[For the Nuclear Regulatory Commission statement of organization, see the *Code of Federal Regulations*, Title 10, Part I]

The Nuclear Regulatory Commission licenses and regulates civilian use of nuclear energy to protect public health and safety and the environment. This is achieved by licensing persons and companies to build and operate nuclear reactors and other facilities and to own and use nuclear materials. The Commission makes rules and sets standards for these types of licenses. It also carefully inspects the activities of the persons and companies licensed to ensure compliance with the safety rules of the Commission.

The Nuclear Regulatory Commission (NRC) was established as an independent regulatory agency under the provisions of the Energy Reorganization Act of 1974 (42 U.S.C. 5801 <i>et seq.</i>) and	Executive Order 11834 of January 15, 1975. All licensing and related regulatory functions formerly assigned to the Atomic Energy Commission were transferred to the Commission.

*Designated as Chief Information Officer and Chief Freedom of Information Act Officer.

The Commission's major program components are the Office of Nuclear Reactor Regulation, the Office of New Reactors, the Office of Nuclear Material Safety and Safeguards, the Office of Federal and State Materials and Environmental Management Programs, and the Office of Nuclear Regulatory Research. Headquarters offices are located in suburban Maryland, and there are four regional offices.

The Commission ensures that the civilian uses of nuclear materials and facilities are conducted in a manner consistent with the public health and safety, environmental quality, national security, and the antitrust laws. Most of the Commission's effort is focused on regulating the use of nuclear energy to generate electric power.

Activities

The Nuclear Regulatory Commission is primarily responsible for the following functions:

- licensing the construction, operation, and closure of nuclear reactors and other nuclear facilities, such as nuclear fuel cycle facilities, low-level radioactive waste disposal sites under NRC jurisdiction, the geologic repository for high-level radioactive waste, and nonpower test and research reactors;
- licensing the possession, use, processing, handling, and export of nuclear material;
- licensing the operators of nuclear power and nonpower test and research reactors;
- inspecting licensed facilities and activities;
- conducting the U.S. Government research program on light-water reactor safety;
- developing and implementing rules and regulations that govern licensed nuclear activities;
- investigating nuclear incidents and allegations concerning any matter regulated by the NRC;
- maintaining the NRC Incident Response Program;
- collecting, analyzing, and disseminating information about the operational safety of commercial nuclear

power reactors and certain nonreactor activities; and

—developing effective working relationships with the States regarding reactor operations and the regulation of nuclear material, and assuring that adequate regulatory programs are maintained by those States that exercise regulatory control over certain nuclear materials in the State.
