k. This application has been accepted for filing and is ready for environmental analysis at this time.

1. *Project Description:* The existing project consists of a dam that includes three 12-foot-long Tainter gates with a crest elevation of 770.8 National Geodetic Vertical Datum of 1929 (NGVD 29); and a powerhouse that includes an intake structure with a trashrack with 2-inch clear bar spacing and a 210-kilowatt vertical Francis turbine-generator unit. The dam creates an impoundment that has a surface area of 235 acres at a normal surface elevation of 770.2 feet NGVD 29. From the impoundment, water flows through the powerhouse to a tailrace that empties into the Waupaca River.

Electricity generated at the powerhouse is transmitted to the electric grid via 4.16-kilovolt generator lead lines, a step-up transformer, and a 25-foot-long transmission line.

Project recreation facilities include: (1) a boat ramp that provides impoundment access; (2) an approximately 270-foot-long access road for the boat ramp; (3) a 100-foot-long portage trail; and (4) a hand-carry boat put-in site downstream of the dam.

Wiscons8 proposes to continue operating the project in a run-of-river mode and maintaining the impoundment elevation at 770.2 ± 0.25 feet NGVD 29. Wiscons8 also proposes to continue maintaining the portage trail and put-in site. The put-in site also includes a dock that Wiscons8 proposes to maintain for public tailrace fishing. Wiscons8 is not proposing to maintain the boat ramp or 270-foot-long access road as project facilities.
