To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including

whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

DELTA Cooperative Agreement Evaluation (OMB Control No. 0920–1412, Exp. 8/31/2026)—Revision—National Center for Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The Centers for Disease Control and Prevention (CDC) seeks OMB approval for three years for this Revision information collection request (ICR) to continue collecting information from 13 recipients (State Domestic Violence Coalitions) funded through CDC's Domestic Violence Prevention Enhancement and Leadership Through Alliances (DELTA) program. CDC will continue to collect information from DELTA recipients as part of its ongoing program evaluation to assess the implementation and impact of the NOFO and further understand the facilitators, barriers, and critical factors to implement specific violence prevention strategies and conduct program evaluation activities.

Intimate Partner Violence (IPV) is a serious, yet preventable public health problem that affects millions of people in the United States each year. Data from CDC's 2023/2024 National Intimate Partner and Sexual Violence Survey (NISVS) indicate that nearly one in three adult women (34%) and approximately one in six men (17%) in the U.S. report having experienced contact sexual violence, physical violence, and/or stalking by a partner. Data from the 2016/2017 NISVS indicate that the lifetime prevalence of experiencing contact sexual violence, physical violence, or stalking by an intimate partner is not shared equally across all groups. Studies also show that people with a disability have nearly double the lifetime risk of IPV
