

Conservation Activity Plan

Agricultural Energy Management, Headquarters

December 2011

Agricultural Energy Management, Headquarters

An agricultural energy management conservation activity plan for farm or ranch headquarters is a site-specific evaluation to help a producer address on-farm energy conservation and efficiency issues and opportunities.

NRCS Technical Service Providers (TSPs) prepare these plans using inputs such as:

- Evaluations of current annual energy usage
- Evaluations of primary agricultural energy users, such as lighting, ventilation, pumping, heating, and cooling

- Assessments of cost-effective alternatives and resulting estimated energy savings
- Expected energy cost savings
- Payback estimates

TSPs can recommend and plan energy conservation practices such as:

- Energy conservation and efficiency improvements
- Pipelines
- Pumping plants
- Irrigation water management
