### Abstract of Information Available

Nona's Site (8SO85d) is a single component site at the edge of a year-round pond, dating to the Middle Archaic Period. The site was mapped in the 1960s and partially destroyed by the General Development Cooperation who dug a drainage ditch through the cemetery leading to the pond. The site was later excavated multiple times between 1977 and 1983. There have been several instances of Ancestors recorded at the site. Human remains representing at least three individuals have been identified. The 202 associated funerary objects include fauna, lithics, and sediment.

### Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice.

### Determinations

The FLMNH has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- The 202 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
