Abstract of Information Available

Based on the information available, human remains representing, at least, three total individuals have been reasonably identified. No associated funerary objects are present. On May 17, 2021 USACE Tulsa was notified that a member of the public had recovered human remains from site 34KA133, a precontact site that dates from the Archaic—Woodland archaeological periods located at Kaw Lake in Kay County, Oklahoma. The remains represent a single individual and no funerary objects were recovered. On May 25, 1998 the remains of one individual were identified eroding from the shoreline at site 34CR107, a precontact Woodland period site located at Keystone Lake in Creek County, Oklahoma. Tulsa District personnel attempted to protect the individual in place. After several storms in the area extensively eroded the shoreline and exposed the individual, and all human remains were recovered. No funerary objects were recovered. Through May 4 and 5, 2019 the remains of one individual who had been discovered by members of the public eroding from the shoreline were recovered from site 34PW3, a precontact site dating from the Woodland—Plains Village archaeological periods located at Keystone Lake in Pawnee County, Oklahoma. No funerary objects were recovered.
