

cloud environments. The data being collected is aggregated wait-time data across the various screening lane configurations (e.g., PreCheck, Standard, Blended, etc.) and will not contain any personally identifiable information.

TSA estimates that annually 450 airport operators will provide the information and that it will take approximately 0.7305 annual hours. This results in an estimated annual time burden on respondents of 328.725 hours.

Use of Results

TSA and individual airports will use these results to improve the passenger's experience; eliminate the need for TSA officers to collect this data manually—yielding a cost avoidance; refocusing the uniformed workforce on screening passengers; enable TSA to quickly respond and mitigate high wait-times; and evaluate opportunities to provide additional staffing resources to frequent hot spots.
