Appendix

Scope of the Investigation

The merchandise covered by the investigation is slag pots with a nominal capacity of 65 cubic feet to 1200 cubic feet regardless of shape, form, or finish.

Slag pots are load bearing devices typically formed as a curved shell or bowl-shaped container. Slag pots are metallurgical goods typically produced either using a casting process or a fabrication process (e.g., welding) and may include a ceramic refractory coating, heat treatment or various finishes in order to handle high temperature slag. Slag pots may contain integral features or attachments including (1) legs (or a stand) and (2) pivotal mounting hooks or brackets. Legs (or a stand) are a fixed or detachable support structure which allows the slag pot to be securely positioned upright on a surface when not being lifted or transported and may also keep the slag pot off the ground and allow for air cooling. The pivotal mounting hooks and brackets are specialized attachment points (such as lifting lugs or trunnions) that allow the slag pot to be securely lifted and transported by a crane or lifting device, or that enable the slag pot to swing or rotate while remaining attached to the lifting mechanism. The merchandise covered by this investigation includes all aforementioned attachments of a fully assembled slag pot, regardless of whether shipped assembled or unassembled.

Slag pots are included within the scope whether finished or unfinished, whether imported individually or with other subject or non-subject merchandise, or whether

assembled with attachments or unassembled. Finishing includes, but is not limited to, arc washing, welding, grinding, shot blasting, heat treatment, machining, and assembly of various parts.

The country of origin for slag pots whether fully assembled, unfinished or finished, is the country where the slag pot was cast or forged. Subject merchandise includes slag pots that have been further processed or further assembled in a third country. Further processing and further assembly include, but is not limited to, arc washing, welding, grinding, shot blasting, heat treatment, painting, coating, priming, machining, and assembly of attachments.

Slag pots subject to the investigation are specified within the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 7309.00.0090 and 8454.20.0080. The slag pot attachments covered by the scope of this investigation may enter under HTSUS subheadings 7316.00.0000, 7325.10.0080, 7325.99.1000, 7325.99.5000, and 7326.19.0080. The HTSUS subheading is provided for convenience and customs purposes only. The written description of the scope of the investigation is dispositive.

Rescission of Review

Pursuant to 19 CFR 351.213(d)(3), it is Commerce’s practice to rescind an administrative review of an AD order when there are no reviewable entries of subject merchandise during the POR for which liquidation is suspended.⁷ Normally, upon completion of an administrative review, the suspended entries are liquidated at the AD assessment rate for the review period.⁸ Therefore, for an administrative review to be conducted, there must be a reviewable, suspended entry that Commerce can instruct CBP to liquidate at the calculated AD assessment rate for the review period.⁹ As noted above,
