

and surveillance requirements; (D) equipment servicing or maintenance scheduling requirements; (F) Safeguard plans, and materials control, and (G) scheduling requirements.

Based on the above assessment, in accordance with 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared in connection with the NRC's consideration of this exemption request.

VII. Conclusions

For the reasons described above, the NRC concludes that, pursuant to 10 CFR 50.82(a)(3), there are site-specific factors affecting the licensee's capability to carry out decommissioning at Peach Bottom Unit 1 because of the presence of the operating units at the site such that an alternative decommissioning schedule is necessary to protect public health and safety. The NRC's determination is based on the multiple connections that exist between Peach Bottom Unit 1 and the operating Peach Bottom Units 2 and 3 at this site, including the presence of the nuclear facilities (Peach Bottom Units 2 and 3 support buildings) located on the Peach Bottom Unit 1 footprint and the need for its continued use by Peach Bottom Units 2 and 3, and the electric power connection at Peach Bottom Unit 1 that is utilized as one of the primary power sources of offsite power for Peach Bottom Units 2 and 3.

Therefore, the NRC grants Constellation Energy Generation, Inc., a one-time exemption from 10 CFR 50.82(a)(3) to allow the licensee an alternative decommissioning schedule that requires the decommissioning of Peach Bottom Unit 1, 20 years after the permanent cessation of operations of either Peach Bottom Units 2 or 3, whichever is earlier, and in no case beyond 2074. With this approval, the licensee's SAFSTOR program will continue for the extended period of decommissioning and the licensee should update its program accordingly. For the period beyond 60 years, the NRC will continue its inspection of the SAFSTOR program as outlined in the Updated Final Safety Analysis Report, technical specifications, and licensee procedures, including the material condition of the Peach Bottom Unit 1 buildings, such as the Unit 1 containment.

The exemption will be effective upon issuance.

Attachment—Exemption

NUCLEAR REGULATORY COMMISSION

Docket Nos. 50–261; Duke Energy Progress, LLC; H.B. Robinson Steam Electric Plant, Unit No. 2; Exemption

I. Background

Duke Energy Progress, LLC (Duke Energy, the licensee) is the holder of the Renewed Facility Operating License (RFOL) No. DRP–23 for H.B. Robinson Steam Electric Plant, Unit 2 (H.B. Robinson Unit 2) which is a Pressurized Water Reactor (PWR) located in Hartsville, South Carolina. The RFOL provides, among other things, that the facility is subject to all rules, regulations, and orders of the U.S. Nuclear Regulatory Commission (NRC, the Commission) now or hereafter in effect.

On July 17, 2024, NRC issued a final rule incorporating by reference Regulatory Guide (RG) 1.147, Revision 21 (Agencywide Documents Access and Management System (ADAMS), Accession No. ML23291A003), into Title 10 of the *Code of Federal Regulations* (10 CFR) 50.55a(3)(ii) (89 FR 58039). This RG determined American Society of Mechanical Engineers Boiler and Pressure Vessel Code, Section XI (ASME BPV XI) Code Case N–921, "Alternative 12-yr Inspection Interval Duration, Section XI, Division 1" to be conditionally acceptable. This code case allows NRC licensees to implement an inservice inspection (ISI) program based upon a 12-year ISI interval, as opposed to the traditional 10-year ISI interval
