What Your Participation Involves

Participation in all NAHMS studies is voluntary and confidential. Operations are selected randomly, and those selected will be contacted by NASS, the USDA agency responsible for the study’s data collection. If you are selected to participate in the Small-Scale Livestock Operations 2011 study, you can expect the following general activities and schedule.

- During March 2011, NASS will send you a letter explaining the study.
- Shortly thereafter, you will receive a study questionnaire in the mail.
- If the questionnaire is not returned, a NASS representative will contact you via telephone and offer to help you complete the questionnaire over the phone.

A Scientific Approach

APHIS established NAHMS to collect and report accurate and valuable information on animal health and management in the United States. Since 1990, NAHMS has developed national estimates on disease prevalence and other factors related to the health of U.S. beef cattle, dairy cattle, swine, equine, poultry, catfish, sheep, and goat populations.

Confidentiality

Because NAHMS’ studies rely on voluntary participation, APHIS protects the privacy of every participant. Only those collecting the data know the identity of the respondent. No name or address is ever recorded in any APHIS database. No data will be reported on any individual or in a manner that would allow the identification of an individual.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual’s income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA’s TARGET Center at (202) 720–2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250–9410, or call (800) 795–3272 (voice) or (202) 720–6382 (TDD). USDA is an equal opportunity provider and employer.

February 2011
The first national study of small-scale livestock operations conducted by the National Animal Health Monitoring System (NAHMS), in coordination with the U.S. Department of Agriculture's National Agricultural Statistics Service (NASS), will launch in March 2011. Known as Small-Scale Livestock Operations 2011, the study will include operations throughout the country that have cattle, horses, swine, sheep, goats, poultry, aquaculture species, and/or other livestock species. With this study, NAHMS—a unit within the Veterinary Services (VS) program of USDA's Animal and Plant Health Inspection Service (APHIS)—seeks to increase knowledge about the characteristics of and challenges faced by small-scale livestock operations.

**Study Focus**

Small-Scale Livestock Operations 2011 is designed to provide individual participants, stakeholders, and the industry with valuable information about the health, marketing, management, and biosecurity practices of small-scale livestock operations in the United States. Participating operations will have livestock such as cattle, horses, poultry, swine, goats, and/or aquaculture species, and they might also raise crops.

The USDA defines a small-scale operation as having total annual sales of agricultural products less than $250,000; this study will focus on operations with annual sales between $10,000 and $500,000. The Small-Scale Livestock Operations 2011 study has the following objectives:

- Provide a description of animal health, marketing, and management practices on small-scale operations;
- Identify challenges faced by small-scale operations; and
- Describe management and biosecurity practices important for the control of infectious diseases on small-scale operations.

How You Can Help

Your participation in the Small-Scale Livestock Operations 2011 study will help NAHMS develop reliable and accurate national estimates about important agricultural issues. This valuable information will have many uses, including the following:

- Assisting university researchers, extension agents, producer groups, and others in identifying and focusing educational efforts on vital issues related to small-scale operations;
- Assisting animal-health officials, policymakers, and industry members in making informed decisions to help protect U.S. agriculture and animal health.

How You Will Benefit

By participating in the Small-Scale Livestock Operations 2011 study, you will receive a variety of reports and information sheets that will enable you to compare your operation—including management decisions and practices—with other small-scale operations. These publications will present study data on general management and marketing topics as well as specific health-related issues.

“Small-scale livestock operations in the United States help create prosperous rural communities and provide safe and nutritious foods for our country and the world. Today, these operations face many challenges, as well as opportunities. The NAHMS Small-Scale Livestock Operations 2011 study will describe these operations and examine their needs. Those who participate in the study will contribute information that will help direct research, develop educational programs, and guide policy development.”

—Dr. John Clifford
Deputy Administrator, Veterinary Services
Animal and Plant Health Inspection Service
United States Department of Agriculture

* Livestock includes cattle, horses, sheep, goats, swine, poultry, aquaculture species, and other farm animals raised for home use or sale.
