This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

### B. Submitting Comments

The NRC encourages timely electronic comment submission through the Federal Rulemaking website (<https://www.regulations.gov>). Please include Docket ID NRC–2025–0479 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <https://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

## II. Rulemaking Procedure

The NRC uses the “direct final rule procedure” for rulemaking when the NRC anticipates the rule is unlikely to attract significant adverse comment because the rule is non-controversial. As explained further, this rulemaking would add a “sunsetting clause” to certain regulations many of which are outdated, seldomly used, or duplicative with other regulations. Moreover, the NRC will provide the public with an opportunity to provide additional information on whether the sunsetting provision should be extended for these provisions at a future time as well as provide Tribal consultation opportunities in compliance with NRC’s Tribal Policy Statement (82 FR 2402; January 9, 2017). Therefore, because the NRC does not anticipate significant public comments on this rulemaking and considers it to be noncontroversial, the NRC is using the “direct final rule procedure” for this rule. The amendments are effective on January 8, 2026. However, if the NRC receives significant adverse comments on this direct final rule by January 2, 2026, then the NRC will publish a document that withdraws this action and will address the comments received in a subsequent final rule as a response to the companion proposed rule published in the Proposed Rules section of this issue of the **Federal Register** or take other action as appropriate. Absent significant modifications to the proposed revisions requiring republication, the NRC will not initiate a second comment period on this action.

A significant adverse comment is a comment where the commenter explains why the rule would be inappropriate, including challenges to the rule’s underlying premise or approach, or would be ineffective or unacceptable without a change.<sup>1</sup> A comment is adverse and significant if:

(1) The comment opposes the rule and provides a reason sufficient to require a

substantive response in a notice-and-comment process. For example, a substantive response is required when:

(a) The comment causes the NRC to reevaluate (or reconsider) its position or conduct additional analysis;

(b) The comment raises an issue serious enough to warrant a substantive response to clarify or complete the record; or

(c) The comment raises a relevant issue that was not previously addressed or considered by the NRC.

(2) The comment proposes a change or an addition to the rule, and it is apparent that the rule would be ineffective or unacceptable without incorporation of the change or addition.

(3) The comment causes the NRC to make a change (other than editorial) to the rule.

For detailed instructions on filing comments, please see the **ADDRESSES** section of this document.

## III. Background

Executive Order (E.O.) 14270, “Zero-Based Regulatory Budgeting to Unleash American Energy,” directs the NRC to issue a rule inserting a conditional sunset date into each of its regulations that are in effect as of the date of the E.O. (90 FR 15643; April 9, 2025) and were issued in whole or in part pursuant to the following statutes, as amended: the Atomic Energy Act of 1954, the Energy Reorganization Act of 1974, and the Nuclear Waste Policy Act of 1982. The conditional sunset date for covered regulations is to be one year after the effective date of the sunset rule. The E.O. directs the NRC to issue a sunset rule “to the extent consistent with applicable law” and provides that the E.O. does not apply to “regulatory permitting regimes authorized by statute.” For purposes of implementing this E.O., regulations that provide standards and requirements for NRC license and permit holders or applicants constitute the NRC’s “regulatory permitting regime.” Thus, the scope of this rulemaking is generally limited to those regulations that do not fit into one or more of the following three categories: (1) regulations that could not be sunset “consistent with applicable law” because they are necessary to fulfill the NRC’s statutory mandate to provide for the common defense and security and to protect public health and safety; (2) regulations that are part of the NRC’s “regulatory permitting regimes authorized by statute”; or (3) regulations that do not implement one of the three NRC-specific statutes identified in the E.O. (*i.e.*, regulations that implement government-wide requirements such as the Freedom of

Information Act of 1969). The vast majority of the NRC’s regulations fit into one of these three categories.

Nonetheless, the NRC identified several regulations that although they fall into one or more of these categories and are therefore outside the scope of the E.O., they are not being used or no longer serve their original purpose. As explained in section IV, “Discussion,” of this document, the NRC will add a sunsetting provision to those regulations. Importantly, the NRC is continuing its regulatory reform efforts through the rulemaking activities directed by E.O. 14300, “Ordering the Reform of the Nuclear Regulation Commission.”

As stated in E.O. 14270, the sunsetting provision will state a conditional sunset date that is one year after the effective date of this rule and provide that the NRC will offer the public an opportunity to comment on the costs and benefits of the regulations to be conditionally sunset before that effective date. The NRC will issue a separate notice describing the comment opportunity after this rule is effective. Following the sunset date, the NRC will consider sunset regulations to no longer be effective, will not seek to enforce sunset regulations, and will remove the regulation from the *Code of Federal Regulations* and make necessary conforming changes. However, following the opportunity for the public to comment on the sunset rule’s costs and benefits, the NRC may extend the conditional sunsetting date if warranted and may do so as many times as appropriate.

## IV. Discussion

The NRC will include the sunsetting provision in the following regulations for the reasons explained below.

The President has directed the NRC to issue this proposed zero-based regulating rule. Section 4(a) of E.O. 14270 states that “each of the Covered Agencies *shall* issue a sunset rule,” and further specifies the terms of that rule. Accordingly, the NRC lacks any discretion over whether to undertake this sunsetting rule. The President’s direction provides an independent, and sufficient, justification for this proposed rulemaking. However, the Executive Order does not direct the NRC to rescind or reissue any particular regulation. The NRC retains its full authority to issue and repeal regulations under the three relevant statutes and their amendments. The President has directed only the manner in which the NRC is to review and issue the relevant regulations.

<sup>1</sup> Administrative Conference of the United States, Adoption of Recommendations, (60 FR 43108–43111; August 18, 1995).

Moreover, as reflected by the Nuclear Energy Innovation and Modernization Act (NEIMA) (Pub. L. 115–439), the Accelerating Deployment of Versatile, Advanced Nuclear for Clean Energy Act of 2024 (Pub. L. 118–67), and E.O. 14300, nuclear technology is quickly evolving. The sunset provisions in this rulemaking will enable the NRC's regulatory infrastructure to keep pace with those developments by requiring the agency to periodically reevaluate its regulations and remove those that are no longer necessary. Thus, outside of the directions in E.O. 14270, the NRC concludes that adopting the proposed sunset rule is warranted and based on its independent policy judgment, as further explained in greater detail, will add to the efficacy of its regulatory oversight by adding a mechanism to periodically streamline the NRC's regulatory infrastructure.

#### *Future Rulemakings*

Executive Order 14270 also directs the NRC to include a sunset provision in future rulemakings that would be covered by the E.O. Therefore, the NRC would also add a new provision to 10 CFR 2.807, “Effective date,” specifying the circumstances in which regulations adopted by the NRC after the effective date of this rulemaking would include a sunset provision.

#### *Early Review of Site Suitability Issues*

Subpart F to part 2, “Additional Procedures Applicable to Early Partial Decisions on Site Suitability Issues in Connection With an Application for a Construction Permit or Combined License To Construct Certain Utilization Facilities; and Advance Issuance of Limited Work Authorizations,” of title 10 of the *Code of Federal Regulations* (10 CFR), provides special procedures for a hearing and the issuance of a partial decision on site suitability matters for which an applicant seeks early resolution. While these provisions constitute part of the NRC's permitting regime authorized by statute, they are no longer needed. Despite being updated to reflect the amendments made in the final rule to 10 CFR part 52, “Licenses, Certifications, and Approvals for Nuclear Power Plants” (72 FR 49352; August 28, 2007), these procedures were last used in the 1970s.<sup>2</sup> Moreover, industry stakeholders do not appear to have any immediate plans to use them. In the preamble to the proposed rule, “Risk-Informed, Technology-Inclusive Regulatory Framework for Advanced

Reactors” (89 FR 86918; October 31, 2024), the staff observed, “[i]nteractions with external stakeholders during the development of the proposed rule did not identify significant interest in or need for including the process for early review of site suitability issues in part 53[.]” “Risk-Informed, Technology-Inclusive Regulatory Framework for Commercial Nuclear Plants”]. A sunset date will allow these unused regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *Oral Hearings*

Subpart N of 10 CFR part 2, “Expedited Proceedings with Oral Hearings,” is a specialized hearing track that contains the NRC's “fast track” hearing procedures intended to provide for the expeditious resolution of issues in cases where contentions are few and not complex. These procedures can be used if all parties agree (*see* 10 CFR 2.310, “Selection of hearing procedures”). They have not been used to date. While these provisions constitute part of the NRC's permitting regime authorized by statute, they are no longer needed. A sunset date will allow these unused regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *Legislative Hearings*

Subpart O of 10 CFR part 2, “Legislative Hearings,” provides for procedures to be used if the Commission decides to hold legislative hearings for design certification rulemakings where the Commission, at its discretion, determined to hold a hearing under 10 CFR 52.51(b). The procedures also can be used at the Commission's discretion in developing a record to assist in resolving a waiver petition filed under paragraph (b) of 10 CFR 2.335, “Consideration of Commission rules and regulations in adjudicatory proceedings.” Subpart O procedures have never been used. While these provisions constitute part of the NRC's permitting regime authorized by statute, they are no longer needed. A sunset date will allow these unused regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *Fitness-for-Duty Licensee Testing Facilities*

Subpart F of 10 CFR part 26, “Licensee Testing Facilities,” provides requirements for fitness-for-duty testing facilities. No licensee fitness-for-duty programs currently use subpart F licensee testing facilities because these facilities are no longer cost-beneficial for licensees. The marketplace offers a more efficient and cost-effective alternative: submitting specimens for testing to a laboratory that is certified to meet the standards of the U.S. Department of Health and Human Services, “Mandatory Guidelines for Federal Workplace Drug Testing Programs” (88 FR 70768; October 12, 2023). While these provisions constitute part of the NRC's permitting regime authorized by statute and at one time played a role in assuring adequate protection of public health and safety, they are no longer needed. A sunset date will allow these outdated regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *Duplicative Regulations in 10 CFR Parts 31, 32, 34, 35, 36, and 39*

The regulations at 10 CFR 31.21, “Maintenance of records,” 10 CFR 32.3, “Maintenance of records,” 10 CFR 34.87, “Form of records,” and 10 CFR 35.5, “Maintenance of records,” are duplicative of 10 CFR 30.51, “Records,” which covers 10 CFR part 31, “General Domestic Licenses for Byproduct Material,” 10 CFR part 32, “Specific Domestic Licenses to Manufacture or Transfer Certain Items Containing Byproduct Material,” 10 CFR part 34, “Licenses for Industrial Radiography and Radiation Safety Requirements for Industrial Radiographic Operations,” and 10 CFR part 35, “Medical Use of Byproduct Material.” In addition, 10 CFR 34.111, “Applications for exemptions,” 10 CFR 35.19, “Specific exemptions,” paragraph (a) of 10 CFR 36.17, “Applications for exemptions,” and 10 CFR 39.91, “Applications for exemptions,” are duplicative of 10 CFR 30.11, “Specific exemptions,” which covers 10 CFR part 34, 10 CFR part 35, 10 CFR part 36, “Licenses and Radiation Safety Requirements for Irradiators,” and 10 CFR part 39, “Licenses and Radiation Safety Requirements for Well Logging.” While these provisions constitute part of the NRC's permitting regime authorized by statute and at one time played a role in assuring adequate protection of public health and safety, they are no longer needed. A sunset date

<sup>2</sup> E.g., Commonwealth Edison (Carroll County Site), ALAB–601, 12 NRC 18, 27 (1980).

will allow these duplicative regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *The Aircraft Impact Assessment Rule*

The regulations in 10 CFR 50.150, “Aircraft impact assessment,” are safety enhancements that are not necessary for the NRC to meet its statutory mission under the Atomic Energy Act of 1954 to provide reasonable assurance of adequate protection from radiological hazards. When the rule was promulgated, the NRC quantified the costs of the rule but did not quantify the benefits and concluded that the key qualitative benefit of the rule was an “improvement in knowledge” of how a new reactor would address beyond-design-basis hazards, such as a deliberate large aircraft impact. At the time, the NRC concluded that qualitative benefits outweighed the cost of the rule. However, if reconsidered today, the cost of implementation would not be justified by the increase in safety for future reactors. Other more recently developed regulations (*i.e.*, 10 CFR 50.155, “Mitigation of beyond-design-basis events,” and proposed 10 CFR part 53) provide alternative approaches to understand how newly licensed plants would address those beyond-design-basis hazards. Because the analyses required by this regulation are incorporated into plants’ licensing bases and are now required by other more comprehensive regulations, sunseting this provision will not decrease safety at any operating facility. Thus, while this provision constituted part of the NRC’s permitting regime authorized by statute, it is no longer needed. A sunset date will allow this outdated and duplicative regulation to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for this regulation, the agency can extend the sunset date as appropriate.

#### *Appendix Q to 10 CFR Part 50*

Appendix Q to 10 CFR part 50, “Pre-Application Early Review of Site Suitability Issues,” provides for NRC staff issuance of a staff site report on site suitability issues with respect to a specific site for which a potential applicant seeks the NRC staff’s views. The staff site report is issued after receiving and considering the comments of Federal, State, and local agencies and interested persons, as well as the views of the Advisory Committee on Reactor Safeguards, but only if site safety issues are raised. The staff site report does not bind the Commission or a presiding

officer in any hearing under 10 CFR part 2, “Agency Rules of Practice and Procedure.” This process was not included in 10 CFR part 52 because it was not needed due to the early site permit process in subpart A of 10 CFR part 52, “Early Site Permits.” Similarly, it was not included in the proposed 10 CFR part 53. Given its limited value, appendix Q should be sunsetted. The downside is that removal of this regulation could remove some flexibility to part 50, “Domestic Licensing of Production and Utilization Facilities,” applicants to potentially address regulatory issues related to siting, such as seismic hazards, emergency planning, and environmental considerations early in the process; however, the benefits afforded by the staff site report could be covered in pre-application interactions through issuance of white paper or topical report feedback. Moreover, applicants for licenses and permits under part 50 may also apply for an Early Site Permit under part 52. Thus, while this provision constituted part of the NRC’s permitting regime authorized by statute, it is no longer needed. A sunset date will allow this unused regulation to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for this regulation, the agency can extend the sunset date as appropriate.

#### *Commenting on Other Agencies’ Environmental Impact Statements*

The regulation in 10 CFR 51.124, “Commission duty to comment,” states the NRC’s policy to provide comments on draft environmental impact statements prepared by other Federal agencies. However, the regulation is not needed because it only states a policy; the NRC has authority to provide comments on draft environmental impact statements from other Federal agencies independent of the operation of 10 CFR 51.124. Thus, while this provision was not promulgated under one of the three statutes identified in E.O. 14270, it is no longer needed. A sunset date will allow this unnecessary regulation to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for this regulation, the agency can extend the sunset date as appropriate.

#### *10 CFR Part 76—Certification of Gaseous Diffusion Plants*

The NRC has not issued a certification under 10 CFR part 76, “Certification of Gaseous Diffusion Plants,” since 1996 and does not expect to issue another one because gaseous diffusion technology is now obsolete. While these provisions constitute part of the NRC’s permitting

regime authorized by statute and at one time played a role in assuring adequate protection of public health and safety, they are no longer needed. A sunset date will allow these outdated regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *10 CFR Part 160—Trespassing on Commission Property*

The regulations in 10 CFR part 160, “Trespassing on Commission Property,” are unnecessary because the General Services Administration regulations and notices currently on the NRC’s facilities provide adequate warning to the public against trespassing, which is also covered under State laws. These regulations promulgated under the Atomic Energy Act are not part of the NRC’s regulatory permitting regime and are not statutorily required. A sunset date will allow these duplicative regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need for these regulations, the agency can extend the sunset date as appropriate.

#### *Written Interpretations by the General Counsel*

The regulations in 10 CFR 19.4, 20.1006, 21.4, 25.7, 26.7, 30.5, 34.5, 36.5, 37.9, 39.5, 40.6, 50.3, 51.5, 52.2, 54.5, 55.6, 60.5, 61.5, 62.4, 63.5, 70.6, 71.2, 72.5, 73.3, 74.5, 75.5, 81.4, 95.7, 110.3, 140.4, 150.5, 170.4, and 171.7 state that no interpretation of the meaning of NRC regulations are to be considered binding on the Commission, other than a written interpretation by the General Counsel. Some of these provisions were part of the original rulemakings for these parts.<sup>3</sup> No explanations for including these provisions were provided in the proposed or final rules. Usage or reliance on these provisions has historically been rare. There is also considerable doubt that the General Counsel, as an inferior officer, can bind the Commission on a question of law. These regulations promulgated under the Atomic Energy Act are not part of the NRC’s regulatory permitting regime and are not statutorily required. A sunset date will allow these seldomly used regulations to roll off the books. At the same time, if evidence emerges in the interim indicating a continued need

<sup>3</sup> For example, the 10 CFR part 50 Interpretation provision first appeared in a 1947 final rule (12 FR 7651; November 18, 1947).

for these regulations, the agency can extend the sunset date as appropriate.

## V. Regulatory Flexibility Certification

Under the Regulatory Flexibility Act (5 U.S.C. 605(b)), the NRC certifies that this rule does not have a significant economic impact on a substantial number of small entities. The substantive portions of this final rule affect only the licensing and operation of nuclear power plants. The companies that own these plants do not fall within the scope of the definition of “small entities” set forth in the Regulatory Flexibility Act or the size standards established by the NRC (10 CFR 2.810).

## VI. Regulatory Analysis

Because the sunset rule is needed to implement E.O. 14270, and this rulemaking is an administrative activity, the NRC did not prepare a regulatory analysis.

## VII. Backfitting and Issue Finality

The sunset rule would not constitute backfitting as that term is defined in 10 CFR 50.109, “Backfitting,” or affect the issue finality of an approval issued under 10 CFR part 52. As a general matter, eliminating a requirement does not meet the definition of “backfitting” because such an act by the NRC would be a nonmandatory relaxation of an existing requirement. For the same reason, the elimination of a requirement would not affect the issue finality of a 10 CFR part 52 approval.

## VIII. Plain Writing

The Plain Writing Act of 2010 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, and well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, “Plain Language in Government Writing,” published June 10, 1998 (63 FR 31885).

## IX. National Environmental Policy Act

The NRC has determined that this final rule is the type of action described in 10 CFR 51.22(c)(2), which categorically excludes from environmental review rules that are corrective or of a minor, nonpolicy nature and do not substantially modify existing regulations. Therefore, neither an environmental impact statement nor environmental assessment has been prepared for this final rule.

## X. Paperwork Reduction Act

This final rule does not contain a collection of information as defined in the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and, therefore,

is not subject to the requirements of the Paperwork Reduction Act of 1995.

## XI. Regulatory Planning and Review

### *Executive Order (E.O.) 12866*

The Office of Information and Regulatory Affairs (OIRA) has determined that this direct final rule is a significant regulatory action. Accordingly, NRC submitted this direct final rule to OIRA for review. The NRC is required to conduct an economic analysis in accordance with section 6(a)(3)(B) of E.O. 12866. However, NRC considers the costs incurred by this rule to be solely those related to the rulemaking process for this administrative activity.

### *Review Under E.O.s 14154, 14192, 14215, and 14300*

The NRC has examined this direct final rule and has determined that it is consistent with the policies and directives outlined in E.O. 14154, “Unleashing American Energy,” E.O. 14192, “Unleashing Prosperity Through Deregulation,” E.O. 14215 “Ensuring Accountability for All Agencies,” and E.O. 14300, “Ordering the Reform of the Nuclear Regulatory Commission.” This direct final rule is considered an E.O. 14192 deregulatory action.

## XII. Congressional Review Act

This direct final rule is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has found it does not meet the criteria at 5 U.S.C. 804(2).
