[Project No. 15055-001]

Northern States Power Company; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR part 380, the Office of Energy Projects has reviewed the application for an original license to operate and maintain the existing, unlicensed Gile Flowage Storage Reservoir Project No. 15055 (project). The project is located on the West Fork of the Montreal River in Iron County, Wisconsin. Commission staff has prepared an Environmental Assessment (EA) for the project.¹

The EA contains staff's analysis of the potential environmental impacts of the project and concludes that licensing the project, with appropriate environmental protective measures, would not constitute a major federal action that would significantly affect the quality of the human environment.

The Commission provides all interested persons with an opportunity to view and/or print the EA via the internet through the Commission's Home Page (<http://www.ferc.gov/>), using the "eLibrary" link. Enter the docket number, excluding the last three digits in the docket number field, to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov*, or at (866) 208-3676 (toll-free), or (202) 502-8659 (TTY).

filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

m. *Description of Request:* Due to drought conditions, the license proposes to temporarily amend the minimum flow requirements at the Comerford Development to preserve the depleted storage capacity of its upstream Moore reservoir, which may prevent future flow reductions if the drought worsens. With the proposed modifications to operations at the Comerford Development, the minimum flow would be decreased from 1,145 cubic feet per second (cfs) to 600 cfs, from September 29, 2025, to January 31, 2026. The licensee would increase flows from Comerford to 1,145 cfs prior to January 31, 2026, when sufficient precipitation refills Moore Reservoir to its median elevation of 805 feet mean sea level.
