e., a DAAD). The effect of a CDD is to suspend the requirement for the area to submit an attainment demonstration, a reasonably available control measures demonstration, a reasonable further progress (RFP) plan, contingency measures, and any other planning requirements related to attainment for as long as the area continues to attain the standard.[16] A CDD does not suspend the requirements for an emissions inventory or for new source review.[17]

II. Determination of Attainment by the Attainment Date

A. Monitoring Network Review, Quality Assurance, and Data Completeness

A determination of whether an area is attaining the NAAQS is typically based upon complete, quality-assured data gathered at established State and Local Air Monitoring Stations (SLAMS) and entered into the EPA's Air Quality System (AQS) database. Data from ambient air monitors operated by state/local agencies in compliance with the EPA monitoring requirements must be submitted to AQS. Monitoring agencies annually certify that these data are accurate to the best of their knowledge. Accordingly, the EPA relies primarily on data in AQS when determining compliance with the NAAQS.[18] The EPA reviews all data to determine the area's air quality status in accordance with 40 CFR part 50, appendix N. Under EPA regulations in 40 CFR 50.7 and in accordance with appendix N, the 1997 annual $PM_{2.5}$ NAAQS are met when the annual arithmetic mean concentration, as determined in accordance with the rounding conventions in 40 CFR part 50, appendix N, is less than or equal to 15.0 $\mu g/m^3$ at each eligible monitoring site within the area.

For the annual $PM_{2.5}$ standard, eligible monitoring sites are those monitoring stations that meet the criteria specified in 40 CFR 58.11 and 58.30 and thus are approved for comparison to the annual $PM_{2.5}$ NAAQS.[19] Three years of valid annual means are required to produce a valid annual $PM_{2.5}$ NAAQS design value.[20] Data completeness requirements for a given year are met when at least 75 percent of the scheduled sampling days for each quarter have valid data.[21] We note that monitors with incomplete data in one or more quarters may still produce valid design values if the conditions for applying the EPA's data substitution test are met.[22] In determining whether data are suitable for regulatory determinations, the EPA uses a ''weight of evidence'' approach, considering the requirements of 40 CFR

[11] 88 FR 86581. We approved the State's best available control measures (BACM) demonstration, attainment demonstration, reasonable further progress (RFP) demonstration, quantitiatve milestone demonstration, five percent reduction in emisisons per year demonstration, and motor vehicle emissions budgets as meeting the ''Serious'' area and CAA section 189(d) planning requirements. We also affirmed that the base year emissions inventories in the plan, which we had previously approved (86 FR 67329, November 26, 2021), provided an adequate basis for the BACM, RFP, five percent, and modeled attainment demonstration analyses. We deferred action on the requirement for contingency measures; however, we subsequently approved the area's contingency measures submittal on October 4, 2024 (89 FR 80749).

[12] Letter dated May 23, 2024, from Steven S. Cliff, Executive Officer, CARB, to Martha Guzman, Regional Administrator, EPA Region 9.

[13] 89 FR 91263.

[14] A design value is the 3-year average NAAQS metric that is compared to the NAAQS level to determine when a monitoring site meets or does not meet the NAAQS. The specific methodologies for calculating whether the annual $PM_{2.5}$ NAAQS is met at each eligible monitoring site in an area is found in 40 CFR part 50, appendix N, section 4.1.

[15] A determination that an area has attained by the applicable attainment date does not constitute a redesignation to attainment.

[16] Because the EPA previously approved the State's attainment plan for the San Joaquin Valley for the 1997 annual $PM_{2.5}$ NAAQS (see footnote 11 of this document), the State would not be required to submit any additional planning elements following a DAAD. However, in *Little Manila Rising, et al.* v. *EPA,* 9th Cir. Case No. 24–6990, the question regarding the extent of the EPA's authority to grant a one-year extension of the applicable attainment date from December 31, 2023, to December 31, 2024, for the San Joaquin Valley for the 1997 annual $PM_{2.5}$ NAAQS is still pending before the court. In the event that the court finds that the EPA did not have the authority to grant the extension, the proposed CDD in this action would relieve the state of the requirement to adopt and submit a new plan for failing to attain by the applicable attainment date.

[17] In the context of CDDs, the EPA distinguishes between attainment planning requirements of the CAA, which relate to the attainment demonstration for an area and related control measures designed to bring an area into attainment for the given NAAQS as expeditiously as practicable, and other types of requirements, such as permitting requirements under the nonattainment new source review program, the emissions inventory requirement, and specific control requirements independent of those strictly needed to ensure timely attainment of the given NAAQS. 81 FR 58010, 58128.

[18] See 40 CFR 50.7; 40 CFR part 50, appendix L; 40 CFR part 53; 40 CFR part 58, and 40 CFR part 58, appendices A, C, D, and E.

[20] 40 CFR part 50, appendix N, section 4.1(b).

[21] Id.

[22] 40 CFR part 50, appendix N, section 4.1(b) and (c).

part 58, appendix A ''in combination with other data quality information, reports, and similar documentation that demonstrate overall compliance with Part 58.'' [23]

Section 110(a)(2)(B)(i) of the CAA requires states to establish and operate air monitoring networks to compile data on ambient air quality for all criteria pollutants. The monitoring requirements are specified in 40 CFR part 58. These requirements are applicable to state and, where delegated, local air monitoring agencies that operate criteria pollutant monitors. The regulations in 40 CFR part 58 establish specific requirements for operating air quality surveillance networks to measure ambient concentrations of $PM_{2.5}$, including requirements for measurement methods, network design, quality assurance procedures, and, in the case of large urban areas, the minimum number of monitoring sites designated as SLAMS.

In section 4.7 of appendix D to 40 CFR part 58, the EPA specifies minimum monitoring requirements for $PM_{2.5}$ to operate at SLAMS. SLAMS produce data comparable to the NAAQS, and therefore, the monitor must be an approved federal reference method (FRM) or federal equivalent method (FEM). The minimum number of SLAMS required is described in section 4.7.1 and can be met by either filter-based or continuous FRMs or FEMs. The monitoring regulations also provide that each core-based statistical area must operate a minimum number of $PM_{2.5}$ continuous monitors; [24] however, this requirement can be met by either an FEM or a non-FEM continuous monitor, and the continuous monitors can be located with other SLAMS or at a different location. Consequently, the monitoring requirements for $PM_{2.5}$ can be met with filter-based FRMs/FEMs, continuous FEMs, continuous non-FEMs, or a combination of monitors at each required SLAMS.

Under 40 CFR 58.10, states are required to submit annual monitoring network plans to the EPA.[25] Within the San Joaquin Valley, CARB and the District are the agencies responsible for assuring that the area meets $PM_{2.5}$ air quality monitoring requirements. CARB and SJVUAPCD submit monitoring network plans to the EPA annually. These plans describe and discuss the status of the air monitoring network, as required under 40 CFR 58.10. Each year, the EPA reviews these annual network plans for compliance with the applicable monitoring requirements in 40 CFR part 58. With respect to $PM_{2.5}$, we have found that the CARB and SJVUAPCD annual network plans meet the applicable requirements under 40 CFR part 58.[26]

During the 2022–2024 period, ambient $PM_{2.5}$ concentration data that are eligible for use in determining whether an area has attained the $PM_{2.5}$ NAAQS were collected at a total of 18 sites within the San Joaquin Valley. The District operates 12 of these sites while CARB operates 6 of these sites. All of the sites are designated SLAMS for $PM_{2.5}$.[27] Based on our review of the $PM_{2.5}$ monitoring network, we propose to find that the monitoring network in the San Joaquin Valley is adequate for the purpose of collecting ambient $PM_{2.5}$ concentration data for use in determining whether the San Joaquin Valley has attained the 1997 annual $PM_{2.5}$ NAAQS.

Under 40 CFR 58.15, monitoring agencies must submit a letter to the EPA each year to certify that all of the ambient concentration and quality assurance data for the previous year have been submitted to AQS and that the ambient concentration data are accurate to the best of their knowledge, taking into consideration the quality assurance findings. The letter must address data for all FRM and FEM monitors at SLAMS and special purpose monitoring stations that meet the criteria specified in 40 CFR part 58, appendix A. CARB annually certifies that the data the agency submits to AQS are quality assured, including the data collected at monitoring sites in the San Joaquin Valley.[28] SJVUAPCD does the same for data submitted to AQS from monitoring sites operated by the District.[29]

With respect to data completeness, we determined that the data collected by the CARB and the District met the quarterly completeness criterion for all 12 quarters of the three-year period at most of the $PM_{2.5}$ monitoring sites in the San Joaquin Valley. More specifically, among the 18 $PM_{2.5}$ monitoring sites from which regulatory data are available, the data from Merced-Vierra (AQS ID: 06–047–2024), Stockton-University (AQS ID: 06–077–1003), and Manteca (AQS ID: 06–077–2010) did not meet the 75 percent completeness criterion for one quarter; [30] however, the data from the sites are sufficient nonetheless to produce valid design values for the 1997 annual $PM_{2.5}$ NAAQS pursuant to the rules governing design value validity in 40 CFR part 50, appendix N, section 4.1.

Finally, the EPA conducts regular technical systems audits (TSAs) where we review and inspect state and local ambient air monitoring programs to assess compliance with applicable regulations concerning the collection, analysis, validation, and reporting of ambient air quality data. For the purposes of this proposal, we reviewed the findings from the EPA's most recent TSAs of CARB's and the District's ambient air monitoring programs.[31] The results of the TSAs do not preclude the EPA from determining that the San Joaquin Valley $PM_{2.5}$ nonattainment area has attained the 1997 annual $PM_{2.5}$ NAAQS.

In summary, based on the EPA's reviews of the relevant annual network plans, certifications, quality assurance data, and TSAs, we propose to find that the $PM_{2.5}$ data collected at San Joaquin Valley monitoring sites are suitable for determining whether the San Joaquin Valley $PM_{2.5}$ nonattainment area has attained the 1997 annual $PM_{2.5}$ NAAQS.

B. The EPA's Evaluation of Attainment

Table 1 of this document provides the $PM_{2.5}$ design values at each of the 18 monitoring sites within the San Joaquin Valley $PM_{2.5}$ nonattainment area, expressed as a single design value representing the 2022–2024 period and for each individual year. The $PM_{2.5}$ data show that the design values at the San Joaquin Valley monitoring sites were below the level of the 1997 annual $PM_{2.5}$ NAAQS of 15.0 $\mu g/m^3$. Consequently,

[23] 40 CFR part 58, appendix A, section 1.2.3.

[24] 40 CFR part 58, appendix D, section 4.7.2.

[25] 40 CFR 58.10(a)(1).

[26] Letter dated October 29, 2024, from Dena Vallano, Manager, Monitoring and Analysis Section, EPA Region IX, to Sylvia Vanderspek, Manager, Air Quality Planning Branch, CARB; and letter dated October 29, 2024, from Dena Vallano, Manager, Monitoring and Analysis Section, EPA Region IX, to Jon Klassen, Director, Air Quality Science, SJVUAPCD.

[27] There are a number of other $PM_{2.5}$ monitoring sites within the valley, including other sites operated by the District, the National Park Service, and certain Indian Tribes, but the data collected from these sites are non-regulatory and not eligible for comparison with the $PM_{2.5}$ NAAQS.

[28] For example, see letter dated April 18, 2025, from Jin Xu, Acting Chief, Air Quality Planning Branch, CARB, to Dena Vallano, Manager, Monitoring and Analysis Section, EPA Region 9, with enclosures, certifying calendar year 2024 ambient air quality data and quality assurance data.

[29] For example, see letter dated March 20, 2025, from Robert Gilles, Program Manager, SJVUAPCD, to Matt Lakin, Director, Air and Radiation Division, EPA Region IX, with attachments, certifying calendar year 2024 ambient air quality data and quality assurance data.

[30] EPA, AQS Combined Site Sample Values (AMP355), Report Request ID: 2290307, May 7, 2025.

[31] Letter dated March 14, 2024, from Matthew Lakin, Director, Air and Radiation Division, EPA Region IX, to Edie Chang, Executive Officer, CARB, with enclosure titled ''Technical Systems Audit of the Ambient Air Monitoring Program: California Air Resources Board December 2021–August 2022.''

the EPA is proposing to determine based upon three years of quality-assured and certified data from 2022 through 2024 that the San Joaquin Valley $PM_{2.5}$ nonattainment area attained the 1997 annual $PM_{2.5}$ NAAQS by the applicable December 31, 2024 attainment date.

TABLE 1—2022–2024 ANNUAL $PM_{2.5}$ DESIGN VALUES FOR THE SAN JOAQUIN VALLEY $PM_{2.5}$ NONATTAINMENT AREA

County	Site name (AQS ID)	Annual mean (μg/m³)			2022–2024 Annual design value (μg/m³)
		2022	2023	2024	
Fresno	Fresno-Garland (06–019–0011)	12.9	10.5	10.3	11.2
Fresno	Tranquillity (06–019–2009)	6.7	4.8	7.0	6.2

III. Clean Data Determination

As described in section I.D. of this document, when an area has attained the relevant $PM_{2.5}$ standard(s), the EPA may issue a CDD after notice and comment rulemaking determining that a specific area is attaining the relevant standard.[32] Based on quality-assured and certified data for 2022–2024, the San Joaquin Valley $PM_{2.5}$ nonattainment area meets the 1997 annual $PM_{2.5}$ NAAQS. Furthermore, preliminary data available in AQS for 2025 (January through March) indicate that the area continues to show concentrations consistent with attainment of the 1997 annual $PM_{2.5}$ NAAQS.[33] Consequently, the EPA is proposing to issue a CDD.

If we finalize this proposed CDD, the obligation to submit attainment planning provisions to meet the requirements for an attainment plan for the 1997 annual $PM_{2.5}$ NAAQS, including an RFP plan, quantitative milestones and quantitative milestone reports, contingency measures, and an attainment demonstration, are suspended until such time as: (1) the area is redesignated to attainment, after which such requirements are permanently discharged; or (2) the EPA determines that the area has re-violated the $PM_{2.5}$ NAAQS, at which time the state shall submit such attainment plan elements for the nonattainment area by a future date to be determined by the EPA and announced through publication in the **Federal Register** at the time the EPA determines the area is violating the $PM_{2.5}$ NAAQS.

A CDD does not suspend the requirements for an emissions inventory or new source review (NSR). The EPA previously approved the base year emissions inventory element of the attainment plan for the 1997 annual $PM_{2.5}$ NAAQS as meeting the requirements of CAA section 172(c)(3) and 40 CFR 50.1008.[34] On January 21, 2025, the EPA proposed a limited approval and limited disapproval of nonattainment NSR SIP revisions submitted by California for the San Joaquin Valley.[35] We are not taking any further action on the submissions at this time.

IV. The EPA's Proposed Action

For the reasons discussed in this document, the EPA is proposing to determine, based on the most recent three years (2022–2024) of complete (or otherwise validated), quality-assured, and certified data meeting the requirements of 40 CFR part 50, appendix N, that the San Joaquin Valley $PM_{2.5}$ nonattainment area attained the 1997 annual $PM_{2.5}$ NAAQS by its December 31, 2024 attainment date. This action, when finalized, will fulfill the EPA's statutory obligation to determine whether the San Joaquin Valley $PM_{2.5}$ nonattainment area attained the NAAQS by the attainment date.

In accordance with 40 CFR 51.1015, we are also proposing to issue a CDD for the San Joaquin Valley $PM_{2.5}$ nonattainment area for the 1997 annual $PM_{2.5}$ NAAQS. Accordingly, the EPA is proposing to determine that the obligation to submit any attainment-related SIP revisions is not applicable for so long as the area continues to attain those NAAQS. This CDD does not constitute a redesignation to attainment. The San Joaquin Valley $PM_{2.5}$ nonattainment area will remain designated nonattainment for the 1997 annual $PM_{2.5}$ NAAQS until such time as the EPA determines, pursuant to sections 107 and 175A of the CAA, that the San Joaquin Valley $PM_{2.5}$ nonattainment area meets the CAA requirements for redesignation to attainment, including an approved maintenance plan showing that the area will continue to meet the standard for 10 years.

The EPA is soliciting public comments on the issues discussed in this document. We will accept comments from the public on this proposal for the next 30 days. We will

[32] 40 CFR 51.1015.

[33] EPA, AQS Combined Site Sample Values (AMP355), Report Request ID: 2296369, June 2, 2025; AQS Combined Site Sample Values (AMP355), Report Request ID: 2296793, June 4, 2025.

[34] 86 FR 67329, 67341 (November 26, 2021).

[35] 90 FR 6928.

consider these comments before taking final action.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Executive Order 14192: Unleashing Prosperity Through Deregulation

This action is not expected to be an Executive Order 14192 regulatory action because this action is not significant under Executive Order 12866.

C. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA because this proposed action does not impose additional requirements beyond those imposed by state law.

D. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities beyond those imposed by state law.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action does not impose additional requirements beyond those imposed by state law. Accordingly, no additional costs to state, local, or Tribal governments, or to the private sector, will result from this action.

F. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

G. Executive Order 13175: Coordination With Indian Tribal Governments

This action does not have Tribal implications, as specified in Executive Order 13175, because the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction, and it will not impose substantial direct costs on Tribal governments or preempt Tribal law. Thus, Executive Order 13175 does not apply to this action.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it merely proposes a DAAD and a CDD. Furthermore, the EPA's Policy on Children's Health does not apply to this action.

I. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

J. National Technology Transfer and Advancement Act (NTTAA)

Section 12(d) of the NTTAA directs the EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. The EPA believes that this action is not subject to the requirements of section 12(d) of the NTTAA because application of those requirements would be inconsistent with the CAA.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Ammonia, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: July 7, 2025.

Joshua F.W. Cook,

Regional Administrator, Region IX.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R08–OAR–2019–0418; FRL–12875–01–R8]

Air Quality State Implementation Plans; Approval and Promulgations: Montana: Infrastructure Requirements for the 2015 Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve elements of a state implementation plan (SIP) submission from Montana regarding the infrastructure requirements of the Clean Air Act (CAA) for the 2015 ozone National Ambient Air Quality Standards (NAAQS). The infrastructure requirements are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA. Additionally, EPA is proposing to approve Montana's request to update their SIP, to incorporate the most current version of the ''Guideline on Air Quality Models.'' The EPA is taking this action pursuant to the CAA.

DATES: Written comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R08–OAR–2019–0418 to the Federal Rulemaking Portal: *https://www.regulations.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *https://www.regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit

https://www2.epa.gov/dockets/commenting-epa-dockets.

Docket: All documents in the docket are listed in the *https://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available electronically in *https://www.regulations.gov.* Please email or call the person listed in the **FOR FURTHER INFORMATION CONTACT** section if you need to make alternative arrangements for access to the docket.

FOR FURTHER INFORMATION CONTACT: Amrita Singh, Air and Radiation Division, EPA, Region 8, Mailcode 8ARD–IO, 1595 Wynkoop Street, Denver, Colorado, 80202–1129, telephone number: (303) 312–6103, email address: *singh.amrita@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document wherever ''we,'' ''us,'' or ''our'' is used, we mean the EPA.

Table of Contents

I. What is the background of this SIP submission?
II. What infrastructure elements are required under section 110(a)(1) and (2)?
III. EPA's Analysis of This SIP Submission
IV. What action is EPA taking?
V. Statutory and Executive Order Reviews

I. What is the background of this SIP submission?

Whenever EPA promulgates a new or revised NAAQS, CAA section 110(a)(1) requires states to make SIP submissions to provide for the implementation, maintenance, and enforcement of the NAAQS. This type of SIP submission is commonly referred to as an ''infrastructure SIP.'' These submissions must meet the various requirements of CAA section 110(a)(2), as applicable. EPA has previously provided states with direction [1] on the application of these CAA provisions and through regional actions on infrastructure submissions. Unless otherwise noted below, we are following that existing approach in acting on this submission. In addition, in the context of acting on such infrastructure submissions, EPA evaluates the submitting state's SIP for factual compliance with statutory and regulatory requirements, not for the state's implementation of its SIP. EPA has other authority to address any issues concerning a state's implementation of the rules, regulations, consent orders, etc. that comprise its SIP.

The Montana Department of Environmental Quality (MDEQ) submitted the following revisions to its infrastructure SIP (ISIP):

- 2015 Ozone ISIP submitted on October 1, 2018, and
- Revisions to appendix W submitted on December 28, 2022.

II. What infrastructure elements are required under section 110(a)(1) and (2)?

CAA section 110(a)(1) provides the procedural and timing requirements for SIP submissions after a new or revised NAAQS is promulgated. Section 110(a)(2) lists specific elements the SIP must contain or satisfy. These infrastructure elements include requirements such as modeling, monitoring, and emission inventories, which are designed to ensure attainment and maintenance of the NAAQS. The elements that are subject to this action are listed below:

- Section 110(a)(2)(A): Emission limits and other control measures.
- Section 110(a)(2)(B): Ambient air quality monitoring/data system.
- Section 110(a)(2)(C): Program for enforcement of control measures/minor new source review (NSR)/prevention of significant deterioration (PSD).
- Section 110(a)(2)(D): Interstate transport.
- Section 110(a)(2)(E): Adequate resources and authority, conflict of interest, and oversight of local governments and regional agencies.
- Section 110(a)(2)(F): Stationary source monitoring and reporting.
- Section 110(a)(2)(G): Emergency powers.
- Section 110(a)(2)(H): Future SIP revisions.
- Section 110(a)(2)(I): Plan revisions for nonattainment areas (under part D);
- Section 110(a)(2)(J): Consultation with government officials; public notification; and PSD and visibility protection.
- Section 110(a)(2)(K): Air quality modeling/data.
- Section 110(a)(2)(L): Permitting fees.
- Section 110(a)(2)(M): Consultation/participation by affected local entities.

III. EPA's Analysis of This SIP Submission

Montana provided a detailed synopsis of how various components of its SIP meet each of the applicable requirements in section 110(a)(2) for the 2015 ozone NAAQS. The following review evaluates the SIP's submission.

Section 110(a)(2)(A)—Emission Limits and Other Control Measures

This section requires SIPs to include enforceable emission limits and other control measures, means or techniques, schedules for compliance, and other related matters. EPA has long interpreted emission limits and control measures for attaining the standards as being due when nonattainment planning requirements are due.[2] In the context of an infrastructure SIP, EPA is not evaluating the existing SIP provisions for this purpose. Instead, EPA is only evaluating whether the State's SIP has basic structural provisions for the implementation of the NAAQS.

The Montana Code Annotated (MCA) 75–2–112 gives MDEQ the authority to ''adopt, amend, and repeal rules for the administration, implementation, and enforcement of this chapter.

Montana implements a statewide program for permitting major and minor stationary sources of air pollution, including sources of ozone precursors. Specific control measures adopted in Montana Board of Environmental Review (BER) Orders, along with multiple SIP-approved state air quality regulations within the Administrative Rules of Montana (ARM) and cited in Montana's certifications, provide enforceable emission limitations and other control measures, means of techniques, schedules for compliance, and other related matters necessary to meet the requirements of CAA section 110(a)(2)(A) for the 2015 ozone NAAQS. Montana's certifications generally list provisions and enforceable control measures within its SIP which regulate pollutants through various programs, including its stationary permitting program which requires sources to demonstrate that emissions will not cause or contribute to violation of any NAAQS (ARM 17.8.749). In the case of Montana, this meets the requirements of section 110(a)(2)(A) for the 2015 ozone NAAQS.

Section 110(a)(2)(B)—Ambient Air Quality Monitoring/Data System

This section requires SIPs to provide for establishing and operating ambient air quality monitors, collecting, and analyzing ambient air quality data, and upon request, to make these data available to EPA. Submission of annual monitoring network plans (AMNP) consistent with EPA's ambient air monitoring regulations at 40 CFR 58.10 is one way of satisfying requirements to

[1] Available at: *https://www3.epa.gov/airquality/urbanair/sipstatus/docs/Guidance_on_Infrastructure_SIP_Elements_Multipollutant_FINAL_Sept_2013.pdf.* Hereinafter referred to as the ''EPA 2013 Guidance.''

[2] *See, e.g.,* EPA's final rule on ''National Ambient Air Quality Standards for Lead.'' 73 FR 66964 at 67034.

provide EPA information regarding air quality monitoring activities.[3] EPA's review of a state's annual monitoring plan includes EPA's determination that the state: (i) monitors air quality at appropriate locations throughout the state using EPA-approved Federal Reference Methods or Federal Equivalent Method monitors; (ii) submits data to EPA's Air Quality System in a timely manner; and, (iii) provides EPA Regional offices with prior notification of any planned changes to monitoring sites or the network plan.

A comprehensive AMNP, was submitted to EPA by Montana on July 1, 2018, and subsequently approved by the EPA.[4] Montana's SIP-approved regulations provide for the design and operation of its monitoring network, reporting of data obtained from the monitors, and annual network review including notification to the EPA of any changes, and public notification of exceedance of NAAQS. As described in the submission, Montana operates a comprehensive monitoring network, including ozone monitoring, compiles and analyzes collected data, and submits the data to the EPA's Air Quality System on a quarterly basis.

Based on this information, we are proposing to approve the Montana SIP as meeting the requirements of CAA section 110(a)(2)(B) for the 2015 ozone NAAQS.

Section 110(a)(2)(C)—Program for Enforcement of Control Measures/Minor NSR/PSD

Section 110(a)(2)(C) requires states to have a plan that includes a program providing for enforcement of all SIP measures, regulation of minor sources and minor modifications, and the regulation of the modification and construction of each stationary source, including a program to meet the Prevention of Significant Deterioration (PSD) of air quality. This section requires SIPs to set forth a program providing for enforcement of all SIP measures, and the regulation of construction of new and modified stationary sources to meet the NSR requirements under PSD and Nonattainment NSR (NNSR) programs. Part C of the CAA (sections 160–169B) addresses PSD, while part D of the CAA (sections 171–193) addresses NSR requirements. A state must also provide for the regulation of minor source and minor modifications (minor NSR).[5] The NNSR requirements of section 110(a)(2)(C) are generally outside the scope of infrastructure SIPs. The EPA is not evaluating nonattainment-related provisions, such as the NNSR program required by Part D of the CAA. The EPA is evaluating the State's PSD program as required by Part C of the CAA and the State's minor NSR programs as required by 110(a)(2)(C).

PSD Requirements

With respect to Element (C), each state is required to make an infrastructure SIP submission for a new or revised NAAQS demonstrating that the air agency has a complete PSD permitting program meeting the current requirements for all regulated NSR pollutants.[6] The requirements for Element (J) in relation to a comprehensive PSD Permitting Program are the same as the requirements with respect to Element (C).[7]

Montana's submission has shown that is has a PSD program [8] in place that covers all regulated NSR pollutants.

Minor NSR

The State has adopted a minor NSR program [9] in the approved SIP, which is adopted under section 110(a)(2)(C) of the CAA. The minor NSR program was originally approved by EPA on March 22, 1972. Since approval of the minor NSR program, the State and EPA have relied on the program to assure that new and modified sources not captured by the major NSR permitting programs do not interfere with attainment and maintenance of the NAAQS. Montana's minor NSR program, as approved in the SIP, covers the construction and modification of regulated NSR pollutants, including $PM_{2.5}$, lead, and ozone and its precursors.

The Montana submission refers to the following state rules and regulations which are SIP-approved, that address and provide for meeting all provisions and requirements of CAA section 110(A)(2)(C).

- 75–2–111, MCA.
- 75–2–112, MCA.
- ARM 17.8.130.
- ARM 17.8.801 *et seq.*
- ARM 17.8.901 *et seq.*
- ARM 17.8.10001 *et seq.*

The EPA is proposing to approve Montana's infrastructure SIP for the 2015 ozone NAAQS, with respect to the general requirements in section 110(a)(2)(C) to include a program in the SIP that regulates the enforcement, modification, and construction of any stationary sources as necessary to assure the NAAQS are achieved.

Section 110(a)(2)(D)—Interstate Transport

CAA section 110(a)(2)(D)(i) consists of four separate elements, or ''prongs''. CAA section 110(a)(2)(D)(i)(I) requires SIPs to contain adequate provisions prohibiting emissions that will contribute significantly to nonattainment of the NAAQS in any other state (prong 1), and adequate provisions prohibiting emissions that will interfere with maintenance of the NAAQS by any other state (prong 2). CAA section 110(a)(2)(D)(i)(II) requires SIPs to contain adequate provisions prohibiting emissions that will interfere with any other state's required measures to prevent significant deterioration of its air quality (prong 3), and adequate provisions prohibiting emissions which will interfere with any others state's required measures to protect visibility (prong 4). Under section 110(a)(2)(D)(i)(I) of the CAA, the EPA and states must give independent consideration to both the prong 1 ''significant contribution to nonattainment'' requirement and the prong 2 ''interference with maintenance'' requirement when evaluating downwind air quality problems under section 110(a)(2)(D)(i)(I).[10] For more information on Montana and EPA's analysis of prongs 1 and 2 for this NAAQS, see our proposed approval of the CAA section 110(a)(2)(D)(i)(I) portion of Montana's October 1, 2018 ISIP.[11]

The EPA took final action on the prong 1 and prong 2 requirements of the CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS for Montana on

[3] EPA 2013 Guidance.

[4] The July 1st, 2018 AMNP is referenced in this action because it reflects the version available and under consideration at the time of the October 1, 2018 SIP submittal by the State of Montana. Accordingly, EPA's evaluation is based on the information contained in the 2018 plan, which is included in this docket for this action. *See* ''Montana AMNP Approval 2018''. EPA has reviewed and approved subsequent AMNP's submitted by the State of Montana in the years since 2018.

[5] See EPA's 2013 Guidance on Infrastructure SIP elements

[6] In accordance with EPA's 2013 Guidance on Infrastructure SIP Elements, the NSR pollutants include the criteria pollutants—carbon monoxide, nitrogen dioxide, sulfur dioxide, ozone, particulate matter (PM 2.5 and PM_{10}), and lead.

[7] The ''Prong 3'' requirements of Element D(i)(II) may be satisfied in part by demonstrating that the air agency has a complete PSD permitting program that correctly addresses all regulated NSR pollutants. Our explanation of how the state has satisfied the Prong 3 requirement is below.

[8] *See* ARM 17.8.801 and ARM 17.8.818.

[9] *See* 79 FR 69374. MDEQ issues permits for minor sources of air pollution under ARM, Subchapter 07, Permit Construction and Operation of Air Containment Sources, 17.8.743.

[10] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–911 (2008).

[11] 87 FR 6095, February 3, 2022.

April 12, 2022 (87 FR 21578). In that rulemaking, the EPA determined that Montana's SIP contains adequate provisions to prohibit emissions that will significantly contribute to nonattainment or interfere with maintenance of the 2015 ozone NAAQs in any other state.[12] The prong 3 (PSD) requirement of the CAA section 110(a)(2)(D)(i)(II) may be met for all NAAQS by a state's confirmation in an infrastructure SIP submission that new major sources and major modifications in the state are subject to a comprehensive EPA-approved PSD permitting program in the SIP that applies to all regulated NSR pollutants and that satisfies the requirements of the EPA's PSD implementation rule(s).[13] EPA is proposing approval of prong 3 in this rulemaking.

To meet the prong 4 (visibility) requirement of the CAA section 110(a)(2)(D)(i)(II) under the 2015 ozone NAAQS, a SIP must address the potential for interference with visibility protection caused by ozone, including precursors. An approved regional haze SIP that fully meets the regional haze requirements in 40 CFR 51.308 satisfies the 110(a)(2)(D)(i)(II) requirement for visibility protection as it ensures that emissions from the state will not interfere with measures required to be included in other state SIPs to protect visibility. In the absence of a fully approved regional haze SIP, a state can still make a demonstration that satisfies the visibility requirement section of 110(a)(2)(D)(i)(II).[14] EPA will consider Montana's visibility provisions through a future rulemaking.

CAA section 110(a)(2)(D)(ii) requires SIPs to include provisions ensuring compliance with the applicable requirements of CAA sections 126 and 115 (relating to interstate and international pollution abatement). CAA section 126 requires notification to neighboring states of potential impacts from a new or modified major stationary source and specifies how a state may petition the EPA when a major source or group of stationary sources in a state is thought to contribute to certain pollution problems in another state. CAA section 115 governs the process for addressing air pollutants emitted in the United States that cause or contribute to air pollution that may reasonably be anticipated to endanger public health or welfare in a foreign country.

To address CAA section 110(a)(2)(D)(ii), Montana states that its SIP-approved PSD program (specifically, ARM 17.8.826(2)(d)) requires the MDEQ to notify potentially affected states, Trbes, and federal land managers (FLMs) of its intent to approve or disapprove a PSD permit application. Montana also states that nothing in its SIP precludes the state from ensuring compliance with CAA sections 126 and 115 with respect to the 2015 ozone NAAQS. Montana asserts that no sources within the state are the subject of an active finding under CAA section 126 with respect to the 2015 ozone NAAQS, nor are there any findings against Montana under CAA section 115 for this NAAQS. For these reasons, Montana concludes that its SIP meets the requirements of CAA section 110(a)(2)(D)(ii) for the 2015 ozone NAAQS.

For the EPA's analysis of CAA section 110(a)(2)(D)(ii), we reviewed the sections of the Montana SIP referenced by the State in its 2015 Ozone infrastructure SIP submission. As required by 40 CFR 51.166(q)(2)(iv), Montana's SIP-approved PSD program requires notice of proposed new sources or modifications to states whose lands may be significantly affected by emissions from the source or modification (*see* ARM 17.8.826(2)(d)). This provision satisfies the notice requirement of section 126(a). Montana also has no pending obligations under sections 126(c) or 115(b). Therefore, the Montana SIP currently meets the requirements of those sections. On these bases, the EPA is proposing to find that the Montana SIP meets the requirements of CAA section 110(a)(2)(D)(ii) for the 2015 ozone NAAQS.

Section 110(a)(2)(E)—Adequate Resources and Authority, Conflict of Interest, and Oversight of Local Governments and Regional Agencies

Section 110(a)(2)(E)(i) requires each SIP to provide necessary assurances that the state will have adequate personnel, funding, and legal authority under state law to carry out its SIP. In addition, section 110(a)(2)(E)(ii) requires each state to comply with the requirements respecting state boards under CAA section 128. Finally, section 110(a)(2)(E)(iii) requires that, where a state relies upon local or regional governments or agencies for implementation of its SIP provisions, the state retains responsibility for ensuring implementation of SIP obligations with respect to relevant NAAQS.

The provisions contained in 75–2–102, MCA, 75–2–111, MCA, and 75–2–112, MCA, provide adequate authority for the State of Montana and the MDEQ to carry out its SIP obligations with respect to the 2015 ozone NAAQS. The State receives section 103 and 105 grant funds through its Performance Partnership Grant, along with required state matching funds to provide funding necessary to carry out Montana's SIP requirements. Montana's Performance Partnership Agreement with the EPA, documents that the State has the resources to carry out agreed environmental program goals, measures, and commitments, including developing and implementing appropriate SIPs for all areas of the State. Annually, states update these grant commitments based on current SIP requirements, air quality planning, and applicable requirements related to the NAAQS. Therefore, we propose to approve Montana's SIP meeting the requirements of section 110(a)(2)(E)(i) for the 2015 ozone NAAQS.

With respect to section 110(a)(2)(E)(iii), the regulations cited by Montana in their certifications (75–2–111 and 75–2–112, MCA) and contained within this docket also provide the necessary assurances that the state has the responsibility for adequate implementation of SIP provisions by local governments. Therefore, we propose to approve Montana's SIP meeting the requirements of section 110(a)(2)(E)(iii) for the 2015 ozone NAAQS.

Section 110(a)(2)(E)(ii) requires each SIP to contain provisions that comply with the state board requirements of section 128 of the CAA. That provision contains two explicit requirements: (1) that any board or body which approves permits or enforcement orders under this chapter shall have at least a majority of members who represent the public interest and do not derive any significant portion of their income from persons subject to permits and enforcement order under this chapter, and (2) that any potential conflicts of interest by members of such board or body or the head of an executive agency with similar powers be adequately disclosed. Section 128 further provides that a state may adopt more stringent conflicts of interest requirements and require EPA to approve such requirements submitted as part of a SIP.

The New Rules I (ARM 17.8.150), II (17.8.151) and III (ARM 17.8.152) adopted by the BER on October 16, 2015, were submitted and approved by the EPA for inclusion in the SIP on

[12] Since this time, EPA has conducted updated modeling which continues to demonstrate that Montana does not significantly contribute to nonattainment or interfere with the maintenance of the 2015 ozone NAAQS in any other state.

[13] *See* 2013 Memo.

[14] *See* 2013 Memo. In addition, the EPA approved the visibility requirement of 110(a)(2)(D)(i) for the 1997 Ozone and $PM_{2.5}$ NAAQS for Colorado before taking action on the State's regional haze SIP. 76 FR 22036 (April 20, 2011).

December 17, 2015, and contain provisions that meet the requirements of section 128(a)(1) and section 128(a)(2) (*See* 81 FR 4234). Montana's SIP continues to meet the requirements of section 110(a)(2)(E)(ii). EPA proposes that Montana meets the infrastructure requirements of this portion of section 110(a)(2)(E) for the 2015 ozone NAAQS.

Section 110(a)(2)(F)—Stationary Source Monitoring and Reporting

States must establish a system to monitor emissions from stationary sources and submit periodic emission reports. Each plan shall also require the installation, maintenance, and replacement of equipment, and the implementation of other necessary steps, by owners, or operators of stationary sources to monitor emissions from such sources. The state plan shall also require periodic reports on the nature and amounts of emissions and emissions-related data from such sources, and correlation of such reports by each state agency with any emission limitations or standards. Lastly, the reports shall be available at reasonable times for public inspection.

The provisions cited by Montana (ARM 17.8.105 and 17.8.106) pertain to testing requirements and protocols. Montana also incorporates by reference 40 CFR part 51, appendix P regarding minimum reporting requirements. (*See* ARM 17.8.103(1)(D)). In addition, Montana provides for monitoring, recordkeeping, and reporting requirements for sources subject to minor and major source permitting.

Furthermore, Montana is required to submit emissions data to the EPA for purposes of the National Emissions Inventory (NEI). The NEI is the EPA's central repository for air emissions data. The EPA published the Air Emissions Reporting Rule (AERR) on December 5, 2008, which modified the requirements for collecting and reporting air emissions data (*See* 73 FR 76539). The AERR shortened the time states had to report emissions data from 17 months to 12 months, giving states one calendar year to submit emissions data. All states are required to submit comprehensive emission inventories every three years and report emissions for certain larger sources annually through the EPA's online Emissions Inventory System. States report emissions data for the six criteria pollutants and their associated precursors—nitrogen oxides, sulfur dioxides, ammonia, lead, carbon monoxide, particulate matter, and volatile organic compounds. Many states also voluntarily report emissions of hazardous air pollutants. Montana made its latest update to the NEI in 2024, however for purposes of this proposed action the emissions data are based on the 2017 NEI released in February 2019 since that included the State's most recent NEI update at the time of the October 1, 2018 ISIP submittal. Based on the analysis above, we propose to approve the Montana SIP as meeting the requirements of CAA section 110(a)(2)(F) for the 2015 ozone NAAQS.

Section 110(a)(2)(G)—Emergency Powers

This section requires that a plan provide for state authority analogous to that provided to the EPA Administrator in section 303 of the CAA, and adequate contingency plans to implement such authority. Section 303 of the CAA provides authority to the EPA administrator to seek a court order to restrain any source from causing or contributing to emissions that present an ''imminent and substantial endangerment to public health or welfare or the environment'' in the event that ''it is not practicable to assure prompt protection. . . . by commencement of such civil action.''

Montana's SIP submittals with regard to the section 110(a)(2)(G) emergency order requirements explain that Montana has an EPA-approved Emergency Episode Avoidance Plan (EEAP) (*See* 71 FR 19, Jan. 3, 2006). According to the EEAP, ''the Department shall take the necessary precautions to protect public health as set forth in 75–2–402, MCA, ''Emergency Powers.'' These precautions include, but are not limited to, ordering a halt or curtailment of any operations, activities, processes, or conditions the Department believes are contributing to the air pollutant emergency episode.'' Montana's submission cites 75–2–402, MCA, as providing general authority comparable to CAA section 303. The submission also cites 75–2–112(2)(a) and 75–2–111(3), MCA. Under 75–2–111(3) MCA, Montana's environmental review board has broad authority to ''issue orders necessary to effectuate the purposes'' of Chapter 2. Also, under 75–2–112(2)(a) MCA, the MDEQ has the authority to use ''appropriate administrative and judicial proceedings'' to enforce orders issued by the board. Any air pollution discharge that created an emergency situation would constitute a violation of the chapter and its purposes; therefore, providing the BER and the MDEQ authority to issue administrative orders to stop discharges that cause emergencies effecting welfare and the environment.

While no single Montana statute mirrors the authorities of CAA section 303, we propose to find that the combination of MCA provisions discussed above provide for authority comparable to section 303 to immediately bring suit to restrain and issue emergency orders for applicable emergencies to take prompt administrative action against any person causing or contributing to air pollution that presents an imminent and substantial endangerment to public health or welfare, or the environment and, therefore are sufficient to meet the authority requirement of CAA section 110(a)(2)(G).

States must also have adequate contingency plans adopted into their SIP to implement the air agency's emergency episode authority (as discussed above). Requirements for contingency plans are provided in 40 CFR part 51, subpart H. The EPA approved Montana's EEAP in 71 FR 19 (Jan. 3, 2006). We find that Montana's air pollution emergency rules include ozone and establish stages of episode criteria; provide for public announcement whenever any episode stage has been determined to exist; and specify emission control actions to be taken at each episode stage. These are consistent with the EPA emergency episode SIP requirements set forth at 40 CFR part 51, subpart H (prevention of air pollution emergency episode) for ozone.

Based on the above analysis, we propose approval of Montana's SIP as meeting the requirements of CAA section 110(a)(2)(G) for the 2015 ozone NAAQS.

Section 110(a)(2)(H)—Future SIP Revisions

This section requires that a state's SIP provide for revision may be necessary, to take account of changes in the NAAQS or availability of improved methods for attaining the NAAQS and whenever EPA finds that the SIP is substantially inadequate.

Montana's statutory provisions in the Montana CAA at 75–2–101 et. seq., give the BER sufficient authority to meet the requirements of 110(a)(2)(H). Therefore, we propose to approve Montana's SIP as meeting the requirements of the CAA section 110(a)(2)(H).

Section 110(a)(2)(I)—Nonattainment Area Plan or Plan Revisions Under Part D

Section 110(a)(2)(I) provides that each plan, or plan revisions for an area designated as a nonattainment area, shall meet the applicable requirements of part D of the CAA. EPA interprets

section 110(a)(2)(I) to be inapplicable to the infrastructure SIP process because specific SIP submissions designated nonattainment areas, as required by part D, are subject to different submission schedule under subparts 2 through 5 of part D, extending as far as 10 years following areas of designation for some elements, whereas infrastructure SIP submissions are due within three years after adoption or revision of a NAAQS. Accordingly, EPA takes action on part D attainment plans through separate processes.

Section 110(a)(2)(J)—Consultation with Government Officials; Public Notifications; and PSD and Visibility Protection

Section 110(a)(2)(J) of the CAA requires that each SIP ''meet the applicable requirements of section 121 of this title (relating to consultation), section 127 of this title (relating to public notification) and part C of this subchapter (relating to PSD of air quality and visibility protection).''

The Montana submissions reference the following specific laws and regulations relating to consultation with identified officials on certain air agency actions, public notifications, prevention of significant deterioration, and visibility protection:

- MCA 2–3–203.
- ARM 17.8.801 *et seq.*—Prevention of Significant Deterioration of Air Quality.
- ARM 17.8.901 *et seq.*—Permit Requirements for Major Stationary Sources of Major Modifications Locating within Nonattainment Areas.
- ARM 17.8.1001 *et seq.*—Preconstruction Permit Requirements for Major Stationary Sources of Major Modifications Locating within Attainment or Unclassified areas.
- Montana's Emergency Episode Avoidance Plan (EEAP) SIP.

(i) Montana has demonstrated that it has authority and rules in place to provide a process a process of consultation with general purpose local governments, designated organizations of elected officials of local governments, designated organizations of elected officials of local governments and any FLM having authority over federal land to which the SIP applies, consistent with the requirements of CAA section 121 (59 FR 2988, Jan. 20, 1994). Moreover, Montana's Emergency Episode Avoidance Plan, approved into the SIP (71 FR 19, Jan, 3, 2006), meets the general requirements of CAA section 127.

Montana has demonstrated that it has the authority and rules in place to provide a process of consultation with general purpose local governments, designated organizations with elected officials of local governments and any FLM having authority over Federal land to which the SIP applies, consistent with the requirements of CAA section 121 (*See* 59 FR 2988, Jan. 20, 1994). Furthermore, Montana's Emergency Episode Avoidance Plan, approved into the SIP (*See* 71 FR 19, Jan, 3, 2006), meets the general requirements of the CAA section 127.

Addressing the requirement in CAA section 110 (a)(2)(J) that the SIP meet the applicable requirements of part C, title 1 of the CAA, we have evaluated this requirement in the context of CAA section 110(a)(2)(C). The EPA most recently approved revisions to Montana's PSD program on June 26, 2018 (*See* 83 FR 29694), updating the program consistency with CAA requirements. Therefore, we are proposing to approve the Montana SIP as meeting the requirements of CAA 110(a)(2)(J) with respect to PSD for the 2015 Ozone NAAQS.

With regard to applicable visibility protection requirements, the EPA recognizes that states are subject to visibility and regional haze program requirements under part C of the CAA. In the event of an establishment of a new NAAQS, however, the visibility and regional haze program requirements under part C does not change. Consequently, we find that there is no new applicable requirement relating to visibility triggered under CAA section 110(a)(2)(J) when a new NAAQS becomes effective.

Based on the above analysis, we are proposing to approve the Montana SIP as meeting the requirements of CAA section 110(a)(2)(J) for the 2015 Ozone NAAQS.

Section 110(a)(2)(K)—Air Quality Modeling/Data

Section 110(a)(2)(K) of the CAA requires that SIPs provide for (i) the performance of air quality modeling as the Administrator may prescribe for the purpose of predicating the effect on air quality of any emissions of any air pollutant for which the Administrator has established a NAAQS, and (ii) the submission, upon request, of data related to such air quality modeling to the Administrator.

The EPA's requirements for air quality modeling for criteria pollutants are found in 40 CFR part 51, appendix W Guideline on Air Quality Models. On January 17, 2017 (*See* 82 FR 5182), the EPA revised appendix W, effective February 16, 2017. The **Federal Register** document stated: ''For all regulatory applications covered under the Guideline, except for transportation conformity, the changes to appendix A preferred models and revisions to the requirements and recommendations of the Guidelines must be integrated into the regulatory processes of respective reviewing authorities and followed by applicants by no later than January 17, 2018.''

In the September 26, 2018 submission, Montana cites ARM 17.8.821 (MT's PSD Program) which requires estimates of ambient air concentrations be based on applicable air quality models specified in appendix W of 40 CFR part 51, pertaining to the Guidelines on Ambient Air Quality Models. Additionally, Montana cites in its State rules and regulations, as contained within ARM 17.8.701, ARM 17.8.801, ARM 17.8.901, and ARM 17.8.1001 (regulating construction of new or modified stationary sources consistent with PSD and NSR requirements) shall demonstrate the facility can be expected to operate in compliance with applicable law and that it will not cause or contribute to a violation of any NAAQS.

ARM 17.8.802(1)(b) incorporates appendix W by reference without a specific date. ARM 17.8.102(1)(a) provides:

(1) Unless expressly provided otherwise in this chapter, where the board has:

(a) Adopted a federal regulation by reference, the reference is to the July 1, 2016 edition of the Code of Federal Regulations (CFR), as it is published on the website of the U.S. Government Printing Office: *https://www.gpo.gov/fdsys/browse/collectionCfr.action?selectedYearFrom=2016&go=Go;*

In the December 28, 2022 appendix W revision [15] we received, Montana incorporates the most current version of the ''Guideline on Air Quality Models'', 40 CFR part 51, appendix W. ARM rule 17.8.802 Incorporation by Reference (b) is updated to comply with EPA's January 17, 2017 revisions to appendix W.

Based on the above information, we are proposing to approve the Montana SIP as meeting the requirements of CAA section 110(a)(2)(K) for the 2015 ozone NAAQS.

[15] *See* appendix W revisions in docket. In its most recent revision to appendix W, the EPA stated that revised requirements must be ''integrated into the regulatory processes of respective reviewing authorities and followed by applicants by no later than January 17, 2018.'' Final rule, Revisions to the Guideline of Air Quality Models: Enhancements to the AERMOD Dispersion Modeling System and Incorporation of Approaches to Address Ozone and Fine Particulate Matter, 82 FR 5182 (Jan. 17, 2017).

CAA Section 110(a)(2)(L): Permitting Fees

CAA section 110(a)(2)(L) provides that the SIP must require each major stationary source to pay permitting fees to cover the cost of reviewing, approving, implementing, and enforcing a permit.

The Montana submission refers to its fully approved title V operating permit program, and references the ARM regulations for the assessment and collection of fees:

- ARM 17.8.504—Air Quality Permit Application Fees.
- ARM 17.8.505—Air Quality Operation Fees.
- ARM 17.8.1701, *et seq.*—Registration of Air Contaminant Sources.

ARM 17.8.48 requires new and modified sources to pay fees in accordance with ARM 17.8.504. With respect to title V sources, on January 22, 2001, the EPA fully approved Montana's part 70 title V operating permit program (*See* 65 FR 80785). Therefore, we are proposing that Montana has satisfied the requirements of CAA section 110(a)(2)(L) for the 2015 ozone NAAQS.

CAA Section 110(a)(2)(M): Consultation/Participation by Affected Local Entities

CAA section 110(a)(2)(M) requires states to provide for consultation and participation in SIP development by local political subdivisions affected by the SIP.

Montana refers to the following ARM and MCA regulations, which require the MDEQ to ''. . .advise, consult, contract, and cooperate with other agencies of the state, local governments, industries, other states, inter-local agencies, the United States, and any interested persons or groups''. Additionally, Montana law allows potentially affected parties of MDEQ actions to petition for hearings.

- ARM 17.8.140 Rehearing Procedures—Form and Filing of Petition.
- ARM 17.8.141 Rehearing Procedures—Filing Requirements.
- ARM 17.8.142 Rehearing Procedures—Board Review.
- 75–2–112, MCA—Powers and Responsibilities of Department.

The rules and regulations cited by Montana provide for the consultation and participation by local political subdivisions affected by the SIP; therefore, we are proposing to approve the Montana SIP as meeting the requirements of CAA section 110(a)(2)(M) for the 2015 ozone NAAQS.

IV. What action is EPA taking?

In this rulemaking, we are proposing to approve multiple elements of the infrastructure SIP requirements for the 2015 ozone NAAQS for Montana along with a proposed no action for three infrastructure elements for Montana. Additionally, we are proposing to approve the revisions to appendix W. Our proposed action is contained in table 1 below.

The EPA is proposing to approve Montana's September 26, 2018, SIP submission for the following CAA section 110(a)(2) infrastructure elements for the 2015 ozone NAAQS: (A), (B), (C), (D)(ii), (E), (F), (G), (H), (J), (K), (L), and (M). The EPA is proposing no action on D(i)(I) Prongs 1 and 2, and D(i)(II) Prong 4.

In the table below, the key is as follows:

A—*Approve.*
D—*Disapprove.*
NA—*No Action.* We intend to address the element in a separate rulemaking action.

TABLE 1—INFRASTRUCTURE ELEMENTS THAT THE EPA IS PROPOSING TO ACT ON

2015 Ozone NAAQS infrastructure SIP elements	Montana
(A): Emission Limitations and Other Control Measures	A
(B): Ambient Air Quality Monitoring/Data System	A
(C): Program for Enforcement of Control Measures; minor NSR; PSD	A
(D)(i)(I): Prong 1 Interstate Transport—significant contribution	NA
(D)(i)(I): Prong 2 Interstate Transport—interference with maintenance	NA
(D)(i)(II): Prong 3 Interstate Transport—PSD	A
(D)(i)(II): Prong 4 Interstate Transport—visibility	NA
(D)(ii): Interstate and International Pollution Abatement	A
(E): Adequate Personnel. Funding, and Authority; State Boards; Local Implementation	A
(F): Stationary Source Monitoring	A
(G): Emergency Authority; Emergency Episode Plans	A
(H): Future SIP Revisions	A
(J): Consultation with Government Officials, Public Notification, PSD and Visibility Protection	A
(K): Air Quality Modeling/Data	A
(L): Permitting Fees	A
(M): Consultation/Participation by Affected Local Entities	A

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because State Implementation Plan approvals under the CAA are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive

Order 13132 (64 FR 43255, August 10, 1999);

- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

(Authority: 42 U.S.C. 7401 *et seq.*)

Dated: July 8, 2025.

Cyrus M. Western,

Regional Administrator, Region 8.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2021–0684; FRL–12805–01–R5]

Air Plan Approval; Minnesota; Exempt Source SIP Revision

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a revision to the Minnesota State Implementation Plan (SIP) which updates Minnesota's air program rules. The Minnesota Pollution Control Agency (MPCA) submitted the request to EPA on October 1, 2021. The revision to Minnesota's air quality rules will reflect changes that have occurred to the State air quality rules since July 2020. EPA is proposing to approve MPCA's submittal, which will result in consistent requirements of rules at both the State and Federal level.

DATES: Comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2021–0684 at *http://www.regulations.gov,* or via email to *damico.genevieve@epa.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI, PBI, or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Jennifer Darrow, Air and Radiation Division (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–6315, *darrow.jennifer@epa.gov.* The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

I. Background
II. Review of State Submittal
III. What action is EPA taking?
IV. Incorporation by Reference
V. Statutory and Executive Order Reviews

I. Background

A. Overview of Revisions Made by Minnesota

On October 1, 2021, MPCA submitted a request for a revision of Minnesota's SIP. The submittal includes amendments to permit rules, clarifications of permit requirements for small sources of air emissions, updates to rules governing small air pollution sources and the addition of four categories of conditionally exempt sources. Minnesota completed a State rulemaking to clarify exempt source and insignificant activities rules in 2019. This proposed SIP revision is intended to codify those amendments to State law in the Minnesota SIP. MPCA previously submitted a similar SIP revision in 2018, and EPA approved the revision on July 27, 2020 (85 FR 45094).

The following chapters of Minnesota's air program rules have undergone revisions: Minnesota Rules Chapter 7005 Definitions and Abbreviations; Chapter 7007 Permits and Offsets; Chapter 7008 Conditionally Exempt Stationary Sources and Conditionally Insignificant Activities; Chapter 7011 Standards for Stationary Sources; and Chapter 7019 Emissions Inventory Requirements. All rule changes were made under the MPCA's rulemaking authority and underwent appropriate public participation procedures as required by State law. EPA proposes to approve the revisions to the Minnesota SIP.

B. Summary of Relevant Statutes

Section 110 of the Clean Air Act (CAA), 42 U.S.C 7410, as amended, requires State and local air pollution control agencies to develop and submit for EPA approval, SIPs that provide for the attainment, maintenance, and enforcement of the NAAQS in each air quality control region (or portion thereof) within each State. Section 110(a) requires an assurance that states' air quality management programs contain the structural components in place to meet the state's responsibilities under the CAA. It also requires that the program attain and maintain the NAAQS.

Section 110(a)(2)(C) of the CAA requires that each SIP include a program to provide for the regulation of construction and modification of stationary sources as necessary to ensure that the NAAQS are achieved. Specific elements for an approvable construction permitting plan are found in the implementing regulations at 40 CFR 51 subpart I—Review of New Sources and Modifications. Requirements relevant to minor

construction programs are 40 CFR 51.160–51.163. EPA regulations have several specific criteria for State minor new source review (NSR) programs. Generally, State programs must set forth legally enforceable procedures that allow the State to determine if a planned construction activity would result in a violation of the State's SIP or a national standard and prevent any activity that would. In accordance with 40 CFR 51.162, the State plan must identify the responsible agency for making permitting decisions. 40 CFR 51.160 requires the plan to identify the types and sizes of facilities and installations that are subject to review under the plan, provide that sources undertaking an activity submit adequate information regarding the nature and amounts of emissions to be emitted, as well as information on the location, design construction, and operation of facilities to enable the State to make a determination of whether the planned construction would result in a violation of the SIP or a national standard. 40 CFR 51.161 provides specific criteria for public availability of information and opportunity for public comment. Finally, 40 CFR 51.164 requires the plan to identify the administrative procedures that will be followed in making permitting decisions.

Section 110(l) of the CAA states that a SIP revision cannot be approved if the revision would interfere with any applicable requirements concerning attainment and reasonable further progress toward attainment of a NAAQS or any other applicable requirement of the CAA.

The revisions to the Minnesota SIP are intended to recodify, refine and update Minnesota's air quality rules in the Minnesota SIP, at 40 CFR 52.1220. This SIP revision addresses the requirements of section 110 of the CAA.

II. Review of State Submittal

A. Chapter 7005: Definitions and Abbreviations

Chapter 7005 contains numerous definitions and abbreviations relevant to rules throughout the Minnesota SIP. In Chapter 7005, MPCA amended and added definitions in Minn. R. 7005.0100, to define new terms, clarify definitions, and re-number definitions. EPA finds these revisions approvable because they provide clarity to terms used in various rules throughout the SIP and do not change the requirements of the rules themselves. EPA proposes to approve the revisions to Minn. R. 7005.0100 into the Minnesota SIP.

B. Chapter 7007: Permits and Offsets

Chapter 7007 contains rules concerning permits and offsets and has undergone various changes. Because Chapter 7007 combines the State's preconstruction and operating permit programs into a single permitting program, MPCA uses the broad term ''Part 70 permit'' to reference several types of permits, including some permits that authorize construction. As used in this action, ''Part 70'' denotes preconstruction permits, unless otherwise specified as ''federal part 70.'' This rulemaking is limited solely to approval of revisions to the state's preconstruction permitting program and federally enforceable State operating permit program. This is not a rulemaking under the Federal rules at 40 CFR part 70.

Minn. R. 7007.0300 relates to sources that are not required to obtain a permit under parts 7007.0100 to 7007.1850. Minn. R. 7007.0300 subpart 1, has been revised to remove item D, which provided that stationary sources listed as insignificant activities, sources that are conditionally insignificant activities, or sources that qualify as both insignificant activities and conditionally insignificant activities, are not required to obtain a permit, subject to certain conditions and recordkeeping requirements. The substantive provisions of item D are now a category of conditionally exempt stationary sources found in Minn. R. 7008.2600, ''Insignificant Facility; Technical Standards,'' which is discussed further below. Therefore, these revisions simply reorganize the provisions and do not change the substance of the rules. EPA proposes to approve the revisions to Minn. R. 7007.0300 into the Minnesota SIP.

Minn. R. 7007.0400 subpart 2 has been revised to change the timeframe for the owner or operator to submit an application for renewal of a Federal part 70 permit. The revision clarifies that a permit will not require a renewal application sooner than 18 months prior to permit expiration. EPA finds these revisions approvable as they align State and Federal permitting rules. EPA proposes to approve the revisions to Minn. R. 7007.0400 into the Minnesota SIP.

Minn. R. 7007.0850 subpart 2 has been revised with changes to the public notice and comment requirements and procedures. The revisions remove the requirements to give public notice in a newspaper of general circulation in the area nearby the source or in the *Minnesota State Register* and require electronic posting of the public notice for the duration of the comment period on the MPCA's public notice website.

Revisions have been made to the minimum requirements of what must be included in the electronic notice to now include the draft permit and a statement of whether the facility has filed a pollution prevention progress report with the State commissioner. Revisions have also been made to paragraph numbering and to include electronic contact information for interested parties to request additional information. Minn. R. 7007.0850 subpart 3 revises the process to petition for meetings and hearings by removing the option of placing the permit onto the agenda of a MPCA board meeting. EPA finds these revisions approvable as they add requirements to align the rules with Federal permitting requirements and do not relax any previously approved SIP provisions. EPA proposes to approve the revisions to Minn. R. 7007.0850 into the Minnesota SIP.

Minn. R. 7007.1144 subpart 5 has been revised to clarify procedures for public participation for capped permits (''capped'' permits are rule-based permits designed for noncomplex facilities that do not require site-specific permit conditions), and removes the option of petitioning for meetings and hearings by placing the permit onto the agenda of a MPCA board meeting. EPA finds these revisions approvable as they do not conflict with any Federal requirement. EPA proposes to approve the revisions to Minn. R. 7007.1144 into the Minnesota SIP.

Minor language changes were made to Minn. R. 7007.1145, 7007.1147, and 7007.1250. EPA finds these revisions approvable as they do not change the substance of the rules. EPA proposes to approve the revisions to Minn. R. 7007.1145, 7007.1147 and 7007.1250 into the Minnesota SIP.

Revisions have been made to the list of insignificant activities in Minn. R. 7007.1300. The changes clarify whether certain activities, and the calculation of emissions from those activities, must be included in an air emissions permit application. Language clarifications related to heat input capacity are added, and certain processing, cleaning and other miscellaneous activities and operations are added to the list of insignificant activities. These revisions also add language to clarify that the thresholds for hazardous air pollutants listed in 7007.1300, subpart 5 are to be utilized in determining whether an emissions unit qualifies as an insignificant activity under 7007.1300, subpart 4. The intent of the insignificant activities list is to streamline the permit application process by specifying those

activities whose emissions are trivial or short-term by their very nature, or activities that fall below a certain size/production rate, and therefore require minimal regulatory oversight. As part of these rule revisions, the MPCA evaluated each of the activities added or moved and their associated emissions. Activities that were added or moved were based on MPCA's estimates of emissions or examples provided by EPA of activities states could add to their insignificant activities list. While the activities listed may have emissions, the rule changes themselves are not expected to change/increase emissions as they do not authorize stationary sources to bypass any other regulations or permitting requirements. Stationary sources that add new insignificant activities are still required to determine whether the change or modification requires a permit amendment or notice to MPCA. EPA finds these revisions approvable as they provide clarity and do not change the stringency of the rule. EPA proposes to approve the revisions to Minn. R. 7007.1300 into the Minnesota SIP.

C. Chapter 7008: Conditionally Exempt Stationary Sources and Conditionally Insignificant Activities

Chapter 7008 provides the conditions under which stationary sources are exempt from the requirement to apply for and obtain an air emission permit as provided for under Minn. R. 7007.0300. In the Chapter 7008 rule revisions, MPCA expands the conditionally exempt source categories to include auto-body refinishing facilities, coating facilities, woodworking facilities, and insignificant facilities. It establishes a permit by rule approach for these source categories that does not relax air quality standards. The revisions in Chapter 7008 specify applicable emission limitation and control requirements, operational restrictions and monitoring, recordkeeping, and other requirements in a similar manner to a traditional permit. The revisions outline the conditions under which stationary sources are exempt from the requirement to apply for and obtain an air emission permit as provided for under Minn R. 7007.0300. Chapter 7008 requires sources who claim their operations are conditionally exempt or conditionally insignificant to maintain records that demonstrate eligibility with the rule.

Minn. R. 7008.0100 has been revised to renumber several subparts and adds definitions pertinent to this category of conditionally exempt stationary sources and conditionally insignificant activities. EPA finds these revisions approvable as they provide clarity and do not change the stringency of the rule. EPA proposes to approve the revisions to Minn. R. 7008.0100 into the Minnesota SIP.

Minn. R. 7008.0200 establishes general requirements for conditionally exempt stationary sources and conditionally insignificant activities. This part has been revised to add a new item F. Item F has been added to clarify to owners and operators that if there is a change at the facility that affects the amount or type of air pollutants the facility emits, the owner or operator must determine whether a permit is needed and follow the permitting requirements at Minn. R. 7007.0400, subpart 4. EPA finds these revisions approvable as they strengthen current requirements in the SIP. EPA proposes to approve the revisions to Minn. R. 7008.0200 into the Minnesota SIP.

Minn. R. 7008.2100, subpart 1 identifies the eligibility requirements for the owner or operator of a gasoline service station to operate without a permit under chapter 7008. The requirements of this subpart have been renumbered. New item A, in subpart 1, revises existing rule language to clarify who is responsible for compliance with the rule and corrects the reference to the general requirements in Minn. R. 7008.2000, not Minn. R. 7008.0200. Subpart 1, item A has also been revised to remove the term ''general operating'' as a qualifier in front of requirements. The revisions also refer to the eligibility requirements in Minn. R. 7008.2000 rather than the general requirements of Minn. R. 7008.0200. New item B revises existing rule language to identify the correct rule citation for insignificant activities and conditionally insignificant activities. This revision provides clarification to the owner or operator that emissions from the gasoline service station must be from insignificant activities or conditionally insignificant activities, or both, in order to operate without a permit. Subpart 3, Notification, is revised to establish the requirements for notification when an owner or operator begins construction of a gasoline service station. The revisions also remove obsolete rule language that referred to a transition period for the original implementation of the rules. EPA finds these revisions approvable as they correct, clarify and strengthen current requirements in the SIP. EPA proposes to approve the revisions to Minn. R. 7008.2100 into the Minnesota SIP.

Minn. R. 7008.2200, subpart 1 identifies the eligibility requirements for the owner or operator of a concrete manufacturing stationary source to operate without a permit under chapter 7008. Subpart 1 has been revised to correct the reference to the general requirements in Minn. R. 7008.2000, not Minn. R. 7008.0200. Revisions also include the addition of a new subpart 6 with recordkeeping requirements for concrete manufacturing stationary sources. The recordkeeping requirements in Minn. R. 7008.2250 are proposed for repeal and are moved to a new subpart 6, items A through D. This change consolidates all requirements for concrete manufacturing stationary sources in one rule part. The revisions also modify language of existing recordkeeping requirements but does not change the content of the requirements. The revisions provide consistent language across the different conditionally exempt source categories. EPA finds these revisions approvable as they clarify and strengthen current requirements in the SIP. EPA proposes to approve the revisions to Minn. R. 7008.2200 into the Minnesota SIP.

Minn. R. 7008.2250 is proposed for repeal. This part provided recordkeeping requirements for concrete manufacturing plants. These requirements are moved to new subpart 6 in part 7008.2200. This consolidates and clarifies the rule so owners and operators can more easily locate, understand and comply with the recordkeeping requirements for concrete manufacturing plants. EPA finds these revisions approvable as they clarify current requirements in the SIP. EPA proposes to approve the revisions that repeal Minn. R. 7008.2250 from the Minnesota SIP.

Minnesota has created four new categories of conditionally exempt sources: Minn. R. 7008.2300 (auto-body refinishing); Minn. R. 7008.2400 (coating facilities); Minn. R. 7008.2500 (woodworking facilities); and Minn. R. 7008.2600 (insignificant facilities). For each of the new source categories, the rule amendments establish technical standards, operational and recordkeeping requirements that control and monitor air emissions in a similar manner to conditions that would be found in a site-specific, low-emitting facility permit.

Minn. R. 7008.2300 establishes technical standards for an owner or operator of an auto-body refinishing facility, by which the source may be exempt from an air emissions permit. Subpart 1 establishes the eligibility requirements for an auto-body refinishing facility to operate without a permit under chapter 7008, including limitations on activities and types of equipment allowed, to ensure there are no other significant sources of emissions

at the source that would otherwise require an air emissions permit. Revisions also establish the maximum amount of coating and cleaning materials that an auto-body refinishing facility can purchase or use each calendar year to be eligible to operate without a permit under this subpart. The limit is set at 2,000 gallons each calendar year. Subparts 2, 3 and 4 establish operational, recordkeeping and notification requirements.

Minn. R. 7008.2400 establishes technical standards for an owner or operator of a coating facility, that is not an auto-body refinishing facility, by which the source may be exempt from an air emissions permit. Subpart 1 establishes the eligibility requirements for a coating facility to operate without a permit under chapter 7008, including limitations on activities and types of equipment allowed, to ensure there are no other significant sources of emissions at the source that would otherwise require an air emissions permit. Revisions also establish a limit of 2,000 gallons per calendar year of coating and cleaning material usage to be eligible to operate without a permit under this subpart. Subparts 2, 3 and 4 establish operational, recordkeeping and notification requirements.

Minn. R 7008.2500 establishes technical standards for an owner or operator of a woodworking facility, by which the source may be exempt from an air emissions permit. Subpart 1 establishes the eligibility requirements for a woodworking facility to operate without a permit under chapter 7008, including limitations on activities and types of equipment allowed, to ensure there are no other significant sources of emissions at the source that would otherwise require an air emissions permit. Subparts 2, 3 and 4 establish operational, control and notification requirements. Subpart 3 establishes five control options that restrict emissions to below the State permitting thresholds for PM and PM_{10}.

Minn R. 7008.2600 establishes a new exempt category for stationary sources that have only insignificant and conditionally insignificant activities. To ensure that the presence of insignificant activities does not exceed a permitting threshold, the rule revision expands and clarifies the conditions that must be met by a stationary source with only insignificant and conditionally insignificant activities by adding conditions that make the technical requirements federally enforceable. Subpart 1 establishes eligibility requirements for an insignificant facility to operate without a permit under chapter 7008 by specifying the insignificant activities and conditionally insignificant activities that qualify and limits the number of emission units such that potential emissions do not exceed the listed permitting thresholds. Subparts 2 and 3 establish operational and recordkeeping requirements to qualify under this category. Subparagraph 4 requires the owner or operator of an insignificant facility to calculate emissions to determine eligibility.

The minor NSR provisions at 40 CFR 51.160 require State programs to determine whether activities would violate an applicable SIP or national standard and to prevent construction of an activity that would violate an applicable SIP provision or national standard. The new provisions exempt certain eligible stationary sources from air permitting requirements. When determining adequacy of State rules, EPA is concerned with the possibility that an exemption might allow an activity that should be subject to major source permitting requirements to escape appropriate review and permitting, that sources are required to maintain information adequate for the State to ensure that exemptions have been applied appropriately, and that the exemptions would not interfere with any applicable requirement concerning attainment and reasonable further progress, or any other applicable requirement of the CAA.

Minnesota Chapter 7008 provides limitations on the use of the specific exemptions in Minn. R. 7008.0050–7008.4110 and requires sources using the exemptions to maintain certain records to demonstrate that the exemptions have been applied appropriately. Specific conditionally exempt sources may be required to implement additional monitoring and recordkeeping as required to ensure that the equipment is operating as required under the exemption. Section 110(l) of the CAA states that a SIP revision cannot be approved if the revision would interfere with any applicable requirement concerning attainment and reasonable further progress toward attainment of a NAAQS or any other applicable requirement of the CAA. These conditionally exempt sources are expected to yield very low levels of actual emissions of regulated pollutants and are not expected to interfere with attainment and maintenance of the NAAQS. The rules also do not interfere with any other applicable requirement of the CAA, including the applicability of other SIP requirements, and those found in the New Source Performance Standards and the National Emission Standards for Hazardous Air Pollutants (NESHAPs). Therefore, EPA proposes to approve the revisions to Minn. R. 7008.2300, 7008.2400, 7008.2500, and 7008.2600.

The revisions to Minn R. 7008.4000 expand and clarify the conditions that must be met by insignificant and conditionally insignificant activities and are intended to improve the enforceability of restrictions on potential to emit for conditionally insignificant activities. This part is further revised to require that calculations from the activities described in parts 7008.4100 and 7008.4110 must be provided in a permit application for a part 70 permit or an amendment to a part 70 permit. EPA finds these revisions approvable as they strengthen current requirements in the SIP. EPA proposes to approve the revisions to Minn. R. 7008.4000.

The title of Minn. R. 7008.4100 is revised to ''Conditionally Insignificant Activity: Material Usage'' in order to provide clarification that the activities described are a conditionally insignificant activity. Revisions have been made in this part to the material usage emissions limits of volatile organic compounds (VOC) that qualify as an insignificant activity under this rule. Thresholds of eligibility for VOC emissions have been increased from less than 2,000 pounds to less than 10,000 pounds, and VOC-containing material usage limits have increased from less than 200 gallons to less than 1,000 gallons per calendar year. The limits have been increased to provide flexibility to owners and operators of stationary sources that have material usage that qualifies as a conditionally insignificant activity. It is estimated that this rule change would potentially result in maximum emissions of a single volatile HAP by no more than 5 tons per calendar year per source, which corresponds to 50% of the major source HAP threshold defined by the CAA section 112.

The rule also removes accounting of PM_{10} and $PM_{2.5}$ separately from particulate matter when calculating emissions for annual calculations. The calculation for particulate matter emissions in this part of the rule is based on the solids content (in lbs/gal or weight%) of the material used. Because the data used for this calculation is not specific to each pollutant (PM, PM_{10}, and $PM_{2.5}$), deleting the reference to PM_{10} and $PM_{2.5}$ simplifies the emission limit and provides consistency across the requirements in Minn. R. 7008.4100 that govern conditionally insignificant material usage.

Subparts 4 and 5 of this rule revise calculation requirements for VOC and particulate matter and add the ability to include control and transfer efficiencies in calculating particulate matter emissions under certain circumstances as allowed under Minn. R. 7011.

The revisions of Minn. R. 7008.4100 are consistent with CAA section 110(l). These revisions are expected to yield very low levels of actual emissions of regulated pollutants and are not expected to interfere with attainment and maintenance of the NAAQS. The revisions also do not interfere with any other applicable requirement of the CAA, including the applicability of other SIP requirements, and those found in the New Source Performance Standards and the National Emission Standards for Hazardous Air Pollutants (NESHAPs). As such, EPA proposes to approve the revisions to Minn. R. 7008.4100.

The title of Minn. R. 7008.4110 has been revised to ''Conditionally Insignificant Activity; Finishing Operations.'' The revision provides clarification that the activities described are a conditionally insignificant activity. The revision also establishes requirements specific to stationary sources that claim mechanical finishing operations emitting PM as a conditionally insignificant activity. The revisions further clarify that any activity emitting any other pollutant in addition to PM does not qualify under this part, including lead emissions.

Revisions are also made to identify the qualifications for mechanical finishing operations to be considered a conditionally insignificant activity. Revisions to subpart 2 add ''mechanical finishing operations'' and remove the example finishing activities (*e.g.,* buffing, polishing, carving, etc.) previously listed in the SIP. Subpart 2 is also revised to remove the requirement that emissions must be vented inside a building 100% of the time and filtered through an air cleaning system, adds control requirements for particulate emissions and limits particulate matter emissions from mechanical finishing operations to less than 10,000 pounds per calendar year.

Clarifying language is added to specify that the limit applies to all finishing operation activities at the stationary source. This revision disallows multiple activities that might qualify independently as conditionally insignificant finishing operations to exceed the emission limit when aggregated. Subparts 3 and 4 of the rule clarify language and add monitoring, recordkeeping and calculation requirements for sources subject to this subpart. EPA finds these revisions approvable as they strengthen current requirements in the SIP. EPA proposes to approve the revisions to Minn. R. 7008.4110.

C. Chapter 7011: Standards for Stationary Sources

Minn. R. 7011.0561 makes minor revisions to language, changing the title from ''Control of mercury from electric generating units'' to ''Controlling mercury from electric generating units'' and removes a reference to Minnesota Statutes, section 216B.687, subdivision 3. EPA finds these revisions approvable as they are minor language changes that do not affect the requirements of the rule. EPA proposes to approve Minn. R. 7011.0561.

Minn. R. 7011.1201 revises a statutory reference for the definition of refuse-derived fuel. EPA finds these revisions approvable as they do not change the applicability of the rule. EPA proposes to approve Minn. R. 7011.1201.

Minn. R. 7011.2300 makes minor language revisions and allows for an alternative sulfur dioxide limit in a permit or other enforceable document that models compliance with Minn. R. 7009.0090, the National Ambient Air Quality Standards as they are incorporated by reference into Minnesota's rules. EPA finds these revisions approvable as they are minor language changes that do not affect the requirements of the rule and strengthen current requirements in the SIP. EPA proposes to approve Minn. R. 7011.2300.

A. Chapter 7019: Emissions Inventory Requirements

Minn. R. 7019.3020 has been revised to change the words ''shall'' to ''must'' and renumbers a reference to subpart ''J'' to ''G''. EPA finds these revisions approvable as they are minor language changes that do not affect the requirements of the rule. EPA proposes to approve Minn. R. 7019.3020 into the Minnesota SIP.

As part of this submittal, Minnesota is also requesting that rule 7023 be removed from the SIP. This rule is obsolete given the November 2019 expiration of the carbon monoxide maintenance area.

III. What action is EPA taking?

EPA is proposing to approve MPCA's October 1, 2021, submittal, as a revision to its existing SIP.

IV. Incorporation by Reference

In this rule, EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is proposing to incorporate by reference revisions to Minnesota Rules Chapter 7005 Definitions and Abbreviations; Chapter 7007 Permits and Offsets; Chapter 7008 Conditionally Exempt Stationary Sources and Conditionally Insignificant Activities; Chapter 7011 Standards for Stationary Sources; and Chapter 7019 Emissions Inventory Requirements, as discussed in sections I. and II. of this preamble. EPA has made, and will continue to make, these documents generally available through *www.regulations.gov* and at the EPA Region 5 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided they meet the criteria of the CAA. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;

• Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and

• Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA;

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rulemaking does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen oxides, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: June 30, 2025.

[EPA–R09–OAR–2025–0268; FRL–12868–01–R9]

Air Plan Approval; Guam; Base Year Emissions Inventory for the 2010 1-Hour Sulfur Dioxide National Ambient Air Quality Standard for the Piti-Cabras Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a revision to Guam's State Implementation Plan (SIP) under section 110(k)(3) of the Clean Air Act (CAA or ''the Act''). This revision concerns the base year emissions inventory for the Piti-Cabras, Guam sulfur dioxide (SO_2) nonattainment area (''Piti-Cabras area'' or NAA) for the 2010 1-hour SO_2 National Ambient Air Quality Standard (NAAQS, ''standard,'' or ''2010 SO_2 NAAQS''). We are taking comments on a proposed approval of this revision and are simultaneously publishing a final action approving this revision in a direct final rule.

DATES: Comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2025–0268 at *https://www.regulations.gov*. For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Khoi Nguyen, Geographic Strategies and Modeling Section, Planning & Analysis Branch, Air & Radiation Division, EPA Region IX, 75 Hawthorne Street, San Francisco, CA 94105; telephone number: 415–947–4120; email address: *Nguyen.Khoi@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA. In the ''Rules and Regulations'' section of this issue of the **Federal Register**, the EPA is approving Guam's submission as a direct final rule without prior proposal because we view this as a noncontroversial action and anticipate no adverse comments. A detailed rationale for the action is set forth in the preamble to the direct final rule. If the EPA receives no adverse comments, the EPA contemplates no further action. If the EPA receives adverse comments, the EPA will withdraw the direct final rule and will address all public comments in a subsequent final rule based on this proposed rule. We do not plan to open a second comment period on this action, so anyone interested in commenting should do so at this time. For additional information, see the direct final rule of the same title that is located in the Final Rules section of this **Federal Register**.

Dated: July 7, 2025.

Air Plan Approval; Indiana; Regional Haze Plan for the Second Implementation Period; Extension of Comment Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; extension of public comment period.

SUMMARY: The Environmental Protection Agency (EPA) is extending the comment period for a proposed rule published on June 18, 2025. The current comment period for the proposed rule was scheduled to close on July 18, 2025. EPA is extending the comment period for the proposed action by 30 days to August 18, 2025.

DATES: The comment period for the proposed rule published in the **Federal Register** on June 18, 2025, at 90 FR 25944 is extended. Comments now must be received on or before August 18, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2021–0963 at *https://www.regulations.gov,* or via email to *langman.michael@epa.gov.* Additional instructions to comment can be found in the notice of proposed rulemaking published June 18,2025 (90 FR 25944).

FOR FURTHER INFORMATION CONTACT: Charles Hatten, Air & Radiation Division (AR–18J), U.S. Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–6031, *hatten.charles@epa.gov.*

SUPPLEMENTARY INFORMATION: On June 18, 2025, EPA proposed to approve the Indiana regional haze state implementation plan (SIP) revision submitted by the Indiana Department of

Environmental Management on December 29, 2021, as satisfying applicable requirements under the Clean Air Act and EPA's Regional Haze Rule for the program's second implementation period. EPA is extending the comment period for an additional 30 days.

Dated: July 1, 2025.

Air Plan Approval; Ohio; Second Maintenance Plan for the Ohio Portion of the Campbell-Clermont, KY-OH SO_2 Maintenance Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve, under the Clean Air Act (CAA), the second 10-year maintenance plan submitted to EPA on November 7, 2024, by the Ohio Environmental Protection Agency (Ohio EPA) for the Ohio portion of the Campbell-Clermont Counties, Kentucky-Ohio maintenance area. The Ohio portion of this area consists of Pierce Township in Clermont County, Ohio. The plan addresses the second 10-year maintenance period for the 2010 sulfur dioxide (SO_2) National Ambient Air Quality Standards (NAAQS). EPA is proposing to approve Ohio EPA's submittal for the area because it provides for the continued maintenance of the 2010 SO_2 NAAQS through the end of the second 10-year portion of the maintenance period.

DATES: Comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2024–0542 at *https://www.regulations.gov* or via email to *arra.sarah@epa.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI, PBI, or multimedia submissions, and general guidance on making effective comments, please visit *https://wwww.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Cecilia Magos, Air and Radiation Division (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–7336, *magos.cecilia@epa.gov.* The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION: In the Final Rules section of this **Federal Register**, EPA is approving the State's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no relevant adverse comments are received in response to this rule, no further activity is contemplated. If EPA receives such comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule which is located in the Rules section of this **Federal Register**.

(Authority: 42 U.S.C. 7401 *et seq.*)

Dated: July 1, 2025.

Cheryl Newton,

Acting Regional Administrator, Region 5.

[EPA–R01–OAR–2025–0196; FRL–12890–01–R1]

Air Plan Approval; Connecticut; State Implementation Plan Revisions Required as a Result of a Definition Change Due to the Ozone Reclassification

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a State Implementation Plan (SIP) revision submitted by the State of Connecticut. This action consists of revisions to Regulations of Connecticut State Agencies (RCSA) sections 22a–174–22e and 22a–174–22f, primarily to add compliance dates for sources brought into the applicability of these sections due to a change in the definition of ''severe non-attainment area for ozone,'' The definition change had previously been approved into Connecticut's SIP. This action is being taken in accordance with the Clean Air Act.

DATES: Written comments must be received on or before August 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R01–OAR–2025–0196 at *https://www.regulations.gov,* or via email to *creilson.john@epa.gov.* For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov.* For either manner of submission, the EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or

other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Publicly available docket materials are available at *https://www.regulations.gov* or at the U.S. Environmental Protection Agency, EPA Region 1 Regional Office, Air and Radiation Division, 5 Post Office Square—Suite 100, Boston, MA. EPA requests that, if possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection.

FOR FURTHER INFORMATION CONTACT: John Creilson, Air Quality Branch, U.S. Environmental Protection Agency, EPA New England Regional Office, 5 Post Office Square, Suite 100 (mail code 5–MI), Boston, MA 02109–3912, telephone number (617) 918–1688, email *creilson.john@epa.gov.*

I. Background
II. Summary and Evaluation of Connecticut's SIP Revision
III. Proposed Action
IV. Incorporation by Reference
V. Statutory and Executive Order Reviews

I. Background

On November 27, 2023, the Connecticut Department of Energy and Environmental Protection (CT DEEP) submitted a revision to its State Implementation Plan (SIP). This action consists of revisions to Regulations of Connecticut State Agencies (RCSA) sections 22a–174–22e and 22a–174–22f, primarily to add compliance dates for sources brought into the applicability of these sections due to a change in the definition of ''severe non-attainment area for ozone'' in another section of Connecticut's regulations—specifically, RCSA § 22a–174–1. The revisions to RCSA §§ 22a–174–22e and 22a–17422f became effective on November 13, 2023. Connecticut's change to the definition of ''severe non-attainment area for ozone'' in RCSA § 22a–174–1 became effective the same day, and the Environmental Protection Agency (EPA) previously approved the new definition into the SIP on February 12, 2024 (89 FR 9771).

On March 20, 2023, CT DEEP proposed changes to the definition of ''severe non-attainment area for ozone'' within RCSA § 22a–174–1. The proposed change to the definition expanded the list of cities and towns in the definition, to include all cities and towns in New Haven County and Middlesex County. CT DEEP also retained the two towns in Litchfield County to ensure classification consistency in these communities and to comply with section 193 of the Clean Air Act (CAA), which prohibits any control measure in effect in a nonattainment area prior to the enactment of the CAA Amendments of 1990 to be modified after enactment, unless such modification yields equivalent or greater emission reductions. As a result of this definition change and as described in 89 FR 9771, the number of towns included in the ''severe non-attainment area for ozone'' increased, making RCSA §§ 22a–174–22e and 22a–174–22f applicable to more sources.

The entire state of Connecticut is divided into two nonattainment areas for ozone. One area consists of the southwest portion of the state (the Connecticut portion of the New York-New Jersey-Connecticut area), and the remainder of the state (Greater Connecticut) makes up the other nonattainment area. The area in the southwest portion of the state generally experiences higher ozone levels, and on October 7, 2022, the EPA published a final rule to reclassify, among other areas, the southwest Connecticut ozone nonattainment area to severe nonattainment from serious nonattainment based on the area's inability to attain the 2008 ozone National Ambient Air Quality Standard (NAAQS) by the attainment date (87 FR 60926).

Connecticut regulations define nonattainment areas in a geographic manner. The original definition of ''severe non-attainment area for ozone'' in RCSA § 22a–174–1, was based on the nonattainment area designation under the 1-hour ozone NAAQS of 1979. The area included all towns and cities in Fairfield County, except the town of Shelton, and two towns in Litchfield County (Bridgewater and New Milford). Currently, the southwest Connecticut ozone nonattainment area for the 2008 ozone NAAQS is larger than the older area for the 1979 ozone NAAQS, and it includes all of Fairfield County, New Haven County, and Middlesex County.

II. Summary and Evaluation of Connecticut's SIP Revision

Sections 22a–174–22e and 22a–174–22f of the RCSA impose requirements on sources based in part on the classification of the nonattainment area in which the source is located, and the quantity of emissions released. Sources emitting over certain threshold amounts of nitrogen oxides (NO_X) are subject to the control requirements of RCSA section 22a–174–22e. As a result of the revision to the definition of ''severe non-attainment area for ozone,'' RCSA §§ 22a–174–22e and 22a–174–22f became newly applicable to certain sources in Towns that were added to the definition. As Connecticut's regulatory revisions bring new sources under RCSA section 22a–174–22e, new provisions were necessary to specify the timing of compliance and of certain submissions the new sources must provide to CT DEEP. The main changes for section 22a–174–22e are (1) the addition of a definition for ''Bumped-up RACT unit'' in subsection (a), and (2) the addition of subsection (n), ''Compliance by bumped-up RACT units.'' Connecticut defines a ''Bumped-up RACT unit'' as ''an emission unit located at a facility with a potential to emit NO_X of not less than twenty-five (25) tons per year whereby such facility becomes a major stationary source of NO_X on or after November 7, 2022 solely as a result of the amendment of the definition of 'severe non-attainment area for ozone' in RCSA section 22a–174–1 effective on November 13, 2023.'' The revisions to § 22a–174–22e require such a bumped-up reasonably available control technology (RACT) unit to comply with emissions limitations already applicable to other sources covered by § 22a–174–22e, providing a timeframe for that compliance, pursuant to certain conditions. Connecticut also made minor corrections or updates to several provisions in RCSA § 22a–174–22e based on the two changes described above. Finally, Connecticut added timing provisions to RCSA § 22a–174–22f coordinated with those of § 22a–174–22e.

This action will ensure that Connecticut is applying RACT requirements and other NO_X control requirements to the appropriate sources in the state, thereby meeting nonattainment requirements for ozone as set out in Section 182(d) of the CAA. The EPA has reviewed Connecticut's November 27, 2023, submittal of revisions to RCSA §§ 22a–174–22e and 22a–174–22f and preliminarily determined that they represent approvable revisions to the versions previously approved into the Connecticut SIP. These revisions will appropriately apply requirements to sources in line with Connecticut's change to the definition of ''severe non-attainment area for ozone'' that the EPA

previously approved into the SIP. (89 FR 9771).

III. Proposed Action

The EPA is proposing to approve Connecticut's November 27, 2023, SIP submittal that addresses revisions to RCSA sections 22a–174–22e and 22a–174–22f. The EPA is soliciting public comments on the issues discussed in this notice or on other relevant matters. These comments will be considered before taking final action. Interested parties may participate in the Federal rulemaking procedure by submitting written comments to this proposed rule by following the instructions listed in the **ADDRESSES** section of this **Federal Register**.

IV. Incorporation by Reference

In this rule, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference changes to Connecticut RCSA sections 22a–174–22e and 22a–174–22f as adopted on November 13, 2023. The changes primarily add compliance dates for sources brought into the applicability of these sections due to a change in the definition of ''severe non-attainment area for ozone.'' The EPA has made, and will continue to make, these documents generally available through *https://www.regulations.gov* and at the EPA Region 1 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Clean Air Act and applicable Federal regulations. *See* 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: July 10, 2025.

Mark Sanborn,

Regional Administrator, EPA Region 1.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R08–OAR–2024–0607; FRL–12598–01–R8]

Air Plan Partial Approval and Partial Disapproval; Colorado; Regional Haze Plan for the Second Implementation Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to partially approve and partially disapprove a regional haze state implementation plan (SIP) submission submitted by the State of Colorado under the Clean Air Act (CAA) and the EPA's Regional Haze Rule (RHR) for the program's second implementation period. Colorado's 2022 SIP submission addresses the requirement that states revise their long-term strategies every implementation period to make reasonable progress towards the national goal of preventing any future, and remedying any existing, anthropogenic impairment of visibility, including regional haze, in mandatory Class I Federal areas. We propose to base our partial disapproval of Colorado's long-term strategy on its inclusion of insufficiently justified enforceable source closures that are not consistent with statutory requirements. Colorado's 2022 SIP submission also addresses other applicable requirements for the second implementation period of the regional haze program. Concurrently, the EPA is proposing to approve a revision to Colorado's SIP consolidating existing regional haze provisions into the same regulation where the State's new, second planning period provisions are located.

DATES: Written comments must be received on or before September 15, 2025.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R08–OAR–2024–0607, to the Federal Rulemaking Portal: *https://www.regulations.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *https://www.regulations.gov.* The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video,

etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

Docket: All documents in the docket are listed in the *https://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available electronically in *https://www.regulations.gov.* Please email or call the person listed in the **FOR FURTHER INFORMATION CONTACT** section if you need to make alternative arrangements for access to the docket.

I. What action is the EPA proposing?

Pursuant to CAA section 110(k)(3), the EPA is proposing to partially approve and partially disapprove a SIP submission submitted by the State of Colorado to the EPA on May 20, 2022, and supplemented on August 2, 2022, and June 23, 2023, addressing the requirements of the second implementation period of the RHR.[1] Specifically, the EPA is proposing approval for the portions of Colorado's 2022 SIP submission relating to 40 CFR 51.308(f)(1): calculations of baseline, current, and natural visibility conditions, progress to date, and the uniform rate of progress; 40 CFR 51.308(f)(2)(ii)–(iv): long-term strategy; 40 CFR 51.308(f)(3): reasonable progress goals; 40 CFR 51.308(f)(4): reasonably attributable visibility impairment; 40 CFR 51.308(f)(5) and 40 CFR 51.308(g): progress report requirements; 40 CFR 51.308(f)(6): monitoring strategy and other implementation plan requirements; and 40 CFR 51.308(i): FLM consultation.

For the reasons described in section IV.C.1.b. of this document, the EPA is proposing to disapprove portions of Colorado's 2022 SIP submission relating to 40 CFR 51.308(f)(2)(i). The submission relies on enforceable source closures that the EPA proposes to disapprove on the basis that they were adopted without full information about grid reliability concerns, particularly because the Class I areas Colorado emissions contribute to are below the Uniform Rate of Progress and the state conducted four-factor analyses. The EPA also proposes to find that the State has not provided necessary assurances required by CAA section 110(a)(2)(E) that unconsented enforceable source closures would not be prohibited by state or federal law.

Concurrently, the EPA is proposing to approve a revision to Colorado's SIP consolidating existing regional haze provisions into the same regulation where the State's new, second planning period provisions are located. Together, these SIP revisions establish updated emission reduction requirements for nitrogen oxides (NO_X), sulfur dioxide (SO_2), and particulate matter (PM) emissions from certain sources identified as impacting Class I areas under the RHR for the second 10-year planning period.[2]

II. Background and Requirements for Regional Haze Plans

A detailed history and background of the regional haze program is provided in multiple prior EPA proposal actions.[3] For additional background on the 2017 RHR revisions, please refer to section III. Overview of Visibility Protection Statutory Authority, Regulation, and Implementation of ''Protection of Visibility: Amendments to Requirements for State Plans'' of the 2017 RHR.[4] The following is an abbreviated history and background of the regional haze program and 2017 Regional Haze Rule as it applies to the current action.

A. Regional Haze

In the 1977 CAA amendments, Congress created a program for protecting visibility in the nation's mandatory Class I Federal areas, which include certain national parks and wilderness areas.[5] CAA section 169A. The CAA establishes as a national goal the ''prevention of any future, and the remedying of any existing, impairment of visibility in mandatory Class I Federal areas which impairment results from manmade air pollution.'' CAA section 169A(a)(1).

Regional haze is visibility impairment that is produced by a multitude of anthropogenic sources and activities that are located across a broad

[1] The EPA may partially approve portions of a submittal if those elements meet all applicable requirements and may disapprove the remainder so long as the elements are fully separable. *See* CAA section 110(k)(3) and July 1992 EPA memorandum titled ''Processing of State Implementation Plan (SIP) Submittals'' from John Calcagni, at *https://www.epa.gov/sites/default/files/2015-07/documents/procsip.pdf.* The EPA proposes to conclude that the elements at issue are fully separable, as described in greater detail later in this preamble.

[2] The EPA uses the terms ''implementation period'' and ''planning period'' interchangeably.

[3] *See* 90 FR 13516 (March 24, 2025).

[4] *See* 82 FR 3078 (January 10, 2017, located at *https://www.federalregister.gov/documents/2017/01/10/2017-00268/protection-of-visibility-amendments-to-requirements-for-State-plans#h-16*).

[5] Areas statutorily designated as mandatory Class I Federal areas consist of national parks exceeding 6,000 acres, wilderness areas and national memorial parks exceeding 5,000 acres, and all international parks that were in existence on August 7, 1977. CAA section 162(a). There are 156 mandatory Class I areas. The list of areas to which the requirements of the visibility protection program apply is in 40 CFR part 81, subpart D.

geographic area and that emit pollutants that impair visibility. Visibility impairing pollutants include fine and coarse particulate matter (PM) (*e.g.,* sulfates, nitrates, organic carbon, elemental carbon, and soil dust) and their precursors (*e.g.,* SO_2, NO_X, and, in some cases, volatile organic compounds (VOC) and ammonia (NH_3)). Fine particle precursors react in the atmosphere to form fine particulate matter ($PM_{2.5}$), which impairs visibility by scattering and absorbing light. Visibility impairment reduces the perception of clarity and color, as well as visible distance.[6]

To address regional haze visibility impairment, the 1999 RHR established an iterative planning process that requires states containing Class I areas and states containing sources whose emissions ''may reasonably be anticipated to cause or contribute to any impairment of visibility'' in a Class I area in another state to periodically submit SIP revisions to address such impairment. CAA section 169A(b)(2); see also 40 CFR 51.308(b), (f) (establishing submission dates for iterative regional haze SIP revisions); (64 FR at 35768, July 1, 1999).

On January 10, 2017, the EPA promulgated revisions to the RHR (82 FR 3078, January 10, 2017) that apply for the second and subsequent implementation periods. The reasonable progress requirements as revised by the 2017 rule (referred to here as the 2017 RHR Revisions) are codified at 40 CFR 51.308(f).

B. Roles of Agencies in Addressing Regional Haze

Because the air pollutants and pollution affecting visibility in Class I areas can be transported over long distances, successful implementation of the regional haze program requires long-term, regional coordination among multiple jurisdictions and agencies that have responsibility for Class I areas and the emissions that impact visibility in those areas. To address regional haze, states need to develop strategies in coordination with one another, considering the effect of emissions from one jurisdiction on the air quality in another. Five regional planning organizations (RPOs), which include representation from state and Tribal governments, the EPA, and FLMs, were developed in the lead-up to the first implementation period to address regional haze. RPOs evaluate technical information to better understand how emissions from state and Tribal land impact Class I areas across the country, pursue the development of regional strategies to reduce emissions of particulate matter and other pollutants leading to regional haze, and help states meet the consultation requirements of the RHR.

The Western Regional Air Partnership (WRAP), one of the five regional planning organizations described in the previous paragraph, is a collaborative effort of state governments, local air agencies, Tribal governments, and various federal agencies established to initiate and coordinate activities associated with the management of regional haze, visibility, and other air quality issues in the Western United States. Members include the states of Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, Wyoming, and 28 Tribal governments.[7] The federal partner members of WRAP are the EPA, U.S. National Parks Service (NPS), U.S. Fish and Wildlife Service (USFWS), U.S. Forest Service (USFS), and the Bureau of Land Management (BLM). WRAP formed a workgroup to develop a planning framework for state regional haze second planning period SIPs. Based on emissions and monitoring data supplied by its membership, WRAP produced a technical system to support regional modeling of visibility impacts at Class I areas across the West. The WRAP Technical Support System consolidated air quality monitoring data, meteorological and receptor modeling data analyses, emissions inventories and projections, and gridded air quality/visibility regional modeling results. The Technical Support System is accessible by member states and allows for the creation of maps, figures, and tables to export and use in state plan development. It also maintains the original source data for verification and further analysis. Colorado collaborated with WRAP on various aspects of the State's 2022 SIP submission, including the identification of Class I areas outside of Colorado that may be affected by sources in the state, source selection, analysis of air quality monitoring data, preparation of emission inventories, development of reasonable progress goals, and air quality modeling, which together informed the development of its long-term strategy.

C. Status of Colorado's Regional Haze Plan for the First Implementation Period

The CAA requires that regional haze plans for the first implementation period (2008 through 2018) include, among other things, a long-term strategy for making reasonable progress and Best Available Retrofit Technology (BART) requirements for certain older stationary sources, where applicable.[8] On December 31, 2012, the EPA approved a regional haze SIP revision submitted May 25, 2011, by the State of Colorado as meeting the requirements of the CAA and RHR.[9] On February 25, 2013, the National Parks Conservation Association (NPCA) and Wild Earth Guardians (Guardians) filed petitions for review in the U.S. Court of Appeals for the Tenth Circuit of the EPA's final approval of the Colorado regional haze SIP.[10] Among other things, Guardians and NPCA challenged the NO_X BART limit for Craig Unit 1. The parties settled the challenge regarding Craig Unit 1.[11] Separately, on May 26, 2015, the EPA reissued its final approval of the May 25, 2011, SIP submission with respect to the State's BART determination for the Comanche Generating Station in response to a petition for review and as part of a voluntary remand, without vacatur, to more adequately respond to public comments concerning the Comanche Generating Station.[12]

D. Colorado's Regional Haze Plan for the Second Implementation Period

On May 20, 2022, Colorado submitted a SIP submission to address its regional haze obligations for the second implementation period (2018–2028). Colorado's 2022 SIP submission contains the State's long-term strategy to address regional haze visibility impairment for each Class I area within the State and each Class I area outside the State that may be affected by emissions from the State. In developing its long-term strategy, the State

[6] There are several ways to measure the amount of visibility impairment, *i.e.,* haze. One such measurement is the deciview, which is the principal metric used by the RHR. Under many circumstances, a change in one deciview will be perceived by the human eye to be the same on both clear and hazy days. The deciview is unitless. It is proportional to the logarithm of the atmospheric extinction of light, which is the perceived dimming of light due to its being scattered and absorbed as it passes through the atmosphere. Atmospheric light extinction (b^{ext}) is a metric used for expressing visibility and is measured in inverse megameters (Mm^{-1}). The formula for the deciview is 10 ln (b^{ext})/10 Mm^{-1}). 40 CFR 51.301.

[7] A full list of WRAP members is available at *https://www.westar.org/wrap-council-members/.*

[8] Requirements for regional haze SIPs for the first implementation period are also contained in CAA section 169A(b)(2).

[9] 77 FR 76871 (December 31, 2012).

[10] *WildEarth Guardians* v. *EPA,* No. 13–9520 (10th Cir.) and *National Parks Conservation Association* v. *EPA,* No. 13–9525 (10th Cir.).

[11] Following that settlement, on July 5, 2018, the EPA approved a SIP revision to include source-specific revisions to the NO_X BART determination for Craig Station Unit 1 and to the NO_X reasonable progress determination for the Nucla Station. 83 FR 31332 (July 5, 2018).

[12] 80 FR 29953 (May 26, 2015).

examined the need to implement additional enforceable emission limitations, compliance schedules, and other measures that may be necessary to make reasonable progress since the first implementation period. Specifically, Colorado's 2022 SIP submission contains an assessment of visibility progress made at Class I areas since the first implementation period and a long-term strategy to address regional haze visibility impairment at the twelve Class I areas the State identified, including: Colorado's selection of sources that may affect visibility in Class I areas within the State and outside the State for four-factor analysis; its evaluation of the selected sources to determine what emission reduction measures constitute reasonable progress for the long-term strategy; regional scale modeling of the State's long-term strategy to set reasonable progress goals for 2028; and ultimately, Colorado's determinations on what control measures are necessary for the long-term strategy to address regional haze visibility impairment in the twelve Class I areas. The State concluded that additional emission reduction measures for Colorado facilities are required for the second implementation period under its long-term strategy.

On May 20, 2022, Colorado submitted a separate SIP submission to move the regional haze provisions currently contained in Regulation Number 3 to Regulation Number 23. The Colorado Air Quality Control Commission previously approved regional haze requirements under Regulation Number 3, which included emission reduction requirements for sources subject to BART and reasonable progress determinations during the first planning period of the regional haze program. As part of Colorado's 2022 SIP submission, the State adopted revisions to Regulation Number 3 (Part F) to the newly created Regulation Number 23 which will serve as the central repository for new and existing provisions that comply with the RHR. Regulation Number 23 includes BART and reasonable progress determinations from the first planning period as well as emission reduction requirements to meet the reasonable progress goals for the second 10-year planning period.

III. Requirements for Regional Haze Plans for the Second Implementation Period

Under the CAA and the EPA's regulations, all 50 states, the District of Columbia, and the U.S. Virgin Islands were required to submit regional haze SIPs satisfying the applicable requirements for the second implementation period of the regional haze program by July 31, 2021. Each SIP must contain a long-term strategy for making reasonable progress toward meeting the national goal of remedying any existing and preventing any future anthropogenic visibility impairment in Class I areas. CAA section 169A(b)(2)(B). To this end, 40 CFR 51.308(f) lays out the process by which states determine what constitutes their long-term strategies, with the order of the requirements in 40 CFR 51.308(f)(1) through (3) generally mirroring the order of the steps in the reasonable progress analysis [13] and (f)(4) through (6) containing additional, related requirements.

Broadly speaking, a state first must identify the Class I areas within the state and determine the Class I areas outside the state in which visibility may be affected by emissions from the state. These are the Class I areas that must be addressed in the state's long-term strategy. See 40 CFR 51.308(f), (f)(2). For each Class I area within its borders, a state must then calculate the baseline (five-year average period of 2000–2004), current, and natural visibility conditions (*i.e.,* visibility conditions without anthropogenic visibility impairment) for that area, as well as the visibility improvement made to date and the ''uniform rate of progress'' (URP). The URP is the linear rate of progress needed to attain natural visibility conditions, assuming a starting point of baseline visibility conditions in 2004 and ending with natural conditions in 2064. This linear interpolation is used as a tracking metric to help states assess the amount of progress they are making towards the national visibility goal over time in each Class I area. See 40 CFR 51.308(f)(1).

Each state having a Class I area and/or emissions that may affect visibility in a Class I area must then develop a long-term strategy that includes the enforceable emission limitations, compliance schedules, and other measures that are necessary to make reasonable progress in such areas. A reasonable progress determination is based on applying the four factors in CAA section 169A(g)(1) to sources of visibility impairing pollutants that the state has selected to assess for controls for the second implementation period. Additionally, as further explained below, the RHR at 40 CFR 51.3108(f)(2)(iv) separately provides five ''additional factors'' [14] that states must consider in developing their long-term strategies. See 40 CFR 51.308(f)(2). A state evaluates potential emission reduction measures for those selected sources and determines which are necessary to make reasonable progress. Those measures are then incorporated into the state's long-term strategy.

After a state has developed its long-term strategy, it then establishes RPGs for each Class I area within its borders by modeling the visibility impacts of all reasonable progress controls at the end of the second implementation period, *i.e.,* in 2028, as well as the impacts of other requirements of the CAA. The RPGs include reasonable progress controls not only for sources in the state in which the Class I area is located, but also for sources in other states that contribute to visibility impairment in that area. The RPGs are then compared to the baseline visibility conditions and the URP to ensure that progress is being made towards the statutory goal of preventing any future and remedying any existing anthropogenic visibility impairment in Class I areas. 40 CFR 51.308(f)(2)–(3). There are additional requirements in the rule, including FLM consultation, that apply to all visibility protection SIPs and SIP revisions. *See e.g.,* 40 CFR 51.308(i).

While states have discretion to choose any source selection methodology that is reasonable, whatever choices they make should be reasonably explained. To this end, 40 CFR 51.308(f)(2)(i) requires that a state's SIP submission include ''a description of the criteria it used to determine which sources or groups of sources it evaluated.'' The technical basis for source selection, which may include methods for quantifying potential visibility impacts such as emissions divided by distance metrics, trajectory analyses, residence time analyses, and/or photochemical modeling, must also be appropriately documented, as required by 40 CFR 51.308(f)(2)(iii).

Once a state has selected the set of sources, the next step is to determine the emissions reduction measures for those sources that are necessary to make reasonable progress for the second implementation period.[15] This is

[13] The EPA explained in the 2017 RHR revisions that we were adopting new regulatory language in 40 CFR 51.308(f) that, unlike the structure in 51.308(d), ''tracked the actual planning sequence.'' (82 FR at 3091).

[14] The five ''additional factors'' for consideration in 40 CFR 51.308(f)(2)(iv) are distinct from the four factors listed in CAA section 169A(g)(1) and 40 CFR 51.308(f)(2)(i) that states must consider and apply to sources in determining reasonable progress.

[15] The CAA provides that, ''[i]n determining reasonable progress there shall be taken into consideration'' the four statutory factors. CAA section 169A(g)(1). However, in addition to four-factor analyses for selected sources, groups of sources, or source categories, a state may also

Continued

accomplished by considering the four factors—''the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any existing source subject to such requirements.'' CAA section 169A(g)(1). The EPA has explained that the four-factor analysis is an assessment of potential emission reduction measures (*i.e.,* control options) for sources; ''use of the terms 'compliance' and 'subject to such requirements' in section 169A(g)(1) strongly indicates that Congress intended the relevant determination to be the requirements with which sources would have to comply to satisfy the CAA's reasonable progress mandate.'' 82 FR at 3091. Thus, for each source it has selected for four-factor analysis,[16] a state must consider a ''meaningful set'' of technically feasible control options for reducing emissions of visibility impairing pollutants. *Id.* at 3088.

The EPA has also explained that, in addition to the four statutory factors, states have flexibility under the CAA and RHR to reasonably consider visibility benefits as an additional factor alongside the four statutory factors.[17] Ultimately, while states have discretion to reasonably weigh the factors and to determine what level of control is needed, 40 CFR 51.308(f)(2)(i) provides that a state ''must include in its implementation plan a description of . . . how the four factors were taken into consideration in selecting the measure for inclusion in its long-term strategy.''

As explained above, 40 CFR 51.308(f)(2)(i) requires states to determine the emission reduction measures for sources that are necessary to make reasonable progress by considering the four factors. Pursuant to 40 CFR 51.308(f)(2), measures that are necessary to make reasonable progress towards the national visibility goal must be included in a state's long-term strategy and in its SIP. If the outcome of a four-factor analysis is that an emissions reduction measure is necessary to make reasonable progress towards remedying existing or preventing future anthropogenic visibility impairment, that measure must be included in the SIP.

The characterization of information on each of the factors is also subject to the documentation requirement in 40 CFR 51.308(f)(2)(iii). The reasonable progress analysis is a technically complex exercise, and also a flexible one that provides states with bounded discretion to design and implement approaches appropriate to their circumstances. Given this flexibility, 40 CFR 51.308(f)(2)(iii) plays an important function in requiring a state to document the technical basis for its decision making so that the public and the EPA can comprehend and evaluate the information and analysis the state relied upon to determine what emission reduction measures must be in place to make reasonable progress. The technical documentation must include the modeling, monitoring, cost, engineering, and emissions information on which the state relied to determine the measures necessary to make reasonable progress.

Additionally, the RHR at 40 CFR 51.3108(f)(2)(iv) separately provides five ''additional factors'' that states must consider in developing their long-term strategies: (1) Emission reductions due to ongoing air pollution control programs, including measures to address reasonably attributable visibility impairment; (2) measures to reduce the impacts of construction activities; (3) source retirement and replacement schedules; (4) basic smoke management practices for prescribed fire used for agricultural and wildland vegetation management purposes and smoke management programs; and (5) the anticipated net effect on visibility due to projected changes in point, area, and mobile source emissions over the period addressed by the long-term strategy.

Because the air pollution that causes regional haze crosses state boundaries, 40 CFR 51.308(f)(2)(ii) requires a state to consult with other states that also have emissions that are reasonably anticipated to contribute to visibility impairment in a given Class I area. If a state, pursuant to consultation, agrees that certain measures (*e.g.,* a certain emission limitation) are necessary to make reasonable progress at a Class I area, it must include those measures in its SIP. 40 CFR 51.308(f)(2)(ii)(A). Additionally, the RHR requires that states that contribute to visibility impairment at the same Class I area consider the emission reduction measures the other contributing states have identified as being necessary to make reasonable progress for their own sources. 40 CFR 51.308(f)(2)(ii)(B). If a state has been asked to consider or adopt certain emission reduction measures, but ultimately determines those measures are not necessary to make reasonable progress, that state must document in its SIP the actions taken to resolve the disagreement. 40 CFR 51.308(f)(2)(ii)(C). Under all circumstances, a state must document in its SIP submission all substantive consultations with other contributing states. 40 CFR 51.308(f)(2)(ii)(C).

Reasonable progress goals ''measure the progress that is projected to be achieved by the control measures states have determined are necessary to make reasonable progress based on a four-factor analysis.'' 82 FR at 3091. For the second implementation period, the RPGs are set for 2028. Reasonable progress goals are not enforceable targets, 40 CFR 51.308(f)(3)(iii). While states are not legally obligated to achieve the visibility conditions described in their RPGs, 40 CFR 51.308(f)(3)(i) requires that ''[t]he long-term strategy and the reasonable progress goals must provide for an improvement in visibility for the most impaired days since the baseline period and ensure no degradation in visibility for the clearest days since the baseline period.''

RPGs may also serve as a metric for assessing the amount of progress a state is making towards the national visibility goal. To support this approach, the RHR requires states with Class I areas to compare the 2028 RPG for the most impaired days to the corresponding point on the URP line (representing visibility conditions in 2028 if visibility were to improve at a linear rate from conditions in the baseline period of 2000–2004 to natural visibility conditions in 2064). If the most impaired days RPG in 2028 is above the URP (*i.e.,* if visibility conditions are improving more slowly than the rate described by the URP), each state that contributes to visibility impairment in the Class I area must demonstrate, based on the four-factor analysis required under 40 CFR 51.308(f)(2)(i), that no additional emission reduction measures would be reasonable to include in its long-term strategy. 40 CFR 51.308(f)(3)(ii). To this end, 40 CFR 51.308(f)(3)(ii) requires that each state contributing to visibility impairment in a Class I area that is projected to improve more slowly than the URP provide ''a robust demonstration, including documenting the criteria used to determine which sources or groups

consider additional emission reduction measures for inclusion in its long-term strategy, *e.g.,* from other newly adopted, on-the-books, or on-the-way rules and measures for sources not selected for four-factor analysis for the second implementation period.

[16] ''Each source'' or ''particular source'' is used here as shorthand. While a source-specific analysis is one way of applying the four factors, neither the statute nor the RHR requires states to evaluate individual sources. Rather, states have ''the flexibility to conduct four-factor analyses for specific sources, groups of sources or even entire source categories, depending on state policy preferences and the specific circumstances of each state.'' 82 FR at 3088.

[17] *See, e.g.,* Responses to Comments on Protection of Visibility: Amendments to Requirements for State Plans; Proposed Rule (81 FR 26942, May 4, 2016), Docket ID No. EPA–HQ–OAR–2015–0531, U.S. Environmental Protection Agency at 186.

[of] sources were evaluated and how the four factors required by paragraph (f)(2)(i) were taken into consideration in selecting the measures for inclusion in its long-term strategy.''

Section 51.308(f)(6) requires states to have certain strategies and elements in place for assessing and reporting on visibility. Individual requirements under this section apply either to states with Class I areas within their borders, states with no Class I areas but that are reasonably anticipated to cause or contribute to visibility impairment in any Class I area, or both. Compliance with the monitoring strategy requirement may be met through a state's participation in the Interagency Monitoring of Protected Visual Environments (IMPROVE) monitoring network, which is used to measure visibility impairment caused by air pollution at the 156 Class I areas covered by the visibility program. 40 CFR 51.308(f)(6), (f)(6)(i), (f)(6)(iv).

All states' SIPs must provide for procedures by which monitoring data and other information are used to determine the contribution of emissions from within the state to regional haze visibility impairment in affected Class I areas, as well as a statewide inventory documenting such emissions. 40 CFR 51.308(f)(6)(ii), (iii), (v). All states' SIPs must also provide for any other elements, including reporting, recordkeeping, and other measures, that are necessary for states to assess and report on visibility. 40 CFR 51.308(f)(6)(vi).

Section 51.308(f)(5) requires a state's regional haze SIP revision to address the requirements of paragraphs 40 CFR 51.308(g)(1) through (5) so that the plan revision due in 2021 will serve also as a progress report addressing the period since submission of the progress report for the first implementation period. The regional haze progress report requirement is designed to inform the public and the EPA about a state's implementation of its existing long-term strategy and whether such implementation is in fact resulting in the expected visibility improvement. See 81 FR 26942, 26950 (May 4, 2016), (82 FR at 3119, January 10, 2017). To this end, every state's SIP revision for the second implementation period is required to assess changes in visibility conditions and describe the status of implementation of all measures included in the state's long-term strategy, including BART and reasonable progress emission reduction measures from the first implementation period, and the resulting emissions reductions. 40 CFR 51.308(g)(1) and (2).

CAA section 169A(d) requires that before a state holds a public hearing on a proposed regional haze SIP revision, it must consult with the appropriate FLM or FLMs; pursuant to that consultation, the state must include a summary of the FLMs' conclusions and recommendations in the notice to the public. Consistent with this statutory requirement, the RHR also requires that states ''provide the [FLM] with an opportunity for consultation, in person and at a point early enough in the State's policy analyses of its long-term strategy emission reduction obligation so that information and recommendations provided by the [FLM] can meaningfully inform the State's decisions on the long-term strategy.'' 40 CFR 51.308(i)(2). For the EPA to evaluate whether FLM consultation meeting the requirements of the RHR has occurred, the SIP submission should include documentation of the timing and content of such consultation. The SIP revision submitted to the EPA must also describe how the state addressed any comments provided by the FLMs. 40 CFR 51.308(i)(3). Finally, a SIP revision must provide procedures for continuing consultation between the state and FLMs regarding the state's visibility protection program, including development and review of SIP revisions, five-year progress reports, and the implementation of other programs having the potential to contribute to impairment of visibility in Class I areas. 40 CFR 51.308(i)(4).

Finally, the state SIP must meet the approval requirements in CAA section 110(a)(2) for plans ''submitted by a State under this chapter'' to the extent not already addressed in the regulations described previously. As relevant here, the state must provide ''necessary assurances'' that the state has adequate personnel, funding, and authority to carry out the implementation plan, that the state ''is not prohibited by any provision of Federal or State law from carrying out such implementation plan or portion thereof,'' and that the state can lawfully rely on regional and local instrumentalities to implement the SIP, as applicable. CAA section 110(a)(2)(E)(i)–(iii).

IV. The EPA's Evaluation of Colorado's Regional Haze Plan for the Second Implementation Period

In section IV of this document, we describe Colorado's 2022 SIP submission and evaluate it against the requirements of the CAA and RHR for the second implementation period of the regional haze program.

A. Identification of Class I Areas

Section 169A(b)(2) of the CAA requires each state in which any Class I area is located or ''the emissions from which may reasonably be anticipated to cause or contribute to any impairment of visibility'' in a Class I area to have a plan for making reasonable progress toward the national visibility goal. The RHR implements this statutory requirement at 40 CFR 51.308(f), which provides that each state's plan ''must address regional haze in each mandatory Class I Federal area located within the State and in each mandatory Class I Federal area located outside the State that may be affected by emissions from within the State,'' and (f)(2), which requires each state's plan to include a long-term strategy that addresses regional haze in such Class I areas.

There are twelve designated Class I areas within the State of Colorado, including four national parks managed by the U.S. National Park Service (Black Canyon of the Gunnison National Park, Great Sand Dunes National Park, Mesa Verde National Park, Rocky Mountain National Park) and eight wilderness areas managed by the U.S. Forest Service (Eagles Nest Wilderness Area, Flat Tops Wilderness Area, La Garita Wilderness Area, Maroon Bells-Snowmass Wilderness Area, Mount Zirkel Wilderness Area, Rawah Wilderness Area, Weminuche Wilderness Area, West Elk Wilderness Area).[18]

Using the 2021 Particulate Source Apportionment Technology (PSAT) product from the WRAP, Colorado identified five Class I areas outside the State where visibility may be affected by Colorado sources: Canyonland National Park in Utah (9.4%), Capitol Reef National Park in Utah (3.6%), Badlands National Park in South Dakota (7.5%), Wind Cave National Park in South Dakota (2.9%), and Wheeler Peak Wilderness in New Mexico (4.1%) based on combined percentages of nitrate + sulfate impairment at these Class I areas from Colorado sources. The State further highlighted that these Class I areas also experience visibility impairment due to five other aerosol species (sea salt, elemental carbon, organic carbon, fine soil, and coarse mass) which were not included in the 2021 PSAT modeling the State relied on to determine its contributions to Class I areas outside of the State.[19] Therefore, according to the State, Colorado's contribution to overall light extinction is less than the results of the 2021 PSAT modeling which only

[18] Colorado 2022 SIP submission at 7.

[19] Colorado 2022 SIP submission at 142.

evaluated nitrate + sulfate impairment. Furthermore, Colorado notes that the already announced retirements of coal-fired power plants driven by Colorado state rules and associated with the State's regional haze long-term strategy and incorporated into the SIP, along with state regulations for ozone, greenhouse gases, and other regulatory programs not part of the State's regional haze long-term strategy, will further reduce nitrate and sulfate contributions from Colorado sources.[20] Because Colorado addressed regional haze visibility impairment for each Class I area within the State, and each mandatory Class I area located outside the State that may be affected by emissions from the State, we find that Colorado did not unreasonably exclude any Class I areas from its analysis.

B. Calculation of Baseline, Current, and Natural Visibility Conditions; Progress to Date; and Uniform Rate of Progress for Class I Areas Within the State

Section 51.308(f)(1) requires states to determine the following for ''each mandatory Class I Federal area located within the State'': baseline visibility conditions for the most impaired and clearest days, natural visibility conditions for the most impaired and clearest days, progress to date for the most impaired and clearest days, the differences between current visibility conditions and natural visibility conditions, and the URP. This section also provides the option for states to propose adjustments to the URP line for a Class I area to account for visibility impacts from anthropogenic sources outside the United States and/or the impacts from wildland prescribed fires that were conducted for certain specified objectives. 40 CFR 51.308(f)(1)(vi)(B).

The IMPROVE monitoring network measures visibility impairment caused by air pollution at Class I areas. Colorado's 2022 SIP submission provides visibility conditions for each IMPROVE monitor and associated Class I area in Colorado (table 1).[21]

TABLE 1—VISIBILITY CONDITIONS (DECIVIEWS) FOR COLORADO IMPROVE STATIONS

Monitor ID	Class I areas	Baseline (2000–2004)	Period (2008–2012)	Current (2014–2018)	Natural (2064) [1]	Progress since baseline (2000–2004)—(2014–2018)	Progress during last implementation period (2008–2012)–(2014–2018)	Difference between current (2014–2018) and natural (2064)
Most Impaired Days								
GRSA1	Great Sand Dunes	9.66	8.88	8.02	4.45	−1.64	−0.86	3.57
MEVE1	Mesa Verde	9.22	8.13	6.51	4.20	−2.71	−1.62	2.31
MOZI1	Mount Zirkel, Rawah	7.29	6.26	5.47	3.16	−1.82	−0.79	2.31
ROMO1	Rocky Moutain National Park	11.12	9.36	8.41	4.94	−2.71	−0.95	3.47

[1] Natural visibility conditions for the clearest days from EPA Memo, Data for regional haze technical addendum. June 3, 2020.

The State also determined the uniform rate of progress for the most impaired and clearest days for Colorado Class I areas.[22] Colorado also provided haze indices and the uniform rate of progress for IMPROVE monitors and associated Class I areas outside the State.[23]

Based on the information provided in Colorado's 2022 SIP submission, the EPA is proposing to approve the State's visibility condition calculations for Great Sand Dunes, Mesa Verde, Mount Zirkel, Rawah, Rocky Mountain National Park, Weminuche, La Garita, Black Canyon of the Gunnison, Eagles Nest, Flat Tops, Maroon Bells, White River, and West Elk [24] as meeting the requirements of 40 CFR 51.308(f)(1) related to the calculation of baseline, current, and natural visibility conditions; progress to date; and the URP.

C. Long-Term Strategy

Each state having a Class I area within its borders or emissions that may affect visibility in a Class I area must develop a long-term strategy for making reasonable progress towards the national visibility goal. CAA section 169A(b)(2)(B). After considering the four statutory factors, all measures that are determined to be necessary to make reasonable progress must be in the long-term strategy. In developing its long-term strategy, a state must also consider the five additional factors in 40 CFR 51.308(f)(2)(iv). As part of its reasonable progress determinations, the state must describe the criteria used to determine which sources or group of sources were evaluated (*i.e.,* subjected to four-factor analysis) for the second implementation period and how the four factors were taken into consideration in selecting the emission reduction measures for inclusion in the long-term strategy. 40 CFR 51.308(f)(2)(iii).

[22] Colorado 2022 SIP submission at 27, 42.

[23] Colorado 2022 SIP submission at 18–28.

[24] Mount Zirkel and Rawah are subject to the same visibility calculation. Weminuche, La Garita, and Black Canyon of the Gunnison are subject to the same visibility calculation. Eagles Nest, Flat Tops, Maroon Bells, White River, and West Elk are subject to the same visibility calculation.

1. Colorado's Long-Term Strategy Four-Factor Analysis

a. Summary of Colorado's Long-Term Strategy Four-Factor Analysis

Colorado identified twelve Class I areas that must be addressed in its long-term strategy.[25] Under 40 CFR 51.308(f)(2)(i), SIP submittals must include a description of the criteria a state used to determine which sources or groups of sources to evaluate through four-factor analysis. Colorado used a Q/d screening approach to identify sources for four-factor analysis. The Q/d screening metric uses a source's annual emissions in tons (Q) divided by the distance in kilometers (d) between the source and the nearest Class I area, along with a reasonably selected threshold for this metric. The larger the Q/d value, the greater the source's expected effect on visibility in each associated Class I area.

Specifically, the WRAP Reasonable Progress Screening protocol recommends a three-step process for screening sources that involves an initial screening of identifying stationary sources that emit combined NO_X, SO_2, SO_4, and PM_{10} emissions of over 25 tons/year, a secondary screening of assessing the Q/d for those stationary sources to determine whether a source Q/d exceeds ''10'' for a specific Class I area, and the use of the 2028 Weighted Emissions Potential (WEP) to determine the possible contribution of the source to visibility impairment in Class I areas for the 20% most impaired days. Using the WRAP-devised screening threshold of Q/d > 10 and emissions information from the 2014 National Emission Inventory (NEI), Colorado initially identified twenty-three sources in the State that may be affecting visibility at Class I areas in Colorado.[26] [27] The State reduced the number of facilities subject to a reasonable progress four-factor analysis to nineteen because two facilities have actual emissions below the WRAP screening protocol's threshold of 25 tons/year, one coal mine closed in 2015, and two adjacent coal mines were combined into one facility.[28] Ultimately, the State selected nineteen sources subject to a four-factor analysis (table 2).[29]

TABLE 2—FACILITIES SCREENED IN USING Q/D

Facility name	Closest Class I area	(d) Minimum of distance (km) to Class I area	(Q) Maximum of emissions (tons/year)	Q/d
Craig Power Plant *(Tri-State Generation)*	Flat Tops Wilderness	47.85	17,665.13	369.17
Hayden Power Plant *(Public Service Co)*	Mount Zirkel Wilderness	31.59	8,435.17	267.04
Cherokee Power Plant *(Public Service Co)*	Rocky Mountain National Park	65.09	8,194.22	125.89

[1] Valmont Power Plant closed in September 2017.
[2] Martin Drake Unit 5 closed in January 2017.
[3] After reviewing emissions for the point sources, Colorado determined that emissions from each point fell below the 10 tons/year for a full analysis of additional control options. Therefore, no point sources were subject to a full emissions control analysis.
[4] The Molson Coors Boiler Support Facility was formerly the Colorado Energy Nations Company (CENC).
[5] Nucla Power Plant closed in September 2019.

The State requested that each of the nineteen sources submit cost information for its review and consideration.[30] For three of these sources, the State determined that it was not necessary to conduct further review because those sources had closed prior to the State's development of its SIP.[31] For the remaining sources, Colorado then evaluated what is necessary to make reasonable progress by considering the four statutory factors[32] for each source:

- Cost of compliance;
- Time necessary for compliance;

[25] Colorado 2022 SIP submission at 7.

[27] WRAP Reasonable Progress Source Identification and Analysis Protocol For Second 10-year Regional Haze State Implementation Plans. February 27, 2019.
[28] Colorado 2022 SIP submission at 51. The WRAP RP Screening protocol recommends a three step process for screening sources that involves (1) identifying stationary sources with combined NO_X, SO_2, SO_4, and PM_{10} emissions of over 25 tons/year, (2) assessing the Q/d for those stationary sources to determine whether a source Q/d exceeds ''10'' for a specific Class I area and (3) using the 2028 Weighted Emissions Potential (WEP) to confirm whether the identified source is located in a grid cell that impacts the specific Class I area for the 20% most impaired days.

[32] 40 CFR 51.308(f)(2)(i)

• Energy and non-air quality environmental impacts of compliance; and

• Remaining useful life of any potentially affected sources.

The State documented these analyses in Colorado's 2022 SIP submission and associated technical support documents. Chapter 7 of the SIP submission contains Colorado's evaluation of the four statutory factors for each source and Colorado's determinations of the source-specific emission reduction measures necessary to make reasonable progress. As part of its four-factor evaluation, Colorado considered the already announced retirements of several units and facilities as part of its ''remaining useful life'' analysis and incorporated those retirements into the SIP.[33] Ultimately, the State concluded that the following enforceable reasonable progress source retirements (table 3) and emission limits (table 4) satisfy and exceed regional haze requirements for the second implementation period and that no other regional haze analyses or regional haze controls will be required by the State during the second regional haze implementation period.

TABLE 3—REASONABLE PROGRESS DETERMINATIONS FOR THE SECOND IMPLEMENTATION PERIOD IN THE COLORADO REGIONAL HAZE SIP—SOURCE CLOSURES [34]

Emission unit	Closure date	Additional requirements/notes
Rawhide Unit 1	December 31, 2029	Maintain existing emission limits until closure.
Martin Drake Unit 6	December 31, 2022	Maintain existing emission limits until closure.
Martin Drake Unit 7	December 31, 2022	Maintain existing emission limits until closure.
Nixon Unit 1	December 31, 2029	Maintain existing emission limits until closure.
Nixon Coal Handling	December 31, 2029	Cessation of coal unloading and crushing.
Comanche Unit 1	December 31, 2022	Maintain existing emission limits until closure.
Comanche Unit 2	December 31, 2025	Maintain existing emission limits until closure. Comply with additional NO_X and SO_2 limits when Comanche Unit 1 closes—see table 4.
Hayden Unit 1	December 31, 2028	Maintain existing emission limits until closure.
Hayden Unit 2	December 31, 2027	Maintain existing emission limits until closure.
Craig Unit 2	September 30, 2028	Maintain existing emission limits until closure.
Craig Unit 3	December 31, 2029	Maintain existing emission limits until closure.
ColoWyo Coal Mine	December 31, 2031	Not applicable.
Cherokee Unit 4	December 31, 2028	Maintain existing emission limits until closure.

TABLE 4—REASONABLE PROGRESS DETERMINATIONS FOR THE SECOND IMPLEMENTATION PERIOD IN THE COLORADO REGIONAL HAZE SIP—EMISSIONS LIMITS [35]

Emission unit	NO_X emission limit	SO_2 emission limit	PM emission limit
Nixon Coal Handling	N/A [1]	N/A [1]	1.46 tons PM_{10} per year, unloading, transfer, conveying, processing, and crushing (12-month rolling total). Cessation of coal unloading and crushing no later than 12/31/2029.
Nixon—Front Range Power Plant Turbine 1 and Turbine 2.	111 ppmvd at 15% O_2 (4-hour rolling average).	N/A [2]	N/A.[2]
Nixon—Clear Spring Ranch Solids Handling and Disposal Facility (SDHF).	N/A [2]	186.4 lb/hr (12-month rolling calculation). 52.20 tons/year (12-month rolling total). 5,000 ppmv H_2S in digester gas.	N/A.[2]
Comanche Unit 2 [3]	0.20 lb/MMBtu (30-day rolling average) 3,050 tons/year (12-month rolling average).	0.12 lb.MMBtu (30-day rolling average) 1,830 tons/year (12-month rolling average).	
Comanche Unit 3	0.08 lb/MMBtu (30-day rolling average) 0.07 lb/MMBtu (annual average)	0.10 lb/MMBtu (30-day rolling average)	0.02 lb/MMBtu. 0.012 lb/MMBtu (24-hour average).
Hayden Coal Ash Handling and Disposal and Unpaved Roads.	N/A [1]	N/A [1]	22.39 tons/year from coal ash, sorbent loading, unloading only (12-month rolling total).
Cherokee Turbine 5	Applicable limits in 40 CFR 60.4300 Table 1 (NSPS KKKK).	N/A [2]	0.1 lb/MMBtu.
Cherokee Turbine 6	Applicable limits in 40 CFR 60.4300 Table 1 (NSPS KKKK).	N/A [2]	0.1 lb/MMBtu.
Pawnee Unit 1	0.07 lb/MMBtu (30-day rolling average)	0.11 lb/MMBtu (30-day rolling average)	0.03 lb/MMBtu.
Pawnee Cooling Tower	N/A [1]	N/A [1]	36.5 tons/year (12-month rolling total).
Manchief Turbine 1	15 ppmvd at 15% O_2 (1-hr average) 100 ppmvd at 15% O_2 and 186 lb/hr during startup (1-hour average). 100 ppmvd at 15% O_2 and 140 lb/hr during shutdown (1-hour average). 25 ppmvd at 15% O_2 low load operation between March 1 and October 31 (1-hour average).	N/A [2]	N/A.[2]

Suncor Boiler 4	0.06 lb/MMBtu (30-day rolling average)	N/A [2]	N/A.[2]
Suncor Boiler 505	0.044 lb/MMBtu (30-day rolling average).	N/A [2]	N/A.[2]

[1] This pollutant is not emitted.
[2] Emissions did not meet the screening threshold. Thus, this unit was not subject to a four-factor analysis for this pollutant.
[3] Compliance with NO_X and SO_2 emission limits beginning when Comanche Unit 1 closes and until Comanche Unit 2 closes.
[4] Beginning February 14, 2022, the Plant 2 sulfur recovery unit tail gas incinerator will meet a 1.20% volume SO_2 (12-hour rolling average) and an annual SO_2 limit of 271 tons per year (12-month rolling total).
[5] The owner/operator must implement optimization of air flow through the Plant 2 sulfur recovery unit no later than December 31, 2023. The Plant 2 sulfur recovery unit tail gas incinerator will meet an SO_2 limit of 120 tons per year (12 month rolling total) within twelve (12) months after optimization and by no later than December 31, 2024.
[6] Alternative for Suncor Plant 2 sulfur recovery unit tail gas incinerator: If the owner/operator fails to implement air flow optimization or fails to achieve the limit by the specified timeline, the owner/operator will install SUPERCLAUS 2+1 on the sulfur recovery unit by no later than December 31, 2028. The sulfur recovery unit must achieve at least a 98.65% sulfur recovery efficiency, by no later than December 31, 2029. The sulfur recovery unit tail gas incinerator will meet an SO_2 limit of 120 tons per year (12-month rolling total) within twelve (12) months after SUPERCLAUS 2+1 installation and by no later than December 31, 2029.

According to Colorado's 2022 SIP submission, each source must comply as expeditiously as practicable with the limits and averaging times, record keeping, and reporting requirements in addition to its applicable permit requirements, but in no event later than five years after EPA approval of Colorado's 2022 SIP submission.[36]

Section 51.308(f)(2) of the RHR requires states to include in their SIPs the enforceable emission limitations, compliance schedules, and other measures necessary to make reasonable progress. In addition to what is required by the RHR, general SIP requirements mandate that the SIP must also include adequate monitoring, recordkeeping, and reporting requirements for the regional haze emission limits and requirements. (*See* CAA section 110(a)). Colorado's 2022 SIP submission requires that sources maintain control equipment or operational practices required to comply with the limits and averaging times, recordkeeping, and reporting requirements, and establish procedures to ensure that such equipment or operational practices are properly operated and maintained.[37] Tables 3 and 4 specify reasonable progress emission limits and compliance schedules found in Colorado Regulation Number 23, Part A, IV. *Regional Haze Determinations,* which was submitted as part of Colorado's 2022 SIP submission.

Colorado's 2022 SIP submission also included Colorado Regulation Number 23, Part A, V. *Monitoring, Recordkeeping, and Reporting for Regional Haze Limits* which specifies the monitoring, recordkeeping, and reporting requirements for the State's regional haze determinations. Specifically, for NO_X and SO_2 emission limits, sources with continuous emission monitoring systems (CEMS) must operate and maintain CEMS in accordance with relevant EPA regulations, in particular, 40 CFR part 75 or 40 CFR part 60. Sources without NO_X and SO_2 emission CEMS are required to use stack testing, fuel sampling, fuel consumption, and associated emission factors, as applicable, and in accordance with EPA and ASTM test methods. For PM emission limits, sources must perform testing in accordance with EPA approved test methods, in particular, 40 CFR part 60 or 40 CFR part 63, and

[36] Colorado Regulation Number 23, Part A, IV.F.4.

[37] *Id.*

other PM monitoring/compliance determinations, as applicable, including compliance assurance monitoring plans developed and approved in accordance with 40 CFR part 64. In addition, sources must keep relevant records for five years and report relevant emissions.

b. The EPA's Evaluation of Colorado's Long-Term Strategy Four-Factor Analysis

Section 169A(b)(2) of the CAA requires each state in which any Class I area is located or ''the emissions from which may reasonably be anticipated to cause or contribute to any impairment of visibility'' in a Class I area to have a plan for making reasonable progress toward the national visibility goal. CAA section 169A(g)(1) specifies: ''[I]n determining reasonable progress there shall be taken into consideration the costs of compliance, the time necessary for compliance, and the energy and nonair quality environmental impacts of compliance, and the remaining useful life of any existing source subject to such requirements.'' [38] The RHR implements this statutory requirement in 40 CFR 51.308(f) for the second and subsequent planning periods for regional haze. 40 CFR 51.308(f) requires states to submit a long-term strategy that addresses regional haze visibility impairment for each mandatory Class I area within the state and for each mandatory Class I area located outside the state that may be affected by emissions from the state. 40 CFR 51.308(f)(2)(i) lays out the CAA 169A four-factor criteria for the evaluation and development of the long-term strategy.

Based on the EPA's review, we find that Colorado's 2022 SIP submission satisfies the requirements of 40 CFR 51.308(f)(2)(i) insofar as Colorado's selection of nineteen sources, evaluation of the cost of compliance, time necessary for compliance, remaining useful life of any potentially affected sources statutory factors, and determinations of the emission reductions necessary to make reasonable progress contained in table 4 of section IV.C.1.a of this document, were reasonable. However, we find that Colorado's long-term strategy does not adequately consider the ''energy and nonair quality environmental impacts of compliance'' statutory factor as it pertains to the enforceable source closures contained in table 3 of section IV.C.1.a. of this document.

With respect to source selection, Colorado followed and provided a detailed description of the WRAP Reasonable Progress Screening protocol the State used to determine sources subject to four-factor analysis.[39] Applying this protocol, Colorado selected nineteen sources for analysis. As previously stated, 40 CFR 51.308(f)(2)(i) requires that a state's SIP submission include a ''description of the criteria it used to determine which sources or groups of sources it evaluated,'' and it must be appropriately documented, as required by 40 CFR 51.308(f)(2)(iii). In addition, states may rely on technical information developed by the RPOs of which they are members to select sources for four-factor analysis and to conduct that analysis, as well as to satisfy the documentation requirements under 40 CFR 51.308(f). Where an RPO has performed source selection and/or four-factor analyses (or considered the five additional factors in 40 CFR 51.308(f)(2)(iv)) for its member states, those states may rely on the RPO's analyses for the purpose of satisfying the requirements of 40 CFR 51.308(f)(2)(i) so long as the states have a reasonable basis to do so and all state participants in the RPO process have approved the technical analyses.[40] Because Colorado provided a detailed description of how the State used technical information to select a reasonable set of sources for an analysis of control measures for the second implementation period and reasonably relied on the selection of sources from the WRAP analysis, we find that Colorado's source selection was reasonable and consistent with the requirements of 40 CFR 51.308(f)(2).

Colorado submitted four-factor analyses for the selected sources and demonstrated that its determination of controls necessary for reasonable progress, and ultimately for inclusion in its long-term strategy, were an outgrowth of its consideration of the four statutory factors in accordance with 40 CFR 51.308(f)(2)(i). Ultimately, Colorado's 2022 SIP submission included both emission limits at fourteen facilities (covering over seventy emission units) and enforceable closures for already announced retirements at an additional eight facilities across 13 units in its long-term strategy under the regional haze program.

These measures are codified in Colorado Regulation Number 23, Part A, IV. *Regional Haze Determinations.* The State also included compliance schedules and other measures (*i.e.,* recordkeeping and reporting) codified in Colorado Regulation Number 23, Part A, V. *Monitoring, Recordkeeping, and Reporting for Regional Haze Limits.*

The EPA reviewed the State's long-term strategy to address regional haze visibility impairment for each Class I area affected by emissions from the State and concluded that the long-term strategy contains the enforceable emission limitations, compliance schedules, and other measures that are necessary to make reasonable progress. The State included in its implementation plan a description of the criteria it used to determine which sources it evaluated and how the four factors were taken into consideration in selecting the measures for inclusion in its long-term strategy as well as adoption of the emission limitations and compliance schedules codified in Colorado Regulation Number 23, Part A, IV. *Regional Haze Determinations* and Colorado Regulation Number 23, Part A, V. *Monitoring, Recordkeeping, and Reporting for Regional Haze Limits.* Because the State evaluated and determined the emission reduction measures contained in table 4 of section IV.C.1.a of this document that are necessary to make reasonable progress by considering the costs of compliance, the time necessary for compliance, the energy and non-air quality environmental impacts of compliance and the remaining useful life of the sources selected in accordance with 40 CFR 51.308(f)(2)(i), we find that Colorado's determination of the emission reduction measures contained in table 4 of section IV.C.1.a of this document that are necessary to make reasonable progress was reasonable and consistent with the requirements of 40 CFR 51.308(f)(2)(i).

However, the EPA proposes to partially disapprove Colorado's long-term strategy to the extent the SIP includes insufficiently justified enforceable source closures. As detailed in the paragraphs below, the EPA has substantial concerns that these enforceable source closures are inconsistent with applicable regulations and CAA sections 110 and 169A, including because the State has not provided necessary assurances that the enforceable closures would not violate State and Federal law as required by CAA section 110(a)(2)(E)(i).

First, we find that Colorado's long-term strategy did not adequately consider the energy impacts associated with the source closures contained in table 3 of section IV.C.1.a. of this document and therefore does not fully satisfy the requirements of CAA section 169A(g)(1) and 40 CFR 51.308(f)(2)(i). More specifically, we find Colorado did not sufficiently assess the closures'

[38] We refer to the CAA section 169A(g)(1) requirements as the four factors.

[39] Colorado 2022 SIP Submission at 51–52.

[40] 40 CFR 51.308(f)(2)(iii).

impacts on maintaining grid reliability and utilities' ability to meet energy demand. This finding is supported by documentation from an electrical utility regarding risk to energy availability and grid reliability due to source closures incorporated into Colorado's long-term strategy.

Colorado's 2022 SIP submission partially addressed the ''energy and nonair quality environmental impacts of compliance'' statutory factor by describing the increasing need to fluctuate the utilization of traditional, coal-fired power plants, which have historically provided baseload electric generating capacity, to balance the inherent variability of available capacity generated from renewable resources. Thus, as more baseload coal-fired power plant units retire, more renewable generation will be added to the grid, thereby increasing the demands on remaining baseload resources to respond to variations in electrical load and maintain a balanced grid.[41] According to the State, ''[m]aintaining grid reliability and meeting demand during this transition is critical to allow for flexibility.'' [42] However, the State did not adequately evaluate and address grid reliability and electrical demand associated with the closures of the coal-fired power plants. Although the State did recognize that accommodating concerns about grid reliability and electrical demand was ''key to the closure date announcements'' [43] of the coal-fired power plants, particularly related to the need for further tightening of existing interim emission limits on retiring units, the State's evaluation of the energy and nonair quality environmental impacts of compliance factor did not include how grid reliability and electrical demand was evaluated related to the closure of these units. Nor did the evaluation discuss what safeguards, if any, the State considered to ensure concerns about grid reliability and electrical demand would be addressed.

During the EPA's review of Colorado's assessment of its long-term strategy's energy impacts, the EPA learned some of those closures were more likely to impair grid reliability than had been previously evaluated. For example, Colorado Springs Utilities submitted information to the EPA on April 2, 2025, regarding the enforceable closure of Nixon Unit 1 in Colorado's 2022 SIP submission.[44] Colorado Springs Utilities asked the EPA to exclude the SIP's proposed closure of Nixon Unit 1 by December 29, 2029, from the EPA's final action on Colorado's 2022 SIP submission. In addition, Colorado Springs Utilities met with the State of Colorado on April 23, 2025, and asked the State to remove the December 29, 2029 closure of Nixon Unit 1 from its submission amid concerns regarding grid reliability.[45] According to Colorado Springs Utilities, the continued operation of Nixon Unit 1 is ''critically important'' for Colorado Springs Utilities to meet projected electricity demand and thereby ensure the reliability of the electric grid. Furthermore, Colorado Springs Utilities explained that ''potentially dire'' electric grid reliability impacts would likely result from Nixon Unit 1's retirement. The risks to grid reliability, according to Colorado Springs Utilities, are being driven by increasingly unfavorable market conditions for renewable energy development, the lack of immediately viable electricity transmission developments in Colorado, and increasing load demands for new electricity. Together, these factors compound Colorado Springs Utilities' inability to bring sufficient resources online prior to the Nixon Unit's planned retirement date of December 29, 2029, ultimately resulting in projected capacity deficits of 173 MW in 2030 and 257 MW in 2034, according to the utility.

In addition to accounting for this new information, we reviewed Colorado's assessment of these measures' energy impacts in light of the rise in electricity demand due to the resurgence of domestic manufacturing and the construction of artificial intelligence data processing centers. As noted in Executive Order 14241, this Administration has found as a matter of national interest, national security, and energy policy that power generated from coal resources is critical to addressing this surging demand.[46] In this instance, the EPA finds that Colorado did not adequately account for the energy impacts of including these source closures in its long-term strategy for regional haze as required by the CAA.

Second, even with all source closures removed from the SIP, Colorado is unlikely to contribute to visibility impairment at any Class I areas projected to be above the adjusted 2028 URP.[47] Because Colorado lacked material information about grid reliability, later provided to the EPA by Colorado Springs Utilities, we propose to find the State did not appropriately weigh the energy impacts of the closure measures against its substantial progress toward natural visibility conditions in a manner consistent with issued executive orders' priority on energy generation.

We also propose to find that Colorado has not provided the assurances required by CAA section 110 that implementing the SIP's forced closure provisions is not prohibited by state or federal law. CAA section 110(a)(2)(E)(i) provides that state plans must provide ''necessary assurances'' that the State ''is not prohibited by any provision of Federal or State law from carrying out such implementation plan or portion thereof.'' The best reading of this provision is that the EPA may not approve a SIP that risks violating Federal or State law in the course of implementation. This reading is consistent with the EPA's independent obligation to follow Federal constitutional and statutory law and with the structure of CAA section 110 as a whole, which sets out detailed requirements for state plans and for the EPA's review of such plans. The EPA proposes to find there is a risk that enforceable source closure provisions, without just compensation, would violate the Federal Takings Clause and possibly comparable provisions of State law, and that Colorado has not provided the necessary assurances that such violations would not occur.[48]

Although the application of the Takings Clause is necessarily fact-specific, an unconsented source closure could constitute either a per se or regulatory taking. The EPA notes that there is a lack of controlling precedent on application of the Takings Clause to forced source closures under CAA

[44] Colorado Springs Utilities meeting with EPA_ April 2, 2025.

[45] Overview of Colorado Springs Utilities meeting with CDPHE_April 23, 2025.

[46] Executive Order 14241, ''Reinvigorating America's Beautiful Clean Coal Industry and Amending Executive Order 14241,'' The White House (April 8, 2025), *https://www.whitehouse.gov/presidential-actions/2025/04/reinvigorating-americas-beautiful-clean-coal-industry-and-amending-executive-order-14241/*.

[47] As the EPA has announced in recent SIP rulemakings, the Agency is proposing to adopt a policy whereby states that are not contributing to visibility impairment at Class I areas projected to be above the Uniform Rate of Progress are presumed to be making reasonable progress toward natural visibility conditions provided they have considered the four statutory factors. *See* Air Plan Approval, West Virginia; Regional Haze Plan for the Second Implementation Period, 90 FR 16478 (April 18, 2025); Air Plan Approval; South Dakota; Regional Haze Plan for the Second Implementation Period, 90 FR 20425 (May 14, 2025).

[48] U.S. Const. amends. V, XIV; *see also* Colo. Const. art. II, § 15.

section 110 because states typically do not seek to implement their SIPs in a manner that forces closure on a nonconsenting source.[49] U.S. Supreme Court precedent suggests, however, that the EPA's approval of this course of action could amount to a per se taking. In *Cedar Point Nursery* v. *Hassid,* 594 U.S. 139 (2021), the U.S. Supreme Court explained that government action that appropriates property ''is no less a physical taking because it arises from a regulation.'' Particularly relevant here, the Court applied the per se bar on uncompensated takings in *Horne* v. *Department of Agriculture,* 576 U.S. 351 (2015), to a complex regulatory regime that required regulated parties to set aside a portion of their output to achieve governmental aims. The EPA proposes to conclude that Colorado has not provided the necessary assurances required by CAA section 110(a)(2)(E)(i) that the submitted closure provisions would not result in uncompensated per se takings in violation of Federal law.

Relatedly, a total regulatory taking could occur if the closure would fully deprive the source owner of all economic use of the land under the standard described in *Lucas* v. *S.C. Coastal Council,* 505 U.S. 1003, 1116 (1992). A partial regulatory taking could occur if the closure inflicted a significant economic impact upon the source owner, undermined distinct, investment-backed expectations, and shared characteristics with actions conventionally regarded as government takings. These factors and how courts should balance them are detailed in *Penn Central Transp. Co.* v. *New York City,* 438 U.S. 104, 123 (1978), and subsequent cases. The EPA proposes to find that Colorado has not provided the necessary assurances required by CAA section 110(a)(2)(E)(i) that Federal law would not prohibit the State from implementing the submitted closure provisions, including whether such unconsented source closures would amount to a taking without just compensation.

Finally, the EPA also proposes to conclude that the forced source closure contained in this portion of the State's submission is inconsistent with the structure of CAA sections 110 and 169A, which do not contemplate forced closures as a means to achieve compliance. In this context, we are referring to a source closure opposed by the source in question that would be made federally enforceable as a result of a SIP approval. The EPA is referring to such a closure as ''unconsented'' or ''forced.''

CAA section 110(a)(1)(A) provides that, as a general matter, a SIP must ''include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights)'' as ''may be necessary or appropriate to meet the applicable requirements of this chapter.'' The EPA is proposing that the ordinary meaning of ''emission limitations'' does not include forced closures that prohibit all operations against the will of the owner/operator, or in a timeframe unconsented to by the owner/operator. Similarly, we are proposing that the best reading of the phrase ''other control measures, means, or techniques'' does not encompass the authority to force a source to close, or to close on timeframe not agreed to by the owner/operator. This proposal is supported by reading the terms ''measures'' and ''means'' in context and informed by the surrounding statutory terms, including the parenthetical phrase discussing market-based incentives that contemplate ongoing operations. ''Measures'' and ''means'' must also be ''necessary or appropriate'' to meet applicable CAA requirements. As noted above, the EPA is proposing that unconsented closures are neither ''necessary'' under the circumstances here nor otherwise required by the CAA, and that such closures are not ''appropriate'' when they could amount to an uncompensated taking in violation of Federal and State law. The EPA seeks comment on this interpretation.

CAA section 169A similarly does not contemplate use of unconsented closures as part of the regional haze program. The statute provides that state plans must contain ''emission limits, schedules of compliance and other measures as may be necessary to make reasonable progress,'' including through the use of ''retrofit technology'' and long-term strategies. Consistent with the interpretation of CAA section 110 proposed above, the EPA proposes that the best reading of the statute does not require or authorize the use of forced source closures to attain the statutory goals listed in CAA section 169A. The EPA seeks comment on this interpretation as well.

The EPA notes that at least one of the sources slated for closure in the SIP—Nixon Unit 1—has expressly stated that it does not consent to closing by the enforceable deadline. Additionally, we note that the North American Electric Reliability Corporation (NERC) stated in their 2024 Long-Term Reliability Assessment that ''most of the North American bulk power system faces mounting resource adequacy challenges over the next 10 years as surging demand growth continues and thermal generators announce plans for retirement.'' Ultimately, according to NERC, ''[t]he trends point to critical reliability challenges facing the industry: satisfying escalating energy growth, managing generator retirements, and accelerating resource and transmission development.'' [50] Industry assessments relied on by Colorado utilities indicate that increasing energy demand in the region may cause additional sources to reverse course on previously agreed-to closure provisions, and Colorado has not sufficiently addressed the legal implications of forcing these plants to close under the SIP provisions submitted by the State.

In summary, we are proposing to partially disapprove Colorado's long-term strategy under CAA section 169A and 40 CFR 51.308(f)(2)(i) because Colorado's 2022 SIP submission does not adequately consider the energy impacts associated with the state's enforceable source closures of coal and gas-fired power plants and associated units to energy availability and grid reliability and contains provisions that are inconsistent with the CAA and its implementing regulations. Our proposed disapproval would encompass, and therefore decline to incorporate, the enforceable source closures contained in Colorado's 2022 SIP submission (listed in table 3 of section IV.C.1.a. of this document) and in Colorado's Regulation Number 23.[51] If we receive information during the comment period that a source is permanently decommissioned (*i.e.,* rendered fully inoperable and its operating permit has been revoked), we could reevaluate our proposed disapproval of these units.

Despite our proposed partial disapproval of the State's long-term strategy as it pertains to source closures, we find that the regional haze requirements are satisfied by the portion of Colorado's 2022 SIP submission that we are approving. Therefore, because no outstanding obligations remain, there

[49] The EPA is not aware of *any* prior state submission under CAA section 110 that sought to force closure of a currently operating source without that source's consent. We seek comment on whether any such examples exist and request that commenters identify such an example with enough specificity to allow us to evaluate the circumstances in which such a forced closure was attempted through a CAA section 110 submission.

will be no additional regulatory action needed, either in the form of a federal implementation plan or another SIP revision, as a result of the partial disapproval.

2. Other Long-Term Strategy Requirements

States must meet the additional requirements specified in 40 CFR 51.308(f)(2)(ii)–(iv) when developing their long-term strategies. 40 CFR 51.308(f)(2)(ii) requires states to consult with other states that have emissions that are reasonably anticipated to contribute to visibility impairment in Class I areas to develop coordinated emission management strategies. Chapter 2.3 of Colorado's 2022 SIP submission describe the State's consultation with other states throughout the development of its regional haze plan.

40 CFR 51.308(f)(2)(iii) requires states to document the technical basis, including modeling, monitoring, costs, engineering, and emissions information, on which the state is relying to determine the emission reduction measures that are necessary to make reasonable progress in each mandatory Class I area it impacts. The State relied on WRAP technical information, modeling, and analysis to support development of its long-term strategy.[52]

40 CFR 51.308(f)(2)(iv) specifies five additional factors states must consider in developing their long-term strategies. The five additional factors are: emission reductions due to ongoing air pollution control programs, including measures to address reasonably attributable visibility impairment; measures to mitigate the impacts of construction activities; source retirement and replacement schedules; basic smoke management practices for prescribed fire used for agricultural and wildland vegetation management purposes and smoke management programs; and the anticipated net effect on visibility due to projected changes in point, area, and mobile source emissions over the period addressed by the long-term strategy.

Chapter 8.4 of Colorado's 2022 SIP submission describes each of the five additional factors it is required to consider under 40 CFR 51.308(f)(2)(iv) and explains how it considered them.[53] Pursuant to 40 CFR 51.308(f)(2)(iv)(A), Colorado detailed the existing and ongoing State and Federal emission control programs that contribute to emission reductions, including the designation status for all current and former non-attainment areas.[54] Many of these same measures, particularly the provisions found in Colorado's Regulation Number 1 and Regulation Number 3, also mitigate the impacts of construction activities as required by 40 CFR 51.308(f)(2)(iv)(B).[55] Pursuant to 40 CFR 51.308(f)(2)(iv)(C), the State considered source retirements schedules in the Colorado 2022 SIP submission[56] as well as in Colorado Regulation Number 23. In considering smoke management as required in 40 CFR 51.308(f)(2)(iv)(D), Colorado explained that it addresses smoke management through its smoke management program[57] as well as Colorado Regulation Number 9 which addresses open burning, prescribed fire, and permitting.[58] Colorado considered the anticipated net effect of projected changes in emissions on visibility as required by 40 CFR 51.308(f)(2)(iv)(E) by discussing the analytical results from the air quality monitoring, emission inventories, and air quality modeling for the second implementation period that it conducted in collaboration with the WRAP.[59]

After reviewing Colorado's 2022 SIP submission chapters addressing 40 CFR 51.308(f)(2)(ii)–(iv), the EPA finds that Colorado has satisfied these additional long-term strategy requirements of 40 CFR 51.308(f)(2)(ii)–(iv).

D. Reasonable Progress Goals

Section 51.308(f)(3)(i) requires a state in which a Class I area is located to establish RPGs—one each for the most impaired and clearest days—reflecting the visibility conditions that will be achieved at the end of the implementation period as a result of the emission limitations, compliance schedules and other measures required under paragraph (f)(2) in states' long-term strategies, as well as implementation of other CAA requirements.

After establishing its long-term strategy, Colorado developed reasonable progress goals for each Class I area for the 20% most impaired days and 20% clearest days based on the results of 2028 WRAP modeling (table 5).[60]

TABLE 5—REASONABLE PROGRESS GOALS FOR THE 20% MOST IMPAIRED DAYS AND 20% CLEAREST DAYS FOR COLORADO CLASS I AREAS

Class I area	20% Most impaired days			20% Clearest days	
	Average baseline conditions (2000–2004)	2028 Unadjusted [1] uniform progress goal	2028 Reasonable progress goal [2]	Average baseline conditions (2000–2004)	2028 Reasonable progress goal
	Deciviews				
Great Sand Dunes	9.66	7.58	7.50	4.5	2.44
Mesa Verde	9.22	7.21	6.10	4.32	2.01
Mount Zirkel, Rawah	7.29	5.64	4.93	1.61	0.02
Rocky Mountain National Park	11.12	8.65	7.56	2.29	1.17
Weminuche, La Garita, Black Canyon of Gunnison	7.78	6.26	6.03	3.11	1.39
Eagles Nest, Flat Tops, Maroon Bells, White River, West Elk	6.30	4.99	4.49	0.70	−0.35

[1] Colorado did not rely on the adjusted URP for either international emissions or international emissions plus wildland prescribed fire.

[60] Colorado 2022 SIP submission at 156.

The reasonable progress goals are based on Colorado's long-term strategy, the long-term strategy of other states that may affect Class I areas in Colorado, and other CAA requirements. Per 40 CFR 51.308(f)(3)(iv), the EPA must evaluate the demonstrations the State developed pursuant to 40 CFR 51.308(f)(2) to determine whether the State's reasonable progress goals for visibility improvement provide for reasonable progress towards natural visibility conditions.

As previously explained in section IV.C.1.b., we are proposing to partially disapprove Colorado's long-term strategy relating to 40 CFR 51.308(f)(2)(i) and the associated source closures. The RPGs in table 5 are based on modeling of the measures included in the long-term strategy, namely the closures of Comanche Units 1 and 2, Craig Unit 1, and Nucla.[61] The closures of Craig Unit 1 and Nucla have already occurred and were previously incorporated into Colorado's federally enforceable SIP.[62] The closures of Comanche Units 1 and 2 are part of Colorado's 2022 SIP submission and are not proposed to be incorporated into this rulemaking. While the RPGs in Colorado's 2022 SIP submission are all below the unadjusted 2028 URP, and Colorado is not known to contribute to any Class I areas that are above the 2028 URP, our proposed action does not include the incorporation of the closures of Comanche Units 1 and 2 into the federally enforceable SIP and therefore may impact whether all Class I areas remain below the URP. The Class I area closest to the URP is Great Sand Dunes where the unadjusted 2028 URP is 7.58 and the 2028 RPG, based on Colorado's long-term strategy which includes the four aforementioned source closures, is 7.50. However, when we evaluate Colorado's 2028 RPG against the *adjusted* glidepaths, either adjusted for international emissions (2028 URP is 8.30) or adjusted for international emissions plus wildland prescribed fire (2028 URP is 8.36), Colorado's 2028 RPG without the closures of Comanche Units 1 and 2 would very likely remain below either adjusted glidepath.[63] If, on the other hand, Colorado's 2028 RPG provides for a slower rate of improvement in visibility due to the absence of the enforceable closures of Comanche Units 1 and 2 in Colorado's federally enforceable SIP, the EPA finds that in accordance with 40 CFR 51.308(f)(3)(ii)(A), Colorado: (1) demonstrated that there are no additional emission reduction measures that would be reasonable to include in its long-term strategy, and (2) provided a robust demonstration, including documenting the criteria used to determine which sources or groups of sources were evaluated and how the four-factors were taken into consideration in selecting the measures for inclusion in its long-term strategy. Specifically, Colorado selected nineteen sources to evaluate, resulting in over seventy emission control measures in the State's long-term strategy. Given the comprehensive set of sources selected and evaluated, the consideration of the four statutory factors for those sources, and the large number of emission control measures included in the SIP, the EPA agrees that there are no additional emissions reduction measures that would be necessary to include in the long-term strategy. Therefore, no additional requirements apply under 40 CFR 51.308(f)(3)(ii). Based on having satisfied the RPG rule requirements, we propose to approve Colorado's reasonable progress goals under 40 CFR 51.308(f)(3).

E. Reasonably Attributable Visibility Impairment (RAVI)

The RHR contains a requirement at 40 CFR 51.308(f)(4) related to any additional monitoring that may be needed to address visibility impairment in Class I areas from a single source or a small group of sources. This is called ''reasonably attributable visibility impairment,''[64] also known as RAVI. Under this provision, if the EPA or the FLM of an affected Class I area has advised a state that additional monitoring is needed to assess RAVI, the state must include in its SIP revision for the second implementation period an appropriate strategy for evaluating such impairment. The EPA has not advised the State to that effect; nor did the State indicate that FLMs for Great Sand Dunes National Park, Mesa Verda National Park, Mount Zirkel Wilderness, Rawah Wilderness, Rocky Mountain National Park, Weminuche Wilderness, Black Canyon of Gunnison NP, La Garita Wilderness, Eagles Nest Wilderness, Flat Tops Wilderness, Maroon Bells-Snowmass Wilderness, and West Elk Wilderness identified any RAVI from Colorado sources. For this reason, the EPA proposes to approve the portions of Colorado's 2022 SIP submission relating to 40 CFR 51.308(f)(4).

F. Monitoring Strategy and Other State Implementation Plan Requirements

Section 51.308(f)(6) specifies that each comprehensive revision of a state's regional haze SIP must contain or provide for certain elements, including monitoring strategies, emissions inventories, and any reporting, recordkeeping and other measures needed to assess and report on visibility. A main requirement of this section is for states with Class I areas to submit monitoring strategies for measuring, characterizing, and reporting on visibility impairment. Compliance with this requirement may be met through participation in the IMPROVE network.

Under 40 CFR 51.308(f)(6)(i), states must provide for the establishment of additional monitoring sites or equipment needed to assess whether reasonable progress goals to address regional haze for all mandatory Class I Federal areas within the state are being achieved. For states with Class I areas (including Colorado), 40 CFR 51.308(f)(6)(ii) requires SIPs to provide for procedures by which monitoring data and other information are used in determining the contribution of emissions from within the state to regional haze visibility impairment at mandatory Class I Federal areas both within and outside the state. Section 51.308(f)(6)(iv) requires the SIP to provide for the reporting of all visibility monitoring data to the Administrator at least annually for each Class I area in the state. 40 CFR 51.308(f)(6)(v) requires SIPs to provide for a statewide inventory of emissions of pollutants that are reasonably anticipated to cause or contribute to visibility impairment, including emissions for the most recent year for which data are available. Section 51.308(f)(6)(v) also requires states to include estimates of future projected emissions. Finally, 40 CFR 51.308(f)(6)(vi) requires the SIP to provide for any other elements, including reporting, recordkeeping, and other measures, that are necessary for states to assess and report on visibility.

Colorado describes its participation in the IMPROVE network, which comprises 110 monitoring sites across the nation, six of which are in Colorado. The State relied on the IMPROVE monitoring network to assess visibility at Class I areas across Colorado[65] and considered the six monitoring sites GRSA1, MEVE1, MOZI1, ROMO1, WEMI1 and WHRI1 to be adequate for

[61] Colorado 2022 SIP submission at 150.

[62] 83 FR 31332 (July 5, 2018).

[63] WRAP, Visibility Progress and Projections. ''Adjustments to Uniform Rate of Progress Glidepath—Most Impaired Days. Great Sand Dunes.'' *https://views.cira.colostate.edu/tssv2/Express/ModelingTools.aspx.*

[64] The EPA's visibility protection regulations define ''reasonably attributable visibility impairment'' as ''visibility impairment that is caused by the emission of air pollutants from one, or a small number of sources.'' 40 CFR 51.301.

[65] Colorado 2022 SIP submission at 12–17.

assessing reasonable progress goals at the State's twelve Class I areas.[66] Using the monitoring data procedures described in its 2022 SIP submission along with other technical information supplied by WRAP,[67] [68] the State determined the contribution of in-State emissions to Class I areas inside and outside Colorado.[69] In addition, the State also provided a statewide inventory of emissions that are reasonably anticipated to cause or contribute to visibility impairment in Class I areas; the State relied primarily on 2014–2018 data but also estimated future projected emissions.[70]

The EPA finds that Colorado has met the requirements of 40 CFR 51.308(f)(6), including through its continued participation in the IMPROVE network and WRAP RPO and its ongoing compliance with the Air Emissions Reporting Requirements (AERR). There is no indication that further SIP elements are necessary at this time for Colorado to assess and report on visibility. Therefore, the EPA proposes to approve the monitoring strategy and other state implementation plan elements of Colorado's 2022 SIP submission as meeting the requirements of 40 CFR 51.308(f)(6).

G. Requirements for Periodic Reports Describing Progress Towards the Reasonable Progress Goals

40 CFR 51.308(f)(5) requires that periodic comprehensive revisions of states' regional haze plans also address the progress report requirements of 40 CFR 51.308(g)(1) through (5). The purpose of these requirements is to evaluate progress towards the applicable RPGs for each Class I area within the state and each Class I area outside the state that may be affected by emissions from within that state. Sections 51.308(g)(1) and (2) apply to all states and require a description of the status of implementation of all measures included in a state's first implementation period regional haze plan and a summary of the emission reductions achieved through implementation of those measures. Section 51.308(g)(3) applies only to states with Class I areas within their borders and requires such states to assess current visibility conditions, changes in visibility relative to baseline (2000–2004) visibility conditions, and changes in visibility conditions relative to the period addressed in the first implementation period progress report. Section 51.308(g)(4) applies to all states and requires an analysis tracking changes in emissions of pollutants contributing to visibility impairment from all sources and sectors since the period addressed by the first implementation period progress report. This provision further specifies the year or years through which the analysis must extend depending on the type of source and the platform through which its emission information is reported. Finally, 40 CFR 51.308(g)(5), which also applies to all states, requires an assessment of any significant changes in anthropogenic emissions within or outside the state that have occurred since the period addressed by the first implementation period progress report, including whether such changes were anticipated and whether they have limited or impeded expected progress towards reducing emissions and improving visibility.

In its 2022 SIP submission,[71] Colorado included the elements of the periodic progress report specified in 40 CFR 51.308(f)(5) and 40 CFR 51.308(g)(1)–(5). Colorado summarized the facility improvements made during and after the first implementation period, including emission control measures installed and emission reductions achieved by the facilities that most affected each Class I area, and summarized the associated emission reductions.[72] In addition, the State summarized the implementation status of ongoing air pollution control programs, measures to mitigate construction activities, source retirement and replacement schedules, and smoke management practices and programs.[73] The EPA finds that Colorado has met the requirements of 40 CFR 51.308(g)(1) and (2) because Colorado's 2022 SIP submission describes the measures included in the long-term strategy from the first implementation period, as well as the status of their implementation and the emission reductions achieved through such implementation.

Visibility conditions (in deciviews) are reported in Colorado's 2022 SIP submission for the most impaired and clearest days. Visibility conditions are expressed in terms of 5-year averages for the baseline period (2000–2004), 2010–2014 period, and current period (2015–2019), as well as the progress made since the baseline period ((2000–2004)–(2015–2019)) and during the last implementation period ((2010–2014)–(2015–2019)) for each Class I area.[74] The EPA therefore finds that Colorado has satisfied the requirements of 40 CFR 51.308(g)(3).

The State used the most current emissions inventory available–the 2017 NEI—to provide emissions inventories for NO_X, SO_2, VOC, ammonia (NH_3), and PM that identify the type of source, activity, and pollutant.[75] Colorado also provided an assessment and discussion of the significant changes in anthropogenic emissions since the first implementation period.[76] The EPA finds that the requirements of 40 CFR 51.308(g)(4) and (g)(5) are satisfied by providing emissions of pollutants contributing to visibility impairment within the State and assessing any significant changes in anthropogenic emissions within or outside the State that have occurred since the period addressed in the most recent plan.

Because Colorado's 2022 SIP submission addresses the requirements of 40 CFR 51.308(g)(1) through (5), the EPA finds that Colorado has met the progress report requirements of 40 CFR 51.308(f)(5). Therefore, we propose to approve Colorado's 2022 SIP submission as meeting the requirements of 40 CFR 51.308(f)(5) and 40 CFR 51.308(g) for periodic progress reports.

H. Requirements for State and Federal Land Manager Coordination

Section 169A(d) of the CAA requires states to consult with FLMs before holding the public hearing on a proposed regional haze SIP, and to include a summary of the FLMs' conclusions and recommendations in the notice to the public. In addition, the 40 CFR 51.308(i)(2) FLM consultation provision requires a state to provide FLMs with an opportunity for consultation that is early enough in the state's policy analyses of its emission reduction obligation so that information and recommendations provided by the FLMs can meaningfully inform the state's decisions on its long-term strategy. If the consultation has taken place at least 120 days before a public hearing or public comment period, the opportunity for consultation will be deemed early enough. Regardless, the opportunity for consultation must be

[76] Colorado 2022 SIP submission, Regional Haze Progress Report at E–33–E–35.

provided at least sixty days before a public hearing or public comment period at the state level. Section 51.308(i)(2) also lists two substantive topics on which FLMs must be provided an opportunity to discuss with states: assessment of visibility impairment in any Class I area and recommendations on the development and implementation of strategies to address visibility impairment. Section 51.308(i)(3) requires states, in developing their implementation plans, to include a description of how they addressed FLMs' comments.

Colorado's 2022 SIP submission summarizes the State's consultation and coordination with the FLMs. Colorado consulted and coordinated with the FLMs during the development of its regional haze SIP through WRAP participation and direct FLM engagement. Colorado facilitated both in-person and virtual public stakeholder meetings in 2019 and 2020 to gather input early in the planning stages. The State also held multiple consultations directly with the FLMs in June 2019 to discuss Q/d thresholds and potential sources for analysis. Subsequent discussions occurred in August and October 2020, as well as in April, May, and June 2021 to refine analyses and address concerns raised by FLMs concerning additional control measures. These discussions occurred prior to the State's public hearing on the draft regional haze plan in November 2020. The State also held a public information meeting in August 2021 to provide information on its draft regional haze SIP prior to holding a public hearing in November 2021.[77] The State further shared the regional haze plan's technical support documents with the FLMs.

Colorado took administrative steps to provide the FLMs the opportunity to review and provide feedback on the State's draft regional haze plan. Therefore, the EPA proposes to approve the FLM consultation component of Colorado's SIP submission which meets the requirements of 40 CFR 51.308(i), as outlined in this section.

V. Proposed Action

The EPA is proposing partial approval and partial disapproval of Colorado's 2022 SIP submission addressing the requirements of the second implementation period of the RHR. Specifically, the EPA is proposing approval for the portions of Colorado's 2022 SIP submission relating to 40 CFR 51.308(f)(1): calculations of baseline, current, and natural visibility conditions, progress to date, and the uniform rate of progress; 40 CFR 51.308(f)(2)(ii)–(iv): long-term strategy; 40 CFR 51.308(f)(3): reasonable progress goals; 40 CFR 51.308(f)(4): reasonably attributable visibility impairment; 40 CFR 51.308(f)(5) and 40 CFR 51.308(g): progress report requirements; 40 CFR 51.308(f)(6): monitoring strategy and other implementation plan requirements; and 40 CFR 51.308(i): FLM consultation. The EPA is proposing disapproval of portions of Colorado's 2022 SIP submission relating to 40 CFR 51.308(f)(2)(i) and its corresponding regulatory provisions (Colorado Regulation Number 23 section IV.F.1.; IV.F.3. pertaining to the cessation of coal handling at Nixon, Coal Handling, Hayden Units 1 and 2, and Pawnee Unit 1; IV.F.5.; and IV.F.6.). Despite our proposed disapproval of the State's long-term strategy as it pertains to source closures, we find that the regional haze requirements are satisfied by the portion of Colorado's 2022 SIP submission that we are approving. Because no outstanding obligations remain, there will be no additional regulatory action needed, either in the form of a federal implementation plan or another SIP revision, as a result of the partial disapproval. Concurrently, the EPA is proposing to approve a revision to Colorado's SIP that moves the regional haze provisions in Regulation Number 3 to the newly adopted Regulation Number 23. Together, these SIP revisions establish updated emission reduction requirements for NO_X, SO_2, and PM emissions from certain reasonable progress sources identified as impacting Class I areas under the RHR for the second ten-year planning period.

VI. Incorporation by Reference

In this document, the EPA is proposing to include regulatory text in an EPA final rule that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, and as discussed in sections I. through V. of this preamble and set forth below in the proposed amendments to part 52, the EPA is proposing: to remove 5 CCR 1001–05, Regulation Number 3, Part F, Regional Haze Limits—Best Available Retrofit Technology (BART) and Reasonable Progress (RP) and the associated entries for VI. Regional Haze Determinations and VII. Monitoring, Recordkeeping, and Reporting for Regional Haze Limits, from the Colorado SIP; and to incorporate by reference 5 CCR 1001–27, Regulation Number 23, Part A, Regional Haze Limits—Best Available Retrofit Technology (BART) and Reasonable Progress (RP) and the associated entries for IV. Regional Haze Determinations and V. Monitoring, Recordkeeping, and Reporting for Regional Haze Limits. The EPA has made, and will continue to make, these materials generally available through *https://www.regulations.gov* and at the EPA Region 8 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

VII. Statutory and Executive Order Reviews

This action proposes to partially approve and partially disapprove state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Is not subject to Executive Order 14192 (90 FR 9065, February 6, 2025) because SIP actions are exempt from review under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as

[77] Colorado 2022 SIP submission at 8–11.

specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Greenhouse gases, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

(Authority: 42 U.S.C. 7401 *et seq.*)

Dated: _July 9, 2025.

Cyrus M. Western,

Regional Administrator, Region 8.

For the reasons stated in the preamble, the Environmental Protection Agency is proposing to amend 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart G—Colorado

■ 2. Amend § 52.320 by:

■ a. In the table in paragraph (c):

■ i. Removing the center heading ''5 CCR 1001–05, Regulation Number 3, Part F, Regional Haze Limits—Best Available Retrofit Technology (BART) and Reasonable Progress (RP)'' and the entries ''VI. Regional Haze Determinations'' and ''VII. Monitoring, Recordkeeping, and Reporting for Regional Haze Limits''; and

■ ii. Adding the center heading ''5 CCR 1001–27, Regulation Number 23, Part A, Regional Haze Limits—Best Available Retrofit Technology (BART) and Reasonable Progress (RP)'' and the entries ''IV. Regional Haze Determinations'' and ''V. Monitoring, Recordkeeping, and Reporting for Regional Haze Limits'' at the end of the table.

■ b. In the table in paragraph (e):

■ i. Adding the entry ''Colorado Visibility and Regional Haze State Implementation Plan for the Twelve Mandatory Class I Federal Areas in Colorado, Revised Regional Haze State Implementation Plan for the Second Implementation Period'' at the end of the table.

The additions read as follows:

§ 52.320 Identification of plan.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 0, 1, and 9

[PS Docket Nos. 21–479 and 13–75; DA 25–580; FR ID 302998]

Facilitating Implementation of Next Generation 911 Services (NG911); Improving 911 Reliability

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; Extension of comment and reply comment periods.

SUMMARY: In this document, the Federal Communications Commission (Commission) extends the comment and reply comment periods of the Further Notice of Proposed Rulemaking (FNPRM) in PS Docket Nos. 21–479 and 13–75, FCC 25–21, that was released on March 28, 2025 and published in the **Federal Register** on June 4, 2025.

DATES: The deadline for filing comments is extended to August 4, 2025, and the deadline for filing reply comments is extended to September 17, 2025.

ADDRESSES: You may submit comments and reply comments, identified by PS Docket Nos. 21–479 and 13–75, by any of the following methods:

- *Electronic Filers:* Parties may file electronically using the internet by accessing the Commission's Electronic Comment Filing System (ECFS): *https://www.fcc.gov/ecfs.* See Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121 (1998), *https://www.govinfo.gov/content/pkg/FR-1998-05-01/pdf/98-10310.pdf.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing.
- Paper filings can be sent by hand or messenger delivery, by commercial courier, or by the U.S. Postal Service. All filings must be addressed to the Secretary, Federal Communications Commission.
- Hand-delivered or messenger-delivered paper filings for the Commission's Secretary are accepted between 8:00 a.m. and 4:00 p.m. by the FCC's mailing contractor at 9050 Junction Drive, Annapolis Junction, MD 20701. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of before entering the building.
- Commercial courier deliveries (any deliveries not by the U.S. Postal Service) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701. Filings sent by U.S. Postal Service First-Class Mail, Priority Mail, and Priority Mail Express must be sent to 45 L Street NE, Washington, DC 20554.
- *People with Disabilities:* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530.

FOR FURTHER INFORMATION CONTACT: Rachel Wehr, Deputy Division Chief, Policy and Licensing Division, Public Safety and Homeland Security Bureau, (202) 418–1138 or *Rachel.Wehr@fcc.gov,* or Chris Fedeli, Attorney Advisor, Policy and Licensing Division, Public Safety and Homeland Security Bureau, (202) 418–1514 or *Christopher.Fedeli@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Public Safety and Homeland Security Bureau's (Bureau) Order in PS Docket Nos. 21–479 and 13–75; DA 25–580, adopted and released on July 8, 2025. The full text of the Order is available at *https://docs.fcc.gov/public/attachments/DA-25-580A1.pdf.*

Initial Paperwork Reduction Act of 1995 Analysis: This document does not contain proposed information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any proposed information collection burden for small business concerns with fewer than 25 employees, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4).

Synopsis

In the Order, the Bureau grants in part a Motion for Extension of Time (Motion) filed jointly on June 17, 2025 by the National Association of State 9–1–1 Administrators (NASNA), the National Emergency Number Association: The 9–1–1 Association (NENA), and the Industry Council for Emergency Response Technologies (iCERT) in PS Docket Nos. 21–479 and 13–75. The Motion seeks an extension of time for filing comments and reply comments in response to the Further Notice of Proposed Rulemaking (FNPRM) that was released on March 28, 2025 proposing and seeking comment on changes to the Commission's 911 reliability rules. The summary of the FNPRM was published in the **Federal Register**, 90 FR 23768 (June 4, 2025). For the reasons stated below, the Bureau finds that the extension request is warranted in part and thus extends the comment and reply comment deadlines to August 4, 2025 and September 17, 2025, respectively.

The joint filers request a 120-day extension to the comment and reply comment deadlines. The Bureau finds that a more limited extension will be sufficient to accommodate the concerns raised. As set forth in section 1.46 of the Commission's rules, 47 CFR 1.46, the Commission does not routinely grant extensions of time. In this case, however, the Bureau finds that a moderate extension of the initial comment deadline will provide additional time for parties to organize and coordinate their input to the Commission, and increasing the interval between initial comments and replies will create an expanded window for collaborative discussions among parties after the initial comments have been filed.

Ordering Clauses

Accordingly, *it is ordered,* that pursuant to 47 U.S.C. 154(i)–(j), and sections 0.204, 0.392, and 1.46 of the Commission's rules, 47 CFR 0.204, 0.392, 1.46, the Motion for Extension of Time is *granted in part and otherwise denied. It is further ordered* that the deadline to file comments in this proceeding *is extended* to August 4, 2025, and the deadline to file reply comments *is extended* to September 17, 2025.

Federal Communications Commission.

Marlene Dortch,

Secretary.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 2

[ET Docket No. 24–136; FR ID 302403]

Promoting the Integrity and Security of Telecommunications Certification Bodies, Measurement Facilities, and the Equipment Authorization Program

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Federal Communications Commission (Commission or FCC) proposes and seeks comment on further measures to safeguard the integrity of the FCC's equipment authorization program. The Commission seeks comment on whether to extend recently adopted prohibitions to include entities subject to the jurisdiction of a foreign adversary or

alternatively apply a presumption-of-prohibition to a larger class of entities. Additionally, the Commission seeks comment on expanding the group of prohibited entities to include several additional lists from federal agencies or statutes and ways it can facilitate and encourage more equipment authorization testing to occur at test labs within the United States or allied countries. Lastly, the Commission encourages further comment on post-market surveillance procedures to ensure compliance to prohibitions on authorization of covered equipment.

DATES: Comments are due on or before August 15, 2025 and reply comments are due on or before September 15, 2025.

ADDRESSES: You may submit comments, identified by ET Docket No. 24–136, by any of the following methods:

Federal Communications Commission's Website: https://www.fcc.gov/ecfs/. Follow the instructions for submitting comments. *See Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121 (1988).*

- *Mail:* Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail (although the Commission continues to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.
- *People with Disabilities:* Contact the Commission to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: *FCC504@fcc.gov* or phone: 202–418–0530 or TTY: 202–418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Jamie Coleman of the Office of Engineering and Technology, at *Jamie.Coleman@fcc.gov* or 202–418–2705.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Further Notice of Proposed Rulemaking,* ET Docket No. 24–136; FCC 25–27, adopted on May 22, 2025, and released on May 27, 2025. The full text of this document is available for public inspection and can be downloaded at *https://docs.fcc.gov/public/attachments/FCC-25-27A1.pdf.* Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format) by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

Comment Period and Filing Procedures. Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates provided in the **DATES** section of this document. Comments must be filed in ET Docket No. 24–136. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS). *See Electronic Filing of Documents in Rulemaking Proceedings,* 63 FR 24121 (1998).

- All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.
- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: *https://www.fcc.gov/ecfs/.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of the proceeding, filers must submit two additional copies for each additional docket or rulemaking number.
  - Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
  - U.S. Postal Service first-class, Express, and Priority mail must be addressed to 45 L Street NE, Washington, DC 20554.

Ex Parte Presentations. The proceedings shall be treated as ''permit-but-disclose'' proceedings in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (*e.g.,* .doc, .xml, .ppt, searchable .pdf). Participants in the proceeding should familiarize themselves with the Commission's *ex parte* rules.

Procedural Matters

Regulatory Flexibility Act. The Regulatory Flexibility Act of 1980, as amended (RFA), requires that an agency prepare a regulatory flexibility analysis for notice and comment rulemakings, unless the agency certifies that ''the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.'' 5 U.S.C. 603, 605(b). The RFA, 5 U.S.C. 601–612, was amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Public Law 104–121, Title II, 110 Stat. 857 (1996). Accordingly, the Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA) concerning the possible/potential impact of the rule and policy changes contained in the FCC document. The IRFA is found in Appendix D of the FCC document, *https://docs.fcc.gov/public/attachments/FCC-25-27A1.pdf.* The Commission invites the general public, in particular small businesses, to comment on the IRFA. Comments must have a separate and distinct heading designating them as responses to the IRFA and must be filed by the deadlines for comments on the Further Notice of Proposed Rulemaking indicated in the **DATES** section of this document.

Paperwork Reduction Act. This document may contain proposed or modified information collection requirements. Therefore, the Commission seeks comment on potential new or revised information collections subject to the Paperwork

Reduction Act of 1995. If the Commission adopts any new or revised information collection requirements, the Commission will publish a notice in the **Federal Register** inviting the general public and the Office of Management and Budget to comment on the information collection requirements, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), the Commission seeks specific comments on how it might further reduce the information collection burden for small business concerns with fewer than 25 employees.

Accessing Materials

Providing Accountability Through Transparency Act. Consistent with the Providing Accountability Through Transparency Act, Public Law 1189–9, a summary of the Notice of Proposed Rulemaking will be available at *https://www.fcc.gov/proposed-rulemakings.*

OPEN Government Data Act. The OPEN Government Data Act, requires agencies to make ''public data assets'' available under an open license and as ''open Government data assets,'' *i.e.,* in machine-readable, open format, unencumbered by use restrictions other than intellectual property rights, and based on an open standard that is maintained by a standards organization. 44 U.S.C. 3502(20), (22), 3506(b)(6)(B). This requirement is to be implemented ''in accordance with guidance by the Director'' of the OMB. (OMB has not yet issued final guidance. The term ''public data asset'' means ''a data asset, or part thereof, maintained by the Federal Government that has been, or may be, released to the public, including any data asset, or part thereof, subject to disclosure under [the Freedom of Information Act (FOIA)].'' 44 U.S.C. 3502(22). A ''data asset'' is ''a collection of data elements or data sets that may be grouped together,'' and ''data'' is ''recorded information, regardless of form or the media on which the data is recorded.'' 44 U.S.C. 3502(17), (16).

Synopsis

In the Further Notice of Proposed Rulemaking (FNPRM), the Commission seeks to expand upon its efforts to ensure the integrity of the FCC's equipment authorization program, particularly through prohibitions on ownership, direction, or control by untrustworthy actors that pose a risk to national security. Specifically, the Commission looks at additional sources of entities that pose a risk to national security and seeks comment on whether and how it should expand the FCC's list of prohibited entities. To balance these efforts, the Commission also solicits feedback on ways to increase equipment testing and certification within the United States or allied countries. The Commission also explores other opportunities to build upon these efforts by proposing tighter controls over post-market surveillance procedures, avoiding conflicts between test labs and the telecommunication certification bodies (TCBs) that review their test reports, and requiring equipment authorized under the Supplier's Declaration of Conformity (SDoC) procedure to be tested at an accredited and FCC-recognized laboratory.

A. Expanding Equipment Authorization Program Prohibitions

Other Entities Potentially Controlled by a Foreign Adversary. In the Report & Order portion of the proceeding, the Commission imposed restrictions on TCBs, test labs, and laboratory accreditation bodies owned by certain entities on one or more federal agency or statutory lists. In the Notice of Proposed Rulemaking (NPRM) (89 FR 55530), the Commission also sought comment ''on whether there are other types of direct or indirect ownership or control, or other types of influences beyond the Covered List determinations that potentially could adversely affect a TCB's or test lab's trustworthiness, or otherwise undermine the public's confidence.'' The Commission seeks further comment on various additions to the list of prohibited entities.

The Commission is concerned, based on the record before us, that limiting the FCC's restriction to TCBs, test labs, and laboratory accreditation bodies that are owned by, or under the direction or control of, prohibited entities, may not be sufficient to address the threats to the integrity of the FCC's equipment authorization processes posed by malign foreign actors. Now that the Commission has included foreign adversaries, as defined by the Department of Commerce, as prohibited entities, should the Commission prohibit recognition of any TCB, test lab, or laboratory accreditation body that conducts operations related to the Commission's equipment authorization program within foreign adversary countries? In other words, should the Commission extend the prohibitions in this rule beyond TCBs, test labs, and laboratory accreditation bodies that are owned by, controlled by, or subject to the direction of a foreign adversary or other prohibited entity to also include those TCBs, test labs, and laboratory accreditation bodies that are subject to the *jurisdiction* of a foreign adversary country? Should the Commission fully extend the prohibitions adopted in the Report and Order portion of the proceeding to any TCB, test lab, or laboratory accreditation body that meets the Commerce Department's definition of ''owned by, controlled by, or subject to the jurisdiction of or direction of a foreign adversary''? If so, how should the Commission implement such a prohibition? For example, would the Commission base the prohibition on any activity that physically occurs within the relevant foreign adversary country or any activity performed by an entity that is subject to the jurisdiction of such, regardless of physical location? Should the Commission require disclosure of the location of employees or activity conducted by the TCB, test lab, or laboratory accreditation body within the jurisdiction of a foreign adversary or other prohibited entity? What other methods of implementation should the Commission consider to protect the integrity of its equipment authorization program against foreign adversary countries?

In what ways would foreign adversary countries have the capability to effectively control any and all entities organized under or doing business within their jurisdiction? Would such action be under- or over-inclusive? What would the economic effects of such action be? In particular, could TCBs and test labs conducting equipment authorization functions in China, or any other foreign adversary, be rapidly replaced by TCBs and test labs conducting such functions outside of a foreign adversary country? What are the estimated costs associated with such a prohibition? How much of the costs are estimated to be passed on to U.S. consumers? Commenters have also raised concerns that the withdrawal of recognition of a significant number of testing facilities would slow down the equipment approval process for manufacturers and require ample time for U.S. companies to identify alternative testing facilities and make new arrangements for certifications, and may even require breaking commercial agreements. How, if at all, should the Commission weigh these economic concerns against potential national security threats? What could the Commission do to assist this transition and mitigate economic harms? As an alternative to wholesale prohibitions, should the Commission consider other limitations on TCBs and test labs operating in foreign adversary countries to mitigate the potential risks to national security and the integrity of the

equipment authorization program? If so, what sort of mitigation measures would suffice to ensure the integrity of the equipment authorization program against national security risks?

The Commission also seeks comment on the extent to which the existence of test labs in foreign adversary countries, particularly China, encourage trade and supply chain dependencies for radio frequency (RF)-emitting equipment. Does the prominence of FCC–recognized test labs in China encourage greater manufacturing and production of finished equipment and components in China? If so, how much? Do test labs in China offer favorable treatment for equipment produced in China or by Chinese companies? Should the Commission prohibit test labs in China from participation in the equipment authorization program in part as a means of reducing these trade and supply chain dependencies on foreign adversaries, given the potential risks to national security threats such dependencies pose? How, if at all, do these considerations relate to the goals of the proceeding?

As the Commission weighs the national security threat posed by test labs and test lab accreditation bodies located in foreign adversary nations, to what extent should the Commission consider the President's determination that nominally private companies in China in particular are not really ''private,'' but functionally controlled by, and answerable to, the Chinese government and the Chinese Communist Party, which is a foreign adversary? For example, Executive Order 13959 states President Donald J. Trump's finding that, ''key to the development of the PRC's military, intelligence, and other security apparatuses is the country's large, *ostensibly private* economy. Through the national strategy of Military-Civil Fusion, China increases the size of the country's military-industrial complex by compelling civilian Chinese companies to support its military and intelligence activities. Those companies, *though remaining ostensibly private and civilian,* directly support China's military, intelligence, and security apparatuses and aid in their development and modernization.'' Indeed, in February of this year, President Trump wrote to several of his Cabinet secretaries recognizing that ''[t]hrough its national Military-Civil Fusion strategy, [China] increases the size of its military-industrial complex by compelling civilian Chinese companies and research institutions to support its military and intelligence activities.'' Even the Supreme Court has accepted that a private company in China ''is subject to Chinese laws that require it to assist or cooperate with the Chinese Government's intelligence work and to ensure that the Chinese Government has the power to access and control private data the company holds.'' As the Public Safety and Homeland Security Bureau has previously recognized, ''the Chinese government is highly centralized and exercises strong control over commercial entities in its sphere of influence, permitting the government, including state intelligence agencies, to demand that private communications sector entities cooperate with governmental requests, including revealing customer information and network traffic information. Demands for such information could come in the form of legal pressure, as in the case of the Chinese National Intelligence Law, or in the form of extralegal political pressure taken through control of subsidy funding, employee unions, or threats and/or coercion. Several commenters also made this point.

The Commission seeks comment as well on whether and to what extent the Commission should factor in the military situation in the Indo-Pacific in recognizing test labs and laboratory accreditation bodies. To what extent should the Commission consider the threat China poses to U.S. interests in the Indo-Pacific region, particularly with regard to a possible invasion of Taiwan, potentially as soon as 2027? If such a conflict erupts, there would no doubt be a substantial, if not total, rupture in trade and economic relations between the U.S. and China, raising significant concerns if the Commission's authorization program is partially reliant on test labs in China. Should the Commission treat test labs in China differently from those in other foreign adversary countries given this consideration of potential military conflicts? The Commission seeks comment on whether it should consider this possibility in determining whether to prohibit recognition of a broader array of test labs in China. How, if at all, do these considerations relate to the goals of the proceeding?

Are there other considerations appropriate for the Commission to consider related to the goals of the proceeding, for example, should the Commission consider the extent to which there is a lack of reciprocity with another country with regard to equipment testing and certification? For example, should the Commission take into account whether China requires domestic testing for all equipment sold in China? If so, to what extent does that unfairly encourage entities that want to sell equipment both in the U.S. and China to test their equipment in China-based test labs?

Alternative Approaches. Congress recently twice codified a definition of ''controlled by a foreign adversary'' in statutes involving data privacy. In this context, Congress defines a ''company or other entity'' as ''controlled by a foreign adversary'' if it satisfies one of three conditions:

(A) a foreign person that is domiciled in, is headquartered in, has its principal place of business in, or is organized under the laws of a foreign adversary country;

(B) an entity with respect to which a foreign person or combination of foreign persons described in subparagraph (A) directly or indirectly own at least a 20 percent stake; or

(C) a person subject to the direction or control of a foreign person or entity described in subparagraph (A) or (B).

The Commission seeks comment on whether to revise the definitions adopted in the Report & Order portion of the proceeding to include entities that meet one of these three conditions to be considered ''controlled by a foreign adversary.'' Should the Commission consider ''historical patterns of behavior by affiliated organizations,'' as suggested by the Foreign Investment Review Section, National Security Division, U.S. Department of Justice? Can any entity that Congress has, in the context of data privacy considerations, twice found to be ''controlled by a foreign adversary'' be trusted not to undermine the integrity and security of the equipment authorization program? Would such a definition be under- or over-inclusive? What would be the economic harms or implementation burden of such a prohibition? What steps, if any, could the Commission undertake to mitigate those concerns? As an alternative to outright prohibition of participation by such entities, should the Commission impose mitigation requirements on entities ''controlled by foreign adversaries''?

Should the Commission adopt the definition used in the CHIPS Act for a ''foreign entity of concern''? This definition lists various ways for an entity to be a ''foreign entity of concern,'' including being ''owned by, controlled by, or subject to the jurisdiction or direction of'' China, Russia, Iran, or North Korea, which is similar to the statutory definition of ''controlled by a foreign adversary.'' However, the CHIPS Act also includes numerous other ways for an entity to be a ''foreign entity of concern,'' including being designated as a foreign terrorist

organization and being alleged to have been involved in various activities for which a conviction was obtained. Is one of these definitions preferable? Should the Commission adopt some amalgamation of this definition along with the other statutory definition?

Alternatively, should the Commission adopt a different definition? If so, what should that definition be and why? The Commission welcomes comment on which category of entities are ''controlled by a foreign adversary.'' Should the Commission adopt a more limited or expansive definition? Does the definition need to be clearly defined? To what extent should the definition be aligned with other Commission rules on foreign ownership?

As an alternative to an outright prohibition on TCBs, test labs, and laboratory accreditation bodies located in or subject to the jurisdiction of a foreign adversary, should the Commission adopt a presumption-of-prohibition policy? Under this policy, any entity subject to the jurisdiction of a foreign adversary would need to provide clear-and-convincing evidence that there was no national security risk from its participation in the equipment authorization program. What are some potential benefits and drawbacks of such an approach? If the Commission adopts such an approach, should the Commission use a different standard than clear-and-convincing? Should the Commission consult the Committee for the Assessment of Foreign Participation in the United States Telecommunications Services Sector and require its approval before recognizing for participation in the equipment authorization program TCBs, test labs, or laboratory accreditation bodies ''controlled by a foreign adversary''? Should the Commission adopt any alternative mechanism to screen such entities for participation?

Other Federal Agency Lists. In the NPRM, the Commission sought comment on ''whether the Commission should consider any other Executive Branch agency lists to rely upon as a source to identify entities that raise national security concerns and to restrict participation of those entities in the FCC's equipment authorization program. The Report & Order portion of the proceeding incorporated several of these lists in the FCC's determination regarding prohibited entities. What other federal agency lists, or entities identified by federal agencies, or lists created by statute, should the Commission consider including in its definition of ''prohibited entity''? The Commission welcomes comment on which ''lists'' are particularly appropriate and which are not.

The Commission is particularly interested in and seeks comment on the usefulness of relying on the following sources:

- The Protecting Americans from Foreign Adversary Controlled Applications Act (''PFACA'') imposed restrictions on the domestic operations of certain foreign adversary-controlled social media applications. In particular, the PFACA imposed restrictions on applications directly or indirectly operated by ByteDance, Ltd., TikTok, their subsidiaries, entities they controlled, or any other entity that the President determines ''is controlled by a foreign adversary'' and ''present[s] a significant threat to the national security of the United States.'' Should the Commission rely on this list to impose restrictions with regard to participation in the equipment authorization program given that either Congress or the President has expressly determined such entities to be national security threats? The Commission welcomes comment on the usefulness and applicability of this list in terms of the equipment authorization program.
- Pursuant to various statutory authorities and Executive Orders, the Office of Foreign Assets Control (''OFAC'') in the U.S. Department of Treasury publishes a Specially Designated Nationals and Blocked Persons List (''SDN List'') of entities subject to certain prohibitions. ''Collectively, such individuals and companies are called 'Specially Designated Nationals' or 'SDNs.' Their assets are blocked, and U.S. persons are generally prohibited from dealing with them.'' The justifications for these sanctions are wide ranging, but entities on the SDN List are generally subject to the most extreme form of sanctions, suggesting that such entities should have no role in the Commission's TCB and test lab program. Additionally, although the SDN List is long, it is published, and businesses have well-established compliance mechanisms. Should the Commission include entities on the SDN List in its definition of prohibited entities?
- The National Defense Authorization Act for Fiscal Year 2024 prohibits the DOD from procuring batteries produced by several Chinese entities, starting in 2027. This list included leading battery manufacturers and their successors. Should the Commission consider this list of battery manufacturers as part of its definition of prohibited entities? Would this list be relevant or useful in determining the integrity and security of TCBs, test labs, and laboratory accreditation bodies?

Are there any other federal agency or statutory ''lists'' that the Commission should consider including within its prohibition?

B. Increasing Equipment Authorization Testing and Certification Within the United States

The actions the Commission takes in the Report and Order portion of the proceeding are the first steps in ensuring the integrity of the FCC's equipment authorization program against ownership, direction, or control by untrustworthy actors that pose a risk to national security. To further the FCC's goals in this area, the Commission seeks comment on ways in which it can facilitate and encourage more equipment authorization testing and certification within the United States and allied countries, such as those with which the Commission has a mutual recognition agreement (MRA). In addition to financial, what other hinderances or advantages (*i.e.,* costs and benefits) would entities seeking equipment authorization encounter in relying primarily on TCBs, test labs, and laboratory accreditation bodies located in the U.S.? What conflicts or other concerns might arise? What rules or processes could the Commission implement or modify to encourage equipment authorization processes that rely primarily upon domestic TCBs, test labs, and laboratory accreditation bodies? How can the Commission encourage the establishment of new, or expansion of existing, TCBs and test labs in the U.S.? What are the primary barriers limiting the presence of TCBs and test labs in the U.S.? Are there actions the Commission can take to reduce regulatory barriers to TCBs and test labs? Should the Commission offer incentives for utilization of domestic TCBs and test labs, and, if so, what sort of incentives? Should any of these incentives or efforts to increase testing be similarly directed toward utilization of TCBs and test labs in allied countries, such as those with which the U.S. has an MRA? If so, which ones and why?

To what extent would having more equipment authorization testing and certification in the United States reduce risks and threats to national security in terms of the equipment supply chain or in other ways? Given the importance of a strong industrial base for national security, should the Commission consider such reindustrialization goals in crafting a program of incentives? The Commission seeks comment on the overall benefits and costs, with quantifiable data, associated with any

proposed measures to encourage more equipment authorization testing and certification within the United States or allied countries.

C. Other Matters

Post-market surveillance procedures. Commission rules impose certain obligations on each TCB to perform post-market surveillance, based on ''type testing a certain number of samples of the total number of product types'' that the TCB has certified. In light of issues discussed in the Report and Order portion of the proceeding to ensure the integrity of the FCC's equipment authorization program, the Commission invites further comment on whether the Commission should revise the post-market surveillance rules, policies, or guidance to address such concerns. The Commission seeks comment on reasonable practices TCBs could implement to better identify equipment that may be noncompliant with Commission rules, despite authorization. In particular, should the Commission change the post-market surveillance requirements to require that TCBs review certification grants by other TCBs? How would such a requirement work? Should the Commission require, instead, that TCBs engage independent reviewers/auditors to conduct their required post market surveillance? If so, what would be the criteria for such third-party reviewers? The Commission invites comment on this and any other measures the Commission might take to strengthen the integrity of the post-market surveillance process.

TCB and test lab relationships. The FCC's rules incorporate ISO/IEC 17025 and ISO/IEC 17065 standards, against which accreditation bodies assess test labs and TCBs, respectively to ensure, in part, that these entities operate in a competent, consistent, and impartial manner. TCBs also are required under the FCC's rules to have the technical expertise and capability to test the equipment it will certify and be accredited to ISO/IEC 17025. The Commission recognizes that this results in most, or all, TCBs in a position to not only verify the test reports received with an application for authorization but also to produce such test reports. The Commission seeks comment on any potential for this current structure to raise questions as to the integrity of the FCC's equipment authorization program or the impartiality of TCBs or test labs. What types of procedures have TCBs and test labs put into place to ensure impartiality, particularly when a TCB reviews an authorization application for which a test lab under the same ownership as the TCB conducted the required testing? What additional information should the Commission require regarding the relationship between the individuals who each performed a defined role in the review and approval process? The Commission seeks comment on additional safeguards that it should consider to further ensure the impartiality of our TCBs and test labs. Specifically, the Commission seeks comment on whether it should restrict the relationships between TCBs and test labs to prevent TCBs from reviewing authorization applications for which the equipment was tested by a test lab owned by, or under the direction or control of the same entities that own, direct, or control the TCB.

Supplier's Declaration of Conformity Procedures. By the Report and Order portion of this proceeding, the Commission prohibits reliance upon test labs owned by, or under the direction or control of, a prohibited entity for SDoC authorization measurement requirements. The ownership information required to be collected pursuant to these new rules will be retained by the responsible party and made available to the Commission upon request. To further the FCC's efforts to ensure the integrity of the equipment authorization program, the Commission is considering additional measures to strengthen the integrity of laboratories upon which entities rely for the SDoC procedure. Specifically, the Commission proposes to require that all equipment authorized under the SDoC procedure be tested at an accredited and FCC-recognized laboratory. The Commission seeks comment on some of the impacts such an action could have on the supply chain and to the testing process, particularly with regard to the confidence in the integrity of the test labs and thereby the security of the U.S. equipment supply chain.

Ordering Clauses

Accordingly, *it is ordered,* pursuant to the authority found in sections 1, 4(i), 229, 301, 302, 303, 309, 312, 403, and 503 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 229, 301, 302a, 303, 309, 312, 403, and 503, section 105 of the Communications Assistance for Law Enforcement Act, 47 U.S.C. 1004; the Secure and Trusted Communications Networks Act of 2019, 47 U.S.C. 1601–1609; and the Secure Equipment Act of 2021, Public Law 117–55, 135 Stat. 423, 47 U.S.C. 1601 note, that the Further Notice of Proposed Rulemaking *is hereby adopted.*

It is further ordered that the Office of the Secretary, *shall send* a copy of the Further Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR Part 2

Administrative practice and procedures, Communications, Communications equipment, Reporting and recordkeeping requirements, Telecommunications, and Wiretapping and electronic surveillance.

Federal Communications Commission.

Marlene Dortch,

Secretary.

Proposed Rules

For the reasons discussed in the document, the Federal Communications Commission proposes to amend 47 CFR part 2 as follows:

Part 2—FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS

■ 1. The authority citation for part 2 continues to read as follows:

Authority: 47 U.S.C. 154, 302a, 303, and 336 unless otherwise noted.

■ 2. Amend § 2.902 by revising the entry for ''Prohibited entities'' to add paragraphs (2)(vii) through (ix) to read as follows:

§ 2.902 Terms and definitions.

* * * * *

Prohibited entities.

* * * * *

(2) * * *

(vii) The Protecting Americans from Foreign Adversary Controlled Applications Act (15 U.S.C. 9901 note);

(viii) Department of Treasury, Office of Foreign Assets Control, Specially Designated Nationals and Blocked Person List; and

(ix) Section 154(b) of the National Defense Authorization Act for Fiscal Year 2024 (Pub. L. 118–31).

(3) * * *

* * * * *

■ 2. Amend § 2.948 by revising paragraphs (a) and (b) to read as follows:

§ 2.948 Measurement facilities.

(a) Equipment authorized under the procedures set forth in this subpart must be tested at a laboratory that is:

* * * * *

(b) A laboratory that makes measurements of equipment subject to an equipment authorization must compile a description of the measurement facilities employed.

* * * * *

■ 3. Amend § 2.949 by revising paragraphs (b)(5), (c), and (e), and

adding paragraphs (c)(4) and (e)(4) to read as follows:

§ 2.949 Recognition of laboratory accreditation bodies.

* * * * *

(b) * * *

(5) Certification to the Commission that the laboratory accreditation body is not:

(i) Owned by, controlled by, or subject to the direction of a prohibited entity pursuant to § 2.902; or

(ii) Physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

(c) * * *

(3) Fails to provide, or provides false or inaccurate, information regarding equity or voting interests of 5% or greater as required in this section; or

(4) Is physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

(e) The Commission will withdraw recognition of any laboratory accreditation body that:

(2) Fails to provide, or provides a false or inaccurate, certification, as required by this section;

(3) Fails to provide, or provides false or inaccurate, information regarding equity or voting interests of 5% or greater, as required by this section; or

(4) Is physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

■ 4. Amend § 2.951 by revising paragraphs (a)(10), (b)(2) and (3), adding paragraph (b)(4), revising paragraphs (d)(2) and (3), and adding paragraph (d)(4) to read as follows:

§ 2.951 Recognition of measurement facilities.

(a) * * *

(10) Certification to the Commission that the laboratory is not:

(i) Owned by, controlled by, or subject to the direction of a prohibited entity pursuant to § 2.902; or

(ii) Physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

(b) * * *

* * * * *

(2) That fails to provide, or that provides a false or inaccurate, certification as required in this section;

(3) That fails to provide, or provides false or inaccurate, information regarding equity or voting interests of 5% or greater as required in this section; or

(4) That is physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

(d) * * *

(2) Fails to provide, or provides a false or inaccurate, certification, as required in this section;

(3) Fails to provide, or provides false or inaccurate, information regarding equity or voting interests of 5% or greater, as required in this section; or

(4) Is physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

■ 5. Amend § 2.960 by revising paragraphs (a)(2), (b)(2) and (3), adding paragraph (a)(4), revising paragraphs (h)(2) and (3), and adding paragraph (h)(4) to read as follows:

§ 2.960 Recognition of Telecommunication Certification Bodies (TCBs).

(a) * * *

* * * * *

(2) Certified to the Commission that:

(i)The TCB is not owned by, controlled by, or subject to the direction of a prohibited entity pursuant to § 2.902; or

(ii) Physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

(b) * * *

* * * * *

(2) That fails to provide, or provides a false or inaccurate, certification as required in paragraph (a) of this section;

(3) That fails to provide, or provides false or inaccurate, information regarding equity or voting interests of 5% or greater; or

(4) That is physically or legally located within the geographical jurisdiction of a foreign adversary country.

(h) * * *

(2) Fails to provide, or provides a false or inaccurate, certification, as required in this section;

(3) Fails to provide, or provides false or inaccurate, information regarding equity or voting interests of 5% or greater, as required in this section; or

(4) Is physically or legally located within the geographical jurisdiction of a foreign adversary country.

* * * * *

■ 6. Amend § 2.962 by adding (a)(3) and revising paragraphs (d)(2) and (i) introductory text to read as follows:

§ 2.962 Requirements for Telecommunication Certification Bodies.

(a) * * *

(3) A TCB is prohibited from reviewing an application that includes test data, as required under this part, that was prepared by a measurement facility that is owned by, controlled by, or subject to the direction of any entity that also owns, controls, or directs the TCB.

* * * * *

(d) * * *

* * * * *

(2) Accept test data from any Commission-recognized accredited test laboratory, except as provided in paragraph (a)(3), subject to the requirements in ISO/IEC 17065, and must not unnecessarily repeat tests.

* * * * *

(i) In accordance with ISO/IEC 17065 a TCB must perform appropriate post-market surveillance activities. These activities must be based on type testing a certain number of samples of the total number of product types that a different TCB has certified.

* * * * *

[FR Doc. 2025–13308 Filed 7–15–25; 8:45 am]

BILLING CODE 6712–01–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[Docket No. FWS–HQ–ES–2023–0033; FXES1113090FEDR–256–FF09E22000]

RIN 1018–BH98

Endangered and Threatened Wildlife and Plants; Endangered Species Status for the Blue Tree Monitor

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; reopening of comment period and announcement of public hearing.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), are reopening the comment period on our December 26, 2024, proposed rule to list the blue tree monitor (*Varanus macraei*), a lizard species from Indonesia, as an endangered species under the Endangered Species Act of 1973, as amended (Act). We are taking this action to allow interested parties an additional opportunity to comment on the proposed rule and to conduct a public hearing. Comments previously submitted need not be resubmitted and will be fully considered in preparation of the final rule.

DATES: *Comment submission:* The public comment period on the proposed

rule that published on December 26, 2024, at 89 FR 104952 is reopened. We will accept comments received on or before August 15, 2025. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES,** below) must be received by 11:59 p.m. Eastern Time on the closing date, and comments submitted by U.S. mail must be received by that date to ensure consideration.

Public hearing: On July 31, 2025, we will hold a public hearing on the proposed rule to list the blue tree monitor as an endangered species under the Act from 12 to 2 p.m. Eastern Time, using the Zoom platform (for more information, see Public Hearing, below).

ADDRESSES: *Comment submission:* You may submit comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Search box, enter FWS–HQ–ES–2023–0033, which is the docket number for the proposed rule. Then, click on the Search button. On the resulting page, in the Search panel on the left side of the screen, under the Document Type heading, check the Proposed Rule box to locate this document. You may submit a comment by clicking on ''Comment.''

(2) *By hard copy:* Submit by U.S. mail to: Public Comments Processing, Attn: FWS–HQ–ES–2023–0033, U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We request that you send comments only by the methods described above. We will post all comments on *https://www.regulations.gov.* This generally means that we will post any personal information you provide us (see Information Requested, below, for more information).

Document availability: The December 26, 2024, proposed rule and its supporting documents, including the species status assessment report, are available at *https://www.regulations.gov* under Docket No. FWS–HQ–ES–2023–0033.

Public hearing: Interested parties may present verbal testimony (formal, oral comments) at a public hearing, which will be held virtually using the Zoom platform. See Public Hearing, below, for more information.

FOR FURTHER INFORMATION CONTACT: Rachel London, Manager, Branch of Delisting and Foreign Species, Ecological Services Program, U.S. Fish and Wildlife Service; telephone 703–358–2171; *Rachel_London@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. Please see Docket No. FWS–HQ–ES–2023–0033 on *https://www.regulations.gov* for a document that summarizes the December 26, 2024, proposed rule.

SUPPLEMENTARY INFORMATION:

Information Requested

We intend that any final action resulting from our December 26, 2024, proposed rule (89 FR 104952) will be based on the best scientific and commercial data available and be as accurate and as effective as possible. Therefore, we request comments or information from other governmental agencies, Native American Tribes, the scientific community, industry, or any other interested parties concerning our proposed rule. In addition to the information requested in our proposed rule, we also seek comments concerning:

(1) Verifiable information demonstrating successful breeding of blue tree monitors in captivity, particularly evidence of legal acquisition of breeding stock and production of a second filial (F2) generation, or subsequent generation.

(2) New information that leads us to conclude the blue tree monitor is threatened instead of endangered and information to assist us with applying or issuing protective regulations under section 4(d) of the Act (a ''4(d) rule'') that may be necessary and advisable to provide for the conservation of the blue tree monitor. In particular, we seek information concerning:

(a) The extent to which we should include any of the Act's section 9(a)(1) prohibitions in the 4(d) rule (including import, export, take, activities with unlawfully taken specimens, and activities in interstate or foreign commerce);

(b) Whether we should consider any modifications or additional exceptions from the prohibitions in the 4(d) rule (for example, an exception for interstate commerce of live blue tree monitors bred in captivity in the United States in accordance with the requirements of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES); or an exception for interstate commerce of live blue tree monitors from one public institution to another public institution);

and

(c) Additional information describing the adequacy or inadequacy of protections afforded to the blue tree monitor via CITES trade regulations, regulations of the range country, or any other relevant regulations.

Please include sufficient information with your submission (such as scientific journal articles or other publications; evidence of legal acquisition of breeding stock and specimens successfully bred-in-captivity; copies of relevant laws, regulations, or permits) to allow us to verify any scientific or commercial information you include.

Please note that submissions merely stating support for, or opposition to, the action under consideration without providing supporting information, although noted, do not provide substantial information necessary to support a determination. Section 4(b)(1)(A) of the Act (16 U.S.C. 1533(b)(1)(A)) directs that determinations as to whether any species is an endangered or a threatened species must be made solely on the basis of the best scientific and commercial data available. Comments or information already submitted on the proposed rule (89 FR 104952, December 26, 2024) need not be resubmitted. Any such comments are already incorporated as part of the public record of the rulemaking proceeding, and we will fully consider them as part of the action.

You may submit your comments and materials concerning the December 26, 2024, proposed rule by one of the methods listed in **ADDRESSES**. We request that you send comments only by the methods described in **ADDRESSES**.

If you submit information via *https://www.regulations.gov,* your entire submission—including any personal identifying information—will be posted on the website. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *https://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing the December 26, 2024, proposed rule, will be available for public inspection on *https://www.regulations.gov.*

Our final determination may differ from the December 26, 2024, proposal because we will consider all comments we receive during the comment period as well as any information that may become available after the proposal. Based on the new information we receive (and, if relevant, any comments

on that new information), we may conclude that the species is threatened instead of endangered, or we may conclude that the species does not warrant listing as either an endangered species or a threatened species. In our final rule, we will clearly explain our rationale and the basis for our final decision, including why we made changes, if any, that differ from the December 26, 2024, proposal.

Background

On December 26, 2024, we published a proposed rule (89 FR 104952) to list the blue tree monitor as an endangered species under the Act (16 U.S.C. 1531 *et seq.*). The proposed rule opened a 60-day public comment period, ending February 24, 2025. During the open comment period, we received a request for a public hearing on the proposed rule. Therefore, we are reopening the comment period on the proposal and announcing a public hearing (see **DATES**, above) to allow the public an additional opportunity to provide comments on the proposed rule to list the blue tree monitor.

For a description of previous Federal actions concerning the blue tree monitor and more information on the types of comments that would be helpful to us in promulgating this rulemaking action, please refer to the December 26, 2024, proposed rule (89 FR 104952).

Public Hearing

We are holding a public hearing to accept comments on our December 26, 2024, proposed rule (89 FR 104952) on the date and at the time listed above in **DATES**. We are holding the public hearing via the Zoom online video platform and via teleconference so that participants can attend remotely. For security purposes, registration is required. All participants must register in order to listen and view the hearing via Zoom, listen to the hearing by telephone, or provide oral public comments at the hearing by Zoom or telephone. For information on how to register, or if technical problems occur joining Zoom on the day of the hearing, visit *https://www.fws.gov/event/virtual-public-hearing-proposed-listing-blue-tree-monitor.*

Registrants will receive the Zoom link and the telephone number for the public hearing. If applicable, interested members of the public not familiar with the Zoom platform should view the Zoom video tutorials (*https://support.zoom.us/hc/en-us/articles/206618765-Zoom-video-tutorials*) prior to the public hearing.

The public hearing will provide interested parties an opportunity to present verbal testimony (formal, oral comments) regarding the December 26, 2024, proposed rule to list the blue tree monitor as an endangered species (89 FR 104952). The public hearing will not be an opportunity for dialogue with the Service but rather a forum for accepting formal verbal testimony. In the event there is a large attendance, the time allotted for oral statements may be limited. Therefore, anyone wishing to make an oral statement at the public hearing for the record is encouraged to provide a prepared written copy of their statement to us through the Federal eRulemaking Portal or U.S. mail (see **ADDRESSES**, above). There are no limits on the length of written comments submitted to us. Anyone wishing to make an oral statement at the public hearing must register before the hearing (*https://www.fws.gov/event/virtual-public-hearing-proposed-listing-blue-tree-monitor*). The use of a virtual public hearing is consistent with our regulations at 50 CFR 424.16(c)(3).

Reasonable Accommodation

The Service is committed to providing access to the public hearing for all participants. Closed captioning will be available during the public hearing. Further, a full audio and video recording and transcript of the public hearing will be posted online at *https://www.fws.gov/event/virtual-public-hearing-proposed-listing-blue-tree-monitor* after the hearing. Participants will also have access to live audio during the public hearing via their telephone or computer speakers. Persons with disabilities requiring reasonable accommodations to participate in the hearing should contact the person listed under **FOR FURTHER INFORMATION CONTACT** at least 5 business days prior to the date of the hearing to help ensure availability. See *https://www.fws.gov/event/virtual-public-hearing-proposed-listing-blue-tree-monitor* for more information about reasonable accommodation.

Authority

The authority for this action is the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Signing Authority

Paul Souza, Regional Director, Region 8, Exercising the Delegated Authority of the Director of the U.S. Fish and Wildlife Service, approved this action on June 13, 2025, for publication. On June 18, 2025, Paul Souza authorized the undersigned to sign the document electronically and submit it to the Office of the Federal Register for publication as an official document of the U.S. Fish and Wildlife Service.

Madonna Baucum,

Regulations and Policy Chief, Division of Policy, Economics, Risk Management, and Analytics of the Joint Administrative Operations, U.S. Fish and Wildlife Service.

DEPARTMENT OF COMMERCE

Economic Development Administration

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Regional Economic Development Data Collection Instrument

AGENCY: Economic Development Administration, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on December 12, 2024 during a 60-day comment period (89 FR 96636). This notice allows for an additional 30 days for public comments.

ADDRESSES: Interested persons are invited to submit written comments email to Hallie Davis, Program Manager and Analyst, U.S. Department of Commerce, at *HDavis1@doc.gov* or *PRAcomments@doc.gov.* Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Hallie Davis, Economic Development Administration, 1401 Constitution Ave NW, Washington DC 20230, by phone 202.579.0218 or at *TechHubs@eda.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The Economic Development Administration (EDA) leads the Federal economic development agenda by promoting innovation and competitiveness and preparing American regions for growth and success in the worldwide economy. Guided by the basic principle that sustainable economic development should be driven locally, EDA works directly with communities and regions to help them build the capacity for economic development based on local business conditions and needs. Section 28 of the Stevenson-Wydler Technology Innovation Act of 1980 (Regional Technology and Innovation Hub Program (15 U.S.C. 3722a) is the legal authority under which EDA awards financial assistance and designee status under the Fiscal Year (FY) 23 Regional Technology and Innovation Hub Program (''Tech Hubs''). Under Tech Hubs, EDA seeks to strengthen U.S. economic and national security through place-based investments in regions with the assets, resources, capacity, and potential to become globally competitive, within approximately ten years, in the technologies and industries of the future—and for those industries, companies, and the good jobs they create to start, grow, and remain in the U.S. in order to support the growth and modernization of U.S. manufacturing, improve commercialization of the domestic production of innovative research, and strengthen U.S. economic and national security. Tech Hubs is a two-phase program: in Phase 1, EDA funded Strategy Development grants and designated 31 regions as Tech Hubs. In Phase 2, designated Tech Hubs are eligible to compete for funding for implementation projects. Further information on Tech Hubs can be found at *www.eda.gov.*

The purpose of this notice is to seek comments from the public and other Federal agencies on a request for a new information collection for designated Tech Hubs to help ensure that Tech Hub investments are evidence-based, data driven, and accountable to participants and the public.

Lead consortium members of the 31 designated Tech Hubs will submit identified program metrics and qualitative information to help assess specific program objectives. A one-time questionnaire will be sent to each of the Tech Hubs consortium leads, which will gather the relevant data and stories for each of the 31 Tech Hubs designee consortia, resulting in consortia regional impact evaluation, resources, and tools for regional economic development decision-makers. The 31 designated Tech Hubs will provide information on the following objectives:

(1) Accelerating technology innovation, commercialization, demonstration, and deployment, which may include information on the number of patents filed, licensing agreements, approximate levels of research and development expenditures, adoption of new technologies, and acceleration of current technologies.

(2) Enabling infrastructure and advancing manufacturing, which may include information on specific facility information.

(3) Integrating an agile workforce system, which may include information on skills needed by employers, available training, hard-to-fill vacancies, policies and strategies for worker retention, and strategies for engagement with underserved workers.

(4) Increasing business and entrepreneurial capacity, which may include assessing employer competitiveness, relationships with federal, state, and local entities, current partnerships, and information about sources of capital to start and grow businesses and to adopt innovative approaches and technologies.

(5) Strengthening national security, which may include information on procurement processes, critical inputs, sourcing, supply chains, and strategic implications of technologies and their use cases.

Tech Hubs designees must submit this data one time to provide a baseline status of the Tech Hub and to help assess the results of designee status as well as potential future federal investments.

EDA is particularly interested in public comment on how the proposed data collection will support the assessment of job quality, including in ways that rely on pairing this information administrative data for analysis and other ways to minimize burden, or if alternative information should be considered.

II. Method of Collection

Data will be collected electronically.

III. Data

OMB Control Number: 0610–0113.

Form Number(s): None.

Type of Review: Revision with extension.

Affected Public: Tech Hubs designees, which may include a(n): Institution of higher education; State, territorial, local or Tribal governments or other political subdivisions of a State, including State and local agencies, or a consortium thereof; Industry groups or firms in relevant technology, innovation, or manufacturing sectors; Economic development organizations or similar entities that are focused primarily on improving science, technology, innovation, entrepreneurship, or access to capital; Labor organizations or workforce training organizations, which may include State and local workforce development boards; Economic development entities with relevant expertise, including a district organization; Organizations that contribute to increasing the participation of underserved populations in science, technology, innovation, and entrepreneurship; Venture development organizations; Organizations that promote local economic stability, high wage domestic jobs, and broad-based economic opportunities, such as employee ownership membership associations and State or local employee ownerships and cooperative development centers, financial institutions and investment funds, including community development financial institutions and minority depository institutions; Elementary schools and secondary schools, including area career and technical education schools; National laboratories; Federal laboratories; Manufacturing extension centers; Manufacturing U.S.A. Institutes; Transportation planning organizations; A cooperative extension services; Organizations that represent the perspectives of underserved communities in economic development initiatives; and Institutions receiving an award under the National Science Foundation's (NSF) Regional Innovation Engines Program.

Preliminary Estimated Number of Respondents: Consortium Lead Members/Tech Hubs Designee Consortia: 31 respondents, responding once.

Estimated Time Per Response: Consortium Lead Members/Tech Hubs Designee Consortia: 3 hours.

Estimated Total Annual Burden Hours: 186 hours.

Type of respondent (one time)	Number of respondents	Hours per response	Number of responses per year	Total estimated time (hours)
Lead Consortium Members/Tech Hubs Designee Consortia	31	3	2	186
Total	31	3	2	186

Estimated Total Annual Cost to Public: $115,394 (cost assumes application of U.S. Bureau of Labor Statistics second quarter 2022 mean hourly employer costs for employee compensation for professional and related occupations of $62.04).

Respondent's Obligation: Mandatory for Consortium Lead Members.

Legal Authority: Stevenson Wydler Technology Innovation Act of 1980, Section 28 (15 U.S.C. 3722a).

IV. Request for Comments

This information collection request may be viewed at *reginfo.gov.* Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments.''

Sheleen Dumas,

Departmental PRA Compliance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

XRIN 0694–XC128

Notice of Request for Public Comments on Section 232 National Security Investigation of Imports of Polysilicon and its Derivatives

AGENCY: Bureau of Industry and Security, Office of Strategic Industries and Economic Security, U.S. Department of Commerce.

ACTIONS: Notice of request for public comments.

SUMMARY: On July 1, 2025, the Secretary of Commerce initiated an investigation to determine the effects on the national security of imports of polysilicon and its derivatives. This investigation has been initiated under section 232 of the Trade Expansion Act of 1962, as amended (Section 232). Interested parties are invited to submit written comments, data, analyses, or other information pertinent to the investigation to the Department of Commerce's (Department) Bureau of Industry and Security (BIS), Office of Strategic Industries and Economic Security. This notice identifies issues on which the Department is especially interested in obtaining the public's views.

DATES: Comments may be submitted at any time but must be received by August 6, 2025.

ADDRESSES: Comments on this notice may be submitted to the Federal rulemaking portal at: *www.regulations.gov.* The *regulations.gov* ID for this notice is BIS–2025–0028. Please refer to XRIN 0694–XC128 in all comments.

All filers using the portal should use the name of the person or entity submitting the comments as the name of their files, in accordance with the instructions below. Anyone submitting business confidential information should clearly identify the business confidential portion at the time of submission, file a statement justifying nondisclosure and referring to the specific legal authority claimed, and provide a non-confidential version of the submission.

For comments submitted electronically containing business confidential information, the file name of the business confidential version should begin with the characters ''BC.'' Any page containing business confidential information must be clearly marked ''BUSINESS CONFIDENTIAL'' on the top of that page. The corresponding non-confidential version

of those comments must be clearly marked ''PUBLIC.'' The file name of the non-confidential version should begin with the character ''P.'' Any submissions with file names that do not begin with either a ''BC'' or a ''P'' will be assumed to be public and will be made publicly available at: *https://www.regulations.gov.* Commenters submitting business confidential information are encouraged to scan a hard copy of the non-confidential version to create an image of the file, rather than submitting a digital copy with redactions applied, to avoid inadvertent redaction errors which could enable the public to read business confidential information.

FOR FURTHER INFORMATION CONTACT: Stephen Astle, Director, Defense Industrial Base Division, Office of Strategic Industries and Economic Security, Bureau of Industry and Security, U.S. Department of Commerce (202) 482–4506, *Polysilicon232@bis.doc.gov*. For more information about the Section 232 program, including the regulations and the text of previous investigations, see *www.bis.doc.gov/232.*

SUPPLEMENTARY INFORMATION:

Background

On July 1, 2025, the Secretary of Commerce initiated an investigation under Section 232 (19 U.S.C. 1862) to determine the effects on national security of imports of polysilicon and its derivatives.

Request for Public Comments

This investigation is being undertaken in accordance with part 705 of the National Security Industrial Base Regulations (15 CFR parts 700 to 709) (NSIBR). Interested parties are invited to submit written comments, data, analyses, or information pertinent to this investigation to BIS's Office of Strategic Industries and Economic Security no later than August 6, 2025. The Department is particularly interested in comments and information directed at the criteria listed in § 705.4 of the regulations as they affect national security, including the following:

(i) the current and projected demand for polysilicon and its derivatives in the United States;

(ii) the extent to which domestic production of polysilicon and its derivatives can meet domestic demand;

(iii) the role of foreign supply chains, particularly of major exporters, in meeting United States demand for polysilicon and its derivatives;

(iv) the concentration of U.S. imports of polysilicon and its derivatives from a small number of suppliers and the associated risks;

(v) the impact of foreign government subsidies and predatory trade practices on the competitiveness of the polysilicon and its derivatives, in the United States;

(vi) the economic impact of artificially suppressed prices of polysilicon and its derivatives due to foreign unfair trade practices and state-sponsored overproduction;

(vii) the potential for export restrictions by foreign nations, including the ability of foreign nations to weaponize their control over supplies of polysilicon and its derivatives;

(viii) the feasibility of increasing domestic capacity for polysilicon and its derivatives to reduce import reliance;

(ix) the impact of current trade policies on domestic production of polysilicon and its derivatives, and whether additional measures, including tariffs or quotas, are necessary to protect national security; and

(x) any other relevant factors.

Material submitted by members of the public that is business confidential information will be exempted from public disclosure as provided for by § 705.6 of the regulations (see the **ADDRESSES** section of this notice). Communications from agencies of the United States Government will not be made available for public inspection. BIS does not maintain a separate public inspection facility. Requesters should first view the Bureau's web page, which can be found at: *https://efoia.bis.doc.gov/* (see ''Electronic FOIA'' heading). If requesters cannot access the website, they may call (202) 482–0795 for assistance. The records related to this assessment are made accessible in accordance with the regulations published at 15 CFR 4.1, *et seq.*

Julia Khersonsky,

Deputy Assistant Secretary for Strategic Trade.

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Emerging Technology Technical Advisory Committee

AGENCY: Bureau of Industry and Security, U.S. Department of Commerce.

ACTION: Notice of partially closed meeting.

SUMMARY: The Emerging Technology Technical Advisory Committee (ETTAC) advises and assists the Secretary of Commerce and other Federal officials on matters related to export control policies; the ETTAC will meet to review and discuss these matters. The meeting will be partially closed to the public pursuant to the exemptions under the Federal Advisory Committee Act (FACA) and the Government in the Sunshine Act.

DATES: The meeting will be held on August 1, 2025, from 9:30 a.m. to 4:00 p.m., Eastern Time (all times are Eastern Time). The closed session will start at 9:30 a.m. and end at approximately 3:00 p.m., and the open session will start at approximately 3:00 p.m. and will end no later than 4:00 p.m. Individuals requiring special accommodations to access the open session should contact *TAC@bis.doc.gov* no later than 11:59 p.m. on July 25, 2025, so that appropriate arrangements can be made. Individuals interested in participating virtually should contact *TAC@bis.doc.gov* no later than 11:59 p.m. on July 29, 2025.

ADDRESSES: The open session of the meeting will be held in Room 38026 of the Herbert C. Hoover Building, 1401 Constitution Avenue NW, Washington, DC (enter through the Main Entrance on 14th Street between Constitution and Pennsylvania Avenues). The open session will be accessible to the public via teleconference.

FOR FURTHER INFORMATION CONTACT: Kevin Coyne, Committee Liaison Officer, Bureau of Industry and Security, U.S. Department of Commerce. For additional information, contact *TAC@bis.doc.gov* or by phone 202–482–4933.

SUPPLEMENTARY INFORMATION:

Background

The Emerging Technology Technical Advisory Committee (ETTAC) advises and assists the Secretary of Commerce (Secretary) and other Federal officials and agencies with respect to actions designed to carry out the policy set forth in Section 1752 of the Export Control Reform Act. The purpose of the meeting is to have ETTAC members and U.S. Government representatives mutually review updated technical data and policy-driving information that has been gathered.

Agenda

The open session will include open business discussions and industry presentations. The closed session will include discussion of matters determined to be exempt from the open meeting and public participation requirements found in Sections 1009(a)(1) and 1009(a)(3) of the Federal Advisory Committee Act (FACA) (5

U.S.C. 1001–1014). The exemption is authorized by Section 1009(d) of the FACA, which permits the closure of advisory committee meetings, or portions thereof, if the head of the agency to which the advisory committee reports determines such meetings may be closed to the public in accordance with subsection (c) of the Government in the Sunshine Act (5 U.S.C. 552b(c)). In this case, the applicable provisions of 5 U.S.C. 552b(c) are subsection 552b(c)(4), which permits closure to protect trade secrets and commercial or financial information that is privileged or confidential, and subsection 552b(c)(9)(B), which permits closure to protect information that would be likely to disclose information the premature disclosure of which would be likely to significantly frustrate implementation of a proposed agency action. The closed session of the meeting will involve committee discussions and guidance regarding U.S. Government strategies and policies.

Open Session Attendance

The open session will be accessible via teleconference. Registration in advance is required to receive the meeting invite for virtual attendance. Individuals interested in participating virtually should contact *TAC@bis.doc.gov* no later than 11:59 p.m. Eastern Time on July 29, 2025. A limited number of seats will be available for members of the public to attend the open session in person on a first-come basis. Reservations to attend in person are not accepted. Registration in advance is not required for in-person attendance, but you will be asked to sign an attendance log when you arrive.

Special Accommodations

Individuals requiring special accommodations to access the open session should contact *TAC@bis.doc.gov* no later than 11:59 p.m. Eastern Time on July 25, 2025, so that appropriate arrangements can be made.

Public Participation

To the extent that time permits, members of the public may present oral statements to the ETTAC. The public may submit written statements at any time before or after the meeting. However, to facilitate distribution of materials to the ETTAC members, the ETTAC suggests that members of the public forward their materials prior to the meeting via email to *TAC@bis.doc.gov*. Materials submitted by the public will be made public and therefore should not contain confidential information. Materials submitted by the public will be accessible via the Technical Advisory Committee (TAC) site at *https://tac.bis.doc.gov,* within 30 days after the meeting.

Closure Determination

The Deputy Assistant Secretary for Administration, performing the non-exclusive functions and duties of the Chief Financial Officer and Assistant Secretary for Administration, with the concurrence of the delegate of the General Counsel, formally determined pursuant to 5 U.S.C. 1009(d), that the portion of the meeting dealing with pre-decisional changes to the Commerce Control List and the U.S. export control policies shall be exempt from the provisions relating to public meetings found in 5 U.S.C. 1009(a)(1) and 1009(a)(3). The remaining portions of the meeting will be open to the public.

Meeting Cancellation

If the meeting is cancelled, a cancellation notice will be posted on the TAC website at *https://tac.bis.doc.gov*.

Kevin Coyne,

Committee Liaison Officer.

Notice of Request for Public Comments on Section 232 National Security Investigation of Imports of Unmanned Aircraft Systems (UAS) and Their Parts and Components

AGENCY: Bureau of Industry and Security, Office of Strategic Industries and Economic Security, U.S. Department of Commerce.

ACTION: Notice of request for public comments.

SUMMARY: On July 1, 2025, the Secretary of Commerce initiated an investigation to determine the effects on the national security of imports of unmanned aircraft systems (UAS) and their parts and components. This investigation has been initiated under section 232 of the Trade Expansion Act of 1962, as amended (Section 232). Interested parties are invited to submit written comments, data, analyses, or other information pertinent to the investigation to the Department of Commerce's (Department) Bureau of Industry and Security (BIS), Office of Strategic Industries and Economic Security. This notice identifies issues on which the Department is especially interested in obtaining the public's views.

DATES: Comments may be submitted at any time but must be received by August 6, 2025.

ADDRESSES: Comments on this notice may be submitted to the Federal rulemaking portal at: *www.regulations.gov.* The *regulations.gov* ID for this notice is BIS–2025–0059. Please refer to XRIN 0694–XC130 in all comments.

All filers using the portal should use the name of the person or entity submitting the comments as the name of their files, in accordance with the instructions below. Anyone submitting business confidential information should clearly identify the business confidential portion at the time of submission, file a statement justifying nondisclosure and referring to the specific legal authority claimed, and provide a non-confidential version of the submission.

For comments submitted electronically containing business confidential information, the file name of the business confidential version should begin with the characters ''BC.'' Any page containing business confidential information must be clearly marked ''BUSINESS CONFIDENTIAL'' on the top of that page. The corresponding non-confidential version of those comments must be clearly marked ''PUBLIC.'' The file name of the non-confidential version should begin with the character ''P.'' Any submissions with file names that do not begin with either a ''BC'' or a ''P'' will be assumed to be public and will be made publicly available at: *https://www.regulations.gov.* Commenters submitting business confidential information are encouraged to scan a hard copy of the non-confidential version to create an image of the file, rather than submitting a digital copy with redactions applied, to avoid inadvertent redaction errors which could enable the public to read business confidential information.

FOR FURTHER INFORMATION CONTACT: Stephen Astle, Director, Defense Industrial Base Division, Office of Strategic Industries and Economic Security, Bureau of Industry and Security, U.S. Department of Commerce, (202) 482–4506, *UAS232@bis.doc.gov.* For more information about the Section 232 program, including the regulations and the text of previous investigations, see *www.bis.doc.gov/232.*

SUPPLEMENTARY INFORMATION:

Background

On July 1, 2025, the Secretary of Commerce initiated an investigation under Section 232 (19 U.S.C. 1862) to determine the effects on national security of imports of unmanned aircraft systems (UAS) and their parts and components.

Request for Public Comments

This investigation is being undertaken in accordance with part 705 of the National Security Industrial Base Regulations (15 CFR parts 700 to 709) (NSIBR). Interested parties are invited to submit written comments, data, analyses, or information pertinent to this investigation to BIS's Office of Strategic Industries and Economic

Security no later than August 6, 2025. The Department is particularly interested in comments and information directed at the criteria listed in § 705.4 of the regulations as they affect national security, including the following:

(i) the current and projected demand for UAS and their parts and components in the United States;

(ii) the extent to which domestic production of UAS and their parts and components can meet domestic demand;

(iii) the role of foreign supply chains, particularly of major exporters, in meeting United States demand for UAS and their parts and components;

(iv) the concentration of U.S. imports of UAS and their parts and components from a small number of suppliers or foreign nations and the associated risks;

(v) the impact of foreign government subsidies and predatory trade practices on the competitiveness of the UAS and their parts and components industry, in the United States;

(vi) the economic impact of artificially suppressed prices of UAS and their parts and components due to foreign unfair trade practices and state-sponsored overproduction;

(vii) the potential for foreign nations and companies to weaponize their control over supplies of UAS and their parts and components;

(viii) the potential for foreign nations and companies to weaponize the capabilities or attributes of foreign-built UAS systems and their parts or components;

(ix) the feasibility of increasing domestic capacity for UAS and their parts and components to reduce import reliance;

(x) the impact of current trade policies on domestic production of UAS and their parts and components, and whether additional measures, including tariffs or quotas, are necessary to protect national security; and

(xi) any other relevant factors.

Material submitted by members of the public that is business confidential information will be exempted from public disclosure as provided for by § 705.6 of the regulations (see the **ADDRESSES** section of this notice). Communications from agencies of the United States Government will not be made available for public inspection. BIS does not maintain a separate public inspection facility. Requesters should first view the Bureau's web page, which can be found at: *https://efoia.bis.doc.gov/* (see ''Electronic FOIA'' heading). If requesters cannot access the website, they may call (202) 482–0795 for assistance. The records related to this assessment are made accessible in accordance with the regulations published at 15 CFR 4.1, *et seq.*

Julia Khersonsky,

Deputy Assistant Secretary for Strategic Trade.

DEPARTMENT OF COMMERCE

International Trade Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Domestic and International Client Export Services and Customized Forms Renewal

AGENCY: International Trade Administration, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before September 15, 2025.

ADDRESSES: Interested persons are invited to submit written comments to Katelynn Byers, PRA Process Administrator by email, *Katelynn.Byers@trade.gov* or *PRA@trade.gov.* Please refer to OMB Control Number 0625–0143 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Katelynn Byers, PRA Process Administrator by phone, 202–989–5979, and by email, *Katelynn.Byers@trade.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The International Trade Administration's (ITA) is mandated by Congress to broaden and deepen the U.S. exporter base and to attract inward foreign direct investment. It accomplishes this by providing counseling, programs and services to help U.S. organizations export and conduct business in overseas markets. This information collection package enables ITA to provide appropriate global trade services to U.S. businesses and international buyers.

ITA offers a variety of services to enable clients to begin exporting and global trade or to expand existing export and global trade efforts. Clients may learn about available services from business related entities such as the National Association of Manufacturers, Federal Express, State Economic Development offices, the internet or word of mouth. ITA provides a standard set of services to assist clients with identifying potential overseas partners, establishing meeting programs with appropriate overseas business contacts and providing due diligence reports on potential overseas business partners. ITA also provides other global trade related services considered to be of a ''customized nature'' because they do not fit into the standard set of services but are driven by unique business needs of individual clients.

The dissemination of international market information and potential business opportunities for U.S. companies interested and actively exporting and conducting business globally are critical components of the ITA's global trade assistance programs and services. U.S. companies are able to conveniently access and indicate their interest in services by completing the appropriate forms via multiple ways, including via a website (*e.g.* trade.gov), web-based survey or form links, or paper-based forms.

ITA works closely with clients to educate them about the exporting/importing process and to help prepare them for global trading opportunities. When a client is ready to begin the process the field staff provide counseling to assist in the development of a global trade strategy. ITA provides fee-based, global trade related services designed to help a client's business presence internationally. The type of service that is offered to a client depends upon a client's business goals and where they are in the export/import process. Some clients are at the beginning of the process and require assistance with identifying potential distributors, whereas other clients may be ready to sign a contract with a potential distributor and require due diligence assistance.

Before ITA can provide global trade and export-related services to clients, such as assistance with identifying potential partners or providing due diligence, specific information is required to determine the client's business objectives and needs. For example, before ITA can provide a service to identify potential business partners, information is needed regarding if the client would like a potential partner to have specific technical qualifications, coverage in a specific market, English or foreign language ability or warehousing requirements. This information collection is designed to elicit such data so that appropriate services can be proposed and conducted to most effectively meet the client's global trading goals. Without these forms ITA is unable to provide services when requested by clients.

The forms ask U.S. businesses standard questions about their company details, demographic information, export/import experience, information about the products or services they wish to export/import and their goals. A few questions are tailored to a specific program type and will vary slightly with each program. ITA staff use this information to gain an understanding of clients' needs and objectives so that they can provide appropriate and effective assistance tailored to each U.S. business' particular global trade requirements.

II. Method of Collection

Clients will be asked to provide their information in multiple ways, including via a website (*e.g.* trade.gov), web-based survey or form links, or paper-based forms.

III. Data

OMB Control Number: 0625–0143.

Form Number(s): None.

Type of Review: Regular submission, revision of a current information collection.

Affected Public: Business or other for-profit organizations; Not-for-profit institutions; State, Local, or Tribal government.

Estimated Number of Respondents: 200,000.

Estimated Time per Response: 10 minutes.

Estimated Total Annual Burden Hours: 34,133 hours.

Estimated Total Annual Cost to Public: $1,030,485.

Respondent's Obligation: Voluntary.

Legal Authority: U.S. Code: 15 U.S.C. 4724.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Departmental PRA Compliance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

International Trade Administration

[C–570–187]

Overhead Door Counterbalance Torsion Springs From the People's Republic of China: Preliminary Affirmative Determination of Critical Circumstances, in Part, in the Countervailing Duty Investigation

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that critical circumstances exist, in part, with respect to imports of overhead door counterbalance torsion springs (overhead door springs) from certain producers and exporters from the People's Republic of China (China). Interested parties are invited to comment on this preliminary determination of critical circumstances.

DATES: Applicable July 16, 2025.

FOR FURTHER INFORMATION CONTACT: Laurel Smalley, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482–3456.

SUPPLEMENTARY INFORMATION:

Background

On October 29, 2024, Commerce received a countervailing duty (CVD) petition concerning imports of overhead door springs from China filed in proper form on behalf of the petitioners, IDC Group Inc., Iowa Spring Manufacturing, Inc., and Service Spring Corp (collectively, the petitioners).[1] On November 25, 2024, we initiated this investigation [2] and, on April 3, 2025, Commerce published its affirmative *Preliminary Determination*.[3]

Commerce selected Foshan Nanhai Xulong Spring Factory (Xulong Spring) and Tianjin Wangxia Spring Co., Ltd. (Tianjin Wangxia) as the individually-examined respondents in this investigation.[4]

On June 24, 2025, the petitioners alleged that critical circumstances exist with respect to imports of overhead door springs from China, pursuant to section 703(e)(1) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 531.206.[5]

In accordance with section 703(e)(1) of the Act and 19 CFR 351.206(c)(1), because the petitioners submitted the critical circumstances allegation more than 30 days before the scheduled date of the final determination,[6] Commerce will make a preliminary finding as to whether there is a reasonable basis to

[4] *See* Memorandum, ''Respondent Selection,'' dated December 17, 2024.

[5] *See* Petitioners' Letter, ''Petitioners' Allegation of Critical Circumstances,'' dated June 24, 2025 (Critical Circumstances Allegation).

[6] The final determination for this CVD investigation is currently due no later than August 11, 2025. *See Preliminary Determination,* 90 FR at 14631.

believe or suspect that critical circumstances exist. Commerce is issuing its preliminary finding of critical circumstances within 30 days after the petitioners submitted the allegation.[7]

Period of Investigation (POI)

The POI is January 1, 2023, through December 31, 2023.

Critical Circumstances Allegation

The petitioners allege that there was a massive increase of imports of overhead door springs from China and provided monthly import data for the period June 2024 through March 2025.[8] The petitioners state that a comparison of total imports, by quantity, for the base period June 2024 through October 2024 to the comparison period November 2024 through March 2025, shows that imports of overhead door springs from China increased by 25.44 percent,[9] which is considered ''massive'' under 19 CFR 351.206(h)(2). The petitioners also allege that there is a reasonable basis to believe that there are subsidies in this investigation which are inconsistent with the Subsidies and Countervailing Measures Agreement of the World Trade Organization (SCM Agreement).[10]

Critical Circumstances Analysis

Section 703(e)(1) of the Act provides that Commerce will preliminarily determine that critical circumstances exist in a CVD investigation if there is a reasonable basis to believe or suspect that: (A) the alleged countervailable subsidy is inconsistent with the SCM Agreement;[11] and (B) there have been massive imports of the subject merchandise over a relatively short period.

In determining whether there are ''massive imports'' over a ''relatively short period,'' pursuant to section 703(e)(1)(B) of the Act and 19 CFR 351.206(h) and (i), Commerce normally compares the import volumes of the subject merchandise for at least three months immediately preceding the filing of the petition (*i.e.,* the base period) to a comparable period of at least three months following the filing of the petition (*i.e.,* the comparison period). However, the regulations also provide that if Commerce finds that importers, or exporters or producers, had reason to believe, at some time prior to the beginning of the proceeding, that a proceeding was likely, Commerce may consider a period of not less than three months from the earlier time.[12] Imports must increase by at least 15 percent during the comparison period to be considered massive.[13]

Alleged Countervailable Subsidies Are Inconsistent With the SCM Agreement

Xulong Spring

In the *Preliminary Determination,* we found that Xulong Spring, pursuant to section 776(b) of the Act, received countervailable subsidies inconsistent with the SCM Agreement under section 703(e)(1)(A) of the Act.[14] Such programs include the Export Loans from Chinese State-Owned Banks, Export Seller's Credit, Export Buyer's Credit, Export Credit Guarantees, Government of China and Sub-Central Government Subsidies for the Development of Famous Brands and China World Top Brands, Foreign Trade Development Fund Grants, Export Assistance Grants, Small and Medium-Sized Enterprises International Market Exploration/Development Fund programs, which were found to be export contingent in the *Preliminary Determination.*[15] Thus, because we preliminarily found that these programs are export contingent, we preliminarily find that the criterion under section 703(e)(1)(A) of the Act has been met.[16]

Tianjin Wangxia

In the *Preliminary Determination,* we found that Tianjin Wangxia did not receive any measurable countervailable subsidies found to be inconsistent with the SCM Agreement under section 703(e)(1)(A) of the Act.[17] However, on April 4, 2025, Tianjin Wangxia withdrew from the CVD investigation, and subsequently, Commerce cancelled verification of Tianjin Wangxia.[18] Therefore, because Commerce was unable to verify Tianjin Wangxia's claims of non-use for certain countervailable, export-contingent programs, we find that Tianjin Wangxia also received export-contingent countervailable subsidies under the Export Loans from Chinese State-Owned Banks, Export Seller's Credit, Export Buyer's Credit, Export Credit Guarantees, Government of China and Sub-Central Government Subsidies for the Development of Famous Brands and China World Top Brands, Foreign Trade Development Fund Grants, Export Assistance Grants, Small and Medium-Sized Enterprises International Market Exploration/Development Fund programs. Thus, because we preliminarily found that these programs are export contingent, we preliminarily find that the criterion under section 703(e)(1)(A) of the Act has been met with respect to Tianjin Wangxia.

Non-Responsive Companies

As explained in the *Preliminary Determination,* we preliminarily applied total adverse facts available (AFA) to Beled Co., Ltd./Beled (Shenxhen) Commerce Co., Ltd.; Jiaxing Taike Springs Co., Ltd; Kowloon Metal Spring Factory; Ningbo I Promise Import Export; and Xiamen Globe Truth GT Industries, pursuant to section 776(b) of the Act.[19] In applying total AFA to these five companies, we preliminarily determined that each benefited from countervailable subsidies under the Export Loans from Chinese State-Owned Banks, Export Seller's Credit, Export Buyer's Credit, Export Credit Guarantees, Government of China and Sub-Central Government Subsidies for the Development of Famous Brands and China World Top Brands, Foreign Trade Development Fund Grants, Export Assistance Grants, Small and Medium-Sized Enterprises International Market Exploration/Development Fund programs. Because we found that these programs are export contingent and therefore inconsistent with the SCM Agreement in the *Preliminary Determination,* we now preliminarily find, pursuant to section 776(b) of the Act, that the five non-responsive companies meet the criterion delineated by section 703(e)(1)(A) of the Act.

Massive Imports

There are no cooperative respondents under investigation. Therefore, in accordance with section 703(e)(1), and sections 776(a) and (b) of the Act, Commerce preliminarily determines that critical circumstances exist with respect to imports of overhead door springs from China for Xulong Spring,

[7] *See* 19 CFR 351.206(c)(2)(ii). In this case, 30 days after the petitioners submitted the allegation would place the deadline on Thursday, July 24, 2025.

[8] *See* Critical Circumstances Allegation at 7 and Attachment.

[9] *Id.* at 7.

[10] *Id.* at 4–5.

[11] Commerce limits its critical circumstances findings to those subsidies contingent upon export performance or use of domestic over imported goods (*i.e.,* those prohibited under Article 3 of the SCM Agreement). *See, e.g., Final Affirmative Countervailing Duty Determination and Final Negative Critical Circumstances Determination: Carbon and Certain Alloy Steel Wire from Germany,* 67 FR 55808–10 (August 30, 2002).

[12] *See* 19 CFR 351.206(i).

[13] *See* 19 CFR 351.206(h)(2).

[14] *See Preliminary Determination* PDM at 18–23.

[15] *Id.*

[16] *Id.*

[17] *See Preliminary Determination* PDM at 31–36.

[18] *See* Tianjin Wangxia's Letter, ''Tianjin Wangxia's Withdrawal of Participation in the Investigation,'' dated April 4, 2025; *see also* Commerce's Letter, ''Cancellation of Tianjin Wangxia Spring Co., Ltd. Verification,'' dated April 4, 2025.

[19] *See Preliminary Determination* PDM at 18–19.

Tianjin Wangxia, and the non-responsive companies.

To determine whether imports are massive within the meaning of 19 CFR 351.206(h) for all other exporters or producers, Commerce's normal practice is to subtract shipments reported by the cooperating mandatory respondents from the shipment data of subject merchandise. However, as stated above, there are no cooperative respondents under investigation. Therefore, for all other exporters and producers, we compared the monthly shipment data using import data from Trade Data Monitor (TDM) for the six months immediately preceding and following the filing of the petition. Because the petition was filed on October 29, 2024, in order to determine whether there was a massive surge in imports, Commerce compared the total volume of shipments during the period May 2024 through October 2024 with the volume of shipments during the period November 2024 through April 2025.[20] The quantity of shipments recorded in the TDM data for U.S. harmonized tariff schedule codes 7320.20.5020, 7320.20.5045, and 7320.20.5060 during the comparison period did not exceed the quantity of shipments recorded for the base period by 15 percent.[21] Therefore, we determine that the record does not support a determination that there is a massive surge in imports between the base and comparison periods for all other exporters and producers of overhead door springs from China.[22]

Accordingly, consistent with section 703(e)(1) of the Act, Commerce preliminarily determines that critical circumstances exist for imports of overhead door springs from China with respect to Xulong Spring, Tianjin Wangxia, and the non-responsive companies under investigation, and that critical circumstances do not exist for all other exporters or producers not individually examined. For the underlying data and results of Commerce's analysis, *see* the Critical Circumstances Analysis Memorandum.

Final Determination

We will make a final determination concerning critical circumstances in the final determination of this investigation, which is currently scheduled for August 11, 2025.

Public Comment

Case briefs or other written comments limited to Commerce's preliminary critical circumstances determination may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which this notice is published in the **Federal Register**. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[23] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[24]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this investigation, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[25] Further, we request that interested parties limit their executive summary of each issue to no more than 450 words, not including citations. We intend to use the executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final determination in this investigation. We request that interested parties include footnotes for relevant citations in the executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[26]

Suspension of Liquidation

In accordance with section 703(e)(2)(A) of the Act, for Xulong Spring, Tianjin Wangxia, and the non-responsive companies, we intend to direct U.S. Customs and Border Protection (CBP) to suspend liquidation of any unliquidated entries of subject merchandise from China entered, or withdrawn from warehouse for consumption, on or after January 3, 2025, which is 90 days prior to the date of publication of the *Preliminary Determination* in the **Federal Register**. For such entries, CBP shall require a cash deposit equal to the estimated preliminary subsidy rates established in the *Preliminary Determination.* This suspension of liquidation will remain in effect until further notice.

U.S. International Trade Commission (ITC) Notification

In accordance with section 703(f) of the Act, Commerce intends to notify the ITC of this preliminary determination of critical circumstances.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act, and 19 CFR 351.205(c).

Dated: July 11, 2025.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–192]

Erythritol from People's Republic of China: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination and Extension of Provisional Measures

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that erythritol from the People's Republic of China (China) is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is April 1, 2024, through September 30, 2024. Interested parties are invited to comment on this preliminary determination.

DATES: Applicable July 16, 2025.

FOR FURTHER INFORMATION CONTACT: Brian Smith or Hannah Lee, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1766 or (202) 482–1216, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 733(b) of the Tariff Act of 1930, as amended (the Act). Commerce published the notice of initiation of this investigation on January 2, 2025.[1] On May 7, 2025, Commerce postponed the preliminary determination of this investigation and the deadline is now July 11, 2025.[2]

For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.[3] A list of topics included in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Investigation

The product covered by this investigation is erythritol from China. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the *Preamble* to Commerce's regulations,[4] the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage (*i.e.,* scope).[5] Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice*.[6] For a summary of the product coverage comments and rebuttal responses submitted to the record for this investigation, and accompanying discussion and analysis of all comments timely received, *see* the Preliminary Scope Decision Memorandum.[7] Commerce is not preliminarily modifying the scope language as it appeared in the *Initiation Notice. See* the scope in Appendix I to this notice.

Methodology

Commerce is conducting this investigation in accordance with section 731 of the Act. Pursuant to sections 776(a) and (b) of the Act, Commerce preliminarily has relied upon facts otherwise available, with adverse inferences, for the China-wide entity. For a full description of the methodology underlying Commerce's preliminary determination, *see* the Preliminary Decision Memorandum.

Combination Rates

In the *Initiation Notice,*[8] Commerce stated that it would calculate producer/exporter combination rates for the respondents that are eligible for a separate rate in this investigation. Policy Bulletin 05.1 describes this practice.[9]

Separate Rates

We have preliminarily granted a separate rate to certain companies that we did not select for individual examination.[10] In calculating the estimated weighted-average dumping margin for non-individually examined separate rate companies in a non-market economy LTFV investigation, Commerce normally looks to section 735(c)(5)(A) of the Act, which pertains to the calculation of the all-others rate in a market economy LTFV investigation, for guidance. Pursuant to section 735(c)(5)(A) of the Act, normally this rate shall be an amount equal to the weighted average of the estimated weighted-average dumping margins established for those companies individually examined, excluding zero and *de minimis* dumping margins, and any dumping margins based entirely under section 776 of the Act. The estimated weighted-average dumping margins in this preliminary determination are based entirely under section 776 of the Act. In an investigation where no estimated weighted-average dumping margins other than zero, *de minimis,* or those determined entirely under section 776 of the Act have been established for individually examined respondents, in accordance with section 735(c)(5)(B) of the Act, Commerce typically calculates a simple average of the dumping margins alleged in the petition and applies the results to all other producers and exporters not individually examined.[11] Therefore, in this preliminary determiantion, we are applying the simple average of the dumping margins alleged in the petition to the non-individually examined companies eligible for a separate rate. The simple average of the dumping margins allged in the Petition is 371.62 percent.[12]

Preliminary Determination

Commerce preliminarily determines that the following estimated weighted-average dumping margins exist:

Exporter	Producer	Estimated weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offsets) (percent)
Beijing Refine Biology Co., Ltd	Chuzhou Refine Biology Co., Ltd	371.62	371.53

Exporter	Producer	Estimated weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offsets) (percent)
Hunan Nutramax Inc	Hunan Nutramax Inc	371.62	371.53
Shandong Newnature Biotechnology Co., Ltd	Shandong Sanyuan Biotechnology Co., Ltd	371.62	371.53
China-Wide Entity [13]		450.64	450.64

* This rate is based on facts available with adverse inferences.

Suspension of Liquidation and Cash Deposit Requirements

In accordance with section 733(d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**, as discussed below. Further, pursuant to section 733(d)(1)(B) of the Act and 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit for estimated antidumping duties equal to the weighted average amount by which normal value exceeds U.S. price, as indicated in the chart above as follows: (1) for the producer/exporter combinations listed in the table above, the cash deposit rate is equal to the estimated weighted-average dumping margin listed for that combination in the table; (2) for all combinations of China producers/exporters of merchandise under consideration that have not established eligibility for their own separate rates, the cash deposit rate will be equal to the estimated weighted-average dumping margin established for the China-wide entity; and (3) for all third-county exporters of merchandise under consideration not listed in the table above, the cash deposit rate is the cash deposit rate applicable to the China producer/exporter combination (or the China-wide entity) that supplied that third-country exporter.

To determine the cash deposit rate, Commerce normally adjusts the estimated weighted-average dumping margin by the amount of domestic subsidy pass-through and export subsidies determined in a companion countervailing duty (CVD) proceeding when CVD provisional measures are in effect. Accordingly, where Commerce has made a preliminary affirmative determination for domestic subsidy pass-through or export subsidies, Commerce has offset the calculated estimated weighted-average dumping margin by the appropriate rate(s). Any such adjusted rates may be found in the ''Preliminary Determination'' section above.

Should provisional measures in the companion CVD investigation expire prior to the expiration of provisional measures in this LTFV investigation, Commerce will direct CBP to begin collecting cash deposits for estimated antidumping duties at a rate equal to the estimated weighted-average dumping margins calculated in this preliminary determination unadjusted for the passed-through domestic subsidies or for export subsidies at the time the CVD provisional measures expire.

These suspension of liquidation instructions and cash deposit requirements will remain in effect until further notice.

Disclosure

Normally, Commerce discloses to interested parties the calculations performed in connection with a preliminary determination within five days of its public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b). However, because Commerce preliminarily applied AFA to the China-wide entity, including the mandatory respondents, in this investigation, in accordance with section 776 of the Act, and the applied AFA rate is based solely on the information included in the Petition, there are no calculations to disclose.[14]

Verification

Because the two mandatory respondents in this investigation did not provide information requested by Commerce, and Commerce preliminarily determines that both of the mandatory respoondents have been uncooperative, verification will not be conducted.

Public Comment

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than 30 days after the date of publication of this preliminary determination in the **Federal Register**. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[15] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[16]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their briefs that should be limited to five pages total, including footnotes. In this investigation, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[17] Further, we request that interested parties limit their executive summary of each issue to no more than 450 words, not including citations. We intend to use the executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final determination in this investigation. We request that interested parties include footnotes for relevant citations in the executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[18]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, within 30 days after the date of publication of this notice. Requests

[14] *Id.*

[15] *See* 19 CFR 351.309(d); *see also Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings,* 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Final Rule*).

[16] *See* 19 351.309(c)(2) and (d)(2).

[17] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

[18] *See APO* and *Service Final Rule.*

should contain: 1) the party's name, address, and telephone number; 2) the number of participants and whether any participant is a foreign national; and 3) a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at a time and date to be determined.

Postponement of Final Determination and Extension of Provisional Measures

Section 735(a)(2) of the Act provides that a final determination may be postponed until not later than 135 days after the date of the publication of the preliminary determination if, in the event of an affirmative preliminary determination, a request for such postponement is made by exporters who account for a significant proportion of exports of the subject merchandise, or in the event of a negative preliminary determination, a request for such postponement is made by the petitioners. Pursuant to 19 CFR 351.210(e)(2), Commerce requires that requests by respondents for postponement of a final antidumping determination be accompanied by a request for extension of provisional measures from a four-month period to a period not more than six months in duration.

On June 16 and 17, 2025, pursuant to 19 CFR 351.210(e), both mandatory respondents, Dongxiao and Sanyuan, requested that Commerce postpone the final determination and that provisional measures be extended to a period not to exceed six months.[19] In accordance with section 735(a)(2)(A) of the Act and 19 CFR 351.210(b)(2)(ii), because: (1) the preliminary determination is affirmative; (2) the requesting exporters account for a significant proportion of exports of the subject merchandise; and (3) no compelling reasons for denial exist, Commerce is postponing the final determination and extending the provisional measures from a four-month period to a period not greater than six months. Accordingly, Commerce will make its final determination no later than 135 days after the date of publication of this preliminary determination.

U.S. International Trade Commission (ITC) Notification

In accordance with section 733(f) of the Act, Commerce will notify the ITC of its preliminary determination of sales at LTFV. If the final determination is affirmative, the ITC will determine before the later of 120 days after the date of this preliminary determination or 45 days after the final determination whether imports of the subject merchandise are materially injuring, or threaten material injury to, the U.S. industry.

Notification to Interested Parties

This determination is issued and published in accordance with sections 733(f) and 777(i)(1) of the Act, and 19 CFR 351.205(c).

Dated: July 11, 2025.

Christopher Abbott,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The product within the scope of this investigation is erythritol, which is a sugar alcohol, commonly referred to as a polyol, typically produced by the fermentation of glucose using enzymes and yeast or yeast-like fungi (though the scope includes erythritol produced using any other feedstock or organism). Erythritol is an organic compound with the molecular formula $C_4 H_{10} O_4$ and a Chemical Abstracts Service (CAS) registry number of 149–32–6. Other names for erythritol include *meso*–erythritol, (2R, 3S)–butan–1,2,3,4–tetrol, butane–1,2,3,4–tetrol, or *meso*–1,2,3,4–Tetrahydryoxybutane.

Erythritol typically appears as a white crystalline, odorless product that rapidly dissolves in water. While erythritol is typically produced in the crystalline form or as a fine powder or in directly compressible form, the scope of this investigation covers all physical forms and grades of erythritol, including organic erythritol.

The merchandise covered by this investigation is classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheading 2905.49.4000. Erythritol may also enter under HTSUS subheading 2106.90.9998. Although the HTSUS subheadings and the CAS registry number are provided for convenience and customs purposes, the written description of the merchandise covered by this investigation is dispositive.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE835]

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to the Washington Department of Transportation Mukilteo Wingwalls Repair Project in Puget Sound, Washington

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request for comments on proposed authorization and possible renewal.

SUMMARY: NMFS has received a request from the Washington Department of Transportation (WSDOT) for authorization to take marine mammals incidental to the Mukilteo Wingwalls Repair Project in Puget Sound, Washington. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an incidental harassment authorization (IHA) to incidentally take marine mammals during the specified activities. NMFS is also requesting comments on a possible one-time, 1-year renewal that could be issued under certain circumstances and if all requirements are met, as described in Request for Public Comments at the end of this notice. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorization and agency responses will be summarized in the final notice of our decision.

DATES: Comments and information must be received no later than August 15, 2025.

ADDRESSES: Comments should be addressed to Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service and should be submitted via email to *ITP.Fleming@noaa.gov.* Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.* In case of problems accessing these documents, please call the contact listed below.

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or

received after the end of the comment period. Comments, including all attachments, must not exceed a 25-megabyte file size. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Kate Fleming, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed IHA is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the monitoring and reporting of the takings. The definitions of all applicable MMPA statutory terms used above are included in the relevant sections below and can be found in section 3 of the MMPA (16 U.S.C. 1362) and NMFS regulations at 50 CFR 216.103.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NAO 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has preliminarily determined that the issuance of the proposed IHA qualifies to be categorically excluded from further NEPA review.

Summary of Request

On February 27, 2025, NMFS received a request from the Washington Department of Transportation (WSDOT) for an IHA to take marine mammals incidental to the Mukilteo Wingwalls Repair Project in Puget Sound, Washington. Following NMFS' review of the application, and discussions between NMFS and WSDOT, the application was deemed adequate and complete on April 24, 2025. WSDOT submitted a final revised version on May 30, 2025. WSDOT's request is for take of nine species of marine mammals by Level B harassment and, for a subset of six of these species, Level A harassment. Neither WSDOT nor NMFS expect serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

NMFS previously issued IHAs to WSDOT for similar work. On July 25, 2014, NMFS issued a requested IHA for the Mukilteo Ferry Terminal Replacement Project, to place the new terminal at Tank Farm. Work was delayed and a new IHA was issued on August 2, 2015. On August 3, 2017, NMFS issued a requested IHA for Phase 2 of the Mukilteo Multimodal Project in Mukilteo, Washington, between August 1, 2017 and July 31, 2018 (82 FR 44164, September 21, 2017). This project was designed to relocate the Mukilteo Ferry Terminal approximately one-third of a mile east of the existing terminal. On August 20, 2018, NMFS issued a subsequent IHA to cover work that was not completed under the prior IHA (83 FR 43849, August 28, 2018), which was subsequently reissued because work was delayed (84 FR 39263, August 9, 2019). An IHA to cover the anticipated final year of the project was issued on July 27, 2020 (85 FR 47737, August 6, 2020). WSDOT's monitoring reports are available online at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities* and information regarding WSDOT's monitoring results may be found in the Potential Effects of Specified Activities on Marine Mammals and Their Habitat.

Description of Proposed Activity

Overview

At the Mukilteo Ferry Terminal, wingwalls are used to guide the Mukilteo ferry into the slip during landings. The Mukilteo-Clinton ferry route is part of State Route (SR) 525, the major transportation corridor crossing Possession Sound (the portion of Puget Sound that separates Island County/Whidbey Island from the mainland). The wingwalls are designed to withstand glancing impacts from the ferries. However, the left wingwall was moved out of position by approximately two feet during a normal ferry landing. The purpose of this project is to strengthen the left wingwall to withstand normal landing impacts.

The activities that have the potential to cause take of marine mammals include installation of six 30-inch (76 centimeter) (cm)) steel piles by vibratory or impact pile driving, and installation and removal of two 30-in (76 cm) steel piles by vibratory pile driving. A total of 6 construction days are planned between October 2025 and February 2026.

Dates and Duration

The proposed IHA would be valid for the statutory maximum of one year from the date of effectiveness, and will become effective upon written notification from the applicant to NMFS, but not beginning later than one year from the date of issuance or extending beyond two years from the date of issuance. All in-water work would be conducted during the Washington Department of Fish and Wildlife (WDFW) authorized work times in saltwater areas. WSDOT indicates that the in-water work window in this area is July 15 through February 15 to avoid working when ESA-listed salmonids are most likely to be present. While in-water work associated with this project could occur between August 1, 2025 and February 15, 2026, WSDOT indicates that October 2025 is the target project start date.

The project would require 6 days of in-water construction. In-water construction activities would occur during daylight hours only.

Specific Geographic Region

The Mukilteo Ferry Terminal is in the City of Mukilteo, Snohomish County, Washington. The terminal is in Township 28N, Range 4E, Section 33 (figure 1). Land use in the Mukilteo area is a mix of residential, commercial, industrial, and open space and/or undeveloped lands.

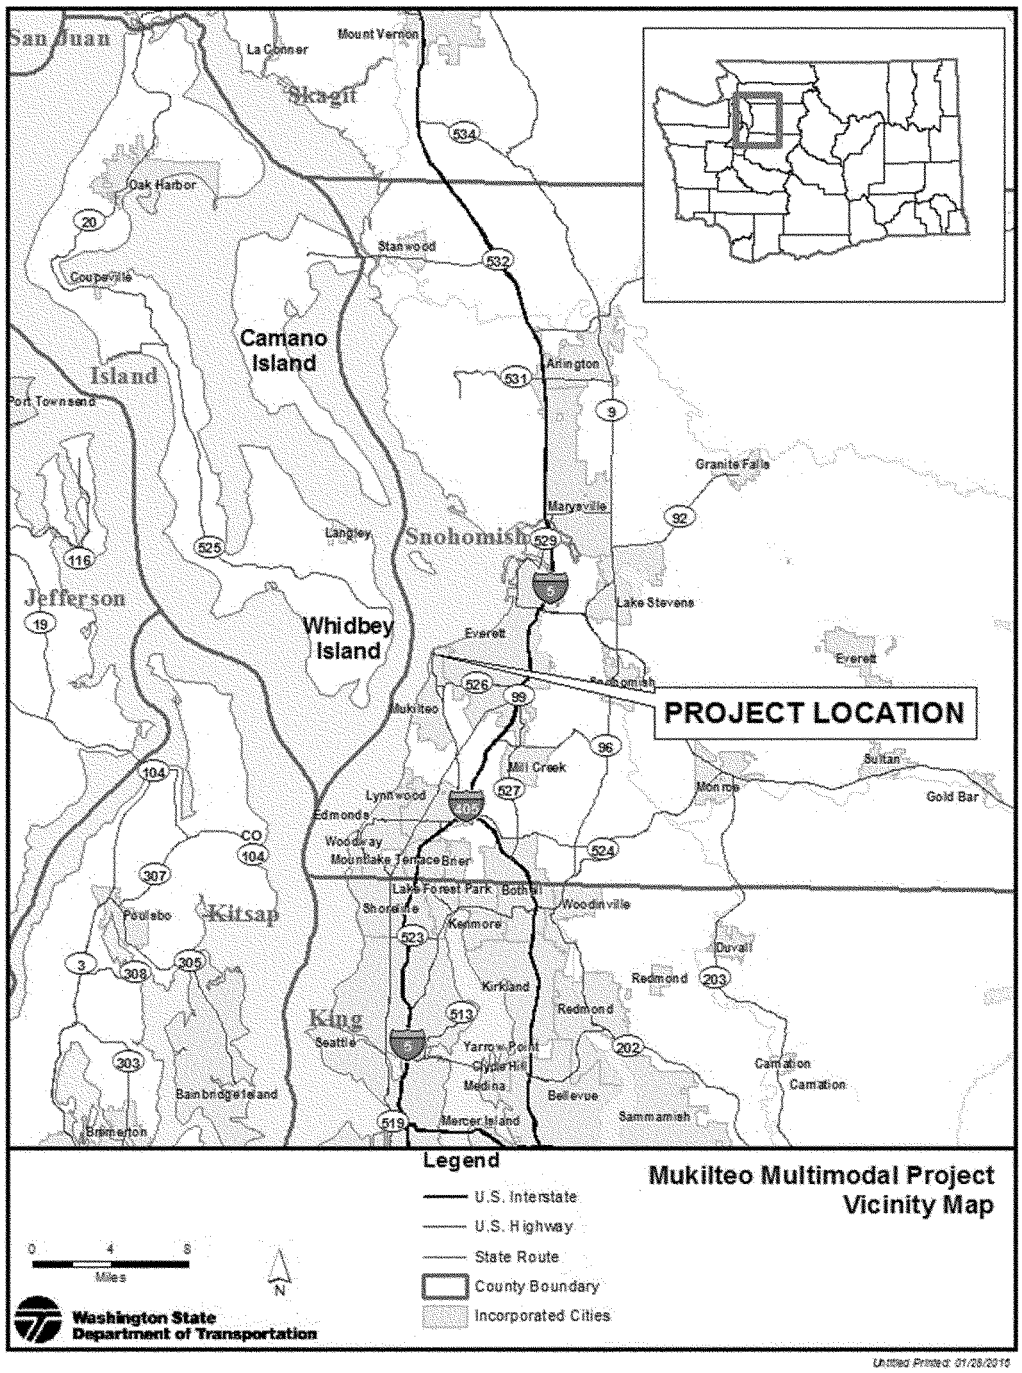

Figure 1—Location of Mukilteo Ferry Terminal

Detailed Description of the Specified Activity

WSDOT is repairing the left wingwalls at the Mulkiteo Terminal by adding two new wingwall bents. To do so, six 30-in (76 cm) permanent steel piles would be installed with a vibratory hammer, then proofed (impacted). A bubble curtain would be used during all impacting. Four piles would be driven plumb (vertical) and two would be driven battered (driven at an angle) to provide additional support to the wingwall. Two temporary 30-in (76 cm) steel piles would be installed and removed with a vibratory hammer (no impacting). The temporary piles would support a guide to drive the two battered permanent piles.

TABLE 1—PILE TYPES, INSTALLATION METHODS, AND DURATIONS

Method	Steel pile size (inch)	Total number	Minutes (strikes) per pile	Piles per day	Minutes (strikes) per day	Construction days
Permanent						
Vibratory Install (vertical)	30	4	60	4	240	1
Impact Install (vertical)			60 (200)		240 (4800)	1
Vibratory Install (battered)	30	2	60	2	120	1
Impact Install (battered)			60 (1200)		120 (2400)	1
Temporary						
Vibratory Install	30	2	60	2	120	1
Vibratory Removal			60	2	120	1

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation and Proposed Monitoring and Reporting).

Description of Marine Mammals in the Area of Specified Activities

Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS fully considered all of this information, and we refer the reader to these descriptions, instead of reprinting the information. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS' website (*https://www.fisheries.noaa.gov/find-species*).

Table 2 lists all species or stocks for which take is expected and proposed to be authorized for this activity and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS' SARs). While no serious injury or mortality is anticipated or proposed to be authorized here, PBR and annual serious injury and mortality (M/SI) from anthropogenic sources are included here as gross indicators of the status of the species or stocks and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS' stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS' U.S. Pacific SARs. All values presented in table 2 are the most recent available at the time of publication (including from the draft 2024 SARs) and are available online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.*

TABLE 2—SPECIES [1] WITH ESTIMATED TAKE FROM SPECIFIED ACTIVITIES

Common name	Scientific name	Stock	ESA/MMPA status; strategic (Y/N) [2]	Stock abundance (CV, N_{min}, most recent abundance survey) [3]	PBR	Annual M/SI [4]
Order Artiodactyla—Cetacea—Mysticeti (baleen whales)						
Family Eschrichtiidae:						
Gray whale	*Eschrichtius robustus*	Eastern N Pacific	-, -, N	26,960 (0.05, 25,849, 2016)	801	131
Family Balaenopteridae (rorquals):						
Minke whale	*Balaenoptera acutorostrata*	CA/OR/WA	-, -, N	915 (0.792, 509, 2018)	4.1	≥0.19
Odontoceti (toothed whales, dolphins, and porpoises)						
Family Delphinidae:						
Killer whale	*Orcinus orca*	West Coast Transient	-, -, N	349 (N/A[5], 349, 2018)	3.5	0.4
Family Phocoenidae (porpoises):						
Dall's porpoise	*Phocoenoides dalli*	CA/OR/WA	-, -, N	16,498 (0.61, 10,286, 2018)	99	≥0.66
Harbor porpoise	*Phocoena phocoena*	Washington Inland Waters	-, -, N	11,233 (0.37, 8,308, 2015)	66	≥7.2
Order Carnivora—Pinnipedia						
Family Otariidae (eared seals and sea lions):						
California sea lion	*Zalophus californianus*	U.S.	-, -, N	257,606 (N/A, 233,515, 2014).	14,011	>321
Steller sea lion	*Eumetopias jubatus*	Eastern	-, -, N	36,308 (N/A[6], 36,308, 2022)	2,178	93.2

TABLE 2—SPECIES [1] WITH ESTIMATED TAKE FROM SPECIFIED ACTIVITIES—Continued

Common name	Scientific name	Stock	ESA/ MMPA status; strategic (Y/N) [2]	Stock abundance (CV, N_{min}, most recent abundance survey) [3]	PBR	Annual M/SI [4]
Family Phocidae (earless seals):						
Harbor seal	*Phoca vitulina*	Washington Northern Inland Waters.	-, -, N	UNK [7] (UNK, UNK, UNK)	UND	9.8
Northern elephant seal	*Mirounga angustirostris*	CA Breeding	-, -, N	187,386 (N/A, 85,369, 2013)	5,122	13.7

[1] Information on the classification of marine mammal species can be found on the web page for The Society for Marine Mammalogy's Committee on Taxonomy (*https://marinemammalscience.org/science-and-publications/list-marine-mammal-species-subspecies/*).

[2] Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[3] NMFS marine mammal stock assessment reports online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region.* CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.

[4] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

[5] N_{est} is based upon count of individuals identified from photo-ID catalogs in analysis of a subset of data from 1958–2018.

[6] N_{est} is best estimate of counts, which have not been corrected for animals at sea during abundance surveys. Estimates provided are for the U.S. only.

[7] While the draft 2024 SAR suggests the abundance estimates for the Washington Northern Inland Waters stock of harbor seal is unknown (UNK), Pearson *et al.,* 2024. Indicates that the most recent N_{est} is 15,898 and the N_{min} is 14,005.

As indicated above, all nine species (with nine managed stocks) in table 2 temporally and spatially co-occur with the activity to the degree that take is reasonably likely to occur. All species that could potentially occur in the proposed project area are included in table 3–1 of the IHA application. While humpback whales (Central America/ Southern Mexico—CA/OR/WA; Mainland Mexico—CA/OR/WA; and Hawai'i stocks), and southern resident killer whales have been documented in the area, take is not proposed for authorization. WSDOT proposes, with NMFS' concurrence, to avoid take of these species by implementing monitoring and mitigation measures (see Proposed Mitigation and Proposed Monitoring and Reporting sections below).

Generally, southern resident killer whales and humpback whales are considered common in the Puget Sound (Olson *et al.,* 2018; Olson *et al.,* 2024), though the greatest density of humpback whale sightings are off the south end of Vancouver Island in the Strait of Juan de Fuca (Olsen *et al.,* 2024) and the occurrence of southern resident killer whale depends on prey abundance. During the multi-year WSDOT Multimodal Construction Project, PSOs located at the project site, on the Mukilteo—Clinton ferry, and additional locations on Whidbey Island, Camano Island, and north of Everett, Washington, monitored for 169 days 2015 and 2021, between the months of August and February. Across 169 monitoring days, a total of 29 southern resident killer whales in 6 groups were observed, all within the same project year. During the same 169 day monitoring period, a single humpback whale was observed on two occasions. For this project, WSDOT would establish shutdown zones for southern resident killer whale and humpback whale at the extent of the estimated Level B harassment zone. WSDOT would shut down if a southern resident killer whale, a killer whale in which the stock has been unidentified, a humpback whale, or an unidentified mysticete is observed near or approaching the Level B harassment zone. WSDOT would also monitor marine mammal occurrence and movement with the Orca Network and the Whale Report Alert System (WRAS) networks daily for this project to ensure PSOs are aware of these species locations in Puget Sound. Due to these mitigation and monitoring measures, which WSDOT has experience designing and implementing, and the fact that these species are highly conspicuous, incidental take of southern resident killer whales and humpback whales are not expected to occur during this project.

Gray Whale

During migration from Mexico to the Arctic, a subpopulation of the Eastern North Pacific stock of Gray whales, commonly referred to as the Pacific Coast Feeding Group (PCFG), stops and feeds along the coasts of Oregon and Washington including the Northern Puget Sound (Calambokidis *et al.,* 2024). A subgroup of the PCFG that feed in the Puget Sound, recently termed as ''Sounders'' gray whales occurs in highest concentrations on the Southern ends of Whidbey and Camano Islands in the North Puget Sound (Calambokidis *et al.,* 2024). However, they typically arrive in March and generally leave the area before June 1, when project activities are not planned to occur.

Across 169 Mukilteo Multimodal Project monitoring days between 2015 and 2021, a single gray whale was observed on two occasions by PSOs.

Minke Whale

Minke whales are reported in Washington inland waters year-round, although a few are reported in the winter (Calambokidis and Baird 1994). Minke whales are relatively common in the San Juan Islands and Strait of Juan de Fuca (especially around several of the banks in both the central and eastern Straits) but are relatively rare in Puget Sound. Across 169 monitoring days between 2015 and 2021, no minke whales were observed by PSOs during the Mukilteo Multimodal Project. However, an occurrence of minke whale was reported near the project area by the Pacific Whale Watching Foundation in 2022 (Gless and Krieger, 2023).

Transient Killer Whale

West coast transient killer whales are documented intermittently year-round in Washington inland waters. Within Puget Sound, transient killer whales primarily hunt pinnipeds and porpoises. Across 169 monitoring days between 2015 and 2021, 43 transient killer whales (11 groups) were reported by PSOs. The maximum pod size reported by PSOs was eight.

Dall's Porpoise

Within the inland waters of Washington and British Columbia, this species is most abundant in the Strait of Juan de Fuca east to the San Juan Islands (Nyswander *et al.,* 2005). Dall's porpoises may be most abundant in Puget Sound during the winter

(Nysewander *et al.,* 2005; WDFW 2007). While sightings appear to be decreasing (Evenson *et al.,* 2016), Dall's porpoises may occur in all areas of inland Washington at all times of year, but with different distributions throughout Puget Sound from winter to summer.

Across 169 monitoring days between 2015 and 2021, a total of 2 Dall's porpoises were observed by PSOs during the Mukilteo Multimodal Project from the Mukilteo—Clinton Ferry monitoring location.

Harbor Porpoise

Harbor porpoise are known to occur year-round in the inland trans-boundary waters of Washington and British Columbia, Canada and along the Oregon/Washington coast (Barlow *et al.,* 1988). There was a significant decline in harbor porpoise sightings within southern Puget Sound between the 1940s and 1990s but sightings have increased seasonally more recently (Carretta *et al.,* 2019). Annual winter aerial surveys conducted by the WDFW from 1995 to 2015 revealed an increasing trend in harbor porpoise in Washington inland waters, including the return of harbor porpoise to Puget Sound. The data suggest that harbor porpoise were already present in Juan de Fuca, Georgia Straits, and the San Juan Islands from the mid-1990s to mid-2000s, and then expanded into Puget Sound and Hood Canal from the mid-2000s to 2015, areas they had used historically but abandoned (Evenson *et al.,* 2016).

Across 169 monitoring days between 2015 and 2021, between 194 and 214 harbor porpoises were observed by PSOs during the Mukilteo Multimodal Project, for an average daily occurrence of 1.3 harbor porpoises and average group size of two.

California Sea Lion

Only male California sea lions migrate into Pacific Northwest waters, with females remaining in waters near their breeding rookeries off the coast of California and Mexico. They use haul-out sites along the outer coast, Strait of Juan de Fuca, and in Puget Sound. Haul-out sites are located on jetties, offshore rocks and islands, log booms, marina docks, and navigation buoys. This species also may be frequently seen resting in the water, rafted together in groups in Puget Sound. The closest documented California sea lion haul out sites to the Mukilteo Ferry Terminal are 3.2 miles northeast on the Everett Harbor buoys (Figure 3–1 in application). The number of California sea lions using the buoys is less than 20 (Jeffries, *et al.,* 2000).

Across 169 monitoring days between 2015 and 2021, between 2,029 and 2,125 California sea lions were observed by PSOs during the Mukilteo Multimodal Project, for an average daily occurrence of 12 California sea lions and average group size of 1.

Steller Sea Lion

Steller sea lions use haul-out locations in Puget Sound, and may occur at the same haul-outs as California sea lions. Across 169 monitoring days between 2015 and 2021, 43 Steller sea lions were observed by PSOs during the Mukilteo Multimodal Project, for an average daily occurrence of 0.25 Steller sea lions and average group size of 1.

Harbor Seal

Harbor seals are the most common and the only pinniped that breeds and remains in the inland marine waters of Washington year-round (Calambokidis and Baird 1994a). Harbor seals haul out on rocks, reefs and beaches, and feed in marine, estuarine and occasionally fresh waters. Harbor seals display strong fidelity for haul out sites (Pitcher and McAllister 1981).

There is a documented California sea lion/harbor seal haulout approximately 8 km NE of the project site. (Figure 3–1). Seals and sea lions also make use of undocumented docks, buoys, and beaches in the area.

Across 169 monitoring days between 2015 and 2021, between 3,506 and 3,513 harbor seals were observed by PSOs during the Mukilteo Multimodal Project, for an average daily occurrence of 20.8 harbor seals and average group size of 1.

Northern Elephant Seal

Elephant seals are generally considered rare in Puget Sound. However, a female elephant seal has been reported hauled out in Mutiny Bay on Whidbey Island periodically since 2010. She was observed alone for her first three visits to the area, but in March 2015, she was seen with a pup. Since then, she has produced three more pups between 2018 and 2021 (Orca Network 2025). Northern elephant seals generally give birth in January but this individual has repeatedly given birth in March. She typically returns to Mutiny Bay (not included in the ensonified area) in April and May to molt (when project activities are not planned). Her pups have also repeatedly returned to haul out on nearby beaches and one has also had a pup (Orca Network 2025).

Across 169 monitoring days between 2015 and 2021, one to two northern elephant seals were observed by PSOs during the Mukilteo Multimodal Project from the New Mukilteo Ferry Terminal monitoring location.

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995; Wartzok and Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007, 2019) recommended that marine mammals be divided into hearing groups based on directly measured (behavioral or auditory evoked potential techniques) or estimated hearing ranges (behavioral response data, anatomical modeling, *etc.*). Generalized hearing ranges were chosen based on the ~65 decibel (dB) threshold from composite audiograms, previous analyses in NMFS (2018), and/or data from Southall *et al.* (2007) and Southall *et al.* (2019). We note that the names of two hearing groups and the generalized hearing ranges of all marine mammal hearing groups have been recently updated (NMFS 2024) as reflected below in table 3.

TABLE 3—MARINE MAMMAL HEARING GROUPS

[NMFS, 2024]

Hearing group	Generalized hearing range *
Low-frequency (LF) cetaceans (baleen whales)	7 Hz to 36 kHz.
High-frequency (HF) cetaceans (dolphins, toothed whales, beaked whales, bottlenose whales)	150 Hz to 160 kHz.
Very High-frequency (VHF) cetaceans (true porpoises, *Kogia,* river dolphins, Cephalorhynchid, *Lagenorhynchus cruciger* & *L. australis*).	200 Hz to 165 kHz.

TABLE 3—MARINE MAMMAL HEARING GROUPS—Continued

[NMFS, 2024]

Hearing group	Generalized hearing range *
Phocid pinnipeds (PW) (underwater) (true seals)	40 Hz to 90 kHz.
Otariid pinnipeds (OW) (underwater) (sea lions and fur seals)	60 Hz to 68 kHz.

* Represents the generalized hearing range for the entire group as a composite (*i.e.,* all species within the group), where individual species' hearing ranges may not be as broad. Generalized hearing range chosen based on ~65 dB threshold from composite audiogram, previous analysis in NMFS 2018, and/or data from Southall *et al.,* 2007; Southall *et al.,* 2019. Additionally, animals are able to detect very loud sounds above and below that ''generalized'' hearing range. Hz = Hertz. kHz = Kilohertz.

For more detail concerning these groups and associated frequency ranges, please see NMFS (2024) for a review of available information.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section provides a discussion of the ways in which components of the specified activity may impact marine mammals and their habitat. The Estimated Take of Marine Mammals section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take of Marine Mammals section, and the Proposed Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and whether those impacts are reasonably expected to, or reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Description of Sound Sources

The marine soundscape is comprised of both ambient and anthropogenic sounds. Ambient sound is defined as the all-encompassing sound in a given place and is usually a composite of sound from many sources both near and far (American National Standards Institute (ANSI), 1995). The sound level of an area is defined by the total acoustical energy being generated by known and unknown sources. These sources may include physical (*e.g.,* waves, wind, precipitation, earthquakes, ice, atmospheric sound), biological (*e.g.,* sounds produced by marine mammals, fish, and invertebrates), and anthropogenic sound (*e.g.,* vessels, dredging, aircraft, construction).

The sum of the various natural and anthropogenic sound sources at any given location and time—which comprise ''ambient'' or ''background'' sound—depends not only on the source levels (as determined by current weather conditions and levels of biological and shipping activity), but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor, and is frequency-dependent. As a result of the dependence on a large number of varying factors, ambient sound levels can be expected to vary widely over both coarse and fine spatial and temporal scales. Sound levels at a given frequency and location can vary by 10–20 dB from day to day (Richardson *et al.,* 1995). The result is that, depending on the source type and its intensity, sound from the specified activity may be a negligible addition to the local environment or could form a distinctive signal that may affect marine mammals.

In-water construction activities associated with the project would include impact pile driving, and vibratory pile driving and removal. The sounds produced by these activities fall into one of two general sound types: impulsive and non-impulsive. Impulsive sounds (*e.g.,* explosions, gunshots, sonic booms, impact pile driving) are typically transient, brief (less than 1 second), broadband, and consist of high peak sound pressure with rapid rise time and rapid decay (ANSI, 1986; National Institute of Occupational Safety and Health (NIOSH), 1998; NMFS, 2018). Non-impulsive sounds (*e.g.,* aircraft, machinery operations such as drilling or dredging, vibratory pile driving, and active sonar systems) can be broadband, narrowband or tonal, brief or prolonged (continuous or intermittent), and typically do not have the high peak sound pressure with rapid rise/decay time that impulsive sounds do (ANSI, 1995; NIOSH, 1998; NMFS, 2018). The distinction between these two sound types is important because they have differing potential to cause physical effects, particularly with regard to hearing (*e.g.,* Ward, 1997, in Southall *et al.,* 2007).

Two types of hammers would be used on this project: impact and vibratory. Impact hammers operate by repeatedly dropping a heavy piston onto a pile to drive the pile into the substrate. Sound generated by impact hammers is characterized by rapid rise times and high peak levels, a potentially injurious combination (Hastings and Popper, 2005). Vibratory hammers install piles by vibrating them and allowing the weight of the hammer to push them into the sediment. Vibratory hammers produce significantly less sound than impact hammers. Peak sound pressure levels (SPLs) may be 180 dB or greater, but are generally 10 to 20 dB lower than SPLs generated during impact pile driving of the same-sized pile (Oestman *et al.,* 2009). Rise time is slower, reducing the probability and severity of injury, and sound energy is distributed over a greater amount of time (Nedwell and Edwards, 2002; Carlson *et al.,* 2005).

The likely or possible impacts of WSDOT's proposed activity on marine mammals could involve both non-acoustic and acoustic stressors. Potential non-acoustic stressors could result from the physical presence of equipment and personnel; however, any impacts to marine mammals are expected to be primarily acoustic in nature. Acoustic stressors include effects of heavy equipment operation during pile installation and removal.

Acoustic Effects

The introduction of anthropogenic noise into the aquatic environment from pile driving is the means by which marine mammals may be harassed from WSDOT's specified activity. In general, animals exposed to natural or anthropogenic sound may experience behavioral, physiological, and/or physical effects, ranging in magnitude from none to severe (Southall *et al.,* 2007, 2019). In general, exposure to pile driving noise has the potential to result in behavioral reactions (*e.g.,* avoidance, temporary cessation of foraging and vocalizing, changes in dive behavior) and, in limited cases, an auditory threshold shift (TS). Exposure to anthropogenic noise can also lead to

non-observable physiological responses such an increase in stress hormones. Additional noise in a marine mammal's habitat can mask acoustic cues used by marine mammals to carry out daily functions such as communication and predator and prey detection. The effects of pile driving on marine mammals are dependent on several factors, including, but not limited to, sound type (*e.g.,* impulsive vs. non-impulsive), the species, age and sex class (*e.g.,* adult male vs. mom with calf), duration of exposure, the distance between the sampling site and the animal, received levels, behavior at time of exposure, and previous history with exposure (Wartzok *et al.,* 2004; Southall *et al.,* 2007). Here we discuss physical auditory effects (TSs) followed by behavioral effects and potential impacts on habitat.

NMFS defines a noise-induced TS as a change, usually an increase, in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018, 2024). The amount of TS is customarily expressed in dB. A TS can be permanent or temporary. As described in NMFS (2018, 2024), there are numerous factors to consider when examining the consequence of TS, including, but not limited to, the signal temporal pattern (*e.g.,* impulsive or non-impulsive), likelihood an individual would be exposed for a long enough duration or to a high enough level to induce a TS, the magnitude of the TS, time to recovery (seconds to minutes or hours to days), the frequency range of the exposure (*i.e.,* spectral content), the hearing and vocalization frequency range of the exposed species relative to the signal's frequency spectrum (*i.e.,* how animal uses sound within the frequency band of the signal; *e.g.,* Kastelein *et al.,* 2014), and the overlap between the animal and the source (*e.g.,* spatial, temporal, and spectral).

Auditory injury and permanent threshold shift (PTS)—NMFS defines auditory injury (AUD INJ) as ''damage to the inner ear that can result in destruction of tissue . . . which may or may not result in PTS'' (NMFS, 2024). NMFS defines PTS as a permanent, irreversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2024). Available data from humans and other terrestrial mammals indicate that a 40-dB TS approximates PTS onset (Ward *et al.,* 1958, 1959; Ward 1960; Kryter *et al.,* 1966; Miller, 1974; Ahroon *et al.,* 1996; Henderson *et al.,* 2008). PTS levels for marine mammals are estimates, as with the exception of a single study unintentionally inducing PTS in a harbor seal (Reichmuth 2019), there are no empirical data measuring PTS in marine mammals largely due to the fact that, for various ethical reasons, experiments involving anthropogenic noise exposure at levels inducing PTS are not typically pursued or authorized (NMFS, 2018).

Temporary threshold shift (TTS)—A temporary, reversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018). Based on data from cetacean TTS measurements (Southall *et al.,* 2007, 2019), a TTS of 6 dB is considered the minimum TS clearly larger than any day-to-day or session-to-session variation in a subject's normal hearing ability (Schlundt *et al.,* 2000; Finneran *et al.,* 2000, 2002). As described in Finneran (2015), marine mammal studies have shown the amount of TTS increases with cumulative sound exposure level (SEL_{cum}) in an accelerating fashion: At low exposures with lower SEL_{cum}, the amount of TTS is typically small and the growth curves have shallow slopes. At exposures with higher SEL_{cum}, the growth curves become steeper and approach linear relationships with the noise SEL.

Depending on the degree (elevation of threshold in dB), duration (*i.e.,* recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious (similar to those discussed in *Masking,* below). For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that takes place during a time when the animal is traveling through the open ocean, where ambient noise is lower and there are not as many competing sounds present.

Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical for successful mother/calf interactions could have more serious impacts. We note that reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.,* 2007), so we can infer that strategies exist for coping with this condition to some degree, though likely not without cost.

Many studies have examined noise-induced hearing loss in marine mammals (see Finneran (2015) and Southall *et al.,* (2019) for summaries). TTS is the mildest form of hearing impairment that can occur during exposure to sound. While experiencing TTS, the hearing threshold rises, and a sound must be at a higher level in order to be heard. In terrestrial and marine mammals, TTS can last from minutes or hours to days (in cases of strong TTS). In many cases, hearing sensitivity recovers rapidly after exposure to the sound ends. For cetaceans, published data on the onset of TTS are limited to captive bottlenose dolphin (*Tursiops truncatus*), beluga whale, harbor porpoise, and Yangtze finless porpoise (*Neophocoena asiaeorientalis*) (Southall *et al.,* 2019). For pinnipeds in water, measurements of TTS are limited to harbor seals, elephant seals (*Mirounga angustirostris*), bearded seals (*Erignathus barbatus*) and California sea lions (*Zalophus californianus*) (Kastak *et al.,* 1999, 2007; Kastelein *et al.,* 2019b, 2019c, 2021, 2022a, 2022b; Reichmuth *et al.,* 2019; Sills *et al.,* 2020). TTS was not observed in spotted (*Phoca largha*) and ringed (*Pusa hispida*) seals exposed to single airgun impulse sounds at levels matching previous predictions of TTS onset (Reichmuth *et al.,* 2016). These studies examine hearing thresholds measured in marine mammals before and after exposure to intense or long-duration sound exposures. The difference between the pre-exposure and post-exposure thresholds can be used to determine the amount of threshold shift at various post-exposure times.

The amount and onset of TTS depends on the exposure frequency. Sounds at low frequencies, well below the region of best sensitivity for a species or hearing group, are less hazardous than those at higher frequencies, near the region of best sensitivity (Finneran and Schlundt, 2013). At low frequencies, onset-TTS exposure levels are higher compared to those in the region of best sensitivity (*i.e.,* a low frequency noise would need to be louder to cause TTS onset when TTS exposure level is higher), as shown for harbor porpoises and harbor seals (Kastelein *et al.,* 2019a, 2019c). Note that in general, harbor seals and harbor porpoises have a lower TTS onset than other measured pinniped or cetacean species (Finneran, 2015). In addition, TTS can accumulate across multiple exposures, but the resulting TTS will be less than the TTS from a single, continuous exposure with the same SEL (Mooney *et al.,* 2009; Finneran *et al.,* 2010; Kastelein *et al.,* 2014, 2015). This means that TTS predictions based on the total, cumulative SEL will overestimate the amount of TTS from

intermittent exposures, such as sonars and impulsive sources. Nachtigall *et al.,* (2018) describe measurements of hearing sensitivity of multiple odontocete species (bottlenose dolphin, harbor porpoise, beluga, and false killer whale (*Pseudorca crassidens*)) when a relatively loud sound was preceded by a warning sound. These captive animals were shown to reduce hearing sensitivity when warned of an impending intense sound. Based on these experimental observations of captive animals, the authors suggest that wild animals may dampen their hearing during prolonged exposures or if conditioned to anticipate intense sounds. Another study showed that echolocating animals (including odontocetes) might have anatomical specializations that might allow for conditioned hearing reduction and filtering of low-frequency ambient noise, including increased stiffness and control of middle ear structures and placement of inner ear structures (Ketten *et al.,* 2021). Data available on noise-induced hearing loss for mysticetes are currently lacking (NMFS, 2018). Additionally, the existing marine mammal TTS data come from a limited number of individuals within these species.

Relationships between TTS and PTS thresholds have not been studied in marine mammals, and there is no PTS data for cetaceans, but such relationships are assumed to be similar to those in humans and other terrestrial mammals. PTS typically occurs at exposure levels at least several decibels above that inducing mild TTS (*e.g.,* a 40-dB threshold shift approximates PTS onset (Kryter *et al.,* 1966; Miller, 1974), while a 6-dB threshold shift approximates TTS onset (Southall *et al.,* 2007, 2019). Based on data from terrestrial mammals, a precautionary assumption is that the PTS thresholds for impulsive sounds (such as impact pile driving pulses as received close to the source) are at least 6 dB higher than the TTS threshold on a peak-pressure basis and PTS cumulative sound exposure level thresholds are 15 to 20 dB higher than TTS cumulative sound exposure level thresholds (Southall *et al.,* 2007, 2019). Given the higher level of sound or longer exposure duration necessary to cause PTS as compared with TTS, it is considerably less likely that PTS could occur.

Activities for this project include impact and vibratory pile driving and removal. For the proposed project, these activities would not occur at that same time and there would likely be pauses in activities producing the sound during each day. Given these pauses and the fact that many marine mammals are likely moving through the project areas and not remaining for extended periods of time, the potential for TS declines.

Behavioral Harassment—Exposure to noise from pile driving and DTH also has the potential to behaviorally disturb marine mammals. Generally speaking, NMFS considers a behavioral disturbance that rises to the level of harassment under the MMPA a non-minor response—in other words, not every response qualifies as behavioral disturbance, and for responses that do, those of a higher level, or accrued across a longer duration, have the potential to affect foraging, reproduction, or survival. Behavioral disturbance may include a variety of effects, including subtle changes in behavior (*e.g.,* minor or brief avoidance of an area or changes in vocalizations), more conspicuous changes in similar behavioral activities, and more sustained and/or potentially severe reactions, such as displacement from or abandonment of high-quality habitat. Behavioral responses may include changing durations of surfacing and dives, changing direction and/or speed; reducing/increasing vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); eliciting a visible startle response or aggressive behavior (such as tail/fin slapping or jaw clapping); and avoidance of areas where sound sources are located. Pinnipeds may increase their haul out time, possibly to avoid in-water disturbance (Thorson and Reyff, 2006). Behavioral responses to sound are highly variable and context-specific and any reactions depend on numerous intrinsic and extrinsic factors (*e.g.,* species, state of maturity, experience, current activity, reproductive state, auditory sensitivity, time of day), as well as the interplay between factors (*e.g.,* Richardson *et al.,* 1995; Wartzok *et al.,* 2004; Southall *et al.,* 2007, 2019; Weilgart, 2007; Archer *et al.,* 2010). Behavioral reactions can vary not only among individuals but also within an individual, depending on previous experience with a sound source, context, and numerous other factors (Ellison *et al.,* 2012), and can vary depending on characteristics associated with the sound source (*e.g.,* whether it is moving or stationary, number of sources, distance from the source). In general, pinnipeds seem more tolerant of, or at least habituate more quickly to, potentially disturbing underwater sound than cetaceans, and generally seem to be less responsive to exposure to industrial sound than most cetaceans. Please see Appendices B and C of Southall *et al.* (2007) and Gomez *et al.,* (2016) for reviews of studies involving marine mammal behavioral responses to sound.

Habituation can occur when an animal's response to a stimulus wanes with repeated exposure, usually in the absence of unpleasant associated events (Wartzok *et al.,* 2004). Animals are most likely to habituate to sounds that are predictable and unvarying. It is important to note that habituation is appropriately considered as a ''progressive reduction in response to stimuli that are perceived as neither aversive nor beneficial,'' rather than as, more generally, moderation in response to human disturbance (Bejder *et al.,* 2009). The opposite process is sensitization, when an unpleasant experience leads to subsequent responses, often in the form of avoidance, at a lower level of exposure.

As noted above, behavioral state may affect the type of response. For example, animals that are resting may show greater behavioral change in response to disturbing sound levels than animals that are highly motivated to remain in an area for feeding (Richardson *et al.,* 1995; Wartzok *et al.,* 2004; National Research Council (NRC), 2005). Controlled experiments with captive marine mammals have showed pronounced behavioral reactions, including avoidance of loud sound sources (Ridgway *et al.,* 1997; Finneran *et al.,* 2003). Observed responses of wild marine mammals to loud pulsed sound sources (*e.g.,* seismic airguns) have been varied but often consist of avoidance behavior or other behavioral changes (Richardson *et al.,* 1995; Morton and Symonds, 2002; Nowacek *et al.,* 2007).

Available studies show wide variation in response to underwater sound; therefore, it is difficult to predict specifically how any given sound in a particular instance might affect marine mammals perceiving the signal. If a marine mammal does react briefly to an underwater sound by changing its behavior or moving a small distance, the impacts of the change are unlikely to be significant to the individual, let alone the stock or population. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on individuals and populations could be significant (*e.g.,* Lusseau and Bejder, 2007; Weilgart, 2007; NRC, 2005). However, there are broad categories of potential response, which we describe in greater detail here, that include alteration of dive behavior, alteration of foraging behavior, effects to breathing, interference with or alteration of vocalization, avoidance, and flight.

Changes in dive behavior can vary widely and may consist of increased or

decreased dive times and surface intervals as well as changes in the rates of ascent and descent during a dive (*e.g.,* Frankel and Clark, 2000; Costa *et al.,* 2003; Ng and Leung, 2003; Nowacek *et al.,* 2004; Goldbogen *et al.,* 2013a, 2013b). Variations in dive behavior may reflect interruptions in biologically significant activities (*e.g.,* foraging) or they may be of little biological significance. The impact of an alteration to dive behavior resulting from an acoustic exposure depends on what the animal is doing at the time of the exposure and the type and magnitude of the response.

Disruption of feeding behavior can be difficult to correlate with anthropogenic sound exposure, so it is usually inferred by observed displacement from known foraging areas, the appearance of secondary indicators (*e.g.,* bubble nets or sediment plumes), or changes in dive behavior. As for other types of behavioral response, the frequency, duration, and temporal pattern of signal presentation, as well as differences in species sensitivity, are likely contributing factors to differences in response in any given circumstance (*e.g.,* Croll *et al.,* 2001; Nowacek *et al.,* 2004; Madsen *et al.,* 2006; Yazvenko *et al.,* 2007). A determination of whether foraging disruptions incur fitness consequences would require information on or estimates of the energetic requirements of the affected individuals and the relationship between prey availability, foraging effort and success, and the life history stage of the animal.

Variations in respiration naturally vary with different behaviors and alterations to breathing rate as a function of acoustic exposure can be expected to co-occur with other behavioral reactions, such as a flight response or an alteration in diving. However, respiration rates in and of themselves may be representative of annoyance or an acute stress response. Various studies have shown that respiration rates may either be unaffected or could increase, depending on the species and signal characteristics, again highlighting the importance in understanding species differences in the tolerance of underwater noise when determining the potential for impacts resulting from anthropogenic sound exposure (*e.g.,* Kastelein *et al.,* 2001, 2005, 2006; Gailey *et al.,* 2007). For example, harbor porpoise respiration rate increased in response to pile driving sounds at and above a received broadband SPL of 136 dB (zero-peak SPL: 151 dB re 1 micropascal (µPa); SEL of a single strike: 127 dB re 1 μPa^2-s) (Kastelein *et al.,* 2013).

Marine mammals vocalize for different purposes and across multiple modes, such as whistling, echolocation click production, calling, and singing. Changes in vocalization behavior in response to anthropogenic noise can occur for any of these modes and may result from a need to compete with an increase in background noise or may reflect increased vigilance or a startle response. For example, in the presence of potentially masking signals, humpback whales and killer whales have been observed to increase the length of their songs (Miller *et al.,* 2000; Fristrup *et al.,* 2003) or vocalizations (Foote *et al.,* 2004), respectively, while North Atlantic right whales (*Eubalaena glacialis*) have been observed to shift the frequency content of their calls upward while reducing the rate of calling in areas of increased anthropogenic noise (Parks *et al.,* 2007). In some cases, animals may cease sound production during production of aversive signals (Bowles *et al.,* 1994).

Avoidance is the displacement of an individual from an area or migration path as a result of the presence of a sound or other stressors, and is one of the most obvious manifestations of disturbance in marine mammals (Richardson *et al.,* 1995). For example, gray whales are known to change direction—deflecting from customary migratory paths—in order to avoid noise from seismic surveys (Malme *et al.,* 1984). Avoidance may be short-term, with animals returning to the area once the noise has ceased (*e.g.,* Bowles *et al.,* 1994; Goold, 1996; Stone *et al.,* 2000; Morton and Symonds, 2002; Gailey *et al.,* 2007). Longer-term displacement is possible, however, which may lead to changes in abundance or distribution patterns of the affected species in the affected region if habituation to the presence of the sound does not occur (*e.g.,* Blackwell *et al.,* 2004; Bejder *et al.,* 2006; Teilmann *et al.,* 2006).

A flight response is a dramatic change in normal movement to a directed and rapid movement away from the perceived location of a sound source. The flight response differs from other avoidance responses in the intensity of the response (*e.g.,* directed movement, rate of travel). Relatively little information on flight responses of marine mammals to anthropogenic signals exist, although observations of flight responses to the presence of predators have occurred (Connor and Heithaus, 1996; Bowers *et al.,* 2018). The result of a flight response could range from brief, temporary exertion and displacement from the area where the signal provokes flight to, in extreme cases, marine mammal strandings (England *et al.,* 2001). However, it should be noted that response to a perceived predator does not necessarily invoke flight (Ford and Reeves, 2008), and whether individuals are solitary or in groups may influence the response.

Behavioral disturbance can also impact marine mammals in more subtle ways. Increased vigilance may result in costs related to diversion of focus and attention (*i.e.,* when a response consists of increased vigilance, it may come at the cost of decreased attention to other critical behaviors such as foraging or resting). These effects have generally not been demonstrated for marine mammals, but studies involving fishes and terrestrial animals have shown that increased vigilance may substantially reduce feeding rates (*e.g.,* Beauchamp and Livoreil, 1997; Fritz *et al.,* 2002; Purser and Radford, 2011). In addition, chronic disturbance can cause population declines through reduction of fitness (*e.g.,* decline in body condition) and subsequent reduction in reproductive success, survival, or both (*e.g.,* Harrington and Veitch, 1992; Daan *et al.,* 1996; Bradshaw *et al.,* 1998). However, Ridgway *et al.* (2006) reported that increased vigilance in bottlenose dolphins exposed to sound over a 5-day period did not cause any sleep deprivation or stress effects.

Many animals perform vital functions, such as feeding, resting, traveling, and socializing, on a diel cycle (24-hour cycle). Disruption of such functions resulting from reactions to stressors such as sound exposure are more likely to be significant if they last more than one diel cycle or recur on subsequent days (Southall *et al.,* 2007). Consequently, a behavioral response lasting less than 1 day and not recurring on subsequent days is not considered particularly severe unless it could directly affect reproduction or survival (Southall *et al.,* 2007). Note that there is a difference between multi-day substantive (*i.e.,* meaningful) behavioral reactions and multi-day anthropogenic activities. For example, just because an activity lasts for multiple days does not necessarily mean that individual animals are either exposed to activity-related stressors for multiple days or, further, exposed in a manner resulting in sustained multi-day substantive behavioral responses.

Between 2015 and 2021, during the months of August through February, the WSDOT documented observations of marine mammals during construction activities at the same project site (New Mukilteo Terminal) (see 85 FR 47737, August 6, 2020; 84 FR 39263, August 9, 2019; 83 FR 43849, August 28, 2018; 82 FR 21793, May 10, 2017; 80 FR 54535,

September 10, 20215) for a total of 169 monitoring days. During the 2020–2021 season, 86 California sea lions were observed within the estimated Level B harassment zone during pile driving activities, mostly traveling. Other behaviors reported while pile driving was occurring were loafing, diving, resting, surfacing, and spy hopping. Eleven harbor porpoises were observed mostly traveling during this time but two were observed spy hopping. A total of 119 harbor seals and 7 Steller sea lions were observed, primarily traveling and looking, but some of both species were also observed diving, resting, surfacing and spy hopping. Similar behaviors were observed during prior years in addition to foraging. No other species were documented within any harassment zones while pile driving was being conducted.

Given the similarities in activities and habitat and the fact the same species are involved, we expect similar behavioral responses of marine mammals to the WSDOT's specified activity. That is, disturbance, if any, is likely to be temporary and localized (*e.g.,* small area movements).

Stress Response—An animal's perception of a threat may be sufficient to trigger stress responses consisting of some combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses (*e.g.,* Seyle, 1950; Moberg, 2000). In many cases, an animal's first and sometimes most economical (in terms of energetic costs) response is behavioral avoidance of the potential stressor. Autonomic nervous system responses to stress typically involve changes in heart rate, blood pressure, and gastrointestinal activity. These responses have a relatively short duration and may or may not have a significant long-term effect on an animal's fitness.

Neuroendocrine stress responses often involve the hypothalamus-pituitary-adrenal system. Virtually all neuroendocrine functions that are affected by stress—including immune competence, reproduction, metabolism, and behavior—are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction, altered metabolism, reduced immune competence, and behavioral disturbance (*e.g.,* Moberg, 1987; Blecha, 2000). Increases in the circulation of glucocorticoids are also equated with stress (Romano *et al.,* 2004).

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and ''distress'' is the cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other functions. This state of distress will last until the animal replenishes its energetic reserves sufficient to restore normal function.

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well-studied through controlled experiments and for both laboratory and free-ranging animals (*e.g.,* Holberton *et al.,* 1996; Hood *et al.,* 1998; Jessop *et al.,* 2003; Krausman *et al.,* 2004; Lankford *et al.,* 2005). Stress responses due to exposure to anthropogenic sounds or other stressors and their effects on marine mammals have also been reviewed (Fair and Becker, 2000; Romano *et al.,* 2002b) and, more rarely, studied in wild populations (*e.g.,* Romano *et al.,* 2002a). For example, Rolland *et al.* (2012) found that noise reduction from reduced ship traffic in the Bay of Fundy was associated with decreased stress in North Atlantic right whales. These and other studies lead to a reasonable expectation that some marine mammals will experience physiological stress responses upon exposure to acoustic stressors and that it is possible that some of these would be classified as ''distress.'' In addition, any animal experiencing TTS would likely also experience stress responses (NRC, 2003), however distress is an unlikely result of this project based on observations of marine mammals during previous, similar projects in the area.

Auditory Masking—Since many marine mammals rely on sound to find prey, moderate social interactions, and facilitate mating (Tyack, 2008), noise from anthropogenic sound sources can interfere with these functions, but only if the noise spectrum overlaps with the hearing sensitivity of the receiving marine mammal (Southall *et al.,* 2007; Clark *et al.,* 2009; Hatch *et al.,* 2012). Chronic exposure to excessive, though not high-intensity, noise could cause masking at particular frequencies for marine mammals that utilize sound for vital biological functions (Clark *et al.,* 2009). Acoustic masking is when other noises such as from human sources interfere with an animal's ability to detect, recognize, or discriminate between acoustic signals of interest (*e.g.,* those used for intraspecific communication and social interactions, prey detection, predator avoidance, navigation) (Richardson *et al.,* 1995; Erbe *et al.,* 2016). Therefore, under certain circumstances, marine mammals whose acoustical sensors or environment are being severely masked could also be impaired from maximizing their performance fitness in survival and reproduction. The ability of a noise source to mask biologically important sounds depends on the characteristics of both the noise source and the signal of interest (*e.g.,* signal-to-noise ratio, temporal variability, direction), in relation to each other and to an animal's hearing abilities (*e.g.,* sensitivity, frequency range, critical ratios, frequency discrimination, directional discrimination, age or TTS hearing loss), and existing ambient noise and propagation conditions (Hotchkin and Parks, 2013).

Under certain circumstances, marine mammals experiencing significant masking could also be impaired from maximizing their performance fitness in survival and reproduction. Therefore, when the coincident (masking) sound is human-made, it may be considered harassment when disrupting or altering critical behaviors. It is important to distinguish TTS and PTS, which persist after the sound exposure, from masking, which occurs during the sound exposure. Because masking (without resulting in TS) is not associated with abnormal physiological function, it is not considered a physiological effect, but rather a potential behavioral effect (though not necessarily one that would be associated with harassment).

The frequency range of the potentially masking sound is important in determining any potential behavioral impacts. For example, low-frequency signals may have less effect on high-frequency echolocation sounds produced by odontocetes but are more likely to affect detection of mysticete communication calls and other potentially important natural sounds such as those produced by surf and some prey species. The masking of communication signals by anthropogenic noise may be considered as a reduction in the communication space of animals (*e.g.,* Clark *et al.,* 2009) and may result in energetic or other costs as animals change their vocalization behavior (*e.g.,* Miller *et al.,* 2000; Foote *et al.,* 2004; Parks *et al.,* 2007; Di Iorio and Clark, 2010; Holt *et al.,* 2009). Masking can be reduced in situations where the signal and noise come from different directions (Richardson *et al.,* 1995), through amplitude modulation of the signal, or through other compensatory behaviors

(Hotchkin and Parks, 2013). Masking can be tested directly in captive species (*e.g.,* Erbe, 2008), but in wild populations it must be either modeled or inferred from evidence of masking compensation. There are few studies addressing real-world masking sounds likely to be experienced by marine mammals in the wild (*e.g.,* Branstetter *et al.,* 2013).

Marine mammals at or near the proposed WSDOT project site may be exposed to anthropogenic noise which may be a source of masking. Vocalization changes may result from a need to compete with an increase in background noise and include increasing the source level, modifying the frequency, increasing the call repetition rate of vocalizations, or ceasing to vocalize in the presence of increased noise (Hotchkin and Parks, 2013). For example, in response to loud noise, beluga whales may shift the frequency of their echolocation clicks to prevent masking by anthropogenic noise (Eickmeier and Vallarta, 2022).

Masking is more likely to occur in the presence of broadband, relatively continuous noise sources such as vibratory pile driving and removal. Energy distribution of pile driving covers a broad frequency spectrum, and sound from pile driving would be within the audible range of pinnipeds and cetaceans present in the proposed action area. While some construction during the WSDOT's activities may mask some acoustic signals that are relevant to the daily behavior of marine mammals, the short-term duration and limited areas affected make it very unlikely that the fitness of individual marine mammals would be impacted.

Airborne Acoustic Effects—Airborne noise would primarily be an issue for pinnipeds that are swimming or hauled out near the project site within the range of noise levels elevated above the acoustic criteria. We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with their heads above water. Most likely, airborne sound would cause behavioral responses similar to those discussed above in relation to underwater sound. For instance, anthropogenic sound could cause hauled-out pinnipeds to exhibit changes in their normal behavior, such as reduction in vocalizations, or cause them to temporarily abandon the area and move further from the source. However, these animals would previously have been ''taken'' because of exposure to underwater sound above the behavioral harassment thresholds, which are in all cases larger than those associated with airborne sound. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted, and airborne sound is not discussed further. Cetaceans are not expected to be exposed to airborne sounds that would result in harassment as defined under the MMPA.

Marine Mammal Habitat Effects

The WSDOT's proposed construction activities could have localized, temporary impacts on marine mammal habitat and their prey by increasing in-water SPLs and slightly decreasing water quality. Increased noise levels may affect acoustic habitat (see *Masking*) and adversely affect marine mammal prey in the vicinity of the project area (see discussion below). During impact and vibratory pile driving and removal, elevated levels of underwater noise would ensonify a portion of Puget Sound, where both fish and mammals occur, and could affect foraging success. Additionally, marine mammals may avoid the area during construction; however, displacement due to noise is expected to be temporary and is not expected to result in long-term effects to the individuals or populations. In-water pile driving activities would also cause short-term effects on water quality due to increased turbidity. Temporary and localized increase in turbidity near the seafloor would occur in the immediate area surrounding the area where piles are installed or removed. In general, turbidity associated with pile installation is localized to about a 25 ft (7.6 m) radius around the pile (Everitt *et al.,* 1980). The sediments of the project site would settle out rapidly when disturbed. Cetaceans are not expected to be close enough to the pile driving areas to experience effects of turbidity, and any pinnipeds could avoid localized areas of turbidity.

In-water Construction Effects on Potential Foraging Habitat—The proposed activities would not result in permanent impacts to habitats used directly by marine mammals. The areas likely impacted by the proposed action are relatively small compared to the total available habitat in Puget Sound. The total seafloor area affected by piling activities is small compared to the vast foraging areas available to marine mammals at either location. At best, the areas impacted provide marginal foraging habitat for marine mammals and fishes. Furthermore, pile driving at the project locations would not obstruct movements or migration of marine mammals.

Avoidance by potential prey (*i.e.,* fish or, in the case of transient killer whales, other marine mammals) of the immediate area due to the temporary loss of this foraging habitat is also possible. The duration of fish and marine mammal avoidance of this area after pile driving activities is unknown, but a rapid return to normal recruitment, distribution, and behavior is anticipated. Any behavioral avoidance by fish or marine mammals of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity.

In-water Construction Effects on Potential Prey—Sound may affect marine mammals through impacts on the abundance, behavior, or distribution of prey species (*e.g.,* crustaceans, cephalopods, fish, zooplankton). Marine mammal prey varies by species, season, and location and, for some, is not well documented. Here, we describe studies regarding the effects of noise on known marine mammal prey.

Fish utilize the soundscape and components of sound in their environment to perform important functions such as foraging, predator avoidance, mating, and spawning (*e.g.,* Zelick *et al.,* 1999; Fay, 2009). Depending on their hearing anatomy and peripheral sensory structures, which vary among species, fishes hear sounds using pressure and particle motion sensitivity capabilities and detect the motion of surrounding water (Fay *et al.,* 2008). The potential effects of noise on fishes depends on the overlapping frequency range, distance from the sound source, water depth of exposure, and species-specific hearing sensitivity, anatomy, and physiology. Key impacts to fishes may include behavioral responses, hearing damage, barotrauma (pressure-related injuries), and mortality.

Fish react to sounds which are especially strong and/or intermittent low-frequency sounds, and behavioral responses such as flight or avoidance are the most likely effects. Short duration, sharp sounds can cause overt or subtle changes in fish behavior and local distribution. The reaction of fish to noise depends on the physiological state of the fish, past exposures, motivation (*e.g.,* feeding, spawning, migration), and other environmental factors. Hastings and Popper (2005) identified several studies that suggest fish may relocate to avoid certain areas of sound energy. Additional studies have documented effects of pile driving on fish, although

several are based on studies in support of large, multiyear bridge construction projects (*e.g.,* Scholik and Yan, 2001, 2002; Popper and Hastings, 2009). Several studies have demonstrated that impulse sounds might affect the distribution and behavior of some fishes, potentially impacting foraging opportunities or increasing energetic costs (*e.g.,* Fewtrell and McCauley, 2012; Pearson *et al.,* 1992; Skalski *et al.,* 1992; Santulli *et al.,* 1999; Paxton *et al.,* 2017). However, some studies have shown no or slight reaction to impulse sounds (*e.g.,* Pena *et al.,* 2013; Wardle *et al.,* 2001; Jorgenson and Gyselman, 2009; Cott *et al.,* 2012). More commonly, though, the impacts of noise on fish are temporary.

SPLs of sufficient strength have been known to cause auditory injury, non-auditory injury, and mortality in fish. However, in most fish species, hair cells in the ear continuously regenerate and loss of auditory function likely is restored when damaged cells are replaced with new cells. Halvorsen *et al.* (2012a) showed that a TTS of 4–6 dB was recoverable within 24 hours for one species. Impacts would be most severe when the individual fish is close to the source and when the duration of exposure is long. Injury caused by barotrauma can range from slight to severe and can cause death, and is most likely for fish with swim bladders. Barotrauma injuries have been documented during controlled exposure to impact pile driving (Halvorsen *et al.,* 2012b; Casper *et al.,* 2013).

The greatest potential impact to fishes during construction would occur during impact pile installation of 30-in steel piles, which is estimated to occur on up to 6 days for a maximum of 4800 strikes per day for up to 4 hours over the course of the day. In-water construction activities would only occur during daylight hours, allowing fish to forage and transit the project area in the evening. Vibratory pile driving and removal would possibly elicit behavioral reactions from fishes such as temporary avoidance of the area but is unlikely to cause injuries to fishes or have persistent effects on local fish populations.

The most likely impact to fishes from pile driving and removal activities in the project area would be temporary behavioral avoidance of the area. The duration of fish avoidance of the area after pile driving stops is unknown but a rapid return to normal recruitment, distribution, and behavior is anticipated. There are times of known seasonal marine mammal foraging when fish are aggregating but the impacted areas are small portions of the total foraging habitats available in the regions. In general, impacts to marine mammal prey species are expected to be minor and temporary. Further, it is anticipated that preparation activities for pile driving and removal (*i.e.,* positioning of the hammer) and upon initial startup of devices would cause fish to move away from the affected area where injuries may occur. Therefore, relatively small portions of the proposed project area would be affected for short periods of time, and the potential for effects to fish would be temporary and limited to the duration of sound-generating activities.

Additionally, the time of the proposed construction activity would avoid the spawning season of ESA-listed salmonid species.

In summary, given the short daily duration of sound associated with individual pile driving and removal, and the relatively small areas being affected, pile driving and removal activities associated with the proposed action are not likely to have a permanent adverse effect on any fish habitat, or populations of fish species. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity. Thus, we conclude that impacts of the specified activity are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species. Further, any impacts to marine mammal habitat are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations.

Estimated Take of Marine Mammals

This section provides an estimate of the number of incidental takes proposed for authorization through the IHA, which will inform NMFS' consideration of ''small numbers,'' the negligible impact determinations, and impacts on subsistence uses.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would primarily be by Level B harassment, as use of the acoustic sources (*i.e.,* vibratory and impact pile driving) has the potential to result in disruption of behavioral patterns for individual marine mammals. There is also some potential for auditory injury (AUD INJ) (Level A harassment) to result, primarily for very high-frequency species, phocids, and otariids because predicted AUD INJ zones are larger in comparison to the observability of such species. Auditory injury is unlikely to occur for high and low-frequency cetaceans. The proposed mitigation and monitoring measures are expected to minimize the severity of the taking to the extent practicable.

As described previously, no serious injury or mortality is anticipated or proposed to be authorized for this activity. Below we describe how the proposed take numbers are estimated.

For acoustic impacts, generally speaking, we estimate take by considering: (1) acoustic criteria above which NMFS believes the best available science indicates marine mammals will likely be behaviorally harassed or incur some degree of AUD INJ; (2) the area or volume of water that will be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) the number of days of activities. We note that while these factors can contribute to a basic calculation to provide an initial prediction of potential takes, additional information that can qualitatively inform take estimates is also sometimes available (*e.g.,* previous monitoring results or average group size). Below, we describe the factors considered here in more detail and present the proposed take estimates.

Acoustic Criteria

NMFS recommends the use of acoustic criteria that identify the received level of underwater sound above which exposed marine mammals would be reasonably expected to be behaviorally harassed (equated to Level B harassment) or to incur AUD INJ of some degree (equated to Level A harassment). We note that the criteria for AUD INJ, as well as the names of two hearing groups, have been updated (NMFS 2024) as reflected below in the Level A harassment section.

Level B Harassment—hough significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed to varying degrees by other factors related to the source or exposure context (*e.g.,* frequency, predictability, duty cycle, duration of the exposure, signal-to-noise ratio, distance to the

source), the environment (*e.g.,* bathymetry, other noises in the area, predators in the area), and the receiving animals (hearing, motivation, experience, demography, life stage, depth) and can be difficult to predict (*e.g.,* Southall *et al.,* 2007, 2021, Ellison *et al.,* 2012). Based on what the available science indicates and the practical need to use a threshold based on a metric that is both predictable and measurable for most activities, NMFS typically uses a generalized acoustic threshold based on received level to estimate the onset of behavioral harassment. NMFS generally predicts that marine mammals are likely to be behaviorally harassed in a manner considered to be Level B harassment when exposed to underwater anthropogenic noise above root-mean-squared pressure received levels (RMS SPL) of 120 dB (referenced to 1 micropascal (re 1 μPa)) for continuous (*e.g.,* vibratory pile driving, drilling) and above RMS SPL 160 dB re 1 μPa for non-explosive impulsive (*e.g.,* seismic airguns) or intermittent (*e.g.,* scientific sonar) sources. Generally speaking, Level B harassment take estimates based on these behavioral harassment thresholds are expected to include any likely takes by TTS as, in most cases, the likelihood of TTS occurs at distances from the source less than those at which behavioral harassment is likely. TTS of a sufficient degree can manifest as behavioral harassment, as reduced hearing sensitivity and the potential reduced opportunities to detect important signals (conspecific communication, predators, prey) may result in changes in behavior patterns that would not otherwise occur.

The WSDOT Mukilteo Wingwalls Repair Project includes the use of continuous (vibratory pile driving and removal) and impulsive (impact pile driving) sources, and therefore the RMS SPL thresholds of 120 and 160 dB re 1 μPa are applicable.

Level A harassment—NMFS' Updated Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 3.0) (Updated Technical Guidance, 2024) identifies dual criteria to assess AUD INJ (Level A harassment) to five different underwater marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). The WSDOT's Mukilteo Wingwalls Repair Project includes the use of impulsive (impact pile driving) and non-impulsive (vibratory pile driving and removal) sources.

The 2024 Updated Technical Guidance criteria include both updated thresholds and updated weighting functions for each hearing group. The thresholds are provided in the table below. The references, analysis, and methodology used in the development of the criteria are described in NMFS' 2024 Updated Technical Guidance, which may be accessed at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance-other-acoustic-tools.*

TABLE 4—THRESHOLDS IDENTIFYING THE ONSET OF AUDITORY INJURY

Hearing group	AUD INJ onset acoustic thresholds * (received level)	
	Impulsive	Non-impulsive
Low-Frequency (LF) Cetaceans	*Cell 1:* $L_{pk,flat}$: 222 dB; $L_{E,LF,24h}$: 183 dB	*Cell 2:* $L_{E,LF,24h}$: 197 dB.
High-Frequency (HF) Cetaceans	*Cell 3:* $L_{pk,flat}$: 230 dB; $L_{E,HF,24h}$: 193 dB	*Cell 4:* $L_{E,HF,24h}$: 201 dB.
Very High-Frequency (VHF) Cetaceans	*Cell 5:* $L_{pk,flat}$: 202 dB; $L_{E,VHF,24h}$: 159 dB	*Cell 6:* $L_{E,VHF,24h}$: 181 dB.
Phocid Pinnipeds (PW) (Underwater)	*Cell 7:* $L_{pk,flat}$: 223 dB; $L_{E,PW,24h}$: 183 dB	*Cell 8:* $L_{E,PW,24h}$: 195 dB.
Otariid Pinnipeds (OW) (Underwater)	*Cell 9:* $L_{pk,flat}$: 230 dB; $L_{E,OW,24h}$: 185 dB	*Cell 10:* $L_{E,OW,24h}$: 199 dB.

* Dual metric criteria for impulsive sounds: Use whichever criteria results in the larger isopleth for calculating AUD INJ onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level criteria associated with impulsive sounds, the PK SPL criteria are recommended for consideration for non-impulsive sources.

Note: Peak sound pressure level ($L_{p,0\text{-}pk}$) has a reference value of 1 μPa, and weighted cumulative sound exposure level ($L_{E,p}$) has a reference value of 1 μPa^2s. In this table, criteria are abbreviated to be more reflective of International Organization for Standardization standards (ISO 2017). The subscript "flat" is being included to indicate peak sound pressure are flat weighted or unweighted within the generalized hearing range of marine mammals underwater (*i.e.,* 7 Hz to 165 kHz). The subscript associated with cumulative sound exposure level criteria indicates the designated marine mammal auditory weighting function (LF, HF, and VHF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The weighted cumulative sound exposure level criteria could be exceeded in a multitude of ways (*i.e.,* varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these criteria will be exceeded.

Ensonified Area

Here, we describe operational and environmental parameters of the activity that are used in estimating the area ensonified above the acoustic thresholds, including source levels and transmission loss coefficient.

The sound field in the project area is the existing background noise plus additional construction noise from the proposed project. Marine mammals are expected to be affected via sound generated by the primary components of the project (*i.e.,* vibratory pile driving and removal, and impact pile driving).

In order to calculate distances to the Level A harassment and Level B harassment thresholds for the methods and piles used in the proposed project, WSDOT and NMFS used acoustic monitoring data from previous pile driving such as WSDOTs Bainbridge Island Ferry Terminal Project (impact pile driving of 30-inch (76 cm) steel, with a bubble curtain in place) and WSDOT's Keystone Ferry terminal Project (vibratory pile driving of 30-inch (76 cm) steel), and also used WSDOT's Biological Assessment Reference (vibratory and impact pile driving of 30-inch (76 cm) steel). A bubble curtain was in place for all impact pile driving measurements and a bubble curtain would be in place during impact pile driving associated with this project.

Source levels for vibratory installation and removal of piles of the same diameter are assumed to be the same.

Note: dB peak = peak sound level; rms = root mean square; SEL = sound exposure level.
* a bubble curtain was in place for all impact pile driving measurements.

TL is the decrease in acoustic intensity as an acoustic pressure wave propagates out from a source. *TL* parameters vary with frequency, temperature, sea conditions, current, source and receiver depth, water depth, water chemistry, and bottom composition and topography. The general formula for underwater *TL* is:

$TL = B \times \text{Log10}\ (R_1/R_2)$, where

TL = transmission loss in dB
B = transmission loss coefficient
R_1 = the distance of the modeled SPL from the driven pile, and
R_2 = the distance from the driven pile of the initial measurement

Absent site-specific acoustical monitoring with differing measured *TL,* a practical spreading value of 15 is used as the *TL* coefficient in the above formula. Site-specific *TL* data for the Womens Bay are not available; therefore, the default coefficient of 15 is used to determine the distances to the Level A harassment and Level B harassment thresholds.

The ensonified area associated with Level A harassment is more technically challenging to predict due to the need to account for a duration component. Therefore, NMFS developed an optional User Spreadsheet tool to accompany the 2024 Updated Technical Guidance that can be used to relatively simply predict an isopleth distance for use in conjunction with marine mammal density or occurrence to help predict potential takes. We note that because of some of the assumptions included in the methods underlying this optional tool, we anticipate that the resulting isopleth estimates are typically going to be overestimates of some degree, which may result in an overestimate of potential take by Level A harassment. However, this optional tool offers the best way to estimate isopleth distances when more sophisticated modeling methods are not available or practical. For stationary sources such as pile driving and DTH, the optional User Spreadsheet tool predicts the distance at which, if a marine mammal remained at that distance for the duration of the activity, it would be expected to incur AUD INJ. Inputs used in the optional User Spreadsheet tool (*e.g.,* number of piles per day, duration, and/or strikes per pile), are presented in table 1, the sound levels are presented in table 5, and the resulting estimated isopleths, are reported below.

TABLE 6—PROJECTED DISTANCES TO LEVEL A AND LEVEL B HARASSMENT ISOPLETHS (m) AND ASSOCIATED AREAS [1] (*km²*) BY MARINE MAMMAL HEARING GROUP FOR VIBRATORY INSTALLATION AND REMOVAL AND IMPACT INSTALLATION OF FOUR 30-INCH (76 cm) STEEL PILES PER DAY [2]

Activity	Level A harassment zones (m)					[1] Level B harassment zones	
	LF	HF	VHF	PW	OW	Distance (km)	Area (km²)
Vibratory	138	53	113	178	60	32	107
Impact	1,604	205	2,483	1,425	531	0.7	3.7

[1] Land is reached at a maximum of 20.6 km.
[2] Although the production rate for battered piles is two per day, all isopleths are estimated based on a production rate of four piles per day.

Level A harassment zones are typically smaller than Level B harassment zones. However, during impact pile driving, the calculated Level A harassment isopleth is greater than the calculated Level B harassment

isopleth for very high-frequency cetaceans and phocids (however, because all activities are assumed as potentially occurring on the same day, we functionally reference the largest Level A and Level B harassment zones for purposes of estimating take). Calculation of Level A harassment isopleths includes a duration component, which in the case of impact pile driving, is estimated through the total number of daily strikes and the associated pulse duration. For a stationary sound source such as impact pile driving, we assume here that an animal is exposed to all of the strikes expected within a 24-hour period. Calculation of a Level B harassment zone does not include a duration component.

Marine Mammal Occurrence and Take Estimation

In this section we provide information about the occurrence of marine mammals, including density or other relevant information which will inform the take calculations.

Additionally, we describe how the occurrence information is synthesized to produce a quantitative estimate of the take that is reasonably likely to occur and proposed for authorization. Available information regarding marine mammal occurrence in the vicinity of the project area includes site-specific and nearby survey information from WSDOT. Specifically, data sources consulted included PSO monitoring completed on 169 days between 2015 and 2021, between the months of August and February, during the multi-year WSDOT Multimodal Construction Project. PSOs were located at the project site as well as on the Mukilteo—Clinton ferry and additional positions on Whidbey Island, Camano Island, and north of Everett, Washington.

To estimate take by Level B and Level A harassment, NMFS and WSDOT referred to the data reported at all PSO monitoring locations from each of the above referenced data sets. For take by Level B harassment, WSDOT and NMFS predicted a daily occurrence probability in which the average daily occurrence for each species is multiplied by the number of days of each type of pile driving activity, generally using the following equation;

Take by Level B harassment = marine mammal occurrence × days of pile driving activities.

However, WSDOT generated different daily average marine mammal occurrence rates based on the size of the Level B harassment zone for impact pile driving and vibratory pile driving. Since impact and vibratory pile driving could occur on any construction day, NMFS instead used the marine mammal occurrence estimated within the largest Level B harassment zone across all activities to estimate take by Level B harassment.

In cases where marine mammals are expected to occasionally occur within the project area (*e.g.,* harbor porpoise or transient killer whale), NMFS and WSDOT define marine mammal occurrence by one group of the average (harbor porpoise) or maximum (transient killer whale) group size for that species. In cases where marine mammals are expected to occur frequently in the project area, marine mammal occurrence is defined by the daily average occurrence of marine mammals documented by PSOs during the Mukilteo Multimodal Project within the largest Level B harassment zones.

Finally, WSDOT rounded daily average occurrence of less than one up to one. However, in such cases where species are unlikely to occur in the project area, but for which there is some potential, NMFS proposes to predict that one group of each species may occur in the project area during the six days of planned construction rather than each construction day (*i.e.,* low-frequency cetaceans and Dall's porpoise).

For take by Level A harassment, WSDOT attempted to estimate the occurrence of marine mammals occurring within the largest Level A harassment zone across all hearing groups. However, WSDOT referred to data reported at all PSO monitoring locations during the Mukilteo Multimodal Project. In general, WSDOT reporting includes the distance of the marine mammal to the PSO rather than the source. Therefore, NMFS instead refers to marine mammal data reported from the Mukilteo Ferry Terminal location only, as it is reasonable to assume the distance of the marine mammal to the PSO reported at that location would be near the source. NMFS also reviewed the data to estimate marine mammal occurrence according to the largest Level A harassment zone of each species' respective hearing group, rather than the largest Level A harassment zone across all hearing groups.

For hearing groups where proposed shutdown zones are greater or equal to the calculated Level A harassment zones, take by Level A harassment is not proposed for authorization (low-frequency and high-frequency cetaceans).

In cases where the Level A harassment zones are larger than the proposed shutdown zones, NMFS proposes to authorize take by Level A harassment. The same general equation is used for take by Level A harassment that is used for take by Level B harassment: marine mammal occurrence × days of pile driving activities. For species that are common in the project area (*i.e.,* California sea lion, Steller sea lion, and harbor seal), marine mammal occurrence is defined by daily average occurrence within the largest Level A harassment zone for that hearing group. For species that are occasionally or rarely expected to occur in the project area, because the Level A harassment zones are large, it is assumed that takes by Level B harassment could also be by Level A harassment.

Gray Whale

As discussed the Description of Marine Mammals in the Area of Specified Activities, gray whales occurring near the project area are the most abundant from March through May, when project activities are not planned to occur. As such, although some exposure to individual gray whales could occur, the project timing will contribute to limiting potential exposures. Therefore, NMFS predicts that one gray whale could occur within the Level B harassment zone across the six day project period, to account for the low, but not discountable, likelihood that this species could occur within the project area. NMFS proposes to authorize one take by Level B harassment of gray whale.

WSDOT initially requested authorization of take by Level A harassment for gray whales. However, NMFS suggested and WSDOT agreed to shut down at a distance larger than the Level A harassment zone for this hearing group. Additionally, no gray whales have been observed anywhere near previous estimated Level A harassment zones. As such, no take by Level A harassment of gray whales is anticipated or proposed for authorization.

Humpback Whale

WSDOT plans to shut down in-water pile driving upon observation of a humpback whale or any unknown large whale approaching the estimated Level B harassment zone. Given the plan to shut down and because humpback whales are conspicuous, no takes by Level B or Level A harassment are anticipated and none are proposed for authorization.

Minke Whale

While rare, it is possible that minke whales could occur within the project

area. Therefore, NMFS predicts that one group of two minke whales could occur within the Level B harassment zone across the six day project period, to account for the low, but not discountable, likelihood that this species could occur within the project area. Therefore, NMFS proposes to authorize two takes by Level B harassment of minke whales.

WSDOT initially requested authorization of take by Level A harassment for minke whale. However, NMFS suggested and WSDOT agreed to shut down at a distance larger than the Level A harassment zone for the low-frequency cetacean hearing group. As such, no take by Level A harassment of minke whale is anticipated or proposed for authorization.

Killer Whale

Southern Resident

WSDOT plans to shut down operations upon observation of a southern resident killer whales or any unknown killer whale approaching the estimated Level B harassment zone. Given the plan to shut down and because killer whales are conspicuous, no takes by Level B or Level A harassment are expected to occur and none are proposed for authorization.

West Coast Transient

Because transient killer whales occasionally occur within the project area and can linger, NMFS conservatively predicts one group of eight transient killer whales could occur within the project area each construction day. Therefore, NMFS proposes to authorize 48 takes by Level B harassment of transient killer whale (1 group × 8 killer whales × 6 construction days = 48 takes by Level B harassment).

WSDOT initially requested authorization of take by Level A harassment for transient killer whales. However, WSDOT plans to shut down at a distance larger than the Level A harassment zone for the high frequency cetacean hearing group. As such, take by Level A harassment is not expected to occur and no take by Level A harassment of transient killer whales is proposed for authorization.

Dall's Porpoise

NMFS predicts that two Dall's porpoise could occur within the Level B harassment zone across the six-day project period. Because exposure estimates are low and the Level A harassment zones are larger than are likely observable during impact pile driving, NMFS proposes to authorize these two takes as Level A harassment, acknowledging that instead the takes could be by the less severe Level B harassment.

Harbor Porpoise

NMFS predicts that two harbor porpoises could occur within the Level B harassment zone across the six day project period. This results in 12 takes by Level B harassment (1 group × 2 harbor porpoises × 6 construction days = 12 takes by Level B harassment). Because exposure estimates are low and the Level A harassment zones are larger than are likely observable during impact pile driving, NMFS proposes to authorize these 12 takes as Level A harassment, acknowledging that instead the takes could be by the less severe Level B harassment.

California Sea Lion

NMFS predicts that 12 California sea lions could occur within the Level B harassment zone each construction day. This results in 72 takes by Level B harassment (12 California sea lions × 6 construction days = 72 takes by Level B harassment).

Across 169 monitoring days between 2015 and 2021, an average of 4.3 California sea lions were observed within 300 m from the PSO at Mukilteo New Terminal, which corresponds to the largest Level A harassment zone for this hearing group. As such, NMFS predicts that an average of 4.3 California sea lions could occur within the Level A harassment zone each construction day. This results in 24 takes by Level A harassment (4.3 California sea lions × 6 construction days = 26 takes by Level A harassment).

Takes by Level B harassment were modified to deduct the proposed amount of take by Level A harassment estimated (*i.e.,* 72 takes by Level B harassment − 26 takes by Level A harassment = 46 takes by Level B harassment). Therefore, for California sea lions, NMFS proposes to authorize 46 takes by Level B harassment and 26 takes by Level A harassment for a total of 72 takes across the 6 day project period.

Steller Sea Lion

NMFS predicts that 1 Steller sea lion could occur within the Level B harassment zone each construction day. This results in six takes by Level B harassment (1 Steller sea lion × 6 construction days = 1 takes by Level B harassment).

Across 169 monitoring days between 2015 and 2021, an average of 0.1 Steller sea lions were observed within 531 m from the PSO at Mukilteo New Terminal, which corresponds to the largest Level A harassment zone for this hearing group. Given the lower occurrence, NMFS conservatively predicts that two Steller sea lions could occur within the Level A harassment zone across the 6 day project period. This results in two takes by Level A harassment (1 group × 2 Steller sea lions across the 6-day project period = 2 takes by Level A harassment).

Takes by Level B harassment were modified to deduct the proposed amount of take by level A harassment estimated (*i.e.,* 6 takes by Level B harassment − 2 takes by Level A harassment = 4 takes by Level B harassment). Therefore, for Steller sea lions, NMFS proposes to authorize four takes by Level B harassment and two takes by Level A harassment for a total of six takes across the project period.

Harbor Seal

NMFS predicts that 21 harbor seals could occur within the Level B harassment zone each construction day. This results in 126 takes by Level B harassment (20.8 harbor seals × 6 construction days = 125 takes by level B harassment).

Across 169 monitoring days between 2015 and 2021, an average of 8.3 harbor seals were observed within 1,425 m from the PSO at Mukilteo New Terminal, which corresponds to the largest Level A harassment zone for this hearing group. As such, NMFS predicts that 50 harbor seals could occur within the Level A harassment zone across the 6-day project period (1 group × 8.3 California sea lions × 6 construction days = 50 takes by level A harassment).

Takes by Level B harassment were modified to deduct the proposed amount of take by Level A harassment estimated (*i.e.,* 125 takes by level B harassment − 50 takes by Level A harassment = 75 takes by Level B harassment). Therefore, for harbor seals, NMFS proposes to authorize 75 takes by Level B harassment and 50 takes by Level A harassment for a total of 126 takes across the project period.

Northern Elephant Seal

Because northern elephant seal can linger and a small number are known to use Whidbey Island in recent years, NMFS predicts that 1 northern elephant seal could occur within the project area each day of the 6-day project period. This results in 6 takes by level B harassment. Because exposure estimates are low and the Level A harassment zones are larger than are likely observable during impact pile driving, NMFS proposes to authorize these six takes as Level A, acknowledging that

instead the takes could be by the less severe Level B harassment.

TABLE 7—TAKE BY STOCK AND HARASSMENT TYPE AND AS A PERCENTAGE OF STOCK ABUNDANCE

Species	Stock	Level B harassment	Level A harassment	Total harassment proposed	Take as percentage of stock abundance
Gray whale	Eastern north pacific	1	0	1	<1
Minke whale	CA-OR-WA	1	0	1	<1
Killer whale	West Coast Transient	48	0	48	14
Dall's porpoise	CA-OR-WA	2		2	<1
Harbor porpoise	Washington Northern Inland	12		12	<1
California sea lion	U.S. Stock	46	26	72	<1
Steller sea lion	Eastern U.S.	4	2	6	<1
Harbor seal	Washington Northern Inland	75	50	125	*1
Northern elephant seal	California Breeding	6		.....	<1

*Reliable abundance estimates for this stock is currently unavailable.

Proposed Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, NMFS considers two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned), and;

(2) The practicability of the measures for applicant implementation, which may consider such things as cost, and impact on operations.

Shutdown Zones

For all pile driving and removal activities, WSDOT proposes to implement shutdowns within designated zones. The purpose of a shutdown zone is generally to define an area within which shutdown of the activity would occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area). Shutdown zones vary based on the activity type and marine mammal hearing group (table 8).

For humpback whales and southern resident killer whales, WSDOT proposes to shut down at distances based on the estimated Level B harassment zones for each activity. During vibratory pile driving and removal, this corresponds to 20.6 km, which is the maximum Level B harassment distance before reaching land, and during impact pile driving, this corresponds to 0.8 km. If a southern resident killer whale, or killer whale of unknown stock, or humpback whale, or unidentified mysticete is observed approaching the Level B harassment zone (*i.e.,* the shutdown zone) WSDOT would implement shutdown measures.

WSDOT also plans to take measures to ensure that they are aware of southern resident killer whales and humpback whale locations, so that work is not conducted when these species are within the vicinity of the project area. Such measures include, but are not limited to, contacting and/or reviewing the latest sightings data from the Orca Network and the Whale Report Alert System on a daily basis (see Monitoring and Reporting section).

With WSDOT's proposed shutdown zones, and efforts to determine the locations of the nearest marine mammal sightings, all incidental harassment would be prevented for southern resident killer whale and any stock of humpback whale.

For all other low-frequency and high-frequency cetaceans, the proposed shutdown zones are based on the estimated Level A harassment isopleths during all activities. The shutdown zones are also based on the estimated Level A harassment isopleths for very high-frequency cetaceans and otariids during vibratory pile driving and removal.

In cases where it would be challenging to detect marine mammals at the Level A harassment isopleth, (*e.g.,* very high-frequency cetaceans, phocids, and otariids during most impact pile driving), or where shutting down at the Level A harassment zone would create practicability concerns (*e.g.,* phocids during vibratory pile driving), smaller shutdown zones have been proposed (table 8).

Construction supervisors and crews, PSOs, and relevant WSDOT staff must avoid direct physical interaction with marine mammals during construction activity. If a marine mammal comes within 10 m of such activity, operations must cease and vessels must reduce speed to the minimum level required to maintain steerage and safe working conditions, as necessary to avoid direct physical interaction. If an activity is delayed or halted due to the presence of a marine mammal, the activity may not commence or resume until either the animal has voluntarily exited and been visually confirmed beyond the shutdown zone indicated in table 8, or

15 minutes have passed without re-detection of the animal.

Finally, construction activities must be halted upon observation of a species for which incidental take is not authorized or a species for which incidental take has been authorized but the authorized number of takes has been met entering or within any harassment zone. If a marine mammal species for which take is not authorized enters a harassment zone, all in-water activities will cease until the animal leaves the zone or has not been observed for at least 15 minutes. Pile driving will proceed if the unauthorized species is observed leaving the harassment zone or if 15 minutes have passed since the last observation.

TABLE 8—PROPOSED SHUTDOWN ZONES FOR 30-INCH (76 cm) STEEL PILES (m)

Pile driving method	LF	HF	VHF	PW	OW	Southern resident killer whale, humpback whale, or unknown killer whale or mysticete
Vibratory Installation and Removal	140	110	115	50	60	20.6 km.*
Impact Pile Driving	1,604	205	115	50	60	0.7 km.

* The calculated Level B harassment isopleth is 32 km, but 20.6 km is the maximum distance to land.

PSOs

The number and placement of PSOs during all construction activities (described in the Proposed Monitoring and Reporting section) would ensure that the shutdown zones are generally visible, such that PSOs are reasonably confident of their ability observe species at relevant distances. WSDOT would employ at least six PSOs during all vibratory pile driving and removal activities and at least four PSOs during all impact pile driving activities.

Monitoring for Level A and Level B Harassment

PSOs would monitor the shutdown zones and beyond to the extent that PSOs can see. Monitoring beyond the shutdown zones enables observers to be aware of and communicate the presence of marine mammals in the project areas outside the shutdown zones and thus prepare for a potential cessation of activity should the animal enter the shutdown zone.

Pre-and-Post-Activity Monitoring

Prior to the start of daily in-water construction activity, or whenever a break in pile driving of 30 minutes or longer occurs, PSOs would observe the shutdown zones and as much of the harassment zones as possible for a period of 30 minutes. Pre-start clearance monitoring must be conducted during periods of visibility sufficient for the lead PSO to determine that the shutdown zones are clear of marine mammals for which take is authorized. If the shutdown zone for which take is authorized is obscured by fog or poor lighting conditions, in-water construction activity will not be initiated until the entire shutdown zone is visible. Pile driving may commence following 30 minutes of observation when the determination is made that the shutdown zones are clear of marine mammals. If a marine mammal is observed entering or within shutdown zones, pile driving activity must be delayed or halted. If pile driving is delayed or halted due to the presence of a marine mammal, the activity may not commence or resume until either the animal has voluntarily exited and been visually confirmed beyond the shutdown zone or 15 minutes have passed without re-detection of the animal. If a marine mammal for which take by Level B harassment is authorized is present in the Level B harassment zone, activities may begin. If work ceases for more than 30 minutes, the pre-activity monitoring of the shutdown zones would commence.

Soft Start

The use of soft-start procedures are believed to provide additional protection to marine mammals by providing warning and/or giving marine mammals a chance to leave the area prior to the hammer operating at full capacity. For impact pile driving, contractors would be required to provide an initial set of three strikes from the hammer at reduced energy, with each strike followed by a 30-second waiting period. This procedure would be conducted a total of three times before impact pile driving begins. Soft start would be implemented at the start of each day's impact pile driving and at any time following cessation of impact pile driving for a period of 30 minutes or longer. Soft start is not required during vibratory pile driving activities.

Bubble Curtain

A bubble curtain would be employed during impact installation or proofing of steel piles. A noise attenuation device would not be required during vibratory pile driving. If a bubble curtain or similar measure is used, it would distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column. Any other attenuation measure would be required to provide 100 percent coverage in the water column for the full depth of the pile. The lowest bubble ring would be in contact with the mudline for the full circumference of the ring. The weights attached to the bottom ring would ensure 100 percent mudline contact. No parts of the ring or other objects would prevent full mudline contact.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered by NMFS, NMFS has preliminarily determined that the proposed mitigation measures provide the means of effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present while conducting the activities. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

—Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.,* presence, abundance, distribution, density);

—Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the activity; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);
—Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;
—How anticipated responses to stressors impact either: (1) long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;
—Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and,
—Mitigation and monitoring effectiveness.

Visual Monitoring

Marine mammal monitoring during pile driving activities must be conducted by NMFS-approved PSOs in a manner consistent with the following:
—PSOs must be independent of the activity contractor (for example, employed by a subcontractor), and have no other assigned tasks during monitoring periods;
—At least one PSO must have prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization;
—Other PSOs may substitute other relevant experience, education (degree in biological science or related field) or training for experience performing the duties of a PSO during construction activities pursuant to NMFS-issued take authorization;
—Where a team of three or more PSOs is required, a lead observer or monitoring coordinator will be designated. The lead observer will be required to have prior experience working as a marine mammal observer during construction activity pursuant to a NMFS-issued incidental take authorization; and,
—PSOs must be approved by NMFS prior to beginning any activity subject to this IHA.

PSOs should also have the following qualifications:
—Ability to conduct field observations and collect data according to assigned protocols;
—Experience or training in the field identification of marine mammals, including identification of behaviors;
—Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
—Writing skills sufficient to prepare a report of observations including, but not limited to, the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and,
—Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

Visual monitoring would be conducted by trained PSOs positioned at suitable vantage points to generally be able to observe the entirety of the shutdown zones (see figures 1 and 2 in WSDOT's marine mammal monitoring plan), which includes the full extent of the Level B harassment zones for southern resident killer whale and humpback whale. WSDOT would place at least 6 PSOs during vibratory pile driving and removal at locations such as Mabana Beach, Camano Island State Park, Tuliap, Harborview Park, Mukilteo Terminal, and Clinton Ferry Terminal, and at least four PSOs would be placed during impact pile driving at locations at or near Mukilteo Ferry Terminal. At least one PSO would be placed near the pile driving site during all pile driving and removal activities.

Monitoring would be conducted 30 minutes before, during, and 30 minutes after all in water construction activities. In addition, PSOs will record all incidents of marine mammal occurrence, regardless of distance from activity, and will document any behavioral reactions in concert with distance from piles being driven or removed. Pile driving activities include the time to install or remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than 30 minutes.

Coordination With Local Marine Mammal Research Network

Before the project begins, WSDOT would contact the Orca Network and ask to be notified of sightings in the project area. Prior to pile driving each day, PSOs would also monitor the Orca Network Facebook page to stay informed about marine mammal sightings. The Orca Network consists of a list of over 600 (and growing) residents, scientists, and government agency personnel in the United States and Canada. Sightings are called or emailed into the Orca Network and immediately distributed to the NMFS Northwest Fisheries Science Center, the Center for Whale Research, Cascadia Research, the Whale Museum Hotline, and the British Columbia Sightings Network.

Sightings information collected by the Orca Network includes detection by hydrophone. The SeaSound Remote Sensing Network is a system of interconnected hydrophones installed in the marine environment of Haro Strait (west side of San Juan Island) to study orca communication, in-water noise, bottom fish ecology, and local climatic conditions. A hydrophone at the Port Townsend Marine Science Center measures average in-water sound levels and automatically detects unusual sounds. These passive acoustic devices allow researchers to hear when different marine mammals come into the region. This acoustic network, combined with the volunteer visual sighting network allows researchers to document presence and location of various marine mammal species.

WSDOT also participates in the Whale Report Alert System (WRAS/WhaleReport Alert System—Ocean Wise). In October 2018, the Ocean Wise Sightings Network (formerly the B.C. Cetacean Sightings Network) launched an alert system that broadcasts details of whale presence to large commercial vessels. Information on whale presence is obtained from real-time observations reported to the Ocean Wise Sightings Network via the WhaleReport app. The alerts inform shipmasters and pilots of cetacean occurrence in their vicinity. This awareness better enables vessels to undertake adaptive mitigation measures, such as slowing down or altering course in the presence of cetaceans, to reduce the risk of collision and disturbance.

All WSDOT ferry vessel crews have been trained in the use of WRAS, and input new sightings of cetaceans so data would be available to other vessels and to PSOs on the project. The lead PSO will check the WRAS sightings regularly during the day to be aware of cetacean reports in the area.

With this level of coordination in the region of activity, WSDOT would be able to get additional real-time information on the presence or absence of cetaceans prior to start of in-water construction each day.

Reporting

WSDOT would submit a draft marine mammal monitoring report to NMFS within 90 days after the completion of pile driving activities, or 60 days prior to a requested date of issuance of any future IHAs for the project, or other projects at the same location, whichever comes first. The marine mammal monitoring report will include an overall description of work completed, a narrative regarding marine mammal sightings, and associated PSO data sheets. Specifically, the report will include:

—Dates and times (begin and end) of all marine mammal monitoring;
—Construction activities occurring during each daily observation period, including: (1) the number and type of piles that were driven and the method (*e.g.,* impact or vibratory); and (2) total duration of driving time for each pile (vibratory driving) and number of strikes for each pile (impact driving);
—PSO locations during marine mammal monitoring;
—Environmental conditions during monitoring periods (at beginning and end of PSO shift and whenever conditions change significantly), including Beaufort sea state and other relevant weather conditions including cloud cover, fog, sun glare, and overall visibility to the horizon, and estimated observable distance;
—Upon observation of a marine mammal, the following information: (1) name of PSO who sighted the animal(s) and PSO location and activity at time of sighting; (2) time of sighting; (3) identification of the animal(s) (*e.g.,* genus/species, lowest possible taxonomic level, or unidentified), PSO confidence in identification, and the composition of the group if there is a mix of species; (4) distance and location of each observed marine mammal relative to the pile being driven for each sighting; (5) estimated number of animals (min/max/best estimate); (6) estimated number of animals by cohort (adults, juveniles, neonates, group composition, *etc.*); (7) animal's closest point of approach and estimated time spent within the harassment zone; (8) description of any marine mammal behavioral observations (*e.g.,* observed behaviors such as feeding or traveling), including an assessment of behavioral responses thought to have resulted from the activity (*e.g.,* no response or changes in behavioral state such as ceasing feeding, changing direction, flushing, or breaching);
—Number of marine mammals detected within the harassment zones, by species; and,
—Detailed information about implementation of any mitigation (*e.g.,* shutdowns and delays), a description of specific actions that ensued, and resulting changes in behavior of the animal(s), if any.

A final report must be prepared and submitted within 30 calendar days following receipt of any NMFS comments on the draft report. If no comments are received from NMFS within 30 calendar days of receipt of the draft report, the report shall be considered final. All PSO data would be submitted electronically in a format that can be queried such as a spreadsheet or database and would be submitted with the draft marine mammal report.

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, the WSDOT must report the incident to the OPR, NMFS (*PR.ITP.Monitoring Reports@noaa.gov* and *itp.fleming@noaa.gov*) and West Coast region (WCR) Regional Stranding as soon as feasible. If the death or injury was clearly caused by the specified activity, the WSDOT must immediately cease the activities until NMFS OPR is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of this IHA. WSDOT must not resume their activities until notified by NMFS. The report must include the following information:

—Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);
—Species identification (if known) or description of the animal(s) involved;
—Condition of the animal(s) (including carcass condition if the animal is dead);
—Observed behaviors of the animals(s), if alive;
—If available, photographs or video footage of the animal(s); and,
—General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any impacts or responses (*e.g.,* intensity, duration), the context of any impacts or responses (*e.g.,* critical reproductive time or location, foraging impacts affecting energetics), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338, September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

To avoid repetition the majority of our analysis applies to all the species listed in table 2, given that many of the anticipated effects of this project on different marine mammal stocks are expected to be relatively similar in nature. Where there are meaningful differences between species or stocks, or groups of species, in anticipated individual responses to activities, impact of expected take on the population due to differences in population status, or impacts on habitat, they are described independently in the analysis below.

Pile driving and removal associated with this project, as outlined previously, have the potential to disturb or displace marine mammals. Specifically, the specified activities may result in take, in the form of Level B harassment and, for some species, Level A harassment from underwater sounds generated by pile driving and removal. Potential takes could occur if individuals are present in the ensonified zone when these activities are underway.

No serious injury or mortality is expected in either year, even in the absence of required mitigation measures, given the nature of the activities. Further, no take by Level A harassment is anticipated for any low-frequency or high-frequency cetaceans, due to the rarity of the species near the project area and/or the application of proposed mitigation measures, such as shutdown zones that encompass the

Level A harassment zones for these species (see Proposed Mitigation section).

Level A harassment is proposed for very high-frequency cetaceans and pinnipeds that may occur in the project area (Dall's porpoise, harbor porpoise, California sea lion, Steller sea lion, harbor seal, and northern elephant seal). Any take by Level A harassment is expected to arise from, at most, a small degree of AUD INJ (*i.e.,* minor degradation of hearing capabilities within regions of hearing that align most completely with the energy produced by impact pile driving such as the low-frequency region below 2 kHz), not severe hearing impairment or impairment within the ranges of greatest hearing sensitivity. Animals would need to be exposed to higher levels and/or longer duration than are expected to occur here in order to incur any more than a small degree of PTS.

Additionally, the amount of take by Level A harassment proposed for authorization is very low. As stated above, for low-frequency and high-frequency cetaceans (three species), NMFS anticipates no take by Level A harassment over the duration of WSDOT's planned activities; NMFS expects no more than 2 takes by Level A harassment for Dall's porpoise; 12 takes by Level A harassment for harbor porpoise; 6 takes by Level A harassment for northern elephant seal; and 2 takes by Level A harassment for Steller sea lion. The proposed amount of take by Level A harassment for California sea lions and harbor seal is a bit larger—24 takes and 49 takes, respectively. However, for all hearing groups, if hearing impairment occurs, it is most likely that the affected animal would lose only a few dB in its hearing sensitivity. Due to the small degree anticipated, any AUD INJ potentially incurred would not be expected to affect the reproductive success or survival of any individuals, much less result in adverse impacts on the species or stock.

Additionally, some subset of the individuals that are behaviorally harassed could also simultaneously incur some small degree of TTS for a short duration of time. However, since the hearing sensitivity of individuals that incur TTS is expected to recover completely within minutes to hours, it is unlikely that the brief hearing impairment would affect the individual's long-term ability to forage and communicate with conspecifics, and would therefore not likely impact reproduction or survival of any individual marine mammal, let alone adversely affect rates of recruitment or survival of the species or stock.

Effects on individuals that are taken by Level B harassment in the form of behavioral disruption, on the basis of reports in the literature as well as monitoring from other similar activities, would likely be limited to reactions such as avoidance, increased swimming speeds, increased surfacing time, or decreased foraging (if such activity were occurring) (*e.g.,* Thorson and Reyff, 2006). Most likely, individuals would simply move away from the sound source and temporarily avoid the area where pile driving is occurring. If sound produced by project activities is sufficiently disturbing, animals are likely to simply avoid the area while the activities are occurring. We expect that any avoidance of the project areas by marine mammals would be temporary in nature and that any marine mammals that avoid the project areas during construction would not be permanently displaced. Short-term avoidance of the project areas and energetic impacts of interrupted foraging or other important behaviors is unlikely to affect the reproduction or survival of individual marine mammals, and the effects of behavioral disturbance on individuals is not likely to accrue in a manner that would affect the rates of recruitment or survival of any affected stock.

The project is also not expected to have significant adverse effects on affected marine mammals' habitats. The project activities would not modify existing marine mammal habitat for a significant amount of time. The activities may cause a low level of turbidity in the water column and some fish may leave the area of disturbance, thus temporarily impacting marine mammals' foraging opportunities in a limited portion of the foraging range; but, because of the short duration of the activities and the relatively small area of the habitat that may be affected (with no known particular importance to marine mammals), the impacts to marine mammal habitat are not expected to cause significant or long-term negative consequences.

There is a Biologically Important Area for feeding gray whale that intersects with the project area, but it is active between February and May (Calambokidis et al., 2024), which does not intersect with the time period when project activities are planned (October). This suggests that impacts from the project would have minimal to no impact on gray whales and would therefore not affect reproduction and survival.

Finally, it is unlikely that minor noise effects in a small, localized area of habitat would have any effect on the reproduction or survival of any individuals, much less these stocks' annual rates of recruitment or survival. In combination, we believe that these factors, as well as the available body of evidence from other similar activities, demonstrate that the potential effects of the specified activities would have only minor, short-term effects on individuals. The specified activities are not expected to impact rates of recruitment or survival and would therefore not result in population-level impacts.

In summary and as described above, the following factors primarily support our preliminary determination that the impacts resulting from this activity are not expected to adversely affect any of the species or stocks through effects on annual rates of recruitment or survival:

—No serious injury or mortality is anticipated or proposed for authorization;

—No take by Level A harassment is proposed for low and high-frequency cetaceans;

—Take by Level A harassment would be very small amounts for most species and of a low severity;

—Proposed takes by Level B harassment are relatively low for most stocks. Level B harassment would be primarily in the form of behavioral disturbance, resulting in avoidance of the project areas around where impact or vibratory pile driving is occurring, with some low-level TTS that may limit the detection of acoustic cues for relatively brief amounts of time in relatively confined footprints on their populations

—The lack of anticipated significant or long-term negative effects to marine mammal habitat.

—Effects on species that serve as prey for marine mammals from the activities are expected to be short-term and, therefore, any associated impacts on marine mammal feeding are not expected to result in significant or long-term consequences for individuals, or to accrue to adverse impacts on their populations from either project;

—The ensonified areas are small relative to the overall habitat ranges of all species and stocks, and overlap with known areas of important habitat is minimal;

—WSDOT would implement mitigation measures including visual monitoring and shutdown zones to minimize the numbers of marine mammals exposed to injurious levels of sound.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the

proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from the proposed activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted previously, only take of small numbers of marine mammals may be authorized under sections 101(a)(5)(A) and (D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one-third of the species or stock abundance, the take is considered to be of small numbers (see 86 FR 5322, January 19, 2021). Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

We propose to authorize incidental take of nine marine mammal stocks each project year (table 7). The total amount of taking proposed for authorization is less than 1 percent for 8 of these stocks and 14 percent for one stock. Though the most recent SAR includes an unreliable population estimate for the Washington northern inland stock of harbor seal because it is more than 8 years old, Pearson *et al.,* 2024 reports that the peak population estimate for this stock is 15,898. As such, the 77 proposed takes by Level B harassment, and 49 proposed takes by Level A harassment, compared to the abundance estimate, suggests that about 1 percent of the stock would be expected to be impacted. We consider these relatively small percentages and thus, small numbers.

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals would be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act

Section 7(a)(2) of the ESA of 1973 (16 U.S.C. 1531 *et seq.*) requires that each Federal agency ensure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally whenever we propose to authorize take for endangered or threatened species.

No incidental take of ESA-listed species is proposed for authorization or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to WSDOT for conducting the Mukilteo Wingwalls Repair Project in Puget Sound, Washington, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. A draft of the proposed IHA can be found at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.*

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this notice of proposed IHA for the proposed Mukilteo Wingwalls Repair Project. We also request comment on the potential renewal of this proposed IHA as described in the paragraph below. Please include with your comments any supporting data or literature citations to help inform decisions on the request for this IHA or a subsequent renewal IHA.

On a case-by-case basis, NMFS may issue a one-time, 1-year renewal IHA following notice to the public providing an additional 15 days for public comments when (1) up to another year of identical or nearly identical activities as described in the Description of Proposed Activity section of this notice is planned or (2) the activities as described in the Description of Proposed Activity section of this notice would not be completed by the time the IHA expires and a renewal would allow for completion of the activities beyond that described in the *Dates and Duration* section of this notice, provided all of the following conditions are met:

—A request for renewal is received no later than 60 days prior to the needed renewal IHA effective date (recognizing that the renewal IHA expiration date cannot extend beyond 1 year from expiration of the initial IHA).

—The request for renewal must include the following:

1. An explanation that the activities to be conducted under the requested renewal IHA are identical to the activities analyzed under the initial IHA, are a subset of the activities, or include changes so minor (*e.g.,* reduction in pile size) that the changes do not affect the previous analyses, mitigation and monitoring requirements, or take estimates (with the exception of reducing the type or amount of take).

2. A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized.

—Upon review of the request for renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures will remain the same and appropriate, and the findings in the initial IHA remain valid.

Dated: June 25, 2025.

Kimberly Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2025–13270 Filed 7–15–25; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Guidance on Referrals for Potential Criminal Enforcement

AGENCY: Office of General Counsel, Department of Defense (DoD).

ACTION: Guidance document.

SUMMARY: This guidance document describes DoD's plans to address criminally liable regulatory offenses under the recent executive order (E.O.) on Fighting Overcriminalization in Federal Regulations.

FOR FURTHER INFORMATION CONTACT: Mr. Gerald Dziecichowicz, Associate Deputy General Counsel, Office of the General

Counsel (Legal Counsel), Department of Defense, Office of the Secretary, Pentagon, Room 3B688, Arlington, VA 22202, 571–256–0695.

SUPPLEMENTARY INFORMATION: On May 9, 2025, the President issued E.O. 14294, ''Fighting Overcriminalization in Federal Regulations,'' which published in the **Federal Register** on May 14, 2025 (90 FR 20363–20365) and is available at *https://www.govinfo.gov/content/pkg/FR-2025-05-14/pdf/2025-08681.pdf.* Section 7 of E.O. 14294 provides that within 45 days of the order, and in consultation with the Attorney General, each agency should publish guidance in the **Federal Register** describing its plan to address criminally liable regulatory offenses.

The E.O. does not apply to the enforcement of immigration laws or regulations promulgated to implement such laws, nor does it apply to the enforcement of laws or regulations related to national security or defense. To the extent that DoD takes any criminal enforcement actions not within one of those exemptions, DoD will apply the policy in this guidance document to such actions.

That policy, subject to appropriate exceptions and to the extent consistent with law, states that when DoD is deciding whether to refer alleged violations of criminal regulatory offenses to the Department of Justice (DOJ), officers and employees of the DoD should consider, among other factors:

- the harm or risk of harm, pecuniary or otherwise, caused by the alleged offense;
- the potential gain to the putative defendant that could result from the offense;
- whether the putative defendant held specialized knowledge, expertise, or was licensed in an industry related to the rule or regulation at issue; and
- evidence, if any is available, of the putative defendant's general awareness of the unlawfulness of his conduct as well as his knowledge or lack thereof of the regulation at issue.

Further, this general policy is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Consistent with the E.O., DoD also advises the public that by May 9, 2026, the Department, in consultation with the Attorney General, will provide to the Director of the Office of Management and Budget a report containing: (1) a list of all criminal regulatory offenses [1] enforceable by the DoD or the DOJ; and (2) for each such criminal regulatory offense, the range of potential criminal penalties for a violation and the applicable mens rea standard [2] for the criminal regulatory offense.

Dated: July 11, 2025.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2025–OS–0144]

Proposed Collection; Comment Request

AGENCY: United States Transportation Command (USTRANSCOM), Department of Defense (DoD).

ACTION: 60-day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the United States Transportation Command announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by September 15, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24 Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Military Surface Deployment and Distribution Command (SDDC), 1 Soldier Way, Scott AFB, IL 62225, Mr. Dennis A. White, 618–220–6932.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Department of Defense Standard Tender of Freight Services; SDDC Form 364–R; OMB Control Number 0704–0634.

Needs and Uses: The information derived from the DoD tenders on file with the Military SDDC is used by SDDC subordinate commands and DoD shippers to select the best value carriers to transport surface freight shipments. Freight carriers furnish information in a uniform format so that the Government can determine the cost of transportation, accessorial, and security services, and select the best value carriers for 1.1 million Bill of Lading shipments annually. The DoD tender is the source document for the General Services Administration post-shipment audit of carrier freight bills.

Affected Public: Business or other for-profit.

Annual Burden Hours: 27,351.

Number of Respondents: 82,053.

Responses Per Respondent: 1.

Annual Responses: 82,053.

Average Burden Per Response: 20 minutes.

Frequency: On occasion.

Dated: July 11, 2025.

Stephanie J. Bost,

Alternate OSD and Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 5274–001]

New Hampshire Department of Environmental Services; Notice of Application for Surrender of Exemption Accepted for Filing, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Surrender of Exemption.

b. *Project No:* 5274–001.

c. *Date Filed:* June 2, 2025, as supplemented on June 13, 2025.

d. *Applicant:* New Hampshire Department of Environmental Services.

e. *Name of Project:* Squam Lake Dam Hydroelectric Project.

f. *Location:* The project is located on the Squam River, in Grafton County, New Hampshire. The project does not occupy any federal lands.

g. *Filed Pursuant to:* Public Utility Regulatory Policies Act of 1978, 16 U.S.C. 2705, 2708.

h. *Applicant Contact:* Corey Clark, P.E., Chief Engineer, New Hampshire Department of Environmental Services, Dam Bureau, 29 Hazen Drive, Concord, NH 03302, *corey.clark@des.nh.gov.*

i. *FERC Contact:* Kelly Fitzpatrick, (202) 502–8435, *kelly.fitzpatrick@ferc.gov.*

j. *Cooperating agencies:* With this notice, the Commission is inviting federal, state, local, and Tribal agencies with jurisdiction and/or special expertise with respect to environmental issues affected by the proposal, that wish to cooperate in the preparation of any environmental document, if applicable, to follow the instructions for filing such requests described in item k below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of any environmental document cannot also intervene. *See* 94 FERC ¶ 61,076 (2001).

k. *Deadline for filing comments, motions to intervene, and protests:* August 12, 2025.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. The first page of any filing should include the docket number P–5274–001. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

l. *Description of Request:* The applicant proposes to surrender the project exemption. The generating

equipment has not operated since 2002. No significant modifications to the existing dam, buildings, or structures and no ground disturbing activities are proposed. The applicant has already disconnected the phase leads from the electrical grid. The applicant proposes to remove the electrical connections to the generators within the powerhouse and disable and/or remove the generating equipment and ancillary electrical equipment from the powerhouse. There will be no work on the dam or spillway. Upon surrender of the exemption, the penstock gates will be left in the closed and locked position. The dam will remain in place with no changes to its components, ownership, operation, maintenance procedures, or monitoring procedures. Flows will continue to pass over the spillway and through three low-level outlet sluice gates. Outlet gates and equipment needed for regular dam operation will remain operable.

m. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.

n. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

o. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

p. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title ''COMMENTS'', ''PROTEST'', or ''MOTION TO INTERVENE'' as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

q. The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: July 11, 2025.

Debbie-Anne A. Reese,

Secretary.

Federal Energy Regulatory Commission

[Docket No. AD24–7–000]

Federal and State Current Issues Collaborative; Notice of Meeting and Agenda

As first announced in the Commission's June 23, 2025 Notice in the above-captioned docket,[1] the second public meeting of the Federal and State Current Issues Collaborative (Collaborative) will be held on July 27, 2025, from approximately 9:30 am–12:00 pm EDT, at the Omni Boston Hotel at the Seaport in Boston, Massachusetts. Commissioners may attend and participate in this meeting. Attached to this Notice is the agenda for the meeting.

The purpose of this meeting is to discuss generic issues related to the states' role in Regional Transmission Organization (RTO) governance, including on resource adequacy issues. Commissioners do not intend to discuss at this meeting any specific proceeding before the Commission, including proceedings that involve similar issues. These proceedings include, but are not limited to:

California Independent System Operator Corp.	Docket No. ER24–2671–001.
Meeting the Challenge of Resource Adequacy in Regional Transmission Organization and Independent System Operator Regions.	Docket No. AD25–7–000.
Midcontinent Independent System Operator, Inc	Docket No. ER25–2247–000.
Midcontinent Independent System Operator, Inc	Docket No. ER25–2298–000.
Midcontinent Independent System Operator, Inc	Docket No. ER25–2454–000.
PJM Interconnection, LLC	Docket Nos. ER24–1790–000 et al.b; ER24–1787–000 et al.
PJM Interconnection, LLC	Docket No. EL25–76–000.
PJM Interconnection, LLC	Docket No. ER25–682–000.
PJM Interconnection, LLC	Docket No. ER25–785–002.
PJM Interconnection, LLC	Docket No. ER25–712–001.
PJM Interconnection, LLC	Docket Nos. ER24–148–000; EL25–18–000.
Southwest Power Pool, Inc	Docket Nos. ER25–2296–000; ER25–2297–000.
Southwest Power Pool, Inc	Docket No. ER25–89–000.

[1] *Fed. and State Current Issues Collaborative,* Notice, Docket No. AD24–7–000 (issued June 23, 2025).

The meeting will be open to the public for listening and observing and will be on the record. There is no fee for attendance and registration is not required. The public may attend in person or via Webcast.[2] This meeting will be transcribed. Transcripts will be available for a fee from Ace Reporting, 202–347–3700.

Commission meetings are accessible under section 508 of the Rehabilitation Act of 1973. For accessibility accommodations, please send an email to *accessibility@ferc.gov* or call toll free 1–866–208–3372 (voice) or 202–208–8659 (TTY), or send a fax to 202–208–2106 with the required accommodations.

More information about the Collaborative is available here: *https://www.ferc.gov/federal-state-current-issues-collaborative.* For questions related to the Collaborative, please contact: Robert Thormeyer, 202–502–8694, *robert.thormeyer@ferc.gov,* CeCe Coffey, 202–502–8040, *cecelia.coffey@ferc.gov,* or Kimberly Duffley, 202–898–1305, *kduffley@naruc.org.*

Dated: July 11, 2025.

Carlos D. Clay,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP25–513–000]

Spire MoGas Pipeline LLC & Spire STL Pipeline LLC; Notice of Application and Establishing Intervention Deadline

Take notice that on June 27, 2025, Spire MoGas Pipeline LLC (Spire MoGas), 329 Josephville Road, Wentzville, Missouri 63385, and Spire STL Pipeline LLC (Spire STL), 700 Market Street, St. Louis, Missouri 63101, filed a joint application with the Federal Energy Regulatory Commission under sections 7(b) and 7(c) of the Natural Gas Act (NGA) and Part 157 of the Commission's regulations. The applicant's request authorization for Spire MoGas to acquire and operate the jurisdictional facilities of Spire STL as part of its existing interstate natural gas system (Project). The Project includes the abandonment by transfer of Spire STL's facilities to Spire MoGas, the creation of a new rate Zone 3, and the consolidation of both pipeline systems into one integrated network. The Project is expected to increase administrative efficiency, enhance reliability and operational flexibility, and maintain existing service and rates for customers. No new construction is proposed, and no environmental or landowner impacts are anticipated, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

Any questions concerning this request should be directed to Alexander Kass, Associate General Counsel, Spire Midstream, 3773 Richmond Avenue, Suite 300, Houston, Texas 77046, by phone at (346) 619–6496 or via email at *Alex.Kass@SpireEnergy.com.*

Pursuant to section 157.9 of the Commission's Rules of Practice and Procedure,[1] within 90 days of this Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file comments on the project, you can protest the filing, and you can file a motion to intervene in the proceeding. There is no fee or cost for filing comments or intervening. The deadline for filing a motion to intervene is 5:00 p.m. Eastern Time on August 1, 2025. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Comments

Any person wishing to comment on the project may do so. Comments may include statements of support or objections, to the project as a whole or specific aspects of the project. The more specific your comments, the more useful they will be.

Protests

Pursuant to sections 157.10(a)(4)[2] and 385.211[3] of the Commission's regulations under the NGA, any person[4] may file a protest to the application. Protests must comply with the requirements specified in section 385.2001[5] of the Commission's regulations. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

To ensure that your comments or protests are timely and properly recorded, please submit your comments on or before August 1, 2025.

There are three methods you can use to submit your comments or protests to the Commission. In all instances, please

[2] A link to the Webcast will be available here on the day of the event: *https://www.ferc.gov/federal-state-current-issues-collaborative.*

[1] 18 CFR 157.9.

[2] 18 CFR 157.10(a)(4).

[3] 18 CFR 385.211.

[4] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[5] 18 CFR 385.2001.

reference the Project docket number CP25–513–000 in your submission.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments or protests electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments or protests by mailing them to the following address below. Your written comments must reference the Project docket number (CP25–513–000).

To file via USPS: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of comments (options 1 and 2 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Persons who comment on the environmental review of this project will be placed on the Commission's environmental mailing list and will receive notification when the environmental documents (EA or EIS) are issued for this project and will be notified of meetings associated with the Commission's environmental review process.

The Commission considers all comments received about the project in determining the appropriate action to be taken. However, the filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding. For instructions on how to intervene, see below.

Interventions

Any person, which includes individuals, organizations, businesses, municipalities, and other entities,[6] has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure[7] and the regulations under the NGA[8] by the intervention deadline for the project, which is August 1, 2025. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

There are two ways to submit your motion to intervene. In both instances, please reference the Project docket number CP25–513–000 in your submission.

(1) You may file your motion to intervene by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Intervention.'' The eFiling feature includes a document-less intervention option; for more information, visit *https://www.ferc.gov/docs-filing/efiling/document-less-intervention.pdf.;* or

(2) You can file a paper copy of your motion to intervene, along with three copies, by mailing the documents to the address below. Your motion to intervene must reference the Project docket number CP25–513–000.

To file via USPS: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of motions to intervene (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail at: Alexander Kass, Associate General Counsel, Spire Midstream, 3773 Richmond Avenue, Suite 300, Houston, Texas 77046 or by email (with a link to the document) at *Alex.Kass@SpireEnergy.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online. Service can be via email with a link to the document.

All timely, unopposed[9] motions to intervene are automatically granted by operation of Rule 214(c)(1).[10] Motions to intervene that are filed after the intervention deadline are untimely, and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations.[11] A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

Intervention Deadline: 5:00 p.m. Eastern Time on August 1, 2025.

[6] 18 CFR 385.102(d).

[7] 18 CFR 385.214.

[8] 18 CFR 157.10.

[9] The applicant has 15 days from the submittal of a motion to intervene to file a written objection to the intervention.

[10] 18 CFR 385.214(c)(1).

[11] 18 CFR 385.214(b)(3) and (d).

Dated: July 11, 2025.

Debbie-Anne A. Reese,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2711–025]

Northern States Power Company; Notice of Application Accepted for Filing and Soliciting Motions To Intervene and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Subsequent Minor License.

b. *Project No.:* 2711–025.

c. *Date filed:* November 30, 2023.

d. *Applicant:* Northern States Power Company (Northern States Power).

e. *Name of Project:* Trego Hydroelectric Project (Trego Project).

f. *Location:* The Trego Project is located on the Namekagon River in Washburn County, Wisconsin.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Donald Hartinger, Director of Renewable Operation-Hydro, Xcel Energy, 414 Nicollet Mall, 2, Minneapolis, MN 55401; phone (651) 261–7668; or Matthew Miller, Environmental Analyst, Xcel Energy, 1414 W. Hamilton Ave., PO Box 8, Eau Claire, WI 54702–0008; phone 715–737–1353.

i. *FERC Contact:* Laura Washington at (202) 502–6072; or email at *Laura.Washington@ferc.gov.*

j. *Deadline for filing motions to intervene and protests:* on or before 5:00 p.m. Eastern Time on September 9, 2025.

The Commission strongly encourages electronic filing. Please file motions to intervene and protests using the Commission's eFiling system at *https://ferconline.ferc.gov/FERCOnline.aspx.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *https://ferconline.ferc.gov/QuickComment.aspx.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. All filings must clearly identify the project name and docket number on the first page: Trego Hydroelectric Project (P–2711–025).

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application has been accepted, but is not ready for environmental analysis at this time.

l. *The Trego Project consists of the following facilities:* (1) a 435.2-acre reservoir; (2) a 642-foot-long, 43.5-foot-high concrete dam; (3) a 59.5-foot-long, 74-feet-high powerhouse containing two James Leffel Company vertical Francis-type turbines with a total generating capacity of 1.2 megawatts; (4) a tailwater; and (5) a 49-foot-long transmission line. Northern States Power is not proposing any changes to project facilities or operation.

m. A copy of the application is available for review via the internet through the Commission's Home Page (*http://www.ferc.gov*), using the ''eLibrary'' link. Enter the docket number, excluding the last three digits in the docket number field, to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll free, (886) 208–3676 or TTY (202) 502–8659.

You may also register online at *https://ferconline.ferc.gov/FERCOnline.aspx* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

n. Anyone may submit a protest or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, 385.211, and 385.214. In determining the appropriate action to take, the Commission will consider all protests filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any protests or motions to intervene must be received on or before the specified deadline date for the particular application.

All filings must (1) bear in all capital letters the title ''PROTEST'' or ''MOTION TO INTERVENE;'' (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. Agencies may obtain copies of the application directly from the applicant. A copy of any protest or motion to intervene must be served upon each representative of the applicant specified in the particular application.

o. Procedural schedule: The application will be processed according to the following schedule. Revisions to the schedule will be made as appropriate.

Comments on Scoping Document 1 due.	July 2025
Request Additional Information (*if necessary*).	August 2025
Issue Scoping Document 2 (*if necessary*).	September 2025

Dated: July 11, 2025.

Carlos D. Clay,

Deputy Secretary.

Accession Number: 20250711–5139.

Comment Date: 5 p.m. ET 8/1/25.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organization, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: July 11, 2025.

Carlos D. Clay,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2417–067]

Northern Power States Company; Notice of Application Accepted for Filing and Soliciting Motions To Intervene and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Subsequent Minor License.

b. *Project No.:* P–2417–067.

c. *Date filed:* November 30, 2023.

d. *Applicant:* Northern States Power Company (Northern States Power).

e. *Name of Project:* Hayward Hydroelectric Project (Hayward Project).

f. *Location:* The Hayward Project is located on the Namekagon River in the City of Hayward in Sawyer, Country, Wisconsin.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791 (a)—825(r).

h. *Applicant Contact:* Donald Hartinger, Director of Renewable Operation-Hydro, Xcel Energy, 414 Nicollet Mall, 2, Minneapolis, MN 55401; phone (651) 261–7668; or Matthew Miller, Environmental Analyst, Xcel Energy, 1414 W Hamilton Ave., PO Box 8, Eau Claire, WI 54702–0008; phone 715–737–1353.

i. *FERC Contact:* Laura Washington at (202) 502–6072; or email at *Laura.Washington@ferc.gov.*

j. *Deadline for filing motions to intervene and protests:* on or before 5:00 p.m. Eastern Time on September 9, 2025.

The Commission strongly encourages electronic filing. Please file motions to intervene and protests using the Commission's eFiling system at *https://ferconline.ferc.gov/FERCOnline.aspx.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *https://ferconline.ferc.gov/QuickComment.aspx.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. All filings must clearly identify the project name and docket number on the first page: Hayward Hydroelectric Project (P–2417–067).

The Commission's Rules of Practice require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application has been accepted, but is not ready for environmental analysis at this time.

l. *The Hayward Project consists of:* (1) a 246.9-acre reservoir; (2) a 442-foot-long the concrete overflow dam; (3) a 18-foot-wide, 24-foot long powerhouse with intake channel containing one S. Morgan Smith vertical Francis-Type turbine with a total installed capacity of 0.168 megawatts; (4) a tailrace; and (5) a 150-foot-long underground transmission line. Northern States Power is not proposing any changes to project facilities or operation.

m. A copy of the application is available for review via the internet through the Commission's Home Page (*http://www.ferc.gov*), using the ''eLibrary'' link. Enter the docket number, excluding the last three digits in the docket number field, to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll free, (886) 208–3676 or TTY (202) 502–8659.

You may also register online at *https://ferconline.ferc.gov/FERCOnline.aspx* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, community organizations, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

n. Anyone may submit a protest or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, 385.211, and 385.214. In determining the appropriate action to take, the Commission will consider all protests filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any protests or motions to intervene must be received on or before the specified deadline date for the particular application.

All filings must (1) bear in all capital letters the title ''PROTEST'' or ''MOTION TO INTERVENE;'' (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. Agencies may obtain copies of the application directly from the applicant. A copy of any protest or motion to intervene must be served upon each representative of the applicant specified in the particular application.

o. *Procedural schedule:* The application will be processed according to the following schedule. Revisions to the schedule will be made as appropriate.

Comments on Scoping Document 1 due.	July 2025.
Request Additional Information (*if necessary*).	August 2025.
Issue Scoping Document 2 (*if necessary*).	September 2025.

Dated: July 11, 2025.

Debbie-Anne A. Reese,

Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 175–032]

Pacific Gas and Electric Company; Notice of Reasonable Period of Time for Water Quality Certification Application

On July 7, 2025, Pacific Gas & Electric Company submitted to the Federal Energy Regulatory Commission (Commission) a copy of its application for Clean Water Act Section 401(a)(1) water quality certification filed with the California State Water Resources Control Board (Water Board), in conjunction with the above captioned project. The submittal also included a response from the Water Board stating that it received the application on July 3, 2025. Pursuant to the Commission's regulations,[1] we hereby notify the Water Board of the following:

Date of Receipt of the Certification Request: July 3, 2025.

Reasonable Period of Time to Act on the Certification Request: July 3, 2026.

If the Water Board fails or refuses to act on the water quality certification request on or before the above date, then the certifying authority is deemed waived pursuant to section 401(a)(1) of the Clean Water Act, 33 U.S.C. 1341(a)(1).

Dated: July 11, 2025.

Debbie-Anne Reese,

Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–12556–01–R6]

Clean Air Act Operating Permit Program; Petition for Objection to State Operating Permit for Valero Refining-Texas, L.P., Harris County, Texas

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final order on petition.

SUMMARY: The Environmental Protection Agency (EPA) former Acting

[1] 18 CFR 5.23(b).

Administrator signed an Order dated January 07, 2025, granting in part and denying in part a petition dated August 20, 2024, from Texas Environmental Justice Advocacy Services, Caring for Pasadena Communities, Lone Star Chapter of the Sierra Club, and Environmental Integrity Project (the Petitioners). The petition requested that the EPA object to a Clean Air Act (CAA) title V operating permit issued by the Texas Commission on Environmental Quality (TCEQ) to Valero Refining-Texas, L.P., for its Valero Houston Refinery located in Harris County, Texas.

FOR FURTHER INFORMATION CONTACT: Jonathan Ehrhart, EPA Region 6 Office, Air Permits Section, (214) 665–2295, *ehrhart.jonathan@epa.gov.* The final order and petition are available electronically at: *https://www.epa.gov/title-v-operating-permits/title-v-petition-database.*

SUPPLEMENTARY INFORMATION: The EPA received a petition from Texas Environmental Justice Advocacy Services, Caring for Pasadena Communities, Lone Star Chapter of the Sierra Club, and Environmental Integrity Project dated August 20, 2024, requesting that the EPA object to the issuance of operating permit No. O1381, issued by TCEQ to Valero Refining-Texas, L.P., for its Valero Houston Refinery located in Harris County, Texas. On January 07, 2025, the EPA former Acting Administrator issued an Order granting in part and denying in part the petition. The order itself explains the basis for the EPA's decision.

Sections 307(b) and 505(b)(2) of the CAA provide that a petitioner may request judicial review of those portions of an order that deny issues in a petition. Any petition for review shall be filed in the United States Court of Appeals for the appropriate circuit no later than September 15, 2025.

Dated: June 30, 2025.

James McDonald,

Director, Air and Radiation Division, Region 6.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2025–0077; FRL–12476–05–OCSPP]

Certain New Chemicals or Significant New Uses; Statements of Findings—May 2025

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Toxic Substances Control Act (TSCA) requires EPA to publish in the **Federal Register** a statement of its findings after its review of certain TSCA submissions when EPA makes a finding that a new chemical substance or significant new use is not likely to present an unreasonable risk of injury to health or the environment. Such statements apply to premanufacture notices (PMNs), microbial commercial activity notices (MCANs), and significant new use notices (SNUNs) submitted to EPA under TSCA. This document presents statements of findings made by EPA on such submissions during the period from May 1, 2025 to May 31, 2025.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2025–0077, is available online at *https://www.regulations.gov.* Additional information about dockets generally, along with instructions for visiting the docket in-person, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT:

For technical information: Rebecca Edelstein, New Chemical Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–1667 email address: *edelstein.rebecca@epa.gov.*

For general information: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave. Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action provides information that is directed to the public in general.

B. What action is the Agency taking?

This document lists the statements of findings made by EPA after review of submissions under TSCA section 5(a) that certain new chemical substances or significant new uses are not likely to present an unreasonable risk of injury to health or the environment. This document presents statements of findings made by EPA during the applicable period.

C. What is the Agency's authority for taking this action?

TSCA section 5(a)(3) requires EPA to review a submission under TSCA section 5(a) and make specific findings pertaining to whether the substance may present unreasonable risk of injury to health or the environment. Among those potential findings is that the chemical substance or significant new use is not likely to present an unreasonable risk of injury to health or the environment per TSCA Section 5(a)(3)(C).

TSCA section 5(g) requires EPA to publish in the **Federal Register** a statement of its findings after its review of a submission under TSCA section 5(a) when EPA makes a finding that a new chemical substance or significant new use is not likely to present an unreasonable risk of injury to health or the environment. Such statements apply to PMNs, MCANs, and SNUNs submitted to EPA under TSCA section 5.

Anyone who plans to manufacture (which includes import) a new chemical substance for a non-exempt commercial purpose and any manufacturer or processor wishing to engage in a use of a chemical substance designated by EPA as a significant new use must submit a notice to EPA at least 90 days before commencing manufacture of the new chemical substance or before engaging in the significant new use.

The submitter of a notice to EPA for which EPA has made a finding of ''not likely to present an unreasonable risk of injury to health or the environment'' may commence manufacture of the chemical substance or manufacture or processing for the significant new use notwithstanding any remaining portion of the applicable review period.

II. Statements of Findings Under TSCA Section 5(a)(3)(C)

In this unit, EPA identifies the PMNs, MCANs and SNUNs for which EPA has made findings under TSCA section 5(a)(3)(C) that the new chemical substances or significant new uses are not likely to present an unreasonable risk of injury to health or the environment. For the findings made during this period, the following list provides the EPA case number assigned to the TSCA section 5(a) submission and the chemical identity (generic name if the specific name is claimed as confidential).

- P–16–0218, Acetoacetylated glycerin (Generic Name).

• P–25–0017, Reaction product of aromatic acid with trifunctional polyol and pelargonic acid (Generic Name).

To access EPA's decision document describing the basis of the ''not likely to present an unreasonable risk'' finding made by EPA under TSCA section 5(a)(3)(C), lookup the specific case number at *https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/determined-not-likely.*

Authority: 15 U.S.C. 2601 *et seq.*

Dated: July 14, 2025.

Shari Z. Barash,

Director, New Chemicals Division, Office of Pollution Prevention and Toxics.

[FR Doc. 2025–13319 Filed 7–15–25; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OW–2023–0329; FRL–10681–02–OW]

Issuance of a General Permit for Ocean Disposal of Marine Mammal and Sea Turtle Carcasses

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability of final general permit.

SUMMARY: The Environmental Protection Agency (EPA) is re-issuing a general permit under the Marine Protection, Research and Sanctuaries Act (MPRSA) to authorize the transport of marine mammal and sea turtle carcasses from the United States and disposal of marine mammal and sea turtle carcasses in ocean waters. Permit re-issuance is necessary because the most recent permit expired on January 4, 2024. The EPA has not made substantive changes to the content of the recently expired general permit, though it has revised the scope and eligibility provisions, and general permittees will be able to resume permitted deposition of marine mammal carcasses in ocean waters pursuant to the re-issued permit terms.

DATES: This permit is effective on August 15, 2025 and expires on July 16, 2032.

ADDRESSES: The EPA established a docket for this action under Docket ID No. EPA–HQ–OW–2023–0329. All documents in the docket are listed on the *https://www.regulations.gov* website.

FOR FURTHER INFORMATION CONTACT: Cheryl Zulick, Freshwater and Marine Regulatory Branch; Oceans, Wetlands, and Communities Division, Mail Code 4504T, Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone (202) 566–0583; email address: *zulick.cheryl@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

The authorization in this general permit is available for any officer, employee, agent, department, agency, or instrumentality of Tribal, Federal, State or local unit of government, as well as any Marine Mammal Health and Stranding Response Program (MMHSRP) Stranding Agreement Holder, authorized members of the Sea Turtle Stranding and Salvage Network (STSSN), any Alaska Native, and members of the Makah Indian Tribe already authorized to take a marine mammal under the Endangered Species Act (ESA) or Marine Mammal Protection Act (MMPA), to transport from the United States and dispose of a marine mammal or sea turtle carcass in ocean waters.

B. Does this action require the disposal of marine mammal or sea turtle carcasses in ocean waters?

The general permit does not require ocean disposal of marine mammal or sea turtle carcasses; it merely authorizes ocean disposal when there is a need for disposition of such carcasses in ocean waters.

C. Why does the EPA permit ocean disposal of marine mammal and sea turtle carcasses?

The disposition of marine mammal and sea turtle carcasses in ocean waters is not excluded from the statutory definition of ''dumping'' or otherwise excluded from the scope of the Marine Protection, Research, and Sanctuaries Act (MPRSA), as such the transportation and disposition of any material, including carcasses, in ocean waters requires a permit under the MPRSA.

D. Why does this action require reporting?

Given the natural and unnatural deaths of marine mammals and sea turtles at sea, the disposal of marine mammal or sea turtle carcasses into the ocean is not anticipated to have any adverse effect on human health, fisheries resources, or marine ecosystems. Under the MPRSA regulations (40 CFR 224.1 and 224.2), each person dumping materials under a general permit must maintain records of the physical and chemical characteristics of the material dumped, the times and locations of the dumping, and any other information required as a condition of the permit. Dumping records must be reported to the EPA as required under the general permit. Additionally, to meet the United States' international treaty obligation for reporting under the London Convention, the EPA reports information about disposals under this general permit, and all other activities authorized under the MPRSA, annually to the International Maritime Organization, which provides administrative support on behalf of the treaty parties.

II. Federal Law and International Conventions

Except as excluded from the definition of dumping in the MPRSA (or otherwise excluded), the transportation for the purpose of dumping and dumping of any material in ocean waters requires authorization under the MPRSA. The MPRSA defines the term ''dumping'' broadly to encompass the disposition of material both for the purpose of disposal and for purposes other than disposal. The exclusion for purposes other than disposal is limited. Section 102(a)(A) of the MPRSA and implementing regulations at 40 CFR 227.14 through 227.16 direct the EPA, in issuing a permit and/or evaluating a permit application, to consider the need for ocean dumping as well as alternatives to ocean dumping.

The MPRSA implements the United States' obligations under the London Convention, the international treaty that protects the marine environment from the dumping of wastes and other matter into the ocean. Contracting Parties to the London Convention agreed to control dumping by implementing regulatory programs to assess the need for, and the potential impact of, dumping. The London Convention requires Contracting Parties to issue a permit for the dumping of wastes and other matter at sea, to prohibit dumping of some materials, and to report annually on all permits issued and monitoring activities undertaken.

For the at-sea disposition of marine mammal and sea turtle carcasses, the EPA establishes terms for MPRSA permit authorization, but other Federal laws also are implicated. The MPRSA general permit only purports to authorize the transportation for the purposes of disposal and disposal of marine mammal and sea turtle carcasses at sea; it does not itself provide for compliance with those other Federal laws.

The Marine Mammal Protection Act (MMPA), for example, regulates human interactions with ''marine mammals''. The term marine mammal refers to any

mammal that is morphologically adapted to the marine environment (including sea otters and members of the orders Sirenia, Pinnipedi, and Cetacea) or primarily inhabits the marine environment (*e.g.,* polar bears). The Marine Turtle Conservation Act defines a sea turtle using the term ''marine turtle'', which means any member of the taxonomic family Cheloniidae or Dermochelyidae.

The EPA does not anticipate that the disposition of marine mammal or sea turtle carcasses will occur except in circumstances, such as but not limited to beached and floating marine mammal or sea turtle carcasses and/or mass strandings of marine mammals or sea turtles resulting in mortalities. In those circumstances, disposition into the ocean may be necessary to protect human health, for example, when other disposal options are not available.

Before 2017, the EPA permitted the ocean disposal of cetacean (whales and related species) and pinniped (seals and related species) carcasses on a case-by-case basis, with MPRSA emergency permits. The EPA issued a general permit for the ocean disposal of marine mammal carcasses, which became effective in January 2017, to streamline MPRSA authorization and reduce burdens associated with case-by-case permitting. That general permit provided authorization from January 5, 2017, through January 4, 2024. Under the MPRSA, general permits may be issued for a period no longer than seven years. By re-issuing the general permit, the general permit's authorization to transport marine mammal and sea turtle carcasses for the purpose of disposal and to dispose marine mammal and sea turtle carcasses in ocean waters would be available for another seven-year period. From January 5, 2017, through January 4, 2024, the effective period for the prior MPRSA general permit for ocean disposal of marine mammal carcasses, the EPA authorized 32 marine mammal carcass disposals in ocean waters under the general permit. During that same period of time, the EPA authorized an additional 43 marine mammal carcass disposals using emergency permits. Re-issuance of the general permit avoids the need for emergency permitting for marine mammal or sea turtle carcasses when such emergencies arise.

Federal laws providing protection and conservation of marine mammals and sea turtles include the MMPA, the Endangered Species Act (ESA), the Marine Turtle Conservation Act, the Whaling Convention Act (WCA), the Fur Seal Act, and international conventions, including the Inter-American Convention for the Protection and Conservation of Sea Turtles, the International Convention for the Regulation of Whaling, which established the International Whaling Commission (IWC), and the Convention on International Trade in Endangered Species of Wild Fauna and Flora. Although this general permit applies only to marine mammal or sea turtle carcasses, certain international regulations are relevant. The United States is a party to the IWC and IWC regulations are self-implementing. The EPA is not the Federal agency charged with primary implementation of the United States' obligations under IWC regulations, but the MPRSA general permit is consistent with them.

IWC regulations recognize indigenous or aboriginal subsistence whaling. As relevant to subsistence whaling in the United States, the IWC sets catch limits for the Western Arctic stock of bowhead whales and Eastern North Pacific gray whales based upon the needs of subsistence fishing in Alaska villages and subsistence needs of the Makah Indian Tribe, respectively. The bowhead whale hunt is managed cooperatively by the National Marine Fisheries Service (NMFS) and the Alaska Eskimo Whaling Commission under the WCA and the MMPA. The gray whale hunt is managed cooperatively by NMFS and the Makah Tribal Council under the WCA and under a waiver of the MMPA (50 CFR 216.100 through 216.119). As such, any Alaska Native or member of the Makah Indian Tribe, who already may take a marine mammal under the MMPA and the ESA, is provided authority under this general permit should marine mammal carcasses need to be transported and disposed at sea. In re-issuing this general permit the EPA does not intend to change, alter, or otherwise affect any ceremonial, cultural, religious and/or subsistence practices involving marine mammals or sea turtles.

The other relevant Federal programs under the MMPA and the ESA are implemented by NMFS. MMHSRP Stranding Agreement Holders are provided authority to dispose of marine mammal carcasses in the ocean under this MPRSA general permit because Stranding Agreement Holders are authorized to take marine mammals subject to the provisions of the MMPA (16 U.S.C. 1361 *et seq.*) and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*). Members of the STSSN are provided authority to dispose of sea turtle carcasses under this MPRSA general permit because they are authorized to take sea turtles subject to the provisions of the ESA (16 U.S.C. 1531 *et seq.*), individual ESA Section 10 permits and/or the implementing regulations governing the taking, importing, and exporting of endangered and threatened marine species and designated critical habitat (50 CFR parts 222 through 226). As such, MMHSRP Stranding Agreement Holders and/or authorized members of the STSSN may have a need for ocean disposal should stranded marine mammals or sea turtles die.

III. Hazard to Public Safety and Navigation

A floating carcass near shore, for example, near a recreational beach or in a harbor or ship channel, may pose a risk to public safety before making land fall to the extent it might attract predators (*e.g.,* sharks) to a recreation area or may pose a hazard to navigation. Per regulations promulgated by the U.S. Army Corps of Engineers (USACE), at 33 CFR 245.20, the determination of a navigation hazard is made jointly by the USACE and the U.S. Coast Guard (USCG). If such a determination is made, the USACE determines appropriate remedial action as described in USACE regulations at 33 CFR 245.25, which may include carcass removal. MPRSA authorization to transport a carcass for the purpose of ocean disposal would be available through this MPRSA general permit if the navigation hazard removal operation requires ocean disposal of such carcasses.

IV. Strandings and Beachings

Marine mammals and sea turtles that have died or have become sick or injured can reach the ocean shoreline by a variety of mechanisms. Possible mechanisms include: beaching, which involves a marine mammal or sea turtle carcass being driven ashore by currents or winds; stranding (single or multiple) of live marine mammal(s) or sea turtle(s) that subsequently die; and transport on the bow of vessels. In most stranding cases, the causes of marine mammal and sea turtle strandings are unknown, but some causes may include the following: disease, parasite infestation, harmful algal blooms, injuries due to ship strikes, fishery entanglements, pollution exposure, unusual weather or oceanographic events, trauma and starvation. While many marine mammals and sea turtles die every year, most carcasses never reach the shore; rather, the carcasses are consumed by other organisms or decompose sufficiently to sink to the ocean bottom where, depending upon size, the carcass may form the basis of an ''organic fall'' ecosystem.

Stranding or beaching of marine mammals, sea turtles and/or marine mammal or sea turtle carcasses may pose a risk to public health due to the potential to transfer communicable diseases (*e.g.,* brucellosis, poxvirus and mycobacteriosis) to the exposed public. Marine carcasses present a significant disposal concern not only because of their size but also due to the frequency with which carcasses reach the shoreline. From 2006—2021, an average of 6,300 marine mammals stranded on United States shorelines per year (NMFS, 2024). A large majority of marine mammals that strand either are dead or die shortly after stranding (NMFS, 2022).

V. Disposal and Management Options

Generally, MMHSRP Stranding Agreement Holders and members of the STSSN are authorized to respond to marine mammals and sea turtles, respectively, that are found floating near shore or beached or stranded along the shore. While Stranding Agreement Holders and members of the STSSN do not and cannot respond to every stranded marine mammal and sea turtle, when they do respond and deem disposal necessary, the carcass must be disposed of properly. The MMHSRP has prepared a programmatic Environmental Impact Statement that describes, among other things, disposal and management options for carcasses of deceased marine mammals (NMFS, 2022).

For a dead marine mammal or sea turtle encountered, generally available methods for carcass disposal and management fall into two main categories: remove-from-the-environment and remain-in-the-environment. Remove-from-the-environment methods entail moving the carcass for disposal through controlled means and include disposing of a carcass in a landfill, or incinerating, rendering, or composting the carcass. Remain-in-the-environment methods involve leaving the marine mammal or sea turtle carcass in the environment to decompose naturally and include the following: allowing the carcass to remain and decompose in place; burying the carcass in place; and transporting the carcass to sea for ocean disposal. No single method is recommended for every carcass, and several factors are necessarily considered to determine the best disposal method for any particular carcass. Selection of a disposal method depends on factors such as number and size of the animals, carcass condition, the location, if chemicals were administered (including as antibiotics, sedatives and/or chemical euthanasia agents), availability of local resources and transportation logistics. Location considerations include coastal geography, currents, proximity to areas used extensively by the public, and Tribal, Federal, State, and/or local laws and regulations. While this **Federal Register** publication discusses other disposal methods briefly, the MPRSA general permit itself only concerns the disposal method to tow or otherwise transport the carcass of a marine mammal or sea turtle to sea for ocean disposal and the at-sea disposition of the remains.

A. Remove-from-the-Environment Methods

One benefit of removing the carcass from the environment is minimizing the likelihood of infectious disease transmission to humans, domesticated animals and wildlife. These methods either sequester the carcass or destroy the carcass and any associated pathogens and should be considered if the animal is suspected to have died from a disease that can easily spread to human or other animal populations. Remove-from-the-environment approaches can also be beneficial if the carcass contains toxic chemicals, such as certain chemical euthanasia agents, like pentobarbital. Some of these methods effectively remove these substances from the environment.

1. Disposal in a Licensed Landfill

The most widespread remove-from-the-environment method is disposal in a landfill. With this method, the carcass is removed from the beaching or stranding location and brought to a nearby landfill in a lined or contained transport vehicle. Disposal in a licensed landfill can minimize the likelihood and adverse effect of releasing any toxic substances contained in the carcass, including any euthanasia drugs, because the substances can be contained to one location. However, not all licensed landfills may be able to accept animals that have been euthanized with barbiturates. Therefore, authorities would contact local landfills to ensure that the landfill can accept carcasses that contain these drugs.

2. Incineration

Incineration is the process by which carcass tissues are disintegrated by burning. Incineration, particularly at an incineration facility, destroys the physical integrity of a carcass and the remaining ashes and hard parts (*i.e.,* teeth, bones, etc.) are buried in a landfill. Disposal via incineration can prevent the spread of diseases, toxic materials and veterinary drugs contained in the carcass from entering the environment. Disposal via the incineration method may require preplanning and coordination with the local facility to fully understand the biological load that the incineration facility can manage. Incineration can be very expensive. Incineration facilities are not commonly found in all areas of the United States and the availability of commercial or municipal incinerators may be limited by the transportability of the carcass.

3. Rendering

Rendering is an activity in which the carcass is rapidly reduced and recycled into new products. Rendering uses all parts of the animal and often creates a protein by-product (*e.g.,* protein meal) and a fat by-product (*e.g.,* tallow and grease). Disposal via rendering exposes the carcass to high heat to eliminate pathogens and prevent the spread of diseases. However, if a carcass contains euthanasia drugs some facilities may not be able to accept or process the carcasses depending on the drug. Disposal via rendering requires preplanning and coordination with the rendering facility to fully understand its policies for disposal of animals that were chemically euthanized. Rendering may be very expensive. Rendering facilities are not commonly found in all areas of the United States and the availability of rendering facilities may be limited by the transportability of the carcass.

4. Composting

Composting marine mammal or sea turtle carcasses would involve bringing a carcass to a commercial composting facility (which may or may not require a State or local operating license) or to a site designated specifically for carcass composting or composting in a carcass digester. While composting is similar to disposal in a landfill, it offers the added benefit that the nutrients contained within the carcass are transformed into biologically available material. Disposal via composting can minimize the threat of releasing any pathogens or toxic substances contained in the carcass, including euthanasia drugs, because composted carcasses are contained to one location. However, if a carcass contains certain veterinary drugs, some facilities may not be able to accept or process the carcasses. Disposal via composting requires preplanning and coordination with the local facility to fully understand their policies for disposal of animals that were chemically euthanized and to ensure that all carcass compost will be used in accordance with local and State

regulations on wildlife compost. Composting facilities are not commonly found in all areas of the United States and the availability of composting facilities may be limited by the transportability of the carcass.

B. Remain-in-the-Environment Methods

The remain-in-environment methods of disposal involve leaving marine mammal or sea turtle carcasses to naturally break down in the same, or similar, area in which it was found. Natural decomposition or burial in place may be used for both small and large marine mammal or sea turtle carcasses and is often the most preferred method if the carcass size or remoteness of the carcass location avoids logistical issues related to transportation. Remain-in-the-environment disposal methods should not be used for animals that were chemically euthanized with drugs known to cause secondary poisoning.

1. In-Place Decomposition

Allowing a carcass to remain in place to decompose may be an acceptable disposal method if the carcass does not pose a human exposure risk for public health and animal health or result in unacceptable odor or visual aesthetic impacts. In-place decomposition may also be the most practical when the carcass is located in an area that is remote or inaccessible to heavy equipment, thereby making other options, such as burying in place or moving to a different disposal location, infeasible.

2. In-Place Burial

In-place burial of a marine mammal or sea turtle carcass involves burying the carcass in the same or a similar location where the animal was found and may be used as a disposal method, especially when the carcass is located near population centers or near areas used for recreational activities. In-place burial involves excavating a trough above the high tide line, placing the carcass in the trench and covering the carcass with the excavated material. Burying the carcass creates a barrier that minimizes the smell and sight of the decaying carcass and reduces the likelihood of transmitting infectious diseases and attracting scavengers. Utilizing the in-place burial disposal method also depends on other factors such as the sediment substrate in the area (*e.g.,* fine sediments versus rocks and boulders), the availability of appropriate excavation equipment, and ability to avoid potential environmental damage (*e.g.,* destruction of dunes, beach grass, or nesting sites) caused by the transportation and operation of excavation equipment.

3. Ocean Disposal

The ocean disposal method is the only method to which the MPRSA general permit applies and imposes requirements. If a carcass cannot be moved to a land-based disposal location, left above ground to decay, or be buried in-place, then it would be appropriate to tow (or transport offshore via another method) and dispose of the carcass in the ocean, provided that an acceptable ocean disposal ''site'' or location can be identified. Ocean disposal of a marine mammal or sea turtle carcass entails selection of an appropriate location for the carcass to be released or sunk to prevent the carcass from drifting or washing back onshore with all reasonable effort, becoming a hazard to navigation, or damaging protected and sensitive habitats. The carcass may float due to gas formation from decomposition. To facilitate rapid sinking, opening the body cavity may be necessary. If the carcass is to be sunk rather than released at the disposal site, appropriate carcass preparation may be necessary (*e.g.,* piercing the body cavity, attaching weights, cement barriers or chains) at the ocean disposal site so that the carcass will not return to shore or pose a hazard to navigation.

VI. Potential Consequences of Marine Mammal and Sea Turtle Carcass Disposal in the Ocean and Why a General Permit Is Appropriate

Leaving a marine mammal or sea turtle carcass in the environment to decompose, for example through in-place decomposition or burial or ocean disposal, provides a number of benefits to terrestrial, pelagic and benthic ecosystems (NMFS, 2022). Marine mammal and sea turtle carcasses that become stranded onshore and are left in-place to decompose or are buried are an integral part of coastal ecosystems providing a key source of food to scavengers and nutrients to the sediments, which may be used by algae and plants potentially increasing landscape heterogeneity (Bui 2009; Laidre et al., 2018; Quaggiotto et al., 2022; Schultz et al., 2022). Marine mammal and sea turtle carcasses that decompose while floating in ocean waters provide an energy-rich source of food for other marine animals, such as orcas and sharks (Leclerc et al., 2011; Quaggiotto et al., 2022; Schultz et al., 2022; Tucker et al., 2019; Whitehead and Reeves, 2005). Most marine mammal and sea turtle carcasses sink to the seafloor and decompose naturally (Quaggiotto et al., 2022; Schultz et al., 2022). Whale carcasses are a significant source of carrion in the marine environment, representing a huge food supply to scavengers and decomposers (Smith and Baco, 2003).

Whale falls, which occur naturally, are the most studied examples of marine mammal carcass decomposition on the seafloor (Smith et al., 2015). Whale falls are sites of intense and lasting enrichment of organic material and sulfides on the seafloor which attract and sustain diverse communities of vertebrate and invertebrate scavengers (Quaggiotto et al., 2022). Most deep-sea benthic ecosystems are organic-carbon limited and, in many cases, are dependent upon organic matter from surface waters (Smith and Baco, 2003). A sunken carcass provides a large load of organic carbon to the seafloor and enhances the structural complexity of the seafloor, provides habitats for chemosynthetic organisms and results in the establishment of specialized biological assemblages (Smith and Baco, 2003; Oldach et al., 2022; Smith et al., 2015). Over 20 macrofaunal species are known to exclusively inhabit the microenvironment formed by large organic falls and over 30 other macrofaunal species are known to inhabit these sites (Smith and Baco, 2003). The deep-sea benthic ecosystem response to whale falls has been the subject of scientific study and several stages of succession have been observed in the assemblages (Smith and Baco, 2003).

The duration of these stages of a whale fall varies greatly with carcass size, but generally occur as follows. The first stage is marked by the formation of bathyal scavenger assemblages that include hagfishes, sleeper sharks, crabs and amphipods. During the second stage, sediments surrounding the carcass, which have become enriched with organic carbon, become colonized by high densities of worms (*e.g., Dorvilleidae, Chrysopetalidae*). Once the consumption of soft tissue is complete, decomposition proceeds dominantly via anaerobic microbial digestion of bone lipids. The efflux of sulfides from the bones may, depending upon the size of the skeleton, provide for the formation of chemoautotrophic assemblages, which marks the third stage of succession. Chemoautotrophic assemblages typically consist of organisms such as heterotrophic bacteria, mussels, snails, worms, limpets and amphipods.

Water and sediment quality in the area adjacent to the fall may be negatively affected by at-sea disposals of marine mammal carcasses because a carcass could release contaminants into

the water during decomposition (NMFS, 2022). Because contaminants would dilute rapidly in the water or break down over time in the tissues, the adverse impact would be minor and no different than what would happen naturally had the carcass sank to the seafloor and decomposed (NMFS, 2022).

The EPA has permitted numerous at-sea disposals of marine mammal carcasses under the MPRSA. In 2020, the EPA conducted biological, chemical and physical monitoring of a location offshore where several marine mammal carcasses had been sunk for disposal between 2009 and 2020, with the most recent disposal occurring six months prior to monitoring. The purpose of the survey was to determine any adverse impacts the decomposing whales may have caused to the immediate benthic community and surrounding area. Monitoring results from a recently disposed humpback whale carcass revealed that the carcass was reduced to whale bones with minimal whale tissue remaining within six months and found no measurable impact on sediment quality parameters (including total organic carbon, grain size and polychlorinated biphenyl concentration) from decomposition.

Less research is available regarding at-sea decomposition of sea turtle carcasses. When a sea turtle dies at sea, however, the carcass typically sinks until decomposition gases cause the body to bloat and float to the surface (Schultz et al., 2022). Partially submerged, sea turtle carcasses may drift as they are transported by winds and currents until it washes onshore or decomposes further and sinks to the seafloor (Santos et al., 2018). Once settled on the seafloor, sea turtle carcasses would decompose naturally (Schultz et al., 2022).

The EPA seeks to minimize the adverse impacts to the marine environment from the materials used when necessary to sink carcasses through a coordination between the general permittee and the regional EPA MPRSA Coordinator. Environmentally benign materials that have been used for sinking marine mammal carcasses include sandbags, jute rope, concrete and steel cables. These materials do not cause adverse impacts on water or sediment quality or harm the marine environment (NMFS, 2022). The small volume of sand used to sink carcasses does not cause an adverse effect on the seafloor substrate type. Burlap sandbags and jute rope (used to sink smaller carcasses), which are non-plastic materials that are biodegradable, do not persist in the marine environment or cause an ingestion hazard (Araya-Schmidt and Queirolo, 2019; Rautenbach et al., 2024; Unsworth et al., 2019; Wang et al., 2021; Zhang et al., 2015). When jute rope is used to tie sandbags to the animal, the shortest length possible is used to minimize the risk of entanglement by other marine organisms. Concrete keel blocks and steel cable used to sink larger carcasses are made from non-plastic, inert materials that are not anticipated to degrade the water quality of the seafloor or the water column (Melchers et al., 2022; Moffat et al., 2017; NMFS, 2022; Sun et al., 2022).

Generally, marine mammal and sea turtle strandings represent a minimum measure of actual at-sea mortality based on scientific studies that estimate that stranding events represent only 10–20% of total mortalities in open ocean environments (Epperly et al., 1996; Hart et al., 2006; Santos et al., 2018). Considering the available scientific information on marine mammal and sea turtle strandings, marine mammal and sea turtle *in situ* decomposition and organic falls, the EPA finds that the potential adverse effects of ocean disposal of marine mammal or sea turtle carcasses under the MPRSA permit are minimal for the following reasons: (1) except in rare instances, most marine mammal or sea turtle carcasses would sink to and decompose on the ocean floor rather than wash ashore; (2) the formation of an organic fall is a naturally occurring phenomenon with no known adverse environmental impacts; (3) the materials used for sinking carcasses are chosen to minimize adverse environmental impacts; (4) the site selection for sinking carcasses requires consultation to avoid adverse environmental impacts; and (5) transporting a marine mammal or sea turtle carcass to sea for ocean disposal, when other disposal methods are not viable, presents a minimal perturbation to a naturally occurring phenomenon.

The EPA's findings are consistent with the statutory considerations applicable to permit issuance under the MPRSA because: (1) the general permit requires consideration of the need for ocean disposal and consideration of land-based alternatives; (2) marine mammal and sea turtle carcass disposals will not cause a significant adverse effect on human health and welfare, fisheries resources, marine ecosystems, or alternate uses of the ocean; (3) marine mammal and sea turtle carcass disposals will not cause any persistent or permanent adverse effects; and (4) the release and disposal locations will be appropriately considered to protect human health and to minimize interference with navigation.

VII. Statutory and Regulatory Background

MPRSA Section 101, 33 U.S.C. 1411, prohibits the unpermitted transportation of any material for the purpose of dumping it into ocean waters. MPRSA Section 102(a)(1), 33 U.S.C. 1412(a), authorizes the EPA, after notice and the opportunity for public hearings, to issue MPRSA permits. Section 102(a) of the MPRSA directs the EPA, in issuing a permit and/or evaluating a permit application, to consider, among other things, the need for ocean dumping as well as alternatives to ocean dumping. MPRSA Section 104(c), 33 U.S.C. 1414(c), authorizes the EPA to issue general permits for the transportation for the purpose of dumping, dumping, or both for specified materials, or classes of materials, it determines will have a minimal adverse environmental impact. The EPA regulations explain that the EPA may issue general permits for the dumping of materials that have a minimal adverse environmental impact and are generally disposed of in small quantities, or emergency permits for specific classes of materials that must be disposed of in emergency situations (40 CFR 220.3(a) and (c)). The towing or other method of transportation to move a marine mammal or sea turtle carcass offshore by any person for disposal at sea constitutes transportation of material for the purpose of dumping in ocean waters, and thus is subject to the MPRSA. Because the material to be disposed will consist of the carcass or carcasses, and in some cases environmentally benign material used to sink the carcass or carcasses, there will be no materials present that are prohibited by 40 CFR 227.5.

VIII. Consideration of Subsistence Uses Authorized Under the MMPA

In re-issuing this general permit, the EPA attempts, to the maximum extent allowable, to avoid interference with long-standing subsistence uses and traditional cultural practice of Alaska natives and the Makah Indian Tribe engaged in ceremonial and subsistence practices. Recognition of subsistence uses is incorporated into the MMPA and the EPA derived permit terms for such users consistent with the MMPA's designed recognition of those uses. In re-issuing this general permit, the EPA does not intend to change, alter or otherwise affect subsistence uses of marine mammals by Alaska Natives and members of the Makah Indian Tribe.

The general permit does not in any way *require* ocean disposal of marine mammal carcasses. Instead, the permit

merely provides the required Federal permit authorization of ocean disposal of marine mammal carcasses when there is a need for disposition of carcasses at sea. Subsistence activities of Alaska Natives and members of the Makah Indian Tribe that fall outside the scope of ocean disposition of carcasses may include: hunting, harvesting, salvaging, hauling, dressing, butchering, distribution, and consumption of marine mammals (or any other species used for subsistence purposes); the transportation and disposition of marine mammal carcasses at inland locations, such as in whale boneyards or in inland waters (*i.e.,* waters that are landward of the baseline of the territorial sea, such as rivers, lakes, and certain enclosed bays or harbors); or leaving marine mammal carcasses to decompose in place, where there is no transportation by vessel or other vehicle for the purpose of ocean disposal. The purpose of this general permit is to expedite the required MPRSA permit authorizations the EPA manages for the ocean disposal of marine mammal carcasses.

A. Consideration of Alaska Natives Engaged in Subsistence Uses

Alaska Natives engaged in subsistence uses are not required to, but may, transport and dispose of marine mammal carcasses in ocean waters. The EPA developed Section B of the general permit taking into consideration the subsistence use patterns and needs of Alaska Native persons. For purposes of this general permit, the EPA uses the term ''Alaska Native'' with reference to the MMPA exemption specifically, the exemption for ''any Indian, Aleut, or Eskimo who resides in Alaska and who dwells on the coast of the North Pacific Ocean or the Arctic Ocean'' who takes a marine mammal ''for subsistence purposes'' or ''for purposes of creating and selling authentic native articles of handicrafts and clothing'' and provided such taking is not in a wasteful manner (16 U.S.C. 1371(b)).

Section B of the general permit provides separate terms for authorized ocean disposal of marine mammal carcasses by an Alaska Native engaged in subsistence uses for two reasons. First, marine mammals are comparatively abundant and widely distributed throughout coastal Alaska, and Alaska Natives depend upon these natural resources for many customary and traditional uses. Collectively, the customary and traditional uses (*e.g.,* food, clothing) are referred to as ''subsistence uses.'' Alaska Natives have been using marine mammals for subsistence for thousands of years. The United States recognizes the importance of Alaska Native subsistence uses under the MMPA, which expressly exempts Alaska Natives engaged in subsistence uses from the general prohibition on ''taking'' marine mammals under certain circumstances (16 U.S.C. 1371(b)). The MPRSA, by comparison, does not include a similar exemption for the transport and disposal in ocean waters by Alaska Natives when marine mammal carcasses (or parts thereof) have no further use for subsistence purposes. Section B of the general permit accommodates the absence of an MPRSA exemption similar to the MMPA exemption by facilitating authorization of ocean disposal of marine mammal carcasses by Alaska Natives, including through annual rather than episodic reporting. Second, many coastal communities of Alaska Natives who engage in subsistence uses are located in remote locations and thus face a time-critical public safety issue, for example, when a marine mammal carcass washes ashore near a village or town, or a marine mammal is harvested or salvaged and the carcass is hauled ashore near a village or town. Such carcasses may attract bears or other scavenger animals, which may increase the risk of human injury or mortality. For these reasons, there are specific provisions in the general permit for Alaska Natives engaged in subsistence activities to expedite the transport and disposal of marine mammals in ocean waters, if necessary.

With these considerations in mind, the EPA's re-issuance of the Alaska Native-specific permit conditions (see Section B) is intended, to the maximum extent allowable, to avoid unnecessary interference with long-standing subsistence uses and traditional cultural practices, and to recognize the unique circumstances of Alaska Natives engaged in subsistence uses. In re-issuing this general permit, the EPA does not intend to change, alter, or otherwise affect subsistence uses of marine mammals by Alaska Natives engaged in subsistence uses. Section B sets forth requirements designed to address these considerations while also complying with international treaties, the MPRSA, and the EPA's regulations at 40 CFR subchapter H. The primary differences between Sections A and B relate to Federal agency concurrence, distance from land requirements for ocean disposal, and reporting requirements.

B. Consideration of Members of the Makah Indian Tribe

Members of the Makah Indian Tribe engaged in ceremonial and subsistence uses of marine mammals may, but are not required to, transport and dispose of marine mammal carcasses in ocean waters. For purposes of this general permit, Section C of the general permit authorizes ocean disposal of marine mammal carcasses by any member of the Makah Indian Tribe engaged in subsistence uses. The Makah Indian Reservation occupies a reservation located on the remote, northwestern tip of Washington State where the Strait of Juan de Fuca meets the Pacific Ocean. For thousands of years, the Makah Indian Tribe has depended on resources from the ocean for their subsistence, culture, and economy and hunting and harvesting whales, seals, other marine mammals, and marine fish have always been integral and essential to the Makah Indian Tribe.

The United States recognizes the importance of ceremonial and subsistence uses of marine mammals by the Makah Indian Tribe through the Treaty of Neah Bay. Through the Treaty of Neah Bay, the United States recognizes sovereign rights of the Makah Indian Tribe to natural resources and cultural practices, including the right to hunt and harvest whales, seals, other marine mammals, and marine fish, as well as the Makah Indian Reservation. By regulation, the Secretary of Commerce has issued a conditional waiver from the MMPA moratorium on the take of Eastern North Pacific gray whales for enrolled members of the Makah Indian Tribe (50 CFR 216.10 through 216.119; 16 U.S.C. 1371(a)(3)(A)). By comparison, the MPRSA does not provide the EPA with authority to waive permitting requirements for the transport and disposal in ocean waters when marine mammal carcasses (or parts thereof) have no further subsistence or ceremonial use. For reasons similar to the accommodations for Alaska Natives, the EPA includes Makah Indian Tribe-specific permit conditions (see Section C) to minimize interference with long-standing marine mammal subsistence uses and traditional cultural practices of the Makah Indian Tribe.

Though EPA did not propose the Makah Indian Tribe-specific provisions, the inclusion of these provisions in this final general permit merely recognizes the existing MMPA waiver of the Eastern North Pacific gray whale moratorium applicable to the Makah Indian Tribe. The difference between Sections A and C (for the Makah Indian Tribe) relates to one aspect of prior consultation. Section C of the general permit does not require that members of the Makah Indian Tribe conduct prior consultation with a Stranding Agreement Holder for the disposal of

carcasses (or parts thereof) that have no further subsistence or ceremonial use. In addition, Section C includes conditions required as part of the Clean Water Act section 401 water quality certification process, as explained below, regardless of how unlikely it may be that a member of the Makah Indian Tribe might transport carcasses (or parts thereof) to the waters where those additional conditions apply.

IX. Discussion

Considering the information presented in the previous sections, the EPA determines that the potential adverse environmental impacts of marine mammal or sea turtle carcass disposals at sea, in compliance with the permit's terms, are minimal and that marine mammal and sea turtle carcasses often must be disposed of to mitigate threats to public safety (*e.g.,* recreational uses in nearby waters) as well as risks of navigation hazards. As such, issuance of a general permit for the transportation for the purpose of disposal and the ocean disposal of marine mammal and sea turtle carcasses is appropriate under the MPRSA.

Authorization under Section A of the general permit is available to Tribal, Federal, State, and local government officials and employees acting in the course of official duties and to MMHSRP Stranding Agreement Holders and members of the STSSN. Section A authorizes such persons to transport and dispose of marine mammal or sea turtle carcasses in ocean waters. Section A requires that each such permittee consult with the MMHSRP of NMFS or the STSSN—and recommends that each such general permittee consults with the applicable USCG District Office—prior to initiating any ocean disposal activities with respect to a marine mammal or sea turtle carcass. Permittees authorized under Section A would need to consult with and obtain concurrence from the applicable EPA Regional Office on selection of an ocean disposal site, which must be at a location three miles seaward of the mean lower low water line (ordinary low water mark) along the coast or a ''closing line'' across river mouths and openings of bays as demarcated on nautical charts. Disposal sites in the ocean waters of Puget Sound are not subject to the distance-from-shore restriction; however, permittees would need to consult with and obtain concurrence from EPA Region 10 on selection of the site. The EPA requested certification under Clean Water Act section 401 that discharges under this permit will comply with applicable provisions of Clean Water Act sections 301, 302, 306 and 307 from the State of Washington and from Tribes in the Puget Sound area for disposals in the ocean waters of Puget Sound that are not subject to the permit's distance-from-shore restriction. Only one entity, the Port Gamble S'Klallam Tribe, required additional conditions as part of the certification process, and those conditions are included in the permit. All permittees authorized under Section A also need to submit a report to the applicable EPA Regional Office on the ocean disposal activities after the disposal.

Alaska Natives engaged in subsistence uses are not required to, but may, transport and dispose of marine mammal carcasses in ocean waters. When disposal in ocean waters is the selected disposal approach, Section B of the general permit authorizes any Alaska Native engaged in subsistence uses to transport and dispose of a marine mammal carcass in ocean waters. Under Section B, the Alaska Native general permittee selects an ocean disposal site sufficiently far offshore so that currents and winds are not expected to return the carcass to shore, and the carcass is not expected to pose a hazard to navigation and afterwards submits, on an annual basis, a report to EPA Region 10 on ocean disposal activities conducted in the prior calendar year. Section B does not require a statement of need for selecting ocean disposal nor does it specify a distance requirement. The EPA requested certification under Clean Water Act section 401 that discharges under Section B of this permit will comply with applicable provisions of Clean Water Act Sections 301, 302, 306 and 307 from the State of Alaska for disposals in ocean waters by any Alaska Native at any distance from shore. The State of Alaska certified discharges associated with this general permit under Clean Water Act section 401 without additional conditions.

X. Response to Comments Received

The EPA published notice of the proposed re-issuance of the general permit on October 8, 2024, and invited public comment for a 60-day period that concluded on December 9, 2024. The EPA received four comment letters from private citizens, a non-governmental organization and an Alaska Native Village. All comments received supported re-issuance of this general permit and agreed with the EPA's assessment that the activities would not result in long-lasting adverse impacts. The EPA has developed a Response to Comments documents explaining the EPA's consideration of public comments received during the comment period. In response to the comments received, the EPA modified the final permit with expansions in the scope of eligibility and clarifications, including to improved language clarity and organization.

XI. Statutory and Executive Order Reviews

A. Paperwork Reduction Act

The information collections under this general permit are covered under the MPRSA Information Collection Request (ICR) that has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act. The ICR document that the EPA prepared for all MPRSA activities has been assigned EPA ICR number 0824.08.

Under section 104(e) of the MPRSA, 33 U.S.C. 1414(e) and implementing regulations at 40 CFR 221.1 and 221.2, applicants for an MPRSA permit must provide information that the EPA determines is necessary to review and evaluate such application, for example, to ensure that ocean dumping is appropriately regulated and will not harm human health or the marine environment. To meet United States' reporting obligation under the London Convention, the EPA reports some of this information in the annual United States ocean dumping report, which is transmitted to the International Maritime Organization for treaty compliance purposes.

Respondents/affected entities: Any officer, employee, agent, department, agency, or instrumentality of Tribal, Federal, State, or local unit of government, as well as any MMHSRP Stranding Agreement Holder and/or authorized member of the STSSN, who disposes of a marine mammal or sea turtle carcass in ocean waters and any Alaska Natives or members of the Makah Indian Tribe engaged in subsistence uses who disposes of a marine mammal carcass in ocean waters will be affected by this general permit. Under this general permit, respondents do not need to request permit authorization because the general permit authorizes ocean disposal of a marine mammal or sea turtle carcass by an eligible person.

Respondent's obligation to respond: Pursuant to regulations implementing section 104(e) of the MPRSA, 33 U.S.C. 1414(e), at 40 CFR 221.1 through 221.2, the EPA requires all ocean dumping permittees to supply specified reporting information.

B. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This MPRSA permitting action has Tribal implications, but the general permit will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law. The general permit has Tribal implications because it may affect traditional practices of some Tribes.

The EPA consulted with Tribal officials under the EPA Policy on Consultation and Coordination with Indian Tribes early in the process of reviewing the previous general permit and preparing to re-issue this general permit to allow them to have meaningful and timely input into its development.

On February 14, 2023, the EPA emailed a consultation notification letter with a consultation and coordination plan to all 574 federally recognized Tribes, notifying them of this upcoming action and inviting Tribal leaders and designated consultation representatives to participate in the Tribal consultation and coordination process.

In early 2024, when the EPA was considering expanding the scope of the general permit to include ocean waters of Puget Sound, it held an additional Tribal coordination and consultation period for the Tribes in the Puget Sound area that could be affected by any such expansion of the permit's scope.

On April 2, 2024, the EPA emailed a consultation notification letter with a consultation and coordination plan to federally recognized Tribes in the Puget Sound area, notifying the Tribes of the proposal to modify the scope of the permit, and inviting Tribal leaders and designated consultation representatives to participate in the Tribal consultation and coordination process. A summary of the Tribal consultation and coordination effort, the Tribal input received, and how the EPA considered the input received may be found in the docket for this action (Docket ID No. EPA–HQ–OW–2023–0329).

Stacey M. Jensen,

Director, Oceans, Wetlands, and Communities Division.

For the reasons stated above, the EPA re-issues the general permit for the transportation and ocean disposal of marine mammal and sea turtle carcasses as follows:

General Permit for the Transportation and Ocean Disposal of Marine Mammal and Sea Turtle Carcasses

A. General Requirements for Governmental Entities and Stranding Agreement Holders

Except as provided in Sections B and C below, any officer, employee, agent, department, agency, or instrumentality of Tribal, Federal, State, or local unit of government, any Marine Mammal Health and Stranding Response Program Stranding Agreement Holder, and any authorized member of the Sea Turtle Stranding and Salvage Network who already may take a marine mammal or sea turtle under the Endangered Species Act or Marine Mammal Protection Act, is hereby granted a general permit to transport for the purpose of disposal and dispose of marine mammal and sea turtle carcasses in ocean waters subject to the following conditions:

1. The permittee shall consult with a Stranding Agreement Holder of the National Marine Fisheries Service or an authorized member of the Sea Turtle Stranding and Salvage Network prior to initiating any disposal activities, unless the permittee is an Agreement Holder or Network member, respectively. Points of contact for Stranding Agreement Holders and members of the Sea Turtle Stranding and Salvage Network are available at *https://www.epa.gov/marine-protection-permitting/ocean-disposal-marine-mammal-and-sea-turtle-carcasses.*

2. The permittee shall consult with and obtain written concurrence (via email or letter) from the applicable EPA Regional Office on ocean disposal site selection. A disposal site must be at a location three miles seaward of the mean lower low water line (ordinary low water mark) along the coast or ''closing lines'' across river mouths and openings of bays as demarcated on nautical charts. Disposal sites in the ocean waters of Puget Sound are not subject to the distance-from-shore restrictions, however permittees would need to consult with and obtain concurrence from EPA Region 10 on selection of the site. Because the presence of a marine mammal or sea turtle carcass near human habitation or recreation areas may pose a time-critical public safety issue, the permittee may obtain concurrence via telephone from the applicable EPA Regional Office provided that the permittee subsequently obtains written concurrence (via email or letter). Points of contact at the EPA are available at *https://www.epa.gov/marine-protection-permitting/ocean-disposal-marine-mammal-and-sea-turtle-carcasses.*

3. If a determination is made that the carcass must be sunk, rather than released at the disposal site, the transportation and disposal of materials necessary to ensure the sinking of the carcass are also authorized for ocean dumping under this general permit. When materials are to be used to sink the carcass, the permittee must first consult with and obtain written concurrence (via email or letter) from the applicable EPA Regional Office on the selection of materials. Any materials described in 40 CFR 227.5 (prohibited materials) or 40 CFR 227.6 (constituents prohibited as other than trace amounts) shall not be used. The transportation and dumping of any materials other than the materials necessary to ensure the sinking of the carcass are not authorized under this general permit and constitute a violation of the MPRSA. Because the presence of a marine mammal or sea turtle carcass near human habitation or recreation areas may pose a time-critical public safety issue, the permittee may obtain concurrence via telephone from the applicable EPA Regional Office provided that the permittee subsequently obtains written concurrence (via email or letter).

4. The permittee shall submit a report on the ocean disposal activities authorized by this general permit to the applicable EPA Regional Office within 30 days after carcass disposal. This report shall include:

a. A description of the carcass(es) disposed (*e.g.,* species, approximate length, general condition, floating or not);

b. The date and time of the disposal, the latitude and longitude of the ocean disposal site, and the geodetic datum associated with the coordinates of the disposal site. Latitude and longitude of the disposal site shall be reported at the highest degree of accuracy available on board the vessel that transported the carcass (*e.g.,* onboard geographic position system technology);

c. The name, title, affiliation, and contact information of the person in charge of the disposal operation and the person in charge of the vessel or vehicle that transported the carcass (if different than the person in charge of the disposal); and

d. A statement of need and rationale for selecting ocean disposal rather than other disposal options.

5. The permittee shall immediately notify the EPA of any violation of any condition of this general permit.

6. Additional permit conditions as required by the Port Gamble S'Klallam Tribe's Clean Water Act Section 401 certification for transportation and disposal of marine mammal and sea turtle carcasses waters within the boundaries of the Port Gamble S'Klallam Reservation and trust lands:

a. Entities covered under this general permit shall use best management practices for sediment and turbidity control.

b. No discharge covered under the general permit shall cause exceedances of port Gamble S'Klallam Surface Water Quality Standards narrative or number criteria.

c. No carcasses shall be disposed of near shellfish beds used by Tribal fishers.

d. No activities under this general permit may negatively impact Tribal resources.

e. The Natural Resources Department shall be notified within 24 hours of any accidents, equipment failures, or unexpected impacts resulting from activities associated with this general permit.

B. Requirements for Any Alaska Native Engaged in Subsistence Uses

Notwithstanding Section A, any Alaska Native engaged in subsistence uses is hereby granted a general permit to transport for the purpose of disposal and dispose of marine mammal carcasses in ocean waters subject to the following conditions:

1. The permittee shall submit a report (via email or letter) on all disposal activities authorized by this general permit that the permittee has conducted in the prior calendar year. Reports shall be submitted to EPA Region 10 within 30 days of the end of the calendar year. Contact information for EPA Region 10 is available at *https://www.epa.gov/marine-protection-permitting/ocean-disposal-marine-mammal-and-sea-turtle-carcasses.* This report shall include:

a. The number and type of carcasses disposed;

b. A description of the general vicinity in which the carcasses were disposed; and

c. The name and contact information of the permittee.

2. Where ocean disposal is the selected approach, marine mammal

carcasses must be towed or otherwise transported to a site offshore where, based on available information, which may include local or traditional knowledge, currents and winds are not expected to return the carcass to shore and the carcass is not expected to pose a hazard to navigation.

C. Requirements for Any Member of the Makah Indian Tribe Engaged in Subsistence Uses

Notwithstanding Section A, any member of the Makah Indian Tribe who already may take a marine mammal under the Endangered Species Act and the Marine Mammal Protection Act is hereby granted a general permit to transport for the purpose of disposal and dispose of marine mammal carcasses in ocean waters subject to the following conditions:

1. The permittee shall consult with and obtain written concurrence (via email or letter) from the EPA Region 10 Office on ocean disposal site selection. A disposal site must be at a location three miles seaward of the mean lower low water line (ordinary low water mark) along the coast or ''closing lines'' across river mouths and openings of bays as demarcated on nautical charts. Disposal sites in the ocean waters of Puget Sound are not subject to the distance-from-shore restrictions, however permittees would need to consult with and obtain concurrence from EPA Region 10 on selection of the site. The permittee may obtain concurrence via telephone from the EPA Region 10 Office provided that the permittee subsequently obtains written concurrence (via email or letter). Points of contact at the EPA are available at *https://www.epa.gov/marine-protection-permitting/ocean-disposal-marine-mammal-and-sea-turtle-carcasses.*

2. If a determination is made that the carcass must be sunk, rather than released at the disposal site, the transportation and disposal of materials necessary to ensure the sinking of the carcass are also authorized for ocean dumping under this general permit. When materials are to be used to sink the carcass, the permittee must first consult with and obtain written concurrence (via email or letter) from the EPA Region 10 Office on the selection of materials. Any materials described in 40 CFR 227.5 (prohibited materials) or 40 CFR 227.6 (constituents prohibited as other than trace amounts) shall not be used. The transportation and dumping of any materials other than the materials necessary to ensure the sinking of the carcass are not authorized under this general permit and constitute a violation of the MPRSA. The permittee may obtain concurrence via telephone from the EPA Region 10 Office provided that the permittee subsequently obtains written concurrence (via email or letter).

3. The permittee shall submit a report on the ocean disposal activities authorized by this general permit to the EPA Region 10 Office within 30 days after carcass disposal. This report shall include:

a. A description of the carcass(es) disposed (*e.g.,* species, approximate length, general condition, floating or not);

b. The date and time of the disposal, the latitude and longitude of the ocean disposal site, and the geodetic datum associated with the coordinates of the disposal site. Latitude and longitude of the disposal site shall be reported at the highest degree of accuracy available on board the vessel that transported the carcass (*e.g.,* onboard geographic position system technology);

c. The name, title, affiliation, and contact information of the person in charge of the disposal operation and the person in charge of the vessel or vehicle that transported the carcass (if different than the person in charge of the disposal); and

d. A statement of need and rationale for selecting ocean disposal rather than other disposal options.

4. The permittee shall immediately notify the EPA of any violation of any condition of this general permit.

5. Additional permit conditions as required by the Port Gamble S'Klallam Tribe's Clean Water Act Section 401 certification for transportation and disposal of marine mammal and sea turtle carcasses waters within the boundaries of the Port Gamble S'Klallam Reservation and trust lands:

a. Entities covered under this general permit shall use best management practices for sediment and turbidity control.

b. No discharge covered under the general permit shall cause exceedances of port Gamble S'Klallam Surface Water Quality Standards narrative or number criteria.

c. No carcasses shall be disposed of near shellfish beds used by Tribal fishers.

d. No activities under this general permit may negatively impact Tribal resources.

e. The Natural Resources Department shall be notified within 24 hours of any accidents, equipment failures, or unexpected impacts resulting from activities associated with this general permit.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

Federal Advisory Committee Act; Technological Advisory Council

AGENCY: Federal Communications Commission.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, this notice advises interested persons that the Federal Communications Commission's (FCC) Technological Advisory Council will hold a meeting on Tuesday August 5, 2025 in the Commission Meeting Room and available to the public via the internet at *http://www.fcc.gov/live,* from 10:00 a.m. to 12:30 p.m.

DATES: Tuesday, August 5, 2025.

ADDRESSES: Federal Communications Commission, 45 L Street NE, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Martin Doczkat, Chief, Electromagnetic Compatibility Division 202–418–2435; *martin.doczkat@fcc.gov.*

SUPPLEMENTARY INFORMATION: At the August 5th meeting, the TAC will consider and advise the Commission on topics such as continued efforts at looking beyond 5G advanced as 6G begins to develop so as to facilitate U.S. leadership; studying advanced spectrum sharing techniques, including the implementation of artificial intelligence and machine learning to improve the utilization and administration of spectrum; and other emerging technologies. This agenda may be modified at the discretion of the TAC Chair and the Designated Federal Officer (DFO).

Meetings are broadcast live with open captioning over the internet from the FCC Live web page at *http://www.fcc.gov/live/.* The public may submit written comments before the meeting to Martin Doczkat, the FCC's Designated Federal Officer for Technological Advisory Council by email: *martin.doczkat@fcc.gov* or U.S. Postal Service Mail (Martin Doczkat, Federal Communications Commission, 45 L Street NE, Washington, DC 20554). Open captioning will be provided for this event. Other reasonable accommodations for people with disabilities are available upon request. Requests for such accommodations should be submitted via email to *fcc504@fcc.gov* or by calling the Office of Engineering and Technology at 202–418–2470 (voice), (202) 418–1944 (fax). Such requests should include a detailed description of the accommodation

needed. In addition, please include your contact information. Please allow at least five days advance notice; last minute requests will be accepted but may not be possible to fill.

Federal Communications Commission.

Ira Keltz,

Acting Chief, Office of Engineering and Technology.

[FR Doc. 2025–13262 Filed 7–15–25; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL RESERVE SYSTEM

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice, request for comment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) invites comment on a proposal to extend for three years, without revision, the Intermittent Survey of Businesses (FR 1374; OMB No. 7100–0302).

DATES: Comments must be submitted on or before September 15, 2025.

ADDRESSES: You may submit comments, identified by FR 1374, by any of the following methods:

- *Agency Website: https://www.federalreserve.gov/.* Follow the instructions for submitting comments, including attachments. *Preferred method.*
- *Mail:* Ann E. Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.
- *Hand Delivery/Courier:* Same as mailing address.
- *Other Means: publiccomments@frb.gov.* You must include the OMB number or the FR number in the subject line of the message.

Comments received are subject to public disclosure. In general, comments received will be made available on the Board's website at *https://www.federalreserve.gov/apps/proposals/* without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would be not appropriate for public disclosure. Public comments may also be viewed electronically or in person in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9 a.m. and 5 p.m. during Federal business weekdays.

Additionally, commenters may send a copy of their comments to the Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. In exercising this delegated authority, the Board is directed to take every reasonable step to solicit comment. In determining whether to approve a collection of information, the Board will consider all comments received from the public and other agencies.

During the comment period for this proposal, a copy of the proposed PRA OMB submission, including the draft reporting form and instructions, supporting statement (which contains more detail about the information collection and burden estimates than this notice), and other documentation, will be made available on the Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR 1374. Final versions of these documents will be made available at *https://www.reginfo.gov/public/do/PRAMain,* if approved.

Request for Comment on Information Collection Proposal

The Board invites public comment on the following information collection, which is being reviewed under authority delegated by the OMB under the PRA. Comments are invited on the following:

a. Whether the proposed collection of information is necessary for the proper performance of the Board's functions, including whether the information has practical utility;

b. The accuracy of the Board's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

At the end of the comment period, the comments and recommendations received will be analyzed to determine the extent to which the Board should modify the proposal.

Proposal Under OMB Delegated Authority To Extend for Three Years, Without Revision, the Following Information Collection

Collection Title: Intermittent Survey of Businesses.

Collection Identifier: FR 1374.

OMB Control Number: 7100–0302.

General description of collection: The FR 1374 survey data are used to gather information to enable the Federal Reserve System to carry out its policy and operational responsibilities. Under the guidance of the Board, Reserve Banks survey business contacts as economic developments warrant. Usually, these voluntary surveys are conducted using an online survey tool, such as Qualtrics, to collect responses by purchasing managers, economists, or other knowledgeable individuals at selected, relevant businesses and occasionally state and local governments. Occasionally, the survey will be conducted via telephone or email as needed. The frequency and content of the questions, as well as the entities contacted, vary depending on developments in the economy. These surveys are conducted to provide Board members and Reserve Bank presidents real-time insights into economic conditions. The Board tailors these survey questions to match current concerns and interests, but they are not meant to supplant the more rigorous, existing economic reporting. The Board collects aggregate responses from the Reserve Banks and then distributes the information to Board members and Reserve Bank presidents.

Frequency: Annual, but it may be conducted up to three times a year depending on developments in the economy.

Respondents: Businesses, and as warranted by economic conditions, state and local governments.

Total estimated number of respondents: 1,500.

Total estimated annual burden hours: 1,125.

Board of Governors of the Federal Reserve System, July 12, 2025.

Benjamin W. McDonough,

Deputy Secretary and Ombuds of the Board.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)).

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington DC 20551–0001, not later than August 15, 2025.

A. Federal Reserve Bank of St. Louis (Holly A. Rieser, Senior Manager) P.O. Box 442, St. Louis, Missouri 63166–2034. Comments can also be sent electronically to *Comments.applications@stls.frb.org:*.

1. *F&M Bancshares, Inc., Trezevant, Tennessee;* to merge with WestTenn Bancorp, Inc., and thereby indirectly acquire The Bank of Jackson, both of Jackson, Tennessee.

Board of Governors of the Federal Reserve System.

Michele Taylor Fennell,

Associate Secretary of the Board.

BILLING CODE P

FEDERAL RESERVE SYSTEM

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice, request for comment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) invites comment on a proposal to extend for three years, with revision, the Applications for Employment with the Board of Governors of the Federal Reserve System (FR 28; OMB No. 7100–0181).

DATES: Comments must be submitted on or before September 15, 2025.

ADDRESSES: You may submit comments, identified by FR 28, by any of the following methods:

- *Agency website: https://www.federalreserve.gov/.* Follow the instructions for submitting comments, including attachments. *Preferred method.*
- *Mail:* Ann E. Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.
- *Hand Delivery/Courier:* Same as mailing address.
- *Other Means: publiccomments@frb.gov.* You must include the OMB number or the FR number in the subject line of the message.

Comments received are subject to public disclosure. In general, comments received will be made available on the Board's website at *https://www.federalreserve.gov/apps/proposals/* without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure. Public comments may also be viewed electronically or in person in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9 a.m. and 5 p.m. during Federal business weekdays.

Additionally, commenters may send a copy of their comments to the Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. In exercising this delegated authority, the Board is directed to take every reasonable step to solicit comment. In determining whether to approve a collection of information, the Board will consider all comments received from the public and other agencies.

During the comment period for this proposal, a copy of the proposed PRA OMB submission, including the draft reporting form and instructions, supporting statement (which contains more detail about the information collection and burden estimates than this notice), and other documentation, will be made available on the Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR 28. Final versions of these documents will be made available at *https://www.reginfo.gov/public/do/PRAMain,* if approved.

Request for Comment on Information Collection Proposals

The Board invites public comment on the following information collections, which are being reviewed under authority delegated by the OMB under the PRA. Comments are invited on the following:

a. Whether the proposed collections of information are necessary for the

proper performance of the Board's functions, including whether the information has practical utility;

b. The accuracy of the Board's estimate of the burden of the proposed information collections, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

At the end of the comment period, the comments and recommendations received will be analyzed to determine the extent to which the Board should modify the proposal.

Proposal Under OMB Delegated Authority To Extend for Three Years, With Revision, the Following Information Collections

Collection title: Applications for Employment with the Board of Governors of the Federal Reserve System.

Collection identifier: FR 28.

OMB control number: 7100–0181.

General description of collection: The forms that comprise the FR 28 are used to manage the Board's hiring process by collecting needed information on candidates. The FR 28a (Application for Employment), is used to examine, rate, or assess the applicant's qualifications, and to contact the applicant to arrange an interview. The FR 28a can be completed either online in two parts (the Initial Application portion and, if selected for an interview, the Interview Selection portion) or in its entirety as a PDF. The FR 28s (Applicant's Voluntary Self-Identification) is used for equal employment opportunity (EEO) recordkeeping, reporting, and self-evaluation of hiring practices. The FR 28i (Research Assistant Application) is a supplement to the FR 28a and is used to collect contact information for an application for employment as a Research Assistant (RA), including to help match an RA candidate's interests with the different research areas at the Board and determine the applicants' data analysis and programming experience. The FR 28c (Pre-Hire Conflict of Interest Screening Form) is used to ensure advance knowledge of a prospective employee's potential conflicts of interest.

Proposed revisions: The Board proposes to revise the FR 28a by removing one data field. The Board proposes to revise the FR 28s by changing one data field. The Board proposes to revise the FR 28i by adding eight new data fields and removing one data field, and to revise the FR 28c by adding a new section to the form and updating the language of several of the questions for readability and to include questions about financial assets not previously contemplated due to technological changes that have occurred. Lastly, the Board proposes to revise the FR 28 clearance to include a new Reference Check Form (FR 28r).

Frequency: Event-generated.

Respondents: Individuals seeking employment with the Board.

Total estimated number of respondents: FR 28a (Initial Application), 32,600; FR 28a (Interview Selection), 1,769; FR 28a (PDF), 238; FR 28s, 32,838; FR 28i, 330; FR 28c, 2007; FR 28r, 650.

Estimated average hours per response: FR 28a (Initial Application), 0.48; FR 28a (Interview Selection), 1.51; FR 28a (PDF), 1.69; FR 28s, 0.02; FR 28i, 0.91; FR 28c, 0.62; FR 28r, 0.34.

Total estimated change in burden: −62.

Total estimated annual burden hours: 21,143.

Board of Governors of the Federal Reserve System, July 12, 2025.

Benjamin W. McDonough,

Deputy Secretary and Ombuds of the Board.

BILLING CODE 6210–01–P

GENERAL SERVICES ADMINISTRATION

[Notice-MA–2025–17; Docket No. 2025–0002; Sequence No. 15]

Federal Management Regulation (FMR); Rescinding and/or Removing FMR Bulletins

AGENCY: Office of Government-wide Policy (OGP), U.S. General Services Administration (GSA).

ACTION: Notice to rescind and/or remove FMR Bulletins.

SUMMARY: GSA is rescinding and/or removing 41 bulletins due to their being outdated, unnecessary, expired, or inconsistent with Administration policy.

DATES: *Applicability Date:* July 16, 2025.

FOR FURTHER INFORMATION CONTACT: Mr. Alexander Kurien, Office of Government-wide Policy, Office of Asset and Transportation Management, at 202–495–9628 or by email at *alexander.kurien@gsa.gov.* Please cite Notice to rescind and/or remove FMR bulletins (MA–2025–17).

SUPPLEMENTARY INFORMATION:

Background

Due to issuance of the Executive Order (E.O.) 14192, *Unleashing Prosperity Through Deregulation,* dated January 31, 2025, GSA is rescinding and/or removing 41 Federal Management Regulation (FMR) Bulletins from GSA's website.

The following bulletins are rescinded and removed from GSA's website because the content is outdated, expired, unnecessary, or inconsistent with Administration policy:

1. FMR Bulletin C–2023–01: Clarifying the Process For Meeting Federal Space Needs
2. Notice-MA–2016–01: Best Practices in Warehouse Asset Management
3. FMR Bulletin 2012–C1: Accurate Reporting of Data for the Federal Real Property Profile
4. FMR Bulletin 2009 B–23: Federal Asset Sales (eFAS) Reporting Tool
5. FMR Bulletin 2008–B7: Federal Real Property Report
6. FMR Bulletin 2008–B2: Real Property Federal Asset Sales
7. FMR Bulletin 2008–B1: Delegations of Lease Acquisition Authority—Notification, Usage, and Reporting Requirements for General Purpose, Categorical, and Special Purpose Space Delegations
8. FMR Bulletin 2007–B3: Assessment of fees and recovery of costs for antennas of Federal agencies and public service organizations
9. FMR Bulletin 2007–B2: Placement of Commercial Antennas
10. FMR Bulletin 2007–B1: Information Technology and Telecommunications Guidelines for Federal Telework and Other Alternative Workplace Arrangement Programs
11. FMR Bulletin 2006–B4: Federal Real Property Profile Summary Report
12. FMR Bulletin 2006–B3: Guidelines for Alternative Workplace Arrangements
13. FMR Bulletin 2005–B2: Federal Real Property Profile Summary Report
14. FMR Bulletin 2005–B1: Revised Implementation Requirements of the Delegation of Lease Acquisition Authority
15. FMR Bulletin 2004 B–1: Federal Real Property Profile Summary Report
16. FMR Bulletin B–53: Use of Government-issued Fleet Charge Cards

17. FMR Bulletin B–52: Clarifying the Process For Meeting Federal Space Needs
18. FMR Bulletin B–43: Vehicle Allocation Methodology for Agency Fleets
19. FMR Bulletin B–40: List of Active and Cancelled or Superseded GSA Bulletins Addressing Personal Property
20. FMR Bulletin B–38: Indirect Costs of Motor Vehicle Fleet Operations
21. FMR Bulletin B–35: Home-to-Work Transportation
22. FMR Bulletin B–33: Alternative Fuel Vehicle Guidance for Law Enforcement and Emergency Vehicle Fleets
23. FMR Bulletin B–31: Government Motor Vehicle Fueling During Market Shortages
24. FMR Bulletin B–29: Accurately Reporting Passenger Vehicle Inventory within the Federal Automotive Statistical Tool
25. FMR Bulletin B–28: Federal Employee Transportation and Shuttle Services
26. FMR Bulletin B–19: Increasing the Fuel Efficiency of the Federal Motor Vehicle Fleet
27. FMR Bulletin B–11: U.S. Government License Plate Codes
28. FMR Bulletin 2004–B6: Proceeds from Sale of Agency-Owned Vehicles
29. FMR Bulletin B–3: Use of Tobacco Products in U.S. Government Vehicles
30. FMR Bulletin B–2: Wireless Phone Use in U.S. Government Vehicles
31. FMR Bulletin C–2: Delegations of Lease Acquisition Authority—Notification, Usage, and Reporting Requirements for General Purpose, Categorical, and Special Purpose Space Delegations
32. FMR Bulletin 2003–B1: Locating Federal Facilities in Rural Areas

The following bulletins are rescinded and removed because the bulletins are unnecessary and the subject matter is already adequately addressed by statute or existing regulations (listed in parentheses after the bulletin title in this notice). Rescission and removal of these bulletins is not intended to and does not impact underlying statutory and regulatory requirements.

33. FMR Bulletin 2009–B1: Protecting Federal Employees and the Public From Exposure to Tobacco Smoke in the Federal Workplace (41 CFR 102–74.315 through 102–74.351)
34. FMR Bulletin 2021–1: Persons who are Nursing in Public Buildings (40 U.S.C. 3318 and 29 U.S.C. 218d)
35. FMR Bulletin 2011–B1: Nursing Mothers in the Federal Workplace (40 U.S.C. 3318 and 29 U.S.C. 218d)
36. FMR Bulletin 2008–B6: POW/MIA Flag Display (36 U.S.C. 902)

The following bulletins are removed from GSA's website because they have expired. Expiration and removal of these bulletins do not alter the designation and redesignations set forth therein:

37. FMR Bulletin PBS 2008–B6: Redesignations of Federal Buildings
38. FMR Bulletin PBS 2007–B3: Redesignations of Federal Buildings
39. FMR Bulletin 2006–B1: Designations and Redesignations of Federal Buildings
40. FMR Bulletin 2005–B3: Redesignations of Federal Buildings
41. FMR Bulletin 2004–B3: Re-designations of Federal Buildings

All currently active FMR bulletins can be viewed at *https://www.gsa.gov/policy-regulations/regulations/federal-management-regulation/fmr-and-related-files.*

Larry Allen,

Associate Administrator, Office of Government-wide Policy.

BILLING CODE 6820–14–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for Office of Management and Budget Review; Head Start Grant Application (Office of Management and Budget #0970–0207)

AGENCY: Office of Head Start, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for Public Comments.

SUMMARY: The Administration for Children and Families (ACF) is requesting a 3-year extension of the Grant Application Instrument and Instructions (Office of Management and Budget (OMB) #0970–0207, expiration June 30, 2025). The updated grant application reduces the amount of documentation required from grant recipients, both in the baseline application and the continuation application, by reducing the number of required documents to support the application and reducing the amount of required information in the program and budget justification narrative. The goal of these changes is to reduce grant recipient burden.

DATES: *Comments due August 15, 2025.* OMB must decide about the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. You can also obtain copies of the proposed collection of information by emailing *infocollection@acf.hhs.gov.* Identify all emailed requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: To receive Head Start funding, Head Start grant recipients must apply for such funds through this information collection. The information submitted by applicants assist program and grant officials in determining whether the applicant meets the requirements for funding under the Act including any requirements specified in annual appropriations by Congress. The updated grant application reduces the amount of documentation required from grant recipients, both in the baseline application and the continuation application, by reducing the number of required documents to support the application and reducing the amount of required information in the program and budget justification narrative. The goal of these changes is to reduce grant recipient burden, and the burden estimates below have been updated to reflect this.

Respondents: Head Start grant recipients.

ANNUAL BURDEN ESTIMATES

Instrument	Total number of respondents	Total number of responses per respondent	Average burden hours per response	Annual burden hours
Head Start Grant Application	1,600	2	20	64,000

Authority: 42 U.S.C. 9801 *et seq.*

Mary C. Jones,

ACF/OPRE Certifying Officer.

BILLING CODE 4184–40–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Evaluation of the National Human Trafficking Hotline: Understanding Engagement With the Community, Law Enforcement, and Other Hotlines (New Collection)

AGENCY: Office of Planning, Research, and Evaluation, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Administration for Children and Families' (ACF) Office of Planning, Research, and Evaluation (OPRE) is proposing a data collection activity as part of the Evaluation of the National Human Trafficking Hotline (NHTH): Understanding Engagement with the Community, Law Enforcement, and other Hotlines. This data collection activity will examine how the NHTH processes contacts, interacts with law enforcement and other hotline providers, and advertises its services to potential contactors.

DATES: Comments due September 15, 2025. In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: You can obtain copies of the proposed collection of information and submit comments by emailing *OPREinfocollection@acf.hhs.gov.* Identify all requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The purpose of the proposed data collection activity is to document and examine how the NHTH processes contacts across modes and contactor types as well as how those processes compare to other similar hotlines, how the NHTH interacts with law enforcement and implements criteria for sharing tips with law enforcement, how the NHTH interacts with other national hotlines including service coordination and information sharing, and how the NHTH communicates and advertises its services to potential contactors.

The proposed data collection activity includes one-time, semi-structured interviews with:

1. Staff and leadership at the NHTH. Interviews with NHTH staff and leadership will include questions focused on NHTH processes, NHTH data collection, communication with contactors, and interactions with law enforcement regarding sharing tips and other hotlines.

2. Staff and leadership at other national hotlines that are similar in scope to the NHTH. Interviews will include questions focused on their own internal processes as well as interactions with and perceptions of the NHTH.

3. Service providers who regularly engage with the NHTH as well as those who do not regularly engage with the NHTH. Interviews will include questions focused on their interactions with and perceptions of the NHTH.

4. Law enforcement personnel who regularly engage with the NHTH as well as those who do not regularly engage with the NHTH. Interviews will include questions focused on perceptions of actionability of tips that are shared by the NHTH, comparison with tips shared by other hotlines, and the deconfliction process.

Respondents: NHTH staff, staff at other national hotlines, law enforcement personnel, victims service providers.

Annual Burden Estimates: This information collection is expected to take place over about 2 years. Burden estimates are shown as the total over 2 years divided by two to provide an annual average estimate.

Instrument	Number of respondents (total over request period)	Number of responses per respondent (total over request period)	Avg. burden per response (in hours)	Total burden (in hours)	Annual burden (in hours)
NHTH Leadership Interview Guide	5	1	1.5	7.5	3.75
NHTH Staff Interview Guide	15	1	1.5	22.5	11.25
Other Hotline Leadership Interview Guide	15	1	1	15	7.5
Other Hotline Staff Interview Guide	15	1	1	15	7.5
Law Enforcement Interview Guide	20	1	1	20	10
Service Provider Interview Guide	15	1	1	15	7.5

Estimated Total Annual Burden Hours: 47.5

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

(Authority: Public Law 106–386 Section 107 [22 U.S.C. 7105].)

Mary C. Jones,

ACF/OPRE Certifying Officer.

BILLING CODE 4184–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

[OMB #: 0970–0534]

Proposed Information Collection Activity; American Indian and Alaska Natives Facility Condition, Location, and Ownership Survey

AGENCY: Office of Head Start, Administration for Children and Families, U.S. Department of Health and Human Services.

ACTION: Request for Public Comments.

SUMMARY: The Office of Head Start (OHS), Administration for Children and Families (ACF), U.S. Department of Health and Human Services, is proposing to collect data for the American Indian and Alaska Natives (AIAN) Facility Condition, Location, and Ownership Survey. This survey fulfills a statutory requirement and is conducted every 5 years. The previous survey used for this purpose was approved under Office of Management and Budget (OMB) #: 0970–0534; this request will be submitted under the same OMB number.

DATES: Comments due September 15, 2025. In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: You can obtain copies of the proposed collection of information and submit comments by emailing *infocollection@acf.hhs.gov.* Identify all requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The AIAN Facility Survey is conducted every 5 years in accordance with section 650(b) of the Head Start Act. The most recent survey was approved under OMB #0970–0534 to fulfill the 2020 statutory requirement. This request will be submitted to OMB under the same number as a reinstatement with changes.

The purpose of the survey is to collect current data on the condition, location, and ownership of facilities used by AIAN Head Start programs. The results inform the 2025 Report to Congress and support ongoing policy, funding, and technical assistance decisions. For the 2025 cycle, updates have been made to reflect lessons learned from the 2020 survey and feedback from OHS staff and partners. Changes include more detailed questions on facility safety (*e.g.,* lead testing, pest control, disaster impact), clearer definitions of facility conditions, and expanded items on funding sources and barriers. These revisions aim to strengthen data quality and ensure the survey captures the full scope of infrastructure challenges and needs across AIAN programs.

Respondents: AIAN Early Head Start and Head Start Preschool grantees.

Annual Burden Estimates

Grant recipients will complete the survey for each facility they operate, which based on current grant recipient information is an average of 3.5 responses per respondent. Data collection is expected to take place following OMB approval over a period of about 6 weeks.

Instrument	Total number of respondents	Total number of responses per respondent	Average burden hours per response	Annual burden hours
AIAN Facility Condition, Location, and Ownership Survey	155	3.5	0.17	92

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–D–5942]

Recommendations for Testing Blood Donations for Hepatitis B Surface Antigen; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the availability of a draft document entitled ''Recommendations for Testing Blood Donations for Hepatitis B Surface Antigen; Draft Guidance for Industry.'' The draft guidance document provides blood establishments that collect blood and blood components, including Source Plasma, with FDA's recommendations for testing blood and blood components for hepatitis B surface antigen (HBsAg) to reduce the risk of transfusion-transmitted hepatitis B virus (HBV). The recommendations contained in the guidance apply to the collection of Whole Blood and blood components, including Source Plasma. The draft guidance, when finalized, is intended to supersede the recommendations regarding testing of all blood donations for HBsAg in the guidance document entitled ''Guidance for Industry: Use of Nucleic Acid Tests on Pooled and Individual Samples From Donors of Whole Blood and Blood Components, Including Source Plasma, to Reduce the Risk of Transmission of Hepatitis B Virus'' dated October 2012 (October 2012 Guidance). The guidance, when finalized, will also supersede information on the same topic that is in the document entitled ''Recommendations for the Management of Donors and Units that are Initially Reactive for Hepatitis B Surface Antigen (HBsAg)'' dated December 1987 (December 1987 Memorandum).

DATES: Submit either electronic or written comments on the draft guidance by October 14, 2025 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov*. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov*.
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–D–5942 for ''Recommendations for Testing Blood Donations for Hepatitis B Surface Antigen; Draft Guidance for Industry.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov*. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf*.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3103, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist the office in processing your requests. The draft guidance may also be obtained by mail by calling CBER at 1–800–835–4709 or 240–402–8010. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Tami Belouin, Center for Biologics Evaluation and Research, Food and Drug Administration, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft document entitled ''Recommendations for Testing Blood Donations for Hepatitis B Surface Antigen; Draft Guidance for Industry.'' The draft guidance provides blood establishments that collect blood and blood components, including Source Plasma, with FDA's recommendations for testing blood and blood components for HBsAg to reduce the risk of transfusion-transmitted HBV. The recommendations contained in the guidance apply to the collection of Whole Blood and blood components, including Source Plasma. Specifically, the guidance recommends that when the donations are tested for HBV Deoxyribonucleic acid (DNA) by nucleic acid tests (NAT) and for antibody to hepatitis B core antigen (anti-HBc) using screening tests that FDA has licensed, approved, or cleared for such use, in accordance with the manufacturer's instructions, testing for hepatitis B surface antigen (HBsAg) is not necessary to reduce adequately and appropriately the risk of transmission of HBV. Because Source Plasma donations are not tested for anti-HBc, the draft guidance recommends the continued testing of Source Plasma donations for HBsAg. The draft guidance, when finalized, is intended to supersede the recommendations with respect to blood donations that are tested for HBV NAT and anti-HBc in the October 2012 Guidance and the information on the same topic in the December 1987 Memorandum. Upon finalization of the new recommendations set forth in this draft guidance, we intend to consolidate all FDA recommendations for testing blood and blood components for HBV to issue one guidance that includes finalized recommendations for testing donations to reduce the risk of transfusion transmission of hepatitis B. Except for conforming changes needed to reflect the new recommendations in this draft guidance, we do not intend to revise existing recommendations for HBV donation testing, quarantine and disposition of reactive units, donor deferral and requalification.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Recommendations for Testing Blood Donations for Hepatitis B Surface Antigen.'' It does not establish any

rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

As we develop any final guidance on this topic, FDA will consider comments on the applicability of Executive Order 14192, per OMB guidance M–25–20, and in particular, on any costs or cost savings.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 601 have been approved under OMB control number 0910–0338 and the collections of information in 21 CFR parts 610 and 630 have been approved under OMB control number 0910–0116.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov*.

Dated: July 11, 2025.

Grace R. Graham,

Deputy Commissioner for Policy, Legislation, and International Affairs.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[PO #4820000251; Order #02412–014–004–047181.0]

Notice of Plat of Survey, New Mexico

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of official filing.

SUMMARY: The plat of survey of the following described lands is scheduled to be officially filed 30 days after the date of this notice in the Bureau of Land Management (BLM) NM State Office, Santa Fe, NM. The survey announced in this notice is necessary for the management of lands administered by the U.S. Bureau of Reclamation (BOR).

DATES: If you wish to protest the survey identified in this notice, you must file a written notice of protest with the BLM Chief Cadastral Surveyor for NM by August 15, 2025.

ADDRESSES: Submit written protests to the BLM NM State Office, 301 Dinosaur Trail, Santa Fe, NM 87508. You may obtain a copy of the survey record from the public room at this office upon required payment. The plat may be viewed at this location at no cost.

FOR FURTHER INFORMATION CONTACT: Jacob B. Barowsky, Chief Cadastral Surveyor; (505) 761–8903; *jbarowsky@blm.gov*. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: Rio Arriba County, NM:

The plat representing the dependent resurvey and survey of land in the Tierra Amarilla Grant, accepted May 20, 2025, for Group No. 1218, NM.

This plat was prepared at the request of the BOR, Albuquerque Area Office.

A person or party who wishes to protest this survey must file a written notice of protest by the date specified in the **DATES** section of this notice with the NM State Director, BLM, at the address listed in the **ADDRESSES** section of this notice.

A written statement of the reasons in support of the protest, if not filed with the notice of protest, must be filed with the BLM State Director for NM within 30 calendar days after the notice of protest is received.

Before including your address, or other personal information in your protest, please be aware that your entire protest, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

(Authority: 43 U.S.C. Chap. 3)

Jacob B. Barowsky,

Chief Cadastral Surveyor for NM.

Bureau of Ocean Energy Management

[Docket No. BOEM–2025–0035]

Commercial Leasing for Outer Continental Shelf Minerals Offshore American Samoa—Request for Information and Interest; Extension of Comment Period

AGENCY: Bureau of Ocean Energy Management, Interior.

ACTION: Request for information and interest; extension of the comment period.

SUMMARY: The Bureau of Ocean Energy Management (BOEM) announces a 30-day extension of the comment period for the request for information and interest (RFI) for leasing of the Outer Continental Shelf minerals in and around an area offshore American Samoa, referred to as the RFI Area.

DATES: BOEM published the RFI on June 16, 2025, and opened a public comment period through July 16, 2025. BOEM is extending this public comment period to August 15, 2025. BOEM must receive all comments, information, and indications of interest in response to this RFI no later than August 15, 2025.

ADDRESSES: Please submit indications of interest in commercial leasing electronically via email to *Pacific.Region@boem.gov* or by hard copy by mail to the following address: Bureau of Ocean Energy Management, Pacific Region, Office of Strategic Resources, 760 Paseo Camarillo (CM 102), Camarillo, California 93010. If you elect to mail a hard copy, also include an electronic copy on a portable storage device. Do not submit indications of interest via the Federal eRulemaking Portal.

Please submit all other comments and information as discussed in section 6 of the June 16, 2025, RFI entitled, ''Types of Information and Comments Requested,'' by either of the following two methods:

1. *Federal eRulemaking Portal: http://www.regulations.gov*. In the search box at the top of the web page, enter BOEM–2025–0035 and then click ''search.'' Follow the instructions to submit public comments and to view supporting and related materials.

2. *By mail to the following address:* Bureau of Ocean Energy Management, Pacific Region, Office of Strategic Resources, 760 Paseo Camarillo (CM 102), Camarillo, California 93010.

Treatment of confidential information is addressed in section 8 of the June 16, 2025, RFI entitled, ''Protection of

Privileged, Personal, or Confidential Information.'' BOEM will post all comments received on *regulations.gov* unless labeled as confidential and BOEM determines that an exemption from disclosure applies.

FOR FURTHER INFORMATION CONTACT: Jennifer Miller, Bureau of Ocean Energy Management, Pacific Region, Office of Strategic Resources, 760 Paseo Camarillo (CM 102), Camarillo, California 93010, at *Pacific.Region@boem.gov* or (805) 384–6305.

SUPPLEMENTARY INFORMATION: Comments already submitted for the June 16, 2025, RFI do not need to be resubmitted. Please refer to the RFI published in the **Federal Register** (90 FR 25369) on June 16, 2025, for more information.

Authority: 43 U.S.C. 1337(k)(1) and 30 CFR 581.12.

Matthew Giacona,

Principal Deputy Director, Bureau of Ocean Energy Management.

BILLING CODE 4340–38–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–1145 (Third Review)]

Steel Threaded Rod From China

Determination

On the basis of the record [1] developed in the subject five-year review, the United States International Trade Commission (''Commission'') determines, pursuant to the Tariff Act of 1930 (''the Act''), that revocation of the antidumping duty order on steel threaded rod from China would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.

Background

The Commission instituted this review on February 3, 2025 (90 FR 8808) and determined on May 9, 2025, that it would conduct an expedited review (90 FR 22115, May 23, 2025).

The Commission made this determination pursuant to section 751(c) of the Act (19 U.S.C. 1675(c)). It completed and filed its determination in this review on July 14, 2025. The views of the Commission are contained in USITC Publication 5647 (July 2025), entitled *Steel Threaded Rod from China: Investigation No. 731–TA–1145 (Third Review).*

By order of the Commission.

Issued: July 14, 2025.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2025–13340 Filed 7–15–25; 8:45 am]

BILLING CODE 7020–02–P

[1] The record is defined in § 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Benson Sergiles, P.A.; Decision and Order

On December 2, 2024, the Drug Enforcement Administration (DEA or Government) issued an Order to Show Cause (OSC) to Benson Sergiles, P.A., of Peoria, Arizona (Registrant). Request for Final Agency Action (RFAA), Exhibit (RFAAX) 1, at 1, 3. The OSC proposed the revocation of Registrant's Certificate of Registration No. MB7529261, alleging that Registrant is ''currently without authority to . . . handle controlled substances in the State of Arizona, the state in which [he is] registered with DEA.'' *Id.* at 2 (citing 21 U.S.C. 824(a)(3)).

The OSC notified Registrant of his right to file a written request for hearing, and that if he failed to file such a request, he would be deemed to have waived his right to a hearing and be in default. *Id.* (citing 21 CFR 1301.43). Here, Registrant did not request a hearing. RFAA, at 3.[1] ''A default, unless excused, shall be deemed to constitute a waiver of the registrant's/applicant's right to a hearing and an admission of the factual allegations of the [OSC].'' 21 CFR 1301.43(e).

Further, ''[i]n the event that a registrant . . . is deemed to be in default . . . DEA may then file a request for final agency action with the Administrator, along with a record to support its request. In such circumstances, the Administrator may enter a default final order pursuant to [21 CFR] 1316.67.'' *Id.* 1301.43(f)(1). Here, the Government has requested final agency action based on Registrant's default pursuant to 21 CFR 1301.43(c), (f), and 1301.46. RFAA, at 4–5; *see also* 21 CFR 1316.67.

Findings of Fact

The Agency finds that, in light of Registrant's default, the factual allegations in the OSC are admitted. According to the OSC, Registrant's Arizona physician assistant license expired on January 2, 2023. RFAAX 2, at 1. Further, according to the OSC, his Arizona physician assistant license specified that he was ''[n]ot certified to prescribe controlled drugs,'' and the prescriptive authority under his license before it expired was only for ''NON–CONTROLLED SUBSTANCES.'' *Id.* at 2. According to Arizona online records, of which the Agency takes official notice,[2] Registrant's Arizona physician assistant license remains expired. Arizona Regulatory Board of Physician Assistants Search, *https://www.azpa.gov/PASearch/PASearch* (last visited date of signature of this Order). Accordingly, the Agency finds that Registrant is not licensed to practice as a physician assistant in Arizona, the state in which he is registered with DEA.[3]

Discussion

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General is authorized to suspend or revoke a registration issued under 21 U.S.C. 823 ''upon a finding that the registrant . . . has had his State license or registration suspended . . .

[1] Based on the Government's submissions in its RFAA dated May 6, 2025, the Agency finds that service of the OSC on Registrant was adequate. The included declaration from a DEA Diversion Investigator (DI) indicates that on January 15, 2025, the DI emailed a copy of the OSC to Registrant at his registered email address but received an ''Undeliverable'' email in response stating that Registrant's registered email address was ''disabled.'' RFAAX 3, at 5. On the same date, the DI sent a copy of the OSC to Registrant's registered mailing address via USPS First Class Mail, but it was returned on January 23, 2025. *Id.* at 3. The DI also mailed a copy of the OSC to Registrant's ''mail to address'' and two additional business addresses associated with Registrant. *Id.* at 4. On February 18, 2025, one of the copies was returned to the DI. *Id.* at 5. Here, the Agency finds that the DI's efforts to serve Registrant at his registered email address, registered mailing address, and multiple other mailing addresses were '' 'reasonably calculated, under all the circumstances, to apprise [Registrant] of the pendency of the action.' '' *Jones* v. *Flowers,* 547 U.S. 220, 226 (2006) (quoting *Mullane* v. *Central Hanover Bank & Trust Co.,* 339 U.S. 306, 314 (1950)). Therefore, due process notice requirements have been satisfied.

[2] Under the Administrative Procedure Act, an agency ''may take official notice of facts at any stage in a proceeding—even in the final decision.'' United States Department of Justice, Attorney General's Manual on the Administrative Procedure Act 80 (1947) (Wm. W. Gaunt & Sons, Inc., Reprint 1979).

[3] Pursuant to 5 U.S.C. 556(e), ''[w]hen an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary.'' The material fact here is that Registrant, as of the date of this decision, is not licensed to practice as a physician assistant in Arizona. Accordingly, Registrant may dispute the Agency's finding by filing a properly supported motion for reconsideration of findings of fact within fifteen calendar days of the date of this Order. Any such motion and response shall be filed and served by email to the other party and to the DEA Office of the Administrator, Drug Enforcement Administration, at *dea.addo.attorneys@dea.gov.*

[or] revoked . . . by competent State authority and is no longer authorized by State law to engage in the . . . dispensing of controlled substances.'' With respect to a practitioner, DEA has also long held that the possession of authority to dispense controlled substances under the laws of the state in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *Gonzales* v. *Oregon,* 546 U.S. 243, 270 (2006) (''The Attorney General can register a physician to dispense controlled substances 'if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.' . . . The very definition of a 'practitioner' eligible to prescribe includes physicians 'licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he practices' to dispense controlled substances. § 802(21).''). The Agency has applied these principles consistently. *See, e.g., James L. Hooper, M.D.,* 76 FR 71,371, 71,372 (2011), *pet. for rev. denied,* 481 F. App'x 826 (4th Cir. 2012); *Frederick Marsh Blanton, M.D.,* 43 FR 27,616, 27,617 (1978).[4]

According to Arizona statute, ''[e]very person who manufactures, distributes, dispenses, prescribes or uses for scientific purposes any controlled substance within th[e] state or who proposes to engage in the manufacture, distribution, prescribing or dispensing of or using for scientific purposes any controlled substance within th[e] state must first: (1) [o]btain and possess a current license or permit as a medical practitioner as defined in § 32–1901 . . . .'' Ariz. Rev. Stat. Ann. § 36–2522(A)(1) (2025). Section 32–1901 defines a ''[m]edical practitioner'' as ''any medical doctor . . . or other person who is licensed and authorized by law to use and prescribe drugs and devices to treat sick and injured human beings or animals or to diagnose or prevent sickness in human beings or animals in [Arizona] or any state, territory or district of the United States.'' *Id.* § 32–1901(56).

Here, the undisputed evidence in the record is that Registrant lacks authority to practice as a physician assistant in Arizona. As discussed above, only a licensed medical practitioner can dispense controlled substances in Arizona. Thus, because Registrant lacks authority to practice as a physician assistant in Arizona, and therefore is not a licensed medical practitioner, Registrant is not eligible to maintain a DEA registration in Arizona. Accordingly, the Agency will order that Registrant's DEA registration in Arizona be revoked.

Order

Pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 824(a), I hereby revoke DEA Certificate of Registration No. MB7529261 issued to Benson Sergiles, P.A. Further, pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 823(g)(1), I hereby deny any pending applications of Benson Sergiles, P.A., to renew or modify this registration, as well as any other pending application of Benson Sergiles, P.A., for additional registration in Arizona. This Order is effective August 15, 2025.

Signing Authority

This document of the Drug Enforcement Administration was signed on July 10, 2025, by Acting Administrator Robert J. Murphy. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

[FR Doc. 2025–13315 Filed 7–15–25; 8:45 am]

BILLING CODE 4410–09–P

[4] This rule derives from the text of two provisions of the CSA. First, Congress defined the term ''practitioner'' to mean ''a physician . . . or other person licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices . . . , to distribute, dispense, . . . [or] administer . . . a controlled substance in the course of professional practice.'' 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that ''[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.'' 21 U.S.C. 823(g)(1). Because Congress has clearly mandated that a practitioner possess state authority in order to be deemed a practitioner under the CSA, DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he is no longer authorized to dispense controlled substances under the laws of the state in which he practices. *See, e.g., James L. Hooper, M.D.,* 76 FR at 71,371–72; *Sheran Arden Yeates, M.D.,* 71 FR 39,130, 39,131 (2006); *Dominick A. Ricci, M.D.,* 58 FR 51,104, 51,105 (1993); *Bobby Watts, M.D.,* 53 FR 11,919, 11,920 (1988); *Frederick Marsh Blanton, M.D.,* 43 FR at 27,617.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Sasha Melissa Ikramelahai; Decision and Order

On January 22, 2025, the Drug Enforcement Administration (DEA or Government) issued an Order to Show Cause (OSC) to Sasha Melissa Ikramelahai of Southern Pines, North Carolina (Registrant). Request for Final Agency Action (RFAA), Exhibit (RFAAX) 1, at 1, 5. The OSC proposed the revocation of Registrant's DEA registration, No. MI8411061, alleging that she currently lacks state authority to handle controlled substances in North Carolina and that she materially falsified her application for registration. *Id.* (citing 21 U.S.C. 824(a)(1), 824(a)(3)).

On March 27, 2025, the Government submitted an RFAA to the Administrator requesting that the Agency issue a default final order revoking Registrant's registration. RFAA, at 1, 3, 6–7. After carefully reviewing the entire record and conducting the analysis as set forth in detail below, the Agency finds that Registrant is in default, finds that Registrant is without state authority, and finds that Registrant materially falsified her application. Accordingly, the Agency grants the Government's RFAA and revokes Registrant's registration.

I. Default Determination

Under 21 CFR 1301.43, a registrant entitled to a hearing who fails to file a timely hearing request ''within 30 days after the date of receipt of the [OSC] . . . shall be deemed to have waived their right to a hearing and to be in default'' unless ''good cause'' is established for the failure. 21 CFR 1301.43(a), (c)(1). In the absence of a demonstration of good cause, a registrant who fails to timely file an answer also is ''deemed to have waived their right to a hearing and to be in default.'' 21 CFR 1301.43(c)(2). Unless excused, a default constitutes ''an admission of the factual allegations of the [OSC].'' 21 CFR 1301.43(e).

The OSC notified Registrant of her right to file a written request for hearing and answer, and that if she failed to file such a request and answer, she would be deemed to have waived her right to a hearing and be in default.[1] RFAAX 1,

[1] Based on the Government's submissions in its RFAA dated March 27, 2025, the Agency finds that service of the OSC on Registrant was adequate. Specifically, the Declaration from a DEA Diversion Investigator (DI) indicates that on January 24, 2025, DIs attempted to serve the OSC on Registrant at her

Continued

at 3–4 (citing 21 CFR 1301.43). Here, Registrant did not request a hearing, file an answer, or respond to the OSC in any way. RFAA, at 1–2, 6. Accordingly, Registrant is in default. 21 CFR 1301.43(c)(1); RFAA, at 1, 3, 6.

''A default, unless excused, shall be deemed to constitute a waiver of the [registrant's] right to a hearing and an admission of the factual allegations of the [OSC].'' 21 CFR 1301.43(e). Because Registrant is in default and has not moved to excuse the default, the Agency finds that Registrant has admitted to the factual allegations in the OSC. 21 CFR 1301.43(c)(1), (e), (f)(1).

Further, ''[i]n the event that [a registrant] . . . is deemed to be in default . . . DEA may then file a request for final agency action with the Administrator, along with a record to support its request. In such circumstances, the Administrator may enter a default final order pursuant to [21 CFR] 1316.67.'' 21 CFR 1301.43(f)(1). Here, the Government has requested final agency action based on Registrant's default pursuant to 21 CFR 1301.43(c), (f), and 1301.46. RFAA, at 1, 3, 6; *see also* 21 CFR 1316.67.

II. Lack of State Authority

A. Findings of Fact

The Agency finds that, in light of Registrant's default, the factual allegations in the OSC are deemed admitted. 21 CFR 1301.43(e). Accordingly, Registrant is deemed to have admitted, in accordance with the OSC, that on July 9, 2024, the North Carolina Medical Board (NCMB) annulled Registrant's physician assistant license. RFAAX 1, at 3. Specifically, the NCMB annulled Registrant's physician assistant license based on findings that (a) she engaged in immoral or dishonorable conduct; (b) made false statements or representations to the NCMB; (c) engaged in unprofessional conduct by fraudulently obtaining and using the identity, credentials, experience, and licensing information of someone else in false representations and forged documents; and (d) obtained or attempted to obtain a practice, money, or anything of value by false representations. *Id.*

According to North Carolina online records, of which the Agency takes official notice, Registrant's physician assistant license is in an ''Inactive'' status.[2] North Carolina Medical Board License Verification Search, *https://portal.ncmedboard.org/verification/search.aspx* (last visited date of signature of this Order). Accordingly, the Agency finds that Registrant is not licensed as a physician assistant in North Carolina, the state in which she is registered with DEA.[3]

B. Discussion

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General may suspend or revoke a registration issued under 21 U.S.C. 823 ''upon a finding that the registrant . . . has had his State license or registration suspended . . . [or] revoked . . . by competent State authority and is no longer authorized by State law to engage in the . . . dispensing of controlled substances.'' With respect to a practitioner, DEA has also long held that the possession of authority to dispense controlled substances under the laws of the state in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *Gonzales* v. *Oregon,* 546 U.S. 243, 270 (2006) (''The Attorney General can register a physician to dispense controlled substances 'if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.' . . . The very definition of a 'practitioner' eligible to prescribe includes physicians 'licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he practices' to dispense controlled substances. [21 U.S.C.] 802(21).''). The Agency has applied these principles consistently. *See, e.g., James L. Hooper, M.D.,* 76 FR 71,371, 71,372 (2011), *pet. for rev. denied,* 481 F. App'x 826 (4th Cir. 2012); *Frederick Marsh Blanton, M.D.,* 43 FR 27,616, 27,617 (1978).[4]

According to North Carolina statute, ''dispense'' means ''to deliver a controlled substance to an ultimate user or research subject by or pursuant to the lawful order of a practitioner, including the prescribing, administering, packaging, labeling, or compounding necessary to prepare the substance for that delivery.'' N.C. Gen. Stat. Ann. § 90–87(8) (West 2025). Further, a ''practitioner'' means a ''physician . . . or other person licensed, registered or otherwise permitted to distribute, dispense, conduct research with respect to or to administer a controlled substance so long as such activity is within the normal course of professional practice or research in this State.'' *Id.* at § 90–87(22)(a).

Here, the undisputed evidence in the record is that Registrant lacks authority to practice as a physician assistant in North Carolina. As discussed above, an individual must be a licensed practitioner to dispense a controlled substance in North Carolina. Thus, because Registrant lacks authority to

home address. RFAAX 2, at 1. The DIs were met by Registrant's mother, who told them that Registrant did not live at that address. *Id.* On January 27, 2025, DI attempted to serve the OSC to several email addresses associated with Registrant. *Id.* at 2. Service by email was successful as DI received an email delivery receipt from Registrant's registered email address. *Id.* Additionally, on February 6, 2025, DI attempted to serve the OSC on Registrant by USPS Certified Mail at her registered address, but the mail was returned to sender. *Id.* On February 7, 2025, DI attempted to reach Registrant by phone at her registered employer, but was told by the clinic's CEO that she no longer worked there. *Id.* Based on these multiple attempts at service that were ''reasonably calculated'' to notify her of the OSC, and the fact that DI received an email delivery receipt from Registrant's registered email address, the Agency finds that due process notice requirements have been satisfied. *See Jones* v. *Flowers,* 547 U.S. 220, 226 (2006) (quoting *Mullane* v. *Cent. Hanover Bank & Trust Co.,* 339 U.S. 306, 314 (1950)); *Mohammed S. Aljanaby, M.D.,* 82 FR 34,552, 34,552 (2017) (finding that service by email satisfies due process where the email is not returned as undeliverable and other methods have been unsuccessful); *Emilio Luna, M.D.,* 77 FR 4,829, 4,830 (2012) (concluding that ''the use of email to serve Registrant satisfied due process because service was made to an email address which Registrant provided to the Agency and the Government did not receive back either an error or undeliverable message'').

[2] Under the Administrative Procedure Act, an agency ''may take official notice of facts at any stage in a proceeding—even in the final decision.'' United States Department of Justice, Attorney General's Manual on the Administrative Procedure Act 80 (1947) (Wm. W. Gaunt & Sons, Inc., Reprint 1979).

[3] Pursuant to 5 U.S.C. 556(e), ''[w]hen an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary.'' The material fact here is that Registrant, as of the date of this Decision and Order, is not licensed to practice as a physician assistant in North Carolina. Accordingly, Registrant may dispute the Agency's finding by filing a properly supported motion for reconsideration of findings of fact within fifteen calendar days of the date of this Order. Any such motion and response shall be filed and served by email to the other party and to the DEA Office of the Administrator, Drug Enforcement Administration, at *dea.addo.attorneys@dea.gov*.

[4] This rule derives from the text of two provisions of the Controlled Substances Act (CSA). First, Congress defined the term ''practitioner'' to mean ''a physician . . . or other person licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices . . . , to distribute, dispense, . . . [or] administer . . . a controlled substance in the course of professional practice.'' 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that ''[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.'' 21 U.S.C. 823(g)(1). Because Congress has clearly mandated that a practitioner possess state authority in order to be deemed a practitioner under the CSA, DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he is no longer authorized to dispense controlled substances under the laws of the state in which he practices. *See, e.g., Hooper,* 76 FR at 71,371–72; *Sheran Arden Yeats, M.D.,* 71 FR 39,130, 39,131 (2006); *Dominick A. Ricci, M.D.,* 58 FR 51,104, 51,105 (1993); *Bobby Watts, M.D.,* 53 FR 11,919, 11,920 (1988); *Blanton,* 43 FR at 27,617.

practice as a physician assistant in North Carolina and, therefore, is not authorized to handle controlled substances in North Carolina, Registrant is not eligible to maintain a DEA registration in that state. Accordingly, the Agency will order that Registrant's DEA registration be revoked.

III. Material Falsification

A. Findings of Fact

The Agency finds that, in light of Registrant's default, the factual allegations in the OSC are deemed admitted. 21 CFR 1301.43(e). Accordingly, Registrant is deemed to have admitted to each of the following facts. On October 27, 2023, Registrant applied for DEA registration as a mid-level practitioner, physician assistant, in Schedules II through V. RFAAX 1, at 2. On October 30, 2023, Registrant was granted DEA registration No. MI8411061. *Id.*

Prior to applying for DEA registration, Registrant fraudulently used the identity and credentials of another physician assistant to obtain her own North Carolina physician assistant license. *Id.* Her North Carolina physician assistant license, which she obtained by fraud, was used as a basis for establishing the required state authority to procure her DEA registration. *Id.* at 2–3.

When Registrant applied for DEA registration, the application requested information regarding the medical/professional school that she attended and the year she graduated. *Id.* at 2. Registrant responded by stating that she graduated in 2014 from the University of New Mexico, facts that were true of the other physician assistant whose identity Registrant had assumed, but not of Registrant. *Id.*

The application also asked: ''Have you graduated, in good standing, from an accredited school of . . . physician assistant . . . in the United States during the 5-year period immediately preceding the date on which you first submitted a registration or renewal and the curriculum included not less than 8 hours of training?'' *Id.* Registrant answered ''yes'' to this question. *Id.*

By signing the application for registration, Registrant represented that the following statement contained on the DEA application was true in regards to her state authority to practice as a physician assistant in North Carolina: ''You must be currently authorized to prescribe, distribute, dispense, conduct research, or otherwise handle the controlled substances in the schedules for which you are applying under the laws of the state or jurisdiction in which you are operating or propose to operate.'' *Id.* at 3.

B. Discussion

A DEA registration may be denied, suspended, or revoked upon a finding that the applicant or registrant materially falsified any application filed pursuant to or required by the Controlled Substances Act (CSA). 21 U.S.C. 824(a)(1).[5] To present a *prima facie* case for material falsification, the Government's record evidence must show (1) the submission of an application, (2) containing a false statement and/or omitting information that the application requires, (3) when the submitter knew or should have known that the statement is false and/or that the omitted information existed and the application required its disclosure, and (4) the false statement and/or required but omitted information is material, that is, it ''connect[s] to at least one of [the section 823] factors that, according to the CSA, [the Administrator] 'shall' consider'' when analyzing ''whether issuing a registration 'would be inconsistent with the public interest.''' *Frank Joseph Stirlacci, M.D.,* 85 FR 45,229, 45,238 (2020) (citing 21 U.S.C. 823 and *Kungys,* 485 U.S. at 771). The Government must establish material falsification with record evidence that is clear, unequivocal, and convincing. *Kungys,* 485 U.S. at 772; *Stirlacci,* 85 FR at 45,230–39.

First, the Government must prove that the applicant or registrant submitted an application for registration pursuant to the CSA. 21 U.S.C. 824(a)(1); *see also* 21 U.S.C. 822 (persons required to register); 21 U.S.C. 823(g)(1) (registration requirements).

Second, the Government must prove that the application contained a false statement or omitted information that the application required, either of which may constitute a material falsity. *See, e.g., Emed Medical Company LLC and Med Assist Pharmacy,* 88 FR 21,719, 21,720 (2023) (applicant falsely answered ''no'' to Liability Question 3 on seventeen applications when the true answer was ''yes''); *Richard J. Settles, D.O.,* 81 FR 64,940, 64,945–46 (2016) (applicant failed to disclose an interim consent agreement restricting his license based on findings that he issued controlled substance prescriptions without federal or state legal authority to do so). In making this assessment, the Agency will examine the entire application, including registrant's ''yes/no'' answers to the liability questions and any follow-up response(s). *Daniel A. Glick, D.D.S.,* 80 FR 74,800, 74,802, 74,808–09 (2015). To establish an omission, the Government must show both that omitted information existed and that the application required inclusion of that information. *See, e.g., Richard A. Herbert, M.D.,* 76 FR 53,942, 53,956 (2011) (omission of a probation which the application required to be identified); *Michel P. Toret, M.D.,* 82 FR 60,041, 60,042 (2017) (Voluntary Surrender Form alone is insufficient evidence to find material falsification based on registrant's ''no'' answer to the question regarding ''surrender[s] (for cause)'').

Third, the Government must prove that the applicant or registrant knew or should have known that the statement is false and/or that the omitted information existed and the application required its disclosure. *See John J. Cienki, M.D.,* 63 FR 52,293, 52,295 (1998) (''[I]n finding that there has been a material falsification of an application, it must be determined that the applicant knew or should have known that the response given to the liability question was false.''); *Samuel Arnold, D.D.S.,* 63 FR 8,687, 8,688 (1998) (''It is also undisputed that Respondent knew that his Ohio dental license had previously been suspended.''); *Bobby Watts, M.D.,* 58 FR 46,995, 46,995 (1993) (''Respondent knew that the Tennessee Board of Medical Examiners had suspended his medical license on May 7, 1987, and had placed his state medical license on probation on May 2, 1988.''); *see also Stirlacci,* 85 FR at 45,236–37 & nn.22–23 (collecting cases).

Fourth, the Government must prove that the false statement and/or required but omitted information is ''material.'' *Kungys* holds that a statement is material if it is ''predictably capable of affecting, *i.e.,* had a natural tendency to affect, the [Agency's] official decision,'' or stated differently, ''had a natural tendency to influence the decision.'' *Kungys,* 485 U.S. at 771–72. As already discussed, materiality, for the purposes of the CSA, is tied to the factors that the Administrator ''shall'' consider when determining whether issuance of a registration ''would be inconsistent with the public interest.'' 21 U.S.C. 823; *Kungys,* 485 U.S. at 771–72; *Stirlacci,* 85 FR at 45,234, 45,238.

[5] A statutory basis to deny an application pursuant to section 823 is also a basis to revoke or suspend a registration pursuant to section 824, and vice versa, because doing ''otherwise would mean that all applications would have to be granted only to be revoked the next day . . . .'' *Robert Wayne Locklear, M.D.,* 86 FR 33,738, 33,744–45 (2021) (collecting cases).

The Supreme Court's decision in *Kungys* v. *United States,* 485 U.S. 759 (1988), and its progeny, guide the Agency's implementation of these CSA provisions.

The Government has the burden of proof in this proceeding. 21 CFR 1301.44. After evaluating each of the alleged material falsifications, the Agency finds that the Government's record evidence presents a *prima facie* case that Registrant submitted a materially false application. 21 U.S.C. 823, 824(a)(1).

Here, there is no question that Registrant submitted an application for DEA registration and that the application contained multiple falsities. RFAAX 1, at 2–3. Two such falsities were that Registrant, assuming the identity of a properly licensed practitioner, represented that she attended the University of New Mexico for professional school and graduated in 2014. *Id.* at 2. Registrant, through her signature, also represented that she was ''currently authorized to prescribe, distribute, dispense, conduct research, or otherwise handle the controlled substances in the schedules for which [she was] applying *under the laws of the state or jurisdiction in which* [*she was*] *operating or propos*[*ed*] *to operate.*'' *Id.* at 3.

But Registrant's state authorization to handle controlled substances was not obtained pursuant to law—it was obtained by fraud. Registrant, in assuming someone else's identity, certainly knew or should have known that she had not graduated from the University of New Mexico in 2014 as she represented to the NCMB and to DEA. Indeed, the NCMB later found that Registrant's state physician assistant license had been acquired under false pretenses as a result of Registrant representing herself as someone else. *Id.* Accordingly, the NCMB annulled the license it had issued to Registrant under false pretenses. *Id.* Thus, Registrant falsified her DEA application by representing that she was authorized to handle controlled substances ''under the laws of'' North Carolina when she would not have been granted state authority were it not for her fraud. *Id.*

In addition, the falsification was material. The Agency has consistently held for decades that possessing valid state authority to handle controlled substances is a prerequisite for obtaining a DEA registration.[6] Thus, whether an applicant possesses valid state authority to handle controlled substances in the state for which the applicant seeks registration is a critical factor DEA must consider when reviewing an application.[7]

In *Steven Bernhard, D.O.,* the Agency found that an application was materially false where the applicant falsely represented that he possessed valid state authority to handle controlled substances, when in fact, he did not. 82 FR 23,298, 23,300 (2017). The Agency explained that ''[b]ecause the possession of state authority is a prerequisite to obtaining and maintaining a practitioner's registration, Respondent's false representations that he currently possessed a state license . . . [was] capable of influencing the Agency's decision to grant his . . . application.'' *Id.; see also Thomas G. Easter II, M.D.,* 69 FR 5,579, 5,580 (2004) (finding that applicant materially falsified an application for registration by falsely representing that ''he was 'currently authorized to prescribe' controlled substances 'under the laws of the State or jurisdiction in which [he was] operating or propos[ed] to operate' '').

Thus, Registrant's application representing that she possessed state authorization obtained pursuant to law to handle controlled substances directly affected the statutory analysis that DEA was required to make when it reviewed Registrant's application. 21 U.S.C. 802(21), 823(g)(1), 824(a)(3); *Gonzales,* 546 U.S. at 270; *Stirlacci,* 85 FR at 45,238; *Bernhard,* 82 FR at 23,300; *Easter,* 69 FR at 5,580. Stated differently, Registrant's application led DEA to believe that she possessed valid state authority when, in fact, that state authority was invalid under state law as it had been obtained by fraud. RFAAX 1, at 2–3; *Bernhard,* 82 FR at 23,300; *Easter,* 69 FR at 5,580. Thus, her false representation was material because it was ''predictably capable of affecting . . . [DEA's] official decision'' regarding whether Registrant met ''the requirements for'' registration. *Kungys,* 485 U.S. at 771.

In sum, the Agency finds clear, unequivocal, and convincing record evidence, and Registrant is deemed to have admitted, that she submitted a materially false application for registration. 21 U.S.C. 824(a)(1); 21 CFR 1301.43(e).

As a result of this established violation, the Agency finds that the Government has established a *prima facie* case for sanction, that Registrant did not rebut that *prima facie* case, and that there is substantial record evidence supporting the revocation of Registrant's registration. 21 U.S.C. 824(a)(1).

C. Sanction

Where, as here, the Government has presented a *prima facie* case showing that a registrant submitted a materially false application for registration, the burden shifts to Registrant to show why she can be trusted with a registration. *Morall* v. *Drug Enf't Admin.,* 412 F.3d 165, 181 (D.C. Cir. 2005); *Jones Total Health Care Pharmacy, LLC* v. *Drug Enf't Admin.,* 881 F.3d 823, 830 (11th Cir. 2018); *Garrett Howard Smith, M.D.,* 83 FR 18,882, 18,904 (2018). The issue of trust is a fact-dependent determination based on the circumstances presented by the individual practitioner. *Jeffrey Stein, M.D.,* 84 FR 46,968, 46,972 (2019); *see also Jones Total Health Care Pharmacy,* 881 F.3d at 833. Historically, the Agency has considered acceptance of responsibility, egregiousness, and deterrence when making this assessment.

Specifically, the Agency requires the practitioner to accept responsibility for his or her violation. *Jones Total Health Care Pharmacy,* 881 F.3d at 833; *ALRA Labs, Inc.* v. *Drug Enf't Admin.,* 54 F.3d 450, 452 (7th Cir. 1995). Acceptance of responsibility must be unequivocal. *Janet S. Pettyjohn, D.O.,* 89 FR 82,639, 82,641 (2024); *Mohammed Asgar, M.D.,* 83 FR 29,569, 29,573 (2018); *see also Jones Total Health Care Pharmacy,* 881 F.3d at 830–31.

In addition, the Agency considers the egregiousness and extent of the misconduct in determining the appropriate sanction. *Jones Total Health Care Pharmacy,* 881 F.3d at 834 & n.4. The Agency also considers the need to deter similar acts by Registrant and by

[6] *See Joely Keen, A.P.R.N.,* 90 FR 13,882, 13,883 (2025) (''DEA has . . . long held that the possession of authority to dispense controlled substances under the laws of the state in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration.''); *Blanton,* 43 FR at 27,617 (holding that ''[s]tate authorization to dispense or otherwise handle controlled substances is a prerequisite to'' obtaining and maintaining a DEA registration).

[7] *See* 21 U.S.C. 802(21) (defining a ''practitioner'' as one who is ''licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices'' to handle controlled substances ''in the course of professional practice''); 21 U.S.C. 823(g)(1) (''The Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.''); 21 U.S.C. 824(a)(3) (providing a basis for revoking a registration where the registrant lacks the requisite state authority to dispense controlled substances); *Gonzales* v. *Oregon,* 546 U.S. 243, 270 (2006) (''The structure and operation of the CSA presume and rely upon a functioning medical profession regulated under the States' police powers'' and explaining registration requirements and the definition of ''practitioner''); *Hatem M. Ataya, M.D.,* 81 FR 8,221, 8,244 (2016) (explaining ''the possession of state authority is a prerequisite for obtaining a registration''); *Hoi Y. Kam, M.D.,* 78 FR 62,694, 62,696 (2013) (''Because possessing authority to dispense controlled substances *under the laws of the State* in which a physician practices medicine is a requirement for holding a DEA registration, . . . a false answer to the state license question is material where an applicant no longer holds authority to practice medicine (regardless of the reason for the State's action) or authority to dispense controlled substances . . . .'') (emphasis added).

future applicants for registration. *Stein,* 84 FR at 46,972–73.

Here, Registrant did not timely request a hearing, or timely or properly answer the allegations, and was therefore deemed to be in default. 21 CFR 1301.43(c)(1), (e), (f)(1); RFAA, at 1–4. To date, Registrant has not filed a motion with the Office of the Administrator to excuse the default. 21 CFR 1301.43(c)(1). Registrant has thus failed to answer the allegations contained in the OSC and has not otherwise availed herself of the opportunity to refute the Government's case. As such, Registrant has not accepted responsibility for the proven violations, has made no representations regarding her future compliance with the CSA, and has not made any demonstration that she can be trusted with registration.

Moreover, the evidence presented by the Government shows that Registrant misrepresented her qualifications for registration and used another person's identity in order to fraudulently obtain a state professional license, further demonstrating that Registrant cannot be trusted with the responsibilities of holding a controlled substances registration. To permit Registrant to maintain a registration under these circumstances would send a dangerous message that identity theft and fraud are acceptable means of acquiring a DEA registration and that DEA does not require truthfulness from applicants and registrants. Accordingly, the Agency will order the revocation of Registrant's registration.[8]

Order

Pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 824(a), I hereby revoke DEA Certificate of Registration No. MI8411061 issued to Sasha Melissa Ikramelahai. Further, pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 823(g)(1), I hereby deny any pending applications of Sasha Melissa Ikramelahai to renew or modify this registration, as well as any other pending application of Sasha Melissa Ikramelahai for additional registration in North Carolina. This Order is effective August 15, 2025.

Signing Authority

This document of the Drug Enforcement Administration was signed on July 10, 2025, by Acting Administrator Robert J. Murphy. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

[FR Doc. 2025–13313 Filed 7–15–25; 8:45 am]

BILLING CODE 4410–09–P

[8] In this matter there are two separate and distinct grounds by which the Government proposed revocation, Registrant's lack of state authority and her material falsification; each ground, standing alone, supports the Agency's decision to revoke.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Osric Malone Prioleau, N.P.; Decision And Order

On February 13, 2025, the Drug Enforcement Administration (DEA or Government) issued an Order to Show Cause (OSC) to Osric Malone Prioleau, N.P., of St. Marys, West Virginia (Registrant). Request for Final Agency Action (RFAA), Exhibit (RFAAX) 2, at 1, 4. The OSC proposed the revocation of Registrant's DEA Certificate of Registration (COR) No. MM2233827, alleging that Registrant is ''currently without authority to . . . handle controlled substances in the State of West Virginia, the state in which [he is] registered with DEA.'' *Id.* at 2 (citing 21 U.S.C. 824(a)(3)).[1]

The OSC notified Registrant of his right to file a written request for hearing, and that if he failed to file such a request, he would be deemed to have waived his right to a hearing and be in default. *Id.* at 2–3 (citing 21 CFR 1301.43). Here, Registrant did not request a hearing. RFAA, at 2.[2] ''A default, unless excused, shall be deemed to constitute a waiver of the registrant's/applicant's right to a hearing and an admission of the factual allegations of the [OSC].'' 21 CFR 1301.43(e).

Further, ''[i]n the event that a registrant . . . is deemed to be in default . . . DEA may then file a request for final agency action with the Administrator, along with a record to support its request. In such circumstances, the Administrator may enter a default final order pursuant to [21 CFR] 1316.67.'' *Id.* at 1301.43(f)(1). Here, the Government has requested final agency action based on Registrant's default pursuant to 21 CFR 1301.43(c), (f), and 1301.46. RFAA, at 1; *see also* 21 CFR 1316.67.

Findings of Fact

The Agency finds that, in light of Registrant's default, the factual allegations in the OSC are deemed admitted. According to the OSC, Registrant's West Virginia registered nurse license and advanced practice registered nurse license were suspended by the West Virginia Board of Registered Nurses on August 22, 2024. RFAAX 2, at 1–2; *see also* RFAAX 3. According to West Virginia online records, of which the Agency takes official notice,[3] Registrant's West Virginia licenses have a status of ''Inactive—Suspension.'' West Virginia Board of Registered Nurses License Lookup, *https://wvrn.boardsofnursing.org/licenselookup/* (last visited date of signature of this Order). Accordingly, the Agency finds that Registrant is not licensed as a practitioner in West Virginia, the state in which he is registered with DEA.[4]

Discussion

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General may suspend or revoke a registration issued under 21 U.S.C. 823 ''upon a finding that the registrant . . . has had his State license or registration suspended . . . [or] revoked . . . by competent State

[1] According to the OSC and Agency records, Registrant's DEA registration expired on January 31, 2025, before issuance of the OSC. RFAAX 2, at 1, 3. ''The Agency has previously held that it is within its jurisdiction and prerogative to adjudicate a matter to finality where a registration expired before issuance of the OSC.'' *William Thompson IV, M.D.,* 90 FR 26,610, 26,610 n.1 (2025) (citing *Abdul Naushad, M.D.,* 89 FR 54,059, 54,059–60 (2024)).

[2] Based on the Government's submissions in its RFAA dated March 28, 2025, the Agency finds that service of the OSC on Registrant was proper. The included Government's Notice of Service of the OSC indicates that on February 20, 2025, Registrant was personally served with the OSC and signed a receipt of service. RFAAX 1, at 1–4.

[3] Under the Administrative Procedure Act, an agency ''may take official notice of facts at any stage in a proceeding—even in the final decision.'' United States Department of Justice, Attorney General's Manual on the Administrative Procedure Act 80 (1947) (Wm. W. Gaunt & Sons, Inc., Reprint 1979).

[4] Pursuant to 5 U.S.C. 556(e), ''[w]hen an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary.'' The material fact here is that Registrant, as of the date of this Order, is not licensed as a nurse in West Virginia. Accordingly, Registrant may dispute the Agency's finding by filing a properly supported motion for reconsideration of findings of fact within fifteen calendar days of the date of this Order. Any such motion and response shall be filed and served by email to the other party and to the DEA Office of the Administrator, Drug Enforcement Administration, at *dea.addo.attorneys@dea.gov.*

authority and is no longer authorized by State law to engage in the . . . dispensing of controlled substances.''

With respect to a practitioner, DEA has also long held that the possession of authority to dispense controlled substances under the laws of the state in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *Gonzales* v. *Oregon,* 546 U.S. 243, 270 (2006) (''The Attorney General can register a physician to dispense controlled substances 'if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.' . . . The very definition of a 'practitioner' eligible to prescribe includes physicians 'licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he practices' to dispense controlled substances. § 802(21).''). The Agency has applied these principles consistently. *See, e.g., James L. Hooper, M.D.,* 76 FR 71,371, 71,372 (2011), *pet. for rev. denied,* 481 F. App'x 826 (4th Cir. 2012); *Frederick Marsh Blanton, M.D.,* 43 FR 27,616, 27,617 (1978).[5]

According to West Virginia statute, ''dispense'' means ''to deliver a controlled substance to an ultimate user or research subject by or pursuant to the lawful order of a practitioner, including the prescribing, administering, packaging, labeling or compounding necessary to prepare the substance for that delivery.'' W. Va. Code § 60A–1–101(i) (West 2025). Further, a ''practitioner'' means ''[a] physician . . . or other person licensed, registered or otherwise permitted to distribute, dispense, conduct research with respect to, or to administer a controlled substance in the course of professional practice or research in this state.'' *Id.* at § 60A–1–101(y)(1).[6]

Here, the undisputed evidence in the record is that Registrant is not a currently licensed practitioner in West Virginia. As discussed above, a nurse must be a licensed practitioner to dispense a controlled substance in West Virginia. Thus, because Registrant's nursing licenses are suspended in West Virginia and, therefore, he is not currently authorized to handle controlled substances in West Virginia, Registrant is not eligible to maintain a DEA registration in West Virginia. Accordingly, the Agency will order that Registrant's DEA registration be revoked.

Order

Pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 824(a), I hereby revoke DEA Certificate of Registration No. MM2233827 issued to Osric Malone Prioleau, N.P. Further, pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 823(g)(1), I hereby deny any pending applications of Osric Malone Prioleau, N.P., to renew or modify this registration, as well as any other pending application of Osric Malone Prioleau, N.P., for additional registration in West Virginia.

This Order is effective August 15, 2025.

Signing Authority

This document of the Drug Enforcement Administration was signed on July 10, 2025, by Acting Administrator Robert J. Murphy. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

BILLING CODE 4410–09–P

[5] This rule derives from the text of two provisions of the Controlled Substances Act (CSA). First, Congress defined the term ''practitioner'' to mean ''a physician . . . or other person licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices . . . , to distribute, dispense, . . . [or] administer . . . a controlled substance in the course of professional practice.'' 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that ''[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.'' 21 U.S.C. 823(g)(1). Because Congress has clearly mandated that a practitioner possess state authority in order to be deemed a practitioner under the CSA, DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he is no longer authorized to dispense controlled substances under the laws of the state in which he practices. *See, e.g., James L. Hooper, M.D.,* 76 FR at 71,371–72; *Sheran Arden Yeates, M.D.,* 71 FR 39,130, 39,131 (2006); *Dominick A. Ricci, M.D.,* 58 FR 51,104, 51,105 (1993); *Bobby Watts, M.D.,* 53 FR 11,919, 11,920 (1988); *Frederick Marsh Blanton, M.D.,* 43 FR at 27,617.

[6] Registrant was specifically licensed to distribute controlled substances in West Virginia as an advanced practice registered nurse pursuant to W. Va. Code § 30–7–15a, which provides explicit authority for advanced practice registered nurses to distribute controlled substances in accordance with the West Virginia Uniform Controlled Substances Act (W. Va. Code § 60A, *et. seq.*).

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Diana Clouthier, N.P.; Decision and Order

On February 13, 2025, the Drug Enforcement Administration (DEA or Government) issued an Order to Show Cause (OSC) to Diana Clouthier, N.P., of Canon City, Colorado (Registrant). Request for Final Agency Action (RFAA), Exhibit (RFAAX) 1, at 1, 4. The OSC proposed the revocation of Registrant's DEA Certificate of Registration (COR) No. MC5780639, alleging that Registrant is ''currently without authority to . . . handle controlled substances in the State of Colorado, the state in which [she is] registered with DEA.'' *Id.* at 2 (citing 21 U.S.C. 824(a)(3)).

The OSC notified Registrant of her right to file a written request for hearing, and that if she failed to file such a request, she would be deemed to have waived her right to a hearing and be in default. *Id.* at 2–3 (citing 21 CFR 1301.43). Here, Registrant did not request a hearing. RFAA, at 2.[1] ''A default, unless excused, shall be deemed to constitute a waiver of the registrant's/applicant's right to a hearing and an admission of the factual allegations of the [OSC].'' 21 CFR 1301.43(e).

Further, ''[i]n the event that a registrant . . . is deemed to be in default . . . DEA may then file a request for final agency action with the Administrator, along with a record to support its request. In such circumstances, the Administrator may enter a default final order pursuant to [21 CFR] 1316.67.'' *Id.* at 1301.43(f)(1). Here, the Government has requested final agency action based on Registrant's default pursuant to 21 CFR 1301.43(c) and (f). RFAA, at 1, 4; *see also* 21 CFR 1316.67.

[1] Based on the Government's submissions in its RFAA dated April 7, 2025, the Agency finds that service of the OSC on Registrant was adequate. The included declaration from a DEA Diversion Investigator (DI) indicates that on February 20, 2025, DI attempted to serve Registrant the OSC at her personal residence and by phone, but both attempts were unsuccessful. RFAAX 2, at 1. Registrant returned the phone call and informed DI that she was not in Colorado and ''would not confirm when she would be returning'' to Colorado. *Id.* On February 24, 2025, DI emailed the OSC to Registrant and Registrant replied acknowledging receipt, but did not request a hearing in her response. *Id.* at 2–4. Accordingly, the Agency finds that the Government's service of the OSC on Registrant was adequate. *See Mohammed S. Aljanaby, M.D.,* 82 FR 34,552, 34,552 (2017) (finding that service by email satisfies due process where the email is not returned as undeliverable and other methods have been unsuccessful); *Emilio Luna, M.D.,* 77 FR 4,829, 4,830 (2012) (same).

Findings of Fact

The Agency finds that, in light of Registrant's default, the factual allegations in the OSC are deemed admitted. According to the OSC, Registrant's Colorado registered nursing license, advanced practice nurse license, and nurse practitioner prescriptive authority license were suspended by the Colorado State Board of Nursing on October 21, 2024. RFAAX 1, at 1–2; *see also* RFAAX 4. According to Colorado online records, of which the Agency takes official notice,[2] Registrant's Colorado licenses have a status of ''Suspended.'' Colorado DORA License Search, *https://apps2.colorado.gov/dora/licensing/lookup/licenselookup.aspx* (last visited date of signature of this Order). Accordingly, the Agency finds that Registrant is not licensed as a practitioner in Colorado, the state in which she is registered with DEA.[3]

Discussion

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General may suspend or revoke a registration issued under 21 U.S.C. 823 ''upon a finding that the registrant . . . has had his State license or registration suspended . . . [or] revoked . . . by competent State authority and is no longer authorized by State law to engage in the . . . dispensing of controlled substances.'' With respect to a practitioner, DEA has also long held that the possession of authority to dispense controlled substances under the laws of the state in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *Gonzales* v. *Oregon,* 546 U.S. 243, 270 (2006) (''The Attorney General can register a physician to dispense controlled substances 'if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.' . . . The very definition of a 'practitioner' eligible to prescribe includes physicians 'licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he practices' to dispense controlled substances. § 802(21).''). The Agency has applied these principles consistently. *See, e.g., James L. Hooper, M.D.,* 76 FR 71,371, 71,372 (2011), *pet. for rev. denied,* 481 F. App'x 826 (4th Cir. 2012); *Frederick Marsh Blanton, M.D.,* 43 FR 27,616, 27,617 (1978).[4]

According to Colorado statute, ''dispense'' means ''to deliver a controlled substance to an ultimate user, patient, or research subject by or pursuant to the lawful order of a practitioner, including the prescribing, administering, packaging, labeling, or compounding necessary to prepare the substance for that delivery.'' Colo. Rev. Stat. § 18–18–102(9) (West 2025). Further, a ''practitioner'' means a ''physician . . . or other person licensed, registered, or otherwise permitted, by this state, to distribute, dispense, conduct research with respect to, administer, or to use in teaching or chemical analysis, a controlled substance in the course of professional practice or research.'' *Id.* § 18–18–102(29).

Here, the undisputed evidence in the record is that Registrant is not a currently licensed practitioner in Colorado. As discussed above, a nurse must be a licensed practitioner to dispense a controlled substance in Colorado. Thus, because Registrant's nursing licenses are suspended in Colorado and, therefore, she is not currently authorized to handle controlled substances in Colorado, Registrant is not eligible to maintain a DEA registration in Colorado. Accordingly, the Agency will order that Registrant's DEA registration be revoked.

Order

Pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 824(a), I hereby revoke DEA Certificate of Registration No. MC5780639 issued to Diana Clouthier, N.P. Further, pursuant to 28 CFR 0.100(b) and the authority vested in me by 21 U.S.C. 823(g)(1), I hereby deny any pending applications of Diana Clouthier, N.P., to renew or modify this registration, as well as any other pending application of Diana Clouthier, N.P., for additional registration in Colorado. This Order is effective August 15, 2025.

Signing Authority

This document of the Drug Enforcement Administration was signed on July 10, 2025, by Acting Administrator Robert J. Murphy. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

[FR Doc. 2025–13354 Filed 7–15–25; 8:45 am]

BILLING CODE 4410–09–P

[2] Under the Administrative Procedure Act, an agency ''may take official notice of facts at any stage in a proceeding—even in the final decision.'' United States Department of Justice, Attorney General's Manual on the Administrative Procedure Act 80 (1947) (Wm. W. Gaunt & Sons, Inc., Reprint 1979).

[3] Pursuant to 5 U.S.C. 556(e), ''[w]hen an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary.'' The material fact here is that Registrant, as of the date of this Order, is not licensed as a nurse in Colorado. Accordingly, Registrant may dispute the Agency's finding by filing a properly supported motion for reconsideration of findings of fact within fifteen calendar days of the date of this Order. Any such motion and response shall be filed and served by email to the other party and to the DEA Office of the Administrator, Drug Enforcement Administration, at *dea.addo.attorneys@dea.gov.*

[4] This rule derives from the text of two provisions of the Controlled Substances Act (CSA). First, Congress defined the term ''practitioner'' to mean ''a physician . . . or other person licensed, registered, or otherwise permitted, by . . . the jurisdiction in which he practices . . . , to distribute, dispense, . . . [or] administer . . . a controlled substance in the course of professional practice.'' 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that ''[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices.'' 21 U.S.C. 823(g)(1). Because Congress has clearly mandated that a practitioner possess state authority in order to be deemed a practitioner under the CSA, DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he or she is no longer authorized to dispense controlled substances under the laws of the state in which he or she practices. *See, e.g., James L. Hooper, M.D.,* 76 FR at 71,371–72; *Sheran Arden Yeates, M.D.,* 71 FR 39,130, 39,131 (2006); *Dominick A. Ricci, M.D.,* 58 FR 51,104, 51,105 (1993); *Bobby Watts, M.D.,* 53 FR 11,919, 11,920 (1988); *Frederick Marsh Blanton, M.D.,* 43 FR at 27,617.

DEPARTMENT OF JUSTICE

[A.G. Order No. 6335–2025]

Revised Specification Pursuant to the Personal Responsibility and Work Opportunity Reconciliation Act of 1996

AGENCY: Department of Justice.

ACTION: Order.

SUMMARY: This document contains an Order of the Attorney General issued pursuant to sections 401 and 411 of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (''PRWORA'' or the ''Act''). This Order withdraws the Attorney General's January 5, 2001, order issued pursuant to PRWORA.

DATES: The effective date of this Order is August 15, 2025.

FOR FURTHER INFORMATION CONTACT: Christina Greer, Office of Legal Policy, Department of Justice, Room 4254, 950 Pennsylvania Avenue NW, Washington, DC 20530, telephone 202–514–5739, for general information. For information regarding particular programs, contact the Federal agency that administers the program.

SUPPLEMENTARY INFORMATION

I. Background on PRWORA

On August 22, 1996, President Clinton signed the Personal Responsibility and Work Opportunity Reconciliation Act of 1996, Public Law 104–193, currently codified in relevant part at 8 U.S.C. 1611 *et seq.,* as amended. With certain exceptions, PRWORA makes aliens who are not ''qualified alien[s]'' ineligible for any ''Federal public benefit,'' as those terms are defined by PRWORA. 8 U.S.C. 1611(a); *see also id.* 1611(c) (defining ''Federal public benefit''), 1641 (defining ''qualified alien''). PRWORA also restricts, with certain exceptions, all aliens from receiving ''Federal means-tested public benefit[s]'' for a five-year period from their entry into the United States with a status within the meaning of the term ''qualified alien.'' 8 U.S.C. 1613(a). Additionally, PRWORA imposes limits on the receipt of State and local benefits by aliens but permits States to authorize the receipt of State and local benefits by otherwise ineligible aliens through the enactment of a State law postdating PRWORA. *See* 8 U.S.C. 1621(a), (d); *see also id.* 1621(c) (defining ''State or local public benefit''). Finally, PRWORA added section 213A to the Immigration and Nationality Act, which excepts from reimbursement certain benefits provided to a sponsored alien pursuant to an affidavit of support. *Id.* 1183a note.

PRWORA requires the creation of uniform verification requirements to ensure that only ''qualified aliens'' eligible for benefits under PRWORA receive them. 8 U.S.C. 1642. Section 1642(a) requires the Attorney General, who at the time of PRWORA's enactment oversaw the Immigration and Naturalization Service within the Department of Justice (''DOJ''), to promulgate regulations requiring verification that a person applying for a Federal public benefit is a qualified alien and is eligible to receive the benefit. Section 1642(a)(2) requires establishment of fair and nondiscriminatory procedures for a person to provide proof of citizenship. Section 1642(b) requires States to have in effect a verification system that complies with the regulations promulgated under section 1642(a). The Attorney General issued interim guidance about the implementation of these verification requirements in 1997. Interim Guidance on Verification of Citizenship, Qualified Alien Status and Eligibility Under Title IV of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996, 62 FR 61344 (Nov. 17, 1997).

II. Authority To Specify Exceptions to PRWORA's Verification Requirements

Sections 401(b)(1)(D) and 411(b)(4) of PRWORA (codified at 8 U.S.C. 1611(b)(1)(D) and 1621(b)(4)), provide that the Attorney General may, in her ''sole and unreviewable discretion after consultation with appropriate Federal agencies and departments,'' specify as excepted from PRWORA's prohibition on receipt of public benefits by unqualified aliens certain types of programs, services, and assistance that meet all of the following criteria: (1) deliver in-kind services at the community level, including through public or private non-profit agencies; (2) do not condition the provision of assistance, the amount of assistance provided, or the cost of assistance provided on the individual recipient's income or resources; and (3) are necessary for the protection of life or safety.

Shortly after PRWORA was signed into law, the Attorney General issued an order implementing this authority by making a ''provisional specification'' of benefits excepted from PRWORA. Specification of Community Programs Necessary for Protection of Life or Safety Under Welfare Reform Legislation, 61 FR 45985 (Aug. 30, 1996) (''Provisional Order''). Approximately one year later, the Attorney General issued a notice to solicit input from ''federal, state, and local agencies operating programs or providing services or assistance that may be covered by the final Order.'' Request for Comments on the Attorney General's Specification of Community Programs Necessary for the Protection of Life or Safety Under the Welfare Reform Act, 62 FR 48308, 48308 (Sept. 15, 1997). The Attorney General subsequently issued a final order specifying these programs in 2001. Final Specification of Community Programs Necessary for Protection of Life or Safety Under Welfare Reform Legislation, 66 FR 3613 (Jan. 16, 2001) (''Final Order''). In both the Provisional Order and the Final Order—the latter of which was, in substance, unchanged in response to the comments received by DOJ—the Attorney General exercised her authority to except programs, services, or assistance to the fullest extent permitted by law by excepting from PRWORA ''any . . . programs, services, or assistance'' that satisfied all three statutory criteria. 61 FR at 45985 (Provisional Order); 66 FR at 3616 (Final Order); *see also id.* at 3615 (''[the] Attorney General has fully exercised the power delegated to her under §§ 401(b)(1)(D) and 411(b)(4) of [PRWORA]'').

The Attorney General's exercise of discretion to determine whether to except benefits from PRWORA does not require notice-and-comment rulemaking. Because PRWORA commits a decision about exceptions to the Attorney General's ''sole and unreviewable discretion'' after consultation with Federal officials, PRWORA ''renders the formal notice-and-comment rulemaking regime inapplicable'' to this action. *See Make The Rd. New York* v. *Wolf,* 962 F.3d 612, 634 (D.C. Cir. 2020). Moreover, the action is exempt from notice-and-comment procedures because the designation of certain benefits as excepted is a ''matter relating to . . . public property, loans, grants, benefits, or contracts.'' 5 U.S.C. 553(a)(2).

III. Executive Order 14218

On February 19, 2025, the President signed Executive Order 14218, ''Ending Taxpayer Subsidization of Open Borders,'' 90 FR 10581. One purpose of the Executive Order is to confirm agencies are complying with PRWORA in administering Federal programs by ensuring, ''to the maximum extent permitted by law, that no taxpayer-funded benefits go to unqualified aliens.'' *Id.* sec. 2(a). The Executive Order directs agencies to identify ''all federally funded programs administered by the agency that currently permit illegal aliens to obtain any cash or non-cash public benefit, and, consistent with applicable law, take all appropriate actions to align such programs with the purpose of the Executive Order and applicable law, including . . . PRWORA.'' *Id.* sec. 2(a)(i).

IV. Re-Evaluation of the 2001 Specification

A. Review of Reliance on the Final Order

In the discharge of her responsibilities under Executive Order 14218 and PRWORA, the Attorney General has reviewed the Final Order issued in 2001. As required by PRWORA, she has engaged in consultation with appropriate Federal agencies and departments about the propriety of

specifying exceptions to PRWORA, including the extent to which agencies rely on the Final Order to except programs, services, or assistance from PRWORA, in order to determine whether the Final Order should be withdrawn or modified.

Multiple agencies responded that they do not rely on the Final Order at all because they do not confer benefits subject to PRWORA; because they rely only on PRWORA's statutory exceptions; or because they do not except the benefits they provide from PRWORA's eligibility requirements. The fact that a particular program does not fall within the scope of PRWORA does not mean that eligibility requirements imposed by other Federal statutes do not apply to the benefit. Some Federal programs, such as Medicaid, unemployment compensation, educational assistance under Title IV of the Higher Education Act of 1965, and assisted housing programs administered by the Department of Housing and Urban Development (''HUD'') already require, absent a waiver, verification of the immigration status of an alien to ensure the alien meets the eligibility requirements for the program. 62 FR at 61345. To verify recipient status and eligibility, agencies use the Systematic Alien Verification for Entitlements (''SAVE'') system, operated by U.S. Citizenship and Immigration Services. *See id.* Except where specified in the statute, PRWORA does not alter preexisting legal requirements regarding the use of the SAVE system or relieve the administrators of statutorily mandated programs of their obligations to comply with the SAVE program. *Id.* The Attorney General defers to agencies as to the extent to which PRWORA applies to the programs they administer and as to whether authorities other than PRWORA require them to ascertain the immigration status of benefit recipients.

Some agencies purported to rely upon the Final Order to except from PRWORA programs that are likely subject to one of PRWORA's statutory exceptions. For example, the Federal Emergency Management Administration purported to rely on the Final Order as to certain emergency or disaster relief programs. But PRWORA already excepts short-term, in-kind, emergency disaster relief from its eligibility requirements, so the Attorney General's exception authority under PRWORA is not legally necessary to except such programs. *See* 8 U.S.C. 1611(b)(1)(B).

Agencies also purported to rely upon the Final Order to except programs that may fail to meet the requirements of PRWORA because eligibility is conditioned on the income or resources of the recipients. For instance, many of the benefits provided through the Community Development Block Grant (''CDBG'') program, managed by HUD, must be conferred to low- or moderate-income persons by statute. *See* 42 U.S.C. 5301 *et seq.* PRWORA, however, grants the Attorney General authority to except only programs for which eligibility is not conditioned on the resources or income of the recipients. *See, e.g.,* 8 U.S.C. 1611(b)(1)(D)(ii).

Agencies also purported to rely upon the Final Order for programs that may go beyond PRWORA's limitation of benefits to programs that are ''necessary for the protection of life or safety.'' 8 U.S.C. 1611(b)(1)(D)(iii). Neither PRWORA nor the Final Order attempts to define this phrase more precisely. This lack of guidance has led to the exception being used more broadly than Congress intended. PRWORA provides examples of the kinds of assistance that the Attorney General has authority to except from the statute's limitation on eligibility—*i.e.,* ''soup kitchens, crisis counseling and intervention, and short-term shelter.'' But agencies have excepted from PRWORA forms of assistance that are quite unlike these examples. For instance, the Department of Homeland Security (''DHS'') funds ''scientific leadership,'' ''citizenship education and training,'' and law enforcement officer training. Such programs—focused more on career building or personal development than human necessities—are not ''necessary for the protection life or safety'' in the sense the drafters of PRWORA used that phrase. Nor is it clear why unqualified aliens would need to receive benefits from such programs. Similarly, while grants, contracts, and loans are a public benefit under PRWORA, many projects funded by HUD through CDBG to address infrastructure improvements or combat urban blight are too far removed from the circumstances that would make them ''necessary for the protection of life or safety'' in the sense that Congress directed when it enacted PRWORA.

B. Revision of the Final Order

Based on her consultations with the appropriate Federal agencies and departments, the Attorney General has determined that the Final Order has created confusion about what sorts of programs are subject to PRWORA's requirements and is being applied more broadly than the statute permits. As a result, unqualified aliens have been able to receive public benefits for which they are not lawfully eligible. To correct this, the Attorney General, in the exercise of her discretion, has chosen not to except any benefits from PRWORA beyond those excepted by the statute itself.

In making this change, the Attorney General is aware that some aliens may have been able to receive certain types of in-kind public benefits that would otherwise be subject to PRWORA's requirements because of the exceptions detailed in the Final Order. Such aliens will not be eligible for those benefits in the future due to this revised specification. To the extent that aliens may have relied on such benefits, the Attorney General concludes, based on her consultation with Federal agencies and departments and other considerations, that the changes described in this specification are nonetheless warranted. This is so for several reasons. First, as noted earlier, some agencies have been excepting from PRWORA certain benefits based on a misunderstanding of the Attorney General's exception authority and hence have been providing benefits to aliens who were not lawfully eligible to receive them. ''No amount of reliance could ever justify continuing a program'' that an ''agency lacked statutory authority to'' implement in the first place, *see Dep't of Homeland Sec.* v. *Regents of the Univ. of California,* 140 S. Ct. 1891, 1930 (2020) (''*Regents*'') (Thomas, J., concurring in part and dissenting in part), so bringing the Federal Government into compliance with the law is a powerful reason to withdraw the Final Order regardless of any reliance interests. Second, as also noted above, some of the benefits previously provided under the Final Order were not, in fact, necessary for life or safety. The lack of any connection to aliens' immediate welfare necessarily reduces the extent of any reliance interests in these benefits. Third, even as to benefits that the Attorney General has the legal authority (but not the duty) to except from PRWORA, any reliance interests are significantly outweighed by the need to reduce the incentive for aliens to illegally migrate to the United States. *See* 8 U.S.C. 1601(2) (''It continues to be the immigration policy of the United States that . . . the availability of public benefits not constitute an incentive for immigration to the United States.''). Finally, Congress has delegated to the Attorney General the authority to determine the appropriate scope of this specification in her ''sole and unreviewable discretion.'' *E.g.,* 8 U.S.C. 1611(b)(1)(D). This delegation indicates Congress's intent that the scope of this specification not be subject to the sort of arbitrary-and-capricious review that would typically require consideration of

reliance interests. *See Regents,* 140 S. Ct. at 1907, 1913 (assessing an agency's consideration of reliance interests only after concluding that the agency's action was subject to judicial review).

Although the Attorney General has the authority to except certain benefits from PRWORA, the decision to do so is expressly committed to her sole and unreviewable discretion. *See, e.g.,* 8 U.S.C. 1611(b)(1)(D). The Attorney General has concluded, in the exercise of that discretion, that the benefits of creating additional exceptions to PRWORA, beyond those set forth in the statute itself, are outweighed by the risks of creating incentives for unlawful migration by allowing access to such programs to individuals who are not ''qualified aliens'' as defined by PRWORA.

This Order does not purport to define what benefit programs are, and are not, ''public benefits'' subject to PRWORA. This Order also has no effect on other statutory eligibility requirements, including those found in PRWORA itself. *See, e.g.,* 8 U.S.C. 1611(b), 1615, 1621(b)(4). The Attorney General has the right, in her sole and unreviewable discretion, to revisit and amend the specification in the future.

Order Specifying Community Programs Necessary for the Protection of Life or Safety Under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996

By virtue of the authority vested in me as Attorney General by law, including Title IV of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (the ''Act''), I hereby specify that:

1. Effective August 15, 2025, the Final Order of the Attorney General dated January 16, 2001, and published at 66 FR 6313, is withdrawn and no longer in force.

2. After undertaking the necessary consultations with appropriate Federal agencies and departments, the Attorney General has concluded, in her sole and unreviewable discretion, not to except any benefits from PRWORA pursuant to her authority to make such exceptions under section 401 and section 411 of PRWORA.

3. I do not construe the Act to preclude aliens from receiving police, fire, ambulance, transportation (including paratransit), sanitation, and other similar services. *See* 8 U.S.C. 1611(c), 1621(c). As a result, I need not specify and am not specifying any such services as being excepted from the Act.

4. It is not the purpose of this Order to define more specifically the scope of the public benefits that Congress intended to include within the scope of the Act, and nothing herein should be construed to do so.

Date: July 11, 2025.

Pamela Bondi,

Attorney General.

[FR Doc. 2025–13318 Filed 7–15–25; 8:45 am]

BILLING CODE 4410–BB–P

DEPARTMENT OF LABOR

Employment and Training Administration

Native American Employment and Training Council

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice of Renewal of the Native American Employment and Training Council charter.

SUMMARY: The Secretary of Labor (Department) announces the renewal of the Native American Employment and Training Council (NAETC) charter.

SUPPLEMENTARY INFORMATION:

I. Background and Authority

Section 166(i)(4) of the Workforce Innovation and Opportunity Act (WIOA), 29 U.S.C. 3221(i)(4) requires the Secretary of Labor (Secretary) to establish and maintain the NAETC. The statute, as amended, requires the Secretary, to formally consult at least twice annually with the NAETC on the operation and administration of the WIOA Section 166 Indian and Native American Employment and Training programs. In addition, the NAETC advises the Secretary on matters that promote the employment and training needs of Indians and Native Americans, as well as to enhance the quality of life in accordance with the Indian Self-Determination and Education Assistance Act. The NAETC also provides guidance to the Secretary on how to make Department of Labor discretionary funding and other special initiatives more accessible to federally recognized tribes, Alaska Native entities, and Native Hawaiian organizations.

II. Structure

The Council will be composed of no less than 15 members, but no more than 20, appointed by the Secretary, who are representatives of Indian tribes, tribal organizations, Alaska Native entities, Indian-controlled organizations serving Indians, or Native Hawaiian organizations pursuant to WIOA Section 166(i)(4)(B). The membership of the Council will, to the extent practicable, represent all geographic areas of the United States with a substantial Indian, Alaska Native, or Native Hawaiian population, and will include representatives of tribal governments and of non-reservation Native American organizations that have expertise in the areas of workforce development, secondary and post-secondary education, health care, business and economic development, and other sectors with job growth.

Each NAETC member will be appointed for a two-year term. A vacancy occurring in the Council membership will be filled in the same manner as the original appointment. A member appointed to a vacancy on the Council will serve for the remainder of the term for which the predecessor of that member was appointed. Members of NAETC will serve on a voluntary and generally uncompensated basis, but will be reimbursed for travel expenses to attend NAETC meetings, including per diem in lieu of subsistence, as authorized by the Federal travel regulations. All NAETC members will serve at the pleasure of the Secretary. Members may be appointed, reappointed, or replaced, and their terms may be extended, changed, or terminated at the Secretary's discretion.

FOR FURTHER INFORMATION CONTACT: Kimberly Vitelli, Office of Workforce Investment; (202) 693–3980; *vitelli.kimberly@dol.gov*.

Authority: Pursuant to the Workforce Innovation and Opportunity Act, 29 U.S.C. 3221(i)(4); Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Susan Frazier,

Acting Assistant Secretary for Employment and Training Administration.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Unemployment Compensation for Ex-Servicemembers Handbook

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employment and Training Administration (ETA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995

(PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before August 15, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The UCX law (5 U.S.C. 8521–8523) requires state workforce agencies (SWAs) to administer the UCX program in accordance with the same terms and conditions of the paying state's unemployment insurance law, which apply to unemployed claimants who worked in the private sector. Each state agency needs to obtain certain military service information on claimants filing for UCX benefits to enable them to determine his/her eligibility for benefits. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on March 11, 202 (90 FR 11750).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–ETA.

Title of Collection: Unemployment Compensation for Ex-Servicemembers Handbook.

OMB Control Number: 1205–0176.

Affected Public: State, Local and Tribal Government.

Total Estimated Number of Respondents: 53.

Total Estimated Number of Responses: 1,060.

Total Estimated Annual Time Burden: 88 hours.

Total Estimated Annual Other Costs Burden: $0.

(Authority: 44 U.S.C. 3507(a)(1)(D))

Michael Howell,

Senior Paperwork Reduction Act Analyst.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Annual Report for Multiple Employer Welfare Arrangements

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before August 15, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Health Insurance Portability and Accountability Act of 1996 (HIPAA), codified as part 7 of title I of the Employee Retirement Security Act of 1974 (ERISA), was enacted to improve the portability and continuity of health care coverage for participants and beneficiaries of group health plans. HIPAA also added section 101(g) to ERISA, providing the Secretary of Labor (Secretary) with authority to require, by regulation, multiple employer welfare arrangements (MEWAs) as defined in section 3(40) of ERISA, that offer or provide coverage for medical benefits but which are not group health plans (non-plan MEWAs), to report annually for the purpose of determining compliance with part 7 requirements. While the statutory authority was directed at non-plan MEWAs, based on the authority in ERISA sections 101(g), 505, and 734, the Department of Labor (Department) in 2003 promulgated a regulation at 29 CFR 2520.101–2 that required the administrators of both plan MEWAs and non-plan MEWAs that offer or provide coverage for medical benefits, as well certain entities that claim not to be a MEWA solely due to the exception in section 3(40)(A)(i) of ERISA (referred to as ''Entities Claiming Exception'' or ''ECEs''), to file the Form M–1 on an annual basis (Form M–1 annual report).

The Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010 (these are collectively known as the ''Affordable Care Act'' or ''ACA'') amended section 101(g) of ERISA to require non-plan MEWAs that provide benefits consisting of medical care to register with the Secretary before operating in a State. In 2011, the Department amended the Form M–1 reporting regulations to enact the ACA required provisions by requiring all MEWAs (plan and non-plan MEWAs) that offer or provide coverage for medical benefits and ECEs to register with the Secretary upon occurrence of certain registration events, such as prior to operating in a State, in addition to continued reporting on an annual basis regarding compliance with part 7 of ERISA. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on January 6, 2025 (90 FR 671).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will

have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–EBSA.

Title of Collection: Annual Report for Multiple Employer Welfare Arrangements.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Employee Retirement Income Security Act of 1974 Investment Manager Electronic Registration

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before August 15, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Section 203A(a) of the Investment Advisers Act of 1940 (and the implementing SEC regulations) provides thresholds for when investment advisers must register with the SEC or with one or more states to qualify as investment manager under ERISA, investment advisers that register with a state, rather than with the SEC, must satisfy ERISA's section 3(38) requirement to file a copy of the State registration with the Department by electronically registering through the Investment Adviser Registration Depository (IARD). This is a centralized electronic filing system operated by the SEC in conjunction with State securities regulation authorities. Because the IARD was established by the SEC and the states, and made mandatory for advisers required to file with SEC, and because all States permit filing through IARD even for advisers who do not file with SEC, the Department determined that use of the IARD would eliminate the duplication of filing paper copies of State registration forms with the Department and facilitate creation of a uniform and efficient ''one-stop'' filing system for state-registered filings by advisers who wished to meet the ''investment manager'' definition of ERISA section 3(38). For additional substantive information about this ICR, see the related notice published in the **Federal Register** on January 6, 2025 (90 FR 671).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Prohibited Transaction Class Exemption 1988–59, Residential Mortgage Financing Arrangements Involving Employee Benefit Plans

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Employee Benefits Security Administration (EBSA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before August 15, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202–693–6782, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Prohibited Transaction Class Exemption (PTE) 88–59, which amended and replaced PTE 82–87, allows employee benefit plans to participate in several different types of residential mortgage financing transactions, provided certain conditions are met. The five categories of transactions permitted under the exemption are: (1) issuance of commitments for the provision of mortgage financing to purchasers of residential dwelling units; (2) receipt by a plan of a fee for the issuance of the commitments; (3) the actual making or purchase of a mortgage loan or participation interest therein pursuant to the commitment; (4) the direct making or purchase of an mortgage loan or participation interest therein without the precondition of a commitment; and (5) the sale, exchange or transfer of a mortgage loan or participation interest therein prior to the maturity date of the instrument, provided that the ownership interest sold, exchanged, or transferred represents the plan's entire interest in such investment.

Among other conditions, the exemption requires a plan to maintain for the duration of any loan made pursuant to this exemption all records necessary to determine whether conditions of the exemption have been met and to make such records available for examination on request by any trustee, investment manager, participant or beneficiary of the plan, or agents of the Department or the IRS. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on January 6, 2025 (90 FR 671).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Bureau of Labor Statistics

Information Collection Activities; Comment Request

AGENCY: Bureau of Labor Statistics, Department of Labor.

ACTION: Notice of information collection; request for comment.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The Bureau of Labor Statistics (BLS) is soliciting comments concerning the proposed revision of the ''National Compensation Survey.'' A copy of the proposed information collection request can be obtained by contacting the individual listed below in the Addresses section of this notice.

DATES: Written comments must be submitted to the office listed in the Addresses section of this notice on or before September 15, 2025.

ADDRESSES: Send comments to Nora Kincaid, BLS Clearance Officer, Division of Management Systems, Bureau of Labor Statistics, by email to *BLS_PRA_Public@bls.gov.*

FOR FURTHER INFORMATION CONTACT: Nora Kincaid, BLS Clearance Officer, at 202–691–7628 (this is not a toll free number.) (See **ADDRESSES** section.)

SUPPLEMENTARY INFORMATION:

I. Background

The National Compensation Survey (NCS) is a nation-wide survey of private industry establishments and state and local governments that provides comprehensive measures of (1) employer costs for employee

compensation, including wages and salaries, and benefits, (2) compensation trends, and (3) the incidence of employer-sponsored benefits among workers. The NCS also collects data and produces estimates on the provisions of selected employer-sponsored benefit plans. The NCS produces:

- Indexes measuring change over time in labor costs through the Employment Cost Index (ECI), a Principal Federal Economic Indicator (PFEI).
- The level of average costs per hour worked through the Employer Costs for Employee Compensation (ECEC).
- Estimates on the incidence of benefits by the percentage of workers with access to and participating in employer-sponsored benefit plans, as well as details of what those plans provide, in the publication of the Employee Benefits in the United States.
- Details of employer-provided health and retirement plan provisions in the Health and Retirement Plan Provision publications.
- Occupational wage data by work level for use by the President's Pay Agent, meeting the requirements of the Federal Employees Pay Comparability Act of 1990 (FEPCA). This data is produced in collaboration with the BLS' Occupational Employment and Wage Statistics (OEWS) program.

II. Current Action

Office of Management and Budget clearance is being sought for a revision of the NCS.

The NCS is designed to be a national representative survey of private industry and state and local government establishments from all 50 states and the District of Columbia. The NCS private industry sample is on a three-year rotational cycle, with one frozen sample year approximately every ten years for the NCS private industry sample when a new NCS State and local government sample is under collection.

The NCS collects occupational information and wage and benefit data from a sample of employers. Using probability sampling, the NCS selects up to eight jobs at an establishment and collects job information, including job duties and work level characteristics, and wages and benefit information. Benefit information includes the incidence, costs, and provisions of the employer-provided benefits. The BLS updates the wage and benefit cost data quarterly. Updating this information allows for the publication of change in the cost of wages, benefits, and total compensation on a quarterly basis as a measure of labor market inflation.

The NCS employs various methods to collect data from establishments. NCS policy is to collect the data in whichever form is easiest for the respondents to provide. Respondents may choose to send the data on forms that the BLS provides. The respondents may respond through email, fax, mail, telephone, or a secure BLS website.

The BLS is planning to eliminate several NCS data elements to reduce the annual costs and burden of the survey. The data elements are not considered to be heavily used or in public demand based on metrics from public database hits and customer service inquiries. The collection and review of these elements are resource intensive. The elements planned for removal capture:

- The presence of and plan details for sick leave carry over.
- The presence of retiree life.
- The presence of third-party plan administration and stop loss protection for health insurance.
- Employee non-medical premiums.
- Employer non-medical premiums when expenditures are collected or costs are unknown.
- Plan details for Defined Benefit Frozen Plans.
- The presence of Other Benefits plans or provisions of plans.

The BLS is planning to discontinue the collection of Worker's Compensation Insurance due to the BLS's inability to improve the currently low response rate for this benefit. Further response efforts could potentially lead to lower response rates for other benefits, which make up a larger proportion of total compensation.

The BLS is also planning a re-weight of the ECI to update employment counts as was done multiple times in the past.

III. Desired Focus of Comments

The Bureau of Labor Statistics is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

Title of Collection: National Compensation Survey.

OMB Number: 1220–0164.

Type of Review: Revision of a currently approved collection.

Affected Public: Businesses or other for-profit; not-for-profit institutions; and State, local, and tribal governments.

Annual Number of Respondents: 17,194

All figures are based on a three-year average.

	Annual number of respondents	Average number of responses per year	Total annual responses	Average annual burden (minutes)	Estimated total burden (hours)
Totals	17,194	3.1603	54,339	42.3917	38,392

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they also will become a matter of public record.

Signed on July 11, 2025.

Eric Molina,

Chief, Division of Management Systems, Branch of Policy Analysis.

POSTAL REGULATORY COMMISSION

[Docket Nos. CP2024–406; MC2025–1570 and K2025–1563; MC2025–1572 and K2025–1565; MC2025–1573 and K2025–1566]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* July 21, 2025.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *https://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Public Proceeding(s)
III. Summary Proceeding(s)

I. Introduction

Pursuant to 39 CFR 3041.405, the Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to Competitive negotiated service agreement(s). The request(s) may propose the addition of a negotiated service agreement from the Competitive product list or the modification of an existing product currently appearing on the Competitive product list.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

Section II identifies the docket number(s) associated with each Postal Service request, if any, that will be reviewed in a public proceeding as defined by 39 CFR 3010.101(p), the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each such request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 and 39 CFR 3000.114 (Public Representative). The Public Representative does not represent any individual person, entity or particular point of view, and, when Commission attorneys are appointed, no attorney-client relationship is established. Section II also establishes comment deadline(s) pertaining to each such request.

The Commission invites comments on whether the Postal Service's request(s) identified in Section II, if any, are consistent with the policies of title 39. Applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3041. Comment deadline(s) for each such request, if any, appear in Section II.

Section III identifies the docket number(s) associated with each Postal Service request, if any, to add a standardized distinct product to the Competitive product list or to amend a standardized distinct product, the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. Standardized distinct products are negotiated service agreements that are variations of one or more Competitive products, and for which financial models, minimum rates, and classification criteria have undergone advance Commission review. *See* 39 CFR 3041.110(n); 39 CFR 3041.205(a). Such requests are reviewed in summary proceedings pursuant to 39 CFR 3041.325(c)(2) and 39 CFR 3041.505(f)(1). Pursuant to 39 CFR 3041.405(c)-(d), the Commission does not appoint a Public Representative or request public comment in proceedings to review such requests.

II. Public Proceeding(s)

1. *Docket No(s).:* CP2025–406; *Filing Title:* USPS Request Concerning Amendment One to Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 137, with Materials Filed Under Seal; *Filing Acceptance Date:* July 11, 2025; *Filing Authority:* 39 CFR 3035.105 and 39 CFR 3041.505; *Public Representative:* Arif Hafiz; *Comments Due:* July 21, 2025.

2. *Docket No(s).:* MC2025–1570 and K2025–1563; *Filing Title:* USPS Request to Add Priority Mail Express International, Priority Mail International & First-Class Package Service Contract 76 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* July 11, 2025; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Maxine Bradley; *Comments Due:* July 21, 2025.

3. *Docket No(s).:* MC2025–1572 and K2025–1565; *Filing Title:* USPS Request to Add Priority Mail Contract 907 to the Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* July 11, 2025; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3035.105, and 39 CFR 3041.310; *Public Representative:* Arif Hafiz; *Comments Due:* July 21, 2025.

POSTAL SERVICE

Product Change—Priority Mail Express, Priority Mail, and USPS Ground Advantage Negotiated Service Agreements; Priority Mail, and USPS Ground Advantage Negotiated Service Agreements; Priority Mail Negotiated Service Agreements

AGENCY: Postal Service.

ACTION: Notice.

SUMMARY: The Postal Service gives notice of filing a request with the Postal Regulatory Commission to add a domestic shipping services contract to the list of Negotiated Service Agreements in the Mail Classification Schedule's Competitive Products List.

DATES: Date of required notice: July 16, 2025.

FOR FURTHER INFORMATION CONTACT: Sean C. Robinson, 202–268–8405.

SUPPLEMENTARY INFORMATION: The United States Postal Service hereby gives notice that, pursuant to 39 U.S.C. 3642 and 3632(b)(3), it filed with the Postal Regulatory Commission the following requests:

BILLING CODE 7710–12–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103435; File No. SR–FINRA–2025–011]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend FINRA Rules 6380A and 6380B (Transaction Reporting) To Extend the Trade Reporting Facilities Operating Hours

July 11, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 8, 2025, the Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as constituting a ''non-controversial'' rule change under paragraph (f)(6) of Rule 19b–4 under the Act,[3] which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

FINRA is proposing to amend FINRA Rules 6380A and 6380B regarding the operation of the FINRA/NYSE Trade Reporting Facility, the FINRA/Nasdaq Trade Reporting Facility Carteret, and the FINRA/Nasdaq Trade Reporting Facility Chicago (the ''Trade Reporting Facilities'' or ''TRFs'') to extend TRF operating hours from opening at 8 a.m. Eastern Time (''E.T.'') to opening at 4 a.m. E.T.[4]

The text of the proposed rule change is available on FINRA's website at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Background

The TRFs are facilities of FINRA that are operated by NYSE Market (DE), Inc. (in the case of the FINRA/NYSE TRF) and Nasdaq, Inc. (in the case of the FINRA/Nasdaq TRF Carteret and the FINRA/Nasdaq TRF Chicago). Along with the Alternative Display Facility (''ADF''),[5] the TRFs provide FINRA members with a mechanism for the reporting of over-the-counter (''OTC'') trades in NMS stocks. While members are required to report all OTC trades in NMS stocks to FINRA, they may choose which FINRA facility (or facilities) to use to satisfy their trade reporting obligations.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 17 CFR 240.19b–4(f)(6).

[4] Unless otherwise specified, all times referred to in the proposed rule change are E.T.

[5] Collectively, the TRFs and the ADF are referred to as the ''FINRA facilities.'' The ADF is a display-only facility operated by FINRA that provides members with a facility for the display of quotations, the reporting of trades, and the comparison of trades in NMS stocks. Currently, there are no active quoting ADF participants, and only one Trade Reporting Only participant utilizing the ADF as a back-up trade reporting facility. The ADF operating hours are 8 a.m. to 6:30 p.m. for both quotation display and trade reporting. Separately, FINRA operates the OTC Reporting Facility (''ORF''), a facility for the reporting of trades in OTC Equity Securities. The ORF operating hours are 8 a.m. to 8 p.m. The instant proposed rule change is limited to the TRFs and FINRA is not at this time proposing any changes to the operational hours of either the ADF or the ORF.

Currently, the operating hours of the TRFs are 8 a.m. to 8 p.m. each business day. These operating hours are reflected in the transaction reporting rules for the FINRA/Nasdaq TRFs (FINRA Rule 6380A (Transaction Reporting)) and the FINRA/NYSE TRF (FINRA Rule 6380B (Transaction Reporting)). Under these reporting rules, transactions executed during normal market hours, *i.e.,* 9:30 a.m. to 4 p.m.,[6] must be reported as soon as practicable but no later than 10 seconds after execution. Transactions executed outside normal market hours must be reported as follows:

- For transactions executed between 8 a.m. and 9:30 a.m., as soon as practicable but no later than 10 seconds after execution, with a unique trade report modifier to denote execution outside normal market hours;
- For transactions executed between 4 p.m. and 8 p.m., as soon as practicable but no later than 10 seconds after execution, with a unique trade report modifier to denote execution outside normal market hours;
- For transactions executed between midnight and 8 a.m., by 8:15 a.m., with a unique trade report modifier to denote execution outside normal market hours; and
- For transactions executed between 8 p.m. and midnight, or on any non-business day,[7] by 8:15 a.m. on the following business day, designated ''as/of'' and with a unique trade report modifier to denote execution outside normal market hours.

All trade reports submitted to the TRFs, other than non-tape reports,[8] are reported to and publicly disseminated by the appropriate Securities Information Processor (''SIP'').[9] Currently, the operating hours of the SIPs are 4 a.m. until 8 p.m. on business days.[10] Transactions executed during current TRF operating hours—*i.e.,* between 8 a.m. and 8 p.m. on business days—are reported to the TRFs and publicly disseminated through the SIPs in real time, since both the TRFs and SIPs are operating during those hours. However, because TRF operating hours do not begin until 8 a.m. each business day, OTC transactions in NMS stocks executed when the SIPs are open but the TRFs are still closed (*i.e.,* between 4 a.m. and 8 a.m. on a business day) cannot be reported to a TRF until 8 a.m., and therefore are not publicly disseminated by the SIPs until after 8 a.m. once they are reported to a TRF.

At this time, FINRA is proposing to extend the opening time of the TRFs from 8 a.m. to 4 a.m. each business day, thereby enabling real-time public dissemination of trade reports for OTC transactions in NMS stocks executed between 4 a.m. and 8 a.m.[11] To implement this proposed enhancement to TRF operating hours, the proposed rule change would amend the FINRA TRF reporting rules to reflect the new 4 a.m. opening time, as described in detail below.

Proposed Amendments to TRF Reporting Rules

At this time, FINRA is proposing to amend its TRF reporting rules to provide that the TRF operating hours will now begin at 4 a.m. each business day, rather than the current 8 a.m. opening time. Specifically, the proposed rule change would make amendments to FINRA Rules 6380A (for the FINRA/Nasdaq TRFs) and 6380B (for the FINRA/NYSE TRF) to change the opening time from 8 a.m. to 4 a.m. FINRA also is proposing conforming changes to paragraphs (a)(2)(A), (C), and (D) and (a)(5)(H) of FINRA Rules 6380A and 6380B, which address reporting of transactions executed outside normal hours and the requirement that firms must append a modifier to identify pre-opening and after-hours trades reported more than 10 seconds after execution. Together, the proposed amendments would extend the general requirement to report transactions to the TRFs as soon as practicable but no later than 10 seconds after execution to cover the new four-hour period from 4 a.m. and 8 a.m., and require transactions executed when the TRFs are closed to be reported within 15 minutes after the new opening time of 4 a.m.[12]

Specifically, paragraph (a)(2)(A) of FINRA Rules 6380A and 6380B currently requires members to report transactions executed between 8 a.m. and 9:30 a.m. as soon as practicable but no later than 10 seconds after execution, and that the trade be designated with the unique trader report modifier to denote execution outside normal market hours. FINRA is proposing to amend this paragraph to cover transactions executed between 4 a.m. and 9:30 a.m. Paragraph (a)(2)(C) of FINRA Rules 6380A and 6380B requires members to report transactions executed between midnight and 8 a.m. by 8:15 a.m. on the trade date, and that the trade be designated with the unique trade report modifier to denote execution outside normal market hours. FINRA is amending this paragraph to only cover transactions executed between midnight and 4 a.m. Finally, paragraph (a)(2)(D) of FINRA Rules 6380A and 6380B currently requires members to report transactions executed between 8 p.m. and midnight, or on any non-business day, on the following business day by 8:15 a.m., and further requires that such trades be designated ''as/of'' and carry the unique trade report identifier to denote execution outside normal market hours. FINRA is amending this paragraph to require such transactions to be reported within 15 minutes after the new TRF opening time, *i.e.,* by 4:15

[6] ''Normal market hours'' are defined as 9:30 a.m. to 4 p.m. for purposes of the FINRA TRF rules. *See* [FINRA] Rules 6320A(a)(6) and 6320B(a)(6).

[7] A non-business day means a weekend or holiday. *See* [FINRA] Rules 6380A(a)(2)(D) and 6380B(a)(2)(D).

[8] ''Tape'' or ''media'' reports are those that are submitted to a TRF for public dissemination by the Securities Information Processors. By contrast, ''non-tape'' or ''non-media'' reports are not submitted to a TRF for public dissemination but are submitted for regulatory and/or clearance and settlement purposes. Another term that is often used with respect to ''tape'' or ''media'' reports is ''for publication.'' In certain limited circumstances, trade reports submitted for publication may be suppressed from public dissemination (*e.g.,* transactions in Restricted Equity Securities effected pursuant to Securities Act Rule 144A, as well as T+365 trades and trades executed on a non-business day).

[9] Market data is transmitted to three tapes based on the listing venue of the security: securities listed on New York Stock Exchange are disseminated through Tape A; securities listed on BYX, BZX, EDGA, EDGX, IEX, LTSE, MEMX, MIAX, Nasdaq BX, Nasdaq PSX, NYSE American, NYSE Texas, NYSE National, or NYSE Arca are disseminated through Tape B; and securities listed on Nasdaq are disseminated through Tape C. Tape A and Tape B market data is disseminated pursuant to the Consolidated Tape Association Plan (''CTA Plan'') and the Consolidated Quotation Plan (''CQ Plan''), while Tape C market data is disseminated pursuant to the Joint Self-Regulatory Organization Plan Governing the Collection, Consolidation and Dissemination of Quotation and Transaction Information for Nasdaq-Listed Securities Traded on Exchanges on an Unlisted Trading Privileges Basis (''UTP Plan'').

[10] *See, e.g.,* UTP Plan, Section XI.

[11] As recently announced by the Operating Committees of the CTA Plan, the CQ Plan, and the UTP Plan (the ''SIP Plans''), the SIP Plans' Operating Committees plan to submit proposed amendments to the SIP Plans that would extend the SIP operating hours to run from 8 p.m. Sundays to 8 p.m. Fridays, excluding holidays, with a technical pause beginning at 8 p.m. Monday through Thursday that would be as brief as technically feasible, but not greater than one hour. *See* SIP Plan Operating Committee Press Release, SIPs to Proposed Extended Operating Hours, available at *https://www.prnewswire.com/news-releases/sips-to-propose-extended-operating-hours-302447700.html.* As an initial, incremental step, FINRA is proposing in the instant filing to align the TRF operating hours with the current SIP operating hours. FINRA intends to separately seek to propose additional rule changes as appropriate to further expand TRF operating hours with the goal of ultimately aligning TRF operating hours with any extension of the SIP operating hours, if approved by the SEC.

[12] FINRA has also published guidance and technical documentation relating to TRF reporting, available at *https://www.finra.org/filing-reporting/trade-reporting-facility-trf.* FINRA would make appropriate conforming change to such guidance and technical documentation in connection with implementation of the proposed rule change.

a.m., designated ''as/of'' and carry the unique trade report modifier.

In addition, the proposed rule change would make a conforming change to paragraph (a)(5)(H) of FINRA Rules 6380A and 6380B, which requires members to append the applicable trade report modifier to identify pre-opening trades (currently, trades executed between 8 a.m. and 9:30 a.m.) and after-hours trades (*i.e.,* trades executed between 4 p.m. and 8 p.m.) that are reported more than 10 seconds after execution. FINRA is amending paragraph (a)(5)(H) of FINRA Rules 6380A and 6380B to cover pre-opening trades starting from 4 a.m. instead of 8 a.m. FINRA is not proposing any changes to the definition of ''normal market hours,'' which would remain 9:30 a.m. to 4 p.m., or to the closing time of the TRFs, which would remain 8 p.m.

FINRA believes the proposed rule change would enhance market transparency by facilitating the real-time reporting and public dissemination of information on OTC trades in NMS stocks for additional hours when the SIPs are open and otherwise disseminating real-time market data. In addition, extending the TRF hours would allow firms to report in real time for an additional period of time, which FINRA understands is operationally preferable to queuing trades for bulk reporting during the 15-minute period after the TRFs open.

FINRA has filed the proposed rule change for immediate effectiveness. The implementation date of the proposed rule change will be during the first quarter of 2026. FINRA will announce the specific implementation date of the proposed rule change in a *Regulatory Notice,* which will be published at least 60 days prior to the implementation date.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,[13] which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.

FINRA believes that the proposed rule change is consistent with the Act because it would enhance market transparency by enabling the reporting and real-time public dissemination of OTC transactions in NMS stocks for an additional four-hour period of each business day. As described above, the TRFs currently only accept transaction reports beginning at 8 a.m. each business day, whereas the SIPs are currently operational and able to disseminate real-time market data beginning at 4 a.m. each business day. FINRA believes that extending the TRF hours would improve the timeliness of trade information available to the public with respect to trades executed during the 4 a.m. to 8 a.m. early morning period. Further, FINRA members may also benefit from operational efficiencies and reduced technological burdens by reporting OTC trades in NMS stocks in real time during the early morning period, as they do for the regular trading day, rather than queuing such trade reports for bulk reporting after 8 a.m.

B. Self-Regulatory Organization's Statement on Burden on Competition

Section 15A(b)(9) of the Act [14] requires that FINRA's rules not impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Economic Impact Assessment

FINRA has undertaken an economic impact assessment, as set forth below, to analyze the potential economic impacts of the proposal, including potential costs, benefits, and distributional and competitive effects, relative to the current baseline.

Regulatory Need

As discussed above, FINRA is proposing to extend the opening time of the TRFs from 8 a.m. to 4 a.m. each business day, thereby enabling real-time reporting and public dissemination of OTC transactions in NMS stocks executed between 4 a.m. and 8 a.m. and improving the timeliness of transparency for these transactions.

Economic Baseline

FINRA estimates that, from January 2024 to February 2025, approximately 2.5 percent of OTC trades in NMS stocks were executed outside of TRF operating hours.[15] Table 1 shows the breakdown of the OTC trades in NMS stocks occurring outside of and during TRF operating hours categorized by media and non-media trades, including the breakdown during different periods outside of TRF operating hours.

TABLE 1—NUMBER OF OTC TRADES IN NMS STOCKS REPORTED TO THE TRFS FROM JANUARY 2024 TO FEBRUARY 2025

[By media and non-media trades]

Execution time	Media trades		Non-media trades	
	Number of trade reports	Percentage of all trade reports	Number of trade reports	Percentage of all trade reports
Between midnight and 4 a.m. on business days (excluding 4 a.m.)	20,869,793	0.12	64,826,157	0.38
Between 4 a.m. and 8 a.m. on business days (excluding 8 a.m.)	48,747,658	0.28	194,064,567	1.13
Between 8 p.m. and midnight on business days (excluding 8 p.m. and midnight) or any time on non-business days	30,258,225	0.18	68,706,127	0.40
Total outside of TRF operating hours	99,875,676	0.58	327,596,851	1.91

[13] 15 U.S.C. 78*o*–3(b)(6).

[14] 15 U.S.C. 78*o*–3(b)(9).

[15] The analysis uses FINRA TRF transaction data as of April 16, 2025. The analysis excludes trades that are canceled, declined, rejected, reversed, or with special trade conditions, which account for approximately 0.03% of OTC trade reports in NMS stocks. The analysis includes both media and non-media trades reported to the TRFs. *See supra* note 8.

Media and non-media trades executed outside of TRF operating hours account for approximately 0.6% and 1.9%, respectively, of all OTC trades in NMS stocks reported to the TRFs. Because some trades are reported with a delay, the analysis used all trades reported within ten days after execution. As discussed below, the majority of trades are reported within the timeframe specified under the current reporting requirements.

TABLE 1—NUMBER OF OTC TRADES IN NMS STOCKS REPORTED TO THE TRFS FROM JANUARY 2024 TO FEBRUARY 2025—Continued

[By media and non-media trades]

Execution time	Media trades		Non-media trades	
	Number of trade reports	Percentage of all trade reports	Number of trade reports	Percentage of all trade reports
Total within TRF operating hours	9,031,882,703	52.73	7,669,681,211	44.78
Total outside of and within TRF operating hours	9,131,758,379	53.31	7,997,278,062	46.69
Total number of trade reports	17,129,036,441			

Among the total OTC trades in NMS stocks executed outside of TRF operating hours, approximately 98 percent of trades were reported by 8:15 a.m. on business days,[16] suggesting that the vast majority of trades executed outside of TRF operating hours were ready to be reported to the TRFs when the facilities resumed operations at 8 a.m. on business days.

FINRA estimates that, from January 2024 to February 2025, OTC trades in NMS stocks reported to the TRFs were executed by 375 firms.[17] Of the 375 firms, 217 firms executed OTC trades in NMS stocks exclusively during the TRF operating hours of 8 a.m. to 8 p.m. on business days and did not execute any OTC trades in NMS stocks outside of TRF operating hours. These firms would not be affected by the proposed rule change.

The remaining 158 firms executed at least one OTC trade in NMS stocks between 8 p.m. and 8 a.m. on business days or on non-business days from January 2024 to February 2025. Of the 158 firms, 135 firms executed at least one OTC trade in NMS stocks between 4 a.m. and 8 a.m. on business days from January 2024 to February 2025 and therefore under the proposed rule change would be required to report these trades as soon as practicable but no later than 10 seconds after execution, rather than the current requirement to report by 8:15 a.m. Additionally, from January 2024 to February 2025, almost all of the 158 firms that executed at least one OTC trade in NMS stocks outside of current TRF operating hours also executed at least one OTC trade in NMS stocks during TRF operating hours, which must be reported as soon as practicable but no later than 10 seconds after execution.

Economic Impacts

Anticipated Benefits

FINRA believes that the proposed changes would provide more timely pricing and other transaction information to the market for OTC trades in NMS stocks executed between 4 a.m. and 8 a.m. on business days, which would support more efficient price formation. Specifically, the proposed rule change would require trades executed between 8 p.m. and 4 a.m. to be reported by 4:15 a.m. instead of 8:15 a.m. Thus, information about these trades would become available four hours earlier than under the current rules, thereby providing market participants real-time access to pricing and other information between 4 a.m. to 8 a.m. These proposed changes would serve to reduce information asymmetry and improve price discovery for trades executed during those hours.

Anticipated Costs

Members may incur initial and ongoing costs, such as programming, maintenance, and compliance costs, to implement and maintain a system to report OTC trades in NMS stocks pursuant to the proposed rule change. Furthermore, members that use third-party vendors to report OTC trades in NMS stocks to the TRFs may need to adjust their business relationships to align with the proposed rule change.

The extent of these costs for each member will depend in part on the current activities and reporting systems of each member with respect to OTC trading in NMS stocks. As discussed above, FINRA estimates 158 firms executed at least one OTC trade in NMS stocks between 8 p.m. and 8 a.m. on business days or at any time on non-business days between January 2024 to February 2025. Almost all of the 158 firms also executed at least one OTC trade in NMS stocks between 8 a.m. and 8 p.m. on business days, and therefore these firms would already have systems in place to report trades as soon as practicable but no later than 10 seconds after execution, indicating that the initial fixed costs and variable costs may be relatively or substantially lower for those members.

FINRA identified a very small number of firms executing OTC trades in NMS stocks exclusively outside of current TRF operating hours. To the extent the current trade reporting systems of these firms are not able to report trades as soon as practicable but no later than 10 seconds after execution, such firms would incur costs to upgrade systems or employ a vendor to do so, depending on the time of trade execution.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on

[16] Approximately 97% of media trades and 98% of non-media trades for OTC trades in NMS stocks executed outside of TRF operating hours were reported within the timeframe required by the rules. Specifically, for OTC trades in NMS stocks, approximately 97% of media trades executed between midnight and 4 a.m. on business days were reported between 8 a.m. and 8:15 a.m. on the same day; approximately 98% of media trades executed between 4 a.m. and 8 a.m. on business days were reported between 8 a.m. and 8:15 a.m. on the same day; and approximately 96% of media trades executed between 8 p.m. and midnight on business days or any time on non-business days were reported between 8 a.m. and 8:15 a.m. on the following business day. In addition, for OTC trades in NMS stocks, approximately 98% of non-media trades executed between midnight and 4 a.m. on business days were reported between 8 a.m. and 8:15 a.m. on the same day; approximately 99% of non-media trades executed between 4 a.m. and 8 a.m. on business days were reported between 8 a.m. and 8:15 a.m. on the same day; and approximately 97% of non-media trades executed between 8 p.m. and midnight on business days or any time on non-business days were reported between 8 a.m. and 8:15 a.m. on the following business day.

[17] The analysis used the Central Registration Depository (CRD) number to identify firms executing trades.

which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[18] and Rule 19b–4(f)(6) thereunder.[19]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–FINRA–2025–011 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2025–011. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of FINRA. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–FINRA–2025–011 and should be submitted on or before August 6, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[20]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103440; File No. SR–NASDAQ–2025–048]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Introduce a New Credit Under Equity 7, Section 118(a)

July 11, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 1, 2025, The Nasdaq Stock Market LLC (''Nasdaq'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Equity 7, Section 118(a) to introduce a new credit.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/nasdaq/rulefilings,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Exchange's schedule of credits, at Equity 7, Section 118(a). Specifically, the Exchange proposes to add a new credit of $0.0029 per share executed for stocks in all Tapes for a member that, through one or more of its Nasdaq Market Center MPIDs: (i) adds displayed liquidity in all securities to the Exchange during the month in a volume greater than 0.50% of Consolidated Volume; [3] and (ii) has a combined volume (adding and removing liquidity) of at least 2.50% of Consolidated Volume during the month. The purpose of the new credit is to incentivize activity on the Exchange and liquidity adding activity, in particular. The Exchange believes that if such incentive is effective, then any ensuing increase in liquidity to the Exchange will improve market quality, to the benefit of all participants.[4]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[5] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[6] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other

[3] Pursuant to Equity 7, Section 118, ''Consolidated Volume'' means ''the total consolidated volume reported to all consolidated transaction reporting plans by all exchanges and trade reporting facilities during a month in equity securities, excluding executed orders with a size of less than one round lot.''

[4] All references throughout this filing to certain rule sections shall pertain to Nasdaq Equity 7.

[5] 15 U.S.C. 78f(b).

[6] 15 U.S.C. 78f(b)(4) and (5).

persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Proposal Is Reasonable

The Exchange's proposed change to its schedule of credits ais reasonable in several respects. As a threshold matter, the Exchange is subject to significant competitive forces in the market for equity securities transaction services that constrain its pricing determinations in that market. The fact that this market is competitive has long been recognized by the courts. In *NetCoalition* v. *Securities and Exchange Commission,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers' . . . .'' [7]

The Commission and the courts have repeatedly expressed their preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, while adopting a series of steps to improve the current market model, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [8]

Numerous indicia demonstrate the competitive nature of this market. For example, clear substitutes to the Exchange exist in the market for equity security transaction services. The Exchange is only one of several equity venues to which market participants may direct their order flow. Competing equity exchanges offer similar tiered pricing structures to that of the Exchange, including schedules of rebates and fees that apply based upon members achieving certain volume thresholds.

Within this environment, market participants can freely and often do shift their order flow among the Exchange and competing venues in response to changes in their respective pricing schedules. As such, the proposal represents a reasonable attempt by the Exchange to increase its liquidity and market share relative to its competitors.

The Exchange believes that it is reasonable to establish a new credit of $0.0029 for shares executed at or above $1.00 for a member that (i) adds displayed liquidity in all securities to the Exchange during the month in a volume greater than 0.50% of Consolidated Volume; and (ii) has a combined volume (adding and removing liquidity) of at least 2.50% of Consolidated Volume during the month. This proposal is reasonable because it will incentivize activity on the Exchange and liquidity adding activity, in particular. The Exchange believes that if such incentive is effective, then any ensuing increase in liquidity to the Exchange will improve market quality, to the benefit of all participants.

The Proposals Are Equitable Allocations of Credits

The Exchange believes that it is equitable to establish the new credit. To the extent that the Exchange succeeds in increasing the levels of liquidity and activity on the Exchange, the Exchange will experience improvements in its market quality, which stands to benefit all market participants.

Any participant that is dissatisfied with the proposal is free to shift its order flow to competing venues that provide more generous pricing or less stringent qualifying criteria.

The Proposal Is Not Unfairly Discriminatory

The Exchange believes that its proposal is not unfairly discriminatory. As an initial matter, the Exchange believes that nothing about its volume-based tiered pricing model is inherently unfair; instead, it is a rational pricing model that is well-established and ubiquitous in today's economy among firms in various industries—from co-branded credit cards to grocery stores to cellular telephone data plans—that use it to reward the loyalty of their best customers that provide high levels of business activity and incent other customers to increase the extent of their business activity. It is also a pricing model that the Exchange and its competitors have long employed with the assent of the Commission. It is fair because it enhances price discovery and improves the overall quality of the equity markets.

The Exchange believes that its proposal to adopt the new credit is not unfairly discriminatory because the changes are not intended to advantage any particular member and will be applied uniformly to all members. Moreover, the proposal stands to improve the overall market quality of the Exchange, to the benefit of all market participants, by incentivizing members to increase the extent of their liquidity adding and overall activity on the Exchange.

Any participant that is dissatisfied with the proposal is free to shift its order flow to competing venues that provide more generous pricing or less stringent qualifying criteria.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Intramarket Competition

The Exchange does not believe that its proposal will place any category of Exchange participant at a competitive disadvantage.

As noted above, the Exchange's proposal to add a new transaction credit is intended to have market-improving effects, to the benefit of all members. Any member may elect to achieve the level of liquidity required to qualify for the new credit.

The Exchange notes that its members are free to trade on other venues to the extent they believe that the Exchange's fee schedule is not attractive. As one can observe by looking at any market share chart, price competition between exchanges is fierce, with liquidity and market share moving freely between exchanges in reaction to fee and credit changes.

Intermarket Competition

In terms of inter-market competition, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its credits and fees to remain competitive with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their credit and own fees in response, and because market

[7] *NetCoalition* v. *SEC,* 615 F.3d 525, 539 (D.C. Cir. 2010) (quoting Securities Exchange Act Release No. 59039 (December 2, 2008), 73 FR 74770, 74782–83 (December 9, 2008) (SR–NYSEArca–2006–21)).

[8] Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005) (''Regulation NMS Adopting Release'').

participants may readily adjust their order routing practices, the Exchange believes that the degree to which credit or fee changes in this market may impose any burden on competition is extremely limited.

The proposed new credit is reflective of this competition because, as a threshold issue, even as one of the largest U.S. equities exchanges by volume, the Exchange has less than 15% market share, which in most markets could hardly be categorized as having enough market power to burden competition. Moreover, price competition between exchanges is fierce, with liquidity and market share moving freely between exchanges in reaction to credit and fee changes. This is an addition to free flow of order flow to and among off-exchange venues which at times comprises more than half of industry volume.

The Exchange's proposal to add a new transaction credit is pro-competitive in that the Exchange intends for the credit to increase liquidity addition and overall activity on the Exchange, thereby rendering the Exchange more attractive and vibrant to participants.

In sum, if the change proposed herein is unattractive to market participants, it is likely that the Exchange will lose market share as a result. Accordingly, the Exchange does not believe that the proposed change will impair the ability of members or competing order execution venues to maintain their competitive standing in the financial markets.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[9]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

[9] 15 U.S.C. 78s(b)(3)(A)(ii).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NASDAQ–2025–048 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NASDAQ–2025–048. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NASDAQ–2025–048 and should be submitted on or before August 6, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[10]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103443; File No. 4–618]

Program for Allocation of Regulatory Responsibilities Pursuant to Rule 17d–2; Notice of Filing and Order Approving and Declaring Effective an Amendment to the Plan for the Allocation of Regulatory Responsibilities Between Cboe BZX Exchange, Inc., Cboe BYX Exchange, Inc., BOX Exchange LLC, Cboe Exchange, Inc., Cboe C2 Exchange, Inc., NYSE Texas, Inc., Cboe EDGA Exchange, Inc., Cboe EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., Long-Term Stock Exchange, Inc., MEMX LLC, Nasdaq ISE, LLC, Nasdaq GEMX, LLC, Nasdaq MRX, LLC, Investors Exchange LLC, Miami International Securities Exchange, LLC, MIAX PEARL, LLC, MIAX Emerald, LLC, MIAX Sapphire, LLC, The Nasdaq Stock Market LLC, Nasdaq BX, Inc., Nasdaq PHLX LLC, NYSE National, Inc., New York Stock Exchange LLC, NYSE American LLC, and NYSE Arca, Inc., Long-Term Stock Exchange, Inc., and 24X National Exchange LLC Concerning Covered Regulation NMS and Consolidated Audit Trail Rules

July 11, 2025.

Notice is hereby given that the Securities and Exchange Commission (''Commission'') has issued an Order, pursuant to Section 17(d) of the Securities Exchange Act of 1934 (''Act''),[1] approving and declaring effective an amendment to the plan for allocating regulatory responsibility (''Plan'') filed on June 25, 2025, pursuant to Rule 17d–2 of the Act,[2] by Cboe BZX Exchange, Inc. (''BZX''), Cboe BYX Exchange, Inc. (''BATS Y''), BOX Exchange LLC (''BOX''), Cboe Exchange, Inc. (''Cboe''), Cboe C2 Exchange, Inc. (''C2''), NYSE Texas, Inc. (''Texas''), Cboe EDGA Exchange, Inc. (''EDGA''), Cboe EDGX Exchange, Inc. (''EDGX''), Financial Industry Regulatory Authority, Inc. (''FINRA''), Long-Term Stock Exchange, Inc. (''LTSE''), MEMX LLC (''MEMX''), Nasdaq ISE, LLC

[2] 17 CFR 240.17d–2.

(''ISE''), Nasdaq GEMX, LLC (''GEMX''), Nasdaq MRX, LLC (''MRX''), Investors Exchange LLC (''IEX''), Miami International Securities Exchange, LLC (''MIAX''), MIAX PEARL, LLC (''MIAX PEARL''), MIAX Emerald, LLC (''MIAX Emerald''), MIAX Sapphire, LLC (''MIAX Sapphire''), The Nasdaq Stock Market LLC (''Nasdaq''), Nasdaq BX, Inc. (''BX''), Nasdaq PHLX LLC (''PHLX''), NYSE National, Inc. (''NYSE National''), New York Stock Exchange LLC (''NYSE''), NYSE American LLC (''NYSE American''), and NYSE Arca, Inc. (''NYSE Arca''), and 24X National Exchange LLC (''24X'') (each, a ''Participating Organization,'' and, together, the ''Participating Organizations'' or the ''Parties''). This Agreement amends and restates the agreement by and among the Participating Organizations approved by the Commission on August 1, 2024.[3]

I. Introduction

Section 19(g)(1) of the Act,[4] among other things, requires every self-regulatory organization (''SRO'') registered as either a national securities exchange or national securities association to examine for, and enforce compliance by, its members and persons associated with its members with the Act, the rules and regulations thereunder, and the SRO's own rules, unless the SRO is relieved of this responsibility pursuant to Section 17(d) or Section 19(g)(2) of the Act.[5] Without this relief, the statutory obligation of each individual SRO could result in a pattern of multiple examinations of broker-dealers that maintain memberships in more than one SRO (''common members''). Such regulatory duplication would add unnecessary expenses for common members and their SROs.

Section 17(d)(1) of the Act[6] was intended, in part, to eliminate unnecessary multiple examinations and regulatory duplication.[7] With respect to a common member, Section 17(d)(1) authorizes the Commission, by rule or order, to relieve an SRO of the responsibility to receive regulatory reports, to examine for and enforce compliance with applicable statutes, rules, and regulations, or to perform other specified regulatory functions.

To implement Section 17(d)(1), the Commission adopted two rules: Rule 17d–1 and Rule 17d–2 under the Act.[8] Rule 17d–1 authorizes the Commission to name a single SRO as the designated examining authority (''DEA'') to examine common members for compliance with the financial responsibility requirements imposed by the Act, or by Commission or SRO rules.[9] When an SRO has been named as a common member's DEA, all other SROs to which the common member belongs are relieved of the responsibility to examine the firm for compliance with the applicable financial responsibility rules. On its face, Rule 17d–1 deals only with an SRO's obligations to enforce member compliance with financial responsibility requirements. Rule 17d–1 does not relieve an SRO from its obligation to examine a common member for compliance with its own rules and provisions of the federal securities laws governing matters other than financial responsibility, including sales practices and trading activities and practices.

To address regulatory duplication in these and other areas, the Commission adopted Rule 17d–2 under the Act.[10] Rule 17d–2 permits SROs to propose joint plans for the allocation of regulatory responsibilities with respect to their common members. Under paragraph (c) of Rule 17d–2, the Commission may declare such a plan effective if, after providing for appropriate notice and comment, it determines that the plan is necessary or appropriate in the public interest and for the protection of investors; to foster cooperation and coordination among the SROs; to remove impediments to, and foster the development of, a national market system and a national clearance and settlement system; and is in conformity with the factors set forth in Section 17(d) of the Act. Commission approval of a plan filed pursuant to Rule 17d–2 relieves an SRO of those regulatory responsibilities allocated by the plan to another SRO.

II. The Plan

On December 3, 2010, the Commission approved the SRO participants' plan for allocating regulatory responsibilities pursuant to Rule 17d–2.[11] On October 29, 2015, the Commission approved an amended plan that added Regulation NMS Rules 606, 607, and 611(c) and (d) and added additional Participating Organizations that are options markets to the Plan.[12] On August 11, 2016, the Commission approved an amended plan that added IEX and ISE Mercury as Participating Organizations.[13] On February 2, 2017, the Commission approved an amended plan that added MIAX PEARL as a Participating Organization.[14] On February 4, 2019, the Commission approved an amended plan that added MIAX Emerald as a Participating Organization and reflected name changes of certain Participating Organizations.[15] On July 25, 2019, the Commission approved an amended plan that added LTSE as a Participating Organization and reflected name changes of certain Participating Organizations.[16] On March 12, 2020, the Commission approved an amended plan that added Rule 613 under the Act and the rules of each Participating Organization related to Rule 613 listed on Exhibit A to the Plan, and reflected the name change of Nasdaq PHLX, Inc. to Nasdaq PHLX LLC.[17] On June 10, 2020, the Commission approved a proposed amendment to the Plan to add MEMX as a Participant to the Plan.[18] On September 23, 2023, the Commission approved a proposed amendment to the Plan to add MIAX PEARL as a Participant to the Plan.[19]

The proposed 17d–2 Plan is intended to reduce regulatory duplication for firms that are members of more than one Participating Organization.[20] The Plan provides for the allocation of regulatory responsibility according to whether the covered rule pertains to NMS stocks or NMS securities. For covered rules that pertain to NMS stocks (*i.e.,* Rules 607, 611, and 612), FINRA serves as the ''Designated Regulation NMS Examining Authority'' (''DREA'') for common members that are members of FINRA

[20] The proposed 17d–2 Plan refers to these members as ''Common Members.''

and assumes certain examination and enforcement responsibilities for those members with respect to specified Regulation NMS rules. For common members that are not members of FINRA, the member's DEA serves as the DREA and ''Designated CAT Surveillance Authority (''DCSA''), provided that the DEA exchange operates a national securities exchange or facility that trades NMS stocks and the common member is a member of such exchange or facility. Section 2(c) of the Plan contains a list of principles that are applicable to the allocation of common members in cases not specifically addressed in the Plan. An exchange that does not trade NMS stocks would have no regulatory authority for covered Regulation NMS rules pertaining to NMS stocks. For covered rules that pertain to NMS securities, and thus include options (*i.e.,* Rule 606, Rule 613 and the SRO Covered CAT Rules), the Plan provides that the DREA will be the same as the DREA for the rules pertaining to NMS stocks and will serve as the DCSA. For common members that are not members of an exchange that trades NMS stocks, the common member would be allocated according to the principles set forth in Section 2(c) of the Plan.

The text of the Plan delineates the proposed regulatory responsibilities with respect to the Parties. Included in the proposed Plan is an exhibit (the ''Covered Rules'') that lists the federal securities laws, rules, and regulations, for which the applicable DREA would bear examination and enforcement responsibility, and for which the applicable DCSA would bear surveillance, investigation, and enforcement responsibility, under the Plan for common members of the Participating Organization and their associated persons.

Specifically, the applicable DREA assumes examination and enforcement responsibility, and the applicable DCSA assumes surveillance, investigation, and enforcement responsibility, relating to compliance by common members with the Covered Rules. Covered Rules do not include the application of any rule of a Participating Organization, or any rule or regulation under the Act, to the extent that it pertains to violations of insider trading activities, because such matters are covered by a separate multiparty agreement under Rule 17d–2.[21] Under the Plan, Participating Organizations retain full responsibility for surveillance and enforcement with respect to trading activities or practices involving their own marketplace.[22]

III. Proposed Amendment to the Plan

On June 25, 2025, the parties submitted a proposed amendment to the Plan. The primary purpose of the amendment is to add 24X as a Participant to the Plan and to reflect the name change of NYSE Chicago, Inc. to NYSE Texas, Inc.

The text of the proposed amended 17d–2 Plan is as follows (additions are in *italics;* deletions are in [brackets]):

Agreement for the Allocation of Regulatory Responsibility for the Covered Regulation NMS and Consolidated Audit Trail Rules Pursuant to § 17(d) of the Securities Exchange Act of 1934, 15 U.S.C. 78q(d), and Rule 17d–2 Thereunder

This agreement (the ''Agreement'') by and among Cboe BZX Exchange, Inc. (''Cboe BZX''), Cboe BYX Exchange, Inc. (''Cboe BYX''), BOX Exchange LLC (''BOX''), Cboe Exchange, Inc. (''Cboe Options''), Cboe C2 Exchange, Inc. (''Cboe C2''), NYSE [Chicago] *Texas,* Inc. (''[CHX] *NYSE Texas*''), Cboe EDGA Exchange, Inc. (''Cboe EDGA''), Cboe EDGX Exchange, Inc. (''Cboe EDGX''), Financial Industry Regulatory Authority, Inc. (''FINRA''), MEMX LLC (''MEMX''), Nasdaq ISE, LLC (''ISE''), Nasdaq GEMX, LLC (''GEMX''), Nasdaq MRX, LLC (''MRX''), Investors Exchange LLC (''IEX''), Miami International Securities Exchange, LLC (''MIAX''), MIAX PEARL, LLC (''MIAX PEARL''), MIAX Emerald, LLC (''MIAX Emerald''), MIAX Sapphire, LLC (''MIAX Sapphire''), The Nasdaq Stock Market LLC (''Nasdaq''), Nasdaq BX, Inc. (''BX''), Nasdaq PHLX LLC (''PHLX''), NYSE National, Inc. (''NYSE National''), New York Stock Exchange LLC (''NYSE''), NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), [and] Long-Term Stock Exchange, Inc. (''LTSE'') *and 24X National Exchange LLC (''24X'')* (each, a ''Participating Organization,'' and, together, the ''Participating Organizations''), is made pursuant to § 17(d) of the Securities Exchange Act of 1934 (the ''Act'' or ''SEA''), 15 U.S.C. 78q(d), and Rule 17d–2 thereunder, which allow for plans to allocate regulatory responsibility among self-regulatory organizations (''SROs''). Upon approval by the Securities and Exchange Commission (''Commission'' or ''SEC''), this Agreement shall amend and restate the agreement by and among the Participating Organizations approved by the SEC on [June 10, 2020] *August 1, 2024.*

Whereas, the Participating Organizations desire to: (a) foster cooperation and coordination among the SROs; (b) remove impediments to, and foster the development of, a national market system; (c) strive to protect the interest of investors; (d) eliminate duplication in their examination and enforcement of (i) SEA Rules 606, 607, 611, 612 and 613 (the ''Covered Regulation NMS Rules'') and (ii) rules of each Participating Organization related to SEA Rule 613 listed on Exhibit A hereto (''SRO Covered CAT Rules,'' together with the Covered Regulation NMS Rules, collectively, the ''Covered Rules'') and (e) eliminate duplication in their surveillance, examination, investigation and enforcement of SEA Rule 613 and the SRO Covered CAT Rules;

Whereas, the Participating Organizations are interested in allocating regulatory responsibilities with respect to broker-dealers that are members of more than one Participating Organization (the ''Common Members'') relating to the examination and enforcement of the Covered Rules and the surveillance, examination, investigation and enforcement of SEA Rule 613 and the SRO Covered CAT Rules; and

Whereas, the Participating Organizations will request regulatory allocation of these regulatory responsibilities by executing and filing with the SEC this plan for the above stated purposes pursuant to the provisions of § 17(d) of the Act, and Rule 17d–2 thereunder, as described below.

Now, therefore, in consideration of the mutual covenants contained hereafter, and other valuable consideration to be mutually exchanged, the Participating Organizations hereby agree as follows:

1. Assumption of Surveillance Responsibility. The Designated CAT Surveillance Authority (the ''DCSA'') shall assume surveillance, investigation and enforcement responsibility relating to compliance by Common Members with SEA Rule 613 and the SRO Covered CAT Rules listed on Exhibit A (''Surveillance Responsibility''). Included in the Surveillance Responsibility assumed hereunder the DCSA shall perform investigations and enforcement resulting from reports and metrics concerning potentially non-compliant CAT reporting generated by the Plan Processor for the National Market System Plan Governing the Consolidated Audit Trail and as provided for in the Monitoring CAT

[21] *See* Securities Exchange Act Release No. 103365 (July 1, 2025), 90 FR 29912 (July 7, 2025) (File No. 4–566) (notice of filing and order approving and declaring effective an amendment to the insider trading 17d–2 plan).

[22] *See* paragraph 3 of the Plan.

Reporter Compliance Policy (dated August 13, 2019 and as amended from time to time) relating to Common Members. FINRA shall serve as DCSA for Common Members that are members of FINRA. The DREA allocated below shall serve as DCSA for Common Members that are not members of FINRA.

2. Assumption of Examination Responsibility. The Designated Regulation NMS Examining Authority (the ''DREA'') shall assume examination and enforcement responsibilities relating to compliance by Common Members with the Covered Rules to which the DREA is allocated responsibility (''Examination Responsibility''). A list of the Covered Rules is attached hereto as Exhibit A.

a. For Covered Regulation NMS Rules Pertaining to ''NMS stocks'' (as defined in Regulation NMS) (*i.e.,* Rules 607, 611 and 612): FINRA shall serve as DREA for Common Members that are members of FINRA. The Designated Examining Authority (''DEA'') pursuant to SEA Rule 17d–1 shall serve as DREA (and accordingly as DCSA as provided in paragraph 1 above) for Common Members that are not members of FINRA, provided that the DEA operates a national securities exchange or facility that trades NMS stocks and the Common Member is a member of such exchange or facility. For all other Common Members, the Participating Organizations shall allocate Common Members among the Participating Organizations (other than FINRA) that operate a national securities exchange that trades NMS stocks based on the principles outlined below and the Participating Organization to which such a Common Member is allocated shall serve as the DREA for that Common Member. (A Participating Organization that operates a national securities exchange that does not trade NMS stocks has no regulatory responsibilities related to Covered Regulation NMS Rules pertaining to NMS stocks and will not serve as DREA for such Covered Regulation NMS Rules.)

b. For Covered Regulation NMS Rules Pertaining to ''NMS securities'' (as defined in Regulation NMS) (*i.e.,* Rule 606 and Rule 613) and the SRO Covered CAT Rules listed on Exhibit A hereto, the DREA shall be the same as the DREA for Covered Regulation NMS Rules pertaining to NMS stocks (and shall serve as the DCSA in paragraph 1 above). For Common Members that are not members of a national securities exchange that trades NMS stocks and thus have not been appointed a DREA under paragraph a., the Participating Organizations shall allocate the Common Members among the Participating Organizations (other than FINRA) that operate a national securities exchange that trades NMS securities based on the principles outlined below and the Participating Organization to which such a Common Member is allocated shall serve as the DREA for that Common Member with respect to Covered Regulation NMS Rules pertaining to NMS securities. The allocation of Common Members to DREAs (including FINRA) and accordingly to serve as DCSA in paragraph 1 above for all Covered Rules is provided in Exhibit B.

c. For purposes of this paragraph 2, any allocation of a Common Member to a Participating Organization other than as specified in paragraphs a. and b. above shall be based on the following principles, except to the extent all affected Participating Organizations consent to one or more different principles and any such agreement to different principles would be deemed an amendment to this Agreement as provided in paragraph 24:

i. The Participating Organizations shall not allocate a Common Member to a Participating Organization unless the Common Member is a member of that Participating Organization.

ii. To the extent practicable, Common Members shall be allocated among the Participating Organizations of which they are members in such a manner as to equalize, as nearly as possible, the allocation among such Participating Organizations.

iii. To the extent practicable, the allocation will take into account the amount of NMS stock activity (or NMS security activity, as applicable) conducted by each Common Member in order to most evenly divide the Common Members with the largest amount of activity among the Participating Organizations of which they are a member. The allocation will also take into account similar allocations pursuant to other plans or agreements to which the Participating Organizations are party to maintain consistency in oversight of the Common Members.[1]

iv. The Participating Organizations may reallocate Common Members from time-to-time and in such manner as they deem appropriate consistent with the terms of this Agreement.

v. Whenever a Common Member ceases to be a member of its DREA (including FINRA), the DREA shall promptly inform the Participating Organizations, who shall review the matter and reallocate the Common Member to another Participating Organization.

vi. The DEA or DREA (including FINRA) may request that a Common Member be reallocated to another Participating Organization (including the DEA or DREA (including FINRA)) by giving 30 days written notice to the Participating Organizations. The Participating Organizations shall promptly consider such request and, in their discretion, may approve or disapprove such request and if approved, reallocate the Common Member to such Participating Organization.

vii. All determinations by the Participating Organizations with respect to allocations shall be by the affirmative vote of a majority of the Participating

viii. Organizations that, at the time of such determination, share the applicable Common Member being allocated; a Participating Organization shall not be entitled to vote on any allocation related to a Common Member unless the Common Member is a member of such Participating Organization.

d. The Participating Organizations agree that they shall conduct meetings among them as needed for the purposes of ensuring proper allocation of Common Members and identifying issues or concerns with respect to the regulation of Common Members. To promote consistency in connection with regulation of Common Members, the Participating Organizations further agree to conduct meetings to discuss the overarching principles as to how Covered Rules, in particular SEA Rule 613 and the SRO Covered CAT Rules, should be surveilled, examined, investigated and enforced. On an ongoing basis, the Participating Organizations agree to consult with and solicit input from the Participating Organizations regarding their surveillance, examination, investigation and enforcement programs regarding SEA Rule 613 and the SRO Covered CAT Rules. In particular, FINRA will consult with Participating Organizations prior to finalizing its disposition and sanctions guidelines with respect to violations of SEA Rule 613 and the SRO Covered CAT Rules. Further, in the period preceding the full implementation of CAT for equities and options securities, FINRA will consult with other Participating Organizations prior to finalizing dispositions other

[1] For example, if one Participating Organization was allocated responsibility for a particular Common Member pursuant to a separate Rule 17d–2 Agreement, that Participant Organization would be assigned to be the DREA of that Common Member, unless there is good cause not to make that assignment.

than no further action that involve their Common Members.

e. By signing this Agreement, the Participating Organizations hereby certify that the list of SRO Covered CAT Rules listed on Exhibit A hereto are correct and are identical or substantially similar to each other.

f. Each year following the commencement date of operation of this Agreement, or more frequently if required by changes in any of the SRO Covered CAT Rules, each Participating Organization shall submit an updated list of SRO Covered CAT Rules to FINRA for review which shall (1) add SRO Covered CAT Rules not included in the current list of SRO Covered CAT Rules that are substantially similar to each other; (2) delete SRO Covered CAT Rules included in the current list that are no longer substantially similar; and (3) confirm that the remaining rules on the current list of SRO Covered CAT Rules continue to be substantially similar. FINRA shall review each Participating Organization's annual certification and confirm whether FINRA agrees with the submitted certified and updated list of SRO Covered CAT Rules. The DREA/DCSA shall not have Regulatory Responsibility for any provision in a SRO Covered CAT Rule provision requiring a member of a Participating Organization to provide notice, reports or any other filings directly to a Participating Organization.

3. Scope of Responsibility. Notwithstanding anything herein to the contrary, it is explicitly understood that the terms ''Surveillance Responsibility'' and ''Examination Responsibility'' (collectively referred to herein as the ''Regulatory Responsibility'') do not include any responsibilities beyond those concerning the Covered Rules, and each of the Participating Organizations shall retain full responsibility for, examination, surveillance and enforcement with respect to trading activities or practices involving its own marketplace unless otherwise allocated pursuant to a separate Rule 17d–2 Agreement. The allocation of DCSA Responsibility to a Participating Organization shall not limit another Participating Organization's ability to utilize data from the Consolidated Audit Trail to perform examination, surveillance, investigative, enforcement or other regulatory work concerning potential or identified violations of statutes or rules other than the SRO Covered CAT Rules.

4. No Retention of Regulatory Responsibility. The Participating Organizations do not contemplate the retention of any responsibilities with respect to the regulatory activities being assumed by the DREA/DCSA under the terms of this Agreement. Nothing in this Agreement will be interpreted to prevent a DREA/DCSA from entering into Regulatory Services Agreement(s) to perform its Regulatory Responsibility.

5. No Charge. A DREA/DCSA shall not charge Participating Organizations for performing the Regulatory Responsibility under this Agreement.

6. Applicability of Certain Laws, Rules, Regulations or Orders. Notwithstanding any provision hereof, this Agreement shall be subject to any statute, or any rule or order of the SEC. To the extent such statute, rule, or order is inconsistent with one or more provisions of this Agreement, the statute, rule, or order shall supersede the provision(s) hereof to the extent necessary to be properly effectuated and the provision(s) hereof in that respect shall be null and void.

7. Customer Complaints. If a Participating Organization receives a copy of a customer complaint relating to a DREA's/DCSA's Regulatory Responsibility as set forth in this Agreement, the Participating Organization shall promptly forward to such DREA/DCSA a copy of such customer complaint. It shall be such DREA's/DCSA's responsibility to review and take appropriate action in respect to such complaint.

8. Parties to Make Personnel Available as Witnesses. Each Participating Organization shall make its personnel available to the DREA/DCSA to serve as testimonial or non-testimonial witnesses as necessary to assist the DREA/DCSA in fulfilling the Regulatory Responsibility allocated under this Agreement. The DREA/DCSA shall provide reasonable advance notice when practicable and shall work with a Participating Organization to accommodate reasonable scheduling conflicts within the context and demands as the entity with ultimate regulatory responsibility. The Participating Organization shall pay all reasonable travel and other expenses incurred by its employees to the extent that the DREA/DCSA requires such employees to serve as witnesses, and provide information or other assistance pursuant to this Agreement.

9. Sharing of Work-Papers, Data and Related Information.

a. Sharing. A Participating Organization shall make available to the DREA/DCSA information necessary to assist the DREA/DCSA in fulfilling the Regulatory Responsibility assumed under the terms of this Agreement. Such information shall include *any* information collected by a Participating Organization in the course of performing its regulatory obligations under the Act, including information relating to an on-going disciplinary investigation or action against a member, the amount of a fine imposed on a member, financial information, or information regarding proprietary trading systems gained in the course of examining a member (''Regulatory Information''). This Regulatory Information shall be used by the DREA/DCSA solely for the purposes of fulfilling the DREA's/DCSA's Regulatory Responsibility.

b. No Waiver of Privilege. The sharing of documents or information between the parties pursuant to this Agreement shall not be deemed a waiver as against third parties of regulatory or other privileges relating to the discovery of documents or information.

10. Special or Cause Examinations and Enforcement Proceedings. Nothing in this Agreement shall restrict or in any way encumber the right of a Participating Organization to conduct special or cause examinations of a Common Member, or take enforcement proceedings against a Common Member as a Participating Organization, in its sole discretion, shall deem appropriate or necessary.

11. Dispute Resolution Under this Agreement.

a. Negotiation. The Participating Organizations will attempt to resolve any disputes through good faith negotiation and discussion, escalating such discussion up through the appropriate management levels until reaching the executive management level. In the event a dispute cannot be settled through these means, the Participating Organizations shall refer the dispute to binding arbitration.

b. Binding Arbitration. All claims, disputes, controversies, and other matters in question between the Participating Organizations to this Agreement arising out of or relating to this Agreement or the breach thereof that cannot be resolved by the Participating Organizations will be resolved through binding arbitration. Unless otherwise agreed by the Participating Organizations, a dispute submitted to binding arbitration pursuant to this paragraph shall be resolved using the following procedures:

(i) The arbitration shall be conducted in a city selected by the DREA/DCSA in which it maintains a principal office or where otherwise agreed to by the Participating Organizations in accordance with the Commercial Arbitration Rules of the American Arbitration Association and judgment upon the award rendered by the

arbitrator may be entered in any court having jurisdiction thereof; and

(ii) There shall be three arbitrators, and the chairperson of the arbitration panel shall be an attorney. The arbitrators shall be appointed in accordance with the Commercial Arbitration Rules of the American Arbitration Association.

12. Limitation of Liability. As between the Participating Organizations, no Participating Organization, including its respective directors, governors, officers, employees and agents, will be liable to any other Participating Organization, or its directors, governors, officers, employees and agents, for any liability, loss or damage resulting from any delays, inaccuracies, errors or omissions with respect to its performing or failing to perform regulatory responsibilities, obligations, or functions, except: (a) as otherwise provided for under the Act; (b) in instances of a Participating Organization's gross negligence, willful misconduct or reckless disregard with respect to another Participating Organization; or (c) in instances of a breach of confidentiality obligations owed to another Participating Organization. The Participating Organizations understand and agree that the regulatory responsibilities are being performed on a good faith and best effort basis and no warranties, express or implied, are made by any Participating Organization to any other Participating Organization with respect to any of the responsibilities to be performed hereunder. This paragraph is not intended to create liability of any Participating Organization to any third party.

13. SEC Approval.

a. The Participating Organizations agree to file promptly this Agreement with the SEC for its review and approval. FINRA shall file this Agreement on behalf, and with the explicit consent, of all Participating Organizations.

b. If approved by the SEC, the Participating Organizations will notify their members of the general terms of the Agreement and of its impact on their members.

14. Subsequent Parties; Limited Relationship. This Agreement shall inure to the benefit of and shall be binding upon the Participating Organizations hereto and their respective legal representatives, successors, and assigns. Nothing in this Agreement, expressed or implied, is intended or shall: (a) confer on any person other than the Participating Organizations hereto, or their respective legal representatives, successors, and assigns, any rights, remedies, obligations or liabilities under or by reason of this Agreement, (b) constitute the Participating Organizations hereto partners or participants in a joint venture, or (c) appoint one Participating Organization the agent of the other.

15. Assignment. No Participating Organization may assign this Agreement without the prior written consent of the DREAs/DCSAs performing Regulatory Responsibility on behalf of such Participating Organization, which consent shall not be unreasonably withheld, conditioned or delayed; provided, however, that any Participating Organization may assign the Agreement to a corporation controlling, controlled by or under common control with the Participating Organization without the prior written consent of such Participating Organization's DREAs/DCSAs. No assignment shall be effective without Commission approval.

16. Severability. Any term or provision of this Agreement that is invalid or unenforceable in any jurisdiction shall, as to such jurisdiction, be ineffective to the extent of such invalidity or unenforceability without rendering invalid or unenforceable the remaining terms and provisions of this Agreement or affecting the validity or enforceability of any of the terms or provisions of this Agreement in any other jurisdiction.

17. Termination. Any Participating Organization may cancel its participation in the Agreement at any time upon the approval of the Commission after 180 days written notice to the other Participating Organizations (or in the case of a change of control in ownership of a Participating Organization, such other notice time period as that Participating Organization may choose). The cancellation of its participation in this Agreement by any Participating Organization shall not terminate this Agreement as to the remaining Participating Organizations.

18. General. The Participating Organizations agree to perform all acts and execute all supplementary instruments or documents that may be reasonably necessary or desirable to carry out the provisions of this Agreement.

19. Written Notice. Any written notice required or permitted to be given under this Agreement shall be deemed given if sent by certified mail, return receipt requested, or by a comparable means of electronic communication to each Participating Organization entitled to receipt thereof, to the attention of the Participating Organization's representative at the Participating Organization's then principal office or by email.

20. Confidentiality. The Participating Organizations agree that documents or information shared shall be held in confidence, and used only for the purposes of carrying out their respective regulatory obligations under this Agreement, provided, however, that each Participating Organization may disclose such documents or information as may be required to comply with applicable regulatory requirements or requests for information from the SEC. Any Participating Organization disclosing confidential documents or information in compliance with applicable regulatory or oversight requirements will request confidential treatment of such information. No Participating Organization shall assert regulatory or other privileges as against the other with respect to Regulatory Information that is required to be shared pursuant to this Agreement.

21. Regulatory Responsibility. Pursuant to Section 17(d)(1)(A) of the Act, and Rule 17d–2 thereunder, the Participating Organizations request the SEC, upon its approval of this Agreement, to relieve the Participating Organizations which are participants in this Agreement that are not the DREA or DCSA as to a Common Member of any and all responsibilities with respect to the matters allocated to the DREA or DCSA pursuant to this Agreement for purposes of §§ 17(d) and 19(g) of the Act.

22. Governing Law. This Agreement shall be deemed to have been made in the State of New York, and shall be construed and enforced in accordance with the law of the State of New York, without reference to principles of conflicts of laws thereof. Each of the Participating Organizations hereby consents to submit to the jurisdiction of the courts of the State of New York in connection with any action or proceeding relating to this Agreement.

23. Survival of Provisions. Provisions intended by their terms or context to survive and continue notwithstanding delivery of the regulatory services by the DREA/DCSA and any expiration of this Agreement shall survive and continue.

24. Amendment.

a. This Agreement may be amended to add a new Participating Organization, provided that such Participating Organization does not assume regulatory responsibility, by an amendment executed by all applicable DREAs/DCSAs and such new Participating Organization. All other Participating Organizations expressly consent to allow such DREAs/DCSAs to

jointly add new Participating Organizations to the Agreement as provided above. Such DREAs/DCSAs will promptly notify all Participating Organizations of any such amendments to add a new Participating Organization.

b. All other amendments must be approved by each Participating Organization. All amendments, including adding a new Participating Organization but excluding changes to Exhibit B, must be filed with and approved by the Commission before they become effective.

25. Effective Date. The Effective Date of this Agreement will be the date the SEC declares this Agreement to be effective pursuant to authority conferred by § 17(d) of the Act, and Rule 17d–2 thereunder.

26. Counterparts. This Agreement may be executed in any number of counterparts, including facsimile, each of which will be deemed an original, but all of which taken together shall constitute one single agreement among the Participating Organizations.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/other.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number 4–618 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number 4–618. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/other.shtml*). Copies of the plan also will be available for inspection and copying at the principal offices of the Participating Organizations. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number 4–618 and should be submitted on or before August 6, 2025.

V. Discussion

The Commission finds that the Plan, as amended, is consistent with the factors set forth in Section 17(d) of the Act[23] and Rule 17d–2(c) thereunder[24] in that the proposed amended Plan is necessary or appropriate in the public interest and for the protection of investors, fosters cooperation and coordination among SROs, and removes impediments to and fosters the development of the national market system. In particular, the Commission believes that the proposed amended Plan should reduce unnecessary regulatory duplication by allocating to the applicable DREA certain examination and enforcement responsibilities, and to the applicable DCSA certain surveillance, investigation, and enforcement responsibilities, for Common Members that would otherwise be performed by multiple Parties. Accordingly, the proposed amended Plan promotes efficiency by reducing costs to Common Members. Furthermore, because the Parties will coordinate their regulatory functions in accordance with the proposed amended Plan, the amended Plan should promote investor protection.

The Commission is hereby declaring effective a plan that allocates regulatory responsibility for certain provisions of the federal securities laws, rules, and regulations as set forth in Exhibit A to the Plan. The Commission notes that any amendment to the Plan must be approved by the relevant Parties as set forth in Paragraph 24 of the Plan and must be filed with and approved by the Commission before it may become effective.[25]

Under paragraph (c) of Rule 17d–2, the Commission may, after appropriate notice and comment, declare a plan, or any part of a plan, effective. In this instance, the Commission believes that appropriate notice and comment can take place after the proposed amendment is effective. In particular, the purpose of the amendment is to add 24X as a Participating Organization and to reflect the name change of NYSE Chicago, Inc. to NYSE Texas, Inc. The Commission notes that the most recent prior amendment to the Plan was published for comment and the Commission did not receive any comments thereon.[26] The Commission believes that the current amendment to the Plan does not raise any new regulatory issues that the Commission has not previously considered, and therefore believes that the amended Plan should become effective without any undue delay.

[23] 15 U.S.C. 78q(d).

[24] 17 CFR 240.17d–2(c).

[25] *See* Paragraph 24 of the Plan. The Commission notes, however, that changes to Exhibit B to the Plan (the allocation of Common Members to DREAs) are not required to be filed with, and approved by, the Commission before they become effective.

[26] *See* Securities Exchange Act Release No. 100636 (August 1, 2024), 89 FR 64517 (August 7, 2024).

VI. Conclusion

This Order gives effect to the Plan filed with the Commission in File No. 4–618. The Parties shall notify all members affected by the Plan of their rights and obligations under the Plan.

It is therefore ordered, pursuant to Section 17(d) of the Act, that the Plan in File No. 4–618 is hereby approved and declared effective.

It is further ordered that the Parties who are not the DREA or DCSA as to a particular Common Member are relieved of those regulatory responsibilities allocated to the Common Member's DREA or DCSA under the Plan to the extent of such allocation.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[27]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103436; File Nos. SR–OCC–2025–006]

Self-Regulatory Organizations; The Options Clearing Corporation; Order Granting Approval of Proposed Rule Change by The Options Clearing Corporation Concerning the Adoption of the Amended and Restated Participant Exchange Agreement Between OCC and Each of the National Securities Exchanges That List Equity Options

July 11, 2025.

I. Introduction

On May 13, 2025, the Options Clearing Corporation (''OCC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–OCC–2025–006, pursuant to Section 19(b) of the Securities Exchange Act of 1934 (''Exchange Act'')[1] and Rule 19b–4[2] thereunder, to replace the current Restated Participant Exchange Agreement with a new agreement.[3] The proposed rule change was published for public comment in the **Federal Register** on May 29, 2025.[4] The Commission has received no written comments regarding the proposed rule change.[5] For the reasons discussed below, the Commission is approving the proposed rule change (hereinafter defined as ''Proposed Rule Change'').

II. Background

OCC is the sole clearing agency for standardized equity options listed on national securities exchanges registered with the Commission. OCC's relationship with the national securities exchanges that list options (each an ''Exchange,'' and collectively, the ''Exchanges'') is largely governed by an agreement, last updated in 2007, between OCC and the Exchanges. This agreement, the Restated Participant Exchange Agreement (''RPEA'') sets out the terms and conditions under which OCC will provide to the Exchanges clearing services for the options listed on the Exchanges.

OCC proposes to replace the current RPEA with a new RPEA. OCC represents that the differences between the current and new RPEA are designed to: (i) reflect current, enhanced, or implied but not specifically stated operational and business practices between OCC and the Exchanges, which may address technology or industry changes or developments that necessitate new or updated agreement terms or incorporate adopted best practices for contract terms; (ii) align the agreement with current law and/or OCC's rules; (iii) eliminate provisions that are out of date or update provisions to reflect current industry terminology; (iv) acknowledge the legal and regulatory landscape of the options industry that affect the interactions between OCC and the Exchanges by recognizing such factors within the agreement; and (v) improve overall readability of the document through the incorporation of intervening amendments and changes into the agreement.[6]

Such differences are described in more detail below.

A. Operational and Business Practices

As stated above, OCC represents that some of the differences between the current RPEA and the new RPEA are designed to reflect current, enhanced, or implied but not specifically stated operational and business practices between OCC and the Exchanges. These operational and business practice changes generally result from technology and industry developments that either necessitate new or updated agreement terms or incorporate into the new RPEA best practices for contract terms that have been implied or adopted in practice but are not reflected in the current RPEA.[7] The specific updates related to developments in operational and business practices are discussed in more detail below.

Section 5 of the new RPEA would set forth conditions the Exchanges will establish before seeking to delist an option. OCC states that this change would reduce the risk that Clearing Members could have open interest in options with no mechanism to close out those positions.[8]

OCC proposes to add a new Section 2(b)[9] that would allow OCC to refuse to clear options that materially impact OCC's risk profile or introduce novel or unique risks to OCC.[10] Proposed section 2(b) requires OCC to work with the Exchange to mitigate any such risk, if feasible, and to otherwise notify an Exchange of a disapproval of a new product. OCC states that this change would address industry changes in terms of risk assessment and management of new products.[11]

OCC proposes to add a new Section 6 to set forth the conditions for options that are listed on only one Exchange. Where OCC deems the price of an option listed on only one Exchange to be inaccurate, unreliable, unavailable, or inappropriate, the new RPEA would require the Exchanges to work with OCC to determine reliable settlement prices and to use commercially reasonable efforts to continue listing a singly listed option until all open interest is closed out at OCC.[12] OCC states that these changes would address a situation in which an underlying price may not be available or accurate.[13]

As a consequence of the substantial growth in the amount and speed of data flow between OCC and the Exchanges since the execution of the current

[9] Section 2 of the new RPEA corresponds to Section 3 of the current RPEA because OCC proposes deleting section 2 of the current RPEA as described below. OCC proposes to make other section number changes as needed. For clarity, references herein are to the proposed section numbers of the new RPEA unless otherwise stated.

[10] New section 2(b) replaces an out of date section related to the obligation to register options for trading.

[11] *See* Notice of Filing, 90 FR at 22809.

[12] If the Exchange could no longer list a singly listed option, it would be required to notify OCC and to permit listing and trading on an alternate Exchange.

[13] *See* Notice of Filing, 90 FR at 22810.

RPEA,[14] OCC proposes to add a new Section 7 governing OCC's use of data provided by the Exchanges.[15] New Section 7 would restrict OCC's use of Exchange Data such that OCC would not be permitted to use Exchange Data in any index calculation or other financial instrument, investment product, or investment strategy without consent.[16] Section 7 also would limit the entities to which OCC would be permitted to redistribute data based on the type of data being provided by the Exchange, and the Exchanges would be permitted to audit OCC's use of Exchange Data for non-compliance with any material provision of this Section 7. Separately, Section 7 would define Derived Data as data derived by OCC from non-real-time Exchange Data, which OCC would be authorized to create and use without restriction.

Section 8 of the RPEA governs trade comparisons. OCC proposes to add a new provision to Section 8 that would require OCC to notify the Exchanges at least 60 days prior to any change to the time by which an Exchange must report trade comparisons. OCC states that this change is designed to give the Exchanges sufficient notice to prepare for the change.[17]

Section 13 of the RPEA limits on OCC's authority. For the avoidance of doubt, and to reflect current practice,[18] OCC proposes to add a provision to Section 13 that would authorize OCC to calculate position limits at the request of the Exchanges even though OCC is generally precluded from establishing or enforcing position limits. OCC states that it began calculating position limits in 2003 at the request of the Exchanges and continues to provide position limits on the OCC website.[19] OCC also proposes adding a parenthetical noting that the general limit precluding OCC from determining when to open or restrict trading would not limit OCC's other rights and obligations under the RPEA.

Section 15 addresses financial requirements for Clearing Members. Currenctly, Exchanges are required both to notify OCC when a Clearing Member is not in compliance with OCC's financial responsibility standards[20] and notify OCC of any financial condition that would be reported any resolution authority.[21] In an effort to incorporate into the RPEA best practices for contract terms that have already been adopted and are in use by the industry, OCC proposes to remove the requirement to notify OCC when a Clearing Member is not in compliance with OCC's financial responsibility standards.[22] OCC also proposes to change the time requirement for submission of material from 2 p.m. Central Time to 3 p.m. Central Time, and to require such reporting ''promptly'' rather than ''immediately.''

Currently, Section 17, which addresses operations, requires OCC to use its best efforts to maintain sufficient operational capacity to clear new options on behalf of the Exchanges. OCC proposes to replace this language with a requirement to use commercially reasonable efforts, which OCC asserts would allow it to conduct its operations in a manner that is economically justified and in accordance with commonly accepted commercial practices.[23] Relatedly, OCC proposes to replace the current requirement to act ''as expeditiously as possible'' with a requirement to act ''as soon as reasonably practicable.'' Additionally, the new RPEA would require the Exchanges to comply with OCC's operational specification for new products and to provide 60 days notice in advance of operational changes such as trading hour changes. OCC asserts that such changes incorporate best practices for contract terms.[24]

OCC proposes to add a new Section 18 governing financial reporting from the Exchanges, including obligations relating to annual financials, quarterly financials, and losses. For example, an Exhange would be obligated to provide quarterly unaudited financials for three years after becoming a party to the new RPEA (if not a party to the current RPEA). An Exchange would also be required to provide quarterly financials following losses over certain thresholds. Under the proposed terms, OCC would be obligated to maintain the confidentiality of such financials to the extent they are not publicly available.[25] OCC states that the purpose of this new section is to allow OCC to monitor for going concern risk.[26]

OCC proposes to add Section 19 in the new RPEA, which addresses information technology and security. Section 19 requires Exchanges and OCC to provide each other with contact information for personnel relating to operational, technology and information security matters. OCC and the Exchanges would be required to provide notice if either party has an incident that could impact their ability to provide or receive services[27] and to take commercially reasonable efforts to comply with relevant cybersecurity regulations. The Exchanges would further agree to accommodate OCC's connectivity requirements. OCC proposes these changes to to strengthen information security given widespread use of ever evolving and improving electronic systems, along with related security concerns since the time the current RPEA became effective.[28]

OCC proposes changes to Section 24, which governs the services, programs and projects OCC provides to and for Exchanges. The changes would provide OCC sole and absolute discretion with regard to taking on projects for an Exchange. The proposed changes would also make it clear that (i) services OCC develops for any Clearing Member or group of Clearing Members and (ii) programs or projects developed at OCC's own cost will be offered to all Clearing Members on the same terms and cost.

OCC proposes to revise Section 29, which covers miscellaneous items, to state that the RPEA may not be assigned by the Exchange without written consent of OCC, and that the RPEA cannot be assigned by OCC without the consent of all Exchanges.[29] OCC also proposes to add a new provision related to the use of the parties' names,

[14] *See* Notice of Filing, 90 FR at 22810.

[15] The Exchanges would provide daily values of underlying interest and options. *See* Notice of Filing, 90 FR at 22811.

[16] The Exchanges would be required to use commercially reasonable efforts to provide OCC with at least 60 days' notice of material modifications, additions, or deletions to Exchange Data.

[17] *See* Notice of Filing, 90 FR at 22811. To reflect current industry terminology, OCC would also add language stating that the term Trading Day is any day the Exchange is trading. *See id.*

[18] *See* Notice of Filing, 90 FR at 22812.

[19] *See* Notice of Filing, 90 FR at 22812.

[20] Exchanges have indicated that they do not incorporate OCC's financial responsibility standards into their Exchange monitoring processes. *See* Notice of Filing, 90 FR at 22812.

[21] The current RPEA already ready requires notification of such reporting to the Securities Investor Protection Corporation. *See* Notice of Filing, 90 FR at 22812.

[22] *See* Notice of Filing, 90 FR at 22812. This is part of a general set of changes to to remove details related to interactions regarding lack of operational capacity to clear a new underlying.

[23] *See* Notice of Filing, 90 FR at 22812.

[24] *See* Notice of Filing, 90 FR at 22813.

[25] Relatedly, OCC proposes to add language to Section 25, which addresses access to books and records of OCC, to state that an Exchange will not have a right to view another Exchange's Confidential Information.

[26] *See* Notice of Filing, 90 FR at 22813.

[27] The proposed terms would permit OCC to take steps in response to the reporting of an incident, such as suspending its obligations to an Exchange under the RPEA. To suspend obligations to the Exchanges, OCC proposes to add a requirement that the OCC CEO, or the COO if the CEO is unavailable, must approve a suspension of obligations to the Exchange. If neither the OCC CEO and OCC COO are available, the Chief Security Officer has the authority to suspend services to the Exchange.

[28] *See* Notice of Filing, 90 FR at 22813.

[29] The RPEA would allow assignment without written consent in the event of a corporate reorganization or the sale of OCC.

tradenames, logos, and trademarks (collectively, ''Marks''). More specifically, OCC proposes to add language where each Exchange grants OCC license to use each party's respective name, tradename, logos, and trademarks in connection with OCC's activities such as issuance, clearance, settlement, and investor education services. OCC states that these changes are intended to reflect either current or implied business practices between OCC and the Exchanges and to incorporate adopted best practices for contract terms.[30]

Section 31 addresses the options disclosure document (''ODD''). OCC proposes to add a subparagraph addressing indemnification. Specifically, OCC proposes to incorporate language from Section 2(g) of the current RPEA, which is being deleted. The proposed text would indicate that OCC agrees to indemnify each Exchange from claims relating to any untrue statement or alleged untrue statement of a material fact contained in the ODD, and the Exchanges agree to indemnify OCC from damages relating to any untrue statement of a material fact contained in information from the ODD. The new text regarding indemnification would also detail the notice requirements related to indemnification (*e.g.,* notification of claim made against an indemnified party).

OCC also proposes to add a new Section 32 that addresses confidential information. OCC proposes to define ''Confidential Information'' to include information that relates to a disclosing party's products and services, operations, customers, members, prospects, know-how, design rights, trade secrets, market information, business affairs, and information provided to the receiving party. OCC would not be permitted to disclose Exchange Data that identifies an Exchange member except when the Exchange consents, when allowed by OCC By-Laws and Rules or required by law, regulation, or government rule, or as post-trade information given to clearing members. OCC states that these changes are intended to reflect current business practices between OCC and the Exchanges and to adopt best practices for contract terms.[31]

B. Current Law and OCC Rules

As stated above, OCC represents that some of the differences between the current RPEA and the new RPEA are designed to align the agreement with current law and/or OCC's rules.[32] General changes throughout the new RPEA include replacing references from ''the Corporation'' to ''OCC.'' In Section 1, OCC proposes to add a requirement for both OCC and the Exchanges that both parties will remain in compliance with the Exchange Act and its own Exchange rules and to require that each party will use reasonable efforts to come back into compliance in the event a party can no longer make the representation. The proposed language of Section 26, which addresses indemnification, would add ''or noteholder agreement'' where the current RPEA references the ''stockholders agreement'' because certain exchanges are subject to the shareholders agreement while other are subject to the noteholders agreement. OCC also proposes to add references to OCC Rules and references.

C. Out of Date Provisions

As stated above, OCC represents that some of the differences between the current RPEA and the new RPEA are designed to eliminate provisions that are out of date or update provisions to reflect current industry terminology.[33] For example, OCC proposes to replace the term ''Participating Exchange'' with ''Exchange'' throughout the agreement. In the introductory paragraph, the new RPEA would note that the current agreement supercedes the old agreement and would reflect the date of the new agreement. OCC proposes to change Section 1 so that national securities associations cannot become parties to the agreement.[34]

OCC proposes to delete Section 2 of the current RPEA, which relates to the registration of options, because the registration of standardized options is no longer required.[35] OCC also proposes changes to Section 2 of the new RPEA (section 3 of the current RPEA), which addresses selection of underlying interests. OCC proposes changes regarding the products it clears, incuding (i) defining the term ''Underlying Interests''; (ii) requiring that an underlying interest must be permitted on a national securities exchange; and (iii) changing the set of Underlying Interests explicitly listed in the RPEA.[36] OCC also proposes to remove a subsection of what would be Section 2 of the new RPEA that is now out of date as it relates to OCC's former obligation to register options for trading. OCC proposes to remove similar references to its former obligation to register options for trading from Section 31 of the new RPEA as well.

OCC proposes to amend Section 3, which addresses expiration dates, exercise prices, and units of trading, to remove time requirements for new series of options for trading. OCC states that such timeframes were necessary decades prior when adding new series and notifying other exchanges of newly added series was a more manual process but are now no longer needed.[37] OCC proposes further to assign the responsibility for determining units of trading to the Exchanges instead of the Securities Committee because the change reflects current business practices.[38]

OCC proposes to amend Section 4, which addresses the listing of option, by replacing a reference to ''expiration months'' with a reference to ''expiration dates'' because expirations have expanded outside of the standard monthly expiration cycle that was prevalent when the RPEA was first executed. OCC also propose to remove the phrase ''in reasonable quantities'' that currently is used in reference to making the list of options available to members because such lists are now provided electronically.

OCC proposes to amend Section 8, which addresses comparison of options transactions, to remove the ability of an Exchange to request a comparison service because OCC has not been retained by the Exchanges to perform such services. OCC also proposes to make ''Matched Trade(s)'' and ''Trading Day'' defined terms. OCC proposes to amend Section 10, which addresses acceptance of options transactions, to remove the payment of options premiums as a perquisite for clearing because OCC accepts all transactions for clearance until a member terminates its membership or is suspended by OCC.

OCC proposes to amend Section 15, which addresses financial requirements for Clearing Members, to add a reference

[30] *See* Notice of Filing, 90 FR at 22814.

[31] *See* Notice of Filing, 90 FR at 22815.

[32] *See* Notice of Filing, 90 FR at 22808.

[33] *See* Notice of Filing, 90 FR at 22808.

[34] OCC states that no parties to the Existing RPEA are national securities associations and the parties do not anticipate that any such entity will become a party to the agreement in the future. *See* Notice of Filing, 90 FR at 22809.

[35] *See* 17 CFR 230.238.

[36] For example, OCC proposes to remove U.S. Treasury bonds, notes, or bills because they do not underlie listed options that OCC clears and do not align with the interest types OCC is prepared to clear. *See* Notice of Filing, 90 FR at 22809. OCC proposes to add, among other things exchange trades funds and exchange traded notes because they did not exist at the time the current RPEA was first executed. *See id.*

[37] *See* Notice of Filing, 90 FR at 22810.

[38] This reflects a rule change OCC implemented in 2018 that transferred the authority to make contract adjustment determinations from panels of the Securities Committee to OCC. *See* Notice of Filing, 90 FR at 22810.

to ''Regulatory Services Agreement'' because some Exchanges outsource member surveillance. OCC also proposes to remove requirements for in-person delivery of documents and telephone calls. Finally, OCC proposes to replace reference to OCC's Chairman or any Vice President with reference to a ''Financial Risk Management officer'' to reflect OCCs' current designation of authority.

OCC proposes to amend Section 17, which addresses Clearing Member operations, to remove references to systems and response protocols that OCC and the Exchange no longer use. Instead, the new RPEA would require Exchanges to provide OCC with supporting materials to support the Exchange's clearing activities. Exchanges would also be required to make representatives available to OCC to discuss any of OCC's additional information needs, and to comply with OCC operational specifications such as extended trading hours.

OCC proposes to delete Section 16 of the current RPEA because it requires OCC to maintain offices in each city in which an Exchange is located. OCC states that, given the widespread use of electronic communications in financial services, the increase in the number and various locations of Exchanges over time, and the ability of Exchanges and OCC to send and receive information quickly via electronic means, the requirement for OCC to maintain an office in such locations is outdated.[39] Similarly, OCC proposes to amend Section 23, which addresses financial arrangements, to remove a requirement to establish local banking relationships because this is no longer necessary. OCC also proposes to amend Section 28, regarding Notices, to remove references to physical addresses of each party and instead add an option to provide notices by email because the addresses in the current RPEA are out of date and, even if updated, may change over time.

OCC proposes to amend Section 20, which addresses exercise restrictions, to replace references to ''index options'' with references to ''Options that are cash settled'' and to replace references to ''other options'' with references to ''Options that are physically settled'' to ensure consistency with current industry terminology, which generally is broader and more descriptive of the products subject to the provisions. OCC also proposes to add language that allows either an Exchange or OCC to restrict the exercise of Options if doing so would be necessary to comply with any government imposed restriction that would have the effect of restricting the exercise of an option.

OCC proposes to amend Section 31, which addresses options disclosure documents, to reassign the responsibility for chairing the Listed Options Disclosure Committee (''LDOC'') from OCC's Chairman of the Board to a an officer of OCC.[40] The changes would also modify the current provision specifying that the Exchange Directors of OCC's Board will participate on the LDOC to specify that representatives of each Exchange will participate on the LDOC. As new Exchanges have joined OCC over time, not all of them have a representative on the OCC Board. Thus, this change would align the RPEA with current practice and help future proof it in the event that additional Exchanges join OCC in the future. OCC also proposes to require Exchanges to notify OCC of proposed Exchange rule changes that would cause information in the ODD to become inaccurate and to require relevant Exchanges to provide input and feedback when OCC is drafting amendments to the ODD. OCC proposes to remove the requirement that OCC will pay costs associated with the meeting of the LODC. OCC states that this provision is out of date because the LODC does not meet in person.[41]

D. Industry Landscape

As stated above, OCC represents that some of the differences between the current RPEA and the new RPEA are designed to acknowledge and factor into the RPEA the legal and regulatory landscape of the options industry that affect the interactions between OCC and the Exchanges.[42]

In Section 2, OCC proposes to add language stating that the underlying interest must be listed in accordance with Options Rules, listed on a national securities exchange, and permitted in the Options Disclosure Document. OCC proposes to add a requirement in Section 2 that Exchanges submit new Options to OCC pursuant to the requirements of the Options Listing Procedures Plan. OCC proposes these changes because because the OLPP serves as the national market plan that establishes the requirements Exchanges must follow when submitting a new option class to OCC.[43]

OCC proposes to amend Section 30, which addresses breach and termination, by adding a provision permitting OCC to suspend its obligations to an Exchange whenever a suspension is necessary to comply with OCC's own rules and outlining which provisions of the RPEA, if breached by an Exchange, would allow OCC to cease providing clearing services. OCC also proposes to add language allowing termination if providing services for the Exchange would cause OCC to be in breach federal securities law. The proposed amendments would also define who at OCC is authorized to approve a suspension and require OCC to notify each Exchange of any suspension. Finally, amended Section 30 would require OCC and the relevant Exchange to work together to minimize a suspension while simultaneously acknowledging that OCC would not be obligated to clear transactions for an Exchange that ceases to (i) be a registered exchange, (ii) abide by the Securities Act of 1933 or the Exchange Act, or (iii) be an OCC noteholder or stockholder.

E. Readability

As stated above, OCC represents that some of the differences between the current RPEA and the new RPEA are designed to improve overall readability of the document through the incorporation of intervening amendments and changes into the agreement.[44] OCC also proposes to replace ''premises'' with ''promises'' in the introduction, and to to remove the language ''The 1975 Agreement is hereby terminated, effective as of the date of this Agreement'' because the 1975 agreement was terminated by the 1983 agreement.

III. Discussion and Commission Findings

Section 19(b)(2)(C) of the Exchange Act directs the Commission to approve a proposed rule change of a self-regulatory organization if it finds that such proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to such organization.[45] Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the self-regulatory organization ['SRO'] that proposed the rule change.'' [46]

The description of a proposed rule change, its purpose and operation, its

[39] *See* Notice of Filing, 90 FR at 22812.

[40] The new RPEA does not specify which officer OCC would designate.

[41] *See* Notice of Filing, 90 FR at 22815.

[42] *See* Notice of Filing, 90 FR at 22808.

[43] *See* Notice of Filing, 90 FR at 22810.

[44] *See* Notice of Filing, 90 FR at 22808.

[45] 15 U.S.C. 78s(b)(2)(C).

[46] Rule 700(b)(3), Commission Rules of Practice, 17 CFR 201.700(b)(3).

effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[47] and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations.[48] Moreover, ''unquestioning reliance'' on an SRO's representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.[49]

After carefully considering the Proposed Rule Change, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to OCC. More specifically, the Commission finds that the Proposed Rule Change is consistent with and with Section 17A(b)(3)(F) of the Exchange Act,[50] Exchange Act Rules 17ad–222(e)(1),[51] 17ad–222(e)(20),[52] and 17ad–222(e)(21),[53] as described in detail below.

A. Consistency With Section 17A(b)(3)(F) of the Exchange Act

Section 17A(b)(3)(F) of the Exchange Act requires, among other things, that the rules of a clearing agency be designed to foster cooperation and coordination with persons engaged in the clearance and settlement of securities transactions.[54] As discussed above, the RPEA sets out the terms and conditions under which OCC will provide clearing services to the Exchanges for the options listed on the Exchanges. Amending the RPEA to better reflect current practices, laws, regulations, and industry terminology as well as general readability, strengthens the RPEA. For example the proposed addition of a section based on singly listed options would require cooperation between OCC and the Exchanges to arrive at a reliable settlement process in the event that the price listed on an exchange is inaccurate. This subparagraph requires both OCC and the exchange to cooperate to determine the correct price. Further, in the selection of new underlying interests, if OCC identifies a risk to a new product, OCC is required to undertake commercially reasonable efforts to address the risk that caused OCC to refuse to issue such option, and the relevant Exchange would be required to reasonably cooperate with those efforts. Both of these provisions require OCC to cooperate with exchanges if there is an inaccurate price or risk posed from the new product. Further, the Proposed Rule Change establishes that an Exchange that makes changes to its Exchange Data will give OCC at least 60 days notice in advance of such change, in most cases. The notice period will provide OCC with the time to prepare for the change, and OCC will cooperate with an Exchange in addressing any such change. Such change, along with those described above, promote cooperation between OCC and the Exchanges because they facilitate, and at times require cooperation between, OCC and the Exchanges.

Accordingly, the Proposed Rule Change is consistent with the requirements of Section 17A(b)(3)(F) of the Exchange Act.[55]

B. Consistency With Rule 17ad–222(e)(1) Under the Exchange Act

Rule 17ad–222(e)(1) under the Exchange Act requires that a covered clearing agency establish, implement, maintain, and enforce written policies and procedures reasonably designed to provide for a well-founded, transparent, and enforceable legal framework for each aspect of its activities in all relevant jurisdictions.[56]

As described above, OCC proposes various changes designed to align the terms of the RPEA with current law and OCC's rules,[57] acknowledge the current legal and regulatory landscape of the options industry,[58] and generally improve the readability of the RPEA.[59] For example, OCC proposes to add multiple representations from both OCC and the Exchanges that OCC and each Exchange is and will remain in compliance with the Exchange Act. In Section 2, OCC proposes to clarify that an Exchange must list options in accordance with the relevant Exchange's rule and submit new products to OCC in accordance with the Options Listing Procedure Plan. These changes are well-founded in that OCC and the exchanges are required to be in compliance with the Exchange Act and create procedures for listing new options and in all aspects of its operations.

As discussed above, in Section 30, OCC proposes to add language permitting OCC to suspend its obligations when necessary to comply with its own rules. OCC also proposes to modify the RPEA to explicitly acknowledge that OCC will not be obligated to clear transactions for an Exchange that cannot abide by the the Exchange Act. These changes help create reasonably designed policies and procedures that allow for a well-founded and enforceable legal framework by ensuring all parties are in compliance with relevant securities laws.

With regard to the ODD, the proposed changes would require that, absent certain exceptions, the Exchanges and OCC indemnify each other for untrue statements or omissions of material fact. Additionally, OCC proposes to update the manner in which the RPEA may be assigned by specifying that an Exchange must have the prior written consent of OCC for assignment and OCC must have prior written consent of all the Exchanges. These changes would help create a more transparent and enforceable legal framework by clarifying both the requirements for effective assignment of the RPEA and when parties are responsible for omissions of material fact by the other party. These changes clarify how the agreement can be assigned and ensure all parties to the RPEA understand the consequences of making or providing untrue statements or omissions of material fact in connection with the ODD.

Accordingly, the Proposed Rule Change is consistent with Rule 17ad–22(e)(1) under the Exchange Act.[60]

C. Consistency With Rule 17ad–22(e)(20) Under the Exchange Act

Rule 17ad–22(e)(20) under the Exchange Act requires that a covered clearing agency establish, implement, maintain, and enforce written policies and procedures reasonably designed to identify, monitor, and manage risks related to any link the covered clearing agency establishes with one or more other clearing agencies, financial market utilities, or trading markets.[61]

As described above, OCC proposes various changes to the RPEA designed to reflect current, enhanced, or implied business practices between OCC and the

[61] 17 CFR 240.17ad–22(e)(20).

Exchanges.[62] For example, OCC proposes to add language allowing it to disapprove new options that pose a risk to OCC. OCC also proposes new provisions governing the pricing and listing of options that are listed on only one Exchange, and to add the ability for OCC to calculate position limits at the request of the Exchanges. These changes help decrease the risk to OCC presented by options that are only listed on one exchange by reducing the risk that OCC would be unable to price such options or that members would be unable to trade options for which there is open interest at OCC. It would also help reduce the risk from position limits so that OCC can adjust accordingly if a position grows too large.

As discussed above, the proposed rule would establish financial requirements for Exchanges and allow OCC to monitor for going concern risk. If an Exchange becomes insolvent it could pose a risk to OCC and other financial institutions. Thus, Exchanges would be required to provide certain financial statements to OCC and notify OCC if they experience a certain percentage decrease in shareholder equity or losses exceeding a certain percentage of shareholder equity. At the same time, the proposed changes to the RPEA would create clear obligations for OCC to keep and maintain non-public information submitted to OCC by the Exchanges strictly confidential and would prevent OCC from sharing or disclosing such information outside of limited circumstances. Together, these updates to the RPEA would help OCC manage financial risk from trading markets should an exchange become insolvent, allow OCC to monitor its member Exchanges for signs of financial distress, and help ensure that the Exchnages' sensitive financial information is protected and kept confidential.

The proposed rule change would also require the parties' to take commercially reasonable steps to comply with relevant cybersecurity regulations. As part of this change, OCC would be authorized under the RPEA to take reasonable steps to mitigate any effects from a cybersecurity incident at an Exchange, for example by suspending its obligations for the impacted Exchange. Cyber related incidents have the potential to disrupt financial institutions, including both the Exchanges and OCC. These policy changes would help OCC identify and manage cybersecurity, connectivity, and other operational and technology risks posed to OCC through its connection to the Exchanges and the various trading markets they serve..

The proposed rule would also explain how Confidential Information is defined and provide how it can be shared. It would also outlines the repercussions in the event of a breach of the confidentiality provisions. Given the volume of information produced by both OCC and the Exchanges, it is important to set clear standards to reduce legal risk.

Accordingly, the Proposed Rule Change is consistent with Rule 17ad–22(e)(20) under the Exchange Act.[63]

D. Consistency With Rule 17ad–22(e)(21) Under the Exchange Act

Rule 17ad–22(e)(21) under the Exchange Act requires, in part, that a covered clearing agency establish, implement, maintain, and enforce written policies and procedures reasonably designed to be efficient and effective in meeting the requirements of its participants and the markets it serves, and have the covered clearing agency's management regularly review the efficiency and effectiveness of its (i) scope of products cleared or settled[64] and (ii) use of technology and communication procedures.[65]

As described above, OCC proposes various changes designed to reflect current, enhanced, or implied business practices between OCC and the Exchanges.[66] For example, the proposed rule change addresses how new options will be approved, permits OCC to refuse to issue such option if it identifies a risk in the new option, and requires OCC to undertake commercially reasonable efforts to address the risk that caused OCC to refuse the new option. The Exchange is also required to reasonably cooperate with OCC. The proposed changes also update the Underlying Interests provisions of the RPEA and, more broadly, help establish transparent and consistent procedures for OCC to clear new products and identify and address the specific risks such new products might pose. Such changes will enhance OCC's ability to meet the requirements of its participants and the needs of the market it serves.

As described above, OCC proposes various changes designed to eliminate RPEA provisions that are out of date.[67] For example, the Proposed Rule Change would remove references to specific times for opening new option series and reflect that it is currently the Exchanges, not the Securities Committee, that determine units of trading. Similarly, OCC proposes to remove the requirement that lists of options be provided ''in reasonable quantities'' because such lists are now provided electronically. OCC also proposes to remove references to in-person delivery of documents and telephone calls, requirements for local banking relationships, and the maintenance of offices in certain cities. These updates to remove outdated references to timeframes, quantities, and requirements improve the clarity and effectiveness of OCC's policies and procedures.

Accordingly, the Proposed Rule Change is consistent with Rule 17ad–22(e)(21) under the Exchange Act.[68]

IV. Conclusion

On the basis of the foregoing, the Commission finds that the Proposed Rule Change is consistent with the requirements of the Exchange Act, and in particular, the requirements of Section 17A of the Exchange Act[69] and the rules and regulations thereunder.

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act,[70] that the Proposed Rule Change (SR–OCC–2025–006) be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[71]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[OMB Control No. 3235–0733]

Proposed Collection; Comment Request; Extension: Rule 194

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (''PRA'') (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''SEC'' or ''Commission'') is soliciting comments on the proposed collection of

information for Commission Rule of Practice 194, (17 CFR 240.194), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*).

Rule of Practice 194 provides a process for security-based swap dealers and major security-based swap participants (collectively, ''SBS Entity'') to make an application to the Commission for an order permitting an associated person who is subject to a statutory disqualification to effect or be involved in effecting security-based swaps on behalf of the SBS Entity. Rule of Practice 194 specifies the process for obtaining relief from the statutory prohibition in Exchange Act Section 15F(b)(6), including by setting forth the required showing, the form of application and the items to be addressed with respect to associated persons that are natural persons. An SBS Entity is not required to file an application under Rule of Practice 194 with respect to certain associated persons that are subject to a statutory disqualification, as provided for in paragraph (h) of Rule of Practice 194. To meet those requirements, however, the SBS Entity is required to file a notice with the Commission.

55 SBS Entities in total are currently registered with the Commission.[1] The Commission anticipates that, on an average annual basis, only a small fraction of the natural persons at an SBS Entity would be subject to a statutory disqualification. Accordingly, based on our experience working with Rule of Practice 194, the Commission estimates that, on an average annual basis, the Commission would receive up to one application in accordance with Rule of Practice 194 with respect to associated persons that are natural persons, and up to three notices pursuant to proposed Rule of Practice 194(h) with respect to associated persons that are natural persons.[2] The Commission estimates that the average time necessary for an SBS Entity to research the questions, and complete and file an application under Rule of Practice 194 with respect to associated persons that are natural persons is approximately 30 hours, for a total of approximately 30 burden hours per year for all SBS Entities. The Commission estimates that up to three SBS Entities will provide notices pursuant to Rule of Practice 194(h) for one natural person each on an average annual basis taking approximately 6 hours per notice, for a total of approximately 18 burden hours per year for all SBS Entities providing the notices for an estimated three natural persons. As such, the combined estimated annual hour burden for all SBS Entities to complete applications and notices pursuant to Rule of Practice 194 is approximately 48 hours per year (30 + 18).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number.

Written comments are invited on: (a) whether this proposed collection of information is necessary for the proper performance of the functions of the SEC, including whether the information will have practical utility; (b) the accuracy of the SEC's estimate of the burden imposed by the proposed collection of information, including the validity of the methodology and the assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated, electronic collection techniques or other forms of information technology.

Please direct your written comments on this 60-Day Collection Notice to Austin Gerig, Director/Chief Data Officer, Securities and Exchange Commission, c/o Tanya Ruttenberg via email to *PaperworkReductionAct@sec.gov* by September 15, 2025. There will be a second opportunity to comment on this SEC request following the **Federal Register** publishing a 30-Day Submission Notice.

Dated: July 14, 2025.

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2025–13312 Filed 7–15–25; 8:45 am]

BILLING CODE 8011–01–P

[1] *See* SEC, List of Security-Based Swap Dealers and Major Security-Based Swap Participants, *available at https://www.sec.gov/files/tm-sbsd-msbsp-pax-list-2412.pdf.*

[2] While we previously estimated that we might receive as many as five applications and five notices from SBS Entity respondents in a given year, our experience since making this estimate has led us to revise down this expectation. Since the first registration of an SBS Entity with the Commission on October 27, 2021, the Commission has only received three notices and one application under Rule of Practice 194. *See* SEC, Applications and Notices by Security-Based Swap Dealers or Major Security-Based Swap Participants for Statutorily Disqualified Associated Persons to Effect or Be Involved in Effecting Security-Based Swap Transactions (Rule of Practice 194) (''Rule 194 Approval Orders and Notices Database''), *available at https://www.sec.gov/rule-practice-194-applications-and-notices.* Based on this and related discussions with registered SBS Entities, we do not expect the number of applications and notices to exceed these figures on an annual basis.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–103439; File No. SR–MEMX–2025–21]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Exchange's Fee Schedule Concerning Equities Transaction Pricing

July 11, 2025.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on June 30, 2025, MEMX LLC (''MEMX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing with the Commission a proposed rule change to amend the Exchange's fee schedule applicable to Members [3] (the ''Fee Schedule'') pursuant to Exchange Rules 15.1(a) and (c). As is further described below, the Exchange proposes to (i) increase the fee for executions of Retail Orders in securities priced at or above $1.00 per share that remove liquidity from the Exchange and (ii) modify the Liquidity Provision Tiers by reducing the rebate and modifying the required criteria under Liquidity Provision 2 and reducing the rebates under Liquidity Provision Tiers 3, 4, and 5. The Exchange proposes to implement the changes to the Fee Schedule pursuant to this proposal on July 1, 2025. The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Exchange Rule 1.5(p).

Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Fee Schedule to: (i) increase the fee for executions of Retail Orders [4] in securities priced at or above $1.00 per share that remove liquidity from the Exchange (such orders, ''Removed Retail Volume''); and (ii) modify the Liquidity Provision Tiers by reducing the rebate and modifying the required criteria under Liquidity Provision 2 and reducing the rebates under Liquidity Provision Tiers 3, 4, and 5, each as further described below.

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 18 registered equities exchanges, as well as a number of alternative trading systems and other off-exchange venues, to which market participants may direct their order flow. Based on publicly available information, no single registered equities exchange currently has more than approximately 12.7% of the total market share of executed volume of equities trading.[5] Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow, and the Exchange currently represents approximately 2.2% of the overall market share.[6] The Exchange in particular operates a ''Maker-Taker'' model whereby it provides rebates to Members that add liquidity to the Exchange and charges fees to Members that remove liquidity from the Exchange. The Fee Schedule sets forth the standard rebates and fees applied per share for orders that add and remove liquidity, respectively. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing, which provides Members with opportunities to qualify for higher rebates or lower fees where certain volume criteria and thresholds are met. Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

Increase Standard Fee for Removed Retail Volume

Currently, the Exchange charges a standard fee of $0.0028 per share for executions of Removed Retail Volume. The Exchange now proposes to increase the standard fee for executions of Removed Retail Volume to $0.0030 per share.[7] The purpose of increasing the standard fee for executions of Removed Retail Volume is for business and competitive reasons, as the Exchange believes that increasing such fee as proposed would generate additional revenue to offset some of the costs associated with the Exchange's current pricing structure, which provides various rebates for liquidity-adding orders, and the Exchange's operations generally, in a manner that is still consistent with the Exchange's overall pricing philosophy of encouraging added liquidity. The Exchange notes that despite the increase proposed herein, the proposed standard fee for executions of Removed Retail Volume remains in line with the standard fees charged by other exchanges for executions of Retail Orders in securities priced at or above $1.00 per share that remove liquidity.[8]

Liquidity Provision Tiers

The Exchange currently provides a base rebate of $0.0015 per share for executions of displayed orders in securities priced at or above $1.00 per share that add liquidity to the Exchange (such orders, ''Added Displayed Volume'').[9] The Exchange also currently offers Liquidity Provision Tiers 1–5 under which a Member may receive an enhanced rebate for executions of Added Displayed Volume by achieving the corresponding required volume criteria for each such tier. The Exchange now proposes to reduce the rebate and modify the required criteria under Liquidity Provision Tier 2 and reduce the rebates under Liquidity Provision Tiers 3, 4, and 5, as further described below.

First, with respect to Liquidity Provision Tier 2, the Exchange currently provides an enhanced rebate of $0.0032 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving: (1) an ADAV [10] that is equal to or greater than 0.20% of the TCV [11] and an ADV [12] that is equal or greater than 0.50% of the TCV; or (2) an ADAV that is equal to or greater than 0.30% of the TCV. The Exchange now proposes to reduce the rebate for executions of Added Displayed Volume under Liquidity Provision Tier 2 to $0.0031 per share,[13] and to modify the required criteria such that a Member would now qualify for such tier by achieving: (1) an ADAV that is equal to or greater than 0.20% of the TCV and an ADV that is equal to or greater than 0.50% of the TCV; or (2) an ADAV that is equal to or greater than 0.20% of the TCV in securities priced at or above $1.00 per share and a Non-Displayed ADAV that is equal to or greater than 6,000,000 shares. Thus, such proposed change would keep the existing first alternative criteria intact and modify the second alternative criteria to include a reduced ADAV threshold in securities priced at or

[4] A ''Retail Order'' means an agency or riskless principal order that meets the criteria of FINRA Rule 5320.03 that originates from a natural person and is submitted to the Exchange by a Retail Member Organization (''RMO''), provided that no change is made to the terms of the order with respect to price or side of market and the order does not originate from a trading algorithm or any other computerized methodology. *See* Exchange Rule 11.21(a).

[5] Market share percentage calculated as of June 26, 2025. The Exchange receives and processes data made available through consolidated data feeds (*i.e.,* CTS and UTDF).

[6] *Id.*

[7] The proposed standard fee for executions of Removed Retail Volume is referred to by the Exchange on the Fee Schedule under the existing description ''Removed volume from MEMX Book, Retail Order'' with a Fee Code of ''RrA'' on execution reports.

[8] *See, e.g.,* the Cboe EDGX equities fee schedule on its public website (available at *https://www.cboe.com/us/equities/membership/fee_schedule/edgx/*), which reflects a standard fee of $0.0030 per share for executions of Retail orders in securities priced at or above $1.00 per share that remove liquidity; the Cboe BZX equities fee schedule on its public website (available at *https://www.cboe.com/us/equities/membership/fee_schedule/bzx/*) which reflects a standard fee of $0.0030 per share for executions of Retail orders in securities priced at or above $1.00 per share that remove liquidity.

[9] The base rebate for executions of Added Displayed Volume is referred to by the Exchange on the Fee Schedule under the existing description ''Added non-displayed volume'' with a Fee Code of ''B'', ''D'' or ''J'', as applicable, on execution reports.

[10] As set forth on the Fee Schedule, ''ADAV'' means the average daily added volume calculated as the number of shares added per day, which is calculated on a monthly basis, and ''Displayed ADAV'' means ADAV with respect to displayed orders.

[11] As set forth on the Fee Schedule, ''TCV'' means total consolidated volume calculated as the volume reported by all exchanges and trade reporting facilities to a consolidated transaction reporting plan for the month for which the fees apply.

[12] As set forth on the Fee Schedule, ''ADV'' means average daily volume calculated as the number of shares added or removed, combined, per day. ADV is calculated on a monthly basis.

[13] The proposed pricing for Liquidity Provision Tier 2 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 2'' with a Fee Code of ''B2'', ''D2'' or ''J2'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

above $1.00 per share and a Non-Displayed ADAV threshold. The Exchange is not proposing to change the rebate for executions of orders in securities priced below $1.00 per share under Liquidity Provision Tier 2.

Second, with respect to Liquidity Provision Tier 3,[14] the Exchange currently provides an enhanced rebate of $0.0030 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving: 1) an ADAV that is equal to or greater than 0.20% of the TCV in securities priced at or above $1.00 per share; or 2) an ADAV that is equal to or greater than 0.175% of the TCV. The Exchange now proposes to reduce the rebate for executions of Added Displayed Volume under Liquidity Provision Tier 3 to $0.0029 per share. The Exchange is not proposing to change the criteria required to qualify for Liquidity Provision Tier 3. The Exchange is also not proposing to change the rebate for executions of orders in securities priced below $1.00 per share under such tier.

Third, with respect to Liquidity Provision Tier 4,[15] the Exchange currently provides an enhanced rebate of $0.0029 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving an ADAV (excluding Retail Orders) that is equal to or greater than 0.09% of the TCV. The Exchange now proposes to reduce the rebate for executions of Added Displayed Volume under Liquidity Provision Tier 4 to $0.0028 per share. The Exchange is not proposing to change the criteria required to qualify for Liquidity Provision Tier 4. The Exchange is also not proposing to change the rebate for executions of orders in securities priced below $1.00 per share under such tier.

Lastly, with respect to Liquidity Provision Tier 5,[16] the Exchange currently provides an enhanced rebate of $0.0025 per share for executions of Added Displayed Volume for Members that qualify for such tier by achieving an ADAV that is equal to or greater than 0.06% of the TCV. The Exchange now proposes to reduce the rebate for executions of Added Displayed Volume under Liquidity Provision Tier 5 to $0.0024 per share. The Exchange is not proposing to change the criteria required to qualify for Liquidity Provision Tier 5. The Exchange is also not proposing to change the rebate for executions of orders in securities priced below $1.00 per share under such tier.

The purpose of reducing the rebates for executions of Added Displayed Volume under Liquidity Provision Tiers 2, 3, 4, and 5 as proposed (*i.e.,* by $0.0001 per share), which the Exchange believes is a modest reduction and remains commensurate with the required criteria, is for business and competitive reasons, as the Exchange believes that such reduction would decrease the Exchange's expenditures with respect to its transaction pricing in a manner that is still consistent with the Exchange's overall pricing philosophy of encouraging added liquidity.

The tiered pricing structure for executions of Added Displayed Volume under the Liquidity Provision Tiers provides an incremental incentive for Members to strive for higher volume thresholds to receive higher enhanced rebates for such executions and, as such, is intended to encourage Members to maintain or increase their order flow, primarily in the form of liquidity-adding volume, to the Exchange, thereby contributing to a deeper and more liquid market to the benefit of all Members and market participants. The Exchange believes that the Liquidity Provision Tiers, as modified by the proposed changes described above, reflect a reasonable and competitive pricing structure that is right-sized and consistent with the Exchange's overall pricing philosophy of encouraging added and/or displayed liquidity. Specifically, the Exchange believes that, after giving effect to the proposed changes described above, the rebate for executions of Added Displayed Volume provided under each of the Liquidity Provision Tiers 1–5 remains commensurate with the corresponding required criteria under each such tier and is reasonably related to the market quality benefits that each such tier is designed to achieve.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[17] in general, and with Sections 6(b)(4) and 6(b)(5) of the Act,[18] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

As discussed above, the Exchange operates in a highly fragmented and competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient, and the Exchange represents only a small percentage of the overall market. The Commission and the courts have repeatedly expressed their preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [19]

The Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow or discontinue use of certain categories of products, in response to new or different pricing structures being introduced into the market. Accordingly, competitive forces constrain the Exchange's transaction fees and rebates, and market participants can readily trade on competing venues if they deem pricing levels at those other venues to be more favorable. The Exchange believes the proposal reflects a reasonable and competitive pricing structure designed to incentivize market participants to direct additional order flow, including displayed liquidity-adding and/or liquidity removing orders to the Exchange, which the Exchange believes would promote price discovery and enhance liquidity and market quality on the Exchange to the benefit of all Members and market participants.

The Exchange believes that the proposed change to increase the standard fee charged for executions Removed Retail Volume is reasonable because it represents only a modest increase from the current standard fee charged for executions of Removed

[14] The pricing for Liquidity Provision Tier 3 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 3'' with a Fee Code of ''B3'', ''D3'' or ''J3'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

[15] The pricing for Liquidity Provision Tier 4 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 4'' with a Fee Code of ''B4'', ''D4'' or ''J4'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

[16] The pricing for Liquidity Provision Tier 5 is referred to by the Exchange on the Fee Schedule under the existing description ''Added displayed volume, Liquidity Provision Tier 5'' with a Fee Code of ''B5'', ''D5'' or ''J5'', as applicable, to be provided by the Exchange on the monthly invoices provided to Members.

[17] 15 U.S.C. 78f.

[18] 15 U.S.C. 78f(b)(4) and (5).

[19] Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

Retail Volume and, as noted above, remains in line with the standard fees charged by other executions of Retail orders in securities priced at or above $1.00 per share that remove liquidity.[20] The Exchange also believes the proposed standard fee charged for executions of Removed Retail Volume is equitable and not unfairly discriminatory, as such fee will apply equally to all Members submitting Retail Orders to the Exchange.

The Exchange notes that volume and quoting-based incentives (such as tiers) have been widely adopted by exchanges, including the Exchange, and are reasonable, equitable and not unfairly discriminatory because they are open to all members on an equal basis and provide additional benefits that are reasonably related to the value to an exchange's market quality associated with higher levels of market activity, such as higher levels of liquidity provision and/or growth patterns, and the introduction of higher volumes of orders into the price and volume discovery process. The Exchange believes that the Liquidity Provision Tiers 2, 3, 4, and 5, as modified by the proposed changes to the rebates and criteria, as applicable, are reasonable, equitable and not unfairly discriminatory for these same reasons, as such tiers would continue to provide Members with an incremental incentive to achieve certain volume thresholds on the Exchange, are available to all Members on an equal basis, and, as described above, are designed to encourage Members to maintain or increase their order flow, including in the form of displayed, liquidity-adding orders to the Exchange in order to qualify for an enhanced rebate for executions of Added Displayed Volume, thereby contributing to a deeper, more liquid and well balanced market ecosystem on the Exchange to the benefit of all Members and market participants. The Exchange also believes that the proposed changes to such tiers reflect a reasonable and equitable allocation of fees and rebates, because, as noted above, the Exchange believes in each case that the proposed new rebate represents a modest reduction, as applicable, remains commensurate with the corresponding required criteria under such tier, and is reasonably related to the market quality benefits that the tier is designed to achieve, as described above.

For the reasons discussed above, the Exchange submits that the proposal satisfies the requirements of Sections 6(b)(4) and 6(b)(5) of the Act[21] in that it provides for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities and is not designed to unfairly discriminate between customers, issuers, brokers, or dealers. As described more fully below in the Exchange's statement regarding the burden on competition, the Exchange believes that its transaction pricing is subject to significant competitive forces, and that the proposed additive rebate described herein is appropriate to address such forces.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposal will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, as discussed above, the proposal is intended to incentivize market participants to direct additional order flow to the Exchange, thereby enhancing liquidity and market quality on the Exchange to the benefit of all Members and market participants. As a result, the Exchange believes the proposal would enhance its competitiveness as a market that attracts actionable orders, thereby making it a more desirable destination venue for its customers. For these reasons, the Exchange believes that the proposal furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.'' [22]

Intramarket Competition

As discussed above, the Exchange believes that the proposal would incentivize Members to submit additional order flow, including displayed, liquidity-adding and/or removing orders to the Exchange, thereby enhancing liquidity and market quality on the Exchange to the benefit of all Members, as well as enhancing the attractiveness of the Exchange as a trading venue, which the Exchange believes, in turn, would continue to encourage market participants to direct additional order flow to the Exchange. Greater liquidity benefits all Members by providing more trading opportunities and encourages Members to send additional orders to the Exchange, thereby contributing to robust levels of liquidity, which benefits all market participants. The opportunity to qualify for the proposed modified Liquidity Provision Tiers 2, 3, 4, and 5, and thus receive the proposed enhanced rebate for executions of Added Displayed Volume under such tiers, would be available to all Members that meet the associated volume requirements in any month. Additionally, as noted above, the proposed increased standard fee for executions of Removed Retail Volume would continue to apply equally to all Members in the same manner that such standard fees currently do today. For the foregoing reasons, the Exchange believes the proposed changes would not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intermarket Competition

As noted above, the Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. Members have numerous alternative venues that they may participate on and direct their order flow to, including 17 other equities exchanges and numerous alternative trading systems and other off-exchange venues. As noted above, no single registered equities exchange currently has more than approximately 12.7% of the total market share of executed volume of equities trading. Thus, in such a low-concentrated and highly competitive market, no single equities exchange possesses significant pricing power in the execution of order flow. Moreover, the Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow or reduce use of certain categories of products, in response to new or different pricing structures being introduced into the market. Accordingly, competitive forces constrain the Exchange's transaction fees and rebates, including with respect to Added Displayed Volume and Removed Retail Volume, and market participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. As described above, the proposed changes represent a competitive proposal through which the Exchange is seeking to generate additional revenue with respect to its transaction pricing and to encourage the submission of additional order flow to the Exchange through volume-based tiers, which have been widely adopted by exchanges, including the Exchange.

[20] *See supra* note 8.

[21] 15 U.S.C. 78f(b)(4) and (5).

[22] *See supra* note 19.

Accordingly, the Exchange believes the proposal would not burden, but rather promote, intermarket competition by enabling it to better compete with other exchanges that offer similar pricing incentives to market participants.

Additionally, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [23] The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition* v. *SEC,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers' . . . .''.[24] Accordingly, the Exchange does not believe its proposed pricing changes impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act [25] and Rule 19b–4(f)(2) [26] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MEMX–2025–21 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MEMX–2025–21. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MEMX–2025–21 and should be submitted on or before August 6, 2025.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[27]

Sherry R. Haywood,

Assistant Secretary.

[Disaster Declaration #21176 and #21177; TEXAS Disaster Number TX–20058]

Presidential Declaration Amendment of a Major Disaster for Public Assistance Only for the State of Texas

AGENCY: U.S. Small Business Administration.

ACTION: Amendment 1.

SUMMARY: This is an amendment of the Presidential declaration of a major disaster for Public Assistance Only for the State of Texas (FEMA–4879–DR), dated July 6, 2025.

Incident: Severe Storms, Straight-line Winds, and Flooding.

DATES: Issued on July 10, 2025.

Incident Period: July 2, 2025 and continuing.

Physical Loan Application Deadline Date: September 4, 2025.

Economic Injury (EIDL) Loan Application Deadline Date: April 6, 2026.

ADDRESSES: *Visit the MySBA Loan Portal at https://lending.sba.gov* to apply for a disaster assistance loan.

FOR FURTHER INFORMATION CONTACT: Sharon Henderson, Office of Disaster Recovery & Resilience, U.S. Small Business Administration, 409 3rd Street SW, Suite 6050, Washington, DC 20416, (202) 205–6734.

SUPPLEMENTARY INFORMATION: The notice of the President's major disaster declaration for Private Non-Profit organizations in the State of Texas, dated July 6, 2025, is hereby amended to include the following areas as adversely affected by the disaster.

Primary Counties: Kendall, Kimble, Menard, San Saba.

All other information in the original declaration remains unchanged.

Federal Highway Administration

[Docket No. FHWA–2025–0037]

Notice of Intent To Prepare an Environmental Impact Statement in Virginia

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice; correction.

SUMMARY: This Notices corrects the date by which comments must be submitted for the Notice of Intent (NOI) for the Powhite Parkway Project in western Chesterfield County, Virginia.

DATES: Comments on this NOI and the Additional Project Information Document must be received by the FHWA at the addressed below by August 15, 2025.

ADDRESSES: This NOI and Additional Project Information Document is available in the docket referenced above at *http://www.regulations.gov* and on the Project website located at *https://www.vdot.virginia.gov/projects/richmond-district/chesterfield-powhite-parkway-study/.* The NOI and Additional Information Document also will be mailed upon request. Interested parties are invited to submit comments by any of the following methods:

Website: For access to the documents, go to the Federal eRulemaking Portal located at *http://www.regulations.gov* or the Project website located at *https://www.vdot.virginia.gov/projects/richmond-district/chesterfield---powhite-parkway-study/.* The NOI and Additional Project Information Document also will be mailed upon request. Follow the online instructions for submitting comments.

Fax: 804–775–3356.

Mailing address of hand delivery or courier: Federal Highway Administration, 400 North 8th Street, Suite 750, Richmond, Virginia, 23219.

Email address: Amanda.Heath@dot.gov.

All submissions should include the agency name and the docket number that appears in the heading of this Notice. All comments received will be posted without change to *http://www.regulations.gov* or the Project website, *https://www.vdot.virginia.gov/projects/richmond-district/chesterfield---powhite-parkway-study/,* including any personal information provided. A summary of the comments received will be included in the Draft EIS, and all comments received will be included in an appendix to the Draft EIS.

FOR FURTHER INFORMATION CONTACT: FHWA: Amanda Heath, Environmental Protection Specialist, Federal Highway Administration—Virginia Division, 400 North 8th Street, Suite 650, Richmond, VA 23219–4825; email: *Amanda.Heath@dot.gov;* 804–775–3342. VDOT: Heather Staton, NEPA Project Manager/Environmental Division, Virginia Department of Transportation, 1401 East Broad Street, Richmond, VA, 23219; email: *heather.staton@vdot.virginia.gov;* 804–980–5659. Persons interested in receiving Project information can contact *PowhiteParkwayStudy@VDOT.virginia.gov* to be added to the Project mailing list.

SUPPLEMENTARY INFORMATION: On July 11, 2025, at 90 FR 31099, FHWA, in coordination with the Virginia Department of Transportation, published an NOI to solicit comment and advise the public, agencies, and stakeholders that an Environmental Impact Statement will be prepared to evaluate the potential environmental impacts of the proposed transportation improvements for the Powhite Parkway Project in western Chesterfield County, Virginia. That Notice incorrectly stated the comment period end date for this effort. This Notice corrects that error and establishes a comment period end date 30 days from the date of publication of this Notice. Late-filed comments will be considered to the extent practicable.

(Authority: 23 U.S.C. 139; 49 CFR 1.85.)

Daniel Omar Suarez,

Acting Division Administrator, Federal Highway Administration.

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2024–0293]

Commercial Driver's License: Application for Exemption; American Public Transportation Association

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of final disposition; grant in part, and deny in part, application for exemption.

SUMMARY: FMCSA announces its decision to grant, in part, and deny in part, the application from the American Public Transportation Association (APTA), on behalf of public transit agencies and their contractor partners. FMCSA grants the application request to allow State Driver Licensing Agencies (SDLAs) the option to waive the ''under-the-hood'' portion of the pre-trip vehicle inspection skills test requirement for commercial driver's license (CDL) applicants seeking to operate commercial motor vehicles (CMVs) in public transportation. Drivers issued CDLs pursuant to the requested exemption are restricted to intrastate operation of transit buses only. FMCSA denies APTA's application request to allow drivers issued a CDL under this exemption to operate in interstate commerce.

DATES: The exemption is effective July 16, 2025 and expires July 16, 2027.

FOR FURTHER INFORMATION CONTACT: Mr. Richard Clemente, FMCSA Driver and Carrier Operations Division; Office of Carrier, Driver and Vehicle Safety Standards; 202–366–2722; *richard.clemente@dot.gov.* If you have questions on viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

Viewing Comments and Documents

To view any documents mentioned as being available in the docket, go to *https://www.regulations.gov/docket/FMCSA-2024-0293/document* and choose the document to review. To view comments, click this notice, then click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

II. Privacy

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its regulatory process. DOT posts these comments, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice DOT/ALL 14 (Federal Docket Management System (FDMS)), which can be reviewed under the ''Department Wide System of Records Notices'' at *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices.* The comments are posted without edit and are searchable by the name of the submitter.

III. Legal Basis

FMCSA has authority under 49 U.S.C. 31136(e) and 31315(b) to grant exemptions from the Federal Motor Carrier Safety Regulations. FMCSA must publish a notice of each exemption request in the **Federal Register** (49 CFR 381.315(a)). The Agency must provide the public an opportunity to inspect the information relevant to the application, including the applicant's safety analysis. The Agency must provide an opportunity for public comment on the request.

The Agency reviews the application, safety analyses, and public comments and determines whether granting the exemption would likely achieve a level of safety equivalent to, or greater than, the level that would be achieved absent such exemption pursuant to the standard set forth in 49 U.S.C. 31315(b)(1). The Agency must publish its decision in the **Federal Register** (49 CFR 381.315(b)). If granted, the notice will identify the regulatory provision from which the applicant will be exempt, the effective period, and all terms and conditions of the exemption (49 CFR 381.315(c)(1)). If the exemption is denied, the notice will explain the reason for the denial (49 CFR 381.315(c)(2)). The exemption may be renewed (49 CFR 381.300(b)).

IV. Background

Current Regulatory Requirements

Under 49 CFR 383.113(a), CDL applicants must possess basic pre-trip vehicle inspection skills for the vehicle class that they operate or expect to operate. Applicants must be able to identify each safety-related part on the test vehicle and explain what needs to be examined during a pre-trip vehicle inspection to ensure the safe operation of the CMV, including the engine compartment.

As prescribed in 49 CFR 383.153(a)(10)(ix), a State may impose restrictions on a CDL or create its own restrictions using additional codes for additional restrictions, as long as each such restriction code is fully explained on the front or back of the CDL document.

Applicant's Request

APTA's application for exemption was described in detail in a **Federal Register** notice published on December 26, 2024, (89 FR 105175) and will not be repeated as the facts have not changed.

V. Public Comments

In response to APTA's application, the Agency received 29 comments;[1] the majority of the comments were from transit-related agencies and associations, such as the Regional Transportation Commission of Southern Nevada, the New York State Metropolitan Transportation Authority, and the Central Ohio Transit Authority. Of the 29 comments, 25 were in support of granting the exemption, three were in opposition, and one comment offered no position either for or against but instead provided general comments.

The three opposing comments were from two individuals and a transit provider. Bryan Martin commented, ''This would call for a separate transit/coach CDL or a restriction to a regular Class B CDL. Currently a bus driver can also drive ANY class B vehicle that they are endorsed for (air brake, tank, HazMat) as well as their bus/coach, but if you take away the small segment of the test for under the hood that would DQ [disqualify] them from traditional commercial trucks.'' Ozark Regional Transit also opposed granting the exemption and posed the following question: ''If you make this change to the CDL, what measures will be in place to prevent a CDL driver to go to another state and start driving a dump truck without knowing the components of

[1] The docket on Regulation.gov lists 30 comments, but one is a duplicate.

under the hood[?]'' Bobby Tyner commented, ''This could be the most unsafe thing that you could do.''

The 25 commenters in support of granting the exemption were primarily transit agencies and associations. Some of the common reasons cited for granting the exemption included: a comparison to the school bus industry's relief from the ''under-the-hood'' skills test; that the ''under-the-hood'' test is unrelated to the driver's job responsibilities; and that the ''under-the-hood'' skills test creates an unnecessary barrier to entry for potential bus operators that further exacerbates the driver shortage. The Community Transportation Association of America commented, ''FMCSA has already exempted the school bus industry from the 'under the hood' CDL testing requirements for many of the same reasons the public transit industry now seeks relief and we urge a similar exemption for all public transit operators.'' The Suburban Mobility Authority for Regional Transportation commented that under current CDL testing requirements, ''public transit workers are compelled to study topics that are not pertinent to their day-to-day responsibilities.'' Latinos in Transit commented, ''we see firsthand how the under-the-hood testing requirement creates unnecessary barriers to entry for potential bus operators, further exacerbating this shortage.''

The Pennsylvania Department of Transportation (PennDOT) was neither for nor against granting the exemption and questioned if APTA wanted an exemption from the original or modernized under-the-hood skills test. PennDOT stated, ''CDL Modernized test exempts applicants from mentioning four fluids (oil, transmission fluid, power steering fluid, and coolant (hydraulic fluid, if applicable)) during their test.'' PennDOT also recommended that FMCSA adopt a single under-the-hood waiver to prevent confusion between CDL restrictions for school and transit bus operators. PennDOT agreed with the applicant's claim that the under-the-hood portion of the test is unnecessary, stating ''Like school bus operators, public transit bus operators have maintenance teams for vehicle servicing, making the under-the-hood portion of the test irrelevant to their job duties. As such, expanding the waiver to eliminate all under-the-hood testing requirements would be practical. This would maintain consistency and allow for interstate driving rather than limiting to intrastate driving only.''

Other commenters, including the American Bus Association and PennDOT, stated that they favored a two-year exemption term and not a five-year exemption as requested by APTA.

VI. FMCSA Decision

FMCSA evaluated APTA's application and public comments and grants the exemption request for a period of two years to permit SDLAs to waive the ''under-the-hood'' portion of the pre-trip vehicle inspection skills test requirement for CDL applicants seeking to operate transit buses in intrastate commerce. FMCSA denies APTA's request to extend the exemption to interstate commerce.

APTA argues that transit agencies are experiencing similar hiring and driver retention challenges as the school bus industry, and the transit industry should receive the same relief granted to the school bus industry, without the intrastate restriction.[2] FMCSA agrees that APTA's request is similar in many respects to the National School Transportation Association's (NSTA) request, and that similar relief is warranted. Like school buses, transit buses travel for relatively short distances and are operated in higher population density areas where mechanics or other qualified personnel are readily available to provide roadside assistance in the event of a vehicle malfunction. Unlike with other CMVs that are often operated for long distances and in remote areas, the risk of a malfunction to a transit bus in a location where only the driver is readily available to perform repairs is low.

Under the exemption, CDL applicants must continue to pass all remaining elements of the pre-trip vehicle inspection components of the skills test, as set forth in 49 CFR 383.113(a)(1)(ii–ix). This exemption is optional for SDLAs, and it may be adopted regardless of which version of the skills test the SDLA administers. All other State or local bus inspection maintenance standards and CDL requirements continue to apply.

FMCSA does not believe that extending the relief beyond the relief granted to the school bus industry, to allow States to issue unrestricted CDLs under the exemption (*i.e.* authorizing interstate operation), would likely achieve an equivalent level of safety. The same reasoning for why FMCSA allowed only intrastate CDLs for school bus drivers under the NSTA exemption applies here as well. The intrastate K restriction required for CDLs issued under the NSTA exemption mitigates concerns about varying State requirements and maintains State authority over driver qualifications for school bus drivers. Allowing interstate operation for drivers issued CDLs under the NSTA exemption would require States that did not adopt the exemption to allow school bus drivers who did not pass the full CDL skills test to operate in their States. In addition, in response to NSTA's request to renew its exemption, the American Association of Motor Vehicle Administrators noted that if a driver received a CDL in a State that adopted the exemption and moved to another jurisdiction that did not adopt the exemption, the new jurisdiction of record would have no way to know that the applicant did not pass the full CDL skills test. FMCSA responded in its decision granting the exemption renewal that requiring States to include ''school bus only'' and K restrictions on CDLs issued under the exemption addressed concerns about drivers moving to a jurisdiction that did not adopt exemption (89 FR 95348, 95351). The reasoning of the NSTA exemption applies here, and FMCSA sees no grounds for granting APTA's request without a similar restriction allowing intrastate operations only.

Further, FMCSA believes that the required restrictions—transit bus only and intrastate only—on CDLs issued under this exemption address the points raised by the commenters who expressed concern about safety and confusion over States' differing rules.

A. Applicability of Exemption

This exemption covers States for the period of two years. Under this exemption, a State may, but is not required to, waive the engine compartment portion of the pre-trip vehicle inspection skills test, set forth in 49 CFR 383.113(a)(1)(i), for CDL applicants seeking the P endorsement and issue them CDLs subject to the K restriction limiting their operation to intrastate commerce and subject to a transit bus only restriction. States issuing CDLs pursuant to this exemption are not subject to the requirement in 49 CFR 383.133(c)(1) that this portion of the pre-trip vehicle inspection test be administered in accordance with an FMCSA pre-approved examiner information manual.

FMCSA intends to closely monitor the safety impacts of the relief granted under this exemption. As necessary, FMCSA may take action to modify the exemption, including scaling back the

[2] On October 27, 2022, FMCSA granted an exemption that allowed States to waive the engine compartment portion of the pre-trip vehicle inspection skills test, set forth in 49 CFR 383.113(a)(1)(i), for CDL applicants seeking the school bus and passenger endorsements, subject to school bus only and K restrictions on their CDLs limiting their operation to intrastate commerce (87 FR 65114). This exemption was renewed on December 2, 2024 (89 FR 95348).

regulatory relief provided, or to terminate the exemption sooner, if conditions warrant.

B. Terms and Conditions

States issuing CDLs pursuant to this exemption must abide by the following terms and conditions:

1. The State Driver Licensing Agency must submit the names and CDL numbers of drivers who are issued a CDL pursuant to the terms of this exemption, as authorized by 49 CFR 383.73(h) and 384.225(e)(2), monthly to *MCPSD@dot.gov.*

2. The CDL credential must conform to the requirements of 49 CFR part 383, subpart J.

3. When issuing a K-restricted CDL with the P endorsement pursuant to this exemption, States must continue to comply with the applicable provisions set forth in 49 CFR 383.73.

4. When issuing a K-restricted CDL with the P endorsement pursuant to this exemption, States must place a transit bus only restriction on the CDL in accordance with 49 CFR 383.153(a)(10)(ix).

5. States must conduct the remaining pre-trip vehicle inspection components of the skills test for drivers subject to this exemption, as set forth in 49 CFR 383.113(a)(1)(ii–ix).

6. This exemption applies only to the intrastate operation by an operator of a public transportation system of public transit buses within the State that issues the CDL. Public transit buses are defined as buses used in ''public transportation,'' as that term is defined in 49 U.S.C. 5302(15). An operator of a public transportation system is defined as any State, local governmental authority, and any other operator of a public transportation system, and its contractor partners, that is subject to the Federal Transit Administration's safety oversight under 49 CFR part 673.

7. States must continue to comply with 49 CFR 383.133(c)(5), including that interpreters are prohibited and neither the applicant nor the examiner may communicate in a language other than English during the skills test.[3]

C. Termination

FMCSA does not believe that drivers issued CDLs under the exemption will experience any deterioration of safety below the level that would be achieved without the exemption. The exemption will be rescinded if: (1) States fail to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

Sue Lawless,

Assistant Administrator.

BILLING CODE 4910–EX–P

[3] FMCSA's regulatory guidance provides that a hearing-impaired driver satisfies the English language requirement if the driver is capable of reading and writing in the English language (79 FR 59139).

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2010–0048]

Southern California Regional Rail Authority's Request to Amend Its Positive Train Control Safety Plan and Positive Train Control System

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of availability and request for comments.

SUMMARY: This document provides the public with notice that, on July 7, 2025, Southern California Regional Rail Authority (SCAX) submitted a request for amendment (RFA) to its FRA-approved Positive Train Control Safety Plan (PTCSP) and positive train control (PTC) system, seeking FRA's approval to, as a result of updates made to its onboard PTC software, modify its PTC braking algorithm. As this RFA involves a request for FRA's approval of proposed material modifications to an FRA-certified PTC system, FRA is publishing this notice and inviting public comment on SCAX's RFA to its PTCSP.

DATES: FRA will consider comments received by August 5, 2025. FRA may consider comments received after that date to the extent practicable and without delaying implementation of valuable or necessary modifications to a PTC system.

ADDRESSES:

Comments: Comments may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and the applicable docket number. The relevant PTC docket number for this host railroad is Docket No. FRA–2010–0048. For convenience, all active PTC dockets are hyperlinked on FRA's website at *https://railroads.dot.gov/research-development/program-areas/train-control/ptc/railroads-ptc-dockets.* All comments received will be posted without change to *https://www.regulations.gov*; this includes any personal information.

FOR FURTHER INFORMATION CONTACT: Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, telephone: 816–516–7168, email: *Gabe.Neal@dot.gov.*

SUPPLEMENTARY INFORMATION: In general, Title 49 United States Code (U.S.C.) Section 20157(h) requires FRA to certify that a host railroad's PTC system complies with Title 49 Code of Federal Regulations (CFR) part 236, subpart I, before the technology may be operated in revenue service. Before making certain changes to an FRA-certified PTC system or the associated FRA-approved PTCSP, a host railroad must submit, and obtain FRA's approval of, an RFA to its PTCSP under 49 CFR 236.1021.

Under 49 CFR 236.1021(e), FRA's regulations provide that FRA will publish a notice in the **Federal Register** and invite public comment in accordance with 49 CFR part 211, if an RFA includes a request for approval of a material modification of a signal or train control system. Accordingly, this notice informs the public that, on July 7, 2025, SCAX submitted an RFA to its PTCSP for its Interoperable Electronic Train Management System, which seeks FRA's approval to modify its PTC braking algorithm. That RFA is available in Docket No. FRA–2010–0048.

Interested parties are invited to comment on SCAX's RFA to its PTCSP by submitting written comments or data. During FRA's review of SCAX's RFA, FRA will consider any comments or data submitted within the timeline specified in this notice and to the extent practicable, without delaying implementation of valuable or necessary modifications to a PTC system. *See* 49 CFR 236.1021; *see also* 49 CFR 236.1011(e). Under 49 CFR 236.1021, FRA maintains the authority to approve, approve with conditions, or deny a railroad's RFA to its PTCSP, at FRA's sole discretion.

Privacy Act Notice

In accordance with 49 CFR 211.3, FRA solicits comments from the public to better inform its decisions. DOT posts these comments, without edit, including any personal information the commenter provides, to *https://www.regulations.gov*, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See *https://www.regulations.gov/privacy-notice* for the privacy notice of

regulations.gov. To facilitate comment tracking, we encourage commenters to provide their name, or the name of their organization; however, submission of names is completely optional. If you wish to provide comments containing proprietary or confidential information, please contact FRA for alternate submission instructions.

[Docket Number FRA–2010–0039]

South Florida Regional Transportation Authority's Request To Amend Its Positive Train Control Safety Plan and Positive Train Control System

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of availability and request for comments.

SUMMARY: This document provides the public with notice that, on July 8, 2025, the South Florida Regional Transportation Authority (SFRV) submitted a request for amendment (RFA) to its FRA-certified Positive Train Control Safety Plan (PTCSP) and positive train control (PTC) system, seeking FRA's approval to temporarily disable its PTC system between Milepost (MP) SX1015.82 and MP SX1022.29 for a planned signal cutover that will last approximately two days and six hours, between September 19, 2025, and September 22, 2025. As this RFA may involve a request for FRA's approval of proposed material modifications to an FRA-certified PTC system, FRA is publishing this notice, and inviting public comment on SFRV's RFA to its PTC system.

DATES: FRA will consider comments received by August 5, 2025. FRA may consider comments received after that date to the extent practicable and without delaying implementation of valuable or necessary modifications to a PTC system.

ADDRESSES:

Comments: Comments may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and the applicable docket number. The relevant PTC docket number for this host railroad is Docket No. FRA–2010–0039. For convenience, all active PTC dockets are hyperlinked on FRA's website at *https://railroads.dot.gov/research-development/program-areas/train-control/ptc/railroads-ptc-dockets.* All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Action

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them. OFAC is also publishing updates to the identifying information of 28 persons that are currently included on the SDN List. Finally, OFAC is publishing removal of 518 persons, including blocked property, from the SDN List.

DATES: This action was issued on June 30, 2025. See Supplementary Information for relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Associate Director for Global Targeting, 202–622–2420; Assistant Director for Licensing, 202–622–2480; Assistant Director for Sanctions

Compliance, 202–622–2490 or *https://ofac.treasury.gov/contact-ofac.*

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website: *https://ofac.treasury.gov.*

Notice of OFAC Action

On June 30, 2025, the President issued Executive Order (E.O.) 14312 of June 30, 2025, ''Providing for the Revocation of Syria Sanctions'' that removes U.S. sanctions on Syria, effective July 1, 2025. This revocation includes six E.O.s that form the foundation of the Syrian Sanctions Regulations (31 CFR part 542, ''SySR''), and terminates the national emergency underlying those E.O.s, which resulted in the removal of U.S. sanctions on Syria.

A. In line with E.O. 14312, on June 30, 2025, OFAC designated 139 persons who were previously designated pursuant to the SySR. OFAC has determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authorities listed below. As a result of this designation, OFAC has further updated the listings of these persons, as reflected below.

BILLING CODE 4810–AL–P

Individuals:

1. AL-FREIJ, Fahd Jassem (a.k.a. AL-FREIJ, FAHAD JASSIM; a.k.a. AL-FURAYJ, FAHD JASIM); DOB 01 Jan 1950; POB Hama, Syria; nationality Syria; Gender Male (individual) [PAARSSR-EO13894].

C. In line with E.O. 14312, on June 30, 2025, OFAC updated the names of 28 persons who were designated pursuant to the SySR, in addition to other sanctions authorities. While these persons remain on the SDN List pursuant to other sanctions authorities, they are no longer designated pursuant to the SySR and their listings no longer reflect the SYRIA tag. The names and relevant sanctions authorities are listed at the URL below and may be distinguished from persons designated on the same day through the inclusion of a sanctions program tag *other than or in addition to* [PAARSSR–EO13894]: *https://ofac.treasury.gov/recent-actions/20250630.*

Lisa M. Palluconi,

Acting Director, Office of Foreign Assets Control.

[FR Doc. 2025–13277 Filed 7–15–25; 8:45 am]

BILLING CODE 4810–AL–C

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Agency Information Collection Activities; Comment Request on U.S. Individual Income Tax Returns and Related Forms, Schedules, Attachments, and Published Guidance

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of Information Collection; request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the IRS is inviting comments on the information collection request outlined in this notice.

DATES: Written comments should be received on or before September 15, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov*. Include ''OMB Control No. 1545–0074'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: View the latest drafts of the tax forms related to the information collection listed in this notice at *https://www.irs.gov/draft-tax-forms*. Requests for additional information or copies of this collection should be directed to Ronald J. Durbala, at (202) 317–5746, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *RJoseph.Durbala@irs.gov*.

SUPPLEMENTARY INFORMATION: The IRS, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the IRS assess the impact and minimize the burden of its information collection requirements. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Tax Compliance Burden

Tax compliance burden is defined as the time and money taxpayers spend to comply with their tax filing responsibilities. Time-related activities include recordkeeping, tax planning, gathering tax materials, learning about the law and what you need to do, and completing and submitting the return. Out-of-pocket costs include expenses such as purchasing tax software, paying

a third-party preparer, and printing and postage. Tax compliance burden does not include a taxpayer's tax liability, economic inefficiencies caused by sub-optimal choices related to tax deductions or credits, or psychological costs.

Proposed PRA Submission to OMB

Title: U.S. Individual Income Tax Returns and Related Forms, Schedules, Attachments, and Published Guidance.

OMB Number: 1545–0074.

Form Numbers: Form 1040 and all related forms, schedules, and attachments.

Abstract: IRC sections 6011 & 6012 of the Internal Revenue Code require individuals to prepare and file income tax returns annually. These forms, schedules, and attachments are used by individuals to report their income tax liability. This information collection covers the burden associated with preparing and submitting individual income tax returns and related forms, schedules, and attachments, and complying with published guidance.

Current Actions: There have been changes in regulatory guidance related to various forms approved under this approval package during the past year. There have been additions and removals of forms included in this approval package. It is anticipated that these changes will have an impact on the overall burden and cost estimates requested for this approval package, however these estimates were not finalized at the time of release of this notice. These estimated figures are expected to be available by the release of the 30-day comment notice from Treasury. This approval package is being submitted for renewal purposes.

Type of Review: Revision of a currently approved collection.

Affected Public: Individuals or Households.

Preliminary Estimated Number of Respondents: 170,100,000.

Preliminary Estimated Time Per Respondent (Hours): 12 hrs. 37 mins.

Preliminary Estimated Total Annual Time (Hours): 2,146,000,000.

Preliminary Estimated Total Annual Monetized Time ($): 47,122,000,000.

Preliminary Estimated Total Out-of-Pockets Costs ($): 50,575,000,000.

Preliminary Estimated Total Monetized Burden ($): 97,697,000,000.

Note: Total Monetized Burden = Out-of-Pocket Costs + Monetized Time

Approved: July 14, 2025.

Ronald J. Durbala,

IRS Tax Analyst.

Appendix–A: Forms and Schedules

INDIVIDUAL TAX FORMS

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Agency Information Collection Activities; Comment Request on Proceeds From Real Estate Transactions.

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of Information Collection; request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the IRS is inviting comments on the information collection request outlined in this notice.

DATES: Written comments should be received on or before September 15, 2025 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Include ''OMB Control No. 1545–0997'' in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: View the latest drafts of the tax forms related to the information collection listed in this notice at *https://www.irs.gov/draft-tax-forms.* Requests for additional information or copies of the form should be directed to Kerry Dennis at (202) 317–5751, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet, at *Kerry.L.Dennis@irs.gov.*

SUPPLEMENTARY INFORMATION: The IRS, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the IRS assess the impact and minimize the burden of its information collection requirements. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Title: Proceeds From Real Estate Transactions.

OMB Control Number: 1545–0997.

Form Number: 1099–S.

Abstract: Internal Revenue Code section 6045(e) and the regulations there under require persons treated as real estate brokers to submit an information return to the IRS to report the gross proceeds from real estate transactions. Form 1099–S is used for this purpose. The IRS uses the information on the form to verify compliance with the reporting rules regarding real estate transactions.

Current Actions: There are no changes to the form that would affect burden, however the agency has updated the estimated number of responses based on the most recent filing projections.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, and individuals or households.

Estimated Number of Responses: 5,450,400.

Estimated Time per Response: 10 minutes.

Estimated Total Annual Burden Hours: 872,064.

Dated: July 14, 2025.

Kerry L. Dennis,

Tax Analyst.

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Military Readiness Activities in the Hawaii-California Training and Testing Study Area; Proposed Rule

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 218

[Docket No. 250708–0120]

RIN 0648–BN44

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Military Readiness Activities in the Hawaii-California Training and Testing Study Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; proposed letters of authorization; request for comments.

SUMMARY: NMFS has received a request from the U.S. Department of the Navy (including the U.S. Navy and the U.S. Marine Corps) (Navy) and on behalf of the U.S. Coast Guard (Coast Guard) and U.S. Army (Army) (hereafter, Navy, Coast Guard, and Army are collectively referred to as the Action Proponents) for Incidental Take Regulations (ITR) and multiple associated Letters of Authorization (LOAs) pursuant to the Marine Mammal Protection Act (MMPA). The requested regulations would govern the authorization of take of marine mammals incidental to training and testing activities, and modernization and sustainment of ranges conducted in the Hawaii-California Training and Testing (HCTT) Study Area over the course of seven years from December 2025 through December 2032. NMFS requests comments on this proposed rule. NMFS will consider public comments prior to making any final decision on the promulgation of the requested ITR and issuance of the LOAs; agency responses to public comments will be summarized in the final rule, if issued. The Action Proponents' activities are considered military readiness activities pursuant to the MMPA, as amended by the National Defense Authorization Act for Fiscal Year 2004 (2004 NDAA) and the NDAA for Fiscal Year 2019 (2019 NDAA).

DATES: Comments and information must be received no later than August 15, 2025.

ADDRESSES: A plain language summary of this proposed rule is available at: *https://www.regulations.gov/docket/NOAA-NMFS-2025-0028.* You may submit comments on this document, identified by NOAA–NMFS–2025–0028, by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Visit *https://www.regulations.gov* and type NOAA–NMFS–2025–0028 in the Search box. Click on the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Ben Laws, Incidental Take Program Supervisor, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910–3225.
- *Fax:* (301) 713–0376; Attn: Ben Laws.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing at: *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, *etc.*), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

A copy of the Action Proponents' Incidental Take Authorization (ITA) application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-military-readiness-activities.* In case of problems accessing these documents, please call the contact listed below (see **FOR FURTHER INFORMATION CONTACT**).

FOR FURTHER INFORMATION CONTACT: Leah Davis, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Regulatory Action

This proposed rule, if promulgated, would provide a framework under the authority of the MMPA (16 U.S.C. 1361 *et seq.*) to allow for the authorization of take of marine mammals incidental to the Action Proponents' training and testing activities and modernization and sustainment of ranges (which qualify as military readiness activities) involving the use of active sonar and other transducers, air guns, and explosives (also referred to *as* ''in-water detonations''); pile driving and vibratory extraction; land-based missile and target launches; and vessel movement in the HCTT Study Area. The HCTT Study Area includes areas in the north-central Pacific Ocean, from California west to Hawaii and the International Date Line, and including the Hawaii Range Complex (HRC) and Temporary Operating Area (TOA), Southern California (SOCAL) Range Complex, Point Mugu Sea Range (PMSR), Silver Strand Training Complex, areas along the Southern California coastline from approximately Dana Point to Port Hueneme, and the Northern California (NOCAL) Range Complex (see figure 1.1–1 of the rulemaking and LOA application (hereafter referred to as the application)). Please see the Legal Authority for the Proposed Action section for relevant definitions.

Legal Authority for the Proposed Action

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review and the opportunity to submit comment.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking; other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (collectively referred to as ''mitigation''); and requirements pertaining to the monitoring and reporting of the takings. The MMPA defines ''take'' to mean to harass, hunt, capture, or kill, or attempt to harass, hunt, capture, or kill any marine mammal (16 U.S.C. 1362). The Preliminary Analysis and Negligible

Impact Determination section discusses the definition of ''negligible impact.''

The 2004 NDAA (Pub. L. 108–136) amended section 101(a)(5) of the MMPA to remove the ''small numbers'' and ''specified geographical region'' provisions, 16 U.S.C. 1371(a)(5)(F), and amended the definition of ''harassment'' in section 3(18)(B) of the MMPA as applied to a ''military readiness activity'' to read as follows: (1) Any act that injures or has the significant potential to injure a marine mammal or marine mammal stock in the wild (Level A Harassment); or (2) Any act that disturbs or is likely to disturb a marine mammal or marine mammal stock in the wild by causing disruption of natural behavioral patterns, including, but not limited to, migration, surfacing, nursing, breeding, feeding, or sheltering, to a point where such behavioral patterns are abandoned or significantly altered (Level B Harassment). 16 U.S.C. 1362(18)(B). The 2004 NDAA also amended the MMPA to establish in section 101(a)(5)(A)(iii) that ''[f]or a military readiness activity . . . , a determination of 'least practicable adverse impact' . . . shall include consideration of personnel safety, practicality of implementation, and impact on the effectiveness of the military readiness activity.'' 16 U.S.C. 1371(a)(5)(A)(iii). On August 13, 2018, the 2019 NDAA (Pub. L. 115–232) amended the MMPA to allow ITRs for military readiness activities to be issued for up to 7 years. 16 U.S.C. 1371(a)(5)(A)(ii).

Summary of Major Provisions Within the Proposed Rule

The major provisions of this proposed rule are as follows:

- The proposed authorization of take of marine mammals by Level A harassment and/or Level B harassment;
- The proposed authorization of take of marine mammals by mortality or serious injury (M/SI);
- The proposed use of defined powerdown and shutdown zones (based on activity);
- Proposed measures to reduce the likelihood of vessel strikes;
- Proposed activity limitations in certain areas and times that are biologically important (*i.e.,* for foraging, migration, reproduction) for marine mammals;
- The proposed implementation of a Notification and Reporting Plan (for dead, live stranded, or marine mammals struck by any vessel engaged in military readiness activities); and
- The proposed implementation of a robust monitoring plan to improve our understanding of the environmental effects resulting from the Action Proponents' training and testing activities and modernization and sustainment of ranges.

This proposed rule includes an adaptive management component that allows for timely modification of mitigation, monitoring, and/or reporting measures based on new information, when appropriate.

Summary of Request

On September 16, 2024, NMFS received an application from the Action Proponents requesting authorization to take marine mammals, by Level A and Level B harassment, incidental to training, testing, and modernization and sustainment of ranges (characterized as military readiness activities) including the use of sonar and other transducers, explosives, air guns, impact and vibratory pile driving and extraction, and land-based missile and target launches conducted within the HCTT Study Area. The Action Proponents also request authorization to take, by serious injury or mortality, a limited number of marine mammal species incidental to the use of explosives and vessel movement during military readiness activities conducted within the HCTT Study Area. The Action Proponents are requesting multiple 7-year LOAs for Navy training activities, Coast Guard training activities, Army training activities, and Navy testing activities. In response to our comments and following an information exchange, the Action Proponents submitted a revised application, deemed adequate and complete on December 13, 2024. On that same date, we published a notice of receipt of application in the **Federal Register** (89 FR 100982), requesting comments and information related to the Action Proponents' request for 30 days. During the 30-day public comment period on the NOR, we received one public comment from the Center for Biological Diversity. NMFS reviewed and considered all submitted material during the drafting of this proposed rule.

NMFS has previously promulgated ITRs pursuant to the MMPA relating to similar military readiness activities in areas located within the HCTT Study Area. NMFS published the first rule effective from January 5, 2009 through January 5, 2014, (74 FR 1456, January 12, 2009), the second rule effective from December 24, 2013 through December 24, 2018 (78 FR 78106, December 24, 2013), and the third rule effective from December 21, 2018 through December 20, 2023 (83 FR 66846, December 27, 2018), which was subsequently amended, extending the effective date until December 20, 2025 (85 FR 41780, July 10, 2020) pursuant to the 2019 NDAA and later further amended to increase the take of large whales by vessel strike and modify the mitigation, monitoring, and reporting measures to reduce vessel strikes (90 FR 4944, January 16, 2025). For this proposed rulemaking, the Action Proponents propose to conduct substantially similar training and testing activities within the HCTT Study Area that were conducted under previous rules (noting that the Study Area has been expanded, as described in the *Geographic Region* section).

The Action Proponents' application reflects the most up-to-date compilation of training and testing activities, and modernization and sustainment of ranges deemed necessary to accomplish military readiness requirements. The types and numbers of activities included in the proposed rule account for interannual variability in training and testing to meet evolving or emergent military readiness requirements. As explained herein, these proposed regulations also consolidate several actions conducted by the Navy that were previously authorized by NMFS and include some new military readiness activities carried out by the Action Proponents. In particular, these proposed regulations would cover incidental take during military readiness activities in the HCTT Study Area that would occur for a 7-year period following the expiration of the existing MMPA authorization which expires on December 20, 2025 (85 FR 41780, as amended by 90 FR 4944). In addition, this proposed rule includes PMSR activities for which incidental take has previously been authorized under separate authorizations, and, if finalized, this rule would supersede the most recent PMSR regulations (87 FR 40888, July 8, 2022). This proposed rule also includes areas along the Southern California coastline from approximately Dana Point to Port Hueneme and would supersede the incidental harassment authorization (IHA) allowing incidental take of marine mammals during pile driving training activities at Port Hueneme (90 FR 20283, May 13, 2025). In this proposed rule, we have undertaken a comprehensive assessment of the risks/impacts of all military training and testing activities on marine mammals likely to be present within the entire range of the Study Area.

Description of Proposed Activity

Overview

The Action Proponents request authorization to take marine mammals

incidental to conducting military readiness activities. The Action Proponents have determined that acoustic and explosives stressors are likely to result in take of marine mammals in the form of Level A and B harassment, and that a limited number of takes by serious injury or mortality may result from vessel movement and use of explosives (including ship shock trials). Detailed descriptions of these activities are provided in chapter 2 and appendix A of the 2024 HCTT Draft Environmental Impact Statement/ Overseas Environmental Impact Statement (2024 HCTT Draft EIS/OEIS) (*https://www.nepa.navy.mil/hctteis/*) and in the Action Proponents' application (*https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-military-readiness-activities*), which are summarized here. Of note, the U.S. Air Force (USAF) is a joint lead agency for the 2024 HCTT Draft EIS/OEIS; USAF activities consist of air combat maneuvers and air-to-air gunnery (a gunnery exercise in which fixed-wing aircraft fire medium caliber guns at air targets). The Action Proponents determined that USAF activities would not result in the take of marine mammals, and therefore these activities are not included in the Action Proponents' application. NMFS concurs that these activities are not anticipated to result in incidental take of marine mammals.

The Navy's statutory mission is to organize, train, equip, and maintain combat-ready naval forces for the peacetime promotion of the national security interests and prosperity of the United States, and for prompt and sustained combat incident to operations essential to the prosecution of a naval campaign. This mission is mandated by Federal law (10 U.S.C. 8062 and 10 U.S.C. 8063), which requires the readiness of the naval forces of the United States. The Navy executes this responsibility by establishing and executing at-sea training and testing, often in designated operating areas (OPAREAs) and testing and training ranges. The Navy must be able to access and utilize these areas and associated sea and air space to develop and maintain skills for conducting naval operations. The Navy's testing activities ensure naval forces are equipped with well-maintained systems that take advantage of the latest technological advances. The Navy's research and acquisition community conducts military readiness activities that involve testing. The Navy tests vessels, aircraft, weapons, combat systems, sensors, and related equipment, and conducts scientific research activities to achieve and maintain military readiness.

The mission of the Coast Guard is to ensure the maritime safety, security, and stewardship of the United States. To advance this mission, the Coast Guard must ensure its personnel can qualify and train jointly with, and independently of, the Navy and other services in the effective and safe operational use of Coast Guard vessels, aircraft, and weapons under realistic conditions. These activities help ensure the Coast Guard can safely assist in the defense of the United States by protecting the United States' maritime safety, security, and natural resources in accordance with its national defense mission (14 U.S.C. 102). Coast Guard training, which accounts for a small portion of overall activities, is summarized below.

The Army is increasingly required to support the naval mission, frequently training in concert with the Navy. Some of this training includes the use of explosives in the marine environment.

Dates and Duration

The specified activities would occur at any time during the 7-year period of validity of the regulations. The proposed number of military readiness activities are described in the Detailed Description of the Specified Activity section (table 2 through table 9).

Geographic Region

The HCTT Study Area includes areas in the north-central Pacific Ocean, from California west to Hawaii and the International Date Line, and including the HRC and TOA, SOCAL Range Complex, PMSR, Silver Strand Training Complex, and the NOCAL Range Complex. The HRC encompasses ocean areas around the Hawaiian Islands, extending from 16 degrees north latitude to 43 degrees north latitude and from 150 degrees west longitude to the International Date Line (figure 1). It also includes pierside locations and port transit channels, bays, harbors, inshore waterways, amphibious approach lanes, and civilian ports where military readiness activities occur as well as transits between homeports and the Hawaii and California Study Areas. The geographic extent of the HRC remains the same and has not changed since the last rulemaking. The SOCAL Range Complex is located between Dana Point, California and San Antonio, Mexico, and extends southwest into the Pacific Ocean. The PMSR is located adjacent to Los Angeles, Ventura, Santa Barbara, and San Luis Obispo Counties along the Pacific Coast of Southern California. The Silver Strand Training Complex is an integrated set of training areas located on and adjacent to the Silver Strand, a narrow, sandy isthmus separating the San Diego Bay from the Pacific Ocean. The NOCAL Range Complex consists of two separate areas located offshore of central and northern California, one northwest of San Francisco and the other southwest of Monterey Bay.

The SOCAL Range Complex expansion, which is new, and incorporation of existing NOCAL Range Complex and the PMSR, are revisions for the HCTT Study Area (formerly HSTT (Hawaii-Southern California Training and Testing) Study Area) in this application (noting that take from activities at PMSR are currently authorized under a separate rule (87 FR 40888, July 8, 2022)).

This proposed rule also incorporates areas along the Southern California coastline from approximately Dana Point to Port Hueneme and includes the new IHA allowing incidental take of marine mammals during pile driving training activities at Port Hueneme (90 FR 20283, May 13, 2025).

Please refer to figure 1.1–1 of the application for a color map of the HCTT Study Area and figure 2–1 through figure 2–17 for additional maps of the range complexes, training and testing ranges, and other notable areas. A summary of the HCTT Study Area Training and Testing Ranges are provided in table 1.

BILLING CODE 3510–22–P

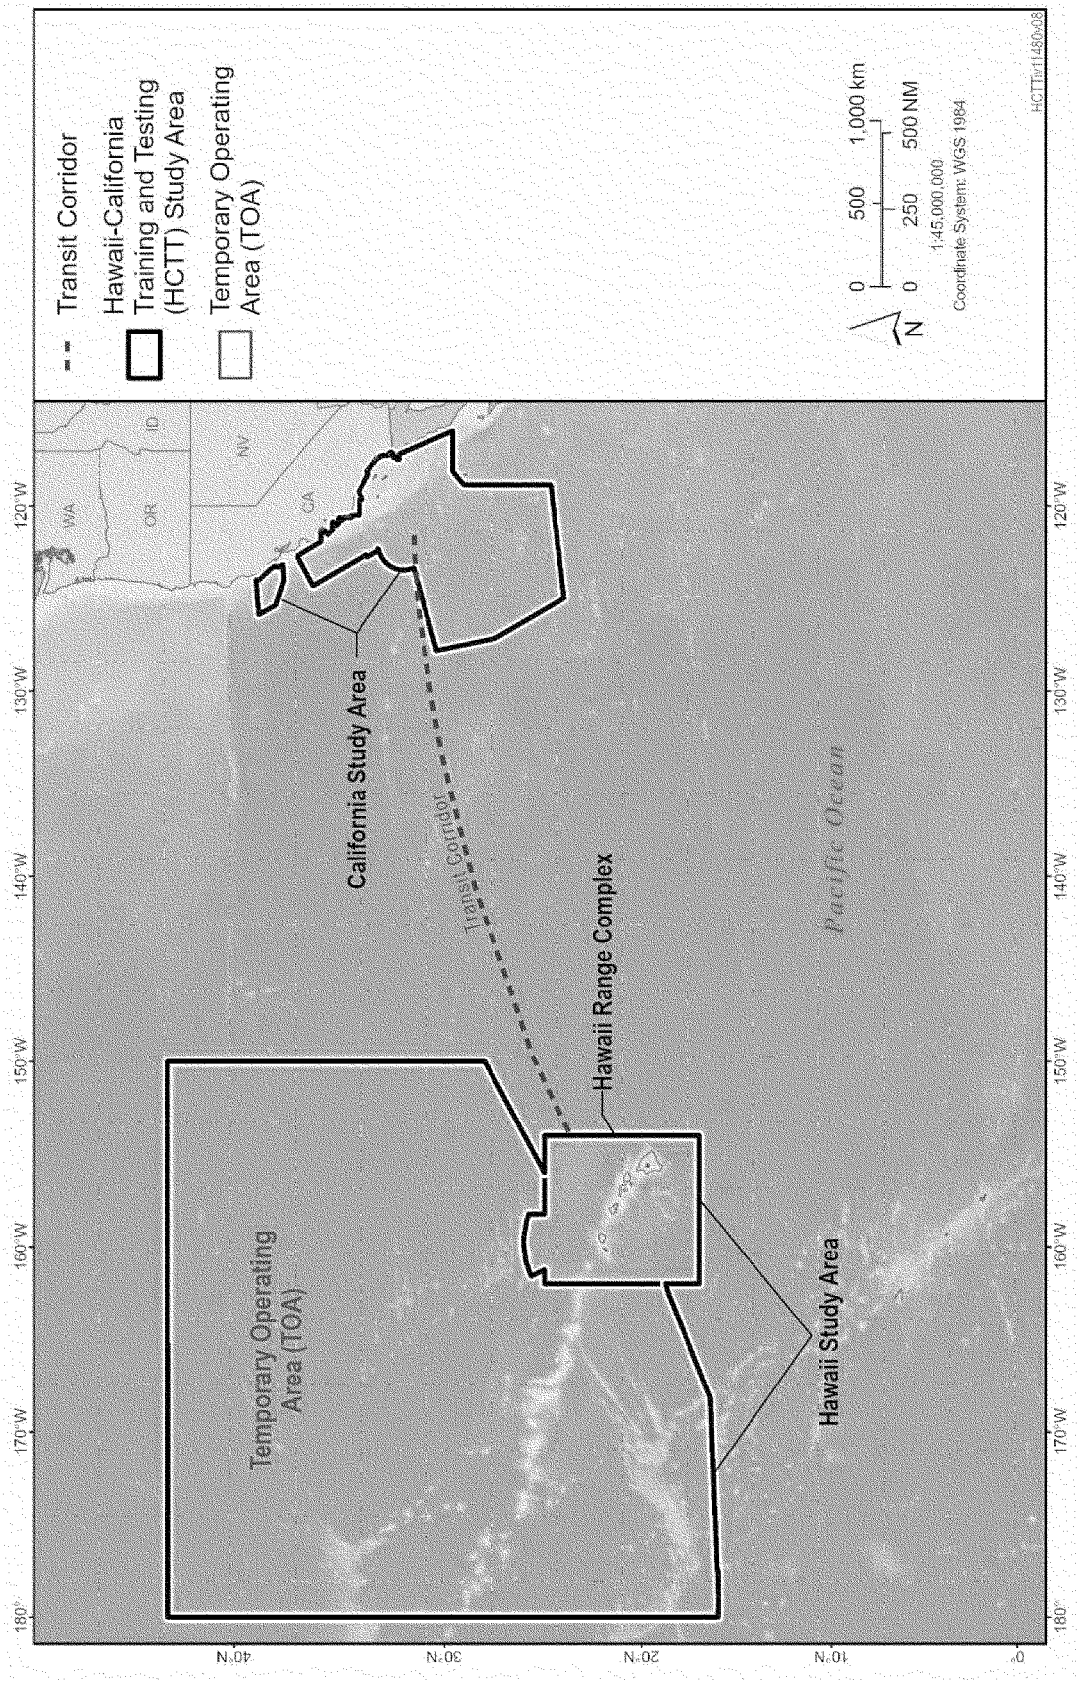

Figure 1 -- Map of the HCTT Study Area

BILLING CODE 3510–22–C

TABLE 1—HCTT STUDY AREA TRAINING AND TESTING RANGES

Name	Basic location	Spatial extent (air, sea, and undersea space)
Hawaii Range Complex (HRC)	Ocean areas around main Hawaiian islands from 16 degrees north latitude to 43 degrees north latitude and from 150 degrees west longitude to the International Date Line.	235,000 nmi² (80,602,744 ha).
Temporary Operating Area (TOA) ..	North and west from the island of Kaua'i	2,000,000 nmi² (585,980,800 ha).
Southern California Range Complex (SOCAL).	Off San Diego County out to approximately 550 nmi (1,109 km)	217,000 nmi² (74,428,916 ha).
Silver Strand Training Complex	Subset of areas within San Diego Bay and adjacent to ocean out to approximately 4 nmi.	16 nmi² (5,488 ha).
Point Mugu Sea Range (PMSR)	Off Los Angeles and Ventura Counties out to approximately 400 nmi	36,000 nmi² (12,347,654 ha).
Northern California Range Complex (NOCAL).	Two separate areas located offshore of central and northern California, one northwest of San Francisco and the other southwest of Monterey Bay.	16,000 nmi² (5,487,846 ha).

Note: nmi² = square nautical miles, ha = hectares, nmi = nautical miles, km = kilometer. Ports included in HCTT: San Diego Bay, California; Port Hueneme, California; and Pearl Harbor, Hawaii.

Detailed Description of the Specified Activity

The Action Proponents propose to conduct military readiness activities within the HCTT Study Area and have been conducting military readiness activities in the Study Area since the 1940s. The tempo and types of military readiness activities have varied interannually due to the introduction of new technologies, the evolving nature of international events, advances in warfighting doctrine and procedures, and changes in force structure (organization of vessels, weapons, and personnel). Such developments influence the frequency, duration, intensity, and location of required military readiness activities.

Primary Mission Areas

The Navy categorizes their activities into functional warfare areas called primary mission areas, while the Coast Guard categorizes their activities as operational mission programs. For the Navy, these activities generally fall six primary mission areas (Coast Guard mission areas are discussed below). The Navy mission areas with activities that may result in take of marine mammals (and stressors associated with training and testing activities within those mission areas) include the following:

- Amphibious warfare (in-water detonations);
- Anti-submarine warfare (sonar and other transducers, in-water detonations);
- Expeditionary warfare (in-water detonations, pile driving and extraction);
- Mine warfare (sonar and other transducers, in-water detonations);
- Surface warfare (in-water detonations and those occurring at or near the surface); and
- Other (sonar and other transducers, air guns, vessel movement, airborne noise from missile and target launches from San Nicolas Island (SNI) and from shore-to-surface gunnery and missile and aerial target launches from the Pacific Missile Range Facility (PMRF), unmanned systems training, and maintenance of ship and submarine sonar at piers and at-sea).

Most Navy activities conducted in HCTT are categorized under one of these primary mission areas; activities that do not fall within one of these areas are listed as ''other activities.'' In addition, ship shock (underwater detonations) trials, a specific Navy testing activity related to vessel evaluation, would be conducted. The testing community also categorizes most, but not all, of its testing activities under these primary mission areas. The testing community has three additional categories of activities: vessel evaluation (including ship shock trials), unmanned systems (*i.e.,* unmanned surface vehicles (USVs), unmanned underwater vehicles (UUVs)), and acoustic and oceanographic science and technology.

The Action Proponents describe and analyze the effects of their activities within the application (see the 2024 HCTT Draft EIS/OEIS for additional details). In their assessment, the Action Proponents concluded that sonar and other transducers, explosives (in-water detonations and those occurring at or near the surface), air guns, land-based missile and target launches, and pile driving/extraction were the stressors most likely to result in impacts on marine mammals that qualify as harassment (and serious injury or mortality by explosives or vessel strike) as defined under the MMPA. Therefore, the Action Proponents' application provides their assessment of potential effects from these stressors in terms of the primary warfare mission areas in which they would be conducted.

The Coast Guard has four major national defense missions:

- Maritime intercept operations;
- Deployed port operations/security and defense;
- Peacetime engagement; and
- Environmental defense operations (including oil and hazardous substance response).

The Coast Guard manages 6 major operational mission programs with 11 statutory missions, which includes defense readiness. As part of the Coast Guard's defense mission, 14 U.S.C. 1 states the Coast Guard is ''at all times an armed force of the United States.'' As part of the Joint Forces, the Coast Guard maintains its readiness to carry out military operations in support of the policies and objectives of the U.S. government. As an armed force, the Coast Guard trains and operates in the joint military arena at any time and functions as a specialized service under the Navy in time of war or when directed by the President. Coast Guard service members are trained to respond immediately to support military operations and national security. Federal law created the framework for the relationship between the Navy and the Coast Guard (10 U.S.C. 101; 14 U.S.C. 2 (7); 22 U.S.C. 2761; 50 U.S.C. 3004). To meet these statutory requirements and effectively carry out these missions, the Coast Guard's air and surface units train using realistic scenarios, including training with the Navy in their primary mission areas. Every Coast Guard unit is trained to support all statutory missions and, thus, trained to meet all mission requirements, which includes their defense mission requirements. Since all Coast Guard's missions generally entail the deployment of cutters or boats and either fixed-wing or rotary aircraft, the Coast Guard training requirements for one mission generally overlaps with the training requirements of other missions. Thus, when the Coast Guard is training

for its defense mission, the same skill sets are utilized for its other statutory missions.

The Coast Guard's defense mission does not involve use of low- or mid-frequency active sonar (LFAS or MFAS), missiles, in-water detonations, pile driving and vibratory extraction, or air guns that would result in harassment of marine mammals.

The Army's mission is mandated by Federal law (10 U.S.C. 7062), which requires an Army capable of, in conjunction with the other armed forces:

- Preserving the peace and security, and providing for the defense, of the United States, the Commonwealths and possessions, and any areas occupied by the United States;
- Supporting the national policies;
- Implementing the national objectives; and
- Overcoming any nations responsible for aggressive acts that imperil the peace and security of the United States.

In general, the Army includes land combat and service forces, as well as aviation and water transport. It shall be organized, trained, and equipped primarily for prompt and sustained combat incident to operations on land. It is responsible for the preparation of land forces necessary for the effective prosecution of war except as otherwise assigned and, in accordance with integrated joint mobilization plans, for the expansion of the peacetime components of the Army to meet the needs of war.

The Army is increasingly required to operate in the marine environment and with the Navy and, therefore, have an increased requirement to train in the maritime environment. The Army's activities include only the use of explosives, and do not include the use of sonars or other transducers, pile driving and vibratory extraction, or air guns that would result in harassment of marine mammals.

Below, we provide additional detail for each of the applicable primary mission areas.

Amphibious Warfare—

The mission of amphibious warfare is to project military power from the sea to the shore (*i.e.,* attack a threat on land by a military force embarked on ships) through the use of naval firepower and expeditionary landing forces. Amphibious warfare operations include Army, Navy, and Marine Corps small unit reconnaissance or raid missions to large-scale amphibious exercises involving multiple ships and aircraft combined into a strike group.

Amphibious warfare training ranges from individual, crew, and small unit events to large task force exercises. Individual and crew training includes amphibious vehicles and naval gunfire support training. Such training includes shore assaults, boat raids, airfield or port seizures, reconnaissance, and disaster relief. Large-scale amphibious exercises involve ship-to-shore maneuvers, naval fire support such as shore bombardment, air strikes, shore-based missile and artillery firing, and attacks on targets that are near friendly forces. Some amphibious activities include firing at ships from shore in defense of the amphibious objective.

Testing of guns, munitions, aircraft, ships, and amphibious vessels and vehicles used in amphibious warfare are often integrated into training activities and, in most cases, the systems are used in the same manner in which they are used for training activities. Amphibious warfare tests, when integrated with training activities or conducted separately as full operational evaluations on existing amphibious vessels and vehicles following maintenance, repair, or modernization, may be conducted independently or in conjunction with other amphibious ship and aircraft activities. Testing is performed to ensure effective ship-to-shore coordination and transport of personnel, equipment, and supplies. Tests may also be conducted periodically on other systems, vessels, and aircraft intended for amphibious operations to assess operability and to investigate efficacy of new technologies.

Anti-Submarine Warfare—

The mission of anti-submarine warfare is to locate, neutralize, and defeat hostile submarine forces that threaten Navy forces. Anti-submarine warfare is based on the principle that surveillance and attack aircraft, ships, and submarines all search for hostile submarines. These forces operate together or independently to gain early warning and detection and to localize, track, target, and attack submarine threats.

Anti-submarine warfare training addresses basic skills such as detecting and classifying submarines, as well as evaluating sounds to distinguish between enemy submarines and friendly submarines, ships, and marine life. More advanced training integrates the full spectrum of anti-submarine warfare from detecting and tracking a submarine to attacking a target using either exercise torpedoes (*i.e.,* torpedoes that do not contain a warhead) or simulated weapons. These integrated anti-submarine warfare training exercises are conducted in coordinated, at-sea training events involving submarines, ships, and aircraft.

Testing of anti-submarine warfare systems is conducted to develop new technologies and assess weapon performance and operability with new systems and platforms, such as unmanned systems. Testing uses ships, submarines, and aircraft to demonstrate capabilities of torpedoes, missiles, countermeasure systems, and underwater surveillance and communications systems. Tests may be conducted as part of a large-scale fleet training event involving submarines, ships, fixed-wing aircraft, and helicopters. These integrated training events offer opportunities to conduct research and acquisition activities and to train aircrew in the use of new or newly enhanced systems during a large-scale, complex exercise.

Expeditionary Warfare—

The mission of expeditionary warfare is to provide security and surveillance in the littoral (*i.e.,* at the shoreline), riparian (*i.e.,* along a river), or coastal environments. Expeditionary warfare is wide ranging and includes defense of harbors, operation of remotely operated vehicles, clearing obstacles, small boat attack, and boarding/seizure operations.

Expeditionary warfare training activities conducted by the Action Proponents include underwater construction team training, diver propulsion device training and testing, parachute insertion, dive and salvage operations, and insertion/extraction via air, surface, and subsurface platforms, among others (see appendix A (Activity Descriptions) of the 2024 HCTT Draft EIS/OEIS for a full description of the expeditionary warfare activities).

Mine Warfare—

The mission of mine warfare is to detect, classify, and avoid or neutralize (*i.e.,* disable) mines to protect U.S. ships and submarines, and to maintain free access to ports and shipping lanes. Mine warfare training for the Navy falls into two primary categories: mine detection and classification, and mine countermeasure and neutralization. Mine warfare also includes offensive mine laying to gain control of or deny the enemy access to sea space. Naval mines can be laid by ships, submarines, UUVs, or aircraft.

Mine warfare neutralization training includes exercises in which aircraft, ships, submarines, underwater vehicles, unmanned vehicles, or marine mammal detection systems search for mine shapes. Personnel train to destroy or disable mines by attaching underwater

explosives to or near the mine or using remotely operated vehicles to destroy the mine. Towed influence mine sweep systems mimic a particular ship's magnetic and acoustic signature, which would trigger a real mine causing it to explode.

Testing and development of mine warfare systems is conducted to improve sonar, laser, and magnetic detectors intended to hunt, locate, and record the positions of mines for avoidance or subsequent neutralization. Mine detection and classification testing involves the use of air, surface, and subsurface vessels and uses sonar, including towed and side-scan sonar, and unmanned vehicles to locate and identify objects underwater. Mine detection and classification systems are sometimes used in conjunction with a mine neutralization system. Mine countermeasure and neutralization testing includes the use of air, surface, and subsurface units and uses tracking devices, countermeasure and neutralization systems, and general purpose bombs to evaluate the effectiveness of neutralizing mine threats. Most neutralization tests use mine shapes, or non-explosive practice mines, to accomplish the requirements of the activity. For example, during a mine neutralization test, a previously located mine is destroyed or rendered nonfunctional using a helicopter or manned surface vehicle/USV-based system that may involve the deployment of a towed neutralization system.

A small percentage of mine warfare testing activities require the use of high-explosive mines to evaluate and confirm the ability of the system to neutralize a high-explosive mine under operational conditions. Only a subset of all mine warfare training areas are approved for underwater explosive use (see figures 2–5, 2–11, and 2–12 of the application). The majority of mine warfare systems are deployed by ships, helicopters, and unmanned vehicles. Tests may also be conducted in support of scientific research to support these new technologies (see appendix H (Description of Systems and Ranges) of the 2024 HCTT Draft EIS/OEIS for additional details).

Surface Warfare—

The mission of surface warfare is to obtain control of sea space from which naval forces may operate and entails offensive action against surface and subsurface targets while also defending against enemy forces. In surface warfare, aircraft use guns, air-launched cruise missiles, or other precision-guided munitions; ships employ naval guns and surface-to-surface missiles; and submarines attack surface ships using torpedoes or submarine-launched, anti-ship cruise missiles.

Surface warfare training includes Navy, Coast Guard, and Army surface-to-surface gunnery and missile exercises, air-to-surface gunnery, bombing, and missile exercises, submarine missile or torpedo launch events, other munitions against surface targets, and amphibious operations in a contested environment.

Testing of weapons used in surface warfare is conducted to develop new technologies and to assess weapon performance and operability with new systems and platforms, such as unmanned systems. Tests include various air-to-surface guns and missiles, surface-to-surface guns and missiles, and bombing tests. Testing events may be integrated into training activities to test aircraft or aircraft systems in the delivery of ordnance on a surface target. In most cases the tested systems are used in the same manner in which they are used for training activities.

Other Training Activities—

Other training activities are conducted in the HCTT Study Area that fall outside of the primary mission areas but support overall readiness. These activities include sonar and other transducers, vessel movement, missile and target launch noise from locations on SNI and PMRF, artillery firing noise from shore to surface gunnery at PMRF, unmanned systems training, and maintenance of ship and submarine sonar at piers and at-sea.

Overview of Training Activities Within the Study Area

The Action Proponents routinely train in the HCTT Study Area in preparation for national defense missions. Training activities and exercises covered in this proposed rule are briefly described below and in more detail within appendix A (Activity Descriptions) of the 2024 HCTT Draft EIS/OEIS. The description, annual number of activities, and location of each training activity are provided by stressor category in table 2 through table 5. Each training activity described meets a requirement that can be traced ultimately to requirements set forth by the National Command Authority.

Within the Navy, a major training exercise (MTE) is comprised of multiple ''unit-level'' range exercises conducted by several units operating together while commanded and controlled by a single commander. These units are collectively referred to as carrier and expeditionary strike groups. These exercises typically employ an exercise scenario developed to train and evaluate the strike group in tactical naval tasks. In a MTE, most of the operations and activities being directed and coordinated by the strike group commander are identical in nature to the operations conducted during individual, crew, and smaller unit-level training events. However, in MTEs, these disparate training tasks are conducted in concert rather than in isolation. Some integrated or coordinated anti-submarine warfare exercises are similar in that they are composed of several unit-level exercises but are generally on a smaller scale than a MTE, are shorter in duration, use fewer assets, and use fewer hours of hull-mounted sonar per exercise. Coordinated training exercises involve multiple units working together to meet unit-level training requirements, whereas integrated training exercises involve multiple units working together in preparation for deployment. Coordinated exercises involving the use of sonar are presented under the category of anti-submarine warfare. The anti-submarine warfare portions of these exercises are considered together in coordinated activities for the sake of acoustic modeling. When other training objectives are being met, those activities are described via unit-level training in each of the relevant primary mission areas.

With a smaller fleet of approximately 250 cutters, Coast Guard activities are not as extensive as Navy activities due to differing mission requirements. However, the Coast Guard does train with the Navy and conducts some of the same training as the Navy. The Coast Guard does not conduct any exercises similar in scale to Navy MTEs/integrated exercises, and the use of mid- or low-frequency sonar, missiles, and underwater detonations are examples of actions that are not a part of the Coast Guard's mission requirements. Coast Guard training generally occurs close to the vessel homeport or close to shore, on established Navy training and testing ranges, or in transit to a scheduled patrol/mission. There are approximately 1,600 Coast Guard vessels (cutters up to 418 feet (ft); 127.4 meters (m) and boats less than 65 ft (19.8 m)), and the largest cutters would be underway for 3–4 months, whereas the smaller cutters would be underway from a few days to 4 weeks. Within California, there are approximately 20 cutters homeported. Cutters are defined as vessels larger than 65 ft (19.8 m). The service has about 1,680 boats nation-wide altogether. These craft include heavy weather response boats, special purpose craft,

aids-to-navigation (ATON) boats, and cutter-based boats. Sizes range from 64 ft (29.5 m) in length down to 12 ft (3.7 m). There are approximately 100 boats in California but the number of boats varies. Within Hawaii, the Coast Guard has eight cutters and an unspecified number of small boats homeported.

The MTEs and integrated/coordinated training activities analyzed for this request are Navy-led exercises in which the Coast Guard may participate and described in table 2. For additional information on these activities see table 1–8 of the application and appendix A (Activity Descriptions) of the 2024 HCTT Draft EIS/OEIS. Table 3 describes the proposed Navy training activities analyzed within the HCTT Study Area while table 4 describes the proposed Coast Guard training activities analyzed within the HCTT Study Area and table 5 describes the Army training activities analyzed within the HCTT Study Area. In addition to participating in Navy-led exercises, Coast Guard and Army training activities include unit-level activities conducted independently of, and not in coordination with, the Navy.

TABLE 2—MTEs AND INTEGRATED/COORDINATED TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA

Training type	Exercise group	Description	Scale	Duration	Location (range complex)	Exercise examples	Typical hull-mounted sonar per event (hours)
Major Training Exercise.	Large Integrated ASW.	Larger-scale, longer duration integrated ASW exercises.	Greater than 6 surface ASW units (up to 30 with the largest exercises), 2 or more submarines, multiple ASW aircraft.	Generally greater than 10 days.	SOCAL, PMSR, HRC.	Strike Group COMPUTEX, RIMPAC.	>500
Major Training Exercise.	Medium Integrated ASW.	Medium-scale, medium duration integrated ASW exercises.	Approximately 3–8 surface ASW units, at least 1 submarine, multiple ASW aircraft.	Generally 4–10 days.	SOCAL, PMSR, HRC.	Task Force/ Sustainment Exercise, Multi-Warfare Exercise.	100–500
Integrated/Coordinated Training.	Small Integrated ASW.	Small-scale, short duration integrated ASW exercises.	Approximately 3–6 surface ASW units, 2 dedicated submarines, 2–6 ASW aircraft.	Generally less than 5 days.	SOCAL, HRC	SWATT, NUWTAC ...	50–100
Integrated/Coordinated Training.	Medium Coordinated ASW.	Medium-scale, medium duration, coordinated ASW exercises.	Approximately 2–4 surface ASW units, possibly a submarine, 2–5 ASW aircraft.	Generally 3–10 days.	SOCAL, HRC	SCC, Fleet Battle Problem, TACDEVEX.	<100
Integrated/Coordinated Training.	Small Coordinated ASW.	Small-scale, short duration, coordinated ASW exercises.	Approximately 2–4 surface ASW units, possibly a submarine, 1–2 ASW aircraft.	Generally 2–4 days.	SOCAL, HRC	ID CERTEX	<50

Note: ASW = Anti-Submarine Warfare, HRC = Hawaii Range Complex, ID CERTEX = Independent Deployer Certification Exercise, NUWTAC = Naval Undersea Warfare Training Assessment Course, PMSR = Point Mugu Sea Range Overlap, RIMPAC = Rim of the Pacific, SCC = Submarine Commanders Course, SOCAL = Southern California Range Complex, SWATT = Surface Warfare Advanced Tactical Training, TACDEVEX = Tactical Development Exercise.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Major Training Exercise—Large Integrated ASW.	Composite Training Unit Exercise.	Aircraft carrier and carrier air wing integrates with surface and submarine units in a challenging multi-threat operational environment that certifies them ready to deploy. Duration: 21 days.	LFH, MF to HF, MF1, MFH, MFM.	1–2	11	Hawaii, SOCAL, PMSR, NOCAL.
Acoustic	Major Training Exercise—Large Integrated ASW.	Rim of the Pacific Exercise.	A biennial multinational training exercise in which navies from around the world assemble in Pearl Harbor, Hawaii, to conduct training throughout the Hawaiian Islands in a number of warfare areas. Marine mammal systems may be used during a Rim of the Pacific exercise. Components of a Rim of the Pacific exercise, such as certain mine warfare and amphibious training, may be conducted in the Southern California Range Complex. Duration: 30 days.	HFH, MF1, MFH, MFM.	0–1	4	Hawaii, SOCAL.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Major Training Exercise—Medium Integrated ASW.	Task Force/ Sustainment Exercise.	Aircraft carrier and carrier air wing integrates with surface and submarine units in a challenging multi-threat operational environment to maintain ability to deploy. Duration: 10 days.	LFH, MF to HF, MF1, MFH, MFM.	0–1	3	Hawaii.
Acoustic	Major Training Exercise—Medium Integrated ASW.	Task Force/ Sustainment Exercise.	Aircraft carrier and carrier air wing integrates with surface and submarine units in a challenging multi-threat operational environment to maintain ability to deploy. Duration: 10 days.	LFH, MF to HF, MF1, MFH, MFM.	0–1	3	SOCAL, PMSR, NOCAL.
Acoustic	Integrated/Coordinated ASW.	Composite Training Unit Exercise—Amphibious Ready Group/Marine Expeditionary Unit.	Navy and USMC forces conduct integration training at sea in preparation for deployment. Duration: 3 weeks.	LFH, MF to HF, MF1, MFH, MFM.	1–2	10	Hawaii, SOCAL, PMSR, NOCAL.
Acoustic	Integrated/Coordinated ASW.	Independent Deployer Certification Exercise/ Tailored Surface Warfare Training.	Multiple ships, aircraft, and submarines conduct integrated multi-warfare training with a surface warfare emphasis. Serves as a ready-to-deploy certification for individual surface ships tasked with surface warfare missions. Duration: 2–3 days.	MF to HF, MF1, MFH, MFM.	8–19	89	SOCAL, PMSR, NOCAL.
Acoustic	Integrated/Coordinated ASW.	Medium Coordinated ASW.	Multiple ships, aircraft, and submarines integrate the use of their sensors, including sonobuoys and unmanned systems, to search, detect, and track threat submarines; event may include inert torpedo firings. Duration: 3–10 days.	MF to HF, MF1, MFH, MFM.	12–17	99	Hawaii.
Acoustic	Integrated/Coordinated ASW.	Medium Coordinated ASW.	Multiple ships, aircraft, and submarines integrate the use of their sensors, including sonobuoys and unmanned systems, to search, detect, and track threat submarines; event may include inert torpedo firings. Duration: 3–10 days.	MF to HF, MF1, MFH, MFM.	5–13	59	SOCAL, PMSR, NOCAL.
Acoustic	Integrated/Coordinated ASW.	Small Joint Coordinated ASW.	Typically, a 5-day exercise with multiple ships, aircraft and submarines integrating the use of their sensors, including sonobuoys, to search, detect, and track threat submarines. Duration: 5 days.	LFH, MF to HF, MF1, MFH, MFM.	1	7	Hawaii.
Acoustic	Integrated/Coordinated ASW.	Small Joint Coordinated ASW.	Typically, a 5-day exercise with multiple ships, aircraft and submarines integrating the use of their sensors, including sonobuoys, to search, detect, and track threat submarines. Duration: 5 days.	LFH, MF to HF, MF1, MFH, MFM.	4–9	43	SOCAL, PMSR, NOCAL.
Explosive	Integrated/Coordinated Training—Other.	Large Amphibious Exercise.	The Large Amphibious Exercise utilizes all elements of the Marine Air Ground Task Force (Amphibious) to secure the battlespace (air, land, and sea), maneuver to and seize the objective, and conduct self-sustaining operations ashore with logistic support of the Expeditionary Strike Group. This exercise could include manned and unmanned activities in multiple warfare areas to secure the battlespace (air, land, and sea) and maneuver and secure operations ashore. Duration: 1 week.	E9	0–1	2	Hawaii.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Explosive	Integrated/Coordinated Training—Other.	Large Amphibious Exercise.	The Large Amphibious Exercise utilizes all elements of the Marine Air Ground Task Force (Amphibious) to secure the battlespace (air, land, and sea), maneuver to and seize the objective, and conduct self-sustaining operations ashore with logistic support of the Expeditionary Strike Group. This exercise could include manned and unmanned activities in multiple warfare areas to secure the battlespace (air, land, and sea) and maneuver and secure operations ashore. Duration: 1 week. Acoustic and Explosive.	Integrated/Coordinated Training—Other.	Innovation and Demonstration Exercise.	These exercises are conducted to demonstrate or test new capabilities, tactics, techniques, and procedures; and generate standardized, actionable data for evaluation. Duration: 1 week.	E5, HFH, LF to HF, LFH, MF to HF, MF1, MFH, MFM.	0–1	4	Hawaii.
Acoustic and Explosive.	Integrated/Coordinated Training—Other.	Innovation and Demonstration Exercise.	These exercises are conducted to demonstrate or test new capabilities, tactics, techniques, and procedures; and generate standardized, actionable data for evaluation. Duration: 1 week.	E5, HFH, LF to HF, LFH, MF to HF, MF1, MFH, MFM.	3	16	SOCAL.
Acoustic and Explosive.	Integrated/Coordinated Training—Other.	Innovation and Demonstration Exercise.	These exercises are conducted to demonstrate or test new capabilities, tactics, techniques, and procedures; and generate standardized, actionable data for evaluation. Duration: 1 week.	E5, HFH, LF to HF, LFH, MF to HF, MF1, MFH, MFM.	1	7	Transit Corridor.
Acoustic and Explosive.	Integrated/Coordinated Training—Other.	Multi-Warfare Exercise.	Live training events which could involve U.S., Joint, and coalition forces operating across all warfare areas (*e.g.,* amphibious, electronic and cyber, air, surface, sub-surface, special warfare, and expeditionary) with manned and unmanned platforms. Events could be comprised of small units up to and including Carrier and Amphibious Strike Groups. Live-fire events could be ship-to-shore, shore-to-offshore target, and ship-to-ship utilizing live ordnance and laser systems. Duration: 1–5 days.	E5, HFH, LF to HF, LFH, MF to HF, MF1, MFH, MFM.	2	12	Hawaii.
Acoustic and Explosive.	Integrated/Coordinated Training—Other.	Multi-Warfare Exercise.	Live training events which could involve U.S., Joint, and coalition forces operating across all warfare areas (*e.g.,* amphibious, electronic and cyber, air, surface, sub-surface, special warfare, and expeditionary) with manned and unmanned platforms. Events could be comprised of small units up to and including Carrier and Amphibious Strike Groups. Live-fire events could be ship-to-shore, shore-to-offshore target, and ship-to-ship utilizing live ordnance and laser systems. Duration: 1–5 days.	E5, HFH, LF to HF, LFH, MF to HF, MF1, MFH, MFM.	6–7	43	SOCAL, PMSR.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Explosive	Amphibious Warfare	Amphibious Operations in a Contested Environment.	Navy and Marine Corps forces conduct operations in coastal and offshore waterways against air, surface, and subsurface threats. Duration: 1–2 weeks.	E2	15	105	Hawaii.
Explosive	Amphibious Warfare	Amphibious Operations in a Contested Environment.	Navy and Marine Corps forces conduct operations in coastal and offshore waterways against air, surface, and subsurface threats. Duration: 1–2 weeks.	E2	10	70	SOCAL, SSTC.
Explosive	Amphibious Warfare	Naval Surface Fire Support Exercise-At Sea.	Surface ship crews fire large-caliber guns at a passive acoustic hydrophone scoring system. Duration: 1–2 hours of firing, 8 hours total.	E5	20–25	155	Hawaii.
Explosive	Amphibious Warfare	Shore-to-Surface Artillery Exercise.	Amphibious land-based forces fire artillery guns at surface targets. Duration: 1–2 hours of firing, 8 hours total.	E6	1	7	PMRF.
Explosive	Amphibious Warfare	Shore-to-Surface Artillery Exercise.	Amphibious land-based forces fire artillery guns at surface targets. Duration: 1–2 hours of firing, 8 hours total.	E6	12	84	SCI.
Explosive	Amphibious Warfare	Shore-to-Surface Missile Exercise.	Amphibious land-based forces fire anti-surface missiles, rockets, and loitering munitions at surface targets. Duration: 1–2 hours of firing, 8 hours total.	E9	4	28	PMRF.
Explosive	Amphibious Warfare	Shore-to-Surface Missile Exercise.	Amphibious land-based forces fire anti-surface missiles, rockets, and loitering munitions at surface targets. Duration: 1–2 hours of firing, 8 hours total.	E9	15	105	SCI.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Helicopter.	Helicopter crews search for, track, and detect submarines. Recoverable air launched torpedoes are employed against submarine targets. Duration: 2–5 hours.	HFH, MFH, MFM.	3–5	27	BARSTUR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Helicopter.	Helicopter crews search for, track, and detect submarines. Recoverable air launched torpedoes are employed against submarine targets. Duration: 2–5 hours.	HFH, MFH, MFM.	3–5	27	SOAR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Maritime Patrol Aircraft.	Maritime patrol aircraft aircrews search for, track, and detect submarines. Recoverable air launched torpedoes are employed against submarine targets. Duration: 2–8 hours.	HFH, MFM	20–80	320	BARSTUR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Maritime Patrol Aircraft.	Maritime patrol aircraft aircrews search for, track, and detect submarines. Recoverable air launched torpedoes are employed against submarine targets. Duration: 2–8 hours.	HFH, MFM	60–80	480	SOAR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Ship.	Surface ship crews search for, track, and detect submarines. Exercise torpedoes are used. Duration: 2–5 hours.	HFH, MF to HF, MF1.	34	238	BARSTUR, BSUR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Ship.	Surface ship crews search for, track, and detect submarines. Exercise torpedoes are used. Duration: 2–5 hours.	HFH, MF to HF, MF1.	104	728	SOAR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Submarine.	Submarine crews search for, track, and detect submarines. Exercise torpedoes are used. Duration: 8 hours.	HFH, LF to HF, MFH.	48	336	BARSTUR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Torpedo Exercise—Submarine.	Submarine crews search for, track, and detect submarines. Exercise torpedoes are used. Duration: 8 hours.	HFH, LF to HF, MFH.	26	182	SOAR.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Helicopter.	Helicopter crews search for, track, and detect submarines. Duration: 2–4 hours.	MFH, MFM	125–130	890	Hawaii.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Helicopter.	Helicopter crews search for, track, and detect submarines. Duration: 2–4 hours.	MFH, MFM	125–130	890	SOCAL, PMSR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Long-Range unmanned Surface Vessel.	Unmanned surface vessels search for, detect, and track a sub-surface target simulating a threat submarine with the goal of determining a firing solution that could be used to launch a torpedo. Duration: 1 day.	MFM	5	35	Hawaii.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Long-Range unmanned Surface Vessel.	Unmanned surface vessels search for, detect, and track a sub-surface target simulating a threat submarine with the goal of determining a firing solution that could be used to launch a torpedo. Duration: 1 day.	MFM	2	14	SOCAL.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Maritime Patrol Aircraft.	Maritime patrol aircraft aircrews search for, track, and detect submarines. Duration: 2–8 hours.	LFH, LFM, MFM.	150–200	1,200	Hawaii.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Maritime Patrol Aircraft.	Maritime patrol aircraft aircrews search for, track, and detect submarines. Duration: 2–8 hours.	LFH, LFM, MFM.	200	1,400	SOCAL, PMSR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Ship.	Surface ship crews search for, track, and detect submarines. Duration: 2–4 hours.	MF to HF, MF1, MFH.	60–119	595	Hawaii.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Ship.	Surface ship crews search for, track, and detect submarines. Duration: 2–4 hours.	MF to HF, MF1, MFH.	240–480	2,400	SOCAL, PMSR.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Submarine.	Submarine crews search for, track, and detect submarines. Duration: 8 hours.	HFH, MFH	200	1,400	Hawaii.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Submarine.	Submarine crews search for, track, and detect submarines. Duration: 8 hours.	HFH, MFH	60	420	SOCAL, PMSR, NOCAL.
Acoustic	Anti-Submarine Warfare.	Anti-Submarine Warfare Tracking Exercise—Submarine.	Submarine crews search for, track, and detect submarines. Duration: 8 hours.	HFH, MFH	9	63	Transit Corridor.
Acoustic and Explosive.	Anti-Submarine Warfare.	Training and End-to-End Mission Capability Verification—Torpedo.	A submarine launches exercise and explosive torpedoes at a suspended target. Duration: 8 hours.	E11, HFH, HFM, MFH.	2	14	BARSTUR.
Acoustic and Explosive.	Anti-Submarine Warfare.	Training and End-to-End Mission Capability Verification—Torpedo.	A submarine launches exercise and explosive torpedoes at a suspended target. Duration: 8 hours.	E11, HFH, HFM, MFH.	1	7	SOAR.
Acoustic	Expeditionary Warfare.	Port Damage Repair	Navy Expeditionary forces train to repair critical port facilities. Duration: 8 hours per day for 5 days.	Pile Driving	12	84	Port Hueneme.
Explosive	Expeditionary Warfare.	Obstacle Clearance	Trains forces to create cleared lanes in simulated enemy obstacle systems to allow friendly forces safe transit from sea to shore. Duration: 8 hours.	E2	40	280	FORACS.
Explosive	Expeditionary Warfare.	Obstacle Clearance	Trains forces to create cleared lanes in simulated enemy obstacle systems to allow friendly forces safe transit from sea to shore. Duration: 8 hours.	E2	10	70	Lima Landing.
Explosive	Expeditionary Warfare.	Obstacle Clearance	Trains forces to create cleared lanes in simulated enemy obstacle systems to allow friendly forces safe transit from sea to shore. Duration: 8 hours.	E2	10	70	Pearl Peninsula.
Explosive	Expeditionary Warfare.	Obstacle Clearance	Trains forces to create cleared lanes in simulated enemy obstacle systems to allow friendly forces safe transit from sea to shore. Duration: 8 hours.	E6	10	70	Pu'uloa.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Explosive	Expeditionary Warfare.	Obstacle Clearance ..	Trains forces to create cleared lanes in simulated enemy obstacle systems to allow friendly forces safe transit from sea to shore. Duration: 8 hours.	E2	100–150	850	SOCAL.
Explosive	Expeditionary Warfare.	Obstacle Clearance ..	Trains forces to create cleared lanes in simulated enemy obstacle systems to allow friendly forces safe transit from sea to shore. Duration: 8 hours.	E10	6	42	SCI.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Air.	Personnel are inserted into a water objective via fixed-wing aircraft using parachutes or by helicopters via ropes or jumping into the water. Personnel are extracted by helicopters or small boats. Duration: 1 hour.	E1	8	56	FORACS.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Air.	Personnel are inserted into a water objective via fixed-wing aircraft using parachutes or by helicopters via ropes or jumping into the water. Personnel are extracted by helicopters or small boats. Duration: 1 hour.	E1	26	182	Pearl Peninsula.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Air.	Personnel are inserted into a water objective via fixed-wing aircraft using parachutes or by helicopters via ropes or jumping into the water. Personnel are extracted by helicopters or small boats. Duration: 1 hour.	E1	500	3,500	Hawaii.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Air.	Personnel are inserted into a water objective via fixed-wing aircraft using parachutes or by helicopters via ropes or jumping into the water. Personnel are extracted by helicopters or small boats. Duration: 1 hour.	E1	854–954	6,278	SOCAL.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Air.	Personnel are inserted into a water objective via fixed-wing aircraft using parachutes or by helicopters via ropes or jumping into the water. Personnel are extracted by helicopters or small boats. Duration: 1 hour.	E1	500–600	3,800	SSTC.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Surface and subsurface.	Personnel are inserted into and extracted from an objective area by small boats or subsurface platforms. Duration: 2–4 hours.	E1	270–336	2,088	Hawaii.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction—Surface and subsurface.	Personnel are inserted into and extracted from an objective area by small boats or subsurface platforms. Duration: 2–4 hours.	E1	1,049–1,149	7,643	SOCAL.
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction Training—Swimmer/ Diver.	Divers and swimmers infiltrate harbors, beaches, or moored vessels and conduct a variety of tasks. Duration: up to 12 hours.	E1	495	3,465	Hawaii
Explosive	Expeditionary Warfare.	Personnel Insertion/ Extraction Training—Swimmer/ Diver.	Divers and swimmers infiltrate harbors, beaches, or moored vessels and conduct a variety of tasks. Duration: up to 12 hours.	E1	1,080–1,280	8,160	SOCAL.
Explosive	Mine Warfare	Amphibious Breaching Operations.	Amphibious forces use explosive clearing systems to clear simulated mines on beaches, shallow water, and surf zones for potential landing of personnel and vehicles. Duration: 8 hours.	E6	100	700	Hawaii.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Explosive	Mine Warfare	Amphibious Breaching Operations.	Amphibious forces use explosive clearing systems to clear simulated mines on beaches, shallow water, and surf zones for potential landing of personnel and vehicles. Duration: 8 hours.	E6	275	1,925	SOCAL.
Explosive	Mine Warfare	Amphibious Breaching Operations.	Amphibious forces use explosive clearing systems to clear simulated mines on beaches, shallow water, and surf zones for potential landing of personnel and vehicles. Duration: 8 hours.	E6	315	2,205	SSTC.
Explosive	Mine Warfare	Amphibious Breaching Operations.	Amphibious forces use explosive clearing systems to clear simulated mines on beaches, shallow water, and surf zones for potential landing of personnel and vehicles. Duration: 8 hours.	E6	48–55	357	SWAT 2.
Acoustic and Explosive.	Mine Warfare	Civilian Port Defense–Homeland Security Anti-Terrorism/Force Protection Exercise.	Maritime security personnel train to protect civilian ports against enemy efforts to interfere with access to those ports. Duration: multiple days.	E4, HFH, HFM, MFH.	1–2	10	Hawaii.
Acoustic and Explosive.	Mine Warfare	Civilian Port Defense–Homeland Security Anti-Terrorism/Force Protection Exercise.	Maritime security personnel train to protect civilian ports against enemy efforts to interfere with access to those ports. Duration: multiple days.	E4, HFH, HFM, MFH.	1–2	11	SOCAL.
Acoustic and Explosive.	Mine Warfare	Civilian Port Defense–Homeland Security Anti-Terrorism/Force Protection Exercise.	Maritime security personnel train to protect civilian ports against enemy efforts to interfere with access to those ports. Duration: multiple days.	E4, HFH, HFM, MFH.	1–2	9	PMSR.
Explosive	Mine Warfare	Limpet Mine Neutralization System.	Navy Explosive Ordnance Disposal divers place a small charge on a simulated underwater mine. Duration: 2 hours.	E0, E3	6–8	48	Lima Landing.
Explosive	Mine Warfare	Limpet Mine Neutralization System.	Navy Explosive Ordnance Disposal divers place a small charge on a simulated underwater mine. Duration: 2 hours.	E0, E3	138–150	1,002	SOCAL.
Explosive	Mine Warfare	Limpet Mine Neutralization System.	Navy Explosive Ordnance Disposal divers place a small charge on a simulated underwater mine. Duration: 2 hours.	E0, E3	42–44	300	SSTC.
Acoustic	Mine Warfare	Mine Countermeasure Exercise—Ship Sonar.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	HFH, MF1K	30	210	Hawaii.
Acoustic	Mine Warfare	Mine Countermeasure Exercise—Ship Sonar.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	HFH, MF1K	42	294	Pearl Harbor.
Acoustic	Mine Warfare	Mine Countermeasure Exercise—Ship Sonar.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	HFH, MF1K	92	644	SOCAL.
Acoustic	Mine Warfare	Mine Countermeasure Exercise—Ship Sonar.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	HFH, MF1K	164	1,148	San Diego Bay.
Acoustic and Explosive.	Mine Warfare	Mine Countermeasures Mine Neutralization Remotely Operated Vehicle.	Ship, small boat, and helicopter crews locate and disable mines using remotely operated underwater vehicles. Duration: 1–4 hours.	E4, HFM	7–8	52	Hawaii MTRs.
Acoustic and Explosive.	Mine Warfare	Mine Countermeasures Mine Neutralization Remotely Operated Vehicle.	Ship, small boat, and helicopter crews locate and disable mines using remotely operated underwater vehicles. Duration: 1–4 hours.	E4, HFM	11	74	SOCAL.

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic and Explosive.	Mine Warfare	Mine Countermeasures Mine Neutralization Remotely Operated Vehicle.	Ship, small boat, and helicopter crews locate and disable mines using remotely operated underwater vehicles. Duration: 1–4 hours.	E4, HFM	6	42	SSTC.
Acoustic and Explosive.	Mine Warfare	Mine Countermeasures Mine Neutralization Remotely Operated Vehicle.	Ship, small boat, and helicopter crews locate and disable mines using remotely operated underwater vehicles. Duration: 1–4 hours.	E4, HFM	3–6	30	TAR 2.
Acoustic and Explosive.	Mine Warfare	Mine Countermeasures Mine Neutralization Remotely Operated Vehicle.	Ship, small boat, and helicopter crews locate and disable mines using remotely operated underwater vehicles. Duration: 1–4 hours.	E4, HFM	11	74	SCORE.
Explosive	Mine Warfare	Mine Neutralization Explosive Ordnance Disposal.	Personnel disable threat mines using explosive charges. Duration: up to 4 hours.	E6	5–7	41	Hawaii.
Explosive	Mine Warfare	Mine Neutralization Explosive Ordnance Disposal.	Personnel disable threat mines using explosive charges. Duration: up to 4 hours.	E6	203–211	1,445	SOCAL.
Explosive	Mine Warfare	Mine Neutralization Explosive Ordnance Disposal.	Personnel disable threat mines using explosive charges. Duration: up to 4 hours.	E6	17–25	143	SSTC.
Explosive	Mine Warfare	Mine Neutralization Explosive Ordnance Disposal.	Personnel disable threat mines using explosive charges. Duration: up to 4 hours.	E6	0–1	5	SWAT 2.
Acoustic	Mine Warfare	Submarine Mine Counter Measure Exercise.	Submarine crews use active sonar or UUVs, and shore-based personnel operate UUVs to detect and avoid training mine shapes or other underwater hazardous objects. Duration: 6 hours.	HFH, MF to HF, VHFH.	80	560	Hawaii.
Acoustic	Mine Warfare	Submarine Mine Counter Measure Exercise.	Submarine crews use active sonar or UUVs, and shore-based personnel operate UUVs to detect and avoid training mine shapes or other underwater hazardous objects. Duration: 6 hours.	HFH, MF to HF, VHFH.	40	280	SOCAL.
Acoustic	Mine Warfare	Submarine Mobile Mine and Mine Laying Exercise.	Submarine crews and shore-based personnel operating a UUV deploy exercise (inert) mobile mines or mines. Duration: 6 hours.	HFL, HFM, MFM, VHFL.	20	140	Hawaii.
Acoustic	Mine Warfare	Submarine Mobile Mine and Mine Laying Exercise.	Submarine crews and shore-based personnel operating a UUV deploy exercise (inert) mobile mines or mines. Duration: 6 hours.	HFL, HFM, MFM, VHFL.	30	210	SOCAL, PMSR.
Acoustic	Mine Warfare	Surface Ship Object Detection.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	MF1K	30	210	Hawaii.
Acoustic	Mine Warfare	Surface Ship Object Detection.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	MF1K	42	294	Pearl Harbor.
Acoustic	Mine Warfare	Surface Ship Object Detection.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	MF1K	92	644	SOCAL.
Acoustic	Mine Warfare	Surface Ship Object Detection.	Ship crews detect and avoid mines while navigating restricted areas or channels using active sonar. Duration: up to 15 hours.	MF1K	164	1,148	San Diego Bay.
Explosive	Mine Warfare	Underwater Demolition Qualification and Certification.	Navy divers conduct various levels of training and certification in placing underwater demolition charges. Duration: up to 8 hours.	E5, E6	5	35	Pu'uloa, Ewa Beach, Barbers Point.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Explosive	Mine Warfare	Underwater Demolition Qualification and Certification.	Navy divers conduct various levels of training and certification in placing underwater demolition charges. Duration: up to 8 hours.	E5, E6	10–20	100	TAR 2.
Explosive	Mine Warfare	Underwater Demolition Qualification and Certification.	Navy divers conduct various levels of training and certification in placing underwater demolition charges. Duration: up to 8 hours.	E5, E6	24	168	SSTC.
Explosive	Mine Warfare	Underwater Demolitions Multiple Charge—Large Area Clearance.	Units deploy large explosive systems from vessels or vehicles to destroy barriers or obstacles over an area large enough to allow amphibious vehicles to access beach areas. Duration: 4 hours.	E13	6	42	TAR 2.
Explosive	Surface Warfare	Bombing Exercise Air-to-Surface.	Fixed-wing aircrews deliver bombs against surface targets. Duration: 1 hour.	E9, E10, E12	194	1,358	Hawaii.
Explosive	Surface Warfare	Bombing Exercise Air-to-Surface.	Fixed-wing aircrews deliver bombs against surface targets. Duration: 1 hour.	E9, E10, E12	653	4,571	SOCAL.
Explosive	Surface Warfare	Bombing Exercise Air-to-Surface.	Fixed-wing aircrews deliver bombs against surface targets. Duration: 1 hour.	E9, E10, E12	10	70	NOCAL.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Boat Medium-Caliber.	Small boat crews fire medium-caliber guns at surface targets. Duration: 1 hour.	E1	10	70	Hawaii.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Boat Medium-Caliber.	Small boat crews fire medium-caliber guns at surface targets. Duration: 1 hour.	E1	14	98	SOCAL.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Ship Large-Caliber.	Surface ship crews fire large-caliber guns at surface targets. Duration: up to 3 hours.	E3, E5	32	224	Hawaii.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Ship Large-Caliber.	Surface ship crews fire large-caliber guns at surface targets. Duration: up to 3 hours.	E3, E5	125	875	SOCAL.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Ship Large-Caliber.	Surface ship crews fire large-caliber guns at surface targets. Duration: up to 3 hours.	E3, E5	14	98	Transit Corridor.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Ship Medium-Caliber.	Surface ship crews fire medium-caliber guns at surface targets. Duration: 2–3 hours.	E1	5–50	170	Hawaii.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Ship Medium-Caliber.	Surface ship crews fire medium-caliber guns at surface targets. Duration: 2–3 hours.	E1	17–180	608	SOCAL.
Explosive	Surface Warfare	Gunnery Exercise Surface-to-Surface Ship Medium-Caliber.	Surface ship crews fire medium-caliber guns at surface targets. Duration: 2–3 hours.	E1	6–40	144	Transit Corridor.
Explosive	Surface Warfare	Missile Exercise Air-to-Surface.	Fixed-wing and helicopter aircrews fire air-to-surface missiles at surface targets. Duration: 1 hour.	E6, E7, E8, E9	17–22	134	Hawaii.
Explosive	Surface Warfare	Missile Exercise Air-to-Surface.	Fixed-wing and helicopter aircrews fire air-to-surface missiles at surface targets. Duration: 1 hour.	E6, E7, E8, E9	4–9	43	SOCAL.
Explosive	Surface Warfare	Missile Exercise Air-to-Surface.	Fixed-wing and helicopter aircrews fire air-to-surface missiles at surface targets. Duration: 1 hour.	E6, E7, E8, E9	90	630	PMSR.
Explosive	Surface Warfare	Missile Exercise Air-to-Surface Rocket.	Helicopter aircrews fire both precision-guided and unguided rockets at surface targets. Duration: 1 hour.	E3	109–129	823	Hawaii.
Explosive	Surface Warfare	Missile Exercise Air-to-Surface Rocket.	Helicopter aircrews fire both precision-guided and unguided rockets at surface targets. Duration: 1 hour.	E3	251–271	1,817	SOCAL.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Explosive	Surface Warfare	Missile Exercise Surface-to-Surface.	Surface ship crews defend against surface threats (ships or small boats) and engage them with missiles. Duration: 2–5 hours.	E9	28–32	208	Hawaii.
Explosive	Surface Warfare	Missile Exercise Surface-to-Surface.	Surface ship crews defend against surface threats (ships or small boats) and engage them with missiles. Duration: 2–5 hours.	E9	10	70	SOCAL.
Explosive	Surface Warfare	Sinking Exercise	Aircraft, ship, and submarine crews deliberately sink a seaborne target, usually a decommissioned ship made environmentally safe for sinking according to U.S. Environmental Protection Agency standards, with a variety of ordnance. Duration: 4–8 hours.	E5, E8, E9, E11, E12.	2–3	17	Hawaii.
Explosive	Surface Warfare	Sinking Exercise	Aircraft, ship, and submarine crews deliberately sink a seaborne target, usually a decommissioned ship made environmentally safe for sinking according to U.S. Environmental Protection Agency standards, with a variety of ordnance. Duration: 4–8 hours.	E5, E8, E9, E11, E12.	0–1	3	SOCAL.
Acoustic	Surface Warfare	Surface Warfare Torpedo Exercise—Submarine.	Submarine crews search for, detect, and track a surface ship simulating a threat surface ship with the goal of determining a firing solution that could be used to launch a torpedo with the intent to simulate destroying the targets. Duration: 8 hours.	HFH	30	210	Hawaii.
Acoustic	Surface Warfare	Surface Warfare Torpedo Exercise—Submarine.	Submarine crews search for, detect, and track a surface ship simulating a threat surface ship with the goal of determining a firing solution that could be used to launch a torpedo with the intent to simulate destroying the targets. Duration: 8 hours.	HFH	10	70	SOCAL.
Explosive	Surface Warfare	Training and End-to-End Mission Capability Verification—Submarine Missile Maritime.	Submarine crews launch missile(s) which may have an explosive warhead at a maritime target simulating an adversary surface ship with the goal of destroying or disabling adversary surface ship. Duration: 8 hours.	E9, E10	2	14	Hawaii.
Explosive	Surface Warfare	Training and End-to-End Mission Capability Verification—Submarine Missile Maritime.	Submarine crews launch missile(s) which may have an explosive warhead at a maritime target simulating an adversary surface ship with the goal of destroying or disabling adversary surface ship. Duration: 8 hours.	E9, E10	3	21	SOCAL.
Acoustic and Explosive.	Other Training Activities.	Multi-Domain Unmanned Autonomous Systems.	Multi-domain (surface, subsurface, and airborne) unmanned autonomous systems are launched from land, ships, and boats, in support of intelligence, surveillance, and reconnaissance operations; and deliver munitions or other non-munition systems to support mission and intelligence requirements. Duration: 4–8 hours.	E5, E7, MF to HF, VHFH.	50–100	500	Hawaii.

TABLE 3—PROPOSED NAVY TRAINING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Explosive	Amphibious Warfare.	Shore-to-Surface Missile Exercise.	Amphibious land-based forces fire anti-surface missiles, rockets, and loitering munitions at surface targets. Duration: 1–2 hours of firing, 8 hours total.	E9	18	126	PMRF.

Note: PMRF = Pacific Missile Range Facility.

Overview of Testing Activities Within the Study Area

While this proposed rule includes an evaluation of proposed training activities by the Navy, Coast Guard, and Army, all testing activities evaluated in this proposed rule would only be conducted by the Navy. The Navy's research and acquisition community engages in a broad spectrum of testing activities, some of which ultimately support all Action Proponents. These activities include, but are not limited to, basic and applied scientific research and technology development; testing, evaluation, and maintenance of systems (*e.g.,* missiles, radar, and sonar) and platforms (*e.g.,* surface ships, submarines, and aircraft); and acquisition of systems and platforms to support Navy missions and give a technological edge over adversaries. The individual commands within the research and acquisition community considered in the application are Naval Air Systems Command (NAVAIR), Naval Facilities Engineering and Expeditionary Warfare Center, Naval Sea Systems Command (NAVSEA), Office of Naval Research (ONR), and Naval Information Warfare Systems Command (NAVWAR). Although included in the testing community, proposed Expeditionary Warfare Center activities do not involve sonar and other transducers, underwater detonations, pile driving, airguns, or any other stressors that could result in harassment of marine mammals, and therefore, are not analyzed further in this proposed rule.

The Action Proponents operate in an ever-changing strategic, tactical, financially-constrained, and time-constrained environment. Testing activities occur in response to emerging science or fleet operational needs. For example, future Navy studies to develop a better understanding of ocean currents may be designed based on advancements made by non-government researchers not yet published in the scientific literature. Similarly, future but yet unknown Navy, Coast Guard, and Army operations within a specific geographic area may require development of modified Navy assets to address local conditions. Such modifications must be tested in the field to ensure they meet fleet needs and requirements. Accordingly, generic descriptions of some of these activities are the best that can be articulated in a long-term, comprehensive document.

Some testing activities are similar to training activities conducted by the fleet (*e.g.,* both the fleet and the research and acquisition community fire torpedoes). While the firing of a torpedo might look identical to an observer, the difference is in the purpose of the firing. The fleet might fire the torpedo to practice the procedures for such a firing, whereas the research and acquisition community might be assessing a new torpedo guidance technology or testing it to ensure the torpedo meets performance specifications and operational requirements (see appendix A (Activity Descriptions) of the 2024 HCTT Draft EIS/OEIS for more detailed descriptions of the activities).

NAVAIR testing activities generally fall in the primary mission areas used by the fleets and include the evaluation of new and in-service aircraft platforms and systems to deliver critical air warfare capabilities to the fleets. To accomplish its mission, NAVAIR conducts anti-submarine warfare tests using fixed-wing and rotary wing aircraft platforms, a suite of passive and active acoustic sonobuoys (to include Lot Acceptance Testing), and dipping sonar systems.

The majority of testing activities conducted by NAVAIR are similar to fleet training activities, and many platforms and systems currently being tested are already being used by the fleet or will ultimately be integrated into fleet training activities. However, some testing activities may be conducted in different locations and in a different manner than similar fleet training activities, and, therefore, the analysis for those events and the potential environmental effects may differ. Table 6 summarizes the proposed testing

activities for NAVAIR analyzed within the HCTT Study Area.

TABLE 6—PROPOSED NAVAIR TESTING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Anti-Submarine Warfare.	ASW Torpedo Test—Aircraft.	This event is similar to the training event torpedo exercise. Test evaluates anti-submarine warfare systems onboard rotary-wing and fixed-wing aircraft and the ability to search for, detect, classify, localize, track, and attack a submarine or similar target. Duration: 2–6 hours.	HFH, MFH, MFM.	24–26	174	Hawaii.
Acoustic	Anti-Submarine Warfare.	ASW Torpedo Test—Aircraft.	This event is similar to the training event torpedo exercise. Test evaluates anti-submarine warfare systems onboard rotary-wing and fixed-wing aircraft and the ability to search for, detect, classify, localize, track, and attack a submarine or similar target. Duration: 2–6 hours.	HFH, MFH, MFM.	36–39	259	SOCAL.
Acoustic	Anti-Submarine Warfare.	ASW Torpedo Test—Aircraft.	This event is similar to the training event torpedo exercise. Test evaluates anti-submarine warfare systems onboard rotary-wing and fixed-wing aircraft and the ability to search for, detect, classify, localize, track, and attack a submarine or similar target. Duration: 2–6 hours.	HFH, MFH, MFM.	36–39	259	SCORE.
Acoustic	Anti-Submarine Warfare.	ASW Tracking Test—Fixed-Wing.	The test evaluates the sensors and systems used by maritime patrol aircraft to detect and track submarines and to ensure that aircraft systems used to deploy the tracking systems perform to specifications and meet operational requirements. Duration: 8 hours.	HFM, LFH, LFM, MFM.	61–67	445	Hawaii.
Acoustic	Anti-Submarine Warfare.	ASW Tracking Test—Fixed-Wing.	The test evaluates the sensors and systems used by maritime patrol aircraft to detect and track submarines and to ensure that aircraft systems used to deploy the tracking systems perform to specifications and meet operational requirements. Duration: 8 hours.	HFM, LFH, LFM, MFM.	68–75	497	SOCAL.
Acoustic	Anti-Submarine Warfare.	ASW Tracking Test—Rotary Wing.	The test evaluates the sensors and systems used by helicopters to detect and track submarines and to ensure that aircraft systems used to deploy the tracking systems perform to specifications and meet operational requirements. Duration: 2 hours.	MFH, MFM	66–73	483	Hawaii.
Acoustic	Anti-Submarine Warfare.	ASW Tracking Test—Rotary Wing.	The test evaluates the sensors and systems used by helicopters to detect and track submarines and to ensure that aircraft systems used to deploy the tracking systems perform to specifications and meet operational requirements. Duration: 2 hours.	MFH, MFM	66–73	482	SOCAL.
Acoustic	Anti-Submarine Warfare.	ASW Tracking Test—Rotary Wing.	The test evaluates the sensors and systems used by helicopters to detect and track submarines and to ensure that aircraft systems used to deploy the tracking systems perform to specifications and meet operational requirements. Duration: 2 hours.	MFH, MFM	66–73	482	SCORE.
Acoustic	Anti-Submarine Warfare.	Kilo Dip Test	Functional check of a helicopter-deployed dipping sonar system prior to conducting a testing or training event using the dipping sonar system. Duration: 1–2 hours.	MFH	6–7	45	Hawaii.

Acoustic	Anti-Submarine Warfare.	Kilo Dip Test	Functional check of a helicopter-deployed dipping sonar system prior to conducting a testing or training event using the dipping sonar system. Duration: 1–2 hours.	MFH	6–7	45	SOCAL.
Acoustic	Anti-Submarine Warfare.	Sonobuoy Lot Acceptance Test.	Sonobuoys are deployed from surface vessels and aircraft to verify the integrity and performance of a lot or group of sonobuoys in advance of delivery to the fleet for operational use. Duration: 6 hours.	HFM, LFH, LFM, MFM.	32–38	242	Hawaii.
Acoustic	Anti-Submarine Warfare.	Sonobuoy Lot Acceptance Test.	Sonobuoys are deployed from surface vessels and aircraft to verify the integrity and performance of a lot or group of sonobuoys in advance of delivery to the fleet for operational use. Duration: 6 hours.	HFM, LFH, LFM, MFM.	320–352	2,336	SOCAL.
Acoustic	Mine Warfare	Airborne Dipping Sonar Minehunting Test.	A mine-hunting dipping sonar system that is deployed from a helicopter and uses high-frequency sonar for the detection and classification of bottom and moored mines. Duration: 2 hours.	HFH	18–20	132	Hawaii.
Acoustic	Mine Warfare	Airborne Dipping Sonar Minehunting Test.	A mine-hunting dipping sonar system that is deployed from a helicopter and uses high-frequency sonar for the detection and classification of bottom and moored mines. Duration: 2 hours.	HFH	18–20	132	SOCAL.
Explosive	Mine Warfare	Airborne Mine Neutralization System Test.	A test of the airborne mine neutralization system evaluates the system's ability to detect and destroy mines from an airborne mine countermeasures capable helicopter. The Airborne Mine Neutralization System uses up to four unmanned underwater vehicles equipped with high frequency sonar, video cameras, and explosive and non-explosive neutralizers. Duration: 2–3 hours.	E4	36–39	261	Hawaii.
Explosive	Mine Warfare	Airborne Mine Neutralization System Test.	A test of the airborne mine neutralization system evaluates the system's ability to detect and destroy mines from an airborne mine countermeasures capable helicopter. The Airborne Mine Neutralization System uses up to four unmanned underwater vehicles equipped with high frequency sonar, video cameras, and explosive and non-explosive neutralizers. Duration: 2–3 hours.	E4	81–84	576	SOCAL.
Acoustic	Mine Warfare	Airborne Sonobuoy Minehunting Test.	A mine-hunting system made up of sonobuoys deployed from a helicopter. A field of sonobuoys, using high-frequency sonar, is used to detect and classify bottom and moored mines. Duration: 2 hours.	MFM	9–10	66	Hawaii.
Acoustic	Mine Warfare	Airborne Sonobuoy Minehunting Test.	A mine-hunting system made up of sonobuoys deployed from a helicopter. A field of sonobuoys, using high-frequency sonar, is used to detect and classify bottom and moored mines. Duration: 2 hours.	MFM	9–10	66	SOCAL.

NAVSEA activities are generally aligned with the primary mission areas used by the fleets and include, but are not limited to, new ship construction, life cycle support, and other weapon system development and testing. Testing activities are conducted throughout the life of a Navy ship, from construction through deactivation from the fleet to verification of performance and mission capabilities. Activities include pierside and at-sea testing of ship systems, including sonar, acoustic countermeasures, radars, torpedoes, weapons, unmanned systems, and radio

equipment; tests to determine how the ship performs at sea (sea trials); development and operational test and evaluation programs for new technologies and systems, including ship shock trials to test the survivability of new ships; and testing on all ships and systems that have undergone overhaul or maintenance. Table 7 summarizes the proposed testing activities for NAVSEA analyzed within the HCTT Study Area.

TABLE 7—PROPOSED NAVSEA TESTING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Anti-Submarine Warfare.	ASW Mission Package Testing.	Ships and their supporting platforms (*e.g.,* rotary-wing aircraft, unmanned aerial systems) detect, localize, and prosecute submarines. Duration: 1–2 weeks with 4–8 hours of active sonar use per day.	MF1, MFH	1	7	Hawaii.
Acoustic	Anti-Submarine Warfare.	ASW Mission Package Testing.	Ships and their supporting platforms (*e.g.,* rotary-wing aircraft, unmanned aerial systems) detect, localize, and prosecute submarines. Duration: 1–2 weeks with 4–8 hours of active sonar use per day.	MF1, MFH	1	7	SOCAL.
Acoustic	Anti-Submarine Warfare.	At-Sea Sonar Testing	At-sea testing to ensure systems are fully functional in an open ocean environment. Duration: 4 hours to 11 days.	HFH, HFL, HFM, LF to HF, LF to MF, LFH, LFM, MF to HF, MF1, MF1K, MFH, MFL, MFM.	9–11	70	Hawaii.
Acoustic	Anti-Submarine Warfare.	At-Sea Sonar Testing	At-sea testing to ensure systems are fully functional in an open ocean environment. Duration: 4 hours to 11 days.	HFH, HFL, HFM, LF to HF, LF to MF, LFH, LFM, MF to HF, MF1, MF1K, MFH, MFL, MFM.	16–22	128	SOCAL.
Acoustic	Anti-Submarine Warfare.	At-Sea Sonar Testing	At-sea testing to ensure systems are fully functional in an open ocean environment. Duration: 4 hours to 11 days.	HFH, HFL, HFM, LF to HF, LF to MF, LFH, LFM, MF to HF, MF1, MF1K, MFH, MFL, MFM.	10–20	70	SOAR.
Acoustic	Anti-Submarine Warfare.	At-Sea Sonar Testing	At-sea testing to ensure systems are fully functional in an open ocean environment. Duration: 4 hours to 11 days.	HFH, HFL, HFM, LF to HF, LF to MF, LFH, LFM, MF to HF, MF1, MF1K, MFH, MFL, MFM.	0–1	4	PMRF.
Acoustic	Anti-Submarine Warfare.	Countermeasure Testing.	Countermeasure testing involves the testing of systems that detect, localize, and engage incoming weapons, including marine vessel targets and airborne missiles. Testing includes surface ship torpedo defense systems, marine vessel stopping payloads, and airborne decoys against targets. Duration: 4 hours to 6 days.	HFH, LF to HF, MF to HF, MFH, MFM, VHFH.	3–6	20	Hawaii, Maui Basin, PMRF.
Acoustic	Anti-Submarine Warfare.	Countermeasure Testing.	Countermeasure testing involves the testing of systems that detect, localize, and engage incoming weapons, including marine vessel targets and airborne missiles. Testing includes surface ship torpedo defense systems, marine vessel stopping payloads, and airborne decoys against targets. Duration: 4 hours to 6 days.	HFH, LF to HF, MF to HF, MFH, MFM, VHFH.	7–12	25	SOCAL, SCORE.

TABLE 7—PROPOSED NAVSEA TESTING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA—Continued

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Anti-Submarine Warfare.	Pierside Sonar Testing	Pierside testing to ensure systems are fully functional in a controlled pierside environment prior to at-sea test activities and complete any troubleshooting. Duration: up to 3 weeks, with intermittent sonar use.	HFH, HFM, MF to HF, MFH, MFM.	13–25	171	Pearl Harbor.
Acoustic	Anti-Submarine Warfare.	Pierside Sonar Testing	Pierside testing to ensure systems are fully functional in a controlled pierside environment prior to at-sea test activities and complete any troubleshooting. Duration: up to 3 weeks, with intermittent sonar use.	HFH, HFM, MF to HF, MFH, MFM.	44–55	383	San Diego Bay.
Acoustic	Anti-Submarine Warfare.	Pierside Sonar Testing	Pierside testing to ensure systems are fully functional in a controlled pierside environment prior to at-sea test activities and complete any troubleshooting. Duration: up to 3 weeks, with intermittent sonar use.	HFH, HFM, MF to HF, MFH, MFM.	15–20	140	Port Hueneme.
Acoustic	Anti-Submarine Warfare.	Surface Ship Sonar Testing/Maintenance.	Pierside and at-sea testing of ship systems occur periodically following major maintenance periods and for routine maintenance. Duration: up to 3 weeks, with intermittent sonar use.	LFL, MF to HF, MF1, MF1K, MFM.	3	7	Hawaii.
Acoustic	Anti-Submarine Warfare.	Surface Ship Sonar Testing/Maintenance.	Pierside and at-sea testing of ship systems occur periodically following major maintenance periods and for routine maintenance. Duration: up to 3 weeks, with intermittent sonar use.	LFL, MF to HF, MF1, MF1K, MFM.	3	21	Pearl Harbor.
Acoustic	Anti-Submarine Warfare.	Surface Ship Sonar Testing/Maintenance.	Pierside and at-sea testing of ship systems occur periodically following major maintenance periods and for routine maintenance. Duration: up to 3 weeks, with intermittent sonar use.	LFL, MF to HF, MF1, MF1K, MFM.	3	21	SOCAL.
Acoustic	Anti-Submarine Warfare.	Surface Ship Sonar Testing/Maintenance.	Pierside and at-sea testing of ship systems occur periodically following major maintenance periods and for routine maintenance. Duration: up to 3 weeks, with intermittent sonar use.	LFL, MF to HF, MF1, MF1K, MFM.	3	21	San Diego Bay.
Acoustic and Explosive.	Anti-Submarine Warfare.	Torpedo (Explosive) Testing.	Air, surface, or submarine crews employ explosive and non-explosive torpedoes against artificial targets. Duration: 1–2 days, 8–12 hours per day.	E8, E11, HFH, MF to HF, MF1, MFH, MFM.	1–5	17	Hawaii, SOCAL, PMSR.
Acoustic	Anti-Submarine Warfare.	Torpedo (Non-Explosive) Testing.	Air, surface, or submarine crews employ non-explosive torpedoes against submarines, surface vessels, or artificial targets. Duration: up to 2 weeks.	HFH, HFM, LF to HF, MF to HF, MF1, MFH, MFL, MFM, VHFH.	13–17	96	Hawaii, SOCAL, BARSTUR, PMSR.
Explosive	Mine Warfare ...	Mine Countermeasure and Neutralization Testing.	Air, surface, and subsurface vessels neutralize threat mines and mine-like objects. Duration: 1–10 days, with intermittent use of countermeasure systems.	E4	18–45	315	SOCAL.
Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	0–1	7	PMRF.
Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	16	109	Maui Basin.
Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	6	36	CPAAA.

Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	6	36	SSTC.
Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	6	37	Tanner Bank.
Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	6	42	Imperial Beach Minefield.
Acoustic and Explosive.	Mine Warfare ...	Mine Countermeasure Mission Package Testing.	Vessels and associated aircraft conduct mine countermeasure operations. Duration: 1–2 weeks, with intermittent use of countermeasure systems.	E4, HFM, MFH	1	7	PMSR.
Acoustic	Mine Warfare ...	Mine Detection and Classification Testing.	Air, surface, and subsurface vessels and systems detect, classify, and avoid mines and mine-like objects. Vessels also assess their potential susceptibility to mines and mine-like objects. Duration: up to 24 days, 8–12 hours per day.	HFH	4–8	28	Hawaii.
Acoustic	Mine Warfare ...	Mine Detection and Classification Testing.	Air, surface, and subsurface vessels and systems detect, classify, and avoid mines and mine-like objects. Vessels also assess their potential susceptibility to mines and mine-like objects. Duration: up to 24 days, 8–12 hours per day.	HFH	0–1	4	Imperial Beach Minefield.
Acoustic	Mine Warfare ...	Mine Detection and Classification Testing.	Air, surface, and subsurface vessels and systems detect, classify, and avoid mines and mine-like objects. Vessels also assess their potential susceptibility to mines and mine-like objects. Duration: up to 24 days, 8–12 hours per day.	HFH	2	14	Maui Basin.
Acoustic	Mine Warfare ...	Mine Detection and Classification Testing.	Air, surface, and subsurface vessels and systems detect, classify, and avoid mines and mine-like objects. Vessels also assess their potential susceptibility to mines and mine-like objects. Duration: up to 24 days, 8–12 hours per day.	HFH	2	14	Tanner Bank.
Acoustic	Mine Warfare ...	Mine Detection and Classification Testing.	Air, surface, and subsurface vessels and systems detect, classify, and avoid mines and mine-like objects. Vessels also assess their potential susceptibility to mines and mine-like objects. Duration: up to 24 days, 8–12 hours per day.	HFH	4–8	28	PMSR.
Acoustic	Mine Warfare ...	Mine Detection and Classification Testing.	Air, surface, and subsurface vessels and systems detect, classify, and avoid mines and mine-like objects. Vessels also assess their potential susceptibility to mines and mine-like objects. Duration: up to 24 days, 8–12 hours per day.	HFH	4–9	30	SOCAL.
Acoustic	Unmanned Systems.	Unmanned Underwater Vehicle Testing.	Testing involves the production or upgrade of unmanned underwater vehicles. This may include testing mine detection capabilities, evaluating the basic functions of individual platforms, or conducting complex events with multiple vehicles. Duration: up to 35 days, gliders could operate for multiple months.	HFL, HFM, MF to HF, MFM, VHFH, VHFL.	2	14	Pearl Harbor.

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Vessel Evaluation.	Undersea Warfare Testing.	Ships demonstrate capability of countermeasure systems and underwater surveillance, weapons engagement, and communications systems. This tests ships' ability to detect, track, and engage undersea targets. Duration: up to 10 days.	HFH, MF1, MFH, MFM.	1–7	26	Hawaii.
Acoustic	Vessel Evaluation.	Undersea Warfare Testing.	Ships demonstrate capability of countermeasure systems and underwater surveillance, weapons engagement, and communications systems. This tests ships' ability to detect, track, and engage undersea targets. Duration: up to 10 days.	HFH, MF1, MFH, MFM.	2–3	16	PMRF.
Acoustic	Vessel Evaluation.	Undersea Warfare Testing.	Ships demonstrate capability of countermeasure systems and underwater surveillance, weapons engagement, and communications systems. This tests ships' ability to detect, track, and engage undersea targets. Duration: up to 10 days.	HFH, MF1, MFH, MFM.	23–43	154	SOCAL.
Acoustic	Vessel Evaluation.	Undersea Warfare Testing.	Ships demonstrate capability of countermeasure systems and underwater surveillance, weapons engagement, and communications systems. This tests ships' ability to detect, track, and engage undersea targets. Duration: up to 10 days.	HFH, MF1, MFH, MFM.	2–14	56	SCORE.
Acoustic and Explosive.	Other Testing ...	Acoustic and Oceanographic Research.	Research using active transmissions from sources deployed from ships, aircraft, and unmanned underwater vehicles. Research sources can be used as proxies for current and future Navy systems. Duration: up to 14 days.	E7, LFM	1	7	Hawaii.
Acoustic and Explosive.	Other Testing ...	Acoustic and Oceanographic Research.	Research using active transmissions from sources deployed from ships, aircraft, and unmanned underwater vehicles. Research sources can be used as proxies for current and future Navy systems. Duration: up to 14 days.	E7, LFM	4–5	31	PMRF.
Acoustic and Explosive.	Other Testing ...	Acoustic and Oceanographic Research.	Research using active transmissions from sources deployed from ships, aircraft, and unmanned underwater vehicles. Research sources can be used as proxies for current and future Navy systems. Duration: up to 14 days.	E7, LFM	2	14	SOCAL.
Acoustic and Explosive.	Other Testing ...	Acoustic and Oceanographic Research.	Research using active transmissions from sources deployed from ships, aircraft, and unmanned underwater vehicles. Research sources can be used as proxies for current and future Navy systems. Duration: up to 14 days.	E7, LFM	0–1	3	PMSR.
Acoustic	Other Testing ...	Insertion/Extraction	Testing of submersibles capable of inserting and extracting personnel and payloads into denied areas from strategic distances. Duration: up to 30 days.	HFM, LF to MF, LFH.	2	14	Hawaii.
Acoustic	Other Testing ...	Insertion/Extraction	Testing of submersibles capable of inserting and extracting personnel and payloads into denied areas from strategic distances. Duration: up to 30 days.	HFM, LF to MF, LFH.	2	14	SOCAL.
Acoustic and Explosive.	Other Testing ...	Semi-Stationary Equipment Testing.	Semi-stationary equipment (*e.g.,* hydrophones) is deployed to determine functionality. Duration: up to 14 days.	E4, HFH	4–8	40	Pearl Harbor.

Acoustic and Explosive.	Other Testing ...	Semi-Stationary Equipment Testing.	Semi-stationary equipment (*e.g.,* hydrophones) is deployed to determine functionality. Duration: up to 14 days.	E4, HFH	4–8	40	San Diego Bay.

Note: LF = low-frequency, MF = mid-frequency, HF = high-frequency, dB = decibels, L = low, M = medium, H = high (*e.g.,* MFL = mid-frequency low source level), H = hours, C = count. BARSTUR = Barking Sands Tactical Underwater Range, CPAAA = Camp Pendleton Amphibious Assault Area, Hawaii = the Hawaii Study Area, PMRF = Pacific Missile Range Facility, PMSR = Point Mugu Sea Range, SCORE = Southern California Offshore Range, SOAR = Southern California Offshore Anti-Submarine Range, SOCAL = Southern California Range Complex, SSTC = Silver Strand Training Complex.

NAVWAR is the information warfare systems command for the Navy. The mission of NAVWAR is to identify, develop, deliver, and sustain information warfare capabilities and services that enable naval, joint, coalition, and other national missions operating in warfighting domains from seabed to space; and to perform such other functions and tasks as directed. NAVWAR Systems Center Pacific is the research and development part of NAVWAR focused on developing and transitioning technologies in the area of command, control, communications, computers, intelligence, surveillance, and reconnaissance. Table 8 summarizes the proposed testing activities for NAVWAR analyzed within the HCTT Study Area.

TABLE 8—PROPOSED NAVWAR TESTING ACTIVITIES ANALYZED WITHIN THE HCTT STUDY AREA

Stressor category	Activity type	Activity name	Description	Source bin	Number of activities 1-year	Number of activities 7-year	Location
Acoustic	Acoustic and Oceanographic Science and Technology.	Acoustic, Oceanographic, and Energy Research.	Testing includes activities utilizing the marine environment for research, and test and evaluation. Tests may involve radar, environmental sensors, magnetic sensors, passive and active acoustic sensors, optical sensors, and lasers. Surface operations utilize a variety of vessels and vehicles for deployment, operation, and testing. Energy research and harvesting would include the development and testing of energy harvesting and storage technologies, maritime charging stations, remote communications, and associated infrastructure. This testing would also include bioacoustics research in support of marine mammal science. Duration: up to 14 days.	HFM, LF to HF, LFM, MF to HF, MFH, MFM.	2	14	Pearl Harbor.

Energy research and harvesting would include the development and testing of energy harvesting and storage technologies, maritime charging stations, remote communications, and associated infrastructure. This testing would also include bioacoustics research in support of marine mammal science. Duration: up to 14 days.	HFM, LF to HF, LFM, MF to HF, MFH, MFM.	2–4	20	PMSR.
Acoustic	Other Testing	Communications ..	Testing of maritime communications, underwater network systems with fiber optics cables, laser communications, acoustic modem networks and launching of communication payloads and objects. Durations: typically 5 days for 6–8 hours per day.	LF to MF	1	7	Hawaii.
Acoustic	Other Testing	Communications ..	Testing of maritime communications, underwater network systems with fiber optics cables, laser communications, acoustic modem networks and launching of communication payloads and objects. Durations: typically 5 days for 6–8 hours per day.	LF to MF	4	28	SOCAL.
Acoustic	Other Testing	Intelligence, Surveillance, Reconnaissance.	Testing deployable autonomous undersea technologies that may include mine detection and classification, detection and classification of targets of interest, sensors on the undersea systems testbed, expansion of the undersea systems testbed with fiber optic cables and nodes, sensor systems to detect mine shapes on ship hulls and pier structures, sensors for swimmer interdiction and other threats, and sensor systems that can detect explosive, radioactive, and other signatures of concern. Duration: up to 30 days.	Air gun, HFL, HFM, LF, LF to HF, LFH, MF to HF, MFH, MFL, MFM, VHFH.	15–17	108	Hawaii.

ONR's mission is to plan, foster, and encourage scientific research in recognition of its paramount importance as related to the maintenance of future naval power, and the preservation of national security. ONR manages the Navy's basic, applied, and advanced research to foster transition from science and technology to higher levels of research, development, test, and evaluation. ONR is also a parent organization for the Naval Research Laboratory, which operates as the Navy's corporate research laboratory and conducts a broad multidisciplinary program of scientific research and advanced technological development. Table 9 summarizes the proposed testing activities for the ONR analyzed within the HCTT Study Area.

Vessel Movement

Vessels used as part of the proposed activities include both surface and subsurface operations of both manned and unmanned vessels (USVs, UUVs). Vessels used as part of the Action Proponents' activities include ships, submarines, unmanned vessels, and boats ranging in size from small, 22 ft (6.7 m) rigid hull inflatable boats to aircraft carriers with lengths up to 1,092 ft (332.8 m). Unmanned systems may include vehicles ranging from 4–16 ft (1.2–4.9 m) but typical size of USVs is 36–328 ft (11–100 m) while UUVs are 33–98 ft (10–30 m) in length. The Marine Corps operates small boats from 10–50 ft (3–15.2 m) in length and include small unit riverine craft, rigid hull inflatable boats and amphibious combat vehicles. Coast Guard vessels range in size from small boats between 13 and 65 ft (3.9 to 19.8 m) to large cutters with lengths up to 418 ft (127.4 m).

Large Navy ships greater than 350 ft (107 m) generally operate at speeds in the range of 10 to 15 knots (kn; 18.5 to 27.8 kilometers per hour (km/hr)) for fuel conservation. Submarines generally operate at lower speeds in transit and even lower speeds for certain tactical maneuvers. Small craft (considered in this proposed rule to be less than 60 ft (18 m) in length) have much more variable speeds (dependent on the mission). While these speeds for large Navy vessels are representative of most events, some of the Action Proponents' vessels may need to temporarily operate outside of these parameters. For example, to produce the required relative wind speed over the flight deck, an aircraft carrier vessel group engaged in flight operations must adjust its speed through the water accordingly. Additionally, there are specific events including high speed tests of newly constructed vessels. The Navy also anticipates testing large USVs, some of which would be at high speed. Conversely, there are other instances such as launch and recovery of a small rigid hull inflatable boat, vessel boarding, search and seizure training events, or retrieval of a target when vessels would be stopped or moving slowly ahead to maintain steerage. The Coast Guard currently operates approximately 250 cutters. Larger cutters (over 181 ft (55 m) in length) are controlled by Area Commands. The Pacific Area command is located in Alameda, CA. Smaller cutters come under control of district commands. There are four districts in the Pacific Area. Cutters usually carry a motor surf boat and/or a rigid-hulled inflatable boat.

The Coast Guard operates approximately 1,600 boats, defined as any vessel less than 65 ft (20 m) in length. These boats generally operate near shore and on inland waterways. The most common is 25 ft (7.6 m) long, of which the Coast Guard has more than 350; the shortest is 13 ft (4.0 m). Boat training includes small boat crews engaging surface targets with small- and medium-caliber weapons.

The number of vessels used in the HCTT Study Area varies based on military readiness requirements, deployment schedules, annual budgets, and other unpredictable factors. Most military readiness activities involve the use of vessels. These activities could be widely dispersed throughout the HCTT Study Area, but would typically be conducted near naval ports, piers, and range areas. Activities involving vessel movements occur intermittently and are variable in duration, ranging from a few hours to multiple weeks.

Action Proponent vessel traffic would especially be concentrated near San Diego, California and Pearl Harbor, Hawaii. There is no seasonal differentiation in vessel use. Large vessel movement primarily occurs with the majority of the traffic flowing

between the installations and the OPAREAS. Support craft would be more concentrated in the coastal waters in the areas of naval installations, ports, and ranges.

The number of testing activities that include the use of vessels is around 18 percent lower than the number of training activities, but testing activities are more likely to include the use of larger unmanned vessels (although these are expected to transition to training use during the effective period of the rule, if finalized). In addition, testing often occurs jointly with a training event so it is likely that the testing activity would be conducted from a vessel that was also conducting a training activity. Vessel movement in conjunction with testing activities could occur throughout the Study Area, but would typically be conducted near naval ports, piers, and range complexes.

Additionally, a variety of smaller craft would be operated within the HCTT Study Area. Small craft types, sizes, and speeds vary. During military readiness activities, speeds generally range from 10 to 14 kn (18.5 to 25.9 km/hr); however, vessels can and will, on occasion, operate within the entire spectrum of their specific operational capabilities. During modernization and sustainment of ranges activities, vessels would operate more slowly, typically 3 kn (5.6 km/hr) or less. In all cases, the vessels/craft will be operated in a safe manner consistent with the local conditions.

Foreign Navies

In furtherance of national security objectives, foreign militaries may participate in multinational training and testing events in the Study Area. Foreign military activities that are planned by and under the substantial control and responsibility of the Action Proponents are included in the proposed action. These participants could be in various training or testing events described in appendix A of the 2024 HCTT Draft EIS/OEIS, and their effects are analyzed in this proposed rule. However, when foreign military vessels operate independently within the Study Area as sovereign vessels outside the planning, control, and responsibility of the Action Proponents, those activities are not considered part of the specified activity. There are many reasons why foreign military vessels may traverse U.S. waters or come into U.S. port, not all of which are at the behest of any of the Action Proponents. Foreign military vessels and aircraft operate pursuant to their own national authorities and have independent rights under customary international law, embodied in the principle of sovereign immunity, to engage in various activities on the world's oceans and seas. When foreign militaries are participating in a U.S. Navy planned and substantially controlled exercise or event, foreign military use of sonar and explosives, when combined with the U.S. Navy's use of sonar and explosives, would not result in exceedance of the analyzed levels (within each Navy Acoustic Effects Model (NAEMO) modeled sonar and explosive bin) used for estimating predicted impacts, which formed the basis of our acoustic impacts effects analysis that was used to estimate take in this proposed rule.

The most significant joint training event is the Rim of the Pacific (RIMPAC), a multi-national training exercise held every-other-year primarily in the HRC. The participation level of foreign military vessels in U.S. Navy-led training or testing events within the HRC and within SOCAL differs greatly between RIMPAC and non-RIMPAC years. For example, in 2019 (a non-RIMPAC year), there were 0.1 foreign navy surface vessel at-sea days (*i.e.,* 1 day = 24 hours) within HRC and 20 foreign navy at-sea days within SOCAL (Navy 2021). Out of 56 U.S.-led training events in 2019, 4 involved foreign navy vessels, with an average time per event of 8.7 hours. During RIMPAC 2022, foreign vessels operated and/or transited through the HRC for 576 hours (24 days). In 2023 (another non-RIMPAC year), there was no foreign vessel participation within SOCAL. Even in a RIMPAC year, the days at sea for foreign militaries engaged in a Navy-led training or testing activity accounts for a small, but variable, percentage compared to the U.S. Navy activities. For instance, the 2020 foreign military participation (a RIMPAC-year) was 1.5 percent of the U.S. Navy's average days at sea (32 days out of an estimated 2,056 days at sea). During RIMPAC 2024, twenty-five foreign surface vessels participated for a combined 5,000 hours in U.S.-led training events. Therefore, foreign surface vessel activity is estimated to conservatively account for up to 10 percent of the U.S. Navy's annual at sea time in HCTT (205 days out of an estimated 2,056 days at sea).

Please see the Proposed Mitigation Measures section and Proposed Reporting section of this proposed rule for information about mitigation and reporting related to foreign navy activities in the HCTT Study Area.

When foreign militaries are participating in a U.S. Navy-led exercise or event, foreign military use of sonar and explosives, when combined with the U.S. Navy's use of sonar and explosives, would not result in exceedance of the analyzed levels (within each NAEMO modeled sonar and explosive bin) used for estimating predicted impacts, which formed the basis of our acoustic impacts effects analysis that was used to estimate take in this proposed rule. Please see the Proposed Mitigation Measures section and Proposed Reporting section of this proposed rule for information about mitigation and reporting related to foreign navy activities in the HCTT Study Area.

Standard Operating Procedures

For training and testing to be effective, Action Proponent personnel must be able to safely use their sensors, platforms, weapons, and other devices to their optimum capabilities and as intended for use in missions and combat operations. The Action Proponents have developed standard operating procedures through decades of experience to provide for safety and mission success. Because they are essential to safety and mission success, standard operating procedures are part of the Proposed Action and are considered in the environmental analysis for applicable resources (see chapter 3 (Affected Environment and Environmental Consequences) of the 2024 HCTT Draft EIS/OEIS). While standard operating procedures are designed for the safety of personnel and equipment and to ensure the success of training and testing activities, their implementation often yields additional benefits on environmental, socioeconomic, public health and safety, and cultural resources.

Because standard operating procedures are essential to safety and mission success, the Action Proponents consider them to be part of the proposed activities and have included them in the environmental analysis. Standard operating procedures that are recognized as providing a potential secondary benefit on marine mammals during training and testing activities are noted below.

- Vessel safety;
- Weapons firing safety;
- Target deployment safety;
- Towed in-water device safety;
- Pile driving safety; and
- Coastal zones.

Standard operating procedures (which are implemented regardless of their secondary benefits) are different from mitigation measures (which are designed entirely for the purpose of avoiding or reducing impacts). Information on mitigation measures is provided in the Proposed Mitigation Measures section.

Description of Stressors

The Action Proponents use a variety of sensors, platforms, weapons, and other devices. Military readiness activities using these systems may introduce sound and energy into the environment. The proposed military readiness activities were evaluated to identify specific components that would act as stressors by having direct or indirect impacts on marine mammals and their habitat. This analysis included identification of the spatial variation of the identified stressors. The following subsections describe the acoustic and explosive stressors for marine mammals and their habitat within the HCTT Study Area. Each description contains a list of activities that may generate the stressor. Stressor/resource interactions that were determined to have impacts that do not qualify as take under the MMPA (*i.e.,* vessel, aircraft, or weapons noise) were not carried forward for analysis in the application. NMFS reviewed the Action Proponents' analysis and conclusions on de minimis sources (*i.e.,* those that are not likely to result in the take of marine mammals) and finds them complete and supportable (see section 3.7.4 of the technical report ''Quantifying Acoustic Impacts on Marine Mammals and Sea Turtles: Methods and Analytical Approach for Phase IV Training and Testing'' (U.S. Department of the Navy, 2024), hereafter referred to as the Acoustic Impacts Technical Report).

Acoustic Stressors

Acoustic stressors include acoustic signals emitted into the water for a specific purpose, such as sonar, other transducers (*i.e.,* devices that convert energy from one form to another—in this case, into sound waves), and air guns, as well as incidental sources of broadband sound produced as a byproduct of vessel movement, aircraft transits, use of weapons or other deployed objects, vibratory pile extraction, and vibratory and impact pile driving. Explosives also produce broadband sound but are characterized separately from other acoustic sources due to their unique hazardous characteristics. Characteristics of each of these sound sources are described in the following sections.

To better organize and facilitate the analysis of approximately 300 sources of underwater sound used for training and testing by the Action Proponents, including sonars and other transducers, air guns, and explosives, a series of source classifications, or source bins, were used. The acoustic source classification bins do not include the broadband noise produced incidental to pile driving, vessel and aircraft transits, weapons firing, and bow shocks. Noise produced from vessels and aircraft are not carried forward because those activities were found to have de minimis or no acoustic impacts, as stated above. Of note, the source bins used in this analysis have been revised from previous (Phase III) acoustic modeling to more efficiently group similar sources and use the parameters of the bin for propagation, making a comparison to previous bins impossible in most cases as some sources are modeled at different propagation parameters. For example, in previous analyses, non-impulsive narrowband sound sources were grouped into bins that were defined by their acoustic properties (*i.e.,* frequency, source level, beam pattern, and duty cycle) or, in some cases, their purpose or application. In the current analysis, these sources are binned based only on their acoustic properties and not on their purpose or application. As such, sources that previously fell into a single ''purpose-based'' bin now, in many cases, fall into multiple bins while sources with similar acoustic parameters that were previously sorted into separate bins due to different purposes now share a bin. Therefore, the acoustic source bins used in the current analysis do not represent a one-for-one replacement with previous bins, making direct comparison not possible in most cases.

The use of source classification bins provides the following benefits:

- Allows new sensors or munitions to be used under existing authorizations as long as those sources fall within the parameters of a ''bin'';
- Improves efficiency of source utilization data collection and reporting requirements anticipated under the MMPA authorizations;
- Ensures that impacts are not underestimated, as all sources within a given class are modeled as the most impactful source (highest source level, longest duty cycle, or largest net explosive weight (NEW)) within that bin;
- Allows analyses to be conducted in a more efficient manner, without any compromise of analytical results; and
- Provides a framework to support the reallocation of source usage (hours/explosives) between different source bins, as long as the total numbers of takes remain within the overall analyzed and authorized limits. This flexibility is required to support evolving training and testing requirements, which are linked to real world events.

Sonar and Other Transducers—

Active sonar and other transducers emit non-impulsive sound waves into the water to detect objects, navigate safely, and communicate. Passive sonars differ from active sound sources in that they do not emit acoustic signals; rather, they only receive acoustic information about the environment (*i.e.,* listen). In this proposed rule, the terms sonar and other transducers will be used to indicate active sound sources unless otherwise specified.

The Action Proponents employ a variety of sonars and other transducers to obtain and transmit information about the undersea environment. Some examples are mid-frequency hull-mounted sonars used to find and track enemy submarines; high-frequency small object detection sonars used to detect mines; high-frequency underwater modems used to transfer data over short ranges; and extremely high-frequency (greater than 200 kilohertz (kHz)) Doppler sonars used for navigation, like those used on commercial and private vessels. The characteristics of these sonars and other transducers, such as source level (SL), beam width, directivity, and frequency, depend on the purpose of the source. Higher frequencies can carry more information or provide more information about objects off which they reflect, but attenuate more rapidly. Lower frequencies attenuate less rapidly, so they may detect objects over a longer distance, but with less detail.

Propagation of sound produced underwater is highly dependent on environmental characteristics such as bathymetry, seafloor type, water depth, temperature, and salinity. The sound received at a particular location will be different than near the source due to the interaction of many factors, including propagation loss; how the sound is reflected, refracted, or scattered; the potential for reverberation; and interference due to multi-path propagation. In addition, absorption greatly affects the distance over which higher-frequency sounds propagate. The effects of these factors are explained in appendix D (Acoustic and Explosive Impacts Supporting Information) of the 2024 HCTT Draft EIS/OEIS. Because of the complexity of analyzing sound propagation in the ocean environment, the Action Proponents rely on acoustic models in their environmental analyses that consider sound source characteristics and varying ocean conditions across the HCTT Study Area. For additional information on how propagation is accounted for, see the Acoustic Impacts Technical Report.

The sound sources and platforms typically used in military readiness activities analyzed in the application are described in appendix A (Activity Descriptions) of the 2024 HCTT Draft EIS/OEIS. Sonars and other transducers used to obtain and transmit information underwater during military readiness activities generally fall into several categories of use described below.

Anti-Submarine Warfare—

Sonar used during anti-submarine warfare training and testing would impart the greatest amount of acoustic energy of any category of sonar and other transducers analyzed in this proposed rule. Types of sonars used to detect potential enemy vessels include hull-mounted, towed, line array, sonobuoy, helicopter dipping, and torpedo sonars. In addition, acoustic targets and decoys (countermeasures) may be deployed to emulate the sound signatures of vessels or repeat received signals.

Most anti-submarine warfare sonars are mid-frequency (1–10 kHz) because mid-frequency sound balances sufficient resolution to identify targets with distance over which threats can be identified. However, some sources may use higher or lower frequencies. Duty cycles can vary widely, from rarely used to continuously active. Anti-submarine warfare sonars can be wide-ranging in a search mode or highly directional in a track mode.

Most anti-submarine warfare activities involving submarines or submarine targets would occur in waters greater than 600 ft (182.9 m) deep due to safety concerns about running aground at shallower depths. Sonars used for anti-submarine warfare activities would typically be used beyond 12 nmi (22.2 km) from shore. Exceptions include use of dipping sonar by helicopters, pierside testing and maintenance of systems while in port, and system checks while transiting to or from port.

Mine Warfare, Small Object Detection, and Imaging—

Sonars used to locate mines and other small objects, as well as those used in imaging (*e.g.,* for hull inspections or imaging of the seafloor), are typically high-frequency or very high-frequency. Higher frequencies allow for greater resolution and, due to their greater attenuation, are most effective over shorter distances. Mine detection sonar can be deployed (towed or vessel hull-mounted) at variable depths on moving platforms (ships, helicopters, or unmanned vehicles) to sweep a suspected mined area. Hull-mounted anti-submarine sonars can also be used in an object detection mode known as ''Kingfisher'' mode (MF1K) (*e.g.,* used on vessels when transiting to and from port), where pulse length is shorter but pings are much closer together in both time and space, since the vessel goes slower when operating in this mode. Sonars used for imaging are usually used in close proximity to the area of interest, such as pointing downward near the seafloor.

Mine detection sonar use would be concentrated in areas where practice mines are deployed, typically in water depths less than 200 ft (60.9 m), and at established training or testing minefields or temporary minefields close to strategic ports and harbors. Kingfisher mode on vessels is most likely to be used when transiting to and from port. Sound sources used for imaging would be used throughout the HCTT Study Area.

Navigation and Safety—

Similar to commercial and private vessels, the Action Proponents' vessels employ navigational acoustic devices, including speed logs, Doppler sonars for ship positioning, and fathometers. These may be in use at any time for safe vessel operation. These sources are typically highly directional to obtain specific navigational data.

Communication—

Sound sources used to transmit data (*e.g.,* underwater modems), provide location (pingers), or send a single brief release signal to seafloor-mounted devices (acoustic release) may be used throughout the HCTT Study Area. These sources typically have low duty cycles and are usually only used when it is necessary to send a detectable acoustic message.

Classification of Sonar and Other Transducers—

Sonars and other transducers are grouped into bins based on their acoustic properties. Sonars and other transducers are now grouped into bins based on the frequency or bandwidth, source level, duty-cycle, and three-dimensional beam coverage. Unless stated otherwise, a reference distance of 1 microPascal (re 1 µPa) at 1 m (3.3 ft) is used for sonar and other transducers.

- Frequency of the non-impulsive acoustic source:
  - Low-frequency sources operate below 1 kHz;
  - Mid-frequency sources operate at or above 1 kHz, up to and including 10 kHz;
  - High-frequency sources operate above 10 kHz, up to and including 100 kHz; and
  - Very high-frequency sources operate above 100 kHz but below 200 kHz;
- Sound pressure level (SPL):
  - Greater than 160 decibels (dB) re 1 µPa, but less than 185 dB re 1 µPa;
  - Equal to 185 dB re 1 µPa and up to 205 dB re 1 µPa; and
  - Greater than 205 dB re 1 µPa.

Active sonar and other transducer use that was quantitatively analyzed in the Study Area are shown in table 10.

TABLE 10—SONAR AND OTHER TRANSDUCERS QUANTITATIVELY ANALYZED IN THE HCTT STUDY AREA

Source type	Source category	Description	Unit	Training annual	Training 7-year total	Testing annual	Testing 7-year total
Broadband	LF	<205 dB	H			430–570	3,430

Air Guns—

Air guns are essentially stainless steel tubes charged with high-pressure air via a compressor. An impulsive sound is generated when the air is almost instantaneously released into the surrounding water. Small air guns with capacities up to 60 cubic inches (in^3; 983 cubic centimeters (cc)) would be used during testing activities in the offshore areas of the California Study Area and in the HRC.

Generated impulses would have short durations, typically a few hundred milliseconds, with dominant frequencies below 1 kHz. The root-mean-square (RMS) SPL and peak pressure (SPL peak) at a distance 1 m (3.3 ft) from the air gun would be approximately 215 dB re 1 µPa and 227 dB re 1 µPa, respectively, if operated at the full capacity of 60 in^3 (983 cc). The size of the air gun chamber can be adjusted, which would result in lower SPLs and sound exposure level (SEL) per shot. The air gun and non-explosive impulsive sources that were quantitatively analyzed in the HCTT Study Area are shown in table 11.

TABLE 11—TRAINING AND TESTING AIR GUN SOURCES QUANTITATIVELY ANALYZED IN THE STUDY AREA

Source class category	Description	Bin	Unit	Training annual	Training 7-year total	Testing annual	Testing 7-year total
Air Guns	Small underwater air guns	AG	C	0	0	30,432–36,780	232,068

Note: AG = air guns, C = count.

Pile Driving—

Impact and vibratory pile driving and extraction would occur during Port Damage Repair training in Port Hueneme, CA. Pile driving would not occur at other locations within the HCTT Study Area. The pile driving method, pile type and size, and assumptions for acoustic impact analysis are presented in table 12. This training activity would occur up to 12 times per year. Each training event consists of up to 7 separate modules, each which could occur up to 3 iterations during a single event (for a maximum of 21 modules). Training events would last a total of 30 days, of which pile driving is only anticipated to occur for a maximum of 14 days. The training would involve the installation and extraction 12- to 20-inch (30.5- to 50.8-cm) steel, timber, or composite round piles, and 27.5- or 18-inch (69.9- or 45.7-cm) steel or FRP Z-shape piles using a vibratory hammer; extraction of 12- to 20-inch (30.5- to 50.8-cm) timber round piles and 12- to 20-inch (30.5- to 50.8 cm) steel H-piles using a vibratory hammer; and installation of 12- to 20-inch (30.5- to 50.8-cm) timber round piles, 12- to 20-inch (30.5- to 50.8-cm) steel H-piles, and 12- to 20-inch (30.5- to 50.8-cm) steel, timber, or composite round piles using an impact hammer table 12.

TABLE 12—PORT DAMAGE REPAIR TRAINING PILES QUANTITATIVELY ANALYZED AND ASSOCIATED UNDERWATER SOUND LEVELS

Method	Pile size and type	Number of piles annual	Number of piles 7-year total	Peak SPL (single strike; dB re 1 µPa)	SEL (single strike; dB re 1 µPa2 ·s)	RMS SPL (single strike; dB re 1 µPa)	Unattenuated SPL (RMS; dB re 1 µPa)	Reference
Impact	12- to 20-inch (30 to 51 cm) timber round.	360	2,520	180	160	170		14-inch (36 cm) round timber piles (Caltrans, 2020).
Impact	12- to 20-inch (30 to 51 cm) steel H.	144	1,008	195	170	180		14-inch (36 cm) steel H-beam piles (Caltrans, 2020).
Impact	12- to 20-inch (30 to 51 cm) steel, timber, or composite round.	360	2,520	203	178	189		24-inch (61 cm) steel pipe piles (Illingworth and Rodkin Inc., 2007).

TABLE 12—PORT DAMAGE REPAIR TRAINING PILES QUANTITATIVELY ANALYZED AND ASSOCIATED UNDERWATER SOUND LEVELS—Continued

Method	Pile size and type	Number of piles annual	Number of piles 7-year total	Peak SPL (single strike; dB re 1 μPa)	SEL (single strike; dB re 1 μPa2 ·s)	RMS SPL (single strike; dB re 1 μPa)	Unattenuated SPL (RMS; dB re 1 μPa)	Reference
Vibratory	12- to 20-inch (30 to 51 cm) timber round.	360	2,520	.....	.....	.....	166	24-inch (61 cm) steel piles (Washington State Department of Transportation, 2010).

Vibratory	12- to 20-inch (30 to 51 cm) steel, timber, or composite round.	1,440	10,080	.....	.....	.....	166	24-inch (61 cm) steel piles (Washington State Department of Transportation, 2010).
Vibratory	18- or 27.5-inch (46- or 70-cm) steel or FRP Z.	2,304	16,128	.....	.....	.....	159	25-inch (64 cm) steel sheet piles (Naval Facilities Engineering Systems Command Southwest, 2020).

Note: Impact method is for installation only.

Only one hammer would be operated at any given point in time; there would not be any instances where multiple piles would be driven simultaneously. All piles and sheets would be extracted using the vibratory hammer.

Impact pile driving would involve the use of an impact hammer with both it and the pile held in place by a crane. When the pile driving starts, the hammer part of the mechanism is raised up and allowed to fall, transferring energy to the top of the pile. The pile is thereby driven into the sediment by a repeated series of these hammer blows. Each blow results in an impulsive sound emanating from the length of the pile into the water column as well as from the bottom of the pile through the sediment. Broadband impulsive signals are produced by impact pile driving methods, with most of the acoustic energy concentrated below 1,000 hertz (Hz) (Hildebrand, 2009). For the purposes of this analysis, the Action Proponents assume the impact pile driver would generally operate on average 60 strikes per pile.

Vibratory installation and extraction would involve the use of a vibratory hammer suspended from the crane and attached to the top of a pile. The pile is then vibrated by hydraulic motors rotating eccentric weights in the mechanism, causing a rapid up and down vibration in the pile, driving the pile into the sediment. During extraction, the vibration causes the sediment particles in contact with the pile to lose frictional grip on the pile. The crane slowly lifts the vibratory driver and pile until the pile is free of the sediment. In some cases, the crane may be able to lift the pile and vibratory driver without vibrations from the driver (*i.e.,* dead pull), in which case no noise would be introduced into the water. Vibratory driving and extraction create broadband, continuous, non-impulsive noise at low source levels, for a short duration with most of the energy dominated by lower frequencies. Port Damage Repair training would occur in shallow water, and sound would be transmitted on direct paths through the water, be reflected at the water surface or bottom, or travel through seafloor substrate. Soft substrates such as sand would absorb or attenuate the sound more readily than hard substrates (*e.g.,* rock), which may reflect the acoustic wave. The predicted sound levels produced by pile driving by method, pile size and type for Port Damage Repair training are presented in table 12.

In addition to underwater noise, the installation and extraction of piles also results in airborne noise in the environment, denoted dBA; dBA is an A-weighted decibel level that represents the relative loudness of sounds as perceived by the human ear. A-weighting gives more value to frequencies in the middle of human hearing and less value to frequencies at the edges as compared to a flat or unweighted decibel level. Impact pile driving creates in-air impulsive sound about 100 dBA re 20 μPa at a range of 15 m for 24-inch (0.61 m) steel piles (Illingworth and Rodkin, 2016). During vibratory extraction, the three aspects that generate airborne noise are the crane, the power plant, and the vibratory extractor. The average sound level recorded in air during vibratory extraction was about 85 dBA re 20 μPa (94 dB re 20 μPa) within a range of 32.8–49.2 ft (10–15 m) (Illingworth and Rodkin, 2015).

Explosive Stressors

This section describes the characteristics of explosions during military readiness activities. The activities analyzed in the application that use explosives are described in appendix A (Activity Descriptions) of the 2024 HCTT Draft EIS/OEIS, and terminology and metrics used when describing explosives in the application are in appendix D (Acoustic and Explosive Impacts Supporting Information) of the 2024 HCTT Draft EIS/OEIS.

The near-instantaneous rise from ambient to an extremely high peak pressure is what makes an explosive shock wave potentially damaging. Farther from an explosive, the peak pressures decay and the explosive waves propagate as an impulsive, broadband sound. Several parameters influence the effect of an explosive: the weight of the explosive warhead, the type of explosive material, the boundaries and characteristics of the propagation medium, and the detonation depth in water. The NEW, the explosive power of a charge expressed as the equivalent weight of trinitrotoluene (commonly referred to as TNT), accounts for the first two parameters.

Explosions in Water—

Explosive detonations during military readiness activities are associated with high-explosive munitions, including, but not limited to bombs, missiles,

rockets, naval gun shells, torpedoes, mines, demolition charges, and explosive sonobuoys. Explosive detonations during military readiness activities involving the use of high-explosive munitions, including bombs, missiles, and naval gun shells, would occur in the air or near the water's surface. Explosive detonations associated with torpedoes and explosive sonobuoys would occur in the water column; mines and demolition charges would be detonated in the water column or on the ocean floor. The Coast Guard usage of explosives is limited to medium and large-caliber munitions used during gunnery exercises. Most detonations would occur in waters greater than 200 ft (60.9 m) in depth and greater than 3 nmi (5.6 km) from shore, although some mine warfare, demolition, and some testing detonations would occur in shallow water close to shore. The Army usage of explosives is limited to large-caliber projectiles used during shore-to-surface artillery and missile exercises, and all projectiles will impact beyond 3 nmi (5.6 km) from shore.

To better organize and facilitate the analysis of explosives used by the Action Proponents during military readiness activities that would detonate in water or at the water surface, explosive classification bins were developed. The use of explosive classification bins provides the same benefits as described for acoustic source classification bins in the Sonar and Other Transducers section. Explosives detonated in water are binned by NEW. Table 13 shows explosives use that was quantitatively analyzed in the Study Area. A range of annual use indicates that occurrence is anticipated to vary annually, consistent with the variation in the number of annual activities described in chapter 2 (Description of Proposed Action and Alternatives) of the 2024 HCTT Draft EIS/OEIS. The 7-year total takes that variability into account.

TABLE 13—EXPLOSIVE SOURCES QUANTITATIVELY ANALYZED PROPOSED FOR USE UNDERWATER OR AT THE WATER SURFACE

Bin	Net explosive weight (lb.)	Example explosive source	Navy training annual	Navy training 7-year	Coast Guard training annual	Coast Guard training 7-year	Army training annual	Army training 7-year	Navy testing annual	Navy testing 7-year
E1	0.1–0.25	Medium-caliber projectile	1,750–4,303	19,911					7,305–7,430	51,510
E2	>0.25–0.5	Medium-caliber projectile	2,950–3,000	20,800						
E3	>0.5–2.5	2.75-inch (7 cm) rockets	5,438–5,720	38,912	150	1,050			4,744–6,568	36,704
E4	>2.5–5	Mine neutralization charge.	179–190	1,286					1,324–2,624	18,352
E5	>5–10	5-inch (12.7 cm) projectile.	5,059–5,984	38,188					2,024–2,676	16,732
E6	>10–20	Hellfire missile	1,693–1,757	12,043			600	4,200	144–148	1,020
E7	>20–60	Demo block/shaped charge.	115–190	1,030					549–622	2,322
E8	>60–100	Lightweight torpedo	3–5	27					213–234	1,552
E9	>100–250	500 lb. (228 kg) bomb	278–300	2,015			108	756	111–115	789
E10	>250–500	Harpoon missile	89	620					13	91
E11	>500–675	Heavyweight Torpedo	7–11	61					1–2	8
E12	>675–1,000	2,000 lb. (907.2 kg) bomb	17–19	125						
E13	>1,000–1,740	Underwater demolitions—large area clearance.	6	42						
E16	10,000	Ship shock detonation							0–3	3

Note: > = greater than, in. = inch, lb. = pound, kg = kilogram.

Propagation of explosive pressure waves in water is highly dependent on environmental characteristics such as bathymetry, seafloor type, water depth, temperature, and salinity, which affect how the pressure waves are reflected, refracted, or scattered; the potential for reverberation; and interference due to multi-path propagation. In addition, absorption greatly affects the distance over which higher-frequency components of explosive broadband noise can propagate. Appendix D (Acoustic and Explosive Impacts Supporting Information) of the 2024 HCTT Draft EIS/OEIS explains the characteristics of explosive detonations and how the above factors affect the propagation of explosive energy in the water. Because of the complexity of analyzing sound propagation in the ocean environment, the Action Proponents rely on acoustic models in their environmental analyses that consider sound source characteristics and varying ocean conditions across the Study Area.

In-Air Acoustic Stressors

The proposed military readiness activities would generate missile and aerial target launch noise from locations on SNI (California), noise from missile and aerial target launches at the PMRF (Kaua'i, Hawaii), and artillery firing noise from shore to surface gunnery at San Clemente Island and PMRF. Table 14 shows launch noise that was quantitatively analyzed in the HCTT Study Area.

Noise from target and missile launches from land at SNI and PMRF may disturb hauled-out pinnipeds. At SNI, this disturbance has been documented over nearly two decades of monitoring and reporting of those activities (U.S. Department of the Navy, 2020, 2022, 2023).

At PMRF, Hawaiian monk seals are known to haul out on a beach near the missile launch complex. If a seal is hauled out during a missile or aerial target launch, the seal may react to the noise and exhibit a behavioral response that may qualify as harassment (*e.g.,* flushing into the water). (Though, of note, behavioral disturbance of monk seals (*e.g.,* flushing or other disturbance) has not been observed due to these activities.) Currently, if a monk seal is hauled out on the beach (typically within approximately 1,000 ft (304.8 m) of the launch site) prior to a missile launch, the launch is halted or postponed until the seal has left the beach.

TABLE 14—PROPOSED LAUNCHES ANALYZED WITHIN THE HCTT STUDY AREA

Launch type	Location	Navy training annual	Navy training 7-year total	Navy testing annual	Navy testing 7-year total
Missiles and Aerial Targets	SNI (PMSR)	0	0	40	280
Missiles and Aerial Targets	PMRF	22	154	13	91
Artillery	PMRF	900	6,300	0	0

Note: SNI = San Nicolas Island, PMSR = Point Mugu Sea Range, PMRF = Pacific Missile Range Facility.

Vessel Strike

NMFS also considered the likelihood that vessel movement during military readiness activities could result in an incidental, but not intentional, strike of a marine mammal in the HCTT Study Area, which has the potential to result in serious injury or mortality. Vessel strikes are not specific to any specific military readiness activity but rather, a limited, sporadic, and incidental result of the Action Proponents' vessel movement during military readiness activities within the Study Area. Vessel strikes from commercial, recreational, and military vessels are known to seriously injure and occasionally kill cetaceans (Abramson *et al.,* 2011; Berman-Kowalewski *et al.,* 2010; Calambokidis, 2012; Crum *et al.,* 2019; Douglas *et al.,* 2008; Laggner 2009; Van der Hoop *et al.,* 2012; Van der Hoop *et al.,* 2013), although reviews of the literature on vessel strikes mainly involve collisions between commercial vessels and whales (Jensen and Silber, 2003, Laist *et al.,* 2001). Vessel speed, size, and mass are all important factors in determining both the potential likelihood and impacts of a vessel strike to marine mammals (Blondin *et al.* 2025; Conn and Silber, 2013; Garrison *et al.* 2025; Gende *et al.,* 2011; Redfern *et al.,* 2019; Silber *et al.,* 2010; Szesciorka *et al.,* 2019; Vanderlaan and Taggart, 2007; Wiley *et al.,* 2016). For large vessels, speed and angle of approach can influence the severity of a strike.

The Action Proponents' vessels transit at speeds that are optimal for fuel conservation or to meet training and testing requirements. From unpublished Navy data, average speed for large (greater than 350 ft (107 m) Navy ships in Southern California and Hawaii from 2016–2023 varied from 10 to 15 kn (18.5 to 27.8 km/hr) in offshore waters greater than 12 nmi from land and from 5 to 10 kn (9.3 to 18.5 km/hr) closer to the coast (less than 12 nmi; Navy 2021, unpublished data). Small craft (for purposes of this analysis, less than 59 ft (18 m) in length) have much more variable speeds (0 to 50 kn (0 to 92.6 km/hr), dependent on the activity). Submarines generally operate at speeds in the range of 8 to 13 kn (14.8 to 24.1 km per hour). Similar patterns are anticipated in the HCTT Study Area. A full description of the Action Proponents' vessels proposed for use during military readiness activities can be found in Chapter 2 (Description of Proposed Action and Alternatives) of the 2024 HCTT Draft EIS/OEIS.

While these speeds for large Navy vessels are representative of most events, some of the Action Proponents' vessels may need to temporarily operate outside of these parameters. For example, to produce the required relative wind speed over the flight deck, an aircraft carrier engaged in flight operations must adjust its speed through the water accordingly. There are specific events, including high speed tests of newly constructed vessels, where the Action Proponents' vessel would operate at higher speeds. By comparison, there are other instances when the Action Proponents vessel would be stopped or moving slowly ahead to maintain steerage, such as launch and recovery of a small rigid hull inflatable boat; vessel boarding, search, and seizure training events; or retrieval of a target.

Large Navy vessels (>400 ft (121.9 m)) and Coast Guard vessels within the offshore areas of range complexes and testing ranges operate differently from commercial vessels, which may reduce potential vessel strikes of large whales. Surface ships operated by or for the Navy have multiple personnel assigned to stand watch at all times, when a ship or surfaced submarine is moving through the water (underway). A primary duty of personnel standing watch on surface ships is to detect and report all objects and disturbances sighted in the water that may indicate a threat to the vessel and its crew, such as debris, a periscope, surfaced submarine, or surface disturbance. Per vessel safety requirements, personnel standing watch also report any marine mammals sighted in the path of the vessel as a standard collision avoidance procedure. All vessels proceed at a safe speed so they can take proper and effective action to avoid a collision with any sighted object or disturbance, and can stop within a distance appropriate to the prevailing circumstances and conditions. As described in the Standard Operating Procedures section, the Action Proponents utilize Lookouts to avoid collisions, and Lookouts are trained to spot marine mammals so that vessels may change course or take other appropriate action to avoid collisions. Despite the precautions, should a vessel strike occur, NMFS anticipates it would likely result in incidental take in the form of serious injury and/or mortality, though it is possible that it could result in a non-serious injury (Level A harassment). Accordingly, for the purposes of the analysis, NMFS assumes that any vessel strike would result in serious injury or mortality.

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation Measures section, Proposed Monitoring section, and Proposed Reporting section).

Description of Marine Mammals and Their Habitat in the Area of Specified Activities

Marine mammal species and their associated stocks that have the potential to occur in the HCTT Study Area are presented in table 15 along with each stock's Endangered Species Act (ESA) and MMPA statuses, abundance estimate and associated coefficient of variation (CV) value, minimum abundance estimate, potential biological removal (PBR), annual M/SI, and potential occurrence in the HCTT Study Area. The Action Proponents request authorization to take individuals of 40 species (79 stocks) by Level A and Level B harassment incidental to military readiness activities from the use of sonar and other transducers, in-water detonations, air guns, missile and target launch noise, pile driving/extraction, and vessel movement in the HCTT Study Area. Currently, the humpback whale (Central America and Mexico Distinct Population Segments (DPSs)), killer whale (Eastern North Southern Resident DPS), false killer whale (Main Hawaiian Islands Insular DPS), and Hawaiian monk seal have critical habitat designated under the ESA in the HCTT Study Area (see *Critical Habitat* section below).

Sections 3 and 4 and appendix B (Marine Mammal Supplemental Information) of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS fully considered all of this information, and we refer the reader to these descriptions, instead of reprinting the information. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs) (*https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS' website at: *https://www.fisheries.noaa.gov/find-species.* Additional information on the general biology and ecology of marine mammals is included in the 2024 HCTT Draft EIS/OEIS. Table 15 incorporates the best available science, including data from the 2023 Pacific and Alaska Marine Mammal Stock Assessment Reports (Carretta *et al.,* 2024; Young *et al.,* 2024) (see *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments),* and 2024 draft SARs, as well as monitoring data from the Navy's marine mammal research efforts.

TABLE 15—MARINE MAMMAL OCCURRENCE WITHIN THE HCTT STUDY AREA [1]

Common name	Scientific name	Stock	ESA/MMPA status; strategic (Y/N) [2]	Stock abundance (CV, N_{min}, most recent abundance survey) [3]	PBR	Annual M/SI [4]

Note: N/A = Not Applicable, UND = Undetermined, UNK = Unknown. Unless otherwise noted, abundance estimates are from the final 2022 Pacific stock assessment report (Carretta *et al.,* 2024; Carretta *et al.,* 2023b), the draft 2023 Pacific stock assessment report (Carretta *et al.,* 2024), or the Alaska stock assessment reports (Young, 2024).

[1] Information on the classification of marine mammal species can be found on the web page for The Society for Marine Mammalogy's Committee on Taxonomy (*https://marinemammalscience.org/science-and-publications/list-marine-mammal-species-subspecies/;* Committee on Taxonomy (2022)).

[2] Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[3] NMFS marine mammal stock assessment reports online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region.* CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.

[4] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

[5] Humpback whales in the Central America/Southern Mexico-California-Oregon-Washington Stock make up the endangered Central America DPS, and humpback whales in the Mainland Mexico-California-Oregon-Washington Stock are part of the threatened Mexico DPS, along with whales from the Mexico-North Pacific Stock, which do not occur in the Study Area.

[6] Mesoplodont beaked whales are analyzed as a group due to insufficient data available to estimate species-specific densities.

[7] The Baja California Peninsula Mexico and California-Baja California Peninsula Mexico populations of false killer whale, pantropical spotted dolphin, and pygmy killer whales are not recognized stocks in NMFS Pacific stock assessment report (Carretta *et al.,* 2024), but separate density estimates were derived to support the Navy's analysis.

Species Not Included in the Analysis

The species carried forward for analysis (and described in table 15) are those likely to be found in the HCTT Study Area based on the most recent data available, and do not include species that may have once inhabited or transited the area but have not been sighted in recent years (*e.g.,* species which were extirpated from factors such as 19th and 20th century commercial exploitation). North Pacific right whale may be present in the northeast Pacific Ocean, but has an extremely low probability of presence in the HCTT Study Area. It is considered extralimital (*i.e.,* not anticipated to occur in the Study Area) and was not included in the analysis.

One species of marine mammal, the southern sea otter, occurs in the HCTT Study Area but is managed by the U.S. Fish and Wildlife Service (U.S. FWS) and thus are not considered further in this analysis.

Below, we consider additional information about the marine mammals in the area of the specified activities that informs our analysis, such as identifying known areas of important habitat or behaviors, or where unusual mortality events have been designated.

Critical Habitat

Currently, the humpback whale (Central America and Mexico DPSs), killer whale (Eastern North Pacific Southern Resident DPS), false killer whale (Main Hawaiian Islands Insular DPS), and Hawaiian monk seal have ESA-designated critical habitat in the HCTT Study Area.

Humpback Whale

On April 21, 2021, NMFS designated critical habitat for the endangered Western North Pacific DPS, the endangered Central America DPS, and the threatened Mexico DPS of humpback whales (86 FR 21082). Areas proposed as critical habitat include specific marine areas located off the coasts of California, Oregon, Washington, and Alaska. Designated critical habitat for the Central America DPS overlaps the NOCAL Range Complex (Units 15, 16, and 17), as well as PMSR and the northern portion of the SOCAL Range Complex (Units 17 and 18). These areas are essential for humpback whale foraging and migration. One of the proposed critical habitat areas, critical habitat Unit 19, would have also overlapped with the SOCAL range in the HSTT Study Area but was excluded after consideration of potential national security and economic impacts of designation.

NMFS, in the final rule designating critical habitat for humpback whales, identified prey species, primarily euphausiids and small pelagic schooling fishes of sufficient quality, abundance, and accessibility within humpback whale feeding areas to support feeding and population growth, as an essential habitat feature. NMFS, through a critical habitat review team (CHRT), also considered inclusion of migratory corridors and passage features, as well as sound and the soundscape, as essential habitat features. NMFS did not include either in the final critical habitat; however, as the CHRT concluded that the best available science did not allow for identification of any consistently used migratory corridors or definition of any physical, essential migratory or passage conditions for whales transiting between or within habitats of the three DPSs. Regardless of whether critical habitat is designated for a particular area, NMFS has considered all applicable information regarding marine mammals and their habitat in the analysis supporting these proposed regulations.

Killer Whale

NMFS designated critical habitat for the Southern Resident killer whale DPS on November 29, 2006 (71 FR 69054) in inland waters of Washington State, and on August 2, 2021, revised the designation by designating six additional coastal critical habitat areas along the U.S. West Coast (86 FR 41668). The HCTT Study Area overlaps two of the three continuous sections off the California coast: the North Central CA Coast Area and the Monterey Bay Area. Based on the natural history of the Southern Resident killer whales and their habitat needs, NMFS identified physical or biological features essential to the conservation of the Southern

Resident killer whale DPS: (1) water quality to support growth and development; (2) prey species of sufficient quantity, quality, and availability to support individual growth, reproduction, and development, as well as overall population growth; and (3) passage conditions to allow for migration, resting, and foraging.

False Killer Whale (Main Hawaiian Island Insular DPS)

Critical habitat for the ESA-listed Main Hawaiian Islands insular false killer whale DPS was finalized in July 2018 (83 FR 35062, July 24, 2018) designating waters from the 45 m depth contour to the 3,200 m depth contour around the main Hawaiian Islands from Niʻihau east to Hawaii. This designation does not include most bays, harbors, or coastal in-water structures. NMFS excluded 14 areas. The total area designated was approximately 45,504 square kilometers (km^2; 13,267 square nautical miles (nmi^2)) of marine habitat. Critical habitat for the main Hawaiian Islands insular DPS of false killer whale entirely overlaps the HRC.

Main Hawaiian Islands insular false killer whales are island-associated whales that rely entirely on the productive submerged habitat of the main Hawaiian Islands to support all of their life-history stages. Island-associated marine habitat for Main Hawaiian Islands insular false killer whale is the only essential feature of the critical habitat. The following characteristics of this habitat support insular false killer whales' ability to travel, forage, communicate, and move freely around and among the waters surrounding the main Hawaiian Islands: (1) adequate space for movement and use within shelf and slope habitat; (2) prey species of sufficient quantity, quality, and availability to support individual growth, reproduction, and development, as well as overall population growth; (3) waters free of pollutants of a type and amount harmful to Main Hawaiian Islands insular false killer whales; and (4) sound levels that would not significantly impair false killer whales' use or occupancy.

Hawaiian Monk Seal

Critical habitat for Hawaiian monk seals was designated in 1986 (51 FR 16047, April 30, 1986) and later revised in 1988 (53 FR 18988, May 26, 1988) and in 2015 (80 FR 50925, August 21, 2015). In the Northwestern Hawaiian Islands Hawaiian monk seal critical habitat includes all beach areas, sand spits and islets, including all beach crest vegetation to its deepest extent inland as well as the seafloor and marine habitat 10 m in height above the seafloor from the shoreline out to the 200 m depth contour around Kure Atoll (Hōlanikū), Midway Atoll (Kuaihelani), Pearl and Hermes Reef (Manawai), Lisianski Island (Kapou), Laysan Island (Kamole), Maro Reef (Kamokuokamohoaliʻi), Gardner Pinnacles (ʻŌnūnui), French Frigate Shoals (Lalo), Necker Island (Mokumanamana) and Nihoa Island. In the main Hawaiian Islands, Hawaiian monk seal critical habitat includes the seafloor and marine habitat to 10 m above the seafloor from the 200 m depth contour through the shoreline and extending into terrestrial habitat 5 m inland from the shoreline between identified boundary points around Kaula Island (includes marine habitat only), Niʻihau (includes marine habitat from 10 m-200 m in depth), Kauaʻi, Oʻahu, Maui Nui (including Kahoʻolawe, Lānaʻi, Maui, and Molokaʻi), and Hawaii Island. A portion of the critical habitat overlaps the HRC.

The essential features of Hawaiian monk seal critical habitat are: (1) terrestrial areas and adjacent shallow, sheltered aquatic areas with characteristics preferred by monk seals for pupping and nursing; (2) marine areas from 0 to 200 m in depth that support adequate prey quality and quantity for juvenile and adult monk seal foraging; and (3) significant areas used by monk seals for hauling out, resting or molting.

Biologically Important Areas

Ferguson *et al.* (2015) identified Biologically Important Areas (BIAs) within U.S. waters of the West Coast (Calambokidis *et al.* 2015) and in Hawaii (Baird *et al.* 2015), which represent areas and times in which cetaceans are known to concentrate in areas of known importance for activities related to reproduction, feeding, and migration, or areas where small and resident populations are known to occur. Unlike ESA critical habitat, these areas are not formally designated pursuant to any statute or law, but are a compilation of the best available science intended to inform impact and mitigation analyses. An interactive map of the BIAs is available at: *https://oceannoise.noaa.gov/biologically-important-areas.* In some cases, additional, or newer, information regarding known feeding, breeding, or migratory areas is available and has been used to update these BIAs (as cited below), and a summary of all of the BIAs is included below.

The West Coast and Hawaii BIAs were updated in 2024 (Calambokidis *et al.*) and 2023 (Kratofil *et al.*), respectively (referred to as BIA II herein). Calambokidis *et al.* (2024) and Kratofil *et al.* (2023) use a new scoring system described here and in Harrison *et al.* (2023). Experts identified an overall Importance Score for each BIA that considers: (1) ''Intensity''—the intensity and characteristics underlying an area's identification as a BIA; and (2) ''Data Support''—the quantity, quality, and type of information, and associated uncertainties, upon which the BIA delineation and scoring depends. Importance Scores range from 1 to 3, with a higher score representing an area of higher intensity and data support. Each BIA identified in BIA II is also scored for boundary uncertainty and spatiotemporal variability (dynamic, ephemeral, or static). Additionally, BIA II includes hierarchical BIAs for some species and stocks where a higher intensity score is appropriate for a smaller core area(s) (child BIA) within a larger BIA unit (parent BIA).

The Hawaii Study Area overlaps BIAs for small and resident populations of the following species: spinner dolphin, short-finned pilot whale, rough-toothed dolphin, pygmy killer whale, pantropical spotted dolphin, melon-headed whale, false killer whale, dwarf sperm whale, goose-beaked whale, common bottlenose dolphin, and Blainville's beaked whale. Further, the Hawaii Study Area overlaps updated BIAs for humpback whale reproduction (Kratofil *et al.* 2023). The California Study Area overlaps feeding BIAs for blue whale, fin whale, and humpback whale in SOCAL. Additionally, it overlaps a reproductive BIA as well as northbound and southbound migratory BIAs for gray whale (Calambokidis *et al.* 2024). Table 16 describes each BIA that overlaps the HCTT Study Area and the scores for the above criteria.

TABLE 16—BIAS OVERLAPPING THE HCTT STUDY AREA

National Marine Sanctuaries

Under Title III of the Marine Protection, Research, and Sanctuaries Act of 1972 (also known as the National Marine Sanctuaries Act (NMSA)), NOAA can establish as national marine sanctuaries (NMS) areas of the marine environment with special conservation, recreational, ecological, historical, cultural, archaeological, scientific, educational, or aesthetic qualities. Sanctuary regulations prohibit destroying, causing the loss of, or injuring any sanctuary resource managed under the law or regulations for that sanctuary (15 CFR part 922). NMS are managed on a site-specific basis, and each sanctuary has site-specific regulations. Most, but not all sanctuaries have site-specific regulatory exemptions from the prohibitions for certain military activities. Separately, section 304(d) of the NMSA requires Federal agencies to consult with the Office of National Marine Sanctuaries (ONMS) whenever their Proposed Activities are likely to destroy, cause the loss of, or injure a sanctuary resource. There are seven designated NMSs and one proposed NMS within the HCTT Study Area (see section 6 of the 2024 HCTT Draft EIS/OEIS):

- Channel Islands NMS
- Chumash Heritage NMS;
- Cordell Bank NMS;
- Greater Farallones NMS;
- Monterey Bay NMS;
- Hawaiian Islands Humpback Whale NMS
- Pacific Remote Islands NMS (in designation); and
- Papahānaumokuākea NMS.

Channel Islands NMS is an ecosystem-based managed sanctuary consisting of an area of 1,109 nmi^2 (3,803 km^2) around Anacapa Island, Santa Cruz Island, Santa Rosa Island, San Miguel Island, and Santa Barbara Island to the south. It encompasses sensitive habitats (*e.g.,* kelp forest habitat, deep benthic habitat) and includes various shipwrecks and maritime heritage artifacts. Channel Islands NMS waters and its remote, isolated position at the confluence of two major ocean currents support significant biodiversity of marine mammals, fish, and invertebrates. At least 33 species of cetaceans have been reported in the Channel Islands NMS region with common species, including: Long-beaked common dolphin, short-beaked common dolphin, Bottlenose dolphin, Pacific white-sided dolphin, Northern right whale dolphin, Risso's dolphin, California gray whale, Blue whale, and Humpback whale. The three species of pinnipeds that are commonly found throughout or in part of the Channel Islands NMS include: California sea lion, Northern elephant seal, and Pacific harbor seal.

Chumash Heritage NMS encompasses 3,430 nmi^2 (11,766 km^2) of coastal and ocean waters offshore Central California stretching nearly 52 nmi (96.6 km) from shore and down to a maximum depth of 11,580 ft (3,530 m). The sanctuary protects and collaboratively manages natural and cultural resources, maritime historical resources, and Indigenous cultural history along 100 nmi (186.9 km) of coastline. Chumash Heritage NMS contains marine biodiversity, productive ecosystems, and sensitive species and habitats, with special geologic features like Rodriguez Seamount and Santa Lucia Bank, along with an important biogeographic transition zone and upwelling along the California Current, which drives biological productivity and creates ecological conditions in the area that supports a high abundance of marine mammals. Different types of ecological habitats found within the sanctuary include kelp forests, rocky reefs, deep-sea coral gardens, and sandy beaches.

Cordell Bank NMS is an extremely productive marine area off the West Coast in northern California, just north of the Gulf of the Farallones. With its southern-most boundary located 36.5 nmi (67.6 km) north of San Francisco, the sanctuary is entirely offshore, with the eastern boundary 5.2 nmi (9.7 km) from shore and the western boundary 26.1 nmi (48.3 km) offshore. In total, the sanctuary protects an area of 971 nmi^2 (3,330 km^2). The centerpiece of the sanctuary is Cordell Bank, a 3.9 nmi by 8.3 nmi (7.2 km by 15.3 km) rocky undersea feature. The combination of ocean conditions and undersea topography creates a rich and diverse marine community in the sanctuary. The prevailing California Current flows southward along the coast, and the annual upwelling of nutrient-rich deep ocean water supports the sanctuary's rich biological community, including marine mammals.

Greater Farallon NMS encompasses 2,488 nmi^2 (8,534 km^2) just north and west of San Francisco Bay, CA, within the California Current ecosystem. Due to a high degree of wind-driven upwelling, there is a ready supply of nutrients to surface waters and the California Current ecosystem is one of the most biologically productive regions in the world. Greater Farallones NMS provides breeding and feeding grounds for at least 25 endangered or threatened species; 36 marine mammal species, including blue, gray, and humpback whales, harbor seals, elephant seals, Pacific white-sided dolphins, and one of the southernmost U.S. populations of threatened Steller sea lion.

Monterey Bay NMS is an ecosystem-based managed sanctuary consisting of an area of 4,601 nmi^2 (15,781 km^2) stretching from Marin to Cambria and extending an average of 26.1 nmi (48.3 km) from shore. Monterey Bay NMS contains extensive kelp forests and one of North America's largest underwater canyons and closest-to-shore deep ocean environments. Its diverse marine ecosystem also includes rugged rocky shores, wave-swept sandy beaches and tranquil estuaries. These habitats support a variety of marine life, including 36 species of marine mammals, more than 180 species of seabirds and shorebirds, at least 525 species of fishes, and an abundance of invertebrates and algae. Of the 36 species of marine mammals, six are pinnipeds with California sea lions being the most common, and the remainder are 26 species of cetaceans.

Hawaiian Islands Humpback Whale NMS is a single-species managed sanctuary, composed of 1,035 nmi^2 of the waters around Maui, Lānaʻi, and Molokaʻi; and smaller areas off the north shore of Kauaʻi, off Hawaii's west coast, and off the north and southeast coasts of Oʻahu. Hawaiian Islands Humpback Whale NMS is entirely within the HRC of the HCTT Study Area and constitutes one of the world's most important Hawaii humpback whale DPS habitats (81 FR 62259, September 8, 2016), and is a primary region for humpback reproduction in the U.S. (National Marine Sanctuaries Program, 2002). Scientists estimate that more than 50 percent of the entire North Pacific humpback whale population migrates to Hawaiian waters each winter to mate, calve, and nurse their young. The North Pacific humpback whale population has been split into two DPSs. The Hawaii humpback whale DPS migrates to Hawaiian waters each winter and is not listed under the ESA. In addition to protection under the MMPA, the Hawaii humpback whale DPS is protected in sanctuary waters by the Hawaiian Islands Humpback Whale NMS. The sanctuary was created to protect humpback whales and shallow, protected waters important for calving and nursing (Office of National Marine Sanctuaries, 2010).

Papahānaumokuākea NMS, the largest NMS, consists of approximately 439,910 nmi^2 (1,508,849 km^2) of marine habitat. The sanctuary comprises several interconnected ecosystems, such as coral islands surrounded by shallow reefs, low-light mesophotic reefs with extensive algal beds, open ocean waters

connected to the greater North Pacific Ocean, deep-water habitats such as abyssal plains 16,400 ft (4,999 m) below sea level, and deep reef habitat characterized by seamounts, banks, and shoals. Hawaiian monk seals, one of the most endangered marine mammals in the world, live in Papahānaumokuākea NMS.

The Office of National Marine Sanctuaries is in the process of designating the Pacific Remote Islands NMS. The atolls, shoals, banks, reefs, seamounts, and open-ocean waters surrounding the Pacific Remote Islands are home to some of the most diverse tropical marine life on the planet. The region's diverse habitats and pristine reefs provide a haven for marine mammals and numerous threatened, endangered, and depleted species thrive in the area, including spinner dolphins and melon-headed whales. NMFS does not anticipate injury to Sanctuary resources in the proposed Pacific Remote Islands NMS, as the action proponents are not proposing to conduct activities within the vicinity of, or within, the proposed Pacific Islands Heritage NMS.

Unusual Mortality Events

An unusual mortality event (UME) is defined under Section 410(9) of the MMPA as a stranding that is unexpected; involves a significant die-off of any marine mammal population; and demands immediate response (16 U.S.C. 1421h(9)). From 1991 to the present, there have been 17 formally recognized UMEs affecting marine mammals in California and Hawaii and involving species under NMFS' jurisdiction; however, there are currently none that are active.

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995, Wartzok and Ketten, 1999, Au and Hastings, 2008). To reflect this, Southall *et al.* (2007), Southall *et al.* (2019c) recommended that marine mammals be divided into hearing groups based on directly measured (behavioral or auditory evoked potential techniques) or estimated hearing ranges (*e.g.,* behavioral response data, anatomical modeling). NMFS (2024) generalized hearing ranges were chosen based on the approximately 65-dB threshold from the composite audiograms, previous analysis in NMFS (2018), and/or data from Southall *et al.* (2007) and Southall *et al.* (2019c). We note that the names of two hearing groups and the generalized hearing ranges of all marine mammal hearing groups have been recently updated (NMFS, 2024) as reflected below in table 16.

TABLE 17—MARINE MAMMAL HEARING GROUPS

[NMFS, 2024]

Hearing group	Generalized hearing range *
Low-frequency (LF) cetaceans (baleen whales)	7 Hz to 36** kHz
High-frequency (HF) cetaceans (dolphins, toothed whales, beaked whales, bottlenose whales)	150 Hz to 160 kHz.
Very High-frequency (VHF) cetaceans (true porpoises, *Kogia,* river dolphins, Cephalorhynchid, *Lagenorhynchus cruciger* and *L. australis*).	200 Hz to 165 kHz.
Phocid pinnipeds (PW) (underwater) (true seals)	40 Hz to 90 kHz.
Otariid pinnipeds (OW) (underwater) (sea lions and fur seals)	60 Hz to 68 kHz.
Phocid pinnipeds (PA) (in-air) (true seals)	42 Hz to 52 kHz.
Otariid pinnipeds (OA) (in-air) (sea lions and fur seals)	90 Hz to 40 kHz.

* Represents the generalized hearing range for the entire group as a composite (*i.e.,* all species within the group), where individual species' hearing ranges are typically not as broad. Generalized hearing range chosen based on the ~65–dB threshold from composite audiogram, previous analysis in NMFS (2018), and/or data from Southall *et al.* (2007) and Southall *et al.* (2019). Additionally, animals are able to detect very loud sounds above and below that ''generalized'' hearing range.

** The Action Proponents split the LF functional hearing group into LF and VLF based on Houser *et al.,* (2024) while NMFS Updated Technical Guidance (NMFS, 2024) does not include these data. NMFS is aware these data and data collected during a final field season by Houser *et al.* (in prep) have implications for the generalized hearing range for low-frequency cetaceans and their weighting function, however, as described in the 2024 Updated Technical Guidance, it is premature for us to propose any changes to our current Updated Technical Guidance. Mysticete hearing data is identified as a special circumstance that could merit reevaluating the acoustic criteria for low-frequency cetaceans in the 2024 Updated Technical Guidance once the data from the final field season is published. Therefore, we anticipate that once the data are published, it will likely necessitate updating this document (*i.e.,* likely after the data gathered in the summer 2024 field season and associated analysis are published).

For more detail concerning these groups and associated frequency ranges, please see NMFS (2024) for a review of available information.

The Navy adjusted these hearing groups using data from recent hearing measurements in minke whales (Houser *et al.,* 2024). These data support separating mysticetes (the LF cetacean marine mammal hearing group in table 17) into two hearing groups, which the Navy designates as ''very low-frequency (VLF) cetaceans'' and ''low-frequency (LF) cetaceans,'' which follows the recommendations of Southall *et al.* (2019c). Within the Navy's adjusted hearing groups, the VLF cetacean group contains the larger mysticetes (*i.e.,* blue, fin, right, and bowhead whales) and the LF cetacean group contains the mysticete species not included in the VLF group (*e.g.,* minke, humpback, gray, pygmy right whales). Although there have been no direct measurements of hearing sensitivity in the larger mysticetes included in Navy's VLF hearing group, an audible frequency range of approximately 10 Hz to 30 kHz has been estimated from measured vocalization frequencies, observed responses to playback of sounds, and anatomical analyses of the auditory system. The upper frequency limit of hearing in Navy's LF hearing group has been estimated in a minke whale from direct measurements of auditory evoked potentials (Houser *et al.,* 2024).

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section provides a discussion of the ways in which components of the specified activity may impact marine mammals and their habitat. The Estimated Take of Marine Mammals section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken

by this activity. The Preliminary Analysis and Negligible Impact Determination section considers the content of this section, the Estimated Take of Marine Mammals section, and the Proposed Mitigation Measures section to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and whether those impacts on individuals are likely to adversely affect the species or stock through effects on annual rates of recruitment or survival.

The Action Proponents have requested authorization for the take of marine mammals that may occur incidental to training and testing activities in the HCTT Study Area. The Action Proponents analyzed potential impacts to marine mammals from acoustic and explosive sources and from vessel use in the application. NMFS carefully reviewed the information provided by the Action Proponents and concurs with their synthesis of science, along with independently reviewing applicable scientific research and literature and other information to evaluate the potential effects of the Action Proponents' activities on marine mammals, which are presented in this section (see appendix D in the 2024 HCTT Draft EIS/OEIS for additional information).

Other potential impacts to marine mammals from training and testing activities in the HCTT Study Area were analyzed in the 2024 HCTT Draft EIS/OEIS, in consultation with NMFS as a cooperating agency, and determined to be unlikely to result in marine mammal take. Therefore, the Action Proponents have not requested authorization for take of marine mammals incidental to other components of their proposed Specified Activities, and we agree that incidental take is unlikely to occur from those components. In this proposed rule, NMFS analyzes the potential effects on marine mammals from the activity components that may result in take of marine mammals: exposure to acoustic or explosive stressors including non-impulsive (*i.e.,* sonar and other transducers, and vibratory pile driving) and impulsive (*i.e.,* explosives, impact pile driving, launches, and air guns) stressors and vessel movement.

For the purpose of MMPA incidental take authorizations, NMFS' effects assessments serve four primary purposes: (1) to determine whether the specified activities would have a negligible impact on the affected species or stocks of marine mammals (based on whether it is likely that the activities would adversely affect the species or stocks through effects on annual rates of recruitment or survival); (2) to determine whether the specified activities would have an unmitigable adverse impact on the availability of the species or stocks for subsistence uses; (3) to prescribe the permissible methods of taking (*i.e.,* Level B harassment (behavioral harassment and temporary threshold shift (TTS)), Level A harassment (auditory injury (AUD INJ), non-auditory injury), serious injury, or mortality), including identification of the number and types of take that could occur by harassment, serious injury, or mortality, and to prescribe other means of effecting the least practicable adverse impact on the species or stocks and their habitat (*i.e.,* mitigation measures); and (4) to prescribe requirements pertaining to monitoring and reporting.

In this section, NMFS provides a description of the ways marine mammals may be generally affected by these activities in the form of mortality, physical injury, sensory impairment (permanent and temporary threshold shifts and acoustic masking), physiological responses (particular stress responses), behavioral disturbance, or habitat effects. Explosives and vessel strikes, which have the potential to result in incidental take by serious injury and/or mortality, will be discussed in more detail in the Estimated Take of Marine Mammals section. The Estimated Take of Marine Mammals section also discusses how the potential effects on marine mammals from non-impulsive and impulsive sources relate to the MMPA definitions of Level A Harassment and Level B Harassment, and quantifies those effects that do not qualify as a take under the MMPA. The Preliminary Analysis and Negligible Impact Determination section assesses whether the proposed authorized take would have a negligible impact on the affected species and stocks.

Potential Effects of Underwater Sound on Marine Mammals

The marine soundscape is composed of both ambient and anthropogenic sounds. Ambient sound is defined as the all-encompassing sound in a given place and is usually a composite of sound from many sources both near and far (American National Standards Institute, 1995). The sound level of an area is defined by the total acoustical energy being generated by known and unknown sources, which may include physical (*e.g.,* waves, wind, precipitation, earthquakes, ice, atmospheric sound), biological (*e.g.,* sounds produced by marine mammals, fish, and invertebrates), and anthropogenic sound (*e.g.,* vessels, dredging, aircraft, construction).

The sum of the various natural and anthropogenic sound sources at any given location and time—which comprise ''ambient'' or ''background'' sound—depends not only on the source levels (as determined by current weather conditions and levels of biological and shipping activity) but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor and is frequency-dependent. As a result of the dependence on a large number of varying factors, ambient sound levels can be expected to vary widely over both coarse and fine spatial and temporal scales. Sound levels at a given frequency and location can vary by 10–20 dB from day to day (Richardson *et al.,* 1995). The result is that, depending on the source type and its intensity, sound from the specified activities may be a negligible addition to the local environment or could form a distinctive signal that may affect marine mammals.

Anthropogenic sounds cover a broad range of frequencies and sound levels and can have a range of highly variable impacts on marine life, from none or minor to potentially severe responses, depending on received levels, duration of exposure, behavioral context, and various other factors. The potential effects of underwater sound from active acoustic sources can possibly result in one or more of the following: temporary or permanent hearing impairment, other auditory injury, non-auditory physical or physiological effects, behavioral disturbance, stress, and masking (Richardson *et al.,* 1995; Gordon *et al.,* 2003; Nowacek *et al.,* 2007; Southall *et al.,* 2007; Götz *et al.,* 2009, Southall *et al.,* 2019a). The degree of effect is intrinsically related to the signal characteristics, received level, distance from the source, and duration of the sound exposure. In general, sudden, high-level sounds can cause auditory injury, as can longer exposures to lower level sounds. Temporary or permanent loss of hearing can occur after exposure to noise and occurs almost exclusively for noise within an animal's hearing range.

Richardson *et al.* (1995) described zones of increasing intensity of effect that might be expected to occur, in relation to distance from a source and assuming that the signal is within an animal's hearing range. First is the area within which the acoustic signal would be audible (potentially perceived) to the animal, but not strong enough to elicit

any overt behavioral or physiological response. The next zone corresponds with the area where the signal is audible to the animal and of sufficient intensity to elicit behavioral or physiological responsiveness. Third is a zone within which, for signals of high intensity, the received level is sufficient to potentially cause discomfort or tissue damage to auditory systems. Overlaying these zones to a certain extent is the area within which masking (*i.e.,* when a sound interferes with or masks the ability of an animal to detect a signal of interest that is above the absolute hearing threshold) may occur; the masking zone may be highly variable in size.

We also describe more severe potential effects (*i.e.,* certain non-auditory physical or physiological effects). Potential effects from impulsive sound sources can range in severity from effects such as behavioral disturbance or tactile perception to physical discomfort, slight injury of the internal organs and the auditory system, or, in the case of explosives, more severe injuries or mortality (Yelverton *et al.,* 1973). Non-auditory physiological effects or injuries that theoretically might occur in marine mammals exposed to high levels of underwater sound or as a secondary effect of extreme behavioral responses (*e.g.,* change in dive profile as a result of an avoidance response) caused by exposure to sound include neurological effects, bubble formation, resonance effects, and other types of organ or tissue damage (Cox *et al.,* 2006; Southall *et al.,* 2007; Zimmer and Tyack, 2007; Tal *et al.,* 2015).

Hearing

Marine mammals have adapted hearing based on their biology and habitat: amphibious marine mammals (*e.g.,* pinnipeds that spend time on land and underwater) have modified ears that allow them to hear both in-air and in-water, while fully aquatic marine mammals (*e.g.,* cetaceans that are always underwater) have specialized ear adaptations for in-water hearing (Wartzok and Ketten, 1999). These adaptations explain the variation in hearing ability and sensitivity among marine mammals and have led to the characterization of marine mammal functional hearing groups based on those sensitivities: very low-frequency cetaceans (VLF group: blue, fin, right, and bowhead whales), low-frequency cetaceans (LF group: minke, sei, Bryde's, Rice's, humpback, gray, and pygmy right whales), high-frequency (HF) cetaceans (HF group: sperm whales, beaked whales, killer whale, melon-headed whale, false/pygmy killer whale, pilot whales, and some dolphin species), very high-frequency (VHF) cetaceans (VHF group: some dolphin species, porpoises, Amazon River dolphin, *Kogia* species, Baiji, and La Plata dolphin), sirenians (SI) (SI group: manatees, dugongs), otariids (OCW) and other non-phocid marine carnivores (OCA) in water and in air (OCW and OCA groups: sea lion, fur seal, walrus, otter), and phocids in water (PCW) and in air (PCA) (PCW and PCA groups: true seals) (Southall *et al.,* 2019). In Phase III, VLF and LF cetaceans were part of one, combined LF cetacean hearing group. However, as described in the Navy's report ''Criteria and Thresholds for U.S. Navy Acoustic and Explosive Effects Analysis (Phase 4)'' (U.S. Department of the Navy, 2025), hereafter referred to as the Criteria and Thresholds Technical Report, Houser *et al.* (2024) recently reported obtaining hearing measurements for minke whales, the first direct measurements for a baleen whale species, using auditory evoked potential (AEP) methodology. The Action Proponents incorporated these measurements, as well as Southall *et al.* (2019), into their analysis. They determined that the data support dividing mysticetes into two separate hearing groups: VLF and LF cetaceans, and NMFS concurs, (as described further in the Estimated Take of Marine Mammals section), that this approach is appropriate for this action.

The hearing sensitivity of marine mammals is also directional, meaning the angle between an animal's position and the location of a sound source impacts the animal's hearing threshold, thereby impacting an animal's ability to perceive the sound emanating from that source. This directionality is likely useful for determining the general location of a sound, whether for detection of prey, predators, or members of the same species, and can be dependent upon the frequency of the sound (Accomando *et al.,* 2020; Au and Moore, 1984; Byl *et al.,* 2016; Byl *et al.* 2019; Kastelein *et al.,* 2005; Kastelein *et al.,* 2019; Popov and Supin, 2009).

Acoustic Signaling

An acoustic signal refers to the sound waves used to communicate underwater, and marine mammals use a variety of acoustic signals for socially important functions, such as communicating, as well as biologically important functions, such as echolocating (Richardson *et al.,* 1995; Wartzok and Ketten, 1999). Acoustic signals used for communication are lower frequency (*i.e.,* 20 Hz to 30 kHz) than those signals used for echolocation, which are high-frequency (approximately 10–200 kHz peak frequency) signals used by odontocetes to sense their underwater environment. Lower frequency vocalizations used for communication may have a specific, prominent fundamental frequency (Brady *et al.,* 2021) or have a wide frequency range, depending on the functional hearing group and whether the marine mammal is vocalizing in-water or in-air. Acoustic signals used for echolocation are high-frequency, high-energy sounds with patterns and peak frequencies that are often species-specific (Baumann-Pickering *et al.,* 2013).

Marine mammal species typically produce sounds at frequencies within their own hearing range, though auditory and vocal ranges do not perfectly align (*e.g.,* odontocetes may only hear a portion of the frequencies of an echolocation click). Because determining a species vocal range is easier than determining a species' hearing range, vocal ranges are often used to infer a species' hearing range when species-specific hearing data are not available (*e.g.,* large whale species).

Hearing Loss and Auditory Injury

Marine mammals, like all mammals, lose their ability to hear over time due to age-related degeneration of auditory pathways and sensory cells of the inner ear. This natural, age-related hearing loss is distinct from acute noise-induced hearing loss (Møller, 2013). Noise-induced hearing loss can be temporary (*i.e.,* TTS) or permanent (permanent threshold shift (PTS)), and higher-level sound exposures are more likely to cause PTS or other AUD INJ. For marine mammals, AUD INJ is considered to be possible when sound exposures are sufficient to produce 40 dB of TTS measured approximately 4 minutes after exposure (U.S. Department of the Navy, 2025). Numerous studies have directly examined noise-induced hearing loss in marine mammals by measuring an animal's hearing threshold before and after exposure to intense sounds. The difference between the post-exposure and pre-exposure hearing thresholds is then used to determine the amount of TTS (in dB) that was produced as a result of the sound exposure (see appendix D of the 2024 HCTT Draft EIS/OEIS for additional details). The Navy used these studies to generate exposure functions, which are predictions of the onset of TTS or PTS based on sound frequency, level, and type (continuous or impulsive), for each marine mammal functional hearing group (U.S. Department of the Navy, 2025).

TTS can last from minutes or hours to days (*i.e.,* there is recovery back to baseline/pre-exposure hearing threshold), can occur within a specific frequency range (*i.e.,* an animal might only have a temporary loss of hearing sensitivity within a limited frequency band of its auditory range), and can be of varying amounts (*e.g.,* an animal's hearing sensitivity might be reduced by only 6 dB or reduced by 30 dB). While there is no simple functional relationship between TTS and PTS or other AUD INJ (*e.g.,* neural degeneration), as TTS increases, the likelihood that additional exposure to increased SPL or duration will result in PTS or other injury also increases (see appendix D of the 2024 HCTT Draft EIS/OEIS for additional discussion). Exposure thresholds for the occurrence of AUD INJ, which include the potential for PTS, as well as situations when AUD INJ occurs without PTS, can therefore be defined based on a specific amount of TTS; that is, although an exposure has been shown to produce only TTS, we assume that any additional exposure may result in some AUD INJ. The specific upper limit of TTS is based on experimental data showing amounts of TTS that have not resulted in AUD INJ. In other words, we do not need to know the exact functional relationship between TTS and AUD INJ, we only need to know the upper limit for TTS before some AUD INJ is possible. In severe cases of AUD INJ, there can be total or partial deafness, while in most cases the animal has an impaired ability to hear sounds in specific frequency ranges (Kryter, 1985).

The following physiological mechanisms are thought to play a role in inducing auditory threshold shift: effects to sensory hair cells in the inner ear that reduce their sensitivity; modification of the chemical environment within the sensory cells; residual muscular activity in the middle ear; displacement of certain inner ear membranes; increased blood flow; and post-stimulatory reduction in both efferent and sensory neural output (Southall *et al.,* 2007). The amplitude, duration, frequency, temporal pattern, and energy distribution of sound exposure all can affect the amount of associated threshold shift and the frequency range in which it occurs. Generally, the amount of threshold shift, and the time needed to recover from the effect, increase as amplitude and duration of sound exposure increases. Human non-impulsive noise exposure guidelines are based on the assumption that exposures of equal energy (the same SEL) produce equal amounts of hearing impairment regardless of how the sound energy is distributed in time (NIOSH, 1998). Previous marine mammal TTS studies have also generally supported this equal energy relationship (Southall *et al.,* 2007). SEL is used to predict TTS in marine mammals and is considered a good predictor of TTS for shorter duration exposures than longer duration exposures. The amount of TTS increases with exposure SPL and duration, and is correlated with SEL, but duration of the exposure has a more significant effect on TTS than would be predicted based on SEL alone (*e.g.,* Finneran *et al.,* 2010b; Kastak *et al.,* 2007; Kastak *et al.,* 2005; Kastelein *et al.,* 2014a; Mooney *et al.,* 2009a; Popov *et al.,* 2014; Gransier and Kastelein, 2024). These studies highlight the inherent complexity of predicting TTS onset in marine mammals, as well as the importance of considering exposure duration when assessing potential impacts.

Generally, TTS increases with SEL in a non-linear fashion, where lower SEL exposures will elicit a steady rate of TTS increase while higher SEL exposures will either increase TTS more rapidly or plateau (Finneran, 2015; U.S. Department of the Navy, 2025). Additionally, with sound exposures of equal energy, those that had lower SPL with longer duration were found to induce TTS onset at lower levels than those of higher SPL and shorter duration. Less threshold shift will occur from intermittent sounds than from a continuous exposure with the same energy (some recovery can occur between intermittent exposures) (Kryter *et al.,* 1966; Ward, 1997; Mooney *et al.,* 2009a, 2009b; Finneran *et al.,* 2010; Kastelein *et al.,* 2014; Kastelein *et al.,* 2015). For example, one short, higher SPL sound exposure may induce the same impairment as one longer lower SPL sound, which in turn may cause more impairment than a series of several intermittent softer sounds with the same total energy (Ward, 1997). Additionally, though TTS is temporary, very prolonged or repeated exposure to sound strong enough to elicit TTS, or shorter-term exposure to sound levels well above the TTS threshold, can cause AUD INJ, at least in terrestrial mammals (Kryter, 1985; Lonsbury-Martin *et al.,* 1987).

Although TTS increases non-linearly in marine mammals, recovery from TTS typically occurs in a linear fashion with the logarithm of time (Finneran, 2015; Finneran *et al.,* 2010a; Finneran *et al.,* 2010b; Finneran and Schlundt, 2013; Kastelein *et al.,* 2012a; Kastelein *et al.,* 2012b; Kastelein *et al.,* 2013a; Kastelein *et al.,* 2014a; Kastelein *et al.,* 2014b; Kastelein *et al.,* 2014c; Popov *et al.,* 2014; Popov *et al.,* 2013; Popov *et al.,* 2011; Muslow *et al.,* 2023; Finneran *et al.,* 2023). Considerable variation has been measured in individuals of the same species in both the amount of TTS incurred from similar SELs (Kastelein *et al.,* 2012a; Popov *et al.,* 2013) and the time-to-recovery from TTS (Finneran, 2015; Kastelein *et al.,* 2019e). Many of these studies relied on continuous sound exposures, but intermittent, impulsive sound exposures have also been tested. The sound resulting from an explosive detonation is considered an impulsive sound, but no direct measurements of hearing loss from exposure to explosive sources have been made. Few studies (Finneran *et al.,* 2002; Lucke *et al.,* 2009; Sills *et al.,* 2020; Muslow *et al.,* 2023) using impulsive sounds have produced enough TTS to make predictions about hearing loss due to this source type (see U.S. Department of the Navy, 2025). In general, predictions of TTS based on SEL for this type of sound exposure are likely to overestimate TTS because some recovery from TTS may occur in the quiet periods between impulsive sounds—especially when the duty cycle is low. Peak SPL (unweighted) is also used to predict TTS due to impulsive sounds (Southall *et al.,* 2007; Southall *et al.,* 2019c; U.S. Department of the Navy, 2025).

Specific to land-based missile and target launches (characterized by sudden onset of sound, moderate to high peak sound levels (depending on the type of missile and distance), and short sound duration) although it is possible that some pinnipeds may incur TTS during launches from SNI (TTS is not anticipated during launches from PMRF), hearing impairment has not been measured for pinniped species exposed to launch sounds. Auditory brainstem response (*i.e.,* hearing assessment using measurements of electrical responses of the brain) was used to demonstrate that harbor seals did not exhibit loss in hearing sensitivity following launches of large rockets at Vandenberg Space Force Base (VSFB, formerly Vandenberg Air Force Base) (Thorson *et al.,* 1999; Thorson *et al.,* 1998). However, the hearing tests did not begin until at least 45 minutes after the launch; therefore, harbor seals may have incurred TTS which was undetectable by the time testing began. There was no sign of PTS in any of the harbor seals tested (Thorson *et al.,* 1999; Thorson *et al.,* 1998). Since 2001, no launch events at SNI have exposed pinnipeds to noise levels at or exceeding those where PTS could be incurred. Of note, the range to PTS and

TTS would not reach haulout locations for Hawaiian monk seals on beaches at PMRF (see section 6.3.2 of the application).

Based on measurements of received sound levels during previous launches at SNI (Burke 2017; Holst *et al.,* 2010; Holst *et al.,* 2005a; Holst *et al.,* 2008; Holst *et al.,* 2011; Ugoretz 2016; Ugoretz and Greene Jr. 2012), the Navy expects that there is a very limited potential of TTS for a few of the pinnipeds present, particularly for phocids. Available evidence from launch monitoring at SNI in 2001–2017 suggests that only a limited number of launch events produced sound levels that could elicit TTS for some pinnipeds (Burke 2017; Holst *et al.,* 2008; Holst *et al.,* 2011; Ugoretz 2016; Ugoretz and Greene Jr. 2012). In general, if any TTS were to occur to pinnipeds, it is expected to be mild and reversible. It is possible that some launch sounds as measured close to the launchers may exceed the auditory injury criteria, but it is not expected that any pinnipeds would be close enough to the launchers to be exposed to sounds strong enough to cause auditory injury. Due to the expected sound levels of the activities proposed and the distance of the activity from marine mammal habitat, the effects of sounds from the proposed activities are unlikely to result in auditory injury.

In some cases, intense noise exposures have caused AUD INJ (*e.g.,* loss of cochlear neuron synapses), despite thresholds eventually returning to normal (*i.e.,* it is possible to have AUD INJ without a resulting PTS (*e.g.,* Kujawa and Liberman, 2006, 2009; Fernandez *et al.,* 2015; Ryan *et al.,* 2016; Houser, 2021)). In these situations, however, threshold shifts were 30–50 dB measured 24 hours after the exposure (*i.e.,* there is no evidence that an exposure resulting in less than 40 dB TTS measured a few minutes after exposure can produce AUD INJ). Therefore, an exposure producing 40 dB of TTS, measured a few minutes after exposure, can also be used as an upper limit to prevent AUD INJ (*i.e.,* it is assumed that exposures beyond those capable of causing 40 dB of TTS have the potential to result in INJ (which may or may not result in PTS)).

Irreparable damage to the inner or outer cochlear hair cells may cause PTS; however, other mechanisms are also involved, such as exceeding the elastic limits of certain tissues and membranes in the middle and inner ears and resultant changes in the chemical composition of the inner ear fluids (Southall *et al.,* 2007). When AUD INJ occurs, there is physical damage to the sound receptors in the ear, whereas TTS represents primarily tissue fatigue and is reversible (Southall *et al.,* 2007). AUD INJ is permanent (*i.e.,* there is incomplete recovery back to baseline/pre-exposure levels) but also can occur in a specific frequency range and amount as mentioned above for TTS. In addition, other investigators have suggested that TTS is within the normal bounds of physiological variability and tolerance and does not represent physical injury (*e.g.,* Ward, 1997). Therefore, NMFS does not consider less than 40 dB of TTS to constitute AUD INJ. The NMFS Acoustic Updated Technical Guidance (NMFS, 2024), which was used in the assessment of effects for this proposed rule, compiled, interpreted, and synthesized the best available scientific information for noise-induced hearing effects for marine mammals to derive updated thresholds for assessing the impacts of noise on marine mammal hearing.

While many studies have examined noise-induced hearing loss in marine mammals (see Finneran (2015) and Southall *et al.* (2019a) for summaries), published data on the onset of TTS for cetaceans are limited to the captive bottlenose dolphin, beluga, harbor porpoise, and Yangtze finless porpoise, and for pinnipeds in water, measurements of TTS are limited to harbor seals, elephant seals, California sea lions, and bearded seals. These studies examine hearing thresholds measured in marine mammals before and after exposure to intense sounds, which can then be used to determine the amount of threshold shift at various post-exposure times. NMFS has reviewed the available studies, which are summarized below (see also the 2024 HCTT Draft EIS/OEIS which includes additional discussion on TTS studies related to sonar and other transducers).

- The method used to test hearing may affect the resulting amount of measured TTS, with neurophysiological measures producing larger amounts of TTS compared to psychophysical measures (Finneran *et al.,* 2007; Finneran, 2015).
- The amount of TTS varies with the hearing test frequency. As the exposure SPL increases, the frequency at which the maximum TTS occurs also increases (Kastelein *et al.,* 2014b). For high-level exposures, the maximum TTS typically occurs one-half to one octave above the exposure frequency (Finneran *et al.,* 2007; Mooney *et al.,* 2009a; Nachtigall *et al.,* 2004; Popov *et al.,* 2011; Popov *et al.,* 2013; Schlundt *et al.,* 2000). The overall spread of TTS from tonal exposures can therefore extend over a large frequency range (*i.e.,* narrowband exposures can produce broadband (greater than one octave) TTS).
- The amount of TTS increases with exposure SPL and duration and is correlated with SEL, especially if the range of exposure durations is relatively small (Kastak *et al.,* 2007; Kastelein *et al.,* 2014b; Popov *et al.,* 2014). As the exposure duration increases, however, the relationship between TTS and SEL begins to break down. Specifically, duration has a more significant effect on TTS than would be predicted on the basis of SEL alone (Finneran *et al.,* 2010a; Kastak *et al.,* 2005; Mooney *et al.,* 2009a). This means if two exposures have the same SEL but different durations, the exposure with the longer duration (thus lower SPL) will tend to produce more TTS than the exposure with the higher SPL and shorter duration. In most acoustic impact assessments, the scenarios of interest involve shorter duration exposures than the marine mammal experimental data from which impact thresholds are derived; therefore, use of SEL tends to over-estimate the amount of TTS. Despite this, SEL continues to be used in many situations because it is relatively simple, more accurate than SPL alone, and lends itself easily to scenarios involving multiple exposures with different SPL (Finneran, 2015).
- Gradual increases of TTS may not be directly observable with increasing exposure levels, before the onset of PTS (Reichmuth *et al.,* 2019). Similarly, PTS can occur without measurable behavioral modifications (Reichmuth *et al.,* 2019).
- The amount of TTS depends on the exposure frequency. Sounds at low frequencies, well below the region of best sensitivity, are less hazardous than those at higher frequencies, near the region of best sensitivity (Finneran and Schlundt, 2013). The onset of TTS—defined as the exposure level necessary to produce 6 dB of TTS (*i.e.,* clearly above the typical variation in threshold measurements)—also varies with exposure frequency. At the low frequency end of a species' hearing curve, onset-TTS exposure levels are higher compared to those in the region of best sensitivity.
- TTS can accumulate across multiple exposures, but the resulting TTS will be less than the TTS from a single, continuous exposure with the same SEL (Finneran *et al.,* 2010a; Kastelein *et al.,* 2014b; Kastelein *et al.,* 2015b; Mooney *et al.,* 2009b). This means that TTS predictions based on the total, cumulative SEL will overestimate the amount of TTS from

intermittent exposures such as sonars and impulsive sources.

- The amount of observed TTS tends to decrease with increasing time following the exposure; however, the relationship is not monotonic (*i.e.,* increasing exposure does not always increase TTS). The time required for complete recovery of hearing depends on the magnitude of the initial shift; for relatively small shifts recovery may be complete in a few minutes, while large shifts (*e.g.,* approximately 40 dB) may require several days for recovery. Under many circumstances TTS recovers linearly with the logarithm of time (Finneran *et al.,* 2010a, 2010b; Finneran and Schlundt, 2013; Kastelein *et al.,* 2012a; Kastelein *et al.,* 2012b; Kastelein *et al.,* 2013a; Kastelein *et al.,* 2014b; Kastelein *et al.,* 2014c; Popov *et al.,* 2011; Popov *et al.,* 2013; Popov *et al.,* 2014). This means that for each doubling of recovery time, the amount of TTS will decrease by the same amount (*e.g.,* 6 dB recovery per doubling of time).

Nachtigall *et al.* (2018) and Finneran (2018) describe the measurements of hearing sensitivity of multiple odontocete species (*i.e.,* bottlenose dolphin, harbor porpoise, beluga, and false killer whale) when a relatively loud sound was preceded by a warning sound. These captive animals were shown to reduce hearing sensitivity when warned of an impending intense sound. Based on these experimental observations of captive animals, the authors suggest that wild animals may dampen their hearing during prolonged exposures or if conditioned to anticipate intense sounds. Finneran (2018) recommends further investigation of the mechanisms of hearing sensitivity reduction in order to understand the implications for interpretation of existing TTS data obtained from captive animals, notably for considering TTS due to short duration, unpredictable exposures.

Marine mammal hearing plays a critical role in communication with conspecifics and in interpretation of environmental cues for purposes such as predator avoidance and prey capture. Depending on the degree (elevation of threshold in dB), duration (*i.e.,* recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious similar to those discussed in auditory masking, below. For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that takes place during a time where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during a time when communication is critical for successful mother/calf interactions could have more serious impacts if it were in the same frequency band as the necessary vocalizations and of a severity that impeded communication. The fact that animals exposed to high levels of sound that would be expected to result in this physiological response would also be expected to have behavioral responses of a comparatively more severe or sustained nature is potentially more significant than the simple existence of a TTS. However, it is important to note that TTS could occur due to longer exposures to sound at lower levels so that a behavioral response may not be elicited.

Depending on the degree and frequency range, the effects of AUD INJ on an animal could also range in severity, although it is considered generally more serious than TTS because it is a permanent condition (Reichmuth *et al.,* 2019). Of note, reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.,* 2007), so we can infer that strategies exist for coping with this condition to some degree, though likely not without some cost to the animal.

As the amount of research on hearing sensitivity has grown, so, too, has the understanding that marine mammals may be able to self-mitigate, or protect, against noise-induced hearing loss. An animal may learn to reduce or suppress their hearing sensitivity when warned of an impending intense sound exposure, or if the duty cycle of the sound source is predictable (Finneran, 2018; Finneran et al., 2024; Nachtigall and Supin, 2013, 2014, 2015; Nachtigall et al., 2016a, 2016b, 2016c, 2018). This has been shown with several species, including the false killer whale (Nachtigall and Supin, 2013), bottlenose dolphin (Finneran, 2018; Nachtigall and Supin, 2014, 2015; Nachtigall *et al.,* 2016c), beluga whale (Nachtigall *et al.,* 2016a), and harbor porpoise (Nachtigall *et al.,* 2016b). Additionally, Finneran *et al.* (2023) and Finneran *et al.* (2024) found that odontocetes that had participated in TTS experiments in the past could have learned from that experience and subsequently protected their hearing during new sound exposure experiments.

Behavioral Responses

Behavioral responses to sound are highly variable and context-specific (Nowacek *et al.,* 2007; Southall *et al.,* 2007; Southall *et al.,* 2019). Many different variables can influence an animal's perception of and response to (nature and magnitude) an acoustic event. An animal's prior experience with a sound or sound source affects whether it is less likely (habituation, self-mitigation) or more likely (sensitization) to respond to certain sounds in the future (animals can also be innately predisposed to respond to certain sounds in certain ways) (Southall *et al.,* 2007; Southall *et al.,* 2016; Finneran, 2018; Finneran *et al.,* 2024; Nachtigall and Supin, 2013, 2014, 2015; Nachtigall *et al.,* 2015; Nachtigall *et al.,* 2016a, 2018; Nachtigall *et al.,* 2016b). Related to the sound itself, the perceived proximity of the sound, bearing of the sound (approaching vs. retreating), the similarity of a sound to biologically relevant sounds in the animal's environment (*i.e.,* calls of predators, prey, or conspecifics), familiarity of the sound, and navigational constraints may affect the way an animal responds to the sound (Ellison *et al.,* 2012; Southall *et al.,* 2007, DeRuiter *et al.,* 2013a, Southall *et al.,* 2021; Wartzok *et al.,* 2003). Individuals (of different age, gender, reproductive status, *etc.*) among most populations will have variable hearing capabilities, and differing behavioral sensitivities to sounds that will be affected by prior conditioning, experience, and current activities of those individuals. Southall *et al.* (2007) and Southall *et al.* (2021) have developed and subsequently refined methods developed to categorize and assess the severity of acute behavioral responses, considering impacts to individuals that may consequently impact populations. Often, specific acoustic features of the sound and contextual variables (*i.e.,* proximity, duration, or recurrence of the sound or the current behavior that the marine mammal is engaged in or its prior experience), as well as entirely separate factors such as the physical presence of a nearby vessel, may be more relevant to the animal's response than the received level alone.

Studies by DeRuiter *et al.* (2013a) indicate that variability of responses to acoustic stimuli depends not only on the species receiving the sound and the sound source, but also on the social, behavioral, or environmental contexts of exposure. Another study by DeRuiter *et al.* (2013b) examined behavioral responses of goose-beaked whales to MF sonar and found that whales responded strongly at low received levels (89–127 dB re 1 µPa) by ceasing normal fluking

and echolocation, swimming rapidly away, and extending both dive duration and subsequent non-foraging intervals when the sound source was 2.1–5.9 mi (3.4–9.5 km) away. Importantly, this study also showed that whales exposed to a similar range of received levels (78–106 dB re: 1 µPa) from distant sonar exercises 73.3 mi (118 km away) did not elicit such responses, suggesting that context may moderate responses.

Ellison *et al.* (2012) outlined an approach to assessing the effects of sound on marine mammals that incorporates contextual-based factors. The authors recommend considering not just the received level of sound, but also the activity the animal is engaged in at the time the sound is received, the nature and novelty of the sound (*i.e.,* whether this a new sound from the animal's perspective), and the distance between the sound source and the animal. They submit that this ''exposure context,'' as described, greatly influences the type of behavioral response exhibited by the animal. Forney *et al.* (2017) also point out that an apparent lack of response (*e.g.,* no displacement or avoidance of a sound source) may not necessarily mean there is no cost to the individual or population, as some resources or habitats may be of such high value that animals may choose to stay, even when experiencing stress or hearing loss. Forney *et al.* (2017) recommend considering both the costs of remaining in an area of noise exposure such as TTS, PTS, or masking, which could lead to an increased risk of predation or other threats or a decreased capability to forage, and the costs of displacement, including potential increased risk of vessel strike, increased risks of predation or competition for resources, or decreased habitat suitable for foraging, resting, or socializing. This sort of contextual information is challenging to predict with accuracy for ongoing activities that occur over large spatial and temporal expanses. However, distance is one contextual factor for which data exist to quantitatively inform a take estimate, and the method for predicting Level B harassment in this proposed rule does consider distance to the source. Other factors are often considered qualitatively in the analysis of the likely consequences of sound exposure, where supporting information is available.

Friedlaender *et al.* (2016) provided the first integration of direct measures of prey distribution and density variables incorporated into across-individual analyses of behavior responses of blue whales to sonar, and demonstrated a five-fold increase in the ability to quantify variability in blue whale diving behavior. These results illustrate that responses evaluated without such measurements for foraging animals may be misleading, which again illustrates the context-dependent nature of the probability of response.

Exposure of marine mammals to sound sources can result in, but is not limited to, no response or any of the following observable responses: increased alertness; orientation or attraction to a sound source; vocal modifications; cessation of feeding; cessation of social interaction; alteration of movement or diving behavior; habitat abandonment (temporary or permanent); and, in severe cases, panic, flight, stampede, or stranding, potentially resulting in death (Southall *et al.,* 2007). A review of marine mammal responses to anthropogenic sound was first conducted by Richardson (1995). More recent reviews (Nowacek *et al.,* 2007; DeRuiter *et al.,* 2013a and 2013b; Ellison *et al.,* 2012; Gomez *et al.,* 2016) address studies conducted since 1995 and focused on observations where the received sound level of the exposed marine mammal(s) was known or could be estimated. Gomez *et al.* (2016) conducted a review of the literature considering the contextual information of exposure in addition to received level and found that higher received levels were not always associated with more severe behavioral responses and vice versa. Southall *et al.* (2016) states that results demonstrate that some individuals of different species display clear yet varied responses, some of which have negative implications, while others appear to tolerate high levels, and that responses may not be fully predictable with simple acoustic exposure metrics (*e.g.,* received sound level). Rather, the authors state that differences among species and individuals along with contextual aspects of exposure (*e.g.,* behavioral state) appear to affect response probability (Southall *et al.,* 2019). The following parts provide examples of behavioral responses to stressors that provide an idea of the variability in responses that would be expected given the differential sensitivities of marine mammal species to sound and the wide range of potential acoustic sources to which a marine mammal may be exposed. Behavioral responses that could occur for a given sound exposure should be determined from the literature that is available for each species (see section D.4.5 (Behavioral Reactions) of the 2024 HCTT Draft EIS/OEIS for a comprehensive list of behavioral studies and species-specific findings) or extrapolated from closely related species when no information exists, along with contextual factors.

Responses Due to Sonar and Other Transducers—

Mysticetes responses to sonar and other duty-cycled tonal sounds are dependent upon the characteristics of the signal, behavioral state of the animal, sensitivity and previous experience of an individual, and other contextual factors including distance of the source, movement of the source, physical presence of vessels, time of year, and geographic location (Goldbogen *et al.,* 2013; Harris *et al.,* 2019a; Harris *et al.,* 2015; Martin *et al.,* 2015; Sivle *et al.,* 2015b). For example, a behavioral response study (BRS) in Southern California demonstrated that individual behavioral state was critically important in determining response of blue whales to Navy sonar. In this BRS, some blue whales engaged in deep (greater than 164 ft (50 m)) feeding behavior had greater dive responses than those in shallow feeding or non-feeding conditions, while some blue whales that were engaged in shallow feeding behavior demonstrated no clear changes in diving or movement even when received levels were high (approximately 160 dB re 1 µPa) from exposures to 3–4 kHz sonar signals, while others showed a clear response at exposures at lower received level of sonar and pseudorandom noise (Goldbogen *et al.,* 2013). Generally, behavioral responses were brief and of low to moderate severity, and the whales returned to baseline behavior shortly after the end of the acoustic exposure (DeRuiter *et al.,* 2017; Goldbogen *et al.,* 2013; Southall *et al.,* 2019c). To better understand the context of these behavioral responses, Friedlaender *et al.* (2016) mapped the prey field of the deep-diving blue whales and found that the response to sound was more apparent for individuals engaged in feeding than those that were not. The probability of a moderate behavioral response increased when the source was closer for these foraging blue whales, although there was a high degree of uncertainty in that relationship (Southall *et al.,* 2019b). In the same BRS, none of the tagged fin whales demonstrated more than a brief or minor response regardless of their behavioral state (Harris *et al.,* 2019a). The fin whales were exposed to both mid-frequency simulated sonar and pseudorandom noise of similar frequency, duration, and source level. They were less sensitive to disturbance than blue whales, with no significant differences

in response between behavioral states or signal types. The authors rated responses as low-to-moderate severity with no negative impact to foraging success (Southall *et al.,* 2023).

Similarly, while the rates of foraging lunges decrease in humpback whales due to sonar exposure, there was variability in the response across individuals, with one animal ceasing to forage completely and another animal starting to forage during the exposure (Sivle *et al.,* 2016). In addition, almost half of the animals that exhibited avoidance behavior were foraging before the exposure, but the others were not; the animals that exhibited avoidance behavior while not feeding responded at a slightly lower received level and greater distance than those that were feeding (Wensveen *et al.,* 2017). These findings indicate that the behavioral state of the animal plays a role in the type and severity of a behavioral response. Henderson *et al.* (2019) examined tagged humpback whale dive and movement behavior, including individuals incidentally exposed to Navy sonar during training activities, at the PMRF off Kauaʻi, Hawaii. Tracking data showed that, regardless of exposure to sonar, individual humpbacks spent limited time, no more than a few days, in the vicinity of Kauaʻi. Potential behavioral responses due to sonar exposure were limited and may have been influenced by breeding and social behaviors. Martin *et al.* (2015) found that the density of calling minke whales was reduced during periods of Navy training involving sonar relative to the periods before training began and increased again in the days following the completion of training activities. The responses of individual whales could not be assessed, so in this case it is unknown whether the decrease in calling animals indicated that the animals left the range or simply ceased calling. Harris *et al.* (2019b) utilized acoustically generated minke whale tracks to statistically demonstrate changes in the spatial distribution of minke whale acoustic presence before, during, and after surface ship MFAS training. The spatial distribution of probability of acoustic presence was different in the ''during'' phase compared to the ''before'' phase, and the probability of presence at the center of ship activity during MFAS training was close to zero for both years. The ''after'' phases for both years retained lower probabilities of presence suggesting the return to baseline conditions may take more than five days. The results show a clear spatial redistribution of calling minke whales during surface ship MFAS training, however a limitation of passive acoustic monitoring is that one cannot conclude if the whales moved away, went silent, or a combination of the two.

Building on this work, Durbach *et al.* (2021) used the same data and determined that individual minke whales tended to be in either a fast or slow movement behavior state while on the missile range, where whales tended to be in the slow state in baseline or before periods but transitioned into the fast state with more directed movement during sonar exposures. They also moved away from the area of sonar activity on the range, either to the north or east depending on where the activity was located; this explains the spatial redistribution found by Harris *et al.* (2019b). Minke whales were also more likely to stop calling when in the fast state, regardless of sonar activity, or when in the slow state during sonar activity (Durbach *et al.,* 2021). Similarly, minke whale detections were reduced or ceased altogether during periods of sonar use off Jacksonville, Florida, (Norris *et al.,* 2012; Simeone *et al.,* 2015; U.S. Department of the Navy, 2013), especially with an increased ping rate (Charif *et al.,* 2015).

Odontocetes have varied, context-dependent behavioral responses to sonar and other transducers. Much of the research on odontocetes has been focused on understanding the impacts of sonar and other transducers on beaked whales because they were hypothesized to be more susceptible to behavioral disturbance after several strandings of beaked whales in which military MFAS was identified as a contributing factor (see *Stranding and Mortality* section). Subsequent BRSs have shown that beaked whales are likely more sensitive to disturbance than most other cetaceans. Many species of odontocetes have been studied during BRSs, including Blainville's beaked whale, goose-beaked whale, Baird's beaked whale, northern bottlenose whale, harbor porpoise, pilot whale, killer whale, sperm whale, false killer whale, melon-headed whale, bottlenose dolphin, rough-toothed dolphin, Risso's dolphin, Pacific white-sided dolphin, and Commerson's dolphin. Observed responses by Blainville's beaked whales, goose-beaked whales, Baird's beaked whales, and northern bottlenose whales (the largest of the beaked whales), to mid-frequency sonar sounds include cessation of clicking, decline in group vocal periods, termination of foraging dives, changes in direction to avoid the sound source, slower ascent rates to the surface, longer deep and shallow dive durations, and other unusual dive behaviors (DeRuiter *et al.,* 2013b; Hewitt *et al.,* 2022; Jacobson *et al.,* 2022; McCarthy *et al.,* 2011; Miller *et al.,* 2015; Moretti *et al.,* 2014; Southall *et al.,* 2011; Stimpert *et al.,* 2014; Tyack *et al.,* 2011).

During a BRS in Southern California, a tagged Baird's beaked whale exposed to simulated MFA sonar within 3 km increased swim speed and modified its dive behavior (Stimpert *et al.,* 2014). One goose-beaked whale was also incidentally exposed to real Navy sonar located over 62.1 mi (100 km) away in addition to the source used in the controlled exposure study, and the authors did not detect similar responses at comparable received levels. Received levels from the MFA sonar signals from the controlled (2.1 to 5.9 mi (3.4 to 9.5 km)) exposures were calculated as 84–144 dB re 1 μPa, and incidental (73.3 mi (118 km)) exposures were calculated as 78–106 dB re 1 μPa, indicating that context of the exposures (*e.g.,* source proximity, controlled source ramp-up) may have been a significant factor in the responses to the simulated sonars (DeRuiter *et al.,* 2013b).

Long-term tagging work during the same BRS demonstrated that the longer duration dives considered a behavioral response by DeRuiter *et al.* (2013b) fell within the normal range of dive durations found for eight tagged goose-beaked whales on the Southern California Offshore Range (Schorr *et al.,* 2014). However, the longer inter-deep dive intervals found by DeRuiter *et al.* (2013b), which were among the longest found by Schorr *et al.* (2014) and Falcone *et al.* (2017), may indicate a response to sonar. Williams *et al.* (2017) note that during normal deep dives or during fast swim speeds, beaked whales and other marine mammals use strategies to reduce their stroke rates (*e.g.,* leaping, wave surfing when swimming, interspersing glides between bouts of stroking when diving). The authors determined that in the post-exposure dives by the tagged goose-beaked whales described in DeRuiter *et al.* (2013b), the whales ceased gliding and swam with almost continuous strokes. This change in swim behavior was calculated to increase metabolic costs by about 30.5 percent and increase the amount of energy expending on fast swim speeds from 27–59 percent of their overall energy budget. This repartitioning of energy was detected in the model up to 1.7 hours after the single sonar exposure. Therefore, while the overall post-exposure dive durations were similar, the metabolic energy calculated by Williams *et al.* (2017) was higher. However, Southall *et al.* (2019a) found that prey availability was higher

in the western area of the Southern California Offshore Range where goose-beaked whales preferentially occurred, while prey resources were lower in the eastern area and moderate in the area just north of the Range. This high prey availability may indicate that goose-beaked whales need fewer foraging dives to meet energy requirements than would be needed in another area with fewer resources.

During a BRS in Norway, northern bottlenose whales avoided a sonar sound source over a wide range of distances (0.5 to 17.4 mi (0.8 to 28 km)) and estimated avoidance thresholds ranging from received SPLs of 117 to 126 dB re 1 µPa. The behavioral response characteristics and avoidance thresholds were comparable to those previously observed in beaked whale studies; however, researchers did not observe an effect of distance on behavioral response and found that onset and intensity of behavioral response were better predicted by received SPL. There was one instance where an individual northern bottlenose whale approached the vessel, circled the sound source (source level was only 122 dB re 1 µPa), and resumed foraging after the exposure. Conversely, one northern bottlenose whale exposed to a sonar source was documented performing the longest and deepest dive on record for the species, and continued swimming away from the source for more than 7 hours (Miller *et al.,* 2015; Siegal *et al.,* 2022; Wensveen *et al.,* 2019).

Research on Blainville's beaked whales at the Atlantic Undersea Test and Evaluation Center (AUTEC) range has shown that individuals move off-range during sonar use, only returning after the cessation of sonar transmission (Boyd *et al.,* 2009; Henderson *et al.,* 2015; Jones-Todd *et al.,* 2021; Manzano-Roth *et al.,* 2022; Manzano-Roth *et al.,* 2016; McCarthy *et al.,* 2011; Tyack *et al.,* 2011). Five Blainville's beaked whales estimated to be within 1.2 to 18 mi (2 to 29 km) of the AUTEC range at the onset of active sonar were displaced a maximum of 17.4 to 42.3 mi (28 to 68 km) after moving away from the range, although one individual did approach the range during active sonar use. Researchers found a decline in deep dives at the onset of the training and an increase in time spent on foraging dives as whales moved away from the range. Predicted received levels at which presumed responses were observed were comparable to those previously observed in beaked whale studies. Acoustic data indicated that vocal periods were detected on the range within 72 hours after training ended (Joyce *et al.,* 2019). However, Blainville's beaked whales have been documented to remain on-range to forage throughout the year (Henderson *et al.,* 2016), indicating the AUTEC range may be a preferred foraging habitat regardless of the effects of active sonar noise, or it could be that there are no long-term consequences of the sonar activity. In the SOCAL Range Complex, researchers conducting photo-identification studies have identified approximately 100 individual goose-beaked whales, with 40 percent having been seen in one or more prior years, with re-sightings up to 7 years apart, indicating a possible on-range resident population (Falcone and Schorr, 2014; Falcone *et al.,* 2009).

The probability of Blainville's beaked whale group vocal periods on the PMRF were modeled during periods of (1) no naval activity, (2) naval activity without hull-mounted MFA sonar, and (3) naval activity with hull-mounted MFA sonar (Jacobson *et al.,* 2022). At a received level of 150 dB re 1 µPa RMS, the probability of detecting a group vocal period during MFA sonar use decreased by 77 percent compared to periods when general training activity was ongoing, and by 87 percent compared to baseline (no naval activity) conditions. Jacobsen et al (2022) found a greater reduction in probability of a group vocal period with MFA sonar than observed in a prior study of the same species at the AUTEC range (Moretti *et al.,* 2014), which may be due to the baseline period in the AUTEC study including naval activity without MFA sonar, potentially lowering the baseline group vocal period activity in that study, or due to differences in the residency of the populations at each range.

Stanistreet *et al.* (2022) used passive acoustic recordings during a multinational navy activity to assess marine mammal acoustic presence and behavioral response to especially long bouts of sonar lasting up to 13 consecutive hours, occurring repeatedly over 8 days (median and maximum SPL = 120 dB and 164 dB). Goose-beaked whales and sperm whales substantially reduced how often they produced clicks during sonar, indicating a decrease or cessation in foraging behavior. Few previous studies have shown sustained changes in foraging or displacement of sperm whales, but there was an absence of sperm whale clicks for 6 consecutive days of sonar activity. Sperm whales returned to baseline levels of clicks within days after the activity, but beaked whale detection rates remained low even 7 days after the exercise. In addition, there were no detections from a Mesoplodon beaked whale species within the area during, and at least 7 days after, the sonar activity. Clicks from northern bottlenose whales and Sowerby's beaked whales were also detected but were not frequent enough at the recording site used to compare clicks between baseline and sonar conditions.

Goose-beaked whale behavioral responses (*i.e.,* deep and shallow dive durations, surface interval durations, inter-deep dive intervals) on the Southern California Anti-Submarine Warfare Range were modeled against predictor values that included helicopter dipping sonar, mid-power MFA sonar and hull-mounted, high-power MFA sonar along with other non-MFA sonar predictors (Falcone *et al.,* 2017). Falcone *et al.* (2017) found both shallow and deep dive durations increased as the proximity to both mid- and high-powered sources decreased and found that surface intervals and inter-deep dive intervals increased in the presence of both types of sonars (helicopter dipping and hull-mounted), although surface intervals shortened during periods without MFA sonar. Proximity of source and receiver were important considerations, as the responses to the mid-power MFA sonar at closer ranges were comparable to the responses to the higher source level vessel sonar, as was the context of the exposure. Helicopter dipping sonars are shorter duration and randomly located, therefore more difficult to predict or track by beaked whales and potentially more likely to elicit a response, especially at closer distances (3.7 to 15.5 mi (6 to 25 km)) (Falcone *et al.,* 2017).

Sea floor depths and quantity of light (*i.e.,* lunar cycle) are also important variables to consider in BRSs, as goose-beaked whale foraging dive depth increased with sea floor depth (maximum 6,561.7 ft (2,000 m)) and the amount of time spent at foraging depths (and likely foraging) was greater at night (likely avoiding predation by staying deeper during periods of bright lunar illumination), although they spent more time near the surface during the night, as well, particularly on dark nights with little moonlight, (Barlow *et al.,* 2020). Sonar occurred during 10 percent of the dives studied and had little effect on the resulting dive metrics. Watwood *et al.* (2017) found that the longer the duration of a sonar event, the greater reduction in detected goose-beaked whale group dives and, as helicopter dipping events occurred more frequently but with shorter durations than periods of hull-mounted sonar, when looking at the number of detected group dives there was a greater reduction during periods of hull-mounted sonar than during helicopter

dipping sonar. DiMarzio *et al.* (2019) also found that group vocal periods (*i.e.,* clusters of foraging pulses), on average, decreased during sonar events on the Southern California Anti-Submarine Warfare Range, though the decline from before the event to during the event was significantly less for helicopter dipping events than hull-mounted events, and there was no difference in the magnitude of the decline between vessel-only events and events with both vessels and helicopters. Manzano-Roth *et al.* (2022) analyzed long-term passive acoustic monitoring data from the PMRF in Kaua'i, Hawaii, and found beaked whales reduced group vocal periods during submarine command course events and remained low for a minimum of 3 days after the MFA sonar activity.

Harbor porpoise behavioral responses have been researched extensively using acoustic deterrent and acoustic harassment devices; however, BRSs using sonar are limited. Kastelein *et al.* (2018b) found harbor porpoises did not respond to low-duty cycle mid-frequency sonar tones (3.5–4.1 kHz at 2.7 percent duty cycle; *e.g.,* one tone per minute) at any received level, but one individual did respond (*i.e.,* increased jumping, increased respiration rates) to high-duty cycle sonar tones (3.5–4.1 kHz at 96 percent duty cycle; *e.g.,* continuous tone for almost a minute).

Behavioral responses by odontocetes (other than beaked whales and harbor porpoises) to sonar and other transducers include horizontal avoidance, reduced breathing rates, changes in behavioral state, changes in dive behavior (Antunes *et al.,* 2014; Isojunno *et al.,* 2018; Isojunno *et al.,* 2017; Isojunno *et al.,* 2020; Miller, 2012; Miller *et al.,* 2011; Miller *et al.,* 2014; Southall *et al.,* 2024), and, in one study, separation of a killer whale calf from its group (Miller *et al.,* 2011). Some species of dolphin (*e.g.,* bottlenose, spotted, spinner, Clymene, Pacific white-sided, rough-toothed) are frequently documented bowriding with vessels and the drive to engage in bowriding, whether for pleasure or energetic savings (Fiori *et al.,* 2024) may supersede the impact of associated sonar noise (Würsig *et al.,* 1998).

In controlled exposure experiments on captive odontocetes, Houser *et al.* (2013a) recorded behavioral responses from bottlenose dolphins with 3 kHz sonar-like tones between 115–185 dB re 1 μPa, and individuals across 10 trials demonstrated a 50 percent probability of response at 172 dB re 1 μPa. Multiple studies have been conducted on bottlenose dolphins and beluga whales to measure TTS (Finneran *et al.,* 2003a; Finneran *et al.,* 2001; Finneran *et al.,* 2005; Finneran and Schlundt, 2004; Schlundt *et al.,* 2000). During these studies, when individuals were presented with 1-second tones up to 203 dB re 1 μPa, responses included changes in respiration rate, fluke slaps, and a refusal to participate or return to the location of the sound stimulus, including what appeared to be deliberate attempts by animals to avoid a sound exposure or to avoid the location of the exposure site during subsequent tests (Finneran *et al.,* 2002; Schlundt *et al.,* 2000). Bottlenose dolphins exposed to more intense 1-second tones exhibited short-term changes in behavior above received levels of 178–193 dB re 1 μPa, and beluga whales did so at received levels of 180–196 dB re 1 μPa and above.

While several opportunistic observations of odontocete (other than beaked whales and harbor porpoises) responses have been recorded during previous Navy activities and BRSs that employed sonar and sonar-like sources, it is difficult to definitively attribute responses of non-focal species to sonar exposure. Responses range from no response to potential highlight-impactful responses, such as the separation of a killer whale calf from its group (Miller *et al.,* 2011). This may be due, in part, to the variety of species and sensitivities of the odontocete taxonomic group, as well as the breadth of study types conducted and field observations, leading to the assessment of both contextually driven and dose-based responses. The available data indicate exposures to sonar in close proximity and with multiple vessels approaching an animal likely lead to higher-level responses by most odontocete species, regardless of received level or behavioral state. However, when sources are further away and moving in variable directions, behavioral responses are likely driven by behavioral state, individual experience, or species-level sensitivities, as well as exposure duration and received level, with the likelihood of response increasing with increased received levels. As such, it is expected odontocete behavioral responses to sonar and other transducers will vary by species, populations, and individuals, and long-term consequences or population-level effects are likely dependent upon the frequency and duration of the exposure and resulting behavioral response.

Pinniped behavioral response to sonar and other transducers is context-dependent (*e.g.,* Hastie *et al.,* 2014; Southall *et al.,* 2019). All studies on pinniped response to sonar thus far have been limited to captive animals, though, based on exposures of wild pinnipeds to vessel noise and impulsive sounds (see Responses Due to Vessel Noise section and Responses Due to Impulsive Noise section below), pinnipeds may only respond strongly to military sonar that is in close proximity or approaching an animal. Kvadsheim *et al.* (2010b) found that captive hooded seals exhibited avoidance response to sonar signals between 1–7 kHz (160 to 170 dB re 1 μPa RMS) by reducing diving activity, rapid surface swimming away from the source, and eventually moving to areas of least SPL. However, the authors noted a rapid adaptation in behavior (passive surface floating) during the second and subsequent exposures, indicating a level of habituation within a short amount of time. Kastelein *et al.* (2015c) exposed captive harbor seals to three different sonar signals at 25 kHz with variable waveform characteristics and duty cycles and found individuals responded to a frequency modulated signal at received levels over 137 dB re 1 μPa by hauling out more, swimming faster, and raising their heads or jumping out of the water. However, seals did not respond to a continuous wave or combination signals at any received level (up to 156 dB re 1 μPa). Houser *et al.* (2013a) conducted a study to determine behavioral responses of captive California sea lions to MFA sonar at various received levels (125 to 185 dB re 1 μPa). They found younger animals (less than 2 years old) were more likely to respond than older animals and responses included increased respiration rate, increased time spent submerged, refusal to participate in a repetitive task, and hauling out. Most responses below 155 dB re 1 μPa were changes in respiration, while more severe responses (*i.e.,* refusing to participate, hauling out) began to occur over 170 dB re 1 μPa, and many of the most severe responses came from the young sea lions.

Responses Due to Impulsive Noise—

Impulsive signals have a rapid rise time and higher instantaneous peak pressure than other signal types, particularly at close range, which means they are more likely to cause startle or avoidance responses. At long distances, however, the rise time increases as the signal duration lengthens (similar to a ''ringing'' sound), making the impulsive signal more similar to a non-impulsive signal (Hastie *et al.,* 2019; Martin *et al.,* 2020). Behavioral responses from explosive sounds are likely to be similar to responses studied for other impulsive noise, such as those produced by air

guns and impact pile driving. Data on behavioral responses to impulsive sound sources are limited across all marine mammal groups, with only a few studies available for mysticetes and odontocetes.

Mysticetes have varied responses to impulsive sound sources, including avoidance, aggressive directed movement towards the source, reduced surface intervals, altered swimming behavior, and changes in vocalization rates (Gordon *et al.,* 2003; McCauley *et al.,* 2000a; Richardson *et al.,* 1985; Southall *et al.,* 2007). Studies have been conducted on many baleen whale species, including gray, humpback, blue, fin, and bowhead whales; it is assumed that these responses are representative of all baleen whale species. The behavioral state of the whale seems to be an integral part of whether the animal responds and how they respond, as does the location and movement of the sound source, more than the received level of the sound.

If an individual is engaged in migratory behavior, it may be more likely to respond to impulsive noise, and some species may be more sensitive than others. Migrating gray whales showed avoidance responses to seismic vessels at received levels between 164 and 190 dB re 1 µPa (Malme *et al.,* 1986, Malme *et al.,* 1988). In one study, McCauley *et al.* (1998) found that migrating humpback whales in Australia showed avoidance behavior at ranges of 3.1–5 mi (5–8 km) from a seismic array during observational studies and controlled exposure experiments, and another study found humpback whales in Australia decreased their dive times and reduced their swimming speeds (Dunlop *et al.,* 2015). However, when comparing received levels and behavioral responses between air gun ramp-up versus constant noise level of air guns, humpback whales did not change their dive behavior but did deviate from their predicted heading and decreased their swim speeds, deviating more during the constant noise source trials but reducing swim speeds more during ramp-up trials (Dunlop *et al.,* 2016). In both cases, there was no dose-response relationship with the received level of the air gun noise, and similar responses were observed in control trials without air guns (vessel movement remained constant across trials), so some responses may have been due to vessel presence and not received level from the air guns. Social interactions between males and mother-calf pairs were reduced in the presence of vessels towing seismic air gun arrays, regardless of whether the air guns were active or not; which indicates that it was likely the presence of vessels (rather than the impulsive noise generated from active air guns) that affected humpback whale behavior (Dunlop *et al.,* 2020).

Proximity of the impulsive source is another important factor to consider when assessing the potential for behavioral responses in marine mammals. Dunlop *et al.* (2017) found that groups of humpback whales were more likely to avoid a smaller air gun array at closer proximity than a larger air gun array, despite the same received level, showing the difference in response between arrays has more to do with the combined effects of received level and source proximity. In this study, responses were varied and generally small, with short-term course deviations of about 1,640 ft (500 m). Studies on bowhead whales have shown they may be more sensitive than other species to impulsive noise, as individuals have shown clear changes in diving and breathing patterns up to 45.4 mi (73 km) from seismic vessels with received levels as low as 125 dB re 1 µPa (Malme *et al.* 1988). Richardson *et al.* (1995b) documented bowhead whales exhibiting avoidance behaviors at a distance of more than 12.4 mi (20 km) from seismic vessels when received levels were as low as 120 dB re 1 µPa, although most did not show active avoidance until 5 mi (8 km) from the source. Although bowhead whales may avoid the area around seismic surveys, from 3.7 to 5 mi (6 to 8 km) (Koski and Johnson 1987, as cited in Gordon *et al.,* 2003) out to 12.4 or 18.6 mi (20 or 30 km) (Richardson *et al.,* 1999), a study by Robertson *et al.* (2013) supports the idea that behavioral responses are contextually dependent, and that during seismic operations, bowhead whales may be less ''available'' for counting due to alterations in dive behavior but that they may not have completely vacated the area.

In contrast, noise from seismic surveys was not found to impact feeding behavior or exhalation rates in western gray whales while resting or diving off the coast of Russia (Gailey *et al.,* 2007; Yazvenko *et al.,* 2007); however, the increase in vessel traffic associated with surveys and the proximity of the vessels to the whales did affect the orientation of the whales relative to the vessels and shortened their dive-surface intervals (Gailey *et al.,* 2016). They also increased their speed and distance from the noise source and have been documented in one case study swimming towards shore to avoid an approaching seismic vessel (Gailey *et al.,* 2022). Todd *et al.* (1996) found no clear short-term behavioral responses by foraging humpbacks to explosions associated with construction operations in Newfoundland but did see a trend of increased rates of net entanglement closer to the noise source, possibly indicating a reduction in net detection associated with the noise through masking or TTS. Distributions of fin and minke whales were modeled with multiple environmental variables and with the occurrence or absence of seismic surveys, and no evidence of a decrease in sighting rates relative to seismic activity was found for either species (Vilela *et al.,* 2016). Their distributions were driven entirely by environmental variables, particularly those linked to prey, including warmer sea surface temperatures, higher chlorophyll-a values, and higher photosynthetically available radiation (a measure of primary productivity). Sighting rates based on over 8,000 hours of baleen and toothed whale survey data were compared on regular vessel surveys versus both active and passive periods of seismic surveys (Kavanagh *et al.,* 2019). Models of sighting numbers were developed, and it was determined that baleen whale sightings were reduced by 88 percent during active and 87 percent during inactive phases of seismic surveys compared to regular surveys. These results seemed to occur regardless of geographic location of the survey; however, when only comparing active versus inactive periods of seismic surveys the geographic location did seem to affect the change in sighting rates.

Mysticetes seem to be the most behaviorally sensitive taxonomic group of marine mammals to impulsive sound sources, with possible avoidance responses occurring out to 18.6 mi (30 km) and vocal changes occurring in response to sounds over 62.1 mi (100 km) away. However, they are also the most studied taxonomic group, yielding a larger sample size and greater chance of finding behavioral responses to impulsive noise. Also, their responses appear to be behavior-dependent, with most avoidance responses occurring during migration behavior and little observed response during feeding behavior. These response patterns are likely to hold true for impulsive sources used by the Action Proponents; however, their impulsive sources would largely be stationary (*e.g.,* explosives fired at a fixed target, small air guns), and short term (hours rather than days or weeks) versus in the aforementioned studies, so responses would likely occur in closer proximity to animals or not at all.

Odontocete responses to impulsive noise are not well studied and the majority of data have come from seismic

(*i.e.,* air gun) surveys, pile driving, and construction activities, while only a few studies have been done to understand how explosive sounds impact odontocetes. What data are available show they may be less sensitive than mysticetes to impulsive sound and that responses occur at closer distances. This may be due to the predominance of low-frequency sound associated with impulsive sources that propagates across long distances and overlaps with the range of best hearing for mysticetes but is below that range for odontocetes. Even harbor porpoises—shown to be highly sensitive to most sound sources, avoiding both stationary (*e.g.,* pile driving) and moving (*e.g.,* seismic survey vessels) impulsive sound sources out to approximately 12.4 mi (20 km) (*e.g.,* Haelters *et al.,* 2014; Pirotta *et al.,* 2014)—have short-term responses, returning to an area within hours upon cessation of the impulsive noise.

Although odontocetes are generally considered less sensitive, impulsive noise does impact toothed whales in a variety of ways. In one study, dolphin detections were compared during 30 second periods before, during, and after underwater detonations near naval mine neutralization exercises in Virginia Capes Operating Area. Lammers *et al.* (2017) found that within 30 seconds after an explosion, the immediate response was an increase in whistles compared to the 30 seconds before an explosion, and that there was a reduction in dolphin acoustic activity during the day of and day after the exercise within 3.7 mi (6 km). This held true only during daytime, as nighttime activity did not appear different than before the exercise, and two days after the explosion there seemed to be an increase in daytime acoustic activity, indicating dolphins may have returned to the area or resumed vocalizations (Lammers *et al.,* 2017). Weaver (2015) documented potential sex-based differences in behavioral responses to impulsive noise during construction (including blasting) of a bridge over a waterway commonly used by bottlenose dolphins, where females decreased area use and males continued using the area, perhaps indicating differential habitat uses.

When exposed to multiple impulses from a seismic air gun, Finneran *et al.* (2015) noted some captive dolphins turned their heads away from the source just before the impulse, indicating they could anticipate the timing of the impulses and may be able to behaviorally mediate the exposure to reduce their received level. Kavanagh *et al.* (2019) found sightings of odontocete whales decreased by 53 percent during active phases of seismic air gun surveys and 29 percent during inactive phases compared to control surveys. Heide-Jorgensen *et al.* (2021) found that narwhals exposed to air gun noise in an Arctic fjord were sensitive to seismic vessels over 6.8 mi (11 km) away, even though the small air gun source reached ambient noise levels around 1.9 mi (3 km) (source level of 231 dB re 1 µPa at 1 m) and large air gun source reached ambient noise levels around 6.2 mi (10 km) (source level 241 dB re 1 µPa at 1 m). Behavioral responses included changes in swimming speed and swimming direction away from the impulsive sound source and towards the shoreline. Changes in narwhal swimming speed was context-dependent and usually increased in the presence of vessels but decreased (a ''freeze'' response) in response to closely approaching air gun pulses (Heide-Jorgensen *et al.,* 2021). A cessation of feeding was also documented, when the impulsive noise was less than 6.2 mi (10 km) away, although received SELs were less than 130 dB re 1 μPa^2s for either air gun at this distance. However, because of this study's research methods and criteria, the long-distance responses of narwhals may be conservatively estimating narwhals' range to behavioral response.

Similarly, harbor porpoises seem to have an avoidance response to seismic surveys by leaving the area and decreasing foraging activity within 3.1–6.2 mi (5–10 km) of the survey, as evidenced by both a decrease in vocalizations near the survey and an increase in vocalizations at a distance (Pirotta *et al.,* 2014; Thompson *et al.,* 2013a). The response was short-term, as the porpoises returned to the area within 1 day upon cessation of the air gun operation. Sarnocińska *et al.* (2020) placed autonomous recording devices near oil and gas platforms and control sites to measure harbor porpoise acoustic activity during seismic air gun surveys. They noted a dose-response effect, with the lowest amount of porpoise activity closest to the seismic vessel ($SEL_{single\ shot}$ = 155 dB re 1 μPa^2s) and increasing porpoise activity out to 5 to 7.5 mi (8 to 12 km), and that distance to the seismic vessel, rather than sound level, was a better model predictor of porpoise activity. Overall porpoise activity in the seismic survey area was similar to the control sites (approximately 9.3 mi (15 km) apart), which may indicate the harbor porpoises were moving around the area to avoid the seismic vessel without leaving the area entirely.

Pile driving, another activity that produces impulsive sound, elicited a similar response in harbor porpoises. Benhemma-Le Gall *et al.,* 2021 examined changes in porpoise presence and foraging at two offshore windfarms between control (102–104 dB) and construction periods (155–161 dB), and found decreased presence (8–17 percent) and decreased foraging activity (41–62 percent) during construction periods. Porpoises were displaced up to 7.5 mi (12 km) away from pile driving and 2.5 mi (4 km) from construction vessels. Multiple studies have documented strong avoidance responses by harbor porpoises out to 12.4 mi (20 km) during pile driving activity, however, animals returned to the area after the activity stopped (Brandt *et al.,* 2011; Dähne *et al.,* 2014; Haelters *et al.,* 2014; Thompson *et al.,* 2010; Tougaard *et al.,* 2005; Tougaard *et al.,* 2009). When bubble curtains were deployed around pile driving, the avoidance distance appeared to be reduced by half to 7.5 mi (12 km), and the animals returned to the area after approximately 5 hours rather than 1 day later (Dähne *et al.,* 2017). Further, Bergström *et al.* (2014) found that although there was a high likelihood of acoustic disturbance during wind farm construction (including pile driving), the impact was short-term, and Graham *et al.* (2019) found that the distance at which behavioral responses of harbor porpoises were likely decreased over the course of a construction project, suggesting habituation to impulsive pile-driving noise. Kastelein *et al.* (2013b) exposed captive harbor porpoises to impact pile driving noise, and found that respiration rates increased above 136 dB re 1 µPa (zero-to-peak), and at higher sound levels individuals jumped more frequently. When a single harbor porpoise was exposed to playbacks of impact pile driving noise with different bandwidths, Kastelein *et al.* (2022) found the animal's behavioral response (*i.e.,* swim speed, respiration rate, jumping) decreased with bandwidth.

Overall, odontocete behavioral responses to impulsive sound sources are likely species- and context-dependent. Responses might be expected close to a noise source, under specific behavioral conditions such as females with offspring, or for sensitive species such as harbor porpoises, while many other species demonstrate little to no behavioral response.

Pinnipeds seem to be the least sensitive marine mammal group to impulsive noise (Richardson *et al.,* 1995b; Southall *et al.,* 2007), and some may even experience hearing effects before exhibiting a behavioral response (Southall *et al.,* 2007). Some species

may be more sensitive and are only likely to respond (*e.g.,* startling, entering the water, ceasing foraging) to loud impulsive noises in close proximity, but only for brief periods of time before returning to their previous behavior. Demarchi *et al.* (2012) exposed Steller sea lions to in-air explosive blasts, which resulted in increased activity levels and often caused re-entry into the water from a hauled out state. These responses were brief (lasting only minutes) and the animals returned to haul outs and there were no documented lasting behavioral impacts in the days following the explosions.

Ringed seals exhibited little or no response to pile driving noise with mean underwater levels of 157 dB re 1 µPa and in-air levels of 112 dB re 20 µPa (Blackwell *et al.,* 2004) while harbor seals vacated the area surrounding an active pile driving site at estimated received levels between 166–178 dB re 1 µPa SPL (peak to peak), returning within 2 hours of the completion of piling activities (Russell *et al.,* 2016). Wild-captured gray seals exposed to a startling treatment (sound with a rapid rise time and a 93 dB sensation level (the level above the animal's hearing threshold at that frequency)) avoided a known food source, whereas animals exposed to a non-startling treatment (sound with a slower rise time but peaking at the same level) did not react or habituated during the exposure period (Götz and Janik, 2011). These results underscore the importance of the characteristics of an acoustic signal in predicting an animal's response of habituation.

Hastie *et al.* (2021) studied how the number and severity of avoidance events may be an outcome of marine mammal cognition and risk assessment using captive grey seals. Five individuals were given the option to forage in a high- or low-density prey patch while continuously exposed to silence or an anthropogenic noise (pile driving or tidal turbine operation) playbacks (148 dB re 1 µPa at 1 m). For each trial, one prey patch was closer to the source, therefore having a higher received level in experimental exposures than the other prey patch. The authors found that foraging success was highest during silent periods and that the seals avoided both anthropogenic noises with higher received levels when the prey density was limited (low-density prey patch). The authors concluded that the seals made foraging decisions within the trials based on both the energetic value of the prey patch (low-density corresponding to low energetic value, high-density corresponding to high energetic value), and the nature and location of the acoustic signal relative to the prey patches of different value.

Pinniped responses to Navy missile launches are limited to observations at SNI on the PMSR, and there are extensive observations from this site over more than two decades (Burke, 2017; Holst *et al.,* 2011; Holst and Greene Jr., 2005; Holst and Greene Jr., 2008; Holst and Greene Jr., 2010; Navy, 2021a, 2021b, 2022; Ugoretz, 2014, 2015, 2016; Ugoretz and Greene Jr., 2012), including observations of northern elephant seals, California sea lions, and harbor seals) to every launch from SNI was required under these authorizations of launch activity. The results from these monitoring efforts (2001–2024) are summarized in this section. Over twenty years of observations of pinniped behavioral responses to land-based rocket and missile launches at VSFB are also available (Force, 2022).The observations at VSFB are consistent with those from SNI, but notable findings from VSFB are detailed below.

Since launches were relatively infrequent, and of such brief duration, it is unlikely that pinnipeds near the SNI launch sites were habituated to launch sounds. The most common type of response to airborne noise from missile and target launches at SNI was a momentary ''alert'' response. When the animals heard or otherwise detected the launch, they were likely to become alert and interrupt prior activities to pay attention to the launch. For both northern elephant seals and California sea lions, the proportion of animals that moved was significantly related to the closest point of approach of the vehicle or the weighted SEL of the event (based on pinniped in-air M-weighting function from Southall *et al.* (2007). These relationships were not evident for harbor seals, despite this species being the most susceptible to disturbance (Holst *et al.,* 2011). In cases where animals were displaced from normal activity, the displacement was typically short in duration (5–15 minutes, although some harbor seals left their haulout site until the following low tide when the haulout site was again accessible).

Observations indicated that elephant seals rarely showed more than a momentary alert, even when exposed to noise levels or types that caused nearby harbor seals and California sea lions to react more. This was also the case for northern fur seals at VSFB. Most elephant seals raised their heads briefly upon hearing the launch sounds and then quickly returned to their previous activity pattern (usually sleeping). During some launches, a small proportion of northern elephant seals moved a short distance on the beach or into the water, away from their resting site, but settled within minutes. Because of this, elephant seals were not specifically targeted for launch monitoring after 2010 (75 FR 71672, November 24, 2010), although in subsequent years they were often in the field of view when monitoring other species.

California sea lions (especially the young animals) exhibited more response than elephant seals, and responses varied by individual and age group. Some exhibited brief startle responses and increased vigilance for a short period after each launch. Others, particularly pups that were playing in groups along the margin of haulouts, appeared to react more vigorously. A greater proportion of hauled-out sea lions typically responded or entered the water when launch sounds were louder.

Harbor seals tended to be the most sensitive of the three target species, and during the majority of launches at SNI, most harbor seals left their haulout sites on rocky ledges to enter the water. In some cases, harbor seals returned to their haulout after a short period of time, while in other cases they did not return during the duration of the video-recording period (which sometimes extended up to several hours after a launch). During the day following a launch, harbor seals usually hauled out again at these sites (Holst and Lawson, 2002). The height of the tide following a launch event may have played a significant role in when harbor seals were able to return to a haulout site.

There were no observations of any sonic booms or stampedes at SNI and, specifically for the monitored launches at SNI from 2001 to 2024, there were no observed launch-related injuries or deaths (National Marine Fisheries Service, 2019b; Naval Air Warfare Center Weapons Division, 2018). On several occasions, harbor seals and California sea lion adults moved over pups (which can also happen without the presence of an anthropogenic noise) as the animals moved in response to the launches, but the pups did not appear to be injured. On one occasion, a stampede of California sea lions was observed in response to a sonic boom at VSFB. This was thought to have resulted from a particularly high amplitude sonic boom and is noted as an isolated incident.

Responses Due to Vessel Noise—

Mysticetes have varied responses to vessel noise and presence, from having no response to approaching vessels to

exhibiting an avoidance response by both horizontal (swimming away) and vertical (increased diving) movement (Baker *et al.,* 1983; Fiori *et al.,* 2019; Gende *et al.,* 2011; Watkins, 1981). Avoidance responses include changing swim patterns, speed, or direction (Jahoda *et al.,* 2003), remaining submerged for longer periods of time (Au and Green, 2000), and performing shallower dives with more frequent surfacing. Behavioral responses to vessels range from smaller-scale changes, such as altered breathing patterns (*e.g.,* Baker *et al.,* 1983; Jahoda *et al.,* 2003), to larger-scale changes such as a decrease in apparent presence (Anderwald *et al.,* 2013). Other common behavioral responses include changes in vocalizations, surface time, feeding and social behaviors (Au and Green, 2000; Dunlop, 2019; Fournet *et al.,* 2018; Machernis *et al.,* 2018; Richter *et al.,* 2003; Williams *et al.,* 2002a). For example, North Atlantic right whales (NARWs) have been reported to increase the amplitude or frequency of their vocalizations or call at a lower rate in the presence of increased vessel noise (Parks *et al.,* 2007; Parks *et al.,* 2011) but generally demonstrate little to no response to vessels or sounds from approaching vessels and often continue to use habitats in high vessel traffic areas (Nowacek *et al.* 2004a). This lack of response may be due to habituation to the presence and associated noise of vessels in NARW habitat or may be due to propagation effects that may attenuate vessel noise near the surface (Nowacek *et al.,* 2004a; Terhune and Verboom, 1999).

Similarly, sei whales have been observed ignoring the presence of vessels entirely and even pass close to vessels (Reeves *et al.,* 1998). Historically, fin whales tend to ignore vessels at a distance (Watkins, 1981) or habituate to vessels over time (Watkins, 1986) but still demonstrate vocal modifications (*e.g.,* decreased frequency parameters of calls) during vessel traffic. Ramesh *et al.* (2021) found that fin whale calls in Ireland were less likely to be detected for every 1 dB re 1 µPa/minute increase in shipping noise levels. In the presence of tour boats in Chile, fin whales were changing their direction of movement more frequently, with less linear movement than occurred before the boats arrived; this behavior may represent evasion or avoidance of the boats (Santos-Carvallo *et al.,* 2021). The increase in travel swim speeds after the vessels departed may be related to the rapid speeds at which the vessels traveled, sometimes in front of fin whales, leading to additional avoidance behavior post-exposure.

Mysticete behavioral responses to vessels may also be affected by vessel behavior (Di Clemente *et al.,* 2018; Fiori *et al.,* 2019). Avoidance responses occurred most often after ''J'' type vessel approaches (*i.e.,* traveling parallel to the whales' direction of travel, then overtaking the whales by turning in front of the group) compared to parallel or direct approaches. Mother humpbacks were particularly sensitive to direct and J type approaches and spent significantly more time diving in response (Fiori *et al.,* 2019). The presence of a passing vessel did not change the behavior of resting humpback whale mother-calf pairs, but fast vessels with louder low-frequency weighted source levels (173 dB re 1 µPa, equating to weighted received levels of 133 dB re 1 µPa) at an average distance of 328 ft (100 m) resulted in a decreased resting behavior and increases in dives, swim speeds, and respiration rates (Sprogis *et al.,* 2020). Humpback whale responses to vessel disturbance were dependent on their behavioral state. Di Clemente *et al.* (2018) found that when vessels passed within 1,640 ft (500 m) of humpback whales, individuals would continue to feed if already engaged in feeding behavior but were more likely to start swimming if they were surface active when approached. In response to an approaching large commercial vessel in an area of high ambient noise levels (125–130 dB re 1 µPa), a tagged female blue whale turned around mid-ascent and descended perpendicular to the vessel's path (Szesciorka *et al.,* 2019). The whale did not respond until the vessel's closest point of approach (328 ft (100 m) distance, 135 dB re 1 µPa RMS), which was 10 dB above the ambient noise levels. After the vessel passed, the whale ascended to the surface again with a three-minute delay.

Overall, mysticete responses to vessel noise and traffic are varied, and habituation or changes to vocalization are predominant long-term responses. When baleen whales do avoid vessels, they seem to do so by altering their swim and dive patterns to move away from the vessel. Although a lack of response in the presence of a vessel may minimize potential disturbance from passing vessels, it does increase the whales' vulnerability to vessel strike, which may be of greater concern for mysticetes than vessel noise.

Odontocete responses due to vessel noise are varied and context-dependent, and it is difficult to separate the impacts of vessel noise from the impacts of vessel presence. Vessel presence has been shown to interrupt feeding behavior in delphinids in some studies (Meissner *et al.,* 2015; Pirotta *et al.,* 2015b) while a recent study by Mills *et al.* (2023) found that, in an important foraging area, bottlenose dolphins may continue to forage and socialize even while constantly exposed to high vessel traffic. Ng and Leung (2003) found that the type of vessel, approach, and speed of approach can all affect the probability of a negative behavioral response and, similarly, Guerra *et al.* (2014) documented varied responses in group structure and vocal behavior.

While most odontocetes have documented neutral responses to vessels, avoidance (Bejder *et al.,* 2006a; Würsig *et al.,* 1998) and attraction (Norris and Prescott, 1961; Ritter, 2002; Shane *et al.,* 1986; Westdal *et al.,* 2023; Würsig *et al.,* 1998) behaviors have also been observed (Hewitt, 1985). Archer *et al.* (2010) compared the responses of dolphin populations far offshore that were often targeted by tuna fisheries to populations closer (less than 100 nmi (185.2 km)) to shore and found the fisheries-associated populations (spotted, spinner, and common dolphins) showed evasive behavior when approached by vessels while those nearshore species not associated with offshore fisheries (coastal spotted and bottlenose dolphins) tended to be attracted to vessels.

Arranz *et al.* (2021) used different engine types to determine whether behavioral responses of short-finned pilot whales were attributable to vessel noise, vessel presence, or both. Mother-calf pairs were approached by the same vessel outfitted with either ''quiet'' electric engines or ''noisy'' traditional combustion engines, controlling for approach speed and distance. Arranz *et al.* (2021) found mother pilot whales rested less and calves nursed less in response to both types of engines compared to control conditions, but only the ''noisy'' engine caused significant impacts (29 percent and 81 percent, respectively).

Smaller vessels tend to generate more noise in higher frequency bands, are more likely to approach odontocetes directly, and spend more time near an animal. Carrera *et al.* (2008) found tour boat activity can cause short-term displacement of dolphins, and Haviland-Howell *et al.* (2007) documented longer term or repetitive displacement of dolphins due to chronic vessel noise. Delphinid behavioral states also change in the presence of small tour vessels that often approach animals: travel and resting increases, foraging and social behavior decreases, and animals move closer together (Cecchetti *et al.,* 2017; Clarkson *et al.,*

2020; Kassamali-Fox *et al.,* 2020; Meissner *et al.,* 2015). Most studies on behavioral responses of bottlenose dolphins to vessel traffic show at least short-term changes in behavior, activities, or vocalization patterns when vessels are nearby (Acevedo, 1991; Arcangeli and Crosti, 2009; Berrow and Holmes, 1999; Fumagalli *et al.,* 2018; Gregory and Rowden, 2001; Janik and Thompson, 1996; Lusseau, 2004; Marega *et al.,* 2018; Mattson *et al.,* 2005; Perez-Ortega *et al.,* 2021; Puszka *et al.,* 2021; Scarpaci *et al.,* 2000).

Information is limited on beaked whale responses to vessel noise, but Würsig *et al.* (1998) noted that most beaked whales seem to exhibit avoidance behaviors when exposed to vessels and beaked whales may respond to all anthropogenic noise (*i.e.,* sonar, vessel) at similar sound levels (Aguilar de Soto *et al.,* 2006; Tyack *et al.,* 2011; Tyack, 2009). The information available includes a disruption of foraging by a vocalizing goose-beaked whale in the presence of a passing vessel (Aguilar de Soto *et al.,* 2006) and restriction of group movement, or possibly reduction in the number of individuals clicking within the group, after exposure to broadband (received level of 135 dB re 1 µPa) vessel noise up to at least 3.2 mi (5.2 km) away from the source, though no change in duration of Blainville's beaked whale foraging dives was observed (Pirotta *et al.,* 2012).

Porpoises and small delphinids are known to be sensitive to vessel noise, as well. Frankish *et al.* (2023) found harbor porpoises more likely to avoid large commercial vessels via horizontal movement during the day and vertical movement at night, which supports previous research that the species routinely avoids large, motorized vessels (Polacheck and Thorpe, 1990). Harbor porpoises have also been documented responding to vessels with increased changes in behavioral state and significantly decreased feeding (Akkaya Bas *et al.,* 2017), fewer clicks (Sairanen, 2014), and fewer prey capture attempts and have disrupted foraging when vessels pass closely and noise levels are higher (Wisniewska *et al.,* 2018). Habituation to vessel noise and presence was observed for a resident population of harbor porpoises that was in regular proximity to vessel traffic (32.8 ft to 0.6 mi (10 m to 1 km) away); the population had no response in 74 percent of interactions and an avoidance response in 26 percent of interactions. It should be noted that fewer responses in populations of odontocetes regularly subjected to high levels of vessel traffic could be a sign of habituation, or it could be that the more sensitive individuals in the population have abandoned that area of higher human activity.

Most avoidance responses were the result of fast-moving or steady plane-hulling motorized vessels and the vessel type and speed were considered to be more relevant than vessel presence, as few responses were observed to non-motorized or stationary vessels (Oakley *et al.,* 2017). Similarly, Akkaya Bas *et al.* (2017) found that when fast moving vessels were within 164 ft (50 m) of harbor porpoises, there was an 80 percent probability of change in swimming direction but only a 40 percent probability of change when vessels were beyond 1,312.3 ft (400 m). Frankish *et al.* (2023) found that harbor porpoises were most likely to avoid vessels less than 984.3 ft (300 m) away but, 5–10 percent of the time, they would also respond to vessels more than 1.2 mi (2 km) away, signifying that they were not just attuning to vessel presence, but to vessel noise as well.

Although most vessel noise is constrained to frequencies below 1 kHz, at close ranges vessel noise can extend into mid- and high frequencies (into the tens of kHz) (Hermannsen *et al.,* 2014; Li *et al.,* 2015) and it is these frequencies that harbor porpoises are likely responding to; the mean M-weighted received SPL threshold for a response at these frequencies is 123 dB re 1 µPa (Dyndo *et al.,* 2015). M-weighting functions are generalized frequency weightings for various groups of marine mammals that were defined by Southall *et al.* (2007) based on known or estimated auditory sensitivity at different frequencies and are used to characterize auditory effects of strong sounds. Hermannsen *et al.* (2019) estimated that noise in the 16 kHz frequency band resulting from small recreational vessels could cause behavioral directions in harbor porpoises and could be elevated up to 124 dB re 1 µPa and raise ambient noise levels by a maximum of 51 dB. The higher noise levels were associated with vessel speed and range, which exceeded the threshold levels found by Dyndo *et al.* (2015) and Wisniewska *et al.* (2018) by 49–85 percent of events with high levels of vessel noise.

Lusseau and Bejder (2007) have reported some long-term consequences of vessel noise on odontocetes but, overall, there is little information on the long-term and cumulative impacts of vessel noise (National Academies of Sciences Engineering and Medicine, 2017; National Marine Fisheries Service, 2007). Many researchers speculate that long-term impacts may occur on odontocete populations that experience repeated interruption of foraging behaviors (Stockin *et al.,* 2008), and Southall *et al.* (2021) indicates that, in many contexts, the localized and coastal home ranges typical of many species make them less resilient to this chronic stressor than mysticetes.

Context and experience likely play a role in pinnipeds response to vessel noise, which vary from negative responses including increased vigilance and alerting to avoidance to reduced time spent doing biologically important activities (*e.g.,* resting, feeding, and nursing) (Martin *et al.,* 2023a; Martin *et al.,* 2022; Mikkelsen *et al.,* 2019; Richardson *et al.,* 1995b) to attraction or lack of observable response (Richardson *et al.,* 1995b). More severe responses, like flushing, could be more detrimental to individuals during biologically important activities and times, such as during pupping season. Blundell and Pendleton (2015) found that vessel presence reduces haul out time of Alaskan harbor seals during pupping season and larger vessels elicit stronger responses. Cates and Acevedo-Gutiérrez (2017) modeled harbor seal responses to passing vessels at haul out sites in less trafficked areas and found the model best predicting flushing behavior included number of boats, type of boats, and distance of seals to boats. The authors noted flushing occurred more in response to non-motorized vessels (*e.g.,* kayaks), likely because they tended to pass closer (82 to 603.7 ft (25 to 184 m)) to haul out sites than motorized vessels (180.4 to 1,939 ft (55 to 591 m)) and tended to occur in groups rather than as a single vessel.

Cape fur seals were also more responsive to vessel noise at sites with a large breeding colony than at sites with lower abundances of conspecifics (Martin *et al.,* 2023a). A field study of harbor and gray seals showed that seal responses to vessels included interruption of resting and foraging during times when vessel noise was increasing or at its peak (Mikkelsen *et al.,* 2019). And, although no behavioral differences were observed in hauled out wild cape fur seals exposed to low (60–64 dB re 20 µPa RMS SPL), medium (64–70 dB) and high-level (70–80 dB) vessel noise playbacks, mother-pup pairs spent less time nursing (15–31 percent) and more time awake (13–26 percent), vigilant (7–31 percent), and mobile (2–4 percent) during vessel noise conditions compared to control conditions (Martin *et al.,* 2022).

Masking

Sound can disrupt behavior through masking, or interfering with, an animal's ability to detect, recognize, interpret, or

discriminate between acoustic signals of interest (*e.g.,* those used for intraspecific communication and social interactions, prey detection, predator avoidance, or navigation) (Clark *et al.,* 2009; Richardson *et al.,* 1995; Erbe and Farmer, 2000; Tyack, 2000; Erbe *et al.,* 2016; Branstetter and Sills, 2022). Masking occurs when the receipt of a sound is interfered with by another coincident sound at similar frequencies and at similar or higher intensity and may occur whether the coincident sound is natural (*e.g.,* snapping shrimp, wind, waves, precipitation) or anthropogenic (*e.g.,* shipping, sonar, seismic exploration) in origin.

As described in detail in appendix D, section D.4.4 (Masking), of the 2024 HCTT Draft EIS/OEIS, the ability of a noise source to mask biologically important sounds depends on the characteristics of both the noise source and the signal of interest (*e.g.,* signal-to-noise ratio, temporal variability, direction), in relation to each other and to an animal's hearing abilities (*e.g.,* sensitivity, frequency range, critical ratios, frequency discrimination, directional discrimination, age, or TTS hearing loss), and existing ambient noise and propagation conditions. Masking these acoustic signals can disturb the behavior of individual animals, groups of animals, or entire populations. Masking can lead to behavioral changes including vocal changes (*e.g.,* Lombard effect, increasing amplitude, or changing frequency), cessation of foraging, and leaving an area, to both signalers and receivers, in an attempt to compensate for noise levels (Erbe *et al.,* 2016).

Most research on auditory masking is focused on energetic masking, or the ability of the receiver (*i.e.,* listener) to detect a signal in noise. However, from a fitness perspective, both signal detection and signal interpretation are necessary for success. This type of masking is called informational masking and occurs when a signal is detected by an animal but the meaning of that signal has been lost. Few data exist on informational masking in marine mammals but studies have shown that some recognition of predator cues might be missed by species that are preyed upon by killer whales if killer whale vocalizations are masked (Curé *et al.,* 2016; Curé *et al.,* 2015; Deecke *et al.,* 2002; Isojunno *et al.,* 2016; Visser *et al.,* 2016). Von Benda-Beckman *et al.* (2021) modeled the effect of pulsed and continuous active sonars (CAS) on sperm whale echolocation and found that sonar sounds could reduce the ability of sperm whales to find prey under certain conditions.

Under certain circumstances, marine mammals experiencing significant masking could also be impaired from maximizing their performance fitness in survival and reproduction. Therefore, when the coincident (*i.e.,* masking) sound is man-made, it may be considered harassment when disrupting natural behavioral patterns to the point where the behavior is abandoned or significantly altered. It is important to distinguish TTS and PTS, which persist after the sound exposure, from masking, which only occurs during the sound exposure. Because masking (without resulting in threshold shift) is not associated with abnormal physiological function, it is not considered a physiological effect, but rather a potential behavioral effect.

Richardson *et al.* (1995) argued that the maximum radius of influence of anthropogenic noise (including broadband low-frequency sound transmission) on a marine mammal is the distance from the source to the point at which the noise can barely be heard. This range is determined by either the hearing sensitivity (including critical ratios, or the lowest signal-to-noise ratio in which animals can detect a signal) of the animal (Finneran and Branstetter, 2013; Johnson *et al.,* 1989; Southall *et al.,* 2000) or the background noise level present. Masking is most likely to affect some species' ability to detect communication calls and natural sounds (*i.e.,* surf noise, prey noise, *etc.*) (Richardson *et al.,* 1995).

The frequency range of the potentially masking sound is important in determining any potential behavioral impacts. For example, low-frequency signals may have less effect on high-frequency echolocation sounds produced by odontocetes but are more likely to affect detection of mysticete communication calls and other potentially important natural sounds such as those produced by surf and some prey species. The masking of communication signals by anthropogenic noise may be considered as a reduction in the communication space of animals (*e.g.,* Clark *et al.,* 2009; Matthews *et al.,* 2016) and may result in energetic or other costs as animals change their vocalization behavior (*e.g.,* Miller *et al.,* 2000; Foote *et al.,* 2004; Parks *et al.,* 2007; Di Iorio and Clark, 2009; Holt *et al.,* 2009). Masking can be reduced in situations where the signal and noise come from different directions (Richardson *et al.,* 1995), through amplitude modulation of the signal, or through other compensatory behaviors (Houser and Moore, 2014). Masking can be tested directly in captive species, but in wild populations it must be either modeled or inferred from evidence of masking compensation. There are few studies addressing real-world masking sounds likely to be experienced by marine mammals in the wild (*e.g.,* Cholewiak *et al.,* 2018; Branstetter and Sills, 2022; Branstetter *et al.,* 2024).

High-frequency sounds may mask the echolocation calls of toothed whales. Human data indicate low-frequency sound can mask high-frequency sounds (*i.e.,* upward masking). Studies on captive odontocetes by Au *et al.* (1974; 1985; 1993) indicate that some species may use various processes to reduce masking effects (*e.g.,* adjustments in echolocation call intensity or frequency as a function of background noise conditions). Odontocete hearing is highly directional at high frequencies, facilitating echolocation in masked conditions (Au and Moore, 1984). A study by Nachtigall *et al.,* (2018) showed that false killer whales adjust their hearing to compensate for ambient sounds and the intensity of returning echolocation signals.

Impacts on signal detection, measured by masked detection thresholds, are not the only important factors to address when considering the potential effects of masking. As marine mammals use sound to recognize conspecifics, prey, predators, or other biologically significant sources (Branstetter *et al.,* 2016), it is also important to understand the impacts of masked recognition thresholds (*i.e.,* informational masking). Branstetter *et al.* (2016) measured masked recognition thresholds for whistle-like sounds of bottlenose dolphins and observed that they are approximately 4 dB above detection thresholds (energetic masking) for the same signals. Reduced ability to recognize a conspecific call or the acoustic signature of a predator could have severe negative impacts. Branstetter *et al.* (2016) observed that if ''quality communication'' is set at 90 percent recognition the output of communication space models (which are based on 50 percent detection) would likely result in a significant decrease in communication range.

As marine mammals use sound to recognize predators (Allen *et al.,* 2014; Cummings and Thompson, 1971; Cure *et al.,* 2015; Fish and Vania, 1971), the presence of masking noise may also prevent marine mammals from responding to acoustic cues produced by their predators, particularly if it occurs in the same frequency band. For example, harbor seals that reside in the coastal waters of British Columbia are frequently targeted by mammal-eating killer whales. The seals acoustically

discriminate between the calls of mammal-eating and fish-eating killer whales (Deecke *et al.,* 2002), a capability that should increase survivorship while reducing the energy required to identify all killer whale calls. Similarly, sperm whales (Curé *et al.,* 2016; Isojunno *et al.,* 2016), long-finned pilot whales (Visser *et al.,* 2016), and humpback whales (Curé *et al.,* 2015) changed their behavior in response to killer whale vocalization playbacks. The potential effects of masked predator acoustic cues depends on the duration of the masking noise and the likelihood of a marine mammal encountering a predator during the time that detection and recognition of predator cues are impeded.

Redundancy and context can also facilitate detection of weak signals. These phenomena may help marine mammals detect weak sounds in the presence of natural or anthropogenic noise. Most masking studies in marine mammals present the test signal and the masking noise from the same direction. The dominant background noise may be highly directional if it comes from a particular anthropogenic source such as a vessel or industrial site. Directional hearing may significantly reduce the masking effects of these sounds by improving the effective signal-to-noise ratio.

Masking affects both senders and receivers of acoustic signals and can potentially have long-term chronic effects on marine mammals at the population level as well as at the individual level. Low-frequency ambient sound levels have increased by as much as 20 dB (more than three times in terms of SPL) in the world's ocean from pre-industrial periods, with most of the increase from distant commercial shipping (Hildebrand, 2009; Cholewiak *et al.,* 2018). All anthropogenic sound sources, but especially chronic and lower-frequency signals (*e.g.,* from commercial vessel traffic), contribute to elevated ambient sound levels, thus intensifying masking for marine mammals.

Masking Due to Sonar and Other Transducers—

The functional hearing ranges of mysticetes, odontocetes, and pinnipeds underwater overlap the frequencies of the sonar sources used in the Action Proponents' LFAS/MFAS/high-frequency active sonar (HFAS) training and the Navy's testing exercises. Additionally, almost all affected species' vocal repertoires span across the frequencies of these sonar sources used by the Action Proponents. Masking by LFAS or MFAS with relatively low-duty cycles is not anticipated (or would be of very short duration) for most cetaceans as sonar signals occur over a relatively short duration and narrow bandwidth (overlapping with only a small portion of the hearing range). LFAS could overlap in frequency with mysticete vocalizations, however LFAS does not overlap with vocalizations for most marine mammal species. For example, in the presence of LFAS, humpback whales were observed to increase the length of their songs (Fristrup *et al.,* 2003; Miller *et al.,* 2000), potentially due to the overlap in frequencies between the whale song and the LFAS. While dolphin whistles and MFAS are similar in frequency, masking is not anticipated (or would be of very short duration) due to the low-duty cycle and short durations of most sonars.

As described in additional detail in the 2024 HCTT Draft EIS/OEIS, high duty-cycle or CAS have more potential to mask vocalizations. These sonars transmit more frequently (greater than 80 percent duty cycle) than traditional sonars, but typically at lower source levels. HFAS, such as pingers that operate at higher repetition rates, also operate at lower source levels and have faster attenuation rates due to the higher frequencies used. These lower source levels limit the range of impacts, however, compared to traditional sonar systems, individuals close to the source are likely to experience masking at longer time scales. The frequency range at which high-duty cycle systems operate overlaps the vocalization frequency of many odontocetes. Continuous noise at the same frequency of communicative vocalizations may cause disruptions to communication, social interactions, and acoustically mediated cooperative behaviors (Sørensen *et al.,* 2023) such as foraging and mating. Similarly, because the high-duty cycle or CAS includes mid-frequency sources, there is also the potential for the mid-frequency sonar signals to mask important environmental cues (*e.g.,* predator or conspecific acoustic cues), possibly affecting survivorship for targeted animals. Spatial release from masking may occur with higher duty cycle or CAS.

While there are currently few studies of the impacts of high-duty cycle sonars on marine mammals, masking due to these systems is likely analogous to masking produced by other continuous sources (*e.g.,* vessel noise and low-frequency cetaceans), and would likely have similar short-term consequences, though longer in duration due to the duration of the masking noise. These may include changes to vocalization amplitude and frequency (Brumm and Slabbekoorn, 2005; Hotchkin and Parks, 2013) and behavioral impacts such as avoidance of the area and interruptions to foraging or other essential behaviors (Gordon *et al.,* 2003). Long-term consequences could include changes to vocal behavior and vocalization structure (Foote *et al.,* 2004; Parks *et al.,* 2007), abandonment of habitat if masking occurs frequently enough to significantly impair communication (Brumm and Slabbekoorn, 2005), a potential decrease in survivorship if predator vocalizations are masked (Brumm and Slabbekoorn, 2005), and a potential decrease in recruitment if masking interferes with reproductive activities or mother-calf communication (Gordon *et al.,* 2003).

Von Benda-Beckmann *et al.* (2021) modeled the effect of pulsed and continuous 1 to 2 kHz active sonar on sperm whale echolocation clicks and found that the presence of upper harmonics in the sonar signal increased masking of clicks produced in the search phase of foraging compared to buzz clicks produced during prey capture. Different levels of sonar caused intermittent to continuous masking (120 to 160 dB re 1 μPa^2, respectively), but varied based on click level, whale orientation, and prey target strength. CAS resulted in a greater percentage of time that echolocation clicks were masked compared to pulsed active sonar. This means that sonar sounds could reduce the ability of sperm whales to find prey under certain conditions. However, echoes from prey are most likely spatially separated from the sonar source, and so spatial release from masking would be expected.

Masking Due to Impulsive Noise—

Impulsive sound sources, including explosions, are intense and short in duration. Since impulsive noise is intermittent, the length of the gap between sounds (*i.e.,* duty-cycle) and received level are relevant when considering the potential for masking. Impulsive sounds with lower duty cycles or lower received levels are less likely to result in masking than higher duty cycles or received levels. There are no direct observations of masking in marine mammals due to exposure to explosive sources. Potential masking from explosive sounds or weapon noise is likely similar to masking studied for other impulsive sounds, such as air guns.

Masking of mysticete calls could occur due to the overlap between their low-frequency vocalizations and the dominant frequencies of impulsive sources (Castellote *et al.,* 2012; Nieukirk

et al., 2012). For example, blue whale feeding/social calls increased when seismic exploration was underway (Di Lorio and Clark, 2010), indicative of a possible compensatory response to masking effects of the increased noise level. However, mysticetes that call at higher rates are less likely to be masked by impulsive noise with lower duty cycles (Clark *et al.,* 2009) because of the decreased likelihood that the noise would overlap with the calls, and because of dip listening. Field observations of masking effects such as vocal modifications are difficult to interpret because when recordings indicate that call rates decline, this could be caused by (1) animals calling less frequently (*i.e.,* actual noise-induced vocal modifications), (2) the calls being masked from the recording hydrophone due to the noise (*e.g.,* animals are not calling less frequently but are being detected less frequently), or (3) the animals moving away from the noise, or any combination of these causes (Blackwell *et al.,* 2013; Cerchio *et al.,* 2014).

Masking of pinniped communication sounds at 100 Hz center frequency is possible when vocalizations occur at the same time as an air gun pulse (Sills *et al.,* 2017). This might result in some percentage of vocalizations being masked if an activity such as a seismic survey is being conducted in the vicinity, even when the sender and receiver are near one another. Release from masking due to ''dip listening'' is likely in this scenario.

While a masking effect of impulsive noise can depend on the received level (Blackwell *et al.,* 2015) and other characteristics of the noise, the vocal response of the affected animal to masking noise is an equally important consideration for inferring overall impacts to an animal. It is possible that the receiver would increase the rate and/or level of calls to compensate for masking; or, conversely, cease calling.

In general, impulsive noise has the potential to mask sounds that are biologically important for marine mammals, reducing communication space or resulting in noise-induced vocal modifications that might impact marine mammals. Masking by close-range impulsive sound sources is most likely to impact marine mammal communication.

Masking Due to Vessel Noise—

Masking is more likely to occur in the presence of broadband, relatively continuous noise sources such as vessels. Several studies have shown decreases in marine mammal communication space and changes in behavior as a result of the presence of vessel noise. For example, North Atlantic right whales were observed to shift the frequency content of their calls upward while reducing the rate of calling in areas of increased anthropogenic noise (Parks *et al.,* 2007) as well as increasing the amplitude (intensity) of their calls (Parks, 2009; Parks *et al.,* 2011). Fournet *et al.* (2018) observed that humpback whales in Alaska responded to increasing ambient sound levels (natural and anthropogenic) by increasing the source levels of their calls (non-song vocalizations). Clark *et al.* (2009) also observed that right whales communication space decreased by up to 84 percent in the presence of vessels (Clark *et al.,* 2009). Cholewiak *et al.* (2018) also observed loss in communication space in Stellwagen National Marine Sanctuary for North Atlantic right whales, fin whales, and humpback whales with increased ambient noise and shipping noise. Gabriele *et al.* (2018) modeled the effects of vessel traffic sound on communication space in Glacier Bay National Park in Alaska and found that typical summer vessel traffic in Glacier Bay National Park causes losses of communication space to singing whales (reduced by 13–28 percent), calling whales (18–51 percent), and roaring seals (32–61 percent), particularly during daylight hours and even in the absence of cruise ships. Dunlop (2019) observed that an increase in vessel noise reduced modeled communication space and resulted in significant reduction in group social interactions in Australian humpback whales. However, communication signal masking did not fully explain this change in social behavior in the model, indicating there may also be an additional effect of the physical presence of the vessel on social behavior (Dunlop, 2019). Although humpback whales off Australia did not change the frequency or duration of their vocalizations in the presence of ship noise, their source levels were lower than expected based on source level changes to wind noise, potentially indicating some signal masking (Dunlop, 2016). Multiple delphinid species have also been shown to increase the minimum or maximum frequencies of their whistles in the presence of anthropogenic noise and reduced communication space (*e.g.,* Holt *et al.,* 2009; Holt *et al.,* 2011; Gervaise *et al.,* 2012; Williams *et al.,* 2014; Hermannsen *et al.,* 2014; Papale *et al.,* 2015; Liu *et al.,* 2017).

Other Physiological Response

Physiological stress is a natural and adaptive process that helps an animal survive changing conditions. When an animal perceives a potential threat, whether or not the stimulus actually poses a threat, a stress response is triggered (Selye, 1950; Moberg, 2000; Sapolsky, 2005). Once an animal's central nervous system perceives a threat, it mounts a biological response or defense that consists of a combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses.

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and distress is the biotic cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other biotic functions. For example, when a stress response diverts energy away from growth in young animals, those animals may experience stunted growth. When a stress response diverts energy from a fetus, an animal's reproductive success and its fitness will suffer. In these cases, the animals will have entered a pre-pathological or pathological state which is called ''distress'' (Selye, 1950) or ''allostatic loading'' (McEwen and Wingfield, 2003). This pathological state of distress will last until the animal replenishes its energetic reserves sufficiently to restore normal function.

According to Moberg (2000), in the case of many stressors, an animal's first and sometimes most economical (in terms of biotic costs) response is behavioral avoidance of the potential stressor or avoidance of continued exposure to a stressor. An animal's second line of defense to stressors involves the sympathetic part of the autonomic nervous system and the classical ''fight or flight'' response, which includes the cardiovascular system, the gastrointestinal system, the exocrine glands, and the adrenal medulla to produce changes in heart rate, blood pressure, and gastrointestinal activity that humans commonly associate with ''stress.'' These responses have a relatively short duration and may or may not have significant long-term effect on an animal's welfare.

An animal's third line of defense to stressors involves its neuroendocrine systems or sympathetic nervous systems; the system that has received the most study has been the hypothalamus-pituitary-adrenal (HPA) system (also known as the HPA axis in mammals or the hypothalamus-pituitary-interrenal axis in fish and some reptiles). Unlike stress responses associated with the autonomic nervous system, virtually all neuro-endocrine functions that are affected by stress, including immune competence, reproduction, metabolism, and behavior, are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction (Moberg, 1987; Rivier and Rivest, 1991), altered metabolism (Elasser *et al.,* 2000), reduced immune competence (Blecha, 2000), and behavioral disturbance (Moberg, 1987; Blecha, 2000). Increases in the circulation of glucocorticosteroids (cortisol, corticosterone, and aldosterone in marine mammals; see Romano *et al.,* 2004) have been equated with stress for many years.

Marine mammals naturally experience stressors within their environment and as part of their life histories. Changing weather and ocean conditions, exposure to disease and naturally occurring toxins, lack of prey availability, and interactions with predators all contribute to the stress a marine mammal experiences (Atkinson *et al.,* 2015). Breeding cycles, periods of fasting, social interactions with members of the same species, and molting (for pinnipeds) are also stressors, although they are natural components of an animal's life history. Anthropogenic activities have the potential to provide additional stressors beyond those that occur naturally (*e.g.,* fishery interactions, pollution, tourism, ocean noise) (Fair *et al.,* 2014; Meissner *et al.,* 2015; Rolland *et al.,* 2012).

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well-studied through controlled experiments for both laboratory and free-ranging animals (*e.g.,* Holberton *et al.,* 1996; Hood *et al.,* 1998; Jessop *et al.,* 2003; Krausman *et al.,* 2004; Lankford *et al.,* 2005; Reneerkens *et al.,* 2002; Thompson and Hamer, 2000). However, it should be noted (and as is described in additional detail in the 2024 HCTT Draft EIS/OEIS) that our understanding of the functions of various stress hormones (*e.g.,* cortisol), is based largely upon observations of the stress response in terrestrial mammals. Atkinson *et al.,* (2015) note that the endocrine response of marine mammals to stress may not be the same as that of terrestrial mammals because of the selective pressures marine mammals faced during their evolution in an ocean environment. For example, due to the necessity of breath-holding while diving and foraging at depth, the physiological role of epinephrine and norepinephrine (the catecholamines) in marine mammals might be different than in other mammals. Relatively little information exists on the linkage between anthropogenic sound exposure and stress in marine mammals, and even less information exists on the ultimate consequences of sound-induced stress responses (either acute or chronic). Most studies to date have focused on acute responses to sound either by measuring catecholamines, a neurohormone, or heart rate as a proxy for an acute stress response.

The ability to make predictions from stress hormones about impacts on individuals and populations exposed to various forms of natural and anthropogenic stressors relies on understanding the linkages between changes in stress hormones and resulting physiological impacts. Currently, the sound characteristics that correlate with specific stress responses in marine mammals are poorly understood, as are the ultimate consequences of these changes. Several research efforts have improved the understanding of, and the ability to predict, how stressors ultimately affect marine mammal populations (*e.g.,* King *et al.,* 2015; New *et al.,* 2013a; Pirotta *et al.,* 2015a; Pirotta *et al.,* 2022b). This includes determining how and to what degree various types of anthropogenic sound cause stress in marine mammals and understanding what factors may mitigate those physiological stress responses. Factors potentially affecting an animal's response to a stressor include life history, sex, age, reproductive status, overall physiological and behavioral adaptability, and whether they are naïve or experienced with the sound (*e.g.,* prior experience with a stressor may result in a reduced response due to habituation) (Finneran and Branstetter, 2013; St. Aubin and Dierauf, 2001). Because there are many unknowns regarding the occurrence of acoustically induced stress responses in marine mammals, any physiological response (*e.g.,* hearing loss or injury) or significant behavioral response is assumed to be associated with a stress response.

Non-impulsive sources of sound can cause direct physiological effects including noise-induced loss of hearing sensitivity (or ''threshold shift'') or other auditory injury, nitrogen decompression, acoustically-induced bubble growth, and injury due to sound-induced acoustic resonance. Separately, an animal's behavioral response to an acoustic exposure might lead to physiological effects that might ultimately lead to injury or death, which is discussed later in the *Stranding and Mortality* section.

Heart Rate Response—

Several experimental studies have measured the heart rate response of a variety of marine mammals. For example, Miksis *et al.* (2001) observed increases in heart rates of captive bottlenose dolphins to which known calls of other dolphins were played, although no increase in heart rate was observed when background tank noise was played back. However, it cannot be determined whether the increase in heart rate was due to stress or social factors, such as expectation of an encounter with a known conspecific. Similarly, a young captive beluga's heart rate increased during exposure to noise, with increases dependent upon the frequency band of noise and duration of exposure, and with a sharp decrease to normal or below normal levels upon cessation of the exposure (Lyamin *et al.,* 2011). Spectral analysis of heart rate variability corroborated direct measures of heart rate (Bakhchina *et al.,* 2017). This response might have been in part due to the conditions during testing, the young age of the animal, and the novelty of the exposure; a year later the exposure was repeated at a slightly higher received level and there was no heart rate response, indicating the beluga whale had potentially habituated to the noise exposure.

Kvadsheim *et al.* (2010a) measured the heart rate of captive hooded seals during exposure to sonar signals and found an increase in the heart rate of the seals during exposure periods versus control periods when the animals were at the surface. When the animals dove, the normal dive-related heart rate decrease was not impacted by the sonar exposure. Similarly, Thompson *et al.* (1998) observed a rapid, short-lived decrease in heart rates in wild harbor and grey seals exposed to seismic air guns (cited in Gordon *et al.,* 2003).

Two captive harbor porpoises showed significant bradycardia (reduced heart rate), below that which occurs with diving, when they were exposed to pinger-like sounds with frequencies between 100–140 kHz (Teilmann *et al.,* 2006). The bradycardia was found only in the early noise exposures and the porpoises acclimated quickly across

successive noise exposures. Elmegaard *et al.* (2021) also found that initial exposures to sonar sweeps produced bradycardia but did not elicit a startle response in captive harbor porpoises. As with Teilmann *et al.* (2006), the cardiac response disappeared over several repeat exposures suggesting rapid acclimation to the noise. In the same animals, 40-kHz noise pulses induced startle responses but without a change in heart rate. Bakkeren *et al.* (2023) found no change in the heart rate of a harbor porpoise during exposure to masking noise (⅓ octave band noise, centered frequency of 125 kHz, maximum received level of 125 dB re 1 µPa) during an echolocation task but showed significant bradycardia while blindfolded for the same task. The authors attributed the change in heart rate to sensory deprivation, although no strong conclusions about acoustic masking could be made since the animal was still able to perform the echolocation task in the presence of the masking noise. Williams *et al.* (2022) observed periods of increased heart rate variability in narwhals during seismic air gun impulse exposure, but profound bradycardia was not noted. Conversely, Williams *et al.* (2017) found that a profound bradycardia persisted in narwhals, even though exercise effort increased dramatically as part of their escape response following release from capture and handling.

Limited evidence across several different species suggests that increased heart rate might occur as part of the acute stress response of marine mammals that are at the surface. However, the decreased heart rate typical of diving marine mammals can be enhanced in response to an acute stressor, suggesting that the context of the exposure is critical to understanding the cardiac response. Furthermore, in instances where a cardiac response was noted, there appears to be rapid habituation when repeat exposures occur. Additional research is required to understand the interaction of dive bradycardia, noise-induced cardiac responses, and the role of habituation in marine mammals.

Stress Hormone and Immune Response—

What is known about the function of the various stress hormones is based largely upon observations of the stress response in terrestrial mammals. The endocrine response of marine mammals to stress may not be the same as that of terrestrial mammals because of the selective pressures marine mammals faced during their evolution in an ocean environment (Atkinson *et al.,* 2015). For example, due to the necessity of breath-holding while diving and foraging at depth, the physiological role of epinephrine and norepinephrine (the catecholamines) might be different in marine versus other mammals.

Catecholamines increase during breath-hold diving in seals, co-occurring with a reduction in heart rate, peripheral vasoconstriction (*i.e.,* constriction of blood vessels), and an increased reliance on anaerobic metabolism during extended dives (Hance *et al.,* 1982; Hochachka *et al.,* 1995; Hurford *et al.,* 1996); the catecholamine increase is not associated with increased heart rate, glycemic release, and increased oxygen consumption typical of terrestrial mammals. Captive belugas demonstrated no catecholamine response to the playback of oil drilling sounds (Thomas *et al.,* 1990b) but showed a small but statistically significant increase in catecholamines following exposure to impulsive sounds produced from a seismic water gun (Romano *et al.,* 2004). A captive bottlenose dolphin exposed to the same sounds did not demonstrate a catecholamine response but did demonstrate a statistically significant elevation in aldosterone (Romano *et al.,* 2004); however, the increase was within the normal daily variation observed in this species (St. Aubin *et al.,* 1996) and was likely of little biological significance. Aldosterone has been speculated to not only contribute to electrolyte balance, but possibly also the maintenance of blood pressure during periods of vasoconstriction (Houser *et al.,* 2011). In marine mammals, aldosterone is thought to play a role in mediating stress (St. Aubin and Dierauf, 2001; St. Aubin and Geraci, 1989).

Yang *et al.* (2021) measured cortisol concentrations in two captive bottlenose dolphins and found significantly higher concentrations after exposure to 140 dB re 1 µPa impulsive noise playbacks. Two out of six tested indicators of immune system function underwent acoustic dose-dependent changes, suggesting that repeated exposures or sustained stress response to impulsive sounds may increase an affected individual's susceptibility to pathogens. Unfortunately, absolute values of cortisol were not provided, and it is not possible from the study to tell if cortisol rose to problematic levels (*e.g.,* see normal variation and changes due to handling in Houser *et al.* (2021) and Champagne *et al.* (2018)). Exposing dolphins to a different acoustic stressor yielded contrasting results. Houser *et al.* (2020) measured cortisol and epinephrine obtained from 30 captive bottlenose dolphins exposed to simulated Navy MFAS and found no correlation between SPL and stress hormone levels, even though sound exposures were as high as 185 dB re 1 µPa. In the same experiment (Houser *et al.,* 2013b), behavioral responses were shown to increase in severity with increasing received SPLs. These results suggest that behavioral responses to sonar signals are not necessarily indicative of a hormonal stress response.

Whereas a limited amount of work has addressed the potential for acute sound exposures to produce a stress response, almost nothing is known about how chronic exposure to acoustic stressors affects stress hormones in marine mammals, particularly as it relates to survival or reproduction. In what is probably the only study of chronic noise exposure in marine mammals associating changes in a stress hormone with changes in anthropogenic noise, Rolland *et al.* (2012) compared the levels of cortisol metabolites in NARW feces collected before and after September 11, 2001. Following the events of September 11, 2001, shipping was significantly reduced in the region where fecal collections were made, and regional ocean background noise declined. Fecal cortisol metabolites significantly decreased during the period of reduced ship traffic and ocean noise (Rolland *et al.,* 2012). Rolland *et al.* (2017) also compared acute (death by vessel strike) to chronic (entanglement or live stranding) stressors in NARW and found that whales subject to chronic stressors had higher levels of glucocorticoid stress hormones (cortisol and corticosterone) than either healthy whales or those killed by ships. It was presumed that whales subjected to acute stress may have died too quickly for increases in fecal glucocorticoids to be detected.

Considerably more work has been conducted in an attempt to determine the potential effect of vessel disturbance on smaller cetaceans, particularly killer whales (Bain, 2002; Erbe, 2002; Lusseau, 2006; Noren *et al.,* 2009; Pirotta *et al.,* 2015b; Read *et al.,* 2014; Rolland *et al.,* 2012; Williams *et al.,* 2009; Williams *et al.,* 2014a; Williams *et al.,* 2014b; Williams *et al.,* 2006b). Most of these efforts focused primarily on estimates of metabolic costs associated with altered behavior or inferred consequences of boat presence and noise but did not directly measure stress hormones. However, Ayres *et al.* (2012) investigated Southern Resident killer whale fecal thyroid hormone and cortisol metabolites to assess two potential threats to the species'

recovery: lack of prey (salmon) and impacts from exposure to the physical presence of vessel traffic (but without measuring vessel traffic noise). Ayres *et al.* (2012) concluded from these stress hormone measures that the lack of prey overshadowed any population-level physiological impacts on Southern Resident killer whales due to vessel traffic. Lemos *et al.* (2022) investigated the potential for vessel traffic to affect gray whales. By assessing gray whale fecal cortisol metabolites across years in which vessel traffic was variable, Lemos *et al.* (2022) found a direct relationship between the presence/density of vessel traffic and fecal cortisol metabolite levels. Unfortunately, no direct noise exposure measurements were made on any individual making it impossible to tell if other natural and anthropogenic factors could also be related to the results. Collectively, these studies indicate the difficulty in determining which factors are primarily influence the secretion of stress hormones, including the separate and additive effects of vessel presence and vessel noise. While vessel presence could contribute to the variation in fecal cortisol metabolites in North Atlantic right whales and gray whales, there are other potential influences on fecal hormone metabolites, so it is difficult to establish a direct link between ocean noise and fecal hormone metabolites.

Non-Auditory Injury

Non-auditory injury, or direct injury, is considered less likely to occur in the context of the Action Proponents' activities than auditory injury and the primary anticipated source of non-auditory injury for these activities is exposure to the pressure generated by explosive detonations, which is discussed in the *Potential Effects of Explosive Sources on Marine Mammals* section below. Here, we discuss less direct non-auditory injury impacts, including acoustically induced bubble formation, injury from sonar-induced acoustic resonance, and behaviorally mediated injury.

One theoretical cause of injury to marine mammals is rectified diffusion (Crum and Mao, 1996), the process of increasing the size of a bubble by exposing it to a sound field. This process could be facilitated if the environment in which the ensonified bubbles exist is supersaturated with gas. Repetitive diving by marine mammals can cause the blood and some tissues to accumulate gas to a greater degree than is supported by the surrounding environmental pressure (Ridgway and Howard, 1979). The deeper and longer dives of some marine mammals (for example, beaked whales) are theoretically predicted to induce greater supersaturation (Houser *et al.,* 2001b). If rectified diffusion were possible in marine mammals exposed to high-level sound, conditions of tissue supersaturation could theoretically speed the rate and increase the size of bubble growth. Subsequent effects due to tissue trauma and emboli would presumably mirror those observed in humans suffering from decompression sickness. Acoustically-induced (or mediated) bubble growth and other pressure-related physiological impacts are addressed below but are not expected to result from the Action Proponents' proposed activities.

It is unlikely that the short duration (in combination with the source levels) of sonar pings would be long enough to drive bubble growth to any substantial size, if such a phenomenon occurs. However, an alternative but related hypothesis has also been suggested: stable bubbles could be destabilized by high-level sound exposures such that bubble growth then occurs through static diffusion of gas out of the tissues. In such a scenario the marine mammal would need to be in a gas-supersaturated state for a long enough period of time for bubbles to become of a problematic size. Recent research with ex vivo supersaturated bovine tissues suggested that, for a 37 kHz signal, a sound exposure of approximately 215 dB re 1 µPa would be required before microbubbles became destabilized and grew (Crum *et al.,* 2005). Assuming spherical spreading loss and a nominal sonar source level of 235 dB re 1 µPa at 1 m, a whale would need to be within 33 ft (10 m) of the sonar dome to be exposed to such sound levels. Furthermore, tissues in the study were supersaturated by exposing them to pressures of 400–700 kilopascals for periods of hours and then releasing them to ambient pressures. Assuming the equilibration of gases with the tissues occurred when the tissues were exposed to the high pressures, levels of supersaturation in the tissues could have been as high as 400–700 percent. These levels of tissue supersaturation are substantially higher than model predictions for marine mammals (Fahlman *et al.,* 2009; Fahlman *et al.,* 2014; Houser *et al.,* 2001; Saunders *et al.,* 2008). It is improbable that this mechanism is responsible for stranding events or traumas associated with beaked whale strandings because both the degree of supersaturation and exposure levels observed to cause microbubble destabilization are unlikely to occur, either alone or in concert.

Yet another hypothesis has speculated that rapid ascent to the surface following exposure to a startling sound might produce tissue gas saturation sufficient for the evolution of nitrogen bubbles (*i.e.,* decompression sickness) (Jepson *et al.,* 2003; Fernandez *et al.,* 2005). In this scenario, the rate of ascent would need to be sufficiently rapid to compromise behavioral or physiological protections against nitrogen bubble formation. Alternatively, Tyack *et al.* (2006) studied the deep diving behavior of beaked whales and concluded that: ''Using current models of breath-hold diving, we infer that their natural diving behavior is inconsistent with known problems of acute nitrogen supersaturation and embolism.'' Collectively, these hypotheses can be referred to as ''hypotheses of acoustically mediated bubble growth.''

Although theoretical predictions suggest the possibility for acoustically mediated bubble growth, there is considerable disagreement among scientists as to its likelihood (Piantadosi and Thalmann, 2004; Evans and Miller, 2003; Cox *et al.,* 2006; Rommel *et al.,* 2006). Crum and Mao (1996) hypothesized that received levels would have to exceed 190 dB in order for there to be the possibility of significant bubble growth due to supersaturation of gases in the blood (*i.e.,* rectified diffusion). Work conducted by Crum *et al.* (2005) demonstrated the possibility of rectified diffusion for short duration signals, but at SELs and tissue saturation levels that are highly improbable to occur in diving marine mammals. To date, energy levels predicted to cause in vivo bubble formation within diving cetaceans have not been evaluated (NOAA, 2002b). Jepson *et al.* (2003, 2005) and Fernandez *et al.* (2004, 2005) concluded that in vivo bubble formation, which may be exacerbated by deep, long-duration, repetitive dives may explain why beaked whales appear to be relatively vulnerable to MFAS/HFAS exposures. It has also been argued that traumas from some beaked whale strandings are consistent with gas emboli and bubble-induced tissue separations (Jepson *et al.,* 2003); however, there is no conclusive evidence of this (Rommel *et al.,* 2006). Based on examination of sonar-associated strandings, Bernaldo de Quiros *et al.* (2019) list diagnostic features, the presence of all of which suggest gas and fat embolic syndrome for beaked whales stranded in association with sonar exposure.

As described in additional detail in the Behaviorally Mediated Injury section of appendix D the 2024 HCTT Draft EIS/OEIS, marine mammals

generally are thought to deal with nitrogen loads in their blood and other tissues, caused by gas exchange from the lungs under conditions of high ambient pressure during diving, through anatomical, behavioral, and physiological adaptations (Hooker *et al.,* 2012). Although not a direct injury, variations in marine mammal diving behavior or avoidance responses have been hypothesized to result in nitrogen off-gassing in super-saturated tissues, possibly to the point of deleterious vascular and tissue bubble formation (Hooker *et al.,* 2012; Jepson *et al.,* 2003; Saunders *et al.,* 2008) with resulting symptoms similar to decompression sickness, however the process is still not well understood.

In 2009, Hooker *et al.* tested two mathematical models to predict blood and tissue tension N2 (P_{N2}) using field data from three beaked whale species: northern bottlenose whales, goose-beaked whales, and Blainville's beaked whales. The researchers aimed to determine if physiology (body mass, diving lung volume, and dive response) or dive behavior (dive depth and duration, changes in ascent rate, and diel behavior) would lead to differences in P_{N2} levels and thereby decompression sickness risk between species. In their study, they compared results for previously published time depth recorder data (Hooker and Baird, 1999; Baird *et al.,* 2006, 2008) from goose-beaked whale, Blainville's beaked whale, and northern bottlenose whale. They reported that diving lung volume and extent of the dive response had a large effect on end-dive P_{N2}. Also, results showed that dive profiles had a larger influence on end-dive P_{N2} than body mass differences between species. Despite diel changes (*i.e.,* variation that occurs regularly every day or most days) in dive behavior, P_{N2} levels showed no consistent trend. Model output suggested that all three species live with tissue P_{N2} levels that would cause a significant proportion of decompression sickness cases in terrestrial mammals. The authors concluded that the dive behavior of goose-beaked whale was different from both Blainville's beaked whale and northern bottlenose whale and resulted in higher predicted tissue and blood N2 levels (Hooker *et al.,* 2009). They also suggested that the prevalence of goose-beaked whales stranding after naval sonar exercises could be explained by either a higher abundance of this species in the affected areas or by possible species differences in behavior and/or physiology related to MF active sonar (Hooker *et al.,* 2009).

Bernaldo de Quiros *et al.* (2012) showed that, among stranded whales, deep diving species of whales had higher abundances of gas bubbles compared to shallow diving species. Kvadsheim *et al.* (2012) estimated blood and tissue P_{N2} levels in species representing shallow, intermediate, and deep diving cetaceans following behavioral responses to sonar and their comparisons found that deep diving species had higher end-dive blood and tissue N2 levels, indicating a higher risk of developing gas bubble emboli compared with shallow diving species. Fahlmann *et al.* (2014) evaluated dive data recorded from sperm, killer, long-finned pilot, Blainville's, and goose-beaked whales before and during exposure to low-frequency (1–2 kHz), as defined by the authors, and mid-frequency (2–7 kHz) active sonar in an attempt to determine if either differences in dive behavior or physiological responses to sonar are plausible risk factors for bubble formation. The authors suggested that CO_2 may initiate bubble formation and growth, while elevated levels of N2 may be important for continued bubble growth. The authors also suggest that if CO_2 plays an important role in bubble formation, a cetacean escaping a sound source may experience increased metabolic rate, CO_2 production, and alteration in cardiac output, which could increase risk of gas bubble emboli. However, as discussed in Kvadsheim *et al.* (2012), the actual observed behavioral responses to sonar from the species in their study (sperm, killer, long-finned pilot, Blainville's beaked, and goose-beaked whales) did not imply any significantly increased risk of decompression sickness due to high levels of N2. Therefore, further information is needed to understand the relationship between exposure to stimuli, behavioral response (discussed in more detail below), elevated N2 levels, and gas bubble emboli in marine mammals. The hypotheses for gas bubble formation related to beaked whale strandings is that beaked whales potentially have strong avoidance responses to MFAS because they sound similar to their main predator, the killer whale (Cox *et al.,* 2006; Southall *et al.,* 2007; Zimmer and Tyack, 2007; Baird *et al.,* 2008; Hooker *et al.,* 2009). Further investigation is needed to assess the potential validity of these hypotheses.

To summarize, while there are several hypotheses, there is little data directly connecting intense, anthropogenic underwater sounds with non-auditory physical effects in marine mammals. The available data do not support identification of a specific exposure level above which non-auditory effects can be expected (Southall *et al.,* 2007) or any meaningful quantitative predictions of the numbers (if any) of marine mammals that might be affected in these ways. In addition, such effects, if they occur at all, would be expected to be limited to situations where marine mammals were exposed to high powered sounds at very close range over a prolonged period of time, which is not expected to occur based on the speed of the vessels operating sonar in combination with the speed and behavior of marine mammals in the vicinity of sonar.

An object exposed to its resonant frequency will tend to amplify its vibration at that frequency, a phenomenon called acoustic resonance. Acoustic resonance has been proposed as a potential mechanism by which a sonar or sources with similar operating characteristics could damage tissues of marine mammals. In 2002, NMFS convened a panel of government and private scientists to investigate the potential for acoustic resonance to occur in marine mammals (NOAA, 2002). They modeled and evaluated the likelihood that Navy MFAS (2–10 kHz) caused resonance effects in beaked whales that eventually led to their stranding. The workshop participants concluded that resonance in air-filled structures was not likely to have played a primary role in the Bahamas stranding in 2000. They listed several reasons supporting this finding including (among others): tissue displacements at resonance are estimated to be too small to cause tissue damage; tissue-lined air spaces most susceptible to resonance are too large in marine mammals to have resonant frequencies in the ranges used by MFAS or LFAS; lung resonant frequencies increase with depth, and tissue displacements decrease with depth so if resonance is more likely to be caused at depth it is also less likely to have an affect there; and lung tissue damage has not been observed in any mass, multi-species stranding of beaked whales. The frequency at which resonance was predicted to occur in the animals' lungs was 50 Hz, well below the frequencies used by the MFAS systems associated with the Bahamas event. The workshop participants focused on the March 2000 stranding of beaked whales in the Bahamas as high-quality data were available, but the workshop report notes that the results apply to other sonar-related stranding events. For the reasons given by the 2002 workshop participants, we do not anticipate injury due to sonar-induced acoustic resonance from the Action Proponents' proposed activity.

Potential Effects of Explosive Sources on Marine Mammals

Explosive detonations that occur in water send a shock wave and sound energy through the water and can release gaseous by-products, create an oscillating bubble, or cause a plume of water to shoot up from the water surface. The shock wave and accompanying noise are of most concern to marine animals and the potential effects of an explosive injury to marine mammals would consist of primary blast injury, which refers to injuries resulting from the compression of a body exposed to a blast wave. Blast effects are greatest at the gas-liquid interface (Landsberg, 2000) and are usually observed as barotrauma of gas-containing structures (*e.g.,* lung, gastrointestinal tract) and structural damage to the auditory system (Goertner, 1982; Greaves *et al.,* 1943; Hill, 1978; Office of the Surgeon General, 1991; Richmond *et al.,* 1973; Yelverton *et al.,* 1973). Depending on the intensity of the shock wave and size, location, and depth of the animal, an animal can be injured, killed, suffer non-lethal physical effects, experience hearing related effects with or without behavioral responses, or exhibit temporary behavioral responses or tolerance from hearing the blast sound. Generally, exposures to higher levels of impulse and pressure levels would result in greater impacts to an individual animal.

The near instantaneous high magnitude pressure change near an explosion can injure an animal where tissue material properties significantly differ from the surrounding environment, such as around air-filled cavities in the lungs or gastrointestinal tract. Large pressure changes at tissue-air interfaces in the lungs and gastrointestinal tract may cause tissue rupture, resulting in a range of injuries depending on degree of exposure. The lungs are typically the first site to show any damage, while the solid organs (*e.g.,* liver, spleen, and kidney) are more resistant to blast injury (Clark and Ward, 1943). Odontocetes can also incur hemorrhaging in the acoustic fats in the melon and jaw (Siebert *et al.,* 2022). Recoverable injuries would include slight lung injury, such as capillary interstitial bleeding, and contusions to the gastrointestinal tract. More severe injuries, such as tissue lacerations, major hemorrhage, organ rupture, or air in the chest cavity (pneumothorax), would significantly reduce fitness and likely cause death in the wild. Rupture of the lung may also introduce air into the vascular system, producing air emboli that can cause a stroke or heart attack by restricting oxygen delivery to critical organs.

Injuries resulting from a shock wave take place at boundaries between tissues of different densities. Different velocities are imparted to tissues of different densities, and this can lead to their physical disruption. Intestinal walls can bruise or rupture, with subsequent hemorrhage and escape of gut contents into the body cavity. Less severe gastrointestinal tract injuries include contusions, petechiae (*i.e.,* small red or purple spots caused by bleeding in the skin), and slight hemorrhaging (Yelverton *et al.,* 1973).

Relatively little is known about auditory system trauma in marine mammals resulting from explosive exposure, although it is assumed that auditory structures would be vulnerable to blast injuries because the ears are the most sensitive to pressure and, therefore, they are the organs most sensitive to injury (Ketten, 2000). Sound-related damage associated with sound energy from detonations can be theoretically distinct from injury from the shock wave, particularly farther from the explosion. If a noise is audible to an animal, it has the potential to damage the animal's hearing by causing decreased sensitivity (Ketten, 1995). Lethal impacts are those that result in immediate death or serious debilitation in or near an intense source and are not, technically, pure acoustic trauma (Ketten, 1995). Sublethal impacts include hearing loss, which is caused by exposures to perceptible sounds. Severe damage (from the shock wave) to the ears includes tympanic membrane rupture, fracture of the ossicles, damage to the cochlea, hemorrhage, and cerebrospinal fluid leakage into the middle ear. Moderate injury implies partial hearing loss due to tympanic membrane rupture and blood in the middle ear. Permanent hearing loss also can occur when the hair cells are damaged by one very loud event, as well as by prolonged exposure to a loud noise or chronic exposure to noise. The level of impact from blasts depends on both an animal's location and, at outer zones, on its sensitivity to the residual noise (Ketten, 1995). Auditory trauma was found in 2 humpback whales that died after the detonation of an 11,023 lb (5,000 kg) explosive used off Newfoundland during demolition of an offshore oil rig platform (Ketten *et al.,* 1993), but the proximity of the whales to the detonation was unknown. Eardrum rupture was examined in submerged terrestrial mammals exposed to underwater explosions (Richmond *et al.,* 1973; Yelverton *et al.,* 1973); however, results may not be applicable to the anatomical adaptations for underwater hearing in marine mammals given differences in impedance (Wartzok and Ketten 1999).

In general, models predict that an animal would be less susceptible to injury near the water surface because the pressure wave reflected from the water surface would interfere with the direct path pressure wave, reducing positive pressure exposure (Goertner, 1982; Yelverton and Richmond, 1981). This is shown in the records of humans exposed to blast while in the water, which show that the gastrointestinal tract was more likely to be injured than the lungs, likely due to the shallower exposure geometry of the lungs (*i.e.,* closer to the water surface) (Lance *et al.,* 2015). Susceptibility would increase with depth, until normal lung collapse (due to increasing hydrostatic pressure) and increasing ambient pressures again reduce susceptibility (Goertner, 1982). The only known occurrence of mortality or injury to a marine mammal due to a Navy training event involving explosives occurred in March 2011 in nearshore waters off San Diego, California, at the Silver Strand Training Complex (see Strandings Associated with Explosive Use section below).

Controlled tests with a variety of lab animals (*i.e.,* mice, rats, dogs, pigs, sheep, and other species) are the best data sources on actual injury to mammals due to underwater exposure to explosions. In the early 1970s, the Lovelace Foundation for Medical Education and Research conducted a series of tests in an artificial pond at Kirtland Air Force Base, New Mexico, to determine the effects of underwater explosions on mammals, with the goal of determining safe ranges for human divers. The resulting data were summarized in two reports (Richmond *et al.,* 1973; Yelverton *et al.,* 1973). Specific physiological observations for each test animal are documented in Richmond *et al.* (1973). Gas-containing internal organs, such as lungs and intestines, were the principle damage sites in submerged terrestrial mammals; this is consistent with earlier studies of mammal exposures to underwater explosions in which lungs were consistently the first areas to show damage, with less consistent damage observed in the gastrointestinal tract (Clark and Ward, 1943; Greaves *et al.,* 1943).

In the Lovelace studies, the first positive acoustic impulse was found to be the metric most related to degree of injury, and size of an animal's gas-containing cavities was thought to play a role in blast injury susceptibility. For

these shallow exposures of small terrestrial mammals (masses ranging from 3.4 to 50 kg) to underwater detonations, Richmond *et al.* (1973) reported that no blast injuries were observed when exposures were less than 6 pounds per square inch per millisecond (psi-ms) (40 pascal seconds (Pa-s)), no instances of slight lung hemorrhage occurred below 20 psi-ms (140 Pa-s), and instances of no lung damage were observed in some exposures at higher levels up to 40 psi-ms (280 Pa-s). An impulse of 34 psi-ms (230 Pa-s) resulted in about 50 percent incidence of slight lung hemorrhage. About half of the animals had gastrointestinal tract contusions (with slight ulceration, *i.e.,* some perforation of the mucosal layer) at exposures of 25–27 psi-ms (170–190 Pa-s). Lung injuries were found to be slightly more prevalent than gastrointestinal tract injuries for the same exposure. The anatomical differences between the terrestrial animals used in the Lovelace tests and marine mammals are summarized in Fetherston *et al.* (2019). Goertner (1982) examined how lung cavity size would affect susceptibility to blast injury by considering both marine mammal size and depth in a bubble oscillation model of the lung; however, the Goertner (1982) model did not consider how tissues surrounding the respiratory air spaces would reflect shock wave energy or constrain oscillation (Fetherston *et al.,* 2019).

Goertner (1982) suggested a peak overpressure gastrointestinal tract injury criterion because the size of gas bubbles in the gastrointestinal tract are variable, and their oscillation period could be short relative to primary blast wave exposure duration. The potential for gastrointestinal tract injury, therefore, may not be adequately modeled by the single oscillation bubble methodology used to estimate lung injury due to impulse. Like impulse, however, high instantaneous pressures may damage many parts of the body, but damage to the gastrointestinal tract is used as an indicator of any peak pressure-induced injury due to its vulnerability.

Because gas-containing organs are more vulnerable to primary blast injury, adaptations for diving that allow for collapse of lung tissues with depth may make animals less vulnerable to lung injury with depth. Adaptations for diving include a flexible thoracic cavity, distensible veins that can fill space as air compresses, elastic lung tissue, and resilient tracheas with interlocking cartilaginous rings that provide strength and flexibility (Ridgway, 1972). Denk *et al.* (2020) found intra-species differences in the compliance of tracheobronchial structures of post-mortem cetaceans and pinnipeds under diving hydrostatic pressures, which would affect depth of alveolar collapse. Older literature suggested complete lung collapse depths at approximately 229.7 ft (70 m) for dolphins (Ridgway and Howard, 1979) and 65.6 to 164 ft (20 to 50 m) for phocid seals (Falke *et al.,* 1985; Kooyman *et al.,* 1972). Follow-on work by Kooyman and Sinnett (1982), in which pulmonary shunting was studied in harbor seals and sea lions, suggested that complete lung collapse for these species would be about 557.7 ft (170 m) and about 590.6 (180 m), respectively. Evidence in sea lions suggests that complete collapse might not occur until depths as great as 738.2 ft (225 m); although the depth of collapse and depth of the dive are related, sea lions can affect the depth of lung collapse by varying the amount of air inhaled on a dive (McDonald and Ponganis, 2012). This is an important consideration for all divers who can modulate lung volume and gas exchange prior to diving via the degree of inhalation and during diving via exhalation (Fahlman *et al.,* 2009); indeed, there are noted differences in pre-dive respiratory behavior, with some marine mammals exhibiting pre-dive exhalation to reduce the lung volume (*e.g.,* phocid seals) (Kooyman *et al.,* 1973).

Further Potential Effects of Behavioral Disturbance on Marine Mammal Fitness

The different ways in which marine mammals respond to sound are sometimes indicators of the ultimate effect that exposure to a given stimulus will have on the well-being (survival, reproduction, *etc.*) of an animal. The long-term consequences of disturbance, hearing loss, chronic masking, and acute or chronic physiological stress are difficult to predict because of the different factors experienced by individual animals, such as context of stressor exposure, underlying health conditions, and other environmental or anthropogenic stressors. Linking these non-lethal effects on individuals to changes in population growth rates requires long-term data, which is lacking for many populations. We summarize several studies below, but there are few quantitative marine mammal data relating the exposure of marine mammals to sound to effects on reproduction or survival, though data exists for terrestrial species to which we can draw comparisons for marine mammals. Several authors have reported that disturbance stimuli may cause animals to abandon nesting and foraging sites (Sutherland and Crockford, 1993); may cause animals to increase their activity levels and suffer premature deaths or reduced reproductive success when their energy expenditures exceed their energy budgets (Daan *et al.,* 1996; Feare, 1976; Mullner *et al.,* 2004); or may cause animals to experience higher predation rates when they adopt risk-prone foraging or migratory strategies (Frid and Dill, 2002). Each of these studies addressed the consequences of animals shifting from one behavioral state (*e.g.,* resting or foraging) to another behavioral state (*e.g.,* avoidance or escape behavior) because of human disturbance or disturbance stimuli.

Lusseau and Bejder (2007) present data from three long-term studies illustrating the connections between disturbance from whale-watching boats and population-level effects in cetaceans. In Shark Bay Australia, the abundance of bottlenose dolphins was compared within adjacent control and tourism sites over three consecutive 4.5-year periods of increasing tourism levels. Between the second and third time periods, in which tourism doubled, dolphin abundance decreased by 15 percent in the tourism area and did not change significantly in the control area. In Fiordland, New Zealand, two populations (Milford and Doubtful Sounds) of bottlenose dolphins with tourism levels that differed by a factor of seven were observed and significant increases in travelling time and decreases in resting time were documented for both. Consistent short-term avoidance strategies were observed in response to tour boats until a threshold of disturbance was reached (average 68 minutes between interactions), after which the response switched to a longer-term habitat displacement strategy. For one population, tourism only occurred in a part of the home range. However, tourism occurred throughout the home range of the Doubtful Sound population and once boat traffic increased beyond the 68-minute threshold (resulting in abandonment of their home range/preferred habitat), reproductive success drastically decreased (*i.e.,* increased stillbirths) and abundance decreased significantly (from 67 to 56 individuals in a short period). Last, in a study of Northern Resident killer whales off Vancouver Island, exposure to boat traffic was shown to reduce foraging opportunities and increase traveling time. A simple bioenergetics model was applied to show that the reduced foraging opportunities equated to a decreased energy intake of 18 percent, while the increased traveling incurred

an increased energy output of 3–4 percent, which suggests that a management action based on avoiding interference with foraging might be particularly effective.

An important variable to consider is duration of disturbance. Severity scales used to assess behavioral responses of marine mammals to acute sound exposures are not appropriate to apply to sustained or chronic exposures, which requires considering the health of a population over time rather than a focus on immediate impacts to individuals (Southall *et al.,* 2021). For example, short-term costs experienced over the course of a week by an otherwise healthy individual may be recouped over time after exposure to the stressor ends. These short-term costs would be unlikely to result in long-term consequences to that individual or to that individual's population. Comparatively, long-term costs accumulated by otherwise healthy individuals over an entire season, year, or throughout a life stage (*e.g.,* pup, juvenile, adult) would be less easily recouped and more likely to result in long-term consequences to that individual or population.

Marine mammals exposed to frequent or intense anthropogenic activities may leave the area, habituate to the activity, or tolerate the disturbance and remain in the area (Wartzok *et al.,* 2003). Highly resident or localized populations may also stay in an area of disturbance because the cost of displacement is higher than the cost of remaining in the area (Forney *et al.,* 2017). As such, an apparent lack of response (*e.g.,* no displacement or avoidance of a sound source) does not necessarily indicate there is no cost to the individual or population, as some resources or habitats may be of such high value that animals may choose to stay, even when experiencing the consequences of stress, masking, or hearing loss (Forney *et al.,* 2017).

Longer term displacement can lead to changes in abundance or distribution patterns of the species in the affected region (Bejder *et al.,* 2006b; Blackwell *et al.,* 2004; Teilmann *et al.,* 2006). For example, gray whales in Baja California, Mexico, abandoned a historical breeding lagoon in the mid-1960s due to an increase in dredging and commercial shipping operations, and only repopulated the lagoon after shipping activities had ceased for several years (Bryant *et al.,* 1984). Mysticetes in the northeast tended to adjust to vessel traffic over several years, trending towards more neutral behavioral responses to passing vessels (Watkins, 1986), indicating that some animals may habituate to high levels of human activity. A study on bottlenose dolphin responses to vessel approaches found that lesser responses in populations of dolphins regularly subjected to high levels of vessel traffic could be a sign of habituation, or it could be that the more sensitive animals in this population previously abandoned the area of higher human activity (Bejder *et al.,* 2006a).

Population characteristics (*e.g.,* whether a population is open or closed to immigration and emigration) can influence sensitivity to disturbance as well; closed populations could not withstand a higher probability of disturbance compared to open populations with no limitation on food (New *et al.,* 2020). Predicting population trends or long-term displacement patterns due to anthropogenic disturbance is challenging due to limited information and survey data for many species over sufficient spatiotemporal scales, as well as a full understanding of how other factors, such as oceanographic oscillations, affect marine mammal presence (Moore and Barlow, 2013; Barlow, 2016; Moore and Barlow, 2017).

Population models are necessary to understand and link short-term effects to individuals from disturbance (anthropogenic impacts or environmental change) to long-term population consequences. Population models require inputs for the population size and changes in vital rates of the population (*e.g.,* the mean values for survival age, lifetime reproductive success, recruitment of new individuals into the population), to predict changes in population dynamics (*e.g.,* population growth rate). These efforts often rely on bioenergetic models, or energy budget models, which analyze energy intake from food and energy costs for life functions, such as maintenance, growth, and reproduction, either at the individual or population level (Pirotta, 2022), and model sensitivity analyses have identified the most consequential parameters, including prey characteristics, feeding processes, energy expenditure, body size, energy storage, and lactation capability (Pirotta, 2022). However, there is a high level of uncertainty around many parameters in these models (Hütt *et al.,* 2023).

The U.S. National Research Council (NRC) committee on Characterizing Biologically Significant Marine Mammal Behavior developed an initial conceptual model to link acoustic disturbance to population effects and inform data and research needs (NRC, 2005). This Population Consequences of Acoustic Disturbance, or PCAD, conceptual model linked the parameters of sound exposure, behavior change, life function immediately affected, vital rates, and population effects. In its report, the committee found that the relationships between vital rates and population effects were relatively well understood, but that the relationships between the other components of the model were not well-known or easily observed.

Following the PCAD framework (NRC, 2005), an ONR working group developed the Potential Consequences of Disturbance (PCoD), outlining an updated conceptual model of the relationships linking disturbance to changes in behavior and physiology, health, vital rates, and population dynamics. The PCoD model considers all types of disturbance, not solely anthropogenic or acoustic, and incorporates physiological changes, such as stress or injury, along with behavioral changes as a direct result of disturbance (National Academies of Sciences Engineering and Medicine, 2017). In this framework, behavioral and physiological changes can have direct (acute) effects on vital rates, such as when changes in habitat use or increased stress levels raise the probability of mother-calf separation or predation; they can have indirect and long-term (chronic) effects on vital rates, such as when changes in time/energy budgets or increased disease susceptibility affect health, which then affects vital rates; or they can have no effect to vital rates (New *et al.,* 2014; Pirotta *et al.,* 2018a). In addition to outlining this general framework and compiling the relevant literature that supports it, the authors chose four example species for which extensive long-term monitoring data exist (southern elephant seals, North Atlantic right whale, *Ziphiidae* beaked whales, and bottlenose dolphins) and developed state-space energetic models that can be used to forecast longer-term, population-level impacts from behavioral changes. While these models cannot yet be applied broadly to project-specific risk assessments for the majority of species, as well as requiring significant resources and time to conduct (more than is typically available to support regulatory compliance for one project), they are a critical first step towards being able to quantify the likelihood of a population level effect. Since New *et al.* (2014), several publications have described models developed to examine the long-term effects of environmental or anthropogenic disturbance of foraging on various life stages of selected species

(sperm whale, Farmer *et al.* (2018); California sea lion, McHuron *et al.* (2018); and blue whale, Pirotta, *et al.* (2018a)).
