m. *Description of Request*: The licensee is proposing to convert energy generation and transmission from a frequency of 25 hertz (Hz) to 60 Hz, to allow for the sale of power directly to the regional electric grid. The replacement of Units 1 and 2 would increase the project's authorized installed capacity from 102 megawatts (MW) to 108.5 MW and increase the maximum hydraulic capacity from 10,160 cubic feet per second (cfs) to 10,380 cfs. During powerhouse outages associated with the licensee's proposal, all flows would be spilled into the bypassed reach and the licensee's ability to provide recreational flow releases would be dependent on project inflows. The licensee would continue to operate the project in run-of-river mode during and following construction. Following construction, the licensee would increase the minimum flows in the bypassed reach and increase the number of recreational flow releases while shortening the duration of each recreational flow release.
