Abstract: On December 15, 1989, pursuant to Section 112 of the Clean Air Act as amended in 1977 (42 U.S.C. 1857), the Environmental Protection Agency (EPA) promulgated National Emission Standards for Hazardous Air Pollutants (NESHAP) regulations to control radionuclide emissions from several source categories. The regulations are codified at 40 CFR part 61. Of the eight subparts (B, H, I, K, Q, R, T and W) included in the 1989 rule, as currently amended, four apply to privately-operated facilities. In addition to requiring operational practices that limit emissions, subparts B, K, R, and W impose radionuclide dose and/or emission limits, respectively, to underground uranium mines, elemental phosphorous plants, phosphogypsum stacks, and uranium mill tailings impoundments. Facilities must inspect impoundments, measure radionuclide emissions, perform analyses or calculations per EPA procedures, and report the results to the EPA.

Information collected is used by the EPA to ensure that public health and the environment continue to be protected from the hazards of airborne radionuclides by compliance with these standards. Compliance is demonstrated through emissions testing and dose calculation when appropriate.

Form Numbers: None.

Respondents/affected entities: The North American Industry Classification System (NAICS) codes of facilities associated with the activity of the respondents are: (1) Elemental Phosphorous 325180, (2) Phosphogypsum Stacks 212390, (3) Underground Uranium Mines 212290, and (4) Uranium Mill Tailings 212290.

Respondent's obligation to respond: mandatory (CAA, Sec. 112; 40 CFR part 61).

Estimated number of respondents: 52 (total).

Frequency of response: Monthly, annual, or one-time depending on the source category and respondent activity.

Total estimated burden: 11,301 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$1,412,827 (per year), which includes \$408,300 annualized capital or operation and maintenance costs.

Changes in Estimates: Total estimated respondent hours increased from 4,146 hours in the previous approved version of this ICR to 11,301, primarily as a result of additional subpart B and subpart W facilities potentially coming online by 2029. Two subpart B facilities were reporting at the time of the last renewal in 2023, however, the Agency identified 12 respondents that are likely to submit annual reports by 2029, and 12 responses were added to the ICR, adding 2,760 hours of labor and \$63,600 of non-labor cost to the burden that was approved in 2023. The Agency also identified a potential for an additional 15 non-conventional impoundments under subpart W to begin operation by 2029, adding an additional 4,215 hours of labor and \$4,500 of non-labor costs. For subparts K and R, there were no changes to the number of respondents, the annual time burden, or the annual non-labor cost compared to the most recent renewals of this ICR.¹

Dated: November 18, 2025.

Armin Ansari,

Acting Director, Radiation Protection Division.
