NUCLEAR REGULATORY COMMISSION

[Docket No. 72–09; NRC–2025–0075]

Department of Energy; Fort St. Vrain Independent Spent Fuel Storage Installation; License Amendment

AGENCY: Nuclear Regulatory Commission.

The requested amendment revises certain license conditions and technical specifications (TS) by adjusting references to relevant organizational components of DOE, correcting prior clerical drafting errors, and changing the description of a DOE official who is responsible for the operation and nuclear safety of the FSV ISFSI and for ensuring its compliance with certain conditions and

requirements of the license and applicable regulations.

SUPPLEMENTARY INFORMATION:

I. Introduction

By letter dated November 14, 2024, DOE submitted to the NRC an application to amend the license conditions and TS for the FSV ISFSI, located in Platteville, Colorado. Materials License No. SNM–2504 authorizes the licensee to receive, possess, store, and transfer spent nuclear fuel from the decommissioned FSV Nuclear Generating Station. The proposed amendment revises TS 5.1.1 and 5.2.1.1 so that they explicitly designate the Manager for the Idaho Cleanup Project (ICP) as the DOE official who is responsible for the operation and nuclear safety of the FSV ISFSI and for ensuring its compliance with NRC license conditions and regulatory requirements. TS 5.1.1 currently designates the Deputy Manager for the ICP as the DOE official who is responsible for the operation of the FSV ISFSI and for ensuring its compliance with NRC license conditions and regulatory requirements. The proposed amendment also revises TS 5.6.1 so that it identifies the Manager for the ICP, rather than the Deputy Manager, as one of the two DOE officials who are responsible for submitting certain reports that are required in connection with the license. Additionally, the proposed amendment corrects clerical drafting errors in TS 3.3.1 and 5.5.2.6 so that those technical specifications accurately reflect changes that were previously approved and included in License Amendment No. 10 but were inadvertently omitted from License Amendment No. 11. The proposed amendment also corrects an erroneous regulatory citation in TS 5.5.1.d, corrects a typographical error in TS 5.5.2.5, and adjusts references to relevant organizational components of DOE in License Condition 14 and in TS 5.1.5, 5.4.2, and 5.5.2.7.

In a letter dated March 21, 2025, the NRC notified DOE that the application was acceptable to begin a technical review. The NRC’s Office of Nuclear Material Safety and Safeguards docketed the application under Docket No. 72–09. In accordance with section 72.16(e) of title 10 of the *Code of Federal Regulations* (10 CFR), the NRC published a notice of docketing in the

Federal Register on May 5, 2025 (90 FR 19011).

The NRC prepared a safety evaluation report (SER) to document its review and evaluation of the amendment request. As further explained in the SER, the NRC has determined that the license amendment is administrative in nature and satisfies the criterion of 10 CFR 51.22(c)(10) for categorical exclusion from the requirement to prepare an environmental assessment or an environmental impact statement. This action qualifies for categorical exclusion under 10 CFR 51.22(c)(10) because it is an amendment to a materials license issued under 10 CFR chapter I which merely changes the position titles of relevant officials of the licensee and makes certain editorial, corrective, and minor revisions, as described previously. Consequently, neither an environmental assessment nor an environmental impact statement is required.

Upon completing its review, the NRC staff determined the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the NRC’s regulations. The NRC has made appropriate findings as required by the Act and the NRC’s regulations in 10 CFR part 72, which are set forth in the license amendment. The license amendment, Amendment No. 12 to License No. SNM–2504, is issued and effective on August 27, 2025.

In accordance with 10 CFR 72.46(b)(2), the NRC has determined that Amendment No. 12 does not present a genuine issue as to whether the health and safety of the public will be significantly affected. Therefore, the publication of a notice of proposed action and an opportunity for hearing or a notice of hearing is not warranted. Notice is hereby given of the right of interested persons to request a hearing on whether the action should be rescinded or modified.

SUPPLEMENTARY INFORMATION:

I. Background

In accordance with section 51.118 of title 10 of the *Code of Federal Regulations* (10 CFR), “Final environmental impact statement—notice of availability,” the NRC is making available for public inspection NUREG–1437, Supplement 21, Second Renewal, regarding the subsequent license renewal of Tennessee Valley Authority (TVA), renewed Facility Operating License No. DPR–33, DPR–52, and DPR–68 for an additional 20 years of operation for Browns Ferry. A notice of availability of the draft EIS (NUREG–1437, Supplement 21, Draft for Comment) was published in the **Federal Register** on May 30, 2025 (90 FR 23074). The U.S. Environmental Protection Agency issued its Notice of Availability on May 30, 2025 (90 FR 23050). The public comment period on the draft EIS ended on July 14, 2025, and the comments received on the draft EIS are addressed in the final EIS (NUREG–1437, Supplement 21, Second Renewal, Final Report).

II. Discussion

The draft EIS (NUREG–1437, Supplement 21, Second Renewal, Draft for Comment) was issued for public comment on May 21, 2025. The final EIS (NUREG–1437, Supplement 17, Second Renewal, Final Report) addresses the comments received on draft EIS. As discussed in Chapter 4 of the final EIS, the NRC staff has determined that the adverse environmental impacts of license renewal for Browns Ferry (*i.e.*, the continued operation of Browns Ferry for a period of 20 years beyond the expiration date of the initial license) are not so great that preserving the option of license renewal for energy-planning decision-makers would be unreasonable. This recommendation is based on: (1) the analysis and findings in NUREG–1437, Generic Environmental Impact Statement for
