The List of Critical Minerals is not static and will be reviewed dynamically (as needed) and revised as necessary to reflect current data on supply, demand, and concentration of production, as well as current policy priorities, as required under the Energy Act of 2020.

The U.S. Government and other organizations may also use other definitions and rely on other criteria to identify a mineral as critical or otherwise important. In addition, there are many minerals not on the final 2025 List of Critical Minerals that are nevertheless important to the economic and national security of the United States. This final 2025 List of Critical Minerals is not intended to replace related terms and definitions of minerals that are deemed strategic or otherwise important.
