m. The application is not ready for environmental analysis at this time.

*Project Description:* The project includes a dam with a spillway crest elevation of 1,528.0 feet National Geodetic Vertical Datum of 1929 (NGVD 29). The dam creates an impoundment that has a surface area of 1,360 acres at 1,528.0 feet NGVD 29. From the impoundment, water flows through an intake structure located on the southern shoreline of the impoundment, approximately 100 feet upstream of the dam. The intake structure includes trashracks with 1-inch clear bar spacing. From the intake structure, water flows to a powerhouse that contains a 200-kilowatt Kaplan turbine-generator unit. Water is discharged from the powerhouse to a tailrace that empties into the Saranac River.

Electricity generated at the powerhouse is transmitted to the electric grid via an underground generator lead line, transformer, and overhead transmission line.

Project recreation facilities include: (1) Riverside Park that includes picnic tables and a pavilion; (2) Hydropoint Park that includes a hand-carry boat access site on the shoreline of the impoundment; (3) Beaver Park that includes a hand-carry boat put-in site on the west bank of the Saranac River downstream of the dam; and (4) the River Walk that includes a recreation trail along the Saranac River.

The Village proposes to: (1) continue operating the project in a run-of-river mode such that project outflow approximates inflow to the impoundment and the normal maximum surface elevation of the impoundment is maintained at 1,528.67 feet NGVD 29; (2) continue releasing a minimum flow of 55 cfs or inflow, whichever is less, as measured immediately downstream of the dam; (3) continue maintaining the project recreation facilities; (4) implement invasive species and bat and bald eagle plans filed with the license application; and (5) implement an impoundment drawdown plan and operation and compliance monitoring plan filed with the license application.
