

NATIONAL DIRECTORY OF COMMODITY SPECIFICATIONS 1932

U. S. DEPARTMENT OF COMMERCE

R. P. LAMONT, Secretary

BUREAU OF STANDARDS GEORGE K. BURGESS, Director

NATIONAL DIRECTORY OF **COMMODITY SPECIFICATIONS**

Classified and Alphabetical Lists and Brief Descriptions of Specifications of National Recognition

MISCELLANEOUS PUBLICATION No. 130

(Supersedes Miscellaneous Publication No. 65)

Prepared by Clarence W. Ingels under the direction of A. S. McAllister, Chief of the Division of Specifications

UNITED STATES GOVERNMENT PRINTING OFFICE WASHINGTON: 1932

CONTENTS

	Page
Foreword	1
Introduction	3
Classified list of specifications	5
Animals and animal products (except wool and hair)	5
000 Animals	5
010 Meats	6
020 Dairy products	11
030 Fish	14
040 Animal and fish oils, fats, and greases	15
050 Hides and skins, raw (except furs)	17
060 Leather and leather manufactures	17
070 Furs	19
090 Miscellaneous animal products	19
Vegetable food products and beverages	21
100 Grains and preparations	21
110 Fodders and feeds	26
120 Vegetables	31
130 Fruits and nuts	39
140 Oil seeds and vegetable oils and fats	49
150 Cocoa, coffee, tea, spices, and leavening agents.	52
160 Sugar, molasses, sirup, honey, and confectionery	58
170 Beverages.	60
Vegetable products, except food, fibers, and wood	65
	65
200 Rubber and similar gums and manufactures thereof	73
210 Gums, resins, and balsams	74
220 Crude drugs and essential oils	
230 Dyeing and tanning materials of vegetable origin	75
240 Seeds (except oil seeds and spice seeds)	75
250 Nursery and greenhouse stock	76
260 Tobacco	76
280 Starch and vegetable glue	77
290 Miscellaneous vegetable products	77
Textiles	78
300 Cotton, cotton fabrics, and cotton knit goods	78
310 Manufactures of cotton	86
320 Jute and jute manufactures	89
330 Flax, hemp, and ramie	90
340 Other vegetable fibers, straw, or grass	92
360 Wool and hair and manufactures thereof	92
370 Silk and manufactures thereof	95
390 Miscellaneous textile products	97
Wood and paper	101
400 Lumber (logs, timber, and other manufactured or partly manufactured wood)	101
410 Lumber for building and factory use	115
420 Manufactures of wood (except furniture)	126
430 Furniture of wood	131
470 Paper (except printed matter)	133
480 Books and other printed matter	144
490 Miscellaneous paper products	145
Nonmetallic minerals	146
500 Coal, petroleum, asphalt, and mineral wax	146
510 Stone, sand, and cementitious materials	166
520 Glass and glass products	199
530 Clay and clay products	202
540 Abrasive materials, asbestos, and chalk	209
550 Mica, rare minerals	211
560 Precious stones and imitations	211
570 Sulphur, magnesia, salt, and graphite	212
590 Miscellaneous nonmetallic minerals	212

NATIONAL DIRECTORY OF COMMODITY SPECIFICATIONS

FOREWORD TO FIRST EDITION ISSUED IN 1925

By Herbert Hoover

Specifications are the formulated, definite, and complete statements of what the buyer requires of the seller. They must be adapted to the best practice of production and distribution. Their formulation requires the services of chemists, physicists, engineers, and whatnot. But beyond this it requires something that has too often been neglected, and that is the added experience of the manufacturer, the producer, and the user. No economy is to be obtained by formulating such a specification for an article as will require that it be specially manufactured when an article largely produced for commercial consumption will give equal service, or by the setting up of such requirements as will necessitate increased cost of production without compensation in service.

At the beginning of the present administration the Department of Commerce instituted a review of Federal purchasing specifications with a view to a better formulation of standards, simplifications, and more accurate presentation of specifications in Federal purchases, in cooperation with committees from the various industries. Upon the erection of

the Bureau of the Budget a Federal Specifications Board was created under the budgetary powers, members of the Department of Commerce acting as chairman and secretary, and a membership representing the different departments of the Government. The Federal Specifications Board has had under review Federal specifications, and in the formulation of such specifications has not only made the necessary scientific investigations, using the facilities of the National Bureau of Standards and other Government laboratories, but has called into consultation representatives of the manufacturing industries concerned in order that Government purchases should be properly adapted to the manufacturing processes and normal stocks and materials of the country. A very considerable amount of economy

has been effected in the purchase of Federal Government supplies by these methods and

their better adaptation to commercial practice.

The State purchasing agencies have from time to time sought the assistance of the department in the formulation of standards, specifications, and methods of tests for their purchases. With the approval of the State governors I called a conference of the purchasing agents of the States on May 25, 1923, to ascertain in what way the department could best be of service to the public purchasers in connection with the formulation, selection, or unification of specifications and in the development of methods of testing. This conference expressed its approval of the proposal of the department to review the specifications in use and to formulate and issue a handbook or encyclopedia for the use of public purchasing agents covering the entire field of standards, specifications, simplifications, and tests which may be determined as the best adapted for public purchases, the publication in each instance to be formulated in consultation with the different agencies particularly concerned.

With a view to the better organization of all of the public purchasing agencies and the establishment of cooperation with the technical and scientific bodies of the country, together with the experience of other large buyers and of manufacturing representatives there was created an advisory board, the members of which are official representatives of 14 leading national organizations interested in the preparation and unification of specifications.

Our engineering and professional societies, especially the American Society for Testing Materials, and the Society of Automotive Engineers have been long engaged, as has more recently the American Engineering Standards Committee, in the preparation and standard-

ization of certain types of specifications; our university laboratories, our great industrial laboratories, the engineers in our large industries, have for years been developing specifications in a great multitude of materials. Many of these specifications have lain dormant for lack of use by the consumer in his demands upon the producer. Others of them have not had applied to them the test of commercial experience in production. It is our purpose to adopt whatever is good, to put it under review as to its practical application, and, as we have done hitherto, to call in the expert manufacturer and producer for his cooperation and advice.

The direct purpose of any wise cooperative effort in the adoption of specifications is thus to secure constructive application of scientific knowledge to service requirements; to coordinate similar demands and eliminate unessential differences; to balance increases in cost against probable service improvements, taking full advantage of existing commercial varieties; and to formulate adequate test or inspection methods—all this resulting in the development of greatly improved products, vital support to the national movement toward simplification of lines, processes, and business practices, and marked lowering of costs and prices. When such a cooperative undertaking combines Federal, State, and municipal groups, as in the present instance, we have the additional advantages of the unequaled facilities of Government laboratories in investigation; the broadcasting, with Government approval, of many little known but excellent specifications developed by private industries; the prestige of Government specifications leading to wide voluntary adoption in commerce; and the unification of demand in vast purchases with incalculable benefit in raising and stabilizing the quality of American production.

INTRODUCTION

This publication is a revised edition of the National Directory of Commodity Specifications, first published in 1925. In it will be found listed the standards and specifications of trade associations, technical societies, and organizations that are representative in a national way of industry or some branch of industry, as well as the standards and specifications of governmental agencies that represent the Federal Government as a whole. It is a compilation of current nationally recognized specifications.

The same decimal system of classification of commodities has been used in this edition as was used with the first edition, some minor changes and additions being made to take

care of new material.

The classification system used tends to throw together specifications and standards relating to the same subjects so that specification-making bodies may take note of or be forewarned of duplication of material. Moreover, a special effort has been made to increase the usefulness of the directory to the purchaser desiring to use nationally recognized specifications. For example, where the use to which a commodity is put is not self-evident from the title of the specification a brief statement of this use has been given, if known. There is also given a brief summary of each specification so that the reader may to some extent judge for himself whether the scope of the specification fits his particular needs. Cross-referencing has been used to tie up related specifications.

To obtain the best results with the directory full use should be made of the index on pages 501 to 548. In this index the commodities are listed alphabetically, and references are given to the classification groups in the body of the directory in which the specifications for the particular commodities appear. Directions for obtaining copies of the specifica-

tions will be found on page 481.

Besides the Directory of Specifications, the Department of Commerce is preparing an Encyclopedia of Specifications. This encyclopedia contains the actual text of the specifications as contrasted with the directory which contains titles with brief descriptive items. Two parts of the encyclopedia have already been published, (1) Standards and Specifications in the Wood Using Industries, published in June, 1927, and (2) Standards and Specifications for Nonmetallic Minerals and their Products, published in March, 1930. These two books cover the classification groups 400-499 and 500-599, respectively, of the National Directory of Specifications. In these parts are to be found the actual text of the nationally recognized specifications under the above classification groups in existence when the books were prepared. Some of the specifications referred to in the present edition of the directory will be found to be revisions of specifications included in the parts of the encyclopedia already published. In a few cases there are references to specifications formulated since the two volumes of the encyclopedia were issued.

CLASSIFIED LIST OF SPECIFICATIONS

000-099

ANIMALS AND ANIMAL PRODUCTS

Except Wool and Hair

000-009

ANIMALS

001. CATTLE

001.1 MILK COWS

U. S. Gov., Dept. of Agriculture. Bureau of Animal Industry. Dept. Circular 249; 1928. Tuberculin Testing of Livestock. Methods of testing recognized by Bur. of Animal Ind. and various State officials, not mandatory except where included under State laws or regulations. Description and method of procedure for the subcutaneous or thermal test, the intradermic or skin test, and the ophthalmic or eye test.

001.2 BEEF CATTLE

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Circular 28; 1928. Market Classes and Grades of Calves and Vealers. Permissive standards, includes feeder and stocker calves, definitions of 5 grades as regards build, shape, and outline of body, quantity, quality, and distribution of fat, quality of flesh, proportion of bones, etc., definitions of slanghter animals the same as in S. R. A., B. A. E. 113. Grades used in market news reports.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. 1380; 1926. Market Classes and Grades of Livestock. Permissive standard, useful for market reports, schedule of market classes and grades for cattle as steers, heifers, etc., subclasses slaughter, feeder, stocker, age selection, weight selection, and grades covered by each, no definitions of

grades included.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. 1464; 1927. Market Classes and Grades of Cattle. Permissive standards for slaughter cattle and for feeders and stockers, definitions of 5 to 7 grades each of steers, heifers, cows, bulls, and stags as regards build, shape, and outline of body, quantity, quality, and distribution of fat, quality of flesh, proportion of flesh to bones, etc., the grade definitions for slaughter cattle being the same as given in S. R. A., B. A. E. 112. Grades used in market news reports.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 112; 1925. Official U. S. Standards for Grades of Slaughter Cattle. Permissive standards, definitions of 5 to 7 grades each of slaughter steers, heifers, cows, bulls, and stags, as regards build, shape, and outline of body, quantity, quality, and distribution of fat, quality of flesh, proportion of flesh to

bones, etc.

U.S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 113; 1928. Official U. S. Standards for Grades of Vealers and Slaughter Calves. Permissive standards, definitions of vealer and calf, of 3 weight selections, and of 6 grades as regards build, shape, and outline of body, quantity, quality, and distribution of fat. quality of flesh, proportion of flesh to bones, etc.

002. HOGS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. 1380; 1926. Market Classes and Grades of Livestock. Permissive standards useful for market reports, schedule of market classes and grades of hogs, as barrows, sows, etc. subclasses feeder, slaughter, use selection as butcher or packer, weight selection, and grades inclusive in each, no definition of grade included.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Standards for Grades of Slaughter Hogs; 1930. Permissive standards, definitions of small, intermediate, and large types, definitions of 6 grades of the intermediate of slaughter barrows and gilts and slaughter sows, as regards body proportions, conformation, relative shape of parts of body.

finish, quality, etc., grades illustrated.

003. SHEEP

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. 1380; 1926. Market Classes and Grades of Livestock. Permissive standards useful for market reports, schedule of market classes and grades of sheep, as ewes, wethers, etc., subclasses slaughter, feeders, age selection, weight selection, and grades included in each, no definition of grade included.

U. S. Gov. Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Standards for Grades of Slaughter Lambs; 1929. Permissive standards, definitions of 6 grades as regards compactness, shape, and outline of body, amount, quality and distribution of fat, size of joints, proportion of bone, etc. Grades used in market

news reports.

004. HORSES

004.1 WORK HORSES

005. MULES, ASSES, AND BURROS

005.1 MULES

005.2 ASSES

CO5.3 BURROS

007. POULTRY

007.0 GENERAL ITEMS

U. S. Gov., Congress, 43 Stat. 822, 844-845; 1925. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30, 1926. For enabling the Sec. of Agriculture to investigate and certify to shippers and other interested parties the class, quality, and/or condition of cotton, and fruits, vegetables, poultry, butter, hay when offered for shipment in interstate shipment or received at central markets.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S.R.A., B.A.E. 103 and Supplement No. 1; 1926. Rules and Regulations

of the Sec. of Agriculture Governing the Inspection and Certification of Live Poultry. Regulations regarding where inspection service is available, who may obtain inspection, form of application, certification, fees,

007.1 CHICKENS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Classes and Subclasses for Live Poultry; 1928. Permissive standards, includes for chickens a description of classes for U. S. and Mediterranean chickens, as broilers, chickens, stags, capons, fowl, and old cocks, with weight limits and general description of each class.

007.2 TURKEYS

U. S. Gov., Dept of Agriculture, Bureau of Agri-cultural Economics. Tentative Classes and Sub-

classes for Live Poultry; 1928. Permissive standards, includes for turkeys a description of 3 classes and 4 subclasses, with weight limits and general description of each.

007 2 DIICKS

U. S. Gov., Dept of Agriculture, Bureau of Agricultural Economics. Tentative Classes and Sub-classes for Live Poultry; 1928. Permissive standards, includes for spring ducks, ducks, and Muscovy ducks, a general description of subclasses and required weight limits.

007.4 GEESE

MEATS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Classes and Sub-classes for Live Poultry; 1928. Permissive standards, includes for geese and chinese or swan geese a general description and weight limits for subclasses.

010-019

010. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Meat. Preparation of sample, determination of moisture, ash, crude fat, total phosphorus, total nitrogen, ash, crude fat, total phosphorus, total introgen, preservatives, creatin, and tentative methods for determination of ammonia, nitrates, nitrites, starch, glycogen, sugar, metals, coloring matters, nitrogen in various combinations, meat bases, and soluble phosphorus.

- U. S. Gov., Congress. Public No. 361, 71st Cong., June 17, 1930, Sec. 306. Imported meat act. Requirements applicable to imported meats that they be wholesome, healthful, and fit for human food and contain no dye, chemical, or ingredient

rendering them unfit.

U. S. Gov., Congress. 34 Stat. 674 of June 30, 1906, and 34 Stat. 1260 of Mar. 4, 1907. Meat inspection act. For meat entering interstate or foreign commerce, requirements for the inspection of animals and meat at the slaughter house or packing plant by inspectors of the Dept. of Agriculture and labeling of such meats as passed or condemned.

- U. S. Gov., Congress. 34 Stat. 768. June 30, 1906. as amended. (For text see S. R. A., F. D. No. 1, 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture. sale, or transportation of adulterated or mis-branded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoeia and Nat. For-
- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 98, Amend. 1, 1929. Rules and Regulations of the Sec. of Agriculture Governing the Investigation and Certification of Class, Quality (Grade), and Condition of Meats and Meat Food Products. Regulations regarding where grading service may be obtained with designation of important central markets, who may apply and form of application,
- U. S. Gov., Dept. of Agriculture. Bureau of Animal Industry. B. A. I. Order 211, revised, 1922, with amendments. Regulations Governing the Meat Inspection of U. S. Dept. of Agriculture. For meat and meat products entering into interstate or foreign commerce, mandatory requirements on

inspection of animals and carcasses, defects and disease indications requiring condemnation of meat, branding and labeling of meat and of containers.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for Enforcement of Federal Food and Drugs Act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U. S. Pharmacopoeia and Nat. Formulary and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia or Nat. Formulary, regulations on powders, on poisonous and

atives, ingredients which require a statement on labels, etc. Includes text of act as amended. U.S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2. Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Meats. General definitions of beef, veal, mutton, lamb, pork, venison, dry salt

meat, corned meat, sweet pickled meat, dried meat, smoked meat, canned meat, hamburg

deleterious ingredients, and on colors and preserv-

steak, potted meat, sausage meat, meat loaf, brawn, headcheese, souse, scrapple, lard.

011. BEEF AND VEAL

011.1 BEEF CARCASSES

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bulletin 1246; 1927. Market Classes and Grades of Dressed Beef. Covers official standards given in S. R. A., B. A. E. 99 with more explanatory and descriptive mate-

rial and illustrations.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics, S. R. A., B. A. E. 99; 1926. Official U. S. Standards for Grades of Carcass Beef. Permissive standards, definitions of 6 and 7 grades each of steer, heifer, cow, bull, and stag carcasses as regards build, shape, and contour of carcass, thickness, color, character and distri-bution of fat, thickness, firmness, and strength of muscle fiber, quality of juices, etc.

U. S. Gov., Federal Specifications Board. 1929. Beef. For fresh dressed carcasses of steers, chilled or frozen, for quarters, briskets, chucks, flanks, and loins, requirements on color grain, and marbling of flesh, weight limits of carcasses and quarters, prepared and inspected

according to regulations of U. S. Dept. of Agriculture and the imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010. Veal carcasses. See 011.8. Beef and yeal cuts. See also 011.91.

011.2 BEEF HEARTS

U. S. Gov., Federal Specifications Board. 566a; 1928. Beef Hearts. For fresh hearts, chilled and frozen classes, requirements on general quality, permissible age of frozen hearts, prepared in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010.

011.3 BEEF KNUCKLES

011.4 BEEF AND VEAL LIVERS

U. S. Gov., Federal Specifications Board. 568a; 1928. Beef livers. For fresh livers, chilled or frozen, requirements on general quality, conformity, and weight, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010.

011.5 BEEF KIDNEYS

U. S. Gov., Federal Specifications Board. 567a: 1928. Beef Kidneys. For fresh kidneys, chilled and frozen classes, maximum time limit for acceptance of frozen kidneys after freezing, preparation in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010.

011.6 BEEF TONGUES

References .- Canned beef tongue. See 018.11.

011.7 OXTAILS

011.8 VEAL CARCASSES AND CUTS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Circular No. 103; 1930. Market Classes and Grades of Dressed Veal and Calf Carcasses. Includes descriptions, illustrations, and definitions of grades, definitions of 6 grades of veal carcasses and of 6 grades of calf carcasses as regards conformation, quantity, quality, and distribution of fat, quality of flesh, size and hardness of bones, weight classes.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 114; 1928. Official U. S. Standards for Grades of Veal and Calf Carcasses, Permissive standards, definitions of 3 weight selections of steer, heifer, and bull carcasses, definitions of 6 quality grades as regards form, shape, and contour of carcass, quantity, quality, and distribution of fat, character and quality of flesh, for veal and calf.

U. S. Gov., Federal Specifications Board. 572a; 1928. Veal. For fresh veal, chilled or frozen, requirements on general quality of sides and hindquarters, weight limits for sides, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act, and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010. Fresh veal cuts. See also 011.91.

011.9 MISCELLANEOUS SPECIFICATIONS FOR BEEF AND VEAL

011.91 Fresh Beef and Veal Cuts

American Hospital Assn. Bulletin No. 36; 1923. Specifications for Purchise of Meats. Includes specifications for beef and veal, including limiting weights of cuts and general class and age of animal from which obtained.

U. S. Gov., Dept. of Agriculture, Bureau of Agricultural Economics, Dept. Bull, 1246; 1927. Market Classes and Grades of Dressed Beef. Wholesale and Retail Cuts of Beef. Standard cuts illustrated, with percentage of total carcass weight represented by each wholesale cut, descriptions of properties of 7 quality grades of whole-

sale cuts graded on same basis as carcasses, permissive standards for steer, heifer, and cow beef.

References.—Other specifications for fresh beef and real. See 01.1., 011.8. Definitions, methods of analysis, food regulations. See 010.

011.94 Smoked Beef and Veal

References .- Dried beef and veal, See 018.13.

011.95 Pickled Beef and Veal

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Barreled salt pickled beef, including barreled extra family or extra plate beef, family or plate beef, packet or light family beef, and mess beef, beef portions or cuts that are included in each grade.

References.—Definitions, methods of analysis, food regulations. See 010.

012. PORK, HAM, AND BACON

References .- Fresh pork cuts. See also 012.91.

012.1 PORK CARCASSES

012.2 PORK LOINS

U. S. Gov., Federal Specifications Board. 571a; 1928. Pork. For fresh pork, chilled or frozen, requirements on trim and weight limits for loins, hams, shoulders and Boston butts, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with Federal food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010. Dry salt cuts. See also 012.92. Fresh pork cuts. See also 012.91.

012.3 HAMS AND SHOULDERS

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including long cut hams, south staffordshire hams, and manchester hams. Requirements on portions to be included in piece and portions to be removed or trimmed off.

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including regular shoulders, New Orleans shoulders, and square shoulders of pork. Requirements on portions to be included in piece and portions to be removed.

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Green or sweet pickled meats, including standard picnics and New York cut shoulders. Requirements on portions to be included in the cut, shaping and trimming.

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Green or sweet pickled meats, standard hams, and skinned hams. Requirements on portions to be included in the cut and trimming. U. S. Gov., Federal Specifications Board, 565a; 1928, Smoked Sweet-Pickled Hams. One class for local deliveries and immediate consumption and second class for storage or shipment to distant station, requirements on general quality, weight limits, permissible fat, kind of smoke, and length of smoking, prepared in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with Food and Drugs Act and Imported Meat Act.

U. S. Gov., Federal Specifications Board. 571a. 1928; Pork. For fresh pork, chilled or frozen, requirements on trim and weight limits for loins, hams, shoulders, and Boston butts, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food egulations. See 010. Fresh pork cuts. See also regulations.

012.4 PORK RIBS

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including rough backs, rib backs, and rib bellies. Requirements on portions to be included in cut and portions to be removed.

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including short rib sides, extra short clear sides, extra short rib sides, and short clear sides of pork. Requirements on portions to be included in cut and portions to be removed.

References.—Definitions, methods of analysis, food regulations. See 010. Fresh-pork cuts. See also 012.91.

012.5 BACON

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Standard Packs. For sliced bacon, standard sizes of consumer packages by weight, number of packages packed in a shipping container.
U. S. Gov., Federal Specifications Board. 559a;

1928. Canned Bacon. From selected, dry salt, clear bellies, requirements on general quality, freedom from defects and poor material, weight limits, temperature and length of smoking, prepared in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

U. S. Gov., Federal Specifications Board. 560a; 1928. Smoked Sweet Pickled Bacon. Of two classes, for local delivery and immediate consumption, and for storage or shipment to distant station, made from clear bellies, requirements on general quality, freedom from defects, weight limits, temperature and length of smoking, prepared in accordance with regulations of and un-der inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Dry salt hellies and sides. See also 012.92. Sweet pickled bellies. See also 012.94. Definitions, methods of analysis, food regulations. See 010.

012.9 MISCELLANEOUS SPECIFICATIONS FOR PORK, HAM, AND BACON

012.91 Fresh Pork

American Hospital Assn. Bulletin No. 36; 1923. Specifications for the Purchase of Meats. Includes pork specifications, including limiting weights of cuts and general class and age of animal from which obtained.

References.—Definitions, methods of analysis, food regulations. See 010. Other fresh pork. See 012.1-

012.92 Dry or Salt Pickled Pork

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Barrelled salt pickled pork, including mess pork, short cut mess or New York family pork, fat back pork, ham butt pork, bean pork, and clear plate pork, requirements on portions or cuts to be included and parts to be excluded in each piece and trim.

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including clear belies, english bellies, short fat backs of pork. Requirements on portions to be included and portions to be

removed, nonpermitted defects.

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including long clear sides and short clear sides of pork. Requirements on portions to be included in cut and portions to be removed

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including regular plates, clear plates, and jowl butts of pork. Requirements on portions to be included in cut and portions to be

New York Produce Exchange. Rules Regulating the Provision Trade; 1922. Description of Meats. Dry salt meats, including wiltshire sides, cumberland sides, dublin middles, long rib sides, birmingham sides, south staffordshire sides, yorkshire sides, irish cut sides, english short clear backs, and english rib backs of pork. Requirements on portions to be included in piece and portions excluded.

References.—Hams and shoulders, dry salt. See also 012.3. Rlhs, dry salt. See also 012.4. Definitions, methods of analysis, food regulations. See 010.

012.93 Sugar Cured Pork

012.94 Sweet Pickle Cured Pork

New York Produce Exchange. Rules Regulating the Provision Trade: 1922. Description of Meats. Green or sweet pickled meats, including rib bellies, clear bellies (square and seedless). Requirements on portions to be included in cut, removal of bone, trimming, etc.

References.—Hams and shoulders, sweet pickled. See 012.3. Bacon, sweet pickled. See 012.5. Definitions, methods of analysis, food regulations. See 010.

012.95 Smoked Pork

References.—Hams and shoulders, smoked. Sec 012.3. Smoked bacon. Sec 012.5. Definitions, methods of analysis, food regulations. Sec 010.

014. MUTTON AND LAMB

014.1 LAMB CARCASSES AND CUTS

American Hospital Assn. Bulletin No. 36; 1923. Specifications for the Purchase of Meats. Includes specifications for lamb, including limiting weights of cuts and general class and age of animal from which obtained.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. 1470; 1927. Market Classes and Grades of Dressed Lamb and Mutton. Permissive standards for market news or as a basis for contracts, for lamb carcasses, definitions of six grades as regards form and contour of carcass, quantity, quality, and distri-bution of fat, thickness, color, and fineness of grain of flesh, etc., definitions of grades of wholesale cuts.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 123; 1931,

Official U. S. Standards for Grades of Lamb Car- | 015.3 FOWL casses, Yearling Mutton, and Mutton Carcasses. For lamb carcasses, permissive standards, defi-nitions of 5 grades as regards conformation, quantity, quality, and distribution of fat, quality of flesh, proportion of flesh to bone and of fat to lean meat.

References.—Definitions, methods of analysis, food regulations. See 010.

014.2 MUTTON LOINS

014.3 CARCASSES, MUTTON

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. 1470; 1927. Market Classes and Grades of Dressed Lamb and Mutton. Permissive standards for market news or as a basis for contracts, for mutton carcasses definitions of 6 grades of each of yearling mutton and of mature mutton carcasses as regards form and contour of carcass, quantity, quality, and distribution of fat, thickness, color, and fineness of grain of flesh, etc., definitions of grades of wholesale cuts.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 123; 1931. Official U. S. Standards for Grades of Lamb Carcasses, Yearling Mutton, and Mutton Carcasses. For yearling mutton and for mutton carcasses, permissive standards, definitions of 5 grades as regards conformation, quantity, quality, and distribution of fat, quality of flesh, proportion of flesh to bone and of fat to lean meat.

S. Gov., Federal Specifications Board. 1928. Mutton. For fresh mutton, chilled or frozen, requirements on general quality and trim of carcasses, hind quarters, legs, and racks, permissible proportion of ewes among delivered carcasses, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported

References.-Definitions, methods of analysis, food regulations. See 010.

015. POULTRY AND GAME

015.1 CHICKENS

American Hospital Assn. Bulletin No. 36; 1923. Specifications for the Purchase of Meats. cludes specifications for chicken, including limiting weights, general class and age of fowl.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Standards and Grades for Dressed Poultry; 1931. Permissive standards for broilers, fryers, roasters, stags, cocks, capons, and fowl, definitions of 4 quality grades for each class dependent on quality of flesh, fat covering, condition of skin, quality of dressing, permissible defects, classification according to age, sex, weight, method of plucking, dressing, finishing, chilling and packing.

U. S. Gov., Federal Specifications Board. PP-C-251; 1931. Dressed Chickens (Broilers, Fryers, and Roasters). For chilled, for frozen, and for fresh killed, for undrawn or drawn, of each of above types, definitions of 2 quality grades of each type as regards quality of flesh, color, dressing, freedom from deformities, torn skin, bruises, etc., permissible time in frozen condition for

References.—Fowl. See also 015.3. Definitions, methods of analysis, food regulations. See 010. Inspection rules. See 015.0. Live chickens. See 007.1.

015.2 DUCKS

References .- Live ducks. See 007.3.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards and Grades for Dressed Poultry; 1931. Permissive standards for dressed fowl included, definitions of 4 quality grades dependent on amount of flesh and fat, quality of dressing, permissible kinds and amounts of defects.

U. S. Gov., Federal Specifications Board. PP-F-611; 1931. Dressed (Fricassee) Fowl. For chilled, frozen, and fresh killed, drawn and undrawn, definitions of 2 quality grades as regards quality of flesh, dressing, freedom from excessive fat, deformities, torn skin, bruises, etc., color, permissible length of refrigeration for frozen

References.—Definitions, methods of analysis, food regulations. See 010. Inspection rules. See 015.0. Live poultry. See 007.

015.4 GEESE

References .- Live geese, See 007.4.

015.5 TURKEYS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards and Grades for Dressed Poultry; 1931. Permissive standards for dressed young hen turkeys, old hens, and old tom turkeys, definitions of 4 quality grades dependent on amount of flesh and fat, permissible defects, classification according to weight, method of plucking, dressing, finishing, chilling, packing.

U. S. Gov., Federal Specifications Board. PP-T-791; 1931. Dressed Turkeys. For chilled, frozen, and fresh killed, undrawn, definitions of 2 quality grades as regards fullness of flesh, quality of flesh, dressing, freedom from bruises, torn flesh, etc., minimum weights, permissible time under refrigeration for frozen birds.

References.—Denitions, methods of analysis, food regulations. See 010. Inspection rules. See 015.0. Live turkeys. See 007.2.

016. HORSE MEAT 016.0 GENERAL ITEMS

U. S. Gov., Congress. 41 Stat. 241; July 24, 1919. Horse meat act. Requirements on labeling of horse meat as "horse meat" under regulations

prescribed by Sec. of Agriculture. U. S. Gov., Dept. of Agriculture. Bureau of Animal Industry. B. A. I. Order 211-revised, 1922, with amendments. Regulations Governing the Meat Inspection of U. S. Dept. of Agriculture. For horse meat entering into interstate or foreign commerce, mandatory requirements on disallowance of use of animals showing evidence of certain diseases or defects, inspection of meat, labeling meat as "horse meat."

018. MEATS, PREPARED, PRESERVED, CANNED

0180 GENERAL ITEMS

Institute of American Meat Packers. Standard Packs for Vinegar Pickled Products in Glass Jars; 1931. For pigsfect, boneless pigsfeet, pig hearts, pig tongues, lamb tongues, honeycomb tripe, etc., standard net weights for product packed in ½ pints, pints, and quarts.

Institute of American Meat Packers. Bulletin No. 17-Z, Nov. 22, 1929. Standard Packs for Vinegar Pickled Products in Tierces, Barrels, and Whitewood Packages. For pickled lamb tongues, pig hearts, honeycomb tripe, pig tongues, and split pigsfeet, standard weights of product in kits, fractional and full size barrels and in tierces.

018.1 BEEF AND VEAL, PREPARED, PRESERVED, CANNED

References .- Pickled beef. See 011.95.

018.11 Tongue

U. S. Gov., Federal Specifications Board. 562a; 1928. Canned Beef Tongue. Requirements on general quality and trimming of sweet-pickled tongues, number per can, permissible bone stock, net weight of tongue per can, prepared in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010.

018.12 Corned Beef and Veal

U. S. Gov., Federal Specifications Board. 561a; 1928. Canned Corned Beef. Cut from best quality canner carcasses, requirements on nonpermitted cuts, permissible preservatives, cooking, composition of finished product, permissible salt, nitrate, and nitrite, prepared in accordance with regulations of and under inspection of Dept, of Agriculture, also in conformity with food and drugs act and imported meat act.

References .- Sce references under 018.11.

018.13 Dried Beef and Veal

Institute of American Meat Packers. Standard Packs for Sliced Dried Beef; 1931. Standard weights of unit packages and standard weights of

shipping package.

U. S. Gov., Federal Specifications Board. 563a; 1928. Canned Sliced Dried Beef. Sliced from dried beef hams, requirements on proportions of insides, outsides, and knuckles, prepared in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References,-See references under 018.11.

018.14 Luncheon Meat

U. S. Gov., Federal Specifications Board. 560a; 1928. Luncheon Meat. For childed and frozen classes, requirements on general quality and proportions of mild cured pork and beef trimmings, hashing, permissible water, stuffing, size of pieces, smoking, cooking, prepared according to rules of and under inspection of Dept. of Agriculture, in conformity also with food and drugs act and imported meat act.

References .- Sec references under 018.11.

018.15 Corned Beef Hash

018.16 Veal Loaf

018.17 Spencer Roll

018.18 Roast Beef

018.2 PORK, PREPARED OR PRESERVED

References.—Dry or salt pickled pork. See 012.92. Sugar cured and sweet pickle cured pork. See 012.93, 012.94. Smoked pork. See 012.95.

018.20 General Items

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Standard Packs. For sausage, for 1-pound package, required number to nack in a shipping container.

required number to pack in a shipping container.
U. S. Gov., Dept. of Agriculture. Bureau of Animal Industry. B. A. I. Order 211—revised, 1922, with amendments. Regulations Governing the Meat Inspection of U. S. Dept. of Agriculture. For sausage entering into interstate or foreign commerce, mandatory requirements on permissible amount of cereal, vegetable starch, vegetable

flour, or added water in sausage. Inclusion of head cheese, liver pudding, and blood pudding under the designation of "sausage."

018.21 Head Cheese

U. S. Gov., Federal Specifications Board. 564a; 1928. Head Cheese. For chilled and frozen classes, requirements on proportions of pork snouts, cheeks, lean pork trimmings, and hogs rinds, general quality, permissible water, seasoning, stuffing, size of pieces, cooking, permissible age of frozen products, prepared in accordance with regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References.—Definitions, methods of analysis, food regulations. See 010., 018.20. Standard packs. See 018.20.

018.22 Sausage, Bologna Style

U. S. Gov., Federal Specifications Board. 575a; 1928. Bologna Style Sausage. For chilled and for frozen classes, requirements on general quality and proportions of beef and pork trimmings, amount of salt and saltpeter added, grinding, stuffing, smoking, cooking, prepared according to regulations of and under supervision of inspectors of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References,-See references under 018.21.

018.23 Sausage, Frankfurter Style

U. S. Gov., Federal Specifications Board. 574b; 1929. Frankfurter Style Sausage. For chilled and for frozen classes, requirements on general quality and proportions of beef and pork trimmings, amount of sait and saltpeter added, grinding, stuffing, smoking, cooking, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References,-See references under 018.21.

018.24 Sausage, Pork

U. S. Gov., Federal Specifications Board. 573a; 1928. Pork Sausage. For chilled and for frozen sausage, requirements on general quality of pork trimmings, permissible water added, seasoning, stuffing, size of links, prepared according to regulations of and under inspection of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References .- See references under 018.21.

018.25 Sausage, Vienna Style

U. S. Gov., Federal Specifications Board. 576b; 1929. Canned Vienna Style Sausage. Requirements on proportions and general quality of beef and pork trimmings, general preparation, amount of salt and of saltpeter added, grinding and stuffing, size of pieces, smoking, made according to the regulations of and under the supervision of inspectors of Dept. of Agriculture, also in conformity with food and drugs act and imported meat act.

References .- See references under 018.21.

References.—Prepared Mutton Suet for Medical Purposes. See 043.1.
018.4 CHICKEN, TURKEY, ETC.

018.5 MINCEMEAT

U. S. Gov., Federal Specifications Board. PP-M-351; 1931. Mincemeat. For type with low moisture content, type with maximum moisture content of 30 per cent, and for fancy type, requirements on ingredients and amount of each ingredient going into each type, general quality of ingredients and preparation requirements, freedom from artificial coloring, chemical preservatives and foreign matter, to conform to Federal food and drugs act, construction of packing cases.

References.—Definitions, methods of analysis, food regulations. See 010.

019. EGGS

019.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Eggs and Egg Products. Method of sampling for liquid eggs, frozen eggs, powdered dried eggs, flaked and drum dried eggs, methods for determination of total solids, organic and ammoniacal mitrogen, water soluble protein-nitrogen, fat, lipoids, lipoid phosphoric acid, unsaponifiable matter, detection of decomposition, acidity of fat, phosphoric pentoxide, chlorine, identification of added color, detection of whole egg or commer-ciel egg yolk solids, estimation of percentage of egg solids

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 96; 1927.
Rules and Regulations of the Sec. of Agriculture

*References.—Food rules for eggs. See 0
019.2 FROZEN EGGS

Governing the Grading and Certification of But-ter, Cheese, and Eggs for Class, Quality, and Condition. Regulations regarding where service is available, designated central markets, who may obtain grading, form of application, certificates.

019.1 FRESH EGGS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Egg Standardization Leaflet No. 2: 1929. Permissive standards, definitions of 7 standard quality grades for individual eggs as regards condition of shell, air cell, yolk, white, and germ; definitions of 4 tentative buying grades for eggs for use of buyers purchasing from producers, includes a weight item in addition to items above for individual eggs; definitions of 22 tentative wholesale grades for eggs for use in wholesale trade, including items on uniformity of size, permissible amount of off-quality eggs in each grade based on standard quality grades for individual eggs.

individual eggs.
S. Gov., Federal Specifications Board. C-E271; 1931. Eggs. For fresh, storage, and processed (oil treated) eggs, definitions of 4 retail
grades, known as U. S. standards, U. S. extras,
U. S. specials, and U. S. specials infertile, requirements on weight of case, general appearance and quality, development of germ, size of
air cell, visibility of yolk, etc., quality of oil and

processing for processed eggs.

References.—Food regulations. See 010. Grading rules for eggs. See 019.0.

020-029

DAIRY PRODUCTS

021. MILK AND CREAM 021.0 GENERAL ITEMS

American Public Health Assn. and Assn. of Official Agricultural Chemists. Standard Methods of Milk Analysis; 1928. Bacteriological methods of A. P. H. A., including sampling, macroscopic and microscopic counts, methylene blue, sediment tests, etc. Chemical methods of A. O. A. C. for sampling, acidity, solids, ash, nitrogen, casein, albumin, lactose, fat, preservatives, added water,

New England Milk Producers Assn. Price Schedule for Milk; 1928. Included definitions of Class I milk, Class II milk, and cream as regards re-

quired percentages of butter fat.
S. Gov., Congress. Public, No. 625, 60th Cong.;
1927. Federal Importation of milk and cream into the U. S. for the purpose of promoting the dairy industry of the U. S. and protecting the public health. Permissible bacteria in imported milk and cream and pasteurized milk and cream, requirements on health of cows and sanitary condition of dairy.

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1, 1930, of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or mis-branded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoeia and Nat. Formulary

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1.

1930. Regulations for Enforcement of Federal food and drugs act. Act applies to foods and drugs shipped in interstate and foreign commerce, standard methods of analysis to be those of U.S. Pharmacopoeia and Nat. Formulary and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia and Nat. Formulary, regulations on powders, on poisonous and deleterious ingredients, and on colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Insecticide Administration. S. R. A., F. D. av. c., Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Milk. Definitions of milk, pasteurized milk, skim milk, goat's milk, and ewe's milk; homogenized, evaporated, sweetened condensed, and dried milks, malted milk, buttermilk, evapporated and condensed skimmed milk; required content of milk fat or milk solids or both for the various treated milks, permissible moisture in dried milks.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A. I. M., No. 1. 1927. Regulations for the enforcement of the Federal import milk act. For the purpose of the act, covers definitions of milk, cream, condensed milk, and evaporated milk, and pasteurization, regulations regarding examination and tuberculin test of cows, sanitary inspection of dairy farms and plants, permits for importation. Includes text of the act.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C19; 1924. Standard Density and Volumetric Tables. Includes tables and specific gravity and weight per gallon of milk and cream, and volume of milk and cream at various tempera-

tures.

U. S. Gov. Treasury Dept. U. S. Public Health Service. The Standard Milk Ordinance and Code; 1929. Recommended for adoption by cities, includes definitions of milk, cream, buttermilk, pasteurization, of 3 grades of raw milk as regards bacterial count, of 1 grade of pasteurized milk, requirements on permits, inspection of dairy farms and plants, testing, labeling, etc.

021.1 FRESH MILK, INCLUDING PASTEURIZED

American Assn. of Medical Milk Commissions, Inc. Methods and Standards for the Production of Certified Milk; 1931. For certified fresh milk, requirements on general quality and bacterial count, methods of test including methods of Am. Public Health Assn., standards relating to vet-erinary inspection of herds, sanitary inspection of farms and equipment, medical inspection of employees.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Milk. Collection and preparation of sample, determination of solids, ash, total nitrogen, casein, albumin, lactose, fat, amount of added water, presence of gelatin, determination of preservatives, coloring matters, and tentative methods for determination

of specific gravity, acidity. U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A. I. M., No. 1; 1927. Regulations for the enforcement of the Federal import milk act. Includes a definition of fresh milk for the purpose of the act.

U. S. Gov., Federal Specifications Board. C-M-381; 1931. Fresh milk, Requirements on general quality, pasteurization, content of milk solids and of milk fat, permissible bacteria, methods of test as specified by Assn of Official Agri. Chemists.

References.—Definitions, methods of analysis, food regulations, density tables. See also 021.0.

021.2 FRESH CREAM

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Cream Collection and preparation of sample, determination of total solids, ash, total nitrogen, lactose, fat, gelatin, preservatives, coloring matters, and

added water.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cream. Definition of cream, required milk fat, and permissible acid-reacting sub-stances, milk-fat requirement for whipping cream. definition of homogenized cream and of evaporated cream.

U. S. Gov., Federal Specifications Board. C-C-671; 1931. Fresh cream. Requirements on general quality, pasteurization, content of milk fat, per-missible bacteria, freedom from added water and preservative for cream, light cream, and whipping cream, methods of test as specified by Assn.

of Official Agri. Chemists.

References.—Definitions, methods of analysis, food regulations, density tables. See also 021.0.

021.3 BUTTERMILK

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930–1931. Tentative Definitions. Dried Buttermilk Feed. Definition. Tentative permissible content of moisture and of mineral matter (ash), required butterfat content.

Assn. of American Feed Control Officials, Definitions of Feeding Stuffs; 1930–1931. Evaporated Buttermilk Feed, Concentrated Buttermilk Feed, Condensed Buttermilk Feed. Definition, requirements on content of total solids, butterfat, and permissible ash.

References.—Definitions, methods of analysis, food regulations, density tables. See also 021.0.

021.4 CONCENTRATED MILK

021.5 CONDENSED MILK

Assn. of Official Agricultural Chemists. Official And Tentative Methods of Analysis; 1930. Sweetened Condensed Milk. Preparation of sample, determination of total solids, ash, pro-

tein, lactose, fat, sucrose.
U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A. I. M., No. 1; 1927. Regulations for the enforcement of the Federal import milk act. Includes, for the purpose of the act, definitions of condensed milk and of sweetened condensed milk with requirements on percentages of milk solids and milk fat.

U. S. Gov., Federal Specifications Board. 381a; 1927. Dairy Products. Sweetened Condensed Milk. Requirements on manufacture, general quality, content of milk fat and of total milk solids, methods of test as specified by Assn. of

Official Agri. Chemists.

References.—Definitions, methods of analysis, food regulations. See also 021.0

021.6 EVAPORATED MILK

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930 Evaporated Milk (Unsweetened). Preparation of sample, determination of total solids, ash, fat, total nitrogen, casein, albumin, lactose, gelatin,

preservatives, and coloring matters.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A. I. M., No. 1; 1927. Regulations for the enforcement of the Federal import milk act. Includes, for the purpose of the act, definition of evaporated milk with requirements on percentages of milk fat and

total milk solids.

U. S. Gov., Federal Specifications Board. C-M-371; 1931. Unsweetened evaporated milk. Definition, requirements on general quality, content of milk fat and of milk solids, methods of test as specified by Assn. of Official Agri. Chemists.

References.—Definitions, methods of analysis, food regulations, See also 021.0.

021.7 MALTED MILK, MILK POWDER

American Dry Milk Institute. Grading of Dry Skim Milk; 1929. For 3 grades of dry skim milk, requirements on flavor, freedom from impurities, percentage fat, moisture, acidity, solubility index, bacterial count, and sediment for spray dried, vacuum dried, and roller dried product, apparatus and methods of testing.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Dried Milk and Malted Milk, Tentative methods for preparation of sample, for determination of moisture, protein, ash, and fat, microscopical identification of malted milk and its flavored

products.

U. S. Gov., Federal Specifications Board. C-M-341; 1931. Dry Malted Milk. Requirements on manufacture, content of butter fat and moisture, methods of test as specified by Assn, of Official

Agri. Chemists.

U. S. Gov., Federal Specifications Board. C-M-351; 1930. Dry Powdered Milk, Skimmed and Whole. For powdered whole milk, requirements on preparation, bacterial count of pasteurized milk used, content of milk fat and of moisture, color, solubility, acidity and sediment permissible in

reconstituted milk. For powdered skimmed milk, requirements on purity, moisture content, freedom from rancidity.

References.—Definitions, methods of analysis, food regulations. See also 021.0.

021.8 MILK FAT OR BUTTER FAT

021.9 MISCELLANEOUS SPECIFICATIONS FOR MILK AND CREAM

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930-1931. Tentative Definitions. Condensed Soured Skimmed Milk (Feeding). Definition, required content of total solids.

Asso. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930-1931. Dried Skimmed Milk (Feeding), and Condensed Skimmed Milk (Feeding). Definitions, required content of total solids for condensed milk, permissible moisture for dried milk.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Ice Cream (Plain). Preparation of sample, determination of fat, and of nitrogen, tentative method for detection of coloring matter.

References.—Definitions, methods of analysis, food regulations. See also 021.0.

022. BUTTER, CHEESE, AND THEIR SUB-STITUTES

022.0 GENERAL ITEMS

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1. 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoeia and Nat. Formulary.

U. S. Gov., Congress. 43 Stat. 822, 844–845; 1925. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30, 1926. For enabling the Sec. of Agriculture to investigate and certify to shippers and other interested parties the class, quality, and/or condition of cotton, and fruits, vegetables, poultry, butter, hay, when offered for shipment in interstate ship-

ment or received at central markets.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. S. R. A., B. A. E. 96; 1927. Rules and Regulations of the Sec. of Agriculture Governing the Grading and Certification of Butter, Cheese, and Eggs for Class, Quality, and Condition. Regulations regarding where service is available, designated central markets, who may

obtain grading, form of application, certificates.
U. S. Gov., Dept. of Agriculture. Food, Drug, and
Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for enforcement of Federal food and drugs act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U. S. Pharmacopoeia and Nat. Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia and Nat. Formulary, regulations on powders, on poisonous and deleterious ingredients, and on colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

022.1 BUTTER

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. But-Sampling, determination of moisture, fat, casein, ash, salt, preservatives, coloring matters, microscopic examination.

Pacific States Butter, Egg, Cheese and Poultry Assn. Butter Standards; 1927. Composition and weight to conform to Federal and State requirements, definitions of 4 grades of butter on basis of flavor, body, color, salt, and package, specifica-

tion for standard butter cube.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A. Markets 51; 1919. The Inspection of Butter under the Food Products Inspection Law. Permissive standards for inspection of butter, grade indicated by numerical score dependent on flavor, body, color, salt, and package, for dairy butter, creamery butter, and process or renovated butter, definitions and maximum scorings for each of above qualities, definitions of 3 grades of ladled butter and 3 grades of packing stock butter, methods of judging butter.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Butter. Definition as fixed by act of Congress of Mar. 4, 1923, required percentage

of milk fat.

. S. Gov., Federal Specifications Board. C-B-801; 1931. Butter. For 2 grades of butter made from cream and for 1 grade made from pasteurized cream, requirements on content of moisture. basis of scoring and required score for flavor, body, color, salt. and package, testing in accordance with methods of Assn. of Official Agri. Chemists.

References.—Food regulations. See 022.0. Renovated butter. See 022.2.

022.2 RENOVATED BUTTER

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Renovated Butter and Oleomargarine. Tentative tests by foam test and melted fat test for distinguishing from true butter.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics, S. R. A. Markets 51; 1919. The Inspection of Butter under the Food Products Inspection Law. Permissive standards for inspection of butter, grade indicated by numerical score dependent on flavor, body, color, salt, and package for process or renovated butter and other types of butter.

References .- Food regulations. See 022.0.

022.3 BUTTER SUBSTITUTE

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Renovated Butter and Oleomargarine. Tentative tests by foam test and melted fat test to distinguish from true butter.

U. S. Gov., Congress. Stat. Public No. 540; 1930. Amendment to Act Defining Butter, Taxing and Regulating Oleomargarine of 1886. Requires that all substances made in imitation of butter, or intended to be sold as butter, or churned or mixed with cream, milk, water, shall be known and designated as "oleomargarine."

U. S. Gov., Federal Specifications Board. EE-0-451; 1930. Oleomargarine. For type A containing animal fats and for type B containing no animal fats, requirements on general quality of product, kinds and amount of ingredients, permissible salt and moisture in type A, permissible fat and moisture in type B, packing requirements.

References .- Food regulations. See 022.0.

022.4 CHEESE

022.40 General Items

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Cheese. Selection and preparation of sample, determination of moisture, ash, salt, nitrogen, acidity, fat, and tentative methods for determination of coloring matter, tartaric acid and citric acid.

022.41 Whole Milk Cheese

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Office of Secretary Circular 157; 1923. Handbook for Use in the Inspection of Whole-Milk American Cheese under the Food Products Inspection Law. Permissive standards for cheese in which quality is determined by definition and indicated by a score with maximum ratings set for flavor, body and texture, finish and appearance, and color, definitions of various grades of above qualities with scoring range, regulations stating where cheese may be inspected, who may apply for inspection, form of application, issuing of certificates, and fees.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2, 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Whole Milk or Partly Skimmed Milk Cheese. General definitions and descriptions of edam, emmenthaler, camembert, brie, and parmesan cheeses, required percentages of milk fat in emmenthaler or swiss cheese and in

camembert cheeses.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2, 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Whole Milk Cheese. General definitions including required percentage of milk fat and permissible water for cheddar, American, American cheddar, pineapple, limburger, brick, gouda, neufchatel, cream cheeses, general definition and description of stilton, roquefort, and gorgonzola cheeses.

References.—Methods of analysis. See 022.40. See also American (cheddar) cheese. 022.45.

022.42 Full Cream Cheese

022.43 Edam Cheese

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Edam Cheese. General definition and description.

References .- Methods of analysis. See 022.40.

022.44 Camembert Cheese

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Camembert Cheese. General definition, required percentage of milk fat.

References .- Methods of analysis. See 022.40,

022.45 American (Cheddar) Cheese

U. S. Gov., Federal Specifications Board. C-C-271; 1931. Cheese. For cheddar, American, or American cheddar cheese, requirements on use of whole milk for manufacture, content of moisture and of butter fat, required scoring based on flavor, texture, and body, color, finish, and appearance, for U. S. Fancy grade and U. S. No. 1 grade, methods of test as specified by Assn. of Official Agri. Chemists.

References.—Methods of analysis. See 022.40. See also whole milk cheese. 022.41.

022.49 Miscellaneous Specifications for Cheese

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Pasteurized Cheese and Emulsified Cheese. General definitions for each, permissible amount of emulsifying agent for emulsified cheese, permissible water and required milk fat in emulsified cheedar cheese.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Skimmed Milk Cheese. Cottage cheese, or schmierkase, general definition and

method of preparation.

References .- Methods of analysis. See 022.40.

030-039

031. FRESH FISH

U. S. Gov., Federal Specifications Board. PP-P-381; 1931. Fresh Fish. For 4 types, fresh, chilled, regular frozen, and quick process frozen, requirements on general quality, requirements on temperature and duration of freezing of the quick freezing process and shipment to destination without other refrigeration.

034. FISH, SALTED OR DRY CURED

U. S. Gov., Federal Specifications Board. PP-F-401; 1931. Salted or Smoked Fish, Specie and size to be specified in order, requirements on general quality, freedom from artificial coloring, preservatives, and impurities, freedom from recognized defects peculiar to the variety.

References.—Definitions, methods of analysis, food regulations. See 010.

FISH

035. CANNED FISH

035.1 CANNED CODFISH AND HADDOCK U.S. Gov., Federal Specifications Board.

U. S. Gov., Federal Specifications Board. PP-F-371; 1931. Canned Flaked Fish. For codfish, haddock, and codfish and haddock, requirements on general quality, freedom from artificial coloring, adulteration, and impurities, freedom from bones and discoloration, to be corned and flaked, construction of packing boxes.

References.—Definitions, methods of analysis, food regulations. See 010.

035.2 CANNED SALMON

U. S. Gov., Federal Specifications Board. PP-S-31; 1931. Canned Salmon. For 5 types, chinook, red, coho, pink and chum, requirements on general quality, freedom from artificial coloring, preservatives, and impurities, softness requirements for bones, color according to type, etc.

References .- See references under 035.1.

035.3 CANNED SARDINES

U. S. Gov., Federal Specifications Board. PP-S-51; 1931. Canned Sardines. For type commercially known as quarter oils of either fancy or standard grades, requirements on acceptable methods of preparation, general quality, uniformity of size, freedom from red feed, softness of bones, number per can, filling with vegetable oil, packing box construction.

References .- See references under 035.1.

035.4 CANNED FISH FLAKES

References.-Flaked codfish and haddock. See 035.1.

035.5 CANNED HERRING

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24. 1920. Item 321. Weights of River Herring Roe in Cans of Various Sizes. Requirements under food and drugs act regarding drained weights of contents for 2 sizes of cans.

References .- See references under 035.1.

035.6 CANNED TUNA

U. S. Gov., Federal Specifications Board. PP-T-771; 1931. Tuna Fish. Canned. Requirements on freedom from artificial coloring, preservatives, and impurities, general quality of meat, cooking and separation of light meat, addition of vegetable oils, to conform to Federal food and drugs act.

References .- See references under 035.1.

035.7 CANNED MACKEREL

035.8 CANNED ANCHOVIES

036. FRESH SHELLFISH

036.1 OYSTERS

U. S. Gov., Federal Specifications Board. PP-0-956; 1931. Fresh oysters. For commercial grade "selects," requirements on general quality, size, weight, freedom from water and chemical preservatives, permissible bacillus coil as determined by methods of American Public Health Assn.

References.—Definitions, methods of analysis, food regulations. See 010.

036.2 CLAMS

U. S. Gov., Federal Specifications Board. PP-C-401; 1931. Fresh clams. For hard shell clams with shells removed, and for soft shell claims, requirements on size, general quality, freedom from added water and chemical preservatives, methods of analysis as specified by Assn. of Official Agricultural Chemists.

References .- See references under 036.1.

036.3 CRAB MEAT

U. S. Gov., Federal Specifications Board. PP-C-656; 1931. Fresh crab meat. For meat made from hard shell crabs, lump, flake, and claw types, requirements on general quality. freedom from chemical preservatives, particles of shell, etc., methods of analysis as specified by Assn. of Official Agri. Chemists.

References .- See references under 036.1.

036.4 LOBSTERS

037. CANNED SHELLFISH

037.1 CANNED SHRIMP

U. S. Gov., Federal Specifications Board. PP-S-311; 1931. Canned Shrimp. For wet pack and dry pack types, requirements on culling, peeling, washing, freedom from discolored and defective shrimp, use of light brine for wet pack type.

References.—Definitions, methods of analysis, food regulations. See 010.

037.2 CANNED CRAB MEAT

U. S. Gov., Federal Specifications Board. PP-C-651; 1931. Crab Meat, Canned. For sound hard shelled crabs cooked alive and canned, requirements on freedom from chemical preservatives, grit, adulterants, and pieces of shell, to be wholesome and sanitary, to conform to Federal food and drugs act, packed in tin cans, with or without shells.

037.3 CANNED LOBSTERS

037.4 CANNED OYSTERS

U. S. Gov., Federal Specifications Board. PP-0-951; 1931. Oysters, Canned. To be of commercial type known as cove, requirements on general quality of oysters and of liquor, to conform to Federal food and drugs act, to be prepared for market under inspection of State or Federal authorities.

039. MISCELLANEOUS FISH PRODUCTS

039.1 CAVIAR

039.2 ANCHOVY PASTE

039.3 CLAM JUICE

039.4 FEEDS OF FISH MEAL

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For crab meal and shrimp meal, tentative definitions when used as feeding stuffs.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definitions of fish meal and of fish residue meal.

References .- Definitions, methods of analysis. See

040-049 ANIMAL AND FISH OILS, FATS, AND GREASES

040. GENERAL ITEMS

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Sulfonated (Sulfated) Oils. Official methods for determination of moisture, ash, and unsaponifiable matter, provisional methods for determination of total alkali, combined SO, combined and free fatty acids, free fatty acids, ammonia, sodium sulfate and sodium carbonate in ash, total salts and impurities, neutralized combined SO, sodium as soap, total and neutral fatty matter.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Oils, Fats, and Waxes. Preparation of sample, determination of apparent specific gravity, index of refraction, melting point of fats, titer test, iodine absorption number, saponification number, soluble acids, insoluble acids, free fatty acids, acetyl value, unsaponifiable residue, cottonseed oil, amount of peanut oil and sesame oil, cold test, tentative methods for determination of cholesterol and phytosterol, presence of resin oil, de-

tection of foreign fats containing tristearin in lard, detection of fish oils in presence of vegetable oils, detection of coloring matters.

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906 as amended. (For text see S. R. A., F. D. No. 1. 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs. confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoeia and Nat. Formulary.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for Enforcement of Federal Food and Drugs Act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U.S. Pharmacopoeia and Nat. Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U.S. Pharmacopoeia or Nat. Formulary, regulations on powders, on poisonous and deleterious ingredients, and on colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

041. ANIMAL OILS

041.1 WHALE AND SPERM OIL

041.2 OLEO OIL

041.3 LARD OIL

U.S. Gov., Federal Specifications Board, 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Lard Oil. For lubrication of pipe cutting and threading tools, free from impurities, requirements on specific gravity, water content, pour point, flash point, viscosity, saponification number, amount of free fatty acid and sediment, methods of test.

References.—Methods of analysis, food regulations. See 040. Other cutting oils. See 504.7.

041.4 NEAT'S-FOOT OIL

042. FISH OILS

042.1 COD OIL

042.2 COD LIVER OIL

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Cod Liver Oil. Description and properties, source, preparation and standard strengths of triturations.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cod Liver Oil. Physical properties, identity tests, test requirements for purity and for vitamine A potency, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References .- Methods of analysis, food regulations. See also 040.

042.3 HERRING AND MENHADEN OIL

043. ANIMAL FATS AND GREASES

043.0 GENERAL ITEMS

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Hard Greases. Provisional methods for determination of melting point, titer test, unsaponifiable matter, and free fatty acids

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Moellons, Provisional methods for determination of moisture, ash, unsaponifiable matter, oxidized fatty acids, and free fatty acids.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment: 1928. Standard Packs. For domestic lard and shortening, standard consumer packages by weight, required number to pack in one shipping container, for 1-pound carton and several sizes of cans.

U. S. Gov., Dept. of Agriculture. Bureau of Animal Industry. B. A. I. Order 211-revised; 1922, with amendments. Regulations Governing the Meat Inspection of U. S. Dept. of Agriculture. For lard, lard substitutes and lard com-pounds entering into interstate or foreign commerce, mandatory requirements on disallowance of added water.

043.1 TALLOW

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A., 1926. Prepared Suet (Mutton Suet). For medical purposes, physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopeial Convention (Inc.). Pharmacopeia of U. S. A.; 1926. Wool Fat. Physical properties, identity tests, test requirements for purity, for medicinal purposes. Recognized as standard in enforcement of Federal food and drugs act

References.—Methods of analysis. See also 043.0. Food regulations. See 040., 043.0.

043.2 LARD

New York Produce Exchange. Rules Regulating Transactions in Lard; 1911. Prime Steam Lard Standard. Requirements on material and method of production of lard, unsalted, and rendered in conformity with the rules and regulations of U.S. Dept. of Agriculture.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. B. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Lard, Definition, permissible content of substances other than fatty acids and fat, required freedom from rancidity. Definitions of leaf lard and neutral lard. Used in enforcing food and drugs act.

U. S. Gov., Federal Specifications Board, PP-L-101; 1931. Lard. For refined steam lard and open-kettle-rendered lard, requirements on purity and general quality of lard and on general quality of hog fat used.

U. S. Pharmacopæial Convention (Inc.). Pharmacopæia of U. S. A.; 1926. Lard. For use in preparation of benzoinated lard, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act

References.-Methods of analysis, standard pack. See also 043.0. Food Regulations. See 040., 043.0.

043.3 LARD COMPOUNDS AND LARD SUBSTI-THITES

U. S. Gov., Federal Specifications Board. EE-L-101; 1931. Lard Substitutes (Including Vegetable Shortening). For one type derived from vegetable origin only, and for one type containing not more than 80 per cent vegetable oil and not less than 20 per cent of oleo stearin, require- | ments on general quality of vegetable oil used, freedom of the product from rancidity, foreign odor, and added water.

References.—Methods of analysis, standard pack. See also 043.0. Food-Regulations. See 040., 043.0. Vegetable shortening. See also 142.95.

045 STEARINE AND STEARIC ACIDS

U. S. Pharmacopæial Convention (Inc.). Pharmacopeia of U. S. A.; 1926. Stearic Acid. For medical purposes, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

046. ANIMAL WAXES

American Railway Assn., Telegraph and Telephone Section. 2-G-26; 1927. Beeswax Compound. For use in moisture-proofing ends of textile insulated cables, half beeswax and half paraffin or cerasin, general purity requirements, test requirements for congealing point,

U. S. Pharmacopœial Convention (Inc.). Pharmacopœia of U. S. A.; 1926. Beeswax. For medical purposes, physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and

drugs act.

HIDES AND SKINS (RAW) EXCEPT FURS 050-059

051. CATTLE HIDES AND SKINS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Schedules of Market Classes and Grades of Hides and Skins; 1928. Definitions of veal skins, calf skins, kip skins, steer hide, cow hide, bull hide, stag hide, packer hides, butcher and country hides, weight classification for above classes, definitions of 4 grades in each class as regards color, salt condition, permissible cuts, damaged areas and defects.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. Tentative Market Classes and Grades of Kips and Calfskins: 1931. Definitions and weight classification of kips and calfskins, definitions of 4 classes of green salted kips and calfskins as regards quality of salting, definitions of 4 quality grades for each class includ-ing permissible holes, cuts, mangy areas, and

other defects.

052. HORSE HIDES

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Schedules of Market Classes and Grades of Hides and Skins; 1928. For renderers and country horse hides, definitions of 4 grades as regards color, salt condition, permissible cuts, damaged areas, and other defects.

053. SHEEP SKINS, RAW

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. Tentative Schedules of Market Classes and Grades of Hides and Skins; 1928. Sheep Skins. For pelts, lambs, shearlings, and clips, definitions of 4 quality grades for each of above classes, requirements on color, soundness of grain, salt condition, permissible defects and damaged areas.

060-069

LEATHER AND LEATHER MANUFACTURES

060. GENERAL ITEMS

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Chrome Tanned Leathers. Provisional methods of location and size of cuttings and preparation of samples, provisional methods for determination of moisture, total ash, petroleum ether extract, nitrogen, hide substance, chromium, barium, iron, and aluminum, sulphates, and basicity.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Vegetable Tanned Leathers. Provisional methods for location and size of cuttings and preparation of composite sample, official methods for determination of moisture, total ash, insoluble ash, petroleum ether extract, nitrogen, hide substance, water solubles, combined tannin, glucose, provisional methods for determination of magnesium sulphate and mineral acidity.

phate and mineral acidity.

Assn. of Official Agricultural Chemists. Official
and Tentative Methods of Analysis; 1930.
Leathers, Tentative Methods. Essentially the
same as those of Am. Leather Chemists Assn.
For vegetable tanned leather, preparation of
sample, determination of moisture, total ash,
insoluble ash, ether extract, acidity, water-soluble material, glucose, soluble solids, soluble nontannins, soluble tannin, nitrogen, hide substance,
combined tannin. combined tannin.

069.1 ATHLETIC GOODS OF LEATHER

American Physical Education Assn., National Section on Women's Athletics. Women's Official Basket Ball Rules; 1930. (Publ. No. 17R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Ball. To consist of rubber bladder with round leather case, required circumference and weight, tolerances.

Amateur Athletic Union of the U. S. Official Athletic Rules; 1931. Publ. No. 117R of Ameri-can Sports Publishing Co., 45 Rose St., New York, N. Y. Volley Ball. For rubber bladder ball covered with leather case, requirements on cir-

cumference and weight limits.

Amateur Athletic Union of the U. S. Official Athletic Rules; 1931. Publ. No. 117R of Ameri-can Sports Publishing Co., 45 Rose St., New York, N. Y. Water Polo Ball. For inflated leather covered ball, requirements on circumference, waterproofness, absence of grease and strapped

American Physical Education Assn., National Section on Women's Athletics. Official Soccer Rules for Women; 1930. (Publ. No. 116R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Ball. For inflated ball, required rubber bladder, leather casing, standard circumference and tolerance.

american Physical Education Assn., National Section on Women's Athletics. Volley Ball Rules for Girls and Women; 1930. (Publ. No. 115R American Sports Publ. Co., 45 Rose St., N. Y.) Volley Ball. For round ball with rubber bladder and leather case, requirements on circumference, weight, and inflation pressure.

weight, and inhanton pressure.

Joint Basketball Rules Committee representing
Y. M. C. A., Amateur Athletic Union, and Nat.
Collegiate Athletic Assn. Official Basketball
Rules; 1931-32. (Publ. No. 700X of Am. Sports
Publ. Co., 45 Rose St., N. Y.) Ball. To consist of rubber bladder and leather cover, requirements on circumference and weight, tolerances.

National Collegiate Athletic Assn. Official Foot Ball Rules; 1930. (Publ. No. 5R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Ball. To be of leather with rubber bladder, requirements on inflation pressure, shape, circumference on long and on short axis, length of long axis, weight of ball, tolerances

National Collegiate Athletic Assn. Rules of Inter-national or Soccer Water Polo. (Publ. No. 91R national or Soccer Water Polo. (Publ. No. 91R of American Sports Publ. Co., 45 Rose St., N. Y.) Ball. For leather covered inflated ball, standard circumference and tolerance, requirements on waterproofness and freedom from grease.

National Collegiate Athletic Assn. and Intercollegiate Soccer Football Assn. of America. Laws of Game of Soccer; 1930. (Publ. No. 108R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Ball. Outer casing to be of leather, required circumference and weight of round ball, tolerances.

American Institute of Baking. Standards and Definitions of Food and Materials. Bulletin No. 3; 1921. Definitions and standards promulgated by Dept. of Agriculture for materials used by the baker.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Plants. Methods for determination of sand and silica, calcium, magnesium, manganese, sodium and potassium, copper, zinc, sulphur, phosphorus, chlorine, total nitrogen, and tentative methods for moisture, ash, iron, aluminum, arsenic, sugars, sucrose, starch, ether extract, and crude

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1. 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal Food and Drugs Act. An act to prevent the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U.S. Pharmacopoeia and Nat. Formulary.

U. S. Gov., Congress. 39 U. S. Statutes at Large, p. 482. U. S. Grain Standards Act of Aug. 11, 1916. Gives authority to the Secretary of Agriculture to fix and establish standards for grains and requires the use of these standard grades in the shipment in interstate or foreign trade of

grain sold by grade.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Dept. Bull. No. 1375; 1927. The Brown-Duvel Moisture Tester and How to Operate It. Specified as the official method for determining the moisture content of grains for which official standards have been established. Construction specifications, how to make a moisture test, standardizing the moisture tester,

drawing and handling samples, etc.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for Enforcement of Federal Food and Drugs Act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U. S. Pharmacopoeia and Nat. Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia or Nat. Formulary, regulations on powdering, on poisonous and deleterious ingredients, and on colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

U. S. Gov., Dept. of Agriculture. Office of Secretary-Circular 70; 1920. Regulations of the Secretary of Agriculture under U. S. Grain Standards Act of 1916. Rules relating to licensing of inspectors, duties of inspector, form of inspection certificates, appeals, disputes, etc. cludes a copy of U. S. grain standards act.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Corn, oats, wheat, barley, feed oats, mixed feed oats, rye, and grain sorghums shall conform to one of the U. S. Grades of the U. S. Dept. of Agriculture.

101. BARLEY AND BARLEY PREPARA-TIONS

101.1 BARLEY

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A .- G. I .- Form 90; 1929. Handbook of Official Grain Standards. Barley Standards. For 5 classes of barley, as barley, western barley (2 subclasses), two-rowed barley (2 subclasses), black barley, and mixed barley, definitions of each class and subclass, mandatory requirements on appearance, test weight, percentage of sound barley, permissible damaged grain, oats, foreign material, and other classes of barley for 6 to 9 grades of each class and subclass, definitions of sample grade, definitions and grading rules for mixed, bleached, garlicky, weevily, and smutty barley, test methods.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weights per Bushel of Various Commodities. For barley, weight of a bushel as defined by Federal statutes, also the bushel weight as established by various States.

U. S. Gov., Federal Specification Board, N-B-121; 1931. Pearl Barley. For No. 2 or No. 3 "Pearl' barley, requirements on general quality, in conformity with Federal food and drugs act and decisions, analyses in accordance with methods of Assn. of Official Agricultural Chemists.

References .- Methods of analysis, food regulations, See 100.

101.2 BARLEY FLOUR

102. BUCKWHEAT AND FLAXSEED

102.1 BUCKWHEAT GRAIN

New York Produce Exchange. Buckwheat Standards; 1927. Requirements on percentage of buckwheat of two acceptable varieties, for 4 grades requirements as to coolness, maturity, soundness,

and cleanliness, for tough and damp grades requirements on permissible moisture.

References.—Methods of analysis, food regulations. See 100. Buckwheat mill feed products. See 118.9.

102.2 BUCKWHEAT FLOUR.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Buckwheat Flour. Definition, required percentage of nitrogen, permissible percentages of moisture and ash.

U. S. Gov., Federal Specifications Board, N-F-451; 1931. Buckwheat Flour. Requirements on general quality, permissible moisture and ash, required nitrogen, in conformity with Federal food and drugs act and decisions, analyses according to methods of Assn. of Official Agricultural Chemists.

References.-Methods of analysis, food regulations. See 100.

102.3 FLAXSEED GRAIN

U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weight per Bushel of Various Commodities. For flaxseed (linseed), weight of a bushel as defined by Federal statutes, also the weight established by various States.

References.—Flaxseed oil cake and meal. See 112.1.

103. CORN AND GRAIN SORGHUMS AND PREPARATIONS

103.0 GENERAL ITEMS

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Alcoholic Acidity of Corn. Standard method for determination of.

103.1 CORN

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A.-G. I.-Form 90; 1929. Handbook of Official Grain Standards. Shelled Corn Standards. For 3 classes, white, yellow, and mixed corn, definitions of each class, mandatory requirements on minimum test weight. permissible moisture, foreign material, and damaged corn, definition of sample grade, definition of weevily corn and method of grading, test methods.
- U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weights per Bushel of Various Commodities. For corn, cracked or shelled, weight of a bushel as defined by Federal statutes, also the weight established by various States

References.-Methods of analysis, food regulations. See 100, 103.0.

103.2 CORN FLOUR

103.3 STARCH

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 44. To Prepare Corn Starch for Lace Curtains. Requirements on mixing corn starch with water, proportions of each, heating.

U. S. Gov., Federal Specifications Board, N-C-541: 1931. Corn starch. Requirements on general quality and permissible moisture in conformity with Federal food and drugs act and decisions, analyses in accordance with methods of Assn. of Official Agricultural Chemists, construction of packing boxes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Starch. For medicinal purposes, description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References .- Methods of analysis, food regulations. See also 100.

103.4 CORN MEAL, CORN GLUTEN FEED AND MEAL

Assn. of American Feed Control Officials. tions of Feeding Stuffs; 1930-1931. Tentative Definitions. Corn Meal (Feeding), Corn Feed Meal. Definitions of each.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For corn products, definitions of ear corn chops, corn meal, corn bran, gluten feed, hominy feed, corn oil cake, etc.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Corn feed meal, corn gluten feed. Requirements on general quality, conforming to definition given by Assn. of Am. Feed Control Officials.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Maize Meal. Definition of maize or corn meal, required percentage of nitrogen, permissible moisture and ash.

S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Corn gluten meal. Requirements on general quality, conforming to definition given by Assn. of American Feed Control

U. S. Gov., Federal Specifications Board. N-C-521; 1931. Cornmeal (White or Yellow). Requirements on general quality, permissible moisture and ash, required nitrogen, in conformity with Federal food and drugs act, analyses in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Methods of analysis, food regulations. See 100, 103.0. Corn oil cake, corn oil meal, corn germ cake, corn germ meal. See 112.9.

103.5 GRAIN SORGHUMS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A.-G. I.—Form 90; 1929. Handbook of Official Grain Standards. Grain Sorghums Standards. For 9 classes, as kafir (2 subclasses), milo (2 subclasses), durra (2 subclasses), feterita, darso, freed sorgo, brown kaoliang, shrock kafir, and shallu, definitions of class and subclass, mandatory requirements on condition and appearance, test weight, permissible moisture, damaged kernels, other grains, and foreign material, for 4 grades of each class and subclass, definition of sample grade, definitions and grading rules for mixed, weevily, and smutty grain sorghums, test methods.

References.—Methods of analysis, food regulations.

105. RICE AND RICE PRODUCTS

105.1 RICE

Rice Millers Assn. Milled Rice, Brown Rice, and Rough Rice. This Assn. has adopted the official standards of the U. S. Dept. of Agriculture.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A.-G. I. Form No. 179; 1928. Handbook of Official Standards for Milled Rice, Brown Rice, and Rough Rice. Permissive standards, for brown rice and for rough rice, definitions for 8 classes, such as honduras, edith, etc., definitions of 3 grades of brown rice and of 5 grades of rough rice as regards permissible cereal grains, seed, mud, damaged and broken kernels, per cent of moisture, definitions of sample and weevily grades, sampling and test methods.

U. S. Gov., Federal Specifications Board. N-R-851; 1931. Rice. Includes the classes short grain, long grain, and round grain, with types acceptable under each class, for the grades U. S. No. 1 uncoated and U. S. No. 2 uncoated, definitions of grades in conformity with definitions of the U. S. Dept, of Agriculture given in Handbook of Official Standards for Milled Rice, Brown Rice, and Rough Rice.

References.—Methods of analysis, food regulations. See 100. Rice feeding stuffs. See 119.5.

106. RYE AND RYE PREPARATIONS

106.1 RYE

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A.—G. I.—Form 90; 1929. Handbook of Official Grain Standards. Rye Standards. Definition of rye, mandatory requirements on test weight, permissible moisture, damaged kernels, and foreign material, for 4 grades, definition of sample grade, definitions and grading rules for garlicky, weevily, ergoty, and smutty rye, test methods.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weight per Bushel of Various Commodities. For rye, weight of a bushel as defined by Federal statutes, also the weight as established by various States.

References.-Methods of analysis, food regulations. See 100.

106.2 RYE FLOUR

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Rye Flour. Definition, required percentage of nitrogen, permissible percentages of moisture and ash.

References.-Methods of analysis, food regulations. See 100.

106.9 MISCELLANEOUS SPECIFICATIONS FOR

References .- Rye products as mill feeds. See 118.9.

107. WHEAT AND PREPARATIONS FROM WHEAT

107.0 GENERAL ITEMS

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Determination of Smutty Wheat, Methods for Detecting Sulphur Bleached Grain. Standard procedure for determination.

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Enzymic Determinations. Requirements for determination of catalase activity, diastatic value of flour, proteolytic activity of wheat and flour.

107.1 WHEAT

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Wheat. Requirements on sampling and methods for determination of moisture, ash, acidity, protein, amino acids, water soluble nitrogen, distribution of nitrogen, starch, sugars, sucrose, crude fat, crude fibre, carbohydrates, and nitrogen-free extract.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A.—G. I.—Form 90; 1929. Handbook of Official Grain Standards. For hard red spring wheat, durum wheat, hard red winter wheat, soft red winter wheat, and white wheat, definitions of 2 and 3 classes under each of above varieties as regards percentages of certain type kernels, mandatory requirements on minimum test weight, permissible moisture, damaged kernels, foreign material, and other wheat varieties, for 5 grades of each class, definitions of sample grade, test methods.

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. G. S. A.—G. I.—Form 90; 1929. Handbook of Official Grain Standards. Includes mandatory grades for mixed wheat, mixed durum, treated, garlicky, smutty, and weevily wheat, definitions of each of above types and method of grading and designating grade, test methods.
- U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weight per Bushel of Various Commodities. For wheat, weight of a bushel as defined by Federal statutes, also the weight as established by various States.

References.—Methods of analysis, food regulations. See also 107.0, 100. Wheat and wheat products as feeding stuff. See also 118.1, 118.2, 118.3, Flour. See 107.2, 107.3, 107.4.

1072 GLUTEN FLOUR.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 1; 1928. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Gluten Flour and Ground Gluten. Definitions, required percentage of nitrogen, permissible percentages of moisture, nitrogen-free extract, and starch for each,

References.—Methods of analysis, food regulations. See 107.0, 107.3, 100.

1073 WHEAT FLOUR

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Wheat Flour. Requirements on sampling, on determination of moisture, ash, acidity, buffer value, protein, glutenin, water soluble nitrogen, amino nitrogen, gluten quality, cold water extract, starch, sugars, crude fat, crude fiber, gasoline color value, pekar color test, bacteria, nitrite nitrogen, qualitative and quantitative test of chlorine bleached flour.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Wheat Flour. Determination of moisture, ash, fat,, ether extract, crude fiber, protein, hydrogen ion concentration, lipoids, and tentative methods for determination of acidity of water extract, sugars, alcohol soluble proteins, albumin and amino nitrogen, gluten, chlorine, nitrite nitrogen,

gasoline color value, starch.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Flour, White Flour, Wheat Flour. Definition, required percentage of nitrogen, permissible percentages of moisture, ash, and fiber.

U. S. Gov., Federal Specifications Board, N-F-481: 1931. Wheat Flour. For hard wheat flour, blended flour, and soft wheat flour, requirements on general quality of wheat and of flour, permissible moisture and ash, required protein, and for the hard wheat flour required absorption, in conformity with Federal food and drugs act, analyses in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Gluten flour. See also 107.2. Whole wheat flour. See also 107.4. Methods of analysis, food regulations. See also 107.0, 100. Purified middlings, semolina, and farina. See 109.7. Flour mill feeds. See 118.3.

107.4 WHOLE WHEAT (GRAHAM) FLOUR

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. '2; 1931. Definitions and Standards for

Food Products. Whole wheat Flour, Graham Flour. Definition, used in enforcing Federal food and drugs act.

U. S. Gov., Federal Specifications Board, N-F-461: 1931. Graham Flour (Whole Wheat Meal). Requirements on general quality of wheat used as source, permissible moisture, ash, and crude fiber, required protein, in conformity with Federal food and drugs act and decisions, analyses in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Methods of analysis, food regulations. Sec 100, 107.0, 107.3.

107.5 PASTRY FLOUR

108. BREAD AND BAKING PRODUCTS 108 0 GENERAL ITEMS

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products: 1928. Alimentary Pastes. Requirements on preparation of sample, on determination of moisture, ash, chlorides in ash, organic and ammoniacal nitrogen, water soluble protein, fat, lipoids and lipoid phosphoric acid.

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Bread, Requirements for preparation of sample, determination of moisture, ash, acidity,

crude protein, crude fat, and sugars.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Alimentary Pastes. Methods for preparation of sample, determination of moisture, ash, chlorides in ash, water-soluble protein nitrogen, fat, lipoids, identification of added color, of whole egg or commercial yolk solids, determination of egg solids.

soilus.
Assn. of Official Agricultural Chemists. Official
and Tentative Methods of Analysis; 1930.
Bread. Methods for determination of total solids, ash, protein, crude fiber and fat, tentative baking test.

108.1 BREAD AND ROLLS

American Institute of Baking. Bread Score Report. Undated. An itemized sheet for scoring loaf bread with standard scores for volume, color of crust, symmetry, evenness of bake, break and shred, character of crust, grain, color of crumb, texture, flavor, and taste.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Boston Brown Bread. Definition, ingredients and usual leavening agents, used in enforcing the Federal food and drugs act.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Raisin Bread. Definition, permissible content of edible farinaceous sub-stances in the flour ingredient, required content of raisins, used in enforcing Federal food and drugs act.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. White Bread. Definition, permissible content of edible farinaceous substance

missible content of edible tarinaceous substance in the flour ingredient, permissible moisture, used in enforcing Federal food and drugs act. U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Whole Wheat Bread, Graham Bread, Definition including permissible amount

of moisture, used in enforcing Federal food | 108.44 Vermicelli and drugs act.

U. S. Gov., Federal Specifications Board. EE-B-671; 1931. Bread and Rolls. For white wheat bread, pan style, for wheat bread, Vienna style, for graham bread, for rye bread, and for rolls, white or graham, requirements on purity and freshness of ingredients, general quality of product, proportions of white flour in graham bread and of rye flour in rye bread to conform to local commercial practice, product to conform to Federal food and drugs act.

References.-Methods of analysis, food regulations. See 108.0, 100. Flour. See 107.3.

108.2 CAKES

108.3 CRACKERS

U. S. Gov., Federal Specifications Board. EE-C-651; 1931. Soda Crackers. For salted or unsalted variety, requirements on use of sound flour free from smut, freedom from rancidity, staleness, or foreign odor, to be crisp and of good flavor, to conform to Federal food and drugs act.

References .- See references under 108.1.

108.4 MACARONI, NOODLES, SPAGHETTI, AND VERMICELLI

108.41 Macaroni

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Macaroni. Definitions of macaroni and of semolina macaroni, kinds of materials used in making, permissible percentage of moisture.

U. S. Gov., Federal Specifications Board. 1929. Spaghetti, Macaroni, and Vermicelli. For solid or tubular stem, in conformity with Federal food and drugs act and subsequent decisions, of American manufacture, requirements on approximate dimensions, percentage of protein, permissible moisture, analysis in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Methods of analysis, food regulations. See 108.0, 100. Flour. See 107.3.

108.42 Noodles

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Noodles. Definitions of egg noodles and of water noodles, egg content requirements for egg noodles, permissible percentage of moisture.

References .- See references under 108.41.

108.43 Spaghetti

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Spaghetti. Definitions of spaghetti and of semolina spaghetti, kinds of materials used in making, permissible moisture content.

U. S. Gov., Federal Specifications Board. S. Gov., Federal Specifications Board. 648a;
 1929. Spaghetti, Macaroni, and Vermicelli. For solid or tubular stem, in conformity with Federal food and drugs act and subsequent decisions, of American manufacture, requirements on approximate dimensions, percentage of protein, permissible moisture, analysis in accordance with methods of Assn. of Official Agricultural Chemists.

References .- See references under 108.41.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2, 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Vermicelli. Definitions of vermicelli and of semolina vermicelli, kinds of ma-terials used in making, permissible percentage of moisture.

U. S. Gov., Federal Specifications Board. 648a; 1929. Spaghetti, Macaroni, and Vermcelli. For solid or tubular stem, in conformity with Federal food and drugs act and subsequent decisions, of American manufacture, requirements on approximate dimensions, percentage of protein, permissible moisture, analysis in accordance with methods of Assn. of Official Agricultural Chemists.

References .- See references under 108.41.

108.5 DIABETIC FOOD

References .- Gluten flour. See 107.2.

108.9 MISCELLANEOUS SPECIFICATIONS FOR BAKING PRODUCTS

U. S. Gov., Federal Specifications Board. EE-B-351; 1931. Biscuit (Hard Bread) or Canned Biscuit. Requirements on freedom from artificial coloring, preservatives, and impurities, general quality of flour and of wheat used, permissible moisture and salt free ash, to conform to Federal food and drugs act.

References.—Methods of analysis, food regulations. See 108.0, 100. Flour. See 107.3.

109. MISCELLANEOUS GRAIN PREPARA-

109.1 GRITS

References.—Hominy grits. See 109.2. Corn chops and grits for feed. See 119.2.

U. S. Gov., Federal Specifications Board. N-H-521; 1931. Hominy Grits. For fine and for coarse types, made of white corn, hulled and degermed, shall be of good color, sound, bright, and free from smut, conforming to Federal food and drugs act.

U. S. Gov., Federal Specifications Board. N-H-541; 1931. Lye Hominy, Canned. Requirements on quality of corn used, on uniform size, color, and general quality of hominy grains, permissible amount of black tips and discolored grains, to conform to Federal food and drugs act, fill of cans, amount of liquor.

References.—Hominy as stock feed. See 117.2. Methods of analysis, food regulations. See 100. Corn. See 103.1.

109.3 CORN FLAKES, CORN BREAKFAST FOODS

S. Gov., Federal Specifications Board, N-C-191; 1931, Cereals (Breakfast Foods), Includes corn flakes, requirements on preparation and general qualities of product, freedom from rancidity, mustiness, grit, dirt, etc., in conformity with Federal food and drugs act.

References .- Methods of analysis, food regulations. See 100.

109.4 OATMEAL AND ROLLED OATS

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and standards for Food Products. Used in enforcement of food and drugs act. Oatmeal. Definition, required per-centage of nitrogen, permissible percentages of moisture, crude fiber, and ash.

U. S. Gov., Federal Specifications Board. N-O-41; 1931. Oatmeal and Rolled or Flaked Oats. Requirements on general quality of oats from which made, permissible moisture, crude fiber, and ash, and required nitrogen for oatmeal, grade of oats and general quality of product for regular rolled or flaked oats and for the quick variety, to conform to Federal food and drugs act.

 $References. \mbox{--}\mbox{Methods}$ of analysis, food regulations. See 100. Oats. See 104.1.

109.5 PUFFED RICE

U. S. Gov., Federal Specifications Board. N-C-191; 1931. Cereals (Breakfast Foods). Includes prepared rice cereal, processed and puffed, requirements on general quality of product, freedom from rancidity, mustiness, chaff, dirt, grit, etc., in conformity with Federal food and drugs act.

References.—Methods of analysis, food regulations. See 100.

109.6 WHEAT BREAKFAST FOODS

U. S. Gov., Federal Specifications Board. N-C-191; 1931. Cereals (Breakfast Foods). Includes bran flakes, prepared bran, puffed wheat. shredded wheat, wheat cream meal, and whole wheat meal, requirements on preparation, general qualities of product, freedom from rancidity, mustiness, chaff, dirt, grit, etc., in conformity with Federal food and drugs act. Permistible moisture and required protein for wheat

cream meal, permissible moisture and required gluten for whole wheat meal.

References.—Farina. See 109.7. Method of analysis, food regulations. See 100.

109.7 FARINA

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Purified Middlings, Semolina, and Farina. Definitions, permissible moisture.

References.—Methods of analysis, food regulations. See 100., 107.3. Wheat middlings for animal feed. See 118.3.

109.9 MISCELLANEOUS SPECIFICATIONS FOR GRAIN PREPARATIONS

- U. S. Gov., Federal Specifications Board. N-C-191; 1931. Cereals (Breakfast Foods). Includes malted cereal commercially known as grape nuts, prepared from whole wheat flours and barley malt, requirements on preparation, general quality of product, freedom from burnt grains, rancidity, dirt, grit, etc., in conformity with Federal food and drugs act.
- U. S. Gov., Federal Specifications Board. N-T-101; 1931. Tapioca. Covers pearl tapioca and granulated tapioca, shall be sound, white, bright tapioca, conforming to Federal food and drugs act.

References.—Methods of analysis, food regulations. See 100.

110-119

FODDERS AND FEEDS

110. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Plants. Methods for determination of sand and silica, calcium, magnesium, manganese, sodium and potassium, copper, zinc, sulphur, phosphorus, chlorine, total nitrogen, and tentative methods for moisture, ash, iron, aluminum, arsenic, sugars, sucrose, starch, eter extract, and crude fiber.

111. HAY

111.0 GENERAL ITEMS

U. S. Gov., Congress. 43 Stat. 822, 844-845; 1925. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30, 1926. For enabling the Sec. of Agriculture to investigate and certify to shippers and other interested parties the class, quality, and/or condition of cotton, and fruits, vegetables, poultry, butter, hay, when offered for shipment in interstate shipment or received at central markets.

111.1 ALFALFA HAY

National Hay Assn., Inc. Grades of Hay and Straw; 1922. Alfalfa Hay. Definitions of 6 grades with requirements on color, permissible defective hay and foreign matter, baled.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook H. F., S. 540. and Amend. 2; 1929. Handbook of Official Hay Standards. Alfalfa and Alfalfa Mixed Hay, Permissive standards, definitions of 10 classes as regards percentages of various hays and grasses for alfalfa and alfalfa mixed with timothy, clover, grass, johnson, and grain hay, definitions of 3 grades in each class as regards per cent leaves, green color, and foreign material, definitions of extra leafy, leafy, extra green, green, and corarse as special grades.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Includes alfalfa and alfalfa mixed hay, to conform to one of the U. S. grades as promulgated by U. S. Dept. of Agriculture.

References.—Alfalfa meal, See 112.5. Alfalfa mixed hays. See also 111.5.

111.2 CEREAL HAY

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Cereal Hay. Definitions of 3 grades of wheat or oats with permissible amount of rye, baled.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Barley hay. For 2 grades, general quality and color requirements, permissible oat hay, wheat hay, early cut legumes, foreign material and fox tail, age at cutting.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Red oat hay. For 2 grades, requirements on general quality and color, permissible wild oat hay, barley or wheat hay, legumes, injurious material and fox tail, age at cutting.

at cutting.
U. S. Gov., Federal Specifications Board. 25c;
1927. Feeds and Forage. Wheat hay. For 2
grades, requirements on general quality and color,
permissible oat hay, barley hay, early cut legumes, foreign material and fox tail, age at cutting.

References.—Wild oat hay. See 111.99. Cereal mixed hays. See also 111.5.

111.3 BERMUDA HAY

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Bermuda Hay. Definitions of 3 grades including color, permissible native grasses in each, baled.

111.4 CLOVER HAY

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Clover Hay. Definitions of two grades with permissible timothy and other grasses, baled,

New York Produce Exchange. Rules Regulating the Hay and Straw Trade; 1915. Grades of Hay. Clover Hay. Definitions of 2 grades of baled hay, general requirements on color, soundness, sweetness.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook H. F. S. 540 revised and Amend. 2; 1929. Handbook of Official Hay Standards. Timothy and Clover Hay. Permissive standards, definitions of 8 classes dependent on percentages of clover, timothy, and other grasses, definitions of 3 grades for each class dependent upon per cent green color, and amount of foreign material, definitions of coarse, extra green, and sample grades.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Includes clover hay, to conform to one of the U. S. grades as promulgated by U. S. Dept. of Agriculture.

References .- Clover mixed hay, See also 111.5.

111.5 MIXED HAY

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Alfalfa and Johnson Mixed Hay. Definitions of 3 grades with permissible Johnson grass in each grade, baled.

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Alfalfa, Timothy, and Grass Mixed Hay. Definitions of 5 grades with required percentages of constituents for each grade, color,

freedom from fox tail, baled.

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Cereal or Grain and Vetch Hay. Definitions of 3 grades with permissible percent-

age of vetch.

National Hay Assn. (Inc.). Grades of Hay and Straw: 1922. Clover Mixed Hay. Definitions of 6 grades of clover mixed with timothy and other grasses, required amounts of constituents for each grade, baled.

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Mixed Peavine or Soy Bean Hay. Definitions of 3 grades with permissible amounts

of sorghum or crab grass, baled.

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Mixed Timothy and Wild Hay. Definitions of 2 grades with percentages of the two hays in each grade, baled.

New York Produce Exchange. Rules Regulating the Hay and Straw Trade; 1915. Grades of Hay. For clover mixed hay, definitions of 3 grades as regards percentages of clover and timothy, color,

soundness, and baling.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook H. F. S. 540 and Amend. 2; 1929. Handbook of Official Hay Standards. Alfalfa, and Alfalfa, Mixed. Hay Standards. Alfalfa and Alfalfa Mixed Hay. Permissive standards, definitions of 10 classes as regards percentages of various hays and grasses for alfalfa and alfalfa mixed with timothy, clover, grass, Johnson, and grain hay, definitions of 3 grades in each class as regards percentage of leaves, green color, and foreign material, definitions of special grades extra leafy, extra green, coarse, etc.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook H. F. S. 540, and Amend. 2; 1929. Handbook of Official Hay Standards. Johnson and Johnson Mixed Hay. Permissive standards, definitions of 5 classes as regards percentage mixtures of Johnson hay with other grasses, with alfalfa, and with lespedeza, definitions of 3 grades for each class as regards per cent of green color and of foreign matter, definitions for extra green, fine, coarse,

and sample grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricolumnal Economics. Handbook H. F. S. 540 and Amend. 2; 1929. Handbook of Official Hay Standards. Mixed Hay. Permissive standards for mixed hay not covered in other classifications and graded according to the grading rules for the predominating kind.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook H. F. S. 540 and Amend. 2; 1929. Handbook of Official Hay Standards. Timothy and Clover Hay. Permissive standards, definitions of 8 classes as regards percentages of timothy, clover, and other grasses, definitions of 3 grades for each class as regards per cent of green color and of foreign material, definitions of coarse, extra green, and

sample grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. Tentative U. S. Standards for Soybean and Soybean Mixed Hay; 1928. Permissive standards, definitions of 5 classes dependent on percentage of soybean hay and of other grasses and Johnson hay, definitions of 3 grades of each class as regards leafiness, per cent green color, and per cent foreign material, definitions of extra green, leafy, coarse, and sample grades.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Grain and wild oat mixed hay. For 2 grades of red oat and/or wheat hay with 10 to 40 per cent wild oat hay, requirements on general quality and color, permissible barley hay, early cut legumes, foreign material and fox tail, age at cutting.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Includes mixed hay, to conform to one of the U. S. grades as promulgated by U. S. Dept. of Agriculture.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Wild out and grain mixed hay. For 2 grades of hay containing over 40 per cent wild oat and 30 per cent red oat hay and/or wheat hay, requirements on general quality and color, and age at cutting, permissible barley hay and early cut legumes.

111.6 TIMOTHY HAY

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Timothy Hay. Definitions of 3 grades of baled hay, with permissible amount of other grasses and foreign matter.

New York Produce Exchange. Rules Regulating the Hay and Straw Trade; 1915. Grades of Hay. Timothy hay, 6 grades, definitions as regards purity and allowable other grasses, color, sound-

ness, baling.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook of H. F. S. 540 and Amend. 2; 1929. Handbook of Official Hay Standards. Timothy and Clover Hay. Permissive standards, definitions of 8 classes as regards percentages of timothy, clover, and other grasses, definitions of 3 grades for each class as regards per cent of green color and of foreign material, definitions of coarse, extra green, and sample grades.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Includes timothy hay, to conform to one of the U. S. grades as promul-

gated by U. S. Dept. of Agriculture.

References .- Timothy mixed hay. See also 111,5.

111.9 MISCELLANEOUS SPECIFICATIONS FOR HAY

111.91 Johnson Hav

National Hay Assn. (Inc.). Grades of Hay and Straw: 1922. Johnson Hay. Definitions of 3 grades with percentage of mixed hays permitted,

sun bleach, etc., baled.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Handbook H. F. S. 540 and Amend. 2; 1929. Handbook of Official Hay Standards. Johnson and Johnson Mixed Hay. Permissive standards, definitions of 5 classes of Johnson hay and of the mixed hay as regards per cent of other grasses, definitions of 3 grades for each class as regards per cent of green color and of foreign matter, definitions for extra green, fine, coarse, and sample grades.
U. S. Gov., Federal Specifications Board.

1927. Feeds and Forage. Johnson and Johnson mixed hay, to conform to one of the U. S. grades as promulgated by the U. S. Dept. of Agriculture.

References .- Johnson mixed hay. See also 111.5.

111.92 Lespedeza Hay

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Lespedeza Hay. Definitions of 2 grades with permissible percentages of native grasses, baled.

111.93 Prairie Hay

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Prairie Hay. Definitions of 6 grades with permissible percentages of weeds.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. Handbook H. F. S. 540. and Amend. 2; 1929 Handbook Of Official Hay Standards. Prairie Hay. Permissive standards, definitions of 4 classes as regards percentages of upland and midland grasses, legumes, etc., definitions of 3 grades in each class as regards per cent green color and of foreign material, defini-

tions of extra green, coarse, and sample grades.
U. S. Gov., Federal Specifications Board. 25c;
1927. Feeds and Forage. Includes prairie hay,
to conform to one of the U. S. grades as promulgated by U. S. Dept. of Agriculture.

111.94 Peanut Hay

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Peanut Hay. Definitions of 3 grades including permissible amounts of native grasses, foreign matter and dirt, baled.

111.95 Peavine Hav

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Peavine or Soy Bean Hay. Defi-nitions of 5 grades with permissible native grasses or foreign matter.

111.96 Salt or Alkali Hay

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Salt or Alkali Hay. Definitions of 4 grades of baled hay with permissible percentages of weeds for each.

111.97 Sudan Hay

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Sudan Hay. Same as Johnson hay. See 111.91.

111.98 Midland Hay

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Midland Hay. Definitions of 2 grades with permissible amount of weeds.

111.99 Specifications for Hay not Elsewhere Classified

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Packing Hay. Definition.

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Peavine or Soy Bean Hay. Defi-nitions of 5 grades with permissible native grasses or foreign matter.

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Sample Hay. Sound baled hay

not covered by other grades.

U. S. Gov, Dept. of Agriculture. Bureau of Agri-cultural Economics. Handbook H. F. S. 540 and Amend. 2; 1929. Handbook of Official Hay Standards. Grass Hay. Permissive standards, definitions of grass hay and of 3 grades as regards per cent green color and of foreign matter, definitions of extra green, coarse, and sample

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics, Tentative U. S. Standards for Soybean and Soybean Mixed Hay; 1928. Permissive standards, definitions of 5 classes dependent on percentage of soybean hay and of other grasses and Johnson hay, definitions of 3 grades of each class as regards leafiness, per cent green color and per cent foreign material, definitions of

extra green, leafy, coarse, and sample grades. U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Includes grass hay, to conform to one of the U. S. grades as promulgated by U. S. Dept. of Agriculture.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Wild oat hay. For 2 grades of not over 30 per cent of grain hays, requirements on general quality and color, permissible barley hay, early cut legumes, foreign material and fox tail, age at cutting.

112. OIL SEED CAKES AND OIL CAKE MEAL

112.0 GENERAL ITEMS

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definitions of oil

cake, oil meal, and ground oil cake. National Cottonseed Products Assn. Rules; 1930. Rules 96 to 99. Cracked Cake and Screenings. Definitions of 4 size grades, requirements on freedom from meal and screen grading for each grade.

112.1 FLAXSEED (LINSEED) OIL CAKE AND MEAL

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For linseed and flax products, definitions of linseed cake or meal, flax plant by-product, flaxseed meal, flaxseed oil cake and feed, screenings oil feed.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Flaxseed meal. Requirements on general quality, conforming to definition given by Assn. American Feed Control Officials.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Linseed cake or meal. Defi-nition, permissible weed seed and foreign material, protein content to be stated with bid. Includes old process oil meal and new process oil meal types.

References.—General definitions. See also 112.0. Methods of analysis for cottonseed oil cake. See 112.3. Methods of analysis of feeding stuffs. See 117.0. Linseed oil. See 143.1, 813.5, 848.1.

112.2 PEANUT OIL CAKE AND MEAL

Assn. of Feed Control Officials of U. S. Definitions of Feeding Stuffs; 1930. For peanut products, definitions of oil cake, oil meal, and unhulled peanut oil feed. National Cottonseed Products Assn. Rules; 1930.

Rules 94 and 95. Peanut Cake. Definitions of 1 grade as regards odor, required content of crude protein or of combined protein and fat.

National Cottonseed Products Assn. Rules; 1930. Rules 115 and 116. Peanut Meal. Definition of 1 grade as regards grinding, odor, and required content of protein or of combined protein and fat.

National Cottonseed Products Assn. Rules; 1930.
Rules 117 to 119. Whole Pressed Peanuts. Definition of 1 grade as regards manufacture, permissible crude fiber and required protein content.

References.—General definitions. See also 112.0. Methods of analysis of cottonseed oil cake. See 112.3. Methods of analysis of feeding stuffs. See 117.0. Peanut oil. See 135.5, 142.6.

112.3 COTTONSEED OIL CAKE AND MEAL

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Cottonseed Cake, Meal, and Meats. Requirements on determination of moisture, oil, and nitrogen, conversion tables for nitrogen into ammonia and protein, dimensions and design of standard jacketed oven for making moisture determination.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930–1931. Tentative Definitions. Whole Pressed Cottonseed and Ground Whole Pressed Cottonseed. Definitions, each to be designated and sold according to

protein content.

National Cottonseed Products Assn. Rules; 1930. Rules 90 to 93. Cotton Seed Cake. Definition. Definitions of 2 grades as regards grade of meal producible therefrom, definition of 1 export grade as regards color, texture, odor, permissible pro-

tein and fat combined.

National Cottonseed Products Assn. Rules; 1930. Rules 100 to 104. Cotton Seed Meal. Definitions of 2 grades as regards grinding, approximate color, required percentages of protein, ammonia or nitrogen, definition of 1 export grade as regards grinding, odor, approximate color, and required content of protein and fat combined.

National Cottonseed Products Assn. Rules; 1930. Rules 106 to 109. Whole Pressed Cotton Seed. Definitions of 2 grades as regards color, texture,

and required crude protein content.
National Cottonseed Products Assn. Rules; 1930. Rules 244, 245, and 272. Cottonseed Cake, Meal and Meats. Methods of sampling and chemical analysis methods for determination of moisture, oil, nitrogen, ammonia, protein, and color.

S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Cottonseed meal. Requirements on general quality, odor, color, per-centage of protein for prime quality and off quality, conforming to definition given by Assn. of American Feed Control Officials.

References.—General definitions. See also 112.0. Cottonseed, cottonseed oil. See 141, 142.4, and 813.3. Methods of analysis of feeding stuffs. See 117.0.

112.4 COCOANUT OIL CAKE AND MEAL

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definition of cocoanut oil meal or copra oil meal.

References.—General definitions. See also 112.0. Methods of analysis of cottonseed oil cake. See 112.3. Methods of analysis of feeding stuffs. See 117.0. Coconut oil. See 142.1.

112.5 ALFALFA MEAL

Assn. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930. For alfalfa products, definitions of chopped alfalfa, alfalfa meal,

leaf meal, and stem meal.

U. S. Gov., Federal Specifications Board. 25c;
1927. Feeds and Forage. Alfalfa meal, Requirements on general quality, conforming to definition given by Assn. American Feed Control Officials.

References .- Alfalfa hay. See 111.1.

112.9 MISCELLANEOUS SPECIFICATIONS FOR OIL MEAL AND OIL CAKE

Assn. of American Feed Control Officials. fions of Feeding Stuffs; 1930. Definitions of corn oil cake, corn oil meal, corn germ cake, corn germ meal.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definitions of

ivory nut meal.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definition of palm kernel oil meal.

References.—General definitions. See also Methods of analysis of cottonseed oil cake. See Methods of analysis of feeding stuffs. See 117.0. meal. See also 103.4. See also 112.0. cake. See 112.3.

113. STRAW

113.1 RYE STRAW

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Straight Rye Straw. Tangled Rye Straw. Definitions of 2 grades of each, baled.

New York Produce Exchange. Rules Regulating the Hay and Straw Trade; 1915. Grades of Straw. Rye straw, definitions of 2 grades of straight and 2 grades of tangled baled rye straw, general quality requirements such as brightness, cleanness, length of straw, soundness, baling.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage, Rye straw. For 2 grades of straight rye straw baled and 2 grades of tangled rye straw, general quality require-ments and permissible defects.

113.2 OAT STRAW

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Oat Straw. Definitions of 2

grades, the better grade baled.

New York Produce Exchange. Rules Regulating the Hay and Straw Trade; 1915. Out Straw. For one grade, definition as regards cleanliness, color, length, freedom from chaff and thistle,

baled, expressed in general terms.

U. S. Gov., Federal Specifications Board. 25c;
1927. Feeds and Forage. Oat straw. For 2 grades, general quality requirements, permissible

defects.

113.3 WHEAT STRAW

National Hay Assn. (Inc.). Grades of Hay and Straw; 1922. Wheat Straw. Definitions of 2 grades, one grade baled.

New York Produce Exchange.

Rules Regulating the Hay and Straw Trade; 1915. Wheat Straw. Definition of one grade as regards color, cleanliness, length, soundness, expressed in general terms, baled.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Wheat Straw. For 2 grades, general quality requirements, permissible defects.

113.4 RICE STRAW

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Rice straw. For 2 grades, general quality requirements, permissible defects.

113.9 MISCELLANEOUS STRAW

S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Bedding straw. General quality requirements.

117. FODDERS AND POULTRY FEEDS

117.0 GENERAL ITEMS

American Assn. of Cereal Chemists. Methods for the Analysis of Cereals and Cereal Products; 1928. Feeding Stuffs. Requirements for sampling, preparation of sample, determination of moisture, crude protein, albuminoid nitrogen, amido nitrogen, ash, acidity, crude fat, crude

fiber, starch, sugars, and pentosans.

Assn. of Official Agricultural Chemists. Official and Tenative Methods of Analysis; 1930. Grain and Stock Feeds. Determination of moisture, ash, crude protein, albuminoid and amido nitrogen, crude fat or ether extract, starch, pentosans, crude fiber, sugars, tentative methods for galactan, and water-soluble acidity.

and Tentative Methods of Analysis; 1930. Grain and Stock Feeds. Grif in Poults. Assn. of Official Agricultural Chemists. Feeds. Tentative methods of determination,

117.1 COTTONSEED FEED

References.—Cottonseed. See 141. Cottonseed ou cake and meal. See 112.3.

117.2 HOMINY FEED

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For hominy feed, includes definitions of hominy feed, meal or chop and yellow hominy feed, meal or chop.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Hominy feed or white hominy feed. Requirements on general quality, in conformity with definition given by Assn. of American Feed Control Officials.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Yellow hominy feed, yellow hominy meal, or yellow hominy chop. Requirements on general quality, conforming to definition given by Assn. of American Feed Control Officials.

References.—Hominy, food for humans. See 109.2. Methods of analysis. See 117.0.

117.3 RICE FEED

References.—Rice. See 105.1. Rice as a feeding stuff. See 119.5. Methods of analysis. See 117.0.

117.4 WHEAT FEED

References.-Wheat. See 107.1. Wheat as a feeding stuff. See 118.1.

118. MILL FEEDS

118.1 WHEAT FEED

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For hard spring wheat products, definitions of standard mid-dlings, flour middlings, red dog, low grade feed flour, bran and standard middlings, mixed feed, and wheat bran.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For winter wheat products, definitions of brown, gray, and white shorts, wheat mixed feed, screenings, scourings,

wheat bran.

References.—Wheat. See also 107.1. Methods of analysis. See 117.0, 100.

118.2 BRAN

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930-1931. Tentative Definitions, Corn Bran, Definitions, to neither weevily, rancid, nor musty.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definition of

wheat bran.

. S. Gov., Federal Specifications Board, 25c; 1927. Feeds and Forage, Bran, Requirements on general quality of wheat bran and of wheat bran and screenings, in conformity with definitions of Assn, of Feed Control Officials, bidder to specify variety of wheat from which made.

References.—Wheat. See 118.1, 107.1. Methods of analysis. See 117.0, 100.

118.3 MIDDLINGS

Assn. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930. For hard spring wheat products, definitions of standard middlings, flour middlings, red dog, bran and standard middlings.

Assn. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930. For winter wheat products, definitions of brown, gray, and white shorts, wheat mixed feed, screenings, scourings, wheat bran.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2, 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Purified Middlings, Semolina, and Farina. Definitions, permissible moisture.

U. S. Gov., Federal Specifications Board. 1927. Feeds and Forage. Standard middlings, brown shorts, flour middlings, gray shorts, and wheat red dog. Requirements on general quality, conforming to respective definitions of Assn. of American Feed Control Officials.

References.—Wheat. See 118.1, 107.1. Methods of analysis. See 117.0, 100.

118.9 MISCELLANEOUS SPECIFICATIONS FOR MILL FEEDS

Assn. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930. Buckwheat Products. Definition of buckwheat shorts or buckwheat middlings.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For oat products, definitions of groats, hulls, middling, shorts,

clipped oat by-product.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930-1931. Tentative Definitions. Oat Chop, Ground Oats, Pulverized Oats, Crushed Oats, and Crimped Oats, Oat Groats, Hulled Oats, Undried Oat Groats, Oat Meal, Ground Oat Groats, Rolled Oat Groats, Oat Mill Feed. Definitions as regards method of production.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs. 1930. For rye products, definitions of bran, feed, red dog, low grade feed flour, middlings, and flour middlings.

References.—Rye, oats, buckwheat, wheat. See 106.1, 104.1, 102.1, 107.1. Methods or analysis. See 117.0,

119. MISCELLANEOUS FODDERS AND FEEDS

119.1 BEET PULP FEED

Assn. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930. Definition of dried

beet pulp.

U. S. Gov., Federal Specifications Board. 25c; 1927. Feeds and Forage. Beet pulp. Requirements on general quality, conforming to definition given by Assn. of American Feed Control Officials.

119.2 CORN CHOPS AND GRITS

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930–1931. Tentative Definitions. Corn Chop, Ground Corn or Cracked Corn, Screened Corn Chop, Screened Ground Corn, Screened Cracked Corn, Corn Meal, Corn Bran, Corn Feed Meal, Corn Grits, Hominy Grits, and Corn Screenings. Definitions, permissible content of foreign material in corn chop, ground corn or cracked corn and in the screened grades of these.

References.—Corn meal, corn feed meal. See 103.4. Methods of analysis. See 177.0, 100.

119.3 MEAT MEAL, MEAT SCRAPS, BONE MEAL, BLOOD MEAL

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For animal by-products, definitions of blood meal, blood flour, digester tankage, and meat scraps, raw bone meal, steamed bone meal and special steamed bone meal.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930-1931. Crab Meal, and Shrimp Meal. Definitions, required content

of protein for crab meal.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Grain and Stock Feeds. Bone in meat scrap or tankage. Tentative method of determination.

References-Methods of analysis. See also 117.0.

119.4 BREWERS' AND DISTILLERS' DRIED GRAINS Assn. of American Feed Control Officials. Defini-

tions of Feeding Stuffs; 1930. For brewers' and distillers' products, definitions of dried grains, corn solubles, rye solubles, malt sprouts, yeast or vinegar dried grains.

U. S. Pharmacopœial Convention (Inc.). Pharmacopeia of U. S. A.; 1926. Malt. For prepara-tion of malt extract for medical purposes, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References .- Methods of analysis. See also 117.0.

119.5 RICE FEED

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For rice products, definitions of bran, hulls, polish, meal, ground rough rice, stone bran and huller bran.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Grain and Stock Feeds. Rice Hulls in Rice Bran. Tentative methods of determination.

References.—Methods of analysis. See also 117.0, 100. Rice, See also 105.1,

119.6 DIGESTER TANKAGE

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For animal by-products, definitions of digester tankage, meat meal tankage or feeding tankage, meat scraps, raw bone meal, steamed bone meal and special steamed bone meal.

119.9 MISCELLANEOUS SPECIFICATIONS FOR FODDERS AND FEED

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Apple products. Definitions of dried apple pomace and of dried apple pectin pulp.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For barley products, definitions of barley hulls, barley feed, mixed feed, ground barley.

Assn. of American Feed Control Officials, tions of Feeding Stuffs; 1930. Definitions of evaporated, concentrated, or condensed buttermilk

feed, and of dried buttermilk feed.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs. 1930. Definitions of fish meal and of fish residue meal.

Assn. of American Feed Control Officials. Definitions of Feeding stuffs; 1930. Definition of processed garbage including maximum percentage of

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930–1931. Tentative Definitions. Milk Sugar Feed. Defined as by-product from manufacture of cheese, required content of lactose.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Definition of mineral feeds as distinguished from feeds containing medicinals or drugs for cure or mitigation of disease.

Assn. of American Feed Control Officials. Defini-tions of Feeding Stuffs; 1930. Tentative definitions of milk products as feeds including dried skimmed milk, condensed skimmed milk, condensed cultured skimmed milk, and milk sugar feed.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930–1931. Tentative Definitions. Table Scrap Meal. Definition, requirements on freedom from metal, crockery, and glass, permissible content of finely ground glass or dull particles of glass.

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. For velvet bean products, definitions of meal and ground velvet

bean and pod.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Grain and Stock Feeds. Beans. Tentative methods for determination of hydrocyanic acid formed by the hydrolysis of glucosides in beans.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Grain and Stock Feeds. Calcium Oxide in Mineral Feeds. Tentative method for determination of amount.

References.—Methods of analysis of feeding stuffs. See 117.0. Methods of analysis of milk products. See also 021.0. Barley. See also 101.0.

120-129

VEGETABLES

120. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Vegetables and Vegetable Products. Preparation of sample, determination of moisture, ash, sodium chloride, total acids, volatile acids, preservatives, and tentative methods for determination of sugars, coloring matters, and metals for canned vegetables in general.

Assn, of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Metals in Foods. Preparation of reagents, design of apparatus, method for determination of arsenic, tentative method for determinations of tin, copper,

zinc, lead, fluorine, manganese.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Plants. Methods for determination of sand and silica, calcium, sulphur, phosphorus, chlorine, total nitrogen, and tentative methods for moisture, ash, iron, aluminum, arsenic, sugars, sucrose, starch, ether extract, and crude fiber.

Canners League of California. California Canned Fruits; 1928. Method of Determining Drained Weight. Procedure and apparatus required for different size cans.

U. S. Gov., Congress. Public No. 446, 67th Conress; February, 1923. Food Products Inspection Law. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30, 1924. For enabling the Sec. of Agriculture to investigate and certify to shippers and other interested parties the quality and condition of fruits, vegetables, poultry, butter, hay, when offered for shipment interstate or received at designated central markets.

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1. 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoeia and Nat. Formulary.

U. S. Gov., Congress. Stat. Public No. 538. 1930. Amendment to pure foods act of 1906. Canned food standardization. Requires that all canned goods (meats and milk excepted) that do not come up to standards of quality, condition, and fill of container, promulgated by Sec. of Agriculture, shall be labeled as being below standard.

U. S. Gov., Congress. 39 U. S. Statutes at Large, pp. 446, 486. U. S. warehouse act, approved Aug. 11, 1916, as amended July 25, 1919 and Feb. 23, 1923. Requirements on licensing and bonding of warehouses used for storage of agricultural products for interstate or foreign commerce, licensing of inspectors, requirements on contents of ware-house receipt including description of products according to official grades and standards of U. S. where such have been fixed or established.

U. S. Gov., Congress. 43 Stat. 822, 844-845; 1925. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30. 1926. For enabling the Sec. of Agriculture to investigate and certify to shippers and other interested parties the class, quality, and/or condition of cotton and fruits, vegetables, poultry, but-ter, hay, when offered for shipment in interstate shipment or received at central markets.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 93; 1925. Rules and Regulations of the Sec. of Agriculture Governing the Inspection and Certification of Fruits, Vegetables, and Other Products, under Act of Congress of Feb. 10, 1925. Regulations about where inspection may be obtained, designation of central markets, who may apply for inspection, form of application, inspection certificates, fees.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for Enforcement of Federal food and drugs act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U. S. Pharmacopoeia and Nat. Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia or Nat. Formulary, regulations on powdering, on poison-ous and deleterious ingredients, and on colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal Food and Drugs Act and Requirements Thereunder. Gives text of amendment known as Mapes amendment, regulations on size of type, wording, and location of label for canned foods that are below U. S. standard, definitions of U. S.

standards for canned peaches, pears, peas, tomatoes, apricots, and cherries.

References.—Coal-tar food colors. See 803.10, 803.13.
Preservatives and artificial sweeteners. See 892.

121. FOLIAGE TYPE VEGETABLES, FRESH

121.1 CABBAGES AND CAULIFLOWER

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Grades for Cauli-flower; 1925. Permissive standards, definitions of 2 grades as regards compactness, color, maturity, freedom from defects and damage, trim and freshness of jacket leaves, minimum size.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Cabbage; 1928. Permissive standards, definitions of 2 grades as regards uniformity of type, solidity, trim, freedom from defects, decay, and damage; size grades that may be used.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh cabbage. Requirements on general quality, color, freedom from deay and damage, minimum weights for different shaped varieties

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh cauliflower. Require-ments on general quality, color, minimum size, amount of trim, freedom from spreading, discolored, or spotted stock.

References.—Canned cabbage. See 125.1. Inspection and grading regulations, food laws. See 120.

121.2 LETTUCE

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Lettuce; 1930. Permissive standards, definitions of 3 grades as regards varietal similarity, freshness, trim, freedom from decay, defects, and damage, appearance of wrapper,

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Lettuce. For head and leaf varieties, requirements on general quality, freedom from defective, decayed, damaged stock, etc.

References.—Inspection and grading regulations, food laws. See 120.

121.3 ENDIVE

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Endive or Escarole or Chicory; 1928. Permissive standards, definitions of 2 grades as regards varietal similarity, freshness, trim, development, freedom from decay and damage.

References .- See references under 121.2.

121.4 PARSLEY

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Parsley; 1930. Permissive standards, definitions of grades as regards general quality, permissible kinds and amounts of defects.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Parsley. Requirements on general quality, freedom from heated or yellow

References .- See references under 121.2.

121.5 SPINACH

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Fresh Spinach for Canning; 1931. Permissive standards, definitions of 4 grades as regards freedom from grass, weeds, roots, decay, damage, and foreign materials.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Spin-

ach; 1931. Permissive standards, not applicable to New Zealand spinach, definitions of 3 grades as regards varietal similarity, growth, trim, free-

dom from decay and damage.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh spinach. Requirements on general quality, freedom from seed stems, yellow or heated stock, etc.

References.—Canned spinach. See 125.5. Inspection and grading regulations, food laws. See 120.

121.6 WATER CRESS

121.7 ARTICHOKES

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Globe Artichokes; 1926. Permissive standards, definitions of 3 grades as regards trimming. form, compactness, development, freedom from damage, variation in diameter in package, and marking of size on package.

References.—Inspection and grading regulations, food laws. See 120.

121.8 KALE

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Kale. Requirements on general quality, freedom from damage and defects.

References.—See references under 121.7.

121.9 MISCELLANEOUS FOLIAGE TYPE VEGE-TABLES

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Italian Sprouting Broccoli; 1930. Permissive standards, definitions of 2 grades as regards general quality, freedom from defects, minimum size of head and minimum total length.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Mustard Greens; 1928. Permissive standards, definitions of 2 grades as regards freshness, freedom

from decay and damage.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Romaine; 1928. Permissive standards, definitions of 2 grades as regards heading, trim, freedom from decay and damage.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Turnip Greens; 1923. Permissive standards, not applicable to seven top turnip or Broccoli greens, definitions of 2 grades as regards freshness and freedom from decay and damage.

References.—Inspection and grading regulations, food laws. See 120.

122. FRUIT TYPE VEGETABLES, FRESH 122.1 BEANS, PEAS, OKRA

122.11 Beans

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Fresh Faba (Fava) Beans; 1931. A permissive standard, definitions of 2 grades as regards maturity, fullness of pods, permissible decay, mildew injury, black spot, and other defects and damage.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for String Beans, Wax or Green; 1927. Permissive standards, definitions of 4 grades as regards uniformity of variety and size, freshness, tenderness,

freedom from damage, etc.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Lima beans. Requirements on general quality, maturity, freedom from stems, foreign material, decay, injury, etc., for both pod beans and hulled beans.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Green or wax beans. Requirements on general quality, freedom from strings, rough or overmatured stock, etc.

References.—Dried and canned beans. See 126.11.
Inspection and grading regulations, food laws. See 120.

122.12 Lentils

122.13 Peas

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Fresh Peas; 1930. Permissive standards, definitions of 3 grades as regards freshness, tenderness, firmness, maturity, freedom from excessive moisture, decay, and damage, percentage of pod filled with developed peas.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Green peas in pods. Requirements on general quality, freedom from foreign matter, decayed or overheated stock, etc.

References.—Canned peas, dry peas. See 126.13. Inspection and grading regulations, food laws. See 120.

122.14 Okra

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Okra; 1928. Permissive standards, definitions of 2 grades as regards pods of okra of varietal similarity, as regards freshness, tenderness, shape, freedom from decay and damage.

References .- See references under 122,13.

122.2 GREEN CORN

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Green Corn; 1927. Permissive standards, definitions of 3 grades as regards varietal similarity, trim, form, freedom from damage, fullness of cob, freshness of husks.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Sweet green corn. For ear corn in husks, of standard sweet varieties, requirements on general quality, freshness of husks, coverage and quality of kernels, freedom

from injured and shriveled stock.

References.—Grain corn, canned corn. See 103.1, 126.2. Inspection and grading regulations. See 120.

122.3 CUCUMBERS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Slicing Cucumbers; 1927. Permissive standards, definitions of 3 grades as regards shape, freshness, firmness, maturity, freedom from decay and damage, minimum length.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh cucumbers. Requirements on general quality, color, minimum size, freedom from shriveled, spongy, or misshapen

stock.

**

**References.—Cucumber pickles. See 129.11. Inspection and grading regulations, food laws. See 120.

122.4 EGGPLANT

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative U. S. Grades for Eggplant; 1925. Permissive standards, definitions of 3 grades as regards varietal similarity, firmness, smoothness, shape, freedom from damage, uniformity in size, size designated by minimum diameter or number in package.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh egg plant. Requirements on general quality, minimum size, freedom

from withered, spongy, or spotted stock.

References.—Inspection and grading regulations, food laws. See 120.

122.5 PEPPERS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Sweet Peppers; 1929. Permissive standards, definitions of 4 grades as regards varietal similarity, greenness, maturity, shape, firmness, freedom from defects, decay, and damage, minimum sizes, similar grade definitions for red peppers and for mixed red and green peppers, illustrations of shapes.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Green sweet peppers. Requirements on general quality, freedom from soft

or spotted stock.

References.—Regulations on inspection and grading, food laws. See 120. Pepper spices. See 154.23.

122.6 PUMPKIN AND SQUASH

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh pumpkin. Requirements on general quality, maturity, freedom from rot and injury, etc.

U. S. Gov., Federal Specifications Board. . S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh summer squash. Requirements on general quality, freedom from hard

shelled or injured stock, etc.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Winter or Hubbard squash. Requirements on general quality, maturity, freedom from injured or spotted stock, etc.

References.—Canned pumpkin and squash. See 126.6. Regulations on inspection and grading, food laws. See 120.

122.7 TOMATOES

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Standards for Can-nery Tomatoes; 1926. Permissive standards, definitions of 3 grades as regards firmness, ripeness, coloring, form, freedom from decay and damage, minimum sizes to be fixed by agreement.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Fresh Tomatoes; 1930. Permissive standards, definitions of 4 grades as regards varietal similarity, maturity, form, smoothness, freedom from defects and damage, package to be marked by minimum size, numerical count, or description of pack.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh Tomatoes. Requirements on general quality, minimum size, freedom from injury, rot, overripe stock, etc.

References.—Canned tomatoes, catsup. See 126.7, 19.12. Regulations on inspection and grading, food 129.12. Regula laws. See 120.

123. ROOT TYPE VEGETABLES, FRESH

123.1 BEETS

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Sugar Beets. Tentative methods for determination of

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Standards for Bunched Beets; 1927. Permissive standards, definitions of 2 grades as regards uniformity of variety, firmness, smoothness, freedom from decay and damage, length of top, uniformity of bunch sizes.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Beets ("bloods" trimmed). Requirements on general quality, shape, minimum size, freedom from dirt, injury, and extra large beets.

References.—Canned beets. See 127.1. Beet pulp. See 119.1. Regulations on inspection and grading. feed laws. See 120.

123.2 CARROTS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Bunched Carrots; 1930. Permissive standards, definitions of 2 grades as regards varietal uniformity, firmness, form, smoothness, freedom from decay and damage, uniformity of bunch sizes, 3 size grades defined.

Dept. of Agriculture, Bureau of Agri-U. S. Gov., cultural Economics. U. S. Standards for Topped Carrots; 1928. Permissive standards, definitions of 2 grades as regards varietal uniformity, trim, firmness, smoothness, shape, freedom from freezing, decay, and damage, dimensional limits.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh carrots. Requirements on general quality, size limits, freedom from splits,

broken or shriveled stock.

References.—Canned carrots. See 127.2. and grading regulations, food laws. See 120. Inspection

123.3 ONIONS AND SCALLIONS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Bermuda Onions; 1930. Permissive standards, definitions of 4 grades as regards uniformity of variety, maturity, shape, freedom from rot, dou-bles, splits, seed stems, noticeably pink onions, and damage, with tolerances for each grade, size classification into 3 sizes.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Creole Onions; 1926. Permissive standards, definitions of 2 grades as regards varietal similarity, maturity, shape, freedom from doubles, defects, seed

stems, and damage, minimum size.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for North-ern Grown Onions; 1931. Permissive standards, definitions of 5 grades including commercial, boilers, and picklers grades, requirements on uniformity of variety, maturity, firmness, shape, permissible sunscald, doubles, splits, scallions, damage from freezing, dirt, disease, insects, etc., size limits.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Green onions. Requirements

on general quality, freedom from extra large bulbs or slimy stock, etc.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Green scallions. Requirements on general quality, freedom from overma-tured or discolored stock, etc.

U. S. Gov., Federal Specifications Board. HHH-O-531; 1930. Onions. For domestic late or northern, domestic bermuda, domestic creole, and other standard market varieties, requirements on general quality, minimum sizes, freedom from doubles, defects, sprouted or damaged stock, etc.

References.— laws. See 120. -Inspection and grading regulations, food

123.4 PARSNIPS AND TURNIPS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Bunched Turnips; 1927. Permissive standards, definitions of 2 grades as regards varietal similarity, firmness, smoothness, freedom from decay and damage, minimum diameter, freshness of tops.

U. S. Gov., Federal Specifications Board. 1925. Vegetables. Fresh parsnips. For trimmed parsnips, requirements on general quality, minimum size, freedom from woody, pithy stock. etc.

U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh turnips. For white turnips and for yellow or rutabaga turnips, trimmed, requirements on general quality, minimum size, freedom from hollow, pithy, woody stock, etc.

References.-Inspection and grading regulations, food laws. See 120.

123.5 POTATOES

123.51 White Potatoes

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Amendment No. 5 to S. R. A. No. 93; 1927. Official Standards for the Inspection of Potatoes. Permissive standards, definitions of 3 grades as regards varietal similarity, shape, freedom from freezing injury, rot, defects and damage, size.

U. S. Gov., Federal Specifications Board. HHH-P-611; 1930. Irish Potatoes. To meet requirements of U. S. Grade No. 1 of Dept. of Agriculture, requirements on general quality, minimum size, freedom from rot or damage, tolerances allowed on deliveries for immediate use and on deliveries to be stored, specifications for shipping crates.

References.—Methods of analysis, grading regulations, I food laws. See 120.

123 52 Sweetnotatoes

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Sweetpotatoes; 1926. Permissive standards, definitions of 4 grades as regards varietal similarity, firmness, shape, freedom from deay, freezing injury, defects, and damage, minimum sizes.

U. S. Gow., Federal Specifications Board. HHH-P-621; 1930. Sweetpotatoes. Requirements on similarity of varieties furnished, general quality, freedom from foreign matter, damage, decay, etc., minimum size, tolerances, to meet requirements for U. S. Grade No. 1 of U. S. Dept. of Agriculture.

References.—Methods of analysis, grading regulations, food laws. See 120.

123.6 RADISHES

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Bunched Radishes; 1926. Permissive standards, definitions of 2 grades as regards varietal similarity, form, smoothness, firmness, crispness, freedom from decay and damage, freshness and freedom from decay and damage of tops, uniformity in size of bunches and of radishes, minimum radish sizes.
- U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Radishes, red or red and white tips. Requirements on general quality, freedom from pithy or hollow stock, etc.

References.—Methods of analysis, grading regulations, food laws. See 120. Prepared horse-radish. See 154.13.

123.7 SALSIFY

123.8 SHALLOTS AND GARLIC

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Bunched Shallots; 1927. Permissive standards, definitions of 3 grades as regards form, firmness, cripsness, blanching, trim, freedom from damage, freshness and freedom from damage of tops, size grades defined.
- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S., Standards for Garlic; 1927. Permissive standards, definitions of 2 grades as regards maturity, cure, cleanness, compactness, clove fill, freedom from damage.

References.—Methods of analysis, grading regulations, food laws. See 120.

mum size, freedom from hollow, pithy, woody | 124, STEM TYPE VEGETABLES, FRESH

124.1 ASPARAGUS

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Asparagus; 1927. Permissive standards, definitions of 2 grades as regards freshness, trimming, freedom from damage and decay, minimum stalk dimensions.
- U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Fresh asparagus. Requirements on general quality, minimum size, freedom from wilted, crooked, or woody stock, etc.

References.—Canned asparagus. See 128.1. Methods of analysis, grading, regulations, food laws. See 120. Asparagus sprays. See 259.

124.2 CELERY

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Rough Celery; 1928. Permissive standards, definitions of 2 grades as regards trim, varietal uniformity, heart formation, blanching, freedom from pithy branches and damage, standards for indication of number of stalks or of stalk length in container.
- U. S. Gov., Federal Specifications Board. 271; 1925. Vegetables. Celery. Requirements on general quality, bleach, freedom from hollow, slimy, strings, or rusty stock, for trimmed or untrimmed stock.

References.—Methods of analysis, grading regulations, food laws. See 120.

124.3 MUSHROOMS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Mushrooms; 1928. Permissive standards, definitions of 2 grades as regards varietal similarity, shape, freedom from disease, spots, and damage, length of trimmed stems, minimum diameter of mushroom, also 4 grades of sizes defined.

References.—See references under 124.2.

124.4 RHUBARB

U. S. Gov., Federal Specifications Board. 271; 1925.
Vegetables. Fresh rhubarb. Requirements on general quality, freedom from heated or decayed stock.

References .- See references under 124.2.

124.5 SWEET ANISE

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Sweet Anise; 1930. A permissive standard for stalks of sweet anise, definitions of 2 grades as regards firmness, tenderness, trim, blanching, freedom from decay, growth cracks, pithy branches, and other defects, minimum size of bulb.

125. FOLIAGE TYPE VEGETABLES, CANNED OR PRESERVED

125.1 CANNED CABBAGE, SAUERKRAUT, AND CANNED SAUERKRAUT

National Kraut Packers Assn. Grade Definitions for Bulk and Canned Sauerkraut; 1929. For the two types, definitions of 2 grades of each including minimum acidity, uniformity of shredding, color requirements, etc., the fill, salt contents, and acidity to comply with U.S. Gov. regulations.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Definitions and Grades for Canned Sauerkraut; 1930. Permissive standards, definitions of 3 grades as regards color, cut, absence of defects, crispness, and flavor, net drained weight requirements for stand-

ard sized cans.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 319. Weights of Sauerkraut in Cans of Various Sizes. Requirements under food and drugs act regarding drained weights for contents of 4 sizes of cans.

of 4 sizes of cans.

U.S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sauerkraut. Definition, requirements on percentage of salt used in preparation, and percentage of acid present after fermentation.

U. S. Gov., Federal Specifications Board. JJJ-C-21; 1931. Canned Cabbage. General requirements on preparation and general quality of cabbage used. Requirements on cutting in quarters, and freedom from grit, dirt, and foreign

material.

U. S. Gov., Federal Specifications Board. JJJ-8-71; 1931. Canned Sauerkraut. Requirements on preparation, percentage of salt used, general quality of cabbage and of resulting product, required acid in finished product, in conformity with Federal food and drugs act, analyses in accordance with methods of Assn. of Official Agricultural Chemists. Covers 2 quality grades.

References.—Fresh cabbage. See 121.1 Methods of analysis, grading regulations, food laws. See 120.

125.2 CANNED LETTUCE

125.3 CANNED ENDIVE

125.4 CANNED PARSLEY

125.5 CANNED SPINACH

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. First Draft of Grades for Canned Spinach (also Turnip Greens and Mustard Greens); 1928. Tentative grades for use under U. S. Warehouse act, definitions of 3 grades as regards color, absence of defects, tenderness and texture, and flavor, standard can sizes and dimensions, requirements on relative weights of liquid and solids, and net drained weight of solids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 320. Weights of Spinach in Cans of Various Sizes. Requirements under food and drugs act regarding drained weights of contents

for 4 sizes of cans.

U. S. Gov., Federal Specifications Board. JJJ-S-611; 1931. Canned Spinach. Requirements on general quality, freedom from coarse stems, grit, straw, etc., for 2 quality grades, drained weights for various can sizes.

References.—Fresh spinach. See 121.5. Method of analysis, grading regulations, food laws. See 120.

125.6 CANNED WATER CRESS

125.9 MISCELLANEOUS CANNED VEGETABLES OF FOLIAGE TYPE

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. First Draft of Grades for Canned Spinach (also Turnip Greens and Mustard Greens); 1928. Tentative grades for use under U. S. warehouse act, definitions of 3 grades as regards color, absence of defects, tenderness and texture, and flavor, standard can sizes and dimensions, requirements on relative weights of liquid and solids, and net drained weight of solids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 320. Weights of Swiss Chard and of Beet Tops in Cans of Various Sizes. Requirements under food and drugs act regarding drained weights of contents for 4 sizes of cans.

References.—Fresh turnip greens and mustard greens. See 121.9. Methods of analysis, grading regulations, food laws. See 120.

126. FRUIT TYPE VEGETABLES, CANNED OR PRESERVED

126.1 BEANS AND PEAS

126.11 Canned Beans and Dry Beans

American Hospital Assn. Bulletin No. 9, 1923. Specifications for Use in Purchasing Canned Vegetables Packed Under Inspection. Includes National Canners Assn. tentatively adopted grades and U. S. Dept. of Agriculture standards of minimum drained weights for standard size cans. Includes string beans, description of grades.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. String Beans. For 5 sieve sizes and seconds, requirements on grade size for each

graue.

U.S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. HFS-751, 1926, and Amend. No. 1, 1930. Handbook of U.S. Standards for Beans. Permissive standards for grading of beans, including pea, red kidney, dark red kidney, white kidney, medium white, marrow, yelloweye, brown swedish, great northern, pinto, small white, large white, pink, California red, bayo, cranberry, blackeye, lima, baby lima, butternut, and western red kidney beans, requirements on permissible moisture, splits, damage, other beans, foreign material, and appearance for 4 grades for each type except limas for which 3 grades are defined.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Form H.F.S. 899; 1928. Handbook of U. S. Standards for Soybeans. Permissive standards for dry threshed soybeans, definitions of 5 grades and sample grade as regards test weight, permissible moisture, split and damaged beans, and foreign material, for yellow, green, brown, black, and mixed soybeans.

U. S. Gov., Dept. of Agriculture, Bureau of Agricultural Economics. U. S. Grades for Canned Lima Beans; 1931. For use under U. S. warehouse act, definitions of 4 grades as regards character of liquor, absence of defects, uniformity of color and size, maturity, and flavor, standard sizes and dimensions of cans, required net drained weight for

each can size.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tentative Grades for Canned Snap or String Beans; 1920. For use under the U. S. warehouse act, definitions of 4 grades as regards clearness of liquor, absence of defects, uniformity of color and conformity to size, flavor of beans and liquor, and tenderness, standard can sizes and dimensions, permissible head space in can.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 314. Weights of Lima Beans in Cans of Various Sizes. For immature grades known as "green" lima beans, requirements on drained weights of contents for 3 sizes of cans

under food and drugs act.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 315. Weights of Wax and Refugee Beans in Cans of Various Sizes. Requirements on drained weights of contents for 3 can sizes under food and drugs act.

green beans, freedom from skins, split and broken beans, and foreign material, screen grading, drained weight for various sizes of cans, permissible head space in can, in conformity with Federal food and drugs act.

U. S. Gov., Federal Specifications Board. JJJ-B-151: 1931. Canned String (or Snap) Beans. For 3 quality grades of cut or whole type beans, requirements on variety of bean, size grading, uniformity in color, general quality, freedom from

rough stock, strings, stems, etc.

S. Gov., Federal Specifications Board. JJJ-B-91; 1930. Canned Beans, with pork. For beans in tomato sauce and for beans in plain sauce, requirements on quality and permissible defects for white beans before and after cooking, permissible discolored beans, ingredients in sauces, to conform to Federal food and drugs act.

S. Gov., Federal Specifications Board. JJJ-B-96; 1930. Canned Beans, without pork. For beans in tomato sauce and for beans in plain sauce, requirements on general quality and permissible defects in white beans before and after cooking, permissible discolored beans, ingredients in sauces, to conform to Federal food and drugs act.

U. S. Gov., Federal Specifications Board. JJJ-B-106; 1930. Dry Beans. For 5 types, white, kidney, lima, colored, and black-eye beans, requirements on varieties acceptable in each type, to be of 2 grades conforming to U. S. Grades No. 1 and No. 2 of U. S. Dept. of Agriculture, specifications for shipping bag.

References.—Fresh string and wax beans. See 122.11. Methods of analysis, grading regulations, food laws. See 120.

126.12 Canned Lentils

126.13 Canned Peas and Dry Peas

American Hospital Assn. Bulletin No. 9; 1923. Specifications for Use in Purchasing Canned Vegetables Packed Under Inspection. Includes National Canners Assn. tentatively adopted grades and U. S. Dept. of Agriculture standards of minimum drained weights for standard size cans. Includes peas, description of grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Grades for Canned Peas; 1930. Mandatory for use under U. S. warehouse act, definitions of 4 grades as regards clearness of liquor, absence of defects, uniformity of size, type and color, flavor of peas and liquor, tenderness, standard can sizes and dimensions, permissible head space in can or drained weight of contents requirements.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 318. Weights of Peas and Unpitted Cherries in Cans of Various Sizes. Requirements under food and drugs act regarding drained

weights of peas for 3 sizes of cans.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S.R.A., F.D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal Food and Drugs Act and Requirements Thereunder, Canned Peas, Definition of the standard below which a substandard label will be required by law, requirements on color, test for tenderness, permissible added water, permissible broken skins.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weight per Bushel of Various Commodities. For peas, weight of bushel as defined by Federal statutes, also the weight as established by various States.

U. S. Gov. Federal Specifications Board. JJJ-B-126; 1931. Canned Lima Beans. For 3 grades, requirements on general quality, percentage of for sugar peas, screen grading requirements for 6 sizes, definitions of 3 quality grades, including requirements on uniformity of color and size, clearness of liquor, flavor, freedom from skins, split peas, and other defects, freedom from dirt, etc., required fill of cans, in conformity with Federal food and drugs act.

References,—Fresh peas. See 122.13, Methods of analysis, grading regulations, food laws. See 120.

126.2 CANNED CORN AND SUCCOTASH

American Hospital Assn. Bulletin No. 9; 1923. Specifications for Use in Purchasing Canned Vegetables Packed Under Inspection. Includes National Canners Assn. tentatively adopted grades and U. S. Dept, of Agriculture standards of minimum drained weights for standard size cans. Includes corn, description of grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Grades for Canned Corn (Cream Style); 1930. Mandatory for use under U. S. warehouse act, definitions of 4 grades as regards color, consistency, absence of defects, cut, maturity, and flavor, standard can sizes and dimensions, required net weight of contents per

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Grades for Canned Corn (Whole Grain Style); 1931. Mandatory for use under U. S. warehouse act, definitions of 4 grades as regards color, absence of defects, uniformity of cut, maturity, and flavor, standard can sizes and dimensions, required drained net weight of contents.

S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A. Chem. 26. Item 341. Weight of Maryland Style Corn in No. 2 Cans. Requirements on average and minimum

drained weights under food and drugs act. S. Gov., Federal Specifications Board. N-C-501; 1931. Canned Corn. For cream style and for whole grain style, 3 quality grades, requirements on acceptable varieties, general quality of corn, freedom from defects, cob, etc.

References.—Fresh corn. See 122.2. Method analysis, grading regulations, food laws. See 120. Methods of

126.3 CANNED CUCUMBERS

References .- Cucumber pickles. See 129,11.

126.4 CANNED EGGPLANT

126.5 CANNED PEPPERS

126.6 CANNED PUMPKIN AND SQUASH

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. First Draft of Definitions and Standards for Canned Pumpkin and Squash; 1929. Tentative standards for use under U. S. warehouse act, definitions of 3 grades as regards consistency, color, texture and finish, absence of defects, and flavor, standard sizes and dimensions of cans, required net weight of contents and permissible head space in can.

U. S. Gov., Federal Specifications Board. JJJ-P-791; 1931. Canned Pumpkin. Requirements on general quality, freedom from excessive moisture, skins, and seed, for 2 quality grades, net weight

contents of cans.

References.—Methods of analysis, grading retions, food laws. See 120. Fresh pumpkin squash. See 122.6. regula-

126.7 CANNED TOMATOES AND TOMATO JUICE

American Hospital Assn. Bulletin No. 9; 1923. Specifications for Use in Purchasing Canned Vegetables Packed Under Inspection. Includes National Canners Assn. tentatively adopted grades and U. S. Dept. of Agriculture standards of minimum drained weights for standard size cans. Includes tomatoes, description of grades.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Vegetables and Vegetable Products. Tomato Products. Preparation of sample, determination of ash, alkalinity of ash, sodium chloride, reducing sugars, sucrose, acetic and citric acids; tentative methods for determination of solids, sand, microanalysis for molds, yeasts, spores, bacteria.

analysis for molds, yeasts, spores, bacteria.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Grades for Canned Tomatoes; 1930. Mandatory for use under U. S. warehouse act, definitions of 4 grades as regards percentage of whole tomatoes, solidity, color, absence of defects, and flavor, standard can sizes and dimensions, requirements on net weight of contents and permissible head space in can.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Canned Tomato Juice. Definition of the product for use in enforcing the

Federal food and drugs act.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal Food and Drug Act and Requirements Thereunder. Canned Tomatoes. Definition of the standard below which a substandard label will be required by law, requirements on test of size of pieces, color in terms of primary distribution curves, permissible peel and defects.

U. S. Gov., Federal Specifications Board. JJJ-T-571; 1931. Canned Tomatoes. For 3 quality grades, preparation, quality, drained weights.

References.—Fresh tomatoes, catsup. See 122.7, 129.12. Methods of analysis, grading regulations, food laws. See 120.

127. ROOT TYPE VEGETABLES, CANNED OR PRESERVED

127.1 CANNED BEETS

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Beets. For 5 grades, requirements on size for each grade, general quality, uniform-

ity of color and size.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. First Draft of Grades for Canned Beets; 1929. Tentative grades for use under the U. S. warehouse act, definitions of 3 grades as regards uniformity of size and color, absence of defects, tenderness and texture, and flavor, standard can sizes and dimensions, required net weight of contents per can.

U. S. Gov., Federal Specifications Board, JJJ-B-181: 1931. Canned Beets. For cut beets and for whole beet types in 2 quality grades. References.—Fresh beets. See 123.1. Methods of analysis, grading regulations, food laws. See 129.

127.2 CANNED CARROTS

Northwest Canners Assn. Canned Fruits and Vegetables. 1926. Carrots. For 4 grades including sliced and quartered, requirements for size for each grade, general quality and color.

U. S. Gov., Federal Specifications Board. JJJ-C-76; 1931. Canned Carrots. Quality and sizes, 2 grades of whole, quartered, sliced, or diced.

References.—Fresh carrots. See 123.2. Methods of analysis, grading regulations, food laws. See 120.

127.3 CANNED ONIONS

127.4 CANNED PARSNIPS AND TURNIPS

127.5 CANNED POTATOES

127.51 Canned White Potatoes

127.52 Canned Sweetpotatoes

U. S. Gov., Federal Specifications Board. JJJ-P-611; 1931. Canned Sweet Potatoes. Two grades.

127.6 CANNED RADISHES

127.7 CANNED SALSIFY

128. STEM TYPE VEGETABLES, CANNED OR PRESERVED

128.1 CANNED ASPARAGUS

U. S. Gov., Federal Specifications Board, JJJ-A-711; 1931. Canned Asparagus. For 3 types, spears, tips, and soup tips and cuts, and for 4 sizes, requirements on general quality, freedom from tough, fibrous, or damaged stock, clearness of liquor, number of tips to container, in conformity with Federal food and drugs act.

References.—Fresh asparagus. See 124.1. Methods of analysis, grading regulations, food laws. See 120.

128.2 CANNED CELERY

128.3 CANNED MUSHROOMS

U. S. Gov., Federal Specifications Board. JJJ-M-S51; 1931. Canned Mushrooms. For 3 size of button type, fancy or sliced, requirements on freedom from artificial coloring, preservatives, and impurities, in conformity with Federal food and drugs act.

128.4 CANNED RHUBARB

129. MISCELLANEOUS VEGETABLE FOOD PRODUCTS

129.1 PICKLES AND SAUCES

129.11 Pickles and Pickled Olives

National Pickle Packers Assn. Pickle Standards; 1925. Grade definitions for 4 standard grades of pickles in salt, including size limits and percentage of crooked pickles and nubbins allowable for each grade, color, and soundness requirements, etc., standard weight of drained pickles for 45 gallon container, general quality requirements for Dill pickles, and of sweet and sour pickles.

National Pickle Packers Assn. Official Chart. Undated. Illustrated chart showing graded sizes of straight pickled cucumbers with the number per 45 gallon cask for each size, crooked pickles and

nubbins also illustrated.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Pickles. Defined as cucumber pickles preserved in vinegar, etc.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Salt Pickles. Defined as immature

cucumbers preserved in salt solution.

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sweet Pickles. Defined as pickled cucumbers or other vegetables in preparation of which sugar is used.

U. S. Gov., Federal Specifications Board. JJJ-P-391; 1931. Pickles and Relishes. For 6 types, sour cucumbers, dill, sour or sweet chowchow, sour or sweet gherkins, sour or sweet

mixed, sweet relish, requirements on general quality of materials entering into product, cur-ing and test for curing, size limits and grades, ingredients and make-up of mixed pickles and relish, freedom from artificial color, adulterants, and impurities, in conformity with Federal food and drugs act.

References.—Fresh cucumbers. See 122.3. Methods of analysis, grading regulations, food laws. See 120. Fresh and pickled olives. See 131.4.

129.12 Catsup

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Catchup. Definition of, made from ripe tomatoes with sugar, vinegar, salt, spice,

U. S. Gov., Federal Specifications Board. JJJ-C-91; 1931. Tomato catsup. Requirements on general quality of tomatoes and of finished product, freedom from dirt, artificial coloring or thickening, and chemical preservatives, requirements on content of total solids, permissible yeasts, spores, bacteria, and mold filaments, to use methods of analysis of Assn. of Official Agri. Chemists, in conformity with Federal food and drugs act.

References.—Fresh tomatoes, canned tomatoes. See 122.7, 126.7. Methods of analysis, food laws. See 126.7, 120.

129.13 Sauces

U. S. Gov., Federal Specifications Board. EE-S-71: 1930. Chili and Worcestershire Sauces. For | 129.21 Bouillon Cubes and Beef Extract

worcestershire sauce, requirements on freedom from artificial coloring, preservatives, and impurities, sauce to be pungent and of good flavor, methods of chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists, requirements on construction of shipping kegs.

U. S. Gov., Federal Specifications Board. EE-S-71; 1930. Chili and Worcestershire Sauces. For chili sauce, requirements on general quality, ripeness, and color of tomatoes, preparation of tomatoes and addition of spices, permissible molds, bacteria, yeast, and spores, and freedom from artificial coloring, preservatives, and impurities, methods of test as specified by Assn. of Official Agri, Chemists.

References.—Methods of analysis, food laws. See 129. Tomato catsup. See 129.12. Chili pepper. See 154.23.

129.14 Salad Dressing

References .- Salad oil and mayonnaise. See 142.94.

129.2 SOUPS

129.20 General Items.

U. S. Gov., Federal Specifications Board, JJJ-S-581; 1931. Canned Soups. Requirements on general quality of vegetables used, use of meat products that have passed U. S. Government inspection, freedom from adulterations and impurities, in conformity with Federal food and drugs act.

References .- Methods of analysis, food laws. See

130-139

FRUITS AND NUTS

130 GENERAL ITEMS

- Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Fruits and Fruit Products. Preparation of sample, determination of alcohol, moisture in dried fruits, solids, ash, sulphur in ash, protein, acidity, sucrose, reducing sugar, commercial glucose, starch, preservatives, sweetening substitutes, and tentative methods for determining insoluble solids, total sulphur including methods for sulphured products, chlorine in ash, potassium, manganese, calcium, magnesium, alcohol precipitate, pectic, tartaric, and citric acids, free mineral acids, dex-trine, gelatine in jellies and jams, agar agar in jellies, added water in white grape juice, metals, and coloring matters.
- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal Food and Drugs Act and Requirements Thereunder. Text of amendment known as Mapes amendment, regulations on size of type, wording, and location of label for canned foods that are below U. S. standard, definitions of U. S. standards for canned peaches, pears, peas, tomatoes, apricots, and cherries.
- U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes, Liquid food products. For fruit sauces composed of sugar and liquor solutions only, whether for use as such, or for the preparation of canned fruits, permissible minimum content of sugar and permissible percentage of alcohol.

131. SUBTROPICAL FRUITS. FRESH AND PRESERVED

131.1 BANANAS

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Bananas. For yellow bananas, requirements on general quality, minimum size and number of hands to bunch.

References.—Methods of analysis, grading regula-tions, food laws. Sec 130, 120.

131.2 CITRUS FRUITS

131.20 General Items

- U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Florida Citrus Fruits; 1930. Permissive standards, definitions of 4 grades as regards varietal similarity, maturity, color, firmness, form, smoothness, thin skinned, freedom from decay, blemishes and damage, may also be graded as bright or russet, requirements on standard pack.
- U. S. Gov., De t. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Texas Citrus Fruits; 1930. Permissive standards, definitions of 4 grades as regards varietal similarity. maturity, color, firmness, smoothness, thinness of skin, freedom from decay, blemishes, and damage, additional color classification, standard pack requirements.

References.—Methods of analysis, grading regula-tions, food laws. See 130, 120.

131.21 Citron

U. S. Gov., Federal Specifications Board, 634a: 1929. Dried (Evaporated) Fruits. Citron. Requirements on general quality, in conformity with Federal food and drugs act and decisions.

References.—Citrus fruits of Florida and Texas. See 131.20. Methods of analysis, grading regulations, food laws. See 130, 120.

131.22 Grapefruit

California Fruit Growers Exchange. Grade Specifications for Grape Fruit; 1926. Quality requirements as to maturity, eating quality, form, color, texture, freedom from spongy, scarred, blemished, scale, thick skin, frost damage, etc., percentage of soluble solids to acid in juice, for two grades.

Florida Citrus Exchange. Grading Rules; 1927–1928. For grapefruit, definitions of various grades under two general grade classifications, dependent on firmness, maturity, thinness of skin, damage, blemishes, discoloration, insects,

smoothness, etc.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for California and Arizona Grapefruit; 1929. Permissive standards, definitions of 4 grades as regards similarity in color and shape, maturity, color, firmness, form, smoothness, thinness of skin, freedom from decay, blemishes, and damage, standard pack requirements.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Grapefruit, Pomelo. Definition, requirement on ratio of soluble solids to acid in

the juice.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Grapefruit. Requirements on general quality, thinness of skin, freedom from defects.

References.—Florida and Texas grapefruit. See also 131.20. Methods of analysis, grading regulations, food laws. See 130, 120.

California Fruit Growers Exchange. Grade Specifications for Lemons, 1926. Quality requirements for form, color, freedom from scale, diseases, defects, sponginess, and frost damage, etc., allowable percentage of fruit in any shipment affected by alternaria or interior decay, for two grades.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Lemons. Requirements on general quality, thinness of skin, freedom from

skin defects, acceptable sizes.

References.—Florida and Texas lemons. See also 131.20. Methods of analysis, grading regulations, food laws. See 130, 120.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Limes. Requirements on general quality, juiciness, freedom from frost, foreign matter, blemishes, mold, etc., minimum sizes.

References.—Florida and Texas citrus fruits. See also 131.20. Methods of analysis, grading regulations, food laws. See 130, 120.

131.25 Oranges

California Fruit Growers Exchange. Grade Specifications for Oranges; 1926. Quality requirements for the fruit for two grades as regards maturity, eating quality, form, color, texture, freedom from scale, disease, splits, frost damage, etc., percentage of soluble solids to acid in the inice.

Florida Citrus Exchange, Grading Rules: 1927-1928. For oranges, definitions of various grades under two general grade classifications, dependent on firmness, maturity, thinness of skin, damage, blemishes, discoloration, insects, smoothness,

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for California Oranges; 1929. Permissive standards, definitions of 4 grades as regards varietal similarity, maturity, coloring, firmness, form, smoothness, freedom from decay, defects, and damage, requirements for standard pack.

V. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Oranges, Definition, requirement on ratio of soluble solids to acid in the juice.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Oranges, Requirements on general quality, thinness of skin, freedom from

blemishes, acceptable sizes.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Satsuma oranges. Requirements on general quality, juiciness, freedom from rot and injury.

References.—Florida and Texas oranges. See also 131.20. Methods of analysis, grading regulations, food laws. See 130, 120. Marmalades. See 134.54.

131,26 Tangerines

Florida Citrus Exchange. Grading Rules; 1927–1928. For tangerines, definitions of various grades under two general classifications, dependent on firmness, maturity, thinness of skin, damage, blemishes, discoloration, insects, smoothness,

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Tangerines. Requirements on general quality, juiciness, freedom from rot, injuries, etc., packing.

References.—Florida and Texas tangerines. See also 131.20. Methods of analysis, grading regulations, food laws. See 130, 120.

131.3 FIGS

California Peach and Fig Growers Assn. Quality Standards and Method of Classifying and Determining Classifications of 1928 Crop of Dried Peaches and Figs; 1928. Definitions of two grades of dried figs as regards soundness, whole, clean, color, texture, freedom from rot, fermentation, sumburn, damage, insects, etc., the better grade to pass examination by Federal, State, or county officials.

U. S. Gov., Federal Specifications Board. Z-F-351; 1931. Canned Figs. For 2 grades of Calimyrna, Kadota, or Magnolia figs, requirements on general quality, uniformity of size, freedom from blemishes, permissible split figs in can, strength test of packing sirup, number of figs in standard can, construction of wooden packing boxes.

References.—Methods of analysis, grading regulations, food laws. See 130, 120.

131.4 OLIVES

California Olive Assn. Harvesting Definition; 1922. Mature fruit defined according to color and ease with which pit is freed from flesh, for mission and manzanillo varieties.

California Olive Assn. Ripe Olive Standards; 1925. For canned olives, requirements on maturity,

color, texture, and size grades.
S. Gov., Federal Specifications Board.
Y-0-451; 1931. Olives. For plain green queen olives, for pimento stuffed manzanillas, and for ripe olives, requirements on size for 6 size grades, uniformity in size and color, freedom from damaged or defective fruit, packing, general quality,

permissible soft olives in ripe class, in conformity with Federal food and drugs act.

References.—Methods of analysis, grading regulations, food laws. See 130, 120.

131.5 PINEAPPLES

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Suggested Tentative U. S. Grades for Pineapples; 1924. Permissive standards, definitions of 2 grades as regards varietal similarity, firmness, maturity, form, freedom from excessive moisture and damage, uniformity of size in package, numerical count to be marked on package.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Pineapples. Requirements on general quality, color, juiciness, freedom from dry, white, woody or overnatured stock, accept-

able sizes.

References.—Methods of analysis, grading regulations, food laws. See 130, 120. Canned pineapple. See 134.24.

131.6 AVOCADOS

Calavo Growers of California. Avocado Grading Chart; 1929. Definitions of 5 grades according to maturity, solidity, surface and other blemishes, percentage of oil, etc.

References .- See references under 131.5.

131.7 POMEGRANATES

California Fruit Exchange. Grade Specifications for Pomegranates; 1928. Requirements on maturity, freedom from rot and damage, uniformity in size, color of juice, per cent acid in juice, in accordance with Calif. Fruit and vegetable standardization law.

References .- See references under 131.5.

132. FRESH FRUITS, EXCEPT SUBTROPI-

132.1 BERRIES, CURRANTS, AND GRAPES

132.11 Berries

American Cranberry Exchange. Varieties, Grades and Brands of Cranberries. Undated. Requirements on size, color, shape, flavor given in general terms for various grades of many varieties, with corresponding brand name, time when available for market given.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Black Raspberries. Permissible varieties, requirements on firmness, ripness, color, nonpermitted defects and imperfections, ring

measure.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Blackberries. Requirements on firmness, ripeness, color, nonpermitted defects and imperfections, ring measure.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Gooseberries. Oregon Champion variety, requirements on firmness, color, nonper-

mitted defects and imperfections, ring measure.
Northwest Canners Assn. Grading Rules for No. 1
Fresh Fruits and Berries for Canning Purposes;
1925. Fresh Loganberries. Requirements on
firmness, ripeness, and color, nonpermitted de-

fects and imperfections, minimum length.

Northwest Camers Assn. Grading Rules for No. 1
Fresh Fruits and Berries for Canning Purposes;
1925. Fresh Red Raspberries. Permissible variety, requirements on firmness, ripeness, color, nonpermitted defects and imperfections, ring measure.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Strawberries. Permissible varieties, requirements on firmness, ripeness, color, nonpermitted defects and imperfections, ring measure.

U. S. Gov, Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Dewberries and Blackberries; 1928. Permissive standards, definitions of 3 grades as regards one variety limitation, firmness, color, development, maturity, freedom from caps, decay, and damage.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Strawberries; 1928. Permissive standards, definitions of 3 grades as regards limitation to one variety, attachment of cap, firmness, maturity, freedom from decay and damage. minimum size.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Berries. For blackberries, blueberries, gooseberries, loganberries, red and black raspberries, requirements on general quality, maturity, freedom from moldy stock, foreign matter, injuries, and defective stock.

J. S. Gov., Federal Specifications Board. 270: 1925. Fresh Fruits. Cranberries. Requirements on general quality, uniformity of size, freedom

from soft and wet stock.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Strawberries. Requirements on general quality, maturity, minimum size, freedom from moldy stock, injuries, etc.

References.—Canned berries, jams and jellies. See 134.11, 134.5. Methods of analysis, grading regulations, food laws. See 130, 120.

132.12 Currants

References .- Dried currants. See 133.12.

132.13 Grapes

California Fruit Exchange. Grade Specifications for Grapes; 1928. Requirements on maturity, uniform color, attachment to stems, freedom from crushed, dried, defective, and damaged grapes, compactness of bunch, percentage of sugar for various varieties, sizes of bunches and berries for sawdust packed grapes, tolerances for defects.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for American (Eastern Type) Bunch Grapes; 1930. A permissive standard, definitions of 3 grades of table grapes and 2 grades of juice grapes as regards uniformity of variety, coloring, maturity, permissible shattered bunches, split, dried, or soft grapes, mold, decay, damage from hail, insects, diseases, etc., minimum size of berries.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Jude Grapes; 1930. Permissive standards with especial reference to California grapes, definitions of a grades of single variety grapes and of 3 grades of mixed variety grapes as regards color, maturity, freedom from shattered, split, and damaged fruit, permissible raisined fruit, sugar test

for maturity.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Sawdust Pack Grapes; 1931. Permissive standards with special reference to California grapes, definitions of 3 grades as regards uniformity of variety, coloring, maturity, firumess, permissible shattered, split, wet, wilted, dried berries, mold, decay, and other defects, sizes of bunches and of berries, condition of stems.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Table Grapes; 1931. Permissive standards with special reference to California grapes, definitions of grades as regards uniformity of variety and color-

ing, maturity, firmness, attachment of berries, permissible crushed, wilted, shot, and dried berries, mold, decay, and damage, weight and form

of bunch, quality of stems.

U. S. Gov., Federal Specifications Board. 270: 1925. Fresh Fruits. Grapes. For table use with preferred varieties of western and of eastern grown varieties, requirements on general quality, freedom from discolored, overripe, or moldy stock.

References.—Raisins, canned grapes. See 133.13, 134.13. Methods of analysis, grading regulations, food laws. See 130, 120.

132.2 FLESHY FRUITS

132.21 Apples

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Apples; 1931. A permissive standard, definitions of 9 grades as regards maturity, picking, cleanliness, uniformity of variety, form, permissible decay, internal breakdown, scald, freezing, bruises, etc., permissible damage due to limbrubs, disease, insects, hall, etc., color requirements for 2 grades, 2 early or immature grades included.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Cannery Apples; 1330. Permissive standards, definitions of 3 grades as regards ripeness, freedom from decay, permissible defects and damage, size

left to agreement.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C10; 1924. Legal Weights (in pounds) per Bushel of Various Commodities. Apples, weight of a bushel of green or ripe apples as defined by Federal statutes, also the bushel weights for apples established by various States are given.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Apples. Requirements on general quality, freedom from frost, injury, mini-

mum grade, preferred varieties.

References.—Dried apples, canned apples and apple sauce. Sce 133.21, 134.21. Methods of analysis, grading regulations, food laws. Sce 130, 120.

132.22 Pears

California Fruit Exchange. Grade Specifications for Pears; 1928. Requirements on minimum sizes for 13 varieties, maturity, freedom from scale, blemishes, worms, frost marks, etc., weight of packed boxes, uniformity in size in accordance with Calif. standardization law.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Pears. Bartlett variety, requirements on firmness, ripeness, color, nonpermitted defects and Imperfections, length and ring meas-

ure

U.S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U.S. Grades for Pears; 1925. Permissive standards, definitions of 4 grades as regards limitation to one variety, maturity, cleanness, form, freedom from decay and damage, size to be marked on package as numerical count or minimum diameter.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Pears. Requirements on general quality, freedom from bruised or misshapen stock, preferred varieties, acceptable

sizes.

References.—Dried pears, canned pears. See 132,22, 134,22. Methods of analysis, grading regulations, food laws. See 130, 120

132.23 Quinces

132.3 MELONS

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Grades for Water-

melons; 1925. Permissive standards, definitions of 3 grades as regards varietal similarity, maturity, form, freedom from decay, whiteheart, defects and damage, variations from average weight in any lot.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Cantaloupes; 1930. Permissive standards, definitions of 2 grades as regards, firmness, muturity, formnetting, freedom from blemishes, decay and

damage.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Honey Dew and Honey Ball Melons; 1927. Permissive standards, definitions of 2 grades as regards maturity, firmness, form, smoothness, freedom from decay, cracks, and damage.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Cantaloupe. Requirements on general quality, maturity, freedom from soft

or yellow fruit.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Watermelons. Requirements on general quality, minimum weight, freedom from misshapen, burned, soft, or immature stock.

References.—Methods of analysis, grading regulations, food laws. See 130, 120,

122.4 STONE FRUITS

132.41 Apricots

California Fruit Exchange. Grade Specifications for Apricots; 1928. Requirements on minimum size, freedom from blemishes and defects.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Apricots; 1928. Permissive standards, definitions of 3 grades as regards maturity, freedom from decay, damage, dirt, scale, etc., requirement that minimum size, or numerical count, or description of pack be marked on container.

References.—Dried apricots, canned apricots. See 133.41, 134.41. Methods of analysis, grading regulations, food laws. See 130, 120.

132.42 Cherries

California Fruit Exchange. Grade Specifications for Cherries; 1928. Requirements on size and packing, uniformity in size in accordance with Calif. fruit and vegetable standardization law, freedom from defects, blemishes, bird pecks, etc.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Cherries. Royal Anne variety, requirements on firmness, ripeness, color, nonpermitted defects and imperfections, weight.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Sour Cherries. Montmorency variety, requirements on firmness, ripeness, color, nonpermitted defects and imperfections, ring measure.

U.S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Red Sour Cherries for Manufacture; 1931. A permissive standard, definitions of 5 grades as regards coloring, permissible decay, stems, worms, and damage caused by pulled pits, hail, bird pecks, disease, foreign material, etc.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Sweet Cherries; 1927. Permissive standards, definitions of 2 grades as regards being of one variety, form, maturity, freedom from decay and damage, size may be specified by minimum diameter or num-

ber in pound.
U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Cherries. For sweet table

varieties, requirements on general quality, freedom from blemishes.

References.—Canned cherries. See 134.42. Methods of analysis, grading regulations, food laws. See 130, 120.

132.43 Dates

132.44 Peaches

California Canning Peach Growers. Form 17: 1925. Canner's Agreement. Includes grade definitions for No. 1 and No. 2 grades of cling or freestone peaches, size limits, blemishes, split pits permissible for canning peaches.

California Fruit Exchange. Grade Specifications for Peaches; 1928. Requirements on maturity, color at which to pick, freedom from blemishes and defects, uniformity in size, official size grades, but no definite size limits set for use with the exchange brand; packing in accordance with Calif. fruit and vegetable standarization law.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Peaches; 1930. Permissive standards, definitions of 4 grades as regards limitation to one variety, firmness, maturity, form, freedom from defects and damage, the fancy grade of above grades also includes requirements on percentage of peaches showing surface covered with characteristic red color, requirement on marking minimum size or numerical count on package.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Peaches. Requirements on general quality, minimum size, freedom from splits, defects, and injuries, preferred varieties. Reterence.—Dried peaches, cannel peaches. See

References.—Dried peaches, canned peaches. See 133.44, 134.44. Methods of analysis, grading regulations, food laws. See 130, 120.

132.45 Plums and Prunes

California Fruit Exchange. Grade Specifications for Plums; 1928. Minimum sizes and color at which to pick for 35 varieties, packing requirements, freedom from defects and blemishes, and in accordance with Calif. fruit and vegetable standardization law.

Northwest Canners Assn. Grading Rules for No. 1 Fresh Fruits and Berries for Canning Purposes; 1925. Fresh Prunes. Italian variety, requirements on ripeness and color, nonpermitted defects

and imperfections, weight.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Plums and Prunes (Fresh); 1931. Permissive standards, definitions of 4 grades as regards limitation to one variety, maturity, firmness, form, freedom from damage and blemishes, method of marking size when packed in 4 basket crates, color and minimum size for Italian prunes.

U. S. Gov., Federal Specifications Board. 270; 1925. Fresh Fruits. Plums. For table variety, requirements on general quality, freedom from scale, blemishes, soft or shriveled stock, preferred

varieties, packing.

References.—Dried prunes, canned plums and prunes. See 133.45, 134.45. Methods of analysis, grading regulations, food laws. See 130, 120.

132.46 Persimmons

California Fruit Exchange. Grade Specification for Oriental Persimmons; 1928. Requirements on maturity, uniformity in size, color, accuracy of count, freedom from damage, cracks, decay, surface blemishes, etc.

References.—Methods of analysis, grading regulations, food laws. See 130, 120.

O DDIED AND DWADODARD

133.1 DRIED BERRIES, CURRANTS, AND GRAPES

133.11 Dried Berries

References.—Fresh berries, jams and jellies. See 132.11, 134.5.

133.12 Dried Currants

U. S. Gov., Federal Specifications Board. Z-C-851; 1931. Dried Currants. Requirements on general quality, permissible moisture, in conformity with Federal food and drugs act and decisions. Covers 2 grades.

References.—Methods of analysis, grading regulations, food laws. See 130, 120.

133.13 Raisins

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Tech. Bull. No. 1; 1927. Tests of Methods for the Commercial Standardization of Raisins. Description of tests developed for grading raisins and that were put in practical operation by the raisin interests of California, method of procedure for weight per volume test, moisture estimation by compression, mold test, and sand test.

U. S. Gov., Federal Specifications Board. Z-R-71; 1931. Raisins. For seeded muscats, thompson seedless, sultanas, and muscat clusters, screen grading for 2 sizes of each type, reculproperts or conversion with the property of size.

quirements on general quality, uniformity of size and color, freedom from mold, rot, insects, damage, sugaring, dirt, etc., permissible moisture content, in conformity with Federal food and drugs act.

References.—Fresh grapes, canned grapes. See 132.13, 134.13. Methods of analysis, grading regulations, food laws. See 130, 120.

133.2 FLESHY FRUITS, DRIED

133.21 Dried Apples

Assn. of American Feed Control Officials. Definitions of Feeding Stuffs; 1930. Apple Products. General definitions of dried apple pomace and of dried apple pectin pulp.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Evaporated Apples. Definition, permissible moisture as determined by methods of Assn. of Official Agrit. Chemists.

U. S. Gov., Federal Specifications Board. Z-A-613; 1931. Evaporated (or Dried) Apples. For 4 grades of ring or sliced apples, peeled and cored, requirements on general quality, sizes of pieces, permissible moisture, permissible sulphuring, free-

dom from dirt, grit, etc.

References.—Fresh apples, canned apples and apple sauce. See 132.21, 134.21. Methods of analysis, grading regulations, food laws. See 130, 120.

133.22 Dried Pears

U. S. Gov., Federal Specifications Board, 634a; 1929. Dried (Evaporated) Fruits. Pears. Requirements on preparation, general quality, disallowance of kieffer variety, permissible moisture content of boxed fruit, in conformity with Federal food and drugs act and decisions.

References.—Fresh pears, canned pears. See 132.22, 134.22. Methods of analysis, grading regulations, food laws. See 130, 120.

133.23 Dried Quinces

133.3 DRIED MELONS

133.4 DRIED STONE FRUITS

133.41 Dried Apricots

U. S. Gov., Federal Specifications Board. Z-A-636; 1931. Evaporated (or Dried) Apricots. For 4 grades of halved and pitted fruit, requirements on general quality, sizes of halves, permissible moisture, permissible sulphuring, freedom from defective stocl.

References.—Fresh apricots, canned apricots. See 132.41, 134.41. Methods of analysis, grading regulations, food laws. See 130, 120.

133.42 Dried Charries

References.—Fresh cherries, canned cherries. See 132.42, 134.42.

133.43 Dried Dates

133.44 Dried Peaches

California Peach and Fig Growers Assn. Quality Standards and Method of Classifying and Determining Classifications of 1928 Crop of Dried Peaches and Figs; 1928. Definitions for two grades of peaches as regards soundness, damage, color, freedom from dirt, mold, insects, green, sunburn, damage by red spider, etc., to pass Federal, State, or county inspection.

U. S. Gow., Fed and Specifications Board. Z-P-193; 1931. Evaporated (or Dried) Peaches. For 4 grades of Muir or yellow varieties, halved and pitted, requirements on general quality, sizes, permissible sulphuring, permissible moisture, free

from damage.

References.—Fresh peaches, canned peaches. See 132.44, 134.44. Methods of analysis, grading regulations, food laws. See 130, 120.

133.45 Dried Plums and Prunes

U. S. Gov., Federal Specifications Board. 634a; 1929. Dried (Evaporated) Fruits. Prunes. For 3 size gradings, requirements on general quality, permissible moisture content of boxed fruit, in conformity with Federal food and drugs act and decisions.

References.—Fresh plums and prunes, canned plums and prunes. See 132.45, 134.45. Methods of analysis, grading regulations, food laws. See 130, 120.

133.5 DRIED SUBTROPICAL FRUITS

References.—Dried figs. See 131.3. Dried dates. See 133,43. Dried citron. See 131,21.

134. CANNED AND PRESERVED FRUITS, JAMS, AND JELLIES

134.1 CANNED BERRIES, CURRANTS, AND

134.11 Canner Berries

Assn. of Nev York State Canners (Inc.). New York Cann & Fruits: 1923. Black Raspberries, Columbian Raspberries, Cuthbert Raspberries, Requirement is on percentage of sugar in sirup, selection, ripeness, freedom from stems, etc., for 4 grades of each variety. Assn. of New York State Canners (Inc.). New

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Blackberries. Requirements on percentage of sugar in sirup, size, freedom from blemishes and stems, etc., for 4

grades.

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Strawberries. Requirements on percentage of sugar in sirup, uniformity of size and color, permissible seedy

berries and hull, etc., for 5 grades.

Michigan Canners Assn. Michigan Canned Fruits; 1923. Gocseberries; Huckleberries; Black Raspberries; Red Raspberries; and Strawberries. For 4 grades of each, requirements on uniformity of size, maturity, freedom from stems and seedy fruit, general quality of fruit, strength of slrup for each grade, packing in enamel lined cans. Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Black Raspberries. For 5 grades, requirements on strength of sirup, general quality and uniformity of fruit.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Blackberries. For 5 grades, requirements on strength of sirup; general quality

and uniformity of fruit.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Cranberries. For 5 grades, requirements on strength of sirup, general quality and uniformity of fruit.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Gooseberries. For 5 grades, requirements on strength of sirup, general quality and uniformity.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Loganberries. For 3 grades, requirements on strength of sirup and nonpermitted imperfections.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Red Raspberries. For 5 grades, requirements on strength of sirup, general quality and uniformity.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Strawberries. For 5 grades, requirements on strength of sirup, general quality and uniformity.

U. S. Gov., Federal Specifications Board. Z-B-491; 1931. Canned Blueberries (Huckleberries). For 2 grades, requirements on general quality of fruit, freedom from defective and blemished fruit and foreign matter, net weight of filled cans, strength of sirup if required.

U. S. Gov., Federal Specifications Board. Z-L-501; 1931. Canned Loganberries. For 3 grades, requirements on general quality, freedom from blemishes and foreign matter, strength of sirup, use of enamel lined cans, in conformity with

Federal food and drugs act.

U. S. Gov., Federal Specifications Board. Z-R-91; 1931. Canned Raspberries. For 4 grades of black raspberries and of red raspberries, acceptable varieties of red raspberries, requirements on general quality of fruit, freedom from blemishes and foreign matter, sugar strength of sirup, packing in enamel-lined cans.

References.—Fresh berries. See 132.11. Jams and jellies. See 134.5. Methods of analysis, grading regulations, food laws. See 130, 120.

134.12 Canned Currants

References .- Dried currants. See 133.12.

134.13 Canned Grapes

Canners League of California. California Canned Fruits; 1928. Muscat Grapes. Requirements on percentage of sugar in sirup, ripeness, freedom from blemishes, uniformity in size, etc., for 4 grades.

References.—Fresh grapes, raisins. See 132.13, 133.13. Methods of analysis, grading regulations, food laws. See 130, 120.

134.2 FLESHY FRUITS, CANNED

134.21 Applesauce and Canned Apples

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Apples, not steamed. Requirements on firmness, size, permissible blemishes and discoloration, paring, coring, etc., for 4 grades.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Apples. Water or solid pack grade, wholesome fruit.

- permissible damaged fruit and blemishes in the various grades, minimum net weights for 3 can sizes, in conformity with Federal food and drugs
- U. S. Gov., Federal Specifications Board. Z-A-621; 1931. Canned Applesauce. Requirements on general quality of apples used, using winter varieties, general qualities of apple sauce, freedom from grit, skin, seeds, etc., consistency, free from preservatives, minimum net weights in cans, in conformity with Federal food and drugs act.

References.—Fresh apples, dried apples. See 132.21. 133.21. Methods of analysis, grading regulations, food laws. See 130, 120.

134.22 Canned Pears

American Hospital Assn. Bulletin No. 35; 1923. Canned Fruits. Includes specifications of National Canners Assn. Includes pears, definition of grades as regards pieces per can, per cent of sugar in sirup, and description of fruit.

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Bartlett Pears. Requirements on percentage of sugar in sirup, color, ripeness, freedom from blemishes, uniformity in size, etc., pieces per can, for 4 grades.

Canners League of California, California Canned Fruits; 1928. Bartlett Pears. Requirements on percentage of sugar in sirup, color, uniform size, ripeness, freedom from blemishes, pieces per can, etc., for 4 grades.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Pears. For 5 grades, requirements on strength of sirup, general quality and

uniformity of fruit, pieces per can.

U.S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 317. Weights of Pears in Cans of Various Sizes. For firm pears in halves, require-ments under food and drugs act on drained weights of contents for 6 sizes of cans.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July S. 1930, to Federal Food and Drug Act and Requirements Thereunder. Canned Pears. Definition of the standard below which a substandard label will be required by law, requirements on weight, sugar strength of liquid, color, uniformity of size, test for tenderness, permissible defects and

unpeeled fruit.

U. S. Gov., Federal Specifications Board. Z-P-201; 1931. Canned Pears. Includes halves in sirup and pie or water fruit without added sugar. For 3 quality grades of halved pears, peeled and cored, Bartlett variety, requirements on general quality, freedom from blemishes, uniformity in size, texture, etc., sugar strength of sirup, pieces per can, net drained weight of can contents, in conformity with Federal food and drugs act, testing in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Fresh pears, dried pears. See 132.22, 133.22. Methods of analysis, grading regulations, food laws. See 130, 120,

134.23 Canned Quinces

134.24 Canned Pineapple

American Hospital Assn. Bulletin No. 35; 1923. Canned Fruits. Includes specifications of National Canners Assn. Includes pineapple, defini-tion of grades, number of pieces per can, per cent of sugar in sirup, and description of the fruit.

U. S. Gov., Federal Specifications Board. Z-A-611; 1931. Canned Apples. For 3 quality, grades, requirements on general quality, preparation, freedom from dirt, grit, etc., strength of sirup, construction of packing boxes, in conformity with Federal food and drugs act, tests according to methods of Assn. of Official Agricultural Chemists.

References.—Fresh pineapple. See 131.5. Methods of analysis, grading regulations, food laws. See 130, 120.

134.3 CANNED MELONS

134.4 CANNED STONE FRUITS

134.41 Canned Apricots

American Hospital Assn. Bulletin No. 35; 1923. Canned Fruits. Includes specifications of National Canners Assn. Includes apricots, definition of grades of fruit as regards pieces per can, per cent of sugar in sirup, and description of the fruit.

Canners League of California. California Canned Fruits; 1928. Apricots. Requirements on percentage of sugar in sirup, color, uniform size, freedom from blemishes, pieces per can, etc., for

4 grades.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal Food and Drug Act and Requirements Thereunder. Canned Apricots. Definition of standard below which a substandard label will be required by law, requirements on weight, sugar strength of liquid, color, uniformity of size, test for tenderness, permissible defects, allowed exceptions.

Z-A-631; 1931. Canned Apricots. For 3 quality grades of halved and pitted fruit, requirements on general quality, uniformity in size, count per can, sugar strength of sirup, construction of packing boxes, in conformity with Federal food and drugs act, tests according to methods of Assn, of Official Agricultural Chemists.

References.—Fresh apricots, dried apricots. See 132.41, 133.41. Methods of analysis, grading regulations, food laws. See 130, 120.

134.42 Canned Cherries

American Hospital Assn. Bulletin No. 35; 1923. Canned Fruits. Includes specifications of National Canners Assn. Includes cherries, definition of grades, per cent of sugar in sirup, description

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Red Sour Pitted Cherries. Requirements on percentage of sugar in sirup, ripeness, freedom from blemishes, uniform size, percentage pits, etc., for 5 grades.

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Red Sweet Cherries. Requirements on percentage of sugar in sirup, ripeness, uniformity in size, freedom from blemishes, etc., for 4 grades.

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. White Cherries. Requirements on percentage sugar in sirup, hard or soft varieties, ripeness, freedom from blemishes,

etc., for 4 grades.

Canners League of California. California Canned Fruits; 1928. Royal Anne Cherries, White Cherries, Black Cherries. Requirements on percentage of sugar in sirup, freedom from blemishes, size uniformity, ripeness, etc., number of pieces per can, for 4 grades.

Michigan Canners Assn. Michigan Canned Fruits; 1923. Red Sour Pitted Cherries. For 4 grades packed in enamel lined cans, general requirements on quality, ripeness, permissible blemishes, pits, etc., requirements on strength of sirup for each

grade.

National Preservers Assn. Definitions and Standards of Fruit Jams, Preserves, Jellies (included in House Bill H. R. 12693, 70th Congress, April 4, 1928). For maraschino cherries, definitions of, preparation method, permissible percentages of sulphur dioxide and of benzoate of soda.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Black and White Cherries. For 5 grades, requirements on strength of sirup, general quality and uniformity of fruit, count per can.

Northwest Canners Assn. Canned Fruits and Vegetables: 1926. Cherries. Royal Anne, Bing and Lambert, for 5 grades, requirements on strength of sirup, general quality, uniformity, and count of fruit.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Sour Pitted Cherries. For 5 grades, requirements on strength of sirup, general quality

of fruit.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 24; 1920. Item 318. Weights of Peas and Unpitted Cherries in Cans of Various Sizes. Requirements under food and drugs act regarding drained weight of contents for 4 sizes of cans for cherries in 2 grades of sirup.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 27. Item 364. Weights of Pitted Cherries in Cans of Various Sizes. Requirements on drained weights of contents for 4 sizes of cans, dependent on type

of sirup, under food and drugs act,

U. S. Gov., Dept. of Agriculture. Insecticide Administration, S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal food and drug act and requirements thereunder. Canned Cherries. Definition of the standard below which a substandard label will be required by law, requirements on weight of fruit, sugar strength of liquid, color, uniformity of size, fleshiness, permissible blemished fruit, allowable exceptions.

U. S. Gov., Federal Specifications Board. Z-C-301; 1931. Canned Cherries. Covers 3 Z-O-301; 1931. Canned Cherries. Covers 3 sweet unpitted varieties, white, black, and royal anne, and 2 sour pitted varieties, red in sirup, and red in water without added sugar. For 3 quality grades, requirements on general quality, uniformity in size and color, freedom from dirt, blemishes, and damaged fruit, sugar strength of sirup, number per can for sweet varieties, in conformity with Federal food and drugs act.

References.—Fresh cherries. See 132.42. Methods of analysis, grading regulations, food laws. See 130, 120.

134.43 Canned Dates

134.44 Canned Peaches

American Hospital Assn. Bulletin No. 35: 1923. Canned Fruits. Includes specifications of National Canners Assn. Includes peaches, definition of grades of fruit as regards pieces per can, per cent of sugar in sirup, and description of the fruit for new cling peaches, yellow free peaches, and sliced peaches.

Canners League of California. California Canned Fruits; 1928. Yellow Cling Peaches and Sliced Yellow Cling Peaches. Requirements on percentage of sugar in sirup, color, ripeness, uniform size, freedom from blemishes, pieces per can, etc., for 4 grades.

Canners League of California. California Canned Fruits; 1928. Yellow Free Peaches. Require-

ments on percentage of sugar in sirup, color, ripeness, uniform size, freedom from blemishes,

pieces per can, etc., for 4 grades. Michigan Canners Assn. Michigan Canned Fruits; 1923. Halves Peaches, Sliced Peaches, Whole Peaches. General requirements on uniformity of size, color, shape, freedom from blemishes, sweetness, required strength of sirup for each grade. Covers 4 grades for each type except for whole peaches which has 3 grades.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., Chem. 26. Item 342. Weights of Peaches in Cans of Various Sizes. Regulations under Federal food and drugs acts regarding the weight of sliced or half peaches to be packed in various standard can sizes, dimensions of cans and methods of deter-

mination of drained weight of contents.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 4, Rev. 1; 1931. Amendment of July 8, 1930, to Federal food and drug act and requirements thereunder. Canned Peaches. Definitions of the standard below which a substandard label will be required by law, requirements on weight, sugar content of liquid, color, uniformity of size, test for tenderness, permissible defects and unpeeled fruit.

S. Gov., Federal Specifications Board. Z-P-191; 1931. Canned Peaches. Covers yellow cling and yellow freestone classes of 3 types, halves in sirup, slices in sirup, and water or pie halves or slices packed without added sugar. For 3 quality grades except as to pie grade, requirements on general quality, uni-formity in size, freedom from blemishes, sugar strength of sirup, number of halves to can, packing box construction, in conformity with Federal food and drugs act.

References.—Fresh peaches, dried peaches. See 132.44, 133.44. Methods of analysis, grading regulations, food laws. See 130, 120.

134.45 Canned Plums and Prunes

American Hospital Assn. Bulletin No. 35; 1923. Canned Fruits. Includes specifications of National Canners Assn. Includes plums, definition of grades, number of pieces per can, per cent of sugar in sirup, and description of the fruit.

Assn. of New York State Canners (Inc.). New York Canned Fruits; 1923. Plums. Requirements on percentage of sugar in sirup, maturity, uniformity in size, freedom from blemishes, etc.,

for 4 grades.

Canners League of California. California Canned Fruits. 1928. Plums. Requirements on percentage of sugar in sirup, freedom from blemishes, size, uniformity, etc., for 4 grades.

Canners League of California. California Canned Fruits; 1928. Prepared Prunes in Sirup. For canned dried prunes, requirements on general quality and appearance, uniformity of count per can, percentage of sugar in sirup, drained weight 30 days after packing. Michigan Canners Assn. Michigan Canned Fruits;

1923. Plums. For 3 grades, general requirements on quality, maturity, uniformity in size and color, freedom from blemish, sweetness, required strength of sirup in each grade.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Fresh Prunes (canned). For 5 grades, requirements on strength of sirup, general quality and uniformity of fruit, count.

Northwest Canners Assn. Canned Fruits and Vegetables; 1926. Plums; Green Gage Plums; Yellow Egg Plums. For 5 grades of each, requirements on strength of sirup, general quality and uniformity of fruit, count per can.

U. S. Gov., Federal Specifications Board. Z-P-491; 1931. Canned Plums. Green gage, yellow egg, Washington, and Damson varieties. For 4 quality grades, requirements on general quality and uniformity of size, sugar strength of sirup, freedom from blemished and damaged fruit, in con-formity with Federal food and drugs act.

U. S. Gov., Federal Specifications Board. Z-P-671; 1931. Canned Prunes. Covers Santa Clara type and Italian type in 2 quality grades, requirements on general quality, freedom from dirt, etc., sugar strength of sirup, standard sizes, drained weight of can contents, fill of can, construction of packing boxes, in conformity with Federal food and drugs act.

References.—Fresh plums and prunes, dried prunes. Sec 132.45, 133.45. Methods of analysis, grading regulations, food laws. Sec 130, 120.

134.5 JAMS, FRUIT BUTTERS, ETC.

134.51 Fruit Butter

National Preservers Assn. Definitions and Standards of Fruit Jams, Preserves, Jellies (included in House Bill H. R. 12693, 70th Congress, April 4, 1928). For apple butter, definition of, method of preparation, minimum percentage of water soluble solids, maximum percentage of sugar to fresh whole apples.

U. S. Gov., Federal Specifications Board. Z-A-616; 1931. Apple Butter. Requirements on general quality of apples used, preparation and general quality of product, freedom from skin, core, seed, dirt, and chemical preservative, permissible mold, to conform to Federal food and drugs act, methods of chemical analysis as prescribed by Assn.

of Official Agricultural Chemists,

References.—Methods of analysis, grading regula-tions, food laws. See 130, 120. Fruit jams made from stone fruits. See 134.52.

National Preservers Assn. Definitions and Standards of Fruit Jams, Preserves, Jellies (included in House Bill H. R. 12693, 70th Congress, April 4, 1928). Includes definitions of fruit jam, fruit and pectin jam, pectin and fruit jam, jam like product, and imitation, required proportions of fruit and sugar and percentage of fruit in final product of each grade, general method of preparation.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev.2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Glucose Fruit Jam, Corn Sirup Fruit Jam. Definitions, required ratio of fruit to glu-

cose or to corn sirup.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Jam, Fruit Jam. Definition, re-

quired ratio of fruit to sugar.

S. Gov., Federal Specifications Board.
Z-J-71; 1931. Fruit Jams. For jam prepared
from fresh or cold packed fruit and sugar and cooked to heavy consistency with use of canned fruit acceptable for stone fruit jams, require-ments on percentage of fruit and sugar, permissible added pectin or fruit acid, required soluble solids, freedom from artificial coloring and chemical preservatives, general quality of product, in conformity with Federal food and drugs act.

References.—Methods of analysis, grading regulations, food laws. See 130, 120.

134.53 Jellies

National Preservers Assn. Definitions and Standards of Fruit Jams, Preserves, Jellies (included in House Bill H. R. 12693, 70th Congress, April 4, 1928). Includes definitions of fruit jelly, pectin jelly, pectin and fruit jelly, and imitation fruit jelly, method of preparation, for fruit jelly the required ratio of fruit juice to sugar and required proportion of water soluble solids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Glucose Fruit Jelly, Corn Sirup Fruit Jelly. Definition of jelly made from fruit juice

or water extract and glucose or corn sirup. U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Jelly, Fruit Jelly. Definition of jelly made from fruit juice or water extract and

Sugar

sugar.
S. Gov., Federal Specifications Board, Z-J-191; 1931. Fruit jellies. For jelly prepared from fruit juice or water extract and sugar, requirements on general quality, freedom from crystallization, solid suspended matter, dirt, etc., permissible added pectin or fruit acid, required content of soluble solids, in conformity with Federal food and drugs act.

References.—Methods of analysis, grading regula-tions, food laws. See 130, 120.

134 54 Marmalades

U. S. Govt., Dept. of Agriculture. Food, Drug, and Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Citrus Fruit Marmalade. Definition, kinds of materials cooked with water and sugar.

References.—Citrus fruits. See 131.2. Methods of analysis, grading regulations, food laws. See 130, 120.

134.55 Fruit Preserves

National Preservers Assn. Definitions and Standards of Fruit Jams, Preserves, Jellies, (included in House Bill H. R. 12693, 70th Congress, April 4, 1928). Includes definition of fruit preserve, fruit and pectin preserve, pectin and fruit preserve, preserve like product, and imitation preserve, required proportions of fruit and sugar and percentage of fruit in final product in each grade, preparation.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Glucose Fruit Preserve and Corn Sirup Fruit Preserve. Definitions, required ra-

tio of fruit to glucose or to corn sirup. U. S. Gov., Dept. of Agriculture. Food, Drug, and

1. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Preserve, Fruit Preserve, Definition,

required ratio of fruit sugar.

S. Gov., Federal Specifications Board. Z-P-631; 1931. Fruit Preserves. Prepared from matured whole fresh or cold-pack fruit of a single variety and sugar, requirements on percentages of fruit and of sugar, general quality of fruit used, freedom from artificial coloring and chemical preservatives, permissible added pectin or fruit acid, required content of soluble solids in product, in conformity with Federal food and drugs act.

References.—Methods of analysis, grading regulations, food laws. See 130, 120.

134.56 Fruit Salads and Sauces

Canners League of California. California Canned Fruits; 1928. Choice Fruits for Salad. To con-

ments on general quality of fruit, preparation, proportions of varieties, drained weight, count,

cut-out density of sirup.

Canners League of California. California Canned Fruits; 1928. Fancy Fruits for Salad. To consist of apricots, bartlett pears, yellow cling peaches, pineapple, and maraschino cherries, requirements on general quality of fruit, preparation, proportions of varieties, drained weight, count, cut-out density of sirup.

References.—Sugar and liquor solutions as fruit sauces. See 130. Methods of analysis, grading regulations, fool laws. See 130, 120.

135. NUTS

135.1 ALMONDS AND ALMOND PASTE

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Almond Paste. Definition of paste made from sweet and bitter almonds, permissible percentage of water and of sugar.

U. S. Gov., Federal Specifications Board. Y-N-711; 1930. Nuts, Assorted and Mixed. Almonds. Requirements on general quality, freedom from in-sect attack, percentage of edible kernels, permissible amount of off-variety, acceptable sizes and

References .-- Almond Extract. See 175.1.

135.2 CHESTNUTS

Northern Nut Growers Assn. Test Sheet. Undated. Test sheet for entering results from tests on nuts in contests, such as weight, cracking pressure, weight of kernel, etc., with weighted multipliers for each value, such as form, color, thinness of shell, cracking quality, color, and quality of kernel, etc., for judging hickory nuts, walnuts, butternuts, chestnuts, etc.

135.3 COCOANUTS AND SHREDDED COCOANUT

U. S. Gov., Federal Specifications Board. Z-C-571; 1930. Prepared Coconut. For long shred, medium shred, or short shred types, shredded without the removal of oil, requirements on preparation, and total coconut content, methods of test as specified by Assn. of Official Agr. Chemists.

References.—Coconut oil meal. See 112.4. Methods of analysis, grading regulations, food laws. See 120.

135.4 FILBERTS

U. S. Gov., Federal Specifications Board. Y-N-711; 1930. Nuts, Assorted and Mixed. Filberts. Requirements on general quality, freedom from defects, percentage of edible kernels, varieties acceptable.

135.5 PEANUTS AND PEANUT BUTTER

National Cottonseed Products Assn. Rules; 1930. Rules 45, 46, and 47. Peanuts. Definitions of 3 grades of unshelled peanuts, permissible dirt, stems, trash, etc., and required percentage of moisture

National Peanut Products Assn. Peanut Butter: 1925. Definitions of 3 standard grades, including grade of peanut used and freedom from mold and

foreign matter.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Grades for Shelled Runner Peanuts; 1925. Permissive standards, definitions of 2 grades as regards permissibility of split or broken peanuts, freedom from shriveled, unshelled, or damaged peanuts and foreign material

sist of apricots, bartlett pears, yellow cling U. S. Gov., Dept. of Agriculture. Bureau of Agripeaches, pineapple, maraschino cherries, requirecultural Economics. U. S. Grades for Shelled White Spanish Peanuts; 1925. Permissive standards, definitions of 2 grades as regards requirements for whole or split peanuts, freedom from shriveled, discolored, unshelled, damaged peanuts, and foreign material.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Farmers Stock Runner Peanuts; 1931. Not applicable to Virginia type runner peanuts. Definitions of 4 grades of unshelled runner peanuts including required percentage of sound and mature ker-

nels and permissible damaged kernels.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Standard for Farm-ers' Stock Virginia Type Peanus; 1929. Permis-sive standards, definitions of 5 grades of unshelled peanuts as regards maturity, dryness, freedom from foreign material, percentages of certain sizes, kernel quality classes included, definitions of 3 quality grades as regards percentages of sound and mature kernels, and definitions of 3 size grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Farmers Stock White Spanish Peanuts; 1928. Permissive standards, definitions of 4 grades of unshelled peanuts as regards maturity, dryness, freedom from damage, percentage of sound and mature

kernels.

U. S. Gov., Federal Specifications Board. Z-P-196; 1931. Peanut Butter. To conform to Federal food and drugs act, to produce a smooth moist butter without separation of oil, to have a good flavor.

References.—Pressed peanuts, peanut meal, peanut oil cake. See 112.2. Methods of analysis, grading regulations, food laws. See 120. Peanut oil. See 142.6.

National Pecan Assn. Pecan Grades and Standards; 1926. Size definitions of 3 standard size grades for long nuts and for round nuts, definitions of 3 quality grades as regards cleanliness, color and percentage of perfect kernels.

National Pecan Growers Exchange. Pecan Grade Standards. Undated. Definitions of size grades for 4 grades of long type nuts and for 4 grades of

other types.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. U. S. Standards for Un-shelled Pecans: 1930. A permissive standard definitions of 3 grades as regards uniformity of color, tightness of shell, dryness, permissible kinds and amounts of defects for shells and for kernels, diameter requirements for size classification.

U. S. Gov., Federal Specifications Board. Y-N-711; 1930. Nuts, Assorted and Mixed. Pecans. Requirements on general quality, freedom from defects, percentage of edible kernels, varieties acceptable.

135.7 WALNUTS

California Walnut Growers Assn. Standards of Marketing: 1926. Sales contract for 1926 season covers requirements for grade sizes, percentage edible kernels, percentage of light colored kernels, and appearance of shell, color chart for determination of color of kernel, for two quality grades.

Northern Nut Growers Assn. Test Sheet, Undated. Test sheet for entering results from tests on nuts in contests, such as weight, cracking pressure, weight of kernel, etc., with weighted multipliers for each value, such as form, color, thinness of shell, cracking quality, color and quality of kernel, etc., for judging of hickory nuts, walnuts, butternuts, chestnuts, etc.

U. S. Gov., Federal Specifications Board. Y-N-711: 1930. Nuts, Assorted and Mixed. English walnuts. Requirements on general quality and freedom from defects, percentage of edible kernels and of light colored kernels, acceptable sizes and varieties.

135.8 MIXED NUTS

U. S. Gov., Federal Specifications Board. Y-N-711; 1930. Nuts, Assorted and Mixed. Mixed Nuts. Requirements on kinds of nuts, their proportions in the mixture, varieties, general qualities for each variety, required percentage of edible kernels for each variety.

135.9 MISCELLANEOUS NUTS AND NUT PRODUCTS

Northern Nut Growers Assn. Test Sheet. Undated. Test sheet for entering results from tests on nuts in contests, such as weight, cracking pressure, weight of kernel, etc., with weighted multipliers for each value, such as form, color, thinness of shell, cracking quality, color and quality of kernel, etc., for judging of hickory nuts, walnuts, butternuts, chestnuts, etc.

U. S. Gov., Dept. of Agriculture. Food, Drug, and . S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Kernel Pastes. For apricot, peach, plum, and prune kernel pastes, definition, requirements on freedom from hydrocyanic acid, permissible percentage of water and of sugar.

U. S. Gov., Federal Specifications Board. Y-N-711; 1930. Nuts, Assorted and Mixed. Brazil nuts. Requirements on general quality, freedom from moldy and defective nuts, percentage of edible kernels, number of nuts to pound.

References.—Methods of analysis, inspection and grading regulations, food laws. See 120.

OIL SEEDS AND VEGETABLE OILS AND FATS

141. OILSEEDS

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Cotton Seed. Requirements on sampling, determination of original moisture and of moisture after fuming, determination of oil and of free fatty acid.

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Cottonseed Hulls. Requirements on sampling, determination of oil, lint, and

calculated cellulose.

National Cottonseed Products Assn. Rules: 1930. Rule 40, Cottonseed. For basis cottonseed requirements on coolness and lack of treatment, percentages of oil, ammonia, foreign matter, and free fatty acid, method for determination of index relation of a given shipment to the basis cottonseed

National Cottonseed Products Assn. Rules; 1930. Rules 125 to 127. Cottonseed Hulls. Definitions

of 2 grades.

National Cottonseed Products Assn. Rules; 1930. Rules 240 and 270. Cottonseed. Methods of sampling from various conveyances, methods of chemical analysis for determination of moisture, moisture of fumed sample, oil content, nitrogen, and free fatty acid.

National Cottonseed Products Assn. Rules; 1930. Rule 271. Cottonseed Hulls. Method of analysis

for determination of oil and of lint.

References.—Peanuts. See 135.5. Cottonseed oil ke and meal. See 112.3. Cocoa or cacao beans. cake and See 151.1.

142. VEGETABLE OILS

142.0 GENERAL ITEMS

American Chemical Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils; 1926. Published by American Oil Chemists Society. Applicable to edible fats and oils, methods of sampling, apparatus and methods of determination of moisture, volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined, free fatty acids, titer, saponification number, unsaponiflable matter, iodine number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl value, opencup flash and fire test, standard color for commercial fat.

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Refined Oils. Requirements on structural features of tintometer, method of determining color of oil with Lovibond glasses, determination of total fatty acids of soap stock and acidulated soap stock, determination of titer.

American Society for Testing Materials, D 94-28: 1928. Approved by American Standards Assn. as Z11t-1930. Method of Test for Saponification Number. Useful in identification of unmixed animal and vegetable oils and for measuring quantity of fatty material in compounded products, apparatus and preparation of reagents, test procedure for saponification number and percentage of fatty oil.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis: 1930. Oils, Fats. and Waxes. Preparation of sample, determination of specific gravity, index of refraction, melting point, titer test, iodine absorption number, saponification number, soluble and insoluble acids, Kirschner value, free fatty acids, acetyl value, unsaponifiable residue, amount of cottonseed, peanut, and sesame oils, tentative methods for determination of cholesterol and phytosterol, presence of resin oil, detection of fish oils in presence of vegetable oils, detection of coloring

National Cottonseed Products Assn. Rules; 1930. Rules 242 and 273. Crude Vegetable Oils. Methods of sampling from tanks and tank cars, methods of chemical analysis for determination of moisture or volatile matter, meal or impurities, and free fatty acids, method of refining and preparation of sodium hydroxide solutions for determination of refining loss, tentative method for refining crude peanut oil, crude cocoanut oil, soyabean oil, corn-oil,

National Cottonseed Products Assn. Rules; 1930. Rules 242 and 275. Refined Oils. Methods of sampling from tanks and tank cars, methods of chemical analysis for determination of color, bleaching, cold test, free fatty acids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Edible Vegetable Oils and Fats. Definition, used in enforcement of Federal food and drugs act.

References.—Lovibond glasses for color determinations. See 914.6.

142.1 COCOANUT OIL

American Oil Chemists Society. Official Methods of Chemical Analysis; 1930. Includes cocoanut oil, apparatus and methods of determination of color and refining loss for crude oils, and color, bleaching, free fatty acids, and cold test for refined oil.

National Cottonseed Products Assn. Rules; 1330. Rules 80 to 83. Crude Cocoanut Oil. Definitions of 3 grades and of basis prime grade as regards freedom from impurities, permissible content of free fatty acid, color requirements, for the pressed

National Cottonseed Products Assn. Rules; 1990. Rules S4 and S5. Refined Cocoanut Oil. Definitions of 2 grades as regards freedom from moisture and impurities, permissible content of free fatty acids, permissible darkness of color.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Cocoanut Oil. For 8 grades of expressed oil, requirements on allowable percentages of free fatty acids, moisture and impurities, color test with

standard glasses.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cocount Oil or Copra Oil. Definition as to source. Cochin Oil is coconut oil prepared in Cochin (Malabar). Ceylon Oil is coconut oil prepared in Ceylon.

References.—Cocoanut oil cake, shredded cocoanut. Sec 112.4, 135.3. Methods of analysis. Sec also 142.0.

142.2 CASTOR OIL

References,—Castor oil, medicinal, See 813.1. Methods of analysis, food laws. See 142.0, 120.

142.3 CORN OIL

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Crude Corn Oil. Tentative method for refining determination with

strength of lye specified.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Corn Oil. For 5 grades of expressed oil, requirements on allowable percentage of free fatty acids, flavor, odor, freedom from moisture and impurities, refning loss, and color test.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Corn Oil or Maize Oil. Defini-

tion as to source.

References.—Methods of analysis, food laws. See 142.0, 120. Corn, corn oil cake. See 103.1, 112.9.

142.4 COTTONSEED OIL

American Oil Chemists' Society. Official Methods of Chemical Analysis; 1930. Includes cottonseed oil, apparatus and methods of determination of color and refining loss for crude oils, and color bleaching, free fatty acids, and cold test for refined oil.

National Cottonseed Products Assn. Rules; 1930. Rules 50 to 57. Crude Cottonseed Oil. Definitions of 5 grades as regards color of refined oil produced therefrom and permissible loss in refining, definitions of 4 grades of cold pressed oil, definition of slow breaking oil.

National Cottonseed Products Assn. Rules; 1930. Rules 60 to 68. Refined Cottonseed Oll. Definitions of 9 grades, including color requirements and permissible amount of free fatty acid.

New York Produce Exchange. Rules Regulating Transactions in Cottonseed Products; 1922, Rule 19. Crude cottonseed oil, definitions of 4 grades as regards soundness of seed, freedom from water and settlings, loss on refining, and ability to produce prime summer yellow oil using test methods of National Cottonseed Products Assn.

New York Produce Exchange. Rules Regulating Transactions in Cottonseed Products; 1922. Refined cottonseed oil, definitions of 9 grades of summer and winter, yellow and white oils, as regards clearness, freedom from water and settlings, flavor, odor, Lovibond color test, allowable free fatty acids, using test methods of National Cottonseed Products Assn.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cottonsed Oil. Definition as to

source.

References.—Cottonseed oil for medicinal purposes. See also 813.3. Cottonseed, cottonseed oil cake and meal. See 141., 112.3. Vegetable shortening. See 142.95. Methods of analysis, food laws. See 142.0, 120. Cottonseed salad oil. See 142.94.

142.5 OLIVE AND PALM OILS

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Olive Oil. For commercial grade of oilve oil, requirements on allowable percentage of moisture and sediment and of free fatty acids, color. For olive oil foots of sulphur olive oil, extracted by bisulphide of carbon, requirements on allowable moisture and impurities, color test.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Palm Oil. Permissible percentage of dirt and

water.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Olive Oil, or Sweet Oil. Definition as to source.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Palm Kernel Oil. Definition as

to source.

U. S. Gov., Federal Specifications Board. Z-0-351; 1931. Olive Oil, Edible Grade. For cold pressed olive oil clarified by mechanical means only, requirements on general quality, color, freedom from rancidity, specific gravity, iodine number, construction of packing boxes, in conformity with Federal food and drugs act.

References.—Olive oil for medicinal purposes. See also 813.6. Methods of analysis, food laws. See 142.0, 120.

142.6 PEANUT OIL

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Tentative Method of Rening Crude Peanut Oil. Required procedure and number of refinings, with strength of lye required for oils with various contents of free fatty acids.

National Cottonseed Products Assn. Rules; 1330. Rules 70 to 72. Crude Peanut Oil. Definitions of 3 grades and of basis prime crude grade, as regards freedom from water and foreign matter, grade of refined oil obtainable and permissible

loss in weight on refining.

National Cottonseed Products Assn. Rules; 1930. Rules 73 to 75. Refined Peanut Oil. Definitions of 3 grades as regards color requirements and permissible content of free fatty acid. New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Futs; 1924. Pennut Oil. For 5 grades of expressed oil, requirements on freedom from moisture and impurities, color test, loss on refining, allowable

free fatty acids, etc.

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2. Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Peanut Oil, or Arachis Oil, or Earthnut Oil. Definition as to source.

References.—Peanuts, peanut oil cake and meal. See 135.5, 112.2. Methods of analysis, food laws. See also 142.0, 120.

142.7 POPPY SEED AND SUNFLOWER OILS

U. S. Gov., Dept. of Agriculture, Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1031. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Poppy Seed Oil, Definition as to source.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sunflower Oil. Definition as to sources.

References.-Methods of analysis, food laws. See 142.0, 120.

142.8 RAPESEED AND SESAME OILS

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Rapessed Oil. For 3 grades of expressed oil, refined and semirefined, permissible percentages of free fatty acids and of moisture and impurities.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Sesame Oil. For hot pressed oil, permissible percentages of moisture and impuri-

ties and of free fatty acids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration, S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Rapeseed Oil, or Rape Oil, or Colza Oil. Definition as to source.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sesame Oll, or Gingilli Oil, or Teel Oil, or Benne Oil. Definition as to source.

References.—Sesame oil for medicinal purposes. See also \$13.7. Methods of analysis, food laws. See 142.0, 120.

142.9 MISCELLANEOUS SPECIFICATIONS FOR VEGETABLE OIL

142.91 Oleomargarine, Nut Margarine

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Renovated Butter and Oleomargarine. Tentative tests by foam test and melted fat test to distinguish from

true butter.

U. S. Gov., Congress. Stat. Public No. 540; 1920.
Amendment to act defining butter. Taxing and Regulating Oleomargarine of 1886. Requires that all substances made in imitation of butter, or intended to be sold as butter, or churned or mixed with cream, milk, water, shall be known and designated as "oleomargarine."

U. S. Gov., Federal Specifications Board. 381a; 1927. Dairy Products. Oleomargarine. Requirements on ingredients used in manufacture including permissible amount of vegetable oil, general quality, content of salt and of moisture, quality score of butter used, butter fat content, methods of test as specified by Assn. of Official Agricultural Chemists.

References.-Methods of analysis, food laws. See also 142.0, 120.

142.92 Vegetable Tallow

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Chinese Vegetable Tallow. Requirements on titre and permissible moisture and impurities.

References.-Methods of analysis, food laws. See 142.0, 120.

142.93 Cacao Butter

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cacao Butter, or Cocoa Butter. Definition, source.

References .- Cacao butter, medicinal. See 813.8.

142.94 Salad Oil and Mayonnaise

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Stalad Dressings. Tentative Methods. Preparation of sample, determination of total solids, reducing sugars, sucrose, total acid, oil, identification of oil, lecithin phosphoric acid, and egg solids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Mayonnaise. Definition, including materials entering into its composition, required percentage of edible vegetable oil and sum of percentages of oil and egg yolk.

U. S. Gov., Federal Specifications Board. EE–D-691; 1931. Salad Dressing. For mayonnaise and for all other varieties, requirements on freedom from artificial coloring, preservatives, adulterants, and impurities, to conform to Federal food and drugs act. For mayonnaise, mayonnaise dressing, and mayonnaise salad dressing, requirements on ingredients, general quality, percentages of vegetable oil and of egg yolk, test methods of Assn. of Official Agri, Chemists.

U. S. Gov., Federal Specifications Board. JJJ-O-361; 1930. Vegetable Salad Oil. For 2 types, any edible vegetable oil except olive oil, any designated type of edible vegetable oil except olive oil, requirements on general quality, freedom from rancidity, 5-hour cold test, conforming to requirements of Federal food and drugs act, specifications for packing boxes.

References.-Methods of analysis, food laws. See 142.0, 120.

142.95 Vegetable Shortening

U. S. Gov., Specifications Board. EE-L-101; 1931. Lard Substitutes (Including Vegetable Shortening). Includes one type derived from vegetable origin only, requirements on use of pure vegetable oil or vegetable is stearin or hydrogenated vegetable oil, solidity of product, freedom of product from rancidity, foreign odor, animal fats, or water.

References.—Methods of analysis, food laws. See 142.0, 120. Cottonseed oil. See 142.4.

142.96 Lavender Oil

References .- Lavender oil, medicinal. See 813.9.

142.97 Lemon and Orange Oils

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Lemon

and Orange Oils. Determination of specific gravity, index of refraction, optical rotation, aldehydes, physical constants of distillate, pinene.

References .- Lemon oil and orange oil for medicinal purposes. See 813.9.

142.99 Miscellaneous Vegetable Oils

References.—China wood oil. See 848.2. Perilla oil. See 848.4. Linseed and soybean oils, See 143.

143. LINSEED AND SOYBEAN CILS

143.1 LINSEED OIL

National Assn. of Dvers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 51. Finish and Sizing for Organdies. Method of preparation from whole flax seed, required constituents and amounts of each.

References.—Linseed oil for medicinal purposes. See 813.5. Linseed oil for paint. See 848.11, 848.12.

143.2 SOYBEAN OIL

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Crude Soybean Oil. Tentative method for refining determination with

strength of lve specified.

American Society for Testing Materials. Tentative Specifications. D 124-22T; 1922. Soybean Oil, Raw or Refined. Preparation of reagents, limiting values and test procedure for foots, loss on heating, specific gravity, acid number, saponification number, iodine number, unsaponifiable matter, and color.

National Cottonseed Products Assn. Rules; 1930. Rules 76, 77. Crude Soybean Oil. Definitions of 2 grades of pressed oil as regards freedom from impurities, color of refined oil produced there-

from, and permissible loss in refining. National Soybean Oil Mfrs. Assn. Purity and Quality of Crude Domestic Raw Soybean Oil; 1930. For oil delivered under trading rules of N. S. O. M. A., requirements on specific gravity, iodine number, saponification number, unsaponifiable matter, permissible free fatty acid, volatile matter, and foots, methods of analysis to be those given in D124-22T of Am. Soc. for Testing Materials.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes, and Fats; 1924. Soybean Oil. For expressed oil, requirements on freedom from impurities and moisture, allowable free fatty acids, color test with standard glasses. for crude, refined, prime, and deodorized grades. For extracted oil, requirements on allowable amounts of free fatty acids, water, and moisture.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Soybean Oil, or Soy Oil, or Soja Oil. Definition as to source.

References .- Methods of analysis. See also 142.0.

COCOA, COFFEE, TEA, SPICES, AND LEAVENING AGENTS

151. COCOA

150-159

151.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Cacao Bean and Its Products. Preparation of sample. determination of moisture, ash, alkalinity of ash, nitrogen, fat, testing of fat for melting point, index of refraction, iodine number, saponification number, etc., and tentative methods for determination of casein, crude fiber, starch, sucrose, milk fat in milk chocolate.

151.1 COCOA OR CACAO BEANS

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cacao Beans, or Cocoa Beans. Definiition as to source.

References .- Methods of analysis. See 151.0.

151.2 COCOA, POWDERED OR PREPARED

American Pharmaceutical Assn. National Formulary; 1926. Cocoa. For medicinal purposes, description and physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. "Breakfast Cocoa." Definition, re-

quired percentage of cacao fat.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cocoa, Powdered Cocoa. Definition, permissible percentages of crude fiber, total ash, and ash insoluble in hydrochloric acid,

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2. Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs drugs act. Dutch-Process Cocoa, "Alkalized Co-Definition, permissible percentage of pocoa. tassium carbonate.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2. Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sweet Milk Cocoa. Definition, required per-

centage of milk solids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sweet or Sweetened Cocoa. Definition, permissible percentages of sugar, crude fiber, total ash, and ash insoluble in hydrochloric acid.

U. S. Gov., Federal Specifications Board. JJJ-C-501; 1931. Cocoa. For pulverized breakfast cocoa and dutch process cocoa, in conformity with food and drugs act, requirements on percentages of cocoa fat, total ash, ash insoluble in hydrochloric acid, and crude fiber, analyses according to methods of Assn. of Official Agriculture Chemists.

References.—Chocolate. See 151.3. Methods of analysis, food regulations. See also 151.0, 120.

151.3 CHOCOLATE, POWDERED OR PREPARED

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Chocolate, Plain Chocolate, Bitter Chocolate, Chocolate Liquor, Chocolate Paste, Bitter Chocolate Coating. Definitions, required percentage of cacao fat, permissible percentages of crude fiber, ash, and ash insoluble in hydrochloric acid.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Dutch-Process Chocolate, "Alkalized Chocolate." Definition, permissible percentage of potassium carbonate.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration, S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Milk Chocolate. Definition, required per-

centage of milk solids.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration, S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sweet Chocolate. Definition, permissible percentages of crude fiber, total ash, and ash in-

soluble in hydrochloric acid.

U. S. Gov., Federal Specifications Board. JJJ-C-271; 1931. Chocolate. For plain chocolate, and sweetened vanilla chocolate, in conformity with Federal food and drugs act, requirements on percentages of cacao fat, total ash, ash insoluble in hydrochloric acid, and crude fiber, chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Cocoa. See 151.1, 151.2. Methods of analysis, food regulations. See 151.0, 120.

152. COFFEE

152.0 GENERAL ITEMS

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Coffee, General definition of coffee, green, raw, unroasted, and roasted.

152.1 COFFEE, RAW OR GREEN

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Green Coffee. Tentative methods for macroscopic examination and for identification of coloring matters.

U. S. Gov., Federal Specifications Board. HHH-C-571; 1931. Coffee. Includes green coffee of 2 grades, one equal to Santos No. 4 and the other to Rio grade No. 4 of the New York Coffee and Sugar Exchange standards, requirements on general quality, in conformity with Federal food and drugs act.

References.-Definitions of coffee, food laws. See 152.0, 120.

152.2 COFFEE, ROASTED

American Pharmaceutical Assn. National Formulary; 1926. Coffee. Roasted coffee for medicinal purposes, description and physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Roasted Coffee. Preparation of sample, determination of ash, alkalinity of ash, phosphoric acid in ash, chlorides, caffeine, crude fiber, ether extract, and tentative methods for determination of macroscopic properties, moisture, soluble solids, starch, sugars, acidity, coating substances of sugar, egg, chicory, waxes.

U. S. Gov., Federal Specifications Board. HHH-C 571; 1931. Coffee. Includes roasted coffee, whole bean or ground, one grade equal to Santos No. 4 and one grade equal to Rio grade No. 4 of the New York Coffee and Sugar Exchange standards, requirements on general quality for 1 quality grade of bean coffee and 2 quality grades of ground coffee, in conformity with Federal food and drugs act.

References.-Definitions of coffee, food laws. See 152.0, 120.

152.3 COFFEE SUBSTITUTES AND EXTRACT

153. TEA

153.0 GENERAL ITEMS

- Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Tea. Preparation of sample, determination of moisture, water extract, ash, alkalinity of ash, phosphoric acid in ash, ether extract, crude fiber, caffeine, and tentative methods for determination of protein, volatile oil, tannin, paraffin and waxy substances, pigments used for coloring or facing.
- U. S. Gov., Congress. 29 Stat. at L. p. 604, 1897 as amended. (For text see S. R. A., T. No. 1. 1928 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) The tea act. Authorizes Sec. of Agriculture to appoint a board each year which shall submit standard samples of tea, the Sec, to establish standards of purity, quality, and fitness for consumption, and to deposit duplicate standard samples at ports of entry, etc., only tea conforming to standards to be allowed entry.
- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., T. No. 1; 1928. Regulations for the enforcement of the tea act. Includes regulations on preparation of standards by board of tea experts, period when such standards take effect, rules for testing teas for quality, impurities, coloring matter, in comparison with standards, permissible amounts of specified screen sizes of dust for various teas, regulations regarding rejection, etc.

153.1 TEA

- . S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. U. S. Gov., 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Tea. Definition, source, limits on percentage of ash, meets act of Congress of Mar. 2, 1897, regulating the importation and inspection of tea.
- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., T. No. 5; 1931. Standards under the tea act. (Effective May 1, 1930.) A list of the 7 standards for tea submitted by board of tea experts and established as standards under tea act, includes Formosa used for Foochow and Canton Oolong, Congou; Java used for all fully fermented East India teas; Gunpowder, green used for all China green teas; Japan; scented orange pekoe; and scented Canton.
- U. S. Gov., Federal Specifications Board, HHH-T-191; 1931. Tea. Covers new crop and medium cup quality teas of 4 types, black tea with 5 acceptable varieties, green tea with 2 acceptable varieties, Oolong tea of 1 variety, and blended or mixed teas, conforming to Federal food and drugs act. Requirements on general quality, type of leaf, uniformity of color, freedom from foreign odors, recommended proportions for mixed teas, in accordance with standards recognized by Federal law, the Federal Board of Tea Experts, and the U. S. Dept. of Agriculture.

References.-Methods of analysis, tea laws. See 153.0.

154. SPICES, SALT, AND VINEGAR 154.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Spices. Preparation of sample, determination of soluble and insoluble ash, calcium oxide in ash, nitrogen, ether extract, alcohol extract, copper-reducing substances, starch, crude fiber, tannin, sulphur, volatile oils in mustard seed, tentative methods for determination of moisture, cold water extract, olive oil in paprika, and microscopic examination.

154.1 SPICES, BARK AND ROOT TYPE, AND HORSE RADISH

154.11 Cinnamon

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cinnamon. Definitions of cinnamon, Ceylon cinnamon, and Saigon cinnamon, permissible percentage of total ash and of ash insoluble in hydrochlotic acid in ground cinnamon.

U. S. Gov., Federal Specifications Board. EE-8-631; 1930. Spices. Cinnamon, ground. Requirements on source, permissible ash, and ash insoluble in hydrochloric acid, methods of analysis as specified by Assn. of Official Agricultural

Chemists.

References.—Methods of analysis, food laws. See 154.0, 120. Cinnamon extract. See 175.9.

154.12 Ginger

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Ginger. Definitions of ginger, Jamaica ginger, and of limed ginger, required percentages of starch, cold water extract, and ash soluble in cold water, permissible percentages of crude fiber, lime, total ash, and ash insoluble in acid, for each type

U. S. Gov., Federal Specifications Board, EE-S-631; 1930. Spices. Ginger, ground. Requirements on source, starch content, cold water extract content, and of ash soluble in water, permissible lime, ash, and ash insoluble in hydrochloric acid, methods of analysis as specified by Assn, of Official Agricultural Chemists.

References.—Methods of analysis, food laws. See 154.0, 120. Ginger extract. See 175.9.

154.13 Horse Radish

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Horse Radish. Definition as to source, prepared horse radish defined as with or without vinegar.

References.-Methods of analysis, food laws. See 120.

154.19 Miscellaneous Spices of Bark and Root Type

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No.; Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Curcuma or Tumeric. Definition as to source.

References.-Methods of analysis, food laws. See 154.0, 120.

154.2 SPICES, FRUIT TYPE

154.21 Allspice

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Allspice, or Pimento. Definition, required percentages of quercitannic acid, permissible percentages crude fiber, total ash, and ash insoluble in hydrochloric acid.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Allspice. For ground material, definition, permissible crude fiber, ash, ash insoluble in hydrochloric acid, required content of quercitannic acid, methods of analysis as specified by Assn. of Official Agricultural

Chemists.

References.—Methods of analysis, food laws. Sec 154.0, 120.

154.22 Panrika

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Hungarian Paprika. Definitions of rosenpaprika and of koenigspaprika or king's paprika, permissible percentages of nonvolatile ether extract, crude fiber, total ash, and ash insoluble in acid.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Paprika. Definition, permissible percentage of total ash and of ash insoluble in

hydrochloric acid, limits on iodine number of extracted oil.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Pimenton, Pimiento, or Spanish Paprika. Definition, permissible percentages of nonvolatile ether extract, crude fiber, total ash, and ash insoluble in acid.

References.-Methods of analysis, food laws. See 154.0, 120.

154.23 Pepper

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Black Pepper. Definitions of black pepper and of ground black pepper, required percentages of nonvolatile ether extract and starch, permissible percentages of total ash and of ash insoluble in hydrochloric acid.

insoluble in hydrochloric acid.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cayenne Pepper. Definition of cayenne or cayenne pepper, required percentage of nonvolatile ether extract, permissible percentages of starch, crude fiber, total ash, and ash

insoluble in acid.

Insolute in actor.

V. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Red Pepper. Definition, permissible percentage of total ash and of ash insoluble in hydrochloric acid.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. White Pepper. Definition, required percentage of nonvolatile ether extract and of starch, permissible percentages of crude fiber, total ash, and ash insoluble in hydrochloric acid.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Black pepper. For ground product, definition, requirements on content of starch, ash, ash insoluble in hydrochloric acid, and nonvolatile ether extract, methods of analysis as specified by Assn. of Official Agri. Chemists.

U. S. Gov., Federal Specifications Board. EE—S-631; 1930. Spices. Cayenne pepper. Definition, requirements on content of nonvolatile ether extract, starch, crude fiber, ash, and ash insoluble in hydrochloric acid, methods of analysis as specified by Assn. of Official Agri. Chemists.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Chili Colorado pepper. For ground pepper, definition, sources from which

obtainable.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. White ground pepper. Definition, requirements on percentages of nonvolatile ether extract, starch, crude fiber, ash, and of ash insoluble in hydrochloric acid, methods of analysis as given by Assn. of Official Agricultural Chemists.

References.—Fresh peppers. See 122.5. Methods of analysis, food laws. See 154.0, 120.

154.3 SPICES, FRUIT SEED TYPE

154.31 Anise

U. S. Gov., Dept. of Agriculture, Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Anise. Definition of anise or aniseed, permissible percentages of total ash and of ash insoluble in hydrochloric acid.

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Star Aniseed. Definition, permissible total

ash.

References.—Methods of analysis, food laws. See 154.0, 120. Anise extract, anise oil. See 175.9, 813.9.

154.32 Celery Seed

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Celery Seed. Definition, permissible percentage of total ash and of ash insoluble in hydrochloric acid.

 $References.{\rm--Methods}$ of analysis, food laws. See 154.0, 120.

154.33 Coriander Seed

U. S. Gov., Dept. of Agriculture. Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Corlander Seed. Definition, permissible percentage of total ash and of ash insoluble in hydrochloric acid.

References.—Methods of analysis, food laws. See 154.0, 120. Oil of coriander. See 813.9.

154.34 Cumin Seed

U. S. Gov., Dept. of Agriculture, Food, Drug. and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cumin Seed. Definition, permissible percentage of total ash, of ash insoluble in hydrochloric acid, and of foreign matter.

References.—Methods of analysis, food laws. Sec 154.0, 120,

154.35 Dill Seed

U. S. Gov., Dept. of Agriculture, Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Dill Seed. Definition, permissible percentage of total ash and of ash insoluble in hydrochloric acid.

References.-Methods of analysis, food laws. See 154.0, 120.

154.36 Fennel Seed

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Fennel Seed. Definition, permissible percentage of total ash and of ash insoluble in hydrochoric acid.

References.—Methods of analysis, food laws. See 154.0, 120. Fennel oil for medicinal purposes. See 813.9.

154.4 SPICES, LEAF TYPE

154.41 Capers

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Capers. Defined as flower buds of capparis spinosa.

References.—Methods of analysis, food laws. See 154.0, 120.

154.42 Cloves

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cloves. Definition, permissible percentage of clove stems, of crude fiber, of total ash, and of ash insoluble in acid, required percentage of volatile ether extract, and of quereitannic acid.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Cloves, ground and whole. Requirements on content of queretrannic acid and of volatile ether extract, permissible stems, crude fiber, ash, and ash insoluble in hydrochloric acid, methods of analysis as specified by Assn. of Official Agricultural Chemists.

References.—Methods of analysis, food laws. See 154.0, 120. Clove extract, oil of cloves. See 175.9, 813.9.

154.43 Marjoram

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Marjoram. Definition of marjoram or leaf marjoram, permissible percentages of stems and foreign material, total ash, and ash insoluble in hydrochloric acid.

References.—Methods of analysis, food laws. See 154.0, 120.

154.44 Sage

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sage. Definition, permissible amount of stems and foreign material. U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Sage. Requirements on source, content of volatile ether extract, permissible crude fiber, methods of analysis as specified by Assn. of Official Agri. Chemists.

References,-Methods of analysis, food laws. See

154.45 Thyme

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Thyme. Definition, permissible percentage of total ash and of ash insoluble in hydrochloric acid.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Thyme. Requirements on source, permissible ash and ash insoluble in hydrochloric acid, methods of analysis as specified by Assn. of Official Agri. Chemists.

References .- Methods of analysis, food laws .- See

154.49 Miscellaneous Leaf Type Spices

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs

act. Savory. General definition.
U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs

act. Tarragon. General definition.

154.5 SPICES, SEED TYPE

154.51 Cardamom

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cardamom seed. Definition, permissible percentage of ash and of ash insoluble in hydrochloric acid.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cardamom. Defined as the dried, nearly ripe fruit of elettaria cardamomum.

References.—Methods of analysis, food laws. See 154.0, 120. Oil of cardamom. See 813.9.

154.52 Caraway

U. S. Gov., Dept. of Agriculture, Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Caraway. Definition of caraway or caraway seed, permissible percentage of total ash and of ash insoluble in hydrochloric acid.

References.—Methods of analysis, food laws. See 154.0, 120. Oil of caraway. See 813.9,

154.53 Mace

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Mace. Definition, limiting amounts of nonvolatile ether extract, permissible percentages of crude fiber, total ash, and of ash insoluble in hydrochloric acid.

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Mace. Definition, requirements on content of nonvolatile ether extract. permissible fiber, ash, and ash insoluble in hydrochloric acid, methods of analysis as given by Assn, of Official Agricultural Chemists.

References.-Methods of analysis, food laws. See 154.0, 120.

154.54 Mustard

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Prepared Mustard. Preparation of sample, determination of solids, ash, salt, protein, acidity, copper reducing substances, crude fiber, preservatives, and tentative methods for determination of ether extract, and coloring matter.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Mustard. Prepared mustard, definition, required percentage of nitrogen, permissible percentages of carbohydrates and crude fiber. Mustard flour, definition, permissible percentages of starch and ash. Mustard cake and ground mustard, definitions. Mustard seed, defi-nitions, required yield of mustard oil, permissible percentage of total ash and of ash insoluble in hydrochloric acid, for several varieties.

U. S. Gov., Federal Specifications Board. EE-M-821; 1931. Prepared Mustard. For 1 type and grade including yellow (English) style, dard (German) style, and French style, requirements on preparation and allowed species of seed, content of carbohydrates, crude fiber, and nitrogen, consistency of product, in conformity with Federal food and drugs act, chemical analysis according to methods of Assn. of Official Agricultural

Chemists.

Federal Specifications Board. EE-S-U. S. Gov., 631; 1930. Spices. Mustard, ground. Defini-tion, requirements on freedom from excessive hulls, permissible starch and ash, methods of analysis as specified by Assn. of Official Agricultural Chemists.

References.—Methods of analysis, food laws. See also 154.0, 120. Oil of mustard. See 813.9.

154.55 Nutmeg

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Nutmeg. Definition, required per-centage of nonvolatile ether extract, permissible percentages of crude fiber, total ash, and of ash insoluble in hydrochloric acid.

insoluble in hydrocnioric acid.
U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Nutmeg. For whole seed and for ground material, definition and general quality, requirements on content of nonvolatile ether extract, permissible crude fiber, ash, and ash insoluble in hydrochloric acid, methods of analysis as specified by Assn. of Official Agricul-

tural Chemists.

References.—Methods of analysis, food laws. See 154.0, 120. Nutmeg extract, oil of nutmeg. See 175.9, 813.9.

154.56 Saffron

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Saffron. Definition, permissible percentages of vellow stiles and foreign matter, volatile matter, total ash, and ash insoluble in hydrochloric acid.

References.-Methods of analysis, food laws. See 154.0, 120.

154.6 SALT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Waters, Brine, and Salt. Salt. Tentative methods for determination of moisture, matters insoluble in water, sulphate, calcium, and magnesium.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Salt. Table salt, or dairy salt, definition, permissible percentages of calcium sulphate and of calcium and magnesium chlorides.

U. S. Gov., Dept. of Commerce. Bureau of Standards, R70; 1927. Salt Packages. Simplified practice recommended and accepted by industry establishing a limited list of standard package sizes for pockets, cartons, burlap or cotton bags, and barrels for salt, sizes expressed in capacity

in pounds of salt.

- U. S. Gov., Federal Specifications Board. 364; 1925. Condiments. Rock salt. Rock salt for animals, half ground or lumps, or in compressed cakes, requirements on content of sodium chlorride, freedom from deleterious matter, to use methods of analysis of Assn. of Official Agri. Chemists
- U. S. Gov., Federal Specifications Board. SS-S-31; 1930. Table Salt. For fine-grained type and for vacuum, free-running type, requirements on permissible calcium sulphate and of calcium and magnesium chloride, and insoluble matter in fine grained type, required purity of free running type, kinds and amount of drier.

References.—Sodium chloride (salt) as a chemical reagent. See 834.9. Food laws. See 120.

154.7 VINEGAR

154.70 General Items

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Vineagars. Preparation of sample, determination of specific gravity, solids, ash, alkalinity of soluble ash, phosphoric acid, volatile and nonvolatile acids, reducing substances, alcohol, glycerol, color, sulphates, formic acid, tartaric acid, preservatives, and tentative methods for determination of polarization, alcohol precipitate, mineral acids, metals, dextrin, coloring matters, presence of spices.

154.71 Vinegar

- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Vinegar. Definition of vinegar, cider vinegar, or apple vinegar, required percentage of acetic acid. Definitions of wine vinegar, grade vinegar, malt vinegar, sugar vinegar, glucose vinegar, spirit vinegar, distilled vinegar, and grain vinegar, requirements on percentage of acetic acid.
- U. S. Gov., Federal Specifications Board. Z-V-401; 1931. Vinegar. Cider vinegar, malt vinegar, and distilled vinegar. Requirements on method of preparation, percentage of acetic acid in product, includes 2 strength grades of distilled vinegar, methods of analysis as specified by Assn. of Official Agri. Chemists.
- U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Vinegar.

Definitions of vinegar and vinegar stock including required amount of acetic acid and permitted amount of alcohol.

References.-Methods of analysis, food laws. See 154.70, 120.

154.9 MISCELLANEOUS SPICES

U. S. Gov., Federal Specifications Board. EE-S-631; 1930. Spices. Curry, ground. Requirements on kinds of ingredients and general quality.

155. LEAVENING AGENTS

155.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Baking Powders and Baking Chemicals. Preparation of sample, determination of total and of available carbon dioxide, of neutralizing value, tartaric acid, starch, ash, iron, aluminum, calcium, potassium and sodium, phosphoric acid, sulphuric acid, ammonia, and tentative methods for determination of lead, fluorides, arsenic.

155.1 BAKING POWDER

- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Baking Powder. Definition, required acid reacting materials but not their proportions, required percentage yield of available carbon dioxide.
- U. S. Gov., Federal Specifications Board. EE-P-611; 1930. Baking Powder. For tartaric acid type, phosphoric acid type, compounds of aluminum type, and combination of phosphoric acid and compounds of aluminum type, requirements on yields of available carbon dioxide, freedom from metallic impurities, and content of alumina and phosphorus pentoxide in the aluminum compound types, testing according to methods of Assn. of Offidal Agri. Chemists.

References.—Methods of analysis, food laws. See 155.0 and 120.

155,2 BAKING SODA

U. S. Gov., Federal Specifications Board. EE-S-571; 1930. Baking Soda. Shall be pure sodium bicarbonate.

References.—Sodium bicarbonate as a medicinal agent and as a chemical reagent. See 834.5. Methods of analysis, food laws. See 155.0, 834.5, 120.

155.3 CREAM OF TARTAR AND SUBSTITUTES

155.4 HOPS

U. S. Gov., Federal Specifications Board. HHH-H-491; 1930. Hops. Requirements on source, general quality, hand rubbing test, permissible amount of arsenic, testing in accordance with methods of Assn. of Official Agri. Chemists.

References.—Methods of analysis, food laws. See

155.5 YEAST

U. S. Gov., Federal Specifications Board. EE-Y-131; 1931. Yeast. Covers 2 types, compressed yeast and dried yeast. For bread yeast prepared from grain mash, in conformity with Federal food and drugs act, requirements on general quality, color, degree of compression, permissible added starch, dead cells, and bacteria, and freedom from wild yeast and foreign organisms, for compressed yeast; freedom from moisture, screenings and foreign organisms for dried yeast.

References .- Methods of testing, food laws. See 120.

160-169 SUGAR, MOLASSES, SIRUP, HONEY, CONFECTIONERY

160. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis: 1930. Sugar Beets. Tentative methods for determination of sucrose.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis: 1930. Sugars and Sugar Products. Sugars, Sirups, and Mo-lasses. Preparation of sample, determination of moisture, solids, ash, alkalinity of ash, nitrogen, mineral adulterants in ash, determination of sucrose, sucrose and raffinose, glucose by polarimetric methods, chemical methods for determination of sucrose, invert, maltose, lactose, and dextrose.

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1; 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs. confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopeia and Nat.

Formulary.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration, S. R. A., F. D. No. 1; 1930. Regulations for enforcement of Federal food and drugs act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U. S. Pharmacopeia and Nat. Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U.S. Pharmacopæia or Nat. Formulary, regulations on powdering, on poisonous and deleterious ingredients, and on colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

U. S. Gov., Dept. of Commerce. Bureau of Standards, C19: 1924. Standard Density and Volumetric Tables. Includes tables of density of solu-

tions of cane sugar.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples, Dextrose. Sample No. 41 prepared and sold by the bureau for use in industry and by others as a standard reducing sugar.

a Standard reducting stgar.
U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Sucrose. Sample No. 17 prepared and sold by the bureau, for use in industry and by others as a standard in calorimetric and saccharimetric

measurements.

U. S. Gov., Dept. of Commerce. Bureau of Standards; T115; 1918. New Baumé Scale for Sugar Solutions. Adopted by Manufacturing Chemists Assn. of U. S., the Bureau of Standards, and by all manufacturers of hydrometers. Scale is based on specific gravity values of Plato, 20° C., and the modulus 145. Tables show relation between degrees Brix or percent sucrose, specific gravity, and degrees Baumé.

161. SUGAR

161.1 SUGAR, GRANULATED

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sugar. Definition, required content of sucrose for granulated, loaf, cut, milled, and powdered sugars. General definitions of maple sugar, maple concrete, massecuite, melada, mush sugar, and concrete

U. S. Gov., Federal Specifications Board, JJJ-S-791: 1931. Beet or Cane Sugar. Includes white granulated sugar, fine and medium grain grades, conforming to Federal food and drugs act, required content of sucrose, chemical tests in ac-cordance with methods of Assn. of Official Agricultural Chemists.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sucrose. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act

References.—Methods of analysis, density tables, food laws. See 160. Other sugars. See 161.2 to 161.7.

161.2 SUGAR, POWDERED

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sugar, Powdered. Definition, required percentage of sucrose.

U. S. Gov., Federal Specifications Board. JJJ-S-791; 1931. Beet or Cane Sugar. Includes white powdered sugar of 3 grades, coarse, XXXX confectioners, and XXXX icing, conforming to Federal food and drugs act, required content of sucrose, permissible starch in icing sugar, chemical tests in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Methods of analysis, food laws, density tables. See 160.

161.3 LOAF SUGAR

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sugar, Loaf. Definition, required percentage of sucrose.

S. Gov., Federal Specifications Board. JJJ-S-791; 1931. Beet or Cane Sugar. Includes white tablet, cube, or domino sugar, conforming to Federal food and drugs act, required content of sucrose, chemical tests in accordance with methods of Assn. of Official Agricultural Chemists.

References.—Methods of analysis, density tables, food laws. See 160.

161.4 GRAPE AND CORN SUGAR

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Dextrose. Definition of dextrose (commercially known as refined corn sugar when derived from corn starch), requirements on con-tent of dextrose and permissible moisture content for anhydrous dextrose and for hydrated dextrose. used in enforcement of Federal food and drugs

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Dextrose. For medicinal purposes, description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Methods of analysis, density, tables, food laws. See 160.

161.5 SOFT SUGAR

U. S. Gov., Federal Specifications Board. JJJ-S-791; 1931. Beet or Cane Sugar. Includes brown sugar commercially known as refluers' soft sugar, medium No. 5 to No. 10, conforming to Federal food and drugs act, general requirements on flavor and uniformity of color.

References.—Methods of analysis, food laws, density tables. See 160.

161.6 STARCH SUGAR

References.—Grape and corn sugar. See 161.4.

161.7 LACTOSE, MILK SUGAR

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Lactose. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Methods of analysis, density tables, food laws. See 160.

162. HONEY

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Honey. Preparation of sample, determination of moisture, ash, alkalinity of soluble ash, reducing sugars, sucrose, free acid, and tentative methods for polarization, determination of levulose, dextrose, dextrine, commercial glucose, commercial invert sugar, and diastase.

Mountain States Honey Producers Assn. Honey Grades. Undated. Definitions of 6 grades of honey, giving range of each grade by Pfund grader, with two points of tolerance between each grade, differing somewhat from Government

standards.

U. S. Gov., Dept. of Agriculture. Bureaus of Entomology and Agricultural Economics. Circular 24; 1927. U. S. Grades, Color Standards, and Packing Requirements for Honey. Permissive standards for extracted honey, definitions of 4 grades as regards ripening, freedom from damage due to overheating, fermentation, objectionable flavors, etc., minimum unit weight, color classification into 7 grades as determined by standard color

grader described.

U.S. Gov., Dept. of Agriculture. Bureaus of Entomology and Agricultural Economics. Circular
24; 1927. U. S. Grades, Color Standards, and
Packing Requirements for Honey. Permissive
standards for section comb honey and cut comb
honey, definitions of 7 grades of section honey,
3 grades of shallow frame comb honey, and 7
grades of cut comb honey, as regards freedom
from pollen cells, defective flavor and damaged
honey, uniformity in color, appearance of sections, dryness of surface, attachment to section
sides, permissible through holes and empty cells,
minimum weight, classification into 4 color
grades as determined by standard color grader
described.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Honey, Definition of honey, comb honey, extracted honey, and strained honey, pernissible percentages of water, ash, and sucrose.

U. S. Pharmacopoelal Convention (Inc.), Pharmacopoela of U. S. A. 1926. Honey. For medical purposes, physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

163, MOLASSES AND REFINERS SIRUP

163.1 MOLASSES, PORTO RICO

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rey. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Molasses. Definition, permissible percentages of water and of ash.

References .- Methods of analysis, food laws. See

163.2 MOLASSES, NEW ORLEANS

References .- See 163.1.

163.3 REFINERS SIRUP

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Refiners Sirup, Treacle. Definition, permissible percentages of water and of ash. References.—Methods of analysis, food laws. See 160, 160.

164. SIRUP

164.1 MAPLE SIRUP

- Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Sugars and Sugar Products. Maple Products. Preparation of sample of sirup and of sugar, determination of moisture, polarization, reducing sugar, sucrose, commercial glucose, ash, alkalinity of ash, conductivity value, and tentative methods for determination of lead number, malic acid value, metals.
- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Maple Sirup. Definition, permissible percentage of water, required weight per gallon.
- U. S. Gov., Federal Specifications Board. JJJ-S-351a; 1931. Sirup. Maple sirup. Definition, requirements on freedom from sediment, Baumé test, to conform to Federal food and drugs act.
- U. S. Gov., Federal Specifications Board. JJJ-8-351a; 1931. Sirup. For sugar and maple sirup, requirements on percentage of maple sirup, Baumé test, to conform to Federal food and drugs act.

References,—Food laws. See 160. Sugar density scales. See 160.

164.2 CORN SIRUP AND GLUCOSE

- U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Glucose. Definition, permissible percentage of ash, chief constituents of ash.
- U. S. Gov., Federal Specifications Board. JJJ-8-351a; 1931. Sirup. For corn and refiners' blended sirup, requirements on percentage of refiners' sirup, Baumé test permissible ash, to conform to Federal food and drugs act.
- U. S. Pharmacopoeial Convention (Inc.), Pharmacopoeia of U. S. A.; 1926. Glucose. For medianal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.
 - References.-Methods of analysis, food laws. See 160. Sugar density scales. See 160.

164.3 BLENDED SIRUP

U. S. Gov., Federal Specifications Board. JJJ-S-351a; 1931. Sirup. Beineded cane sugar and refiners' sirup. Permissible content of ash, required Baumé test, to conform to Federal food and drugs

U. S. Gov., Federal Specifications Board. JJJ-S-351a; 1931. Sirup. For corn and refiners' blended sirup, requirements on percentage of refiners' sirup, Baumé test, permissible water and ash, to conform to Federal food and drugs act.

References.—Methods of analysis, food laws. See 160. Sugar density scales. See 160. Sugar and maple sirup. See 164.1.

164.4 CANE SIRUP

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sugar Cane Sirup. Definition, permissible percentages of water and of ash.

U. S. Gov., Federal Specifications Board. JJJ.-8-351a; 1931. Sirup. For sugar cane sirup, requirements on percentage of water and of ash allowed, Baumé test, to conform to Federal food and drugs act, specifications for shipping crate.

Re/erences.—Methods of analysis, food laws. See 160. Sugar density scales. See 160.

164.5 SORGHUMS

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sorghum Sirup. Definition, permissible percentages of water and of ash.

References.—Methods of analysis, food laws. See 160. Sugar density scales. See 160.

164.6 SUGAR SIRUP

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sugar Sirup. Definition, permissible percentage of water.

References.—Sugar. See 161.1. Methods of analysis, food laws. See 160. Sugar density scales. See 160.

165. CONFECTIONERY

165.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Confectionery. Preparation of sample, determination of moisture, ash, alkalinity of ash, nitrogen, sucrose, glucose, alcohol in sirups, tentative methods for determination of mineral adulterants in ash, starch, ether extract, coloring matter, and metals.

165.1 CANDY

U. S. Gov., Federal Specifications Board. EE-C71; 1931. Candy. For chocolates, bon bons, hard candy, and stick candy, made from saccharine substances with or without coloring, flavoring, or filling materials, requirements on freedom from mineral substances, poisonous color or flavors, deleterious ingredients, spiritous liquors, and narcotic drugs, to conform to Federal food and drugs act, to be standard commercial brands, requirements on number of pieces to pound and assortment of varieties for chocolates, flavor of lemon drops, assortment of flavors for stick candy.

References.—Methods of analysis, food laws. See 165.0, 160. Sugar. See 161.1. Chocolate and chocolate coating. See 151.3.

165.2 CHEWING GUM

165.3 ICE CREAM

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Ice Cream (Plain). Preparation of sample, determination of fat, tentative method for detection of coloring matters.

References.—Ice cream brick cartons, brick molds. See 954.1, 785.2.

170-179

BEVERAGES

170. GENERAL ITEMS

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1. 1930 of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoela and Nat. Formulary.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for enforcement of Federal food and drugs act. Act applies to foods and drugs shipped in interstate or foreign commerce, standard methods of analysis to be those of U. S. Pharmacopoeia and Nat. Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia or Nat. Formulary, regulations on powdering, on poisonous and deleterious ingredients, and on

colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

U. S. Gov., Treasury Dept. Internal Revenue. U. S. Internal-Revenue Gaugers' Manual; 1913. Proof. Spirit. Definition of proof spirit as regards percentage by volume of absolute alcohol and of water, definitions of 100 proof, 200 proof, etc.

171. DISTILLED LIQUORS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Distilled Liquors. Determination of specific gravity, alcohol, extract, ash, acidity, esters, aldehydes, furfural, fusel oil, sugars, methyl alcohol, and tentative methods for determination of coloring matters, caramel.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Brandy. For medical purposes, physical properties, identity tests, test requirements for purity, requirements for percentage of alcohol and for storage before use. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Whiskey. For medical purposes, physical properties, identity tests,

test requirements for purity, requirements on percentage of alcohol and storage before use.

Assn. of Official Agricultural CR Assn. of Offici eral food and drugs act.

References.—Food laws, strength definitions. See 170. Alcohol. See 822.4.

173. WINES

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Wines. Preparation of sample, determination of specific gravity, alcohol, glycerol, extract, nonsugar solids, reducing sugars, sucrose, commercial glucose, ash, alkalinity of ash, phosphoric and sulfuric acids, chlorides, volatile acids, tartaric acid, tannin and coloring matter, protein,

pentosans, preservatives.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Wine. Definition, limiting percentages of alcohol, permissible percentages of sodium chloride, potassium sulphate, and of volatile acids. For dry wine, permissible percentages of sugar, grape ash and sugar-free grape solids. For sweet wine, definition, required amounts of sugar and grape ash. Fortified sweet wine, definition, requirements for the sweet wine to be fortified and of the wine spirits added for fortification as fixed by acts of Congress including percentage and purity of sugar added. Sparkling wine, definition, required grape ash. Modified or ameliorated wine, definition, requirements on final alcoholic strength.

References.—Food laws, strength definitions. See 0. Alcohol. See 822.4.

175. FLAVORING EXTRACTS

175.1 ALMOND EXTRACT

Assn, of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Almond Extract. Tentative Methods. Determination of alcohol, benzaldehyde, benzoic acid, hydrocyanic

acid, nitrobenzol.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Almond Extract. Definition, requirements on percentage of oil of bitter almonds and freedom from hydrocyanic acid, species of bitter almond, apricot, or peach from which oil of bitter almond is obtained.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Almond Extract. Required percentage of oil of bitter almonds in extract when alcohol is permitted in the manu-

facture.

175.2 CASSIA EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Cassia Extract. Tentative methods for determination of alcohol, oil, refractive index and color reaction of oil with ferric chloride.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liqours for Nonbeverage Purposes. Cassia extract. Required percentage of oil of cassia in extract in order to obtain permission to use alcohol in its manufacture.

References .- Food laws. See 170.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Peppermint Extract. Tentative method for determination of alcohol and oil,

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Peppermint Extract. Definition, required percentage of oil of peppermint, definition of oil of peppermint with required percentage of

menthol

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Peppermint extract. Required percentage of oil of peppermint in the extract in order to obtain permission to use alcohol in its manufacture.

References .- Oil of Peppermint for Medical Purposes.

175.4 VANILLA EXTRACT

Assn, of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Vanilla Extract and Its Substitutes, Determination of specific gravity, alcohol, vanillin and coumarin, lead number, solids, ash, sucrose, and tentative methods for determination of glycerol, vanilla

resins, color value, coloring matters.
U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Vanilla Extract. Definition, required per-

centage of soluble matter from the vanilla bean. U. S. Gov., Federal Specifications Board. EE-E-911; 1930. Flavoring Extracts and Nonalcoholic Flavors. Vanilla. For extra concentrated ex-tract, 4X strength extract, regular strength extract, and imitation extract with artificial flavoring and coloring, requirements on preparation and strength of extracts and amount of alcohol, required constituents of imitation extract, test methods of Assn. of Official Agri. Chemists.

U. S. Gov., Treasury Dept., Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Vanilla extract, and imitation vanilla extract. Required amount of soluble matter of vanilla bean in vanilla extract and of vanillin and coumarin in imitation extract, in order to obtain permission to use alcohol in their manufuacture.

References.—Vanilla for medicinal purposes.

175.5 WINTERGREEN EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Wintergreen Extract. Tentative methods for determi-

green Extract. Tentative methods for determination of alcohol, oil, and methyl salicylate.
U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Wintergreen Extract. Definition, required percentage of oil of wintergreen, definition of oil of wintergreen.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Wintergreen extract, and imitation wintergreen extract. Required percentage of oil of wintergreen in wintergreen extract and of methyl salicylate in the

imitation extract, in order to obtain permission to use alcohol in their manufacture.

References.—Oil of Wintergreen for medical purposes, See 813.9.

175.6 LEMON EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Lemon and Orange Extracts. Determination of specific gravity, alcohol, lemon and orange oils, aldehydes, citral, solids, ash, sucrose, methyl alcohol, and tentative methods for determination of glyc-

erol, and coloring matters.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Lemon Extract. Definition, required percentage of oil of lemon, definition of oil of lemon with required optical rotation and

percentage of citral.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Terpeneless Extract of Lemon. Definition, required percentage of citral obtained

from oil of lemon.

U. S. Gov., Federal Specifications Board. EE-E-911; 1930. Flavoring Extracts and Nonalcoholic Flavors. Lemon. For concentrated extract, extract, terpeneless extract and nonalcoholic lemon flavor, requirements on ingredients and preparation, percentages of oil of lemon, citral, and alcohol in extracts, and percentages of oil of lemon and cottonseed oil in the flavor, test methods of Assn. of Official Agri. Chemists.

U. S. Gov., Treasury Dept. Burcau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Lemon extract, terpeneless extract of lemon, and imitation lemon extract. Required percentage of oil of lemon for lemon extract and of citral for the other 2 extracts, in order to obtain permission to use alcohol in their manufacture.

References.—Oil of Lemon for Medical Purposes. See 813.9. Lemon oil, nonmedicinal. See 142.97.

175.7 ORANGE EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Lemon and Orange Extracts. Determination of specific gravity, alcohol, lemon, and orange oils, aldehydes, citral, solids, ash, sucrose, methyl alcohol, and tentative methods of determination of glycerol, and coloring matters.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Orange Extract. Definition, required percentage of oil of orange, definition of oil of orange with required optical rotation.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Terpeneless Extract of Orange. Definition, definition of terpeneless oil of orange.

U. S. Gov., Federal Specifications Board. EE-E-911; 1930. Flavoring Extracts and Nonalcoholic Flavors. Orange. For extract of orange, terpeneless extract of orange, and nonalcoholic orange flavor, requirements on preparation, percentages of alcohol and oil of orange in the extracts, percentages of oil of orange and of cottonseed oil in nonalcoholic orange flavor, test methods of Assn. of Official Agri. Chemists.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Orange extract, and terpeneless extract of orange. Required percentage of oil of orange in order to obtain permission to use alcohol in its manufacture.

References.—Oil of Orange for Medical Purposes. See 813.9. Orange oil, nonmedicinal. See 142.97.

175.9 MISCELLANEOUS SPECIFICATIONS FOR FLAVORING EXTRACTS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Anise and Nutmeg Extracts. Tentative method for determination of oil.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Cassia, Cinnamon, and Clove Extracts. Tentative methods for determination of alcohol, oil, refractive index, color reaction with ferric chloride for the

oil.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Ginger Extract. Tentative methods for determination of alcohol, solids, identification of ginger and capsicum.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Spearmint Extract. Tentative method for determination of

alcohol and of oil.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Anise Extract. Definition, required per-centage of oil of anise, definition of oil of anise.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Celery Seed Extract. Definition, required

percentage of oil of celery seed.

S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Ceylon Cinnamon Extract. Definition, required percentage of oil of Ceylon cinnamon, definition of oil of Ceylon cinnamon with required percentage of cinnamic aldehyde and allowed amount of eugenol.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Cinnamon Extract, or Cassia Extract, or Cassia Cinnamon Extract. Definition, required percentage of oil of cinnamon, definition of oil of cinnamon with required percentage of cinnamic aldehyde,

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs

act. Clove Extract. Definition, required percentage of oil of cloves, definition of oil of cloves. U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Ginger Extract. Definition, required content of ginger.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2,

Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Nutmeg Extract. Definition, required percentage of oil of nutmeg, definition of oil of nutmeg.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Rose Extract. Definition, required percentage of attar of roses, definition of attar of roses.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration, S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Savory Extract, Definition, required percent-

age of oil of savory, definition of oil of savory.
U. S. Gov., Dept. of Agriculture. Food, Drug, and
Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Spearmint Extract. Definition, required percentage of oil of spearmint, definition of oil of spearmint.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2: 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Star Anise Extract. Definition, required percentage of oil of star anise, definition of oil

of star anise.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sweet Basil Extract. Definition, required percentage of oil of sweet basil, definition of oil of sweet basil,

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sweet Marjoram Extract. Definition, required percentage of oil of marjoram, definition

of oil of marjoram.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs Thyme Extract. Definition, required percentage of oil of thyme, definition of oil of thyme.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Tonka Extract. Definition, required percentage of countarin extracted from tonka bean.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Allspice extract, anise extract, caraway extract, celery seed extract, cinnamon extract, clove extract, kummel extract, nutmeg extract, rose extract, savory extract, spearmint extract, star anise extract, sweet basil extract, sweet marjoram extract, thyme extract, and tonka extract. Required percentage of oil of allspice, oil of anise, etc., in the respective extracts in order to obtain permission to use alcohol in their manufacture.

176. MINERAL WATERS

176.0 GENERAL ITEMS

American Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Gas Volume Test. Recommended practice on standard method for testing bottled carbonated beverages for gas volume with chart of values for use in making the determination.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Waters, Brine and Salt. Mineral Water. Determination of specific gravity, solids, nitrogen, chlorine, hydrogen sulphide, carbonic and bicarbonic acids, silica, iron and other metals, sulphuric acid, phosphoric acid, iodine, bromine. arsenic, boric acid.

176.1 SELTZERS

176.2 VICHY WATER

176.3 TABLE WATERS

U. S. Gov., Federal Specifications Board. EE-W-111; 1931. Table Water, Effervescent. To be of type known as carbonated mineral water, to be pure, wholesome, palatable, conforming to standards for sanitary quality of Food and Drug Administration of U. S. Dept. of Agriculture, to conform to Federal food and drugs act, to contain carbonic acid gas in solution.

GINGER ALE, SARSAPA-177. BITTERS. R.TT.T.A

177.1 BITTERS

177.2 GINGER ALE

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2, 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Ginger Ale. General definition, materials entering into its composition, definition of ginger ale flavor.

S. Gov., Federal Specifications Board. EE-G-391; 1931. Ginger Ale. For 2 types, dry, pale color, without capsicum, and aromatic or golden with capsicum, in conformity with Federal food and drugs act, requirements on flavor and makeup, required sugar content, chemical tests in accordance with methods of Assn. of Official Agricultural Chemists.

References.-Methods of test, food laws. See 176.0,

177.3 SARSAPARILLA

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Used in enforcement of food and drugs act. Sarsaparilla. Definition, definition of sarsaparilla flavor with materials entering into its composition but not their proportions.

References.—Methods of test, food laws. See 176.0.

178. FRUIT JUICE BEVERAGES

178.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Beverages (Non-Alcoholic) and Concentrates. Methods for determination of specific gravity, alcohol, acidity, esters, total solids, sucrose, reducing sugars.

ity, esters, total solids, sucrose, reducing sugars, commercial glucose, ash, alkalinity of ash, preservatives, anthramilic acid esters, tentative methods for determination of citric acid, tartaric acid, coloring matters, and metals.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Fruit Juice. Definition, used in enforcement of Federal food and drugs act.

U. S. Gov., Treasury Dept. Bureau of Prohibition.

Regulation 2; 1927. Relating to Permits for the

Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Liquid food products. Permissible percentage of alcohol.

178.1 LEMON JUICE

178.2 LIME JUICE

178.3 ORANGE JUICE

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products Orange Juice. Definition, used in enforcement of Federal food and drugs act.

178.4 GRAPE JUICE

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 2, Rev. 2; 1931. Definitions and Standards for Food Products. Grape juice. Definition, used in enforcement of Federal food and drugs act.

U. S. Gov., Federal Specifications Board. Z-G-661; 1931. Grape Juice. For unfermented juice of sound ripe grapes, made by single pressing, requirements on general quality, Concord variety of grape unless otherwise specified.

179. MISCELLANEOUS BEVERAGE SPECI-FICATIONS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Beers. Preparation of sample, determination of specific gravity, alcohol, extract, degree of fermentation, lactic, acetic and phosphoric acids, reducing sugars, glycerol, ash, protein preservatives, and tentative methods for determination of color, dextrin, polarization, coloring matters, and metals

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Cider. Definitions of cider, sweet cider, and preserved sweet cider with 2 permitted methods of preservation for the preserved sweet cider.

VEGETABLE PRODUCTS, EXCEPT FOOD, FIBERS, AND WOOD 200-299

RUBBER AND SIMILAR GUMS AND MANUFACTURES THEREOF 200-209

200. GENERAL ITEMS

American Railway Assn. Mechanical Division. Recommended Practice. 1923. Rubber Goods, Mechanical, General Instructions on Standard Methods of Tests for. Preparation of specimen, measurement, marking and test procedure for tension, elongation, permanent set, friction, hydrostatic, steaming tests and dimensions of

standard test specimens.

American Society for Testing Materials. D 15-24; 1924. Methods of Testing Rubber Products. Preparation of test specimen and reagents, short chemical test procedure for determination of free sulphur, total sulphur and ash, complete chemical test procedure and apparatus for determination of rubber hydrocarbons, saponifiable acetone extract, unsaponifiable resins, chloro-form and alcoholic potash extracts. Apparatus test specimens and test procedure for tensile, adhesive, and hydrostatic pressure tests of rubber materials and hose.

American Society for Testing Materials. Tentative Methods, D 297-31T; 1931, Methods of Chemical Analysis of Rubber Products. Includes a short procedure for determination of acetone extract, free sulphur, alcoholic-potash extract, total sulphur, and ash. Also a complete procedure for 30 per cent Hevea rubber compounds, including above determinations total sulphur, anti-

mony, free carbon, etc.

American Society for Testing Materials. Tentative Test Method. D-314-31T; 1931. Method of Test for Hardness of Rubber. Applicable to tire treads and automotive mechanical rubber parts but not to extremely hard or extremely soft goods. Dimensions and construction of standard indentor, dimensions of test specimen, method of

Dept. of Commerce. Bureau of Stand-U. S. Gov., ards, C38; 1915. Testing of Rubber Goods. Describes Bureau of Standards procedure for testing mechanical rubber goods, including thickness measurement, test for set, tensile strength, test for adhesion of plies in rubber line hose and rubber belting, and methods of chemical analysis.

U. S. Gov., Federal Specifications Board. 59a. (Superseded by ZZ-R-601; 1930.) Rubber Goods. Methods of sampling, physical tests, and chemical analysis for rubber goods of various kinds, physical tests include tests for tensile strength and elongation, set, adhesion of rubber and reinforcement, hardness, steam test, boiling test, aging, hydrostatic test, specific gravity, etc.

201. RUBBER UNMANUFACTURED

201.1 CRUDE RUBBER

201.2 SCRAP AND RECLAIMED RUBBER

National Assn. of Waste Material Dealers (Inc.). Circular H; 1928. Standard Classification for Scrap Rubber. Definition of class with number and code word for each.

202. HOSE (RUBBER, COTTON, AND LINEN)

202.0 GENERAL ITEMS

American Marine Standards Committee. O No. 1: 1926. Kinds and Sizes of Hose for Ship Equipment. Size and purpose with general description of each type.

American Society for Testing Materials. D 181-25; Tolerances for Hose Ducks and Belt Tolerances on width, weight, thread 1925. count and gage, crimp, and tensile strengths.

202.1 AIR HOSE

202.11 Air Brake and Signal Hose

American Electric Railway Engr. Assn. Recommended Specification. E102-30; 1930. Air Brake Hose. Porosity, bursting, friction, stretching, and tension tests, hose dimensions, specification for fabric wrapping, drawings of tensile test

American Railway Assn. Mechanical Div. Brake Hose Coupling; 1926. Controlling dimen-

sions of standard design.

American Railway Assn. Mechanical Div. Brake Hose Coupling Gages for Gaging Guard Arm and Tips on Used Couplings. Recommended Practice; 1926. Dimensions and design.

American Railway Assn. Mechanical Div. Brake Hose Coupling Gasket; 1926. Dimensions

and tolerances of standard gasket.

American Railway Assn. Mechanical Div. Air Brake Hose Coupling Packing Ring Gage; 1921. Dimensions and design.

American Railway Assn. Mechanical Div. Air Brake Hose Nipple; 1927. Dimensions of stand-

ard nipple provided with 14-inch pipe thread at one end. American Railway Assn. Mechanical Div. Gages

for Gaging New Air Brake Hose Couplings; 1928.

Dimensions and design for 12 gages. American Railway Assn. Mechanical Div. kets for Air Brake Hose; 1929. Gaskets of rub-

ber compound, deflection and tension test requirements, dimensioned drawing, American Railway Assn. Mechanical Div. Hose,

Air-Brake and Train Air-Signal; 1928. For rub-ber hose with cotton reinforcement, requirements on number of cotton plies, on construction of hose, on adhesion of plies test, permanent set test, tension test of rubber tube and cover,

hydrostatic test, standard sizes and dimensions. S. Gov., Federal Specifications Board. 43; 1922. Air Brake and Signal Hose and Gaskets. For cotton reinforced rubber hose, requirements on construction, dimensions, material and weave of cotton reinforcement, tensile strength, elongation, porosity, and hydrostatic test, methods of test. For gaskets, requirements on dimen-sions, design, deflection test and tension test.

References.—Methods of testing. See also 200. Hose duck. See 202.0.

202.12 Pneumatic Tool Hose

American Marine Standards Committee. O No. 16; 1928. Rubber Air Hose. For wrapped and braided air hose of ½ inch and ¾ inch, require-ments for cotton reinforcement and rubber cover, dimensions, test requirements for pressure, tension, and friction. Substantially in accord with Am. Railway Assn. spec's for air hose.

American Railway Assn. Mechanical Div. Hose, Air, Gas and Oxygen, Wrapped and Braided; 1928. Air hose for not more than 125 pounds pressure, gas and oxygen hose for gas welding outfits, construction requirements and number of

cotton plies, size and construction of wire armor, weight of woven cotton jacket, test requirements for adhesion of plies, permanent set, tension test of tube and cover, hydrostatic test, standard sizes

and dimensions.

American Society for Testing Materials. D 46-24; 1924. Wrapped Air Hose for Use with Pneumatic Tools. For pressures up to 125 pounds, construction of hose, number of plies of cotton reinforcement, size of armor wire for armored hose, standard sizes and dimensions, requirements for tensile strength and elongation for rubber tube and cover, for adhesion between piles, and hydrostatic pressure using A. S. T. M. test methods, D 15. American Society for Testing Materials. D 60-24;

American Society for Testing Materials. D 60-24; 1924. Braided Air Hose for Use with Pneumatic Tools. For pressures up to 125 pounds, construction of rubber hose with braided cotton ply reinforcement, dimensions of protective wire armor or cotton jacket where specified, tensile strength and elongation for rubber tube and cover, adhesion of plies and hydrostatic pressure test require-

ments, standard dimensions.

U. S. Gov., Federal Specifications Board. ZZ-H-491; 1931. Pneumatic Hose. For wrapped construction, cotton reinforced, for 5 sizes up to 1½ inches, requirements on construction, thickness of rubber, number of plies, hydrostatic test and burst test, tensile tests of rubber, methods of test in accordance with F. S. B. spec. ZZ-R-601 for rubber goods.

References.—Methods of testing. See also 200. Standard sizes, hose duck. See 202.0.

202.13 Divers' Hose

U. S. Gov., Federal Specifications Board. 44b; 1925. Divers Hose. For 1 grade of "sinking" type, requirements on construction of rubber hose with 3 ply cotton reinforcement, general quality of reinforcement, dimensions of hose, chemical composition of rubber, tension, elongation, adhesion of ply, and hydrostatic pressure test requirements, in accordance with testing methods of F. S. B. spec. 59 for rubber goods.

References.—Methods of testing. See also 200. Standard sizes, hose duck. See 202.0.

202,2 CHEMICAL AND OIL HOSE

202.21 Chemical Hose

Underwriters' Laboratories. Rubber Lined Fire Hose for Chemical Fire Extinguishers and Chemical Fire Engines; 1920. General construction of cotton reniforced hose with wrapped or braided reinforcement or with outer cotton jacket, thickness of inner and outer rubber coverings, number of cotton piles, test requirements for hydrostatic pressure, adhesion of plies, tension and chemical tests of rubber.

U. S. Gov., Federal Specifications Board. 47, 1922. Chemical Hose. For chemical fire extinguishers and fire engines, sizes ¾ to 1¼ inches, requirements on construction of wrapped reinforced rubber hose, braided reinforced rubber hose, and cotton jacketed rubber hose, and cotton jacketed rubber hose, minimum thicknesses of rubber lining and cover, number of reinforcement plies, tension test, adhesion of plies test, and hydrostatic test requirements, chemical composition of rubber compound.

References.—Methods of testing. See also 200. Hose duck. See 202.0.

202.22 Oil Hose

American Marine Standards Committee. O No. 20-1928. Oil Suction and Discharge Hose, Rubber Covered. For 4, 6, and 8 inch sizes, specifications for wire and cotton reinforcement, rubber layer and cover, test requirements for hydrostatic pressure, tension and friction. U. S. Gov., Federal Specifications Board. ZZ-H-481; 1931 Oil Suction and Discharge Hose. For cotton duck and wire reinforced hose, requirements on construction, weight and general quality of duck, amount of wire, number of piles, dimensions of 4, 6, and 8 inch sizes, tensile strength, clongation, set, adhesion of parts, and hydrostatic tests for hose, methods of test specified in F. S. B. spec. 59 for rubber goods.

References.—Methods of testing. See also 200. Standard sizes, hose duck. See 202.0.

202.3 GAS AND GASOLINE HOSE

202.31 Gas Hose

American Gas Assn. Approval Requirements for Flexible Gas Tubing; 1926. Performance requirements and methods of test for leakage, capacity, strength, flexibility, resistance to heat and freezing, elasticity and gripping power of rubber slip ends, drawing of standard hose and nozzle.

American Railway Assn. Mechanical Div. Hose, Air, Gas and Oxygen, Wrapped and Braided; 1928. For gas and oxygen hose for gas welding outfits, construction requirements and number of cotton piles, size and construction of wire armor, weight of woven cotton jacket, test requirements for adhesion of plies, permanent set, tension test of rubber tube and cover, hydrostatic test, standard sizes and dimensions.

U. S. Gov., Federal Specifications Board. ZZ-H-461; 1931. Gas Hose. One grade of hose for acetylene-hydrogen, and for oxygen. Construction of rubber hose with cotton reinforcement, dimensions, friction strength, and hydrostatic pressure strength requirements for hose, tensile strength requirements for rubber tube and cover, methods of sampling, methods of test according to F. S. B. spec. ZZ-R-601.

References.—Methods of testing. See also 200. Hose duck. See 202.0.

202.32 Gasoline Hose

Underwriters' Laboratories. Rubber Hose for Conducting Gasoline; 1924. Applies to short lengths of flexible hose, made of inner rubber tube, canvas layers or braid, and outer rubber cover, inside diameter, construction, thickness of rubber, number of cotton plies, pressure and tension test requirements for hose, aghesion test for plies, chemical test of rubber of inner tube.

Underwriters' Laboratories. Construction of %, 1, and 1¼ inch Cotton Covered Rubber Metal Hose for Conducting Gasoline; 1925. Maximum length of hose, construction of packed flexible metal tube of galvanized steel, brass, bronze, or copper, thickness of rubber, construction of rubber tube and cotton jacket, test requirements for repeated bending, hydrostatic pressure, failure on bending, and crushing, test of rubber tube for tension, and

solubility in gasoline.

U. S. Gov., Federal Specifications Board. ZZ-H-466; 1930. Rubber-Metal Gasoline Hose. Requirements on construction, bending test of metal tubing, bending, crushing, and hydrostatic tests for hose, tensile test of rubber, gasoline extract of rubber, methods of sampling, methods of test as specified in F. S. B. spec. ZZ-R-601 for rubber goods.

References.—Methods of testing. See also 200. Hose duck. See 202.0.

202.4 WATER HOSE, STEAM HOSE

202.41 Fire Hose

American Marine Standards Committee. O No. 3-1926. Specification for 2½-inch Double-Jacketed Cotton Rubber-Lined Fire Hose. Construction, length, weight, hydrostatic pressure, and kink test

requirements, strength and chemical test requirements for the rubber parts, adhesion tests.

American Marine Standards Committee. O No.

1930. 21/2-inch. Unlined Linen Fire Hose. For flax-line hose and for flax-tow hose, requirements on general quality and chemical test of yarn, construction and length of hose, tests for bursting strength, kink, and leakage in conformity with requirements of Underwriters Laboratories.

American Marine Standards Committee. O No. 11-1926. Specification for 21/2-inch Single-Jacketed Cotton Rubber-Lined Fire Hose. Caution on its use, construction, requirements, length and weight, pressure and kink test requirements, strength, chemical and adhesion tests of rubber

narts

American Railway Assn. Mechanical Division. Recommended Practice; 1927. Hose, Fire. Cotton rubber lined and linen unlined hose for private fire departments, construction, tensile, stretch, friction, and hydrostatic test requirements, dimensions of rubber lined hose, chemical composition and weight of couplings, hydrostatic and kink test requirements for unlined linen hose.

American Society for Testing Materials. Tenta-tive Specifications. D 296-31T: 1931. Joint sponsor with Fire Protection Group under procedure of American Standards Assn. and under designation L 3-1931. Cotton Rubber-Lined Fire Hose for Public and Private Fire Department Use. For 1½ to 3½ inch sizes of single, double and triple jacketed hose, construction, thickness of rubber lining, chemical composition, tension, and life test requirements for rubber lining, hydrostatic pressure, twist, warp, and kink test requirements for hose.

Associated Factory Mutual Fire Insurance Companies. Fire Hose, Couplings, Playpipes and Hose Houses; 1930. Includes construction, leakage, and bursting strength requirements for linen hose for inside factory use for 11/4 and

21/2 inch sizes.

Associated Factory Mutual Fire Insurance Companies. Fire Hose, Couplings, Playpipes and Hose Houses; 1930. Includes for fire hose, the specifications for cotton fabric, tensile, adhesion test requirements, and chemical analysis of rubber lining, bursting strength of hose for 21/2 inch

single jacketed and double jacketed rubber lined hose for mill yard use, includes special sizes from 1¼ to 3½ inches.
Underwriters' Laboratories, (Inc.) Cotton Rubber Lined Fire Hose; 1931. For public and private department use, essentially same as the specifications adopted by American Standards Assn., for single, double, and triple jacketed hose of sizes 11/2 to 31/2 inches, requirements on thickness of rubber lining, manufacture of hose, hydrostatic, bursting, and kink tests for hose, adhesion, ten-sile test, and chemical tests for rubber lining and for rubber cover, methods of test.

Underwriters' Laboratories, (Inc.) Unlined Fire Hose (Flax Line); 1930. Covers hose without a rubber lining for use inside of buildings, requirements on quality and chemical tests of flax yarn, standard hose sizes and tolerances, con-struction of hose, bursting strength tests, kink tests, and leakage test, methods of testing.

U. S. Gov., Federal Specifications Board. ZZ-H-451; 1931. Cotton Rubber-Lined Fire Hose. Requirements for construction of hose, weight, and flexibility of finished hose, hydrostatic pressure test for strength, elongation, twist, warp, and rise, requirements of rubber lining for rubber content, sulphur, acetone extract, tensile prop-perties, set, life tests, and adhesion between backing and lining, methods of sampling, methods of test in accordance with F. S. B. spec. ZZ-R-601.

U. S. Gov., Federal Specifications Board. 527: 1927. Unlined Linen Fire Hose. The technical requirements of this specification are the same as those of the Underwriters Laboratories for unlined fire hose (flax line) revision of 1927.

References.—Methods of testing. See also 200. Standard sizes. See 202.0. Fire hose fittings. See 974.2. Chemical fire hose. See 202.21. Hose duck. See 202.0.

202.42 Garden and Ordinary Cold Water Hose

American Marine Standards Committee. O No. 18-1928. 11/2-inch Water Hose, Rubber Covered. Construction requirements, dimensions, test requirements for pressure, tension and stretch of rubber tube and cover, adhesion of parts.
Substantially in accordance with the Am. Bail-

way Assn. Spec. for "wrapped cold-water hose."

American Railway Assn., Mechanical Division. Recommended Practice; 1927. Wrapped Cold Water Hose. Rubber and cotton reinforcement, construction, tension, stretch, friction and bydrostatic test requirements, standard dimensions,

American Society for Testing Materials. D 177-24; 1924. Wrapped Cold Water Hose. For other than fire department use, construction of rubber hose with cotton duck reinforcement, requirements for tensile strength and elongation of rubber tube and cover, adhesion of plies of reinforcement, and hydrostatic pressure test, using A. S. T. M. test methods D 15, standard sizes and dimensions.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C327; 1927. Selection and Care of Garden Hose. Describes manufacture of 3 types, wrapped, braided, and cotton rubber lined, with simple methods of inspection and making kink test.

U. S. Gov., Federal Specifications Board. ZZ-H-521; 1931. Spray Hose. Requirements on con-struction, dimensions of 4 sizes up to 1 inch, rubber content of tube and cover, number of reinforcement plies, tensile strength, adhesion of plies, elongation, and set test requirements.
U. S. Gov., Federal Specifications Board. 588;

1928. Braided Water Hose, For rubber hose with cotton braid reinforcement, requirements on dimensions, thickness of tube and cover, number of reinforcement plies, hydrostatic test of hose, adhesion of plies, tensile strength and elongation of rubber tube and cover, set, for 5%, 34, and 1 inch sizes, methods of test according to F. S. B.

Spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. WW-C-623; 1931. Hose Couplings for Garden and Water Hose. Covers lug or ribbed shank type for sizes ½ to 3 inches and slotted expansion type for 1½ inch size only and includes washdeck hose couplings, requirements on design, strength, detail dimensions, and threading of couplings, assembly, chemical composition of coupling metal, in conformity with F. S. B. spec. QQ-M-151 for metals.

U. S. Gov., Federal Specifications Board. ZZ-H-611; 1930. Wrapped Water Hose. For sizes ¾ to 3 inches of which the 11/2-inch size is wash deck hose, requirements on construction and dimensions of cotton reinforced rubber hose, number of plies, general quality and weight of cotton duck, tensile strength, elongation, set, adhesion of parts, and hydrostatic pressure test, testing in accordance with F. S. B. spec. No. 59 and No. 345.

References.—Methods of testing. See also 200. Standard sizes. See 202.0. Tender and tank hose. See 202.45. Suction hose. See 202.46. Hose duck. See 202.0.

202.43 Radiator Hose

Society of Automotive Engineers. 1931 Handbook. Rubber Hose, Clamps and Fittings; 1916. Inside and outside diameters of hose, inside diameters of clamps, for one to four ply hose, length of fitting.

202.44 Steam and Hot Water Hose

American Marine Standards Committee. O No. 17–1928. Rubber Steam Hose Specification. %-inch and 1½-inch sizes, construction, dimensions, inspection, hydrostatic, steam, and adhesion tests.

American Railway Assn. Mechanical Division. Recommended Practice; 1927. Hose, Steam. Rubber with reinforcing cotton, construction, tensile, friction, steaming, deflection, and hydrostatic test requirements.

American Society for Testing Materials. Tentative Specifications. D 54-317; 1931. Steam Hose. For pressures not exceeding 125 pounds, construction, number of piles of cotton reinforcement, tension and adhesion requirements for rubber inner tube and outer cover, steam and hydrostatic pressure test requirements for hose, size and dimensions, rubber tests in accordance with A. S. T. M. method D 15.

U. S. Gov., Federal Specifications Board. ZZ—H-541; 1931. Steam Hose. For 5 sizes of reinforced rubber hose, requirements on construction and dimensions, number of piles, general quality of cotton duck, tension test and adhesion of piles test before steaming and after steaming, methods of test specified in F. S. B. spec. 59.

U. S. Gov., Federal Specifications Board. WW-C-636; 1931. Steam Hose Couplings. Covers slotted expansion type for % inch size and hexagon shank type for ½ to 1½ inch sizes, requirements on strength, chemical composition of brass metal for various parts, design, assembly, detail dimensions, and threading, in conformity with F. S. B. spec. No. 339a for metals.

References.—Methods of testing. See also 200. Standard sizes. See 202.0. Radiator hose. See 202.43. Hose duck. See 202.0. General requirements for metals. See also 600.1.

202.45 Tender and Tank Hose

American Railway Assn. Mechanical Division. Recommended Practice; 1929. Hose, Tender Tank. Rubber with cotton and wire reinforcement, construction, tensile, stretch, friction, bend, and steaming test requirements, dimensions.

U. S. Gov., Federal Specifications Board. 46c; 1926. Tender Hose, Corrugated. For rubber hose with imbedded wire and cotton reinforcement, requirements on construction, general quality and weight of cotton duck, tensile strength, elongation, adhesion of parts, and bend test requirements, methods of test in accordance with F. S. B. spec. 59 for rubber goods.

References.-Methods of testing. See also 200. Hose duck. See 202.0.

202.46 Suction Hose

American Marine Standards Committee. O No. 19– 1928. 2½-inch Water Suction Hose, Smooth Bore. Specification on construction, dimensions of hose, cotton and wire reinforcements, test requirements for tension and stretch of rubber parts, adhesion of piles, and bending of hose. Substantially in accordance with Am. Railway Assn. "tender tank hose."

U. S. Gov., Federal Specifications Board. ZZ-H-561; 1930. Water Suction Hose, Smooth Bore. For 10 sizes of cotton and wire reinforced rubber hose up to 12-inch size, requirements on construction, dimensions, number of plies, general quality of cotton duck, size and construction of steel wire helix, fitting equipment, tension test, adhesion of plies, hydrostatic pressure test, content of rubber,

methods of test specified in F. S. B. spec. 59 for rubber goods.

References.—Oil suction hose. See 202.22. Standard sizes. See 202.0. Methods of testing rubber goods, See also 200. Hose duck. See 202.0.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Hose Clamps, except tank hose, list of recommended standard sizes of hose clamps.

References.—Methods of testing. See also 200. Hose duck. See 202.0. Dredging sleeves. See 209.1.

203. RUBBER FOOTWEAR, GLOVES, AND CLOTHING

203.1 RUBBER BOOTS, SHOES, AND HEELS

203.11 Rubber Boots

U. S. Gov., Federal Specifications Board. 492; 1927. Rubber Hip Boots. Specification covers same general ground as given under F. S. B. 493 for short light rubber boots.

U. S. Gov., Federal Specifications Board. 493; 1927. Short Light Rubber Boots. Requirements on percentage of Heven rubber and specific gravity for compound for outer sole, upper stocks, heels, and compound for frictions, measurements, weight, finish, thickness of gum parts, structural features, weights of cotton fabric for various parts, vulcanization, methods of test according to F. S. B. spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. 494; 1927. Short Heavy Rubber Boots. Specification covers same general ground as given under F. S. B. 493 for short light rubber boots.

References.—Methods of testing rubber goods. See 200.

203.12 Rubber Shoes

References .- Leather shoes. See 067.1.

203.13 Rubber Heels

203.2 RUBBER GLOVES

American Society for Testing Materials. D 120-23; 1923. Rubber Gloves for Electrical Workers on Apparatus or Circuits not Exceeding 3,000 Volts to Ground. Covers gloves for use with external protection and gloves without such protection, manufacture, high voltage and leakage current test requirements, tensile strength and elongation requirements using A. S. T. M. method D 15, standard sizes and dimensions.

U. S. Gov., Federal Specifications Board. 312;1925. Rubber Gloves for Electrical Workers. Covers 2 classes for use on voltages up to 3,000. Identical with spec. D 120-23 of Am. Soc. for Testing Materials.

References.—Surgeon's rubber gloves. See 204.52. Methods of testing. See also 200.

203.3 RUBBER HATS

References .- Cloth hats. See 395.2.

203.4 RAINCOATS

References.—Waterproof clothing. See also 392.5. Cotton fabrics for rubber coating. See 304.71.

203.5 RUBBER APRONS

References.—Surgeons aprons. See 204.51. Cotton aprons. See 311.92.

204. DRUGGISTS' RUBBER SUNDRIES 204.1 BANDAGES AND PLASTERS

204.11 Rubber Bandages

U. S. Gov., Federal Specifications Board. ZZ-B-101; 1931. Rubber Bandages. Requirements on dimensions, content of rubber, tensile strength, elongation, resistance to hot air, methods of test as specified in F. S. B. spec. 59 for rubber goods.

References.—Methods of testing. See also 200. Other surgical dressings. See 398.

204.12 Plasters

U. S. Gov., Dept. of Commerce. Bureau of Standards. R85-28; 1928. Adhesive Plaster. Simplified practice recommended and accepted by industry establishing a limited list of standard stock widths and lengths of adhesive tape in rolls and on spools.

U. S. Pharmacopoeial Convention, Inc. Pharmacopoeia of U. S. A.; 1926. Adhesive Plaster. For medicinal purposes, requirements on content of rubber and of zinc oxide where present, thread count and weight of cotton cloth, weight of plaster mass, tensile strength of plaster. Recognized as standard in enforcement of Federal food and

drugs act.

References .- See references under 204.11.

204.13 Tourniquets

204.2 BAGS, BOTTLES, AND CUSHIONS OF RUBBER 204.21 Bags, Ice

U. S. Gov., Federal Specifications Board. ZZ-I-121; 1931. Rubber Ice Bags. For round or oval bags, requirements on size of filler opening, thickness of wall, rubber content, minimum di-mensions, tests for resistance to hot air, leakage, tensile strength and elongation, methods of test as specified in F. S. B. spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. ZZ-I-111; 1930. Helmet Shaped Ice Bags. For a com-bination ice bag and helmet made of rubber coated cotton fabric, requirements on dimensions as helmet and as circular ice bag, thickness of walls, features of fittings, leakage test, in conformity with F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textiles, and F. S. B. spec. ZZ-S-311 for rubber sheeting.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See also 300.4. Rubber sheeting. See 204.33.

204.22 Bags, Obstetrical

204.23 Bags and Bottles. Water

U. S. Gov. Federal Specifications Board. ZZ-B-581; 1930. Cloth-Inserted hot Water Bottles. For oblong bottles of rubber sheeting, requirements on construction, capacity, thickness of wall, structural features of throat plug, etc., test for resistance to hot water and to pressure to conform to F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textile materials, and F. S. B. spec. 233 for rubber sheeting.

U. S. Gov., Federal Specifications Board. ZZ– B-586; 1930. Rubber Hot Water Bottles. For sizes 1 to 4 quarts, requirements on thickness of walls, structural features of throat plug, etc., content of new rubber, tensile strength and elongation, boiling water test, hot-air test, and pressure test, methods of test as specified in F. S. B. spec. 59 for rubber goods.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See 300.4. Rubber sheeting. See 204.33.

204,24 Rubber Basins

204.25 Rubber Cushions and Pillows

U. S. Gov., Federal Specifications Board. 231a; 1929. Rubber Pillowcases. For white or cream white pillowcases of rubber sheeting, requirements on general quality of sheeting, dimensions and design of pillowcases, to conform to F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textile materials, and to F. S. B. 233 for rubber sheeting.

U. S. Gov., Federal Specifications Board. 232b; 1929. Rubber Air Pillows. For pillows made of rubber sheeting, requirements on dimensions, construction, thickness of sheet, air pressure test, to conform to F. S. B. spec. 59 for rubber goods, F. S. B. spec, 345 for textile materials, and F. S. B.

spec. 233 for rubber sheeting.

U. S. Gov., Federal Specifications Board. ZZ-C-791; 1930. Cloth-Inserted Ring Cushions. For inflatable ring cushions of rubber sheeting, requirements on general construction, diameter, width of deflated air pocket, thickness of wall, inflation test, to conform to F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textile materials, and F. S. B. spec. 233 for rubber sheeting.

U. S. Gov., Federal Specifications Board. ZZ-C-796; 1930. Rubber Ring Cushions. For 3 sizes of inflatable rubber ring cushions, requirements on general construction, diameter, width of deflated air pocket, thickness of wall, content of new rubber, tensile strength and elongation, hot air test, and inflation test, methods of test as specified in F. S. B. spec, 59 for rubber goods.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See 300.4. Rubber sheeting. See 204.33.

204.26 Fountain Syringes

U. S. Gov., Federal Specifications Board. ZZ-S-901; 1930. Fountain Syringes, Cloth Inserted. For 2-quart size made of rubber sheeting, requirements on general construction, dimensions of tubing, hard rubber connecting pieces and noz-zles, content of rubber in tubing, tensile strength and resistance of tubing to hot air, resistance of sheeting to hot water, in conformity with F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textile materials, and F. S. B. spec. ZZ-S-311 for rubber sheeting.

U. S. Gov., Federal Specifications Board. ZZ-S-916; 1930. Rubber Fountain Syringe. For rapid flow 2-quart type, requirements on general con-struction, thickness of walls, types and dimensions of hard rubber accessories and of tubing, content of rubber, tensile strength and resistance to hot air for syringe and tubing, resistance to hot water for syringe, methods of test as speci-fled in F. S. B. spec. 59 for rubber goods.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See 300.4. Rubber sheeting. See 204.33.

204.27 Politzer Bags

U. S. Gov., Federal Specifications Board. ZZ-B-71; 1931. Politzer Bags. For 3 sizes, require-ments on shape, thickness of walls of bag, dimensions of tubing, content of rubber, tensile strength and elongation, resistance to hot air, methods of test as specified in F. S. B. spec. 59 for rubber goods.

References.—Methods of testing rubber goods. See 200.

204.3 BLANKETS, CLOTH, AND SHEETING

204.31 Rubber Blankets

204.32 Rubber Cloth

References .- Rubber sheeting. See 204.33.

204.33 Rubber Sheeting

U. S. Gov., Federal Specifications Board. 233b. (Superseded by ZZ-S-311; 1930). Rubber Sheeting. For single coated or double coated sheeting, marroon, white, or cream white, supplied in rolls, requirements on length, width, thickness, rubber content, tensile strength, resistance to steam and to phenol, waterproofing qualities, to conform to F. S. B. spec. 59 for rubber goods and 345 for textile materials.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See 300.4.

204.4 DENTAL RUBBER GOODS

U. S. Gov., Federal Specifications Board. ZZ-D-51; 1931. Rubber Dam. For rubber dam supplied in rolls, requirements on thickness, dimensions of rolls, new rubber content, tensile strength, elongation, and resistance to hot air, methods of test as specified in F. S. B. spec. 59 for rubber goods.

References,-Methods of testing, See 200. Other dental goods. See 915.1.

204.5 SURGEONS' GOODS

204.51 Rubber Aprons

U. S. Gov., Federal Specifications Board. ZZ-A-611; 1930. Rubber Surgeons' Aprons. For rubber coated cotton fabric apron, requirements on dimensions and construction, thickness of coating, weight of straps, to conform to F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textile materials, and F. S. B. spec. 233 for rubber sheeting.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See 300.4. Rubber sheeting. See 204.33. Cotton fabrics for rubber coating. See 304.71.

204.52 Rubber Gloves and Finger Cots

- U. S. Gov., Federal Specifications Board. ZZ-C-571; 1931. Rubber Finger Cots. Requirements on length and weight for small, medium, and large sizes, requirements on tensile strength, elongation, rubber content, aging, and sterilization tests, methods of test as specified in F. S. B. spec. 59 for rubber goods.
- Spec. 38 for Hubber goods.

 U. S. Gov., Federal Specifications Board. 229; 1925. Surgeons' Rubber Gloves. For 7 sizes, requirements on length, width, and weight for 2 weight classes, rubber content, tensile strength, elongation, sterilization, methods of test as specified in F. S. B. spec. 59 for rubber goods.

References.—Other rubber gloves. See 203.2. Methods of testing rubber goods. See 200.

204.53 Rubber Pads

U. S. Gov., Federal Specifications Board. 230b; 1929. Surgical Operating Pads. For reversible type with apron, made of rubber sheeting, requirements on size, design of pad, Inflating cushion, drain apron, and fittings, bursting strength test, to conform to F. S. B. spec. 59 for rubber goods, F. S. B. spec. 345 for textile materials, and to F. S. B. spec. 233 for rubber sheeting.

References.—Methods of testing rubber goods. See 200. Methods of testing textile fabrics. See 300.4. Rubber sheeting. See 204.33.

204.54 Stomach and Colon Tubes

U. S. Gov., Federal Specifications Board. 237; 1925. Stomach or Lavage Tube. For tube or funnel of rubber compound, requirements on finish, general construction, wall thickness, rubber content, tensile strength, elongation, resistance to hot air, methods of test as specified in F. S. B. spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. ZZ-T-751; 1930. Colon Tube. For tube made of rubber compound, requirements on dimensions and wall thickness, on rubber content, tensile strength, elongation, and resistance to hot air, methods of test as specified in F. S. B. spec. 59 for rubber goods.

References .- Methods of testing rubber goods. See

204.55 Catheters

U. S. Gov., Federal Specifications Board. 222; 1924. Rubber Catheters. For solid tip type with depressed velvet eye, requirements on content of new rubber, tensile strength and elongation, resistance to hot air test, to conform to F. S. B. spec. 59 for rubber goods.

References .- Methods of testing. See 200.

204.59 Miscellaneous Surgeons' Goods

References.—Other rubber surgeons goods. See 204.1, 204.2, 204.3. Surgical instruments and equipment. See 915.2 to 915.5.

204 6 RUBBER TURING

U. S. Gov., Federal Specifications Board. ZZ-T-831; 1930. Rubber Tubing. Laboratory tubing, pure gum grade and compounded grade, up to 1-inch size, various wall thickness grades and including vacuum connection tubing, requirements on dimensions, content of rubber, tensile strength, elongation and set, accelerated aging test, testing in accordance with F. S. B. spec. ZZ-R-601 for rubber goods.

References .- Methods of testing. See 200.

204.9 MISCELLANEOUS RUBBER SUNDRIES

204.91 Rubber Bulbs

204.92 Rubber Cement

U. S. Gov., Federal Specifications Board. 223; 1924. Rubber Cement for Medical Rubber Goods. For new rubber with benzene or napitha, requirements on rubber content, to conform to F. S. B. spec. 59 for rubber goods.

204.93 Erasers

204.94 Rubber Inflators

204.95 Rubber Stoppers

U. S. Gov., Federal Specifications Board. 383; 1926. Rubber stoppers. Requirements on dimensions of 22 regular sizes and 7 extra long sizes, content of rubber, compressibility, steaming test, acid test, methods of test, to be in conformity with F. S. B. spec. 59 for rubber goods.

References .- Methods of testing. See 200.

204.96 Rubber Tips for Crutches

U. S. Gov., Federal Specifications Board. 225; 1924. Rubber Tips for Crutches. For tips modded in one piece with canvas disk at bottom of opening, requirements on thickness of bottom, dimensions and weight of 7 sizes, types of finish, to conform to F. S. B. spec. 59 for rubber goods.

References .- Methods of testing. See 200.

205. HARD-RUBBER GOODS

205.1 ELECTRICAL GOODS, HARD RUBBER

American Railway Assn. Signal Section. 8820; 1921. Lead Type Portable Storage Battery for Signaling. Includes hard-rubber jars and covers for batteries, dimensions and construction, high temperature resistance, tensile strength and elongation requirements. Also includes minimum thickness requirements for perforated rubber separators. Society of Automotive Engineers, 1931 Handbook, I Storage Battery Jars for Electric Vehicles; 1921. Tensile strength and elongation requirements of hard rubber for hard-rubber jars, dimensions of 2 and 4 ribbed jars for both passenger cars and

U. S. Gov., Federal Specifications Board. W-B-131; 1930. Storage Batteries for Ignition, Lighting, and Starting. Includes cell jars and battery case specifications. For hard-rubber cell jars, test requirements for electrical breakdown, tensile strength and elongation; for battery cases, test requirements for distortion, resistance to impact, electrical breakdown, and acid absorption.

References.—Methods of testing rubber goods. See also 200. Rubber linemen's gloves. See 203.2. Rub-ber insulation. See also 719.55, 719.56.

205.2 LABORATORY APPARATUS, HARD RUBBER

References,-Rubber tubing. See 204.6. 205.3 SURGICAL GOODS, HARD RUBBER

205.4 TOILET ARTICLES OF HARD RUBBER

206. RUBBER TIRES, CASINGS, AND TUBES

206.0 GENERAL ITEMS

American Society for Testing Materials, D 122-30; 1930. Tolerances and Test Methods for Tire Fabrics Other Than Cord Fabrics. Tolerances on width, weight, count, thickness, strength, twist, erimp, and bow, test procedure for measurement of above items.

American Society for Testing Materials. D 179-30: 1930. Tolerances and Test Methods for Tire Cord, Woven and on Cones. Standard tolerances on width, weight, count, thickness, tensile strength, elongation and twist, test procedure for

measurement of above items.

U. S. Gov., Dept. of Commerce. Bureau of Stand-T318; 1926. Endurance Tests of Tires. Describes the method developed at the bureau for an accelerated endurance test for the tire carcass but not including abrasive resistance test of the tread, size of cleats on test drum and the axle loads used in tests were established in cooperation with the Rubber Assn. of America.

206.1 PNEUMATIC TIRE CASINGS FOR AUTOMO-BILES

Society of Automotive Engineers 1931 Handbook. Tires and Rims; 1930. Covers tires and rims for passenger cars, balloon and high pressure tires and rims for commercial vehicles, rim dimensions and standard tire sections for various rim diameters, not including super tires for passenger cars. Same as standards adopted by Tire and Rim Assn. Tire and Rim Assn. (Inc.) 1931 Year Book. Loads

and Inflation Tables; 1931. Maximum loads for various inflation pressures for various tire sizes and number of plies for balloon and high pressure passenger car tires, for balloon and high pressure truck and bus tires.

Tire and Rim Assn. (Inc.) 1931 Year Book. Pas-senger Car Tires, Truck and Bus Tires. Stand-ard passenger car balloon tire sizes for original equipment with cross sectional limits, proper rims for use with each tire section, current practice on tire, rim, and valve equipment for various car makes. Standard tire sizes and corresponding rim dimensions for truck and bus balloon tires and high pressure tires, dual spacings of truck and motorcoach tires, current practice on tire and valve equipment for commercial cars and trucks.

Federal Specifications Board. ZZ-S. Gov., T-381; 1930. Pneumatic Automobile Tires. high pressure and balloon tires, light and heavy duty types, including truck and bus tires, requirements on construction, minimum number of plies, number of chafing and reinforcing strips, endurance test of tire on standard test wheel, thickness, tensile strength, elongation tests for tread and side walls, hydrostatic test for tire, diameter of inflated tire, methods of test as specified in F. S. B. spec. 59 for rubber goods.

ferences.—Methods of testing. See also 206.0, Tire fabrics. See also 303.8. Rims. See 722.36.

206.2 PNEUMATIC TIRE CASINGS FOR MOTOR CYCLES, BICYCLES, AND AIRPLANES

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Airplane Tires; 1929. Actual tire dimensions for plain tread standard and oversize tires with rim dimensions for 10 wheel sizes, tire loads and inflation pressures, tire and wheel combinations with minimum wheel strengths.

Tire and Rim Assn. (Inc.) 1931 Year Book. Airplane Tires, Motor-cycle Tires. Dimensions and standard sizes of airplane tires for tail wheels and landing wheels, load, inflation, and deflection tables, recommended practice on axle, rim, and tire dimensions, load, inflation, and valve equipment for low pressure and extra low pressure airplane tires. Standard tire sizes for motor

eveles.

Tire and Rim Assn. (Inc.) 1931 Year Book. Load and Inflation Tables; 1930. Maximum loads for various inflation pressures for various tire sizes for airplane tires and for balloon and high pres-

sure motor-cycle tires.

S. Gov., Federal Specifications Board. 3c; 1927. Pneumatic and Solid Rubber Tires and Inner Tubes. For pneumatic tires for motor cycles, requirements on construction, number of plies, of chafing, and of reinforcing strips, durance test of tire on standard test wheel, thickness, tensile strength, elongation, and set tests for tread and side walls, hydrostatic test, diameter of inflated tire.

. S. Gov., Federal Specifications Board. 581; 1928. Single Tube and Clincher Bicycle Tires. Requirements on number of plies of cotton or cord fabric, structural features, type of valve, diameter, percentage of new rubber, tensile strength, elongation, thickness, and set for tread, sidewall, and tube, adhesion between plies and rubber, methods of test in accordance with F. S. B. 59 for rubber goods.

References .- See references under 206.1.

206.3 INNER TUBES FOR PNEUMATIC TIRES FOR AUTOMOBILES

(Inc.) re and Rim Assn. (Inc.) 1931 Yearbook. Valves; 1931. Dimensions of standard sizes of valve stems, straight, bent, etc., for passenger cars, trucks, and buses, including convertible standard valves for truck and bus, recommended

bridge washers for truck tubes.

U. S. Gov., Federal Specifications Board. ZZ-T-721; 1930. Automobile and Motorcycle Inner Tubes. For pure gum tubes, compounded tubes, and heavily compounded tubes, requirements on construction and dimensions, on rubber content. tensile strength, elongation, and set, aging and inflation test, methods of test as specified in F. S. B. spec. ZZ-R-601 for rubber goods.

References .- Methods of testing. See also 206.0, 200.

203.4 INNER TUBES FOR PNEUMATIC TIRES OTHER THAN AUTOMOBILE

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Airplane Tire Valves; 1930. Recommended standard dimensions for various sizes and angle of bend for 5 valves.

Tire and Rim Assn. (Inc.) 1931 Yearbook.
Valves. Dimensions of standard valve stems for airplane tires and for motor-cycle tires.

U. S. Gov., Federal Specifications Board. ZZ-T-721; 1930. Automobile and Motorcycle Inner Tubes. For pure gum tubes, compounded tubes, and heavily compounded tubes, requirements on construction and dimensions, on rubber content, tensile strength, elongation, and set, aging and inflation test, methods of test as specified in F. S. B. spec. ZZ-R-601 for rubber goods.

References.—Methods of testing. See also 206.0, 200.

206.5 SOLID TIRES FOR AUTOMOBILES AND TRUCKS

Society of Automotive Engineers 1931 Handbook. Cushion Tires; 1929. List of standard tire sizes for various wheel diameters, maximum carrying capacity and maximum recommended speeds.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Industrial Truck Tires; 1931. Tire widths and wheel diameters for flat base tires and for channel base thres, for nominal wheel diameters from 5 to 24 inches, dimensions of base bands, maximum loads. In conformity with standards of Tire and Rim Assn.

Society of Automotive Engineers 1931 Handbook. Solid Tires; 1929. Table of standard tire sizes with corresponding wheel diameter, maximum carrying capacity, and maximum recommended

speeds.

Tire and Rim Assn. (Inc.) 1931 Yearbook. Solid Tires; 1928. Maximum carrying capacities of solid tires and of cushion tires of various widths and over-all diameters, recommended maximum speed.

Tire and Rim Assn. (Inc.) 1931 Yearbook. Solid Tires for Industrial Trucks; 1930. Standard solid tire sizes and maximum loads for flat base and for cbannel base tires for wheel sizes from

6 to 24 inches.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R103-29; 1929. Industrial Truck Tires. Simplified practice recommended and accepted by industry establishing a standard limited list of stock sizes covering widths of tires and nominal wheel diameters for flat base tires and for channel base tires, covers solid rubber tires for inside-of-plant trucks.

U. S. Gov., Federal Specifications Board. ZZ-T-391; 1930. Solid Automobile Tires. Requirements on chemical composition and strength of weld of base bands, rubber content, tensile strength, elongation, and rebound value of tread stock, areas of cross-sections, methods of test according to F. S. B. spec. ZZ-R-601 for rubber

goods.

References.—Methods of testing. See also 206.0, 200. Rims. See also 722.36.

207. RUBBER AND BALATA BELTING, PACKING, AND GASKETS

207.0 GENERAL ITEMS

American Society for Testing Materials. D 181–25; 1925. Tolerances for Hose Ducks and Belt Ducks, Tolerances on width for hose duck, rubber and balata belt ducks, and stitched canvas belting ducks, tolerance on weight, tolerance on thread count and gage of hose and belting ducks, tolerances on crimp and tensile strength.

207.1 CONVEYOR BELTING

207.2 ELEVATOR BELTING

207.3 TRANSMISSION BELTING

American Petroleum Institute. Standard No. 1; 1931. Belting Specifications. Balata Belting. For oil country purposes, requirements on construction, elongation, tensile strength, friction test, tolerances on width, methods of test.

American Petroleum Institute. Standard No. 1; 1931. Belting Specifications. Rubber Belting. For oil country purposes, requirements on construction, elongation, tensile strength, friction test, tolerances on width, methods of test.

American Railway Assn. Mechanical Div. Recommended Practice. Beiting, Axie Light; 1930. Rubber beiting for axie light generator drives, requirements on construction, friction, elongation, tension, and bending test, thicknesses, tolerance on width, tested in conformity with A. R. A. standard methods of tests for rubber goods.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Canvas and Rubber Driving Belts; 1923. Length tolerance, driven pulley diameters for various ply belts, belb-duck weight and stitching requirements, horsepower ratings for various belt widths and number of plies, test requirements on separation of plies in rubber belting.

References.—Methods of testing, See also 200. Belt duck tolerances. See 207.0. Leather belting. See 314.1.

207.4 PACKING AND GASKETS

References.—Rubber gaskets, rubber packing. See 707.13, 707.24.

208. MISCELLANEOUS RUBBER PRODUCTS 208.1 RUBBER FLOOR COVERING

American Society for Testing Materials. D 178-24; 1924. Rubber Matting for Use Around Electrical Apparatus or Circuits not Exceeding 3000 Volts to Ground. Construction, tensile strength and elongation requirements using A. S. T. M. test method D 15, test requirements for voltage and dielectric strength tests, minimum thickness.

U. S. Gov., Federal Specifications Board. 382; 1926. Rubber Matting. For a layer of rubber backed with cotton sheeting, requirements on width, thickness and length of roll, size of corrugations, general quality, tensile strength and elongation of rubber compound, weight, thread count and strength of cotton fabric, flexibility, adhesion of backing, testing in accordance with F. S. B. spec. 59 for rubber goods and F. S. B. spec. 345 for textile materials.

U. S. Gov., Federal Specifications Board. 414; 1926. Rubber Matting for Use Around Electrical Apparatus. For circuits not over 3,000 volts, requirements on general quality and construction of matting, thickness, tensile strength, elongation, set, dielectric strength, conductivity test, methods

of test with physical test according to F. S. B. specification 59.

References .- Methods of testing. See also 200.

208.2 RUBBER BANDS

U. S. Gov., Federal Specifications Board. ZZ-B-111; 1931. Rubber Bands. For 20 sizes, requirements on dimensions, tensile strength, elongation, aging test, content of new rubber, methods of test as in F. S. B. spec. 59 for rubber goods.

References .- Methods of testing. See 200.

208.3 RUBBER CEMENT AND COMPOUNDS References.—Rubber cement. See 204.92.

208.4 RUBBER INSULATION

References.—Rubber battery jars. See 205.1. Rubber floor covering. See 208.1. Rubber gloves. See 208.2. Rubber covering for electric wires. See 719.55. Rubber tape, friction tape. See 719.55, 719.56.

208.5 RUBBER TUBING

References .- Rubber tubing. See 204.6.

208.6 RUBBER JAR RINGS

S. Gov., Federal Specifications Board. 51; 1922. Rubber Jar Rings. For 1 size, requirements on dimensions, tensile strength, elongation, boiling water test, steam pressure test, and dry

208.9 MISCELLANEOUS MECHANICAL RUBBER GOODS

208.91 Bumpers of Rubber

208.92 Ear Cushions

208.93 Expansion Joints

208.94 Pads

References .- Rubber surgical pads. See 204.53.

208.95 Rubber Washers

209. MISCELLANEOUS RUBBER MANUFAC-TURES

209.1 DREDGING SLEEVES

U. S. Gov., Federal Specifications Board. 42; 1922.
Dredging Sleeves. Sleeves for hydraulic dredges, requirements on construction for rub ber sleeves with cotton reinforcement, weight, and quality of canvas reinforcement, minimum thickness of hose, tensile strength, adhesion of plies, ultimate elongation, methods of test specified in F. S. B. spec. 59 for rubber goods.

References.—Methods of testing. See also 200. Hose duck. See 202.0.

209.2 HORSESHOE PADS

209.4 PLUMBERS' FORCE CUPS

209.5 SQUITGEES

209.6 WEATHER STRIPPING

209.7 GROMMETS OR BUSHINGS

Society of Automotive Engineers 1931 Handbook. Rubber Bushings 1929. Dimensions of rubber bushings or grommets up to 1-inch size for bushing holes in sheet metal.

209.8 RUBBER HOSE TIPS

209.9 MISCELLANEOUS RUBBER GOODS

Amateur Athletic Union of the U.S. Official Athletic Rules; 1931. (Publ. No. 117R of American Sports Publishing Co., 45 Rose St., New York, N. Y.) Code Ball. For spherical inflated rubber ball, requirements on diameter, weight, and pressure resistance capacity.

National Collegiate Athletic Assn. Water Polo Rules; 1930. (Publ. No. 91R of American Sports Publ. Co., 45 Rose St., N. Y.) Ball. Regulation white rubber ball, standard diameter and tol-erances, requirements on inflation and freedom

from oil and grease

209.91 Rubber Balls

U. S. Golf Assn. (Publ. 3X of American Sports Publ. Co., 45 Rose St., N. Y.) Playing Rules; 1930. Weight and Size of Golf Ball. Permis-sible weight and minimum diameter. The new weight and diameter effective after Jan. 1, 1931, are also given.

U. S. Intercollegiate Lacrosse Assn. Lacrosse Rules; 1930. (Publ. No. 113R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Ball. To be of India rubber sponge, requirements on circumfer-

ence and weight, tolerances.

209.92 Ice Hockey Puck

Amateur Athletic Union of the U.S. Official Athletic Rules; 1931. (Publ. No. 117R of American Sports Publishing Co., 45 Rose St., New York, N. Y.) Ice Hockey. For the puck, requirements on thickness, diameter, and weight of hardened

vulcanized rubber puck. National Collegiate Athletic Assn. Ice Hockey Rules; 1930. (Publ. No. 92R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Puck. To be of black vulcanized rubber, requirements on standard thickness, diameter, weight, freedom from identa-

tions and cuts.

National Hockey League. Laws of Hockey; 1929. (Publ. No. 90R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Puck, To be of vulcanized rubber, required thickness and diameter.

209.99 Rubber Goods not Elsewhere Classified References.—Rubber pump-valves. See 707.3. Rubber gas masks. See 993.

GUMS, RESINS, AND BALSAMS

211. TURPENTINE, TAR, AND PITCH

211.1 TURPENTINE

American Pharmaceutical Assn. National Formulary; 1926. Turpentine. Description and physical properties, test requirements for purity and identity. Recognized as standard in enforcement of Federal food and drugs act.

American Railway Assn. Mechanical Division. Recommended Practice; 1925. Turpentine. Applies to gum or spirits turpentine as well as to wood turpentine. Appearance, specific gravity, refractive index, residue after polymerization, boiling point, distilling point, methods of test.

American Society for Testing Materials. D 13-26; 1926. Gum Spirits of Turpentine and Steam Distilled Wood Turpentine. Requirements on appearance, color, odor, specific gravity, refractive index, residue, boiling point, distillation according to A. S. T. M. methods of test D 233.

American Society for Testing Materials. D 233-26;

1926. Methods of Sampling and Testing Turpentine. Methods of sampling from tank cars and containers, construction of distilling apparatus, procedure for distilling test, test method for color, polymerization test and preparation of reagent. American Society for Testing Materials. D 236-27: 1927. Destructively Distilled Wood Turpentine. Requirements for specific gravity, refractive index, residue, boiling point, distillation test

according to A. S. T. M. test methods D 233.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Turpentine Oil (Spirits of Turpentine). Tentative method for determination of color, specific gravity, refractive index, distillation, official gravity, method for determination of mineral oil.

U. S. Gov., Dept. of Agriculture. Food, Drug, and S. GOV., Dept. of Agriculture Food, Drug, and Insecticide Administration. Misc. Cir. No. 22; 1924, and Supplements 1 to 5, incl., 1929. The Naval Stores Act and Regulations for Its En-forcement. Turpentine. General definitions as regards source or method of production of gum spirits of turpentine, steam distilled wood turpentine, destructively distilled wood turpentine, and sulphate wood turpentine. Text of pertinent portions of act. Use of above designations for transactions in turpentine required by law

S. Gov., Federal Specifications Board, LLL-T-791: 1931. Turpentine. For gum spirits of turpentine and steam distilled wood turpentine, requirements on appearance, odor, specific gravity, refractive index, qualities of residue after polymerization, boiling point, distillation test, methods

of inspection and test.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Oil of Turpentine. Source, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

211.2 PINE-TAR OIL

211.3 PINE OIL

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Oil of Dwarf Pine Needles. Physical properties, identity tests, test requirements for purity and for strength. Recognized as standard in enforcement of Federal food and drugs act.

211.4 TAR (NOT INCLUDING COAL TAR)

U. S. Pharmacopoeial Convention (Inc.), Pharmacopoeia of U. S. A.; 1926. Pine Tar. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

212. CAMPHOR

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Camphor. Description and properties, preparation and standard strengths of tincture, dilutions, medications, triturations, and saturated tincture for medicinal purposes.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Camphor and Monobromated Camphor in Tablets. Methods for preparation of sample and reagents, and for determination of amount of camphor.

U. S. Pharmacopoetal Convention (Inc.), Pharmacopoeta of U. S. A.; 1926. Camphor. For medical purposes, physical properties, identity tests, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and druzs act.

213. CHICLE

214. BALSAMS

U. S. Pharmacopoeial Convention (Inc.) Pharmacopoeia of U. S. A.; 1926. Balsam of Peru. Balsam Copaiba. Balsam of Tolu. For medical purposes, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.) Pharmacopoeia of U. S. A.; 1926. Storax. A balsam for medical purposes, physical properties, iden-

tity tests, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

215. VARNISH GUMS AND RESINS

References.—Varnish gums and resins. See also 846.6. Rosin. See 216.

216. ROSIN

American Society for Testing Materials. D 269-30; 1930. Method of Test for Determination of Toluol Insoluble Matter in Rosin. Treatment of sample and test procedure for determination of matter insoluble in toluol, chiefly sand, chips, dirt and bark.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Rosin. Tentative method for determination of toluol-in-

soluble material in rosin.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. Misc. Cir. No. 22, 1924, and Supplements 1 to 5, incl.; 1929. The Naval Stores Act and Regulations for Its Enforcement. Rosin. Definitions of gum rosin and of wood rosin, type standards for 15 grades of rosin are in custody of Dept. of Agriculture, the use of which are mandatory in commercial transactions in rosin. Includes text of pertinent portions of act.

U. S. Pharmacopoeial Convention (Inc.) Pharmacopoeia of U. S. A.; 1926. Rosin. Source, physical properties, identity tests, purity requirements. Recognized as standard in enforcement

of Federal food and drugs act.

217. MISCELLANEOUS GUMS, BALSAMS, AND RESINS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Drugs. Tragacanth. Tentative method for determination of volatile acidity.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 45, Gum Arabic Sizing. Requirements on kinds and amounts of constituents, directions for prepa-

ration

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Gum Arabic (Acacia). For medical purposes, physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Gum Tragacanth. For medical purposes, physical properties, iden-

tity tests, test requirements for purity.

220-229

CRUDE DRUGS AND ESSENTIAL OILS

221. CRUDE DRUGS OF VEGETABLE ORIGIN

American Institute of Homeopathy, Homeopathic Pharmacopoeia of the U. S.; 1914. Lists several hundred drugs, including crude drugs of vegetable origin, with names and synonyms, description of plant, its habitat, and the part used for drug purposes, with method of preparation and standard strengths of medicinals prepared therefrom.

American Pharmaceutical Assn. National Formulary; 1926. Covers standards for crude drugs of vegetable origin that are not included in U. S. Pharmacopoeia, gives descriptions and physical properties, permissible foreign organic matter, formulas for and preparation of elixirs, extracts,

liniments, solutions, etc., from the crude drugs. Recognized as standard in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Santonica (Levant Wormseed). Tentative tests for determination of percentage of santonin. II. S. Pharmacopocial Convention (Inc.). Phar-

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926, 630 Drugs and Medicinals Including those of Vegetable Origin. Source, physical properties, identity tests, test requirements for purity, dosage. Recognized as standards in enforcement of Federal food and drugs act.

References.—Medicinal and pharmaceutical preparations. See also 810-819.

222. DRUGS OF VEGETABLE ORIGIN OTHER THAN CRUDE

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the United States; 1914. Lists several hundred drugs, mostly plant drugs, gives names and synonyms, description of plant, its habitat, the part used for drug purposes, the methods of preparation and standard strengths of tinctures, dilutions, medications, triturations, etc., as used in homeopathic medicine.

American Pharmaceutical Assn. National Formulary; 1926. Contains standards for crude drugs and chemicals and for medicinal preparations made from them, that are not included in U. S. Pharmacopoela. Recognized as standards in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Drugs. Methods for separation, identifying, and determination of percentages of the potent ingredients for 56 drugs including several alkaloids.

ORIGIN

U. S. Pharmacopoelal Convention (Inc.). Pharmacopoela of U. S. A.; 1926. 630 Drugs and Medicinals including those of Vegetable Origin. Source, physical properties, identity tests, test requirements for purity, dosage. Recognized as standards in enforcement of Federal food and drugs act.

References.—Medicinal and pharmaceutical preparations. See also 810-819.

223. ESSENTIAL AND DISTILLED OILS

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926, 630 Drugs and Medicinals including Essential and Distilled Oils. Physical properties, identity tests, test requirements for purity and in some cases for strength, dosage. Recognized as standards in enforcement of Federal food and drugs act.

References.—Medicinal oils. See 813. Vegetable oils. See 142.

230–239 DYFING AND TANNING MATERIALS OF VEGETABLE ORIGIN

231. TANNING MATERIALS

American Chemical Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils; 1926. Published by American Oil Chemists Society. Applicable to fats and fatty oils used in the tanning industry, methods of sampling, apparatus and methods of determination of moisture, volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined, free fatty acids, titer, saponification number, unsaponifiable matter, iodine number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl value, opencup flash and fire test, standard color for commercial fat.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Chrome Tanning Materials. Provisional methods of analysis for chromium, acid content, and basicity.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Provisional Method for the Determination of Sugars in Tanning Materials. Methods for determination of reducing sugars, total sugars, and nonreducing sugars.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Official Method of Sampling Tanning Materials. For solid, powdered and pasty extracts, for liquid extracts in barrels, in bulk, and in tank cars, for crude tanning materials, for spent materials from leaches, for tanning liquors.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Provisional Method for Sampling Tanning Material. Requirements on number of packages to be sampled, method of taking samples of solid extract, quebracho, mangrove, wattle, etc., methods of sampling pasty extracts, powdered extracts, bark and wood in sticks, wood chips, fruits, roots, spent tanning materials, liquid extracts.

tanning materials, liquid extracts.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Vegetable Materials Containing Tannin. Official methods of analysis for raw and spent materials, analysis of extract for total solids, water, soluble solids, insolubles, nontannins, and tannins, analysis of liquor for total solids, soluble solids, insolubles, and nontannins, and total acidity of liquors, test for presence of sulphite cellulose.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Vegetable Materials Containing Tannin. Official international method of analysis bethe a provisional method of analysis of the A. L. C. A., comprising methods of sampling, determination of moisture, total solids, solubles, nontannins, tanning matter absorbable by hide powder, insoluble matter, and specific gravity.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Tanning Materials, Tentative Methods Essentially the same as methods of Am. Leather Chemists Assn. Preparation of solution, determination of total solids, soluble solids, and tannin for extracts and liquors; for raw and spent materials, determination of moisture, extracting and analysis of extract.

SEEDS

(Except Oil Seeds and Spice Seeds)

240. GENERAL ITEMS

Assn. of Official Seed Analysis of North America and U. S. Dept. of Agriculture. Department Circular 406; 1928. Rules for Seed Testing. Methods of sampling, sizes of test samples for various kinds of seed, requirements on methods of purity analysis, and germination tests, including requirements for type of substratum, temperatures and duration of test for different kinds of seed. 241. ALFALFA, CLOVER, AND TIMOTHY | 244. FLOWER SEEDS SEEDS

242. GRASS SEEDS

243. FORAGE PLANT SEEDS

245. CABBAGE AND TURNIP SEEDS

246. GARDEN SEEDS, EXCEPT CABBAGE AND TURNIP

250-259

NURSERY AND GREENHOUSE STOCK

251. BULBS AND ROOTS

American Assn. of Nurserymen. Horticultural Standards; 1923. Herbaceous Perennials. Re-quirements on minimum number of buds in clump, required statement on method of propagation, age, and number of buds.

259. MISCELLANEOUS NURSERY AND GREENHOUSE STOCK

American Assn. of Nurserymen. Horticultural Standards; 1923. For deciduous trees, standard increments for stating height, caliper, and diameter of top, location of point of caliper measurement, bundling of fruit trees, combination caliper and minimum heights for deciduous trees and for fruit trees, standard plant names.

American Assn. of Nurserymen. Horticultural Standards. 1923. Evergreen Trees. Standard increments for stating heights and spread.

American Assn. of Nurserymen. Horticultural Standards. 1923 and Supplement. 1930. Rose

Grades. Classification of roses into 4 classes, definitions of 2 grades for each class dependent on number and length of canes.

American Assn. of Nurserymen. Horticultural Standards, 1923 and Supplement, 1930. Shrub Grades. Standard increments for stating heights and diameter, classification of various varieties into 6 classes including dwarf and tree form. grades for each class dependent on number of canes and height.

American Assn. of Nurserymen. Horticultural Standards; 1923. Vines. Standard increments for stating length, required statement of age

and average number of stems.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Asparagus Plumosus; 1930. A permissive standard of trimmed asparagus sprays including definitions of 3 grades as regards shape, freedom from shattering, second growths, and damage, color of foliage, size classification.

260-269

TOBACCO

260. GENERAL ITEMS

U. S. Gov., Congress. Public, No. 661, 70th Congress; 1929. Tobacco Stocks and Standards Act. An act to provide for the collection and publication of statistics of tobacco by the Dept. of Agriculture. Authorizes the Sec. of Agriculture to establish standards for the classification of tobacco and requires holders of tobacco other than original grower to report stock of tobacco according to these standards.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcement No. 90; 1925. Regulations of Secretary of Agriculture under U. S. Warehouse Act of 1916. Regulations for Warehousemen Storing Tobacco. Regulations regarding warehouse licenses and bonds, warehouse receipts, duties of warehousemen, fees, licensed samplers, graders, and weighers, tobacco classification at licensed warehouses using such official standards of U. S. as have been adopted. Includes a copy of U. S. warehouse act.

261. TOBACCO UNMANUFACTURED

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Summary of Standard To-bacco Grades for U. S. Types 11, 12, 13, and 14; 1931. For reporting stocks of leaf tobacco 14; 1931. For reporting stocks of leaf tobacco under tobacco stocks and standards act for tobacco produced in Virginia, North Carolina, South Carolina, Georgia, and Florida, list of 80 standard grades of flue cured tobacco arranged in groups with quality grade and color combinations under each of the group wrappers, heavy leaf this load of the group wrappers, heavy leaf this load of the group wrappers. heavy leaf, thin leaf, etc., no definitions of quality grades or group classification.

U. S. Gov., Dept. of Agriculture. Bureau of Agri-cultural Economics. Standard Grades for Wis-

consin Tobacco (U. S. Types 54 and 55): 1931. Grade definitions according to group, quality, color, and length; groups comprising binders, fillers, scrap, nondescript, etc.; quality dependent on smoothness, texture, elasticity, oiliness, firmness, thinness of body, strength, etc.; color classification for each group.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 118; 1929. Classification of leaf tobacco covering classes, types, and groups of grades, issued under authority of the tobacco stocks and standards act. Leaf tobacco divided into following classes, flue cured, fire cured, air cured, cigar filler, cigar binder, cigar wrapper, misc. domestic types, foreign grown cigar leaf types, foreign grown other than cigar leaf types, division of each class into types with type names and places of production, grade groups applicable to each type, such as heavy leaf, thin leaf, seconds, etc., definition of grades not included. Includes text of tobacco stocks and standards act.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Misc. Circ. No. 83; 1926. U. S. Standard Tobacco Sizes. Standards for use under U. S. warehouse act and permissive for other purposes, definitions of 6 classes of standard sizes, as 1-inch sizes, 2-inch sizes, etc., in which the distance between upper and lower limits of length are 1-inch, 2-inch, etc., numerals for designating the various standard length sizes, types of tobacco to which the various classes of grading are applicable, charts and illustrations of sizing boards and sizing tables for use in grading tobacco.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Summary of Standard Tobacco Grades for U. S. Type 21; 1929. For re-

porting stocks of leaf tobacco under tobacco stocks and standards act, covers 50 grades of Virginia fire-cured tobacco arranged in groups as wrappers, heavy leaf, thin leaf, etc., with color, quality grade, and size combination for each grade, no definitions of quality grade or group classification.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Summary of Standard To-bacco Grades for U. S. Type 23; 1929. For reporting stocks of leaf tobacco under tobacco stocks and standards act, covers 46 grades of western fire-cured tobacco, arranged in groups as wrappers, heavy leaf, thin leaf, etc., with

color and quality grade for each grade, no definitions of quality grades or group classification. References.—Warehousing regulations. See 260.

262. MANUFACTURES OF TOBACCO

262.1 CIGARETTES

262.2 CIGARS

262.3 CHEWING TOBACCO

262.4 NICOTINE INSECTICIDES

References .- Nicotine insecticides. See 881.24.

STARCH AND VEGETABLE GLUE

281. STARCH

References .- Cornstarch. See 103.3.

282. VEGETABLE GLUE

References.—Glue of animal origin. See 093. Mucilage made from gum acada. See 932,5.

290-299

MISCELLANEOUS VEGETABLE PRODUCTS

291. IVORY, VEGETABLE, OR TAGUA NUTS
U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. U. S. Standards for Broomcorn; 1931. A permissive standard, definitions of 5 grades as regardle color absence of flat files.

293. FIBER SPONGES 294. BROOM CORN cultural Economics. U. S. Standards for Broomcorn; 1931. A permissive standard, definitions of 5 grades as regards color, absence of flat fiber, and permissible defects, classification definitions for hurl, self-working, and underwork divisions, classification into whisk, parlor, and warehouse.

COTTON, COTTON FABRICS, AND KNIT GOODS

300. GRADES, DEFINITIONS, AND TESTS OF COTTON

300.0 GENERAL ITEMS

U. S. Gov., Congress. 39 Stat. 476, 1916. Amended 40 Stat. 1348, 1351, 41 Stat. 725, and Public No. 657, 69th Cong.; 1927. U. S. cotton futures act. To avoid payment of tax on cotton sold for future delivery certain requirements are laid down, including sale of cotton by official grades established by Sec. of agriculture, adjustment of price where grade delivered is not the grade specified in contract or is not middling where no grade is specified, and disallowance of delivery of cotton below a prescribed range in the official standards.

U. S. Gov., Congress. 42 Statutes at Large, p. 1517; 1923. U. S. cotton standards act. Makes it unlawful for anyone to indicate the grade of cotton, in connection with any transaction or shipment in commerce, by other than the official cotton standards of the U. S. then in effect, but not applicable to transactions by sample, authorizes Sec. of Agriculture to license graders and to establish

official cotton standards.

U. S. Gov., Congress. 43 Stat. 822, 844-845; 1925. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30, 1926. For enabling the Sec. of Agriculture to investigate and certify to shippers and other interested parties the class, quality, and/or condition of cotton and fruits, vegetables, poultry, butter, hay, when offered for shipment in interstate shipment or when received at designated central markets.

U. S. Gov. Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 120; 1931. Regulations of Secretary of Agriculture under U. S. warehouse act of 1916. Regulations regarding warehouse licenses and bonds, warehouse receipts, duties of warehouseman, fees, licensed classifiers and weighers, cotton classification for licensed warehouses using official cotton standards of U. S. and including definitions of irregularities, such as perished staple, immature staple, gin-cut cotton, etc. Includes a copy of U. S. warehouse act.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcement No. 124; 1931. Regulations of the Sec. of Agriculture under the U. S. cotton futures act. Regulations regarding classification requests, inspection and sampling, classification, cotton class certificates, supervision of transfer of cotton, list of official cotton standards ,etc. Includes text of U. S. cotton futures act.

References.—Lime for Use in Textile Industry. Sec 517.2 Coal-tar dyes. Sec 803.1

300.1 U. S. STANDARDS FOR GRADES OF COTTON

Arkwright Club and New England Cotton Buyers' Assn. New England Terms for Buying and Selling American Cotton: 1929. Includes definitions of short staple and of long staple cotton, trading regulations using U. S. Government standard classification, not applicable to sea island or American grown Egyptian cotton.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 92; 1925. Standards for Cotton Classification in the United States and Abroad. Includes official cotton standards of the U. S. for grades and colors of American upland cotton, known as the Universal Standards for American Cotton. Grade and color are defined by samples in custody of U. S. Dept. of Agriculture for 9 grades of white cotton, 5 grades of yellow tinged, 3 grades of yellow stained, and 3 grades of blue stained, with descriptive definitions for 12 intermediate grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 92 and No. 94; 1925. Official Standards of the United States for American Cotton Linters. The standards are published in each of above publications. Grade defined for 7 grades by samples in custody of Dept. of Agriculture, definitions of hull fiber, mixed packed,

and off grade grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 109; 1928. Items relating to the administration of the U. S. cotton futures and cotton standards acts. Includes standards for color for American cotton linters. Definitions of 7 color grades as embraced in the colors of the samples composing efficial standards of U. S. for cotton linters.

U.S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 117; 1929. Proceedings of International Universal Cotton Standards Conference of 1929 and items relating to the administration of the U.S. cotton futures and cotton standards acts. Includes official cotton standards acts. Includes official cotton standards of the U.S. for grades and colors of American Egyptian cotton, effective Aug. 1, 1930. Grade and color for 5 grades defined by samples in custody of Dept. of Agriculture, definitions of repacked, false packed, mixed packed, and water

packed grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 117; 1929. Proceedings of International Universal Cotton Standards Conference of 1929 and items relating to the administration of the U. S. cotton futures and cotton standards acts. Includes additional official cotton standards of the U. S. for extra white cotton grades of upland cotton, effective Aug. 1, 1930. Grade and color defined by samples in custody of

Dept. of Agriculture for 7 grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 117; 1929. Proceedings of International Universal Cotton Standards Conference of 1929 and items relating to the administration of U. S. cotton futures and cotton standards acts. Includes official cotton standards of the U. S. for length of staple, last amended in 1929. Definition of staple length and conditions of measurement, list of standard lengths for designating length of staple, the standard lengths for 17 grades of upland and for 4 grades of American Egyptian are represented by samples in custody of Dept. of Agriculture.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 117; 1929. Proceedings of International Universal Cotton Standards Conference of 1929 and items relating to the adminisTEXTILES 300.4

tration of the U.S. cotton futures and cotton standards acts. Includes tentative standards for preparation of long staple cotton, use in spot transactions permitted. Three preparations in each of grades 4, 5, and 6 of upland cotton defined by samples in custody of Dept. of Agriculture.

References.—Laws and regulations establishing cotton grades. See 300.0.

300.4 GENERAL METHOD OF TESTING COTTON FABRICS

American Assn. of Textile Chemists and Colorists, 1930 Yearbook. Standard Tests for Fastness to Acids and Alkalies and Selection of Standards. For dyed cotton, dyed silk, and dyed wool, methods of test and classification of material according to resistance to tests.

American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Report of Subcommittee on fastness to carbonizing. Usual methods of laboratory tests using method with acid and method

with aluminum chloride.

American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Report of subcommittee on fastness to crocking. Tentative method of test using manual procedure and wet and dry white cloths, classification of materials according to resistance to tests.

American Assn. of Textile Chemists and Colorists. 1939 Yearbook. Report of subcommittee on fastness to sea water. Method of test, requirements on composition of artificial sea water.

- American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Fastness Tests for Dyed or Printed Cotton. Standard methods of test for fastness to domestic washing, laundering and soaping using standard launder-ometer and alternate method without launder-ometer; fastness to fulling of dyed cotton against white cotton; silk and wool; fastness to chlorine; fastness to stoving; classification of materials according to resistance to tests; dyes and dyeings chosen as comparison standards for the various classifications.
- American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Fastness Tests for Dyed or Printed Rayon, Celanese, and Similar Fibers. Standard methods of test for fastness to domestic washing and laundering using the launder-ometer, classification of material according to degree of resistance to tests.
- American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Fastness Tests for Dyed Silk. Standard methods of test for fastness to domestic washing and laundering using launder-ometry, fastness to fulling, fastness to degumming of dyed silk, fastness to stoving silk, classification of materials according to degree of resistance to tests, dyes chosen as standard for various classifications.
- American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Fastness Tests for Dyed Wool. Standard methods of testing of fastness to washing or laundering of dyed woolen material using launder-ometer, fastness to fulling, scouring and mill washing, fastness to dry and wet heat, fastness to stoving, classification of materials according to resistance to tests, dyes and dyeing chosen as comparison standards for various classifications.
- American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Report of subcommittee on light fastness. Recommended procedure for standard sun test, approximate relation between time periods for sun exposure and for exposure in fadeometer using artificial light.

American Assn. of Textile Chemists and Colorists. 1930 Yearbook. Report of subcommittee on standard methods of determining sizing and finishing materials in textile fabries. Tentative method for determination of quantity of moisture, oils, fats and waxes, soap, total sizing or filling and finishing materials, in cotton cloth.

American Society for Testing Materials. D 39–27: 1927. Approved by American Standards Assn. as L5–1931. Methods of Testing Woven Textile Fabrics. Method of testing for length, width, weight, number of threads per inch, thickness, tensile

strength, and crimp.

American Society for Testing Materials. D 274-29: 1929. Tolerances and Test Methods for Certain Light and Medium Cotton Fabrics. For print cloth, sheeting, pillow tubing, carded lawn, pajama checks, bunting, denlms, drill, twill, cotton fiannel, buckram, and blanket cloths, accuracy of width measurement, tolerances on specified average width, weight, and thread count, tensile strength not less than specified, tests according to A. S. T. M. method D 39.

American Society for Testing Materials, Tentative Methods, D 276-31 T; 1931. Methods for Identification of Textile Fibers and Their Quantitative Determination in Mixed Goods. General characteristics, appearance, and illustrations of principal textile fibers, qualitative identification by dyeing and burning, complete chemical quantitative analysis for percentages of each material in cotton and wool mixtures, cotton, silk and wool mixtures, etc., identification tests for various kinds of rayons.

American Society for Testing Materials. Tentative Standard. D 337-31 T; 1931. Methods of Determining Relative Humidity. Definitions of absolute humidity, relative humidity, etc., requirements on apparatus and test procedure, re-

quired accuracy of measurement,

National Assn. of Dyers and Cleaners. Fabric Testing. Undated. Small wall chart with tests for distinguishing different kinds of fabric; or different threads in one fabric; for open silk, a burning test; for weighted silk, a burning test; for pure wool, a burning test; for cellulose acetate, a burning and chemical test; for cotton, linen, ramie, china grass, artificial wool, rayon, a burning test.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 5 To Determine the Amount of Wool and Cotton in Fabric. Test procedure using method of weighing, boiling out wool in caustic solution.

washing, drying and reweighing.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 3. To Determine the Amount of Wool, Silk, and Cotton in Fabric. Test procedure using method of weighing before and after dissolvingout the silk in ammoniacal nickel hydrate, and again after dissolving-out the wool in caustic potash.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1923. Laboratory Test No. 4. To Determine Amount of Silk and Cotton in a Fabric. Test procedure using method of weighing before and after dissolving the cotton in zinc chloride solution.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 5. To Determine the Amount of Cotton and Linen in Fabric. Test procedure using method of weighing before and after treating with sulphuric acid and washing out the cotton. National Assn. of Dyers and Cleaners. Instruc-

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Labratory Test

No. 9. To Estimate Amount of Sizing or Dressing Materials in Fabrics. Test procedure using method of treating sample in prescribed strengths of hydrochloric acid and of soda ash solution, for removing sizing and dressing, weighing sample before and after treatment.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928, Laboratory Test No. 10, To Determine if Cotton Has Been Mer-cerized. Test proceduce using fading of color reaction after steeping sample in Lange's iodine

and zinc chloride solution.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 20. To Determine the Class of Dye in Fabric. Test methods for the dyes turkish red, para red, direct red (benzo, diamine, congo, etc.), sulphur black, aniline black, and logwood black, test for direct colors and for basic colors, to distinguish sulphur from indigo blue, sulphur from mineral khaki, and indigo blue from indanthrene blue.

National Assn. of Finishers of Cotton Fabrics. Methods for Testing Cotton Fabrics to Determine Their Fastness to Light and Power Laundry Washing. Undated. Description of fade-ometer and launder-ometer, test procedure and classification of samples in accordance with the resistance to light and laundering obtained from using above apparatus under prescribed

conditions.

U. S. Gov., Dept. of Commerce. Bureau of Standards. RP61; 1929. A Multiple Strand Test for Yarns. Describes method of preparing test specimen and test procedure using multiple strands of yarn under uniform tension, test gives breaking strength and also the stressstrain relationship. Comparison is made with tentative specification D258-31T of Am. Soc. for

Testing Materials. See page 99.
U. S. Gov., Federal Specifications Board. 345a; 1929. Textile Materials. Methods of physical and chemical tests, requirements on conditions of temperature and humidity, methods of identification and quantitative determination of fiber in cotton, wool, and mixed goods, test methods of breaking strength, weight, thread count, width, fastness of color, shrinkage, and per cent sizing

References.—Textile testing machines. See 770. Coal tar dyes and colors. See 803.1. Other textile tests and methods. See the individual textile.

References .- Textile Testing machines. See 770.

300.6 DEFINITIONS OF TEXTILE TERMS

American Society for Testing Matetrials. D 123-30; 1930. Definitions of Terms Relating to Textile Materials. Includes definitions of imperfections, several mechanical cotton fabrics, twill, drills, alberts, jeans, serge, and clay fabrics, standard condition, regain, moisture content, yarn, cord, thread, lea, count, twist, crimp, etc.

yath.

American Society for Testing Materials. Tentative Definitions. D 123-30T; 1930. Definitions of Terms Relating To Textile Materials. Includes definitions of breaker the fabric, sheeting, cidites definitions to breaker the fabric, since one osnaburg, airplane fabric, awning cloth, tent duck, elastic webbing, dungaree, burlap, felt, imperfections, hawser twist, cable twist, and hard twist yarns, twine, rope, laid fabric, holland, book fold, shoe fold.

Cotton Textile Institute (Inc.) and National Tent and Awning Mfrs. Assn. Nomenclature and Defi-nitions of Fabrics in the Tent and Tarpaulin Trade. Definitions adopted by the above in 1932 and tentatively adopted by the industry are published by the National Bureau of Standards in CS28-32. Definitions of single filling and double filling duck; army, enameling, flat, numbered, and wagon cover ducks; drill, jean, sheeting, osnaburg; conversion of numbered duck to ounce duck.

300.7 STITCHES AND SEAMS

U. S. Gov., Federal Specifications Board. DDD-S-751; 1930. Stitches, Seams, and Stitching. Standard stitches, seams, and stitching are defined, illustrated, and classified, and given a symbol for each class and type for convenience in reference

301. PARTIALLY MANUFACTURED COTTON

301.1 WASTE AND PACKING

301.11 Waste

U. S. Gov., Federal Specifications Board. 262a; 1925. Cotton Waste, White. Requirements on type and general quality of new yarn, minimum length of yarn, permissible weight, moisture, and tare content of bale, method of test, packing.

U. S. Gov., Federal Specifications Board. 263a; 1925. Cotton Waste, Colored. Requirements on general quality and type of yarn, percentages of white and colored yarns and slasher yarns, yarn lengths, freedom from foreign material, permissible weight, moisture, and tare content of bales, packing, methods of test.

References.—Waste for journal boxes. See also 301.12. Wool waste. See 363.1.

301.12 Journal Box Packing

American Railway Assn., Mechanical Div. Method of Analysis of Reclaimed Waste; 1930. Method of washing and determination of dirt and foreign matter

American Railway Assn. Mechanical Div. New Waste for Journal Box Packing; 1930. Either cotton or wool waste or a combination of the two, requirements on amount of resilient material, percentage of spooler and slasher cotton, length of cotton threads for cotton waste, and source of material for wool waste, permissible dirt, grease, and moisture.

301.2 CAULKING COTTON

301.3 LINTERS

National Cottonseed Products Assn. Rules: 1930. Rules 130 to 136. Cotton Seed Linters. Specific grades to be those of U. S. Dept. of Agriculture, including the definition of cottonseed hull fiber. dimensions and weight of standard bale of American cotton linters

U.S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 92 and 94; 1925. Official Standards of the U. S. for American Cotton Linters. The standards in each of above publications cover definitions of 7 grades by samples in custody of Dept. of Agriculture, definitions of hull fiber, mixed packed, and off

grade grades.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 109; 1928. Items relating to the administration of the U.S. cotton futures and cotton standards acts. Includes standards for color for American cotton linters. Definitions of 7 color grades as embraced in the colors of the samples composing official standards of U. S. for cotton linters.

References .- U. S. grades for other cotton. See 300.1.

301.4 MATTRESS FILLING

301.5 ABSORBENT WASTE

References,-Absorbent cotton, surgical. See 398.1.

References .- Guncotton. See 862.

301.7 TARES

302. COTTON YARN, THREAD, AND CORD-

302.1 COTTON YARN

302.10 General Items

American Society for Testing Materials. D 180-27; 1927. Tolerances and Test Methods for Cotton Yarns, Single and Plied. Tolerances on strength and size, definition of direction of twist, tolerance on twists per inch, test procedure for strength, correction for regain, determination of size and of ply twist. American Society for Testing Materials. D 203-

25: 1925. Tolerances and Test Methods for Electrical Cotton Yarns. Tolerances on strength, size, and twists per inch, definition of direction of twist, procedure for strength tests, correction for regain, determination of size and of twist of

plied yarns.

Associated Knit Underwear Mfrs. of America. Cone colors for cotton yarns, same as given in commercial standard CS33-32 published by Bu-

reau of Standards of U. S. Gov.

National Assn. of Hosiery and Underwear Manudatabasis. U. S. Department of Commerce. Commercial Standard CS11-29; 1929. Regain of Mercerized Cotton Yarns. Definitions of mois-ture content and of regain, standard established for regain.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS11-29; 1929. Regain of Mercerized Cotton Yarns. A commercial standard selected and accepted by industry defining the standard moisture content and regain to be used in price adjustment of buying and selling cotton yarns

adjustment of buying and selling cotton yarns and for other purposes.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C833-32; 1931. Knit Underwear (Exclusive of Rayon). A commercial standard selected and accepted by industry. Includes recommended practice on cone colors for single cotton yarns, the color of cone on which the yarn is wound designates the size of the yarn, 12 colors recommended. mended.

302.11 Sea Island Cotton Yarn

302.12 Three-ply Bleached Cotton Yarn

302.13 Asbestos Yarn

References .- Asbestos yarn. See 545.4.

302.2 COTTON THREAD

302.20 General Items

American Society for Testing Materials. D 204-27: 1927. Tolerances and Test Methods for Cotton Sewing Threads. Tolerances on strength and yards per pound, definition of direction of twist, test procedure for balance, running qualities, strength, yards per pound, length of package, and twist in ply.

302.21 Thread for Flag Making

302.22 Sewing Machine Thread

302.23 Silkateen or Mercerized Cotton Thread

302.24 Colored Thread, Polished

302.25 Thread for Canvas Work

302.3 COTTON TWINE

302.31 Cable Laid Twine

302.32 Cotton Seine Twine

U. S. Gov., Federal Specifications Board. T-T-881; 1930. Cotton Seine Twine. Requirements on general quality, freedom from sizing, loading, linters, etc., size of yarn, construction, yardage per pound, plies per yarn, and breaking strength for 6 sizes, methods of test.

References.—Tolerances and methods of test for cotton yarn. See also 302.10. Methods of testing textile materials. See 300.4.

302.34 White and Khaki Colored Twine

References .- Other white twines See 302.31-

302.35 Sailmakers' Twine

302.36 Wrapping Twine

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment. 1928. Twine for Tying Paper Wrapped Smoked Meats. Of No. 24 cotton, braid, stranding, size of yarn, weight and tensile strength requirements.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R124-31; 1931. Polished Cotton Twine. Simplified practice recommended and accepted by industry establishing a limited number of standard sizes, constructions, weights, and puts-ups, and colors, for plain and surface colored polished twine furnished in balls, on tubes, reels, or in

U. S. Gov., Federal Specifications Board. T-T-871; 1930. Cotton Wrapping Twine. Requirements on freedom from sizing, loading, etc., on construction, ply, weight, and breaking strength for 10 sizes, methods of test in accordance with F. S. B. spec. 345.

References.—Tolerances and methods of testing cotton yarn, See also 302.10. Methods of testing textile products. See 300.4. Jute wrapping twine. See 326.

302.39 Miscellaneous Cotton Twine

Institute of American Meat Packers, Packing-house Supplies, Packs, and Equipment; 1928, Boiled Ham Twine, for tying hams for boiling, Twine for Roping Boned Loins for Boiling, Twine for Stringing Sweet Pickled Hams and Picnics. Cotton twines for the boiling meats and hemp for the pickled meats, requirements on size, number of plies, weight, and tensile strength.

Institute of American Meat Packers, Packing-house Supplies, Packs, and Equipment; 1928. Twine for Tying Casings, Twine for Roping and Hanging Bologna, Twine for Roping Dry Saus-age. Requirements on size of cotton twine, number of plies, size of yarn, weight, and tensile strength.

References.—Tolerances and methods of testing cotton yarn. See also 302.10.

302.4 COTTON ROPES AND CORDS

302.40 General Items

American Society for Testing Materials. D 179-30; 1930. Tolerances and Test Methods for Tire Cord, Woven and on Cones. Standard tolerances on width, weight, count, thickness, tensile strength, elongation and twist, test procedure for measurement of above items.

U. S. Gov., Dept. of Commerce. Bureau of Standards. T300; 1925. Development of a Standard Bending Test for Rope Yarns. Describes testing machine and gives recommended procedure for making bending test in which the original twist in the yarn is retained during test.

302.41 Bell and Signal Cord

302.42 Chalk Line

302.43 Gill Line

302.44 Halvards

302.45 Lacing Cord

302.46 Sash Cord

U. S. Gov., Federal Specifications Board. 528; 1927. Cotton Braided Sash Cord. Requirements on general quality, finish, ply, and size of yarn,

construction of cord, diameter, weight, stretch, breaking strength, number of strands, number of ends per strand, for 5 sizes, absorption test. methods of testing, size of pulley applicable to each size.

References.—Tolerances and methods of testing yarns. See also 302.40, 302.10.

302.47 Wrapping Cords

References .- Wrapping twine, See 302.36.

302.48 Yoke Ropes

302.49 Miscellaneous Cotton Cords and Ropes

U. S. Gov., Federal Specifications Board. 447: 1926. Cotton Rope. For ¼, %, and ½-inch sizes, requirements on weight and breaking strength, methods of test.

References.—Tolerances and methods of testing yarns and cord. See also 302.40, 302.10, 303.8. The cord. See 303.8.

303. COTTON MECHANICAL FABRICS

303.0 GENERAL ITEMS

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Cotton Duck. List of rec-ommended standard widths and weights. American Society for Testing Materials. D 122-20, 1929. Telephone and Purchased St. 1929.

30; 1930. Tolerances and Test Methods for Tire Fabrics Other Than Cord Fabrics. Tolerances on width, weight, count, thickness, strength, twist, crimp, and bow; test procedure for meas-

urement of above items.

American Society for Testing Materials. D 181-25: 1925. Tolerances for Hose Ducks and Belt Ducks. Tolerances on width and weight of hose duck, rubber and balata belt ducks, and stitched canvas belting duck, tolerances on thread count and gage of hose and belting ducks, tolerances on crimp and tensile strength.

American Society for Testing Materials. D 230– 27; 1927. Tolerances for Numbered Cotton Duck. Tolerances on width, weight, threads per

inch, and strength.

U. S. Gov., Dept. of Commerce. Bureau of Standards R27; 1927. Cotton Duck. Simplified practice recommended and accepted by industry establishing a limited list of standard widths and weights of sail duck and of wide duck (26 and 120 inches).

303.1 COTTON DUCK

American Marine Standards Committee. E No. 19-1928. Cotton Duck for Insulation Coverings. Requirements as to length, weave, thread count and ply, width, weight, strength, and methods of testing and sampling.

U. S. Gov., Federal Specifications Board. 53; 1924. Numbered Cotton Duck. Requirements on general quality, weave, widths, weight, number of ply, thread count, and breaking strength test for hard texture and medium texture grades.

U. S. Gov., Federal Specifications Board 159; 1924. Light Weight Duck (Army Duck, Grey). Requirements on weave, weight, width, ply, thread count, and breaking strength, methods of test.

References.—Tolerances, methods of testing, definitions, standard sizes and weights. See also 303.0, 300.4, 300.6. Other cotton duck. See 303.2, to 303.9.

203 9 CLOTHING DUCK

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. Includes white union duck for hot weather uni-form, requirements on weave with linen filling, thread count, strength, and weight,

References.—See references under 303.1. Cotton uniforms. See 311.6.

303.3 DUCK FOR BAGS

American Society for Testing Materials. D 205-27; 1927. Osnaburg Cement Sacks. Requirements, tolerances, and method of test for width, weight, thread count, tensile strength of material, cut and seam construction of sacks.

References.—Tolerances, methods of testing, definitions, standard sizes and weights. See also 303.0, 300.4, 300.6. Stitches and stitching. See also 300.7.

303.4 LINING DUCK

303.5 TENT DUCK

U. S. Gov., Federal Specifications Board 160: 1924. Tent Duck. Of grade suitable for bleaching or dyeing or for use in grey state, requirements on weave, weight, width, ply, thread count, and breaking strength for 4 weights, methods of testing

References.—See references under 303.3. Other cotton duck. See 303.1.

203.6 AWNING CLOTH

U. S. Gov., Federal Specifications Board. CCC-C-406; 1931. Awning Cloth. Covers 3 types of woven stripe cloth, I type of painted stripe or tinted solid colors, and 1 type of piece dyed. Requirements on weave, weight, width, thread count, construction, and breaking strength.

References .- See references under 303.3.

303.7 DUCK FOR MATTRESS COVERS AND COTS References .- Duck for canvas cots. See 319.94.

303.8 TIRE CORD AND FABRICS

American Society for Testing Materials. D 179-30; 1930. Tolerances and Test Methods for Tire Cord, Woven and on Cones. Standard tolerances on width, weight, count, thickness, tensile strength, elongation and twist, test procedure for measurement of above items.

American Society for Testing Materials. D 298-29; 1929. 23/5/3 Carded American Tire Cord. For cord of 23/5/3 construction, requirements on grade of cotton, staple length, tensile strength of cord, elongation, size or yardage, thickness, number and direction of twists, and permissible variations, test methods according to A. S. T. M. method D 179.

American Society for Testing Materials. Tentative Specifications. D 316-31T; 1931. Chafer Tire Fabrics. For 8, 9, 12, and 14 oz. grades, requirements on construction, width, weight, count, thickness, tensile strength, ply twist, crimp,

methods of testing.

American Society for Testing Materials. Tentative
Specifications. D 333-31T; 1931. Enameling
Duck for the Tire Industry. Requirements on weight, thread count, thickness, yarn size and ply, and tensile strength for single filling and for double filling duck, methods of test.

References.—Tolerances, methods of testing, defini-tions, standard sizes and weights. See also 303.0, 300.4, 300.6. Pneumatic tires. See 206.

TEXTILES 304.71

303.9 MISCELLANEOUS MECHANICAL FABRICS

303.91 Mode Duck

303.92 White Duck

References .- White clothing duck. See 303.2.

303.93 Enameled Duck

303.94 Rubberized Duck

303.95 Waterproof Duck

References .- Waterproof fabric. See 392.4.

303.96 Packing

References.—Canvas and other fabric packing. See 707.25.

303.97 Hose and Belt Ducks

American Society for Testing Materials. D 181–25; 1925. Tolerances for Hose Ducks and Belt Ducks. Tolerances on width, weight, thread count and gage, crimp and tensile strengths.

References.—Tolerances, methods of test, definitions, standard sizes and weights. See also 303.0, 300.4, 300.6.

304. COTTON CLOTH, BLEACHED AND UNBLEACHED

304.1 COTTON CLOTH, PLAIN

Textile Converters' Assn. Definition of Fair Trade Practices in the Sale and Purchase of Cotton Gray Goods for the Converting Trade. Published in Converters' Yardstick, the official journal of the T. C. A., for June, 1931. Prepared and adopted jointly with Assn. of Cotton Textile Merchants of New York. Definitions of single cuts and double cuts, requirements on percentage of yardage to be delivered in double cuts for various gray cotton fabrics, use of oil remover, tolerances from specified amounts for yardage, width, warp and filling count, and weight.

References.—Cotton cloth for rubber and pyroxylin coating. See 306.24.

304.2 FLANNEL

U. S. Gov., Federal Specifications Board, 613; 1929. Canton Flannel. Requirements on general quality of cotton, finish, weave, width length of bolt or roll, weight, thread count, and breaking strength, testing according to methods of F. S. B. spec. 345 for textile materials.

References.—Cotton grades. See 300.0, 300.1. Tolerances, methods of testing, definitions. See also 300.4, 300.6.

304.3 CHEESECLOTH

Institute of American Meat Packers. Packinghouse Supplies, Packs and Equipment; 1928. Cheese Cloth and Muslin. For wiping smoked meats and desks, for lining meat boxes and tubs, for sacking meat cuts and smoked meats, requirements for thread count and weight for six grades.

U. S. Gov., Federal Specifications Board. 251a; 1925. Cheeseloth for Wiping Purposes. For bleached or unbleached cotton cheesecloth which may be seconds, requirements on cleanness,

width, and weight.

U. S. Gov., Federal Specifications Board. 252b; 1926. Unbleached Cheescloth. For first quality, clean, cotton cheescloth, requirements on length, width, thread count, weight for 2 grades, tolerances, methods of test as specified in F. S. B. spec. 345 for textile materials. U. S. Gov., Federal Specifications Board. 253b;

U. S. Gov., Federal Specifications Board. 253b; 1928. Bleached Cheesecloth. For high thread count or low thread count types, requirements on thread count, weight, length, width, methods of test as specified in F. S. B. spec. 345 for textile materials.

U. S. Gov., Federal Specifications Board. 344; 1925. Chesecloth Remnants for Wiping Purposes. For bleached or unbleached cheesecloth, requirements on weight, minimum width and length.

References.—Tolerances, methods of testing definitions. See 300.4, 300.6.

304.4 DRILL

Abrasive Paper and Cloth Manufacturers Exchange. Abrasive Coated Products; 1929. Includes drill cloth for backing for abrasive, requirements on weight, tensile strength and method of test.

American Marine Standards Committee. O No. 27– 1930. Uniforms for Merchant Marine Officers, Includes white cotton drill for hot weather uniforms, requirements on weave, thread court, ten-

sile strength, and weight of material.

American Society for Testing Materials. Tentative Specifications. D 334-31T; 1931. Cotton Goods for Rubber and Pyroxylin Coating. Permissible amount and types of defects in the cotton goods, requirements on selvage, permissible content of sizing and natural oils for sheetings, drills, sateens, and broken twills, permissible amount of injurious chemicals, tolerances on width, thread count, and weight, required tensile strength, test methods.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS2-21; 1931. Cotton Goods for Rubber and Pyroxylin Coating. A commercial standard selected and accepted by industry covering requirements on tensile strengths for various constructions of sheeting, drill, twill, broken twill, and sateen, length of cuts, permissible and non-permissible defects, permissible sizing and injurious chemicals, methods of test.

U. S. Gov., Federal Specifications Board. 557; 1928. Drill (Unbleached). For 4 types of first quality, requirements on finish, weave, width, length, weight, thread count, breaking strength, methods of test according to F. S. B. spec. 345

for textile materials.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6. Gray goods for converting trade. See 304.1.

304.5 JEAN

Abrasive Paper and Cloth Manufacturers Exchange, Abrasive Coated Products; 1929. Include jean cloth for backing, requirements on weight and tensile strength and method of test.

U. S. Gov., Federal Specifications Board, 614; 1929. Bleached Jeans. Requirements on general quality of cotton, weave, width, length of roll, weight, thread count, breaking strength, testing according to methods of F. S. B. spec, 345 on textile materials.

References.—Tolerances, methods of testing, definitions. See also 300.4, 300.6. Gray goods for converting trade. See 304.1.

304.6 MUSLIN

Institute of American Meat Packers. Packinghouse Supplies. Packs and Equipment. 1928. Cheese Cloth and Muslin. For wiping smoked meats and desks, for lining meat boxes and tubs, for sacking meat cuts and smoked meats, requirements for thread count and weight for six grades.

References.—Gray goods for converting trade. See 304.1.

304.7 SHEETINGS

304.71 Sheetings, Bleached and Unbleached

American Society for Testing Materials. Tentative Specifications. D 334 31T; 1931. Cotton Goods for Rubber and Pyroxylin Coating. Permissible amount and types of defects in the cotton goods, requirements on selvage, permissible content of sizing and natural oils for sheetings, drills, sateens, and broken twills, permissible amount of injurious chemicals, tolerances on width, thread count, and weight, required tensile strength, test methods.

U. S. Goy., Dept. of Commerce. Bureau of Standards. CS32-31; 1931. Cotton Goods for Rubber and Pyroxylin Coating. A commercial standard selected and accepted by industry covering requirements on tensile strengths for various constructions of sheeting, drill, twill, broken twill, and sateen, length of cuts, permissible and non-permissible defects, permissible sizing and inturious chemicals methods of the sizing and inturious chemicals are sized to the sizing and the sizing and the sizing and sizing and sized the sizing and sizing and sized the sizing and sized the sized that the

jurious chemicals, methods of test.
U. S. Gov., Federal Specifications Board. CCC-S-271; 1931. Cotton Sheeting, Bleached, Wide. For plain weave commercial "firsts," requirements on length of cut or rolls, thread count, weight, breaking strength, and standard widths, methods of test as specified in F. S. B. No. 345

for textile materials.

U. S. Gov., Federal Specifications Board. CCC-8-281; 1931. Cotton Sheeting, Unbicached, Narrow. For plain weave sheeting, requirements on length of roll, width of cloth, weight, thread count, and breaking strength for 6 types of construction, methods of test in accordance with F. S. B. spec. 345 for textile materials.

U. S. Gov., Federal Specifications Board. CCC-S-291; 1931. Cotton Sheeting, Unbleached, Wide. For commercial "firsts," requirements on weave, length of bolt or roll, thread count, widths, weight, breaking strength, testing in conformity with F. S. B. spec. 345 for textile materials.

References.—Tolerances, methods of testing, definitions. See also 300.4, 300.6. Sheets, brown sheeting. See 315.2, 304.76. Rubber sheeting. See 204.33. Gray goods for converting trade. See 304.1.

304.72 Cotton Hull Sheeting

304.73 Pontoon Sheeting

304.74 Cotton Sheeting for Mounting

304.75 Gray Cotton Sheeting

304.76 Brown Sheeting

U. S. Gov., Federal Specifications Board. 302; 1925. Brown Wide Cotton Sheeting. Requirements on finish, weave, thread count, length of cut or roll, weight, and breaking strength for 9 widths of 42 to 99 inches, methods of sampling and test.

References.—Tolerances, methods of testing, definitions. See also 300.4, 300.6. Unbleached cotton sheeting. See 304.71.

304.8 TICKING

U. S. Gov., Federal Specifications Board. CCC-T-351; 1931. Mattress and Pillow Ticking. On type for mattresses and one type for pillows, requirements on general quality of cotton, width of white and blue stripes, weave, length of bott or roll, fastness of dye, width, weight, thread count and breaking strength, testing according to methods of F. S. B. spec. 345 for textile materials.

References.—Tolerances, methods of testing, definitions. See also 300.4, 300.6.

304.9 COTTON TOWELING

304.91 Cotton Crash Toweling

U. S. Gov., Federal Specifications Board. 633; 1929. Crash Towels, Mixed Linen and Cotton. For crash toweling and for crash towels, of cotton warp and linen filling, requirements on finish, weave, width, weight, thread count, breaking strength, length, testing in conformity with methods of F. S. B. spec. 345 on textile materials.

References.—Towels. See also 319.3. Tolerances, methods of testing, definitions. See also 300.4, 300.6.

304.92 Cotton Huck Toweling

U. S. Gov., Federal Specifications Board. DDD 7–531; 1931. Office Huck Towels with Woven Name. For grade known as "firsts," requirements on weave, width and length, weight, threads per inch, permissible sizing, permissible seconds in grade, F. S. B. spec. 345 for textile materials to be compiled with also.

References .- See references under 304.91.

306.3 SUITINGS, COTTON

306.31 Denim and Cottonade

- U. S. Gov., Federal Specifications Board. CCC-D-161; 1931. Brown Denim, Shrunk. For type commercially known as 2.20 brown denim with white back, requirements on color, shrinkage test, weave, width, length of piece, color fastness, thread count, weight, breaking strength, methods of test specified in F. S. B. No. 345 for textile materials.
- U. S. Gov., Federal Specifications Board. CCC-D-171; 1931. Brown Denim, Unshrunk. For type known commercially as 2.20 brown denim, white back, requirements on color, shrinkage test, weave, width, length of piece, color fastness, thread count, weight, and breaking strength, methods of test specified in F. S. B. spec. No. 245.
- U. S. Gov., Federal Specifications Board. CCC-D-151; 1931. Blue Denim. Covers shrunk denim. For whiteback, mock twist, pin stripe, hickory stripe, express stripe, and white stripe classes and 2.40, 2.20, 2.00, and 1.80 commercial types, requirements on colors of warp and filling threads for various classes, permissible shrinkage, weave, length, width, color fastness, thread count, weight, and breaking strength, methods of test as specified in F. S. B. spec. 345 for textile materials.
- U. S. Gov., Federal Specifications Board. CCC-D-156; 1931. Indigo Blue Denim, Unshrunk. For whiteback, mock twist, pin stripe, hickory stripe, express stripe, and white stripe types, requirements on weave, length of cuts or rolls, width, weight, breaking strength and tolerances, for 4 weight grades, shrinkage test, methods of test specified in F. S. B. No. 345 for textile materials.

306.33 Italian Cloth

306.34 Khaki Cloth, Cotton

American Marine Standards Committee. O No. 27–1930. Uniforms for Merchant Marine Officers. Includes cotton khaki cloth for hot weather uniform, requirements on weave, finish, color, weight, and tensile strength.

References.—Tolerances, methods of testing, definitions. See also 300.4, 300.6. Standard colors. See 306.0.

306.35 Print Cloth

References.—Gray goods for converting trade. See 304.1.

306.36 Cotton Twill

Abrasive Paper and Cloth Manufacturers Exchange. Abrasive Coated Products; 1929. Includes twill cloth for backing for abrasive, requirements on weight and tensile strength and method of test.

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. Includes white cotton cloth of twill weave for hot weather uniforms, requirements on weave, thread count, tensile strength, and weight

of material.

American Society for Testing Materials. Tentative Specifications. D334-31 T; 1931. Cotton Goods for Rubber and Pyroxylin Coating. Permissible amount and types of defects in the cotton goods, requirements on selvage, permissible content of sizing and natural oils for sheetings, drills, sateens, and broken twills, permissible amount of injurious chemicals, tolerances on width, thread count, and weight, required tensile strength, test methods.

U. S. Gow., Dept. of Commerce. Bureau of Standards. CS32-31; 1931. Cotton Goods for Rubber and Pyroxylln Coating. A commercial standard selected and accepted by industry covering requirements on tensile strengths for various constructions of sheeting, drill, twill, broken twill, and sateen, length of cuts, permissible and nonpermissible defects, permissible sizing and

injurious chemicals, methods of test.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6. Gray goods for converting trade. See 304.1.

306.4 BUNTING

306.41 Cotton Bunting

U. S. Gov., Federal Specifications Board. 611; 1929. Cotton Bunting. Requirements on general quality of cotton, weave, width, length of bolt or roll, weight, threads per inch, ply, breaking strength, fastness of dye, color according to standard sample, tests according to methods of F. S. B. spec. 345 for textile materials.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6. Standard colors. See 306.0.

306.42 Wool Bunting

U. S. Gov., Federal Specifications Board. CCC-B-801; 1931. Wool Bunting. Requirements on weave, width and length of both or roll, weight, thread count, ply of warp and filling, breaking strength, evenness and fastness of color, with methods of test according to F. S. B. spec. 345 for textile materials.

References.—Tolerances, methods of testing, definitions, See 360, 300.4, 300.6. Standard colors. See 306.0.

306.43 Cotton Flags

American Railway Assn. Operating Div. Circular 2087; 1920. Bunting Signaling Flags. Dimensions of the one standard size adopted.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1930. Report of committee recommending one standard size of signal flag to be carried in stock. 306.44 Wool Flags

306.45 Silk Flags

306.46 Flag Kits

307. YARN-DYED OR STOCK-DYED COTTON CLOTH

309. COTTON KNIT GOODS

309.0 GENERAL ITEMS

American Society for Testing Materials. Tentative Specifications. D 231–28T; 1928. Tolerances and Test Methods for Knit Goods. Tolerances for width, weight, and count, apparatus and method of test for moisture regain, determination of grease, width, weight, wales and courses, bursting strength, percentage of cotton and wool according to A. S. T. M. method D 276, thickness according to D 39.

Associated Knit Underwear Mfrs. of America.

Proposed Standard Method of Testing Knitted Fabrics; 1924. Requirements on atmospheric conditions, dimensions, and direction of cut of test specimens, type of machine and test procedure for tensile tests, size and shape of clamping jaws.

309.1 GLOVES

References .- Rubber gloves. See 203.2, 204.52.

309.2 HOSIERY

National Assn. of Hosiery and Underwear Manufacturers, U. S. Dept. of Commerce. Bureau of Standards paper T324; 1926. Standard Hosiery Lengths. Standard lengths for ladies', men's, children's and misses' ribbed, children's sport, infants' ribbed hose and infants' and children's socks, standard method of measurement.

Textile Color Card Assn. of the U. S. (Inc.) and National Assn. of Hosiery and Underwear Mfrs. Standard Hosiery Color Card of America; 1927. Card containing 88 hosiery color samples, stand-ardized and issued by T. C. C. A., each color hav-ing a name and number. Assn. also issues seasonal color cards showing standard colors fore-

cast for the season.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C149; 1924. A Standardized Method of Measuring the Size of Hosiery. Adopted by manufacturers and the Federal Spec. Board., Nat'l Assn. of Hosiery and Underwear Mfrs., and Am. Home Economics Assn. Defines and illustrates the standard method of measuring the size of circular knit hose and defines sizes.

U. S. Gov., Federal Specifications Board. 92; 1923. Measuring Sizes of Hosiery. Standard method of measurement of length of foot of hosiery.

References.—Tolerances, methods of testing, definitions. See 303.0, 300.4, 300.6. Hosiery boxes. See 953.2.

309.3 JERSEY COTTON CLOTH

309.4 KNIT UNDERWEAR

Associated Knit Underwear Mfrs. of America. For cotton underwear the standards given in com-mercial standard CS33-32, published by Bureau

of Standards, have been adopted.

of Standards, have been adopted.
U.S. Gov., Dept. of Commerce. Bureau of Standards. CS33-32; 1931. Knit Underwear (Exclusive of Rayon). A commercial standard selected and accepted by industry establishing standard measurements and standard methods of measurements. ing knit underwear, flat knit and ribbed types. Includes cotton union suits for men, boys, children, and women, flat fleece union suits for men and boys, athletic union suits for men and boys, cotton shirts for men and boys, polo shirts for men, athletic shirts for men and boys, infants shirts, cotton drawers for men, boys, and women, athletic shorts for men, cotton vests for children and women, cotton pants for children, sleeping garments for children, infants bands, recommended practice on standard symbols for different models.

315.4 COUNTERPANES, BEDSPREADS

American Marine Standards Committee. O No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes bed spreads, standard sizes and kinds.

U. S. Gov., Federal Specifications Board, 620; 1929. Crinkle Bedspreads. For cotton bedspreads of commercial grade "firsts," requirements on general quality, finish, weave, dimensions of 8 sizes, weight, thread count, breaking strength, testing in accordance with methods of F. S. B. spec. 345 for textile materials.

References.—Standard sizes. See also 315.0. Tolerances, methods of testing, definitions. See 300.4, 300.6.

315.5 BLANKETS

References.—Standard sizes and grades of blankets.

315.6 SPRING COVERS

American Marine Standards Committee. O No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes canvas spring covers, standard sizes.

316. TABLECLOTHS, NAPKINS, AND SILENCE CLOTHS

316.1 TABLECLOTHS

American Marine Standards Committee. O No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes tablecloths, cotton and linen, standard sizes.

and then, standard uses.

U.S. Gov., Federal Specifications Board. 500; 1927.

Cotton Tablecloths. For finished tablecloths and tablecloths in bolt form, requirements on general quality of cotton, weave, width, weight, thread count, strength, finish, length, methods of test in accordance with F. S. B. spec. 345 for fextile materials.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6.

316.2 NAPKINS

American Marine Standards Committee. O. No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes napkins, linen and cotton, standard sizes.

316.3 SILENCE CLOTHS

316.4 TRAY CLOTHS

American Marine Standards Committee. O No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes linen tray cloths, standard sizes.

317. NETS AND NETTING

317.1 BOBBINET

U. S. Gov., Federal Specifications Board. 540a; 1929. Mosquito Netting (Unbleached Bobblnet). Requirements on weave, width, lengths of pieces, weight, meshes per inch, breaking strength, using methods of test of F. S. B. spec. 345 for textile materials.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6.

JUTE AND JUTE MANUFACTURES

321. JUTE AND JUTE BUTTS

321.1 JUTE PACKING

322. FABRICS OF JUTE

322.1 BURLAP

American Society for Testing Materials. D 174-25; 1925. Burlap Saturated With Bituminous Substances for Use in Water-proofing. Jute fabric saturated with either asphalt or coal-tar | pitch, requirements on width, weight, strength, pliability, loss on heating, weight on saturant, also weight, ash, and composition of desaturated fabric, using A. S. T. M. standard test methods

U. S. Gov., Federal Specifications Board. 499; 1927. Jute Burlap. For grade known commercially as "firsts," requirements on weight and thread count, width, also in accordance with F. S. B. spec. 345 for textile materials.

References.—Burlap for bags. See also 322.2. Tolerances, methods of testing, definitions. See 300.4, 300.6.

322 2 JUTE BAGGING

American Society for Testing Materials. Tenta-tive Specifications. D 275-27 T; 1927 Cuban (Jute) Raw Sugar Bags. For gunny sacking, requirements for weave, thread count, width, weight, tensile strength, and sizing; for bags, requirements for weight of standard bags, methods of measurement of width and length, test, procedure according to A. S. T. M. method D 39.

References.—Other burlap. See 322.1. Tolerances, methods of testing, definitions. See 300.4, 300.6. Cloth bags. See 957.1. Burlap waste classification. See 390.5.

322.3 BALING MATERIAL, JUTE

References .- Burlap, jute hagging. See 322.1, 322.2.

325. JUTE CORDAGE

325.1 JUTE CORD

References .- Standard sizes and varieties. See 326.

325.2 JUTE ROPE

References .- Standard sizes and varieties. See 326.

326. JUTE TWINE

U. S. Gov., Dept. of Commerce. Bureau of Standards. R 110-29; 1929. Soft Fiber (Jute) Twine. Simplified practice recommended and accepted by industry for limitation of stock varieties, covers standard stock varieties with grades. weights, average tensile strengths, and standard put-ups for fine finished twine, wrapping, sail, sewing, millers, and baling twine, heavy finished (India) twinc, compress and ham twine, heavy finished ixtle twine, tube rope, paper makers' bale rope, pipecord, hide rope, box twine, jute rope, fleece twine.

U.S. Gov., Federal Specifications Board. T-T-911; 1930. Jute Twine. For 4 types of wrapping twine, fine India twine and heavy India twine, finished, and unfinished wrapping twine and tube rope, requirements on length per pound and break-ing strength for 5 and 6 sizes for each type, methods of sampling and testing.

References .- Methods of testing. See 300.4.

329 1 PADDING

329.2 HORSE BLANKETS

329.3 JUTE WEBBING

329.4 JUTE FELT.

Refeences .- Jute and hair felt. See 365.98.

330-339

FLAX, HEMP, AND RAMIE

330. GENERAL ITEMS

The Government of the Philippine Islands, Dept. of Agriculture and Natural Resources, Fiber Standardization Board. Administrative Order No. 5; 1927. Regulations governing the standardization and description of grades of Philippine fibers. Definitions of standard grades as regards tensile strength, cleaning, color, and length of fiber, for abaca (Manila hemp) specially prepared for tagal braid, for abaca prepared for cordage, for decorticated abaca, for canton, for pacol, for retted maguey and sisal, and for decorticated maguey and sisal.

331. CORDAGE, TWINE AND THREADS

331.1 CORDAGE, FLAX, HEMP, AND RAMIE

331.10 General Items

U. S. Gov., Dept. of Commerce. Bureau of Standards. T300; 1925. Development of a Standard Bending Test for Rope Yarns. Describes testing machine and gives recommended procedure for making bending test in which the original twist in the yarn is retained during test.

331.11 Fishing Lines

331.12 Houselines, Hemp

References .- Houseline and Navy houseline. See 331 16

331.13 Cordage, Hemp and Ramie

References .- Hemp cordage. See 331.16.

331.14 Linen Blocking Cord

331.15 Ratline, Hemp

References .- Tarred ratline stuff. See 331.16.

331.16 Hemp Rope and Tarred Hemp Rope

American Petroleum Institute. Standard No. 9-B; 1930. Specifications for Manila Cordage. Tentative. For manila or abaca fiber rope, construction, sizes, weight, lubrication, length of drilling cable, bull and calf rope, general purpose rope, and strength of bull and calf rope and of general purpose rope, methods of test, recommended practice to obtain maximum life, standard form of grooves in sheaves.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1930. Report of committee recommending list of standard sizes to be carried in

stock of manila rope.

U. S. Gov., Federal Specifications Board. 61b; 1929. Manila Rope. To be of manila or abaca fiber inspected by Government of Philippine Islands, permissible grades and mixtures of fiber, requirements on construction, dimensions, weight, breaking strength, lubricant content, methods of sampling and test.

U. S. Gov., Federal Specifications Board, T-C-621; 1930. Tarred Hemp Cordage. Requirements on percentage of tar, construction, weight, and breaking strength for 6 sizes of ratline stuff, 4 sizes of seizing stuff, 3 weights of marline, 2 sizes of spun yarn, 1 size of houseline, Navy houseline, roundline, and hambroline, methods of testing.

References.—Grades of fiber. See 330. Methods of testing, definitions. See also 331.10, 300.6. Sisal rope. See 341.2.

331.2 TWINE (FLAX, HEMP, RAMIE)

331.20 General Items

339.7

U. S. Gov., Dept. of Commerce. Bureau of Standards. R92-28; 1928. Hard fiber Twines (Ply and Yarn Goods). Simplified practice recommended and accepted by industry establishing a limited list of standard kinds and put-ups for hard fiber twines, covering quality, ply, weight, and tensile strength for laid manila, laid and twisted java, laid and twisted new zealand, and twisted sisal.

331.21 Flax Twine

- American Railway Assn., Telegraph and Telephone Section. 2-G-18; 1925. Twelve Ply Cable Sewing Twine. Waxed twine of flax fiber for use in forming wires and cables, size of flax fiber strands, composition of wax, construction of twine, test requirements for yards per pound, tensile strength, solubility of wax, and construction.
- U. S. Gov., Federal Specifications Board. T-L-411; 1930. Shot Lines for Line Throwing Guns. For 3 sizes of 3-strand flax twine line, requirements on lay, diameter, circumference, length, weight, and breaking strength, methods of sampling and test.

References.—Standard kinds and put-ups. See 331.20. Methods of testing, definitions. See also 331.10, 300.6. Other shot lines for line carrying guns. See 619.1.

331.22 Hemp Twine

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Twine for Roping Dry Sausage. Twine for Roping Genoa and Salami Sausage. Requirements on size of hemp, number of ply, weight, and tensile strength.

Institute of American Meat Packers, Packinghouse Supplies, Packs, and Equipment; 1928. Twine for Stringing Sweet Pickled Hams and Picnics. 3 ply, No. 6 india hemp, weight and tensile

strength requirements.

U. S. Gov., Federal Specifications Board. T-T-901; 1931. Hemp Twine. For polished and commercially stainless fine hemp twine, 6 sizes, requirements on number of plies, weight, and average breaking strength, methods of test including test for strain.

References.—Standard kinds and put-ups. See 331.20. Methods of testing, definitions. See 331.10, 300.6. Grades of fiber. See 330.

331.24 Marlin Twine

331.25 Impregnated Twine

331,3 THREAD OF FLAX, HEMP, RAMIE

U. S. Gov., Federal Specifications Board. V-T-291; 1930. Linen Thread. For 3 types, three-cord (stitching), lock-stitch twist, and hand shoe thread, requirements on freedom from sizing, loading, adulterants, etc., on length per pound and average breaking strength for several sizes, twist per inch for lock-stitch-twist thread, in conformity with F. S. B. spec. 345 for textile materials.

References.-Methods of testing textile materials. See 300.4.

331.4 OAKUM

332. CABLES (HEMP, FLAX, RAMIE)

American Petroleum Institute. Standard No. 9-B: 1930. Manila Cordage. Tentative. Includes

drilling cable and rope, requirements on construction, sizes, weight, and length, lubrication, strengths of bull and calf rope, methods of test.

333. FABRICS OF FLAX

333.1 DOWLAS LINEN

333.2 HOLLANDS, BROWN

349.2 MATTRESS, KAPOK

349.3 PILLOWS, KAPCK

349.4 KAPOK PADS

349.5 KAPOK LIFE COATS, JACKETS, AND BUOYS

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Life Preservers of Kapok. Mandatory requirements on weight of kapok provided, prolonged buoyancy test, weight and buoyancy test of kapok collar.

360-369

WOOL AND HAIR AND MANUFACTURES

360. GRADES, DEFINITION, AND TESTS OF WOOL

American Society for Testing Materials. Tentative Test Methods. D 232-257; 1925. Methods of Testing Grease Wool and Allied Fibers for Secured Content. Procedure for weighing sample, scouring, drying, and computation of yield of scoured wool, for wool in the fleece, necks, pieces, bellies, pulled wool, and colonial scoured.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 109; 1926. Official Standards of the U. S. for Grades of Wool and Wool Top. Permissive standards, definitions of 12 grades of wool and wool tops as regards dlameter of fiber compared to standard samples in custody of Dept. of Agriculture.

361. WOOL UNMANUFACTURED

361.1 WOOL

National Assn. of Wool Manufacturers. Definitions of Wool; 1924. General definitions for clean wool, shrinkage, clean content of wool, and normal condition of wool as to moisture.

References.—Standard grades, methods of testing wool. See 360.

362. HAIR, UNMANUFACTURED

362.1 CURLED HORSEHAIR

U. S. Gov., Federal Specifications Board. C-H-111; 1930. Horse Hair, Curled. For horsemane hair and for horsetail hair, requirements on percentage of natural black hair, cleanliness, preparation, permissible amounts of short hair, method of sampling and testing.

362.2 CURLED MATTRESS HAIR

References .- Curled horse hair. See 362.1.

362.3 UPHOLSTERY HAIR

365.97 Mohair Serge

365.98 Felt

American Marine Standards Committee. E No. 18-1928. Hair Felt for Insulation. Specification for material, weight and size of hair felt. Substantially identical with F. S. B. specification for the same material.

American Railway Engineering Assn.; 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes rag felt, weight, ash, and fiber content of felt, weight, strength, pliability, dimensions of felt saturated with asphalt or pitch. Conforms closely to A. S. T. M. serial D 172-23T.

American Society for Testing Materials. D 146-

27; 1927. Methods of Testing Felted and Woven Fabrics Saturated with Bituminous Substances for Use in Waterproofing and Roofing. Sampling, inspection for weight and dimensions, test procedure for moisture, strength, pliability, absorption, voltality of asphalt, extraction and distilla-tion of coal-tar products, desaturation of fabric, weight and ash determinations.

American Society for Testing Materials. D 224-27: 1927. Asphalt Roll-Roofing Surfaced with Powdered Talc. For medium and heavy weight roofing felt saturated and coated on both sides with asphalt, general quality of felt, test requirements for degree of saturation, requirements on width, weight, pliability, voltatility, percentage of saturant, ash, weight of mineral surfacing, using A. S. T. M. methods D 228.

American Society for Testing Materials. D 228-31T; 1931. Tentative Methods of Testing Asphalt Roll Roofing Surfaced with Fine Talc, Granular Talc, or Mineral Granules; Also Asphalt Shingles Surfaced with Mineral Granules. Method of sampling, determination of size and weight, pliability of roofing, loss on heating, percentage of saturant, weight of felt, ash, and mineral surfacing.

American Society for Testing Materials, D 249-27; 1927. Heavy Weight Slate Surfaced Asphalt Roll-Roofing and Heavy Weight Slate Surfaced Asphalt Shingles. Roofing felt saturated and coated on both sides with asphalt, surfaced on weather side with granulated slate, general quality of felt and test for degree of saturation, requirements on width, weight, pliability, volatility, percentage saturant, ash, tested according to A. S. T. M. method D 228.

American Society for Testing Materials. Tentative | Methods. D 272-29T; 1929. Methods of Analysis of Roofing Felt for Fiber Composition. Sampling procedure, requirements for microscope, graticule, dropper, preparation of Herzberg stain, preparation of sample and test procedure using fiber count method.

Asphalt Shingle and Roofing Institute. Dry Felt Tests; 1921. Sampling, test procedure for measuring weight, thickness, moisture content, tensile strength, pliability, ash, fibers present by means of microscope and stains, counting of

fibers.

Asphalt Shingle and Roofing Institute. Recommended Tests. Test to Ascertain the Thoroughness with Which Felt Will Saturate; 1922. Test procedure for drying samples and saturating with kerosene.

Asphalt Shingle and Roofing Institute. Recommended Test. Test to Determine the Speed with Which Felt Will Saturate; 1923. Test procedure for measuring the speed of absorption of zylol

by capillarity.

National Hair and Jute Felt Mfrs. Assn. Standard Weights and Loom Run Widths; 1929. For jute and hair felts made by the needle loom punching process, 13 standard ounce weights per square yard and 7 standard rough widths have been adopted for roll goods.

Society of Automotive Engineers 1931 Handbook. Felt; 1929. For 13 grades, requirements on percentages of wool, cotton, and ash, on color, thickness tolerances, and weight, permissible alcohol,

ether, and water extracts for the better grades. Underwriters Laboratories. Class C Asphalt Rag-Felt Sheet Roofing and Shingles; 1929. For roofing felt of vegetable and animal fibers, requirements on general quality, permissible ash, and weight for 2 weight grades.
U. S. Gov., Federal Specifications Board. 158;

1924. Hair Felt. For cattle hair felt suitable for pipe covering and general low temperature insulating purposes, requirements on general quality, width, weight and area per roll for thicknesses up to 2 inches.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Pipe Covering. Wool felt sectional covering, minimum thickness, lining and jacket materials, dimensions, finish, and application of bands, types of plastic materials and their applications to valves and fittings, for hot and cold water supplies.

368.7 WOOLEN DRAWERS AND UNDERSHIRTS

References .- Knit wool underwear. See 367.2.

368.8 SUITS AND UNIFORMS OF WOOL

368.81 Woolen Suits

368 82 Woolen Uniforms

American Marine Standards Committee. O No. 27–1030. Uniforms for Merchant Marine Officers. Blue uniform. For uniform of either of 2 weights of blue serse, requirements on grade of wool used, thread count, tensile strength, weight, kind of dye, shrinking of material, materials and construction of buttons, lace, rank insignia, construction and cut of trousers and double breasted roll lapel coat, number and sizes of pockets, etc.

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. Undress blouse. For blouse of broadcloth finish blue cloth or of blue serge, requirements on grade of wool used, thread count, tensile strength, weight, kind of dye, shrinking of material, number and construction of buttons, construction of single breasted coat, number and size of pockets, etc.

References.—Wool grades. See 300.1. Methods of testing. See 365.0, 300.4. Cotton uniforms. See 311.6.

368.9 MISCELLANEOUS WOOL WEARING AP-PAREL

References .- Caps and hats. See 395.

369. MISCELLANEOUS MANUFACTURES OF WOOL AND HAIR

369.1 BRAIDS AND CORDS

References .- Service stripes. See 369.6.

369.2 BLANKETS

369.21 Bed Blankets

American Marine Standards Committee. O No. 7–1926. Kinds and Sizes of Mattresses and Pilows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes woolen blankets and cotton blankets. standard sizes and grades

U. S. Gov., Dept. of Commerce. Bureau of Standards. R11; 1924. Bed Blankets. Simplified practice recommended and accepted by industry establishing a limited list of standard widths and lengths.

369.22 Horse Blankets

369.23 Printer's Blankets

369.3 MATTRESSES, HAIR

References .- Curled horsehair. See 362.1.

369.4 HAIR PILLOWS

369.5 FLAGS AND FLAG KITS

References .- Wool bunting, flags. See 306.42, 306.43.

369.6 CHEVRONS AND SERVICE STRIPES

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. Rank and corps insignia. Standard number and widths of stripes for various service ranks, size and standard designs of insignia for various services, construction and gold or silver content of gold and silver lace, general quality of silk braid, etc.

369.7 STEAMER RUGS

American Marine Standards Committee O No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. For woolen steamer rugs for cabin service, one standard kind and size.

369.9 MANUFACTURES OF HAIR AND WOOL NOT ELSEWHERE CLASSIFIED

References.—Hair belting, See 314.1. Wool rags, See 390.5. Hair floor sweeps, See 981.4. Brushes of bristle and hair. See 982.

370-379

SILK AND MANUFACTURES THEREOF

370. GENERAL ITEMS

American Society for Testing Materials. Tentative Specifications. D 231–287; 1928. Tolerances and Test Methods for Knit Goods. Tolerances for width, weight, and count, apparatus and method of test for moisture regain, determination of grease, width, weight, wales and courses, bursting strength, percentage of cotton and wool according to A. S. T. M. method D 276, thickness according to A. S. T. M. D 39.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 2. To Determine Amount of Wool and Silk in Fabric. Test procedure using method of weighing, dissolving the silk in hydrochloric acid, washing and reweighing.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 6. To Determine the Amount of Natural Silk and Rayon in Fabric. Test procedure using method of weighing before and after dissolving out the natural silk with copper sulphate.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 7. To Distinguish Domesticated Silkworm Silk from Tussah (Wild Silk). Test procedure using the method of dissolving out the domesticated silkworm silk with hydrochloric acid, weighing sample before and after.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 8. To Determine if Silk has Been Weighted with Tin Salts. Test procedure using color test for distinguishing type of material after treating with logwood-acetic acid solution.

Textile Color Card Assn. of U. S. (Inc.). Standard Color Card. 8th ed.; 1928. Card containing 192 textile color samples standardized and issued by this assn., each color having a name and number. The assn. also issues spring and fall sea-

sonal color cards showing standardized colors forecast for the season.

371. SILK UNMANUFACTURED

Silk Assn. of America (Inc.). Raw Silk Rules; 1924. Rules governing transactions in raw silk, including required weight of bale and permissible variation, permissible boil-off percentages, permissible variation from standard grade sizes.

Silk Assn. of America (Inc.). Second Report of the Raw Silk Classification Committee; 1926. Includes definitions of raw silk, standard condition, and silk defects, includes standard test procedure for sizing test, serimeter and serigraph tests, evenness and cleanness test, and defects test, all for purposes of classification, also cohesion and winding tests.

Silk Assn. of America (Inc.). A Raw Silk Classifi-cation with Methods of Testing; 1929. Definitions of 9 quality grades of Japanese raw silk, Japanese white and yellow, any size, 10 bale lots, as determined by cleanness, evenness, neatness, size deviation, size variation, strength, elongation, and winding test, 6 of above grades identical with classes of National Raw Silk Exchange for 13/15 Japan raw silk. Publication includes amendments to some of the methods of test given in "Second report of the Raw Silk Classification Committee; 1926."

372. SILK SKEINS, COPS, OR WARPS 372.0 GENERAL ITEMS

Silk Assn. of America, Inc. Thrown Silk Rules; 1929. Rules governing transactions in thrown silk, includes basis of weight determination, permitted boil-off percentage, required twist and permissible variation therefrom, required length of skeins and permissible variations, for organzine, tram, and crêpe.

372.1 BRAIDING SILK

References,—Thrown silk rules, See 372.0, Tests for silk fiber and weighting of silk. See 370. Standard colors. See 370. Raw silk classification. See 371. Textile testing methods. See 300.4.

372.2 EMBROIDERY SILK

U. S. Gov., Federal Specifications Board. V-T-301; 1931. Silk Thread. Includes embroidery silk, white, black, and colored. Requirements on freedom from loading, number of plies, weight and breaking strength for 3 sizes, fastness to light and laundering tests, in conformity with F. S. B. spec. 345 for testing textile materials.

References .- See references under 372.1.

372.3 SEWING SILK

. S. Gov., Federal Specifications Board. V-T-301; 1931. Silk Thread. Includes sewing silk suitable for hand sewing, white, black, and colored. Requirements on construction, weights and breaking strengths for 4 sizes, tests for fastness to light and laundering, methods of test in accordance with F. S. B. spec. 345 for textile materials.

References.-See references under 372.1.

372.4 SPUN SILK

References .- See references under 372.1.

872 5 TW/TST

U. S. Gov., Federal Specifications Board. V-T-301; 1931. Silk Thread. Includes machine twist and tailor's buttonhole twist, white, black, and colored. Requirements on construction, freedom | 375.4 SILK CLOTHING FOR AVIATORS

from loading, weights and breaking strengths for 9 sizes of machine twist and 5 sizes of button-hole twist, tests for fastness to light and laundering, methods of test in accordance with F. S. B. spec. 345 for textile materials.

References.-See references under 372.1.

379.4 GRADING SCREENS OF SILK CLOTH

Abrasive Paper and Cloth Manufacturers Ex-change. Abrasive Coated Products; 1929. Includes silk screens used in grading abrasive sands, mesh number, screen number and typical count of warp and filler.

References .- Methods of testing. See 370, 300.4.

390-399

MISCELLANEOUS TEXTILE PRODUCTS

390. GENERAL ITEMS

390.4 SPECIFICATIONS AND TOLERANCES FOR RETAIL FABRIC MEASURING DEVICES

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as MS5 of U. S. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Fabric Measuring Devices. For devices designed for use in retail sales, requirements on size and spacing of graduations, permissible principles in the making of computing charts, permissible tolerances on both in-creasing and decreasing registrations.

390.5 CLASSIFICATION OF RAG AND TWINE WASTE STOCK

Felt Manufacturers Assn. Classification of Rag Stock; 1928. Definitions of 6 grades of rag stock with materials suitable for inclusion in each grade, No. 1 roofing rags of part wool, No. 2 roofing rags of cotton, No. 3 of brussels and hard back carpets, No. 4 roofing rags of tailor rags with paper, No. 6 of city dump rags, requirements on freedom from rubbish and moisture.

National Assn. of Waste Material Dealers (Inc.), Classification Covering Bagging. Undated. Definitions of classes with numbers for gunny, burlap, and jute bagging.

National Assn. of Waste Material Dealers (Inc.). Classification for Mixed Twines. Undated. Defi-nition of one class with allowable percentage of straight sisal.

National Assn. of Waste Material Dealers (Inc.) Woolen Rag Classification. 1921. Definition of grades with allowable percentages in rejections and tare for mixed soft woolens, mixed rough cloth, mixed skirted cloth, and merchant tailor

Writing Paper Manufacturers Assn. Cotton Rag Classification; 1922. Name and definition of grade for grades of old rags, new rags, and hosiery. (Printed by National Assn. of Waste Material Dealers (Inc.).)

390.6 SIZINGS FOR FABRICS

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 45, Gum Arabic Sizing. Formula 50, Gelatine Sizing. Formula 51, Finish and Sizing for Organdies. Formula 52, Rug Sizing. List of required materials and amounts of each, method of preparation.

391. LINOLEUM FLOOR COVERING

Linoleum and Felt Base Mfrs. Assn. Report of Committee on Standardization and Simplifica-tion; 1931. Felt Base Rugs. Recommendations on maximum number of patterns for various sizes, standard rug sizes, point limits for felt, classification and packing of rugs.

Linoleum and Felt Base Mfrs. Assn. Report of Committee on Standardization and Simplification; 1931. Linoleum, Recommendations on limited list of standard gauges and maximum number of colors for each gauge, classification and packing, for battleship and plains, jaspes, cork carpet, inlaids, and printed linoleums

CORK CAPPET, INIAIOS, and printed inforemis.

U. S. GOV., Federal Specifications Board. LLL-L351; 1931. Battleship Linoleum. Requirements
on ingredients, color, and finish according to
sample agreed upon, width, adhesion of burlap
backing, seasoning, thicknesses and tolerances for 3 thickness grades, minimum weights, test requirements for indentation, pliability, and water absorption. Recommended for use on board ships and on floors of hospitals and office buildings.

U. S. Gov., Federal Specifications Board. LLL-L-361. 1931. Plain Linoleum, Inlaid, and Printed. Covers plain, jaspe, granite, straight-line and molded inlaid, and printed linoleums, require-ments on ingredients, with finish, color, and pattern according to sample agreed upon, seasoning, widths, weights, indentation test, weight, thicknesses and tolerances, pliability test.

392. COATED, FILLED, AND WATER-PROOFED FARRICS

392.1 COATED FABRICS

392.11 Enameled Cloth

392.12 Tracing and Blueprint Cloth

U. S. Gov., Dept. of Commerce. Bureau of standards. C63; 1917. Specification of the Transparency of Paper and Tracing Cloth. Describes a standard method of specifying the transpar-rency using principle of contrast ratio, description of apparatus and method of test, directions for making application test.

U. S. Gov., Federal Specifications Board. CCC-C-531; 1931. Tracing Cloth. For clear transparent cloth and pure white (pencil) cloth, requirements on general quality of coating, thread count and tensile strength of cotton cloth, color, drawing and erasing qualities, methods of test.

S. Gov., Federal Specifications Board. CCC-C-536; 1931. Printed Tracing Cloth. For profile cloth, cross-section cloth, logarithmic cloth, and plan profile cloth, requirements on general quality of coating, finish, drawing and erasing tests, to be in accordance with accepted samples, methods of test.

References .- Methods of testing. See 300.4.

392.13 Varnished Cloth

References.—Varnished cambric cloth and tape and friction tape for electrical purposes. See 719,56.

392.2 BOOK AND WINDOW SHADE CLOTH AND

392.21 Book Cloth

392 22 Shade Cloth

U. S. Gov., Federal Specifications Board. CCC-C-521; 1930. Shade Cloth. For translucent cambric (handmade tinted), opaque cambric (handmade), holland, and pyroxylin impregnated shade cloths, requirements on materials entering into construction and methods of application, standard colors, fastness of colors, thread count, breaking strength, standard widths, lengths, testing according to F. S. B. spec. 345.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6. Window shades. See 392.23.

392.23 Window Shades

U. S. Gov., Federal Specifications Board. 367b; 1928. Window Shades, Rollers, Slats, Cords, and Accessories. For window shades with wooden rollers or metal rollers, requirements on diameters of rollers and lengths of springs for various sizes of shades, standard shade widths for translucent cambric, opaque cambric, holland, and pyroxylin shades, size of slat, size and strength of cord, construction of hem, brackets, etc., shade cloth according to F. S. B. spec, 555.

References .- Shade cloth, See 392,22,

392.3 RUBBERIZED FABRIC

American Assn. of Textile Chemists and Colorists 1930 Yearbook. Report of Subcommittee on Rubberized Fabrics; 1930. Method of test applicable to all fibers whether chromium is present or not, for determination of copper, manganese, and iron. References.—Electrical insulating rubberized tape. See 719.56. Cotton fabrics for rubber coating. See 304.71.

392.4 WATERPROOF CLOTH

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Waterproofing Fabric. For a woven cotton fabric, requirements on thread count, degree of saturation with asphalt, weight of asphalt added, tensile strength, and elongation of treated fabric.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes asphalt treated fabric, weight, ash, and thread count of cotton fabric, width, weight, moisture content, strength, pliability, loss on heating, weight of saturant for treated cotton fabric. Conforms closely to A. S. T. M. D 173-27.

American Society for Testing Materials. D 146-27; 1927. Methods of Testing Felted and Woven Fabrics Saturated with Bituminous Substances for Use in Waterproofing and Roofing. Sampling, inspection for weight and dimensions, test procedure for moisture, strength, pliability, absorption, volatility of asphalt, extraction and distillation of coal-tar products, desaturation of fabric, weight and ash determinations.

American Society for Testing Materials. D 173-27; 1927. Woven Cotton Fabrics Saturated with Bituminous Substances for Use in Waterproofing, Requirements on width and weight of saturated and desaturated fabric, moisture content, average strength, pliability, loss on heating, weight of saturant, percentage ash and maximum thread count of fabric, using A. S. T. M. methods of test D 146.

References.—Tolerances, methods of testing. See also 300.4. Asphalt for waterproofing, tar for waterproofing. See 505.16, 505.36. Oiled waterproof cloth

for oilskins. See 392.53. Waterproof serge. See 392.54. Cotton fabrics for rubber and pyroxylin coating. See 304.71.

392.5 WATERPROOF CLOTHING

392 51 Ponchos

392.52 Slicker

392.53 Oiled Clothing

American Marine Standards Committee. O No. 27–1930. Uniforms for Merchant Marine Officers. Oilskin Coat. For coat made from closely woven black oiled cloth of loose fit type, requirements on cut and construction, number of pockets, etc.

392.54 Rain Clothing

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. Serge raincoat. For raincoat made of dark blue waterproofed serge, requirements on quality of wool, thread count, strength, weight, type of dye, kind and quality of waterproofing material, for the serge material, construction and cut of sip-on style double breasted raincoat, size of pockets, etc.

References.—Methods of testing fabrics, definitions. See 365.0, 300.4, 300.6. Ollskin coat. See 392.53.

392.6 OILCLOTH

U. S. Gov., Federal Specifications Board, 498; 1927. White Table Oilcloth. For grade known as "firsts," requirements on weight of cotton cloth backing, width and length of roll, breaking strength, weight, cracking, with methods of test in accordance with F. S. B. spec. 345 for textile materials.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6.

393. LABELS, WOVEN

394. WEBBING

394.1 KHAKI WEBBING

394.2 OLIVE-DRAB WEBBING

394.3 JUTE WEBBING

394.4 WEBBING STRAPS

394.5 ELASTIC CORD AND ELASTIC WEBBING

Webbing Mfrs. Exchange. Minimum Standard for Elastic Webbing; 1923. Minimum allowable rubber thread size, standard lengths of web in rolls for fly shot webs and for gang loom webs, normal and maximum cuts allowed in roll and maximum pieces permitted in roll.

U.S. Gov. Dept. of Commerce. Bureau of Standards, R112-29; 1929. Elastic Shoe Goring. Simplified practice recommended and accepted by industry covering a standard schedule for stock varieties of unmercerized cotton elastic shoe goring, standard qualities and widths, with weight, size, and number of rubbers, weight of cloth, percentage stretch of finished goring for each quality grade.

References.—Tolerances, methods of testing, definitions. See 300.4, 300.6.

395. HATS AND CAPS (except straw or other fiber, or rubber)

395.1 CAPS

395.11 Cooks' and Bakers' Caps

American Marine Standards Committee. O No. 7-1926. Kinds and Sizes of Mattress and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes caps for cooks, standard commercial sizes, no dimensions given

395.12 Caps, Winter

395.13 Caps. Dress. Full Dress, and Special Dress

American Marine Standards Committee. 27-1930. Uniforms for Merchant Marine Officers. Cap and cover. For a cap frame to support either a blue, white, or khaki top, requirements on general measurements, materials and construction of frame, cap body, visor, band, chin straps, blue cap top, white cap top, khaki cap top, and rain cover.

395.14 Olive-Drab Service and Officers' Caps

American Marine Standards Committee. O No. 27–1930. Uniforms for Merchant Marine Officers. Cap and cover. For a cap frame to support either a blue, white, or khaki top, requirements on general measurements, materials and construction of frame, cap body, visor, band, chin straps, blue cap top, white cap top, khaki cap top, and rain cover.

395.15 Summer Caps

References.—White caps for marine officers. See 395.13.

395.16 Watch Caps

395.17 White Caps, Marine Band and Officers'

References .- White caps, marine officers'. See 395.13.

395.18 Fur Caps

395.2 HATS, EXCEPT STRAW AND RUBBER HATS

395.21 Field Hats

395.22 Blue Denim Working Hats

395.23 Olive-Drab (Nurses') Hats

395.24 Olive-Drab (Officers') Hats

395.25 Hats, Southwester

395.26 Hats, Oiled Squam

396. BALLOON AND AIRSHIP FABRICS

References.—Tolerances, methods of testing, definious. See 300.4, 300.6.

397. RAYON, CELANESE, AND MANUFAC-TURES THEREOF

397.0 GENERAL ITEMS

American Assn. of Textile Chemists and Colorists 1930 Yearbook. Report of subcommittee on rayon. Tentative method of identification of rayon including identification of cellulose acetate rayon, nitrocellulose rayon, cupra-ammonium rayon, and viscose rayon.

American Society for Testing Materials. Tentative Specifications. D 258-31T; 1931. Tolerances and Test Methods for Rayon. Definitions and classification of rayons, methods of distinguishing the various rayons from each other, permissible tolerances on yarn size, twist, and strength, methods of test, requirements on standard moisture regain for the various rayons.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 6. To Determine the Amount of Natural Silk in Rayon in Fabric. Test procedure using method of weighing before and after dissolving-out the natural silk with copper sulphate.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 13. To Distinguish Rayons From Each Other. 397.15 Rayon Mufflers and Scarfs

Test procedure using color test after treating sample with sulphuric acid and iodine for distinguishing nitrocellulose, viscose, cupra-ammonium,

cellulose acetate, and gelatine. National Assn. of Hosiery and Underwear Manufacturers. Standard Maximum Percentage of Oil on Rayon Yarns Used in Knitting: 1927.

Textile Color Card Assn. of the U.S. (Inc.). Standard Color Card. 8th ed.; 1928. Card containing 192 textile color samples standardized and issued by this association, each color having a name and number. The association also issues spring and fall seasonal color cards showing standardized colors forecast for the season. U. S. Gov., Dept. of Commerce.

Bureau of Standards. RP61; 1929. A Multiple Strand Test for Yarns, Describes method of preparing test specimen and test procedure using multiple strands of yarn under uniform tension, test gives breaking strength and also the stress-strain relationship which is of particular value for rayon. Comparison is made with tentative specification D258-31T of Am. Soc. for Testing Materials.

References.—Nitrocellulose and tests of cellulose compounds. See 846.5.

397.1 RAYON KNIT GOODS

397.11 Socks and Stockings of Rayon

References.—Standard sizes, methods of measurement, standard colors of hosiery. See 309.2. Methods of testing fabrics. See 397.0, 300.4.

397.12 Rayon Underwear

Associated Knit Underwear Manufacturers of America. 22; 1928. Men's Rayon Knit Athletic Shirts (Pullover Shirts). Method of measuring and standard measurements and tolerances for a full range of sizes of ribbed and flat knit shirts. Suggested method of washing rayon knit underwear.

Associated Knit Underwear Manufacturers of America. 25; 1928. Men's Rayon Ribbed Knit Athletic Union Suits. Method of measurement, standard measurements and tolerances for a full range of union suits with no sleeves, button shoulder or button front, and short leg. Suggested method of washing rayon knit underwear.

Associated Knit Underwear Manufacturers of America. 26; 1928. Men's Rayon Flat Knit Athletic Union Suits. Method of measuring, standard measurements for, and tolerances, for a full range of sizes for union suits with no sleeves, button shoulder or button front and short leg. Suggested method of washing rayon knit underwear.

Standard No. 33; 1930. Men's Rayon Track Pants. For elastic waist band type and elastic back type, standard measurements and tolerances for a full range of sizes. Suggested method of washing rayon knit underwear.

Associated Knit Underwear Mfrs. Standard No. 107, 1930, Women's Flat Knit Rayon Union Suits (Bodice top, knee length). No. 108, 1930, Women's Knit Rayon Bloomers (Knee length, elastic at waist and knee). No. 109, 1930, Women's Rayon Vests (Bodice top). Standard measurements and tolerances for a full range of sizes. Suggested method of washing rayon knit underwear.

References.—Methods of measuring underwear. See also 309.4. Methods of testing fabric. See 397.0, 300.4.

397.13 Hoods and Toques of Rayon

397.14 Jerseys and Sweaters of Rayon

398. ABSORBENT COTTON, GAUZE, AND SURGICAL DRESSING

398.1 ABSORBENT COTTON

U. S. Gov., Federal Specifications Board. JJJ-C-561; 1931. Absorbent Cotton. For unsterilized type in roll and for sterilized type in package, 2 grades of each type, requirements on general quality, bleaching, freedom from lumps, dirt, foreign matter, etc., of the cotton material, neutrality and evaporation residue of water extract, permissible moisture and ash, required fiber length and absorbency, methods of test. U. S. Pharmacopoeial Convention (Inc.). Pharma-

U. S. Pharmacopoeial Convention (Inc.). Pharma-copoeia of U. S. A.; 1926. Purified Cotton (Absorbent Cotton). Physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References,-Standard cotton grades. See 300.1.

398.2 GAUZE

398.21 Plain Gauze

U. S. Gov., Dept. of Commerce. Bureau of Standards. R86-28; 1928. Surgical Gauze. Simplified practice recommended and accepted by industry establishing a limited number of stock sizes and varieties covering widths and construction of surgical gauze and crinoline in 100 yard bolts, construction, widths, and lengths of bandage rolls and bandages, construction and length of package goods.

U. S. Gov., Federal Specifications Board. 289: 1925. Plain Gauze. For 6 grades, requirements on freedom from loading, percentage of water extract, of alcohol extract, of ether extract, of alcohol extract, of ether extract, permissible decrease in strength on sterilization, absorption test, thread count, and weight for each grade. methods of test.

References.—Tolerances, methods of testing, definitions. See also 300.4, 300.6. Gauze bandages, gauze dressings. Sec 398.31, 398.34.

398.22 Sublimated Gauze

398.23 Iodoform Gauze

398.3 SURGICAL DRESSINGS

398.31 Bandages

U. S. Gov., Dept. of Commerce. Bureau of Standards. R86-28; 1928. Surgical Gauze. Simplified practice recommended and accepted by industry establishing a limited number of stock sizes and varieties, covering construction, widths, and lengths of bandage rolls and bandages, construction and length of package goods, widths and construction of surgical gauze.

U. S. Gov., Federal Specifications Board. DDD-B-51; 1931. Compressed Gauze Bandage. Requirements on dimensions of material and dimensions of rolled and compressed bandage, method of packing, gauze to conform to requirements for type A given in F. S. B. spec. 289 for plain gauze. U. S. Gov., Federal Specifications Board. DDD-

U. S. Gov., Federal Specifications Board. DDD-B-61; 1931. Plain Gauze Roller Bandages. For 8 sizes, requirements on widths and lengths, rolling and freedom from loose ends, gauze to

conform to requirements for type I given in F. S. B. spec. 289 for plain gauze.

U. S. Gov., Federal Specifications Board. 300; 1925. Plaster of Paris Bandage. For 3 sizes, requirements on dimensions, general quality and time of setting of plaster of paris, weight of plaster per bandage, packing, gauze used to meet requirements of type A given in F. S. B. spec. 289 for plain gauze.

References.—Gauze, surgical dressings. See also 398.21, 398.34. Rubber bandages, adhesive plaster. See 204.11, 204.12.

398.32 Compresses

398.33 Surgical Tape

References .- Adhesive tape. See 204.12.

398.34 Gauze Dressings, Pads, Etc.

American College of Surgeons. Manual of Surgical Dressings; 1930. Proposed standard dressings, including grade of material used, size of cutting, number of and size of folds, for various sizes of sponges (dressings for sponging or wiping), abdominal packs for walling off, sterile gauze dressings for covering incisions after operation, and pads to absorb drainage after operation.

References .- Gauze, bandages. See 398.21, 398.31.

399. MISCELLANEOUS TEXTILE MANUFACTURES

399.1 BRASSARDS

399,2 CLOTH BUCKETS AND BASINS

399.3 CASES OF CLOTH

399.4 STINGS

399.5 CUSHIONS AND COVERS

References .- Rubber cushions. See 204.25.

399.6 HOSE

References .- Rubber, linen, and cotton hose. See 202.

399.7 WICKS

American Society for Testing Methods. D 219—30; 1930. Approved by American Standards Assn. as Z11s—1930. Method of Test for Burning Quality of Long Time Burning Oil for Railway Use. Includes requirements on construction and dimensions of felt wick for Am. Rwy. Assn. standard semaphore lamp.

399.8 TYPEWRITER RIBBONS

References.—Typewriter, hectograph, and other machine ribbons. See 932.2.

399.9 TEXTILE PRODUCTS NOT ELSEWHERE CLASSIFIED

American Marine Standards Committee. O No. 27—1930. Uniforms for Merchant Marine Officers, Gold and silver lace. For gold or silver thread lace and for gold or silver wire lace, requirements on construction, weight of gold or silver metal per yard, assay of gold strip or wire, standard widths of strips.

References.—Asbestos textiles, yarns and packing. See 545.4.

WOOD AND PAPER

400-409 LUMBER (LOGS, TIMBER, AND OTHER UNMANUFACTURED OR PARTLY MANUFACTURED WOOD)

400.0 LUMBER STANDARDIZATION

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles. Classification and grades of softwood lumber in conformity with Am. Lumber Standards in general with slight variations therefrom in definitions of maxi-

mum defects and blemishes.

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recommend. R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. Standards set up and recommended by industry covering classification of lumber, nomenclature, basic grade definitions, seasoning standards, standard sizes, uniform workings, description, measurement, tally, shipping provisions, grade marking, and inspection of lumber.

400.1 PHYSICAL ANALYSIS OF LUMBER 400.12 Properties and Uses of Lumber

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. For structural timber for highway bridges, per-

missible unit stresses for select and common grades for use with computed stresses which contain no allowance for live load impacts.

American Railway Engineering Assn. Proc. for 1929, vol. 30, p. 1206. Wooden Bridges and Trestles. For structural timber, relation of strength of dry timber to that of timber not continuously dry, basis for determination of allowable stresses for structural grades of Am. Lumber Standards, basic working stresses for clear wood of various species of structural sizes, charts for computing strengths.

400.13 Tests of Lumber

American Society for Testing Materials. D143-27; 1927. Methods of Testing Small Clear Speci-mens of Timber. Approved by American Stand-ards Assn. as O4a-1927. Selection, preparation. and storage of test specimens, test procedure for static and impact bending, tension, compression, hardness, shear, cleavage, specific gravity, shrinkage, and moisture content.

American Society for Testing Materials. D 198-27; 1927. Methods of Conducting Static Tests of Timbers in Structural Sizes. Approved by American Standards Assn. as 04b—1927. Number and sizes of test specimens, methods for major tests of member proper for bending and compression, for minor tests for static bending, compression, hardness, shear, and moisture con-

tent.

400.14 Inspection of Lumber

National Engineering Inspection Assn. Tentative Methods of Procedure for Inspection of Materials; 1930. Includes for timber, pilès, poles, and ties, general procedure including checking of order, inspection before treatment, inspection of treating process, inspection after treatment, loading, and reports.

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recom. R16-29; 1929. Lumber. Includes regulations on who may obtain inspection, reinspection on complaint, etc., the formulation of regulations for inspection and the administration of inspection service to be conducted by the lumber industry through its trade associations and not by Government.

400.2 SOFTWOOD GRADING RULES

400.20 General Items

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules applicable to export trade only, for domestic trade the grading rules of West Coast

Lumbermens Assn. are used. U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice. Recom. R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. Standards set up and recommended by industry covering basic grade definitions for yard lumber, structural material, fac-tory and shop lumber, definitions of defects and blemishes, basic definitions of select and common grades, standard sizes, seasoning, etc.

400.21 Cedar Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Thin Lumber, and Plywood; 1931. Aromatic Red Cedar. For one select grade and 3 common grades, definitions of grades with permissible defects, dimensions, and percentages of sizes of the minimum dimensions.

Pacific Lumber Inspection Bureau (Inc.). Sched-ule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Cedar grading rules applicable to export trade only, for domestic trade the grading rules of West Coast

Lumbermens Assn. are used.

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. For western red cedar, definitions of quality grades, allowable defects, size standards and dressed dimensions, for yard, factory, shop, and box lumber, definitions of defects, in conformity with American Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, and Idaho White Pine; 1929. Includes grading rules for cedar, definitions of select and common grades of yard lumber and of grades for timbers, permissible defects, standard sizes. In conformity with Am. Lumber Standards with a few exceptions on sizes.

References.—Am. Lumber Standards, nomenclature and basic grading rules. See 400.0, 400.20.

400.22 Cypress Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Cypress. For factory lumber, definitions of 6 grades, including standard thicknesses, width and length limits, permissible defects, sapwood, etc., includes tank and boat stock and box stock.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Cypress. For yard lumber, definitions of 5 grades of finish lumber and of 5 grades of common lumber, including standard thicknesses, width and length limits, permissible defects, sapwood, etc.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Grading rules for yard lumber, factory lumber, timber and railroad material of red cypress (coastal type), in conformity with American Lumber Standards except for the clear heart finish grade in the select, and peck grade in the common grade of yard lumber.

References.—Am. Lumber Standards, nomenclature and basic grading rules. See 400.0, 400.20.

400.23 Fir Grading Rules

Douglas Fir Plywood Institute. Douglas Fir Plywood Grading Rules; 1928. Application and uses of four grades, with grade names, no very definite quality requirements for the grades.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Fir grading rules applicable to export trade only, for domestic trade the grading rules of West Coast Lumbermens Assn. are used.

West Coast Lumbermens Assn. Grading and Dressing Rules Douglas Fir, Sitha Spruce, West Coast Hemlock, Western Red Cedar Lumber; 1929. For Douglas fir, definitions of quality grades, allowable defects, size standards and dressed dimensions, for yard lumber and structural timbers, and for shop lumfer, definitions of defects, in conformity with American Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, and Idaho White Pine; 1929. Includes grading rules for Douglas fir and white fir, definitions of select and common grades, permissible defects, standard sizes. In conformity with Am. Lumber Standards with a few exceptions on sizes.

References.—Am. Lumber Standards, nomenclature and basic grading rules. See 400.0, 400.20.

400.24 Hemlock Grading Rules

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Grading rules for yard lumber including defluitions of defects and permissible defects for various grades of different varieties of yard lumber, to conform to American Lumber Standards as to grade and standard sizes.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sittas Spruce, and Western Red Cedar Lumber. Hemlock grading rules applicable to export trade only, for domestic trade the grading rules of West Coast Lumbermens Assn. are used.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber: 1929. For west coast hemlock, definitions of quality grades, allowable defects, size standards and dressed dimensions, for yard lumber, factory, box and car lumber, definitions of defects, in confornity with American Lumber Standards.

References.—Am. Lumber Standards, nomenclature and basic grading rules. See 400.0, 400.20.

400.25 Larch and Tamarack Grading Rules

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Grading rules for yard lumber including definitions of defects and permissible defects for various grades of different varieties of yard lumber, to conform to American Lumber standards as to grade and standard sizes.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, and Idaho White Pine; 1929. Includes grading rules for larch, definitions of 2 select and 5 common grades, permissible defects, standard sizes. In conformity with Am. Lumber Standards with a few exceptions on sizes.

References.—Am. Lumber Standards, nomenclature and basic grading rules. See 400.0, 400.20.

400.26 Pine Grading Rules

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes grading rules for soft pine conforming to American Lumber Standards for yard lumber, includes moisture content requirements.

Southern Pine Assn. Grades of Dense Longleaf and Shortleaf Southern Yellow Pine Timbers; 1927. Definitions of quality grades of structural timbers, structural joists and plank, and utility timbers, with definition of dense southern pine in accordance with American Lumber Standards, definitions of defects.

Southern Pine Assn. Grades of Longleaf and Shortleaf Southern Pine Lumber; 1929. Definitions of quality grades of southern pine yard lumber, standard sizes and dressed dimensions, moisture content requirements, definitions of defects, standard patterns, in conformity with American Lumber Standards.

Southern Pine Assn. The Gult Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Definitions of export grades of pitch pine covering flooring, boards and planks, deals, decking, scantling, dimension, kiln and air dried saps, definitions of defects.

Southern Pine Asm. Southern Yellow Pine Bridge and Trestie Timbers for Railway Structures; 1917. For stringers, caps, sills, posts, struts, girts, braces, ties and guard rails, definitions of quality grades, definitions of defects.

Southern Pine Assn. Southern Yellow Pine Car Material; 1919. Definitions of quality grades for car siding, lining, roofing, and flooring, and for car sills and flooring, definitions of defects.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, and Idaho White Pine; 1929. Definitions of select and common grades, permissible defects, standard lengths and sizes. In conformity with Am. Lumber Standards except for inclusion of a 11/16 size for finish, boards, etc. and a greater lap in shitlap.

nap in sinplap.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Definitions of quality grades of yard lumber suitable for interior trim, pattern stock, door, and sash, etc., also grades of mouldings, shelving, barn lumber, and box lumber, permissible defects in each grade.

References.—Am. Lumber Standards, nomenclature, and basic grading rules. See 400.0, 400.20.

400.27 Redwood Grading Rules

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Conforms to American Lumber Standards, definitions of standard defects, standard dimensions of dressed sizes and rough dry sizes of yard lumber, definitions of grades of yard lumber and of shop or pattern lumber as regards amount of heart wood, permissible defects, etc., additional C. R. A. grades of clear heart lumber.

California Redwood Assn. Structural Grades of California Redwood; 1928. For two grades of all-heart structural timber, permissible defects, permissible variations from nominal dimensions.

California Redwood Assn. Western Grades, Uppers, Sundry Commons, Shop; 1929. Permissible off-dimension allowance for rough and for finished lumber, definitions of grades dependent on percentage heart, allowable defects.

References.—Am. Lumber Standards, nomenclature, and basic grading rules. See 400.0, 400.20.

400.28 Spruce Grading Rules

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Spruce grading rules applicable to export trade only, for domestic trade the grading rules of West Ocast Lumbermens Assn. are used.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. For sitka spruce, definitions of quality grades, allowable defects, size standards and dressed dimensions, for yard lumber, factory and box lumber, definitions of defects, in conformity with American Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Callif. White Pine, Sugar Pine, and Idaho White Pine; 1929. Includes grading rules for spruce, definitions of select and common grades, permissible defects, standard sizes. In conformity with Am. Lumber Standards with a few exceptions on sizes.

References.—Am. Lumber Standards, nomenclature, basic grading rules. See 400.0, 400.20.

400.3 HARDWOOD GRADING RULES

400.30 General Items

U. S. Gov., Federal Specifications Board. 24; 1922. Lumber. For softwood lumber see F. S. B. spec. 533a. Hardwood lumber specifications to be in accordance with grading rules of National Hardwood Lumber Assn.

400.31 Basswood Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Basswood. Definitions of 6 grades, width and length limits, permissible kinds and amounts of defects, side hend, etc.

400.32 Birch Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Oypress, Veneers, Plywood; 1931. Birch. Defininitions of 7 grades, width and length limits, permissible kinds and amounts of defects, side bend, etc.

400.33 Gum Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Black Gum, Quartered Sap Gum. Quartered Black Gum, Plain and Quartered Red Gum. Definitions of 5 and 6 classes of each, width and length limits, permissible kinds and amounts of defects, sapwood, etc.

400.34 Hickory Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Hickory. Definitions of 5 grades, width and length limits, permissible kinds and amounts of defects, bird pecks, side bend, etc.

400.35 Mahogany Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Cuban and San Domingo Mahogany. Definitions of 8 grades, width and length limits, permissible kinds and amounts of defects, worm holes, short grades, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber Cypress, Veneers, Plywood; 1931. Mexican and African Mahogany. Definitions of 14 grades, width and length limits, permissible kinds and amounts of defects, pin worm holes, short grades, city.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Philippine Mahogany. Definitions of 12 grades, width and length limits, permissible kinds and amounts of defects, needle worm holes, etc.

400.36 Maple Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Hard and Soft Maple. Definitions of 7 grades of hard maple and 6 grades of soft maple, width and length limits, permissible kinds and amounts of defects, side bend, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. White Maple. For firsts, seconds, and No. 1 common, definitions of grade, required portions showing white, width and length limits, permissible defects, etc.

400.37 Oak Grading Rules

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Bending Oak, Including red and white oak, firsts, seconds, and No. 1 common, definitions of grade, width and length limits, permissible defects, worm holes, stain, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Plain and Quartered Red and White Oak. Definitions of grades, width and length limits, permissible kinds and amounts of defects, sapwood, slde bend, etc.

400.38 Walnut Grading Rules

American Walnut Manufacturers' Assn. and National Hardwood Lumber Assn. Rules for the Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Thin Lumber and Plywood; 1931. Published by N. H. L. A. Definitions of standard defects and of 6 grades of walnut lumber, giving width and length limitations, permissible kinds and amount of defects.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Walnut. Definitions of 6 grades, width and length limits, permissible kinds and amounts of defects, sapwood, etc.

400.39 Grading Rules for Other Hardwoods

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Ash, Beech, Hackberry, Red Alder, Sycamore, Soft Elm, Buckeye, Chestnut, Poplar, Rock Elm, Pecan, Cottonwood, Tupelo, Magnolia, Willow, Aspen, Cherry, and Butternut. Definitions of 5 to 7 grades of each, width and length limits, permissible kinds and amounts of defects, etc.

National Hardwood Lumber Assn. Rules Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Quartered Poplar. For firsts, seconds and No. 1 common, definitions of grade, width and length limits, permissible defects, etc.

400.4 PRESERVATIVE TREATMENT FOR WOOD

400.40 Definitions and Standards Relating to Wood Preservation

American Railway Engineering Assn. 1929 Manual. Wood Preservation; 1926. General requirements, preparation and handling of wood before treatment as regards grouping, stacking, seasoning, adzing, boring, and framing, care of wood after treatment.

American Wood Preservers' Assn. 2c; 1929. Standards for the Purchase and Preservation of Treatable Timber. Requirements on quality of wood, peeling, seasoning before treatment, stacking, framing, recommended type of treating process and amount of treatment.

400.41 Preservative Solutions for Wood

References.—Creosote, zinc chloride. 839.38. See 801.3,

400.42 Pressure Process of Wood Preservation

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Preservative Treatments for Timber. Requirements on pressures and time of application for steam seasoning of southern yellow pine and for oil seasoning for douglas fir, preparation of timber for treatment, required penetration and quantity of preservative retained for piling and large timbers, temperatures, pressures, periods of treatment, and procedure for full cell process, empty cell process with initial air, and empty cell process without initial air for oil treatment of southern yellow pine, and for zinc chloride treatment of southern yellow pine, and for full cell and empty cell process for Douglas fir.

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Preservative Treatment for Creosoted Wood Blocks. Requirements on temperatures, pressures, and time interval for each step in treatment procedure for initial steam, vacuum, preservative added with pressure, final vacuum, and final content of preservative for treatment of southern yellow pine, tamarack, norway pine,

and douglas fir blocks.

American Electric Railway Engr. Assn. Recommended Specification. WP104-29; 1929. Preservative Treatment of Wood by Pressure Process. Requirements on seasoning, procedure for impregnation with creosote oil by full cell process, with zinc chloride and creosote oil by full cell process, with creosote oil by empty cell process with final vacuum, with creosote oil by empty cell process with initial air and final vacuum.

American Electric Railway Engr. Assn. Recom-mended Specification. WP105-29; 1929. Pressure Treatment of Pine Poles. Requirements on preparation and seasoning of poles, required absorption and penetration and treatment procedure for full cell or Bethel process, empty cell with initial air pressure, and empty cell with

final vacuum.

American Railway Assn. Signal Section, 14026; 1926. Preservative Treatment of Capping and Grooved Trunking. Preservative to be creosote of A. R. E. A. Grade 1, treatment procedure by empty cell process with initial air, required final retention of preservative.

American Railway Assn. Telegraph and Telephone Section. 1-A-25; 1928. Pressure Treatment of Pine Poles. Creosote according to A. R. E. A. specification, preparation of poles for treatment. requirements for seasoning, treatment procedure for full cell and empty cell processes, amount of preservative retained and methods of determining penetration.

American Railway Assn., Telegraph and Telephone Section. 1-A-10; 1928. Creosoted Timber Other Than Poles Used In The Telegraph and Telephone Plant. Includes conduit, crossarms, planks and other timber. Creosote according to A. R. E. A. specifications, preparation of timber, requirements on treatment procedure, tempera-tures and pressures, for full cell process, and for empty cell process, requirements on penetration and amount of preservative retained.

American Railway Engineering Assn. 1929 Manual. Wood Preservation. Preservative Treatment of Douglas Fir: 1926. Amount of creosote or zinc chloride preservative to be absorbed under different types of treatment for ties, piling, and structural timbers, minimum sapwood and penetration for piling, treatment requirements for Douglas fir with full cell, Rueping,

Lowry, and zinc chloride processes.

American Railway Engineering Assn. 1929 Manual. Wood Preservation. Treating Processes; 1927. For creosote (full cell process), creosote-Lowry process (empty cell with final vacuum), creosote-Rueping (empty cell with initial air and final vacuum), zinc chloride, zinc chloride and creosote-card process, and the zinc-tannin processes, requirements for seasoning of wood, kind and amount of preservative to be retained, depth of treatment, temperatures, pressures, vacuum requirements during process, and steps in process of treatment. American Society of Municipal Engineers, Creo-

soted Wood Block Paving; 1921. Preservative treatment procedure, times, temperatures, and pressures, requirements on retention of preserva-

tive, for coal tar preservative oils.

American Society for Testing Materials. D 52-20; 1920. Wooden Paving Blocks for Exposed Pavements. Includes procedure for pressure treatment of paving blocks, pressures, temperatures, time of treating, treatment procedure.

American Wood Preservers' Assn. 3b: 1931. Definition of Creosote. Definition of Tar. Defines in general terms, three classes of tars.

American Wood Preserver's Assn. 12a; 1921 Definitions of Processes. Exposition of various processes and modifications, dates when patented and name of patentee, for pressure process, full cell and empty cell methods for creosote and for zinc chloride, brush and open tank treatments.

American Wood Preserver's Assn. 16b; 1923. Creosoted Wood Block Street Paving. Includes treatment requirements for wood paving blocks of southern yellow pine, douglas fir, tamarack, or norway pine, temperatures, pressures, treatment procedure and required retention of preservative, using coal tar oils.

American Wood Preserver's Assn. 20a; 1921.

Method for Determining Zinc Chloride Penetration by Color Reaction Test with Iodine-Potassium Ferricyanide-Starch. Preparation of solution, test procedure by spraying a disc of the

boow

American Wood Preserver's Assn. 23a; 1922. Method of Calculating Volumetric Absorption of Zinc Chloride Solutions. Refers to percentage of volumetric absorption in treated timber.

Visual Method of Determining Sodium Fluoride Penetration in Treated Wood. Solutions required, test by spraying disc of the treated wood with solution.

American Wood Preserver's Assn. 33b; 1926. Instructions for the Inspection of Preservative Treatment of Wood. Applicable to full cell processes for oil, salt, and oil-salt treatments, and to

empty cell processes for oil treatment.

American Wood Preserver's Assn. 34b; 1926.
Preservative Treatment of Ties by Pressure
Processes. Not applicable to douglas fir, larch or
tamarack. Seasoning and preparation of ties for treatment, treating operation including required temperatures, pressures, and times, for oil, salt, and oil-salt treatments, for full cell and empty cell processes. Retention specified by contract.

American Wood Preserver's Assn. 35c; 1929. Preservative Treatment of Timber and Lumber by Pressure Processes. Not applicable to douglas fir, larch or tamarack, requirements for season-ing and preparation of material for treatment, treating procedures including required temperatures, pressures and times for full and empty cell process of oil treatment, for salt treatment and oil-salt treatment. Retention of preservative specified by contract.

American Wood Preserver's Assn. 36b; 1926.
Preservative Treatment of Poles by Pressure
Processes. Not applicable to Douglas fir, larch, or tamarack. Seasoning and preparation of material for treatment, requirements on treating procedure, temperatures, pressures, and times for full cell and empty cell processes. Retention of

preservative specified by contract.

American Wood Preserver's Assn. 37b; 1926. Preservative Treatment of Posts by Pressure Processes. Requirements for seasoning and prepara-tion of material, procedure in treating, required temperatures, pressures, and times for full cell and empty cell processes using creosote. Amount of preservative retained to be specified in contract.

American Wood Preserver's Assn. 38a; 1926. Pre-servative Treatment of Douglas Fir Ties by Pressure Process. Seasoning and preparation for treatment, treating procedure including required temperatures, pressures, and times for full cell and empty cell process for oil treatment, for salt treatment, and for oil-salt treatment. Retention of preservative as specified by contract.

American Wood Preserver's Assn. 39a; 1926. Pre-servative Treatment of Yellow Pine Piles by Pressure Processes. Seasoning and preparation for treatment, treating procedure including required temperatures, pressures, and times for creosote treatment by full cell and by empty cell process. Retention of preservative as specified

by contract.

American Wood Preserver's Assn. 41a; 1926. Pre-servative Treatment of Douglas Fir Piles by Pressure Processes. Seasoning and preparation for treatment, treating procedure, including required temperatures, pressures, and times for creosote treatments by full cell and empty cell processes. Retention of preservatives as specified

by contract.

American Wood Preserver's Assn. 42a; 1928. Preservative Treatment of Trunking and Capping by Pressure Processes. Not applicable to Douglas fir, larch or tamarack. Seasoning and preparation for treatment, treating procedure including required temperatures, pressures, and times for creosote treatment by full cell and empty cell processes. Retention of preservative according to contract

American Wood Preserver's Assn. 28a; 1923. American Wood Preserver's Assn. 45a; 1928. Pre-Visual Method of Determining Sodium Fluoride servative Treatment of Douglas Fir Lumber by Pressure Processes. Includes sawed timbers, seasoning and preparation for treatment, treatment procedure including required temperatures, pressures, and times for creosote treatment by full cell and by empty cell processes. Retention of preservative as specified by contract.

U. S. Gov., Federal Specifications Board. TT-W-

571; 1931. Wood Preservatives and Processes of Treatment. The specifications of the American Wood Preserver's Assn. for preservatives and methods of treatment have been adopted by F. S. B. for treatment of ties, piling, poles, posts, and structural timbers. A schedule of recommended practice for the preservative treatment of the various forms of timber is included in this specification.

References.—Lumber suitable for treatment. 404.0. Definitions, preparatory treatment of wood. 400.40. Creosote, zinc chloride. See 801.3, 839.38.

400.43 Brush and Open Tank Treatment for Wood Preservation

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Preservative Treatments for Timber. For opentank treatment requirements as regards equipment, temperature of bath, time of immersion, and procedure for hot bath treatment, for ordinary and heavy hot and cold bath treatment, temperatures and procedures for brush treatment and for spray treatment.

American Electric Railway Engr. Assn. Recom-mended Specification WP106-30; 1930. Nonpressure Treatment for Structural Timber and Ties. For open-tank treatment, requirements on preparation, time of immersion, procedure for single or hot bath treatment, for hot and cold treatment, empty cell, and for hot and cold treatment, full cell. For brush and for spray treatments, procedure and temperatures of preservative.

American Electric Railway Engr. Assn. Recom-mended Specification WP107-29; 1929. Brush Treatment of Wood Poles. Requirements on types of preservative, temperature of preservative, methods of treatment for new poles before installation, treatment of wood poles in place and of wood poles that have been removed from and of wood poles that have been ground and in various stages of decay.

Notice Pailway Engr. Assn. WP125-30;

American Electric Railway Engr. Assn. 1930. Open Tank Butt Treatment of Poles, Plain and Incised. Requirements on seasoning, preparation, types and temperature of preservative, length of treated section, treatment procedure, amount and depth of incisions for incised poles.

American Railway Assn., Telegraph and Telephone Section 1-A-7; 1925. Butt Treatment of Cedar Poles in Open Tanks. Preparation of poles for treatment, creosote according to A. R. A. specifications, classification of poles for treatment, required depth of penetration and method of testing.

during depin on penetration and method of testing.
American Railway Assn., Telegraph and Telephone
Section 1-A-19; 1927. Butt Treatment of Chestnut Poles. Treatment by alternate hot and cold
bath open-tank method, creosote according to
A. R. E. A. specifications, classification of poles, preparation for treatment, duration of each treatment for each class of poles, length of section to be treated.

American Wood Preservers Assn. 12a; 1921. Definitions of Processes. Includes definitions of brush

and open-tank treatments.

American Wood Preserver's Assn. 43a; 1928. Preservative Treatment of Pole Butts by Nonpressure Process-Incising Method. Preparation of material, height of treatment, treating procedure for creosote oil treatment.

American Wood Preserver's Assn. 44a; 1928. Preservative Treatment of Pole Butts by Nonpressure Process-Nonincising Method. Preparation of material for treatment, height of treatment, treating procedure for tank process for creosote

U. S. Gov., Federal Specifications Board. TT-W-571; 1931. Wood Preservatives and Processes of Treatment. The specifications of the American Wood Preservers Assn. for preservatives and methods of treatment have been adopted by F. S. B. for treatment of ties, piling, poles, posts, and structural timbers. A schedule of recom-mended practice for the preservative treatment of the various forms of timber is included in this specification.

Western Red Cedar Assn. Butt Treating Cedar Poles in Open Tanks; 1930. For 3 methods of treatment in creosote, a continuous submersion in hot creosote for 15 minutes, a process using alternately submersion in hot and cold creosote for 6 hours, and a guaranteed penetration treatment, procedure and temperature of preservative for each method, creosote according to Am. Wood Preservers Assn. specifications.

References.—Definitions, preparatory treatment of wood. See 400.40. Creosote, zinc chloride. See 801.3, 839.38.

400.49 Miscellaneous Specifications for Wood Preservative Treatment

Railway Fire Protection Assn. Handbook. 1925. Timber Treating Plants, Fire Prevention and Protection. Recommendations on relative location of storage tanks, treating cylinders, boilers, etc., their enclosure, lighting, and location of valves, types of fire protection, water lines, hydrants, fire extinguishers, smother jets, water barrels and pails recommended.

400.5 WOOD PULP

400.50 General Items

American Paper and Pulp Assn. Assn. of American Wood Pulp Importers. Technical Assn. of the Pulp and Paper Industry. Rules for Weighing, Sampling, and Testing Wood Pulp for Moisture; 1930. Rules for sampling at pulp mill by strip method and rules for sampling on dock or at receiving point by boring, strip or wedge methods, getting wet weight, drying, calculating dry weight, moisture testing of baled pulp.

National Assn. of Waste Material Dealers (Inc.). Official Rules for Weighing, Sampling, and Testing Wood Pulp; 1926. Methods for determination of wet weight, sampling at pulp mill, on

dock, or at receiving point.

Technical Assn. of Pulp and Paper Industry. Proposed Standard Test Conditions for Determining the Initial Strength of Pulp; 1927. Requirements on preparation of pulp, making of test sheet, pressing and drying, atmospheric conditions during testing of sheets.

401. RAW AND HEWN TIMBERS

401.1 RAILROAD TIES

401.10 General Items

American Mining Congress. Committee Report on Mine Timbering: 1923. Includes recommended kinds and sizes of timber for general timbering, method of timbering in roadways, and sizes of ties for steel rails.

American Railway Engineering Assn. and U. S. Forest Service. Sponsors. Approved by American Standards Assn. as 03—1926. Railroad Ties. Published by National Assn. of Railroad Ties. Producers. For cross ties and switch ties, acceptable kinds of wood, requirements on general qualities, resistance to wear, dimensions of standard sizes, permissible defects, classification into groups which may be used untreated and groups which require treatment.

National Hardwood Lumber Assn. Switch Ties and Cross Ties. Specifications of American Standards

Assn. adopted.

401.11 Cedar Ties

American Electric Railway Engr. Assn. W26-26 and W27-26; 1926. Cross Ties, Switch Ties. Specifications same as those of Am. Rwy. Engr. Assn. Includes requirements for cedar ties. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties. Switch Ties. Includes require-

ments for cedar ties. See 401.10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as specifica-tions of American Railway Engineering Assn.

Includes cedar ties. See 401.10.

Northern White Cedar Assn. Manufacture and Grading of Northern White Cedar Products; 1923. Standard Ties. For sawed or hewn ties, limiting dimensions, permissible defect, definitions of 2 classes dependent on size.

References,-Preservative treatment. Sec 400,42.

401.12 Chestnut Ties

American Electric Railway Engr. Assn. W26-26 and W27-26; 1926. Cross Ties, Switch Ties. Specifications same as those of Am. Rwy. Engr. Includes requirements for chestnut ties. Assn. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties. Switch Ties; 1926. Includes requirements for chestnut ties. See 401.10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as specifications of American Railway Engineering Assn. for chestnut ties. See 401.10.

References .- Preservative treatment. See 400.42.

401.13 Cypress Ties

American Electric Railway Engr. Assn. W26-26 and W27-26; 1926. Cross Ties, Switch Ties. Specifications for cypress ties the same as those of Am. Rwy, Engr. Assn. See 401.10.

American Railway Engineering Assn. 1929 Man-ual. Cross Ties. Switch Ties. Includes require-

ments for cypress ties. See 401.10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as specifications of American Railway Engineering Assn. for

cypress ties. See 401.10.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Switch Ties, Cross Ties. For 1 grade of switch ties and 1 grade of peck cross ties, requirements on non-permitted defects and permissible peck.

References .- Preservative treatment. See 400.42.

401.14 Fir Ties

American Electric Railway Engineering Assn. W26-26 and W27-26; 1926. Cross Ties, Switch Ties. Specifications for fir ties are same as those of Am. Rwy. Engr. Assn. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties. Switch Ties. Includes re-

quirements for fir ties. See 401.10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as specifications of American Railway Engineering Assn. for fir ties. See 401.10.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic

Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for fir ties applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemiock, and Western Red Cedar Lumber; 1929. Ties. For fir ties, definitions of 3 quality grades, permissible defects, permissible variations in size and length.

References .- Preservative treatment. See 400.42.

401.15 Oak Ties

American Electric Railway Engr. Assn. W26-26 and W27-26; 1926. Cross Ties, Switch Ties. Specifications for oak ties are same as those of Am. Rwy. Engr. Assn. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties. Switch Ties; 1926. Includes requirements for oak ties. See 401.10. National Assn. of Railroad Tie Producers. Cross

National Assn. of Railroad Tie Producers, Cross Ties and Switch Ties; 1926. Same as specifications of American Railway Engineering Assn. for oak ties. See 401.10.

References .- Preservative treatment. See 400.42.

401.16 Pine Ties

American Electric Railway Engr. Assn. W26–26 and W27–26; 1926. Cross Ties, Switch Ties. Specifications for pine ties are same as those of Am. Rwy. Engr. Assn. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties. Switch Ties; 1926. Includes requirements for pine ties. See 401.10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as specifications of American Railway Engineering Assn. for pine ties. See 401.10.

References .- Preservative treatment. See 400.42.

401.17 Redwood Ties

American Electric Railway Engr. Assn. W26–26 and W27–26; 1926. Cross Ties, Switch Ties. Specifications for redwood ties are same as those of Am. Rwy. Engr. Assn. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties. Switch Ties; 1926. Includes requirements for redwood ties. See 401,10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as specifications of American Railway Engineering Assn. for redwood ties. See 401.10.

References .- Preservative treatment. See 400.42.

401.18 Walnut Ties

American Electric Railway Engr. Assn. W26-26 and W27-26; 1926. Cross Ties, Switch Ties. Specifications for walnut ties are the same as those of Am. Rwy. Engr. Assn. See 401.10.

American Railway Engineering Assn. 1929 Manual. Cross Ties, Switch Ties; 1926. Includes requirements for walnut ties. See 401.10.

National Assn. of Railroad Tie Producers. Cross Ties and Switch Ties; 1926. Same as those of American Railway Engineering Assn. for walnut ties. See 401.10.

References .- Preservative treatment. See 400.42.

401.2 POSTS

401.21 Cedar Posts

American Railway Engineering Assn. 1929 Manual. Standard Right-of-Way Fences; 1926. Includes cedar fence posts, minimum dimensions and depth of setting, general quality. Northern White Cedar Assn. Manufacture and Grading of Northern White Cedar Posts; 1927. For posts cut from live timber, round or sawed, requirements on peeling and trimming, minimum top sizes, permissible defects such as knots, twist, rot, crook, etc.

Western Red Cedar Assn. Western Red Cedar Posts; 1929. For split and round posts, standard sizes, minimum small end sizes, shapes for split

posts, permissible defects.

References .- Preservative treatment. See 400.42.

401.22 Chestnut Posts

American Railway Engineering Assn. 1929 Manual. Standard Right-of-Way Fences; 1926. Includes chestnut fence posts, minimum dimensions and depth of setting, general quality.

References .- Preservative treatment. See 400.42.

401.23 Cypress Posts

401.24 Locust Posts

American Railway Engineering Assn. 1929 Manual. Standard Right of Way Fences; 1926. Includes locust fence posts, minimum dimensions and depth of setting, general quality.

References .- Preservative treatment. See 400.42.

401.25 Oak Posts

American Railway Engineering Assn. 1929 Manual. Standard Right of Way Fences; 1926. Includes white oak fence posts, minimum dimensions and depth of setting for end and intermediate posts, and general quality.

References .- Preservative treatment. See 400.42.

401.26 Pine Posts

401.29 Miscellaneous Specifications for Posts

American Railway Engineering Assn. 1929 Manual. Standard Right-of-Way Fences; 1926. Includes wood fence posts and braces, of cedar, locust, chestnut, bois d'arc, white oak, mulberry, catalpa, minimum dimensions and depth of setting for intermediate and end posts, general quality.

California Redwood Assn. Structural Grades of California Redwood; 1928. For two grades of all-heart lumber for caps, posts, rail posts, etc., permissible defects, permissible variations from nominal dimensions of rough and dressed lumber.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Wood Guard Rail. For wood posts for guard rail, requirements on grade of lumber for sawed posts as defined by Am. Lumber Standards, West Coast Lumbermens Assn., or Southern Pine Assn., preparation and general quality of round posts, painting and preservative treatments.

References .- Preservative treatment. See 400.42.

401.3 POLES, HEWN AND SAWN

401.30 General Items

American Railway Assn., Electrical Section, VI-a-23; 1923. Electric Light, Power Supply and Trolley Lines Crossing Railways. Wood Poles. For wood poles at crossings, requirements on general quality, minimum top diameter, depth of setting for various pole lengths, allowable unit stresses.

American Railway Assn., Electrical Section. VI-b-25; 1925. Construction of Overhead Electric Supply Lines for Railroad Use on Railroad Property. Wood Poles Permissible minimum top diameter, requirements on depth of setting for various lengths of pole, allowable unit stresses

for various species of wood and for 2 types of construction.

American Standards Assn., Telephone Group. 05a-1930. Ultimate Fiber Stresses of Wood Poles. Standard fiber stresses to be allowed in designing pole lines for northern white cedar, western red cedar, chestnut, and creosoted southern yellow pine poles.
American Wood Preserver's Assn. 14b; 1926.

Standard Volumes of Piles and Poles. Table of volumes per foot of length for various diameters

of small and large ends.

401.31 Cedar Poles

American Electric Railway Engr. Assn. D8-26: 1926. Wood Poles. For western red cedar poles, and for eastern white cedar poles, requirements on general quality, minimum diameters of poles of various lengths for 3 classes of poles used in trolley and combination trolley and auxiliary line construction.

American Standards Assn., Telephone Group. O5b1-1931 and O5b2-1931, White Cedar Poles. Tentative standard for quality covering requirements on prohibited and permissible kinds and amounts of defects, permissible grain twist, pole sweep, length tolerance, peeling, sawing ends, trimming. Standard dimensions for poles from 16 to 60 feet long, location of ground line.

American Standards Assn., Telephone Group. O5c1-1931 and O5c2-1931. Western Red Cedar Poles. Tentative standard for quality covering requirements on prohibited and permissible kinds and amounts of defects, permissible rot, grain twist, pole sweep, length tolerances, peeling, sawing of ends, trimming. Standard dimensions for poles from 16 to 90 feet long, location of ground line

National Electric Light Assn. Suggested Specifica-tions. D1-22T; 1922. Tentative. Western Red Cedar Poles. Requirements on general quality, permissible defects and their location in pole, permissible sweep, classification of poles according to butt and top dimensions for various length poles. Published in 1922 N. E. L. A. proceedings. National Electric Light Assn. Handbook on Over-

head Line Construction; 1914, p. 127. Suggested Specifications. Eastern White Cedar Poles. For 3 classes of poles, minimum dimensions of top and butt for various lengths, permissible defects and their location, permissible sweep, allowable hollow heart.

Northern White Cedar Assn. Manufacture and Grading of Northern White Cedar Poles; 1925. For poles cut from live timber and 16 feet or more in length, requirements on peeling and trimming, standard top measurements, permissible rot, crook, cat faces, knot, twist, standard weights.

Western Red Cedar Assn. Western Red Cedar Poles; 1929. Requirements on peeling and trimming, permissible variations in length, permissible defects and sweep, minimum top and butt measurements for various length poles.

References.—Preservative treatment. See also 400.42, 400.43. Fiber stress in poles. See 401.30. Standard sizes, depth of setting. See also 401.30.

401.32 Chestnut Poles

American Electric Railway Engr. Assn. D8-26; 1926. Standard specifications for wood poles, Timber quality specifications, minimum diameters of poles of various lengths of three classes of poles used in trolley and combined trolley and auxiliary line support construction, for chestnut poles.

merican Standards Assn., Telephone Group. 05d1-1931 and 05d2-1931. Chestnut Poles. American

Tentative standard for quality covering requirements on prohibited and permissible kinds and amounts of defects, grain twist, pole sweep for town and country poles, length tolerances, peel-ing, sawing of ends, trimming. Standard dimensions and location of ground line for poles from 16 to 70 feet long.

National Electric Light Assn. Suggested Specifica-tions. D2-23T; 1923, Tentative, Chestnut Poles. Permissible defects and their location in pole, requirements on finish and permissible sweep, classification of poles according to butt and top dimensions for various length poles. Published in 1923 N. E. L. A. proceedings.

References.—Preservative treatments. See also 400.42. 400.43. Fiber stress in poles. See 401.30. Standard sizes, depth of setting. See also 401.30.

401.33 Cypress Poles

401.34 Fir Poles

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Pole Stock. For Douglas fir pole stock, definitions of 1 quality grade, permissible defects, required grain slope.

401.35 Oak Poles

401.36 Pine Poles

American Standards Assn., Telephone Group. O5e1-1931 and O5e2-1931. Southern Pine Poles. Tentative standard for quality covering requirements on species of wood, prohibited and permissible kinds and amounts of defects, grain twist, pole sweep, length tolerances, peeling, sawing of ends, trimming, framing, storage and handling. Standard dimensions and locations of ground line for poles from 16 to 90 feet long.

National Electric Light Assn. Suggested Specification. D5-24T; 1924, Creosoted Yellow Pine Poles. Permissible types, sizes and location of defects, requirements on trimming, creosote specifications, full cell and empty cell treating processes, amount of preservative used, dimensions of five classes of poles. Published in 1924 N. E. L. A.

proceedings.

References.—Preservative treatment. See also 400.42, 400.43. Fiber stresses in poles. See 401.30. Standard sizes, depth of setting. See also 401.30.

401.37 Redwood Poles

National Electric Light Assn. Handbook on Overhead Line Construction, 1914, p. 131. Suggested Specifications. Sawed Redwood Poles. For 2 classes of poles, top and butt dimensions for various lengths, permissible sapwood, knots, and other defects.

References .- See references under 401.36.

401.4 PILING, HEWN AND SAWN

401.40 General Items

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles. Timber Piles; 1928. Permissible sizes of defects, number of rings in close-grained piles, amount of sapwood for piles to be treated, dimensions of southern pine, douglas fir, oak, cypress, and western red cedar piles, straightness requirements.

American Society for Testing Materials. Tentative Specifications. D25-30T; 1930. Timber Piles. Covers untreated round timber suitable for piles and also timber suitable for treatment, requirements on general quality, permissible knots and other defects for first class and second class piles, peeling, dimensions and permissible variations.

American Wood Preserver's Assn. 14b; 1926. | 401.45 Cak Piling Standard Volumes of Piles and Poles. Table of volumes per foot of length for various diameters of small and large ends.

401 41 Cedar Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Piles. For cedar piles, requirements on percentage of heartwood, permissible knots, bend, bark, and defects, peeling, diameters at tip and at 4 feet from butt for various lengths.

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles. Timber Piles; 1928. Includes cedar piles, permissible sizes and types of defects, number of rings for close grained piles, amount of sapwood for piles to be treated, dimensions, straightness require-

ments.

Western Red Cedar Assn. Standard Cedar Piling; 1914. Requirements on production, permissible butt rot, standard lengths, sizes of butts and tops, permissible crook, cat faces, and dry streaks.

References.—Requirements for piles irrespective of ecte. Sec 401.40. Preservative treatment. Sec

401.42 Chestnut Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Piles. For chestnut piles, requirements on percentage of heartwood, permissible knots, bend, bark and defects, peeling, diameters at tip and at 4 feet from butt for various lengths.

References.—Requirements for piles irrespective of secie. See 401.40. Preservative treatments. See specie.

401.43 Cypress Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Piles. For cypress piles, permissible knots, bend, bark, and defects, requirements on percentage of heartwood, peeling, diameters at tip and at 4 feet from butt for various lengths.

American Railway Engineering Assn. 1929 Manual. Wooden Bridges and Trestles. Timber Piles. Includes cypress piles, permissible sizes and types of defects, number of rings for close grained piles, amount of sapwood for piles to be treated, dimensions, straightness requirements.

American Society of Municipal Engineers. ers; 1927. Includes cypress piles used in sewer construction, general quality, straightness, minimum dimensions of ends for various lengths.

References.—Requirements for piles irrespective of ecie. See 401.40. Preservative treatment. See specie. 400.42.

401.44 Fir Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Piles. For Douglas fir piles, required percentage of heartwood, permissible knots, bend, bark, and other defects, requirements on peeling. diameters of tip and at 4 feet from butt for various lengths.

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles. Timber Piles; 1928. Includes fir piles, permissible sizes and types of defects, number of rings for close grained piles, amount of sapwood for piles to be treated, dimensions, straightness requirements.

References.—Requirements for piles irrespective of specie. See 401.40. Preservative treatment. See 400.42.

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Piles. For oak piles, permissible knots, bend, bark, and defects, requirements on percentage of heartwood, peeling, diameters at tip and at 4 feet from butt for various lengths.

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles. Timber Piles; 1928. Includes oak piles, permissible sizes and types of defects, number of rings for close grained piles, amount of sapwood for piles to be treated, dimensions, straightness requirements.

References.—Requirements for piles irrespective of ecie. See 401.40. Preservative treatment. See 400.42.

401.46 Pine Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Piles. For piles of southern yellow pine, permissible knots, bend, bark, and defects, requirements on percentage of heartwood, peeling, diameters at tip and at 4 feet from butt for various lengths.

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles. Timber Piles; 1928. Includes pine piles, permissible sizes and types of defects, number of rings for close grained piles, amount of sapwood for piles to be treated, dimensions, straightness, require-

References.—Requirements for piles irrespective of specie. See 401.40. Preservative treatment. See 400.42.

401.47 Redwood Piling

American Assn. of State Highway Officials, Highway Bridges and Incidental Structures; 1931. Timber Piles. For redwood piles, permissible knots, bend, bark, and defects, requirements on percentage of heartwood, peeling, diameters at tip and 4 feet from butt for various lengths.

California Redwood Assn. California Specifications for Structural Grades of Redwood; 1930. Round Redwood Piling. Requirements on taper, straightness, straightness of grain, annual rings per inch. permissible defects, dimensions for various lengths.

References.—Requirements for piles irrespective of specie. See 401.40. Preservative treatment. See 400.42.

401.49 Miscellaneous Specifications for Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Sheet Piling. For timber sheet piling, requirements on general quality and nonpermitted defects, tongue and groove construction, sharpening of lower ends.

American Society of Municipal Engineers. Sewers; 1927. Includes wood piles used in sewer construction, general quality, permissible kinds of wood, straightness requirements, minimum dimensions of ends for various length piles.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Sheet Piling. Requirement on number of sound edges and faces, permissible defects.

U. S. Gov., Dept. of Agriculture. Bureau of Public Forest Road Construction: 1929. Untreated Timber Piles. Of any satisfactory species, cut from live trees, nonadmissible defects, minimum allowed diameters of tip and butt, for foundation piles and trestle piles.

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recom. R16-29; 1929. wood lumber. For sheet piling, standard sizes and dressed dimensions, basic rules for quality

References.—Requirements for piles irrespective of specie. See 401.40. Preservative treatment. See 400.42.

401.5 SHIP'S KNEES

401.6 CORDWOOD

401.9 MISCELLANEOUS SPECIFICATIONS FOR RAW AND HEWN TIMBERS

American Walnut Mfrs. Assn. Rules for Grading American Black Walnut Logs; 1930. Definitions of 4 grades of logs with dimension and length limits, permissible defects in each grade, standard

method of measuring. Lumbermen's Club of Memphis. Rules for Measurement and Inspection of Logs; 1924. Standard lengths, definitions of defects, grading requirements as regards permissible defects, presence of sap, diameter, twist, etc., for 3 grades of red and white oak, white ash, yellow poplar, cypress, red gum, cottonwood, elm, maple, basswood, tupelo, and black gum, rules for measuring logs,

402. ROUGH LUMBER

402.1 SAWN STAKES AND CROSS ARMS

American Electric Railway Engr. Assn. Recommended Specification. D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes wood cross arms with wood according to Spec. D100 of Nat. Elec. Light Assn., requirements on boring, dimensions and permissible variations for light service and heavy service arms up to 8-pin sizes.

American Railway Assn., Electrical Section, VI-a-23; 1923. Electric Light, Power Supply Electrical Section, and Trolley Lines Crossing Railways. Cross arms. For fir or southern pine cross arms for use at crossings, cross-sectional requirements for

2 to 8 pin sizes, permissible stresses

American Railway Assn., Electrical Section. VI-b-25: 1925. Construction of Overhead Electric Supply Lines for Railroad Use on Railroad Property. Cross arms. For wooden cross arms, permissible minimum section dimensions, permissible unit stresses for fir and yellow pine arms, strength requirements when installed on pole and braced.

American Railway Assn. Telegraph and Telephone Section. 1-A-28; 1929. Douglas Fir Cross arms. For standard cross arms for steel pins and for wood pins and for cross arms with special pole pin spacing, requirements on finish, number of annual rings, slant of grain, permissible sap-wood, defects, and warp, dimensions of cross

arms and of cross arm gage.

American Railway Assn. Telegraph and Telephone Section. 1-A-29; 1929. Treated Southern Yellow Pine Cross Arms. For standard cross arms for steel pins and for wood pins and for cross arms with special pole pin spacing, requirements on finish, number of annual rings, slant of grain, permissible sapwood, defects, and warp, dimensions of cross arms and of cross arm gage, amount of preservative with method of application and material requirements according to A. R. A. specifications.

National Electric Light Assn. Suggested Specification. D100-24T; 1924. Untreated Wood Cross Arms (Material). For cross arms of Douglas fir and long leaf yellow pine, requirements on annual ring count, permissible types and amount of defects, gauging accuracy. Published in 1924

N. E. L. A. proceedings.

Lumber. American Lumber Standards for soft- National Electric Light Assn. Suggested Specifications. D109-28T; 1928. Tentative 2 Pin Cross Arm (Low Voltage). D125-28T; 1928. Tentative. 2 Pin Cross Arm. (Medium Voltage.) For wood cross arms, dimensions and allowable variations for one size of each, gaging of holes, 4 sides surfaced, wood in accordance with D100-22.

National Electric Light Assn. Suggested Specificaational friedric Light Assai. Suggested specifications. D1D-22; 1922. 4 Pin Cross Arm (Low Voltage). D111-22. 1922; 6 Pin Cross Arm (Low Voltage). D112-22; 1922. 8 Pin Cross Arm (Low Voltage). D120-22; 1922. 6 Pin Alley Arm (Low Voltage). D130-22; 1922. 2 Pin Cross Arm (Medium Voltage). D 131-22; 1922. 4 Pin Cross Arm (Medium Voltage). For wood cross arms, surfaced on 4 sides, dimensions and allowable variations, gaging of holes. Published in 1924 N. E. L. A. proceedings.

U. S. Gov., Dept. of Commerce. Bureau of Standards. H10; 1927. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. For cross arms of yellow pine or fir, permissible minimum cross-

section dimensions for various numbers of insu-

lator pins for various grades of line construction.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Cross Arm Stock of Douglas Fir. Definition of 1 quality grade, permissible defects, required ring count and grain slope.

References.—Gage for bolt hole sizes in cross arms. See 615.82. Grading rules for cypress, fir, pine. See 400.22, 400.23, 400.26. Preservative treatment. See 400.4.

402.2 FENCING, GUARD RAILS, SCAFFOLDS, AND FALSE WORK

California Redwood Assn. California Specifications for Structural Grades of Redwood; 1930. Defines 2 grades of all-heart lumber for railing timbers, wheel guards, etc., as regards annual rings per inch, angle of grain, permissible defects, dimensions of rough and of dressed sizes.

U. S. Gov., Dept. of Agriculture. Bureau of Public Forest Road Construction; 1929. Wire Cable Guard Rail. Requirements on construction, minimum size, and minimum strength of steel cable, quality of posts, construction method

and painting.

U. S. Gov., Dept. of Agriculture. Bureau of Public Forest Road Construction; 1929. Wood Guard Rail. For wood rail and posts, requirements on grade of lumber for sawed rail and posts, on preparation and general quality of round posts, painting and paint mixture, preservative treatment of posts, construction of guard fence.

References .- Redwood grading rules. See 400.27.

402.3 WOOD BLOCKS FOR PAVEMENTS AND FLOORS

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures: 1931. Creosoted Wood Paving Blocks. For blocks of yellow pine, Douglas fir, tamarack, and Norway pine, general quality and freedom from defects requirements, limiting dimensions; composition, specific gravity, and distillation requirements for coal-tar paving oil and for coal-tar distillate oil as preservatives, treatment procedure, required preservative content of blocks.

American Assn. of State Highway Officials. Tentative Method T-63. Undated. Method of Sampling and Testing Wood Block. Requirements on size of sample, methods for determination per-

centage of moisture, of oil, and of rosin. American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Creosoted Wood Block Pavements; 1929. Grading, subgrade and foundation according to A. R. E. A. specifications for concrete pavements, wood of Douglas fir, Norway pine, yellow pine, tamarack, western larch, general quality and proportions of blocks, description of 3 permissible methods of laying, expansion joints.

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Wood Block Floors; 1929. Foundation according to A. R. E. A. specifications, general quality, size and proportions of blocks, treatment in accordance with specifications of American Wood Preservers Assn., methods of laying blocks and of providing

expansion joints.

American Society of Civil Engineers. Committee Materials for Road Construction and Report. Standards for Their Test and Use: 1918. cludes wood block pavements, recommendations on maximum road grade, crown, artificial foundation, available woods, disallowed defects, size of blocks, annual rings, type of preservative, method of treatment with preservative, construction of pavement, methods of test of preservative.

merican Society of Municipal Engineers. Creo-soted Wood Block Paving: 1921. Wood for American blocks of yellow pine, fir, tamarack, Norway pine, hemlock or black gum, general quality, number of annual rings, and percentage of heart wood requirements, test requirements for preservative oils, treatment procedure, pitch and asphalt

fillers, and construction of pavement.

American Society for Testing Materials. D 52-20; 1920. Wooden Paving Blocks for Exposed Pavements. Covers southern yellow pine, Douglas fir, tamarack, Norway pine, hemlock, or black gum woods, general quality, number of annual rings, percentage of heartwood, limiting dimensions, treatment procedure using pressure process, and retention of preservative requirements.

American Wood Preserver's Assn. 16b; 1923. Creosoted Wood Block Street Paving. Of southern yellow pine, Douglas fir, tamarack, or Norway pine, size of blocks, creosote treatment procedure for blocks, pavement construction for concrete foundation with paint coat or mortar bed or mastic cushion construction, physical and chemical requirements for bituminous filler.

American Wood Preserver's Assn. 19b; 1923. terior Creosoted Wood Block Flooring. Of southern yellow pine, Douglas fir, tamarack, or Norway pine, size of blocks, requirements on percentage creosote, construction of floor for bituminous paint coat on concrete base or for mortar bed or bituminous mastic cushion on concrete base, requirements for coal tar pitch for filler.

References.—Preservative treatments. See 400.4. Road construction. See also 518.1, 518.2, 518.3. Bituminous fillers. See 505.15. Sand filler. See 512.14

402.4 YARD LUMBER

References.—Other yard lumber. See 411, Structural and factory lumber. See 412, 413. Am. Lumber Standards for softwood yard lumber. See 400.0.

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes strips, defects, dressed dimensions and rough sizes, grade definitions for 4 grades in conformity with American Lumber Standards, moisture content requirements.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927, Strips, Grading according to Am. Lumber Standards, definitions of quality grades giving permissible defects, standard dimensions.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Cherry Strip. For clear and No. 1 common grades, definitions of grades, length and width limits, permissible defects, sapwood, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Mahogany Strips. For clear, No. 1 common, and wormy, definitions of grade, width and length limits, per-

missible defects, etc. National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Plain and Quartered Oak Strips. For clear, clear sap, No. 1 common, and No. 2 common, definitions of grade, width and length limits, permissible defects, sapwood, etc., slant of grain for quartered oak. National Hardwood Lumber Assn. Rules

Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Poplar Strips. For clear, sap, No. 1 common, No. 2 common, definitions of grade, width and length limits, permissible defects, sapwood, etc.

National Hardwood Lumber Assn. Rules Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Strips. For clear, No. 1 and No. 2 common, definitions of grade, length and width limits, permissible defects.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Common Boards and Strips. For 5 grades of strips, definitions of grade including standard lengths and permissible short pieces, permissible defects and crook, sizes in accordance with American Lumber Standards.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 2. Common Boards and Strips. Definitions of 4 common grades, permissible defects, standard sizes, permissible moisture content for air dried or kiln dried material. Conforms to American Lumber Standards. Southern Pine Assn. The Gulf Coast Classification

of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Kiln Dried Strips. River plate standard, definition of 1 grade, permissible defects, sizes. Does not cover dressed and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Strips. West Indian (export grade),

definitions of 4 quality grades.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Common Lumber. Definitions of 5 common grades, permissible defects, standard sizes, for above woods. In conformity with Am. Lumber Standards.

References.—Am. Lumber Standards for softw. strips. See 400.0. Grades for boards. See 402.42.

402.42 Boards

American Railway Assn. Freight Container Bu-reau. Tentative Specifications. Circulars No. 5, No. 10, No. 12; 1923. Crates for Furniture (Case Goods), Crates for Furniture and Lamps, Crates for Upholstered Furniture. Includes lumber for crates, permissible moisture and allowable defects, permissible woods arranged into four groups depending on strength and nail holding qualities.

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes common boards, defects, dressed dimensions and rough sizes, grade definitions for 4 grades in conformity with American Lumber Standards, moisture content requirements.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Common Boards. Grading according to Am. Lumber Standards, definitions of quality grades, Nos. 1, 2, and 3 common giving permissible defects, standard di-

mensions

National Hardwood Lumber Assn. Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. cypress yard lumber, definitions of grades, standard dimensions, permissible defects for 5 finish grades, 4 common grades, and peck grade. Standard dimensions and permissible defects for nanel stock

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber: 1927. Common Boards and Strips. For 5 grades of common boards, definitions of grade, including standard lengths and permissible short pieces, permissible defects and crook, sizes in accordance with American Lumber Standards,

Pacific Lumber Inspection Bureau (Inc.) Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for boards and ship plank for export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Common Boards. Definitions of 5 common grades, standard sizes and dressed dimensions, permissible defects. In conformity with Am. Lumber Standards with the addition of a peck

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 2. Common Boards and Strips. Definitions of 4 common grades, permissible defects, standard sizes, permissible moisture content for air dried or kiln dried material. Conforms to American Lumber Standards.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Boards and Planks. Export grades, definitions of 5 quality grades, permissible defects and sapwood, sizes. Does not cover dressed

and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Boards and Planks. River plate standard, definition of 1 grade, permissible defects, sizes. Does not cover dressed and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Boards and Planks. West Indian (export grade). Definitions of 4 quality grades,

sizes.

Southern Pine Assn. The Gulf Coast Classifica-tion of Pitch Pine Resawn Lumber and Sawn Lumber: 1923. Kiln Dried Saps. Air Dried Saps. Export grade for boards and dimension of sapwood, definitions of 1 grade of each, permissible defects, sizes. Does not cover dressed and surfaced lumber.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Boards. For fir, hemlock, and spruce, definitions of 5 common grades; for red cedar, definitions of 4 common grades, permissible defects, standard sizes. In conformity with Am. Lumber Standards except for addition of a se-

lected common grade.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Rough Clears. For Douglas fir, hemlock and spruce, definitions of 2 quality grades for each of air dried or kiln dried and definitions of 2 grades of green clears for each of 3 thickness ranges, permissible defects, sizes and dimensions. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Common Lumber. Definitions of 5 common grades, permissible defects, standard sizes, for above woods. In conformity

with Am. Lumber Standards.

402.43 Dimension Lumber

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes dimension lumber, defects, dressed dimensions and rough sizes, grade definitions for 3 common grades in conformity with American Lumber Standards, moisture content requirements.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Dimension, Heavy Joists and Small Timbers. Grading according to Am. Lumber Standards, definitions of Nos. 1, 2, and 3 Common with permissible defects and waste, standard dimensions.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Squares. For 2 grades including a clear heart grade, permissible

crook, sapwood, size and number of knots. National Hardwood Lumber Assn. Rules Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Select Dimension and Common Dimension. Definitions of grade, permissible defects, heart-center, etc., for any hardwood specified for construction work, National Hardwood Lumber Assn. Rules for

Measurement and Inspection of Harwood Lumber, Cypress, Veneers, Plywood; 1931. Squares. Sizes 3 by 3 to 12 by 12, for 5 grades, length limits, permissible defects, permissible wane and

sapwood for various woods, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Standard Turning Squares. For sizes 1/2-inch to 5 inches, length limitations, definitions for 2 grades including permissible defects, wane, etc.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Dimension. Definitions of 5 grades of common, including standard lengths, permissible defects and crook. In conformity with Am.

Lumber Standards.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Heavy Joists. Definitions of 2 grades of common, including permissible defects, for 4 by 8 inches and wider and 6 by 10 inches and wider. In conformity with Am. Lumber Standards

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for dimension lumber applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Dimension. Definitions of 5 common grades, permissible defects, standard sizes and dressed di-mensions. In conformity with Am. Lumber Standards with addition of a peck grade.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Turning Squares. For 2 sizes, dimensions, per-

missible sapwood and defects.

Southern Pine Assn. Grades of Dense Longleaf and Shortleaf Southern Yellow Pine Timbers. 1927 with 1928 Supplement. Utility Timbers. Definitions of 3 grades, merchantable, square edge and sound, and No. 1 common, including permissible sapwood and defects.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Dimension and Heavy Joists. Definitions of 3 common grades, permissible defects, allowable crook, dressing sizes. In conformity with Am. Lumber

Standards

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Deals. Export grades, definitions of 5 quality grades, permissible defects and sapwood, sizes. Does not cover dressed and surfaced

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Dimension. Export grades, definitions of 4 grades, permissible sapwood and defects, sizes. Does not cover dressed and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Kiln Dried Saps. Air Dried Saps. Export grades for boards and dimension of sapwood, definitions of 1 grade of each, permissible defects, sizes. Does not cover dressed and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Scantling. Export grades, definitions of 5 grades, permissible sapwood and defects, sizes. Does not cover dressed and surfaced

lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Scantling and Deals, River plate standard, definition of 1 grade, permissible defects, sizes. Does not cover dressed and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Scantling and Deals. West Indian (export trade), definitions of 4 quality grades,

sizes.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Dimension, Plank, and Small Timbers. For Douglas fir, hemlock, and spruce, definitions of 4 common grades; for red cedar, definition of 2 common grades, permissible defects, standard sizes. In conformity with Am. Lumber Standards except for addition of selected common grade for first 3 woods.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Nonstructural Timbers and Stringers. For Douglas fir, definition of 4 com-mon grades of timber and 2 common grades of stringers, for red cedar, definitions of 2 common grades of timbers, permissible defects. In conformity with Am. Lumber Standards except for additional selected common grade for fir.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Rough Clears. For Douglas fir, hemlock, and spruce, definitions of 2 quality grades for each of air dried or kiln dried and definitions of 2 grades of green clears for each of 3 thickness ranges, permissible defects, sizes and dimensions. In conformity with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Turning Squares. For Douglas fir and spruce, definition of 1 quality grade for

each, permissible defects.

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber; 1929, Windmill Stock. For Douglas fir stock, definition of selected common grade of timber. permissible defects, standard sizes.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, and Idaho White Pine Lumber; 1929. Common Lumber. Definitions of 5 common grades, permissible defeets, standard sizes, for above woods. In con-

formity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Dimension. Definitions of 3 grades of dimension of white fir, Douglas fir, spruce, or cedar, permissable defects. In conformity with Am. Lumber Standards.

References.—Am. Lumber Standards for softwood dimension lumber. See 400.0. Hardwood grading rules. See 400.3. Structural timbers. See 48s 412.1. 412.9. Plank. See 48s 412.1. Furniture dimension stock. See 413.53.

402.5 LATHS AND SHINGLES

402.51 Lath

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes lath, dimensions and permissible defects for 2 grades of common lath, dimensions and quality requirements for 1 grade of byrkit lath.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Lath. Standard dimensions, allowable scantiness, permissible de-

Contracting Plasterers' International Assn. Out-line Specification for Lathing and Plastering; 1930. Wood Lath. Standard thickness and

width of No. 1 grade lath.

National Hardwood Lumber Assn. Rules Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Hard-wood Lath. For 2 grades, standard length, required dimensions green and dry, permissible defects.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack. Lumber; 1927. Hemlock Lath and Byrkit Lath. Definitions of 3 grades of hemlock lath including standard lengths and permissible defects for each grade. For byrkit lath, definitions of 2 grades with permissible waste and standard size and pattern.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Lath grading rules for export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Southern ern Pine Lath, Byrkit Lath. Definitions of 2 grades of pine lath, permissible defects, standard sizes. Definition of 1 grade of byrkit lath, permissible defects, standard pattern and dimencione.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Byrkit Lath of Douglas Fir. Definition of 1 quality grade, permissible defects, standard sizes and pattern. In conformity with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1829. Lath. For green and dry lath of fir, hemlock, spruce, and cedar, definitions of 2 grades of

each, permissible defects.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idabo White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Lath. Definitions of 2 grades for each of above woods, definitions of 2 mixed grades, permissible defects, standard sizes in conformity with Am. Lumber Standards.

References.—Am. Lumber Standards for byrkit lath. Sec 400.0. Lathing practice. Sec 514.63. Metal lath. Sec 605.24.

402.52 Shingles

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Shingles. Dimensions, definitions of two grades with permissible defects, packing provisions.

Northern White Cedar Assn. Manufacture and Grading of Northern White Cedar Products; 1923. Shingles. Definitions of 3 grades with permissible defects, dimensions, and permissible

percentage of narrow widths.

Red Cedar Shingle Bureau. Grading and Packing Rules; 1931. Definitions of grade, permissible defects, width limits, and packing rules for 3 sizes of random width shingles and 3 grades, definitions of 2 grades of dimension shingles, packing and count requirements. In conformity with commercial standard CS31-31 issued by Bureau of Standards, U. S. Dept. of Commerce.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Shingles. Definitions of 5 quality grades as regards dimensions, permissible and nonpermitted

defects.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Shingles. Definitions of 4 grades, permissible defects, minimum dimensions, allowable sapwood.

U. S. Gov., Dept. of Commerce. Bureau of Standards CS31-31; 1931. Red Cedar Shingles. A commercial standard selected and accepted by industry establishing quality standards for western red cedar shingles, requirements on edge grain structure, disallowed defects, length, width, and thickness, running inches per bundle, and unit for standard packing, grading tolerance, definitions, covering capacity information.

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recom. R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. For red cedar shingles, standard sizes, definitions of 4 quality grades, required percentage of clear material, permissible sap-

wood, minimum width shingle in each size, packing and count.

References .- Asphalt shingles. See 505.16.

LUMBER FOR BUILDING AND FACTORY USE

ING PURPOSES

411.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce. Bureau of Standards R16-29; 1929. Lumber. American Lumber Standards, recommended and accepted by industry. For softwood yard lumber, basic definitions of standard select and common grades. yard and industrial size standards, description, measurement, and tally. Covers grades, sizes, and patterns for siding, flooring, ceiling, partition, molding, finish, shiplap, dressed and matched, etc.

411.1 SIDING

American Railway Assn. Mechanical Div. Siding, Flooring, Roofing, and Lining; 1912. For siding, standard dimensions for 2 widths of tongued and

grooved siding.

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes drop and bevel siding, definitions of defects, dimensions of standard patterns, definitions of grades and permissible defects, in conformity with American Lumber Standards, end matched drop siding is included.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Siding. Grading according to Am. Lumber Standards, definitions of quality grades with permissible sapwood and defects, standard dimensions of bevel, drop, and bungalow siding, definition of C. R. A. additional grade of clear heart lumber.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber; 1917 and Supplement No. 1: 1928. For siding, dimensions of standard

patterns (illustrated) of bevel, drop, bungalow, economy, anzac, and log cabin siding.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Drop Siding, and Bevel Siding. Definitions of 1 select and 3 common grades of siding including standard lengths and permissible short pieces, permissible defects and crook, sizes and pattern in accordance with American Lumber Standards.

Pacific Lumber Inspection Bureau (Inc.) Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for siding applicable to export trade only, for domestic trade the rules of West Coast

Lumbermens Assn. are used. Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Bevel Siding, Bungalow Siding, and Drop Siding. In conformity with Am. Lumber Standards,

definitions of 4 grades of each, dimensions and permissible defects and sapwood.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 2. Barn Siding. Definitions of 4 common grades, standard lengths and sizes, permissible defects, crook, and moisture content, standard patterns. Conforms to American Lumber Standards.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Bevel Siding. Definitions of 2 select and 3 common grades of siding, permissible defects, standard lengths, sizes and patterns, permissible moisture content for air dried or kiln dried material. Conforms to American Lumber Standards.

411. YARD LUMBER FOR GENERAL BUILD- | Southern Pine Assn. Grades for Long Leaf and Short Leaf Southern Pine Lumber; 1929. Drop Siding and End Matched Drop Siding. Definitions of 2 select and 3 common grades of drop siding and of 4 grades of end-matched drop siding, permissible defects, standard lengths, sizes and patterns, permissible moisture content for air dried or kiln dried material. Conforms to American Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Bevel Siding. Definitions of 3 quality grades for each of Douglas fir, hemlock, spruce, and red cedar, permissible defects, standard sizes. In conformity with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Bungalow or Colonial Siding. Definition of 1 quality grade for each of Douglas fir, hemlock, and spruce, definitions of 3 grades for red cedar, permissible defects, standard sizes. conformity with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Drop Siding, Rustic Siding. For Douglas fir and hemlock, definitions of 3 grades of each, permissible defects, standard sizes and patterns. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Colonial Siding, Bungalow Siding, Bevel Siding. Definitions of 4 quality grades for above woods except larch, definition of 3 grades for larch, an "E" grade included, permissible defects, standard sizes and patterns. In conformity with Am. Lumber Standards.
White Pine Assn. of the Tonawandas. Grades of

Northern White Pine Lumber as Made in the Tonawandas; 1922. Barn Siding. Definitions of 3 grades, permissible defects.

References.—Am, Lumber Standards for softwood siding. See 411.0.

411.2 FLOORING

411.21 Cedar Flooring

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Porch Flooring of Cedar. Definitions of 2 quality grades, permissible defects. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Pondersosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. For cedar flooring, standard patterns with dimensions.

References.—Am. Lumber Standards for softwood flooring. See 411.0.

411.22 Cypress Flooring

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Flooring. In conformity with Am. Lumber Standards, definitions of 4 quality grades as regards permissible defects and sapwood, standard dimensions and pattern.

References.—Am. Lumber Standards for softwood flooring. See 411.0.

411.23 Fir and Douglas Fir Flooring

Pacific Lumber Inspection Bureau (Inc.) Schedule N: 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for Douglas Fir flooring applicable to export trade only, for domestic trade the rules of West Coast

Lumbermens Assn. are used.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir. Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Flooring of Douglas Fir. Definitions of 5 quality grades of vertical grain flooring and of 4 grades of flat grain flooring, required angle of grain, permissible defects, standard sizes and patterns. In conformity with Am. Lumber Stand-

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, etc.; 1929. For Douglas and white fir for flooring, standard patterns with dimen-

References.—Am. Lumber Standards for softwood flooring. See 411.0.

411.24 Hemlock Flooring

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Flooring. Definitions of 1 select and 3 common grades of flooring including standard lengths and permissible short pieces, permissible defects and crook, sizes and patterns in accordance with American Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Flooring of Hemlock. Definitions of 5 quality grades of vertical grain flooring and of 4 grades of flat grain flooring, kiln dried, required angle of grain, permissible defects, standard sizes and patterns. In conformity with Am. Lumber Standards.

References.—Am. Lumber Standards for softwood flooring. See 411.0.

411.25 Maple Flooring

Maple Flooring Manufacturers Assn. Grading Rules for Northern Hard Maple, Beech and Birch Flooring; 1927. For 3 grades, standard dimensions, proportions of various lengths in each grade, permissible defects in each grade, requirement for kiln drying and end matching.

References.—Am. Lumber Standards for softwood flooring. See 411.0. Hardwood grading rules. See 400,3,

411.26 Oak Flooring

Oak Flooring Manufacturers Assn. of the U. S. Oak Flooring Grading Rules; 1931. Definitions of 3 grades of quartered oak and of 4 grades of plain oak flooring, as regards permissible defects. average length and permissible amount of short lengths per bundle, standard thicknesses, widths, and counts.

References.—Am. Lumber Standards for softwood flooring. See 411.0. Hardwood grading rules. See 400.3.

411.27 Pine Flooring

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes standard and factory flooring, definitions of defects, definitions of grades with permissible defects, in conformity with American Lumber Standards, dimensions.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. End Matched Flooring. Definitions of 4 grades of flat grain and 3 grades of edge grain flooring, length limits, standard sizes and patterns, permissible defects, and moisture content. Conforms to American Lumber Standards.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Factory Flooring and Decking. Definition of 1 common grade, permissible crook and defects, standard workings. In conformity with Am. Lumber

Standards.

Standards. Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Floor-ing. Definitions of 7 grades of flat grain and of 6 grades of vertical grain flooring, standard sizes and patterns, permissible defects, and moisture content. Conforms to American Lumber Standards

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Flooring. Export grades, definitions of 7 quality grades, permissible defects and sap-wood, sizes. Does not cover dressed and surfaced lumber.

Southern Pine Assn. Southern Yellow Pine Car Material; 1919. Car Flooring. Definitions of all-heart, heart face, and No. 1 common grades, with permissible defects for each, standard dimen-

with permissione detects for sold said said patterns.
Western Pine Assn. Grading Rules for Ponderosa
Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. For flooring of western pines, standard patterns with dimensions.

References.—Am. Lumber Standards for softwood flooring. See 411.0.

411.28 Spruce Flooring

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Flooring. For spruce flooring. kiln dried, definition of 1 quality grade, permissible defects, standard sizes and patterns. In conformity with Am Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929A. For spruce flooring, standard patterns with dimensions.

References.—Am. Lumber Standards for softwood flooring. See 411.0.

411.29 Miscellaneous Flooring Specifications

American Railway Assn. Mechanical Div. Siding, Flooring, Roofing, and Lining; 1912. For floor-ing, dimension requirements for 6 widths and various thicknesses of flooring of 3 types, square edged, shiplapped, tongue and groove, dressed all over.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Flooring. Grading according to Am. Lumber Standards, dimensions, two grades according to amount of heart wood and permissible defects, definition of C. R.

A. additional clear heart grade.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber; 1917. For flooring, dimensions of standard patterns, illustrated.

Maple Flooring Manufacturers Assn. Grading

Rules for Northern Hard Maple, Beech, and Birch Flooring; 1927. For three grades, standard dimensions, proportions of various lengths in each grade, permissible defects in each grade, requirement for kiln drying and end matching.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Tamarack Flooring. Definitions of 1 select and 3 common grades of flooring, including standard lengths and permissible short pieces, permissible defects and crook, sizes and patterns in accordance with American Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. For larch flooring, standard patterns with dimensions.

References.—Am. Lumber Standards for flooring of ft wood. See 411.0. Hardwood grading rules. See

411.3 CEILING LUMBER

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes ceiling lumber, definitions of defects, definitions of grades with permissible defects, in conformity with American Lumber Standards, dimensions.

California Redwood Assn. Eastern Grades California Redwood Lumber; 1927. Ceiling. Grading according to Am. Lumber Standards, definitions of two grades with permissible sapwood and defects, standard dimensions, definition of C. R. A. additional clear heart grade.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber; 1917. For ceiling,

dimensions of standard patterns, illustrated.

Northern Hemlock and Hardwood Mfrs. Assn.

Grading Rules for Hemlock and Tamarack Lumber; 1927. Ceiling. Definitions of 1 select and 3 common grades of ceiling, including standard lengths and permissible short pieces, permissible defects and crook, sizes and patterns in accordance with American Lumber Standards,

Pacific Lumber Inspection Bureau (inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Herrlock, Sitka Spruce, and Western Red Cedar Lumber. Greding rules for ceiling lumber applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Ceiling. In conformity with Am. Lumber Standards, definitions of 4 quality grades as regards permissible defects and sapwood, standard dimen-

sions and patterns.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Ceiling. Definitions of 2 select and 3 common grades, standard sizes and patterns, permissible defects, permissible crook, and moisture content. Conforms to American Lumber Standards.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. End Matched Ceiling. Definitions of 4 grades, length limits, permissible crook and defects, standard sizes and patterns, moisture content. Conforms

to American Lumber Standards,

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Ceiling. Definitions of 3 quality grades for fir, 3 grades for hemlock, and 1 grade for spruce, permissible defects, standard sizes and patterns. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. For ceiling lumber, standard patterns, definitions of quality grades for the various species of wood covered.

References.—Am. Lumber Standards for softwood ceiling. See 411.0. Hardwood grading rules. See 400.3.

411.4 PARTITION LUMBER, MOLDINGS, AND FIN-ISH LUMBER

411.41 Partition Lumber

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes partitions, definitions of defects, definitions of grades with

permissible defects, in conformity with American Lumber Standards, dimensions.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Partition Lumber. Grading according to Am. Lumber Standards, definitions of two grades with permissible sapwood and defects, standard dimensions, definition of C. R. A. additional clear heart grade.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber; 1917. For partitions, dimensions of standard patterns, illustrated.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Partition. Definitions of 1 select and 3 common grades of partition including standard lengths and permissible short pieces, permissible defects and crook, sizes and patterns in accordance with American Lumber Standards.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Partition. In conformity with Am. Lumber Standards, definitions of 4 quality grades as regards permissible defects and sapwood, standard

dimensions.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Partition. Definitions of 2 select and 3 common grades of partition, permissible defects, standard sizes and patterns, permissible moisture content. Conforms to American Lumber Standards.

West Coast Lumbermens Assn. Grading and Dress-irg Rules for Douglas Fir, Sitka Spruce, West Coast Hemleck, and Western Red Cedar Lumber; 1929. Partition. Definitions of 3 quality grades for Douglas fir and hemlock and of 1 grade for spruce, permissible defects, standard sizes and patterns. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. For partition lumber, standard patterns with dimensions, definitions of quality grades for the various species of

wood covered.

References.—Am, Lumber Standards for softwood partition. See 411.0. Hardwood grading rules, See 400.3.

411.42 Moldings

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes moldings, definitions of defects, definitions of grades with permissible defects, dimensions, in conformity with American Lumber Standards.

Arkansas Soft Pine Bureau. Wood Moldings and Universal Sizes; 1930. Illustrated hand book of molding patterns with dimensions.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Lattice Moldings, Casing, and Base. Definitions of grades, permissible defects, standard lengths.

Hardwood Interior Trim Manufacturers Assn. Rules and Regulations for Hardwood Interior Trim and Molding; 1928. Permissible defects for one grade, requirements on seasoning checks and warp, allowable moisture, designs and sizes to conform to American Lumber Standards.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929, Battens. Definitions of No. 1 Common grade or better as regards permissible defects, to be made according to molding book patterns, standard sizes and workings.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Moldings. Same as Am. Lumber Standards for grade B finish or better,

Southern Pine Assn. Grades of Longleaf and Shortleaf Southern Pine Lumber. 1929. Molded Casing and Base, Window and Door Jambs. Casing and base according to Am. Lumber Standards for sizes and patterns, definitions of 3 grades, permissible crook, defects, and moisture content.

Southern Pine Assn. Grades of Longleaf and Shortleaf Southern Pine Lumber; 1929. Moldings. Sizes and patterns in accordance with Am. Lumber Standards, definitions of 1 grade, permissible defects, moisture content, standard

lengths.

West Coast Lumbermens Assn. Grading And Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Casing and Base. For Douglas fir casing and base, definitions of 3 quality grades, permissible defects. In conformity with Am, Lumber Standards,

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber. 1929. Battens. For fir, hemlock, and red cedar battens, definitions of 1 grade of each, permissible

defects, standard sizes and patterns.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Molding. For fir, hemlock, spruce, and red cedar molding, definitions of 1 grade for each of 2 width ranges, permissible defects, in conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce and Cedar Lumber; 1929. Moldings. Definition of C and better grade for above woods, permissible defects, standard lengths. In con-

formity with Am. Lumber Standards.

White Pine Assn. of the Tonawandas. Northern White Pine Lumber as Made in the Tonawandas; 1922. Moldings. Definitions of 2 quality grades for moldings and of stained sap and star clear grades for inside finish and trim, permissible defects, standard widths and lengths.

References.—Am. Lumber Standards for softwood molding and interior trim. See 411.0. Hardwood grading rules. See 400.3.

411.43 Finish Lumber

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Finish. Definitions of 3 grades, permissible defects and crook, standard lengths and sizes, moisture content requirements. In conformity with Am. Lumber Standards.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. For finish, deflnitions of 3 grades of finish including a clear heart grade, permissible defects for each grade, standard lengths, standard sizes and dressed dimensions, in conformity with American Lumber Standards.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Thin Lumber, and Plywood; 1931. Cypress Finish. Definitions of 5 grades including a clear heart grade, permissible defects for each grade, standard widths and lengths.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Panel and Wide No. 1. 18 inches wide and over of poplar, cottonwood, and gum, length limits and permissible defects.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber: 1927. Finishing Lumber. Definitions of one grade, including standard lengths and permissible amounts of short pieces, permissible defects and crook, standard dressed dimensions in conformity with American Lumber Standards.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Finish. Definitions of 5 grades, standard sizes and dressed dimensions, permissible defects. In conformity with Am. Lumber Standards with

additional grade of clear heart finish.

Southern Cypress Manufacturers Assn. Grades and Classification of Cypress; 1929. Panel Stock. Definitions of 3 finish grades as regards permissible defects, dimensions and lengths, with clear heart finish in addition to A and B finish of Am. Lumber Standards.

Southern Pine Assn. Grades of Longleaf and Shortleaf Southern Pine Lumber; 1929. Finish. Definitions of 3 quality grades, standard lengths, permissible crook and defects. In conformity

with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir. Sitka Spruce. West Coast Hemlock, and Western Red Cedar Lumber; 1929. Finish. For fir, hemlock, and cedar, definitions of 3 quality grades, for spruce, definitions of 2 grades, permissible defects, standard sizes. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Pondosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Finish. Definitions of 3 select grades for above woods except larch, definitions of 2 grades for larch, permissible defects, standard sizes. In conformity with Am. Lumber Standards with a few exceptions on sizes.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Finish. Definitions of 2 quality grades, permissible defects, standard

widths and lengths.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Shelving and Dressing. Definitions of 2 quality grades suitable for inside and outside finishing, permissible defects.

References.—Am. Lumber Standards for softwood finish. See 411.0. Hardwood grading rules. See 400.3.

411.5 SHIP-LAP LUMBER

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes shiplap, definition of defects, dimensions, grade definitions and permissible defects, in conformity with American Lumber Standards.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Ship-lap. Grading according to Am. Lumber Standards, definitions of quality grades with permissible sapwood and defects, standard dimensions.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber; 1917. For ship-lap, dimensions of standard patterns, illustrated.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Dressed and Matched and Ship-lap. For ship-lap, definitions of 5 grades of common, including standard lengths and permissible short pieces, permissible defects and crook, sizes in conformity with American Lumber Standards.

Pacific Lumber Inspection Bureau (Inc.). Schedule N: 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for ship-lap applicable to export trade only, for domestic trade the rules of West Coast

Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Ship-lap, In conformity with Am, Lumber Standards, definitions of 4 quality grades as regards permissible defects and sapwood, standard dimensions and pattern.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Heavy Ship-lap. Definition of 1 common grade, permissible crook and defects, standard sizes and pat-

terns

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 2. Ship-lap. Definitions of 4 common grades, standard lengths and sizes, permissible defects, crook, and moisture content, standard pattern. Conforms to American Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Ship-lap. For fir and hemlock, definitions of 5 common grades, for red cedar, definitions of 4 common grades, permissible defects, standard pattern. In conformity with Am. Lumber Standards except for addition of a selected common grade.

Western Pine Assn. Grading Rules for Pondosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. Ship-lap. Standard sizes and patterns, definitions of grades with

permissible defects.

References.—Am. Lumber Standards for softwood ip-lap. See 411.0. Hardwood grading rules. See

411.6 DRESSED AND MATCHED YARD LUMBER

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes dressed and matched yard lumber, defect definitions, dimensions and grade definitions with permissible defects, in conformity with American Lumber

standards, moisture content requirements.

California Redwood Assn. Eastern Grades of
California Redwood Lumber; 1927. Dressed and
Matched Yard Lumber. Grading according to
Am. Lumber Standards, definitions of quality
grades with permissible sapwood and defects,

standard dimensions.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Dressed and Matched and Ship-lap. Definitions of 5 grades of common, including standard lengths and permissible short pieces, permissible defects and crook, sizes in conformity with American Lumber Standards.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 2. Dressed and Matched. Definitions of 4 common grades, standard sizes, permissible crook and defects, permissible moisture content. Conforms to American Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Dressed and Matched. Defini-tions of 5 common grades for fir and hemlock and of 4 common grades for red cedar, permissible defects, standard sizes and patterns, in conformity with Am. Lumber Standards except for addition of a selected common grade.

Western Pine Assn. Grading Rules for Pondosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. Dressed and Matched. Standard sizes and dressed dimensions, defini-

tions of quality grades with permissible defects for each grade.

References.—Am. Lumber Standards for softwood D. & M. See 411.0. Hardwood grading rules. See 400.3.

411.7 ROOFING LUMBER

American Railway Assn. Mechanical Div. Siding, Flooring, Roofing, and Lining; 1912. For roofing and lining, standard dimensions of 2 widths of tongued and grooved roofing and lining.

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Grooved Roofing. Definition of No. 1 common grooved roofing, permissible defects, standard pattern and standard groove, in conformity with American Lumber Standards.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Heavy Roofing and Decking. Grading according to Am. Lumber Standards, definitions of No. 1 and No. 2 Common with permissible defects, standard dimen-

sions

Southern Cypress Mfrs. Assn. Grades and Classifications of Cypress; 1929. Grooved Roofing. Standard pattern and groove with dimensions for grooved roofing are the same as the standard of

Arkansas Soft Pine Bureau.

Southern Pine Assn. Grades of Dense Longleaf and Shortleaf Southern Yellow Pine Timbers; 1927 with 1928 Supplement. Factory Flooring and Roofing Plank. Definitions of 2 quality grades, permissible sapwood and defects, standard lengths and standard workings.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 2. Grooved Roofing. Definitions of 4 common grades, standard lengths, sizes and groove dimensions, permissible crook, defects, and moisture content. Conforms to American Lumber Standards.

Western Pine Assn. Grading Rules for Pon-derosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. Grooved Roofing. Standard pattern with standard sizes and dimensions, grade definitions including permissible defects in each grade.

References.—Am. Lumber Standards for softwood rosing. See 411.0. Hardwood grading rules. See 400.3. Wood shingles. See 402.52.

411.8 SHELVING

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for spruce shelving applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Shelving. Definitions of 4

quality grades, permissible defects.

411.9 MISCELLANEOUS SPECIFICATIONS FOR BUILDING LUMBER

Pacific Lumber Inspection Bureau (Inc.) ule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for stepping and decking applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. End-Matched Concrete Form Lumber, End-Matched Sheathing and Subflooring, Definition of I grade, standard lengths, permissible defects, in conformity with American Lumber Standards.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS26-30; 1930. Aromatic Red Cedar Closet Lining. A commercial standard selected and accepted by industry for clothes closet lining covering requirements on species of wood, standard thicknesses, lengths, widths, details of matching, percentage of heartwood, and permissible defects.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir. Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Cedar Porch Decking, Flooring and Ceiling, definitions of 2 grades, permissible defects.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber: 1929. Corn Cribbing. For Douglas fir cribbing, green or air dried, definitions of 2 quality grades, permissible defects, standard pattern for beveled type.

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Stepping. For fir, hemlock, and spruce, definitions of 2 quality grades of vertical grain

stepping, permissible defects.
West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; Turned Porch Columns. For Douglas fir, definition of 1 grade of green or air dried columns; for red cedar, definition of 1 quality grade for porch columns and newels, permissible defects in each grade.

References.—Am. Lumber Standards. See 411.0. Hardwood grading rules. See 400.3.

412 STRUCTURAL TIMBERS AND BRIDGES 412.0 GENERAL ITEMS

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures: 1931. Basic Grading of Structural Timber. Grading in accordance with American Lumber Standards, requirements on measurements of knots and defects, number of annual rings in yellow pine and douglas fir, amount of summer wood, standard dimensions, permissible amount and location of defects, for select and common grades for joists, plank, beams, stringers, posts, and timbers, re-

quirements on percentage of heartwood in untreated timber.

American Mining Congress. Committee Report on Mine Timbering; 1923. Kinds and sizes of timber, method of timbering in roadways and permanent air courses, recommended sizes of ties for

steel rails, drawings of corner framing.

American Railway Engineering Assn. 1929 Man-ual. Wooden Bridges and Trestles, Grading Rules and Classification of Timber and Lumber for Railway Uses; 1929. Commercial names, use and size classification, definitions of defects and blemishes differing slightly from American Lumber Standards, abbreviations, American Lumber Standards for softwood lumber, including specifications for structural wood joist, plank, beams, stringers, and posts, working stresses for structural timbers under various use exposures, classes · of lumber to be used for various structural parts of bridges and buildings.

American Railway Engineering Assn. 1929 Manual. Wooden Bridges and Trestles. Structural Wood Joist, Plank, Beams, Stringers, Posts, and Timbers. Permissible variations from nominal dimensions for rough and for surfaced materials, permissible defects, location and sizes of knots, required slope of grain, heartwood, ring count,

etc., for various grades and species of structural timber.

American Society for Testing Materials. D 9-30; 1930. Definitions of Terms Relating to Timber. Definition of structural timber, of terms relating to wood, of standard defects, commercial names and botanical names of woods used for structural timbers.

American Society for Testing Materials. D 245-30: 1930. Structural Wood Joist, Planks, Beams, Stringers and Posts. Structural grades of quality, use, and size in conformity with "Basic Provisions for the Selection and Inspection of Softwood Dimension and Timbers Where Working Stresses are required" adopted at the General Lumber Conference in 1925, permissible variations from nominal dimensions, permissible sizes and location of knots in various sizes of lumber. maximum shake, checks, and wane, requirements on density and location of radial lines for various

Southern Pine Assn. Grades of Dense Longleaf and Shortleaf Southern Yellow Pine Timbers; 1927 with 1928 Supplement. Structural Joists and Plank. Definitions of 2 grades, dense heart and structural square edge and sound, including density requirements, amount of heart, and per-

missible defects, standard sizes,

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recom. R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. For structural dimension and timber where working stresses are required, general regulations to be used as a basis for the preparation of grading rules by manufacturers, standard method for measurement of defects. density, etc., definitions of dense Douglas fir and dense southern pine.

412.1 STRUCTURAL TIMBERS

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Cribbing. Requirements on grade of timber or general quality of logs, least dimensions of timbers or of logs, minimum dimensions of mud sills, construction, length of ties, fastening means, method of filling, etc.

American Railway Engineering Assn. 1929 Manual. Wooden Bridges and Trestles. Construction Oak: 1921. Where strength and durability are controlling items, definition of firsts, names of oaks included under white oak or red oak. For structural timbers of white oak, disallowed defects, permissible amount of boxed hearts and

wane in various sized pieces.

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes dimension timbers and joists, definitions of defects, dimensions, definitions of grades with permissible defects, in conformity with American Lumber Standards, moisture content requirements.

Associated Factory Mutual Fire Insurance Com-panies. Longleaf Pine Factory Timber: 1916. For beams, columns, and plank in slow burning construction, requirements as to density, amount of rosin, heartwood and growth rings, permissible

defects.

California Redwood Assn. California Redwood in Structural Grades; 1930. Structural Grades in conformity with Am. Lumber Standards for structural joists and plank, structural beams and stringers, and structural posts and timbers, definitions of 4 quality grades of each class as regards permissible knots, sapwood, and other defects, with permissible bending stress for each grade, required ring count.

California Redwood Assn. California Specifica-

tions for Structural Grades of Redwood; 1930.

Definitions of 3 quality grades as regards required ring count, permitted and nonadmissable defects, rough sizes and dressed dimensions.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Dimension, Heavy Joists and Small Timbers. Grading according to Am. Lumber Standards, definitions of Nos. 1, 2, and 3 Common with permissible defects and waste, standard dimensions.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Crossing Plank. Definitions of grade, permissible defects.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Sound Square Edge, and Common Timbers. Definitions of grade, permissible defects.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Step Plank. For 14 to 2 inch planks, for 2 grades, definitions of grade, limiting dimensions, per-

missible defects.

Northern Hemlock and Hardwood Mfrs. Assn. Grading Rules for Hemlock and Tamarack Lumber; 1927. Timbers. Permissible defects in No. 1 Common of sizes 4 by 4 to 8 by 8 and larger, in No. 2 Common of sizes 4 by 4 and 4 by 6, in mine and dock structural timber of sizes 10 by

10 and larger.

Pacific Lumber Inspection Bureau (Inc.). Schedule N. 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Rac Cedar Lumber. Grading rules for timbers applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Timbers. For No. 1 grade nonpermissible de-

fects, heartwood requirement.

Southern Pine Assn. Grades of Dense Longleaf and Shortleaf Southern Yellow Pine Timbers; 1927 and 1928 Supplement. Structural Joists and Plank. Definitions of 2 grades, dense heart and structural square edge and sound, including density requirements, amount of heart, and permissible defects, standard sizes.

Southern Pine Assn. Grades of Dense Longleaf and Shortleaf Southern Yellow Pine Timbers; 1927 with 1928 Supplement. Structural Timbers. Definitions of 3 grades, select, dense heart, and structural square edge and sound, including density requirements, amount of heart, permis-

sible defects.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929 and Suppl. No. 1 and No. 2. Dimension and Heavy Joists. Definitions of 3 common grades, permissible defects, allowable crook, standard dressing sizes.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Dimension. Export grades, definitions of 4 grades, permissible sapwood and defects, sizes from 6 by 6 and up. Does not cover dressed and surfaced lumber.

Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Merchantable Sawn Timber. Export grade, definition, lengths. Does not cover dressed

and surfaced lumber.

Southern Pine Assn. Southern Yellow Pine Bridge and Trestle Timbers for Railway Structures; 1917. Stringers, Caps, Sills, Posts, Struts, Girts, Braces, Ties, and Guard Rails. Definitions of 2 quality grades, requirements on percentage of heart wood, permissible defects.

Southern Pine Assn. Southern Yellow Pine Car Material; 1919. Car Sills and Framing. Definitions of No. 1 common heart and No. 1 common grades with permissible defects and permissible

scant measurement when dry.

U. S. Gov., Dept of Commerce. Bureau of Standards. Simplified Practice Recom. R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. For joist and plank, beams and stringers, and posts and timbers, permissible sizes of knots, shakes, checks, and wane, required slope of grain for 2 quality grades.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Flr, Sitha Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Posts and Timbers, Structural. For Douglas fir, definitions of 3 quality grades, permissible defects, close grain requirements; for red cedar, definition of 1 quality grade, permissible defects, recommended working stresses for different exposure conditions. In conformity with Am. Lum-

ber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West-Coast Hemlock, and Western Red Cedar Lumber; 1929. Structural Joist, Rafters, Plank, and Small Timbers, definitions of 3 grades for fir and of 1 grade for red cedar, permissible defects, close grain requirements for fir timber, in conformity with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Structural Stringers, Girders, and Beams, definitions of 3 grades for fir and of 1 grade for red cedar, permissible defects, close grain requirements for the fir timbers, in conformity with Am,

Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Dimension and Timber. Definitions of 3 grades of white fir, Douglas fir, spruce, or cedar timbers, permissible defects. In conformity with Am. Lumber Standards.

western Pine Assn. Structural Grades of Larch and Inland Empire Douglas Fir; 1931. Published as supplement to 1929 standard grading rules for yard and factory lumber, definitions of grades, requirements on closeness of grain and density, permissible kinds, amounts, and location of defects, recommended working stresses for joists, plank, structural posts, and

References.—Other specifications for structural timber. See 12.0. Am., umber Standards for structural terms of the see 12.0. Am. of the standards for structural rules. See 400.3. Plants, dimension lumber and foists. See also 40.2.42, 402.43. Heavy flooring and roofings see also 41.12, 411.7, 412.9. Sheet pling. See 401.45. Permissible unit stresses. See 400.12. Methods of testing for strength, moisture, etc. See 400.13.

412.2 BRIDGES

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Structures. For bridges, requirements on grades of lumber to be used for the various bridge members, framing and boring of treated timber, preservative coating of surfaces of untreated timbers and of pile heads, sizes of bolt holes, construction of pile bents, stringers, wheel guards, trusses, etc., painting.

American Electric Railway Engr. Assn. Misc. Methods and Practices. B209-26; 1926. Design of Small Bridges, Culverts, and Trestles. Shows maximum recommended sizes of pipe and drawings of typical designs of concrete box culverts. concrete arch culverts, I-beam spans on concrete

abutments, frame and pile trestles.

American Railway Engineering Assn. 1929 Manual. Wooden Bridges and Trestles. Requirements for metal details, workmanship on pile and frame trestles, specifications for timber piles, grading rules and classification of timber and lumber for railway uses, specifications for construction oak and structural oak timbers.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood: 1931. Bridge and Dock Timbers. For any hardwood, definitions of

one grade, permissible defects.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads, Forest Road Construction; 1929.
Timber Structures, including bridges, requirements on grade of lumber applicable to various members of structure, minimum absorption for treated timbers, thickness of floor planks, methods of construction for pile bents, stringers, etc., materials according to standard specifications specified.

References.—Timber for bridges. See also 412.0, 412.1. Bridge flooring. See also 411.2, 412.9. Permissible unit stresses. See 400.12. Methods of testing for strength, moisture, etc. See 400.13.

412.9 MISCELLANEOUS SPECIFICATIONS FOR STRUCTURAL TIMBERS AND BRIDGES

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Bridge Floors. For plank floor, requirements on grade of lumber, construction of single plank and of double plank floors. For laminated or strip floors, requirements on grade of lumber, construction, construction of subfloors for wood block wearing surface.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Bridge Plank. No. 1 and No. 2 grades, width and length limits,

definitions of grade, permissible defects.
Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Lumber; 1923. Decking. Export grades, definitions of 2 quality grades, all heart and heart face, permissible defects, sizes. Does not cover dressed and surfaced lumber.

413. SHOP OR FACTORY LUMBER

413.0 GENERAL ITEMS

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Pattern and Shop Lumber. Grading in accordance with Am. Lumber Standards, for one grade of shop lumber, requirements on percentage of cuttings of given size, permissible defects and sapwood.

California Redwood Assn. Western Grades: 1929. Shop Lumber. Requirements on percentage sap and percentage of cuttings above certain sizes,

permissible defects.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Factory Lumber. In conformity with Am. Lumber Standards except as to dressed dimensions of 3 of 11 standard sizes, definitions, standard dimensions, permissible defects and sapwood for firsts, seconds, selects, No. 1 shop, No. 2 shop, and box.

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recom. R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. For factory plank, basic grade classification into 5 grades dependent on percent-

age of first or second quality door cuttings available, definitions of 2 grades of door cuttings, standard sizes of cuttings.

U. S. Gov., Dept. of Commerce. Bureau of Standards. Simplified Practice Recom, R16-29; 1929. Lumber. American Lumber Standards for softwood lumber. For shop lumber, general requirements forming basis for classification into 6 classes, 3 of which are dependent on percentage of first or second quality cuttings available, sizes of cuttings, general quality classification of cuttings.

Western Pine Assn. Grading Rules for Pon-derosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Etc.; 1929. Factory Lumber. Standard Thicknesses for factory lumber sur-

faced on 2 sides.

413.1 TANK STOCK LUMBER

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Tank Stock, Silo Staves. Grading in accordance with Am. Lumber Standards, definition of 1 grade with permissible defects and amount of sapwood, defi-nition of C. R. A. additional clear heart grade.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Cypress. For tank and boat stock, standard thicknesses. width and length limits, permissible defects and

sapwood for 1 grade.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for fir tank stock applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Tank and Boat Stock. Standard dimensions, permissible defects for 1 grade.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Silo staves, of Douglas fir, defini-tions of 3 quality grades, permissible defects, water-tight requirements.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Tank Stock, Rough Green. For fir and red cedar tank stock, definitions of 1 quality grade for each, permissible sapwood and defects. In conformity with Am. Lumber Standards.

Western Pine Assn. Grading Rules for Ponderosa Pine, California White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Tank Stock. General requirements for 1 grade.

References.—Am. Lumber Standards for softwood factory and shop lumber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413.2 CAR STOCK LUMBER

413 20 General Items

American Railway Assn. Mechanical Div. Recom-mended Practice. Lumber; 1910. Description of various woods used by railroads for car and locomotive lumber, schedule of lumber adopted in 1916 indicating the kind and grade that should

be used in each part of the car or locomotive.

American Railway Assn. Mechanical Div. Recommended Practice. Sections of Car Lumber; 1930. Dimensions of 13 standard sections or patterns of car lumber, siding, flooring, etc., requirements on moisture content when lumber is applied to car.

413.21 Fir Car Stock

American Railway Assn. Mechanical Div. Recommended Practice; 1910. Lumber. Includes Douglas fir car and locomotive material, classification, grading and dressing rules, definitions and illustrations of knots and other defects.

est Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Car Material of Douglas Fir. Definitions of 3 grades of car framing, of 3 grades of green running board, of 2 grades of car siding, of 3 grades of car lining, of 1 grade of insulation, of 3 grades of car roofing, of 4 grades of car decking, and of 3 grades of horizontal sheathing, permissible defects for each grade.

Western Pine Assn. Grading Rules for Larch and Douglas Fir Railroad Car Material. 1931. Published as supplement to 1929 standard grading rules for yard and factory lumber, definitions of grades and permissible defects for running boards, car lining, car roofing, car siding. car decking, and horizontal sheathing.

References.—Species of lumber recommended for various uses. See 413.20. Am. Lumber Standards for softwood factory and shop lumber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413.22 Mahogany Car Stock

References .- See references under 413.21.

413.23 Oak Car Stock

American Railway Assn. Mechanical Div. Recom-mended Practice; 1910. Lumber. Includes locomotive, freight and passenger car oak, classification, grading and dressing rules, definition and illustrations of knots and other defects.

National Hardwood Lumber Assn. Rules Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Select Car Stock, Freight Car Stock. White oak for select grade and white or red oak for freight car stock, definitions of grade, permissible defects.

References.—Species of lumber recommended for various uses, See 413.20. Am. Lumber Standards for softwood factory and shop lumber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413.24 Pine Car Stock

American Railway Assn. Mechanical Div. Recommended Practice; 1910. Lumber. Includes white and Norway pine and southern yellow pine car material, classification, grading and dressing rules, definitions and illustrations of knots and other defects.

Southern Pine Assn. Southern Yellow Pine Car Material; 1919. Car Decking or Flooring. Definitions of all-heart, heart face, and No. 1 common grades, with permissible defects for each, stand-

ard dimensions and patterns.

Southern Pine Assn. Southern Yellow Pine Car Material; 1919. Car Siding, Lining, and Roofing. Definitions of 1 select and 2 common grades, permissible defects, standard dimensions and pat-

Southern Pine Assn. Southern Yellow Pine Car Material; 1919. Car Sills and Framing. Definitions of No. 1 common heart and No. 1 common with permissible defects and allowable scant

measurement when dry.

References.—Species of lumber recommended for various uses. See 413.20. Am. Lumber Standards for softwood factory and shop lumber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413.25 Spruce Car Stock

American Railway Assn. Mechanical Div. Recom-mended Practice; 1910. Lumber. Includes

eastern spruce, classification, grading and dressing rules, definition and illustrations of knots and other defects.

References.—See references under 413.24.

413.26 Hemlock Car Stock

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Hemlock Car Material. Definitions of 2 grades of car siding, 3 grades of car lining, and 3 grades of car roofing, permissible defects.

References .- See references under 413.24.

413.29 Miscellaneous Car Stock

American Railway Assn. Mechanical Division. Recommended Practice; 1910. Lumber. List of the woods used by railroad companies, schedule of kind and grade of lumber used in the detail parts of cars and locomotives, classification, grading and dressing rules for northern pine car material, including white and Norway pine and eastern spruce, for southern yellow pine car material, for locomotive freight and passenger car oak, for Douglas fir car and locomotive material, for cypress car material, with definitions and illustrations of knots and other defects.

American Railway Assn. Mechanical Div. Lining for Outside Framed Cars; 1917. Standard dimensions of tongued and grooved lining for 3

standard thicknesses.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Car Roofing and Siding, Car Lining. Definition of 1 grade of each as regards permissible defects.

Western Pine Assn. Grading Rules for Larch and Douglas Fir Railroad Car Material. 1931. Published as supplement to 1929 standard grading rules for yard and factory lumber, definitions of grades and permissible defects for running boards, car lining, car roofing, car siding, car decking, and horizontal sheathing.

References.—Species of lumber recommended for various uses. See 413.20. Am. Lumber Standards for softwood factory and shop lumber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413.3 AIRPLANE STOCK LUMBER

413.31 Softwood Airplane Stock

413.32 Hardwood Airplane Stock

413.4 SHIP STOCK LUMBER

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Decking. For No. 1 common grade, definition of grade, permissible defects, standard sizes, lengths, and dressed dimensions, standard workings.

California Redwood Assn. Eastern Grades of California Redwood Lumber: 1927. Decking. Definitions of 2 common grades, permissible defects, crook and cup, standard lengths, standard workings, in conformity with Am. Lumber Standards. National Hardwood Lumber Assn. Rules for Meas-

urement and Inspection of Hardwood Lumber, Cypress, Vencers, Plywood; 1931. Cypress. For tank and boat stock, standard thicknesses, width and length limits, permissible defects and sap-

wood for 1 grade.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for ship plank and decking applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929.

Tank and Boat Stock. Standard dimensions,

permissible defects for 1 grade.

Southern Pine Assn. Grades of Longleaf and Shortleaf Southern Pine Lumber; 1929. Deck-ing. Definition of No. 1 common grade, permissible defects and crook, standard sizes and dressed dimensions, standard workings, in conformity with American Lumber Standards.

Southern Pine Assn. Gulf Coast Classification of Pitch Pine; 1923. Decking. Standard sizes. definitions of 2 quality grades, permissible de-

fects for each grade.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Ship Decking, Rough Ship Plank. For fir material, definition of 1 quality grade for each, permissible defects.

References.—Am. Lumber Standards for softwood factory and shop lumber. See 413.0. Hardwood grading rules. See 400.3.

413.5 STOCK FOR WOODEN HANDLES, FURNI-TURE, AND VEHICLES

413.51 Handle Stock Lumber

References.—Handles for agricultural implements and for tools. See 428.1, 428.2.

413.52 Vencer and Plywood

American Society for Testing Materials. D 45-17T 1917. Tentative Specifications. Canned Food Boxes, Wirebound Construction, Includes veneer for box construction, requirements on kiln drying of lumber, permissible size, type, and location of knots.

Douglas Fir Plywood Institute. Douglas Fir Plywood Grading Rules; 1928. Applications and uses of 4 grades, grade names, no very definite

quality requirements for the grades.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Thin Lumber and Plywood; 1931. Rotary Cut Veneer, Cottonwood, Cypress, Gum, Poplar, Sycamore, Tupelo, and Yellow Pine. For 8 types and grades, definitions of grade, permissible defects, width and length limits, rules

for measurement, etc. National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Sawn and Sliced Piano Rim Stock, Plywood. Permissible defects in center stock, definitions of 4 grades of faces and 3 grades of backs for panels and tops with requirements on matching, allowable discoloration, etc., definitions of 3 grades of lumber

cores.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Sawn and Sliced Veneer of Plain White and Red Oak. For 2 grades, thickness, width and length limits, definitions of grade, permissible defects, sapwood,

streaks, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Sawn and Sliced Veneer of Quartered White and Red Oak. For 3 grades, thickness, width, and length limits, definitions of grade, permissible defects, sapwood, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber. Cypress, Veneers, Plywood; 1931. Sawn Red Gum Veneer. For 2 grades of quartered red gum, figured and unfigured, definitions of grade, thickness, width, and length limits, permissible defects.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber,

Cypress, Veneers, Plywood; 1931. Veneer, Rotary Cut Ash, Basswood, Beech, Birch, Elm, and Maple. For 6 grades, definitions of grade, permissible defects, width and length limits, rules for measurement, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Veneer, Ro-tary Cut Red Oak, White Oak, and Chestnut. For 4 grades, definitions of grade, permissible defects, required amount of clear face cuttings, etc. in each grade, rules of measurement.

Plywood Manufacturers Assn. Rules for Measurement and Inspection of Veneer, Thin Lumber and Plywood; 1926. The rules are the same as those of the National Hardwood Lumber Assn. cover-

ing this class of product.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS35-31; 1931. Plywood. A commercial standard selected and accepted by industry establishing grading rules for hardwood and eastern red cedar plywood, including requirements on figure, grain, and color matching, permissible kinds and amounts of defects for 4 grades of faces for the various wood species, construction and permissible defects for various grades of cores and cross banding, standard sizes and quantities of plywood, tolerances on dimensions, definitions of plywood terms.

References.—Am. Lumber Standards for softwood veneer and plywood. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413.53 Furniture Stock except Plywood and Veneer

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, urement and inspection of 1331. Furniture Di-mension Stock. For clear, select, and common grades of square stock and flat stock, permissible scantiness in thickness and width, permissible defects, woods in which sap wood is a defect, etc.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Uppers and Selects. Definitions of 3 clear grades suitable for plano and

organ building, permissible defects.

References.—Veneer and plywood. See 413.52. Am. Lumber Standards for softwood furniture stock. At 13.0 under U. S. Gov. Hardwood grading rules. See 400.3. Wooden furniture. See 430-439.

413.54 Wagon and Vehicle Stock Lumber

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes wagon bottoms, definitions of defects, dimensions, definitions of grades with permissible defects.

National Assn. of Farm Equipment Manufacturers. Wagon Material; 1921. National Hardwood Lumber Assn. Grading rules for No. 1 and No. 2 wagon stock, axles, bolsters, sandboards, brake beams, poles, reaches, eveners, singletrees, neck yokes, sawed felloes, requirements on kinds of wood, general quality of wood, standard dimensions, and permissible defects.

National Hardwood Lumber Assn, Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Vehicle Lumber. For 4 grades, definitions of grade, width and length limits, permissible defects, pin

worm holes, stain, etc.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Wagon Stock—Axles. For No. 1 and No. 2 hickory axles, definitions of grade, required length, permissible defects, etc. National Hardwood Lumber Assn. Rules for

Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Wagon Stock-Bolsters and Sandboards. Of oak or hickory, No. 1 and No. 2 grades, definitions of

grade, permissible defects.

National Hardwood Lumber Assn. Rules Measurement and Inspection of Hardwood Lumher, Cypress, Veneers, Plywood; 1931. Wagon Stock—Box Boards. For poplar, cottonwood, gum, tupelo, magnolia, and basswood boxboards. for 1 grade, width and length limits, standard thickness, permissible defects.

National Harwood Lumber Assn. Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Wagon Stock-Eveners, Single Trees, Brakebeams, and Neck Yokes. Of hickory, No. 1 and No. 2 grades,

definitions of grade, permissible defects.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood, 1931. Wagon Stock-Reaches and Poles. Of oak or hickory No. 1 and No. 2, grades, definitions of grade,

permissible defects.

National Hardwood Lumber Assn. Rules for Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, Plywood; 1931. Wagon Stock—Sawn Felloes. Of oak, No. 1 and No. 2 grades, definitions of grade, permissible defects.

Southern Pine Assn. Grades for Long Leaf and Short Leaf Southern Pine Lumber: 1929. Wagon Bottoms. Definitions of 2 quality grades, standard thickness, minimum stock width, moisture content, permissible defects. Conforms to American Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Fir Wagon Bottoms, definition of 1

quality grade, standard sizes, permissible defects. References,—Railway car stock. See 413.2. Ship stock. See 413.4. Am. Lumber Standards for softwood shop and factory inmber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

413 6 PATTERN STOCK LUMBER

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Pattern and Shop Lumber, Grading in accordance with Am. Lumber Standards, for pattern lumber, defini-tions of 2 quality grades of clear lumber with permissible flat grain and annual growth rings.

est Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast West Coast Hemlock, and Western Red Cedar Lumber; 1929. Cedar Shop Lumber. For general cut-up purposes and for pattern lumber, standard dressed dimensions, definitions of 3 quality grades dependent on percentage of certain quality cuttings available, definitions of 2 grades of cuttings with permissible defects, size of cuttings. In conformity with Am. Lumber Standards.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Pattern Lumber. Definitions of 2 select grades and of 2 cut-up grades,

permissible defects, standard sizes.

References.—Am. Lumber Standards for softwood pattern Inmber. See 413.0 under U. S. Gov. Hard-wood grading rules. See 400.3. Pattern colors. See 429.9.

413.7 COOPERAGE STOCK LUMBER

References .- Cooperage. See 421.

413.8 DOOR, WINDOW, AND MILLWORK LUMBER

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes molded cas-ing and base, window and door jambs, definitions of defects, definitions of grades for finish, sizes and natterns in accordance with American Lumber Standards

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Casing and Base, Window and Door Frame Stock. Grading in accordance with Am. Lumber Standards, definitions of 2 finish grades, definition of C. R. A. clear heart grade.

Hardwood Interior Trim Manufacturers Assn. Rules and Regulations for Hardwood Interior Trim and Molding; 1928. Permissible defects for 1 grade, requirements on seasoning checks and warp, allowable moisture, designs and sizes to conform to American Lumber Standards.

Pacific Lumber Inspection Bureau (Inc.). Schedule N: 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for Douglas fir door stock applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn, are used.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules western red cedar panel flitches applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are nsed.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Window and Door Frame Stock, Jambs, Etc. In conformity with Am. Lumber Standards, definitions of 3 quality grades as regards permissible

defects and sapwood.

West Coast Lumbermens Assn. Grades for Architectural Woodwork; 1930. Millwork Lumber. For 2 quality grades, requirements on moisture content, permissible defects, special properties and allowable defects for the different species of west coast softwoods and hardwoods.

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Cut Door Stock. For Douglas fir, hemlock, and spruce, definitions of 3 quality grades of each of stiles, rails, top rails, and muntins, permissible defects.

West Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West lng Rules for Douglas Fir, Sirka Spruce, West-Coast Hemlock, and Western Red Cedar Lum-ber; 1929. Factory Lumber. Definitions of 1 select and 3 common grades of Douglas fir, hemlock, and spruce, dependent on percentage of door or sash cuttings, definitions of 3 quality grades of door cuttings with required ring count and permissible defects, sizes of door cuttings. In conformity with Am. Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Factory Plank. Cedar plank for door and sash cuttings, definitions of 3 clear grades and of 3 shop grades dependent on percentage of certain quality cuttings available in each grade, definitions of 2 quality grades of cuttings with permissible defects, size of cuttings.

In conformity with Am. Lumber Standards.
Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine,
Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Factory Grades. Definitions of No. 3 clear factory, No. 1 shop, No. 2 shop, and No. 3 shop, dependent on percentage of door cuttings available, standard sizes and grades of door cuttings with permissible defects, standard thicknesses. In conformity with Am. Lumber Standards. Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Inch Factory Grades. Definitions of inch 3 clear factory and inch shop grades, dependent on percentage of cuttings available, sizes and quality of cuttings suitable for general mill work.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Door and Trim Lumber. Definitions of 3 quality grades dependent on percentage of clear cuttings available, permissible

defects.

References.—Am. Lumber Standards for softwood shop and factory lumber. See 413.0 under U. S. Gov. Hardwood grading rules See 400.3. Millwork See 423. Molding, casing, baseboard. See also 411.42. Flinish and panel stock. See 411.3.

413.9 MISCELLANEOUS SHOP AND FACTORY LUMBER

National Cigar Box Manufacturers Assn. Cigar Box Lumber. For imitation and veneered cedar, made from sawed bay poplar lumber. For imitation cedar, thickness of tops and ends, permissible percentage of 3 foot lengths, permissible defects, permissible defects for veneered cedar.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules and Basic Schedule of Douglas Fir. Pacific Hemlock, Sitta Spruce, and Western Red Cedar Lumber. Grading rules for fir staves and pipe stock applicable to export trade only, for domestic trade the rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Box Lumber. Dimensions and permissible defects for

1 grade.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Washing Machine Tub Stock. Definition of B and Better Finish grade in conformity with Am. Lumber Standards.

U. S. Gov., Dept. of Commerce. Bureau of Standards, R59; 1926. Rotary-Cut Lumber Stock for Wire Bound Boxes. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of softwood stock for boxes, designates standard lengths, widths, and thicknesses.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Box Lumber. Definitions of 3 grades of hemlock and spruce box lumber and 1 grade of red cedar, grades based on percentage of box cuttings available, standard thicknesses. West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Cedar Shop Lumber. For general cut-up purposes and for pattern lumber, standard dressed dimensions, definitions of 3 quality grades dependent on percentage of certain quality cuttings available, definitions of 2 grades of cuttings with permissible defects, size of cuttings. In conformity with Am, Lumber Standards.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Fir Pipe Stave Stock. Definitions of 1 quality grade, permissible sapwood and defects.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Ladder Stock. For fir, hemlock, and spruce ladder stock, definition of 1 grade of each, permissible defects, required ring count.

Western Pine Assn. Grading Rules for Ponderosa

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Box Lumber. Definitions of inch box, thick box, and short box lumber grades, dependent on percentage of cuttings available, size and quality requirements for cuttings.

Western Pine Assn. Grading Rules for Ponderosa Pine, Calif. White Pine, Sugar Pine, Idaho White Pine, Larch, Douglas Fir, White Fir, Spruce, and Cedar Lumber; 1929. Incense Cedar Pencil Stock. Definition of 1 quality grade with permissible defects.

White Pine Assn. of the Tonawandas. Grades of Northern White Pine Lumber as Made in the Tonawandas; 1922. Box Lumber. Definition of 1 grade, permissible defects.

References.—Am. Lumber Standards for softwood shop and factory lumber. See 413.0 under U. S. Gov. Hardwood grading rules. See 400.3.

MANUFACTURES OF WOOD

(Except Furniture)

421. COOPERAGE, BARRELS, BOXES, AND SHOOKS

421.0 GENERAL ITEMS

References.—Standard fruit and vegetable barrel, standard lime barrel. See 951.10.

421.1 TIGHT BARREL STAVES

Associated Cooperage Industries of America. Tight Barrel Staves and Heading; 1930. Dimensions, number per barrel, permissible defects for bucked and sawed staves for spirits, oll, turpentine, and pork barrels of oak, gum and gum mixed timbers, and staves for therees. Dimensions and permissible defects of oak beer staves.

*References.—Tight barrel and tub staves. See also 951.10, 951.13, 951.24, 951.44, 951.72. Tank stock lumber. See 418.1.

421.2 SLACK BARREL STAVES

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 14; 1924. Slack Barrels and Slack Casks and Inside Packing for Pottery. Circular No. 21, 1927. Slack Barrels and Inside Packing for Glass Tableware. Include staves, kinds of suitable woods classed according to strength and nail | 423.1 WOODEN DOORS holding power, permissible moisture and defects in staves, construction and dimensions of staves.

Associated Cooperage Industries of America. Slack Barrel Staves; 1931. Thickness of staves for various woods, permissible kinds and amounts of defects for 2 grades, dimensions and standard bilge.

References .- Slack barrel staves. See also 951.10, 951.13.

421.3 BARREL HEADINGS AND HOOPS

American Railway Assn. Freight Container Bu-reau. Tentative Specification. Circular No. 14; 1924. Slack Barrels and Slack Casks and Inside Packing for Pottery. Circular No. 21; 1927. Slack Barrels and Inside Packing for Glass Tableware. Includes headings and hoops, kinds of suitable woods classed according to strength and nail holding power, permissible moisture and defects, construction and dimensions of headings and hoops. Associated Cooperage

Industries of Coiled Elm Hoops; 1930. Dimensions of keg and barrel hoops, permissible defects.

Darrel hoops, permissible defects.
Associated Cooperage Industries of America.
Slack Barrel Heading; 1931. Thickness, permissible defects, woods, construction of 3 grades.
Associated Cooperage Industries of America.
Steel Hoops, Width and Gage, for Tight Barrels and Kegs, other than I. O. C. Barrels and Kegs;

1930. Standard dimensions of head hoop, quarter hoop, and bilge hoop for various capacity

kegs and barrels.

Associated Cooperage Industries of America. Tight Barrel Staves and Heading; 1930. For circled and square headings, sawing, thickness, length, and construction, permissible defects, kinds of wood for spirits, beer, oil, turpentine, and pork barrels of oak and gum, and for ash tierce

Reforences.—Headings and hoops. See also 951.10, 951.13, 951.24, 951.44, 951.72. Steel hoops. See also 604.22.

421.4 BOX SHOOKS

Western Pine Assn. Rules for Grading Westpine Box Shooks and Crating; 1925. Definitions of 3 grades, select grade for macaroni, dried fruit, and similar tight packages, standard grade, and merchantable grade for meat boxes, vegetable and machinery crates, permissible defects and moisture content. Applicable to all Inland Empire woods,

References.—Box shook. See also 953.30, 953.31, 953.33, 953.35, 953.36, 953.39. Box lumber. See also 413.0, 413.9.

421.5 BOXES, BARRELS, CASKS, HOGSHEADS

References.—Barrels, drums, and tubs. See 951. Wooden boxes. See 953.3. Wooden crates. See 954.3. Wooden switch boxes. See 715.12.

422. BASKETS

References .- Baskets. Sec 952.

423. MILLWORK

423.0 GENERAL ITEMS

Millwork Institute of California. Service Bulletin 32; 1928. Glossary of Terms and Standard Trade Practices. Standard practice for mois-ture content, designation of dimensions, glazing, definitions of stiles, ralls, bars, sash and windows, types of doors, blinds, shutters, stickings, moldings, astragals, etc., construction and per-missible defects in doors of California pine, fir, or Oregon pine.

Millwork Institute of California. Architectural Woodwork; 1930. Doors. For solid and veneered doors for exterior and interior openings, including garage doors, cupboard doors, and access doors; permissible defects for various species of wood, requirements on thickness and construction of veneer, panels, and laminated panels, door thickness standards, construction of stile and rail doors and of flush doors, trimming standards.

Millwork Institute of California, Architectural Woodwork; 1930. Screens and Screen Doors, Architectural For wood framed screen doors, permissible woods and defects in wood, minimum mesh of wire cloth, standard thicknesses and tolerances for

screen doors, standard construction.

Millwork Institute of California. Service Bulletin 32; 1928. Glossary of Terms and Standard Trade Practices. Includes doors of No. 1 quality of California pine and/or fir or Oregon pine, requirements on construction and permissible defects.

National Door Manufacturers Assn. Standard National Manufacturers List of Doors, Open Sash and Outside Blinds; 1926. Includes grading rules with permissible defects, sap, defective workmanship, etc., for 4 quality grades of doors and 2 quality grades of garage doors, finished thicknesses and permissible scantiness.

National Door Manufacturers Assn. Standard Naational Mfrs. List of Doors, Open Sash and Outside Blinds; 1926. Garage Doors. Definitions of 2 quality grades as regards permissible defects in material and in stiles and bottom rails.

Southern Sash, Door, and Millwork Mfrs. Assn. Official Grades; 1923. For doors, definitions of 4 quality grades, permissible defects, for through tenoned, blind tenoned, or doweled standard

doors Southern Sash, Door, and Millwork Mfrs. Assn. Sash, Door, Blind, and General Millwork Catalog 3; 1919. Doors. Standard sizes and thicknesses of doors for various number and arrangement of panels, for ordinary doors, cupboard doors, bungalow and lattice doors, veneered panel and sash doors, garage doors, mirror and front doors, no dimensions of details,

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS22-30; 1930. Builders' Hardware, Nontemplate. A commercial standard selected and accepted by industry. Recommends minimum width of door stiles, method of measuring stile width, definition of "French door," elimination of

rabbets, minimum setback for door trim. West Coast Lumbermens Assn. Grades for Architectural Woodwork; 1930. Doors. For exterior and interior walls and for cabinets, requirements on structural features for softwood and for hardwood doors, thickness limits, width limits on stiles and rails, for 2 quality grades, requirements on structural features of solid and of veneered stile and rail panel or glass doors, slab doors, and inside doors of the select grade.

References.—Millwork lumber. See also 411.4, 413.8. Metal doors and tin clad doors. See 605.22. Softwood and hardwood grading rules. See 400.2, 400.3, 413.0.

423.2 SASH

Millwork Institute of California. Architectural Woodwork; 1930. Screens and Screen Doors. For wood framed window and sash screens, porch screens, ventilator screens, and screen porch screens, ventuator screens, and screen doors, permissible woods and defects in wood, minimum mesh of wire cloth, standard thick-nesses and tolerances for screens, standard construction.

Millwork Institute of California. Architectural Woodwork; 1930. Windows and Sash. For win-dows, casements, cabinet and partition sash and other sash for exterior and interior wall or ceiling openings, permissible defects, permissible woods, standard thicknesses and tolerances, standard construction and assembly, sizes of tenons and dowels, thickness of veneer for plywood construction.

National Door Manufacturers Assn. Standard National Manufacturers List of Doors, Open Sash and Outside Blinds; 1926. Includes grading rules with permissible defects, sap, defective workman-ship, etc., for check rail and plain rail windows and sash, finished thicknesses and permissible scantiness

Southern Sash, Door, and Millwork Mfrs. Assn. Official Grades; 1923. For sash, permissible defects for 1 grade of check rail window and 1 grade of plain rail window and sash, permissible varia-

tion from list thickness for finishing.

Southern, Sash, Door, and Millwork Mfrs. Assn. Sash, Door, Blind, and General Millwork Catalog 3; 1919. Sash. List of standard sizes giving thickness of sash, number of lights, size of glass, and size of opening, for check rail windows, plain rail windows, casement sash, one-light sash, cupboard sash, cellar sash, barn sash, transoms, hot bed sash, front sash, bungalow windows, no dimensions of details.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware, Nontemplate. A commercial standard selected and accepted by industry. Defines "French winrecommends minimum width of stile, and standard mortises for turned wheel sash pulleys.

West Coast Lumbermens Assn. Grades for Architectural Woodwork; 1930. Sash. For Douglas fir or western red cedar, requirements on quality of wood and use of edge grain, structural features of sash, fitting and priming of sash and frames, for 2 quality grades.

References.—Millwork lumber. See also 411.4, 413.8. Steel windows. See 605.22. Softwood and hardwood grading rules. See 400.2, 400.3, 413.0. Definitions of terms, standard practice. See 425.0. Screen fasteners, See 617.35. Klinges. See

423.3 SLAT BLINDS

Millwork Institute of California. Architectural Woodwork; 1930. Blinds and Shutters. Permissible woods and defects in material, requirements on thickness of slats, thickness and laminated construction of panels, standard thicknesses of stile and rail type and of batten type, standard construction.

National Door Manufacturers Assn. Standard National Manufacturers List of Doors, Open Sash and Outside Blinds; 1926. Includes grading rules with permissible defects, sap, defective workmanship, etc., for 2 grades of outside blinds, finished thicknesses and permissible scantiness.

Southern Sash, Door, and Millwork Mfrs. Assn. Sash, Door, Blind and General Millwork Catalog 3; 1919. Blinds. List prices for outside blinds of 2 standard thicknesses and to fit various standard window openings, no dimensions of details.

Southern Sash, Door, and Millwork Mfrs. Assn. Official Grades: 1923. For blinds, permissible defects for one grade of outside blinds, permissible variation from list thickness for finishing.

West Coast Lumbermens Assn. Grades for Architectural Woodwork; 1930. Blinds and Shutters. For 2 quality grades, made from edge grain Douglas fir, western red cedar, or Port Orford cedar, requirements on structural features, use of water resistant glue, number of plies in panels, etc.

References.—Millwork lumber. See also 411.4, 413.8, Softwood and hardwood grading rules. See 400.2, 400.3, 413.0. Definitions of terms, standard practice. See 423.0.

423.4 SLATS

423.5 PICKETS AND PALINGS

Arkansas Soft Pine Bureau. Grades of Arkansas Soft Pine Lumber; 1929. Includes pickets, di-mensions and finish requirements for square pickets and for flat pickets.

California Redwood Assn. Eastern Grades of California Redwood Lumber; 1927. Battens, Pickets,

Porch Rail. Grading in accordance with Am. Lumber Standards, definition of 1 finish grade. California Redwood Assn. Standard Patterns of Worked Redwood Lumber; 1917. For pickets, dimensions, and design of standard patterns, illustrated.

Pacific Lumber Inspection Bureau (Inc.). Schedule N; 1929. Export Grading Rules of Douglas Fir, Pacific Hemlock, Sitka Spruce, and Western Red Cedar Lumber. Grading rules for Douglas fir pickets for use in export trade, for domestic trade the grading rules of West Coast Lumbermens Assn. are used.

Southern Cypress Manufacturers Assn. Standard Grades and Classifications of Cypress; 1929. Pickets. Definitions of 2 quality grades as regards permissible defects, standard sizes and workings for 3 square sizes and 1 flat size.

Southern Pine Assn. Grades for Longleaf and Shortleaf Southern Pine Lumber; 1929. Pickets. For square pickets and flat pickets, dimensions

and dressing requirements.

west Coast Lumbermens Assn. Grading and Dress-ing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Pickets. Douglas fir and red cedar pickets, green or air dried, definition of 1 quality grade of each, standard sizes for square and flat pickets.

References.—Softwood and hardwood grading rules See 400.2, 400.3, 413.0. Definitions of terms, standard practice. See 423.0.

423.9 MISCELLANEOUS MILLWORK SPECIFICA-TIONS

Millwork Institute of California, Architectural Woodwork; 1930. Interior Jambs, Interior Jamb and Trim Assemblies, Cabinetwork, Panelings, Standardized Cabinets and Built-In Fixtures, Stairwork, and Exterior Frames. Requirements on quality of material and finish, standards of construction and assembly.
Southern Sash, Door, and Millwork Mfrs. Assn.

Sash, Door, Blind, and General Millwork Catalog 3; 1919. Window Frames, Door Frames, standard size frames, sectional dimensions of pieces making up frame and the outside trim, grade of yellow pine used.

West Coast Lumbermens Assn. Grades for Architectural Woodwork; 1930. For 2 grades of architectural woodwork of west coast woods, requirements on moisture content and quality of wood, permissible defects, species of wood acceptable for various classes of millwork, requirements on structural features, fitting, priming, weatherproofing, etc., for exterior frames, sash, doors, inside finish, cabinets, panelwork, stairs, exterior finish, blinds, shutters, and screens.

References.—Millwork lumber. See also 411.4, 413.8. Softwood and hardwood grading rules. See 400.2, 400.3, 413.0. Definitions of terms, standard practice. See 428.0.

424. TANKS

References. -Wood tanks, See 956.2. Metal tanks. See 605.23, 956.2.

425. MANUFACTURES OF CORK

425.1 CORK STOPPERS

425.2 CORK BOARD, COMPRESSED CORK

Federal Specifications Board. LLL-U. S. Gov., C-571; 1931. Compressed Cork (Corkboard). Corkboard intended for insulation, requirements on behavior and expansion in boiling test, weight of material, dimensions of blocks.

References .- Ground cork. See 414.1.

425.3 LIFE PRESERVERS, BELTS, AND BUOY RINGS OF CORK

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Life Preservers. For marine use, vessels.) Life Preservers. For marine use, mandatory requirements for life preservers of compressed cork, balsa wood, or tule, or vest type, requirements on design, reversibility, length, buoyancy test, weight and stitching of cotton covering, strength of straps, weight of cork, weight and buoyancy test of kapok collar. U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors.

Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Ring Life Buoys. For solid cork buoys, mandatory requirements on minimum inside and outside diameters, buoyancy test, strength and sewing of cloth covering, size and attachment of manila line, gluing of cork layers and steaming test of joints.

References.—Ground cork, compressed cork, 414.1, 425.2. Balsa wood life buoy. See 429.9.

425.4 CORK PIPE COVERINGS

S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Pipe 1926. Covering. Sectional molded cork covering 11/4 inches thick, requirements for manufacture, type of jacket, application of covering to pipes and valves, for drinking or ice water supplies.

References.—Cork pipe covering. See also 707.41. Ground cork, compressed cork. See 414.1, 425.2.

426. VEHICLES

References — Wagon stock. See 413.54. Locomotives. See 7012, 721.1. Locomotives and trucks. See 721.2, 722, 723. Aircraft Depth Bergeles, moreovees, See 725.1, 725.2. Boats, ships. See 725.3, 725.4. Railway cars. See 726. Trucks, other than motor trucks. See 729.3.

427. ELECTRICAL EQUIPMENT OF WOOD

American Electric Railway Engr. Assn. Recommended Specification. D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes wooden switch boxes, general requirements on construction, painting, inclination of lead entrance holes, guarding of switch handles.

American Railway Assn. Signal Section 5728; 1928. Trunking and Capping. Wood trunking as conduit for insulated wire, finish, dimensions, quality requirements for lumber, permissible defects in white or norway pine, longleaf yellow

pine, fir, cedar, cypress, and redwood.

American Railway Assn. Telegraph and Telephone
Section. 1-C-3; 1928. Creosoted Wood Conduit. For conduit of southern yellow pine, norway pine, or black gum, permissible defects in wood, range in lengths of one size square conduit with circular bore, dimensious of tenons and mortises, required weight of preservative, method of creosoting according to A. R. A. spec. 1-A-10.

American Railway Assn. Telegraph and Telephone Section. 1-C-4; 1928. Creosoted Pine Plank. Plank for use in underground construction, southern yellow pine, permissible defects, dimension requirements, method of creosoting and creosote

requirements, method or creosoting and creosote according to A. R. A. standard specifications.

National Electric Light Assn. Suggested Specifications. D180-24T; 1924. Ground Wire Molding (Material). D190-24T; 1924. Ground Wire Molding (Dimensions). For wood molding for protection of ground wire, of oak, chestnut, or rock elm, permissible amount of defects, dimensions, and allowable varieties. Published in sions and allowable variations. Published in

sions and anowable variations.

1924 N. E. L. A. proceedings.

Underwriters' Laboratories. Wooden Raceways for
Surface Wiring; 1920. For electric circuits of
300 volts or less, for use in dry places, design,
minimum thicknesses of walls, and finish require-

References—Wooden insulators and insulator pins. See 429.7. Wooden poles, crossarms. See 401.3, 402.1.

428. WOODEN HANDLES, OARS, AND PAD-DLES

428.1 HANDLES FOR AGRICULTURAL IMPLE-MENTS

U. S. Gov., Dept. of Commerce. Bureau of Standards. R76; 1927. Ash Handles. Simplified practice recommended and accepted by industry defining 3 quality grades for fork, hoe, rake, and shovel handles, requirements on color, weight, texture, number of growth rings, straightness of grain, and permissible blemishes,

U. S. Gov., Dept. of Commerce. Bureau of Standards. R77; 1927. Hickory Handles. Simplified practice recommended and accepted by industry defining 3 quality grades for handles 24 inches and longer and 3 grades for hammer and hatchet handles, requirements on general quality, number of annual rings, color, and permissible defects for each grade.

428.2 WOODEN HANDLES FOR TOOLS

428.20 General Items

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Tool Handles. List or recommended standard sizes of tool handles for axe, pick, maul, hammer, adze, and hatchet,

428.21 Broom, Mop, and Brush Handles

References.—Brooms and broom handles. See 981.
Brushes and brush handles. See 982. Mopsticks.
See 983.1.

428.22 Package Handles

428.29 Miscellaneous Tool Handles

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Track Tool Handles; 1929. Standard design and dimensions of handles for track chisels, spike mauls, sledges, axes, picks, and adzes, eye dimensions in accordance with simplified practice recommendations R17 of U. S. Bureau of Standards for forged tools.

U. S. Gov., Dept. of Commerce. Bureau of Standards. H5; 1923. Approved by American Standards. ards Assn. as B 13-1924. American Logging and Sawmill Safety Code. Includes axe handles, requirements on general quality and grain of hickory handles, permissible defects, permissible variations from specified dimension, number of

annual rings.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R77; 1927. Hickory Handles. Simplified practice recommended and accepted by industry defining 3 quality grades for handles 24 inches and longer and 3 grades for hammer and hatchet handles, requirements on general quality, number of annual rings, color, and permissible defects for each grade.

References .- Standard sizes. See also 428.20.

428.3 OARS AND PADDLES

429. MISCELLANEOUS MANUFACTURES OF WOOD

429.1 WOODENWARE (DISHES AND KITCHEN UTENSILS)

429.2 WOODEN TOOLS

References .- Metal hand tools. See 615, 616.

429.3 WOODEN POLE BRACKETS AND STEPS

References.—Steel brackets and steps. See 719.62.

429.4 WOODEN LADDERS

National Safety Council (American Society of Safety Engineers, Engineering Section). Approved by American Standards Assn. as A14-1923. Safety Code for the Construction, Care, and Use of Ladders. Requirements on permissible kinds and relative dimensions of wood for side rails and rungs, permissible defects in wood, test requirements for strength for portable and extension ladders, dimensions and construction of wooden and of metal ladders, fixed, portable, extension, fire, and step ladders, trolley ladders, sectional, and trestle ladders, installation and operation.

References.—Ladder stock. See 413.9. Construction of ladders for mines. See 751.

429.5 WOODEN ROLLERS

429.7 WOODEN INSULATORS AND INSULATOR PINS

American Electric Railway Engr. Assn. Recommended Specification. D102–29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes wood insulator pins and wood strain insulators. For feeder insulator pins and for oak (Western Union) bracket insulator pins, requirements on dimensions and permissible variations, wood according to spec. D150 of Nat. Elec. Light Assn. For strain insulators of hickory, requirements on impregnation, construction, dimensions and permissible variations, breaking strength, for four sizes.

National Electric Light Assn. Suggested Specifications. D150-22; 1923. Wood Insulator Pins (Material). D160-22; 1922. Wood Pin (Dimensions). For yellow or black locust pins, permissible amounts and location of defects, threading, dimensions, and permissible variations. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications. D991-28T; 1923. Tentative. 1-inch and 1¾-inch Wood Pin Thread. For 4 threads per inch, detail dimensions of thread, allowable variations.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-227. Wood Strain Insulators. Requirements on general quality of hickory material, impregnation, and dimensions for various combinations of end connections of eye or clevis.

References.—Thread Gages for Insulator Pins. See 615.82,

429.8 WOODEN WHEELS

References.—Wood spoke automobile wheels. See 122.35. Wagon wheel stock. See 413.54.

429.9 MANUFACTURES OF WOOD NOT ELSE-WHERE CLASSIFIED

Amateur Athletic Union of the U. S. Official Athletic Rules; 1931. (Publ. No. 117R of American Sports Publishing Co., 45 Rose St., New York, N. Y.) Ice Hockey. For wood sticks, requirements on shape, width, length of blade and of bandle.

Amateur Athletic Union of the U. S. Specifications of Apparatus; 1931. (Publ. No. 117R of American Sports Publ. Co., 45 Rose St., N. Y.) Relay Baton. For hollow wood tube, standard length, weight and circumference.

Amateur Athletic Union of the U. S. Official Athletic Rules. (Publication No. 117R of American Sports Publishing Co., 45 Rose St., New York, N. Y.; 1931.) Springboard. Permissible minimum length and width, to be slightly elastic.

American Bowling Congress, Atlantic Coast Bowling Assn. Pacific Coast Bowling Assn. Ruse and Regulations; 1929. (Publ. No. 49R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Pins. To be made of maple, requirements on design and dimensions, permissible variation in weight of pins in one set, weight limits.

American Foundrymea's Assn. Standard Pattern Colors; 1925. Wall chart showing standard colors of paint to be applied to patterns to indicate finished and unfinished surfaces, seats of loose pieces, core prints, and stop offs.

American Foundrymen's Assn. Tentative Recommended Practice; 1927. Joint Committee on Pattern Equipment Standardization, Marking gaged surfaces and locating points on patterns, indicating chilled surfaces and metal inserts, loose pieces, sizes of leather fillets and of core prints. Tentative standard design of vibrators for match plates.

American Physical Education Assn., National Section on Women's Athletics. Outdoor Baseball Rules for Girls and Women; 1930. (Publ. No. 121R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Bat. For round wood bat, permissible maximum diameter and length, no restrictions on weight or kind of wood.

American Railway Assn. Telegraph and Telephone Section. 1-A-30; 1929. Typical Wood Booth for Roadway Telephone. For exterior woodwork and trim of cypress and for interior woodwork of pine, with asphalt shingle roof, requirements on thickness of roof sheathing and flooring, dimensions of backboard and door, general design and dimensions of booth.

and dimensions of boots.

American Railway Assn. Telegraph and Telephone
Section. 1-A-31; 1929. Telephone Shelter Box,
Type A. For box of white pine, requirements on
thickness and type of boards, grade of tin roofing, attachment and operating features of door,
dimensions and design of box, mounting on post.

American Railway Engineering Assn. 1929 Manual. Tie Plugs; 1925. Wooden plugs for filling spike holes, 25 suitable varieties of wood, general quality, dimensions of 2 standard sizes.

Intercollegiate Assn. of Amateur Athletes of America. (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.) 1931. Relay Baton. For standard hollow wood tube, requirements on length, weight, and circumference.

Machinery Bullders Society. Standard Method for Marking Patterns; 1926. Standard colors which parts of pattern are to be painted to indicate unfinished surfaces, machined surfaces, seats of loose pieces, core prints, and stop offs.

National Collegiate Athletic Assn. College Baseball Rules, 1930. (Publ. No. 130R of American Sports Publ. Co., 45 Rose St., N. Y.) Bat. Standards as given are the same as those of National College Baseball Rules.

tional League and American League of Professional Base Ball Clubs.

National Collegiate Athletic Assn. Ice Hockey Rules; 1930. (Publ. No. 92R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Sticks. To be of wood, permissible maximum width, length, and length of blade

National Collegiate Athletic Assn. Swimming Rules; 1930. (Publ. No. 91R of American Sports Publ. Co., 45 Rose St., N. Y.) Springboard. Standard length and width with recommended design and construction of pipe supports.

National Collegiate Athletic Assn. Track and Field Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Relay Baton. For wooden baton, requirements on

length, weight, and circumference.

National Hockey League, Laws of Hockey; 1929, (Publ. No. 90R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Hockey Stick. To be of wood, permissible length, length of blade, height of blade for regular stick and for goal keepers stick.

National Indoor Baseball Assn. of U. S. Hancock's Indoor Baseball Rules as revised and adopted by N. I. B. A. U. S.; 1980. (Publ. Group 1. No. 12R of American Sports Publ. Co., 45 Rose St., N. Y.) Bat. For wood bat, requirements on length, permissible maximum diameter, provision of rubber tip on handle, may be loaded with metal rod.

National League of Professional Base Ball Clubs.
American League of Professional Base Ball
Clubs. National Assn. of Professional Base Ball
Leagues. Official Base Ball Rules; 1930. (Publ.
No. 100X of American Sports Publ. Co., 45 Rose
St., N. Y.) Bat. To be round of hard wood construction, permissible maximum diameter and
length, permissible winding of twine on handle.

Playground and Recreation Assn. of America. Official Rules of Playground Base Ball; 1930. (Publ. Group 1. No. 12R of American Sports Publ. Co., 45 Rose St., N. Y.) Bat. For wood bat, permis-

sible maximum diameter and length.

Steel Founders Society of America. Standard Trade Customs in the Steel Foundry Industry. Undated. Includes standard painting practice for patterns for machined and unfinished surfaces, seats of loose places, core prints, etc., using solid and striped colors.

U. S. Field Hockey Assn. and American Physical Education Assn. Official Field Hockey Rules; 1931. (Publ. No. 33R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Sticks. Requirements on location of flat face, disallowance of inserts or fittings, stick to pass through 2-inch ring, rounding of edges, permissible maximum weight.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CSI8-29; 1929 Hickory Golf Shafts. A commercial standard selected and accepted by industry for "B" form shafts for iron-headed clubs, including requirements on general quality of wood, permissible moisture content, dimensions and tolerances, straightness, straightness of grain, stiffness requirement for each of 3 grades, test method.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS19-30; 1930. Foundry Patterns of Wood. Pattern colors selected and accepted by industry as a commercial standard covering cors for unfinished surfaces, machined surfaces, core prints, etc. Same as standard pattern colors sponsored by American Foundrymen's Assn.

and other organizations.

U. S. Gov., Dept. of Commerce. Bureau of Standards, H5; 1923. Approved by American Standarls Assn. as B 13-1924. American Logging and Sawmill Safety Code. For flume construction, permissible maximum spacing of supporting posts, minimum size of posts, minimum size of runway, requirements on material of runway

and provision of handrail.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Ring Life Buoy. For balsa wood buoy, mandatory requirements on construction, minumum outside and inside diameters, buoyancy test, strength and sewing of cloth covering, size and attachment of manula line.

West Coast Lumbermens Assn. Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, and Western Red Cedar Lumber; 1929. Well Tubing. For Douglas fir well tubing, dressed and matched, green or air dried, definition of 1 quality grade, permissible defects.

References.—Turpentine. See 211.1. Rosin. See 216. Softwood grading rules, hardwood grading rules, bardwood grading rules, See 400.2, 400.3. Battery cases, wooden. See 518.29. Medicine chest, wood. FURNITURE OF WOOD

431. HOUSEHOLD FURNITURE, EXCEPT CHAIRS

431.1 BEDROOM FURNITURE OF WOOD

431.11 Wooden Beds

U. S. Gov., Dept. of Commerce. Bureau of Standards. R2-30; 1930. Bedsteads, Springs, and Mattresses. For wooden beds, simplified practice recommended and accepted by industry establishing a limited list of standard sizes with width and length dimensions for full and single sizes of beds and coil spring and metal fabric bedsprings.

References.—Veneer, plywood, and other furniture stock. See 413.52, 413.53. Metal beds. See 613.1.

431.12 Bureaus and Chiffoniers

References .- Plate glass mirrors. See 527.

431.13 Cots

U. S. Gov., Federal Specifications Board. 240; 1924. Folding Canvas Cot. Descriptive construction of rock elm, beech, or hard maple wooden folding frame, of sheet steel fittings and of rivets, dipping requirements, construction of canvas cover, size of thread, thread count, tensile strength of fabric requirements, construction of web binding straps and of handle. Cover of

unbleached duck or standard khaki duck.

References .- Bookcase sections. See 435.5.

435.2 WOODEN OFFICE CHAIRS AND STOOLS

U. S. Gov., Federal Specifications Board. 409; 1926. Office Chairs. For rotary arm chair, leg arm chair, rotary and leg chairs without arms, rotary chair, rotary and leg chairs without arms, rotary chair, rotary stone with and without back, and rotary typewriter chair, requirements on construction of chairs with wood slat backs and wood saddle type seats using quartered white oak or mahogany, or birch to match mahogany, excepting judge's chair having leather upholstered back and seat, requirements on dimensions and materials of castors, type of spiders, dimensions and structural features, finish, color conforming to standard colors of General Supply Committee.

435,3 DESKS AND OFFICE TABLES, WOODEN

U. S. Gov., Federal Specifications Board. 478; 1927. Wood Tables and Stands. For office tables and stands of quartered white oak, mahogany, or birch to match office desks, commercial sizes, heights, construction of tops, legs, and drawers, and finish requirements.

U. S. Gov., Federal Specifications Board. AA-D-201; 1930. Wood Desks. For flat top single and double desks, roll top desks, and typewriter desks with flat top, drop at center, drop at either side, and typewriter compartment in either pedesta, types, requirements on height and sizes, general quality of oak, mahogany, and birch woods, size and construction of legs, number of ply and construction of panels, tops, decks, slides, drawers, thickness of tops, amount and type of hardware, flnish, color.

References.—Veneer, plywood, and other furniture stock. See 413.52, 413.53. Metal desks and tables. See 613.4, 613.6. Desk locks. See 617.21.

435.4 WOODEN DOCUMENT BOXES

435.5 WOODEN FILING CASES AND CABINETS

American Railway Assn. Telegraph and Telephone Section. 2-G-44; 1929. Stationery Holder. For box type of holder of oak with horizontal shelves, requirements on dimensions, design, and finish, method of mounting on telegraph table.

U. S. Gov., Federal Specifications Board. 359a; 1927. Wood Office Sectional Furniture, Cabinets and Trays. Includes small sections, upright sections, bookcase sections, tray and cabinets, card filling, the sectional devices to intermember with and match in size, appearance, and finish the standard sections adopted by General Supply Committee, requirements on general quality and kinds of wood, construction, number of ply, types of joint, etc., for framing, backs, tops, panels, drawers, drawer suspensions, dimensions of upright sections and bookcase sections, kinds of hardware, finish.

References.—Veneer, plywood, and other furniture stock. See 413.52, 413.53. Steel filing cases. See 313.7.

435.6 WASTE PAPER BASKETS

436. STORE FURNITURE AND FIXTURES, WOODEN

437. CHURCH, SCHOOL, AND THEATER FURNITURE. WOODEN

U. S. Gov., Dept. of Commerce. Bureau of Standards. R111-30; 1930. Color for School Furniture. Simplified practice recommended and accepted by industry for use of School Furniture. Brown as the standard color for stock varieties of school furniture, such as desks, seats, chairs, tables, filing cabinets, bookcases and laboratory furniture, color block included showing the standard color. Applicable to wooden furniture.

438. WOODEN CHAIRS

438.0 GENERAL ITEMS

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 1; 1922. Porch Rocking Chairs. Circular No. 8; 1923. Wooden Chairs. Requirements for packing in bundles with or without paper wrapping dependent on value; weight, mullen test, and size of paper for wrapper.

American Railway Assn. Freight Container Bureau. Bulletin No. 3; 1926. Bundling and Tying of Chairs When not Crated. Illustrations of recommended practice in bundling and tying for shipment.

438.1 DINING-ROOM CHAIRS

438.2 WOODEN OFFICE CHAIRS

References.—Office chairs. See 435.2. Packing of chairs. See 438.0.

438.3 FOLDING CHAIRS AND CAMP STOOLS

U. S. Gov., Dept. of Commerce. Bureau of Standards. RS0-28; 1928. Folding and Portable Wooden Chairs. Simplified practice recommended and accepted by industry establishing 3 standard types of each of folding chair and of portable assembly chair, with 1 finish for each, description of construction of each type, definitions of single folding chair and portable assembly chair.

References .- Packing of chairs. See 438.0.

PAPER

(Except printed matter)

470. GENERAL ITEMS

470.1 DEFINITIONS AND CLASSIFICATION OF PAPER

American Paper and Pulp Assn. Committee on Classification of Papers. Classification and Defi-nitions of Paper; 1928. A committee report cov-ering a classification of paper and paper board based on the method of manufacture and a comprehensive list of generally accepted definitions of the various types and kinds of paper and paper boards.

National Assn. of Waste Material Dealers (Inc.). Waste Paper Classification; 1922. Definitions of

10 classes.

Rag Content Paper Mfrs. Definition of Rag Content Paper; 1931. Requires a minimum of 25 per cent of rag content.

References.—Wood pulp. See 400.50. Lime for use in manufacture of paper. See 517.2.

470.2 SIZES OF PAPER

U. S. Gov., Dept. of Commerce. Bureau of Standards. R22; 1924. Paper. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of paper and their doubles, covering stock sizes for general printing and publishing, for book publishers, and for forms and letterheads.

470.3 TESTS OF PAPER

Abrasive Paper and Cloth Manufacturers Ex-change. Abrasive Coated Products; 1929. Includes method of test for weight and tensile

strength of rope paper.

American Railway Assn. Mechanical Div. Recommended Practice. Porosity Testing Apparatus; 1927. Dimensions and design of test device for testing porosity of paper, illustrated.

Technical Assn. of Pulp and Paper Industry.
Paper Testing Methods; 1928. Chemical Analysis. Includes official methods for analysis of mineral filler in paper, for analysis of mineral coating, for qualitative determination of casein, rosin, nitrogenous proteinaceous material, starch, and active sulphur in paper, and for the quantitative determination of moisture, ash, amount of mineral coating, resin, proteinaceous nitrogen, starch, and of paraffin in paraffined paper. Unofficial methods for determination of coloring matter, amount of free acid, and tests for special materials.

Technical Assn. of the Pulp and Paper Industry. Paper Testing Methods; 1928. Includes microscopical examination methods. Official method for determination of fiber composition, description of apparatus, preparation of stains, procedure, also the tentative dot method is described. Includes a classification of papermaking fibers with photomicrographs of several and identifica-

tion of specks and dirt in paper.

Technical Assn. of the Pulp and Paper Industry.
Paper Testing Methods; 1928. Physical Testing Methods. Includes official conditioning method for test specimens and required relative humidity and temperature of atmosphere at time of test, also official methods for determination of machine direction of paper, weight of paper, burst-ing strength, thickness, folding endurance, tensile breaking strength, tearing strength, opacity, and gloss, descriptions and specifications of test apparatus with required degree of accuracy. Also includes descriptions of tests and apparatus for nonofficial methods for testing resistance to wet rub, porosity, degree of sizing, water resistance, grease resistance, absorption, volumetric composition, presence of conducting particles, retention of filler, expansion and contraction of

Technical Assn. of the Pulp and Paper Industry. Paper Testing Methods; 1928. Includes official method of sampling paper for testing. Requirements on minimum size of sheets and total area of test specimen, on percentage of lot to be sampled, and on method of sampling from rolls, cases,

frames, and bundles.

Technical Assn. of Pulp and Paper Industry.

Proposed Standard Test Conditions for Determining the Initial Strength of Pulp; 1927. Requirements on preparation of pulp, making of test sheet, pressing and drying, atmospheric condi-

tions during testing of sheets.

U. S. Gov., Congress. Joint Committee on Print-ing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Methods of Inspection and Tests. Covers prescribed methods for sampling, fiber analysis, determination of ash, acidity, sizing, weight, folding endurance, bursting and tensile strength, thickness, opacity. absorption, and water resistance.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C107; 1921. Testing of Paper. Gives methods of testing and describes apparatus used at bureau in the routine testing of paper, with schedule of fees for making tests. Covers determination of weight, thickness, bursting and tensile strengths, folding endurance, tearing strength, absorption, transparency, chemical determination of loading material, sizing, and mi-

croscopical testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards. T250; 1924. Pulp and Paper Fiber Composition Standards. Colored charts as reference standards, showing the color reactions of common paper-making fibers and standard fiber mixtures with various stains for use in identification and estimation of fiber composition of paper, method of preparing the stains used.

U. S. Gov., Dept. of Commerce. Bureau of Standards. T326; 1926. Measurement of Degree of Sizing of Paper. Describes and compares several methods of testing sizing including the Bureau of Standards dry-indicator method and the

curl method.

S. Gov., Federal Specifications Board. 1926. Paper. Definitions of "tub sized with animal glue" and "air dried," packing requirements, methods of sampling and test, standard atmospheric conditions, fiber analysis, tests for ash, weight, bursting strength, thickness, folding endurance, animal glue sizing tests, and starch sizing qualitative test.

References.—Tests of electrical insulating paper. See 719.50, 719.52.

471. ABSORBENT PAPER

471.1 BLOTTING PAPER

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Blotting Paper, White and Colored. (Lots 354, 355.) For 1 weight and sheet size, requirements on ash, bursting strength, absorption, freedom from ground

wood pulp stock, and test methods, with color | 472.14 Pulp Board

and finish according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Desk Blotting Paper, Colored. (Lots 358, 359.) For 1 weight and sheet size, requirements on ash, bursting strength, freedom from ground wood pulp stock, and test methods, with color and finish according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 25 per cent Rag Blotting Paper, White and Colored. For 1 weight and sheet size, requirements on ash, bursting strength, absorption, freedom from ground wood pulp, test methods, and with color and finish according to sample.

References.—Methods of testing. See also 470.3. Definitions and classification. See 470.1.

471.2 FILTER PAPER

American Chemical Society. Standard Sizes and Shapes of Apparatus: 1927. Includes filter paper. sizes selected as standard for stock.

References .- Definitions. See 470.1.

471.3 PAPER TOWELING

U. S. Gov., Dept. of Commerce. Bureau of Standards. C294; 1925. Standards for Paper Towels. Includes recommended specifications with requirements on weight, absorbency, and bursting strength, and recommended methods of testing quality.

References.—Methods of testing. See 470.3. Definitions and classification. See 470.1.

471.9 MISCELLANEOUS ABSORBENT PAPER

References .- Stereotype molding paper. See 479.4.

472. PAPER BOARDS

472.0 GENERAL ITEMS

Paperboard Industries Assn. Gage Lists; 1928. Lists of standard thicknesses of various boards in conformity with Simplified Practice Recommendation No. 44, promulgated by U. S. Dept. of Commerce.

Paperboard Industries Assn. Standards; 1928. Includes definitions covering basis of regular sizes, standard package, bundle, regular number, procedure for determining count and number, basis

of gage lists, and 8 gage lists for various boards.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R44; 1925. Box Board Thicknesses. Simplified practice recommended and accepted by industry establishing a list of standard thicknesses for various weights and finishes for nonbending boards, bending boards, solid news and solid wood pulp board, pasted chip board, container board, satent coated, and double manila wood pulp filled board.

472.1 COMBINATION BOARD (Nonhomogeneous, one operation)

472.11 Chip Board (jute-lined, manila-lined, news vatlined)

References .- Definitions and classification. See 470.1.

References.—Pulp board for boxes. See 953.2. Fillers and flats of pulpboard for egg cases. See 953.36. Definitions and classification. See 470.1.

472.15 Strawboard (jute-lined, manila-lined, vatlined)

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Goy. Print. Off. and Depts. Binders Board— Lined Strawboard. (Lot 405.) For 1 weight and sheet size, requirements on bursting strength, thickness, and test methods, with surface and appearance according to sample.

References.—Standard sizes, methods of testing. See also 472.0, 470.3. Strawboard for boxes. See also 953.2. Definitions and classification. See 470.1.

472.16 Boxboard, Lined

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Binders Board-Lined Boxboard. (Lot 406.) For 1 weight and sheet size, lined on one side, requirements on bursting strength, thickness, and test methods, with surface and appearance according to sample.

References.—Standard sizes, methods of testing. also 472.0, 470.3. Definitions and classification. 470.1. Corrugated strawboard, See 472.25.

472.19 Miscellaneous Lined Boards

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications: 1929. Recommended schedule for Gov. Print. Off. and Depts. Binders Board—Marble Grained Lined Board. (Lot 403.) For 1 weight and sheet size, requirements on bursting strength, thickness and test methods, with surface and appearance according to sample.

References.—Standard sizes, methods of testing. See also 472.0, 470.3. Definitions and classification. See 470.1.

472.2 PASTED BOARD (Two operations)

472.21 Pasted Chip Board

References .- Definitions and classification. See 470.1.

472.22 Sheet-lined Chip Board

References .- Definitions and classification. See 470.1. 472.23 Sheet-lined Straw Board

References .- Definitions and classification. See 470.1.

472.24 Wall Board

References .- Definitions and classification. See 470.1. 472.25 Corrugated Strawboard

American Railway Assn. Freight Container Bureau. Tentative Specification. Circular No. 11; 1923. Corrugated Strawboard Boxes for Boots and Shoes. Includes double faced or double walled corrugated boxboard, weight of facings, waterproof test requirements for facings, com-position, weight, minimum thickness of strawboard, composition of silicate of soda for cement, construction of corrugated boxboard, minimum thicknesses and Mullen test requirements of built-up board.

References.—Standard sizes, methods of testing. See also 472.0, 470.3. Strawboard for boxes. See also 953.2. Definitions and classification. See 470.1.

472.3 SOLID BOARD (Homogeneous, one operation) 472.31 Chip Board (Plain, tack board, test)

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for

Gov. Print. Off. and Depts. Binders Board-Chip Board. (Lot 402.) For 1 weight and 5 sheet sizes, requirements on bursting strength, thickuess, and test methods, with surface and appearance according to sample.

References.—Standard sizes, methods of testing. See also 472.0, 470.3. Definitions and classification. See 470.1.

472.32 Binders Board

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Binders Board, Hard GOV. Frint. Un. and Depts. Binders Board, Hard Rolled, Best Quality. (Lot 408.) For 7 weights and 2 sheet sizes, requirements on bursting strength, thickness, density, and test methods, with water resistance, springiness, firmness, and appearance according to sample. U. S., Gov., Congress. Joint Committee on Printing.

Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts, Binders Board, Hard Rolled, No. 2 Quality. (Lot 407.) For 6 weights and 1 sheet size, requirements on bursting strength, thickness, density, and methods of test, with water resistance, springiness, firmness, and appearance according to sample.

U. S. Gov., Congress. Joint Committee on Printing Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Binders Board-Chip Board. (Lot 402.) For 1 weight and 5 sheet sizes, requirements on bursting strength, thickness, and test methods, with surface and appear-

ance according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts. Binders Board-Newsboard. (Lot 401.) For 1 weight and sheet size, requirements on bursting strength, thickness, and test methods, with surface and appearance

according to sample. U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Binders Board— Strawboard. (Lot 404.) For 1 weight and sheet size, requirements on bursting strength, thickness, and test methods, with surface and appearance according to sample.

Dept. of Commerce. Bureau of Stand-U. S. Gov., ards. R81-28; 1928. Binder's Board. Simplified practice recommended and accepted by industry establishing 10 sizes of binder's board as standard

for stock purposes.

References—Lined strawboard, binders board. See 472.15. Lined boxboard, binders board. See 472.16. Marble grained lined board, binders board. See 472.16. Standard sizes and thicknesses. See 472.0. Methods of testing. See also 470.3. Definitions and classifica-tion. See 470.1.

474. CARDBOARD

474.1 BLANKS

474.11 Nonpasted Blanks

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications: 1929. Recommended schedule for Gov. Print. Off. and Depts. Railroad Board, White and Colored. (Lots 302 to 305 incl.) For 1 sheet size in 4, 8, and 14 ply board, re-quirements on thickness, on coating of facing sheets, with color and finish according to sample.

References.—Methods of testing. See also 470.3. Definitions and classification. See 470.1.

474.12 Pasted Blanks

References .- Definitions and classification. See 470.1. 474.2 INDEX BRISTOLS

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 per cent Rag Index Paper, White and Colored, Single Ply. (Lots 190 to 193.) For 4 weights and various requirements on ash, bursting sizes, strength, thickness, freedom from ground wood pulp, writing and erasing qualities, and test methods, with color and finish in accordance with sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts. 100 per cent Rag Index Paper, White and Cream, Single Ply, Tub Sized, Air Dried. (Lot 196.) For permanent records, 1 weight and 2 sheet sizes, requirements on ash, acidity, sizing, bursting strength, thickness, writing and erasing qualities, and test methods, with color and finish according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committete on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Sulphite Index Paper, White and Colored, Single Ply. (Lots 184 to 187.) For 4 weights and 3 sheet sizes, of 100 per cent chemical wood pulp, requirements on ash, bursting strength, thickness, writing and erasing qualities, and test methods, with color and finish in accordance with sample.

References.—Methods of testing. See also 470.3. Definitions and classifications. See 470.1.

474.3 MILL BRISTOLS (Folders, tags)

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Manila Cardboard. (Lot 301.) For 1 weight and 3 sheet sizes, requirements on bursting strength, thickness, and test methods, with color and finish according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. U. S. Postal Card Bristol. (Lot 311.) For 1 weight and size of roll, requirements on ash, moisture content, freedom from ground wood pulp, bursting strength, thickness, color, finish, formation, and test methods.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule For Gov. Print. Off. and Depts. Wood Bristol Board, Colored. (Lots 306 to 310 incl.) For 2 weights, 2 roll sizes, and 3 sheet sizes, requirements on bursting strength, thickness, surface and test methods, with color and finish according to sample.

475. COVER PAPER, NEWS PAPER, AND PRINTING PAPER

475.1 COATED COVER PAPER

Cover Paper Manufacturers Assn. Trade Customs; 1931. Includes list of standard sizes and sub-

stances of cover paper.

U. S. Gov., Congress. Joint Committee on Printing.
Twenty First Report of Committee on Paper
Specifications; 1929. Recommended schedule for
Gov. Print. Off. and Depts. Coated Cover Paper,
Colored. (Lot 201.) For 1 sheet size and
weight, requirements on ash, bursting strength,
coating and surface, freedom from ground wood
pulp, and test methods, with color and finish according to sample, suitable for halftones.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classifications. See 470.1.

475.2 PASTED COVER PAPER

Cover Paper Manufacturers Assn. Trade Customs; 1931. Includes list of standard sizes and substances of cover paper.

References.—Definitions, classification, methods of test. See 470.1, 470.3.

475.3 UNCOATED COVER PAPER

Cover Paper Manufacturers Assn. Trade Customs; 1931. Includes list of standard sizes and sub-

stances of cover paper.

U. S. Gov., Congress. Joint Committee on Printing, Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 per cent Rag Antique Cover Paper, Colored. (Lot 206.) For 1 weight and sheet size, requirements on ash, bursting strength, freedom from ground wood pulp, and test methods, with color and finish according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 per cent Rag Laid Cover Paper, Colored. (Lot 205.) For 1 weight and 2 sheet sizes, requirements on ash, bursting strength, freedom from ground wood

pulp, and test methods.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 25 per cent Rag Machine Finish Cover Paper, Colored. (Lots 203, 204.) For 1 weight and 2 sheet sizes of antique finish and of smooth finish, requirements on ash, bursting strength, freedom from ground wood pulp, and test methods, with color and finish in accord with sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

475.4 HANGING PAPER (NEWS), WALLPAPER

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS16-29; 1929. Wall Paper. A commercial standard selected and accepted by industry covering widths of stock and pattern, length of roll and coverage, 3 standard weights, color fastness and grounding requirements for printed, plain, and embossed papers, widths, lengths, coverage, quality of raw stock, 4 standard weights for varnished tiles and engraved papers.

Wallpaper Assn. of the U. S. Trade Regulations Undated. Standard lengths of roll and standard paper weights for wallpaper, permissible variations.

References.—Definitions and classification, methods of test. See 470.1, 470.3.

475.5 NEWSPRINT

News Print Service Bureau. Standard News Print Paper; 1923. Definition of news print paper, including its general composition, method of manu-

facture, and approximate weight.

U. S. Gov., Congress. Joint Committee on Printing. Twenty-First Report of the Committee on Paper Specifications; 1929. Recommended schedule for the public printing and binding and blank paper for use of the Government depts. Standard Newsprint, lot 1. Test requirements for weight, tensile strength, thickness, and opacity, color, finish, formation, and cleanliness according to standard samples at Gov. printing office, for 3 roll widths.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See also 470.1.

475.6 COATED PRINTING PAPER

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Double Coated Book. Lot 36. For 3 sizes, requirements on freedom from ground-wood pulp, ash, weight, folding endurance, bursting strength, thickness, coating and surface, test methods, color, finish, etc., in accordance with standard samples.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag Double Coated Book. Lot 37. For 5 sizes, requirements on freedom from ground-wood pulp, ash, weight, folding endurance, bursting strength, thickness, coating and surface, test methods, color, finish, etc., in accord with standard samples.

U. S. Gov., Congress. Joint Committee on Printing.
Twenty First Report of Committee on Paper
Specifications; 1929. Recommended schedule for
Gov. Print. Off. and Depts. Single Coated Book.
Lot 35. For 3 sizes, recommendations on freedom
from ground-wood pulp, ash, weight, folding endurance, bursting strength, thickness, coating and
surface, test methods, color, finish, etc., in accord
with standard samples.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

475.7 UNCOATED PRINTING PAPER

References.—Newsprint. See 475.5. Definitions and classification. See 470.1.

475.71 Bible Paper

References .- Definitions and classification. See 470.1.

475.72 Book Paper

U. S. Gov., Congress. Joint Committee on Printing. Twenty-Pirist Report of the Committee on Paper Specifications; 1929. Recommended schedule for the public printing and binding and blank paper for use of the Gov. Depts. Machine-Finish Book. Lots 3 to 14. For stock free from unbleached or ground-wood pulp, test requirements for ash, weight, bursting strength, thickness, opacity, for 5 weight classes, color, finish, formation and cleanliness in accordance with standard samples at Gov. Printing Office, weight and cut or roll dimensions for each lot.

- U. S. Gov., Congress. Joint Committee on Printing. Twenty-First Report of the Committee on Paper Specifications; 1929. Recommended schedule for the public printing and binding and for use of Gov. Depts. Machine-Finish Book. Lot 15. For use on monotype machines, requirements on freedom of stock from unbleached or ground wood pulp, on tests for ash, weight, bursting strength, and thickness, color, finish, etc., according to standard sample at Gov. Printing Office, width of roll.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty-Pirst Report of Committee on Paper Specifications; 1929. Recommended schedule for for the public printing and binding and for use of Gov. Depts. Machine-Finish Book End Paper. Lot 17. Requirements on freedom of stock from unbleached or ground-wood pulp, on dimensions of flat sheets, test requirements for ash, weight, bursting strength, and thickness, color, finish, etc., in accord with standard samples at Gov. Print. Off.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Printing Off. and Depts. Light Weight Machine-Finish Book. Lot 19. Requirements on freedom from unbleached or ground-wood pulp, for 2 flat sizes, test requirements for ash, weight, bursting strength, thickness, and opacity, with color and finish in accord with standard samples at Gov. Print. Off.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag Machine-Finish Book. Lots 21, 22, 23. For fiat sizes, requirements on percentage of rag, freedom from ground-wood pulp, ash, acidity, sizing, weight, bursting strength, thickness, and opacity, test methods, color, finish, etc., in accord with standard samples.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Supercalendered Book. Lots 26 to 31. Requirements for flat sizes and for rolls in various lots, on freedom from ground-wood pulp, ash, weight, bursting strength, thickness, and opacity, test methods, color, finish, etc., in accord with standard samples.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag Supercalendered Book. Lot 33. Requirements on dimensions, freedom from ground-wood pulp, on ash, acidity, sizing, weight, bursting strength, thickness, and opacity, test methods, color, finish, etc., in accord with standard samples.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Halftone Book. Lot 34. For 2 sizes, requirements on freedom from ground-wood pulp, on ash, weight, bursting strength, thickness, and opacity, test methods, color, finish, etc., in accord with standard samples.
- U. S. Gov., Congress.

 Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Machine-Finish Lithograph. Lot 39. For 2 sizes, requirements on freedom from ground-wood pulp,

- ash, weight, bursting strength, thickness, surface and finish, test methods, color, formation, etc., in accord with standard samples.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag Machine-Finish Lithograph. Lot 40. For 1 size, requirements on freedom from groundwood pulp, percentage of rag, ash, weight, bursting strength, thickness, surface, and finish, test methods, color, formation, etc., iu accordance with standard sample.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty-First Report of the Committee on Paper Specifications; 1929. Recommended schedule for the public printing and binding and for use of Gov. Depts. Plant Fiber Machine-Finish Book. Lot 16. Requirements on percentage of fiber from corn or cotton stalks, straws, etc., color, finish. formation, and opacity, in accordance with standard samples at Gov. Print. Off., test requirements for ash, weight, and bursting strength, for 4 roll widths.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for the public printing and binding and for use of Gov. Depts. Antique Book. Lot 18. Requirements on freedom from unbleached or ground wood pulp, on dimensions of 2 cut sizes, test requirements for ash, acidity, sizing, weight, bursting strength, thickness, opacity, with color, finish, etc., in accordance with standard samples at Gov. Print, Off.
- U.S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts. 50 Per Cent Rag Light Weight High Machine-Finish Book. Lot 20. For 2 sizes of flat paper, requirements on percentage of rag, freedom from ground-wood pulp, ash, bursting strength, weight, thickness, and opacity, test methods, color, finish, etc., in accord with standard samples.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 100 Per Cent Rag Machine-Finish Book. Lots 24, 25. Of highest quality for permanent records, requirements on general quality, percentage of new rags, ash, acidity, sizing, weight, folding endurance, bursting strength, opacity, color, appearance, with finish and texture in accordance with standard samples.

American Railway Assn. Freight Container Bureau. Recommended Specification. Circulars No. 5, 8, 10, and 12; 1923. Crates for Furniture. Includes paper for wrapping for both crated and uncrated furniture, for No. 1 sulphite (100 per cent sulphite) manila wrapper, weight, size of sheet.

and Mullen test requirements.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Rope Manila Paper. (Lots 213 and 214.) For 4 weights, 1 roll size, of 100 per cent manila and (or) jute pulp stock, requirements on folding endurance, bursting strength, and test methods, with color and finish according to sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Sulphite Manila Paper. (Lots 211, and 212.) For 4 weights, any sheet size, and 1 roll size, requirements for chemical wood pulp, folding endurance, bursting strength, and test methods, with color and finish

in accord with sample.

U. S. Gov., Congress. Joint Committee on Printing.
Twenty First Report of Committee on Paper
Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Wood Manila Paper. (Lots 209, 210.) For 4 weights, 2 sheet sizes, and 3 roll sizes, requirements on bursting strength and methods of test, with color and finish according to sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1. Sulphite manila paper. See 477.7.

477.3 NUMBER ONE KRAFT PAPER

American Railway Assn, Freight Container Bureau. Recommended Specification. Circulars No. 5, 8, 10, and 12; 1923. Crates for Furniture. Includes paper for wrapping for both crated and uncrated furniture, for No. 1 kraft, percentage of sulphate, weight, size of sheet, and Mullen test

requirements.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. No. 1 Kraft Paper. For any sheet size, 2 weights, of 100 per cent sulphate pulp, requirements on folding endurance, bursting strength, and test methods, with color and finish according to sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See

477.4 NUMBER TWO KRAFT PAPER

American Railway Assn. Freight Container Bureau. Recommended Specification. Circulars No. 5, 8, 10, and 12; 1923. Crates for Furniture. Includes paper for wrapping for both crated and uncrated furniture, for No. 2 kraft of chemical pulp and mechanically ground wood, weight, size

of sheet, Mullen test requirements.

of sneet, samen test requirements.
U. S. Gov., Congress. Joint Committee on Printing.
Twenty First Report of Committee on Paper
Specifications; 1929. Recommended schedule for
Gov. Print. Off. and Depts. No. 2 Kraft Paper.
(Lots 217 to 219, incl.) For 6 weights, any sheet
size and 5 roll sizes, of 100 per cent sulphate
unit requirements on folding and prague burst. pulp, requirements on folding endurance, bursting strength, and test methods, with color and finish according to sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

477.5 SANITARY WRAPPING PAPER, PARAFFIN PAPER

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper

Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. White Paraffin Pa-per. (Lot 351.) For 1 weight and sheet size, requirements on bursting strength, freedom from ground wood pulp, percentage of parafin, and test methods, with color and surface according to sample.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R125-31; 1931, Waxed Tissue Paper. Simplified practice recommended and accepted by industry. Requirements on weight of raw stock and of finished material, melting point of wax, for 2 grades of which one is made from bleached all sulphite tissue, accepted limited number of standard sizes, sheets per ream or unit, and method of packing, for waxed sheet tissue, sheet lunch rolls, lunch envelopes, butter wraps, and continuous household rolls,

References .- Definitions and classification. See 470.1.

477.9 MISCELLANEOUS WRAPPING PAPERS

American Railway Assn. Freight Container Bu-reau. Recommended Specification. Circulars No. 5, 8, 10, and 12; 1923. Crates for Furniture. Includes paper for wrapping for both crated and uncrated furniture, includes fiber paper of sul-phite and not over 20 per cent mechanically ground wood, and rope paper of not less than 40 per cent rope stock, weight, size of sheet, and Mullen test requirements.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Paper. For 11 varieties of paper, weight requirements, standard sizes for wrapping smoked meats, for greaseproof, vegetable parchment, glassine, packers manila, gray ham paper, screenings, fiber, kraft, and transparent cellulose

papers.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

478. WRITING PAPER, DRAWING AND | 478.13 Ledger Paper CHART PAPER

478.1 COMMERCIAL WRITING PAPER

478.11 Bond Writing Paper

- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Declaration Bond, Tub Sized, Air Dried. (Lot No. 130.) Of 100 per cent new rag stock, white or cream, requirements on ash, acidity, sizing, weight, folding en-durance, bursting strength, and writing quality, with color, finish, watermarking in accord with sample, test methods, two sheet sizes, two weights.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 75 Per Cent Rag White Bond. (Lots 125, 126.) 100 Per Cent Rag White Bond (Lots 128, 129) Tub-Sized, Air Dried. The 100 per cent rag bond is for permanent records. For 4 and 3 weights respectively, requirements on width limits, freedom from ground wood pulp, on ash, acidity, sizing, folding endurance, bursting strength, writing quality, and watermarking, test methods, color, etc., in accord with standard sample.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Sulphite Bond, White and Colored. Lots 101 to 105. For 4 weights and various sizes and colors, of 100 per cent chemical wood pulp, requirements on ash, folding endurance, bursting strength, and writing quality, test methods, color, finish, etc., in accord with standard sample.
- U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Twenty First Report of Committee on Faper Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts. 30 per cent Rag Bond (lots 190 to 117), 50 per cent Rag Bond (lots 120 to 123), White and Colored, Tub-Sized, Air-Dried. For 4 weights and various sizes and colors, requirements on freedom from groundwood pulp, on ash, sizing, folding endurance, writing quality, and watermarking, test methods, color, finish, etc., in accord with standard sample.

Writing Paper Mfrs, Assn. Trade Customs; 1928. Includes list of 25 regular sheet sizes for flats and bonds, and permissible under-runs or overruns on any delivery.

Writing Paper Mfrs. Assn. Approved by National Paper Trade Assn. Trade Customs; 1928. Table of standard substances and weights for various sizes of bonds and linens, flat writings and ledgers.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

478.12 Flat Writing Paper

Writing Paper Mfrs, Assn. Trade Customs: 1928. Includes list of 25 regular sheet sizes for flats and bonds, and permissible under-runs or over-runs on any delivery.

Writing Paper Mfrs. Assn. Approved by National Paper Trade Assn. Trade Customs; 1928. Table of standard substances and weights for various sizes of bonds and linens, flat writings and ledgers.

References .- Definitions and classification. See 470.1.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts, Ledger Paper, White and Colored, Tub Sized, Air Dried. 30 per cent Rag (lots 154 to 157). 50 per cent Rag (lots 160 to 165). 75 per cent Rag (lots 168–173). For various sheet sizes and weights, requirements on ash, sizing, folding endurance, bursting strength, freedom from ground wood pulp, writing and erasing qualities, test methods, with color, finish,

watermarking, etc., in accordance with sample.
U. S. Gov., Congress. Joint Committee on Printing,
Twenty First Report of Committee on Paper Specifications: 1929. Recommended schedule for Gov. Print. Off. and Depts. 100 per cent Rag White Ledger, Tub Sized, Air Dried. For permanent records, 6 weights, various sheet sizes, requirements on ash, acidity, sizing, folding en-durance, bursting strength, writing and erasing qualities, and test methods, with color, finish, and watermarking in accordance with sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Sulphite Ledger, White and Colored (lots 151, 152, 153). For 5 weights, requirements on wood pulp stock, ash, folding endurance, bursting strength, writing quality, sheet width limits, with color, finish, etc., in accordance with sample, test methods. Writing Paper Mfrs. Assn. Trade Customs; 1928.

Includes list of 18 regular sheet sizes for ledger paper, and permissible under-runs or over-runs

on any delivery.

Writing Paper Mfrs. Assn. Approved by National Paper Trade Assn. Trade Customs; 1928. Table of standard substances and weights for various sizes of bonds and linens, flat writings and ledgers.

478.19 Miscellaneous Commercial Writing Paper

Envelope Manufacturers Assn. of America. Trade Customs; 1928. Substance number range for 9 kinds of paper used in manufacture of envelopes. standard weights listed, permissible variations

from quantities ordered.

U. S. Gov., Congress. Joint Committee on Print-ing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended sched-Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 per cent Rag Index Paper, White and Colored, Single Ply. (Lots 190 to 193 incl.) For 4 weights and various sheet sizes, requirements on ash, bursting strength, thickness, freedom from ground wood pulp, writing and erasing qualities and test methods, with color and finish according to sample.

U. S. Gov., Congress. Joint Committee on Print-ing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 100 per cent Rag Index Paper, White and Cream, Single Ply, Tub Sized, Air Dried. (Lot 196.) For permanent records, 1 weight, and 2 sheet sizes, requirements on ash, acidity, sizing, bursting strength, thickness, writing and erasing qualities, and test

methods, with color and finish in accordance with

sample.

U. S. Gov., Congress. Joint Committee on Print-ing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 100 per cent Rag White Writing Paper, Vellum Finish, Tub Sized, Air Dried. Lot 63. Requirements on ash, acidity, sizing, weight, bursting strength, and writing quality, test methods, color, finish, etc., in accord with standard samples, 1 weight and sheet size.

U. S. Gov., Congress. Joint Committee on Print-ing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts. Sulphite Index Paper, White and Colored, Single Ply. (Lots 184 to 187.) For 4 weights and 3 sheet sizes, of 100 per cent chemical wood pulp, requirements on ash, bursting strength, thickness, writing and erasing qualities, and test methods, with color and finish in accordance with sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Sulphite Writing Paper, White and Colored. Lots 55 to 61. For various flat and roll sizes and colors, requirements on 100 per cent chemical wood pulp stock, on ash, weight, folding endurance, bursting strength, writing quality, and test methods, color, finish, etc., in accordance with standard samples.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. U S M O Writing Paper, White and Blue. Lot 52. For one width of roll, requirements on 100 per cent chemical wood pulp stock, on ash, weight, folding endurance, bursting strength, writing quality, and watermarking, methods of test, color, finish, etc., in accord with standard sample,

Writing Paper Mfrs. Assn. Trade Customs; 1928. Includes list of 19 regular sheet sizes for looseleaf paper, and permissible under-runs or over-

runs on any delivery.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Safety writing paper. See 478.33. Definitions and classification. See 470.1.

478.2 DUPLICATING PAPER

478.21 French Folio Paper

References .- Definitions and classifications. See 470 1

478.22 Manifold Paper (Includes Stencil Paper)

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1329. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag Manifold Paper, White and Colored. Lots 73 to 76. For 2 weights and various sizes and colors, requirements on freedom from ground-wood pulp, on ash, bursting strength, and writing quality, test methods, color, finish, etc., in accord with sample.

With Sample.
U. S. Gov., Congress. Joint Committee on Printing.
Twenty First Report of Committee on Paper
Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag White Glazed Manifold Paper, Lot 83, For 1 weight and 2 sizes, requirements on freedom from ground-wood pulp, on ash, bursting strength, and writing quality, test methods, color and finish in

accord with standard sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Twenty First Report of Committee of Laplace Specifications; 1929. Recommended schedule for Gov. Print, Off. and Depts. 100 Per Cent Rag Manifold Paper, White and Colored, Tub Sized, Air Dried. Lots 78 to 81. For 2 weights and various sizes, requirements on ash, acidity, sizing, folding endurance, bursting strength, and writing quality, test methods, color, finish, etc.,

writing quantity, test mentions, color, finish, etc., in accord with standard sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Sulphite Manifold Paper, White and Colored. Lots 70, 71. For 1 weight and 4 sizes of 100 per cent chemical wood pulp stock, requirements on ash, bursting strength, and writing quality, test methods, color, finish, etc., in accord with standard sample.

U. S. Gov., Federal Specifications Board. 484a. 1927. 50 Per Cent Rag Manifold Paper, White and Colored, Unglazed. Requirements on freedom from ground wood pulp, weights for 2 weight grades, bursting strength, ash, sizing, sizes, with color, finish and formation in conformity with accepted sample, methods of test in accordance with F. S. B. spec. 394 for paper.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See

478.3 INDUSTRIAL PAPER

478.31 Chart and Map Paper

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Twenty First Report of Committee on Faper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. 50 Per Cent Rag Lithograph-Finish Map Paper, Tub Sized, Air Dried. Lot 65. For 3 weights and 8 sizes, requirements on freedom from ground-wood pulp, on ash, sizing, weight, folding endurance, bursting strength, surface and finish, test methods, color, formation, etc., in accordance with standard sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Lithograph-Finish Map Paper. Lot 64. For 2 weights and 5 sizes, requirements on freedom from ground-wood pulp,

on ash, weight, folding endurance, bursting strength, surface and finish, test methods, color, formation, etc., in accord with standard sample.

U.S. Gov., Congress. Joint Committee on Printing.
Twenty First Report of Committee on Paper
Specifications; 1929. Recommended Schedule for Gov. Print, Off. and Depts. 100 per cent Rag White Chart Paper, Lithograph-Finish, Tub-Sized, Air-Dried. Lot 69. For one weight, requirements on width limits, ash, sizing, folding endurance, bursting strength, thickness, erasure, formation, sorting, and test methods, color, finish, and surface in accord with standard sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended Schedule for Gov. Print. Off. and Depts. 75 per cent Rag Lithograph-Finish Map Paper, Tub-Sized, Air-Dried. Lots 66, 67. For 4 weights and several sizes, requirements on freedom from ground-wood pulp, on ash, sizing, weight, folding endurance, bursting strength, surface and finish, and test methods, color, formation, etc., in accord with standard sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

478.32 Drawing Paper

U. S. Gov., Federal Specifications Board. B-561; 1931. Bristol Board. For rough and smooth types, first and second grade of each, for use with pencil or drawing ink, ink lining and

crasure test requirements.

U. S. Gov. Federal Specifications Board. 594; 1928. Detail Drawing Paper. For white detail, cream or buff detail, and manila detail, of slightly grained surface or smooth, mounted or unmounted, requirements on freedom from defects, percentage of rag, weight, bursting strength, folding endurance, and transparency ratio for the white detail, percentage of rag, weight, and bursting strength for buff or cream detail, pencil marking and erasure tests for all types, methods of

test according to F. S. B. spec. 394 for paper.
S. Gov., Federal Specifications Board. 595; 1928. Drawing Paper. For Whatman type, hot pressed, cold pressed, and rough; for white drawing, smooth surface or slightly grained surface, or pebbled surface; for buff or cream drawing, smooth surface, and slightly grained surface; for students' drawing paper with slightly grained surface; requirements on weight, percentage of rag, bursting strength, mounting and thread count of mounting muslin, ink drawing capacity and erasing qualities, methods of test according to F. S. B. spec. 394 for paper.

U. S. Gov., Federal Specifications Board. 596; 1928. Printed Drawing Paper. For drawing papers and

tracing papers of the types, profile, cross section, logarithmic, plan profile, township, coordinate isometric, and statistical diagrammatic, suitable for pencil and ink drawings, general requirements such as continuity, accurate spacing, uni-formity of width and color of lines, quality of ink.

U. S. Gov., Federal Specifications Board. 597; 1928. Ruled Drawing Paper. For cross section paper and topographical paper suitable for pencil and ink drawings, general requirements such as continuity, accurate spacing, uniformity of width and color of lines, lining and erasing qualities of ink, etc.

References.—Standard sizes, methods of testing. See so 470.2, 470.3. Definitions and classification. See also 4

478.33 Safety Writing Paper

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended Schedule for Gov, Print, Off. and Depts. Blue U S M O Safety Writing Paper, Safety or Sensitive Design. For 2 roll sizes, requirements on all chemical wood pulp, on ash, weight, folding endurance, bursting strength, writing quality, and watermarking, test methods, color, finish, safety properties, etc., in accordance with standard samples.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Safety Writing Pa-per, Colored. Lot 53. For 3 sizes of various colors, requirements on 100 per cent chemical wood pulp stock, on ash, weight, folding endurance, bursting strength, writing quality, and safety device, test methods, color, finish, etc., in accord with standard sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See

478.34 Sensitizing Paper

U. S. Gov., Dept. of Commerce. Bureau of Standards. R98-29; 1929. Photographic Paper. Simplified practice recommended and accepted by industry covering a selected list of stock sizes and varieties as standard for cut sizes of photographic paper and for roll sizes of single weight and double weight.

U. S. Gov., Federal Specifications Board. UU-P-81; 1931. Blue Print Paper, Permanent-Record (Sensitized and Unsensitized). For thin, medium, and thick grades suitable for permanent records which are subject to frequent handling, requirements on weight, 100 per cent rag stock, folding endurance, wet tensile strength, coating

and finish, standard widths.

S. Gov., Federal Specifications Board. P-86; 1931, Blue Print Paper, Semipermanent-Record (Sensitized and Unsensitized). For thin, medium, and thick grades of blue print paper subject to much handling, requirements on weight, 100 per cent rag stock, folding endurance, wet tensile strength, coating and finish, standard widths.

S. Gov., Federal Specifications Board. UU-P-91; 1931. Blue Print Paper, Temporary-Record (Sensitized and Unsensitized). For medium and thick grades in rolls, suitable for blue prints subjected to considerable wear and tear, requirements on weight, percentage of rag stock, folding endurance, wet tensile strength, coating and finish, standard widths.

S. Gov., Federal Specifications Board. UU-P-141; 1931. Brown-Print Paper, Permanent Record (Sensitized and Unsensitized. For thin and medium grades in rolls, suitable for permanent records which are subject to frequent handling, requirements on weight, thickness, 100 per cent rag stock, folding endurance, wet tensile strength, coating and finish, standard widths, to conform with F. S. B. spec. 394 for paper.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

478.35 Tracing Paper

U. S. Gov., Dept. of Commerce. Bureau of Standards. C63; 1917. Specification of the Transparency of Paper and Tracing Cloth. Describes a standard method of specifying the transparency using principle of contrast ratio, description of apparatus and method of test, directions for making application for test.

U.S. Gov., Federal Specifications Board. 596; 1928.
Printed Drawing Paper. For drawing papers and tracing papers of the types, profile, cross section, logarithmic, plan profile, township, coordinate, isometric, and statistical diagrammatic, suitable for pencil and ink drawings, general requirements such as continuity, accurate spacing, uniformity of width and color of lines, quality of

ink, transparency of tracing paper.

U. S. Gov., Federal Specifications Board. 598; 1928. Tracing Paper. For smooth and slightly grained surfaced papers of rag and of sulphite white manifold and oil-treated manifold types, and for smooth surfaced French vegetable type, requirements on general quality, weights, composition of manifold papers, tests of manifold paper for erasure and ink and pencil line drawing qualities, transparency test for all types, bursting strengths of manifold papers, methods of test according to F. S. B. spec. 394 for paper and Bur. of Standards Circ. 63 for transparency test.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Definitions and classification. See 470.1.

479. MISCELLANEOUS SPECIFICATIONS FOR PAPER

479.1 TRANSFER PAPER

References .- Definitions and classification. See 470.1.

479.2 GUMMED PAPER

Consoli-Consolidated Classification Committee. dated Freight Classification No. 6; 1930. Rule 41, Section 4. Paper Sealing Strip. For covering seams of fibreboard boxes, requirements on use of No. 1 kraft, weight, strength by Cady or

Mullen test, minimum width.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. White Gummed Paper. (Lots 352, 353.) For 1 weight and 2 sheet sizes, requirements on freedom from ground wood pulp stock and on freedom from curl, with color, finish, and adhesive qualities according to sample.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R114-30: 1930. No. 1 Kraft Sealing Tape.

Simplified practice recommended and accepted by industry covering a standard schedule of stock varieties of sealing tape, with weight, bursting strength, length per roll, width, and packaging requirements for each variety.

References .- Methods of testing. See also 470.3.

479.3 PAPER FOR ABRASIVE PAPERS

Abrasive Paper and Cloth Manufacturers Exchange. Abrasive Coated Products; 1929. Includes rope paper as backing for abrasive, requirements on weight, thickness, minimum tensile strength, method of testing.

References.—Standard sizes, methods of testing. See 470.2, 470.3.

479.4 MISCELLANEOUS PAPERS USED IN PRINT-ING PROCESS

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Back Lining Paper. For Case Making Machines. (Lot 364.) For 1 weight and roll size, requirements on bursting strength and test methods, with surface and finish in accordance with sample.

U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Oiled Manila Tympan Paper. For 1 weight and 3 roll sizes, requirements on bursting strength, oiliness, freedom from ground wood pulp stock, and test methods, with surface according to sample.

For use in printing process.
U. S. Gov., Congress. Joint Committee on Printing. Twenty First Report of Committee on Paper Specifications; 1929. Recommended schedule for Gov. Print. Off. and Depts. Plate Wiping Paper for Embossing Presses. (Lot 363.) For 1 weight and roll size, requirements on bursting strength and test methods, with surface according to sample.

References.—Standard sizes, methods of testing. See also 470.2, 470.3. Stereotype tissue and molding paper, See 476.25. Definitions and classification. See 470.1.

480-489

BOOKS AND OTHER PRINTED MATTER

481. BOOKS AND PAMPHLETS

American Automobile Assn. 1929 Catalogue. Emergency Road Service Report Books and Report Forms. Standard Books and Forms.

American Automobile Assn. 1929 Catalogue.
Tour Books, Standard size and contents of regional tour books giving automobile travel

information and maps.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R84-28; 1928. Composition Books. Simplified practice recommended and accepted by industry establishing a limited schedule of standand stock varieties covering 2 grades of ground wood paper, 4 grades of writing paper with writing with ink test, 4 grades or weights of cover stock, numbers of leaves for crown size and demy size.

References.—Standard paper sizes, methods of testing. See also 470.2, 470.3.

482. MAPS, CHARTS, AND MUSIC

American Automobile Assn. 1929 Catalogue. Tour Maps. Size, scale, number of colors for regional, state and U. S. maps showing automobile routes and mileage.

References.—Chart and map paper. See 478.31. Navigational and topographical symbols for map making. See 910.

483. LITHOGRAPHIC PRINTS

484. BOOKLETS

489. MISCELLANEOUS PRINTED MATTER

National Wholesale Druggists Assn. Standard Forms; 1929. 4 by 6 printed price list standard card, standard sizes and form for invoices, standard size of catalogue page with recommended size of type.

Railway Accounting Officers Assn. Railway Accounting Procedure; 1931. Standard Forms, Freight Waybills, Passenger Traffic and Freight Traffic Accounting Forms. Requirements on headings, spacing, dimensions of forms, quality and weight of paper, and for waybills the strength requirements for paper.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R34; 1924. Warehouse Forms. Simplified practice recommended and accepted by industry establishing standard forms, their dimensions, the arrangement and content of printed matter, for rate quotation form, over, short and damage report, warehouse receipts, notice of order filled, bill of lading, account of stock, household goods form, packing ticket, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R37-28: 1928. Commercial Forms. Sim-

plified practice recommended and accepted by industry establishing standard dimensions, arrangement and content of printed matter appearing on form, for simplified invoice form, inquiry

form, and purchase order form.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R50; 1926. Bank Checks, Notes, Drafts and Similar Instruments. Simplified practice recommended and accepted by industry establishing standard sizes for bank checks, bank drafts, notes, trade acceptances, counter checks, customers checks, pocket checks, deposit slips, with unform arrangement of subject matter on checks.

form arrangement of subject matter on checks.
U. S. Gov., Dept. of Commerce. Bureau of Standards. R93-29; 1929. Paper Shipping Tags.
Simplified practice recommended and accepted by industry covering a selected limited list of standard stock varieties of reinforced eyelet type ship-

ping tags giving dimensions, quality, grades of paper, and standard colors.

U. S. Gov., Dept. of Commerce. Eureau of Standards. R113-30; 1930. Restaurant Guest Checks. Simplified practice recommended and accepted by industry covering a limited standard schedule of guest checks, with widths and lengths, colors of ink, varieties and weights of cardboard and paper used, and numbering.

U. S. Gov., Federal Specifications Board. 6G-C-101; 1930. Calender Pads and Stands. For 3 types, ordinary folding type, bound memorandum type, and large size folding executive type, requirements on substance and general quality of paper, size of sheets, punching, printed matter on sheet, dimensions and structural features of metal base, paper in accordance with specifications of U. S. Congress, Joint Committee on Printing.

500-509 COAL, PETROLEUM, ASPHALT, AND MINERAL WAX

500. GENERAL ITEMS

American Assn. of State Highway Officials. Tentative Method T-67. Undated. Method of Verification of Testing Machines. Same as E 4-27

of Am. Soc. for Testing Materials.

American Society for Testing Materials. E 4-27; 1927. Methods of Verification of Testing Machines. Definitions, verification of testing ma-chines that measure load by method of standard weights, by standardized proving levers, by elastic calibration device, by comparison method, tolerances for new and for old machines.

American Society for Testing Materials. E 6-30 and E 6-30T; 1930. Definitions of Terms Relating to Methods of Testing. Definitions of stress. strain, stress-strain diagram, elastic limit, yield point, tensile strength, compressive strength,

modulus of elasticity.

American Society for Testing Materials. E 11-26: 1926. Sieves for Testing Purposes. Construction of woven wire sieves of brass, bronze, or other suitable wire, micron designation and corresponding U. S. standard sieve series number, sieve openings, wire diameters, and tolerances for 30 sizes, permissible methods of measurement of openings and of wire diameters.

American Society for Testing Materials. E 12-27: 1927. Definitions of Terms Relating to Specific Gravity. Covers specific gravity and absolute specific gravity of solids and liquids, apparent specific gravity of solids, and bulk specific grav-

ity of solids.

American Society for Testing Materials. Tentative Definition. E 13-28T; 1928. Definition of the Term Screen (Sieve). Covers plate, sheet, or woven cloth types.

References.—Other specifications for sieves. 645.31

501. COAL AND COKE

501.0 GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code. Solid Fuels; 1927. Methods of sampling coal and laboratory analysis, including apparatus and method for determination of moisture, ash, volatile matter, fixed carbon, sulphur, phosphorus in ash, fusibility of ash, ultimate chemical analysis, calorimetric test, flue gas analysis and combustible matter in ashes and stack cinders, analysis of powdered coal, Frazer classification of solid fuels.

American Society for Testing Materials. D 21-16; 1916. Approved by American Standards Assn. as X 1-1921. Method of Sampling Coal. Collection of gross sample, minimum size, crushing, mixing and reduction, collection of sample for determi-

nation of total moisture.

American Society for Testing Materials. D 121-30; 1930. Definitions of Terms Relating to Coal and Coke. Definitions of proximate and ultimate analysis, moisture, ash, volatile matter, fixed carbon, beehive coke, by-product coke, coke breeze, dry coke.

American Society for Testing Materials. Tentative Specifications, D 121-30T; 1930, Definition

of the Term Coke.

American Society for Testing Materials. D 197-30; 1930. Method of Test for Fineness of Powdered Coal. Sizes, dimensions, and construction of sieves, collection of sample for both multiple and unit powdered coal systems, test procedure for hand sieving of sample.

American Society for Testing Materials. D 271-30: 1930. Methods of Laboratory Sampling and Analysis of Coal and Coke. Approved by American Standards Assn. as K18-1930. Sizes and types of apparatus, methods of sampling dry and wet coal and coke, determination of moisture, ash, volatile matter, fixed carbon, sulfur, phosphorus in ash, fusibility of ash, ultimate analysis, calori-

metric determination.

U. S. Gov., Dept. of Commerce. Bureau of Mines. Tech. Paper 113; 1919. Directions for Sampling Coal for Shipment or Delivery. Time of sampling, collection and size of gross sample, wagonload sampling, carload sampling, ship or barge sampling, crushing, halving, and quartering of sample, sealing and mailing, includes description of sample container of bureau.

501.1 ANTHRACITE COAL

American Society for Testing Materials. D 310-31; 1931. Method of Test for Size of Anthracite. Covers screen tests for determination of undersize or oversize in any given commercial size, dimensions and design of screens, sampling according to A. S. T. M. method D 21, procedure,

Anthracite Institute. Standard Anthracite Specifications; 1929. Standard screen grading for broken, egg, stove, nut, pea, and buckwheat an-

thracite coal.

References.—Definitions, methods of sampling and of testing. See also 500. and 501.0.

501.2 BITUMINOUS COAL

American Society for Testing Materials. D 166-24; 1924. Gas and Coking Coals. Methods of sampling using A. S. T. M. method D 21, method of chemical analysis according to A. S. T. M. D 271, requirements on limiting percentages of moisture, volatile matter, ash, and sulfur, minimum fusion point of ash.

American Society for Testing Materials. D 291-29; 1929. Method of Test for Cubic Foot Weight of Crushed Bituminous Coal. Does not apply to powdered coal used in boiler plants but to coarsely crushed coal as used in coke ovens, dimensions of cubic foot test box, preparation of sample and procedure for determination of weight, for sampling use made of A. S. T. M. method D 21.

American Society for Testing Materials. D 311-30; 1930. Method of Test for Sieve Analysis of Crushed Bituminous Coal. For rather coarsely crushed coal as used in coke ovens, not applicable to powdered coal for boiler plants. Requirements on ratio of sieve openings for succeeding sizes of sieves, sampling according to A. S. T. M. method D 21, sieve sizes, test procedure.

U. S. Gov., Dept. of Commerce. Bureau of Standards. RR1-29; 1929. Simplification of Sizes and Terminology of High Volatile Bituminous Coal. A regional simplified practice recommended and accepted by industry for coal handled over docks at American head of the Great Lakes. Defines screen sizes and size names for bituminous coal sized at the docks.

501 6 CHARCOAL

American Pharmaceutical Assn. National Formulary: 1926. Purified Animal Charcoal. Description and physical properties and test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Wood Charcoal. For medicinal purposes, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

502. PETROLEUM

502.0 GENERAL ITEMS

American Society for Testing Materials. Tentative Test Methods. D 287-30T; 1930. Method of Test for Gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Does not apply for road oils, road tars, asphalt cements and soft tar pitches. Definition of specific gravity and A. P. I. gravity and comparison table, graduation and accuracy requirements of hydrometer and thermometer, test method.

American Society for Testing Materials. Tentative Definitions. D 288-31T; 1931. Definitions of Terms Relating to Petroleum. Includes definitions of crude petroleum, petroleum naphtha, pe-

troleum spirits, kerosine, gas oil, fuel oil, oil shale, end point, engine distillate. etc.

502.1 CRUDE PETROLEUM

American Society for Testing Materials. Tentative Methods. D 270–30T; 1930. Methods of Sam-pling Petroleum and Petroleum Products. In-cludes all petroleum products except gascs. Dimensions and design of apparatus, sampling procedure for bottle or beaker sampling of tank cars and tanks, continuous sampling of pipe lines, dipper sampling for stream discharge, thief sampling for cans, drums, and tank cars, borings sampling for wax and soft solids in cases, cakes, barrels, grab sampling for loose lumpy materials in bins, sacks, barrels.

American Society for Testing Materials. Tentative Test Mcthod. D 285–30T; 1930. Method of Test for Distillation of Crude Petroleum. For determining the percentages and distillation range of the naphtha in any refinable crude, but does not specify what quality of product shall be defined as naphtha, dimensions and tolerances of Hempel distilling flask, dimensions and construction of fractionating column and condenser, distillation procedure, for redistillation for naphtha method D 86 of A. S. T. M. is used.

New York Produce Exchange. Rules Regulating the Petroleum Trade; 1920. Crude Petroleum. General definition of pure natural mineral oil, untreated, free from water, sediment, and adul-

502.2 PETROLEUM PRODUCTS

American Electric Railway Engr. Assn. Recom-mended Specification; WP117-26; 1926. Deter-mination of Water in Petroleum Products and Other Bituminous Materials. Specification and dimensioned drawings of apparatus, specification for solvent, procedure.

American Society for Testing Materials, D 95-30; 1930. Approved by American Standards Assn. as Z11i-1930. Method of Test for Water in Petro-leum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke-oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements for solvents, test procedure.

American Society for Testing Materials. D 96-30; 1930. Approved by American Standards Assn. as Z11h-1930. Method of Test for Water and Sediment in Petroleum Products by Means of Centrifuge. May be used for crude mineral oils centringe. May be used for crude inheral one and fuel oils; a more accurate method is given in A. S. T. M. method D 95. Structural requirements and speed of centrifuge, capacity and graduation for centrifuge tubes, test procedure.

American Society for Testing Materials. D 97-30; 1930. Approved by American Standards Assn. as Z11e-1930. Cloud and Pour Points of Petroleum Products. Definition of cloud point for transparent oils and of pour point for other petroleum oils, dimensions of test jar, dimensions, design and graduation of low range thermometers, assembly of apparatus, test procedure.

American Society for Testing Materials. D 286-30; 1930. Approved by American Standards Assn. as Z11w-1930. Method of Test for Determination of Autogenous Ignition Temperatures. For liquid and semiliquid peroleum products, test procedure by method of dropping sample into flask, resting

in molten solder bath.

American Society for Testing Materials. E 12-27; 1927. Definitions of Terms Relating to Specific Gravity. Covers specific gravity and absolute specific gravity of solids and liquids, apparent specific gravity of solids, and bulk specific gravity of solids.

New York Produce Exchange. Rules Regulating the Petroleum Trade; 1920. Refined Petroleum. Requirements on burning test and gravity,

method of test for burning test.

U. S. Gov., Federal Specifications Board. O—E—751, 1931. Petroleum Ether. Requirements on distillation range, color, absence of sediment, residue on heating, nonspot forming in spot test, lack of acidity, and absence of benzene hydrocarbons, methods of sampling, methods of making distillation and acidity tests.

503. FUEL AND ILLUMINATING OILS

503.0 GENERAL ITEMS

American Assn. of State Highway Officlals. Tentative Method. T-72. Undated. Methods of Test for Viscosity of Petroleum Products and Lubricants. Same as D 88-30 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-73. Undated. Method of Test for Flash Point by Means of the Pensky-Martens Closed Tester. Same as D 93-22 of Am. Soc.

for Testing Materials.

American Chemical Society. Standard Methods for the Sampling and Analysis of Commercial Pats and Oils; 1926. Published by American Oil Chemists Society. Includes methods of sampling from different types of containers, apparatus and methods of determination of moisture, volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl value, open-cup flash and fire test, standard color for commercial fat, other recommendations not yet standardized

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, Par 16; 1931. Density Determinations. Density standards for liquids and gases, methods of density measurement for solids including measuring and weighing method, picnometer method, and hydrostatic weighing method; for liquids, the picnometer, hydrostatic weighing, hydrometer, and westphal balance methods; for gases and vapors the methods described in U. S. Bureau of Standards publications T89 and T94 are re-

ferred to

American Society of Mechanical Engineers. Test Code for Liquid Fuels; 1930. Methods of conducting tests for calorific value, gravity, determination of carbon, hydrogen, sulphur, ash, water and sediment, viscosity, distillation, flash and fire points, cloud and pour points, color, corrosion, acidity, burning quality, and carbon residue, citing the applicable methods of A. S. T. M. and U. S. Bureau of Mines. Method of measurement of flue gas temperature, taking samples and analysis apparatus for flue gasses.

American Society for Testing Materials. D 6-30; 1930. Method of Test for Loss on Heating of oil and Asphaltic Compounds. Requirements on preparation of sample, limiting dimensions and structural requirements for test oven, dimensions, graduation, standardization, and permissible error of mercury thermometer, test procedure.

American Society for Testing Materials. D 56–21; 1921. Approved by American Standards Assn. as K 8–1923. Method of Test for Flash Point of Volatile Flammable Liquids. For Iquids flashing below 175° F. except fuel oils for which A. S. T. M. method D 93 is preferred, dimensions of Tag Closed Tester, dimensions, graduation marking and accuracy requirements for thermometer, test procedure.

American Society for Testing Materials. D 86–30; 1930. Approved by American Standards Assn. as Z11j–1930. Methods of Test for Distillation of Gasoline, Naphtha, Kerosene, and Similar Petroleum Products. Dimensions and design of fiask, condenser, support, and thermometers, test procedure, corrections for barometric pressure.

American Society for Testing Materials. D 88-30; 1930. Approved by American Standards Assn. az 11b-1930. Methods of Test for Viscosity of Petroleum Products and Lubricants. Use of Saybolt universal viscosimeter for lubricants and of Saybolt Furol viscosimeter for fuel oils, dimensions and graduation of thermometer, dimensions of oil tubes, temperatures for making determinations, test procedure.

American Society for Testing Materials. Tenta-

American Society for Testing Materials. Tentative Test Methods. D 90-30T; 1930. Method of test for Sulphur in Motor Fuels, Naphthas and Illuminating Oils (Lamp Method). Dimensions and assembly of absorber, lamp and spray trap, preparation of reagents, test procedure, accuracy

of determination.

American Society for Testing Materials. D 93–22; 1922. Approved by American Standards Assn. as Z11g-1930. Method of Test for Flash Point by means of the Pensky-Martens Closed Tester. For fuel oils, dimensions and design of tester cup, stirring device, air bath, and thermometer, test

procedure.

American Society for Testing Materials. D 95–30; 1930. Approved by American Standards Assa. ST11i–1930. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements for solvent, test procedure.

American Society for Testing Materials. D 96-30; 1930. Approved by American Standards Assa, as Z11h-1930. Method of Test for Water and Sediment in Petroleum Products by Means of Centrifuge. May be used for crude mineral oils and fuel oils, a more accurate method given in A. S. T. M. method D 95. Structural requirements and speed of centrifuge, capacity and graduation of centrifuge tube, test procedure.

American Society for Testing Materials. D 129-27; 1927. Approved by American Standards Assn. as Z11m-1928. Method of Test for Sulphur in Petroleum Oils Heavier than Illuminating Oil. By use of oxygen bomb, capacity of bomb, material and dimensions of oil cup and fuse wire, com-

position of reagents, test procedure.

American Society for Testing Materials. Tentative Test Method. D 156-23T; 1923. Method of test for Color of Refined Petroleum Oil by Means of Saybolt Chromometer. Dimensions and construction of Saybolt Chromometer, test procedure for comparing color of oil with standard color disks. American Society for Testing Materials. D 158-28; New York Produce Exchange. Rules Regulating 1928. Methods of Testing Gas Oils. Distillation the Petroleum Trade; 1920. Refined Petroleum. test method, dimensions of flask, condenser, support, etc., assembly of apparatus, determination of gravity, determination by A. S. T. M. standard methods of sulphur, carbon residue, pour point,

viscosity, and water.

American Society for Testing Materials. D 189-30;
1930. Method of Test for Carbon Residue of
Petroleum Products (Conradson Carbon Resi due). Provides information for engine lubricants, domestic fuel oils, and oils for gas manufacture, Dimensions and construction of test apparatus, test procedure for residue after prescribed application of heat-

American Society for Testing Materials. D 206-25; 1925. Approved by American Standards Assn. as Z11a-1928. Standard Abridged Volume Correction Table for Petroleum Oils. For reducing oil volumes to the basis of 60° F. Based on same data as Table 2, U. S. Bureau of Standards Cir-

cular No. 154.

American Society for Testing Materials. D 240-27; 1927. Approved by American Standards Assn. as Z11n-1928. Method of Test for Thermal Value of Fuel Oil. Permissible makes of combustion bombs, requirements for calorimeter jacket, stirring procedure, calibration of thermometers, standardization of calorimeter, filling of bomb. test procedure.

American Society for Testing Materials. Tentative Methods, D 270-30T; 1930. Methods of Sampling Petroleum and Petroleum Products. Dimensions and design of apparatus, sampling procedure for bottle or beaker sampling of tank cars and tanks, continuous sampling of pipe lines, dipper sampling of stream discharge, thief sampling of containers, borings samplings of soft solids, grab sampling of lump material.

American Society for Testing Materials. D 286-30: 1930. Approved by American Standards Assn. as Z11w-1930. Method of Test for Determination of Autogenous Ignition Temperatures. For liquid and semiliquid petroleum products, test procedure by method of dropping sample into flask resting

in molten solder bath.

American Society for Testing Materials. Tentative Test Methods. D 287-30T: 1930. Method of Test for Gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Does not include determination of specific gravity for road oils, road tars, asphalt cements and soft tar pitches. Definition of specific gravity and A. P. I. gravity and comparison table, graduation

and accuracy requirements of hydrometer and special thermometer, test procedure. American Society for Testing Materials. Tentative Definitions. D 288-31T; 1931. Definitions of Terms Relating to Petroleum. Includes definitions of crude petroleum, petroleum naphtha, pe-troleum spirits, kerosene, gas oil, fuel oil, oil shale, end point, engine distillate, etc. merican Wood Preserver's Assn. 40a; 1926.

American Standard Abridged Volume Correction Table for Petroleum Oils. Based on same data as Table No. 2 of Bureau of Standards Circular No. 154. Table for reducing oil volumes to basis of 60° F.

for 6 groups of oils.

Associated Factory Mutual Fire Insurance Com-panies. Fuel Oil Installations for Furnaces and Engines; 1928. Classification of fuel oils, requirements for oils as regards fire hazards, specifications for steel tanks, their location, installation and piping connections, requirements, regarding tank heating, installation of pumps, automatic valves, oil burner installations, interlocking valves, oil engine installations and exhaust piping with special reference to fire hazards.

Requirements on burning test and gravity, method

of test for burning test.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Method of Rating Fuels for Detonation; 1931. Method of rating gasoline for fuel knock to conform to a series of octane numbers, definition of octane number for a fuel.

U.S. Gov., Dept. of Commerce. Bureau of Standards. C154 and Suppl.; 1924. National Standard Petroleum Oil Tables. Approved by Am. Petroleum Institute and Bureau of Mines. Applies to all petroleum oils, both crude and refined, produced in the U. S., the A. P. I. scale chosen as standard for density measurement. Tables con-verting observed degrees A. P. I., volume, and specific gravity to corresponding values at 60° F. and tables converting degrees A. P. I. to specific gravity, pounds per gallon, and degrees Baumé.

U. S. Gov., Dept. of Commerce. Bureau of Standards C19; 1924. Standard Density and Volumetric Tables. Includes comparison table of degrees Baumé, degrees A. P. I., pounds per gallon, and specific gravity, also tables for graduation of

various types of hydrometers.

U. S. Gov., Federal Specifications Board. 2d: 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Includes methods of test for lubricants and liquid fuels including several A. S. T. M. methods and flock test, wick feed test, sediment, water by centrifuge, emulsion tests, demulsibility, protection test, reaction test, acidity in gasoline, doctor test, corrosion tests, fatty oil.

503.1 BENZINE AND PETROLEUM ETHER

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Cotton Seed. Includes petrolic ether used in extraction of oil from cotton seed, requirements on distillation range, initial boiling point, end point, non-volatile matter content, and specific gravity of petrolic ether.

National Cottonseed Products Assn. Rules; 1930. Rule 272. Methods of Analysis of Cottonseed Cake, Meal and meats, Includes specifications for petrolic ether used in extraction of oil from the oil cake, meal, or meats. Requirements on distillation range, initial boiling point, end point,

nonvolatile matter, and specific gravity.

U. S. Gov., Federal Specifications Board. O-E-751: 1931. Petroleum Ether. For 2 grades, requirements on color, moisture and sediment, boiling point range, residue after evaporation, spot test, acidity, and absence of benzene hydrocarbons, methods of test.

References.—Definitions, methods of sampling and testing. See also 503.0.

503.2 DISTILLATES OF PETROLEUM

American Society for Testing Materials. Tentative Specifications. D 235-26T; 1926. Petroleum Spirits (Mineral Spirits). Apply only to petroleum distillates. Requirements for color in accordance with A. S. T. M. test method D 156, for flash point in accordance with A. S. T. M. method D 56, for distillation according to A. S. T. M. D 86, for appearance, test requirements for blackening and acidity.

National Assn. of Dyers and Cleaners. U. S. Bu-

reau of Standards. Commercial Standard CS3-28; 1928. Stoddard Solvent (Dry Cleaning). For a petroleum distillate, requirements on appearance, color, odor, flash point, corrosion test, distillation range, acidity, sulphuric acid absorp-tion test, methods of sampling from cars, drums, and small containers, test methods.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test Nos. 16, 17, 18, and 19. To Determine Impurities in Dry Cleaning Solvent. Reagents and test procedure for determination of presence of alkali. moisture, sulphur compounds, or benzine soap in

dry cleaning solvent.

U. S. Gov., Dept. of Commerce, Bureau of Standards. CS3-28; 1928. Stoddard Solvent. A commercial standard for a dry cleaning agent se-lected and accepted by industry, a petroleum distillate, requirements on appearance, color, odor, flash point, corrosion test, distillation range, acidity, doctor test, and sulphuric acid absorption test, methods of sampling and test.

U. S. Gov., Federal Specifications Board, P-S-661: 1931. Dry Cleaning Solvent. Known in trade as Stoddard Solvent, requirements on appearance, color, odor, flash point, corrosion test, distillation range, acidity, doctor test, sulphuric acid absorption test, methods of test, dimensions of Tag closed tester for flash point, dimensions, graduation, and calibration of test thermometer.

503.7 LONG-TIME BURNING (SIGNAL) OIL

American Society for Testing Materials. D 219-30; 1930. Approved by American Standards Assn. as Z11s-1930. Method of Test for Burning Quality of Long-Time Burning Oil for Railway Use. Using standard Am. Rwy. Assn. sema-phore lamp, dimensions of burner, dimensions of chimney, material and dimensions of wick, test procedure.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines, Tech. Paper 323B.) Lubricants and Liquid Fuels. Long-Time Burning Oil. For oil free from water, glue, and suspended matter, requirements on color, flash point, amount of sulphur, flock test, end point, cloud point, doctor test, and burning test, test methods.

American Assn. of State Highway Officials. Tenta-tive Method. T-72. Undated. Methods of Test for Viscosity of Petroleum Products and Lubricants. Same as D 88-30 of Am. Soc. for Testing Materials.

American Chemical Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils; 1926. Published by American Oil Chemists Society. Applicable to lubricating oils, fats and fatty oils for candles, methods of sampling from different types of containers, apparatus and methods of determination of moisture volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Teichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl value, open-cup flash and fire test, standard color for commercial fat.

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, Part 17; 1930. Determination of the Viscosity of Liquids. General procedure in making viscosity determinations, precautions recommended in taking readings, description, relative advantages, range and accuracy, test procedure, corrections and calibration for various types of viscosimeters.

American Society for Testing Materials. D 88-30; 1930. Approved by American Standards Assn. as Z11b–1930. Methods of Test for Viscosity of Petroleum Products and Lubricants. Use of Saybolt universal viscosimeter for lubricants and of Saybolt Furol viscosimeter for fuel oils, dimensions of oil tubes, dimensions and graduation of thermometer, temperatures for making deter-

minations, test procedure.

American Society for Testing Materials. Tenta-tive Test Method. D 91–30T; 1930. Method of Test for Precipitation Number of Lubricating Commonly used for steam cylinder stocks and black oils, measurement of precipitate when a mixture of lubricating oil and petroleum naphtha are centrifuged, requirements for centrifuge and centrifuge tubes, gravity, distillation and aniline requirements for the petroleum naphtha diluent, test procedure.

American Society for Testing Materials. D 92-24; 1924. Approved by American Standards Assn. as Z11f-1928. Method of Test for Flash and Fire Points by Means of Open Cup. For all products except fuel oil having open cup flash below 175° F., dimensions and design of Cleveland open cup and of thermometer, dimensions of test flame,

test procedure.

American Society for Testing Materials. D 94-28; 1928. Approved by American Standards Assn. as Z11t-1930. Method of Test for Saponification Number. Useful in identification of unmixed animal and vegetable oils and for measuring quantity of fatty material in compounded products, apparatus and preparation of reagents, test procedure for saponification number and percentage of fatty oil.

American Society for Testing Materials. D 95-30; 1930. Approved by American Standards Assn. as Z111-130. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas and coke oven tars, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements for solvents, test procedure.

American Society for Testing Materials. D 128- American Society for Testing Materials. D 97-30; 27; 1927. Approved by American Standards Assn. as Z11p-1928. Method of Analysis of Grease. Methods for determination of fillers, ash, soap bases, soap, fat, water, excess alkali or acid, petroleum products, and unsaponifable matter, qualitative tests for glycerine, preparation of solvents.

American Society for Testing Materials. Tentative Test Method. D 155-23T; 1923. Method of Test for Color of Lubricating Oils by Means of Union Colorimeter. Dimensions and construction of Union Colorimeter, dimensions of standard glass test jar, list of 15 standard colors with Lovibond analysis, test procedure for lubricating oils in

general and for cylinder oils.

American Society for Testing Materials. D 157-28; 1928. Approved by American Standards Assn. as Z110-1928. Steam Emulsion of Lubricating Oils. Dimensions, design and assembly of apparatus, test temperatures, test procedure, determination of steam emulsion number as time in seconds for oil to separate from the emulsion produced under the test conditions.

American Society for Testing Materials. Tentative Test Method. D 188-27T; 1927. Approved as tentative standard by Am. Standards Assn. under designation Z111-1928. Method of Test for Neutralization Number of Petroleum Products and Lubricants. For indicating presence of organic acids and contamination by alkalies and mineral acids, preparation of reagents, procedure for compounded and noncompounded petroleum products.

American Society for Testing Materials. D 189-30; 1930. Method of Test for Carbon Residue of Petroleum Products (Conradson Carbon Residue). Provides information for engine lubricants, do-mestic fuel oils, and oil for gas manufacture. Dimensions and construction of test apparatus, test procedure for residue after prescribed appli-

cation of heat.

American Society for Testing Materials. Tentative Test Method. D 217-27T; 1927. Approved as tentative by American Standards Assn. under designation Z 11c-1928. Method of Test for Penetration of Greases and Petrolatum. For measuring the original consistency or the worked consistency of No. 0 cup grease and all harder greases and of unworked petrolatum, test procedure using asphalt penetrometer with special cone tip, dimensions and design of grease worker for use in testing worked consistency.

American Society for Testing Materials. Tentative Methods, D 270-30T; 1930. Methods of Sampling Petroleum and Petroleum Products. Dimensions and design of apparatus, sampling procedure for bottle or beaker sampling of tank cars and tanks, continuous sampling of pipe lines, dipper sampling of stream discharge, thief sampling of containers, borings sampling for wax and soft solids, grab sampling for loose lumpy

materials.

American Society for Testing Materials. Tentative Test Methods. D 287-30T; 1930. Method of Test for Gravity of Petroleum and Petroleum Products by means of the Hydrometer. Does not include determination of specific gravity for road oils, road tars, asphalt cements and soft tar pitches. Definition of specific gravity and of A. P. I. gravity and comparison table, graduation and accuracy requirements of hydrometer and special

thermometer, test procedure. American Society for Testing Materials. Tentative Method of Test. D322-30T; 1930. Test for Dilution of Crankcase Oils. Specifications for test apparatus, test procedure for measurement of dilution of crankcase oil when gasoline has been used

as fuel in gasoline engines.

1930. Approved by American Standards Assn. as Z11e-1930. Cloud and Pour Points of Petroleum Products. Definition of cloud point on cooling of transparent oils and of pour point on cooling of other oils, dimensions and assembly of test apparatus, dimensions and graduation of low range thermometers, test procedure.

American Wood Preservers Assn. 40a; 1926. Standard Abridged Volume Correction Table for Petroleum Oils. Based on same data as Table 2 of Bureau of Standards Circular No. 154. Table for reducing oil volumes to basis of 60°

F. for 6 groups of oils.

504.1 SPECIAL LUBRICATING OILS

504.11 Heavy Asphaltic Lubricating Oils

504.12 Lubricating Oils for Car Axle Generators

504.13 Journal Box Lubricating Oils

American Railway Assn. Mechanical Div. Recom-mended Practice; 1930. New Car Oil. Requirements on flash point, viscosity, pour point, and percentage of water, using A. S. T. M. test methods, requirements on allowable tarry matter and insoluble impurities using methods specified, for summer grade and for winter grade oils.

American Railway Assn. Mechanical Div. claimed Oil; 1930. For use in lubricating car journals, requirements on flash and fire points, viscosity, pour point, precipitation number of sediment, percentage of water, and screening.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Car and Locomotive Engine Oil. A journal lubricant, requirements on flash point, viscosity, pour point, and precipitation number, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.14 Mineral Lubricating Oils

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0. Journal box oil. See 504.13. Misc. Inbricating oils. See 504.18. Cylinder and engine oils. See 504.2. Machine lubri-cating oils. See 504.3. Paraffin oil. See 504.53. Transformer and switch oils. See 504.8.

504.19 Miscellaneous Lubricating Oils

American Railway Assn. Signal Section. 10220; 1921. Zero Fahrenheit Lubricating Oil. For signal mechanisms, but not for relays or dash pots, test requirements for flash point, fire point, vicosity, pour at zero, moisture, and acid, oil to be neutral and free from vegetable or animal oils or fats, free from alkali.

American Railway Assn. Signal Section. 10320; 1921. 45° Below Zero Fahrenheit Lubricating Oil. For signal mechanisms, not for dash pots, neutral, free from vegetable and animal oils and fats and alkali, test requirements for flash point, fire point, viscosity, pour at -45° F., moisture.

and acid.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Gear, Chain, and Wire Rope Lubricant. A petroleum product free from foreign admixtures, requirements on viscosity and on protective qualities, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Gun and Ice Machine Oil. Includes oil for small arms, for 2 grades, requirements on flash point, viscosity, pour point, neutralization number, corrosion and emulsion test, demulsibility, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.2 CYLINDER OILS

504.21 Compressor Oil, for Air and for Ammonia Compressors

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Gun and Ice Machine Oil. For small arms, for cylinders of ice machines, pneumatic tools, and hydraulic systems, a refined petroleum without foreign admixtures, for 2 grades, requirements on flash point, viscosity, pour point, neutralization number, corrosion and emulsion test, demulsibility, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.22 Engine Oils, for Steam Engine Cylinders and for Turbines

National Electric Light Assn. Proceedings, vol. 78; 1922. p. 903. Proposed Specifications. Steam Turbine Oils. For lubrication of horizontal turbines provided with a circulating and forced feed system, requirements on general quality, flash and fire points, viscosity, color, pour test, acidity, corrosion test, emulsion test, carbonization, distillation, methods of test, for 3 gravity grades.

Society of Automotive Engineers, 1931 Handbook.

Society of Automotive Engineers, 1931 Handbook. Recommended Practice. Crankease Lubricating-Oil Viscosity Numbers; 1930. For 7 oil grades, assigned viscosity numbers and corresponding Saybolt viscosity range at specified temperatures.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 328B.) Lubricants and Liquid Fuels. Lubricants, Class C. A refined petroleum oil suitable for both turbine and internal combustion engines. For 5 grades, free from foreign admixtures, requirements on flash and fire points, viscosity, color, pour point, neutralization number, corrosion test, emulsion test, demulsibility, test methods.
U. S. Gov., Federal Specifications Board. 2d; 1927.

U. S. Gov., Federal Specifications Board. 20; 1927.
(Bureau of Mines Tech, Paper 323B.) Lubricants and Liquid Fuels. Lubricants, Class B. For lubrication of turbines, dynamos, and high speed steam engines, using circulating and forced feed systems. For 5 grades free from foreign admixtures, requirements on flash and fire points, viscosity, color, pour point, corrosion test, emulsion test, demulsibility, test methods.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 322B.) Lubricants and Liquid Fuels. Lubricants, Class A. Refined petroleum oil for general lubrication of engines and machinery, but not for steam cylinders. For 5 grades free from foreign admixtures requirements on flash and fire points, viscosity, color, pour point, reaction chemically, corrosion test, test methods.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Mineral Steam Cylinder Oil for Noncondensing Engines. For 2 grades of well refined petroleum oil, requirements on flash point, viscosity, pour point, precipitation number, and carbon residue, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927.
(Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Compounded Steam-Cylinder Oil for Noncondensing Engines. Permissible amount of fatty oil, requirements on flash point, viscosity, pour point, precipitation number, and neutralization number, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Marine-Engine Oil. Not for circulating or forced feed systems, a mineral oil free from water, mineral acids, alkalies and asphaltic matter, requirements on viscosity, pour point, neutralization number, flash and fire points, corrosion, emulsion, and wick feed tests, test methods.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Llquid Fuels. Compound Marine-Engine Oil. For marine reciprocating engilies, but not for use in circulating or forced feed lubricating systems, a refined petroleum oil compounded with a rapessed or peanut oil, requirements on percentage limits of rapessed oil, on viscosity, pour point, neutralization number, corrosion test, emulsion test, wick feed test, methods of test, for two grades.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.23 Cylinder Oils, for Internal Combustion Engines

U. S. Gov., Federal Specifications Board. 2d; 1927.
(Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Puels. Lubricants, Class C. A refined petroleum oil suitable for both turbine and internal combustion engines. For 5 grades, free from foreign admixtures, requirements on flash and fire points, viscosity, color, pour point, neutralization number, corrosion test, emulsion test, demulsibility, test methods.
U. S. Gov., Federal Specifications Board. 2d; 1927.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Lubricants, Class D. For uncompounded petroleum oils for lubricating internal combustion engines, except aircraft and Diesel engines. For 9 grades, requirements on flash and fire points, viscosity, color, pour point, neutralization number, corrosion test, and carbon residue, test methods.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Liberty Aero Oil. For stationary-cylinder aircraft engines, a refined petroleum oil without foreign admixtures, for 4 grades, requirements on flash point, viscosity, pour points, neutralization number, emulsion test, carbon residue, and precipitation number, methanism can be seen and control of the control o

ods of test.

U. S. Gov., Federal Specifications Board. 21; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Diesel Engine Lubricating Oil. A refined petroleum oil free from admixtures, requirements on flash point, viscosity, pour point, neutralization number, emulsion test, and carbon residue, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0. Auto engine crank-case oil. See 504.34.

504.24 Valve Oils

504.3 MACHINE OILS

504.31 Oils for Dynamos, Spindles, Pumps, etc.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Gun and Ice Machine Oil. For small arms, for cylinders of ice machines, pneumatic tools, and hydraulic systems, a refined petroleum without foreign admixtures, 2 grades, requirements on flash point, viscosity, pour point, neutralization number, corrosion and emulsion test, demulsibility, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Lubricants, class A. Refined petroleum oil for general lubrication of engines and machinery, but not for steam cylinders. For 5 grades free from foreign admixtures requirements on flash and fire points, viscosity, color, pour point, reaction chemically, corrosion test, test methods.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.32 Machine-Gun Oil

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Aircraft Machine Gun Oil. For refined petroleum oil without foreign admixtures, requirements on flash point, viscosity, pour point, neutralization number, corrosion number, and carbon residue, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.33 Recoil and Recuperator Oils for Guns

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Recuperator Oil and Grease. For recoil mechanism on 75 and 155 mm French gun. The recuperator oil is the same as the recoil oil specified under this specification.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Recoil Oil. For recoil cylinder of gun carriages of War Dept., a refined petroleum oil free from foreign admixtures, in 3 grades, requirements on flash and fire points, viscosity, color, pour point, neutralization number, and corrosion test, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Buffer Oil for Recoil and Recuperator Cylinders of All British Types of Howitzers and Gun Carriages. For refined petroleum oil without foreign admixtures, requirements on flash point, viscosity, pour point, and neutralization number, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0. Recuperator grease. See 504.49.

504.34 Transmission and Crankcase Oil for Automobiles

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Crankcase Lubricating-Oil Viscosity Numbers; 1930. For 7 oil grades, assigned viscosity numbers and corresponding Saybolt viscosity range at specified temperatures.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Transmission and Rear Axle Lubricant Viscosity Numbers; 1931. A classification of lubricants into 5 classes in terms of viscosity and consistency at low temperatures.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Transmission Oil. For transmission gears of motor vehicles, a petroleum product without foreign admixtures, requirements on ash and viscosity, methods of test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0. Engine oil for internal combustion engines. See also 504.23.

504.35 Typewriter, Sewing Machine, and Clock Oils

504.36 Oil for Door Closers and Door Checks

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Closers. Liquid for door closers, requirements on viscosity, pour point, permissible acidity.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.4 LUBRICATING GREASES

504.41 Cup Greases

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Graphite Lubricating Grease. Covers 3 grades of cup grease for lubricating motor equipment and machinery and for ball and roller bearings, a mixture of mineral oil, graphite, and lime scop, free from fillers and impurities, requirements on percentage of water, penetration, corrosion test, and composition, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Mineral Lubricating Grease. Covers 3 grades of cup grease for lubricating motor equipment and machinery and for ball and roller bearings, a mixture of mineral oil and lime soap free from fillers and impurities, requirements on percentage of water, penetration, corrosion test, composition, test methods.

References.—Definitions, methods of sampling and of testing. See also 504.0.

504.42 Cylinder Greases

504.43 Gear, Chain, and Wire Rope Greases

American Mining Congress. American Standards Assn. M 11–1927. Wire Ropes for Mines. Includes lubrication and lubricant for wire ropes, recommendations as to general quality of lubricant.

References.—Definitions, methods of sampling and of testing. See also 504.0. Liquid lubricant for gear, chain, and wire rope. See 504.19.

504.44 Graphite Greases

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Graphite Lubricating Grease. Covers 3 grades of cup grease for lubricating motor equipment and machinery and for ball and roller bearings, a mixture of mineral oil, graphite, and lime soap, free from fillers and impurities, requirements on percentage of water, penetration, corrosion test, and composition, methods of test.

References.—Definitions, methods of sampling and of testing. See also 504.0.

504.46 Crank Pin, Driving Journal, and Rod Cup Greases

U. S. Gov., Federal Specifications Board. 24; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Crank Pin Grease, Driving Journal Compound, Rod-Cup Grease. For use on locomotives, composed of soda soap and refined cylinder stock petroleum oil, non-crumbling, requirements on color, soap content, percentage of free alkali, of water, glycerin, and impurities, methods of test.

References.—Definitions, methods of sampling and of testing. See also 504.0.

504.49 Miscellaneous Lubricating Greases

Society of Automotive Engineers, 1931 Handbook. Recommended Practice. Transmission and Rear Axle Lubricant Viscosity Numbers; 1931. A classification of lubricants into 5 classes in terms of viscosity and consistency at low temperatures.

VIS. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Recuperator Oil and Grease. For recoil mechanism on 75 and 155 mm French gun carriages, the grease composed of calcium soap, animal or vegetable oils and

mineral oil, permissible percentage of water, requirements on penetration, corrosion test, and composition, test methods.

References.—Definitions, methods of sampling and of testing. See also 504.0.

504.5 PARAFFIN, PARAFFIN OIL, AND PARAFFIN WAX

504.51 Candles

504.52 Illuminating Wax

504 53 Paraffin Oils

U. S. Pharmacopoeial Convention (Inc). Pharmacopoeia of U. S. A.; 1926. Liquid Petrolatum (White Mineral Oil, Parafin Oil.) Physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0. Petrolatum. See also 504.6.

504.54 Paraffin Wax

American Society for Testing Materials. D ST-22; 1922. Approved by American Standards Assn. as Z11d-1928. Method of Test for Melting Point of Parafin Wax. Definition of A. S. T. M. parafin wax melting point, dimensions and design of container, air bath, water bath, stirrer, and thermometer, test procedure.

American Society for Testing Materials, Tentative Test Methods. D 308-20T; 1929 Method of Test for Expressible Oil and Moisture in Parafin Waxes. Test procedure using press method, requirements for press, platens and accessories.

requirements for press, platens and accessories. New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Paraffin Wax. White crude wax on basis of 2 per cent oil and moisture content, yellow crude wax on basis of 4 per cent oil and moisture content, sold on basis of color and guaranteed melting point.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Paraffin. Physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement

of Federal food and drugs act.

References.—Definitions, methods of sampling and of testing. See also 504.0.

504.6 PETROLATUM

American Railway Assn. Signal Section. 7719; 1920. Petrolatum for Use in Impedance Bonds. A pure mineral oil free from crystalline wax, acid, alkali, solidifying at 120° F., requirements for specific gravity, flash point, viscosity, melting point, solidifying point.

American Society for Testing Materials. D 127-30; 1930. Approved by American Standards Assn. as Z11v-1930. Method of Test for Melting Point of Petrolatum. Apparatus and test procedure for determination of temperature where petrolatum is sufficiently fluid to drop

from thermometer bulb.

American Society for Testing Materials. Tentative Test Methods. D 218-25T; 1925. Method of Test for Color of Petrolatum by Means of Union Colorimeter. Dimensions and construction of Union Colorimeter and glass test jar, list of 15 standard colors and Lovibond analysis, test procedure.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Petrolatum (Petroleum Jelly), Liquid Petrolatum (White Mineral Oil, Paraffin Oil). Physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0. Liquid petrolatum. See also 504.53.

504.7 CUTTING OILS

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Soluble Cutting Oil. For cooling and lubricating cutting and threading tools, a mixture free from mineral acids, sediment, etc., requirements on non-clogging qualities. emulsion forming qualities with water, water content, emulsion test, ash, and corrosion test, methods of test.

U. S. Gov., Federal Specifications Board. 2d; 1927. (Bureau of Mines Tech. Paper 323B.) Lubricants and Liquid Fuels. Compounded Cutting Oil (Mineral Lard Oil). For lubricating and cooling machine cutting tools where a soluble oil is not suitable, a solution of refined mineral oil and lard oil, requirements on freedom from rancidity and foreign matter, nongumming, soluble and oily in kerosene or soda and water mixtures, color, flash point, viscosity, pour point, percentages of fatty oil, free fatty acid, water, and sediment, methods of test.

References.—Definitions, methods of sampling and of testing for lubricating oils. See also 504.0. Definitions, methods of sampling and of testing for animal oils and fats. See also 040. Other lard oils. See 041.3.

504.8 TRANSFORMER AND SWITCH INSULATING OILS

American Railway Assn. Signal Section. 4631; 1931. Transformer Oil. Fractionally distilled from petroleum, free from moisture, acid, and alkali, flash point, fire test, pour test, permissible acidity, and viscosity requirements, electrical breakdown voltage test requirements. American Society for Testing Materials. D 117–

merican Society for Testing Materials. D 117-31; 1931. Methods of Testing Electrical Insulating Oils. Dimensions and design of sampling apparatus and sampling procedure, apparatus, reagents, and test procedure for determination of sulphur, dielectric strength test procedure, other tests for flash point, pour point, neutralization number, and mineral acids according to A. S. T. M. standard methods.

National Electrical Mfrs. Assn. Handbook of Apparatus Standards; 1928. Transformers for Distribution and Power Service. Transformer oil; 1921. Dielectric test requirements for transformer oil.

References.—Definitions, methods of sampling and of testing. See also 502.2, 503.0, 504.0.

504.9 MISCELLANEOUS OILS

References.—Castor oil for medicinal purposes. See 813.1. Cottonseed oil. See 142.4.

505. ASPHALT AND OTHER BITUMINOUS MATERIALS

505.0 GENERAL ITEMS

American Assn. of State Highway Officials. Tentative Method. T-30. Undated. Method of Mechanical Analysis of Extracted Aggregates. For mineral aggregate left after extraction of bituminous materials, drying and screen grading procedure.

American Assn. of State Highway Officials. Tentative Method. T-40. Undated. Methods of Sampling Bituminous Materials. Same as D 140– 25 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-41. Undated. Methods of

Sampling Bituminous Mixtures. Method of cutting sample from finished pavement or of taking sample during preparation of mixture.

American Assn. of State Highway Officials. Ten-tative Method. T-43. Undated. Methods of Test for Specific Gravity of Bituminous Mate-Test procedure for hydrometer method for thin fluids, pycnometer method for viscous fluids and semisolids, displacement method for hard solids and for semisolids.

American Assn. of State Highway Officials. Ten-tative Method, T-44. Undated. Method of Test for Percentage of Bitumen (Soluble in Carbon Disulphide). Requirements on type of test

apparatus and test procedure.

American Assn. of State Highway Officials. Ten-tative Method. T-45. Undated. Method of Test for Percentage of Bitumen Insoluble in Carbon Tetrachloride. Requirements on type of test

apparatus and method of procedure.

American Assn. of State Highway Officials, Tentative Method, T-46. Undated, Method of Test for Percentage of Bitumen Insoluble in Paraffin Naphtha. Requirements on test apparatus

and test procedure.

American Assn. of State Highway Officials. Ten-tative Method. T-47. Undated. Method of Test for Loss on Heating of Oil and Asphaltic Compounds. Same as D 6-30 of Am. Soc. for Testing Materials except that T-47 permits use of a 2-ounce can and adds a test for loss at 100° C.

American Assn. of State Highway Officials, Ten-tative Method, T-48, Undated, Method of Test for Flash and Fire Points by Means of Open Cup. Same as D 92-24 of Am. Soc. for Testing Materials except that T-48 includes test with the Gill style cup in addition to Cleveland cup and test procedure applies to oils with flash points below 158° F, instead of 175° F.

American Assn. of State Highway Officials. Tentative Method. T-49. Undated. Method of Test for Penetration of Bituminous Materials. Same as D 5-25 of Am. Soc. for Testing Materials except that the use of a Roberts No. 2

needle is permitted in T-49.

American Assn. of State Highway Officials. Tenta-tive Method. T-50. Undated. Method of Float Test for Bituminous Materials. Same as D 139-27 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tenta-tive Method. T-51. Undated. Method of Test for Ductility of Bituminous Materials. Same as

D 113-26T of Am. Soc. for Testing Materials. American Assn. of State Highway Officials. Tenta-tive Method. T-53. Undated. Method of Test for Softening Point of Bituminous Materials (Ring and Ball Method). Same as D 36-26 of Am. Soc. for Testing Materials except that the simultaneous use of more than one ring is allowed in T-53.

American Assn. of State Highway Officials. Tentative Method. T-54. Undated. Method of Test for Specific Viscosity. For fluid bituminous road materials, test procedure using Engler viscosim-

American Assn. of State Highway Officials. Tenta-tive Method. T-55. Undated. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Same as D 95-30 of Am.

Soc. for Testing Materials. American Assn. of State Highway Officials. Tentative Method. T-56. Undated. Method of Test for Percentage of Residue of Desired Penetration. For oils, method of determination by trial by evaporating samples of oil,

American Assn. of State Highway Officials. Tentative Method. T-57. Undated. Calcium Chloride Method for Determination of Percentage of Water in Bituminous Emulsions (not applicable to clay emulsions). Test procedure for separat-

ing and measuring asphalt.

American Assn. of State Highway Officials. Tenta-tive Method. T-58. Undated. Method for Ex-amination of Bituminous Mixtures. Procedure for centrifugal method and for hot extraction method, with suggested method for examination of bituminous mortars.

American Assn. of State Highway Officials. Tenta-tive Method. T-59. Undated. Methods of Test-ing Bituminous Emulsions. Same as D 244-28T

of Am. Soc. for Testing Materials.

American Society of Mechanical Engineers. Test Codes. Instruments and Apparatus, Pt. 16; 1931. Density Determinations. For solids, procedure for density determination by measuring and weighing, by picnometer, and by hydrostatic weighing methods. For liquids, procedure for density determination by picnometer, hydrostatic weighing, hydrometer, and Westphal balance methods.

American Society for Testing Materials. D 4-27; 1927. Method of Test for Determination of Bitumen. Apparatus required, preparation of sample, test procedure, method No. 1 for the usual sample, method No. 2 where mineral residue is not easily retained on filter. Approved by American Standards Assn. as A37c-1930.

American Society for Testing Materials. 1925. Method of Test for Penetration of Bituminous Materials. Dimensions and construction of container and needle, water bath standard temperature, preparation of sample, test procedure. Approved by American Standards Assn. as A37a-1920

American Society for Testing Materials. D 6-30; 1930. Method of Test for Loss on Heating of Oil and Asphaltic Compounds. Dehydration of test sample, limiting dimensions and structural requirements for test oven, dimensions, graduation, standardization, and permissible error of mercury

thermometer, test procedure.

American Society for Testing Materials. D 20-30; 1930. Method of Test for Distillation of Bituminous Materials Suitable for Road Treatment.
Dimensions and design of distilling flask, glass
condenser tube, metal shield, total immersion thermometer, assembly of apparatus, test procedure.

American Society for Testing Materials. D 36-26; 1926. Method of Test for Softening Point of Bituminous Materials. Dinrensions, design, and material for test ring, ball, container, and thermometer, preparation of sample, assembly of apparatus, test procedures for soft and for hard

materials.

American Society for Testing Materials. D 61-24; 1924. Method of Test for Softening Point of Tar Products. Cube in water method, dimensions, design, and material of sample, hook, container, and thermometer, assembly of apparatus and test procedure for ordinary pitches and for soft pitches.

American Society for Testing Materials. D 70-27; 1927. Method of Test for Specific Gravity of Road Oils, Road Tars, Asphalt Cements and Soft Tar Pitches. Dimensions and weight of pycnometer or weighing bottle, test procedure.

American Society for Testing Materials. D 71-27: 1927. Method of Test for Specific Gravity of Asphalts and Tar Pitches Sufficiently Solid to Be Handled in Fragments. Determination by use of analytical balance, preparation of specimen, test procedure.

American Society for Testing Materials. Tentative Test Method. D 113-26T; 1926. Method of Test for Ductility of Bituminous Materials. Dimensions of specimen mold, requirements for water bath, test procedure in pulling specimen for

measurement of ductility.

American Society for Testing Materials. D 139-27; 1927. Method of Float Test for Bituminous Materials. Weight and dimensions of aluminum float and of brass collar, assembly of apparatus, design and graduation of thermometer, preparation of sample and test procedure for asphalt products and for tar products. Approved by American Standards Assn. as A37b-1930.

American Society for Testing Materials. D140-25; 1925. Methods of Sampling Bituminous Materials. Methods of sampling from bulk storage and during loading at factory, sampling from tank cars, distributors, and from drums of solid or semisolid material at point of delivery.

American Society for Testing Materials. D 146-27; 1927. Methods of Testing Felted and Woven Fabrics Saturated with Bituminous Substances for Use in Waterproofing and Roofing. Sampling. inspection for weight and dimensions, test procedure for moisture, strength, pliability, absorption, volatility of asphalt, extraction and distillation of coal tar products, desaturation of fabric, weight and ash determinations.

American Society for Testing Materials. D 147-27; 1927. Methods of Testing Bituminous Mastics, Grouts and Like Mixtures. Definitions of bituminous grout, asphalt mastic, and asphalt mastic cake, preparation of samples, design and dimensions of test apparatus, test procedure for analysis of 10 to 30 gram samples and for analysis of 50 to 500 gram samples.

American Society for Testing Materials. D 165-27; 1927. Method of Test for Determination of Proportion of Bitumen Soluble in Carbon Tetrachloride. List of apparatus, preparation of sample, preparation of Gooch crucible, test procedure.

American Society for Testing Materials. Tentative Test Method. D 243-28T; 1928. Method of Test for Residue of Specified Penetration. Applies to the evaporation of a road oil or semisolid asphalt at a temperature of 249° to 260° C. until a residue of the specified penetration is obtained and calculating the residue as a percentage of original sample, dimensions of sample container, thermometer design and graduation, test procedure.

American Society for Testing Materials. Test Methods. D 244-28T; 1928. Methods of Testing Bituminous Emulsions. For emulsified light oils for dust laying purposes and for emulsifled asphaltic materials suitable for construction or repair with or without considerable mineral matter. Test procedure for miscibility with water, stone coating test, percentage of water by distillation process.

American Society for Testing Materials. D 255-28; 1928. Method of Test for Steam Distillation of Bituminous Protective Coatings. General method for separation and recovery of solvent and base in bituminous mixtures, description and

assembly of test apparatus, test procedure.

American Society for Testing Materials. Tentative
Recommended Practice. D 290–28T; 1928. Bituminous Paving Plant Inspection. Duties of in-spector, collecting of samples, control of mix

tures, conducting plant-laboratory tests.

American Society for Testing Materials. Tentative Test Method. D 313-29T; 1929. Method of Test for Coarse Particles in Bituminous Materials by Means of Elutriation. Test procedure for dissolving sample in successive solvents and measuring sediment, sampling according to A. S. T. M. method D 140.

American Society for Testing Materials, Tentative Methods, D 270-30T; 1930, Methods of Sam-

pling Petroleum and Petroleum Products. Dimensions and design of apparatus, sampling procedure for bottle or beaker sampling of tank cars and tanks, continuous sampling of pipe lines, dipper sampling of stream discharge, thief sampling of containers, borings sampling of wax and soft solids, grab sampling of loose lumpy mate-

Asphalt Shingle and Roofing Institute. Recommended Tests. Mill Analysis of Bituminous Roofings; 1922. Size of samples of original felt and of felts after saturation and after saturation and coating, test procedure and calculations for determination of weight, moisture, ash, satura-tion, weight of coating, mineral surfacing, and dust surfacing.

Asphalt Shingle and Roofing Institute. Discoloration Test for Coatings; 1922. For testing whether the roofing felt coating will discolor the tale surfacing on aging by an accelerated test on asphalt sprinkled with calcium carbonate and

heated

Asphalt Shingle and Roofing Institute. Tentative Recommended Methods of Testing. Bituminous Materials; 1921. For melting point the A. S. T. M. ball and ring method D 36 is shown and recommended. For penetration the A. S. T. M. method D 5 is recommended and shown. For solubility in carbon-disulphide a short method is shown, for a long and more accurate method the A. S. T. M. method D 4 is recommended and shown. For loss on heating the A. S. T. M. method D 6 is recommended and shown. For flash point the Bureau of Mines Bulletin No. 5. p. 25, is recommended and shown, "Report of Committee on Standardization of Petroleum Specifications." Dimensions and design of Cleveland open cup tester and of special thermometer, assembly of apparatus and test procedure.

Asphalt Shingle and Roofing Institute. Ductility of Coatings; 1921. Dimensions and design of specimen mold, preparation of specimen, testing procedure for pulling apart and measuring elon-

gation under specified temperature.

Asphalt Shingle and Roofing Institute. Tentative
Recommended Methods of Testing. Bituminous
Materials; 1921. Viscosity of Saturation. Method of recording the time required for the first 50 cc to flow through an Engler viscosimeter at 350° F. as described in Bulletin 691 of U. S. Dept. of Agriculture in specifications for road materials. Illustration of apparatus, test procedure.

U. S. Gov., Dept. of Commerce. Bureau of Standards, R4; 1926. Asphalt. Simplified practice recommended and accepted by industry establishing a limited list of varieties of paving asphalt, defining penetration range for each variety for asphalt used in construction of sheet asphalt, asphaltic concrete, and asphalt macadam pavements, and for use in joint filler.

505.1 ASPHALTS

505.11 Native Asphalt

U. S. Gov., Federal Specifications Board. SS-A-706; 1931. Asphalt for Use in Road and Pavement Construction. Covers 14 grades of petroleum asphalt and of fluxed native asphalt, portion of country and type of traffic to which each grade is applicable, requirements on specific gravity, flash point, softening point, penetration, ductility, volatility, and bitumen content, using methods of test of A. S. T. M.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0.

505.12 Asphalt Pavements

References .- Asphalt pavements. See 518.37.

505.13 Asphalt Cement

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Asphalt for Bituminous Carpets. For concrete or wood bridge floors, use of either spec. M-21 or M-23 of A. A. S. H. O. for asphalt cement, with special requirements on specific gravity and penetration.

American Assn. of State Highway Officials. tative Specifications; M-20, 1926. Asphalt Cement (prepared from petroleum). For penetration grades 30 to 40, 40 to 50, 50 to 60, 60 to 70. Requirements for freedom from water, penetration, total bitumen, soluble bitumen, ductility, flash point, volatility, sampling and testing in accordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials, Tenmerican Assn. of State Highway Officials. tative Specifications. M-21; 1926. Asphalt Cement (prepared from petroleum). For penetration grades 85 to 100, 100 to 120, 120 to 150, Requirements on freedom from water, penetra-tion, total bitumen, soluble bitumen, ductility, flash point, volatility, sampling and testing in accordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials, tative Specification. M-22; 1926. Asphalt Cement (prepared from native asphalt). For penetration grades 30 to 40, 40 to 50, 50 to 60, 60 to 70. Requirements on freedom from water. penetration, total bitumen, soluble bitumen, ductility, flash point, volatility, sampling and testing in accordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials. Ten-tative Specification. M-23; 1926. Asphalt Cement (prepared from native asphalt). For penetration grades 85 to 100, 100 to 120, 120 to 150. Requirements on freedom from water, penetration, total bitumen, soluble bitumen, ductility, flash point, volatility, sampling and testing in accordance with A. A. S. H. O. methods.

American Marine Standards Committee. E No. 14-1928. Insulation of Piping and Machinery on Ships. Includes waterproof cement with asphaltic base, type of solvent, flash point, physical characteristics after setting, flow point, spread-

ing and mixing capabilities.

American Raitway Engineering-Assn. ual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes elastic cement of asphalt, softening point, penetration, loss on heating, and ductility requirements.

American Society of Municipal Engineers. Fine Aggregate Asphaltic Concrete Paving; 1927. Includes asphalt cement, penetration, ductility, vol-atility, flash point, and solubility, tested in ac-cordance with methods of A. S. T. M. American Society of Municipal Engineers. Asphalt

Macadam Pavements; 1927. Includes asphalt cement, penetration, ductility, volatility, flash point, and solubility requirements, using A. S.

T. M. methods of test.

American Society of Municipal Engineers. Subgrades and Foundations for Pavements; 1928. Includes asphalt cement, specific gravity, flash point, penetration, ductility, volatility, and solubility requirements, using test methods of U.S. Dept. of Agriculture and of A. S. T. M. American Society of Municipal Engineers. Sheet

Asphalt Paving; 1927. Includes asphalt cement, requirements as to penetration, ductility, loss on heating, flash point, and proportion soluble in

carbon tetrachloride.

American Society for Testing Materials. Tenta-tive Specifications. D 99-26T; 1926. Asphalt Cement, 40 to 50 Penetration, for Use in Sheet Asphalt and Asphaltic Concrete Pavements and as Filler for Brick and Block Pavements. Requirements for penetration, flash point, loss on heating, ductility, bitumen soluble in carbon tetrachloride, in accordance with A. S. T. M. methods of test D 5, D 92, D 6, D 113, and D

American Society for Testing Materials. tive Specifications. D 100-26T and D 101-26T: 1926. Asphalt Cement for Use in Sheet Asphalt and Asphaltic Concrete Pavements and as Filler for Block Pavements. D 100 for 50 to 60 penetration, D 101 for 60 to 70 penetration, requirements for penetration, flash point, loss on leating, ductility, and bitumen soluble in carbon

tetrachloride, in accordance with A. S. T. M. test methods D 5, D 92, D 6, D 113, and D 165. American Society for Testing Materials. Tentative Specifications. D 102-24T, D 103-24T; 1924. Also D 135-23T; 1923. Asphalt Cement for Use in Asphalt Macadam Pavements. D 102 for 85 to 100 penetration, D 103 for 100 to 120 penetration, D 135 for 120 to 150 penetration. Requirements for penetration, flash point, loss on heating, ductility, bitumen soluble in carbon tetrachloride, in accordance with A. S. T. M. test methods D 5, D 92, D 6, D 113, and D 165.

American Society for Testing Materials. Tentative Specifications. D 133-23T; 1923. Asphalt Cement, 10 to 15 Penetration, for the Manufacture of Asphalt Block. Requirements for penetration, flash point, loss on heating, ductility, and bitumen soluble in carbon tetrachloride, in accordance with A. S. T. M. test methods D 5, D 92, D 6, D 113,

and D 165.

American Society for Testing Materials. Tentative Specifications, D 134-23T; 1923, Asphalt Cement, 15 to 25 Penetration, for the Manufacture of Asphalt Block. Requirements for penetration, flash point, loss on heating, ductility, bitumen soluble in carbon tetrachloride, in accordance with A. S. T. M. test methods D 5, D 92, D 6, D 113, and D 165.

American Society for Testing Materials. Tentative Specifications. D 163-23T; 1923. Asphalt Cement, 25 to 30 Penetration, for Use in Sheet Asphalt and Asphaltic Concrete Pavements. Requirements for penetration, flash point, loss on heating, ductility, and bitumen soluble in carbon

tetrachloride, in accordance with A. S. T. M. test methods D 5, D 92, D 6, D 113, and D 165. American Society for Testing Materials. Tentative Specifications. D 164-23T; 1923. Asphalt Cement, 25 to 30 Penetration, for Use in Sheet Asphalt and Asphaltic Concrete Pavements, Requirements for penetration, flash point, loss on heating, ductility, and bitumen soluble in carbon tetrachloride, in accordance with A. S. T. M. test

methods D 5, D 92, D 6, D 113, D 165.

American Society for Testing Materials. D 223-30; 1930. Acid Resisting Asphalt Mastic. For use in waterproofing, proportion requirements for asphalt cement, mastic cake, and mineral aggregate, composition requirements of mastic cake, grading requirements of mineral aggregate, tests according to A. S. T. M. method D 147.

American Society for Testing Materials. D 249-27; 1927. Heavy Weight Slate Surfaced Asphalt Roll-Roofing and Heavy Weight Slate Surfaced Asphalt Shingles. Includes specifications for lap cement for roll roofing, composed of bituminous materials dissolved in volatile solvent, flash point requirements.

Underwriters Laboratories. Class C Asphalt Rag-Felt Sheet Roofing and Shingles; 1929. For lap cement, requirements on flash point and general

quality. S. Gov., Federal Specifications Board. 389: 1926. Asphaltic Plastic Cement. For use in con-

bituminous roofing, for the repair of asphalt and metal roofing, and as an expansion-joint material for concrete and masonry, composed of an asphaltic base, asbestos fiber, and a suitable solvent, suitable for application with a trowel, requirements on content of nonvolatile matter and of asbestos fiber, workability, time of set-ting, behavior at 60° C. and 0° C., toughness, examination of cement for separation, thicken-ing, or livering, methods of sampling and test.

References. - Definitions, methods of sampling and of testing. See also 502.2, 505.0.

505.14 Oil Asphalt

American Railway Engineering Assn. 1929 Manual. Asphalt Base Dipping Oil; 1923. Recommended requirements of an oil for oiling track bolts, turnout fixtures, rail, tie plates, and spikes to prevent corrosion, includes requirements on flash point, penetration of asphalt, and viscosity of oil.

American Society of Municipal Engineers. Proposed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. Includes asphaltic oil for hot surface treatment, specific gravity, flash point, specific viscosity, float test, volatility, and

solubility requirements.

American Society of Municipal Engineers. Proposed Specifications. 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. Includes cut-back asphalt cement for cold surface treatments, a mixture of asphalt cement and naphtha, specific gravity, volatility, penetration, specific viscosity, and solu-

bility requirements.

- Asphalt Institute. Asphaltic Road Materials No. 1 to No. 7; 1931. No. 1 intended for use as a dust layer, No. 2 a primer, No. 3 a nonhardening liquid of medium viscosity for mixed-in-place wearing courses. No. 4 for construction of mixed-in-place wearing courses subject to heavy traffic and severe climate, No. 5 for surface treatment of bituminous roads preparatory to light cover of stone chips, No. 6 a binder for cold patch mixtures and premixed aggregates which are to be laid cold, No. 7 for use in construction of rollercompacted mixed-in-place wearing courses. Requirements on specific viscosity, distillation ranges, and on residue from distillation, requirements on penetration, ductility, and solubility in carbon disulphide, flash point requirements for Nos. 6 and 7, standard methods of test of A. S. T. M. and Am. Assn. of State Highway Officials specified.
- U. S. Gov., Federal Specifications Board. SS-A-706; 1931. Asphalt for Use in Road and Pave-ment Construction. Covers 14 grades of petroleum asphalt and of fluxed native asphalt, portion of country and type of traffic to which each grade is applicable, requirements on specific gravity, flash point, softening point, penetration, ductility, volatility, and bitumen content, using methods of test of Am. Soc. for Testing Materials.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0. Asphalt emulsion. See 505.19.

505.15 Asphalt and Other Bituminous Fillers

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Joint Fillers for Use in Waterproofing. For oil asphalt for horizontal joints and for oil asphalt and asbestos fiber for vertical joints, requirements on flash point, softening point, penetra-tion, volatility, ductility, and total bitumen, percentage of asbestos in vertical joint filler.

- struction of plastic flashings in conjunction with | American Assn. of State Highway Officials. Tentative Standard Specifications. M-18; 1924. Asphalt Filler, Type A. Requirements on free-dom from water, flash point, softening point, penetration, volatility, ductility, total bitumen, soluble bitumen, testing in accordance with A. A. S. H. O. methods.
 - American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931.
 Pitch Filler for Wood Block Floors. Requirements on specific gravity, softening point, per-centage of bitumen soluble in disulphide, and specific gravity of distillate.
 - American Assn. of State Highway Officials. Tentative Standard Specifications. M-19; 1927. Asphalt Filler, Type B. Requirements on freedom from water, flash point, softening point, penetration, volatility, ductility, total bitumen, soluble bitumen, testing in accordance with A. A. S. H. O. methods.
 - American Assn. of State Highway Officials. Tenta-tive Specification M-26; 1924. Tar for Use in the Maintenance of Cracks and for Sealing Joints in Concrete Roads. Requirements on percentage of water, float test, total bitumen, distillation test, softening point, sampling and testing in accordance with A. A. S. H. O. methods.
 - American Assn. of State Highway Officials. Ten-tative Specifications M-33; 1924. Premolded Expansion Joints. Of asphaltic or tar composition, requirements on general properties, absorption, distortion, brittleness, sampling, and testing in accordance with A. A. S. H. O. methods.
 - American Assn. of State Highway Officials. Tentative Method, T-42, Undated, Methods of Sampling and Testing Premolded Joint Fillers. tive Requirements on size of sample, test procedure for absorption, brittleness, and distortion under heat test.
 - American Railway Engineering Assn. 1930 Sup-plement to 1929 Manual. Railway Buildings, Sec. 21. Brick Pavements and Floors. Expansion joint filler, requirements on proportions of asphalt, coal tar pitch, and Portland cement, coal tar pitch to conform to specifications of Am. Soc. for Testing Materials, D-112.
 - American Society of Municipal Engineers, Vitrified Brick Pavements; 1930. Asphalt Filler. Requirements on flash point, melting point, penetration, loss on evaporation, ductility, and total bitumen.
 - American Society of Municipal Engineers. Block Pavements; 1927. Includes tar pitch filler and asphalt cement filler, requirements as to softening point, distillation, residue, specific gravity, and ductility for pitch, penetration, flash point, volatility, ductility, and solubility requirements for asphalt filler.
 - American Society of Municipal Engineers. soted Wood Block Paving; 1921. Includes pitch filler and asphalt filler, melting point, free carbon, specific gravity requirements for pitch filler, percentage bitumen, penetration, ductility, and volatility requirements for asphalt filler.
 - American Society of Municipal Engineers. Port-land Cement Concrete Pavements; 1926. Includes bituminous premolded joint filler, water absorption, brittleness, and distortion test requirements.
 - American Society for Testing Materials. Tenta-tive Specifications. D 99-26T; 1926. Asphalt Cement, 40 to 50 Penetration, for Use in Sheet Asphalt and Asphaltic Concrete Pavements and as Filler for Brick and Block Pavements. Re-quirements for penetration, flash point, loss on

heating, ductility, bitumen soluble in carbon | tetrachloride, in accordance with A. S. T. M. test

methods D 5, D 92, D 6, D 113, D 165.

American Society for Testing Materials, tive Specifications. D 109-26T and D 101-26T; 1926. Asphalt Cement for Use in Sheet Asphalt and Asphaltic Concrete Pavements and as Filler for Block Pavements. D 100 for 50 to 60 penetration, D 101 for 60 to 70 penetration, requirements for penetration, flash point, loss on heating, ductility, bitumen soluble in carbon tetra-

chloride, in accordance with A. S. T. M. test methods D 5, D 92, D 6, D 113, and D 165. American Society for Testing Materials. D 112– 30; 1930. Coal-Tar Pitch for Stone Block Filler. Requirements for allowable water, softening point, distillation test, specific gravity, ductility, total bitumen, in accordance with A. S. T. M. test methods D 95, D 61, D 20, D 113, and

D 4

American Society for Testing Materials. Tentative Specifications. D 241-26T; 1926. Asphalt Filler for Brick Pavements (Blown Type). Requirements for flash point, softening point, penetration, loss on heating, ductility, soluble bitumen in carbon tetrachloride, in accordance with A. S. T. M. test methods D 92, D 36, D 5, D 6, D 113, and D 165.

American Wood Preserver's Assn. 19b; 1923. Interior Creosoted Wood Block Flooring. Includes specifications for coal tar pitch filler,

melting point test requirements.

American Wood Preserver's Assn. 16b; 1923. Creosoted Wood Block Street Paving. Includes specifications of bituminous filler; for coal tar pitch, test requirements for specific gravity, free carbon, melting point, distillation; for special pitch filler, specific gravity, distillation and melting point requirements; for asphalt filler, percentage bitumen, penetration, ductility.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R4; 1926. Asphalt. For asphalt used in joint filler, simplified practice recommended and accepted by industry establishing a limited list of standard varieties with penetration range for

each variety.

U. S. Gov., Federal Specifications Board. SS-A-696; 1931. Petroleum Asphalt for Joint Filler. For filling joints in brick and concrete pavements, requirements on freedom from water, flash point, penetration, ductility, volatility, and bitumen content, using methods of test of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board, 380; 1926. Asphaltic Plastic Cement. For use as an expansion joint filler, composed of asphalt and asbestos fiber, requirements on content of nonvolatile matter and of asbestos fiber, workability, time of setting, behavior at 60° and 0° C., toughness, methods of sampling and test.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0, 505.30. Nonbituminous fillers. See 512.16.

505.16 Asphalt and Asphalt Felt for Roofing and Waterproofing

American Assn. of State Highway Officials, Highway Bridges and Incidental Structures; 1931. Waterproofing Asphalt. Requirements on flash point, softening point, penetration, volatility, ductility, and total bitumen.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Built-Up Roofing; 1926. Includes asphalt roofing, melting point, penetration, ductility, volatility of asphalt, weight of asphalt primer, weight and bending test requirements for roofing felt, construction of roofs of asphalt and gravel or slag and of asphalt impregnated asbestos felt as applied over

wood, concrete or gypsum.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes asphalt for mopping and saturant, asphalt for mastic, and asphalt for elastic cement, requirements on softening point, penetration, flash point, loss on heating, ductility, and solubility.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges: 1927. Rag felt or asbestos felt, saturated with asphalt or coal-tar pitch, composition of felt, dimension and weight limits for treated felts, strength, pliability, weight of saturant, moisture content, conforms closely to A. S. T. M. serial D 173-23T.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes cotton fabric treated with asphalt of coal-tar pitch, weight, ash, and thread count of fabric, width, weight, moisture content, strength, pliability, loss on heating, weight of saturant for saturated fabric. Conforms closely to A. S. T. M. D 173-25.

American Society for Testing Materials. D 40-25; 1925. Asphalt for Use in Damp Proofing Below Ground Level. Requirements on softening point, penetration, flash point, loss on heating, ductility, insolubility in carbon disulphide according to A. S. T. M. methods of sampling and testing as enumerated. For use as a mopping coat or as a plying cement in membrane system.

American Society for Testing Materials. D 41-26; 1926. Primer for Use with Asphalt in Damp-Proofing and Waterproofing Below and Above Ground level. Method of sampling, distillation points of solvent, allowable sediment, and percentage of asphaltic requirements using A. S. T. M. standard and tentative methods of test. For application to concrete and masonry surfaces.

American Society for Testing Materials. D 144-25; 1925. Asphalt for Use in Damp Proofing and Waterproofing Above Ground Level. For temperatures less than 115° F., requirements on softening point, penetration, flash point, loss on heating, ductility, insolubility in carbon disulphide, using A. S. T. M. standard methods of sampling and test. For use as a mopping coat or plying ce-

ment in membrane system.

American Society for Testing Materials. D 169-25; 1925. Asphalt Mastic for Use in Waterproofing. Proportions of mastic cake, asphalt cement and mineral aggregate, required percentages of asphalt cement and granular mineral matter in mastic cake, size grading of granular mineral matter, grading of crushed stone or gravel aggregate, asphalt cement according to A. S. T. M. specification D 163-23T.

American Society for Testing Materials. D 170-25; 1925. Bituminous Grout for Use in Water-proofing Above Ground Level. Suitable as a protective coating of membrane systems or for bedding brick or flooding surface of brick protective coating, for railroad bridges, culverts, subways. Proportions of bituminous binder and of mineral aggregate, either asphalt binder according to A. S. T. M. D 144 or coal-tar pitch binder according to A. S. T. M. specification D 42 or D 200,

grade size of sand aggregate.

American Society for Testing Materials. D 171-25; 1925. Bituminous Grout for Use in Waterproofing Below Ground Level. For use as a protective covering of membrane systems, or for bedding brick, or flooding surface of brick coverings, suitable for tunnels and subways, mixture proportions, asphalt binder according to A. S. T. M. specifications D 40, or coal tar pitch binder according to A. S. T. M. D 42 or D 200, grade size

of sand aggregate.

American Society for Testing Materials. D 173-27; 1927. Woven Cotton Fabrics Saturated with Bituminous Substances for Use in Waterproofing. Requirements on width and weight of satuing. Requirements on winth and weight of saturated and desaturated fabric, moisture content, average strength, pliability, loss on heating, weight of saturant, for cotton fabric, percentage ash and thread count, using A. S. T. M. test methods D 146.

American Society for Testing Materials. D 174-25; 1925. Burlap Saturated With Bituminous Substances for Use in Waterproofing. Jute fabric saturated with either asphalt or coal-tar pitch, requirements on width, weight, strength, pliability, loss on heating, weight of saturant, also weight, ash, and composition of desaturated fabric, using A. S. T. M. standard test methods D 146. American Society for Testing Materials. D 223-

30; 1930. Acid Resisting Asphalt Mastic. For use in waterproofing, proportion requirements for asphalt cement, mastic cake, and mineral aggregate, composition requirements of mastic cake, grading requirements of mineral aggregate, tests

according to A. S. T. M. method D 147.

American Society for Testing Materials. D 22427; 1927. Asphalt Roll-Roofing Surfaced with Powdered Talc. For medium and heavy weight roofing felt saturated and coated on both sides with asphalt, general quality of felt, test requirements for degree of saturation, requirements on width, weight, pliability, loss on heating, percentage of saturant, weight and ash of desaturated felt, weight of mineral surfacings, sampling and test according to A. S. T. M. methods D 228.

American Society for Testing Materials. 29: 1929. Asphalt Roll Roofing and Asphalt Shingles Surfaced with Mineral Granules. Composed of roofing felt saturated and coated with asphalt, granulated slate or mineral matter on weather side, general quality of felt, requirements for saturation, dimensions, weight, plia-

mems for saturation, omensions, weight, paid bility, percentage saturant, ash, volatility, size and coating of nails, flash point of lap cement, tests according to A. S. T. M. method D 228. American Society for Testing Materials. D 248-27; 1927. Asphalt Roll-Roofing Surfaced with Granular Talc. Roofing felt saturated and coated on both sides with asphalt, granular tale on face and powdered tale on back, general quality of felt and test requirements for degree of saturation, requirements on width of roll, weight, pliability, volatility, percentage saturant, ash, weight of mineral surfacings, using A. S. T. M.

methods of test D 228.

American Society for Testing Materials. D 249-27; 1927. Heavy Weight Slate Surfaced Asphalt Roll-Roofing and Heavy Weight Slate Surfaced Asphalt Shingles. Roofing felt saturated and covered on both sides with asphalt, surfaced on weather side with granulated slate, general quality of felt and test for degree of saturation, width of roll, weight, pliability, volatility, percentage saturant, ash, weight of mineral surfacing, size and type of nails, flash point requirements for lap-cement, tests according to A. S. T. M. method D 228.

American Society for Testing Materials. D 226-27; 1927. Asphalt-Saturated Roofing Felt for Use in Waterproofing and in Constructing Built-Up Roofs, General quality of felt, test require-

ments for degree of saturation, requirements for width, weight of saturated felt, loss on heating, pliability, percentage of saturant, weight and ash of desaturated felt, using A. S. T. M. test methods D 146

American Society for Testing Materials. Tenta-tive Specification. D 228-31T; 1931. Methods of Testing Asphalt Roll-Roofing Surfaced with Fine or Granular Talc, Slate Surfaced Asphalt Roll-Roofing and Slate Surfaced Asphalt Shingles. Method of sampling, determination of size and weight, pliability of roofing, loss on heating, percentage of saturant, weight of felt, ash, and mineral surfacing.

American Society for Testing Materials. D 250– 27; 1927. Asphalt Saturated Asbestos Felt for Use in Constructing Built-Up Roofs. General quality of asbestos felt, test requirements for degree of saturation, requirements on weight, loss on heating, pliability, percentage of saturant, weight and ash of desaturated felt, using A. S. T. M. test methods.

American Society for Testing Materials. Tentative Specifications. D 312-29T; 1929. Asphalt for Use in Constructing Built-Up Roof Coverings. Covers asphalt for use as hot cement and mopping coat, including steam distilled and blownpetroleum asphalts and mixtures with native asphalts, requirements for softening point, penetration, loss on heating, ductility, solubility, ash, elutriation test, in accordance with A. S. T. M. methods of test D 36, D 5, D 6, D 113, D 4, D 271, D 165, and D 313.

Asphalt Shingle and Roofing Institute. Directions for Laying Roll Roofings; 1920. Includes a series of specific and essential features to be included in the manufacturers' roll roofing directions and recommendations and precautions that

are desirable but not essential.

Asphalt Shingle and Roofing Institute. Directions for Laying Shingles; 1921. Rules of fundamental importance that should not be omitted from manufacturer's direction sheet.

Underwriters Laboratories. Class C Asphalt Rag-Felt Sheet Roofing and Shingles; 1929. Requirements on general quality and weight of felt, before and after saturation, on character and flashpoint of saturant and coating, test requirements for pliability, adhesion of surfacing, behavior on heating, and stickiness, for single thickness felt, saturated and coated on both sides 2 weight classes, flash point of lap cement, size and coating of nails.

U. S. Gov., Federal Specifications Board. 84; 1924. Asphalt for Mineral Surfaced Roofing, Intended for use with asphalt saturated rag felt for roofing and waterproofing (F. S. B. spec. 86) in construction of built-up roofing, requirements on appearance, melting point, penetration, ductility, volatile matter, solubility in carbon disulphide,

methods of sampling and test.

U. S. Gov., Federal Specifications Board. 86; 1924. Asphalt Saturated Rag Felt for Roofing and Waterproofing. For use with asphalt for roofing covered in F. S. B. specifications 84, 85, and 88, requirements on appearance, width, weight, pliability, breaking strength, weight of saturant, weight of surfacing, and ash, methods of sampling and test.

S. Gov., Federal Specifications Board. 295; 1925. Asphalt Saturated Rag Felt for Flashings. Requirements on general quality and appearance, width, weight, pliability, strength, percentage of volatile matter, weight of saturant, ash, methods

of sampling and test.

U. S. Gov., Federal Specifications Board. 82; 1924. Surfacing Materials for Bituminous Built-Up Roofing. Requirements on general quality and

screen grading of roofing gravel, roofing slag, and crushed stone, general quality and tolerance on specified dimensions of promenade tile, general quality and minimum thickness of slate.

methods of sampling and test.

U. S. Gov., Federal Specifications Board. 85: 1924. Asphalt for Waterproofing and Damp Proofing. For use with asphalt saturated rag felt for roofing and waterproofing (F. S. B. Spec. 86) as a plying cement in construction of membrane waterproofing or alone as damp proofing, requirements on appearance, melting point, penetration, ductility, volatile matter content, solubility in carbon disulphide, methods of sampling and test.

U. S. Gov., Federal Specifications Board. 87; 1924.
Asphalt Primer for Roofing and Waterproofing. Intended for use as a priming coat on concrete, gypsum, and masonry surfaces over which asphalt roofing or waterproofing is to be applied, requirements on content of asphaltic base, distillation range for solvent, melting point and penetration of asphaltic base, methods of sam-

pling and test.

U. S. Gov., Federal Specifications Board. 88; 1924. Asphalt for Unsurfaced Built-Up Roofing. For use with asphalt saturated rag felt for roofing (F. S. B. Spec. 86) or with asphalt saturated asbestos felt in the construction of unsurfaced built-up roofing, requirements on appearance, melting point, penetration, ductility, content of volatile matter, solubility in carbon disulphide, and ash, methods of sampling and test.

U. S. Gov., Federal Specifications Board. 146 and 147; 1924. Construction of Built-Up Roofing, Types 4AWS and 5AWS. For roofing built up on board sheathing or gypsum slabs, spec. 146 covering 4 layer roof and spec. 147 covering 5 layer roof, made of asphalt saturated rag felt cemented together with asphalt, requirements on weights per unit area of saturated felt, of asphalt surfacing, of roofing gravel or slag, methods of application, materials according to F. S. B.

specifications.

U. S. Gov., Federal Specifications Board, 148, 149, and 150; 1924. Construction of Built-Up Roofing, Types 3ACS, 4ACS, and 5ACS. For roofing adapted to concrete and poured gypsum surfaces, Spec. 148 for 3 layer, Spec. 149 for 4 layer, and Spec. 150 for 5 layer roofs, made of asphalt saturated rag felt cemented together with as-phalt, requirements on weights per unit area of asphalt primer, of saturated felt, of asphalt surfacing, of roofing gravel or slag, methods of application, materials according to F. S. B. specifications

U. S. Gov., Federal Specifications Board. 214; 1924. Asphalt Prepared Roofing. For 2 weights of roofing of rag felt saturated and coated with asphaltic compounds, requirements on appearance, width of roll, weight per unit area, pliability, effect of heat, thickness and weight and ash of desaturated felt, per cent saturation, weight of talc or mica surfacing, methods of

test.

U. S. Gov., Federal Specifications Board. 1926. Slate Surfaced Asphalt and Asbestos Prepared Roofing. Requirements on percentage of asbestos fiber in felt, saturation and coating with asphalt, surfacing with granulated slate, on width, area, and weight of rolls, allowable volatile matter, behavior on heating, weight and thickness of felt, weight of slate, dimensions of nails, methods of test, weight of saturant.

U. S. Gov., Federal Specifications Board. 296; 1925. Slate Surfaced Asphalt Prepared Roofing and Shingles. For roll roofing and shingles of rag felt saturated on 2 sides with asphalt and surfaced on one side with granulated slate, requirements on behavior when heated, percentages of volatile matter and ash, weight, thickness, weight of slate, width of roll, percentage saturation, methods of sampling and test.

U. S. Gov., Federal Specifications Board. 294; 1925. Asphalt Saturated Woven Cotton Fabric 1920. Aspirant Saturated World Cotton Fabric for Waterproofing. Requirements on general quality, porosity, width, weight, weight of sur-facing, percentage of volatile matter and of ash, pliability, weight of saturant, thread count, for all-cotton fiber fabric, methods of test.

U. S. Gov., Federal Specifications Board. 380; 1926. Asphaltic Plastic Cement. For use in construction of plastic flashings, repair of asphalt and metal roofs, composed of asphalt and asbestos fiber, requirements on content of nonvolatile matter and of asbestos fiber, workability, time of setting, behavior at 60° and 0° C., tough-

ness, methods of sampling and test.

U. S. Gov., Federal Specifications Board. 424; 1926. Asphalt Fibrous Roof Coating. Requirements on consistency of asphaltic materials, percentage of nonvolatile matter, percentage of asbestos fiber in roof coating, time of setting, behavior on heating, and toughness, methods of

sampling and test.

U. S. Gov., Federal Specifications Board. 444a; 1928. Integral Waterproofing Material. For material intended for mixing with Portland cement mortar or concrete for waterproofing, require-ments on general qualities of material, permis-sible reduction in compressive strength of the waterproofed mortar or concrete, permissible absorption and required reduction in permeability to water, test methods,

Tar roofing and waterproofing. See 505.38. Roof construction. See also 518.57. Cotton fabric for waterproofing. See 363.89.

505.17 Asphaltic Mastic Flooring

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes asphalt mastic, flash point, penetration, ductility, solubility of asphalt, grade and quality of coarse and fine aggregate and mineral filler, percentage of asphalt in mastic cake, and mixture proportions for poured-in-place mastic.

Assn. of Railway Electrical Engineers, 1929 Man-

ual. C-III; 1928. Recommended Storage Battery Installation and Maintenance Practice. Includes recommended specifications for acid proof mastic battery room floor for battery room not directly on ground, requirements for construction of floor using asphalt saturated felt on concrete floor and covered with mastic, for single membrane and double membrane types, tests for acid resistance and hardness.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0. Asphalt for bituminous carpets. See 505.19.

505.19 Miscellaneous Specifications for Asphalt

American Assn. of State Highway Officials Tentative Standard Specifications. M-38; 1930. Asphalt Emulsion, Slow Breaking Type. Requirements on general quality, stability, distillation test, and for residue from distillation test requirements on specific gravity, softening point, penetration, bitumen, and ash, using A. A. S. H. O. methods of test.

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931.
Asphalt for Bituminous Carpets. For concrete or wood bridge floors, requirements on specific gravity, flash point, volatility, penetration, ductility, bitumen soluble in carbon disulphide and in carbon tetrachloride, covers both oil asphalt and

native asphalt.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes asphaltic primer, distillation points for hydrocarbon solvent, percentage of sediment and asphaltic base in primer.

sediment and asphaltic base in primer.

American Society of Municipal Engineers. Portland Cement Concrete Pavements; 1926. Includes asphalt for grout or mastic, penetration, flash point, volatility, duetility, and solubility requirements for asphalt, composition and prepara-

tion of the grout and mastic.

U. S. Gov., Federal Specifications Board. SS-A-681; 1930. Emulsion Asphalt, Slow Breaking Type. For use in repair and resurfacing of bituminous roads, requirements on distillation test, on specific gravity, softening point, penetration, bitumen content, and ash for the residue from distillation test, using test methods of Am. Soc. For Testing Materials.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Danger-ous Articles; 1930. Shipping Container Spec. 10A. Wooden Barrels and Kegs (Tight). For ashaltum used for lining, requirements on spe-cific gravity, melting point, flash point, fire test, penetration, and matter insoluble in carbon di-sulphide, mandatory for use in shipment of dangerous articles.

505.2 ROAD OILS

505.20 General Items

American Assn. of State Highway Officials. Tentative Method T-54. Undated. Method of Test for Specific Viscosity. For fluid bituminous road materials, test procedure using Engler viscosi-

meter

American Society for Testing Materials. D 95-30; 1930. Approved by American Standards Assn. as Z111-1930. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements for solvents, test procedure.

505.21 Oil for Cold Application to Roads

American Society of Municipal Engineers. Proposed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. Includes temporary substitute for road oil for cold application, specific gravity, flash point, specific viscosity, volatility, float test, and solubility requirements.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0, 505.20. Asphaltic road olls. See 505.14. Road tars. See 505.31-505.35.

505.22 Oil for Hot Application to Roads

U. S. Gov., Federal Specifications Board, VV-O-751; 1931. Road Oil for Hot Application. For hot surface treatment of macadam, gravel, or shell roads, prepared from asphaltic petroleum, requirements on freedom from water, nonfoaming qualities, specific gravity, flash point, viscosity, float test, volatility, and bitumen content, using test methods of A. S. T. M.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0, 505.20. Asynattic road oils. See 505.14, Road tars. See 505.31-505.35.

505.23 Oil Asphalt

References .- Oil asphalt. See 505.14.

505.29 Miscellaneous Specifications for Road Oils

American Society for Testing Materials. Tenta-tive Specifications. D 98-30T; 1930. Calcium Chloride for Dust Prevention. For use on highways, screen analysis and chemical composition requirements.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0, 505.20.

505.3 TAR AND TAR PITCH

References,-Coal-tar chemical products. See 800-809.

505.30 General Items

American Assn. of State Highway Officials, Tentative Method. T-52. Undated. Method of Test for Distillation of Tars and Tar Products. Same as D 20-30 of Am. Soc. for Testing Materials. See 505.0.

American Society for Testing Materials. D 61-24; 1924. Method of Test for Softening Point of Tar Products. Cube in water method, dimensions, design, and material of sample, hook, container, and thermometer, assembly of apparatus and test procedure for ordinary pitches and for soft pitches.

American Society for Testing Materials. 30; 1930. Approved by American Standards Assn. as Z11i-1930. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements of solvent, test procedure.

American Society for Testing Materials, D 165-27; 1927. Method of Test for Determination of Proportion of Bitumen Soluble in Carbon Tetrachloride. List of apparatus, preparation of sample, preparation of Gooch crucible, test pro-

cedure.

American Society for Testing Materials. Tentative Definitions. D 324-30T; 1930. Definitions of Terms Relating to Timber Preservatives. Definitions of creosote, creosote coal-tar solution, creosote distillate, coal-tar, coal gas tar, coke oven tar, and water gas tar.

American Wood Preservers' Assn. 3b; 1931. Definition of Tar. Defines three classes of tars in

general terms.

505.31 Tars for Cold Application to Roads

American Assn. of State Highway Officials. Tentative Specifications. M-24; 1924. Tar for Surface Treatment. For cold application, requirements on percentage water, viscosity, bitumen, distillation, softening, sampling and testing in accordance with A. A. S. H. O. methods, American Society of Municipal Engineers. Pro-

posed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. Includes high carbon tar and low carbon tar for cold surface treatment, moisture, specific gravity, specific viscosity, distillation test, softening point, and free carbon re-

quirements, using A. S. T. M. methods of test.

American Society for Testing Materials. D 10430; 1930. High Carbon Tar for Surface Treatment, Cold Application. Requirements on percentage of water, specific viscosity, distillation test, specific gravity, softening point, total bittumen, in accordance with A. S. T. M. test methods D 95, D 20, D 30, D 4, viscosity test according to U. S. Dept. of Agriculture Bulletin 1216. American Society for Testing Materials. D 105–30; 1930. Low Carbon Tar for Surface Treatment, Cold Application. Requirements for allowable water, viscosity, distillation test, softening point, total bitumen, in accordance with test methods D 95 of A. S. T. M., Bulletin No. 1216 of U. S. Dept. of Agriculture, D 20, D 36, and D 4 of A. S. T. M.

U. S. Gov., Federal Specifications Board. R-T-101; 1931. Tars for Cold Application. For 4 grades dependent on viscosity, requirements on specific gravity, viscosity, distillation test, softening point, bitumen content, and water content, using methods of test of A. S. T. M.

References.—Definitions methods of sampling and of testing. See also 502.2, 505.0, 505.30. Tar for repair work, cold application. See also 505.34.

505.32 Tars for Hot Application to Roads

American Assn. of State Highway Officials. Tentative Specifications. M-25; 1924. Tar for Surface Treatment. For hot application. Requirements on percentage water, float test, total bitumen, distillation test, softening point, sampling and testing in accordance with A. A. S. H. O. methods.

American Society of Municipal Engineers. Proposed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. Includes refined tars for hot surface treatments, low carbon and high carbon types, moisture, specific gravity, float test, distillation test, softening point, and free carbon requirements, using A. S. T. M. methods of test.

American Society for Testing Materials. D 108-30; 1930. High Carbon Tar for Surface Treatment, Hot Application. Requirements for allowable water, float test, distillation test, specific gravity, softening point, total bitumen, in accordance with A. S. T. M. test methods D 95, D 139,

D 20, D 36, and D 4.

American Society for Testing Materials. D 109-30; 1930. Low Carbon Tar for Surface Treatment, Hot Application, Requirements on permissible water, float test, distillation test, softening point, total bitumen, in accordance with A. S. T. M. test methods D 95, D 139, D 20, D 36, and D 4.

U. S. Gov., Federal Specifications Board. R-T-131; 1931. Refined Tar for Hot Application. For hot surface treatment of macadam and gravel roads, requirements on specific gravity, float test, distillation test, bitumen content, using methods of test of Am. Soc. for Testing Materials.

References.—Definitions, methods of sampling and of testing. See also 502.2. 505.0, 505.30. Bituminous fillers. See also 505.15. Tar for repair work, hot application. See also 505.34.

505.33 Tars for Road Construction

American Wood Preserver's Assn. 15a; Preservatives for Flooring and Paving Blocks. Includes refined water-gas tar, requirements on allowable water, insoluble matter, specific gravity, distillation, using A. W. P. A. standard method for Creosote Analysis.

U. S. Gov., Federal Specifications Board. R-T-121; 1931. Refined Tar for Construction. For 6 grades of water gas and coal tar, for use in construction of bituminous macadam roads, requirements on freedom from water, specific gravity, float test, distillation test, bitumen content, using methods of test of A. S. T. M.

References.— Definitions, methods of sampling and of testing, See also 502,2, 505.0, 505.30. Flich and other bituminous fillers. See also 505.15, Tar for cold application. See also 505.31, Tar for hot application. See also 505.32. Tar for repair work. See also 505.34. Tar cement. See also 505.35.

505.34 Tars for Repair Work

American Society for Testing Materials. Tenta-tive Specifications. D 106-28T; 1928. High Carbon Tar Cement for Use Cold in Repair Work (Cut-Back Product). Requirements for allowable water, viscosity, distillation test, softening point, total bitumen, in accordance with test methods D 95 of A. S. T. M., Bulletin 691 of U. S. Dept. of Agriculture, D 20, D 36, D 4 of A. S. T. M.

American Society for Testing Materials, Tentative Specifications. D 107-28T; 1928. Low Car-bon Tar Cement for Use Cold in Repair Work (Cut-Back Product). Requirements for allow-(Cut-Back Product). Requirements for anomable water, viscosity, distillation test, softening point, total bitumen, in accordance with test methods D 95 of A. S. T. M., Bulletin 691 of U. S. Dept. of Agriculture, D 20, D 36, and D 4 of A. S. T. M.

S. Gov., Federal Specifications Board. R-Tin repair of roads by surface application or by mixing with broken stone, graded according to viscosity into 2 grades, requirements on specific gravity, viscosity, distillation test, bitumen content, water content, using test methods of Am.

Soc. for Testing Materials.

References,—Definitions, methods of sampling and of testing. See also 502.2, 505.0, 505.30. Tar cement. See also 505.35.

505.35 Tar Cement

American Assn. of State Highway Officials. Tenta-tive Specification. M-27; 1924. Tar Cement. For construction of bituminous macadam by penetration method, requirements on freedom from water, float test, total bitumen, distillation test, softening point, sampling and tests in accordance with A. A. S. H. O. methods.

American Society of Municipal Engineers. Asphaltic Concrete; 1916. Includes coal-tar cement and water-gas tar cement, specific gravity, melting point, free carbon, moisture, and ash requirements for coal tar cement; specific gravity, solubility, penetration, and distillation test require-

ments for water-gas tar cement.

American Society for Testing Materials. Tentative Specifications. D 106–28T; 1928. High-Carbon Tar Cement for Use Cold in Repair Work. D 107–28T. 1928. Low-Carbon Tar Cement for Use Cold in Repair Work. (Cut-Back Products). Requirements on allowable water, viscosity, distillation test, softening point, total bitumen, with test methods in accordance with standard methods of A. S. T. M. and U. S. Dept. of Agriculture. American Society for Testing Materials. D 110-30; 1930. High-Carbon Tar Cement. For use in construction of tar macadam and tar concrete pavements, requirements for permissible water, softening point, distillation test, specific gravity, total bitumen, in accordance with A. S. T. M. test methods D 95, D 36, D 20, D 139, D 4.

American Society for Testing Materials. D 111-30; 1930. Low-Carbon Tar Cement. For use in construction of tar macadam and tar concrete pavements, requirements for permissible water, softening point, distillation test, total bitumen, in accordance with A. S. T. M. test methods D 95, D 36,

D 20, D 139, and D 4.

References.—Definitions, methods of sampling and of testing. See also 502.2, 505.0, 505.30. Tar cement for repair work. See also 505.34.

505.36 Tar and Tar Felt for Roofing and Waterproofing

American Marine Standards Committee. O No. 15-1928. Marine Glue for Seams of Ship Decks. Definitions, grade and composition, test requirements as to specific gravity, melting point, penetration, evaporation, with appendix on use and conditions of application. Grade A of bitumens and vegetable pitches, Grade B of bitumens, vege-

table pitch, coal tar.

American Railway Engineering Assn. 1929 Manual, Buildings for Railway Uses. Built-Up Roofing: 1926. Percentage of carbon, melting point of coal-tar pitch, melting point, penetration, ductility, volatility of asphalt, weight of asphalt primer, weight and bend test requirements for roofing felt, construction of roofs of pitch and gravel over wood, or concrete, or gypsum, of roofs of asphalt and gravel or slag over wood, gypsum, or concrete, of roofs of impregnated asbestos felt and asphalt cement over wood, or concrete, or

American Railway Engineering Assn. 1929 Manual, Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; 1927. Includes coal-tar pitch, specific gravity, distillation test, softening point, ductility, and

solubility requirements.

American Society for Testing Materials. D 43-25; Creosote Oil for Priming Coat with Coal-Tar Pitch in Damp Proofing and Waterproofing Below and Above Ground Level. For application to concrete or masonry surfaces, method of sampling, requirements on dryness, consistency, specific gravity, insolubility in benzol, and distil-lation test, using A. S. T. M. test methods for creosote oil, D 38.

American Society for Testing Materials. D 42-25; 1925. High-Carbon Coal-Tar Pitch for Use in Damp Proofing and Waterproofing below ground level. Requirements on dryness, specific gravity, softening point, distillation test, ductility, and insolubility in carbon disulphide, using A. S. T. M. standard methods of sampling and test. For use as a mopping coat or plying cement in membrane system of waterproofing.

American Society for Testing Materials. D 145-

25; 1025. High-Carbon Coal-Tar Pitch for Use in Damp Proofing and Waterproofing above Ground Level. Requirements on dryness, specific gravity, softening point, distillation test, ductility, and insolubility in carbon disulphide, using A. S. T. M. standard methods of sampling

using A. S. T. M. Standard methods of sampling and test. For use as a mopping coat or plying cement in membrane type proofing. American Society for Testing Materials. D 200– 25. 1925. High Bitumen Coal-Tar Pitch for Use in Damp Proofing and Waterproofing Below Ground Level. Requirements on dryness, specific gravity, softening point, distillation test, ductility, solubility in carbon disulphide, using A. S. M. standard methods of sampling and test. For use as a mopping coat or plying cement in

membrane system of waterproofing.

American Society for Testing Materials. D 201– 25; 1925. High Bitumen Coal-Tar Pitch for Use in Damp Proofing and Waterproofing above Ground Level. Requirements on dryness, specific gravity, softening point, distillation test, ductility, and solubility in carbon disulphide, using A. S. T. M. standard methods of sampling and test. For use as a mopping coat or plying cement

in membrane system of waterprofing.

American Society for Testing Materials. D 251-27; 1927. High-Carbon Coal-Tar Pitch for Use in Constructing Built-Up Roofs Surfaced with Slag or Gravel. For use as mopping coat on inclines up to 3-inches per foot over boards and 1-inch per foot over concrete, requirements for dryness, specific gravity, softening point, distillation, ductility, insolubility, ash, using A. S. T. M. standard methods.

American Society for Testing Materials. D 252-27; 1927. High-Bitumen Coal-Tar Pitch for Use in Constructing Built-Up Roofs Surfaced with Slag or Gravel. For use as a mopping coat for maximum inclines of 3-inches per foot over boards and 1-inch per foot over concrete, requirements on dryness, specific gravity, softening point, distillation test, ductility, total bitumen, ash, using A. S. T. M. standard methods.

American Society for Testing Materials. D 227-27: 1927. Coal-Tar Saturated Roofing Felt for Use in Waterproofing and in Constructing Built-Up Roofs. General quality of felt, test requirements for degree of saturation, requirements for width, weight, moisture, distillate percentage, pliability, percentage of saturant, weight and ash of desaturated felt, using A. S. T. M. standard

test methods D 146.

United Roofing Contractors Assn. Gravel or Slag Roofing Specification; 1915. One construction specification for use over concrete and one for use over board sheathing, requirements on procedure in laying felt, amount of lap, mopping and nailing procedure, minimum weights of felt and of gravel, required use of U. R. C. A. inspected materials, inspection requirements of materials not stated. Covers pitch roofs only.

U. S. Gov., Federal Specifications Board. 80; 1924. Coal-Tar Pitch for Roofing. For use with F. S. B. spec. 81 (coal-tar saturated rag felt for roofing) in construction of built up roofing over board sheathing, requirements on appearance, melting point, ductility, specific gravity, free carbon content, distillation test, methods of sam-

pling and test.

U. S. Gov., Federal Specifications Board. 81; 1924. Coal-Tar Saturated Rag Felt for Roofing and Waterproofing. For use with coal-tar pitch specified in F. S. B. specifications Nos. 80 and 83, requirement on appearance, width, weight of roll, weight per unit area, pliability, breaking strength, thickness and ash of desaturated felt, sampling and methods of test.

U. S. Gov., Federal Specifications Board. 82; 1924. Surfacing Materials for Bituminous Built-Up Roofing. Requirements on general quality and screen grading of roofing gravel, roofing slag, and crushed stone, general quality and tolerance on specified dimensions of promenade tile, general quality and minimum thickness of slate,

methods of sampling and test.

U. S. Gov., Federal Specifications Board. 83; 1924. Coal-Tar Pitch for Waterproofing and Damp Proofing. For use with tar saturated rag felt (F. S. B. Spec. 81 for roofing felt) in construction of membrane waterproofing or alone for damp proofing and waterproofing tanks, walls, etc., requirements on appearance, melting point, ductility, specific gravity, free carbon, and distillation test, methods of sampling and test,

U. S. Gov., Federal Specifications Board. 151, 152, and 153; 1924. Construction of Built-Up Roofing, Types 3TCS, 4TCS, and 5TCS. For tar roofing adapted to concrete and poured gypsum surfaces, Spec. 151 for 3 layer, Spec. 152 for 4 layer, and Spec. 153 for 5 layer roofing, made of coaltar saturated rag felt cemented with coal-tar pitch, requirements on weights per unit area of saturated rag felt, of coal-tar pitch, and of roofing gravel or slag, methods of application, materials according to F. S. B. specifications.

U. S. Gov., Federal Specifications Board. 154 and 155; 1924. Construction of Built-Up Roofing, Types 4TWS and 5TWS. For tar roofing adapted to board sheathing or gypsum slabs or blocks, Spec. 154 for 4 layer and Spec. 155 for 5 layer roofs, made of coal-tar saturated rag felt cemented with coal-tar pitch, requirements on

weight per unit area of sheathing paper, of saturated felt, of coal-tar pitch, and of roofing slag or gravel, methods of application, materials according to F. S. B. specifications.

505.37 Tar Oils

American Electric Railway Engr. Assn. Recommended Specification. WP112-26; 1926. Specification for Water-Gas-Tar Distilate. Allowable percentage of water and of matter insoluble in benzol, specific gravity of oil and of the fractions. percentages distilling at given temperatures and coke residue

American Electric Railway Engr. Assn. Recom-mended Specification. WP113-26; 1926. Specification for Water-Gas-Tar Mixture. Made up of 60 per cent distillate, allowable percentage of water and of matter insoluble in benzol, specific gravity of the oil and of the fractions, percentage distilling at given temperatures, and coke residue.

American Wood Preserver's Assn. 15a; 1923, Preservatives for Flooring and Paving Blocks Includes coal-tar paving oil and coal-tar distillate oil, requirements on allowable water, insoluble matter, specific gravity, distillation, float test, and coke residue, tests in accordance with A. W. P. A. standard method of analysis of creosote.

References.—Definitions, methods of sampling and of testing: See also 502.2, 505.0, 505.30. Creosote and naphthalene. See 801.3, 801.4.

505.39 Miscellaneous Specifications for Tar

American Society for Testing Materials. merican society for Testing Materials. Tenta-tive Specifications. D 112-30; 1930. Coal-Tar Pitch for Stone Block Filler. Requirements for allowable water, softening point, distillation test, specific gravity, ductility, total bitumen, in accordance with A. S. T. M. test methods D 95, D 61, D 20, D 113, and D 4.

American Wood Preserver's Assn. 19b: 1923. terior Creosoted Wood Block Flooring. Includes specifications for coal tar pitch filler, melting

point test requirements.

American Wood Preserver's Assn. 16b; 1923. Creosoted Wood Block Street Paving. Includes specifications for bituminous filler. tar pitch, test requirements for specific gravity, free carbon, melting point, and distillation; for special pitch filler, specific gravity, distillation and melting point requirements.

STONE, SAND, AND CEMENTITIOUS MATERIAL

510. GENERAL ITEMS

American Concrete Institute. Definitions. Definitions of materials, forms, and apparatus used in concrete constructions. Proceedings of the

A. C. I., vol. 19 of 1923, p. 320.

American Society of Mechanical Engineers, Power Test Codes. Instruments and Apparatus, pt. 16; 1931. Density Determination. Includes methods of density determination for solids including measuring and weighing method, pyc-nometer method, and hydrostatic weighing method.

American Society for Testing Materials. D 2-26; 1926. Abrasion of Rock. Similar in almost all respects to the Deval abrasion test of French School of Roads and Bridges, dimensions and design of machine, preparation of sample, test procedure, for testing broken stone for obtain-

ing the coefficient of wear.

American Society for Testing Materials. D 3-18; 1918. Approved by American Standards Assn. as A 5-1930. Method of Test for Toughness of Rock. Definition of toughness, dimensions and weights of parts of testing machine, preparation of test specimens, method of testing.

American Society for Testing Materials. 1918. Definitions of Terms Relating to Materials for Roads and Pavements. Covers bituminous

and nonbituminous materials.

American Society for Testing Materials. D 75-22; 1922. Approved by American Standards Assn. as A 26-1930. Standard Methods of Sampling Stone, Slag, Gravel, Sand and Stone Block for Use as Highway Materials. Methods of sampling of stone from ledges or quarries for quality, sampling of stone from commercial quarries, sampling of field stone and boulders, sampling of sand

and gravel, and of stone block.

American Society for Testing Materials. E 4-27; 1927. Methods of Verification of Testing Machines. For testing machines that measure load, methods of verification by standard weights, by standardized proving levers, by means of elastic calibration device, and by comparison method, tolerances for new and for used machines.

American Society for Testing Materials. E 6-30 and E 6-30T; 1930. Definitions of Terms Relating to Methods of Testing. Definitions of stress, strain, stress-strain diagram, elastic limit, yield point, tensile strength, compressive strength, modulus of elasticity.

American Society for Testing Materials. E 12-27; 1927. Definitions of Terms Relating to Specific Gravity. Covers specific gravity and absolute specific gravity of solids and liquids, apparent specific gravity of solids, and bulk specific gravity

of solids.

American Society for Testing Materials. Tentative Standard. D 326-30T; 1930. Method of Compression Testing of Natural Building Stone. Sampling and preparation of test specimen for dry condition testing and for wet condition test-

ing, test procedure.

American Society for Testing Materials. Tentative Standard. D 327-31T; 1931. Method of Flexure Testing of Natural Building Stone. For determination of modulus of rupture, requirements on types of specimens, dimensions of knife-edges supporting specimen, sensitivity of test machine, test procedure.

American Society for Testing Materials. Tentative Standard. D 328-31T; 1931. Methods of Test for Absorption and Apparent Specific Gravity of

Natural Building Stone, Requirements on test |

specimen, methods of test, calculation.

Asphalt Shingle and Roofing Institute. Tests for Granular Surfacing Materials; 1922. For crushed slate or other mineral granules for surfacing composition roll roofing and shingles, sampling and design of sampler, test procedure for permanency of color, moisture, sieve analysis, and percentage of dust and powder.

Asphalt Shingle and Roofing Institute. Recommended tests. Tests for Powdered Surfacing Materials; 1923. For tale, sand, mica, and powdered surfacing materials and for powdered and dust fillers. Sampling, moisture and sieve analysis test procedure the same as for Granular Surfacing Materials tests of A. S. R. I. with modifications as noted.

511. STONE AND STONE MANUFACTURES

511.1 GRANITE

National Building Granite Quarries Assn. (Inc.). Architectural Granite. Undated. Includes specifications for granite work, general requirements on quality of granite, submitting of samples for judging quality, texture and color, requirements on degree of finish, quality of finish and cutting, construction of beds and joints, bonding, provision of washes and drips, etc.

References.—Definitions, methods of sampling and of testing. See also 500, 510. Granite curb. See also 518.63. Stone block. See also 511.71. Riprap. See also 511.72. Ashlar stone, rubble stone, riprap stone. See 511.9.

511.2 LIMESTONE AND DOLOMITE

American Ceramic Society. Journal of A. C. S. for June 1928. Bureau of Standards. Cir. 118. Adopted by A. C. S. in 1924. Limestone, Quicklime, and Hydrated Lime. Use of lime in manufacture of glass, definitions, requirements on chemical composition of nonvolatile portion of limestone, quicklime or hydrated lime, fineness, methods of sampling and testing.

American Society for Testing Materials. C 25-29; 1929. Methods of Chemical Analysis of Limestone, Quicklime and Hydrated Lime. Treatment of sample, determination of silica and insoluble matter, of total iron, aluminum, calcium, strontium, magnesium, volatile matter, mechanical moisture, carbon dioxide, sulphuric anhydride, sulphur, phosphorus, manganese, ferrous iron, available lime, procedure of test.

Indiana Limestone Institute. Grading and Uniform Classification of Indiana Limestone; 1928. Definitions of 11 grades, including fineness of grain, allowable variations in density, color and texture, permissible streaks, seams, pit holes, etc., hardness, density, etc., special utility of each' grade, definitions of mill block, dimension stone,

monolith block, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C207; 1925. Limestone, Quicklime, Lime Powder, and Hydrated Lime for Use in the Manufacture of Sugar. Approved by Interdepartmental Conference on Chemical Lime, Nat'l Lime Assn., and Hawaiian Sugar Planters Assn. For limestone, requirements on percentage of sugar soluble lime, permissible magnesia, loss on ignition, tolerance on size, methods of sampling and test.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C144; 1923. Limestone and Quicklime for Use in the Manufacture of Sulphite Pulp. Approved by Interdepartmental Conference, Nat'l Lime Assn., and Tech. Assn. of Pulp and Paper Assn. Requirements on chemical composition of high calcium limestone and of high magnesium limestone, methods of sampling and testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards, C25 and Suppl.; 1927. Standard Samples. Argillaceous Limestone. Sample No. 1a prepared and sold by the Bureau with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of limestone, etc. Analysis shown in supplement.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Dolomite. Sample No. 88 prepared and sold by the bureau with a certificate of its complete analysis, for use by industrial organizations as a comparison standard in checking the accuracy

of analysis of similar material, etc.

References.—Definitions, methods of sampling and of testing. See also 500., 510. Stone block. See 511.71. Riprap. See 511.72 Ashiar, rubble, and riprap stone. See 511.80.

511.3 MARBLE

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Marble and Tile Work: 1929. Includes Terrazzo Tile, dimensions, pressure used in manufacture, made from marble chips, requirements for construction of terrazzo tile floor and base.

National Assn. of Marble Dealers. Interior Marble Work: 1926. Explanatory of the material a specification for interior marble work should contain, includes grouping of marbles according to properties for finishing, kinds of finish and where used, standard thicknesses for marble for differ-ent applications, recommended details and methods of construction, 42 plates illustrating typical installations.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Water-Closet Inclosures and Partitions. For marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures and partitions, general quality and finish requirements for slate

and soapstone.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Bath Inclosures With and Without Lead Pan. For shower bath and dressing room inclosures of marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures, details of joints, construction requirements for concrete floor foundation and for placing lead pan, general quality and finish requirements for slate and soapstone.

References.—Definitions, methods of sampling and of testing. See 500., 510. Stone block. See 511.71. Riptap, See 511.72. Ashlar, riprap, and rubble stone. See 513.9. Sandstone curb. See 518.63.

511.5 STATE

511.50 General Items

American Society for Testing Materials. Standard Test Model D 221-31; 1931. Method of Test for Water Absorption of Slate. Size of specimen, test procedure for drying, weighing, immersing and weighing.

American Society for Testing Materials. Standard Test Methods. D 222-31; 1931. Methods of Flexure Testing of Slate. Preparation of specimens, dimensions and design of knife edges,

test procedure for determination of modulus of rupture and modulus of elasticity using transverse loading

American Society for Testing Materials. D 247-27; 1927. Definition of the Term Slate.

Tests for Asphalt Shingle and Roofing Institute. Granular Surfacing Materials; 1922. For crushed slate or other mineral granules for surfacing composition roll roofing and shingles, sampling and design of sampler, test procedure for permanency of color, moisture, sieve analysis, and percentage of dust and powder.

511.51 Blackboard Slate

U. S. Gov., Dept. of Commerce. Bureau of Standards. R15; 1924. Blackboard Slate. Simplified practice recommended and accepted by industry establishing a limited list of standard heights of slabs and number of slabs to be used in various width wall spaces.

References.—Definitions, methods of sampling and of testing. See 511.50.

511.52 Building Slate and Slate Plumbing Fixtures

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Slate Roof-ing; 1927. Requirements on general quality of slate, type and weight of felt, type and size of nails, requirements for laying and nailing.

Asphalt Shingle and Roofing Institute. Granular Metric Specification for Red Slate, for Green Slate, and for Blue-Black Slate. Undated. Granules to be produced from natural nonfading slate, screen grading requirements for each of

the above colors.

Pennsylvania Slate Institute. Roofing Slate; 1929. Requirements on modulus of rupture, porosity, permissible longitudinal curvature, and thickness, using Am. Soc. for Testing Materials test methods.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R13-28; 1928, Structural Slate for Plumbing and Sanitary Purposes. Simplified practice recommended and accepted by industry establishing a limited schedule of standard dimensions, sizes, types, nomenclature, and thickness of slab for slate laundry tubs, sink and tub combinations, slate sinks, sink tops, slop hoppers, shower stalls, toilet inclosures, and urinals,

U. S. Gov. Dept. of Commerce. Bureau of Standards. R14-28; 1928. Roofing Slate. Simplified practice recommended and accepted by industry establishing a limited list of standard face dimensions and thicknesses for slate shingles for sloping roofs and for flat roofs, number of nail holes, and standard color nomenclature.

U. S. Gov., Federal Specifications Board. s. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Bath Inclosures with and without Lead Pan. For shower bath and dressing room inclosures of marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures, details of joints, construction requirements for concrete floor foundation and for placing lead pan, gen-eral quality and finish requirements for slate and soapstone.

U. S. Gov., Federal Specifications Board. 1926. Plumbing Fixtures (For Land Use). Water-Closet Inclosures and Partitions. For marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures and partitions. general quality and finish requirements for slate

and soapstone.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures. (For Land Use). Slate or Soapstone Sinks. General dimensions, thickness of slate or soapstone, size and type of bibbs, combinations of sink with right and left hand drain boards, general quality and finish requirements for slate and soapstone.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Slate or Soapstone Laundry Trays, For 1, 2, and 3 compartment trays, general dimensions and construction, thickness of slate or soapstone, angle iron supports from floor, sizes and types of fittings for supply and waste, general quality and finish requirements for slate and soapstone.

References.—Definitions, methods of sampling and of testing. See also 511.50. Roofing construction. See also 518.57.

511.53 Slate for Electrical Purposes

American Railway Assn. Signal Section. 10720: 1921. Switchboard. Includes slate panel, general quality, finish, and dimensions, dielectric strength requirements according to Am. Inst. of Elec. Engrs. Rules.

American Society for Testing Materials. Tentative Test Methods. D 273-27T; 1927. Methods of Test for Determining the Insulating Qualities of Slate. Apparatus requirements, test procedure for measuring impedance leakage current by measuring the current in low voltage winding of testing transformer.

References.—Definitions, methods of sampling and of testing, See also 511,50. Electrical panels and switchboards, See also 711.42. Telephone switchboards, See 714.52. Fuse blocks, See 714.52. Cut-out bases, See 714.52. Hethods of testing insulating qualities. See also 71.50.

511.6 SOAPSTONE

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Bath Inclosures with and without Lead Pan. For shower bath and dressing room inclosures of marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures, details of joints, construction requirements for concrete floor foundation and for placing lead pan, general quality and finish requirements for slate and soapstone.

U. S. Gov., Federal Specifications Board, 448; 1926, Plumbing Fixtures (For Land Use). Water-Closet Inclosures and Partitions, For marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures and partitions, general quality and finish requirements for slate

and soapstone.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Slate or Soapstone Sinks. General dimensions, thickness of slate or soapstone, size and type of bibbs, combinations of sink with right and left hand drain boards, general quality and finish requirements for slate and soapstone.

S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Slate or Soapstone Laundry Trays. For 1, 2, and 3 compartment trays, general dimensions and con-struction, thickness of slabs, angle iron supports from floor, sizes and types of fittings for supply and waste, general quality and finish require-ments for slate and soapstone.

511.7 ROCK AND STONE FOR ROAD BUILDING

511.70 General Items

American Assn. of State Highway Officials. Tentative Method. T-2. Undated. Methods of Sampling Stone, Slag, Gravel, Sand, and Stone Block for Use as Highway Materials, Including Some Material Survey Methods. Same as D 75-22 of Am. Soc. for Testing Materials except that the words "or in some other satisfactory manner" in paragraph 16 of D 75-22 have been omitted.

American Assn. of State Highway Officials. Tenta-tive Method. T-5. Undated. Method of Test for Toughness of Rock. Same as D 3-18 of Am.

Soc. for Testing Materials.

American Society for Testing Materials. D 35-18; 1918. Form of Specifications for Certain Commercial Grades of Broken Stone. Form for entering the percentages passing certain specified screen sizes.

511.71 Stone and Granite Blocks

American Assn. of State Highway Officials. Tenta-tive Standard Specifications. M-1; 1924. Stone for Telford Base Course and Reconstructed Base Course, Requirements on general quality of stone and of approximate dimensions of pieces.

American Society for Testing Materials. D 59-26; 1926. Block for Granite Block Pavements. General quality of stone block, percentage of wear and toughness requirements using A. S. T. M. methods of test, dimensions of blocks, dressing.

American Society for Testing Materials. D 131–23; 1923. Block for Recut Granite Block Pavements. General quality of block, percentage of wear and toughness requirements using A. S. T. M. methods of test, limiting dimensions, dressing.

American Society for Testing Materials. D 132-23; 1923. Block for Durax Granite Pavements. General quality, percentage of wear, and toughness requirements, using A. S. T. M. methods of test, limiting dimensions, dressing.

U. S. Gov., Federal Specifications Board. 651; 1931. Block for Granite, Recut Granite, and Durax Granite Pavements. For 3 grades of granite block, 1 grade of recut, and 2 grades of durax blocks, requirements on dressing, percentage of wear, toughness, and dimensions, using test methods of Am. Soc. for Testing Materials. Requirements are the same as for A. S. T. M. spec. D59-26, D131-23, D132-23 except for dimensions of durax blocks, and the addition of a C grade in granite block.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 511.70. Granite, limestone, sandstone. See also 511.1, 511.2, 511.4. Cast stone. See 516.4. Stone block pavements. See 518.36.

511.72 Riprap

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures. 1931, Rip-rap. Requirements on general quality and weight of stone, proportion of large stones, general construction requirements for 2 classes of dry rip-rap, for mortar and for grouted rip-rap, construction of stone rip-rap for foundation protection, filling and placing concrete rip-rap in bags.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Hand-Laid Rip-Rap. Requirements on general quality, minimum thickness and volume of stone. method of laying and permissible variation of finished work from required contour.

References.—Definitions, methods of sampling and of testing, See also 500., 510., 511.70. Riprap. See also 511.9. Granite, limestone, sandstone. See also 511.1. 511.2. 511.4. Retaining and head walls. See also 510.0. Rubble and saliar masonry. See 518.51, 910.000.

511.73 Railway Ballast

American Electric Railway Engr. Assn. Misc. Methods and Practices. W202-23; 1923. Bal-last for Suburban and Interurban Lines. Definitions and descriptions with recommendations as to best type of ballast and minimum depths for different types of ballast.

American Railway Engineering Assn. 1929 Man-ual. Burnt Clay Ballast; 1921. Location of deposit, procedure for burning, maximum recom-mended size and absorption of broken burnt clay, minimum depth of ballast in roadbed.

American Railway Engineering Assn. 1929 Man-ual. Pit Run Gravel Ballast; 1921. Allowable percentages of dust or sand for unwashed gravel for three classes of railways, test method for separating and measuring percentage of dust, sand, and gravel, dimensions of roadway ballast sections.

American Railway Engineering Assn. 1929 Man-ual. Washed Gravel Ballast; 1926. Percentage of material in each size range for washed gravel including crushed gravel, test requirements for amount of dirt or loam, amount of oversize coarse aggregate, amount of undersize sand, and percentages of the various sizes, dimensions of

roadway ballast sections.

American Railway Engineering Assn. 1929 Man-ual. Stone Ballast; 1925. Test methods for measurement of weight, toughness, wearing qualities, cementing quality, soundness test requirements, size limits, production and handling, di-mensions of roadway ballast sections.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 511.70, 512.10. Gravel, sand, broken stone, slag. See also 512.11, 512.12, 512.15, 512.2.

511.9 MISCELLANEOUS STONE AND STONE MAN-UFACTURES

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Ashlar Stone. Rubble Stone. Rip-Rap Stone. Requirements on general quality and nonadmissible defects for each type.

American Institute of Mining and Metallurgical Engineers, sponsor under auspices of American Standards Assn. M 13–1925. Recommended Practice for Rock Dusting Coal Mines to Prevent Coal Dust Explosions. Kind, size, and amounts of dust to be used, parts of mine to be dusted, sampling of dust after mine has been dusted, for all bituminous mines,

References.—Definitions, methods of sampling and of testing. See also 500., 510., 511.70.

512. SAND, GRAVEL, BROKEN STONE, SLAG

512.1 SAND, GRAVEL, BROKEN STONE

512.10 General Items

American Assn. of State Highway Officials. Tenta-tive Method. T-2. Undated. Methods of Sam-pling Stone, Slag, Gravel, Sand, and Stone Block for Use as Highway Materials, Including Some Material Survey Methods. Same as D 75-22 of Am. Soc. for Testing Materials except that the words "or in some other satisfactory manner" in paragraph 16 of D 75-22 have been omitted.

American Assn. of State Highway Officials. Ten-tative Method. T-3. Undated. Methods of Test for Abrasion of Broken Stone and Broken Slag. A modification in some respects of D 2-26

of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-12. Undated. Method of Decantation Test for Sand and Other Fine Aggregates. Same as D 136-22T of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-13. Undated. Method of Test for Apparent Specific Gravity of Sand, Stone, and Slag Screenings, and Other Fine

Nonbituminous Highway Materials. Same as D 55-25 of Am. Soc. for Testing Materials for the Le Chatelier test, not accurate for samples containing a relatively large proportion of absorptive grains.

American Assn. of State Highway Officials. Ten-tative Method, T-15. Undated. Method of Test for Apparent Specific Gravity and Absorption or Free Moisture Content of Sand, Gravel. Stone, or Other Nonbituminous Highway Materials. For pycnometer method, requirements on general features of pycnometer, test procedure.

American Assn. of State Highway Officials, Tentative Method. T-19. Undated. Method of Test for Unit Weight of Aggregate for Concrete. Same as C 29-27 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials, Tentative Method. T-27. Undated. Method of Test for Sieve Analysis of Aggregates for Concrete. For coarse or for mixtures of fine and

coarse aggregates, method the same as C41-24 of Am. Soc. for Testing Materials except as to size of sample and recommendation of elutriation test in T-27.

American Assn. of State Highway Officials. Ten-tative Method. T-38. Undated. Method of Proportioning Natural Sand and Gravel for Concrete Construction. Method for determining the amount of cement to make concrete equivalent to any base mixture, when the percentage of sand in the total aggregate varies from the base mixture.

American Assn. of State Highway Officials. Ten-tative Method. T-71. Undated. Method of Test for Sand to be Used as Fine Aggregate in Concrete. For determining the structural strength of sands by means of a compression test on a mortar of plastic consistency and gaged to a definite water cement ratio of 0.9, requirements on measurement of consistency on flow table and preparation of compression test specimens.

American Society for Testing Materials. C 29-27; 1927. Method of Test for Unit Weight of Aggregate for Concrete. Dimensions, shape, and capacities of measuring containers, dimensions of metal tamping rod, calibration of measure, method of filling measure and determining the

unit weight of aggregate.

American Society for Testing Materials. C 30-22; Approved by American Standards Assn. as A 19-1923. Method of Test for Determination of Voids in Fine Aggregate for Concrete. Formula for determination of percentage of

voids with definitions of terms.

American Society for Testing Materials. C 40-27; 1927. Method of Test for Organic Impurities in Sands for Concrete. As a warning that further tests of the sands are necessary before approval for use; preparation of mixture of sand and of sodium hydroxide solution and comparison of color after 24 hours with that of a standard tannic acid solution.

American Society for Testing Materials. C 41-24; 1924. Method of Test for Sieve Analysis of Aggregates for Concrete. Requirements on sizes of samples for fine aggregates and for coarse aggregates, sizes of openings and of wires in sieves, method of separating and reporting analysis of

the samples.

American Society for Testing Materials. C 58-28;

1928. Definition of the Term Sand.

American Society for Testing Materials. Tentative Definition. C 58-28T; 1928. Definition of Term Aggregate.

American Society for Testing Materials. D 19-16: 1916. Method of Mechanical Analysis of Mixtures of Sand or other Fine Material with Broken Stone or Broken Slag, Except Aggregates Used in Cement Concrete. Dimensions of sample, screen separation of sample, examining por-tion retained on screen by A. S. T. M. test method D 18, and the portion passing the screen by A. S. T. M. method D 7.

American Society for Testing Materials. D 30-18; 1918. Approved by American Standards Assn. as A 27-1924. Method of Test for Apparent Specific Gravity of Coarse Aggregates. Size and screening of sample, apparatus, test method.

American Society for Testing Materials. D 55-25; 1925. Methods of Test for Apparent Specific Gravity of Sand, Stone and Slag Screenings, and Other Fine Nonbituminous Highway Materials. Alternate methods, Le Chatelier, and Jackson, dimensions and design of testing apparatus and test procedure for each method.

American Society for Testing Materials. Tentative Standard, C 86-31T; 1931. Method of Test for Apparent Specific Gravity of Coarse Aggregates in a Saturated Condition. Test procedure and calculation of apparent specific gravity.

American Society for Testing Materials. Tentative Standard. C 87-31T; 1931. Method of Test for Structural Strength of Fine Aggregate Using Constant Water-Cement-Ratio Mortar, Requirements on preparation of mortar using a 0.9 water-cement ratio, procedure for making flow test for determining consistency of mortar, pro-

cedure for molding compression specimens.

American Society for Testing Materials, Tentative Specifications. D 64–20T; 1920. Commercial Sizes of Sand and Gravel for Highway Construction. Standard size designations and maximum permissible range in mechanical analyses for nine commercial grades of sand and gravel for waterbound gravel and cement concrete roads

and pavements.

American Society for Testing Materials. D 2-26; 1926. Abrasion of Rock. Similar in almost all respects to the Deval abrasion test of the French School of Roads and Bridges, dimensions and design of machine, preparation of sample, test procedure for testing broken stone for obtaining the coefficient of wear.

American Society for Testing Materials. Tentative Test Method. D 289-28T; 1928. Method of Test for Abrasion of Gravel. For uncrushed and crushed gravel, dimensional requirements of Deval abrasion testing machine, dimensions and weight of cast iron abrasive spheres, preparation of sample and separation into grade class,

test procedure.

U. S. Gov., Dept. of Commerce. Bureau of Standards. LC 248; 1928. Sintering Test of Molding Sand. For finding temperature at which the molding sand "burns on" the casting, requirements on preparation of samples, methods of test and illustration of apparatus using a heated platinum ribbon and measuring the temperature at which it sticks to the specimen.

512.11 Gravel

American Assn. of State Highway Officials. Tenta-Specifications. M-37: Standard Gravel for Portland Cement Concrete Pavements or Bases, Highway Bridges and Incidental Structures. For use as coarse aggregate, requirements on general quality, permissible deleterious sub-stances, wear, size, and uniformity of size using A. A. S. H. O. methods of test.

American Assn. of State Highway Officials. Tentative Method. T-4. Undated. Method of Test for

Abrasion of Gravel. Requirements on screening of sample and preparation according to one of four standard grade classes, size of sample, duration of test in Deval abrasion testing machine, speed of machine, measurement of loss by abrasion: for gravel without crushed pieces and for gravel with crushed pieces.

American Assn. of State Highway Officials. Tenta-tive Method. T-6. Undated. Method of Test for Toughness of Gravel. Preparation of sample and height of fall for machine described in Proceedings of Am. Soc. for Testing Material for 1922 by F. H. Jackson, "An Impact Test for Gravel."

American Assn. of State Highway Officials. Tentative Method. T-7. Undated. Method of Determining Quality of Glacial Gravels by Lithological Count of Particles. Method dependent on separation by inspection of a sample into the various rock types.

American Assn. of State Highway Officials. Tentative Method, T-8, Undated, Method Of Test for Quantity of Soft Pebbles in Gravel, Requirements on separation of sample into 3 sizes and crushing the soft pebbles by specified loads for each size class, computation of percentage by

weight.

American Assn. of State Highway Officials. Tenta-tive Method. T-11. Undated. Method of Test for Quantity of Clay and Silt in Gravel. Same as D 72-21 of Am. Soc. for Testing Materials.

American Concrete Institute. Tentative Method. Method of Test for Abrasion of Gravel; 1928. Defines grades and tests in Deval abrasion machine. Proc. of A. C. I. for 1928, vol. 24, p. 783.

American Railway Engineering Assn. 1929 Manual. Concrete Fence Posts; 1923. Includes bank gravel for fine and coarse aggregate for concrete, general quality, size ranges, test requirements

for organic impurities.

American Society of Municipal Engineers. posed Specifications for Broken Stone and Gravel Roads; 1922. For gravel road, requirements on general quality of gravel, permissible content of disintegrated stone, required proportions of sizes of materials as determined by screen grading for a No. 1 product and a No. 2 product comprising mixtures of gravel, sand, and clay, cementation test for No. 1 product using method recommended by the special committee on "Materials for Road Construction" of the American Society

of Civil Engineers, 1916.

American Society for Testing Materials. Tentative Specifications. D 64-20T; 1920. Commercial Sizes of Sand and Gravel for Highway Construction. Standard size designations and maximum permissible range in mechanical analyses for nine commercial grades of sand and gravel, when used in construction of waterbound-gravel and cement

concrete roads and pavements.

American Society for Testing Materials. D 72-21; 1921. Method of Test for Quantity of Clay and Silt in Gravel for Highway Construction. Di-mensions of test vessel, size of sample, test pro-

American Society for Testing Materials. D 309-30; 1930. Gravel for Bituminous Concrete Base. For ¼ to 1¼ inch size and for ¼ to 2½ inch size, general quality, permissible amounts of deleterious substances, screen grading requirements.

National Sand and Gravel Assn. (Inc.). Report of Committee on Specifications for Standardized Sizes of Sand and Gravel; 1931. Includes proposed standard commercial sizes of gravel with standard designations for sizes, permissible coarser material and permissible finer material than the limits set.

U. S. Gov., Federal Specifications Board. 455; 1927. Broken Stone, Broken Slag, or Gravel for

Bituminous Surface Treatment. Requirements on general qualities of materials, sizes, and screen grading, methods of test are those of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board. 82; 1924. Surfacing Materials for Bituminous Built-Up Roofing. For roofing gravel, requirements on general quality and sieve grading, methods of

sampling and test.

512 12 Sand

American Assn. of State Highway Officials. Ten-tative Standard Specification, M-6a; 1927. tative Standard Specification. Mortar Sand. Requirements on general quality, permissible clay and silt, permissible organic matter, mortar strength test, screen grading, us-ing A. A. S. H. O. methods of test T-10, T-12, T-21, T-27, T-35.

American Assn. of State Highway Officials. Tentative Standard Specifications. M-120; 1926. Sand for Bituminous Mixtures. For use in bi-tuminous pavements, bituminous mortars, bituminous filler or mastics, requirements on general quality, screen grading limits, using A. A. S. H. O.

methods of test.

American Assn. of State Highway Officials. Ten-tative Method. T-21. Undated. Method of Test for Organic Impurities in Sands for Concrete. Same as C 40-27 of Am. Soc. for Testing Materials except that the use of commercial soda lye is permitted and provision is made for comparing the colors with a color chart in T-21.

American Assn. of State Highway Officials. Tentative Method. T-28. Undated. Method of Mechanical Analysis of Sand or Other Fine Highway Material. Same as D 7-27 of Am. Soc. for Testing Materials except as to size of sample and recommendation of elutriation test in T-28.

American Ceramic Society, Journal of A. C. S. for June 1928. Tentative Method. Complete Sand Analysis; 1928. Preparation and dissolving of sample, method of determination of R2O3, CaO. MgO, and loss on ignition, determination of iron. zirconia, alumina, silica, and electrometer method

for iron in glass sands.

American Foundrymens Assn. Methods of Testing and Grading Foundry Sands; 1928. Determination of moisture, definitions, descriptions of apparatus, standard methods of performing per-meability test, compression strength (green sand), fineness test, chemical analysis. Tenta-tive standard tests for transverse, tensile, and shear strength of green sand, tensile and transverse strength test of baked cores, dye absorption and sintering tests, grading classifications.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, Sec. 21. Brick Pavements and Floors. For cushion sand, requirements on general quality, freedom from clay, organic matter, shale or alkali, maximum size of particle, screen grading re-

quirements.

American Railway Engineering Assn. 1929 Manual. Concrete Fence Posts; 1923. Includes sand for fine aggregate, general quality, test requirements for organic impurities. American Society of Municipal Engineers. Vitrified Brick Pavements; 1930. Sand. Sand for sand bed for brick pavements, and sand for cement sand bed, requirements on general quality, allowable loam or silt, screen grading.

American Society for Testing Materials. C 35-30;

1930. Gypsum Plastering Sand. General quality, composition, and screen grading sizes.

American Society for Testing Materials. Tentative Specifications. C 66-31T; 1931. Sand for Use in Lime Plaster. General quality and grading requirements, permissible organic impurities, sieve analysis according to A. S. T. M. test method C 41, decantation test according to A. S. T. M. method D 136, and organic impurities ac-

cording to A. S. T. M. method C 40. American Society for Testing Materials. D 7-27; 1927. Method of Mechanical Analysis of Sand or Other Fine Highway Material, Except Fine Aggregates Used in Cement Concrete. Size and preparation of sample, sieving procedure with

sieve dimensions for various sizes of sieves.

American Society for Testing Materials. Tentative Specifications. D 64-20T; 1920. Commercial Sizes of Sand and Gravel for Highway Construction. Standard size designations and maximum permissible range in mechanical analyses for nine commercial grades of sand and gravel, when used in construction of waterbound gravel

and cement concrete roads and pavements.

American Society for Testing Materials. D 162–29; 1929. Sand for Sheet Asphalt and Bituminous Concrete Pavements. General quality requirements, limiting percentages passing and retained on various sieve sizes, grading according to A. S. T. M. method D 7 and sampling according to A. S. T. M. method of D 75.

American Society for Testing Materials, 1928. Method of Decantation Test for Sand and Other Fine Aggregates. For determination of total quantity of silt, loam, clay, etc., dimensions

of pan, preparation of sample, test, procedure. National Sand and Gravel Assn. (Inc.). Report of Committee on Specifications for Standardized Sizes of Sand and Gravel; 1926. Includes a table of suggested standard commercial sizes of sand and gravel for specific types of work such as for maintenance of gravel roads, concrete highway construction, railroad ballast, etc.

U. S. Gov., Federal Specifications Board. SS-S-71; 1931. Sands for Use in Sheet Asphalt or Bituminous Concrete Pavements. Requirements are the same as those of Am. Soc. for Testing Materials, Spec. D 162-29 for sand for sheet asphalt and bituminous concrete pavements.

U. S. Gov., Federal Specifications Board. SS-S-61; 1931. Sand for Cement Grout Filler, for Brick and Stone Block Pavements. Requirements on general quality, sieve grading, tensile strength of mortar, using methods of test of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board. 1927. Sand for Cement Mortar Bed for Brick, Stone Block, or Wood Block Pavements. quirements on general qualities, screen grading, and tensile strength of mortar briquettes, methods of test being those of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board. SS-M-51; 1931. Materials for Cushion Course for Brick, Stone Block, or Wood Block Pavement. For sand, granulated slag, slag screenings, or lime-stone screenings requirements on screen grading, and permissible silt, loam, clay, etc., using test methods of Am. Soc. for Testing Materials.

512.13 Fine Aggregate

American Assn. of State Highway Officials. Tentative Standard Specifications. M-6; 1930. Fine Aggregate for Portland Cement Concrete Pavement of Base Course, Highway Bridges and Incidental Structures. Permissible deleterious substances, requirements on mortar strength, concrete strength, screen grading, and uniformity, using A. A. S. H. O. methods of test.

American Assn. of State Highway Officials. Tentative Method, T-16. Undated, Method of Test for Approximate Apparent Specific Gravity of Fine Aggregate. Same as C 68-30 of Am. Soc.

for Testing Materials.

American Assn. of State Highway Officials. Tenta-tive Method. T-17. Undated. Method of Test for Approximate Percentage of Voids in Inundated Fine Aggregate. Same as C 69-30 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-18. Undated. Method of Test for Surface Moisture in Fine Aggregate. Same as C 70-30 of Am. Soc. for Testing Materials.

as C 10-50 of Am. Soc. for resing materials.

American Assn. of State Highway Officials. Tentative Method. T-20. Undated. Method of Test
for Determination of Voids in Fine Aggregate for Concrete. Same as C 30-22 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-30. Undated. Method of Mechanical Analysis of Extracted Aggregates. For mineral aggregate left after extraction of bituminous materials, drying and screen grading procedure.

American Assn. of State Highway Officials. Tentative Method. T-35. Undated. Methods of Making Compression and Tension Tests of Fine Aggregate for Concrete. Requirements on preparation and testing of test specimens made of fine aggregate in comparison with tests made on specimens prepared from standard Ottawa sand.

American Concrete Institute. E-5A-29T; 1929. Tentative Purchase Specifications for Concrete Aggregate. For fine aggregate, permissible percentages of deleterious materials, requirements on freedom from organic impurities, screen grading, and mortar strength compared to that of standard sand

American Concrete Institute. Fine Aggregate, Definition of. Proc. of A. C. I. for 1923, vol. 19, p. 323.

American Railway Engineering Assn. 1929 Manual. Masonry. Portland Cement Concrete, Plain and Reinforced; 1929. Includes fine ag-Plain and Reinforced; 1929. Includes nne ag-gregate, general quality requirements, grading requirements, permissible organic impurities with method of test according to A. S. T. M. American Railway Engineering Assn. 1929 Man-ual. Concrete Fence Posts; 1923. Includes fine aggregate. Sand or stone screenings, general

quality, range of sizes, test requirements for organic impurities.

American Society of Municipal Engineers, Sidewalks and Curbs; 1927. Includes fine aggregate for sidewalks, general quality requirements for sand, gravel, or crushed stone, grading requirements, percentage of loam test requirements, tensile test requirements on mortar made of the

fine aggregate.

American Society for Testing Materials. Tentative Specifications. C 33-31T; 1931. Concrete Aggregates. For fine aggregates, permissible amounts of various deleterious substances, screen grading, uniformity, and mortar strength, A list of the applicable A. S. T. M. methods of test is given.

American Society for Testing Materials. C 68-30; 1930. Method of Test for Determination of Approximate Apparent Specific Gravity of Fine Aggregate. For specific gravities of 2.2 to 2.85, design and graduation of special flask, prepara-

tion of sample, test procedure.

American Society for Testing Materials, 1930. Method of Test for Determination of Approximate Percentage of Voids in Inundated Fine Aggregate. Requirements on design, dimensions and graduation of special flask, preparation of sample, test procedure using inundation method.

American Society for Testing Materials. C 70-30; 1930. Method of Test for Determination of Surface Moisture in Fine Aggregate. For use in determination of moisture in fine aggregate for which allowance needs to be made in proportioning concrete by the maximum water content method. Method determines moisture on outside of particle. Dimensions and design of flask, preparation of sample, test procedure.

American Society for Testing Materials.

28; 1928. Method of Decantation Test for Sand and Other Fine Aggregates. For determination of total quantity of silt, loam, clay, etc., dimensions of pan, preparation of sample, test pro-

cedure.

U. S. Gov., Federal Specifications Board. SS-F-51: 1931. Fine Aggregate for Portland Cement Concrete Pavement or Base. One grade, requirements on general quality of sand or other material, screen grading, permissible percentage of silt, loam, clay, etc., and strength of mortar briquettes, using methods of test of Am. Soc. for Testing Materials.

512.15 Broken Stone

American Assn. of State Highway Officials. Tentative Standard Specifications, M-2; 1927. Broken Stone for Waterbound Base Course. Requirements on general quality, percentage of wear, soundness, screen grading limits for 2 sizes of broken stone and of screenings, using A. A. S. H. O. methods of testing.

American Assn. of State Highway Officials, Tentative Standard Specifications. M-4; 1926. Broken Stone for Bituminous Concrete Base Course. Requirements on general quality, percentage of wear, toughness, screen grades for 2 sizes of coarse aggregate, testing in accordance with A. A.

S. H. O. methods.

American Assn. of State Highway Officials. Tentative Standard Specifications. M-7; 1930. Broken Stone for Cement Concrete Base Course. For coarse aggregate, requirements on general quality, permissible deleterious material, required percentage of wear, toughness, soundness. screen grading limits, and uniformity of size, testing in accordance with A. A. S. H. O. methods of test.

\merican Assn. of State Highway Officials. Tentative Standard Specifications, M-9; 1927. Broken Stone for Waterbound Macadam Surface Course. Requirements on general quality, percentage of wear, toughness, soundness, screen grading limits for coarse stone and for screenings, testing in accordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials. tive Standard Specifications. M-11; 1927. Bro-ken Stone for Bituminous Macadam Surface Course. Requirements on general quality, percentage of wear, toughness, soundness, screen grading limits for coarse stone, filling stone, and stone chips, testing in accordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials. tive Standard Specifications. M-13; 1927. Broken Stone for Bituminous Concrete Surface Course. Requirements on general quality, percentage of wear, toughness, screen grading limits for coarse aggregate and for fine graded bituminous concrete and for coarse graded bituminous concrete, testing in accordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials. tive Standard Specifications. M-15; 1930. Broken Stone for Portland Cement Concrete Surface Courses, Highway Bridges and Incidental Structures. Requirements on general quality, permissible deleterious substances, required percentage of wear, toughness, soundness, screen grading, uniformity of size, using A. A. S. H. O. methods of test.

American Assn. of State Highway Officials. Tentative Method. T-14. Undated. Method of Test for Apparent Specific Gravity and Absorption of Stone and Other Coarse Materials. Requirements on preparation of sample, dimensions and design of test vessel, test procedure.

American Society of Municipal Engineers. posed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. For stone roads, general quality, coefficient of wear, toughness, and screen grading requirements for broken stone.

American Society for Testing Materials. D 18-16; 1916. Method of Mechanical Analysis of Broken Stone or Broken Slag, Except Aggregates Used in Cement Concrete. Preparation of sample and screening procedure through prescribed sizes and

order of use of screens.

American Society for Testing Materials. Tentative Specifications. D 63–23T; 1923. Commercial Sizes of Broken Stone and Broken Slag for Highway Construction. Standard size designations and maximum permissible range in mechanical analyses for nine commercial grades of broken stone and broken slag for highway construction.

American Society for Testing Materials, Tentative Specifications. D 190-29T; 1929. Broken Stone for Waterbound Base. General quality, percentage of wear, and grading requirements for 3 sizes of coarse aggregate and 2 sizes of screenings, using A. S. T. M. methods D 2, D 18, and D 75.

American Society for Testing Materials. D 191-29; 1929. Broken Stone for Waterbound Macadam Surface Course. General quality, percentage of wear and toughness requirements, grading requirements for coarse stone and for screenings, according to A. S. T. M. test methods D 2, D 3, D 18, and according to D 75 for sampling methods.

American Society for Testing Materials. D 192-29. Broken Stone for Bituminous Macadam. For surface or base course, general quality, percentage of wear, and toughness requirements, grading requirements for coarse stone, stone for filling surface voids, and for stone chips, according to

A. S. T. M. test methods D 2, D 3, and D 18, sampling according to A. S. T. M. method D 75. American Society for Testing Materials. Tentative Specifications. D 193-29T; 1929. Broken Stone for Bituminous Concrete Base. General quality, percentage of wear, toughness, and grading requirements for open mix and for closed mix bidurements for open mix and for closed mix bittuminous concrete base, in accordance with A. S. T. M. test methods D 2, D 3, D 18, and D 75. American Society for Testing Materials. D 194— 29; 1929. Broken Stone for Bituminous Concrete Surface. General quality, percentage of wear,

and toughness requirements, grading requirements for stone chips for seal coat, and for coarse aggregate for both fine graded and coarse graded concrete mixtures, according to A. S. T. M. methods D 2, D 3, and D 18, sampling according

U. S. Gov., Federal Specifications Board. 455; 1927. Broken Stone, Broken Slag, or Gravel for Bituminous Surface Treatment. Requirements on general qualities of materials, sizes, and screen grading, testing according to methods of Am. Soc.

for Testing Materials.

U. S. Gov., Federal Specifications Board. 456; 1927. Broken Stone and Broken Slag for Waterbound Base and Wearing Course. For 4 sizes of broken stone, requirements on general quality, screen grading, percentage of wear, testing according to methods of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board. 457; 1927. Broken Stone and Broken Slag for Bituminous Macadam Base or Surface Course. 3 size grades for base course and 1 size grade for surface course, for broken stone or broken slag, requirements on general quality, screen grading, percentage of wear for stone, and unit weight for slag, using Am. Soc. for Testing Materials methods of test.

U. S. Gov., Federal Specifications Board, 458; 1927. Broken Stone and Broken Slag for Bi-Broken Stone and Broken Slag for Bituminous Concrete Base or Surface Course. For 5 size grades, requirements on percentage of wear, toughness, and screen grading of broken stone, and unit weight and screen grading of broken slag, using methods of test of Am. Soc. for Test-

ing Materials.

U. S. Gov., Federal Specifications Board. 459; 1927. Broken Stone and Broken Slag for Binder Course, Sheet Asphalt Pavement, Requirements on general quality, toughness, and screen grading of broken stone, unit weight and screen grading of broken slag, using methods of test of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board. 82; 1924. Surfacing Materials for Bituminous Built-Up Roofing. For crushed stone, requirements on general quality and sieve grading, methods of

sampling and test.

512.16 Mineral Fillers

American Assn. of State Highway Officials. Ten-1924 tative Standard Specifications. M-17; Mineral Filler. For use in construction of sheet asphalt or bituminous concrete pavements. For Portland cement or approved dust, requirements cordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials. Ten-tative Method. T-36. Undated. Method of Sampling Mineral Filler. Sampling the same as for Portland cement received in carload lots.

American Assn. of State Highway Officials, Ten-tative Method, T-37. Undated, Method for Determination of Fineness of Mineral Filler. Procedure using 200 mesh sieve and hand method

American Society for Testing Materials. D 57– 20; 1920. Approved by American Standards Assn. as A 31–1924. Materials for Cement Grout Filler for Brick and Stone Block Pave-ments. General quality and grading require-ments for sand, test requirements for tensile strength for cement mortar made with the sand to specified proportions, cement according to A. S. T. M. specifications for Portland cement.

American Society for Testing Materials. Tenta-tive Specifications. D 242-26T; 1926. Mineral Filler for Sheet Asphalt and Bituminous Concrete Pavements. Composed of limestone dust, Portland cement, or other material, sieve analysis requirements in accordance with A. S. T. M.

test method D 7.

U. S. Gov., Federal Specifications Board. SS-M-351; 1931. Mineral Filler for Sheet Asphalt or Asphaltic Concrete Pavements. For limestone dust, dolomite dust or Portland cement, requirements on sieve grading, using methods of test of Am. Soc. for Testing Materials.

References.—Definitions, methods of sampling and of testing. See also 500., 510., 511.70, 512.10. Sand. See also 512.12. Bituminous fillers. See 505.15.

512.2 SLAG

American Assn. of State Highway Officials. Ten-tative Standard Specifications. M-3: 1927. Broken Slag for Waterbound Base Course. Requirements on general quality, percentage of wear, weight, screen grading limits for coarse slag and screenings, testing in accordance with A. A. S. H. O. methods of test.

American Assn. of State Highway Officials. Tentative Standard Specification. M-10; 1927. Broken Slag for Waterbound Surface Course. M-10; 1927. Requirements on general quality, percentage of wear, weight, screen grading limits for coarse slag and for screenings, testing in accordance

with A. A. S. H. O. methods.

American Assn. of State Highway Officials. Ten-tative Standard Specifications. M-12; 1929. Broken Slag for Bituminous Macadam Surface Course. Requirements on general quality, percentage of wear, weight, screen grading limits for coarse slag, void filling slag, and slag chips, testing in accordance with A. A. S. H. O. methods

American Assn. of State Highway Officials. Tentative Standard Specifications. M-14; 1927. Broken Slag for Bituminous Concrete Surface Course. Requirements on general quality, percentage of wear, weight, screen grading limits for 2 sizes applicable to fine graded and to coarse graded bituminous concrete, testing in ac-

cordance with A. A. S. H. O. methods.

American Assn. of State Highway Officials. Tentative Standard Specifications. M-16; 1930. Broken slag for Portland Cement Concrete Base and Surface Course. For coarse aggregate, requirements on general quality, permissible deleterious substances, required unit weight. screen grading, uniformity of size, using A. A. S. H. O. methods of test.

on general quality, sieve grading, testing in ac- | American Concrete Institute. Crushed Slag, Definition of. Proc. of A. C. I. for 1923, vol. 19, n. 322.

American Railway Engineering Assn. 1929 Man-ual. Masonry. Portland Cement Concrete, Plain and Reinforced; 1929. Includes slag as coarse aggregate, air cooled, minimum weight, seasoning and grading requirements.

American Society for Testing Materials, Tentative Specifications. C 33-31T; 1931. Concrete Aggregates. For slag, permissible amounts of various deleterious substances, requirements on screen grading, weight, and durability. A list of the applicable A. S. T. M. methods of test is

given.

American Society for Testing Materials. D 18-16; 1916. Method of Mechanical Analysis of Broken Stone or Broken Slag, Except Aggregates Used in Cement Concrete. Preparation of sample and screening procedure through prescribed sizes and order of use of screens,

American Society for Testing Materials. tive Specifications. D 63-23T; 1923. Commercial Sizes of Broken Stone and Broken Slag for Highway Construction, Standard size designations and maximum permissible range in me-chanical analyses for 9 commercial grades of broken stone and broken slag.

American Society for Testing Materials. D 65-23; 1923. Broken Slag for Waterbound Base and Wearing Course. Covers air cooled blast-furnace slag, general quality, weight, percentage of wear, and grading requirements using A. S. T. M. methods of test, for screenings and coarse slag.

American Society for Testing Materials, D 66-23; 1923. Shovel-Run or Crusher-Run Broken Slag for Waterbound Base. Covers air cooled blast-furnace slag, general quality requirements, weight, percentage of wear, grading requirements according to A. S. T. M. methods of test. American Society for Testing Materials. D 159-27; 1927. Broken Slag for Bituminous Macadam Wearing Course. For air cooled blast-furnace

slag, general quality, weight, screen grading sizes, using A. S. T. M. test methods.

American Society for Testing Materials. 27; 1927. Broken Slag for Bituminous Concrete (Coarse Graded Aggregate Type). For road wearing course constructed by mixing method, using air cooled blast-furnace slag, general quality, weight, and screen grading requirements using A. S. T. M. methods.

American Society for Testing Materials. D 161-27: 1927. Broken Slag for Bituminous Concrete (Fine Graded Aggregate Type). For bituminous concrete road wearing surface, general quality, weight, and screen grading requirements for the slag using A. S. T. M. methods of test.

American Society for Testing Materials. D 195-27; 1927. Broken Slag for Bituminous Macadam Base. Grade sizes for different courses, general quality, weight, using A. S. T. M. methods of test.

American Society for Testing Materials. D 196-27; 1927. Broken Slag for Bituminous Concrete Base. Air cooled blast-furnace slag for road base, general quality, weight, screen grading requirements, using A. S. T. M. test methods.

American Society for Testing Materials, Tentative Specifications. C 33-28T; 1928. Concrete Aggregates. Includes coarse aggregates of blast furnace slag, general quality, permissible deleterious substance grading, durability, and minimum weight requirements, tests according to A. S. T. M. and Am. Assn. of State Highway Officials methods as enumerated.

National Slag Assn. Recommended Specifications. Slag to be Used in Highways and Highway Structures; 1927. For broken air cooled blastfurnace slag, requirements on weight and general quality for various applications in highway construction, for granulated slag for brick cushion and for granulated base course, requirements on screen sizes.

U. S. Gov., Federal Specifications Board 82; 1924. Surfacing Materials for Bituminous Built-Up Roofing. For roofing slag requirements on general quality and sieve grading, methods of sam-

pling and test.

U. S. Gov., Federal Specifications Board 455; 1927. Broken Stone, Broken Slag, or Gravel for Bituminous Surface Treatment. Requirements on general qualities of materials, sizes, and screen grading, testing according to methods of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board 456; 1927. Broken Stone and Broken Slag for Waterbound Base and Wearing Course. For 4 sizes of broken slag, requirements on general quality, screen grading, and unit weight. For one grade of shovel-run or crusher-run slag, requirements on screen grading and unit weight. Tests made ac-cording to methods of Am. Soc. for Testing Ma-

U. S. Gov., Federal Specifications Board 457; 1927. Broken Stone and Broken Slag for Bituminous Macadam Base or Surface Course. For 3 size grades for base and 1 size grade for surface course, requirements on general quality, screen grading, percentage of wear for stone, and unit

weight for slag, using methods of test of Am. Soc. for Testing Materials.
U. S. Gov., Federal Specifications Board 458; 1927. Broken Stone and Broken Slag for Bituminous Concrete Base or Surface Course. For 5 size grades, requirements on percentage of wear, toughness, and screen grading of broken stone, and unit weight and screen grading of broken slag, using methods of test of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board 459: 1927. Broken Stone and Broken Slag for Binder Course, Sheet Asphalt Pavement. Requirements on general quality, toughness, and screen grading of broken stone, unit weight and screen grading of broken slag, using methods of test of Am. Soc.

for Testing Materials.

U. S. Gov., Federal Specifications Board, M-51; 1931. Materials for Cushion Course for Brick, Stone Block, or Wood Block Pavements. For sand, granulated slag, slag screenings, or limestone screenings, requirements on screen grading, permissible silt, loam, clay, etc., using test methods of Am. Soc. for Testing Materials.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 512-10. Italiway ballast. See also 511.73. Fine and coarse aggregates. See also 512.13, 512.14. See references under 512.13 and 512.14 which are in general applicable to slag. Phosphate slag as fertilizer. See 852.

513. SAND-LIME BRICK

American Society for Testing Materials. C 73-30; 1930. Sand-Lime Building Brick. For building brick made of sand and lime, requirements on compressive strength and modulus of rupture for 3 grades, dimensions of standard size, tests in accordance with A. S. T. M. methods C 67.

U. S. Gov., Dept. of Commerce. Bureau of Standards R38; 1925. Sand-Lime Brick. Simplified practice recommended and accepted by industry establishing one standard size of sand-lime brick.

U. S. Gov., Federal Specifications Board 505; 1927. Common Sand Lime Brick. For 3 grades of hardness, requirements on general quality, standard size, permissible variations in dimensions, absorption and transverse strength requirements, methods of test.

References — Definitions, methods of sampling and of testing. See also 500, 53410 Lime for sand time brick. See 517.2. Brick pavements. See 518.35. Clay brick, fire brick. See 534.11, 534.12. Brick in building construction. See items under 518.5. Brick masonry. See also 518.83.

514. GYPSUM, GYPSUM PLASTERS, AND OTHER PLASTERS

514.0 GENERAL ITEMS

American Society for Testing Materials C 11-28; 1928. Definitions of Terms Relating to the Gypsum Industry. Includes definitions of gypsum, calcined gypsum, gypsum plastering sand, Keene's

cement, mortar, plaster, stucco, etc. American Society for Testing Materials. Definitions. C 11-31T; 1931. Definitions of Terms Relating to the Gypsum Industry. Includes definitions of aggregate, partition tile or block, gypsum plaster board, wall board, sheathing board, and lath, gypsum concrete and fiber concrete.

American Society for Testing Materials. C 26-30; 1930. Methods of Testing Gypsum and Gypsum Products. Determination of free water and of fineness, chemical analysis for combined water, carbon dioxide, silica and insoluble, iron and alumina, lime, magnesia, sulphur trioxide, and sodium chloride, consistency test of calcined gypsum, determination of time of setting, tensile, compressive, and transverse strengths, and of absorption of tile or block.

References.—Methods of lathing and plastering. See also 514.63.

514.1 GYPSUM

American Society for Testing Materials. C 22-25; 1925. Gypsum. Definition and chemical formula, grading requirements for run-of-mine, crushed, sized, and 4 grades of ground gypsum, chemical composition according to contract using A. S. T. M. method of test C 26.

References.—Definitions, methods of sampling and of testing. See also 500, 514.0. Calcined grpsum, plaster of Paris. See also 514.2. Gypsum plaster. See 514.3. Gypsum plaster board and wall board. See 514.61. Gypsum tiles and blocks. See 514.62.

514.2 CALCINED GYPSUM (Plaster of Paris)

American Dental Assn. Tentative Specification No. 2; 1930. Dental Inlay Casting Investment. Published in Vol. XVII of Journal of Am. Den-tal Assn. for Dec. 1930. For a powder essentially plaster of Paris and silica, requirements on freedom from foreign material and partly set lumps, absence of cracking when heated, ability to cast with alloy, freedom from poisonous odors, setting expansion, thermal expansion, compressive strength, time of set, and screen grading of

sive strength, time of set, and provider, methods of test.

American Society for Testing Materials. C 2330; 1930. Calcined Gypsum. Grade sizes and fineness of material, time of setting, tensile and compressive strength requirements for calcined gypsum according to A. S. T. M. test method C 26.

American Society for Testing Materials. 'C 61-30; 1930. Keene's Cement. Comprises anhydrous calcined gypsum, the set of which is accelerated by addition of other materials. Time of setting, tensile strength, fineness, and maximum water content requirements, sampling, method of determination of chemical and physical properties a modification of A. S. T. M. method C 26. American Society for Testing Materials. C 72–30;

1930. Calcined Gypsum for Use in the Prepara-

tion of Dental Plasters. For quick setting, medium setting, and slow setting grades, requirements on percentage of calcined gypsum, time of setting, tensile strength, fineness, and dryness, tested according to a modification of A. S. T. M method C 26.

S. Gov., Federal Specifications Board. SS-G-901; 1930. Calcined Gypsum. For a fine grade and a medium grade, requirements on chemical composition, tensile and compressive strengths fineness, time of set, methods of sampling and test.

. S. Gov., Federal Specifications Board. 300; 1925. Plaster of Paris Bandage. For 3 sizes. requirements on dimensions, general quality and time of setting of plaster of Paris, weight of plaster per bandage, packing, gauze used to meet requirements of type A given in F. S. B. Spec. 289. for plain gauze.

References.—Definitions, methods of sampling and of testing. See also 500., 514.0. Gypsum. See also 514.1. Packaging of dental investments. See 915.10.

5143 GYPSUM PLASTER

American Society for Testing Materials. C 28-30; 1930. Gypsum Plasters. Definition, composition, time of setting, and tensile strength requirements for first and second coat of gypsum readysanded plaster, of neat plaster, of wood-fibered plaster, and of calcined gypsum for finishing coat, using A. S. T. M. test methods C 26. American Society for Testing Materials. C 59-30;

1930. Gypsum Molding Plaster. For making interior embellishments, cornices, etc., requirements on percentage of calcined gypsum, time of setting, tensile strength, and sampling using A. S.

T. M. test method C 26.

American Society for Testing Materials. C 60-30; 1930. Gypsum Pottery Plaster. Calcined gypsum for making pottery molds, requirements on percentage of calcined gypsum, time of setting, tensile strength, fineness, and sampling requirements, using A. S. T. M. test method C 26.

Gypsum Assn. Gypsum Plasters; 1927. Requirements on general quality of water and sand, plaster to be equal in quality and composition to A. S. T. M. Spec. C 28, proportions and mixing for various coats on various base types for neat plaster, wood-fibered, ready-sanded, and finishing plaster, thickness of application of neat plaster.

U. S. Gov., Federal Specifications Board. SS-P-401; 1931. Gypsum Plaster. For wood fibered plaster, neat plaster, sanded brown coat plaster, and sanded scratch coat plaster, requirements on content of gypsum, wood fiber, and sand, time of set, and tensile strength, methods of test, gypsum to conform to F. S. B. Spec. SS-G-901.

References.—Definitions, methods of sampling and of testing. See also 500., 514.0. Sand. See also 512.12. Gypsum. See also 514.1. Wall plasters and methods of plastering. See also 514.63.

514.4 LIME PLASTER

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes; 1929. Includes requirements on plastering, number of coats and their application, general quality of lime putty and sand requirements.

National Lime Assn. Proposed Specifications for Lime Plastering. Undated. Requirements on preparation, mix proportions, and application of scratch coat, brown coat, white finish coat, and sand finish coat for wood lath, for metal or wire lath, and for application to brick tile, or concrete, recommendations on construction of backing and use of Am. Soc. for Testing Materials specifications for materials.

National Lime Assn. Proposed Specifications for Lime Stucco. Undated, Requirements on proportions and mixing of scratch coat, brown coat, and finish coat, thickness and application of various coats to wood or metal lath and to brick. tile, stone or concrete, recommendations on construction of backings, on grading and properties of fine aggregate, on A. S. T. M. specifications for materials.

References.—Definitions, methods of sampling and of testing. See also 500., 514.0. Sand. See also 512.12, Lime. See also 517.2. Wall plasters and methods of plastering. See also 514.63.

514.5 PORTLAND CEMENT PLASTER

514.6 PLASTER MANUFACTURES

514.61 Gypsum Plaster Board and Wall Board

American Society for Testing Materials. C 36-25; 1925. Gypsum Wall Board. Construction, thickness, dimensions, weight, finish, and transverse strength test requirements.

American Society for Testing Materials. Tentative Specifications. C 36-31T; 1931. Gypsum Wall Board. A tentative revision of A. S. T. M. Spec. C 36-25 changing the size of the flexural strength test specimen and corresponding test values.

American Society for Testing Materials. C 37-30; 1930. Gypsum Plaster Board. Definition, composition, thickness, dimensions, weight, finish, and transverse strength test requirements.

American Society for Testing Materials. Tentative Specifications. C 37-31T; 1931. Gypsum Lath. A revision of A. S. T. M. spec. C 37-30 changing the size of the flexural strength test specimen and the corresponding test values.

American Society for Testing Materials. Tentative Specifications. C 79-31T; 1931. Gypsum Sheathing Board. For use as a sheathing in the frame of buildings, requirements on flexural strength, dimensions, weights, and permissible

variations

Gypsum Assn. Specifications Governing Gypsum Plaster Board Construction; 1923. Uses of gypsum plaster board, requirements on dimensions and transverse strength with methods of test, on finish, on erection on wood framing, on application to metal supports, design of fireresisting walls and partitions.

U. S. Gov., Federal Specifications Board. SS-P-431; 1931. Gypsum Plaster Board. Requirements on general construction and quality, thickness, width, length, weight, and tolerances, transverse strength, strength of bond between surface and core, for 3 thicknesses, methods of test.

U. S. Gov., Federal Specifications Board. SS-W-51; 1931. Gypsum Wall-Board. For 2 types, boards with square edges for butted joints and boards with round edges for filled joints, requirements on general quality and construction, thickness, width, length, and weight, and tolerances, transverse strength, strength of bond between surface and core, methods of test,

References.—Definitions, methods of sampling and of testing. See also 500., 514.0. Gypsum. See also 514.1. Fire tests of building materials. See 518.50.

514.62 Gypsum Tiles and Blocks

American Society for Testing Materials. C 52-27; 1927. Gypsum Partition Tile or Block. For use as fire protection for columns and elevator shafts, preferable face dimensions of cored or solid tile, minimum thicknesses of shell, absorption, compressive and transverse strength test requirements for block or tile, and where fire resistance is important shall meet requirements of A. S. T. M. C 19-26T.

Gypsum Assn. Gypsum Partition Tile; 1928. Specifications for Erection of Gypsum Partition Tile. Requirements on laying, anchoring, bonding, permissible heights of partitions, construc-tion of bucks and lintels, composition of mortar, plastering, installation of conduit and trim.

References.—Definitions, methods of sampling and of testing. See also 500., 514.0. Gypsum. See also 514.1. Fire tests of building materials. See also 518.50.

514.63 Wall Plasters

American Society for Testing Materials, C 61–30; 1930. Keene's Cement. Comprises anhydrous calcined gypsum, the set of which is accelerated by addition of other materials. of setting, tensile strength, fineness, and maximum water content requirements, method of determination of chemical and physical properties.

Contracting Plasterers' International Assn. Out-line Specification for Lathing and Plastering; Feb. 1931, issue of Plastering Craft. Requirements on dimensions of metal, wood, gypsum, and fibrous insulating lath, sizes of nails, requirements on lathing, furring, suspended ceiling construction, quality of materials used, preparation of lime putty, application of hard finish, scratch and brown coats, composition and application of stuceo scratch coat and brown coat, minimum thickness of plaster and of grounds, rules for measurement of lathing and plastering.

References.—Definitions, methods of sampling and of testing. See also 500., 514.0. Gypsum plaster. See also 514.3. Lime plaster. See also 514.4.

515. MAGNESTTE

516. CEMENT, CONCRETE, AND MORTAR 516.0 GENERAL ITEMS

American Assn. of State Highway Officials. Tentative Test Method, T-1. Undated, Methods of Testing Cement. Same as Am, Soc. for Testing Materials spec. C 77-30.

American Assn. of State Highway Officials, tative Method, T-22, Undated, Method of Making Compression Tests of Concrete, Same as C 39-27 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-23. Undated. Method of Making and Storing Compression Test Specimens of Concrete in the Field. Same as C 31-27 of Am. Soc. for Testing Materials except for thickness of plates for capping test specimens and additional provisions for capping and curing in T-23.

American Assn. of State Highway Officials. tative Method. T-24. Undated. Methods of Securing Specimens of Hardened Concrete from the Structure. Same as C 42-27 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Ten-tative Method. T-25. Undated. Method of Test for Absorption of Concrete. Requirements on drying specimen, boiling in water, and measuring absorption.

American Assn. of State Highway Officials. Tentative Method. T-26. Undated. Method of Test for Quality of Water to be Used in Concrete. Test procedure for testing for acidity, alkalinity, total solids and inorganic matter. comparison with distilled water in making con-

crete.

American Assn. of State Highway Officials. Ten-tative Method. T-35. Undated. Methods of Making Compression and Tension Tests of Fine

Aggregate for Concrete. Requirements on preparation and testing of test specimens made of fine aggregate in comparison with tests made on specimens prepared from standard Ottawa sand.

American Assn. of State Highway Officials. Tentative Method. T-36. Undated. Method of Sampling Mineral Filler. Sampling the same as for Portland cement received in carload lots.

American Assn. of State Highway Officials. Ten-tative Method. T-37, Undated. Method for Determination of Fineness of Mineral Filler. Procedure using 200 mesh sieve and hand method of analysis.

American Assn. of State Highway Officials. Ten-tative Method. T-38. Undated. Method Of Proportioning Natural Sand and Gravel for Concrete Construction. Method for determining the amount of cement to make concrete equivalent to any base mixture, when the percentage of sand in the total aggregate varies from the base mixture.

American Concrete Institute. C-5A-26: Standard Methods for the Measurement of Concrete Work. Units of measurement, items to be measured, how measured, permissible allowance for holes, voids, etc. Proc. of A. C. I. for 1926,

vol. 22, p. 655.

American Society for Testing Materials. Tenta-tive Specifications. C 9-16T; 1916. Compressive Strength of Portland Cement Mortars. Requirements for compressive strength after 7 days and after 28 days for mortar composed of 1 part cement and 3 parts standard sand, recommended dimensions and design of specimen mold, preparation of specimen, dimensions of steel tamper, test procedure.

American Society for Testing Materials. C 31-31: 1931. Method of Making and Storing Specimens of Concrete in the Field. Dimensions and shape of specimens and molds, method of sampling concrete, of molding, capping, and removal of speci-

mens from molds.

American Society for Testing Materials. C 39-27: 1927. Methods of Making Compression Tests of Concrete. Preliminary tests of materials, cement, fine and coarse aggregates, according to standard A. S. T. M. methods, dimensions and shape of concrete test specimens, flow test requirements for concrete, molding capping and curing of specimens, procedure for compressive strength tests.

American Society for Testing Materials. C 42-31; 1931. Methods of Securing Specimens of Hardened Concrete from the Structure. By use of core drill, shape and proportions of test specimen, precautions in obtaining specimen, correction factors for specimens not having standard

proportions.

American Society for Testing Materials. Tenta-tive Rules. C44-22T; 1922. Rules for Inspection of Concrete and Reinforced Concrete Work. Responsibilities and duties of inspector, rules for inspection of excavation and foundation, materials, metal reinforcement, mixing and placing concrete, forms, and removal of forms.

American Society for Testing Materials. C 77-30:

Approved by American Standards Assn. as A 1b-1931. Methods of Testing Cement. quirements on sampling, method of test for loss on ignition, insoluble residue, sulphuric anhydride, magnesia, determination of fineness, methods for mixing cement pastes and mortars, determination of consistency, soundness, time of setting, tension testing method.

American Society for Testing Materials. Tentative Test Method. C 78-30T; 1930. Method of Making Flexure Tests of Concrete, Using a Simple Beam with Center Loading. Covers methods for use in laboratory for hand mixed concrete with slight modification from methods of compression tests in A. S. T. M. Spec. C39. Requirements on preparation of materials, determination of proportions, mixing, design of test apparatus and method of test, cement and aggregates to be tested in accordance with A. S. T. M. standard methods as enumerated.

Merican Society for Testing Materials. Tentative Standard, C 85-317; 1931. Method of Routine Analysis of The Cement Content of Portland Cement Concrete, Preparation of sample and

test procedure.

American Society for Testing Materials. Tentative Test Method. D 138-26T; 1926. Method of Test for Consistency of Portland Cement Concrete. Covers laboratory and field methods, dimensions and construction of sheet metal frustrum of cone, test procedure for filling with concrete, re-

moving and measuring slump.

National Engineering Inspection Assn. Tenta-tive Methods of Procedure for Inspection of Materials; 1930. Includes general procedure such as checking of order, sampling, testing, sealing of cars, for cement; inspection of cement, inspection of forms, checking of mix of concrete, for concrete construction; materials and reinforcement according to A. S. T. M. speci-

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Cement. Sample No. 460 for normal cement and No. 47d for extra fine cement, prepared and sold by the bureau, for use in industry and by others as standards for measuring the

fineness of testing sieves, etc.

516.1 CEMENT

516.11 Portland Cement

American Assn. of State Highway Officials. Tenta-tive Standard Specifications. M-5; 1927. Port-land Cement. Same as Am. Soc. for Testing Materials spec. C 9-30.

American Assn. of State Highway Officials. Tentative Standard Specifications. M-39. Undated. High Early-Strength Cement. Same as C 74-30T Am. Soc. for Testing Materials with some additional informative notes.

American Concrete Institute. Portland Cement, Definition of, Proc. of A. C. I. for 1923, vol. 19,

p. 325.

American Railway Engineering Assn. 1929 Manual. Masonry. Portland Cement; 1927. Definition, chemical test requirements for loss on ignition, insoluble residue, sulphuric anhydride, and magnesia, fineness, time of setting and tensile strength test requirements, methods of test.

American Society of Civil Engineers. Specifica-tions and Methods of Tests for Portland Ce-ment; 1918. Requirements as to loss on ignition, insoluble residue, sulphuric anhydride, magnesia, specific gravity, fineness, soundness under steam test, time of setting, tensile strength, meth-

ods of sampling and testing.

American Society for Testing Materials. C 9-30; 1930. Approved by American Standards Assn. as Ala-1931. Portland Cement. Test requirements for loss on ignition, insoluble residue, permissible sulphuric anhydride and magnesia, fineness, soundness, time of setting, and tensile strength, methods of test as given in C 77-30 of A. S. T. M.

American Society for Testing Materials. C 9-16T; 1916. Tentative Specifications, Compressive Strength of Portland Cement Mortars. For a one to three mixture, requirements on compressive strength of cement mortar at 7 days and at 28 days, form and molding of test piece.

American Society for Testing Materials. Tentative Specifications. C 74-30T; 1930. High Early Strength Portland Cement. Definition, requirements on permissible loss on ignition, insoluble residue, sulphuric anhydride, and magnesia, on fineness, soundness, time of setting, and tensile strength

Asphalt Institute. Tentative Specifications, B-5; 1920. Portland Cement Concrete Base. Includes specification for Portland cement, composition, specific gravity, fineness, soundness, setting, and tensile strength requirements using A. S. T. M.

methods of test.

Asphalt Institute. Tentative Specifications. C-3: 1920. Shoulders, Headers, Curbs, and Gutters. Includes specifications for Portland Cement. Composition, specific gravity, fineness, soundness, setting, and tensile strength of mortar, using A. S. T. M. standard methods of test.

U. S. Gov., Federal Specifications Board. 191; 1930. Portland Cement. Definition, requirements on permissible loss on ignition, insoluble residue, sulphuric anhydride, magnesia, required fineness, soundness, time of setting, and tensile strength of standard briquet, methods of sampling and testing.

References.—Definitions, methods of sampling and of testing. See also 500., 516.0.

516.12 Natural Cement

American Concrete Institute. Natural Cement, Definition of. Proc. of A. C. I. for 1923, vol. 19,

American Society for Testing Materials. C 10-09; 1909. Natural Cement. Test requirements for fineness, soundness, time of setting, and tensile

516.19 Miscellaneous Cements

American Concrete Institute, Puzzolan Cement: 1923. Definition of Puzzolan cement. See Proc. of A. C. I. for 1923, vol. 19, p. 325.

American Concrete Institute. Sand Cement, Silica Cement, Definition of. 1923. Proc. of A.

C. I. for 1923, vol. 19, p. 326. American Concrete Institute. Hydraulic Cement; 1923. Definition of hydraulic cement. See Proceedings of A. C. I. for 1923, vol. 19, p. 324.
U. S. Gov., Federal Specifications Board. SS-C-

181; 1931. Masonry Cement. For use in making mortar for laying masonry units, requirements on fineness, time of setting, soundness, and compressive strength, methods of testing, other requirements conform to F. S. B. Spec. SS-C-191 for Portland cement.

References.-Definitions, methods of sampling and of testing. See also 500., 516.0.

516.2 STUCCO

American Concrete Institute. Recommended Practice. Portland Cement Stucco; 1923. Recom-mended materials, design of masonry and frame walls for receiving stucco, preparation and application of mortar and finish. Proc. of A. C. I.

for 1923, vol. 19, p. 473.

American Concrete Institute. C-3C-29T; 1929.

(Proc. A. C. I. for 1929, vol. 25, p. 561.) Finish
Coat Portland Cement Stucco. Published separately by Portland Cement Assn. Requirements on compressive strength and absorption, permissible content of material passing 100 mesh sieve, general quality of coloring pigment if used, methods of making specimens and methods of test.

American Concrete Institute. Stucco, Definition of. 1923. Proc. of A. C. I. for 1923, vol. 19, p. 327. American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Lathing and

Plastering; 1926. Includes exterior stucco work, mix proportions of the cement mortar for the different coats, general quality requirements for aggregate and sand, methods of application and

thicknesses of coats, types of finish.

Contracting Plasterers' International Assn. Outline Specification for Lathing and Plastering; Feb. 1931 issue of Plastering Craft. Stucco. Requirements on composition and application of scratch coat and of brown coat, application of stucco to masonry and concrete walls, cellings, and columns, and to painted walls.

National Lime Assn. Proposed Specifications for Lime Stucco. Undated. Requirements on proportions and mixing of scratch coat, brown coat, and finish coat, thickness, and application of various coats to wood or metal lath and to brick, tile, stone, or concrete, recommendations on construction of backings, on grading and properties of flue aggregate, on A. S. T. M. specifications

for materials.

Portland Cement Assn. Portland Cement Stucco, Condensed Specification; 1927. Cement and lime in accordance with specifications of A S. T. M., suggested requirements on general quality and screen sizes of fine aggregate, general quality of water and of coloring matter, weight, gage and mesh of metal reinforcement, proportioning and mixing, application to ma-

sonry and to frame construction.

Portland Cement Assn. Suggested Specifications for the Application of Portland Cement Stucco on Concrete Block and The Walls; 1928. Cement and lime according to specifications of Am. Soc. for Testing Materials, general quality of aggregate and of coloring matter, requirements on proportioning, mixing and application of scratch and brown coats, description of typical stucco finishes.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C311; 1926. Stucco Investigations at the Bureau of Standards with Recommendations for Portland Cement Stucco Construction. Includes some design requirements of building, use of white Portland cement, screen grading of fine aggregate, hydrated lime according to A. S. T. M. specifications, recommendations on mixing, placing, and general structural features of stucco construction.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 512.10, 516.0. Cement and lime. See also 516.1, 517.2. Sand and fine aggregate. See also 512.12, 512.13.

516.3 CONCRETE AND MORTARS

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931.
Concrete Masonry. Classification of concrete into 3 classes according to mix percentages and size of coarse aggregate, strength requirements for each class, mixing and consistency of mixture, depositing concrete above and below water, type and construction and type of expansion joints, surface finishing of concrete, placing and fastening reinforcement.

American Concrete Institute. Concrete, Definition of. Proc. of A. C. I. for 1923, vol. 19, p. 322. American Concrete Institute. Mortar, Definition

of, Proc. of A. C. I. for 1923, vol. 19, p. 324. American Concrete Institute. Tentative Specification. 504-31T; 1931. Ready Mixed Concrete. See Proceedings of A. C. I., vol. 27, p. 1177 (May 1931 Journal of A. C. I.). Covers central plant mixed concrete and central plant-proportioned truck-mixed concrete, materials and concrete quality and proportions to be in accordance with general specifications for plain and reinforced concrete, requirements on type of mixer, time lapse between addition of cement and placing of concrete, types of transporting vehicles for various consistencies of concrete, loading of truck mixers.

American Marine Standards Committee. E No. 33-1930. Insulating Brick and Mortar. For mortar for temperatures up to 2,500° F., requirements on fineness, plastic qualities, bonding properties under heating test, nonshrinking qualities, and softening temperatures of mortar, methods

of test.

American Railway Assn. Signal Section. 1111; 1911. Portland Cement Concrete. General quality of sand and permissible amount of clay or loam, general quality and maximum size of crushed stone or gravel, construction of forms, mixing, plading, and finishing concrete, placing

of reinforcement.

American Railway Engineering Assn. 1929 Manual. Masonry. Portland Cement Concrete, Plain and Reinforced; 1929. Cement and reinforcement steel according to A. R. E. A. specifications, general quality and grading requirements for fine aggregate and for coarse aggregate of crushed stone, gravel or slag, organic impurity test for sand according to A. S. T. M. methods sizes of reinforcement bars, proportioning and mixing requirements, rules for placing and handling concrete, depositing under water, construction of forms, placing reinforcement, proportions for concrete in sea water and alkali soils, surface finish.

sortiate limits.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes; 1929.

Mortars. Mortar for brickwork, mortar for stone masonry, mortar for sewers, mortar for clay hollow tile, mortar for architectural terra cotta, and mortar for concrete and architectural stone, requirements on general quality of cement and sand, mixing and proportions of ingredients.

American Society of Municipal Engineers. Sewers;

American Society of Municipal Engineers. Sewers; 1927. Mortar, for brick or segmental block masonary, and mortar for pipe joints. Requirements on mix proportions and general quality

of materials.

American Society of Municipal Engineers. Sewers; 1927. Concrete. Definition, requirements on mix proportions for 4 classes of concrete, procedure for mixing by machine and for mixing by hand, consistency, and preparation in freezing weather.

for use in construction of sewers. American Society for Testing Materials. Tentative

Specifications. C 80-317; 1931. Curing Portland Cement Concrete. Required strength standard for various methods of curing, requirements on temperatures and protection for cold weather curing, use of A. S. T. M. test methods specified. American Society for Testing Materials. Tentative Specifications. C 81-317; 1931. Curing Portland Cement Concrete Slabs with Bituminous Coverings. Requirements on consistency of bituminous material, procedure for curing using wet burlap coverings followed by spraying concrete with bituminous material after removal of bur-

lap.

American Society for Testing Materials. Tentative Specifications. C 82-31T; 1931. Curing Port land Cement Concrete Slabs with Calcium Chloride Admixture. Calcium chloride according to A. S. T. M. Spec. D 98-30T, requirements on preparation of solution and addition to mix, finishing concrete and use of wet burlap covering. American Society for Testing Materials. Tentative Specifications. C 83–31T; 1931. Curing Portland Cement Concrete Slabs by Surface Application of Calcium Chloride. Calcium chloride according to A. S. T. M. Spec. D 98–30T, procedure of covering with burlap, removing, and applying specified amount of calcium chloride.

American Society for Testing Materials. Tentative Specifications. C 84-31T; 1931. Curing Portland Cement Concrete Slabs with Wet Coverings. Requirements on covering of concrete with burlap followed by ponding or covering with wet earth or straw, time periods for each

type of covering.

Associated Tile Manufacturers. Publ. K300. Basic Specification for Tile Work; 1924. Concrete and Mortar. Requirements on mix proportions of concrete and of mortar, general quality

of materials, screen grading of sand.

Cast Stone Institute. Architectural Specification for Cast Stone; 1930. Includes specifications for Portland cement mortar for setting of cast stone, requirements on mix proportions of cement, lime, and sand, screening of lime, preparation of mortar.

Common Brick Manufacturers' Assn. of Am. Brick House. Undated. For mortars, requirements on composition of lime mortar, cement-

lime mortar, and cement mortar.

Concrete Reinforcing Steel Institute. Reinforced Concrete, Handbook; 1928. Includes standard customs, sizes of bars, standard uses of spacers and supports, bundling and tagging, standard design formulas. Includes specifications of reinforced concrete in structures, requirements for concrete mix, general quality and grading of sand and crushed stone or gravel, construction of forms, placing and spacing of reinforcement, placing concrete.

Gypsum Assn. Gypsum Partition Tile; 1928. Specifications for Erection of Gypsum Partition Tile. Includes mortar for gypsum tile construction, requirements on mix proportions of gypsum

plaster and sand.

National Board of Fire Underwriters. Building Code; 1931. Reinforced Concrete. Requirements on mix proportions of concrete, screen grading requirements for fine aggregate, size lim-

its for coarse aggregate.

Portland Cement Assn. Making, Placing and Curing Concrete in Cold Weather; 1927. Suggested requirements on temperature of concrete when placed and time for which a specified temperature is to be maintained after placing, general requirements on housing of work and methods

of heating.

Portland Cement Assn. Plain and Reinforced Concrete; 1928. Water-cement ratio method, based on proposed standard building regulations of Am. Concrete Inst. Cement and reinforcement in accordance with specifications of Am. Soc. for Test. Materials, requirements on quality, size, and permissible organic matter in aggregate, water-cement ratio for various concrete strengths, proportions and consistency, mixing and placing.

Portland Cement Assn. Plain and Reinforced Concrete, Specification Manual; 1924. Typical specification forms for use by architects and engineers with materials and methods of test according to specifications of A. S. T. M., includes general requirements on excavation, backfilling, construction of forms, construction of joints, placing reinforcement, proportioning, mixing and placing concrete for various types of concrete construction.

U. S. Gov., Dept. of Commerce. Bureau of Standards, BH6; 1924. Recommended Minimum Requirements for Masonry Wall Construction. For

special cement-lime mortar for use in walls of hollow unit construction, requirements on proportion of Portland cement, lime, and sand, recommended by Building Code Committee for incorporation in building codes.

U. S. Gov., Dept. of Commerce. Bureau of Standards. BH6; 1924. Recommended Minimum Requirements for Masonry Wall Construction. For concrete used in monolithic construction, requirements on proportions of cement, sand, and coarse aggregate, general quality and screen grading of coarse and of fine aggregates, recommended by building code committee for incorporation in building codes.

U. S. Gov., Federal Specifications Board. SS-W-101; 1931. Integral Waterproofing Material. For material intended for mixing with Portland cement mortar or concrete for waterproofing, permissible absorption and permeability of mortar, required strength as compared to mortar

without waterproofing, methods of test.

516.4 CONCRETE BRICKS AND BLOCKS

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Concrete Cribbing. Requirements on proportions for concrete are the same as for precast bearing piles, material and minimum size of drift bolts, nonallowance of depressions, spalls, patched surfaces, and other defects, construction of cribbing, and layer method of placing filling.

American Concrete Institute. P-1A-29; 1929. Concrete Building Block and Concrete Building Tile. Strength and absorption requirements and methods of testing. Proc. of A. C. I. for 1927, vol. 23, p. 696, as amended in Proc. for 1928, vol. 24, p.

American Concrete Institute. P3-A-29T; 1929. (Proc. A. C. I. for 1929, vol. 25, p. 550.) Pulsibled separately by Portland Cement Assn. Tentative Specifications for Cast Stone. Definition, requirements on compressive strength and absorption at age of 28 days, selection of specifications.

mens and methods of testing.

American Concrete Institute. Recommended Prac-

tice. Manufacture of Concrete Building Block, Building Tile and Brick. Recommendations in regard to materials and manufacture that will assist in making a product equal to the specifications. Proc. of A. C. I. for 1925, vol. 21, p. 473. American Concrete Institute. Proposed Recommended Practice for the Manufacture of Concrete Building Block and Tile. Proceedings of

mended Fractice for the standardure of Concrete Building Block and Tile. Proceedings of A. C. I., vol. 27, p. 1001 (April 1931 Journal). Proposed by committee with a view to superseding spec. P 6-A-25T. Recommendations on plant layout, curing room construction for various types of curing systems, general quality of materials, consistency of concrete, mixing, manufacture, and curing of blocks and tile. American Concrete Institute. Tentative Specifica-

American Concrete Institute. Tentative Specification. P-1B-267; 1926. Concrete Brick.
Strength and absorption requirements and methods of test. Proc. of A. C. I. for 1925, vol. 21, p. 604 as amended on p. 667 of vol. 22 of 1926.

American Railway Engineering Assn. 1929 Manual, Buildings for Railway Purposes. Concrete Architectural Stone: 1926. Cement according to A. R. E. A. specifications, compressive strength and water absorption limit requirements, type of finish and general requirements

on use in building construction.

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Concrete Roofing Tile; 1926. For 2 sizes and for interlocking and flat types in large sizes, cement according to A. R. E. A. specifications, types of and addition of colorings, method of manufacture, permissible weight and variations in dimensions, water absorption limits and load bearing requirements, method of laying.

American Society for Testing Materials. tive Specifications. C 55-28T: 1928. Concrete Building Brick. General quality, compressive strength and modulus of rupture requirements when tested according to A. S. T. M. method C 67, dimensions of standard brick and permissible variations. Covers 2 grades dependent on

strength.

Cast Stone Institute. Tentative Standard Specification for Cast Stone. Undated. Definition, requirements on compressive strength and absorption, methods for testing.

Portland Cement Assn. Recommended Building Ordinance for Concrete Block and Tile; 1928. Cement in accordance with specifications of A. S. T. M., requirements on strength and ab-

sorption limits for block and tile.

Underwriters' Laboratories (Inc.). Hollow Concrete Building Units; 1930. For units with a rating of R3 hours under standard fire tests, requirements on compressive strength, dimensions, thickness of webs, design, permissible silicious material in aggregate used, permissible combustible material in cinders used for aggregate, weight of Haydite aggregate, proportioning of concrete, curing.

U. S. Gov., Dept. of Commerce. Bureau of Standards. BH.1; 1923. Recommended Minimum Requirements for Small Dwelling Construction. For hollow concrete block, recommendations of building code committee on requirements for compressive strength and permissible absorption for blocks used in exterior or party walls.

U. S. Gov., Dept. of Commerce. Bureau of Standards. BH6; 1924. Recommended Minimum Requirements for Masonry Wall Construction. For concrete block or concrete tile, requirements for compressive strength, permissible absorp-tion, recommended by building code committee for incorporation in building codes.

U. S. Gov., Dept. of Commerce. Bureau of Standards. BH6; 1924. Recommended Minimum Requirements for Masonry Wall Construction. For concrete brick, recommendations of building code committee on requirements for compressive

strength and permissible absorption.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R32; 1924. Concrete Building Units. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes and dimensions of concrete blocks, concrete building tile, and concrete brick.

U. S. Gov., Federal Specifications Board. SS-C-621: 1931. Hollow Masonry Concrete Units. Units for wall construction, load bearing type and nonload bearing type, requirements on com-pressive strength, moisture in units at time of delivery, and absorption allowed for load bearing type, methods of test.

References.—Definitions, methods of sampling and of testing. See also 500., 510., 512.10, 516.0. Methods of sampling and testing clay brick and fire clay brick. See 534.10. Gravel, sand, fine aggregate, coarse ag-

gregate, broken stone, slag. See also 512.11, 512.12, 512.13, 512.14, 512.15, 512.2. Cement. See also 516.1. Concrete brick and blocks in building construction. Concrete brick See also 518.5.

516.5 CONCRETE SIDEWALKS AND DRIVEWAYS

American Concrete Institute. C-2B-25; 1925. Portland Cement Concrete Sidewalks. Specifications for materials, construction, measuring and mixing, and curing, specification for 1 and 2 course construction. Proc. of A. C. I. for 1925, vol. 21, p. 591.

American Society of Municipal Engineers. Side-walks and Curbs; 1927. General quality, size range of fine aggregate, tensile test requirements for fine aggregate mortar, general quality and size ranges of coarse aggregate, mixing, placing, and reinforcement for 2-course and for 1-course

sidewalks.

Portland Cement Assn. Concrete Sidewalks; 1930. For 1-course sidewalks and for 2-course sidewalks, suggested requirements on material, quality, and screen grading of fine aggregate and coarse aggregate, cement according to A. S. T. M. specification C9, thickness of joint fillers and of metal division plates, mix proportions of concrete, thickness of course, placing and finishing, provision of joints.

516.9 MISCELLANEOUS SPECIFICATIONS FOR CEMENT AND CONCRETE

American Electric Railway Engr. Assn. Recom-mended Specification. D108-26; 1926. Specifi-cation For The Manufacture of Reinforced Concrete Poles. Materials, methods of manufacture, and curing.

American Railway Assn. Electrical Section. XVIII-b-21; 1921. Stone Conduits. Requirements on screen grading of limestone screenings, mix proportions with Portland cement, standard dimensions, joint construction, mandrel test, water absorption test, hammer test for cracks,

installation rules.

American Railway Assn. Signal Section. 11622; 1922. Cement Concrete Battery Box. Dimensions of box, size, type and placing of reinforcement, general quality of sand and stone or gravel, size of stone or gravel, mixing proportions and consistency of concrete, construction of cover of wood covered with sheet iron, painting, test requirements for strength and leakage of box, and for humus content of sand.

American Railway Assn. Signal Section. 12429; 1929. Concrete Trunking and Capping. For protection of insulated signal wire, size and type of reinforcement steel, cement according to A. R. A. specifications, permissible clay in sand, size of stone or gravel, mixing proportions, placing con-

crete, dimensions of forms, curing.

American Railway Assn. Telegraph and Tele-phone Section. 1–A-8; 1925. Reinforced Con-crete Poles. General quality requirements of sand, water, and gravel, range in size of gravel or stone, type of reinforcement rods and their elastic limit, requirements on placing of rein-forcement and construction of poles, curing, strength test requirements, standard dimensions of round poles.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, Sec. 21. Brick Pavements and Floors. For cement grout filler, requirements on general quality and screen grading of sand, cement in accordance with A. R. E. A. specifications for Portland

cement.

matter, for fine and coarse aggregate, and bank gravel, type of reinforcement, mixing, consist-ency and strength requirements for the concrete, manufacturing and curing concrete posts.

Joint Concrete Culvert Pipe Committee. Tentative Standard Specifications for Reinforced Concrete Culvert Pipe; 1928. (Am. Concrete Inst., A. S. T. M., U. S. Dept. Agri., Am. Soc. Civil Engineers, Am. Assn. State Highway Off., Am. Rwy. Engr. Assn., Am. Concrete Pipe Assn.) standard and extra strength pipe, cement and steel in accordance with A. S. T. M. specifications, requirements on general quality and freedom from injurious amounts of organic and unsuitable material for fine and coarse aggregate, screen grading of fine aggregate, methods of design, permissible working stresses, standard sizes of pipe, placing reinforcement, strength tests and strength requirements.

Portland Cement Assn. Suggested Specifications for Concrete in Petroleum Refineries; 1927. Cement according to A. S. T. M. specifications, requirements on material, general quality, and screen grading of fine aggregate and of coarse aggregate, quality of water, placing of reinforcement, water-cement ratio, mixing and placing

concrete.

517. LIME

517.0 GENERAL ITEMS

American Society for Testing Materials. C 50-27; 1927. Methods of Sampling, Inspection, Packing, and Marking of Quicklime and Lime Products. Methods of sampling of lump or granular material and of powdered material in bulk or in packages, packing and marking of lump, pulverized and hydrated lime.

American Society for Testing Materials. C 51-28; 1928. Definitions of Terms Relating to Lime.

517.1 LIME

References.-Lime, quicklime, and hydrated lime. See 517.2.

517.2 HYDRATED LIME AND QUICKLIME

American Ceramic Society. Journal of A. C. S. for June, 1928. U. S. Bureau of Standards Cir. 118. Adopted by A. C. S. in 1924. Limestone, Quicklime, and Hydrated Lime. Use of lime in manufacture of glass, definitions, requirements on chemical composition of nonvolatile portion of limestone, quicklime or hydrated lime, fineness, methods of sampling and testing.

American Railway Engineering Assn. 1929 Man-ual. Water Service and Sanitation. Quicklime to be Used in Water Treatment; 1922. For high calcium and calcium classes and for selected and run-of-kiln grades, sampling and chemical com-

position requirements.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Hydrated Lime to be Used in Water Treatment; 1922. For high calcium and calcium classes, sampling, chemical composition, and fineness requirements.

American Railway Engineering Assa. 1929 Man-ual. Concrete Fence Posts; 1923. Cement ac-cording to A. R. E. A. specifications, material, general quality, range of sizes, test for organic nesium oxides, for silica, alumina, oxide of iron, and for carbon dioxide, percentage of residue from slaking test, chemical tests according to A. S. T. M. C 25-27T.

American Society for Testing Materials. C 6-31; 1931. Hydrated Lime for Structural Purposes. Covers masons' hydrate for plaster, stucco and mortar; and finishing hydrate for finish plaster coat, test requirements for percentages of car-bon dioxide and oxides of calcium and magnesia, for fineness, soundness, and for finishing grade

plasticity test requirements.

American Society for Testing Materials. C 25-29; 1929. Methods of Chemical Analysis of Lime-stone, Quicklime and Hydrated Lime. Treatment of sample, determination of silica and insoluble matter, of total iron, aluminum, calcium, strontium, magnesium, volatile matter, mechanical moisture, carbon dioxide, sulphuric anhydride, sulphur, phosphorus, manganese, ferrous iron, available lime, procedure of test.

American Society for Testing Materials. C 46-27; 1927. Quicklime for Use in the Manufacture of Sulphite Pulp. Limiting percentages of calcium and magnesium oxides, and of oxides of silicon, aluminum, and iron, chemical analysis according to A. S. T. M. C 25-27T.

American Society for Testing Materials. C 47-27; 1927. Hydrated Lime for the Manufacture of Varnish. General quality requirements, test requirements for fineness and for tung oil heat test. requirements on percentages of oxides of calcium, magnesium, and iron, and of insoluble matter, chemical analysis according to A. S. T. M. C 25-27T.

American Society for Testing Materials. C 45-25; 1925. Quicklime and Hydrated Lime for Use in the Cooking of Rags for the Manufacture of Paper. General quality, requirements for percentages of available lime, methods of analysis according to A. S. T. M. C 25-27T.

American Society for Testing Materials. C 48-

24; 1924. Quicklime and Hydrated Lime for Use in the Textile Industry. General quality requirements, requirements on percentages of oxides of calcium, magnesium, iron, aluminum, percentages of carbon dioxide and insoluble matter, chemical analysis according to A. S. T. M C 25-27T.

American Society for Testing Materials. C 49-24; 1924. Quicklime and Hydrated Lime for the Manufacture of Silica Brick. Requirements on percentages of oxides of calcium, magnesium. iron, and aluminum, of silica and insoluble matter, and of carbon dioxide, using A. S. T. M. method of test C 25-27T.

American Society for Testing Materials. C 53-27; 1927. Quicklime for Use in Water Treatment. General quality requirements, required percentage of available lime using A. S. T. M. test method C 25-27T. For treatment of public water supplies.

American Society for Testing Materials. C 54-27; 1927. Hydrated Lime for Use in Water Treatment. For use in treatment of public water supplies, required percentage of available lime using A. S. T. M. test method C 25-27T.

American Water Works Assn. Water Works Prac-

tice Manual; 1925. Chemicals Used in Water Purification. Lime. Standard content of available calcium oxide for quick lime and for hydrated lime.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C373; 1928. Quicklime for Use in the Distillation of Ammonia from Ammonia Liquors Obtained in Coke and Gas Manufacture. Approved by Interdepartmental Conference on Chemical Lime and the Nat'l Lime Assn. Requirements on fineness and available calcium oxide, methods of sampling and testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards C372; 1929. Quicklime and Hydrated Lime for Use in Soap Making. Approved by Interdepartmental Conference on Chemical Lime and the Mat'l Lime Assn. Requirements on available lime in quicklime and available calcium hydroxide in hydrated lime, permissible magnesia and insoluble matter, methods of sambling and test.

U. S. Gov., Dept. of Commerce. Eureau of Standards C231; 1925. Quicklime and Hydrated Lime for Use in the Purification of Water. Approved by the Interdepartmental Conference on Chemical Lime. Requirements on percentage of available lime in quicklime and of available calcium hydroxide in hydrated lime, methods of sampling

and testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards C207; 1925. Limestone, Quicklime, Lime Powder, and Hydrated Lime for Use in the Manufacture of Sugar. Approved by Interdepartmental Conference on Chemical Lime, Nat'l Lime Assn., and Hawaiian Sugar Planters Assn. Requirements on percentage of sugar soluble lime, permissible magnesia and loss on ignition, screen grading requirements of powder and hydrated lime, methods of sampling and testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards C203; 1925. Quicklime and Hydrated Lime for Use in the Manufacture of Calcium Arsenate. Approved by Interdepartmental Conference on Chemical Lime and the Nat'l Lime Assn. Requirements on available lime and permissible magnesia, methods of sampling and testing.

U. S. Gov., Dept. of Commerce. Eureau of Standards C189; 1924. Quicklime and Hydrated Lime for Use in the Absorption of Carbon Dioxide. Approved by Interdepartmental Conference on Chemical Lime, the Nat'l Lime Assn., and Bureau of Aeronautics of Navy Dept. Requirements on percentage of available lime, permissible carbon dioxide, fineness, and methods of sampling and testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards C159; 1923. Quickline and Hydrated Lime for Use in the Manufacture of Sand-Lime Brick. Approved by Interdepartmental Conference and Nat'l Lime Assn. Requirements on general quality, chemical composition and purity, methods of

sampling and test.

U.S. Gov., Dept. of Commerce. Bureau of Standards C144; 1923. Limestone and Quicklime for Use in the Manufacture of Sulphite Pulp. Approved by Interdepartmental Conference, Nat'l Lime Assn., and Tech. Assn. of Pulp and Paper Assn. Requirements on chemical composition of high calcium stone and lime and of high magnesium stone and lime, methods of sampling and testing.

U. S. Gov., Dept. of Commerce. Bureau of Standards C143; 1923. Recommended Specification for Quicklime for Use in Causticizing. Approved by Tech. Assn. of Pulp and Paper Assn. representing the largest users. Requirements on available lime, permissible magnesia, methods of sampling.

and testing.

U. S. Gov., Federal Specifications Board. SS-L-351; 1930. Hydrated Lime for Structural Purposes. For masons type and for finishing type, requirements on content of calcium and magnesium oxides and of carbon dioxide, fineness, soundness, and plasticity, methods of sampling and test. U. S. Gov., Federal Specifications Board, SS-Q-351; 1930. Quicklime for Structural Purposes, For calcium type and for magnesium type, requirements on content of calcium and magnesium oxides, permissible silicon, aluminum, and iron oxides, carbon dioxide, and waste, methods of sampling and test.

U. S. Pharmacopœial Convention (Inc.). Pharmacopœia of U. S. A.; 1926. Lime, and Chlorinated Lime. For medicinal purposes, descriptions and physical properties, test requirements for identity and purity. Recognized as standards in enforce-

ment of Federal food and drugs act.

References.—Definitions, method of sampling and of stating. See also 500., 517.0. Lime for fertilizer. See 859. Lime whitewash. See 843.5.

518. CONSTRUCTION WORK

518.0 GENERAL ITEMS

American Society for Testing Materials. D 220-29; 1929. Method of Test for the Determination of Moisture Equivalent of Sub-Grade Soils in the Field. Treatment of sample, test procedure for determining water absorption qualities of subgrade soil for road work.

518.1 GRADING FOR ROADS

518.10 General Items

American Electric Railway Engineering Assn. W201-15; 1915. Classification and Bearing Power of Soils. Mechanical analysis of soils into fine gravel, sands, silt, and clay, with sizes of screens used in making of analysis, data on bearing power. Same as given in U. S. Dept. of Agriculture Bull. No. 82.

American Railway Engineering Assn. 1929 Manual. Grade Crossings. Highway grade crossings and approaches other than those for which requirements are stipulated by law; 1923. Grading requirements, width of embankments and

surfacing of highway.

518.11 Roadway Preparation

American Society of Municipal Engineers. Street Railway Track; 1923. Requirements on excavation, subsurface and surface drainage, construction and general quality of ballast for plain ballast construction and for concrete slab subballast, solid concrete construction, concrete according to A. S. M. E. specifications, rails and rail joints according to A. S. T. M. and A. E. R. E. A. specifications, kinds of wood and dimensions of ties.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Includes clearing of roadway, requirements on clearing and grubbing of trees and shrubs, removal of stumps and roots from roadway proper, permissible use of timber cut in construction of road, piling timber, piling and burning brush.

References.—Definitions, methods of sampling and of testing. See also 518.0, 518.10.

518.12 Excavation and Embankment

American Society for Testing Materials. D 220-29; 1929. Method of Test for the Determination of Moisture Equivalent of Subgrade Soils in the Field. Treatment of sample, test procedure for determining water absorption qualities of subgrade soil for road work.

Asphalt Institute. Tentative Specification, C-1; 1920. Preparation of Subgrade. Requirements on clearing and grubbing, roadway excavation, construction of embankments, installation of

under drainage, grading and rolling.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929.

Hand-Laid Rock Embankment. Requirements on general quality and minimum volume of stones, excavation of footing and construction of foot-

ing and embankment.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. For roadway and drainage excavation and eurbankment construction, requirements on classificause and disposal of material excavated, method of measurement, layer method of constructing embankment, tamping around structures, etc.

References.—Definitions, methods of sampling and of testing. See also 518.0, 518.10.

518.13 Slopes and Shoulders for Roads

Asphalt Institute. Tentative Specifications. 1920. Shoulders, Headers, Curbs, and Gutters. General quality and screen grading requirements and construction of gravel shoulders. General quality and screen grading requirements and construction of broken stone, mine tailings or slag shoulders.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. For shoulders, requirements on methods of construc-

References.—Definitions, methods of sampling and of testing. See also 518.0, 518.10. Gravel, broken stone, slag for shoulders. See also 512.11, 512.15, 512.2.

518.14 Subbases for Roads

Asphalt Institute. Tentative Specifications. C-2; 1920. Subbase. General quality and maximum size of approved stone, mine tailings, slag, or gravel aggregate, placing of material and construction of subbase.

References.—Definitions, methods of sampling and of testing. See also 518.0, 518.10. Other specifications for subbases and foundations. See also 518.2. Gravel, broken stone, slag. See also 512.11, 512.15, 512.2.

518.2 FOUNDATION FOR ROADS

518.20 General Items

American Electric Railway Engineering Assn. W102-23; 1923. Recommended Design of Proper Foundation for Tracks in Paved Streets. Drawing showing recommended design of track foundation, with dimensions and mix proportions of concrete.

U. S. Gov. Federal Specifications Board. SS-M-51; 1931, Materials for Cushion Course for Brick, Stone Block, or Wood Block Payement. For sand, granulated slag, slag screenings, or limestone screenings, requirements on screen grading, permissible silt, loam, clay, etc., using test methods of Am. Soc. for Testing Materials.

518.21 Cement Concrete Foundation for Roads

American Society for Testing Materials. D 58-24; 1924. Materials for Cement Mortar Bed for Brick, Stone Blocks, Wood Block, Asphalt Block, and Other Block Pavements. General quality and grading of sand, strength test requirements for mortar made from sand, cement according to A. S. T. M. specifications for Portland cement.

Asphalt Institute. Tentative Specifications. B-3; 1920. Reconstruction of Old Macadam to Serve as Base Course. For construction of base course over old road, general quality, wear, and screen grading requirements for coarse aggregate and screenings of broken stone, mine tailings, or slag, using A. S. T. M. standard methods of test, depth and construction of one course base.

Asphalt Institute, Tentative Specifications, B-5; 1920. Portland Cement Concrete Base, General quality, wear, and screen grading requirements for broken stone, mine tailings, slag, or gravel, general quality and grading requirements for sand and stone screenings, composition and physical requirements for Portland cement, tests according to A. S. T. M. methods, mixing concrete, depth, construction of base.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 512.10, 516.0, 518.0, 518.10. Street railway foundation. Sec 518.20. Sand, gravel, broken stone, slag. Sec 6185.512. 512.2. Cement and concrete. Sec also 516.1, 516.3. Preparation of roadway. Sec also 518.1, 518.12.

518 22 Telford Foundation for Roads

American Assn. of State Highway Officials. Tentative Standard Specifications. M-1; 1924. Stone for Telford Base Course and Reconstructed Base Course, Requirements on general quality of stone and of approximate dimensions of pieces.

Asphalt Institute. Tentative Specifications. B-4; 1920. Telford Base. General quality require-ments for stones, approximate dimensions of large stones, placing of stones and construction of

base

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads, Forest Road Construction; 1929. For subbase of telford stone, requirements on depth and method of laying and ramming, filling of voids, rolling or tamping.

References.—Definitions, methods of sampling and of testing. See also 510. Preparation of roadway. See also 518.11, 518.12.

518.23 Macadam Foundation for Roads

American Society of Municipal Engineers. Asphaltic Concrete; 1916. Includes new macadam foundation for asphaltic concrete pavement, grade sizes of stone, construction of foundation.

Asphalt Institute. Tentative Specifications B-2; 1920. Macadam Base. General quality, wear, and screen grading requirements for coarse aggregate and screenings of broken stone, mine tailings, or slag, using A. S. T. M. standard methods of test, for 2 course base, depths of courses and construction of base.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 51210. Sand, gravel, and Slag foundation. See also 518.28. Bituminus macadam foundation. See also 518.25. Bituminus macadam foundation. See also 518.25. Asphaltic foundation. See also 518.27. Broken stone foundation. See also 518.27. Broken stone foundation. See also 518.21. Broken stone foundation. See also 518.21. See also 518.21. Preparation of roadway. See also 518.11, 518.12.

518.24 Broken Stone Foundation for Roads

American Society of Municipal Engineers. Subgrades and Foundations for Pavements; 1928. For broken stone foundations, preparation of subgrade, grade sizes of broken stone, construction of new macadam and making use of old macadam foundation.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. For subbase of crushed rock, permissible largest dimension of material, method of construction by layers and maximum depth of layer, amount of filler and method of application and rolling.

References.—Definitions, methods of sampling and of testing. See also 500., 510., 512.10. Broken stone. See also 512.15. Ballast. See also 511.73. Teiford foundation. See also 518.22. 518.26 Bituminous Concrete Foundation for Roads

American Society of Municipal Engineers. Subgrades and Foundations for Pavements; 1928. Includes tar-bound base, hot penetration type, construction of subgrade, grade sizes of broken stone, temperature of applied tar, construction of various courses and sand cushion of payement. physical and chemical requirements for refined tar

References.—Other bituminous (asphalt) concrete foundations. See also 518.27. Definitions, methods of sampling, and of testing bituminous materials. See also 518.27. Definitions materials. See also 50.3 of testing by the second seed of the seed o

518.27 Asphaltic Foundation for Roads

American Society of Municipal Engineers. Sub-grades and Foundations for Pavements; 1928. Includes asphaltic base, general quality of broken stone, slag, mine tailings, or gravel, wear per cent for broken stone or slag, and screen grading of coarse aggregate, grading requirements for sand, physical and chemical requirements for asphalt cement, preparation of ingredients and construction of pavement.

Asphalt Institute. B-7; 1929. Asphalt Macadam Base. (Penetration Method.) General quality, wear, and screen grading requirements for broken stone, mine tailings or slag, general quality of asphalt cement, tests in accordance with A. S. T. M. standard methods, depth of courses and construction of 2 course base.

Asphalt Institute. B-8; 1929. Asphaltic Concrete Base. (Black Base.) General quality, wear, and screen grading requirements for broken stone, mine tallings, slag or gravel, general quality and grading requirements for sand, general quality of asphalt cement, test methods in accordance with A. S. T. M. standard methods, preparation of mixture, depth and construction of base.

References—Other asphaltic (bituminous) founda-tions. See also 518.25, 518.26. Definitions, methods of sampling and of testing bituminous materials. See also 502.2, 505.0. Definitions, methods of sampling and of testing nonbituminous materials. See also 500, 510, 512.10. Sand, gravel, broken stone. See also 512.1. Slag. See also 512.2. Asphalt, road oils. See also 505.1, 505.2. Preparation of roadway. See also 518.11, 518.12.

518.28 Slag Foundation for Roads

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction: 1929. For subbase of slag, permissible largest dimensions of material, method of construction by layers and maximum depth of layer, amount of filler and method of application and rolling.

References.—Definitions, methods of sampling and of testing. See also 500., 510., 512.10. Slag. See also 512.2. Preparation of roadway. See also 518.11, 518,12.

518.29 Miscellaneous Specifications for Foundations for Roads

Asphalt Institute. Tentative Specifications. B-1; 1920. Gravel Base. General quality, and screen grading requirements for gravel in accordance with A. S. T. M. methods of test D 18, depth of courses and construction of two course base.

Asphalt Institute. Tentative Specifications. B-6: 1920. Truing Up Old Pavements to Serve as Base Course. Materials according to Asphalt Assn. specifications for sheet asphalt surface course, asphaltic concrete surface course, or asphalt macadam surface course, mixing and construction, using above materials for filling.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. subbase of knapped field or quarry stone, or gravel, permissible largest dimension of material, method of construction by layers and maximum depth of layer, amount of filler and method of application and rolling.

References.—Definitions, methods of sampling and of testing. See also 500., 510., 512.10, 518.0, 518.10, Rock and Stone. See also 511.7. Sand, gravel, and broken stone. See also 512.1. Slag. See also 512.2. Preparation of roadway. See also 515.11, 518.12.

518.3 PAVEMENT SURFACES

518.30 General Items

American Assn. of State Highway Officials. Standards of Practice for General Road Design; 1929. Requirements on number of traffic lanes for various densities of traffic, maximum degree of curvature, location of points of change of direction, superelevation of curves, required sight distances on curves, width of subways, etc.

518.31 Cement Concrete Pavements

American Concrete Institute. S-6A-28; Portland Cement Concrete Pavements. S-6A-28; 1928. Course Pavement for Highways. Specifications for materials, subgrade, forms, joints, mixing, placing concrete and reinforcement, and curing. Proc. of A. C. I. for 1924, vol. 20, p. 695 with amendment in vol. 24, p. 852; 1928.

american Concrete Institute, S-6B-28; 1928. American Concrete Institute, S-6B-28; 1928. Portland Cement Concrete Pavements. Two Course Pavement for Highways. Specifications for materials, subgrade, forms, joints, mixing and placing, reinforcement, curing. Proc. of A. C. I. for 1924, vol. 20, p. 710 with amendment in red. 21, 8552, 1928.

in vol. 24, p. 852; 1928.

American Concrete Institute S-6C-28; Portland Cement Concrete Pavements. S-6C-28; 1928. Course Street Pavement. Specifications for materials, subgrade, street structures, forms, joints, mixing and placing, finishing and curing. Proc. of A. C. I. for 1924, vol. 20, p. 716 with amendment in vol. 24, p. 852; 1928.

American Concrete Institute, S-6D-28; Portland Cement Concrete Pavements. S-6D-28; 1928. Course Street Pavement. Specifications for materials, subgrade, street structures, forms, joints, mixing and placing, finishing and curing. Proc. of A. C. I. for 1924, vol. 20, p. 724 with amendment in vol. 24, p. 852; 1928.

American Electric Railway Engr. Assn. Recom-mended Specification. W113-28; 1928. Prepared jointly with Am. Soc. of Municipal Engineers Street Railway Track Construction. For track in paved city streets, recommendations on excavation and subgrade, subsoil and surface drainage, plain ballast and concrete slab subballast construction, rails, rail joints, bonds, rail fastenings, ties, pavement base, rail filler, and pavement types.

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Concrete Pavements and Foundations; 1929. Pavement of subgrade and one course of concrete, preparation of subgrade, general requirements on construction of forms, layout of expansion and longitudinal joints, placing of reinforcement and concrete, finishing, and curing.

American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes cement concrete pavements, recommendations on rates of road grade, crown, artificial foundation, thickness of slab, cement tested according to A. S. C. E. committee recommendation on Uniform Test for Cement, construction of navement, methods of test.

American Society of Municipal Engineers. Port-land Cement Concrete Pavements; 1926. Mini-mum size and spacing of reinforcement, recommendations on design, cement and aggregates according to A. S. T. M. specifications, composi-tion of asphalt grout and mastic, penetration, flash point, ductility, and other requirements for asphalt for mastic, absorption, brittleness, and distortion test requirements for joint filler, compressive strength of concrete, minimum thickness of pavement, requirements for mixing and placing of concrete and for construction of pavement.

51832 Gravel Pavements

American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918, Includes gravel roads, recommendations on rates of road grade, crown, artificial foundation, includes two classes of materials, screened and un-screened, recommendations on sizes as adopted by American Society of Municipal Engineers in 1916, methods of test.

American Society of Municipal Engineers. Proposed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. For gravel roads, construction of subgrade, composition and grading requirements for two mixtures of gravel, sand and clay, cementation test requirement using A. S. C. E. methods, construction of three course road.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Sur-Roads. Forest Road Construction, 1920. Surface Courses. Two course crushed rock or crushed gravel, one course crushed rock or crushed gravel, and 2 course gravel surface courses. Requirements on general quality and screen grade sizes of material in each course and binder, percentage of binder, methods of construction and rolling.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 512.10, Gravel, sand See also 512.12.22. Griding 12.10, Gravel, sand 518.7 Foundations of roads. See also 518.2. Curbs and gutters. See also 518.63, 518.64. Road building equip-ment. See 438.

518.33 Macadam Payements

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Macadam Pavements; 1929. Grading and subgrade same as for concrete pavements, general quality of stone, thickness, size of broken stone, and method of construction of foundation course, second course, and surface course, minimum weight of roller.

American Society of Civil Engineers, Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes broken stone reads, recommendations on rates of road grade, crown, artificial foundation, recommended abrasion test requirements, maximum screen sizes of stone, construction, methods of test.

American Society of Municipal Engineers. Macadam Pavement; 1927. General quality, per cent of wear number, weight and grading require-ments for coarse, intermediate, and fine grades of aggregate of broken stone, mine tailings or slag; penetration, ductility, volatility, flash point, and solubility of asphalt cement, using A. S. T. M. methods of test, construction of

pavement.

American Society of Municipal Engineers. Proposed Specifications; 1922. Broken Stone and Gravel Roads With and Without Bituminous Surface Treatment. For stone roads, general quality, coefficient of wear, toughness, and screen grading requirements for broken stone, number of and construction of courses, physical and chemical requirements for refined tars and asphaltic oils for surface treatments, requirements for treating of road surface with hot bituminous materials or with cold bituminous materials.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Surface Courses. Two course crushed rock or crushed gravel, one course of crushed rock or crushed gravel, and 2 course gravel surface courses. Requirements on general quality and screen grade sizes of material in each course and binder, percentage of binder, methods of construction and rolling.

References.—Definitions, methods of sampling and of testing. See also 500, 101, 512.10. Sand, gravel testing see also 500, 101, 512.10. 518.34 Bituminous Macadam and Bituminous Concrete Pavements

American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes bituminous macadam pavements, recommendations on rates of road grade, crown, artificial foundation, recommended abrasion test requirements, maximum screen size of stone, construction of road and application of bituminous material. methods of test.

American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes bituminous concrete pavements, recom-mendations on rates of road grade, crown, artificial foundation, three classes of pavement dependent on aggregate used, recommended abrasion test and screening test requirements for broken stone, recommended practice on heating, mixing, and laying, methods of test.

American Society of Municipal Engineers. Asphaltic Concrete; 1916. (Bituminous Concrete Pavement.) For tar concrete pavement, requirements on construction of foundation, quality, and mesh composition of mineral aggregate. methods of mixing and laying, surface finishing, physical and chemical requirements for coal tar cement and water-gas tar cement.

References.—Other bituminous (asphalt) pavement, See also 518.37. Definitions, methods of sampling and of testing for bituminous materials. See also 502.2, 505.0, 505.30. 518.35 Brick Pavements

American Assn. of State Highway Officials. Bituminous Filled Brick Pavements; 1929. For vitrified brick on concrete base, requirements for grading of sand or granulated slag for bedding course, oil asphalt for filling joints according to A. A. S. H. O. specifications 18 or 19, method of preparation of bedding course and laying brick, rolling brick, heating and applying filler.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, Sec. 21. Brick Pavements and Flors. For brick pavements, requirements on quality and size of brick, quality and screen grading of cushion sand, composition of grout and of bituminous fillers, construction of foundation, laying of cushion, laying paving brick, tamping and rolling, application of fillers.

American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes brick pavements, recommendations on rates of road grades, crown, artificial foundation, joints, construction of sand cushion and pavement, method of making rattler test.

American Society of Municipal Engineers. Vitrified Brick Pavennents: 1930. Requirements on general quality, types, dimensions, and testing of brick, quality of sand and construction and thickness of sand or cement sand bed for pavement, specifications for asphalt filler, laying of brick, rolling, and construction of pavenent.

References.—Definitions, methods of sampling and of testing. See also 500, 512.10, 534.10. Sand-lime brick. See also 518. Clay brick. See also 518. Clay brick. See also 518. Clay brick. See also 518. See also 518.2. Curbs and see also 518.3. Read building equipment. See 718.63.

518.37 Asphalt Pavements

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Asphalt Paving Blocks. For the asphaltic cement, requirements on freedom from water, specific gravity, flash point, penetration, volatility, ductility, and bitumen soluble in carbon tetrachloride; types of stone, percentage of wear, and screen grading of mineral aggregate; fineness of inorganic dust; manufacture and dimensions of blocks, specific gravity, and absorption test reoutrements.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Asphalt Macadam Pavements; 1929. Grading and subgrade same as for concrete pavement specifications, general quality of stone, asphaltic cement according to A. S. T. M. specifications, friminum weight of roller, thickness, size of broken stone, and method of construction of foundation course, second course, top surface.

American Railway Engineering Assn. 1929 Manual. Bituminous Crossings; 1926. Construction of pavement at crossings, preparation of roadbed, number, thickness, mix proportions of courses, tamping or rolling and general construction requirements, for use of emulsified asphalt, rock asphalt, and cut-back products.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Asphalt Block Pavements; 1929. Subgrade according to A. R. E. A. specifications for concrete pavement, dimensions of blocks, pressure and temperature used in manufacture, making of mortar bed, laying blocks, construction of asphalt, sand, or grout joints, surfacing.

American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes sheet asphalt pavements, recommendations on maximum road grade, crown, artificial foundation, thickness of wearing course, grading of binder aggregate, of sand, and of dust filler, percentage of bitunen, hot mixing recommendations and construction of road. methods of test.

tions and construction of road, methods of test. American Society of Civil Engineers. Committee Report. Materials for Road Construction and Standards for Their Test and Use; 1918. Includes asphalt block pavements, recommendations on road grade to which applicable, crown, artificial foundation, construction of road, material for making of block, grading of material, specific gravity, absorption, and dimensions of blocks, recommended test methods.

American Society of Municipal Engineers. Sheet Asphalt Paving; 1927. General quality and screen size requirements for stone for binder course, for sand for binder and for surface courses, and of mineral filler, penetration, duetility, volatility, and flash point requirements for asphalt cement, type of equipment and operation, within the course of th

mixing proportions, construction of pavement. American Society of Municipal Engineers. Pine Aggregate Asphaltic Concrete Paving; 1927. General quality, percentage of wear, and mesh composition of broken stone aggregate, general quality, and mesh composition of fine aggregate and of chip stone seal coat, penetration, ductility, volatility, flash point, and solubility of asphaltic cement, preparation and composition of asphaltic concrete mixture, construction of pavement, test methods according to A. S. T. M. specifications.

American Society of Municipal Engineers. Asphaltic Concrete (Bituminous Concrete Pavement); 1916. For asphaltic concrete pavement, requirements on construction of foundation, quality and mesh composition of mineral aggregate, methods of mixing and laying, surface finishing, asphalt to be in conformity with requirements in specifications for sheet asphalt pavement of A. S. M. E. Preparation of materials and construction of bituilthic pavement.

Asphalt Institute. A-1; 1929. Asphalt Macadam Surface Course. Percentage of wear and gradfine aggregate of broken stone, mine tailings or slag, weight of slag, quality and penetration requirements for asphalt cement, tests according to A. S. T. M. methods, depth of course, construction, filling voids, seal coat, etc.

Asphalt Institute. A-2; 1929. Asphaltic Concrete Surface Course. (Coarse Graded Aggregate Type.) General quality, wear and screen grading requirements for coarse and intermediate aggregates of broken stone, mine tailings, slag, or approved gravel, general quality and screen grading of sand and of limestone dust filler, tests according to A. S. T. M. methods, depth and construction of course.

Asphalt Institute. A-3; 1929. Asphaltic Concrete Surface Course. (Fine Graded Aggregate Type.) Asphaltic Concrete General quality and screen grading requirements for broken stone, slag, or mine tailings and for sand and limestone dust, quality of asphalt coment, tests according to A. S. T. M. methods, preparation of mixture, construction of and

depth of course.

Asphalt Institute. A-4; 1929. Sheet Asphalt Binder and Surface Courses. General quality, wear, and screen grading requirements for broken stone, quality and grading requirements for sand for binder and surface courses, general quality of asphalt cement, tests according to A. S. T. M. methods, preparation of mixture, depths of courses and construction.

Asphalt Institute. A-5; 1929. Asphaltic Concrete Binder and Surface Courses. General quality, wear, and screen grading requirements for broken stone or slag, general quality and grad-ing requirements for sand or broken stone or slag for wearing course, quality of asphalt coment, tests according to A. S. T. M. methods, preparation of mixtures, depth and construction

of courses.

518.38 Sand Clay or Top-Soil Pavements

American Society of Civil Engineers. Committee Report, Materials for Road Construction and Standards for Their Test and Use; 1918. Includes earth and sand clay roads, recommendations on rates of road grade, crown, artificial foundation, construction of earth roads, mixture percentages for sand-clay road material, construction of sand-clay roads on different types of subsoil.

National Lime Assn. Lime Treatment of Earth Roads. Undated. For clay or silt loam roads, requirements on preparation of road surface, amount of lime to apply, applying and working

in of the hydrated lime.

U. S. Gov., Federal Specifications Board. 452; 1927. Materials for Top-Soil or Sand-Clay Road Surfaces. For material made up of sand, silt, clay, and gravel, free from excess of mica and feldspar, divided into 3 grades for traffic of 400 vehicles per day and less, requirements on screen grading and mechanical analysis, using Am. Soc. for Testing Materials methods.

References.—Definitions, methods of sampling and of testing. See also 500, 510, 512.10. Sand. See also 512.11. Grading for roadways. See also 518.1. Foundations for roads. See also 518.2. Grading of soils. See also 394. Road building equipment. See 743.

ing requirements for coarse, intermediate and | 518.39 Miscellaneous Pavements Specifications

518.4 BRIDGE CONSTRUCTION

518.41 Bridges

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Includes some specifications and references to other specifications for materials, general construction as regards excavation and fill, sheet piling, bearing piles, concrete masonry, reinforcement, ashlar masonry, rubble masonry, brick masonry, rip-rap, waterproofing, design features, loads, unit stresses, concrete design, etc.

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Reinforced Concrete Slab and Girder Bridges. Requirements on type and mix proportions of concrete, placing concrete, design of drainage,

camber, and surface finish.

American Electric Railway Engr. Assn. Misc. Methods and Practices. B209-26; 1926. Design of Small Bridges, Culverts and Trestles. Shows maximum recommended sizes of pipe and drawings of typical designs of concrete box culverts, concrete arch culverts, I beam spans on concrete

abutments, frame and pile trestles,

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Concrete. Includes concrete bridges, requirements on mix proportions for various parts of bridge structure, on screen grading, color test, and mortar strength test for fine aggregate of sand, general quality, screen grading, per cent of wear of coarse aggregate of broken stone, gravel, or slag, methods of construction, placing of reinforcement, materials not otherwise specified to be in accordance with A. S. T. M. and Fed. Spec. Bd. and other standard specifications,

References—Stone. See also 511. Sand, gravel, broken stone, slag. See also 512. Cement. See also 518. Stone. Sometime stone stone concrete cribbing, concrete beds. Stone. Concrete cribbing, concrete beds. Stone. Sometime stone. Stone stone. Sometime stone. Stone stone. 518,84.

518.42 Piling

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931, Concrete Piles. For precast piles, requirements on percentage of reinforcement, spacing of reinforcement, type of reinforcement, form work and casting procedure, grade of concrete. For castin-place piles, requirements on rigidity of metal form, type and placing of reinforcement, placing of concrete, grade of concrete.

American Railway Engineering Assn. 1929 Man-ual. Masonry. Premolded Concrete Piles; 1927. Size range of aggregate, strength requirements

and curing, rules for driving.

National Board of Fire Underwriters. Building
Code; 1931. Includes concrete piles used in building construction, requirements on minimum shell thickness and diameter of pile for steel tubes filled with concrete; for premolded piles, requirements on amount and location of reinforcement, diameter or lateral dimension for various lengths; for cast-in-place piles, require-ments on dimensions; requirements on size of broken stone or gravel and mix proportions for concrete, permissible bearing loads for the various types.

Simplex Concrete Pile Assn. (Inc.). Standard Simplex Concrete Piles. Undated. Describes

method of making cast-in-place piles by driving in form, filling with concrete, and removing form, requirements on shape of steel form, mate-

rial of detachable driving base.

U. S. Gov., Dept. of Agriculture. Bureau of Public Forest Road Construction; 1929. Concrete Piles. Requirements on general quality and screen grading of sand and of coarse aggregate, on minimum average and minimum point diameters, relation of length to diameter, placement of reinforcement and construction of precast piles, curing requirements.

References.—Sand, gravel, broken stone. See also 512.1. Cement. See also 516.1. Concrete and morturs. See also 516.3. Steel reinforcement. See also 605.25. Wooden piling. See 401.4.

518.43 Parapets and Railings

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931.
Railings and Parapets. Requirements on material and construction of concrete railing, and of pipe railings.

References—Sand, gravel, broken stone. See also 512.1. Coments See daso 516.1. Oncrete and mortars. See also 516.3. Steel reinforcement, See also 605.25. Cast iron pipe for railings. See also 607.13. Other iron and steel pipe. See 607.2, 607.3, 607.4. Masonry bridges. See 518.41. Wooden railing lumber. See

518.44 Bridge Slabs and Girders

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures: 1931. Reinforced Concrete Slab and Girder Bridges. Requirements on type and mix proportions of concrete, placing concrete, design of drainage, camber, and surface finish.

References.—Sand, gravel, broken stone. See also 512.1. Cement. See also, 516.1. Concrete and mortars. See also 516.3. Steel reinforcement. See also 605.25. Masonry bridges. See also 518.41.

518.45 Concrete Floors for Bridges

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Bituminous Carpets. For tar carpets on bridge floors, first coat using tar according to spec. M-24 of A. A. S. H. O. with specific viscosity from 8 to 13 and second coat according to spec. M-25. For asphalt carpet using either Spec. M-21 or M-23 for asphalt cement of A. A. S. H. O. with special requirements on specific gravity and penetration.

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Bridge Floors. Requirements on mix proportions of concrete, placing of reinforcement and concrete, expansion joints, drainage, surface fin-

ish, and curing,

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Wearing Surfaces for Bridge Floors. For concrete wearing surface, requirements on additional thickness of floor for monolithic construction, thickness of concrete for separate wearing surface construction, mix proportions of concrete. For brick wearing surface, requirements on preparation of subfloor, proportions and placing of sand-cement bedding course, laying and rolling the brick, applying asphalt filler, surface dressing. For asphalt block wearing surface, requirements on preparation of subfloor, proportions and placing of mortar bed, laying blocks. For bituminous carpets, requirements on quality and size of fine aggregate, preparation of wood and of concrete subfloors, construction of tar mat and of asphalt mat surface. For creosoted wood block wearing surface, requirements on preparation of subfloor, laying the blocks, application of filler. Materials according to A. A. S. H. O. specifications.

References.—Sand, gravel, broken stone, slag. See also 512. Cement, concrete. See also 516.1, 516.3. Steel reinforcement. See also 605.25. Brick. See also 534.11. Paving surfaces. See also 518.3.

518.46 Bridge Arches

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Arches. Requirements on centering of ribs, waterproofing, drainage, and filling. For concrete arches, requirements on type and mix of concrete, placing of concrete, construction of expansion joints, finish of surface. Ashlar masonry and rubble masonry arches, requirements on general quality and size of stone, construction of arch ring, material and construction of backing.

518.5 BUILDING CONSTRUCTION AND MATE-RIALS

References.—Steel buildings and metal parts of buildings. See 605.22.

518.50 General Items

American Concrete Institute. Proposed Recommended Practice for the Use of Pigment Admixtures in Troweled Concrete Surfaces. Proceedings of A. C. I., vol. 27, p. 275 (April 1931 Journal). For the pigment, requirements on insolubility, purity, fastness to light, heat, alkalies, and weak acids, fineness, permissible calcium sulphate and moisture, methods of test; for colored concrete, requirements on proportioning and mixing of pigments, cement, and aggregates, quality and size of aggregates, quality of water, placing and finishing for various types of construction.

American Concrete Institute. No. 506-31T; 1931. Tentative Construction Specifications for Concrete Work on the Small Job. (Journal of A. C. I. for Sept., 1930, as amended in May, 1931, Journal.) Cement and steel in accordance with A. S. T. M. specifications, requirements on sieve analysis and fineness modulus of fine and of coarse aggregates, construction and design of formwork, measurement and proportioning of batch for concrete of various strengths, mixing and placing of concrete, etc.

American Concrete Institute. No. 503-31T; 1931. (Proc. of A. C. I. for 1930, vol. 26, p. 444.) Tentative specifications for Supplying, Fabricating, and Setting Reinforcing Steel on Ordinary Buildings. Material in accordance with A. S. T. M. specifications, requirements on extension of bars into supports, relative width of stirrups. lap of column bars, length of spiral reinforcement in column and its relative diameter, etc.

column and its relative diameter, etc.

American Concrete Institute. No. 502-31T; 1931.

(Proc. of A. C. I. for 1930, vol. 26, p. 1 as amended in vol. 27, p. 99.) Tentative Construction Specifications for Concrete Work on Ordinary Buildings. Cement in accordance with A. S. T. M. specifications, requirements on general quality, fineness, modulus and screen grading of fine aggregate and of coarse aggregate, construction of formwork, measurement and proportioning of batch, placing concrete, etc.

American Concrete Institute. Recommended Practice in Use of Cast Stone; 1930. (Proc. of A. C. I. for 1930, vol. 26, p. 760.) Requirements on manufacture, compressive strength, permissible absorption, classification according to finish, depth to reinforcement, structural requirements for the cast stone and of cast stone in building con-

struction

American Concrete Institute. Tentative Recom-mended Practice. C-2B-25T; 1925. Treatment of Exterior Surfaces of Industrial Reinforced Concrete Buildings. Minimum requirements for pointing and patching, correction of column and beam lines, cement washes, paints, rubbed and tooled finishes. Proc. of A. C. I. for 1925, vol. 21, n. 564.

American Concrete Institute. Tentative Regula-tions. E-1A-2ST; 1928. Building Regulations for Reinforced Concrete. Intended as a supplement to a building code, they give allowable working stress, mixing and placing of concrete, construction of forms, design rules for buildings and parts. Proc. of A. C. I. for 1928, vol. 24, p. 791.

American Institute of Architects. Document No. 172; 1927. A filing System for Architects' Offices. Includes a standard classification of construction materials with numbers assigned to headings and subheadings, primarily for filing of advertising

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Purposes; 1929. General construction requirements for excavation. filling, sewers and drainage, concrete and masonry work of various types, roofs, sheet metal work, structural steel and iron, millwork, paint-

ing, plastering, hardware, plumbling, heating, electrical work, floors and pavements, etc.
American Society for Testing Materials. Tentative Specifications. C 19-26T; 1926. Approved as tentative by American Standards Assn. under designation A 2-1926. U. S. Bureau of Standards and A. S. A. Fire Protection Group joint sponsors with A. S. T. M. Fire Tests of Building Construction and Materials. For determining performance during exposure to fire and not for suitability for use after exposure, standard time temperature curve for regulation of fire test, fire endurance test requirements and fire stream test where specified for floors, roofs, walls, columns and partitions.

Associated Tile Manufacturers, K-300; 1924. Tile-work. Basic specifications for installation of tilework, including requirements for size of aggregate, mixing of concrete, mortar, metal lath, shrinkage mesh, building paper, mortar setting beds, setting of tiles, scratch coats for vertical surfaces, and special applications.

Common Brick Mfrs. Assn. of America. Suggested Specifications for Brickwork; 1930. For building construction, includes requirements on bricklaying, such as wetting of brick, bonding, construction, and thickness of joints, construction at intersection of walls, facing and back-up, setting of door frames, waterproofing, connecting with existing work, cement and lime in accordance with A. S. T. M. specifications, etc.

Concrete Reinforcing Steel Institute. Concrete, Handbook: 1928. Includes standard customs, sizes of bars, standard uses of spacers and supports, bundling and tagging, standard design formulas. Includes specifications of rein-forced concrete in structures, requirements for concrete mix, general quality and grading of sand and crushed stone or gravel, construction of forms, placing and spacing of reinforcement,

placing concrete.

Concrete Reinforcing Steel Institute. Handbook of Reinforced Concrete Building Design; 1928. Includes Tentative Building Regulations for Reinforced Concrete. Prepared as a part of a general building code by American Concrete Institute and Concrete Reinforcing Steel Institute. See American Concrete Institute Specification E-1A-28T for description of scope.

National Assn. of Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Drawings and brief descriptions of standard construction for sheet metal roofing, gutters, conductors, flashings, corrugated iron work, skylights, ventilators, metal cornices, metal ceilings, warm air furnaces, heating and ventilating systems, blow pipe and exhaust systems, fire door and kalamein doors, hollow metal doors and trim, hollow metal windows, restaurant, kitchen, and hotel equipment, protective coatings and paints, 356 drawings of standard sheet metal practice and typical designs.

National Board of Fire Underwriters. Building Code; 1931. Recommended for municipalities, requirements on height and area restrictions, location of building, light and ventilation, number, types, and location of exits, required loadings for design and permissible working stresses for materials, construction requirements for concrete, masonry, steel and iron, and wood, wall thicknesses, safeguards during construction, fireproof construction and semi-fireproof construc-tion, installation of heat appliances and forced draft systems, regulations for theatres, garages, elevators, electrical equipment, and fire extin-

guishing equipment.

National Board of Fire Underwriters. Nitro-Cellulose Motion Picture Film, Production, Storage and Handling; 1931. Requirements on construction of buildings and partitions, capacity and construction of storage cabinets; for film vaults, construction, protection of openings, construction of racks, type of lighting fixture, vents; for buildings and vaults, provision of and requirements for automatic sprinkler systems, allowable types and construction of heating, lighting, and motor equipment, rules for handling film.

National Board of Fire Underwriters. graphic and X-Ray Nitrocellulose Films; 1930. Storage and handling of unexposed film and of film negatives, venting, division, materials, construction, and automatic sprinkler requirements for storage cabinets and storage vaults, maximum area to be covered by one sprinkler, heating and lighting requirements, maximum per-

mitted size of cabinet or vault.

National Board of Fire Underwriters. Suggested Ordinance Providing Safeguards Against Fire Hazards During the Construction of Buildings; 1929. Covers requirements on type of construction for scaffolds, hoists, hoisting machinery, as regards fire resistance, provision of passenger elevators, temporary stairways, fireproofing, standpipes, etc., dependent on height of structure.

National Board of Fire Underwriters. Storage and Sale of Pyroxylin Plastic; 1922. Regulations on provision of sprinklers for storage rooms, spacing of displays, sizes of containers, precautions on lights, heat, means of egress, ventilation and

storage requirements.

National Board of Fire Underwriters. Pyroxylin Plastic, Storage, Handling, and Use in Factories; 1928. Definitions, permissible height and con-struction of factory buildings, material and construction of partitions, requirements on types and installation of heating and drying equipment and lights, water supply requirements for automatic sprinklers, provision of fire pails and auxiliary hose; for isolated storage buildings, requirements on construction, capacity, venting, and distance from other buildings; for factory, requirements on storage of raw materials, their transportation, arrangement of tables and apparatus, precautions in manufacture.

National Board of Fire Underwriters. Protection of Openings in Walls and Partitions against Fire; 1930. Number and minimum size of wall openings, type of door required, construction of silis, wall openings, lintels, and wall frames, installation of various types of doors and shutters, conditions to which applicable, ease of mounting, ruggedness, relative resistance to fire and fire stream, size, operation and maintenance, includes applicability of various sliding, swinging, vertical, rolling, normally closed, and automatic doors, tin clad, solid steel, sheet metal, and hollow metal doors, tin clad, solid steel, and sheet metal shutters, swinging, sliding and rolling shutters, and glass fire windows, for protection of openings in division walls, enclosures to vertical openings partitions and exterior walls.

openings in division wants, encourse to recreate openings, partitions, and exterior walls.

National Board of Fire Underwriters. Electric Railway Car Houses and Cars; 1925. Wiring of electric car houses and auxiliary buildings operated by electric traction companies, support and protection of trolley wires and third rail, enclosing of control apparatus in cabinets, sizes of fuses, construction of car houses, dimensions of walls, fireproofing materials, construction of skylights, pits, tracks, chimneys, maintenance and fire protection requirements for both inside and outside.

National Board of Fire Underwriters. Hose Houses for Mill Yards; 1926. Size, construction, material, and illustrated designs for frame hose houses, construction of hose shelves, hardware, fire quijument leavily and size of hose presided.

fire equipment, lengths and size of hose provided. Structural Clay Tile Assn. Structural Clay Building Tile as Recommended for Building Code and Engineering Practice; 1930. Requirements on general quality, strength, and absorption for hard, medium, and soft tile, minimum dry weights, installation, grade of tile, and permissible working stress for tile exterior and bearing walls, allowable heights of non-bearing walls, floor and roof arch-construction with thickness and strength requirements for tile and minimum depth of arch, fireproofing requirements.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R87-29; 1929. Sizes of Removable and Permanent Forms, Pans, or Domes Made of Wood, Steel, or Other Material Used in Concrete Ribbed Floor Construction. Simplified practice recommended and accepted by industry establishing a limited number of standard stock sizes for forms, standard widths and depths.

U. S. Gov., Dept. of Commerce. Bureau of Standards LO 71; 1992. Tentative Classification of Puilding Construction with Reference to Fire Resistance. Building construction is divided into 7 grades with subclasses according to ability to resist exposure to fire or prevent the spread of fire, type of material permitted in exterior and fire walls, in partitions, doors, floors, interior trim, etc.

U.S. Gov., Dept. of Commerce. Bureau of Standards BH 7; 1924. Minimum Live Loads Allowable for Use in Design of Buildings. Recommended by building code committee for adoption in State and Municipal building codes, covers live loads due to human occupancy, industrial or commercial occupancy, roof loads, movable partition loads, and wind pressures.

U. S. Gov., Dept. of Commerce. Bureau of Standards BH8; 1925. Recommended Practice for Arrangement of Building Code. Standard form and arrangement of a building code, recommended by building code committee for adoption by codemaking bodies.

U. S. Gov., Dept. of Commerce. Bureau of Standards BH9; 1926. Recommended Building Code Requirements for Working Stresses in Building Materials. Requirements on working stresses in

reinforced concrete, cast iron, structural steel shapes, and wood members, recommended by building code committee for adoption by code making bodies.

making bodies.

518.51 Buildings and Dwellings

American Assn. of Medical Milk Commissions. Methods and Standards for Production of Certified Milk; 1931. Includes construction of dairy building and milking stables from sanitary viewpoint.

American Electric Railway Engr. Assn. Recommended rules. B102-25; 1925. Regulations for construction, maintenance and protection of car houses. Specifications for height of buildings, thickness of walls, fireproof construction, and regulations on heating, lighting, housekeeping, and fire protection equipment.

American Electric Railway Engineering Assn.
Recommended Rules. B104-30; 1930. Regulations for Construction and Operation of Bus
Garages. Requirements on building heights and
floor areas between fire walls, structural features in conformity with Building Code of National Board of Fire Underwriters, requirements
on openings in walls, enclosure of vertical openings, lighting, heating, ventilation, fire protec-

tion.

American Electric Railway Engr. Assn. Misc. methods and practices. B206-23; 1923. Design of oil houses and their equipment for property of 100 to 150 cars. Recommendations on construction, selection of equipment, and drawings of suggested arrangements of building and equipment, construction for decreasing fire hazard.

American Railway Assn. Purchases and Stores
Div. Stores Department Buildings and Facilities for Handling Material; 1929. Report of
committee recommending standards as regards
location of buildings, maximum dimensions, fire
resistive construction, number of stories, level of
floor, provision of platforms, structural features,
etc., for store houses, paint and oil store houses,
garages, lumber sheds, oxygen-acetylene houses,
etc.

Associated Factory Mutual Fire Insurance Companies. Gravity Water Tanks and Steel Towers. vol. 1. Structural Details; 1930. For buildings supporting tanks, requirements as to footings on brick supporting walls, design of anchorage, allowable bearing pressures for supports of various building materials. Concrete buildings according to A. S. T. M. specifications for concrete.

Common Brick Manufacturers' Assn. of Am. Brick House. Undated. Specifications for the brickwork in a dwelling including requirements for composition of mortar, laying of brick, thickness of walls and construction of chimneys and fireplaces, construction and design of ideal type brick wall.

National Board of Fire Underwriters. Storage and Handling of Combustible Fibers; 1925. Covers standard fiber warehouse of fire resistive con-

or concrete, roof covering, protection of roof and wall openings, doors, construction of floors, fire extinguishing equipment, requirements for heating, power, and electric light equipment, storage

ing, power, and electric light equipment, storage methods and quantities, housekeeping. National Board of Fire Underwriters. Dwelling Houses; 1920. A code of suggestions for the construction and fire protection of dwelling houses recommended by N. B. F. U., covers de-fective construction and its relation to fire bazard, quality of materials suitable for construction, construction of walls, floor, roof, chimneys, heating and lighting equipment, fire stopping, frame and concrete construction,

National Board of Fire Underwriters. Code of Suggested Ordinances for Small Municipalities; 1928. Includes requirements for private and public garages, requirements on construction and

fire test resistance of floor, ceiling, and walls, capacity and location of gasoline storage tanks, etc.

National Board of Fire Underwriters. Code of Suggested Ordinances for Small Municipalities; 1928. Includes requirements for the construction and equipment of buildings in small towns and villages, requirements on construction of skylights, shafts, number of exits, roof openings, fire stops, height of frame buildings, chimneys, in-stallation of hot air pipes, steam pipes, stoves

National Building Granite Quarries Assn. (Inc.). Architectural Granite, Undated, Includes specifications for granite work, general requirements on quality of granite, submitting of samples for judging quality, texture and color, requirements on degree of finish, quality of finish and cutting, construction of beds and joints, bonding, provision of washes and drips, etc., carving, setting, precautions against stain, pointing and cleaning, etc

National Fire Protection Assn. Approved by American Standards Assn. as A 9-1929. Building Exits Code. Requirements on width, construction, materials, design, arrangement, inclo-sure, etc., for stairs, horizontal exits, doors, slide escapes, elevators and escalators in accordance with American Standards Assn. Codes, installa-

tion of lighting and alarm systems, etc.

National Fire Protection Assn. Protection of
Records; 1928. Includes Record Rooms, requirements on dimensions, materials, thickness and construction of walls, fire resistance ratings of walls, floors, ceilings, metal and vault type doors, construction of doors and windows, installation of filing equipment, lighting, heating, ventilating.

National Fire Protection Assn. Building Construction, Standard Industrial Buildings; 1929. For buildings over one story, includes slow-burning heavy timber construction, permissible height and floor area, number of exits, materials and stresses according to quoted specifications, requirements on construction and protection of roof and wall openings and shaft enclosures, on framing methods, on wall tributed and fire protection equipment, etc.

Building Construcframing methods, on wall thicknesses, electrical

National Fire Protection Assn. tion, Standard Industrial Buildings; 1929. For buildings over one story, including Reinforced Concrete Construction, permissible height and floor area, number of exits, materials and stresses according to quoted specifications, requirements on construction and protection of roof and wall openings and shaft enclosures, on construction of walls, columns, floor, roof, on drainage, electrical and fire protection equipment, etc.

struction for baled cotton, sisal, jute, hemp, oakum, kapok, excelsior, etc. Dimensions, construction of solid masonry walls of brick, stone, plates illustrating standard construction for entrances, bays, door openings, arched openings, balcony construction, balustrades, wall copings, cornices, store front piers, niches, windows, dormers, columns, domes, towers, spires, gargoyles, methods of support, details of anchors, hangers, straps, the drawings are to scale and contain main dimensions.

Portland Cement Assn. Recommended Building Ordinance for Concrete Block and Tile; 1928. Cement in accordance with specifications of A. S. T. M., requirements on strength and absorption limits for block and tile, materials and mix proportions of mortar, lateral support, thickness and height of walls, permissible working stresses, and bonding, for various types of wall construction.

Portland Cement Assn. Specifications for Small Store Buildings. For monolithic concrete and concrete masonry construction, recommended requirements on proportioning of concrete, mixing and placing concrete, mortar mix for concrete block and tile construction, finishing of floors and exterior walls, cast-in-place ornamental trim, application of stucco, materials according to cited specifications of various organizations.

Railway Fire Protection Assn. Handbook; 1925. Stations, freight depots, warehouses, shop plants, store houses, oil and paint houses, power plants, coaling stations. Recommendations on building location, some structural details, placing and protection of equipment, installation of heating and lighting equipment, storage and handling of hazardous materials, care and maintenance, fire protection and equipment-all with reference to reduction of fire hazard.

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Airdromes and Airways. Classification of airdromes as regards accommodations and equipment, size, approaches, and surface of landing fields, requirements on day and night markings, and illumination for land plane stations and seaplane stations. For airways, location of identification markers, identification of towns, arrangement of international or universal marker diagram.

U. S. Gov., Dept. of Commerce. Bureau of Standards. BH 1; 1923. Recommended Minimum Requirements for Small Dwelling Construction. Recommendations of building code committee on thickness, height, and bonding of exterior walls, proportions of piers, bearing areas of arches and lintels, quality and strength of the building materials used, recommended types and details of construction for economy, strength, and fire protective qualities for various types of masonry and frame construction.

References.—Building construction, general items. See also 518.50. See references under 518.50. Ms. building construction items. See also 518.50. Steel buildings and metal parts of buildings. See also 605.22. Sheet metal work metal doors and trim, tho clad fire doors. See also 605.22. Sheet metal roofing. See also 604.3.

518.52 Foundations for Buildings

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Concrete Pavements and Foundations; 1929. General Requirements on construction of forms, placing of reinforcement and concrete, finishing and curing. American Railway Engineering Assn. 1929 Man-ual. Masonry. Portland Cement Concrete, Plain and Reinforced; 1929. Includes footings. quality, and grade requirements for materials, mixing and placing concrete, bending moment formula, design and allowable stress requirements for reinforced footings, and unreinforced pedestals.

References.—Cement, concrete and mortar. See also 516.1, 516.3. Sand, gravel, broken stone, slag. See also 512. Reinforcement steel. See also 605.25. Building construction. See also 518.50, 518.51.

518.53 Walls and Partitions for Buildings

Associated Tile Manufacturers. K-300; 1924. Tilework, Basic specifications for tilework including walls and vertical surfaces, requirements for concrete, aggregates, mortar, metal lath, preparations for and requirements of scratch coat, installation of tile, grouting and joining.

Common Brick Manufacturers' Assn. of Am. Brick House. Undated. For walls of solid and ideal construction, requirements on laying of brick, mortar bed, proportion of full mortar joints, design and construction of ideal type walls.

Gypsum Assn. Gypsum Partition Tile; 1928. Specifications for Erection of Gypsum Partition Tile. Requirements on laying, anchoring, bonding, permissible height of partitions, construction of wood or metal bucks and of built-up, reinforced, rod reinforced, and metal lintels, composition of mortar, plastering requirements, installation of conduits and trim.

Gypsum Assn. Specifications Governing Gypsum Plaster Board Construction; 1923. Uses of gypsum plaster board, requirements on dimensions, transverse strength, methods of test, finish, erection on wood framing, erection on metal framing, design of fire resisting walls and partitions.

U. S. Gov., Dept. of Commerce. Bureau of Standards BH6; 1924. Recommended Minimum Requirements for Masonry Wall Construction. For exterior and interior masonry walls for all buildings, construction requirements recommended by building code committee for adoption by city and State code making bodies. Covers solid brick walls, walls of hollow tile, concrete block, concrete, and stone, hollow walls of brick, veneered walls, requirements on quality of materials, working stresses, thickness, bond, reinforcement, etc.

References.—Building construction. See also 518.50, 518.51. See references under 518.50.

518.54 Inclosures

National Board of Fire Underwriters. Code of Suggested Ordinances for Small Municipalities; 1928. Includes requirements on equipment and operation of motion picture machines and inclosures, requirements on minimum dimensions, materials and construction of walls, size of door, orlifee, and ventilation opening, ventilation requirements, switch provisions, etc. Underwriters' Laboratories (Inc.). Bandit Resisting Enclosures. 1930. For partitions, grille

Underwriters' Laboratories (Inc.). Bandit Resisting Enclosures. 1930. For partitions, grille doors, and safety openings, capable of resisting the fire of pistols, installed between spaces where money is handled and lobby used by public, requirements on installation, gunfire resistance, type of gun ports for defense, locking of grille doors, height of construction, protection at top of partition, protection of windows, etc.

References.—Building construction. See also 518.50, 518.51. See references under 518.50.

518.55 Chimneys for Buildings

Common Brick Manufacturers' Assn. of Am. Brick House. Undated. For chimneys and fire places, requirements on minimum thickness of walls, flue lining and general construction.

Eastern Clay Products Assn. Flues and Flue Linings; 1927. Includes recommended specifications for brick chimneys with fire clay flue linings. Conforms to requirements in the Ordinance of National Board of Fire Underwriters and in proposed Code of Am. Soc. of Heating and Vent. Engrs., requirements on general quality of brick, proportioning of mortar mix, softening point of flue lining, placing of lining, smoke test of chimney.

National Board of Fire Underwriters. Recommended Standard Ordinance for Chimney Construction; 1927. General quality and softening point requirements for flue linings, installations in which flue linings may be omitted, requirements on height of chimney above roof, thickness of walls, flue area, type and mix of mortar, woodwork around chimneys, and other structural features.

References.—Fire clay flue linings, clay stove pipe. See also 534.29. Building construction. See also 518.50, 518.51. See references under 518.50. Regulations on chimney sizes for house heating boilers. See also 614.4.

518.56 Floors for Buildings

American Concrete Institute C-2A-23; 1923. Concrete Floors. Specifications of materials, construction, mixing, and curing. Proc. of A. C. I, for 1924, vol. 20, p. 739 with revision of paragraph 7 in vol. 21 of 1925, p. 596.

American Concrete Institute, Proposed Recommended Practice for Dusted-On Floor Finish. Proceedings of A. C. I., vol. 26, p. 550 (March, 1930, Journal). Limitations on type of concrete with which dusted-on finish may be used, types and general quality of materials and mix proportions for finish, placing and compacting, finishing by troweling and finishing by grinding.

American Concrete Institute. Proposed Recommended Practice for Heavy Duty Concrete Floor Finish with Notes on Light Duty Floor Finish. Proceedings of A. C. I., vol. 26, p. 527 (March, 1930, Journal). Requirements on preparation of base slab, general quality and screen grading of fine and coarse aggregate in the finish, mixture and consistency of concrete, placing and compacting, finished by troweling, by grinding.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Asphalt Block Floors; 1929. Foundation according to A. R. E. A. specifications, dimensions of blocks, pressure and temperature used in manufacture, making of mortar bed, laying blocks, construction of asphalt, sand, or grout joints, surfacing.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, sec. 21. Brick Pavements and Floors. For brick floors, requirements on quality and size of brick, quality and sereen grading of cushion sand, composition of grout and bituminous fillers, construction of foundation, laying of cushion, laying brick, tamping and rolling, application of fillers.

Associated Tile Manufacturers. K-300; 1924. Tilework. Basic specifications for installation of tilework including tiled floors, requirements for concrete, aggregates, mortar, shrinkage mesh, building paper, concrete and mortar setting beds in various applications, setting of tiles.

Common Brick Manufacturers' Assn. of Am. Brick House. Undated. For porch, terrace, and basement floors, thickness and mix of concrete base, laying of brick and construction requirements.

Maple Flooring Manufacturers Assn. Specification Form for Laying and Finishing MFMA Northern Hard Maple Flooring, Northern Beech and Birch Flooring, Undated. Requirements on size, spacing, and creosoting of sleepers, filling between sleepers, size of boards and nailing of sub floors, application of paper, laying of floors, sanding and finishing.

National Slate Assn. Slate Floors, Terraces and Slate Floors, Terraces and Slate Suggested paragraphs for insertion in architects specification for laying of slate walks and floors on soil, on cinder sub-bed, on concrete in earth, and on masonry slab, construction and preparation of base on which slate is laid

Portland Cement Assn. Concrete Floor Finishes; 1929. Includes typical working specifications for heavy-duty floor finish, light-duty floor finish, and terrazo floor finish. Requirements on level of striking off of base slab, quality and screen grading for fine and coarse aggregates, mix proportions, placing, compacting, finishing by troweling or grinding, curing and protection, thickness of topping.

References.—Tile flooring. See also 518.59, 534.25. Wood flooring. See 411.2. Hollow flooring tile. See also 534.22. Building construction. See also 518.50, 518.51. See references under 518.50.

518.57 Ceilings and Roofing for Buildings

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Slate Roofing; 1927. General quality of slate, type and weight of felt, type and size of nails, requirements for laying and nailing.

Associated Tile Manufacturers. K-300; 1924. Tilework. Basic specifications for installation of tilework including tiled ceilings, requirements for aggregates, concrete, mortar, metal lath, preparations for and requirements of scratch coat,

setting of tile.

National Slate Assn. Slate Roofs: 1926. Specification "M." Sheet Metal Work for Slate Roofs. A construction specification with requirements on preparation of surfaces for flashings, use of building paper, weight of building paper, size of nails, thickness of copper, copper and solder according to A. S. T. M. specifications, heights, construction and application of flashings.

National Slate Assn. Slate Roofs; 1926. Specification "S." A construction and material specification covering weight of felt, thickness and di-mensions of slate, requirements on laying of felt, on laying of slate for various roof constructions, sizes of copper nails, for standard slate roof,

National Slate Assn. Slate Roofs; 1926. Specification "T." For textural slate roof, requirements on weight of felt, thickness of slate, laying of felt, laying of slate for various roof constructions.

National Slate Assn. Slate Roofs; 1926. Specification "G." For graduated slate roof, requirements on weight of felt, range of thicknesses and widths of slate, laying of felt, laying of slate for various roof constructions.

U. S. Gov., Federal Specifications Board. 1924. Installation of Metal Flashings with Bituminous Built-Up Roofing. Requirements on length of flashings, painting, depth and location of groove in wall, preparation of roof and installation of flashings.

U. S. Gov., Federal Specifications Board. 157; 1924. Installation of Plastic Flashings With Bituminous Built-Up Roofing. For flashings of asphalt saturated rag felt or of coal-tar saturated rag felt, requirements on installation of 3 layer flashings, amount of overlap on roof, depth of groove in wall, construction and application of counterflash, application of bituminous cement, etc.

References.—Sheet steel and tin roofing. See also 604.32, 604.31. Asphalt roofing, tar roofing. See also 505.16, 505.36. Slate roofing. See also 516.27. Roof-ling tiles. See also 534.23. Wood shingles. See also 402.52. Celling lumber. See also 411.3. Building construction. See also 605.22. Building see also 605.22.

American Concrete Institute. Tentative Regula-tions. E-1A-2ST; 1928. Building Regulations for Reinforced Concrete. Includes specifications and rules of design of beams and columns, and flat slabs in construction of buildings. Proc. of

A. C. I. for 1928, vol. 24, p. 791. American Railway Engineering Assn. 1929 Manual. Masonry. Portland Cement Concrete, Plain and Reinforced; 1929. Includes reinforced beams, columns, slabs, quality and grade requirements for materials, mixing and placing concrete, reinforcement design, design formulas for flexure, proportions, and allowable stresses for rectangular and T beams, and for slabs, design formulas for allowable axial load, load and bending stresses for columns.

References.—Building construction. See also 518.50, 518.51. See references under 518.50.

518.59 Miscellaneous Specifications for Building Construction and Materials

American Concrete Institute. P-4A-26; 1926. Specifications and Building Regulations for Concrete Staves. Strength and absorption requirements, methods of test, limits of loading. Proc. of A. C. I. for 1926, vol. 22, p. 666.

Associated Tile Manufacturers. Tile Bathrooms and Tiled Floor or Wainscots; 1920. General requirements for sand, cinders, crushed stone, size of tile, preparation of foundation and setting floor tile, preparation of scratch coat and setting

of wall tile.

National Assn. of Marble Dealers. Interior Marble Work: 1926. Explanatory of the material a specification for interior marble work should contain, includes grouping of marbles according to properties for finishing, kinds of finish and where used, standard and minimum thicknesses for marble for different applications, recommended details and methods of construction, 42 plates

illustrating typical installations. National Board of Fire Underwriters. mended Good Practice for the Construction and Protection of Airplane Hangars; 1930. Recommendations on height, area for sprinkled and for unsprinkled hangars, materials and types of construction in order of preference, floor drainage, lighting, power, heating, permissible repairing in hangar, construction of doping room, automatic sprinkler and standpipe and hose equipment.

National Board of Fire Underwriters. Construction and Operation of Pyroxylin Lacquer Manufacturing Plants; 1930. Requirements on type of protective construction of buildings of nonfireproof construction, inclosure of openings, height of door sills, construction of fire partitions, lighting and heating equipment, ventilation and fire protection, storage and handling of materials.

National Board of Fire Underwriters. Piers and Wharves, Construction and Protection, 1931. Recommended requirements on construction of two standard classes of piers or wharves including construction of substructures, fire bulk-heads, and pier decks or floors and based on standard automatic sprinkler protection, including steel and concrete construction and heavy

timber construction, fire protection requirements. National Board of Fire Underwriters. Recommended Requirements for Marine Oil Terminals; 1930. For terminals for tankers and barges for handling flammable and refined oils, terminals for crude oil, and land and floating gasoline stations for small craft; requirements on construction of piers and wharves, piping, flexible hose connections, protective systems against fire and static electricity, operating requirements.

National Board of Fire Underwriters. Recommended Safeguards for the Coloring of fruits and Vegetables; 1930. Requirements on construction, general design, and automatic safety features for burner house for fruit coloring using kerosene burners; requirements on method of conducting ethylene from cylinders to coloring room and methods of measuring gas for ethylene method of coloring.

National Board of Fire Underwriters. Construction of Merchandise Vaults; 1930. For storage of furs, silks, etc., but not for highly inflammable materials, requirements on permissible materials for and thickness of walls, floors, and ceilings, construction and fire resistance of supports from ground to vault, fire classification of door, water tightness, lighting, refrigeration, and fire ex-

tinguishing equipment.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. as C 1–1931. Transformer Vaults. Construction, thickness of walls and roof, ventilation, drainage and doorway requirements for reinforced concrete or brick vaults.

National Fire Protection Assn. Protection of Records; 1928. Includes vaults, ground supported and structure supported, requirements on materials and construction of walls, roof and floor, minimum wall thicknesses, for 6, 4, and 2 hour rated vaults, construction and insulation of vault doors, installation of filing equipment, lighting and ventilating.

References.—Building construction. See also 518.50, 518.51. See references under 518.50.

518.6 DRAINAGE STRUCTURES

518.60 General Items

American Assn. of State Highway Officials. Tentative Method. T-33. Undated. Method of Testing Culvert Pipe. For concrete pipe, method same as C 76-30T of Am. Soc. for Testing Materials, sections 20 to 27.

American Society of Civil Engineers. Manual of Engineering Practice No. 2; 1928. Definitions of Terms used in Sewerage and Sewage Disposal

Practice.

American Society for Testing Materials. C 8-24; 1924. Terms Relating to Sewer Pipe. Defini-tions of kinds of raw materials, kinds of pipe as regards materials used, parts of pipe, types of joints, qualities of materials, visual defects.

American Society for Testing Materials. C 12-19; 1919. Recommended Practice for Laying Sewer Pipe. Preparing trenches and foundations, pipe

laying, backfilling trenches.

518.61 Culverts and Culvert Pipe

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Monolithic Concrete Culverts. Requirements on general construction of footings, paved inverts, aprons, and curtain walls, mix proportions of concrete, and method of placing concrete.

American Assn. of State Highway Officials. Tentative Standard Specifications. M-41. Undated. Reinforced Concrete Culvert Pipe. Same as Am. Soc. for Testing Materials spec. C 79-30T, sec-

tions 1 to 19 and 28 to 34.

American Concrete Institute. J-2A-29T; 1929. Reinforced Concrete Culvert Pipe. Specifications as submitted by Joint Concrete Culvert Pipe Committee of A. C. I., A. S. T. M., Bur. Publ. Roads of U. S. Dept. of Agri., Am. Soc. Civil Engrs., Am. Assn. State Highway Off., Am. Rwy. Engr. Assn., Am. Conc. Pipe Assn. (See Proc. A. C. I. for 1929, vol. 25, p. 606.) For standard and extra strength pipe, cement and steel in accordance with A. S. T. M. specification, requirements on general quality and freedom from injurious amounts of organic and unsuitable material for fine and coarse aggregate, screen grading of fine aggregate, methods of design, permissible working stresses, standard sizes of pipe, placing reinforcement, strength tests and strength requirements.

American Railway Engineering Assn. 1929 Man-ual. Masonry. Reinforced Concrete Culvert Pipe; 1929. Cement and reinforcement bars according to A. R. E. A. specifications, reinforcement wire according to A. S. T. M. specifications, general quality of fine and coarse aggregates, design assumptions and requirements, placing of reinforcement, strength test and absorption test requirements, minimum dimensions and area of reinforcement for various loads.

American Society for Testing Materials. Tentative Specifications, C 76-30T: 1930, Reinforced Concrete Culvert Pipe. For standard and for extra strength reinforced culvert pipe, with cement and steel in conformity with A. S. T. M. specifications, requirements on general quality and screen grading of fine aggregate and general quality of coarse aggregate, design, construction, absorp-

tion, strength, methods of test, standard sizes.
U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Culverts. Requirements on excavation for foundation, construction of foundation fill, direction of lay of bell and spigot pipe, proportions of cement mortar, back filling, protection of pipe ends with

masonry, etc.

U. S. Gov., Dept. of Agriculture. Bureau of Public Forest Road Construction; 1929. Reinforced Concrete Pipe. Requirements on mix proportions of concrete, screen grading and general quality of sand and of coarse aggregate, structural details of bell and spigot ends for sizes above 12 inches, position of reinforcement, strength and absorption test according to A. S. T. M. methods, installation.

References.— Definitions and methods of test. See also 500, 518.00. Other specifications for culverture of the second seed of the second seed of the s

518.62 Drains, Drain Tile, and Pipe

American Concrete Institute. P-7B-25; 1925. Concrete Drain Tile. Specification for material, sizes, chemical, physical, absorption and freezing test requirements. Published as tentative in Proc. of A. C. I. for 1924, vol. 20, p. 678.

American Society for Testing Materials. C 4-24; 1924. Joint sponsor with U. S. Dept, of Agriculture, approved by American Standards Assn. as A 6-1925. Drain Tile. Covers farm, standard, and extra quality drain tile of concrete or of

clay, disallowed materials in chemical composition, requirements on crushing strength and absorption test, visual inspection, and where specified, freezing and thawing test requirements, American Society for Testing Materials. Tenta-

tive Specifications. C 75–30T; 1930. Reinforced Concrete Pipe. For standard and for extra strength reinforced pipe, cement and steel in conformity with A. S. T. M. specifications, requirements on general quality and screen grading of fine aggregate, general quality of coarse aggregate, design, construction, strength, methods of test, standard sizes.

References.—Definitions, methods of test. See 500., 518.60. Sand, gravel, broken stone, slag. also 512. Cement, concrete and mortar. See 516.1, 516.3. Vitrified clay pipe. See also 5 See also Clay drain tile. See also 534.21. Sewers and sewer pipe. See also 518.67. Cast iron drain pipe. See also 607.11. Sheet metal pipe. See also 607.5. Plain concrete pipe. See also 518.67.

518.63 Curbs

American Concrete Institute. Tentative Specifications. S-6E-27T; 1927. Concrete Curb and Concrete Curb and Gutter. Specifications for materials, construction, dimensions, and curing. Proc. of A. C. I. for 1927, vol. 23, p. 684.

American Society of Municipal Engineers. walks and Curbs; 1927. Includes stone curbs and concrete curbs. For stone, absorption test and abrasive test requirements, dressing, cutting, limiting dimensions and setting requirements for granite, sandstone, bluestone, and limestone curbs. For concrete curb, poured in place and premolded, grade and general quality of fine. coarse, and mixed aggregates, mixing and placing concrete, and construction of curb.

Asphalt Institute. Tentative Specifications. C-3; 1920. Shoulders, Headers, Curbs, and Gutters. Includes curbs, general quality, wear, and screen grading requirements for coarse aggregate of broken stone, mine tailings, slag, or gravel, quality and grading of sand and stone screenings, composition and physical requirements for Portland cement, mixing of concrete, construction of

References.—Granite, limestone, sandstone. See also 51.1.4. Sand, gravel, broken stone, slag. See also 512. Cement, concrete and mortar. See also 516.1. 516.3. Brick. See also 513, 534.11. Street payements. See also 518.3. Sidewalks. See also

518.64 Gutters

American Concrete Institute. Tentative Specifications. S-6E-27T; 1927. Concrete Curb and Concrete Curb and Gutter. Specifications for materials, construction, dimensions, and curing. Proc.

of A. C. I. for 1927, vol. 23, p. 684.

Asphalt Institute. Tentative Specifications. C-3; 1920. Shoulders, Headers, Curbs, and Gutters. Includes gutters, general quality, wear, and screen grading requirements for coarse aggregate of broken stone, mine tailings, slag or gravel, quality and grading of sand and stone screenings. composition and physical requirements for Portland cement, mixing of concrete, construction of guitters.

References .- See references under 518.63.

518.65 Catch Basins, Inlets, Manholes

American Concrete Institute. P-1C-29; 1929. Concrete Manhole and Catch Basin Block. Strength and absorption requirements and methods of sampling and testing. Proc. of A. C. I. for 1927,

vol. 23, p. 694.

American Electric Railway Engr. Assn. D200-29; 1929. Specification and Form of Contract for Electrical Conduit Construction. Includes man-holes and concrete work about ducts, standard designs and wall thicknesses for concrete line, corner, and crossing manholes, laying and aligning of duct and pouring concrete around duct, cement according to A. S. T. M. spec. C-9, requirements on quality and screen grading limits for fine and coarse aggregates, strength test for sand mortar, mix proportions for concrete, quality, strength, and bend test requirements for wrought iron, general quality of cast iron, specifications for tile duct and fibre duct, installation of duct.

American Railway Assn. Telegraph and Telephone Section. 1-C-1; 1927. Communication Underground Conduit Construction. Includes construction of manholes, requirements on mixture of concrete, dimensions of manhole and thickness of walls, and placing of reinforcement.

American Society of Municipal Engineers. 1927. For manholes and inlets of concrete or brick, requirements on class of concrete or of brick masonry to be used, laying of brick and width of joints, spacing and material of steps.

References.—Sand, gravel, broken stone, slag. See also 512. Cement, concrete and mortars. See also 516.1, 516.3. Brick. See also 518, 534.11. Brick masonry. See also 518,83. Manhole and conduit castings. See 61.112.

518.66 Retaining and Head Walls

References.—Riprap. See 511.72. Rubble and ashlar masonry. See 518.81, 518.82. Brick masonry. See 518.83. Stone masonry retaining walls. See 518.89.

518.67 Sewers and Sewer Pipe

American Concrete Institute. Tentative Specificaritors. P-7A-24T; 1924. Plain Concrete Sewer Pipe. Materials, dimensions, requirements and tests for loading, hydrostatic pressure and ab-sorption. Proc. of A. C. I. for 1924, vol. 20, p. 669.

American Concrete Institute. Tentative Specifica-tions. P-7C-25T; 1925. Reinforced-Concrete Sewer Pipe. Materials, design, load test and method of application, strength requirements and inspection. Proc. of A. C. I. for 1925, vol. 21, p.

584

American Concrete Institute. S-3A-24; 1924. Monolithic Concrete Sewers and Recommended Rules for Concrete Sewer Design. Specifications for materials, reinforcement, iron castings, lining materials, concrete, forms, general sewer construction, and recommended design rules. Proc.

of A. C. I. for 1924, vol. 20, p. 737.

American Railway Engineering Assn. 1929 Manual, Buildings for Railway Purposes. Sewers and Drainage; 1926. General requirements on excavation, pumping and bailing, laying of pipe, back filling, general quality of vitrified sewer pipe, materials and mix proportions of mortar, general quality of brick and of cast iron manhole

covers.

American Society of Municipal Engineers. Sewers; 1927. Cement and lime according to specifications of A. S. T. M., general quality and grade sizes of sand and crushed stone, transverse, crushing, and absorption test requirements for common brick, absorption and rattler test for vitrified brick, general quality, dimensions, and permissible defects of vitrified sewer pipe and of concrete pipe, with tests for crushing, hydrostatic pressure and absorption according to A. S. T. M. specifications, sizes, curing, crushing and absorption test requirements for reinforced concrete pipe, reinforcement according to A. S. T. M. specifications, general quality and dimensions of segmental vitrified tile blocks, general quality and dipping requirements for iron castings, general quality of lumber and wood piles, dimensions of piles, requirements on excavations, removing pavements, mixing concrete, and construction of concrete, brick, segmental block, and pipe sewers.

American Society for Testing Materials, C 14-24; 1924. Cement Concrete Sewer Pipe. Cement according to A. S. T. M. specifications C 9, general quality requirements, dimensions, test requirements for crushing, hydrostatic pressure, and

absorption tests.

U. S. Gov., Federal Specifications Board. WW-P-371; 1931. Plain Concrete Pipe. Bell and spigot pattern for conveyance of sewage, industrial waste, and storm water, permissible defects, requirements on straightness, crushing strength, leakage under pressure, and absorption, standard

sizes and lengths, dimensions of sockets, tolerances, methods of sampling and test.

References.—Definitions, methods of testing, methods of laying pipe. See also 518.60. Sand, gravel, broken stone, slag. See also 518.60. Sand, gravel, broken stone, slag. See also 516.1, 516.3. 518.7 RESERVOIRS, TANKS, POOLS, ETC.

518.71 Fuel Storage Tanks

American Concrete Institute. Recommended Practice and Tentative Specifications. Concrete Fuel Oil Tanks; 1923. Recommendations on reinforce-

ment, materials, mixing, placing, forms, and construction. Proc. of A. C. I. for 1923, vol. 19, p. 420. National Board of Fire Underwriters. Containers for Storing and Handling Flammable Liquids; 1927. Includes concrete fuel oil storage tanks, design, minimum thickness of walls, allowable unit stresses, cement according to A. S. T. M. specifications, grading and quality tests for fine aggregate, grading of coarse aggregate, mixing and placing concrete, construction of forms and placing reinforcement, finish requirements.

References.—Sand, gravel, broken stone, slag. See also 512. Cement, concrete and mortars. See also 516.1, 516.3. Reinforcing steel. See also 605.25. Steel tanks. See 605.23. Other tanks. See 956.2.

518.72 Viaducts

American Assn. of State Highway Officials, Highway Bridges and Incidental Structures; 1931. Concrete Viaducts. For concrete slab and girder structures supported on bents or towers of concrete columns, requirements on type and mix of concrete, construction of forms, placing of concrete, and finish, superstructure same as specified for concrete slab and girder bridges,

References.—Sand, gravel, broken stone, slag. See also 512. Cement, concrete and mortars. See also 516.1, 516.3. Reinforcing steel. See 605.25.

518.73 Swimming Pools

Associated Tile Manufuacturers. K-300; 1924. Tilework. Basic specifications for installation of tilework including special requirements applicable to swimming pools, requirements for concrete, mortar, metal lath, mortar setting beds, and scratch coats, setting of tile.

Scratch coats, setting of the.

Portland Cement Assn. Concrete Swimming Pool

Construction; 1928. Cement and reinforcement
in accordance with specifications of A. S. T. M., suggested requirements on general quality and screen grading of fine and coarse aggregates, permissible clay in fine aggregate, general quality of water, mixing and placing concrete, and general construction requirements.

518.74 Watering Troughs

518.75 Reservoirs 518.76 Spillways

518.77 Cofferdams

518.8 MASONRY

518.81 Dry Rubble Masonry

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Dry Rubble Masonry. For coursed, random and random range work, requirements on general quality, minimum dimensions, and proportions of stone, shaping and laying of stone, design and construction of copings.

U. S. Gov., Dept. of Agriculture. Bureau of Public Forest Road Construction; 1929. Dry Roads. Rubble Masonry. Requirements on general quality of stone and minimum dimensions, base thickness in relation to height, number of headers, breaking of joints, and general structural features.

References.—Definitions, methods of sampling and of testing, See also 510. Masonry stone. See also 511.1, 511.2, 511.4, 511.9. Riprap. See also 511.72.

518.82 Cement Rubble Masonry

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Ashlar Masonry. Requirements on general quality of stone, minimum dimensions, types of surface finish, proportions of stretchers, design and construction of headers, cores, and backing, laying stone, construction of copings, pointing.

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Mortar Rubble Masonry. Requirements on general quality of stone, minimum dimensions and proportions of stone, design of headers, shaping of stone, laying of stone, design and construction

of copings, pointing. National Board of Fire Underwriters. Building Code: 1931. Stone Masonry. Requirements on number and size of header stones and bonding, laying of stone, thickness and bonding of ashlar facings, type of mortar, thickness of stone walls for buildings.

U. S. Gov., Dept. of Agriculture. Bureau of Public Reads. Forest Road Construction; 1929. Cement Rubble Masonry. Requirements on screen grading, color test and mortar strength test for sand, on general quality and minimum dimensions of stone, methods of construction, number of headers, thickness of joints, etc.

References.—Definitions, methods of sampling and of testing stone. See also 510. Massorry stone. See also 511., 511., 511.2, 511.4, 511.9. Cement, concrete and mortars. See also 516.1, 516.3. Building construction, See also 518.50, 518.51. Stone massorry. See also See al. 518.89.

518.83 Brick Masonry

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Brick Masonry. Brick according to specifications of Am. Soc. for Testing Materials, requirements on laying of brick and general construction of

walls, piers, and copings.

American Railway Assn. Telegraph and Telephone
Section. 1-C-1; 1927. Communication Underground Conduit Construction. Includes brick manholes, construction, dimensions, and thickness of walls.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes. Brickwork; 1929. Requirements on brick laying and thickness of joints, general quality of sand, lime, and mortar for common brickwork and for face brickwork, lining of flues, etc.

Common Brick Manufacturers' Assn. of Am. Brick House. Undated. For bricklaying, requirements on laying of brick, full bed of mortar, proportion of full mortar joints, bricklaying and type of mortar for floors, sills, footings, construction and

design of ideal type wall.

National Board of Fire Underwriters. Building
Code; 1931. Brick Masonry. Requirements on
frequency of header courses and bonding, laying of brick, type of mortar, thickness of walls, for building construction.

Common Brick Mfrs. Assn. of America. Suggested Specifications for Brickwork; 1930. For build-

ing construction, includes requirements on bricklaying such as wetting of brick, bonding, con-struction and thickness of joints, construction at intersecting walls, facing and back-up, setting of door frames, waterproofing, connecting with existing work, cement and lime in accordance with A. S. T. M. specifications, etc.

References.—Sand lime brick. See also 513. Clay brick. See also 534.11. Fire clay brick. See also 534.12. Concrete brick. See also 516.4. Cement, concrete and mortars. See also 516.1, 516.3. Wails and partitions of building. See also 518.53. Building construction. See also 518.50, 518.51.

518.84 Masonry Arches

American Railway Engineering Assn. 1929 Manual. Masonry. Stone Masonry; 1924. Includes arch masonry of ashlar stone and block rubble, general quality requirements for stone, mixing of mortar, rules for laying stone and pointing, construction of falsework, dressing, face and backing.

References.—Definitions, methods of sampling and of testing stone. See also 510. Masonry stone. See also 511., 511., 511.5, 511.5, Cement, concrete and mortal stones of the see also 518.4, 518.89. Building construction. See also 518.50, 518.50.

518.85 Monuments

518.89 Miscellaneous Specifications for Masonry

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Purposes. Stone Masonry and Cut Stone Work; 1929. Requirements on general quality of stone, sizes of submitted samples, general requirements on cutting and finish, composition and mix proportions of mortar, setting of stone, permissible joint width, construction of broken coursed ashlar and of boulder masonry.

American Railway Engineering Assn. ual. Masonry. Stone Masonry; 1924. Cement and concrete according to specifications of A. R. E. A., general quality requirements for stone, mixing of mortar, rules for laying stone and pointing; dressing, construction of face, backing, and coping, proportions of stretchers and headers for ashlar stone bridge and retaining wall masonry; falsework, dressing, face and backing requirements for ashlar stone and block rubble arches, construction of culvert masonry and dry masonry retaining walls and slope walls.

Cast Stone Institute. Architectural Specification for Cast Stone; 1930. For erection of cast stone, finish classification for surfaced cast stone and for cut cast stone, quality and finish according to sample, requirements on mix proportions and preparation of Portland cement mortar for setting cast stone, setting, grouting and caulking of cornice joints, etc.

References.—Definitions, methods of sampling and of testing stone. See also 510. Masonry stone. See also 510. the stone of the stone of

518.9 MISCELLANEOUS CONSTRUCTION WORK

American Electric Railway Engr. Assn. D200-29; 1929. Specification and Form of Contract for

Electrical Conduit Construction. Includes concrete work in laying of tile and fiber conduit. cement according to A. S. T. M. Spec. C-9, requirements on quality and screen grading limits for fine and coarse aggregates, mortar strength test for sand, mix proportions for concrete, installation of duct.

American Petroleum Institute. Code No. 4; 1928. Recommended Field Practice for Standard Rigs and Derricks. Includes appendix on specifications for concrete derrick foundations and design

of foundations.

American Railway Assn. Telegraph and Telephone Section. 1-C-1; 1927. Communication Under-ground Conduit Construction. Includes concrete construction in placing of underground conduit and construction of manholes, trenching, grading, method of laying wood duct, vitrified clay duct, iron or steel pipe, and fiber duct, mixing and placing of concrete, thickness of concrete required; for manholes, mixture of concrete, dimensions of manhole and thickness of walls, placing of reinforcement.

Associated Factory Mutual Fire Insurance Com-panies. Gravity Water Tanks and Steel Towers, vol. 1. Structural Details; 1930. For concrete foundations for tanks and towers, requirements as to concrete mixture, construction of piers, anchorage requirements, permissible bearing presdetails of concrete design according to

sures, details of concret A. S. T. M. specifications.

National Board of Fire Underwriters. Construc-tion of Incinerators; 1928. Covers nonfuel fired incinerators, fuel fired incinerators for garbage and waste, rubbish and waste material incinerators, permissible locations, layout of chutes, di-mensions of brick walls and fire brick linings, gauge of metal in smoke pipes and fire brick lining requirements for different capacity incinerators.

National Electric Light Assn. Proceedings, vol. 81. p. 1776; 1924. Typical Form of Specifications for Underground Conduit Construction. Covers suggested contract specification for excavation, sheeting, pumping, back filling, duct laying, man-holes, rodding, etc., includes requirements on proportions and mixing of concrete, general quality of sand, general quality and grading of broken

stone and gravel.

Portland Cement Assn. Suggested Specifications for Concrete Lined Shafts; 1927. Cement and reinforcement steel according to A. S. T. M. specifications, requirements on materials, general quality, and screen grading of fine and of coarse aggregates, general quality of water, excavation, construction of forms, placing of reinforcement, proportions of concrete, mixing, placing, and waterproofing concrete.

Portland Cement Assn. S-105; 1931. Suggested Specifications for Reinforced Concrete Tennis Courts. Requirements on construction of subgrade, screen sizes of aggregate, amount of reinforcement, thickness of slab, dimensions of court. proportioning, mixing, and placing of concrete provision of expansion joints, etc.

References.—Sand, gravel, broken stone, slag. See also 512. Cement, concrete and mortars. See also 516.1, 516.3. Portable gas incinerator. See 997.2.

520-529

GLASS AND GLASS PRODUCTS

520. GENERAL ITEMS

American Ceramic Society. Journal of A. C. S. for June, 1928. Tentative Methods. Analysis of Glass; 1926. Preparation and fusion of sample, method for determination of silica, iron and alumina, lime, magnesia, and alkalis.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl; 1927. Standard Samples. Glass. Sample No. 80 for soda-lime glass, No. 89 for lead-barlum glass, No. 91 for opal glass, No. 92 for standard low boron glass, and No. 93 for standard high boron glass (Pyrex), sample prepared and sold by the bureau with a certificate of its analysis, for use by industrial organizations and others as a comparison standard in checking the accuracy of analysis of glass, etc.

521. FLAT GLASS

521.0 GENERAL ITEMS

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1930. Report of committee recommending list of standard sizes to be carried in stock of double strength window glass.

521.1 PLATE GLASS

American Marine Standards Committee. H No. 1-1925. Glass for Air Ports and Fixed Lights. Dimensional drawing with tolerances. Material to be according to F. S. B. specification No. 123.

Plate Glass Manufacturers of America. Polished Plate Glass; 1928. Standard stock thickness of polished plate glass for glazing purposes is between ½ and ¾ inch, tolerance in thickness when thickness is specified.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Plate Glass; 1928. Two grades specified for windshields and front quarter windows, selected glazing and glazing, with definitions of each, thickness requirements and tolerances.

U. S. Gov., Federal Specifications Board. 123; 1924. Flat Glass for Glazing Purposes. Polished plate glass. Superseded by Federal specification

DD-G-451; 1931, given below.

U. S. Gov., Federal Specifications Board. DD-451; 1931. Flat Glass for Glazing Purposes. Includes polished plate glass. For polished figured plate glass. For polished plate glass, standard thicknesses and tolerances permissible defects for two quality grades dependent on size; for ornamental or polished figured plate glass, definition, standard thickness, non-permitted defects.

References.—Methods of analysis, standard samples of glass. See also 520. Sand for glass. See 512.12. Lime for glass. See 517.2. Limestone for glass. See 517.2.

521.2 CLEAR WINDOW GLASS

U. S. Gov., Federal Specifications Board. DD-451; 1931. Flat Glass for Glazing Purposes. Clear window glass. For single strength, double strength, and heavy sheet glass, standard thicknesses, tolerances in thickness and average weight, recommended maximum dimensions, permissible curvature, permissible defects for 2 quality grades, methods of examination.

References.—Methods of analysis, standard samples of glass. See 520. Standard sizes. See also 521.0. Sand, lime, and limestone for glass. See 512.12, 517.2, 511.2.

521.3 WIRE GLASS

U. S. Gov., Federal Specifications Board. DD-G-451; 1931. Flat Glass for Glazing Purposes. Wire glass. Standard thicknesses and tolerances, nonallowable defects, tolerances on dimensions ordered, methods of examination.

References.—Methods of analysis, standard samples of glass. See 520. Standard sizes. See 521.0. Sand, line, limestone for glass. See also 512.12, 517.2, 511.2.

521.4 ROLLED FIGURED SHEET GLASS

U. S. Gov., Federal Specifications Board. DD-G-451; 1931. Flat Glass for Glazing Purposes. Rolled figured sheet glass. Made in a wide variety of surfaced finishes for obscuring vision and for decorative effect, standard thicknesses and tolerances, maximum sizes, nonallowable defects, for 1 quality grade.

References.—Methods of analysis, standard samples of glass. See 520. Standard sizes. See 521.0. Sand, lime, limestone for glass. See also 512.12, 517.2, 511.2

521.5 PRISM GLASS

U. S. Gov., Federal Specifications Board. DD-451; 1931. Flat Glass for Glazing Purposes. Prism glass. For a rolled sheet glass with or without wire or for a pressed tile, nonallowable defects, tolerances in thickness and dimensions, maximum sizes, standard thicknesses, standard tile sizes, methods of examinations.

References.—Methods of analysis, standard samples of glass. See 520. Sand, lime, limestone for glass. See also 512.12, 517.2, 511.2.

521.6 SPECIAL QUALITY GLASS

U. S. Gov., Federal Specifications Board. DD-G-451; 1981. Flat Glass for Glazing Purposes. Glass for absorbing and intercepting ultra-violet and infra-red rays. It may be rolled figured sheet or wire glass, requirements on minimum permissible amount of ultra-violet and of infrared rays to be excluded.

References.—Methods of analysis, standard samples of glass. See 520. Sand, lime, limestone for glass. See also 512.12, 517.2, 511.2.

521.7 SIDEWALK AND SKYLIGHT GLASS

U. S. Gov., Dept. of Commerce. Bureau of Standards. R49; 1926. Sidewalk, Floor, and Roof Lights. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of round glass and square glass sidewalk lights and floor lights, designating thickness of supporting edge, size of shield, and distance on centers.

References.—Methods of analysis, standard samples of glass. See 520. Sand, lime, limestone for glass. See also 512.12, 517.2, 511.2.

521.8 GLASS PARTITIONS AND INCLOSURES

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Batinclosures with and without lead pan. For shower bath and dressing room inclosures of marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures, details of joints, construction requirements for concrete floor foundation and for placing lead pan, general quality and finish requirements for slate and soapstone.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Water-Closet Inclosures and Partitions. For marble, slate, soapstone, or glass, dimensions of slabs and of assembled inclosures and partitions, general quality and finish requirements for slate and soapstone.

and soapstone.

References.—Methods of analysis, standard samples of glass. See 520. Sand, lime, limestone for glass. See also 512.12, 517.2, 511.2.

521.9 MISCELLANEOUS FLAT GLASS

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Glass Shelf. Dimensions of shelf and cast brass bracket, chemical composition of brass, nickel plating requirements and tests.

References.—Methods of analysis, standard samples of glass. See 520. Sand, lime, limestone for glass. See also 512.12, 517.2, 511.2.

522. GLASS CONTAINERS

References.—Bottles, carboys, flasks, jars, and demijohns. See 955.

523. TABLE GLASSWARE

523.0 GENERAL ITEMS

523.1 VINEGAR BOTTLES

U. S. Gov., Federal Specifications Board. 121a: 1926. Glass Tableware. For blown or pressed ware and for cut ware, covering tumbler, vinegar bottle, sirup pitcher, salt and pepper shakers, requirements on general quality, materials, percentage of lead oxide and specific gravity of cut ware, tolerances in dimensions, capacity, and weight, bolling and shock test requirements.

References.—Methods of analysis, standard samples of glass. See 520. Pressed ware (bottles). See also 523.9.

523.2 PITCHERS

U. S. Gov., Federal Specifications Board. 121a; 1926. Glass Tableware. For sirup pitchers of blown or pressed ware and of cut ware, requirements on general quality, materials, percentage of lead oxide and specific gravity of cut ware, tolerances in dimensions, capacity, and weight, boiling and shock test requirements.

References.—Methods of analysis, standard samples of glass. See 520. Pressed ware (pitchers). See also 523.9.

523.3 GLASS SALT SHAKERS

U. S. Gov., Federal Specifications Board. 121a; 1926. Glass Tableware. For salt shaker and for pepper shaker of blown or pressed ware and of cut ware, requirements on general quality, materials, percentage of lead oxide and specific gravity of cut ware, tolerances in dimensions, capacity, and weight, boiling and shock test requirements.

References.—Methods of analysis, standard samples of glass. See 520. Pressed ware (shakers). See also 523.9.

523.4 TUMBLERS

- U. S. Gov., Dept. of Commerce. Bureau of Standards. R91-29; 1929. Glass Containers for Preserves, Jellies, and Apple Butter. Simplified practice recommended and accepted by industry, limits the stock sizes of jelly tumblers and of preserve jars to the content capacities given in the publication.
- U. S. Gov., Federal Specifications Board. 121a; 1926. Glass Tableware. For tunbler of blown or pressed ware and of cut ware, requirements on general quality, materials, percentage of lead oxide and specific gravity of cut ware, tolerances in dimensions, capacity, and weight, boiling and shock test requirements.

References.—Methods of analysis, standard samples of glass. See 520. Pressed ware (tumblers). See also 523.9.

523.9 MISCELLANEOUS TABLE GLASSWARE

American Marine Standards Committee. O No. 8-1926. Kinds and Sizes of Glassware for Ship Equipment. Kinds and sizes of blown ware and pressed ware listed as standard equipment.

524. LIGHTING GLOBES AND SHADES

American Railway Assn. Signal Section. 5927; 1927. Hand Lantern Globes. Globes of clear, red, yellow, green, or blue low expansion glass, dimensions, requirements for boiling water test, photometric values, and chilling test.

American Society for Testing Materials. D 187-30, D 219-30, D 239-30; 1930. Method of Test for Burning Quality of Kerosene Oils, Long Time Burning Oil for Railway Use, and Mineral Seal Oil. Included in each specification are dimensional requirements for the lamp chimneys used with standard testing lamps.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Permanent Water-tight Fixtures. For outside lighting fixtures, recommended requirements on permissible temperature rise of fixture, provision of water-tight globe and of guard about lamp, threading requirements for 2 sizes of globes and of base of fixture.

U. S. Gov., Federal Specifications Board. 122; 1924. Glass Lantern Globes and Lamp Chimneys. For clear and colored lantern globes for hand lanterns and for railway signal lanterns, and for clear lamp chimneys, requirements on straightness and trueness and freedom of glass from bubbles and defects, sudden chilling test and boiling test.

References.—Methods of analysis, standard samples of glass. See 520. Electric lamps. See 716.1. Electron tubes. See 718.62. Oil lamps and lanterns. See 997.1.

525. LENSES

References.—Binoculars, telescopes and optical goods. See also 914.

525.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce. Bureau of Standards. C27; 1918. Properties and Testing of Optical Instruments. Description of test methods and list of tests which the bureau will make on demand with fees charged, for spectacle lenses, field glasses, telescopes, etc., for single lenses, for compound lenses, such as photographic objectives, etc.

525.1 LIGHTHOUSE LENSES

525.2 REFLECTORS

References.—Glass reflectors for headlights and searchlights. See 716.2.

525.3 SIGNAL LAMP LENSES

American Electric Railway Engr. Assn. Recommended Practice. S105–25; 1925. Sizes of Lenses for Use in Light Signals.

American Railway Assn. Signal Section. Highway Crossing Signals; 1928. For flashing light type, includes requirements for size and transmission values of lenses and roundels.

American Railway Assn. Signal Section. 6918; 1918. Signal Roundels, Lenses, and Glass Sildes. Minimum allowable index of refraction and specific gravity, colors, dimensions, design, and types, photometric and spectrophotometric analysis requirements for roundels, lenses, and slides, focal lengths for lenses.

References.—Methods of analysis, standard samples of glass. See 520. Testing of lenses. See 525.0. Color definitions of traffic signal lenses. See 718.5.

525.4 AUTOMOBILE LAMP LENSES

Society of Automotive Engineers 1931 Handbook. Lamp Lenses; 1929. Diameter of lens and of prismatic area, thickness of lens flange for various sizes on head lamp lenses, diameters of tail lamp lens, of spot lamp lens, of side lamp lens, of motorcycle head lamp lens, minimum light openings in doors of spot lamps and side lamps, thickness of lens edge for motorcycle head lamp lens.

References.—Methods of analysis, standard samples of glass. See 520.

526. CHEMICAL LABORATORY AND OTHER I GLASSWARE

526.1 GLASS INSULATORS

National Electric Light Assn. Suggested Specificarions. D590-23; 1923. Side Groove Pin Insulator (Glass).—D591-23; 1923. Top Groove Pin Insulator (Glass).—D592-23; 1923. Service Pin Insulator (Glass). For green glass insulators, requirements on dimensions and allowable variations, minimum thickness of wall, threading, for one size of each type. Published in 1924 N. E. L. A. proceedings.

References.—Methods of analysis, standard samples of glass, See 520. Porcelain insulators. See 532.22. Thread gages for insulators. See also 615.82.

526.2 CHEMICAL LABORATORY GLASSWARE

References.—Methods of analysis, standard samples of glass. Sec 520. Surgical and medical instruments. Sec 915.2. Burettes and pipettes. Sec 918.1. Bears, graduates, funnels. Sec 918.2. Glass tubing and tubes. Sec 918.3. Biological laboratory apparatus. Sec 918.4. 919.8. Biological laboratory apparatus. Sec 918.8. Laboratory flasks. Sec 918.9. Bottles, jars. Sec 955.1, 955.4.

526.3 COVER GLASSES

526.4 GLASS TUBES AND TUBING

References .- Glass tubes and tubing. See 918.7.

526.6 WATER GAUGES

American Railway Assn. Mechanical Division Recommended Practice: 1925. Water Gauge and Lubricator Glasses. Reflex, tubular, bulls eye types of water gauge glasses and bulls eye type of lubricator gauge glass for locomotive and stationary boilers. Optical, change in temperature, solubility, and pressure test requirements. permissible variation in dimensions.

References.—Methods of analysis, standard samples of glass, See 520.

526.9 MISCELLANEOUS SPECIFICATIONS FOR GT.ASS

U. S. Gov., Federal Specifications Board. DD-C-791; 1930. Pin and Sponge Cups. Requirements on dimensions and shape of 1 type of cup made of glass, general quality of glass, drop test requirements.

References.—Methods of analysis, standard samples of glass. See 520. Electron vacuum tubes. See 718.62.

527. MIRRORS

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS27-30; 1930, Plate Glass Mirrors, A commercial standard selected and accepted by industry establishing 5 quality grades, permissible defects in the glass for each grade, thickness, time guarantee on silvering, guarantee labeling of mirrors

References.—Other plate glass. See 521.1. Methods of analysis, standard samples of glass. See 520.

530-539

CLAY AND CLAY PRODUCTS

531. CLAY

531.0 GENERAL ITEMS

American Ceramic Society. Journal of A. C. S. for June, 1928. Method for Sampling Ceramic Materials as Delivered; 1922. Time of sampling, method of collecting and size for underground material and for ground or pulverized material, treatment of gross sample.

American Ceramic Society. Journal of A. C. S. for June, 1928. Tentative Method. Sampling Clay Deposits. Method for preliminary and for ex-

tended sampling.

American Ceramic Society. Journal of A. C. S. for June, 1928. Method for Drying Shrinkage; 1920. Size and preparation of test pieces, method for measurement of plastic volume, dry volume and determination of volume shrinkage and linear

shrinkage.

American Ceramic Society. Journal of A. C. S. for June, 1928. Method for Behavior in Firing. For determination of progressive change in porosity and progressive change in volume in the firing process for clay, requirements on preparation of test pieces, placement in furnace, rate of heating, drawing from furnace, cooling, weighing, saturating and weighing, for samples drawn at different temperatures, calculation of apparent porosity, volume change, apparent and bulk specific gravity, and absorption.

American Ceramic Society. Journal of A. C. S. for June, 1928. Tentative Test Method. Sag Tests; 1928. For determination of rate of softening under fixed conditions of load and heat treatment, as evidenced by transverse bending. Requirements on shape and size of test pieces, heating rate and transverse loading for clay and for fine and coarse grog bodies, determination of

warpage ratio.

American Ceramic Society. Journal of A. C. S. for June, 1928. Method for Shrinkage and Pore Water; 1928. Method of determination from data on plastic volume and dry volume.

American Ceramic Society. Journal of A. C. S. for June, 1928. Method for Slaking Test; 1928. Size and preparation of test piece, procedure for testing time of slaking.

American Ceramic Society. Journal of A. C. S. for June, 1928. Specific Gravity. Requirements on sampling and crushing of samples, method for determination of true specific gravity, apparent

specific gravity, and bulk specific gravity.

American Ceramic Society. Journal of A. C. S. for June, 1928. Tentative Test Method. Transverse Strength; 1928. Preparation, shape, and size of test specimen, drying of specimen, test procedure, calculation of modulus of rupture, for clay specimens.

American Ceramic Society. Journal of A. C. S. for June, 1928. Method for Water of Plasticity; 1920. Size and preparation of test piece, method of test by drying test piece and calculating the

water of plasticity from loss in weight.

Water of pixels and the solution of the control of on sampling, size, shape, and preparation of test cones, rate of heating and method for determination of softening point.

American Society for Testing Materials. C 71–28 and C71–31T; 1931. Definitions of Terms Relating to Refractories. Standard definitions of fire clay, plastic fire clay, diaspore clay, nodular fire clay, spalling pyrometric cone equivalent,

and of heat transmission terms.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Clay. Sample No. 97 for flint clay and No. 98 for plastic clay, prepared and sold by the bureau with a certificate of analysis in each case, for use in industry and by others as comparison

standards for checking the accuracy of analyses of clays, etc. Analysis of each shown in supplement.

531.1 BALL CLAY

531.2 CHINA CLAY

531.3 FIRE CLAY

American Marine Standards Committee. E No. 13-1927. Fire-Clay Refractories for Marine Service. Test requirements for grades of fire clay brick, fire clay, and plastic refractory, including composition, softening point, quenching, load, etc. S. Gov., Federal Specifications Board. HH-C-

451; 1930. Fire Clay. For a fine class and a commercial class, requirements on fineness, bond, and softening point, methods of sampling and

U. S. Gov., Federal Specifications Board. 191; 1930. Plastic Fire Clay Refractories. For fire clay, requirements on silica content, softening point, water content, dry and burned shrinkage, methods of sampling and test.

References.—Definitions, See 531.0. Methods of sampling and of testing, See also 531.0. Fire brick and tile. See also 534.12. Fire clay flue lining. See also 534.29.

531.4 KAOLIN

American Pharmaceutical Assn. National Formulary; 1926. Kaolin. For medicinal purposes, description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

531.5 CLAY PRODUCTS, PIPE, CONDUIT, ETC.

American Assn. of State Highway Officials. Ten-tative Method. T-33. Undated. Method of Testing Culvert Pipe. For vitrified clay pipe, method same as in C 76-30T of Am. Soc. for

Testing Materials, sections 20 to 27.

American Railway Assn. Electrical Section, XVIII-a-21; 1921. Underground Conduit Construction for Power Cables. Vitrified Clay Ducts. Requirements on general quality and construction, permissible defects, standard length, tolerance on inside dimensions, minimum wall thickness, mandrel test, water absorption test, freedom from alkalies and acids, installation rnles

American Railway Assn. Signal Section. 2412; 1912. Vitrified Clay Conduit. Covers sewer pipe style round or square bore and multiple duct square bore conduit for wires and cables, dimensions, general quality and permissible size of defects, finish, test requirements for straightness,

alkalinity, and water absorption.

American Society of Municipal Engineers. Sewers; 1927. Includes vitrified sewer pipe, general quality, dimensions, permissible defects, sand-bearing crushing test, hydrostatic test, and absorption test according to A. S. T. M. specifications.

American Society for Testing Materials. C 13-24;

1924. Clay Sewer Pipe. Disallowed chemical components in composition of pipe, general qual-ity requirements, dimensions, test requirements for crushing strength, hydrostatic pressure, and absorption.

Eastern Clay Products Assn. Standards; 1928. Salt Glazed Vitrified Sewer Pipe and Fittings. Dimensions of standard single and double Strength pipe up to 36 inch size, dimensions of Ts, Ys, bends, traps, etc.

S. Gov., Federal Specifications Board. 448;

1926. Plumbing Fixtures (For Land Use). Vitrified Clay Pipe. General quality requirements for No. 1, standard weight, socketed, vitrified clay pipe, permissible size of cracks and fractures,

scoring of large sockets and spigots, method of making joints and mix requirements for cement

References.—Metnods of sampling and of testing clay and clay products. See also 531.0. Porcelain products. See also 532.2. Bricks and tiles. See also 534. Burnt clay ballast. See also 511.73.

531.6 ENAMEL FOR ENAMELWARE

American Ceramic Society. Journal of A. C. S. for Sept., 1930. Method of Test for Determination of Deformation Temperature of Enamel; 1930. Requirements on preparation of sample, test procedure, rate of heating, etc.

American Ceramic Society. Journal of A. C. S. for Sept., 1930. Method of Test for Fineness of Wet-Milled Enamel; 1930. Standard method for sieve

testing of fineness.

American Ceramic Society. Journal of A. C. S. for Sept., 1930. Tentative Test Method. Determination of Resistance of Sheet-Steel Enamel to Deflection; 1930. Requirements for test machine, preparation of test pieces, test procedure.

References.—Methods of testing clay and clay products. See also 531.0. Enameled cast-iron bath tubs and sinks. See 612.21, 612.23.

532. CHINA AND PORCELAIN WARE

532.1 TABLE CHINAWARE

American Marine Standards Committee. O No. 24-1929. Chinaware for Ship Equipment. List of standard sizes of chinaware of three weights. Same as simplified practice recommendation of Div. of simplified practice of Bureau of Standards for shore service chinaware.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R39; 1925. Dining Car Chinaware. Simplified practice recommended and accepted by industry establishing a limited list of standard types and sizes of dining car chinaware, plates,

butters, dishes, bakers, bowls, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards R33; 1924. Chinaware for Cafeteria and Restaurant. Simplified practice recommended and accepted by industry establishing a limited list of recognized types, sizes, and styles of cafeteria and restaurant chinaware, plates, butters, bowls, cups, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards R5; 1924. Hotel Chinaware. Simplified practice recommended and accepted by industry establishing a limited list of recognized types and sizes of hotel chinaware, as plates, dishes, bakers, bowls, cups, etc., limitation to 3 weight grades.

U. S. Gov., Dept. of Commerce. Bureau of Standards R40; 1925. Hospital Chinaware. Simplified practice recommended and accepted by industry establishing a limited list of standard types and sizes of hospital chinaware, plates, butters, dishes, bakers, bowls, etc.

S. Gov., Federal Specifications Board. 243a; 1926. Vitrified Chinaware. For thick china, hotel or rolled edge china, and medium weight china, requirements on dimensions, shapes, and weights, test requirements on absorption, impact, and chipping. Includes plates, saucers, cups, platters, bakers, and bowls.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Table glassware. See 523.

532.2 PORCELAIN PRODUCTS

References .- Table chinaware. See 532.1.

532.20 General Items

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Porcelain Ware. Manufacture, color, grinding requirements, dimensional tolerance, glazing requirements, allowable sizes of cracks, crowfeet,

and discolored spots.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbling Fixtures (For Land Use). Vitreous Ware. Manufacture, color, grinding requirements, minimum thickness, dimensional tolerance, allowable warpage, glazing quality requirements, and red ink absorption test requirements.

532.21 Crucibles and Laboratory Porcelain Ware

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes dishes and crucibles, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

Manufacturing Chemists Assn. of the U. S. Labocatory Apparatus; 1922. Laboratory Porcelain Ware. Requirements on general quality, tolerance on capacity, test requirements for resistance to rapid heating and cooling, resistance to hot alkalies, freedom from porous surface, softening at high temperatures, standard sizes and dimensions for annealing cups, boats, casseroles, combustion capsules, high and low form crucibles and crucible covers, dishes, buchner funnels, gooch crucibles and covers, perforated plates for funnels, plates for color reactions, long spatula with knob, dupont nitrometer, requirements on surfaces to be glazed.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Other laboratory apparatus. See 918.

532.22 Porcelain for Electrical Purposes

American Electric Railway Engr. Assn. Recommended Specification. D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes porcelain strain, feeder, and messenger insulators, requirements on dimensions and general design of 4 sizes of strain type insulators, and of 2 sizes of feeder pin type insulators, and of 1 size of messenger insulators, general quality of porcelain, flashover and leakage tests for the feeder insulators.

American Institute of Electrical Engineers. Standard No. 41; 1930. Approved by American Standards Assn. as C29a-1930. Insulator Tests. Definitions, methods of making design and routine tests for both pin and suspension type insulators, including dry and wet flashover tests, corona and puncture tests, thermal and porosity tests. The 1925 edition available in Spanish from Bur. of Foreign and Domestic Commerce of

U. S. Dept. of Commerce.

American Railway Assn. Electrical Section. IX—
a-26; 1926. Porcelain Insulators for Railroad
Supply Lines. For pin type and for suspension
type lisulators, requirements on ratio of dashover voltage to puncture voltage, general quality
of porcelain and of glaze, type of hardware,
assembly of insulators, flashover and mechanical strength tests, methods of testing as specified
by Am. Inst. of Elec. Engrs.

American Railway Assn. Signal Section. 14428; 1928. Porcelain Insulation. Dry process porcelain for terminal blocks and switch mountings, general quality requirements, dimension toler-

ance, absorption test requirements.

American Railway Assn. Signal Section. 14631; 1931. Pin Type Porcelain Insulators. For signal purposes for all voltage ranges, requirements on general physical qualities, tolerance on dimensions, strength, and permissible porosity, methods of conducting dry and wet flashover tests, corona formation test, and puncture test.

American Railway Assn. Telegraph and Telephone Section. 2-G-14; 1924. Porcelain Filler Button, ARA-3-A. For use with porcelain jack panel ARA-4-B, general quality and water absorption test requirements, dimensions.

American Railway Assn. Telegraph and Telephone Section. 2-G-9; 1924. Porcelain Jack Panel ARA-4-B. Panel for mounting 16 jacks on switchboard frame, insulation resistance test and absorption of water test requirements for porcelain panel, color of glaze, dimensions.

American Railway Assn. Telegraph and Telephone Section. 2-G-5; 1924, and 2-G-6; 1924. Fuse Block ARA-1-A and ARA-2-A. For porcelain bases, general quality and absorption test re-

quirements.

American Society for Testing Materials. D 116-30; 1930, Methods of Testing Electrical Porcelain. For wet process, cast, and dry process porcelain, dimensions and design of test specimens and specimen test grips, test procedure for tensile strength, compressive and transverse strength, resistance to impact, dielectric strength, effect of heat, porosity, requirements for apparatus.

Apparatus.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Wiring Methods. Includes cleats, knobs and tubes, dimensions for

various wire sizes.

National Electric Light Assn. Suggested Specifications. D510-23; 1923. Side Groove Pin Insulator. D511-23; 1923. Top Groove Pin Insulator. For porcelain insulators, dimensions and permissible variations, minimum wall thickness, threading, requirements on dry arc over value, for wet process porcelain, brown glazed finish. Published in 1924 N.E. L. A. proceedings.

National Electric Light Assn. Suggested Specification. D560-23; 1923. Guy Strain Insulator. For 3 sizes of wet-process porcelain strain insulators, dimensions and allowable variations, strength requirements for compression, brown glaze finish. Published in 1924 N. E. L. A. pro-

ceedings.

National Electric Light Assn. Suggested Specifications. D580-23; 1923. Spool Insulator (Small Type). D581-23; 1923. Spool Insulator (Large Type). Dimensions and allowable variations for one size of each, of brown glazed porcelain. Published in 1924 N. E. L. A. proceedings. National Electric Light Assn. Suggested Specifi-

National Electric Light Assn. Suggested Specifications. D990–28T; 1928. Tentative. 1-inch and 1%-inch Thread in Insulator. For 4 threads per

inch, detail dimensions.

National Electric Light Assn. Suggested Specifications. D900-28T; 1928. Tentative. Wireholder. For brown glazed wet-process porcelain wire holder on wood screw, dimensions and allowable variations for one size.

National Electric Light Assn. Suggested Specifications. D570-28T; 1928. Tentative. Multifin Guy Strain Insulator. Material brown glazed, wet-process porcelain, dimensions and allowable

variations for 3 sizes.

National Electrical Mfrs. Assn. Publ. No. 31-10. 1931 Switchgear Standards. SGS-33 and SGS-34. Outdoor Insulator Units. Requirements on parallelism of top and bottom surfaces, standard bolt and bolt circle assemblies, standard heights of 3-inch bolt circle insulator units, tolerances.

Underwriters' Laboratories. Cleats, Knobs and Tubes; 1920. Supporting insulators for low potential wiring, general design, properties of materials, standard dimensions of various sizes,

dimensioned drawings.

U. S. Gov., Dept. of Commerce. Bureau of Standards. H10; 1927. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the

Installation and Maintenance of Electrical Supply and Communication Lines. For line insulators for grade A or B construction, requirements for wet porcelain insulators for voltages of 2,300 or above, including ratio of flashover to puncture voltages, dry flashover test requirements for insulators for various voltage applications.

U. S. Gov., Dept. of Commerce. Bureau of Standards R73; 1927. One-Piece Porcelain Insulators. Simplified practice recommended and accepted by industry establishing a limited list of standard designs and shapes of one-piece porcelain insulators, designated by the various manufacturers'

catalogue numbers.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Other electrical insulating materials and methods of testing. See 719.5. Thread gauges for insulators. See 61.5.2. Glass meating the following for the second section of the section of the second section of the section

532.23 Tubs, Sinks, Water-closets, and Lavatories

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes, Plumbing; 1926. Regulations for installation of plumbing fixtures, minimum sizes of water supply pipes, of waste pipes, and of vent pipes, drawings showing principal dimensions of typical plumbing fixtures with location of inlet and outlet pipes, for lavatories, closets, urinals, drinking fountains, and slop sinks.

American Water Works Assn. Water Works Practice Manual; 1925. Sanitary Drinking Fountains, Specifications. Requirements on use of slanting jets, protection of orifices and orifice guards.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. Shower Receptor. A commercial standard selected and accepted by industry, standard sizes and main dimensions, permissible amounts and location of blemishes in regular selection grade, method of grading.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. Bath Tubs. A commercial standard selected and accepted by Industry, standard types and main dimensions, permissible amounts and location of blemishes in regular selection grade, method of grading.

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. Lavatories. A commercial standard selected and accepted by industry, standard types and main dimensions, permissible amounts and location of blemishes in regular selection grade, method of grading, for

leg types and pedestal types.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. Laundry Trays. A commercial standard selected and accepted by industry, standard types and main dimensions, permissible amounts and location of blemishes in regular selection grade, method of grading, covering roll rim and flat rim laundry trays and combination sink and laundry trays.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. Sinks. A commercial standard selected and accepted by industry, standard types with main dimensions, permissible amount and location of blemishes in regular selection grade, method of grading, covering

kitchen sinks, slop sinks, combination sink and laundry tray.

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. Stall Urinals. A commercial standard selected and accepted by Industry, covers main dimensions of standard types, permissible amount and location of blemishes in regular selection grade, method of grading.

regular selection grade, method of grading.
U.S. Gov., Dept. of Commerce. Bureau of Standards. CS20-30; 1930. Staple Vitreous China Plumbing Fixtures. Urinals. A commercial standard selected and accepted by industry for stall and pedestal type urinals, covering nomenclature, definitions, grading rules, types, sizes, and main dimensions for regular selection and culls, graded according to amount and location of blemishes, requirements on red link test for vit-

reous china, depth of water seal.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS20-30; 1930. Staple Vitreous China Plumbing Fixtures. Lavatories, Pedestals, and Legs. A commercial standard selected and accepted by industry, covering nomenclature, definitions, grading rules, types, sizes, and main dimensions for regular selection and culls graded according to amount and location of blemishes and warpage, red link test for vitreous china.
U. S. Gov., Dept. of Commerce. Bureau of Stand-

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS20-30; 1930. Staple Vitreous China Plumbing Fixtures. Water-Closet Bowls and Tanks. A commercial standard selected and accepted by industry, covering nomenclature, definitions, grading rules, types, sizes, and main dimensions, for 2 grades, regular selection and culls, graded according to amount and location of blemishes, requirements on depth of water seal, red

ink test for vitreous china.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C829-31; 1931. Staple Seats for Water-Closet Bowls. A commercial standard selected and accepted by industry establishing standard types and finishes for varnished seats, sprayed seats, sheet covered seats, hard rubber seats, and molded composition sheets, permissible defects in wood and size of doweling in wood seats, requirements on thickness of sovering and standard colors for sprayed finish and sheet covered seats, standard types, weights, dimensions, spacing, and material of hinges.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS30-31; 1931. Colors for Colored Sanitary Wear. A commercial standard selected and accepted by industry establishing 6 standard colors for colored sanitary wear, standard samples being kept at the Bureau of Standards, requirements on procedure for making color comparisons with sample. Applicable to plumbing fixtures

and allied products.

U. S. Gov., Dept. of Commerce. Bureau of Standards, R106-30; 1930. Hospital Plumbing Fixtures. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes and types of baby baths, receiving baths, prenatal baths, seat baths, continuous flow baths, portable baths, surgeon's lavatory, instrument washing lavatory, narrow lavatory, surgeon's wash-up sinks, service washing sinks and trays, medicine sinks, spyhon jet slop sink, pack sinks, massage table, and autopsy table, materials vitreous china or porcelain for most of the items, conforming to commercial standards CS20-30 and CS4-29 of Nat. Bur. of Standards as to quality.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Vitreous Urinal Stall. Quality requirements and thicknesses, tolerances and warpage of vitreous ware, dimensions and construction requirements for stall and vitreous tank. Urinal outfits com-prising stall with tank and stall with flushing valve.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Water-Closet Bowl. Vitreous ware, wash-down siphon type with molded-in trap. Quality requirements and tests for vitreous ware and glazing, minimum thicknesses, tolerances and warpage allowed, dimensions and construction requirements for bowl, for vitreous low tank, and for wooden seat. Two water-closet outfits, tank outfit and flushing valve outfit respectively.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Porcelain Urinal Stall. For porcelain composed of glazed vitreous coating over fre-clay body, quality requirements for porcelain and glaze, dimensions and construction requirements for stall and vitreous tank. Urinal outfits comprising stall with tank and stall with flushing valve.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Vitreous Lavatories. For concealed hanger supported, rectangular and corner lavatory, quality requirements and tests for vitreous ware and glazing, construction and tolerances, list of accessories for lavatories.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Water-Closet Bowl. Vitreous ware, siphon jet type with molded-in trap. Quality requirements and tests for vitreous ware and glazing, minimum thicknesses, tolerances and warpage of vitreous ware, dimensions and construction requirements for bowl, for vitreous high or low tank, for composition seat without cover. Water-closet outfits comprising various combinations of reg-

ular bowl and extended lip bowl with high tank, low tank, or flush valve.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Vitreous Slop Sink. Quality requirements and tests for vitreous ware, dimensions and illustrated design for slop sink and supporting 3-inch trap standard, connections of cast iron trap, di-mensions and construction of water supplies and rim guard.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Vitreous Lavatories. For leg supported, rectangular and corner lavatory, quality requirements and tests for vitreous ware and glazing, construction, dimensions and tolerance, list of accessories for lavatories for two bowl sizes.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Porcelain Laundry Trays. For one-piece porce-lain tray supported from floor, general dimensions and construction of tray and wringer base, quality of porcelain, sizes and types of fittings for supply and waste.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Vitreous Barrack Lavatories. For wall support or for support on cast-iron standards from floor as illustrated. Quality requirements and test

for vitreous ware and glazing, dimensions and construction of lavatories.

534.10 General Items

American Assn. of State Highway Officials. Tentative Method. T-31. Undated. Method of Sampling and Testing Paving Brick. Same as C 7-30 of Am. Soc. for Testing Materials, sections 11, 12, 17 to 29.

American Assn. of State Highway Officials. Tentative Method. T-32. Undated. Methods of Test-ing Brick. Same as C 67-30T of Am. Soc. for

Testing Materials.

American Ceramic Society. Journal of A. C. S. for June, 1928. Method of Testing for Pyrometric Cone Equivalent; 1928. Applicable to fire brick, refractory materials and clays. Requirements on sampling, size, shape and preparation of test cones, rate of heating and method for determination of softening point.

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, Part 3. Temperature Measurement; 1931. Includes Pyrometric Cones. Description, classification, and use of pyrometric cones, advantages and disadvantages of their use, range and accuracy, preparation for and making of test, corrections and calibration of cones.

American Society of Municipal Engineers. Brick Pavements; 1922. Includes rattler for making rattler test of brick, materials, dimensions and construction of barrel, staves, and frame; number, dimensions, weight, and chemical composition requirements for two sizes of cast iron spheres forming the abrasive charge, speed of revolution, and number of revolutions in stand-

ard test.

American Society for Testing Materials. C 16-20; 1920. Method of Test for Refractory Materials Under Load at High Temperatures, Construc-tion and dimensions of furnace and loading device, size of test specimen, amount of loading for end applied load, heating schedule, measurement

of change of dimensions.

American Society for Testing Materials. C 18-21; 1921. Methods of Chemical Analysis of Refrac-tory Materials, Including Chrome Ores and Chrome Brick. Preparation and strength requirements of reagents, determination of moisture, loss on ignition, percentage of silica, alumina, for general refractories, additional methods for determination of chromium in chrome ores and chrome brick.

American Society for Testing Materials. Tentative Specifications. C 19-26T; 1926. Approved as tentative by American Standards Assn. under designation A 2-1926. Nat. Bureau of Standards and A. S. A. Fire Protection Group joint sponsors with A. S. T. M. on this project. Fire Tests of Building Construction and Materials. For determining performance during exposure to fire and not for suitability for use after exposure. standard time temperature curve for regulation

fire test, fire endurance test requirements and fire stream test where specified for floors, roofs,

walls, columns and partitions.

American Society for Testing Materials. C 20-20;
1920. Method of Test for Porosity and Permanent Volume Changes in Refractory Materials. Cutting of brick specimens, burning procedure with schedule of temperatures, drying and weighing of sample in air and in kerosene, determination of true specific gravity from powdered sample, calculation of volume shrinkage of brick and of volume of open and sealed pores.

American Society for Testing Materials. C 24-31;

1931. Method of Test for Softening Point of Fire Clay Brick. Preparation and dimensions of sample and of test cones, test procedure for softening point by comparison with standard Orton

pyrometric cones.

American Society for Testing Materials. Tentative Standard. C 38-31T; 1931. Method of Control Test for Resistance of Fire Clay Brick to Thermal Spalling Action. Requirements on standard size of sample, test procedure for repeated rapid heating and cooling through prescribed cycle of temperatures and time intervals and obtaining loss by spalling.

American Society for Testing Materials. C 67-31; 1931. Methods of Testing Brick. Preparation of specimen, requirements for testing apparatus, and test procedure for compression test, flexure or cross-bending test, and absorption test.

American Society for Testing Materials. C 71-28 and C 71-31 T; 1931. Definitions of Terms Re-lating to Refractories. Standard definitions of fire clay, plastic fire clay, diaspore clay, nodular fire clay, spalling, pyrometric cone equivalent, and of heat transmission terms.

U. S. Gov., Dept. of Commerce. Bureau of Standards LC 266; 1929. Portable Testing Machine for Making Transverse Tests of Building Bricks. Requirements on general design features, dimensions of knife edge, weight, capacity, and accuracy for manually operated machine.

534.11 Face, Common, and Vitrified Brick

American Face Brick Assn. Standard Grading Rules for Face Brick; 1931. For uniform shade, mingled shade, substandard, and cull, requirements as to dimensional variations, warpage, chippage, and color, definitions, test methods.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, sec. 21. Brick Pavements and Floors. For paving brick, requirements on general quality, permissible kiln marks, standard size, straightness of straight side, permissible loss on rattler test, to conform to Spec. C-7 of Am. Soc. for Testing Materials on paving brick.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes. Brickwork; 1926. For common brick, requirements on general quality, permissible water absorption.

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Purposes. Sewers and Drainage; 1926. For brick for sewers, requirements on general quality, permissible water absorption.

American Society of Municipal Engineers. 1927. Includes common brick and vitrified brick used in construction of sewers, general quality, permissible variations in dimensions, and absorption test requirements for common brick, with transverse and crushing tests where specified. General quality, loss on rattler test, and absorption test requirements for vitrified brick.

American Society of Municipal Engineers. Vit-rified Brick Pavements; 1930. Includes vitrified

paving brick, requirements on general quality, dimensions and design of repressed or wire cut lug brick and of plain wire cut brick, with or without lugs, permissible variations in dimensions, permissible bulge, rattler test in accordance with A. S. T. M. methods.

American Society for Testing Materials. C 7-30; 1930. Paving Brick. Covers vitrified brick made from fire clay, semifire clay or shale, general quality, sizes and dimensions of lug, repressed and bevel end bricks, permissible loss on rattler test for various sizes, construction, materials and design of rattler and abrasive charge, rattler test procedure.

American Society for Testing Materials. 1924. Clay Sewer Brick. For medium brick, hard brick, and two grades of vitrified brick, dimensions, absorption, compression and trans-

verse strength test requirements.

American Society for Testing Materials. C 62-30; 1930. Building Brick (Made from Clay or Shale). For 3 grades of bricks dependent on strength, compressive strength, and modulus of rupture requirements using A. S. T. M. method of test C 67, standard size of common brick, rough-face brick, and of smooth-face brick.

U. S. Gov., Dept. of Commerce. Bureau of Standards R1-29; 1929. Vitrified Paving Brick. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, dimensions, and types for plain wire cut, wire cut lug brick, and repressed lug brick.
U.S. Gov., Dept. of Commerce. Bureau of Standards R7; 1923. Face Brick and Common Brick.

Simplified practice recommended and accepted by industry establishing one standard size for common brick and rough face brick and one standard size for smooth face brick, approximate dimensions.

U. S. Gov., Dept. of Commerce. Bureau of Standards BH 1; 1923. Recommended Minimum Requirements for Small Dwelling Construction. For brick used in 8-inch walls, recommendations of the building code committee on requirements for absorption limits, compressive strength, and modulus of rupture, for face brick and for common brick. Less severe requirements than those of Am. Soc. for Testing Materials for medium brick.

S. Gov., Federal Specifications Board. 504; 1927. Common Clay Brick. For vitrified and 3 other hardness grades, requirements on general quality, standard size, variations permitted in dimensions, absorption, and transverse strength. method's of test.

U. S. Gov., Federal Specifications Board. SS-B-671; 1930. Paving Brick. For plain wire cut, wire cut lug, and repressed lug types, made of fire clay, semifire clay or shale, requirements on dimensions, freedom from defects, permissible loss by abrasion test, using methods of test C 7-29T of Am. Soc. for Testing Materials.

534.12 Fire Brick and Tiles, and Fire Clay Brick

American Foundrymen's Assn. Recommended Tentative Standards. Malleable Refractories: 1927. Recommends 24 standard sizes of refractories for malleable industry, drawings and dimensions of door opening tiles, tap-out blocks, shapes for side walls, bridge walls, etc., shapes for bungs, shapes for stacks.

American Marine Standards Committee. E No. 13-1927. Fire-Clay Refractories for Marine Service. Test requirements for grades of fire clay brick, fire clay, and plastic refractory, including

composition, softening point, quenching, load, etc.
American Marine Standards Committee. E No.
33-1930. Insulating Brick and Mortar. For 2 grades of brick and mortar for temperatures up to 2,500° F., requirements on dimensions, weight, conductivity, and softening point of brick, on fineness, plastic qualities, bonding properties under heating test, and softening temperatures of mortar, methods of test, nonshrinkage requirements.

American Society for Testing Materials. C 27-28; 1928. Definitions for Clay Refractories. Softening point requirements for bricks of various heat duties, for clay fire brick and siliceous clay fire

brick.

American Society for Testing Materials. C 63–28; 1928. Clay Fire Brick for Malleable Furnaces with Removable Bungs and for Annealing Ovens. Requirements on silica content, softening point, spalling, modulus of rupture, using A. S. T. M. test methods C 18, C 24, C 38 – 277, and C 67–28T, respectively, test requirements for linear contraction, values of above items dependent on location

of brick in furnace, size tolerance.

American Society for Testing Materials. C 64-28: 1928. Clay Fire Brick for Stationary Boiler Service. Size tolerance, requirements on silica content, softening point, spalling, modulus of rupture, and deformation according to A. S. T. M. methods of test C 18, C 24, C 38-27T, C 67-28T, and C 16, respectively, test requirements for absorption and linear contraction, tests and test values dependent on location of brick in furnace. American Society for Testing Materials. C 65-28;

1928. Clay Fire Brick for Marine Boiler Service. Requirements on size tolerance, silica content, softening point, spalling, and deformation under load according to A. S. T. M. test methods C 18, C 24, C 38–27T, and C 16, respectively, linear contraction test, requirements dependent on location of brick in furnace.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R79-28; 1928. Malleable Foundry Refractories. Simplified practice recommended and accepted by industry establishing a limited list of standard stock shapes and sizes of brick and tile for malleable foundry refractories, including door opening tile, tap-out blocks, shapes for side walls, bridge walls, bungs, roofs, and round stacks.

U. S. Gov., Dept. of Commerce. Bureau of Standards. T116; 1919. Silica Refractories (silica brick). Factors affecting their quality and methods of testing the raw materials and finished ware. Includes recommendations on inspection of raw materials, content of SiO2, degree of softening on heating, specific gravity, expansion on heating, transverse test on cold brick, and load test on hot brick.

U. S. Gov., Federal Specifications Board. 671; 1930. Fire Clay Brick. For 6 classes of brick dependent on severity of service as regards temperature, loading, abrasion, resistance to apalling, etc., requirements on softening point,

quenching test, percentage silica, absorption, deformation under load, methods of sampling and

test. U. S. Gov., Federal Specifications Board. SS-R-191; 1930. Plastic Fire Clay Refactories. For a mixture of grog, raw clay, and water, requirements on silica content, softening point, water content, dry and burned shrinkage, methods of

sampling and test.

References.—Definitions, methods of sampling and of testing of brick. See also 534.10. Methods of

sampling and of testing of clay and clay products. See also 531.0. Fire clay paving brick. See 534.11.

American Society for Testing Materials. C 43-31; 1931. Definitions of Terms Relating to Struc-tural Clay Tile. Definitions of terms relating to hollow building units with parallel cells.

Associated Tile Manufacturers. K-300; 1924. Tilework and Related Documents. Basic specifica-tions for installation of tilework, including preparation of surfaces, setting of tile, etc., for general and for special applications.

534.21 Drainage Tile

American Assn. of State Highway Officials. Tenta-tive Method. T-34. Undated. Method of Sam-pling and Testing Drain Tile. Same as C4-24 of Am. Soc. for Testing Materials Sections 8 to 30 except that the preliminary wetting of the tile for the compression test may be omitted in routine testing in T-34.

American Society of Municipal Engineers. ers; 1927. Includes two-ring and one-ring segmental tile blocks, general quality, thicknesses and limiting dimensions for various sizes of

sewers.

American Society for Testing Materials. C 4-24; 1924. Joint sponsor with U. S. Dept. of Agriculture, approved by American Standards Assn. as A 6-1925. Drain Tile. Covers farm, standard, and extra quality drain tile of concrete or of clay, disallowed materials in chemical composition, requirements on crushing strength and absorption test, visual inspection, and where specified, freezing and thawing test requirements.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Concrete drain tile and pipe, culvert pipe, and sewer pipe. See 518.62, 518.61, 518.67.

534.22 Hollow Building Tile

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes. Includes Clay Hollow Tile; 1926. Absorption and load bearing capacity for load bearing tile, finished face tile, and vitrified foundation tile, general requirements on their installation in building construction.

American Society for Testing Materials. C 34-31: 1931. Structural Clay Load-Bearing Wall Tile. For 3 classes, requirements on hardness, absorption and compression tests, freezing and thawing tests, for tile for end construction and for side

construction.

American Society for Testing Materials. O 56-31; 1931. Structural Clay Fireproofing Partition and Furring Tile. For hard, medium, and soft grades, test requirements for absorption and dry weight, permissible variations in weight and dimensions.

American Society for Testing Materials. C 57-31: 1931. Structural Clay Floor Tile. For 3 classes, requirements on general quality, hardness, weight, absorption and compressive strength

tests.

U. S. Gov., Dept. of Commerce. Bureau of Standards R12; 1926. Hollow Building Tile. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of load bearing wall tile, partition tile, split furring tile, and book tile, giving overall dimen-sions, number of cells, and weight of each. U. S. Gov., Dept. of Commerce. Bureau of Standards BH 1; 1923. Recommended Minimum Requirements for Small Dwelling Construction. For hollow building tile, recommendations of building code committee on requirements on compressive strength for tile used in exterior or party walls for vertical cell construction and for horizontal cell construction.

S. Gov., Federal Specifications Board. 506; 1927. Hollow Clay Floor Tile. For medium and soft grades, requirements on general quality, tolerance on dimensions, weights of various sizes of flat arch, segmental arch, and tile for use in combination tile and concrete construction, absorption, compressive strength where called for,

methods of test.

U. S. Gov., Federal Specifications Board. 507; 1927. Hollow Clay Tile, Load Bearing Wall Type. For 3 grades of hardness, requirements on general quality, tolerance on dimensions, weights of various sizes, absorption, compressive strength where called for, methods of sampling and test.

U. S. Gov., Federal Specifications Board. 508; 1927. Hollow Clay Tile, Fireproofing, Partition, and Furring. For medium and soft grades, requirements on tolerance on dimensions, weights of various sizes, absorption, compressive strength where called for, methods of sampling and test.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Definitions. See also 534.20. Fire tests. See also 534.10. Use in building construction. See 518.5. Gypsum building tile. See 514.62. Concrete building tile and blocks. See 516.4.

534.23 Roof Tiles

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Clay Roofing Tile; 1926. Tile to be natural color, hard burned, and true in shape to agree with sample submitted, general requirements for laying in roof.

Clay Products Institute of California. Strength Tests for Roofing Tiles. Undated. Require-ments on procedure for transverse strength testing of roofing tiles, recommendations for permissible absorption, and transverse strength under the specified conditions of test.

Eastern Clay Products Assn. Standards; 1928. Salt Glazed Vitrified Wall Coping. Standard dimensions of double slant and camel back wall coping, straight sections and corners.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Fire tests. See also 534.10. Concrete roofing tile. See 516.4. Use in building construction. See 518.5.

534 94 Terra Cotta

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes. Architectural Terra Cotta; 1926. Compressive strength, uniform fracture, and scratch resistance requirements, general requirements on use in building construction.

National Terra Cotta Society. Manufacture, Furnishing and Setting of Terra Cotta: 1923. In-

cludes requirements on minimum thickness of walls and partitions and depth of beds, on provision of washes, drips, weep holes, adaptability to flashings, on dimensions and protection of supports and anchors, on setting and pointing, etc., glossary of terms.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Terra cotta in building construction. See also 518.51.

534.25 Glazed Tile and Mosaic

Associated Tile Manufacturers. K-300; 1924. Tilework and Related Documents. Basic specifications for installation. See 534.20.

Associated Tile Manufacturers. K-400; 1921. Glazed Tiles and Trimmers. Standardized Shapes and Sizes. Sizes of glazed tiles, method of numbering, definition of letter symbols, dimensions and design of quarter rounds and coves, small and large radius combinations, bases, caps, architraves, plinths, mouldings, illustrations of types and illustrations of typical uses,

Associated Tile Manufacturers. Tile Bathrooms and Tiled Floors or Wainscots; 1920. General requirements for sand, cinders, crushed stone, size of tile, preparation of foundation and setting floor tile, preparation of scratch coat and setting

of wall tile.

U. S. Gov., Dept. of Commerce. Bureau of Standards R61-30; 1930. Clay Tiles for Floors and Walls. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, shapes, and grades of glazed tiles and ceramic mosaic, including overall dimensions of the standard sizes, definition of grades, permissible warpage, wedging, crooked edge, spots, blots, and other defects for 2 grades each of white glazed and of colored glazed tiles, capacity of shipping containers.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Installation and standard sizes. See also 534.20. Building construction. See 518.5.

534.29 Miscellaneous Specifications for Tile

American Electric Railway Engr. Assn. D200-29; 1929. Specification and Form of Contract for Electrical Conduit Construction. Includes single tile duct, requirements on length, minimum bore, structural features, glazing, alignment, permissible cracks and blisters, absorption test.

Eastern Clay Products Assn. Standards; 1928. Fire Clay Flue Linings and Fittings. Stove Pipe and Fittings. Dimensions of standard sizes of rectangular and round flue linings (unglazed)

and of round stove pipe and fittings.

Eastern Clay Products Assn. Salt Glazed Vitrified Clay Liner Plates. Undated. For use in lining sewers, requirements on dimensions, glazing surface, provision of key for mortar or concrete, for curved or flat plates.

References.—Methods of sampling and of testing clay and clay products. See also 531.0. Chimneys. See 518.55. Sewers. See 518.67.

ABRASIVE MATERIALS, ASBESTOS, AND CHALK 540-549

541. ABRASIVES, NATURAL AND ARTIFI-CTAL

541.0 GENERAL ITEMS

Grinding Wheel Mfrs. Assn. of the U.S. and Canada. Standard Grain Sizes; 1930. Allowable limits for the sizing of aluminum oxide and silicon carbide abrasives for polishing uses and for grinding wheel manufacture but not applicable to abrasives used in the manufacture of abrasive papers and cloths, grading by standard screens for 19 grit sizes.

U. S. Gov., Dept. of Commerce. Bureau of Standards R118-30; 1930. Abrasive Grain Sizes. Simplified practice recommended and accepted by industry covering electric furnace abrasives (not for use in manufacture of abrasive cloth and paper). Definitions of 19 grades as regards screen grading for aluminum oxide and silicon carbide abrasives for polishing uses and grinding wheel manufacture, list of manufacturers from which standard samples may be obtained.

541.1 FLINT

References.—Flint coated abrasive products. See 541.4.

541,2 HONES, WHETSTONES, AND OILSTONES References .- Abrasive grain sizes. See 541.0.

541.3 ABRASIVE WHEELS

Grinding Wheel Manufacturers Assn. of U. S. and Canada, International Assn. of Industrial Accident Boards and Commissions, Approved by American Standards Assn. as B 7-1930. Safety Code for the Use, Care and Protection of Abrasive Wheels. Requirements on size of spindles, direction and length of spindle thread, size of wheel holes, angle of exposure, materials, dimensions and design of protection hoods, dimensions of flanges, mounting of wheel, permissible speeds, operating rules.

Grinding Wheel Mfrs. Assn. of the U.S. and Canada. Standard Blotter Sizes; 1926. Standard blotter diameters and hole sizes applicable to various sizes of grinding wheels of straight

and tapered sides.

Grinding Wheel Mfrs. Assn. of the U. S. and Canada. Standard Steel Center Coping Wheels; 1929. Standard design, dimensions, and tolerances for 10 sizes of wheels from 10 to 36 inches. Society of Automotive Engineers 1931 Handbook.

Recommended Practice. Crankshaft Grinding Wheels; 1920. 15 sizes of grinding wheels ac-

cording to width, radii of edges.

U. S. Gov., Dept. of Commerce. Bureau of Standards R45-28; 1928. Grinding Wheels. Simplified practice recommended and accepted by industry establishing a limited list of standard types, sizes, and dimensions of grinding wheels, covering straight, tapered 2 sides, cylinder, recessed one side, recessed 2 sides, straight cup, flaring cup, dish, and saucer types, standard nomenclature for various classes of grinding work.

References.—Dental grinding wheels. See also 915.10. Electric buffers and grinders. See 711.24. Abrasive grain sizes. See 541.0.

541.4 ABRASIVE CLOTHS AND PAPERS

Abrasive Paper and Cloth Manufacturers Exchange. Abrasive Coated Products; 1929. Requirements on method of hand analysis of abrasive sands, grade name and screen grading of abrasive, weight and tensile strength of cloth or paper backing, grades, closed or open coating, kind of backing, size of sheet, and weight for flint, emery cloth, crocus cloth, garnet, chalk, flint, aluminum oxide, silicon carbide, in reams and in rolls, standard packing.

U. S. Gov., Dept. of Commerce. Bureau of Standards R89-28; 1928. Coated Abrasive Products. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes and varieties of coated paper and coated cloth abrasives, covering types, weight of paper or type of cloth backing, sizes, coverage of coat-

ing, and fineness of abrasive material.

U. S. Gov., Federal Specifications Board. 385b; 1929. Flint Paper. For ream flint paper and roll flint paper, requirements on commercial grain sizes covered, size of grain to agree with the standard sample, general quality of abrasive, size of sheets and of rolls, weight, tensile strength and kind of paper in backing, packing. U. S. Gov., Federal Specifications Board. 386a;

1928. Garnet Paper. Requirements on commer-

cial grain sizes covered, general quality of abrasive, size of sheets, length of roll, weight strength, and kind of paper used for backing, packing, grain size to agree with standard sample.

U. S. Gov., Federal Specifications Board. 387b; 1929. Aluminum Oxide Abrasive Cloth. For sheets, requirements on size of sheet, weave, weight, strength, and width of backing cloth, general quality of abrasive, commercial grading numbers covered, grain size to agree with standard sample, packing, methods of test.

U. S. Gov., Federal Specifications Board. 388b; 1929. Emery Cloth. For sheets, requirements on size of sheets, weave, width, weight, and tensile strength of cloth, general quality of abrasive, commercial sizes covered, grain size to agree

with standard sample, packing, methods of test. S. Gov., Federal Specifications Board. 582; 928. Waterproof Artificial Abrasive Paper. Requirements on size, weight of paper backing, abrasive silicon carbide or aluminum oxide, commercial designation for grain size, tensile strength, standard packaging, equal to standard sample as regards quality and adhesion of grain as shown by comparative test.

. S. Gov., Federal Specifications Board, 583; 1928. Waterproof Garnet Paper, Requirements on sheet size, weight and type of paper backing. grain sizes according to commercial designation, strength test, standard packaging, quality of paper and adhesion of grain tested by rubbing

with standard sample.

541.5 PUMICE

American Pharmaceutical Assn. National Formulary; 1926. Pumice. For medicinal purposes, description and physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

545. ASBESTOS

545.1 ASBESTOS, UNMANUFACTURED

545.2 ASBESTOS PAPER, MILLBOARD, AND ROLL BOARD

American Marine Standards Committee. E No. 17-1928. Asbestos Millboard. Specifications of material, size, thickness, and weight of mill-board, test requirements for loss in weight on heating and for cracking and deflection under load. Substantially identical with that of F. S. B. for the same material.

U. S. Gov., Dept. of Commerce. Bureau of Standards R19-28; 1928. Asbestos Paper and Asbestos Millboard. Simplified practice recommended and accepted by industry establishing a limited list of standard widths and weights of roll and thicknesses of asbestos paper, size of sheet and thick-

nesses of asbestos millboard.

U. S. Gov., Federal Specifications Board. HH-M-351; 1931 Asbestos Millboard. For medium and hard grades, requirements on permissible vegetable matter, standard dimensions, thicknesses and tolerances, weight, behavior on heating, loss on heating, and transverse test requirements.

545.3 ASBESTOS PIPE COVERING AND CEMENTS References .-- Asbestos pipe covering. See 707.42.

545.4 ASBESTOS TEXTILES, YARNS, AND PACK-ING

American Marine Standards Committee. mercial Marine Standards Committee. In No. 14-1928. Insulation of Piping and Machinery on Ships. Includes asbestos cloth, pure and commercially pure grades, weight, carbon content, twist of yarn, number of threads and weave requirements.

American Society for Testing Materials. D 299-29.
Tolerances and Test Methods for Asbestos Yarus. Definitions, nominal yardage and permissible variation for various varn cuts, tolerance on size of wire in metallic asbestos yarn, cotton content and method of determination for 4 grades of plain asbestos yarn and of metallic asbestos yarn.

U. S. Gov., Federal Specifications Board. HH-P-31; 1931. Asbestos Metallic Cloth Sheet Packing. Covers 2 grades for steam pressures up to 300 pounds, made of woven asbestos wire insertion cloth treated with rubber, requirements on num-ber of plies, bend test, size of brass or copper wire, content of asbestos, weave, weight, amount of rubber, steam pressure test, methods of test in

F. S. B. Spec. 59.

U. S. Gov., Federal Specifications Board. HH-P-46; 1930. Compressed Sheet Asbestos Packing. For steam up to 300 pounds, hot or cold water, brine, air, gases of combustion, and fuel oil, for 1 grade of asbestos fiber and rubber mixed, requirements on content of asbestos, tensile strength, tolerance on thickness, methods of test as specified in F. S. B. Spec. ZZ-R-601 for

rubber goods.

U. S. Gov., Federal Specifications Board. HH-G-76; 1931. Asbestos Metallic Cloth Gaskets. For steam pressures up to 300 pounds, includes all folded gaskets for boiler manholes, handholes, and flanged joints, covers 2 grades of seamless and of jointed types, of woven asbestos wire insertion cloth treated with rubber, requirements on number of plies, tolerance on thickness, bend test, size of brass or copper wire, content and quality of asbestos, weave, weight of metallic cloth and of rubber, steam pressure test, methods of test as specified in F. S. B. Spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. 41; 1931. Asbestos Wick and Rope Packings. Requirements on percentage of asbestos, water of composition in asbestos, freedom from wire insertions, sizing, and lubrication, minimum unit weights, for 1/4-inch wicking and % to 11/4 inch

rope packing.

U. S. Gov., Federal Specifications Board. HH-P-36; 1930. Asbestos High Pressure Rod Packing. For asbestos cloth packing treated with rubber compound, requirements on construction, thread count, content of asbestos fiber and of water in yarn, content of rubber and of sulphur in rub-ber compound, area of core or spring back, amount of lubricant, steam test, test methods of F. S. B. Spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. HH-P-51; 1930. Asbestos Valve Stem Packing. For steam and water pressures up to 300 pounds, also for use with air and fuel oil, for 4 types covering braided asbestos and twisted asbestos types each of which comes in lubricated with oil type and frictioned with rubber type, requirements on construction, percentages of fiber and water in asbestos, amount of lubricant or rubber, testing according to methods of F. S. B. Spec. 59 for rubber goods.

References.—Asbestos electrical tape. See 719.51.
Asbestos copper gaskets. See 707.11. Methods of testing cotton fabrics and yarns. See 300.4, 302.10.
Methods of testing rubber goods. See 200.

545.9 MISCELLANEOUS MANUFACTURES OF AS-RESTOS

American Railway Engineering Assn. 1929 Man-Iron and Steel Structures. Waterproofing and Drainage of Solid Floor Railway Bridges; Includes asbestos felt, thickness and composition, for asbestos saturated felt, weight, width, moisture content, weight of saturant, loss on heating, strength, conforms closely to A. S. T. M. serial D 173-23T.

American Society for Testing Materials. D 250-27; 1927. Asphalt Saturated Asbestos Felt for Use in Constructing Built-Up Roofs. General quality of asbestos felt, test requirements for degree of saturation, requirements on width, weight, loss on heating, pliability, percentage of saturant, weight and ash of desaturated felt, using A. S.

T. M. test methods D 146.

U. S. Gov., Dept. of Commerce. Bureau of Standards R66; 1927. Automobile Brake Lining. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of brake linings, covering widths and

thicknesses.

U. S. Gov., Dept. of Commerce. Bureau of Standards R75-29; 1929. Composition Blackboard. Simplified practice recommended and accepted by industry establishing a limited list of standard stock items covering widths and lengths of black blackboard of cement asbestos backing, of woodpulp backing, and of gypsum core backing, and green blackboard of wood-pulp backing.

References.—Asphalt and tar roofing. See also 505.16, 505.36. Methods of testing saturated roofing felt. See 505.0.

546. CHALK

American Ceramic Society. Journal of A. C. S. for June, 1928. Ceramic Whiting; 1924. Definition and use, requirements on general quality, composition and allowable variations, fineness, sampling,

recommended methods of analysis.

U. S. Gov., Dept. of Commerce. Bureau of Standards C152; 1923. Ceramic Whiting. Approved by Interdepartmental Conference on Chemical Lime and the Am. Ceramic Society. For the pure calcium carbonate class and the mixed calcium and magnesium carbonates class, requirements on chemical composition, and fineness, methods of sampling and test.

U. S. Pharmacopæial Convention (Inc.). Pharmacopæia of U. S. A.; 1926. Prepared Chalk. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food

and drugs act.

References .- Other calcium carbonate compounds.

550-559

MICA, RARE MINERALS

551. CRUDE MICA

| 552. MANUFACTURED MICA

560-569

PRECIOUS STONES AND IMITATION STONES

560. GENERAL ITEMS

National Jewelers Board of Trade. Recommended Practice. Description of Precious Stones; 1928.

Recommended definitions of descriptive terms for precious stones, including genuine, reconstructed, synthetic, doublet, and imitation.

561. DIAMONDS AND PEARLS

National Jewelers Board of Trade. Recommended Practice. Description of Diamonds; 1928. Recommended definitions and rules for use of the descriptive terms perfection, color, cutting, weight unit, and imitations. National Jewelers Board of Trade. Recommended Practice. Description of Pearls and Imitation Pearls; 1928. Recommended rules for the use of terms pearl, culture pearl, and imitation pearls in advertising and sale of pearls.

562. SAPPHIRES

570-579

SULPHUR, MAGNESIA, SALT, AND GRAPHITE

571. SULPHUR

References. - Sulphur insecticides. See 881.21.

572. MAGNESIA

U. S. Gov., Federal Specifications Board. HH-M-51; 1931. Magnesia Asbestos Plaster. For 85 per cent magnesia material, requirements on composition, molding and heating test, weight, and methods of analysis. Used for insulating pipes and other surfaces against heat.

U. S. Gov., Federal Specifications Board. HH-M-71; 1931. Magnesia Molded Pipe Covering and Blocks. For 85 per cent magnesia material for pipe covering and lagging, requirements on composition, weight, standard thicknesses of pipe covering, weight of canvas cover, size and material of attachment bands, sizes of rectangular blocks, methods of analysis.

U. S. Gov., Federal Specifications Board. 445; 1927. Plastic Magnesia Cement Used as Flooring, Bases, Wainscots, Etc. For calcined caustic magnesia, fibrous materials, fillers, and colors when gaged with a solution of magnesium chloride to form a resilient product, requirements on tensile and trausverse strength, expansion, time of set, fineness, soundness, chemical composition of magnesium chloride, methods of test.

References.—Magnesia pipe covering. See also 707.43. Boiler lagging sizes. See also 707.40.

573. SALT

References.—Salt as a condiment. See also 154.6. Salt, sodium chloride as a chemical reagent, medicinal, or agricultural supply. See also 834.9.

574. GRAPHITE AND MANUFACTURES THEREOF

Plumbago Crucible Assn. American Foundrymens Assn. Sponsors. Approved by American Standards Assn. as H 13-1925. Outside Dimensions of Plumbago Crucibles for Non-Tilting Furnaces in Nonferrous Foundry Practice. Standard size numbers, corresponding outside dimensions, and approximate capacities.

References .- Carbon brushes for electric motors. See 711.42.

575. CARBONS AND ELECTRODES 575.1 CARBON POWDERED

U. S. Gov., Federal Specifications Board. SS-F-111; 1930. Foundry Facings, Carbon-base. For coating face of sand molds in dry or wet form in iron and brass foundry work, for 5 grades, requirements on sieve analysis, percentages of volatile matter, fixed carbon, ash, and graphitic carbon, covering Ceylon graphite facings, foundry blacking, silver lead, charcoal, and sea coal foundry facings, methods of testing.

References.—Charcoal. See 501.6. Lampblack and bone black. See 842.4.

575.2 CARBON ELECTRODES

U. S. Gov., Federal Specifications Board. W-E-441; 1930. Amorphous Carbon Electrodes. Requirements on physical features affecting operating properties, for 7 sizes from 8 to 24 inches in diameter, requirements on length, tolerances on diameter and eccentricity, resistance, density, ash content, and crook, methods of sampling and testing.

References.—Carbon brushes for electric motors. Sec 711.42.

590-599

MISCELLANEOUS NONMETALLIC MINERALS

591. FLUORSPAR AND CRYOLITE

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Fluorspar. Sample No. 79 prepared and sold by the bureau with a certificate of its complete analysis, for use by industrial organizations and others as a comparison standard in checking the accuracy of analysis of fluorspar, etc.

592. FELDSPAR

U. S. Govt., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Feldspar. Sample No. 70 prepared and sold by the bureau with a certificate of its complete analysis, for use by industrial organizations and others as a comparison standard in checking the accuracy of analysis of similar material, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS23-30; 1930. Feldspar. Commercial standard classification accepted by Industry, including a fineness classification with sieve grading requirements, a chemical composition classification with requirements on silica content and ratio of potash and soda for the ceramic or body

grades, on soda content for the glazing grades, and on silica, alumina, and irou content for the glass making grades, methods of sieve testing and chemical analysis.

593. SILICA, DIATOMACEOUS EARTH, IN-FUSORIAL EARTH

American Marine Standards Committee. E No. 32-1930. Calcined Granular Diatomaceous Earth. For heat insulation purposes, requirements on freedom from clay and sand, temperature of calcination, fineness, percentage of silica, weight, and temperature of softening, methods of test.

U. S. Gov., Federal Specifications Board. SS-M-501; 1930. Silica Mold Wash. For 2 grades for use in steel foundry work for washing surfaces of sand molds, requirements on sieve analysis, silicon dioxide content, and percentage sediment

in wash, methods of testing.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Purified Siliceous Earth. A fine odorless powder, a form of silica purified by boiling with acid, washing and calcining, physical properties, test requirements for

purity. Used for medicinal purposes. Recognized as standard in enforcement of Federal food and drugs act.

References .- Silica brick. See 534.12.

594. SOILS

American Ceramic Society. Journal of A. C. S. for June, 1928. Tentative Method. Sampling Clay Deposits. Method for preliminary and for extended sampling.

American Electric Railway Engineering Assn. W201-15; 1915. Classification and Bearing Power of Soils. Mechanical analysis of soils into fine gravel, sands, silts, and clay, with sizes of screens used in making analysis. Same as given in U. S. Dept. of Agriculture Bull. No. 82.

American Society for Testing Materials. D 220-29; 1929. Method of Test for the Determination of Moisture Equivalent of Sub-Grade Soils in the Field. Treatment of sample, test procedure for determining water absorption qualities of sub-

grade soil for road work.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Soils, Tentative. Sampling, preparation of sample and reagents, apparatus and test procedure for determination of moisture, loss on ignition, carbonate carbon, organic carbon, nitrogen, silica, metal oxides, calcium, magnesium, manganese, iodine, sulphur, phosphorus, potassium and sodium, nitrate nitrogen, alkali salts. U. S. Gov., Dept. of Agriculture. Bureau of Chem-

istry and Soils. Dept. Circ. 419; 1927. Grouping of Soils on Basis of Mechanical Analysis, Classification of soils based on percentages of clay, sand, loam, and silt, 20 classes classified under 3 classes dependent on percentage of clay, 5 special classes comprising peat, muck, gravelly, and stony soils.

U. S. Gov., Dept. of Agriculture. Bureau of Chemistry and Soils. Tech. Bulletin 170; 1930. A Pipette Method of Mechanical Analysis of Soils Based on Improved Dispersion Procedure. Standard method used by bureau for preparation and dispersion of soil samples and for separation into 8 particle sizes from fine gravel to colloid.

References .- Soil pavements. See also 518.38.

599. NONMETALLIC MINERALS NOT ELSE-WHERE CLASSIFIED

American Institute of Mining and Metallurgical Engineers. Adopted by American Standards Assn. as M 13–1925. Recommended Practice for Rock Dusting Coal Mines to Prevent Coal Dust Explosions. Kind, size, and amounts of dust to be used, parts of mine to be dusted, sampling of dust after mine has been dusted.

FERROUS AND NONFERROUS MATERIAL.

A 130-30;
1930. Methods of Sampling Rolled and Forged
Steel Products for Cheek Analysis. Require-

600.1 TESTING OF METALS

American Assn. of State Highway Officials. Tentative Method. T-68. Undated. Methods of Tension Testing of Metallic Materials. Same as E 8-27T of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-69. Undated. Methods of Compression Testing of Metallie Materials. Same as B 9-2T of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-70. Undated. Methods of Brinell Hardness Testing of Metallic Materials. Same as E 10-27 of Am. Soc. for Testing Materials.

American Electric Railway Engr. Assn. Recommended Practice. E 108-25, 1925. Proof Testing of Forgings to Determine Their Soundness After Quenching and Tempering. Drawing showing method of supporting axles and table of heights for dropping a tup of 1,640 or 2,000 lbs. onto axle, drawing of gauge for determining if permanent set is taken.

American Society for Testing Materials. A 33–24; 1924. Standard Methods of Chemical Analysis of Plain Carbon Steel. Methods of analysis, reagents required and description of test apparatus for determination of carbon, manganese, phosphorus, sulphur, silicon, copper, nickel, and chromium, methods of sampling rolled and forged steel products for check analysis.

American Society for Testing Materials. A 34-28; 1928. Methods of Test for Magnetic Properties of Iron and Steel. For induction and hysteresis measurement, definitions, requirements for test specimens, data required, four standard methods of test listed but not described, with limitations of each; for core loss measurement, definitions, procedure, requirements of testing apparatus, and sampling; for measurement of properties at low inductions and audio frequencies, requirements for test specimens, apparatus, and procedure, calculation of induction and permeability.

American Society for Testing Materials. A 55-24; 1924. Standard Methods of Chemical Analysis of Alloy Steels. Methods of analysis, reagents required for determination of nickel, manganese, silicon, chromium, phosphorus, vanadium, sulphur, tungsten, cobalt, molybdenum, with reference to A 33-24. Analysis of plain carbon steel for determination of carbon, manganese, etc.

American Society for Testing Materials. A 124-29; 1929. The Arbitration Test Bar and Tension Test Specimen for Cast Iron. Form and dimensions of pattern and mold for casting test bar intended for transverse testing and dimensions of tension test bar machined from a portion of arbitration test bar.

American Society for Testing Materials, Tentative Definitions, A 127-31T; 1931. Definitions of Terms, With Units and Symbols, Relating to Magnetic Testing. American Society for Testing Materials. A 130–30; 1930. Methods of Sampling Rolled and Forged Steel Products for Cheek Analysis. Requirements on method of taking and preparation of sample, location of sample in large sections, blooms, billets, rounds, shapes, bored forgings, thin material, and rolled sheets.

American Society for Testing Materials. E 2-30; 1930. Rules Governing the Preparation of Micrographs of Metals and Alloys. Standard magnifications, rules for reproductions, recommended elneses, definition of grain and methods of measurement of grain size. Recommended practice for photography as applied to metallography, illumination of specimens, recommended photographic materials.

American Society for Testing Materials. E 3-24; 1924. Methods of Metallographic Testing of Iron and Steel. Macroscopic and microscopic examination, etching solutions and reagents for different grades of steel and alloy steels, methods for indicating distribution of sulphur and for indicating small eracks, location of test pieces, methods of polishing and etching.

American Society for Testing Materials. E 4-27: 1927. Methods of Verification of Testing Machines. For testing machines that measure load, methods of verification by standard weights, by standardized proving levers, by means of elastic calibration device, and by comparison method, tolcrances for new and for used machines.

American Society for Testing Materials. E 5-27; 1927. Methods of Metallographic Testing of Nonferrous Metals and Alloys. Macroscopic and microscopic examination, etching solutions and reagents for the different alloys, location of test pieces, methods of polishing and etching including electrolytic etching.

American Society for Testing Materials. E 6-30 and E 6-30T; 1930. Definitions of Terms Relating to Methods of Testing. Definitions of stress, strain, stress-strain diagram, elastic limit, yield point, tensile strength, compressive strength, modulus of elasticity.

American Society for Testing Materials. E 7-27; 1927. Definitions of Terms Relating to Metallography. Includes definitions of grain, grain size, micrograph, metallography, etc.

American Society for Testing Materials. Tentative Test Methods. B 8-27T; 1927. Methods of Tension Testing of Metallic Materials. Recommended dimensions, design, and gage marking for test specimens from various shapes of material, shaping of ends of specimen and design of gripping devices, speed of operation of testing machine, determination of elastic limit, yield point, tensile strength.

American Society for Testing Materials. Tentative Test Methods. E 9-2TT; 1927. Methods of Compression Testing of Metallic Materials. Dimensions and design of 3 recommended sizes of compression test specimens, design of bearing blocks, speed of operation of testing machine, determination of elastic limit, yield point, and compressive strength.

Metallic Materials. Tables of Brinell hardness numbers for various diameters of indentation for a 10 mm. ball and 500 and 3,000 kilogram leads, requirements of microscope, ball and test specimen, rules for application of load and for measurement of impression, calibration of hardness testing apparatus.

American Society for Testing Materials. E 12-27; 1927. Definitions of Terms Relating to Specific Gravity. Covers specific gravity and absolute specific gravity of solids and liquids, apparent specific gravity of solids, and bulk specific gravity

of solids.

American Society for Testing Materials. Tentative Recommended Practice. E 14-30T; 1930. Ther-mal Analysis of Steel. Requirements for apparatus, furnace, and thermocouple, size of test specimen, test procedure for both inverse rate method and differential method.

American Society for Testing Materials. E 15-29: 1929. Recommended Practice for Radiographic Testing of Metal Castings. Defects that may be revealed by X rays, equipment and size of X-ray tube for certain size castings, radiographic

technique.

Association of American Steel Manufacturers. Standard Methods of Sampling and Permissible Variations for Check Analysis of Rolled and Forged Steel Products; 1928. Location of samples, number of check analyses, premissible variation in composition from the ordered limits.

National Engineering Inspection Assn. Tentative Methods of Procedure for Inspection of Materials; 1930. Covers general procedure such as checking of order, witnessing of tests, surface inspection, marking, and reports; for mill, shop, and field inspection of structural steel for buildings and bridges; for inspection of tee and girder rails, steel plate pipe, rolled or drawn steel and iron pipe, boiler and firebox steel, and cast iron pipe.

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Brinell Hardness Test; 1924. Requirements on size of ball and applied weight, table of Brinell hardness numbers.

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Rockwell Hardness Tests; 1927. Explanation of method of test and of readings obtained, application to different types of specimens.

Society of Automotive Engineers. 1931 Handbook. Test Specimens, Iron and Steel; 1922. Location of test specimens for various materials, dimensions of tension and bend test specimens.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Acid open-hearth steel. Sample No. 19c of 0.2 C, No. 20c of 0.4 C, No. 21c of 0.6 C, No. 34a of 0.8 C, and No. 35a of 1.0 C, prepared and sold by the bureau with a certificate of analysis in each case, for use by industrial organizations and others as comparison standards in checking the accuracy of analyses of similar steels, etc., average analyses shown in supplement to C25.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Basic open-hearth steel. Sample No. 15b of 0.1 C, No. 11d of 0.2 C, No. 12c of 0.4 C, No. 13c of 0.6 C, No. 14b of 0.8 C, and No. 16b of 1.0 C, prepared and sold by the Bureau with a cer-tificate of analysis, for use by industrial organizations and others as a comparison standard for checking the accuracy of analyses of similar steels, etc., average analyses shown in supplement to C25.

American Society for Testing Materials. E 10-27; U. S. Gov., Dept. of Commerce. Bureau of Stand-1927. Methods of Brinell Hardness Testing of ards. C25 and Suppl.; 1927. Standard Samples. Bessemer steel. Sample No. 8d of 0.1 C, No. 9c of 0.2 C, No. 10d of 0.4 C, No. 22b of 0.6 C, and No. 23a of 0.8 C, prepared and sold by the bureau with a certificate of analysis, for use by industrial organizations and others as a comparison standard for checking the accuracy of analyses of similar steels, etc., average analyses shown in supplement to C25.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Electric steels. Sample No. 51 for electric furnace steel of 1.2 C, and sample No. 65a for acid electric steel, prepared and sold by the bureau with a certificate of analysis in each case, for use by industrial organizations and others as comparison standards for checking the accuracy of analyses of similar steels, etc., average anal-

vses shown in supplement to C25.

S. Gov., Federal Specifications Board. 339a: 1929. Metals. General requirements applicable to all metal specifications and intended to form a part of all detail specifications for metals. Covers responsibility for manufacturing methods, information and facilities to be furnished by contractor, procurement of samples and identification, selection and type of physical test specimen and methods of test, reports, packing and shipping requirements, information on inspection and tests and definitions of terms.

References.—Other test methods. See specifications under individual commodities. Proving rings for calibrating testing machines. See 919.9.

600.2 CLASSIFICATION OF METALS

American Electric Railway Engr. Assn. Recommended Classification. PS100-29; 1929. Classification of Scrap Materials. Ferrous scrap classified under 21 numbered classes, each class defined as to kind and size of railroad material included, nonferrous scrap classified into 22 numbered classes.

American Electric Railway Engr. Assn. Methods and Practices. PS200-26; 1926. Classification of Materials and Supplies for Electric Railways. Assignment of numbers to 74 defined classes of materials and supplies, storeroom form

showing operation in these materials.

American Railway Assn. Purchases and Stores Div. Classification of Scrap Iron and Steel; Classification of locomotive, car, and building parts under numbered headings of scrap material, classed according to the material in the part, its condition, size, etc., including iron, steel, copper, brass, lead, aluminum, white metal, zinc, burlap, barrels, belting, canvas, linoleum, rope, and rubber.

American Railway Assn. Purchases and Stores Div. Standard Material Classification; 1922. Classification of the materials used by railroad under main numbered headings with detail lists of materials under each heading and the unit

in which purchased.

National Assn. of Waste Material Dealers (Inc.). Circular L; 1930. Standard Classification for Old Metals. Number and code word for each class with definition of class, types of material, limitations on maximum dimensions, percentages of certain kinds, etc., covers brass, copper, pewter, zinc, lead, aluminum, babbitt.

U. S. Gov., Dept. of Commerce. Bureau of Stand-R58; 1928. Classification of Iron and ards. Steel Scrap. Simplified practice recommended and accepted by industry establishing and defining various standard classes and grades of scrap under the general classes of scrap for blast furnaces, for basic open-hearth furnaces, low

phosphorus and low sulphur scrap for acid open hearth furnaces, scrap for electric furnaces, for gray iron foundry practice, for bessemer converters, and for miscellaneous purposes.

600.3 COATING OF METALS

American Assn. of State Highway Officials. Tenta-tive Method. T-65. Undated. Methods for De-termining Weight of Coating on Zinc Coated Articles. Same as A 90-30 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method. T-66. Undated. Methods of Test for Uniformity of Galvanizing or Spelter Coating on Wire. Requirements on preparation of standard copper sulphate solution, quantity of solution, number of samples, cleaning of samples, test procedure.

American Electric Railway Engr. Assn. D6-14; 1914. Specification for Galvanizing or Sherardizing on Iron and Steel. Test requirements for immersion test of samples in standard copper

sulphate solution.

American Institute of Electrical Engineers. Standard No. 60; 1928. Joint sponsors with American Electric Railway Assn., American Railway En-gineering Assn., American Society for Testing Materials, Assn. of Edison Illuminating Com-panies, Assn. of Railway Electrical Engineers, National Board of Fire Underwriters, National Electric Light Assn., National Electrical Manufacturers Assn., National Fire Protection Assn. under auspices of American Standards Assn., C 8 b1-1928. Specifications for Tinned Soft or Annealed Copper Wire. Includes requirements on tinning and tests for tinning.

American Railway Assn. Electrical Section VI-a-23; 1923. Electric Light, Power Supply and Trolley Lines Crossing Railways. Appendix C. Galvanizing or Sherardizing on Iron and Steel. Requirements on preparation of copper sulphate test solution, test procedure and test requirements for galvanized wire and other galvanized

or sherardized material.

American Railway Assn. Signal Section. 2211; 1911. Galvanized E. B. B. Bonding Wires. Includes tests for galvanizing, cleaning of samples, preparation and neutralization of copper sulphate solution, immersion procedure and effects necessitating rejection.

American Railway Assn. Signal Section. 2330; 1930. Channel Pin. For fastening bond wires into railroad rails, includes requirements on quality of tin in plating and tin plating test

requirements.

American Railway Assn. Signal Section. 2912: 1912. Galvanizing for Iron or Steel. Test for galvanizing, cleaning of sample, preparation of neutralized copper sulphate solution, size of jars and amount of testing solution for various type samples, routine and length of immersions for

testing quality of zinc coating.

American Railway Assn. Telegraph and Telephone Section. S-1; 1923. Electric Light, Power Supply, and Trolley Lines Crossing Railways. Includes test requirements for testing galvanized or sherardized material in standard copper sulphate

solution.

American Society for Testing Materials. 1930. Standard Methods for Determining Weight of Coating on Zinc Coated Articles. Shop weighing test method, sampling, standard hydrochloric acid-antimony chloride method, alternate basic lead acetate and sulphuric acid permanganate methods, field test methods including Preece or copper sulphate dip, thermal, and evolution of hydrogen methods.

American Society for Testing Materials. A 91-24; 1924. Standard Methods of Determining Weight of Coating on Tin, Terne, and Lead-Coated Sheets. Sampling, for terneplate the method of dissolving the coating and part of iron in acid and making separate determinations of iron, tin, and lead, for tin coated sheets the method of determining tin directly.

American Society for Testing Materials. A 110-30; 1930. Methods of Testing Zinc Coated (Galvanized) Iron and Steel Wire and Wire Products. Covers testing of coatings applied by hot dip or electro-deposition. Weight of coating and uniformity determined by A. S. T. M. method A 90, dip designation meaning, wrap test requirements

for coated wire.

American Society for Testing Materials. A 123-30; 1930. Approved by American Standards Assn. as G8e-1930. Zinc (Hot Galvanized) Coatings on Structural Steel Shapes, Plates and Bars and Their Products. Zinc according to A. S. T. M. Spec. B 6, permissible impurities in zinc bath, minimum allowed weight of zinc coating and method of test, visual inspection requirements. Ashphalt Shingle and Roofing Institute. Nails.

Zinc in Protective Coating; 1921. Recommends hydrochloric acid-antimony chloride method for determining amount of zinc in protective coating, apparatus requirements, test procedure.

National Electric Light Assn. Suggested Specification. D210-22; 1922. Hot Galvanizing. Requirements on composition of standard test solution of copper sulphate, test procedure for detecting copper deposit after specified number of immersions. Published in 1924 N. E. L. A. proceedings.

Society of Automotive Engineers. 1931. Handbook. Flexible Conduit Ferrules; 1928. Includes salt spray test requirements for zinc or cadmium plated steel ferrules.

American Railway Assn. Telegraph and Telephone Section. 1-D-5. Undated, Galvanizing for Iron and Steel. Requirements on preparation of copper sulphate solution, number of samples of wire or hardware immersed simultaneously, time of immersion and temperature of solution, test pro-

Underwriters' Laboratories. Rigid Steel Conduit; 1931. Zinc coating on conduit. Requirements on elasticity test of coating by bend test of coated conduit, test for amount of coating by dipping in copper sulphate solution, number of dips for electroplated, sheraridized, and hot dipped types of coating, preparation of standard copper sulphate solution, test procedure. Underwriters' Laboratories. Tin Clad Fire Doors

and Shutters; 1930. Includes standard method for the determination of weight and composition of coating on terne plate for tin clad fire doors

and shutters.

S. Gov., Federal Specifications Board, 297; 1925. Wire Rope. Galvanizing. Minimum number of immersions for testing thickness of zinc

coating by Preece method.

S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Nickel Plating. Test of Nickel Plating on Brass. Requirements for thickness of nickel plating on articles according to amount of abrasion received in use. Electrolytic solution of nickel plating and determination of amount by dimethylglyoxime method.

Federal Specifications Board. FF-H-U. S. Gov., 101; 1930. Builders' Hardware, Nontemplate. Chromium Plating. For chromium plating on hardware, requirements on sequence of plating operations and thicknesses of coatings for chromium on nickel on nonferrous metals and for

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Nickel Plating. For nickel plating on hardware, requirements on thickness of coating for plating on nonferrous metals and of combined coating of nickel on cadmium or copper base for nickel plating on polished steel, methods of test.

S. Gov., Federal Specifications Board. 101; 1930. Builders' Hardware, Nontemplate. Zinc Coatings. Requirements on thickness of coating on hardware and also on accurately machined parts such as screw threads, methods of

References.—Nickel salts for nickel plating, See 839.39. Ammonium chloride (sal ammoniae) for gal-vanizing purposes. See 831.4. Other metallic coating requirements and methods of test. See specifications under individual commodities.

600.4 DEFINITIONS OF METALS

American Society for Testing Materials. A 81-30; 1930. Definitions of Terms Relating to Wrought-Iron Specifications. Definitions of wrought iron, bushelling, muck bar or puddled bar, slab pile, box pile, etc.

American Society for Testing Materials. E 7-27; 1927. Definitions of Terms Relating to Metallography. Definitions of alloy, alpha and beta brass, grain, micrograph, macrograph, etc.

600.5 HEAT TREATMENT OF METALS

American Society for Steel Treating, Handbook p. 91; 1929. Tentative General Recommendations for Heat Treatment of Tool Steels. General principles and precautions, types of cooling mediums and quenching mediums, explanatory items with reference to cooling, tempering, normalizing and annealing, recommendations.

American Society for Steel Treating. Handbook p. 96; 1925. Recommended Practice for the Heat Treatment of Plain Carbon Tool Steel. Normalizing of steel before hardening, heating, quenching and tempering, tables of temperatures for the above steps for steels of various carbon content.

American Society for Steel Treating. Handbook p. 100; 1925. Recommended Practice for the Heat Treatment of 18 per cent Tungsten High-Speed Steel. Instructions for annealing, quenching, preheating, tempering, with temperatures

specified and recommended baths.

American Society for Steel Treating. Handbook p. 102; 1928. Recommended Practice for the Heat Treatment of Nonshrinking, Nondeforming, Oil-Hardening Tool Steels. Applies only to steels of the chemical composition given. Instructions for heating for annealing, cooling, heating for quenching, quenching and tempering in oil, temperatures specified.

American Society for Steel Treating. Handbook P. 104. Recommended Practice for the Heat Treatment of Finishing Steel; 1927. Applies to fast finishing tool steel but not to high speed steel. Percentages of carbon, tungsten, chromium, and vanadium in steels considered, temperatures and procedure for annealing, quench-

ing, and tempering.

American Society for Steel Treating. Handbook p. 105; 1927. Recommended Practice for the Heat Treatment of Taps and Milling Cutters. Applies to tools of plain carbon tool steel, 18 per cent tungsten high-speed steel, and 1.50 to 2 per cent tool steel of chemical compositions specified. Instructions for annealing of steel after forging and before machining, and for annealing for removing machining strains, annealing temperatures and times.

chromium on nickel on cadmium on polished steel, American Society for Steel Treating. Handbook tolerance on individual pieces, methods of test.

p. 108. Recommended Practice for the Heat Treatment of Dies for Die Casting; 1930. Chemical composition of 6 steels suitable for dies, instructions for normalizing after forging, annealing, hardening and tempering of chromiumvanadium and of tungsten die casting steels.

American Society for Steel Treating. Handbook p. 113. Tentative Recommended Practices for the Heat Treatment of Plain and Alloy Steel Die Blocks; 1931. Includes cold and hot forming plain carbon die blocks, alloy steel die blocks, cold heading die-blocks XIII, and die blocks for silverware. Chemical composition of steels considered, temperatures and time for normalizing,

annealing, hardening, and tempering.

American Society for Steel Treating. Handbook p. 125. Tentative Recommended Practice for the Heat Treatment of Blanking Dies and Punches; 1928. Chemical composition, temperatures for normalizing, annealing, hardening, and tempering, and quenching medium for eleven steels including plain carbon, chrome vanadium, tungsten, and high-speed steel.

American Society for Steel Treating. Handbook p. 128; 1928. Tentative Recommended Practice for the Heat Treatment of Shear Blades. Chemical composition of steels for shears for hot and cold work on heavy and light material, heat treatment specification for each of the 10 listed

steels

American Society for Steel Treating. merican Society for Steel Treating. National Metals Handbook p. 131. Tentative Recommended Practice for Heat Treatment of Chisels; 1929. Approximate chemical composition of 5 suitable steels with recommended heat treatment

for each grade.

American Society for Steel Treating. Handbook, p. 132; 1929. Recommended Practice for the Heat Treating of Carbon Steels. S. A. E. Series. Chemical compositions, normalizing, annealing, quenching, and tempering temperatures, quenching medium and temperatures specified for S. A. E. steel Nos. 1010, 1020, 1025, 1030, 1035, 1040, 1045, automobile parts to which each steel is applicable, including the use of Nos. 1010 and 1020 for bolts, pins, cap screws, Nos. 1025 and 1030 for forgings, pressed and stamped parts, frames and washing machine parts.

American Society for Steel Treating, National Metals Handbook, p. 137. Recommended Prac-tice for the Heat Treatment of Carbon Steel Castings; 1929. Covers commercial castings for ordinary construction purposes, chemical compositions, recommended temperatures for single normalizing and annealing, for double normalizing and annealing, and for oil and water quenching with temperatures and times specified,

American Society for Steel Treating. National Metals Handbook, p. 142. Recommended Practice for the Heat Treatment of Alloy Steel Castings; 1929. For commercial alloy castings for ordinary construction purposes, approximate chemical compositions for 25 alloy steels, recommendations on normalizing treatments, annealing temperatures, quenching and tempering times and temperatures for each steel.

American Society for Steel Treating. Handbook, p. 148; 1929. Recommended Practice for the Heat Treatment and Care of Sling and Crane Chain. Recommendations for normalizing, testing, and inspecting chain after welding, precautions in use, safe load for different loadings, reduced factor of safety of worn chain, annealing treatment for iron chain.

American Society for Steel Treating. Handbook, p. 155; 1929. Recommended Practice for the Heat Treatment of Oil Hardening Alloy Gears.

Pertains only to gears of about the size of passenger car sliding gear. Chemical composition, normalizing, preliminary quenching and annealing after forging, heating, quenching and tempering of the gears for S. A. E. Steels Nos. 2345,

3250, 5150, and 6150,

American Society for Steel Treating, National Metals Handbook, p. 158. Recommended Prac-tice for the Heat Treatment of Plain Carbon and Alloy Spring Steel; 1929. Applies to medium and large coil springs and to flat springs. Chemical composition for 3 alloy and 2 carbon steels considered, recommendations on hardness limits of received steel, on normalizing, quenching and tempering temperatures and procedure, hardness limits of product.

American Society for Steel Treating, Tentative Recommended Practices; 1931. Heating, Forging, and Heat Treating of Locomotive Forgings.

The Heat Treatment of Spline Shafts. The Heat Treatment of Rivet Sets for Hot Work.

American Society for Steel Treating, National Metals Handbook, p. 217. Recommended Practice for the Carburizing and Heat Treatment of Camshafts; 1929. For S. A. E. steels 1015, 1020, 2320, 2512, 3120, 6120, nickel-molybdenum, and chrome vanadium steels, chemical compositions, recommended annealing and heat treatment before machining, carburizing, temperatures for carburizing, quenching and tempering, heating and quenching mediums.

American Society for Steel Treating. National Metals Handbook, p. 220. Recommended Prac-tice for the Carburizing and Heat Treating of Gears; 1929. Chemical composition of 8 steels considered, temperatures and method of cooling for annealing, temperatures for carburizing and quenching, quenching medium, for each steel, for each of 3 purposes for which heat treatment is

undertaken.

American Society for Steel Treating, National Metals Handbook p. 224, Recommended Practice for the Carburizing and Heat Treating of tice for the Carburizing and Heat Treating of Piston Pins; 1929. Chemical compositions, in-structions for carburizing, carburizing, quench-ing, and tempering temperatures, and quench-ing medium recommended for S. A. E. steels 1015, 2315, 2512, 3115, 4615, and 6115.

American Society for Steel Treating. Handbook Sheet A1-5601. Data Sheets; 1927. Heat Treatment of Wrought Aluminum Alloys of High Strength. Chemical composition, properties, grades and tempers for duralumin, 178, 258, and 51S alloys, mechanical properties, discussion of practice and suitable temperatures for annealing, for solution heat treatment, for precipitation heat treatment, welding and forming properties

of the alloys.

American Society for Testing Materials. Recom-mended Practice. A 35-24; 1924. Annealing of Miscellaneous Rolled and Forged Carbon Steel Objects. Rates of heating and cooling with temperatures specified for various steels, for removing coarse grain, for great softness and ductility, for high tensile strength and elastic limit, for removing effects of rolling and cold working, for combined high ductility and tensile strength, etc.

American Society for Testing Materials. Recommended Practice. A 36-24; 1924. Heat Treatment of Carbon Steel Castings. Procedure for annealing, normalizing, reheating, quenching, and recommended annealing temperatures for

various carbon content steels.

American Society for Testing Materials. Recom-mended Practice. A 37-27; 1927. Carburizing and Heat Treatment of Carburized Objects. Procedure and precautions to be observed, table of temperatures and cooling mediums recommended for preliminary heat treatment, carburizing, re-fining and hardening for 13 S. A. E. steels, common defects in carburized objects.

American Society for Testing Materials. A 119-30; 1930. Definitions of Terms Relating to Heat Treatment Operations (Especially as Related to

Ferrous Alloys).

Society of Automotive Engineers. 1931 Handbook. General Heat Treatments; 1930. General infor-mation on heat treatments applicable to the various steels specified in the Handbook. Not a part of the standard specifications but intended as a guide to heat treatment and the physical properties that may be expected after heat treatment.

References.—Other heat treatment requirements.

600.6 PLUMBING

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses, Plumbing: Supporting, minimum fall, uses of bends, weights of cast-iron soil pipe, general quality requirements for wrought-iron pipe, lead pipe, brass pipe, connections, installation of pipe and fittings, minimum sizes for various applications, etc., typical plumbing fixtures with main dimensions.

National Assn. of Master Plumbers of the U. S. Plumbing Symbols; 1927. Standard symbols for plumbing fixtures, drains, and exposed piping for various purposes, symbols for piping include plan and line symbols, band initial and band color.

U. S. Gov., Dept. of Commerce. Bureau of Standards. BH13; 1928. Recommended Minimum Requirements for Plumbing. Recommended by Building Code Committee for incorporation in building codes of States and cities, includes definitions of terms, regulations on slope of horizontal piping, change in direction, prohibited fittings, quality of materials in general according to A. S. T. M. specifications, requirements on minimum thickness of sheet metals, construction of joints and connections, kinds, sizes, materials, and required installation of traps, pipe cleanouts, back water valves, water supply pipes, waste stacks, vent pipes, house drains and sewers, storm drains, etc., inspection and test requirements for completed installation, recommended construction details.

References .- Plumbing fixtures. See 617.7.

600.7 WEIGHTS AND TOLERANCES OF IRON AND STEEL

American Society for Testing Materials. E 12-27: 1927. Definitions of Terms Relating to Specific Gravity. Specific gravity, absolute, apparent and

bulk.

Association of American Steel Manufacturers. Standard Practice Governing Allowable Varia-tions in Size and Weight of Hot Rolled Bars; 1910. Standard allowable variations in weight of bar sizes of angles, tees, zees, and channels, and variations in size of rounds, squares, hexagons, and flats.

Assn. of American Steel Manufacturers. Standard Permissible Variations in Gage Weight, Gage Thickness, Size and Flatness of Sheets and Light

Plates Blue Annealed; 1929.

601. ORES, PIG IRON, AND SCRAP 601.1 IRON ORE

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Crescent iron ore. Sample No. 26 prepared and sold by the bureau with a certificate giving percentages of Al2O3, CaO, and MgO, for use by industrial organizations and others as a comparison ! standard in checking the accuracy of analysis of

iron ores, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Magnetite iron ore (titaniferous). Sample No. 29 prepared and sold by the bureau with a certificate giving complete analysis, for use by industrial organizations and others as a comparison standard in checking the accuracy of analysis of

standard in checking the accuracy from ores, etc.
U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples.
Norrie iron ore. Sample No. 28 prepared and sold by the bureau with a certificate giving percentage Mn (low), for use by industrial organizations and others as a comparison standard in checking the accuracy of analysis of iron ores, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Sibley iron ore. Sample No. 27a prepared and sold by the bureau with a certificate giving per-centages of SiO₂, P, and Fe, for use by industrial organizations and others as a comparison standard in checking the accuracy of analysis of iron

ores, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards, C26; 1921. Analyzed Iron and Manganese Ores, Methods of Analysis. With special reference to standard samples Nos. 25b, 26, 27a, 28, and 29 of iron ores, the methods used by the bureau are given for mixing and drying of material, for determination of silica, phosphorus, sulphur, aluminum, titanium, vanadium, iron, etc., standardization of permanganate solutions.

References.—Chrome, manganese, and silicon ores. See 621.1. Ferrochrome, ferromanganese, etc. See 621.2.

601.2 PIG IRON

601.20 General Items

American Society for Testing Materials. A 64-27; 1927. Standard Methods of Sampling and Chemical Analysis of Pig and Cast Iron. Sampling and treatment of samples from pig and casting, permissible variations in chemical analyses from different sources, determination of total carbon, of manganese, phosphorus, sulphur, silicon, small amounts of chromium, nickel, copper, titanium, arsenic.

601.21 Charcoal Pig Iron

601.22 Coke Pig Iron

601.23 Foundry Pig Iron

American Railway Assn. Mechanical Division. Recommended Practice; 1916. Iron, Foundry Pig. Chemical composition requirements for three grades, foundry coke, low silicon, and high man-ganese pig iron and also for foundry charcoal pig iron

American Society for Testing Materials. A 43-24; 1924. Foundry Pig Iron. Permissible variations from purchasers chemical composition, specifications, sampling requirements, recommends standard methods of sampling and chemical analysis

of A. S. T. M. No. A 64. U. S. Gov., Federal Specifications Board. 126a; 1928. Foundry Pig Iron. For 4 regular grades, requirements on chemical composition, for special grades, permissible tolerances on specified compositions, to conform to F. S. B. Spec. 339 for metale

References.—Methods of testing and general requirements for metals. See also 601.20, 600.1. Ferrochrome, ferromanganese, etc. See 621.2.

602.2 STEEL BARS AND BILLETS

American Railway Assn. Mechanical Division. Recommended Practice; 1925. Carbon Steel Blooms, Billets, and Slabs for Forgings. classes according to carbon content, class A for welding and casehardening, class B for case-hardening when later heat treated, class C for special purposes, class D for axles, shafts, connecting rods, class E for class D that are to be heat treated. Chemical analysis of each class.

American Society for Testing Materials. A 17-29: 1929. Carbon Steel and Alloy Steel Blooms, Billets, and Slabs for Forgings. Includes one type of carbon steel, chemical composition test requirements, reduction from ingot requirements

and permissible chipping.
U. S. Gov., Federal Specifications Board. 316;
1925. Steel Blooms, Billets, Slabs, and Bars for Reforging, Carbon and Alloy. General quality requirements, amount of ingot discard, minimum reduction in area in rolling from ingot to billet, sampling, chemical composition, tensile test, and cold bend test requirements for 4 grades of carbon steel and 6 grades of alloy steel.

References.—Methods of analysis, general requirements for metals. See also 600.1. Alloy steel billets. See 621.31.

603. IRON AND STEEL BARS, RODS, AND WIRE

603.0 GENERAL ITEMS

American Railway Assn. Purchases and Stores Div. Standard Method of Designating Class. Kind or Grade of Steel and Iron Bars by Painting the Ends; 1926. Recommended colors for engine bolt and staybolt iron, for mild steel, and for bar iron.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Common, Merchants, Mild Steel or Open-Hearth Bars. Dimensions of rec-ommended standard sizes, 24 rounds, 11 squares, 4 half rounds, and 89 flat bars, bands, and plates.

603.1 WROUGHT IRON BARS AND RODS

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Iron stays and rivet bars. Requirements on tension test and bend test.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Round and flat iron bars. For bars as rolled and for bars reduced by machining, requirements on tension test, cold bend and hot bend tests.

American Electric Railway Engr. Assn. E16-24: 1924. Standard Specification for Refined Wrought-Iron-Bars. (Identical with A. S. T. M. Specification A41-18.) Tension, bend and etch tests, and permissible variations in dimensions of

round and flat bars.

American Electric Railway Engr. Assn. Recommended Specification W104-28; 1928. Approved by American Standards Assn. as tentative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes wrought iron common or refined for rods, reinforcing, bars, fillers and small forgings. Manufacture according to A. S. T. M. or A. R. A. specifications, tensile strength requirements.

American Railway Assn. Mechanical Division. Recommended Practice; 1926. Engine Bolt Iron. Puddled iron, tensile, bend, step, and etch test requirements, permissible variations in gage of round, square and hexagonal bars.

American Railway Assn. Mechanical Division.
Recommended Practice: 1926. Staybolt Iron Hollow, Locomotive. From puddled or charcoal iron, chemical analysis, tension, bend, splitting

and etch test requirements, variation in gage.

American Railway Assn. Mechanical Division.

Recommended Practice; 1926. Staybolt Iron, Solid, Locomotive. From puddled or charcoal iron, chemical analysis, tension, bend and etch

test requirements, variation in gage.

American Railway Assn. Mechanical Div. Recommended Practice. Wrought Iron Bars, Refined: 1930. Requirements on chemical composition, tension tests, bend tests, hot bend tests, nick bend tests, and etch tests.

American Railway Assn. Signal Section. 1830; 1930. Wrought Iron Bars. General quality requirements, tensile, fracture, bend, and etch test requirements, permissible variations in dimensions.

American Society of Mechanical Engineers. Boiler Construction Code. Section II; 1930. Specifica-tions for Boiler Rivet, Staybolt, and Extra-Re-fined Bar Iron. For reworked, puddled or charcoal iron, tension, bend and etch test requirements, permissible variation in gage. Based substantially on A. S. T. M. standard specifications for staybolt, engine bolt and extra-refined wrought iron bars (A84-27.)

American Society of Municipal Engineers. Sew-

ers; 1927. Includes wrought iron used in sewer construction, general quality of merchant iron, tensile strength and elastic limit requirements,

fracture test requirements.

American Society for Testing Materials. A 41-30; 1930. Approved by American Standards Assn. as G12-1931. Refined Wrought-Iron Bars. Tension, bend, and etch test requirements, standard gages and permissible variations in gage. 1918 edition available in Spanish and in French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 84-30; 1930. Staybolt, Engine-Bolt and Extra-Refined Wrought-Iron Bars. For three grades of iron, chemical composition and tests, tension, bend and etch test requirements, permissible variations in gage. 1924 edition available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce, U. S. Dept. of Commerce. American Society for Testing Materials. A 85–27; 1827. Common Iron Bars. May be of reworked

iron scrap with some steel scrap. Chemical composition and tests, tension, bend and etch test requirements, permissible variations in gage.

American Society for Testing Materials. A 86-30; 1930. Hollow Rolled Staybolt Iron. Chemical composition and tests, tension, bend, splitting, and etch test requirements, permissible variation in gage.

S. Gov., Federal Specifications Board. 391; 1926. Iron, Bar, Wrought, Refined. For one grade, tension test, cold bend test, hot bend test, fracture test, and metallographic examination requirements, permissible variations in dimensions specified.

References.—Standard sizes, marking of type. See 603.0. Methods of testing, general requirements for

metals. See also 600.1. Classification of metals. See 600.2. Zinc coatings. See 600.3. Size and weight tolerances. See also 600.7.

603.2 CARBON STEEL BARS AND RODS

603.21 Steel Stock for Bolts, Nuts, Rivets, and Screws

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel Rivets. Includes rivet bars for boiler rivets and for hull rivets, tension test requirements of bar stock.

American Railway Assn. Mechanical Div.: 1925. Rivet Steel and Rivets for Locomotive Tenders. Passenger and Freight Equipment Cars. Chemical composition, tension, bend, and flattening test requirements, dimensions and permissible variations.

American Railway Assn. Mechanical Division. Recommended Practice; 1923. Rivet Steel and Rivets for Steam Boilers and Other Pressure Vessels. Chemical composition, tension, bend and flattening test requirements, permissible varia-

tion in dimensions.

American Railway Engineering Assn. 1929 Man-ual. Iron and Steel Structures. Steel Railway Bridges; 1924. Includes rivet steel specifications. Agree with A7-24 of American Society for Testing Materials except for permissible variation in weight of plates.

American Society of Mechanical Engineers. Boiler Construction Code. Section II; 1930. Specifica-tions for Boiler Rivet Steel. Chemical analysis, tension and bend test requirements for rolled bars and bend and flattening test requirements for rivets, permissible dimension tolerances. Identical with A. S. T. M. Specifications for boiler rivet steel, A 31-24.

American Society of Mechanical Engineers. Boiler

merican Society of Mechanical Engineers. Bother Construction Code. Section II. Specifications for Staybolt Steel; 1930. Chemical composition, tension and fracture test requirements, permissible variation in gage, for solid or hollow bars and for seamless steel tubing for staybolts.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers under procedure of American Standards Assn. B 18a-1927. Small Rivets, under 75-inch diameter. Chemical composition, strength, ductility, and hardness tests for the rivet material, tables of standard dimensions and tolerances for the standard types, flat head, countersunk head, button head, pan head, and truss or wagon-box head

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers under procedure of American Standards Assn. A. S. A. serial B 18g-1928. Tinners, Coopers' and Belt Rivets. Chemical composition, strength. ductility, and hardness requirements for the steel stock, tables of dimensions for the rivets.

American Society for Testing Materials. A 7-29; 1929. Structural Steel for Bridges. Includes rivet steel, chemical composition, tension, and bend

test requirements.

American Society for Testing Materials. A 9-29; 1929. Structural Steel for Buildings. Includes rivet steel, chemical composition, tension and bend test requirements, permissible variations in cross section and weight from quantities specified.

American Society for Testing Materials. A 13-24; 1924. Rivet Steel for Ships. For rolled bars, required chemical composition and tests, tension and bend test requirements, permissible variation in diameter, for the rivets, bend and flattening test requirements.

American Society for Testing Materials. A 31-24; 1924. Boiler Rivet Steel. Chemical composition and tests, tension and bend test requirements, and

permissible variation in diameter for the rolled bar, bending and flattening test requirements, and variations in diameter for the rivets. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 107-30; 1930. Commercial Quality Hot Rolled Bar Steels. Covers carbon steel rounds, squares and hexagons. Chemical composition and tests for two grades of screw steel, permissible variations in dimensions.

American Society for Testing Materials. A 108-30; 1930. Commercial Cold-Finished Bar Steels and Cold-Finished Shafting. Covers carbon steel rounds, squares, hexagons, flats, and shafts. Chemical composition and test requirements for

11 grades, including 2 grades of screw steel. American Society for Testing Materials. A 113-29; 1929. Structural Steel for Locomotives and Cars. Includes rivet steel, chemical composition, tension and bend test requirements, permissible variations in weight and dimensions from quan-

tities specified.

Assn. of American Steel Manufacturers. tural and Boiler Steel; 1922. Includes structural rivet steel and boiler rivet steel, chemical composition, tension, and bend test requirements, permissible variations in size and weight of bars. Society of Automotive Engineers. 1931 Handbook.

Castle Hexagon Nuts, Aeronautic. Dimensions of nuts, tension test requirements of bar steel stock. Society of Automotive Engineers. 1931 Handbook. Plain Hexagonal Nuts, Aeronautic; 1928. Dimensions of nuts and tensile test requirements of bar steel stock.

Society of Automotive Engineers. 1931 Handbook. Screw Stock Steel; 1931. Chemical composition

requirements for 2 grades.

U. S. Gov., Federal Specifications Board. 1929. Steel, Structural, for Bridges. Includes 2 classes of rivet steel, noncopper and copper. Chemical composition, tensile test, and bend test requirements, permissible variations in dimensions from ordered quantities.

S. Gov., Federal Specifications Board. 352a; 1929. Steel, Structural, for Buildings. Includes class C, rivet steel, noncopper; class D, rivet steel, copper. Chemical composition, tensile test, and bend test requirements, permissible varia-

tions in size from sizes ordered. U. S. Gov., Federal Specifications Board. 373a; 1929. Steel, Structural, for Cars. Includes grade E, rivet steel, noncopper, and grade F, rivet steel. copper. Chemical composition, tension test, and bend test requirements, permissible variations in dimensions of rounds and flats from ordered quantities.

U. S. Gov., Federal Specifications Board. QQ-S-751; 1931. Steel, Structural, for Ships Other Than Naval Vessels. Includes rivet steel. Chemical composition, tension test, and bend test requirements, permissible variations in dimen-

sions.

U. S. Gov., Federal Specifications Board. Steel, Staybolt, Boiler. One grade for either solid or hollow staybolts, physical appearance, chemical composition, tension test, bend test, and fracture test requirements, permissible variations in dimensions of round bars.

References.—Alloy steel stock for bolts, treets, serves, See (21.31. Standard sizes, marking of type, or bars. See (60.0. Methods of testing, general requirements for metals. See also (600.1. Classification of metals, size and weight tolerances. See also (600.2, 600.7. Screws, botts, rivets. See 608.2, (608.3, 608.4.)

603.22 Steel for Case Hardening

Society of Automotive Engineers. 1931 Handbook. Carbon Steels; 1929. Chemical composition re-

quirements for 13 grades, including 1 grade suitable for casehardening.

References.—Standard sizes, marking of type. See 603.0. Methods of testing, general requirements for metals. See also 600.1. Classification of metals, size and weight tolerances. See also 600.2, 600.7. Alloy steel for casehardening. See 621.31.

603.23 Commercial Grade Steel Bars and Rods

American Society of Mechanical Engineers. Boiler Construction Code. Section II. Specifications for Steel Bars; 1930. Chemical composition, ten-sion and bend test requirements, permissible variation in gage. Based on A. S. T. M. Spec. A 7-24. See 605.11.

American Society for Testing Materials. A 107-30; 1930. Commercial Quality Hot Rolled Bar Steels. Covers carbon steel rounds, squares and hexagons of all sizes and flats not over 6 inches wide. Chemical compositions and tests for 21 grades of open-hearth, bessemer, and screw steel,

permissible variation in dimensions.

American Society for Testing Materials. A 108-30; 1930. Commercial Cold-Finished Bar Steels and Cold-Finished Shafting. Covers rounds, squares, and hexagons of all sizes, and flats and shafts up to 6 inches. Chemical composition and tests for 8 grades of open-hearth, 1 of bessemer, and 2 of screw steel, permissible variations in dimensions.

ssociation of American Steel Manufacturers. Commercial Quality Bar Steel; 1924. For hot rolled carbon steel bars, chemical composition re-Association quirements, check analyses, allowable variations in sizes of bars.

References.—Standard sizes, marking of type. Sec 603.0. Methods of testing, general requirements for metals. Sec also 600.1. Classification of metals, size and weight tolerances. Sec also 600.2, 600.7. Structural grades. Sec also 605.1.

603.24 Steel for Shafts, Axles, and Forgings

American Society for Testing Materials. A 108-30; 1930. Commercial Cold-Finished Bar Steels and Cold-Finished Shafting. Covers rounds, squares, and hexagons of all sizes, and flats and shafts up to 6 inches. Chemical composition and tests for 8 grades of open-hearth, 1 of bessemer, and 2 of screw steel, permissible variations in dimensions.

Association of American Steel Manufacturers. Special Forging Quality Bar Steel; 1924. For hot rolled carbon steel bars, chemical composi-tion requirements, check analysis, permissible variations in composition and dimensions.

Society of Automotitve Engineers. 1931 Handbook. Carbon Steels; 1929. Chemical composition requirements, for 13 grades, including grades suitable for forged, machined, or cold worked parts for automotive uses.

References.—Other steels of forging quality. See 611.51 and specifications of commodities made of forged steel. Standard sizes, marking of type. See 603.0. 603.25 Steel Reinforcing Bars and Rods

References.-Reinforcement steel. See 605.25.

603.26 Steel Bars and Rods for Welding

American Electric Railway Engr. Assn. W46-30; 1930. Welding Rod. For plain uncoated steel arc welding rod, for 3 grades dependent on content of carbon, requirements on chemical composition, tolerances on dimensions, standard sizes, general quality, welding test.

References.—Methods of testing and general requirements for metals. See also 600.1. Welding apparatus and practice. See 767. Iron and carbon steel welding

wire. See 603.41 Cast-iron rod for welding. See 611.19. Brass rod, aluminum rod, for welding. See 645.11, 631.31,

603.27 Steel Bars and Rods for Automotive and Railway Use

American Electric Railway Engr. Assn. Recom-mended Specification. W104-28; 1928. Approved by American Standards Assn. as tentative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes rolled steel bars, chemical composition, tensile strength, and bend test requirements.

Society of Automotive Engineers. 1931 Handbook, Carbon Steels; 1929. Chemical composition requirements for 13 grades suitable for automotive uses.

References.—Steels suitable for railway and automo-tion to the steel of the steel

603.3 SPRING AND TOOL STEEL BARS AND RODS 603.31 Drill Tool Steel Bars and Rods

603.32 Hand, High-Speed, and Machine Tool Steels

American Railway Assn. Purchases and Stores Standardization and Simplification of Stores Stock; 1930. Report of committee recommending list of standard sizes to be carried in stock of flats, rounds, and squares of high-speed steel, and octagons, rounds, and squares of carbon tool steel.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes tool steel, chemical

composition requirements.

American Society for Testing Materials. A 71-26; 1926, Carbon Tool Steel. Suitable for lathe and planer tools, drills and milling cutters, dies, etc. Permissible variations from chemical composition specified, method of sampling, tolerances in di-mensions, the recommended practice for the heat treatment of plain carbon tool steel of the American Society for Steel Treating is included.

References.—Standard sizes, marking of type. See 603.0. Methods of testing, general requirements forments. See 43s 600.1. Classification of metals, size and weight tolerances. See 41so 600.2, 600.7. Heartteatments. See 31so 600.2, 600.7. House 15 see 621.35.

603.33 Spring Steel Bars and Rods

American Electric Railway Engr. Assn. Recommended Specification. W104-28; 1928. Approved by American Standards Assn. as tentative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes helical steel springs, chemical composition requirements for the spring steel bar stock.

American Railway Assn. Mechanical Division. Steel Bars, Carbon, for Railway Springs; 1917. Chemical analysis, permissible variation in gage for flats, rounds and squares, for elliptical and

helical springs.

American Society for Testing Materials. A 14-27; 1927. Carbon Steel Bars for Railway Springs. Covers grade A for elliptical and helical springs, grade B for helical springs. Chemical composition and tests, permissible variations in dimensions. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 58-27: 1927. Carbon Steel Bars for Vehicle and General Purpose Springs. For two grades of steel, chemical composition and tests, permissible variations

in dimensions.

American Society for Testing Materials. A 68-27; 1927. Carbon Steel Bars for Railway Springs with Special Silicon Requirements. Covers grade A for elliptical and helical springs, grade B for helical springs. Chemical composition and tests, permissible variations in dimensions.

Society of Automotive Engineers. 1931 Handbook. Carbon Steels; 1929. Chemical composition requirements for 13 grades, including 3 grades of

spring steel.

603.4 IRON AND STEEL WIRE

603.40 General Items

U. S. Gov., Dept. of Commerce. Bureau of Standards. C67; 1918. Wire Gages. Combined tables of sizes of American (B. & S.) wire gage, steel wire gage, Birmingham (Stubs) wire gage, British standard wire gage, and metric wire gage, with diameters in mils, inches, and metric units, and cross section in square mils, square inches, and metric units.

603.41 Bare and Coated Iron and Steel Wire

American Bureau of Welding. Bulletin No. 2: 1921. Welding Wire Specifications and Folios. Chemical composition requirements, uses, and recommended sizes for iron and steel bare electrodes, for iron and steel gas welding rods, for coated or covered electrodes not including chemical composition of coating, for gas welding rods for welding high carbon steels, nonferrous metals and mild steel.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1924. Welding Wire and Rods. Two classes of wire for gas or electric welding of wrought iron and cast or wrought steel. Chemical compositions, dimensions and toler-

ances.

American Society for Testing Materials. A 82-27; 1927. Cold-Drawn Steel Wire for Concrete Reinforcement. For wire of gages 0.080 to 0.625 inch. Tension and bend test requirements, per-

missible variations in gage.

U. S. Gov., Federal Specifications Board, 174; 1924. Welding Wire, Iron and Steel. For bare iron and steel electrodes in 4 grades dependent on amount of carbon, for plain iron and steel gas welding wire in 3 grades dependent on car-bon content, for cast iron welding rod in one grade, for welding low and high carbon steels, nickel steel and cast iron. General physical quality and adaptability requirements, chemical composition requirements

References.—Iron and steel welding rod. See also 603.26, 611.19, 622.4. Alloy steel welding wire. See 622.4. Fence wire. See also 603.33. Telephone, telegraph, signal, track bonding wire of iron or steel. See 115.43. Methods of testing, general requirements for metals. See also 600.1. Wire gages. See also 603.40. Zinc coatings and tests. See also 600.3.

603.42 Bare and Coated Wire Rope

American Assn. of State Highway Officials. Tentative Specification. M-30; 1927. Wire Rope and Fittings for Highway Guard Rail. For 4-inch and 1-inch steel rope, requirements on weight and testing of galvanizing, construction, lay, and tensile strength of rope, dimensions, threading, galvanizing and tensile strength of forged eye bolts, sampling and testing in accordance with A. A. S. H. O. methods.

A. A. S. N. O. Methods. American Assn. of State Highway Officials. Tenta-tive Method. T-39. Undated. Methods of Tests for Wire Rope (Guardrail). Definitions of lay

and diameter of wire rope, requirements on method of preparation of tension test specimen, attachment of socket and tension test procedure.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel wire ropes. Requirements on breaking strength for various sizes and strandings of wire rope for stream cables, towlines, hawsers, and warps, and

for wire rigging. American Electric Railway Engr. Assn. Recom-mended Specification. D102-29; 1929. Overhead Line Materials for Direct and Catenary Suspension. Includes 7 strand steel guy and messenger cable, requirements on factor of safety when using, galvanized strand to conform to A. S. T. M.

spec. A122

American Marine Standards Committee. H No. 9-1926. Wire Rope Sockets. Dimensioned drawing for wrought steel sockets, 18 standard sizes of open and closed types, strength requirements of material.

American Marine Standards Committee, H No. 10-1926. Solid Thimbles for Wire Rope. Dimensioned drawing for cast iron thimbles, 19 stand-

ard sizes

American Marine Standards Committee. H No. 11–1926. Open Thimbles for Wire Rope. Dimensioned drawing for wrought steel thimble for 24

standard sizes.

American Marine Standards Committee. O No. 25-1930. Standard Wire Ropes for Marine Uses. For 4 strength grades of cast steel and plow steel rope, uncoated and galvanized, constructions and their ordinary uses for 10 standard ropes, including fiber cored, marline clad types, sash and bell cord, requirements on weight, breaking strength, lay, strand fabrication, tolerance on diameter, torsional and wrapping test and test for galvanizing for various sizes of each type, recommended practice on storing, handling, and use.

American Mining Congress, sponsor, American Standards Assn., M 11-1927. Wire Rope for Mines. Types, material grades according to strength, torsional and wrapping test requirements, galvanizing, fiber core and lubrication requirements, weight, minimum strength, and construction of the various grades of rope, and recommended practice in the use of wire rope at mines, clamping, seizing, socketing, splicing, drums and sheaves, lubrication, safety factor.

American Petroleum Institute. Standard No. 9-A; 1931. Wire Rope. For plow steel, extra strong cast steel, and cast steel grades of wire rope, requirements on tension, elongation, torsion, and bend tests of wire, and strength test of full sized rope, tolerances on manufacture, lubrication, directions for attaching sockets, breaking strength and galvanizing test for galvanized guy strand.

Wire rope for oil drilling lines.

American Railway Assn. Signal Section. 4714: 1914. Galvanized Messenger Wire. Seven-strand wire cable, general quality and diameter of wire, diameter, area, strength, elongation, lay, weight, wrapping test requirements for 3 sizes of cable, galvanizing according to Signal Section specification 2912

American Railway Assn. Telegraph and Telephone Section. 1-A-17: 1927. Galvanized Steel Guy and Messenger Strand. For 7-strand cable, dimensions, lay, and tensile strength requirements for 4 sizes of cable, galvanizing according to A. R. A. specifications 1-D-5.

American Railway Engineering Assn. 1929 Man-Iron and Steel Structures. Movable Rail-Bridges: 1922. Includes wire rope and attachments, stranding and size limits for plow steel around hemp center, allowable stress in forged steel sockets, tensile strength, elongation, wrapping, and repeated bending test requirements for wire, strength test requirements for

rope and sockets.

American Society for Testing Materials. Zinc Coated (galvanized) Steel Wire Strand suitable as guy wire, messenger wire, span wire, etc. Zinc according to A. S. T. M. specifications B 6, requirements on weight and uniformity of zinc coating using A. S. T. M. test method A 110, construction of strand, weight, size of wires, breaking strength, and elongation requirements

National Electric Light Assn. Suggested Specifications. D300–22; 1922. Thimble. — D308–22; 1922. Eye Nut. — D309–23; 1923. Clevis. Dimensions and allowable variations for 3 sizes of steel thimbles, one size each of forged steel eye nut and steel clevis, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22. Published in 1924 N. E. L. A.

proceedings.

National Electric Light Assn. Suggested Specifications. D308-22. Eye Nut. Dimensions of one size of forged steel eye nut threaded for connection to rod or cable, permissible varia-tions in dimensions, material according to N. E. L. A. specifications D200-22 and D209-22, galvanizing according to D210-22. Published in

vanishing according to D210-22. Fublished in 1924 N. E. L. A. proceedings. National Electric Light Assn. Suggested Specifi-cations. D650-28T; 1928. Tentative. Galvanized Steel Strand. For 7-strand cable, sizes 1/4 to ½-inch, requirements on size and permissible variations of individual wires, on weight of cable, breaking strength for 4 grades, (standard, stements martin, high strength, extra-high strength), pitch, lay, bending test, galvanizing according to N. E. L. A. spec, D210.

National Electric Light Assn. Suggested Specifi-cations. D660–28T; 1928. Tentative. Copper Covered Steel Strand. For 7 sizes of 7-strand cable, standard and extra-high strength, requirements on size of wires, weight of cable, tensile strength and elongation, pitch and lay, conductivity, ferroxyl test for copper coating, test of

adhesion of copper to steel.

ociety of Automotive Engineers. 1931 Hand-book. Shackles, Aeronautic; 1928. Dimensions Society of Automotive Engineers. of shackles for various strengths up to 1/2-inch bolt hole size.

Society of Automotive Engineers, 1931 Hand-book. Recommended Practice. Steel Thimbles, Aeronautic; 1918. Dimensions of galvanized thimbles for wire cable $\frac{\pi}{6}$ to %-inch diameter. U. S. Gov. Dept. of Agriculture. Bureau of Public

Roads. Forest Road Construction; 1929. Wire Cable Guardrail. For cable for guardrail, requirements on general quality of wire, method of applying and test for amount of galvanizing. for 7 wire %-inch cable, requirements on stranding and lay, size of wire, minimum strength of cable.

U. S. Gov., Federal Specifications Board. 297; 1925. Wire Rope. Covers 19 types of wire rope and seizing strand, uncoated and galvanized, made from five grades of steel and one grade of phosphor bronze. Strength requirements of wires, torsional, wrapping and galvanizing test requirements for wires, construction, dimensions, weight, breaking strength, safe working load, and recommended sizes of sheaves or drums, information on handling, application of seizing and sockets and clips, care and uses,

References .- See references under 603.43.

603.43 Manufactures of Iron and Steel Wire

American Railway Engineering Assn. 1929 Manual. Standard Right-of-Way Fences; 1926. Covers 2

types of steel smooth wire fencing, 1 type of combined woven and barbed wire fence, and 1 type of ribbon, smooth wire or barbed wire fence. Gage and spacing of longitudinal and stay wires, strength, winding, and galvanizing requirements, material and dimensions of wood posts and of staples, erection of fence, recommended types of

American Society for Testing Materials. A 116-30; 1930. Zinc Coated (Galvanized) Farm-Field and Railroad Right-of-Way Wire Fencing. Requirements on weight and uniformity of zinc coating using A. S. T. M. method of test A 110, permissible variations from nominal wire sizes, recommends styles and sizes of fence fabrics given in Simplified Practice Recommendation No. 9 of

U. S. Dept. of Commerce.

American Society for Testing Materials. A 117-30; 1930. Zinc Coated Chain Link Fence Fabric Galvanized after Weaving. Pickets are helically wound and interwoven into a link fabric without knots or ties, usual wire and mesh sizes and heights of fence, zinc according to A. S. T. M. specifications B 6, weight and uniformity of zinc coating tested according to A. S. T. M. method A 110.

American Society for Testing Materials. Tentative Specifications. A 118-30T; 1930. Zinc Coated Chain Link Fence Fabric Galvanized before Weaving. Pickets are helically wound and interwoven into a link fabric without knots or ties. Usual wire and mesh sizes and heights of fence, zinc according to A. S. T. M. specifications B 6, requirements on weight and uniformity of zinc coating, tests in conformity with A. S. T. M. method A 110, for farm field fence wire and for railroad right-of-way fence wire.

American Society for Testing Materials. A 121-30; 1930. Zinc Coated (Galvanized) Barb Wire. For wire coated before or after fabrication, zinc according to A. S. T. M. specifications B 6. usual sizes and construction of barb wire, requirements on weight and uniformity of coating using A. S. T. M. test method A 110, size tolerance.

American Society for Testing Materials. E 11-26; 1926. Sieves for Testing Purposes. Construction requirements, table of sieve openings and wire diameters with permissible variations, methods of testing sieves, for brass, bronze or other suitable

wire sieves.

Society of Automotive Engineers. 1931 Handbook. Wire Cloth; 1924. For mesh sizes 8 to 200, diameter of wire and size of opening, tolerance in spacing and size of wire, materials as specified by purchaser, usually steel or brass up to 80 mesh and phosphor bronze or monel metal above that

U. S. Gov., Dept. of Commerce. Bureau of Standards R9-28; 1928. Woven Wire Fencing. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes and varieties of field fence, close-mesh hog and cattle field fence, wolf-proof fence, and poultry fence, with heights, weave, sizes and spacing

of wires. U. S. Gov., Dept. of Commerce. Bureau of Standards, R122-31; 1931. Wire Insect Screen Cloth. Simplified practice recommended and accepted by industry establishing a limited number of stock varieties of black painted and electro-galvanized steel wire screen cloth and of copper and commercial bronze wire screen cloth, includes standard mesh openings, sizes of wire, widths of roll, length of roll, packing, required percentage of copper for copper and bronze screen wire.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders Hardware, Nontemplate.

Ceiling Hook, Coat and Hat Hooks, Hooks and Eyes. Dimensions and illustrated construction of hooks made from steel wire.

U. S. Gov., Federal Specifications Board, FF-H-101; 1930. Builders Hardware, Nontemplate. Hooks and Eyes. Four standard lengths of brass or steel wire hooks and screw eyes as illustrated.

. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Single Jack Chain, Double Jack Chain, Ladder Chain, Register Chain, Flat Lock Link Chain, Single Jack Lock Link Chain. Wire gage, links per foot, weight, tensile strength requirements for several sizes of

each type.

U. S. Gov., Federal Specifications Board. RR-F-221; 1930. Wire Fencing, Barbed, Netting, and Woven Wire, Black and Galvanized. For zinc coated barbed wire, for black or zine coated woven wire farm or field fencing, and for zinc coated wire netting, requirements on size of wire, spacing of barbs, sizes of mesh and width of netting, woven wire fencing to conform to sizes in R9 of Nat. Bureau of Standards, required weight and dip of coating, methods of sampling and testing of coating, also in conformity with F. S. B. spec. 339a for metals and 91a for zinc.

References.—Methods of testing, general requirements for metals. See also 600.1. Zinc contings and tests. See also 600.3. Wire lath. See 605.24. Wire fabric for concrete reinforcement. See 605.25. Motor-cycle spokes. See 725.2. Bed springs and wire fabric for beds. See 613.1.

603.5 CHAINS AND ATTACHMENTS

603.50 General Items

U. S. Gov., Dept. of Commerce. Bureau of Standards. R100-29; 1929. Welded Chain. Simplified practice recommended and accepted by industry in which the sizes and varieties listed in the publication are eliminated from the list of stock items formerly provided, including sizes of straight link proof coil and BB chain, breast chains, cart back chains, trace chains, wagon chains, chain dogs, ring dogs, heel chains, etc.

603.51 Long-Link Chains

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Long Link Coil Chain. Covers buoy or submarine net chain of wrought iron and con-veyor or sprocket-wheel chain of iron or steel. Chemical composition of iron or steel, proof and breaking load test requirements, dimensions and weight for sizes up to 2-inches.

References.—Methods of testing, general requirements for metals. See also 600.1.

603.52 Short Link, Straight-Link Chains

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Chains. For wrought iron or steel unstudded short link chain, requirements on breaking test, proof test, and weight for various sizes.

weight for various standards Committee. H No. 14-1926. Railroad Iron Sling for Cargo Han-dling Gear for Ships. Dimensional drawing of standard size, to be in conformity with Am. Bureau of Shipping specifications for chains.

American Marine Standards Committee. H No. 15-1926. Chain Sling for Cargo Handling Gear for Ships. Dimensional drawing of standard size, to be in conformity with Am. Bureau of Shipping specifications for chains.

American Railway Assn. Mechanical Div. Recommended Practice. Chain; 1930. For 2 classes of chain; crane chain for slings, hoists, steam shovels, where an all iron chain is desired; proof coil for railroad cars and construction work.

Crane chain of wrought iron without scrap or l steel, proof coil of iron or steel, requirements on construction, chemical composition, proof, tension, and etch tests, standard weights and

dimensions.

American Society for Testing Materials. A 56-30; 1930. Iron and Steel Chain. Covers 2 grades; crane chain of wrought iron for slings, hoists, steam shovels, and marine uses; and proof coil of wrought iron or steel for railroad cars, construction and forestry work. Construction, chemical composition and test requirements, proof and break test requirements, nominal weights and dimensions.

U. S. Gov., Federal Specifications Board. 1925. Standard Miscellaneous Chain and Attachments. Close Link Coil Chain. Class I for slings, cranes, hoists, steam shovels, and marine uses, and where an all-iron chain is desired, Class II for ordinary slings and hoists, Class III for general service. Chemical composition of iron and of steel, proof load and breaking load test requirements, for sizes up to 2 inches.

References.—Standard sizes and varieties. See also 603.50. Methods of testing, general requirements for metals. See also 600.1. Heat treatments. See also 600.5. Classification of metals. See 600.2.

603.53 Stud-Link Chains

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Chains. For stud link chains of wrought iron or steel or of cast steel, requirements on dimensions and tolerances, weight, breaking test, and proof test for various sizes.

American Society for Testing Materials. Tentative Specifications. A 77-28T; 1928. Electric Cast Steel Stud Link Anchor Chain. Proof and break test requirements for chain links, swivels, shackles, etc., dimensions and permissible variations for links, end links, swivels, shackles, and

shackle pins.

U. S. Gov., Federal Specifications Board. 1926. Chain, Ship. Covers 3 grades, all iron forged, forged steel, and commercial grade chain of stud link type for anchor, mooring, buoy, and towing chain. Manufacture, annealing, finish of chain, chemical composition and tensile test requirements for iron or steel used, dimensions, weight and tolerances of common links, enlarged links, and end links, proof load and breaking load test requirements for 48 sizes of chain, to conform to F. S. B. spec 339 for metals.

References.—Standard sizes and varieties of chain. See also 603.50. Methods of testing, general requirements for metals. See also 600.1. Classification of metals. See 600.2. Heat treatments. See also 600.5.

603.54 Twisted-Link Chain

S. Gov., Federal Specifications Board. 1925. Standard Miscellaneous Chain and Attach-Twist Link Chain. One grade for ordinary slings and hoists. Dimensions and weight for sizes ¼ to ½, breaking load and elongation test requirements, chemical composition requirements for iron or steel.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Twist Link Coil Chain (Liberty Pattern). Common coil chain for general service. Dimensions, weight, and minimum tensile

strength, for sizes up to 16.

References.—Standard sizes and varieties. See also 602.50. Methods of testing, general requirements for metals. See also 600.1.

603.55 Straight and Twisted Link Vehicle Chain

References.—Standard sizes and varieties of chain.
See also 603.50. Vehicle and barness books. See 603.57.

603.56 Weldless Chain, Various Link Patterns

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware (Non-template). Transom Chains. Types selected and accepted by industry as standard, with type of plate and material and length of chain.

. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Ladder Chain, Register Chain. Wire gage, links per foot, tensile strength, and weight for several sizes of steel

and of brass chains of each type.
U. S. Gov., Federal Specifications Board. 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Lock Link, Flat; Lock Link, Single Jack, Chains. Made from steel, copper, brass, or bronze wire. Dimensions, weight, and tensile strength of 14 sizes of steel chain of each type and of one size of brass single jack lock link chain.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Single Jack Chain, Double Jack Chain. Wire gage, links per foot, tensile strength, and weight for several sizes of

steel and brass chains of each type.

U. S. Gov., Federal Specifications Board. 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. For steel and bronze sash chain; steel flat link, of short pitch and long pitch, chain; for brass and aluminum safety chain; and for steel and copper plumbers chain; sheet metal gage, links per foot, weight and tensile strength of various sizes.

References.—Standard sizes and varieties. See also 603.50. Methods of testing, general requirements for metals. See also 600.1. Classification of metals. See 600.2. Transom chain. See also 617.5.

603.57 Chain Attachments

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Chain Shackles. For D shackles and anchor shackles F, requirements on dimensions of shackle and pin for various sizes of chain, breaking test, and proof test for wrought iron or steel and for cast steel shackles.

American Society for Testing Materials. tive Specifications, A 77-28T; 1928, Electric Cast Steel Stud Link Anchor Chain, For swivels, shackles, and shackle pins, proof and break test requirements, dimensions and permissible

variations.

U. S. Gov., Federal Specifications Board. 171a; 1926. Chain, Ship. Shackles, D. Chemical composition and tensile test requirements of material, manufacture, dimensions and tolerances of shackle and pin, illustrated, to conform also to F. S. B. Spec. 339 for metals. U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and At-

tachments. Chain Dogs, Ring Dogs, Chemical composition of steel, dimensions of chain links and end links, dimensions of dog, for various pat-

terns as illustrated.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Drop Forged Connecting Links, Repair or End Lap Links, Lap Rings, Oval Side Lap Links. Dimensions and weight for various sizes of metal, tensile strength of connecting links.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Rings. Chemical composition of steel, dimensions and weight for many sizes of rings.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Shackles, Screw Pin Anchor Shackles, Screw Pin Chain Shackles, Oval Pin Anchor Shackles, Oval Pin Chain Shackles, Round Pin Anchor Shackles, Round Pin Chain Shackles, Dimensions, size of pin, estimated weight for many sizes of each type of forged steel shackles.

U. S. Gow., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Sheared Toggles, Forged Toggles. Chemical composition of steel, dimensions of toggle and inside diameter of ring for toggles for

various chain sizes.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Aftachments. Slip Hooks, Grab Hooks, Hoist or Sling Hooks, Bale Hooks and Box Hooks, Barrel Hooks and Stone Hoist Hooks, Hogshead Hooks, Can Hooks. Dimensions of various sizes with approximate weights of some of the above classes of steel hooks as illustrated.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Swivels. Dimensions and weight of malleable iron swivels for 6 chain sizes.

U. S. Gov., Federal Specifications Board. 348; 1925. Standard Miscellaneous Chain and Attachments. Vehicle and Harness Hooks. steel long slip pattern for stay chains. Dimensions, and weight for 4 sizes.

References.—Stundard sizes and varieties of chain. See also 603.50. Methods of testing, general requirements for metals. See also 600.1. Heat treatments. See also 600.5.

603.59 Miscellaneous Chains

References .- Roller chain, silent transmission chains. See 766.1.

603.6 HORSESHOES

References.—Standard shoe for horseshoe pitching. See 943.5.

604. IRON AND STEEL PLATES AND SHEETS

604.0 GENERAL ITEMS

U. S. Gov., Congress. 27 Stat. L., 746, approved Mar. 3, 1893. An act establishing a standard gage for sheet and plate iron and steel. Table of sheet and plate thicknesses corresponding to standard gage numbers. Reprinted in Circ. 391 of Bureau of Standards of Dept. of Commerce.

U. S. Gov., Dept. of Commerce. Bureau of Standard Stall plants (2891; 1981. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). For iron and steel sheet and plate, U. S. standard gage, table showing gage number and corresponding sheet thicknesses and weights. Established by an act of Congress (27 Stat. L., 746) approved Mar. 3, 1893, an Act establishing a standard gage for sheet and plate iron and steel. Permissible variations in weight and thickness of plates and sheets.

604.1 IRON AND STEEL PLATES

604.10 General Items

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Blue Annealed Steel Sheets (or Tank Steel). Dimensions of recommended standard sizes, No. 8 to No. 16 gage.

Assn. of American Steel Manufacturers. Standard Permissible Variations in Gage Weight. Gage Thickness, Size, and Flatness of Sheets and Light Plates Blue Annealed; 1929.

Light Plates Blue Annealed; 1929. 604.11 Steel Plates for Pressure Vessels

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel plates for boilers. For shell plates and for plates for flanging or welding, requirements on tension test and bend test.

American Marine Standards Committee. E No. 27–1929. Marine Boiler Steel Plates. For two grades of steel, chemical composition, tension, and bend test requirements, permissible variations.

tions in weight and thickness.

American Railway Assn. Mechanical Div. Steel, Boiler, and Firebox, for Locomotive Equipment; 1925. Chemical analysis, tension, bend, and homogeneity test requirements, permissible varia-

tion in weight and thickness.

American Society of Mechanical Engineers. Boller Construction Code. Section II. Material Specifications; 1930. Specifications for Steel Boller Plate. For flange and firebox plate, chemical analysis, tension, bend, and homogeneity test requirements, permissible variation in dimensions. Identical with A. S. T. M. specifications for boiler and firebox steel for stationary service, A 70-27.

American Society for Testing Materials. A 30–24; 1924. Boiler and Firebox Steel for Locomotives. Covers flange and firebox steel. Chemical composition and tests, tension, bend and homogeneity test requirements, permissible variation in weight and thickness. Available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 70-27: 1927. Boiler and Firebox Steel for Stationary Service. For flange and firebox steel, chemical composition and tests, tension, bend and homogeneity test requirements, permissible variation

in weight and thickness.

American Society for Testing Materials. A 89-30; 1930. Steel Plates of Flange Quality for Forse Welding. For welding without the use of fluxes. For 2 grades of steel, chemical composition and tests, tension and bend test requirements, permissible variations in weight and thickness.

American Society for Testing Materials. Tentative Specifications. A 89-31T; 1931. Steel Plates of Flange and Firebox Qualities for Forge Welding. For 2 grades of each of flange quality and firebox quality steel, requirements on chemical composition, tension test and elongation, bend test, and homogeneity, permissible overweights of plates ordered to thickness.

American Society for Testing Materials. Tentative Specifications. A 114–29T; 1929. Marine Boiler Steel Plates. Covers 2 grades dependent on strength, chemical composition, tension and bend test requirements, permissible variations in

thickness and weights.

American Society for Testing Materials. Tentative Specifications. A 129-30T: 1930. Open-Hearth Iron Plates of Flange Quality. For 3 types, requirements on chemical composition, tension tests, bend tests, permissible variations in weight and thickness from ordered amounts. Assn. of American Steel Manufacturers. Struc-

assi. Of American Science Maintenance Studential and Boiler Steel; 1922. Includes firebox and flange steel for boilers, chemical composition, tension, and bend test requirements, permissible variations in thickness of plates.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Boiler Plate. For construction and repair of boilers on steam vessels, mandatory requirements on chemical composition, tensile and bend test.

U. S. Gov., Federal Specifications Board. 549; 1928. Steel Plates, Marine Boller. Classes A and B of open-hearth steel for use where forming or flanging is required, class C of Bessemer steel for smokestacks, uptakes, where strength not required. Chemical composition, tension test, bend test requirements for classes A and B, physical appearance and permissible variations in dimensions of all classes.

References—Methods of testing searenl requirements for metals, See slas 600.1, Classificantion of metals, See 600.2, Standard thicknesses. See 604.0, Standard sheet sizes, tolerances on weight and thickness. See also 604.10. Power bollers, water heaters, tanks. See also 703. 614, 605.23, 956.2.

604.12 Steel Plates for Nonpressure Tanks and Stacks

U. S. Gov., Federal Specifications Board. 549; 1928. Steel Plates, Marine Boiler. Classes A, B, and C. Class C of Bessemer steel for smokestacks, uptakes, and where strength is not required. Of best commercial quality, physical appearance requirements, permissible variations in dimensions.

References.—Methods of testing, general requirements for metals. See also 600.1. Classification of metals. See 600.2. Standard thicknesses. See 604.0. Standard sheet sizes, tolerances on weight and thickness. See also 604.10. Alloy steel plates for tank cars. See 621.32. Steel tanks. See 605.23, 956.2, 726.1.

604.13 Steel Plates for Ship Hulls

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Iron plates and angles. Requirements on tension and cold bend tests.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel Plates. Tension test and bend test requirements.

American Society for Testing Materials. A 12-21; 1921. Structural Steel for Ships, Chemical composition and tests, tension and bend test requirement, permissible variations in weight and thickness for plates. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

Assn. of American Steel Manufacturers. Structural and Boiler Steel; 1922. Includes class A for ships, cars, etc., chemical composition, tension, and bend test requirements, permissible

variations in weight.

U. S. Gov., Federal Specifications Board. 469; 1927. Structural Steel for Ships Other than Naval Vessels. Chemical composition, tension test, and bend test requirements, permissible variations in dimensions and weight of plates and shapes.

References—Methods of testine, general requirements for metals. See also 600.1 Classification of metals. See 800.8 Standard themesses and seeping the sheet sizes, tolerances on thickness and weight. See also 604.10. Other structural steel for ships. See 605.15.

604.14 Wrought-Iron Plates

American Bureau of Shipping, Rules for Building and Classing Steel Vessels; 1930. Iron plates and angles. Requirements on tension and cold bend tests.

American Society for Testing Materials. A 42–30; 1930. Approved by American Standards Assn. as G13–1931. Wrought-Iron Plates. Tension and bend test requirements for 2 grades of material. 1918 edition of this specification is available in Spanish and in French from Bureau of Foreign and Domestic Commerce of U. S. Dept, of Commerce.

References.—Methods of testing, general requirements for metals. See also 600.1, Classification of metals. See 600.2. Standard thicknesses. See 604.0. Standard sheet sizes, tolerances on weight and thickness. See also 604.10.

604.19 Miscellaneous Iron and Steel Plates

American Society of Mechanical Engineers. Boiler Construction Code. Section II; 1930. Specifications for Steel Plate for Brazing. Chemical analysis, tension and bend test requirements.

American Society for Testing Materials. A 78–30; 1330. Steel Plates of Structural Quality for Forge Welding. Chemical composition and tests for 2 grades of steel, tension and bend test requirements and permissible variation in weight and thickness.

References.—For plates classifiable under sheets. See 604.2. Structural carbon steel plates. See also 605.1. Structural aloy steel plates. 604.2 IRON AND STEEL SHEETS

604.20 General Items

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Light Sheet Steel And Iron. Dimensions of recommended standard sizes of galvanized steel sheets, one pass-cold rolled box annealed sheets, and jacket steel.

Assn. of American Steel Manufacturers. Standard Permissible Variations in Gage Weight, Gage Thickness, Size, and Flatness of Sheets and Light

Plates Blue Annealed; 1929.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R28-29; 1929. Sheet Steel. Simplified practice recommended and accepted by industry establishing a limited list of stock sizes of steel sheets in various gages, for galvanized flat sheets, one-pass cold-rolled box annealed sheets, and blue annealed sheets.

604.21 Iron and Steel Sheets for Magneto Electric Apparatus

604.22 Iron and Steel Strips, Bands, and Hoops

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation, Tank Hoops; 1920. Quality and strength of the wrought iron or steel according to A. R. E. A. specifications for steel railway bridges, minimum size, allowable stress, and spacing of hoops of circular section, design of hoop lugs, safe working loads for hoops.

American Society for Testing Materials. Tentative Specifications. A 109-27T; 1927. Cold Rolled Strip Steel. Covers 5 grades from hard to dead soft temper, for blanking, bending, forming, spinning and deep drawing. Chemical composition, tension and bend test requirements, permissible varieties in specified dimensions.

variations in specified dimensions.
Associated Cooperage Industries

Associated Cooperage Industries of America. Steel Hoops, Width and Gage, for Tight Barrels and Kegs, other than I. C. C. Barrels and Kegs; 1930. Standard dimensions of head hoop, quarter hoop, and bilge hoop for various capacity kegs and barrels.

Society of Automotive Engineers. 1931. Handbook. Steel Bands and Strips; 1911. Widths and corresponding ranges in thickness for widths

up to 95% inches.

U. Ś. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Shipping Container Spec. 10A. Wooden Barrels and Kegs (Tight). For steel hoops, requirements on carbon content of steel, strength and elongation, number and sizes of hoops for various sizes of containers, mandatory for shipment of dangerous articles.

References.—Methods of testing, general requirements for metals. See also 600.1. Standard thicknesses. See 604.0. Standard sheet sizes, tolerances on weight and thickness. See also 604.20. Barrels and tanks. See 951, 950.2. Barrel hopps. See also 421.3.

604.23 Iron and Steel Sheets for Drawing and Forming

American Society for Testing Materials. Tentative Specifications. A 109–27T; 1927. Cold Rolled Strip Steel. Covers 5 grades, hard, half hard, quarter hard, planished, and dead soft temper, used for blanking, bending, forming, spinning and deep drawing. Chemical composition requirements, tension and bend test requirements, permissible variations in dimensions.

References .- See references under 604.22.

604.24 Spring and Tool Steel Sheets

604.25 Iron and Steel Sheets for Automotive and Railway Use

American Railway Assn. Mechanical Div. Recommended Practice; 1926. Steel Sheets and Thin Plates. For plates less than $\hat{\tau}_0$ inch thickness. Chemical analysis, bend test requirements, permissible variations in weight, thickness and size.

References.—Other iron and steel sheets for automotive and railway use. See 604.22 and 604.23. See references under 604.22.

604.29 Iron and Steel Sheets for Miscellaneous Purposes

American Assn. of State Highway Officials. Tentative Specification M-36. Undated. Base Metal for Corrugated Metal Sheets for Culverts. Chemical composition requirements for pure iron, copper bearing pure iron, copper iron, copper molybdenum iron, copper steel, tolerances on check analysis.

U. S. Gov., Dept. of Commerce. Bureau of Standards. RF8-28; 1928. Iron and Steel Roofing. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, covering widths, lengths, gage thicknesses, and weights for galvanized sheets and painted sheets, corrugated, roll, V-crimp, and pressed

standing seam types.

604.3 TIN COATED AND ZINC COATED SHEETS 604.31 Tin-Coated Sheets (Roofing Tin, Terneplate)

U. S. Gov., Dept. of Commerce. Bureau of Standards. C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). Tin Plate Gage. For gage dependent on pounds per base box, table of trade symbols and corresponding weight and approximate thickness for gage established by custom, permissible variations in weight. Includes tin plate, terne plate, roofing tin and terne.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R30-28; 1928. Roofing Ternes. Simplified practice recommended and accepted by industry establishing a limited list of standard weights.

of terne plate and a minimum thickness.

U. S. Gow., Federal Specifications Board. QQ-T-201; 1930. Terneplate, Roofing Tin. For prime sheets only, requirements on general quality of the black sheets and of coated sheets, chemical composition of the Iron or steel base metal, heat treatment and pickling, chemical composition of coating, weight of sheets before and after coating, for 6 weights of coating on 6 base metal weights, methods of testing, in conformity also with F. S. B. spec. 339 for metals.

References.—Methods of testing, general requirements for metals. See also 600.1. Coatings and tests of coatings. See also 600.3. Standard sheet sizes, tolerances on weight and thickness. See also 604.20.

604.32 Zinc-Coated (Galvanized) Steel Sheets

American Railway Assn. Mechanical Division-Recommended Practice; 1923. Galvanized Sheets. Galvanized steel and iron and copper bearing sheets. Chemical composition of copper bearing sheets, weight and dimensions of galvanized sheets and coating, bend and coating test requirements, permissible variations in dimensions.

American Society for Testing Materials. A 93-27; 1927. Approved by American Standards Assn. as GSb1-1931. Zinc Coated (Galvanized) Sheets. Covers steel and open-hearth iron with 5 classes of zinc coatings applied by hot-dip process dependent on thickness of coating and amount of bending required. Weight of coating and bend test requirements, permissible variations in dimensions and weight. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

U. S. Gov., Dept. of Commerce. Bureau of Standards C 391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). Galvanized sheet gage. Table of gage numbers with corresponding weights of finished sheet, as established by custom, tolerances on

weights.

U. S. Gov., Dept. of Commerce. Bureau of Standards R 78-28; 1928. Iron and Steel Roofing, Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, covering widths, lengths, gage thicknesses, and weights for galvanized sheets and painted sheets, corrugated, roll, V-crimp, and pressed standing seam types.

References.—Methods of testing, general requirements for metals. See also 600.1. Coatings and tests of coatings. See also 600.3 Standard sheet sizes, tolerances on weight and thickness. See also 604.20.

605. STRUCTURAL IRON AND STEEL

605.0 GENERAL ITEMS

American Institute of Architects. Document No. 172; 1927. A Filing System for Architects' Offices. Includes a standard classification of construction materials with numbers assigned to headings and subheadings, primarily for filing of advertising matter.

advertising matter.

American Institute of Steel Construction. Code of Standard Practice; 1929. Classification of material, practice on use of drawing weights, drawings and specifications, workmanship, inspection, erection, delays and extra work, proposals and contracts.

605.1 STRUCTURAL SHAPES AND PLATES, NOT FABRICATED

605.11 Structural Steel for Bridges

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Eyebars. Material in conformity with A. S. T. M. Spec. A 7-24 for structural steel for bridges, tension test requirements for full size tests of eyebars.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Steel Railway Bridges; 1924. Includes structural and rivet steel specifications. Agrees with specification A7-24 of American Society for Testing Materials except for permissible variations in weight of

plates.

American Society for Testing Materials. A 7-29; 1929. Structural Steel for Bridges. Chemical composition, tension, and bend test requirements for structural and rivet steel, permissible variations in cross section and weight, and of thickness of plates.

Association of American Steel Manufacturers.

Structural and Boiler Steel: 1922. Includes Class A steel for railway bridges, ships, cars, etc.. chemical composition, tension and bend test requirements, permissible variations in weight.

National Electric Light Assn. Suggested Specifications D 200-22; 1922. Steel (Material). To comply with A. S. T. M. specifications A7-21 covering structural steel for bridges, tension and bend test requirements. Published in 1924 N. E.

L. A. Proceedings.

S. Gov., Federal Specifications Board. 351a; 1929. Steel, Structural, for Bridges. Covers 4 classes, structural steel, noncopper and copper, chasses, structural steel, honcopper and copper, and and rivet steel, noncopper and copper, suitable for railroad and highway bridges, large capacity cranes, and high radio towers. Chemical composition, tensile test, and bend test requirements, permissible variations in weight of plates and shapes and in dimensions of rods and flats from the ordered quantities.

References.—Alloy structural steel. See 621.31, 621.32, 621.33, Methods of testing, general requirements for metals. See also 600.1. Classification of See also 600.2. Tolerances on weight and thickness of plates and bars. See also 600.7. Standard thicknesses of sheets and plates. See 600.7. Standard sheet sizes. See also 604.0. Standard sheet sizes. See also 604.1, 604.20. River steel, rivets. See also 605.21, 608.4. Steel castings. See also 601.41. Steel bridges. See also 60.21.

605.12 Structural Steel for Buildings

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Structural Steel and Iron; 1929. Design rules, maximum unit stresses, maximum slenderness ratio, minimum depth ratio, minimum thicknesses of metal, general design, spacing of rivets, lacing for trusses, beams, columns, provision for expansion, materials according to A. S. T. M. specifications, finish and erection.

American Society for Testing Materials. A 9-29; 1929. Structural Steel for Buildings. Chemical composition, tension and bend test requirements for structural and for rivet steel, permissible variations in weight and cross section of shapes, and in weight and thickness of plates from quan-

tities specified.

Association of American Steel Manufacturers. Structural and Boiler Steel; 1922. Includes class B steel for buildings, highway bridges, train sheds, etc., chemical composition, tension, and bend test requirements, permissible variations in

weight.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R 94-30; 1930. Open Web Steel Joists. Simplified practice recommended and accepted by industry establishing for open web joists a standard symbol system, standard resisting moments, end reactions, and allowable uniform loading for various spans and for beam depth of 8

to 16 inches.

S. Gov., Federal Specifications Board. 1929. Steel, Structural, for Buildings. Class A structural steel, noncopper; class B, structural steel, copper; class C, rivet steel, noncopper; class D, rivet steel, copper. Chemical composition, tensile test, and bend test requirements, permissible variations in weight of plates and shapes and variations in dimensions of rods and

References.—Metal roofing material. See also 604.3. See also 605.22. For other references see references under 605.11.

605.13 Structural Steel for Cars and Locomotives

American Railway Assn. Mechanical Div. Recom-mended Practice; 1923. Steel, Structural, Shapes, Plates, and Bars. For cars and locomotives. Chemical analysis, tension and bend test requirements, permissible variations in weight and

dimensions.

American Railway Assn. Mechanical Div. Arch Bars, Column and Journal Box Bolts and Column Castings to be Used for Maintenance of Existing Arch Bar Trucks of 40 and 50 Ton Capacity; 1929. Dimensions and shape of arch bars and tie bars of wrought iron or mild steel for replacement of defective bars, dimensions of malleable iron or cast steel columns.

American Railway Assn. Mechanical Div. Recommended Practice; 1929. Truck Bolsters. Design test requirements for freight bolsters with integral or separable center plate, of cast steel, structural steel, or forged iron or steel, in accordance with A. R. A. specifications for materials, maximum permissible stresses, test load requirements and permissible deflections.

American Railway Assn. Mechanical Div. Recommended Practice. Bolsters, Truck, Pressed Steel, for 80,000, 100,000 and 140,000 Pound Capacity Cars; Specifications and Tests for; 1915. Steel to conform to specifications and tests for structural steel for freight cars, limiting weights for

various capacities.

American Railway Assn. Mechanical Div. Recommended Practice. Bolsters, Truck, Cast and Pressed Steel, Gages for. Three gages for each of 3 sizes of bolsters, dimensions and design.

American Railway Assn. Mechanical Div. Center Plate Gages: 1927. Dimensions and design of body center plate gage and truck center plate gage. American Railway Assn. Mechanical Div. Center Plates; 1927. Standard dimensions of truck bol-

ster center plate and of body bolster center plate. American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. Coupler Yokes. Design test requirements for freight coupler yokes of horizontal or vertical plane types, material cast steel, structural steel, or forged iron or steel in accordance with A. R. A. specifications, requirements on minimum tension area, test requirements for maximum set and for breaking load.

American Railway Assn. Mechanical Div. Pedestals for Passenger Car Trucks; 1928. Recommended dimensions and design requirements for 4 sizes, for single, bottom equalizer trucks having

rectangular section wheel pieces.

American Railway Assn. Mechanical Div. Center, Steel, Section for; 1922. Dimensions of 12-inch section for railway car center sill.

American Railway Assn. Mechanical Div. Recom-mended Practice. Truck Sides, Cast Steel, Gages for; 1917. Dimensions and design of straightening and journal box bolt spacing gage, etc.

American Railway Assn. Mechanical Div. ing Dimensions for Cast Steel Truck Side Frames; 1929. Main dimensions and tolerances for 3 sizes.

American Society for Testing Materials. A 113-29; 1929. Structural Steel for Locomotives and Cars. Not including boiler and fire-box plates. Chemical composition, tension, and bend test requirements for structural steel for cars, structural steel for locomotives, plates for cold pressing, and rivet steel, permissible variations in weight and dimensions from quantities specified.

Assn. of American Steel Manufacturers. Structural and Boiler Steel; 1922. Includes class A for railway bridges, ships, cars, etc., chemical composi-tion, tension, and bend test requirements, per-

missible variations in weight.
S. Gov., Federal Specifications Board. 1929. Steel, Structural, for Cars. Grade A, structural steel, noncopper; grade B, structural steel, copper; grade C, steel for cold pressing, noncopper; grade D, steel for cold pressing, copper; grade E, rivet steel, noncopper; grade F, rivet steel, copper. Chemical composition, tension test, and bend test requirements, permissible variations in weight of plates and shapes, and permissible variations in dimensions of rods and bars from the quantities ordered.

605.14 Structural Steel for Machinery

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel angles, shapes, and stays for boilers, requirements on tension test and bend test.

American Railway Assn. Signal Section. 2111; 1911. Machinery Steel. General quality, chemical composition, tensile strength, elongation, and bending test requirements.

Reference.—Alby structural steel. See 621.31, 261.32, 261.33. Methods of testing general requirements for metals. See also 600.1. Standard thicknesses of plates. See 601.0. Boiler and firebox steel. See 604.11. Steel castings for machinery and boilers. See also 611.41.

605.15 Structural Iron and Steel for Ships

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Iron plates and angles. Requirements on tension and cold bend tests.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel plates, angles, bulb angles, channels, etc. Tension test and bend test requirements.

American Society for Testing Materials. A 12–21; 1921. Structural Steel for Ships. Chemical composition and tests, tension and bend test requirements, permissible variations in weight and thickness. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 13-24; 1924. Rivet Steel for Ships. For rolled bars, required chemical composition and tests, tension and bend test requirements, permissible variation in diameter; for the rivets, bend and flattening test requirements.

Assn. of American Steel Manufacturers. Structural and Boiler Steel; 1922. Includes class A for railway bridges, ships, cars, etc., chemical composition, tension, and bend test requirements, permissible variations in weight.

U. S. Gov., Federal Specifications Board. QQ-8-751; 1931. Steel, Structural, for Ships Other than Naval Vessels. Structural Steel and Rivet Steel. Chemical composition, tension test, and bend test requirements, permissible variations in dimensions and weight of plates and shapes, permissible variations in dimensions of bars and rods.

References.—Alloy structural steel. See 621.31, 621.32, 621.33. Plates for ship hulls. See also 604.13. Methods of testing, general requirements for metals. See also 600.1. Zinc and other coatings and tests. See also 600.3. Tolerances on weights and chickness of plates and bars. See also 600.7. Standard thickness of sheets and plates. See 604. Rivet seel, rivets. See 604.21, 005.4. Stee classings or ships. See also 610.21, 105.4. Stee classings or ships. See also 610.21, 105.4. Steel classings.

605.19 Miscellaneous Structural Steel

American Electric Railway Engr. Assn. Recommended Specification. W104-28; 1928. Approved by American Standards Assn. as tentative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes steel for structural shapes and plates, chemical composition, tensile strength, and bend test requirements.

American Society for Testing Materials. A 78–30; 1930. Steel Plates of Structural Quality for Forge Welding. Chemical composition and tests for two grades of steel, tension and bend test requirements and permissible variations in weight and dimensions.

References.—Alloy structural steel. See 621.31, 621.32, 621.33. Methods of testing general requirements for metals. See also 600.1. Zinc coatings. See also 600.7. Tolerances on weights and thicknesses of plates and bars. See also 600.7. Standard thicknesses of sheets and plates. See 604.0. Rivef steel, rivets. See also 603.21. 608.4. Other steel track materials.

605.2 STRUCTURAL SHAPES AND PLATES, FAB-RICATED

605.20 General Items

American Electric Railway Engr. Assn. Misc. methods and practices. B207-20; 1920. Rules for inspection and maintenance of bridges.

605.21 Steel Bridges and Railway Turntables

American Assn. of State Highway Officials. American Railway Engineering Assn. 1929 Manual. Steel Highway Bridges; 1929. Materials according to A. S. T. M. specifications, requirements on punching, machine work, assembly, tension test of eye bars, erection, limiting clearances, drainage, loadings and distribution of load for designed use, computation of impact forces, unit stresses proportioning and general design of parts, bracing, girders, etc.

American Railway Engineering Assn. 1929 Manual and 1930 Supplement to Manual. Iron and Steed Structures. Movable Railway Bridges; 1922. Materials required for various parts, conditions specified for computation of stresses and machinery power requirements, proportioning of parts and machinery power, friction coefficients, allowable unit stresses, bearing stresses, permissible loads and strength of wire rope, general design requirements for rail end connections, rim girders, counterweights, bearings, shafts, gears, and other bridge parts, design and type requirements for steam power equipment, gasoline engine equipment, electrical power and controllers, specifications for cast steel, forged steel, tool steel, bronzes, babbitt metal, workmanship and erection.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Steel Railway Bridges; 1924. Span limits for beam, girder, and truss bridges, minimum clearances, minimum live loads, computation of impact, lateral force, centrifugal force, longitudinal force, allowable unit stresses and proportioning of parts, slenderness and depth ratios, general design requirements for riveted joints, stay plates, lacing, pins, etc., floors, bracing, plate girders, trusses and viaducts, chemical composition, tension and bend test requirements for structural and rivet steel and for cast steel, permissible variations in thickness and weight of plates and shapes, chemical composition and transverse test requirements for cast iron, workmanship and structural requirements for bridge members, riveting, etc., tension test requirements for full sizes eve bars.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Steel Railway Turntables; 1924. For balanced and 3-point support types, clearances, minimum live loads for design, allowable unit stresses and proportioning of parts, general features of design of center, end trucks, pit and tracks.

American Railway Engineering Assn. Steel Highway Bridges; 1929. See American Assn. of State

Highway Officials.

American Society of Civil Engineers. Final Report on Specifications for Design and Construction of Steel Highway Bridge Superstructure; 1924. Construction, loading and application of loads, allowable stresses, details of design, tension and bend test requirements for structural steel, permissible variations in weight and dimensions, test requirements for eye bars. Specifications for structural nickel steel to conform to those of the American Society for Testing Materials.

American Society of Civil Engineers. Final Report on Specifications for Design and Construction of Steel Railway Bridge Superstructure; 1923. Types of loading and other items requiring consideration in the design, allowable stresses in various materials and parts, design requirements, construction, eye bar tests, tension and bend test requirements for the steel, permissible variation in weight and dimensions, data and curves for use in bridge design. The specifications for nickel structural steel conform to those of the American Society for Testing Materials.

References.—Rules for inspection and maintenance of bridges. See also 605.20. Methods of testing, general requirements for metals. See also 600.1. Structural steel for bridges. See also 605.11, 621.31, 621.32, 621.32. Rivet steel, rivets. See also 605.21, 608.4.

605.22 Steel Buildings and Metal Parts of Buildings

American Institute of Steel Construction (Inc.). Standard Specification for Fireproofing Structural Steel Buildings; 1927. Test procedure according to A. S. T. M. C 19-26T. Classification of fires and fire hazards, steel variation with temperature, alternate test method to that of A. S. T. M., Safety factor.

American Institute of Steel Construction. Structural Steel for Buildings; 1929. Material according to A. S. T. M. specification A9-24, loading. allowable stresses, proportions of girders and beams, requirements as to rivet and boit proportions and spacing, design of connections and lattice, painting, punching, erection.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, Sep-12-B. Ornamental and Misc. Metal Work. Metal clad doors, metal covered sash. Requirements on number of plies, general quality, and species of wood in core, weight of terne plate in cover, watertightness, to meet requirements of Nat. Board of Fire Underwriters.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Sheet Metal Work; 1927. Made of copper, galvanized iron, lead or rolled zinc, thickness of soft copper for flashings and of hard copper for caves troughs.

flashings and of hard copper for eaves troughs, gutters, rain conductors, and cornices, thickness of galvanized iron, lead, and zinc, solder according to A. S. T. M. specifications, construction and installations for flashings, gutters, cornices, rain conductors, hip capping, skylights.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Purposes; 1929. General construction requirements for excevation, filling, sewers, and drainage, concrete and masonry work of various types, roofs, sheet-metal work, structrual steel and from, millwork, painting, plastering, hardware, plumbing, heating, electrical work, floor and pavements, etc. Associated Factory Mutual Fire Insurance Com-

ssociated Factory Mutual Fire Insurance Companies. Tin Clad Fire Doors and Shutters; 1925. Two types of fire doors, their application, requirements for sills, door openings and heads, construction of wooden core, covering material and method of covering, hardware, similar requirements for shutters.

National Assn. of Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. A compilation of drawings with descriptive items of standard construction and typical designs for sheet metal structural items covering roofing, gutters, conductors, flashings, corrugated iron work, skylights, ventilators, metal cornices, metal ceilings, warm air furnaces, heating and ventilating systems, blow pipe and exhaust systems, fire doors, hollow metal doors and trim, hollow metal windows, restaurant, kitchen and hotel equipment, protective coatings and paints, a total of 356 drawings.

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Section VIII. Fire Doors, Tin Clad, All Metal and Metal Covered. Includes regulations of National Board of Fire Underwriters for the protection of openings in walls and partitions against fire, for 1927, typical illustrated designs of fire doors for many applications showing fixtures, fusible link connections, for types that meet requirements of Fire Underwriters and types that do not.

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Sections IX and X. Hollow Metal Door and Trim, Hollow Metal Window. Requirements for hollow metal door and trim, including construction, gage of sheet metal, and finish, typical designs illustrated of swing doors, elevator doors, entrance doors, jamb sections, double hung windows, multiped assistants of the standard sections of the sections of

lioned, daylight and casement windows.
National Board of Fire Underwriters. Recommended Building Code; 1931. Code for adoption by cities for controlling building construction as regards fire hazard. Covers classification of buildings, permissible area of lot occupied, requirements on excavations, foundations, walls, heights and areas, allowable loads, means of egress, tests and quality of materials, working stresses, cast iron, steel, and timber construction, roofs, fire doors and windows, cellars, vaults, mill construction, fireproof construction, reinforced concrete construction, fire tests, installation of heating apparatus, standpipe and sprinkler requirements, theater and assembly hall construction, plumbing and electrical requirements, construction of elevators, tenement house laws.

construction of elevators, tenement house laws. National Electrical Mfrs. Assn. Publ. No. 31-10. 1931. Switchgear Standards. SG8-60. Outdoor Substations. Structural steel according to spec. A9 of Am. Soc. for Testing Materials, requirements on strength of bolt and rivet steel, minimum thickness of metal in structure, minimum sizes of bolts and rivets, zinc coating of steel work, allowances for ice and wind loads, permissible stresses, general design of foundations, spacing of rivets and bolts, fabrication, current ratings for bare conductors.

National Fire Protection Assn. Building Construction, Standard Industrial Buildings; 1929. For buildings over 1 story, includes protected Steel Construction, permissible height and floor area, number of exits, materials and stresses according to quoted specifications, requirements on construction and protection of roof and wall openings and shaft enclosures, on wall thicknesses, on fireproofing of structural members, floors and roofs, electrical and fire equipment, etc.

Railway Fire Protection Assn. Handbook; 1925. Garages and Repair Shops. (For Rail Motor Cars.) Recommendations that construction be in conformity with National Building Code, of fire resistive materials, without unventilated cellars, recommendations on drainage of floors, on lighting, heating, natural or mechanical ventilation, on separation from garage of repair shop and battery charging plant, on exhaust discharge of gasoline motors in shops, on storage and handling of gasoline and oil, and on fire protection

facilities to be provided.

Underwriters' Laboratories. Tin-Clad Fire Doors and Shutters; 1930. Acceptable woods, minimum dimensions and finish of core, weight of terneplate covering, size and type of nails, assembly, nailing and finished dimensions of cores of 2 and 3 ply, forming, application and mailing of face plates, provision of vent hole and astragal, construction where glass panels are used etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R72–30: 1930. Solid Section Steel Windows. Simplified practice recommended and accepted by industry establishing a standard nomenclature, standard symbol designations, and a limited list of stock, standard, and listed special sizes and types for basement windows, pivoted windows, Underwriters' labeled windows, projected windows, and industrial doors.

Steel Joist Institute. Steel Joist Construction; 1932. Includes construction specifications for steel joists composed of rolled shapes, riveted or welded bars or rods, or expanded rolled shapes, as used between girders. Steel according to A. S. T. M. spec. A9, requirements on methods of design and stresses, span, spacing, bridging, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R82-28; 1928. Hollow Metal Single Acting Swing Doors, Frames and Trim. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of hollow metal doors, including door clearances, door dimensions, details of butt mortise, lock mortise, and strike mortise, dimensions of transom. rough buck, cabinet jamb, casing, and combination frame, types of combination frame.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R83-28; 1928. Kalamein Single Acting Swing Doors, Frames, and Trim. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes and dimensions for kalamein doors, including types of doors, door clearances, door dimensions, jamb details, gauge of metal and butt mortise details.

References.—Structural steel for buildings. See also 605.12, 621.31, 621.32, 621.33. Sheet metal roofing. See also 604.3. Sheet metal eaves troughs. See also 604.5. Rivet steel, rivets. See also 603.21, 608.4. Masonry and frame buildings, parts of buildings, fire tests of materials. See 518.50, 518.51.

605.23 Steel Tanks, Towers, and Flumes

American Petroleum Institute. Standard No. 4; 1931. Standard Rigs and Derricks. Requirements on standard major dimensions of steel, and of wood derricks, including heights, bases and water table openings, grade of steel for steel derricks (A. S. T. M. spec. A94), requirements on wind and dead load capacities.

American Petroleum Institute. Standard No. 12-A and Supplement No. 2; 1931. Standard Tanks with Riveted Shells. For oil storage tanks, requirements on tank sizes, grade of steel, maximum stresses and design specifications for shell, roof, and bottom, fabrication and erection, number and thicknesses of plates for various tank capacities.

American Petroleum Institute. Standard No. 12-B; 1931. Standard Bolted Tanks. For oil storage tanks, requirements on spacing of bolts, pitch of cone roof, dimensions of tank and shell, thickness of plate and size of bolts for various tank parts, for various standard capacities. American Railway Assn. Electrical Section. VIa-23; 1923. Electric Light, Power Supply and
Trolley Lines Crossing Railways. Steel Structures. For steel supporting towers at crossings,
requirements on general construction, minimum
thickness of metal, minimum sizes of angles,
bolts, and rivets, minimum spacing of rivets, maximum unsupported length of compression members, ratio of tower length to radius of gyration,
allowable unit stresses in tension and compression for structural shapes, steel to conform to
Am. Soc. for Testing Materials spec. A-9 for
structural steel for buildings.

American Railway Assn. Electrical Section. VIb-25; 1925. Construction of Overhead Electrical Supply Lines for Railroad Use on Railroad Property. Steel Structures. Requirements on general construction, minimum thicknesses of metal, minimum sizes of angles, bolts, and rivets, spacing of rivets, permissible unsupported length of compression members, ratio of length to radius of gyration, allowable unit stresses for structural shapes, bolts, and rivets, steel in accordance with A. S. T. M. spec. A-9 for structural steel for buildings. Includes steel towers and steel poles.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Steel Substructures for Water Tank; 1921. 12 post tower for supporting 50,000 and 100,000 gallon wooden water tanks, dimensional drawings of standard designs, material, and workmanship according to A. R. E. A. specifications for Iron and Steel

Structures.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Steel Water and Oil Tanks; 1912. For tanks requiring plates not more than 5½ inch thick, steel the same as for steel railway bridges, allowable unit stresses, forming and punching of plates, making of joints, minimum thickness of plates and size of rivets, painting.

American Society of Mechanical Engineers. Boiler Construction Code; 1931. Section VIII. Unfired Pressure Vessels. Specifications of safety valves, allowable design stresses in materials, construction and allowable working pressures of vessel, riveted joints, dished heads, braced and stayed surfaces and openings, vessel supports, hydrostatic pressure test, rules for the fusion process of welding, rules for forge welding, rules for brazing, requirements for enameled pressure vessels.

Associated Factory Mutual Fire Insurance Companies. Fuel Oil Installations for Furnaces and Engines; 1928. Includes specifications for steel or iron storage tanks, materials, joints, connections and rust proofing requirements, installation and piping connections, requirements as regards tank heating, for underground, above ground and inside tanks, with special reference to fire hazards.

Associated Factory Mutual Fire Insurance Companies. Gravity Water Tanks and Steel Towers. Vol I. Structural Details; 1931. For steel towers for supporting water tanks, minimum number of columns, materials according to A. S. T. M. specifications, computation of dead, live, and wind load, allowable unit stresses, design details.

Associated Factory Mutual Fire Insurance Companies, Gravity Water Tanks and Steel Towers. Vol. I. Structural Details; 1931. For steel tanks for fire protection, standard sizes; plates, shapes and rivets according to A. S. T. M. specifications; dead, live, and wind load computations, allowable stresses, thicknesses of plates and design details.

Associated Factory Mutual Fire Insurance Companies, Gravity Water Tanks and Steel Towers. Vol. II; 1929. Piping, Fittings, and Heating Systems. For water tanks, requirements for discharge pipe and fittings, expansion joint, overflow, clean out and drain, mill-use connections, tell-tale, valve pit or valve house, frost proof casings for pipes. General requirements for steam heaters and for coal burning heaters, recommended designs and makes of heaters.

Associated Factory Mutual Fire Insurance Companies Storage and Handling of Flammable Liquids; 1931. Storage Tanks. Requirements on minimum gage of steel or wrought iron for various capacities of underground tanks, construction of joints, internal pressure test, construction of connections, installation rules, rust proofing.

National Board of Fire Underwriters. Containers for Storing and Handling Flammable Liquids; 1927. Includes underground storage systems without inside discharge, inside discharge systems, portable tanks in buildings, general storage, concrete tanks, storage cabinets, outside storage houses for 3 classes of liquids depending on flash point, capacity and location of tanks, setting, thickness of sheet steel, venting, filling and withdrawal of liquid requirements, fittings, piping.

National Board of Fire Underwriters. Oil Burning Equipments, Storage and Use of Oil Fuels; 1928. Construction of galvanized steel or iron tanks, for underground and for above ground storage, thickness of metal, rust proofing, setting of tanks, location and capacity of tanks, piping and protection of piping, installation of valves, heating equipment, pumps for oil, ventilation, fire

equipment.

National Board of Fire Underwriters. Tanks, Gravity and Pressure, Towers; 1931. Pressure Tanks, used for automatic sprinkler systems, air pressure, water level, and air lock requirements, construction according to specifications for unfired pressure vessels of American Society of Mechanical Engineers, design of supports, requirements on pipe connections, fittings, gauges, safety appliances.

National Board of Fire Underwriters. Tanks, Gravity and Pressure. Towers; 1931. Steed Gravity Water Tanks. Standard sizes, form, steel according to A. S. T. M. specifications, design requirements, minimum thicknesses, construction requirements and accessories, design and construction requirements for concrete foundations and supports on buildings, required pipe connections, minimum sizes, location of valves, value enclosures and frost protection, construction requirements for steam heating and coal-burning heater installations.

National Board of Fire Underwriters. Tanks, Gravity and Pressure, Towers; 1931. Stee Towers. Towers for supporting water tanks, minimum number of columns, steel according to A. S. T. M. specifications, design requirements, maximum unit stresses, minimum thickness of metal, size of rivers, construction requirements, accessories, design and construction of concrete foundations, design of supports on buildings.

National Fire Protection Assn. Suggested Ordinance Regulating Use, Handling, Storage, and Sale of Flammable Liquids; 1926. Includes specifications for steel or iron tanks, above ground and underground type, requirements on thickness of metal, on pressure test for pressure tanks, on strength of steel, general construction of tanks and foundations, venting, location of valves, piping requirements, etc.

Underwriters' Laboratories. Horizontal and Vertical Above-Ground Storage Tanks for Hazardous Liquids; 1922. For steel plate construction, limiting capacities and dimensions, minimum thicknesses of plates, acceptable methods of making pipe connection, seam and head joints, types and construction of heads for horizontal tanks and of top and bottom of vertical tanks, manhole requirements and construction, pressure test requirements.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and rive ressels.) Steel Tanks for Storage of Fuel Oils. For use on passenger vessels, mandatory requirements on riveting of joints, minimum thickness of plates, hydrostatic test, size of vent pipe, attachment of fittings, installation of heaters.

References.—Structural steel for bridges and buildings. See also 605.11, 605.12. Alloy structural stees elso 621.31, 621.32, 621.33. Plates for tanks. See also 604.1. Zinc coatings and tests. See also 600.0 ther tanks. See 35.2. Range bollers, expansion tanks, fuel tanks. See 36.2. Range bollers, expansion tanks, fuel tanks. See also 614.1, 614.3. Railway tank cars. See 720.1.

605.24 Metal Lath

Contracting Plasterers' International Assn. Outline Specification for Lathing and Plastering; Feb. 1931 issue of Plastering Craft. Wire Lath and Metal Lath. Requirements on size of wire, mesh, painting, and weight of wire lath, gauge thickness, painting, and weight of metal lath.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R3-28; 1928. Metal Lath. Simplified practice recommended and accepted by industry establishing a limited list of stock sizes and varieties of flat expanded and of rib expanded metal lath, weights per square yard and gauge of metal, minimum weight of painted steel sheet lath.

U.S. Gov., Federal Specifications Board. QQ-B-101; 1930. Metal Bases for Plaster and Stucco Construction. For expanded metal base, flat expanded metal lath, flat rib lath, esli-furring lath, %-inch and %-inch rib lath, esli-furring lath, inforcement, sheet-metal base, flat sheet-metal lath, ribbed sheet metal lath, wire base, woven wire lath, ribbed woven wire lath, woven wire fabric, and welded wire fabric, definitions of types, gages and weights of metal for various weight grades of above types, structural features, requirements on strength of wire and fabric, and strength and quality of backing paper.

References.—Standard thicknesses of sheets. See 604.0. Tolerances on weights and thickness of sheets. See also 600.7. Building construction. See 518.50, 518.51. Wire sizes. See 603.40.

605.25 Steel for Concrete Reinforcement

American Assn. of State Highway Officials, Highway Bridges and Incidental Structures; 1931. Reinforcement. Specifications for bar reinforcement the same as A 15-30 of Am. Soc. for Testing Materials except for disallowance of cold twisted bars, all bars of open hearth structural steel, test specimens not less than 24 inches long.

American Assn. of State Highway Officials. Tentative Specifications; M-31. 1924. Billet Steel Concrete Reinforcement Bars. For plain or deformed bars, requirements on percentage phosphorus, tension test, and bend test requirements, variation in weight from theoretical, sampling and testing in accordance with A. A. S. H. O, methods. Not applicable to bars for bridges and incidental structures.

American Assn. of State Highway Officials. Tentative Specifications; M-32. 1924. Cold Drawn Steel Wire Fabric For Concrete Reinforcement. Up to 1/2 inch in diameter, tension and bend test | requirements, permissible variations in diameter from size ordered.

American Railway Engineering Assn. 1929 Manual. Masonry. Billet-Steel Concrete Reinforcement Bars; 1920. Plain and deformed bars of 3 grades of hardness, made from new billets, chemical composition, tension and bend test requirements, per-

missible variation in weight.

American Society for Testing Materials, A 15-30; 1930. Billet-Steel Concrete Reinforcement Bars. Covers plain, deformed, and cold twisted bars, plain and deformed in 3 grades, and structural steel, intermediate and hard. Requirements on chemical composition and tests, tension and bend tests, permissible variation in weight. 1914 edition is available in Spanish and French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 16-14;

1914. Rail-Steel Concrete Reinforcement Bars. For plain, deformed and hot twisted bars. Tension and bend test requirements, permissible variation in weight. Available in Spanish and French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce,

American Society for Testing Materials. A 82-27; 1927. Cold Drawn Steel Wire for Concrete Reinforcement. For wire of gages 0.080 to 0.525 inch, tension and bend test requirements, permissible

variations in gage.

Assn. of American Steel Manufacturers. Concrete Reinforcement Bars Rolled from Billets; 1928. Chemical composition requirements, tension and bend test requirements for 3 grades of plain and deformed bars and 1 grade of cold twisted bar, permissible variations in weight.

Assn. of American Steel Manufacturers. Rail Steel Concrete Reinforcement Bars; 1914. Tension and bend test requirements for plain reinforcement bars and for deformed and hot-twisted bars, num-

ber of twists for hot-twisted bars.

Concrete Reinforcing Steel Institute. for Concrete Reinforcing Bars. 1930. Table of standard sizes, areas, and weights per foot for reinforcing bars, sizes and areas as adopted by industry in simplified practice recommendation R26-30 of U. S. Bureau of Standards.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R26-30; 1930. Steel Reinforcing Bars.

Simplified practice recommended and accepted by industry establishing a limited list of standard areas of reinforcing bars and the equivalent sizes of round and square bars. A. S. A. No. A47-1932.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R53; 1926. Steel Spiral Rods for Concrete Reinforcement. Simplified practice recommended and accepted by industry establishing a limited list of standard round rod sizes for spiral reinforcement and standard pitches of spiral for various column core sizes and percentages of reinforcement area to concrete area. Approved by American Standards Assn. as A38-1927.

U. S. Gov., Federal Specifications Board. 350a; 1929. Bars, Reinforcement, Concrete. 4 types, A, plain; B, deformed; C, hot twisted; D, cold twisted; 4 grades, 1, structural-billet steel; 2, intermediate-billet steel; 3, hard-billet steel; 4, hard-rail steel; 3 classes, a, open hearth steel-basic; b, open hearth steel-acid; c, bessemer steel, Chemical composition, tensile test, and bend test requirements, permissible variations from theoretical weights.

606.1 STEEL RAILS, TEE, AND GIRDER

American Electric Railway Engr. Assn. W1-27; 1927. Manufacture of Open-Hearth Steel Girder Rails of Plain, Grooved, and Guard Types. Classification of girder guard rails and of plain and grooved girder rails into 3 classes as regards quality of material, requirements on chemical composition of each class, impression test, permissible variations from templet dimensions, tolerances on punching and milling.

American Electric Railway Engr. Assn. W6-30; 1930. Approved by American Standards Assn. as Standard Design for 7-Inch Girder Grooved Rail. Detail dimensions of section of

standard 7-inch, 122-pound rail. American Electric Railway Engr. Assn. W7-30; 1930. Standard Design for 9-Inch Girder Grooved Rail. Detail dimensions of section of standard 9-inch, 134-pound rail. American Electric Railway Engr. Assn. W8-30;

1930. Standard Design for 7-Inch Girder Guard Rail. Detail dimensions of standard section of rail.

American Electric Railway Engr. Assn. W9-30; 1930. Standard Design for 9-Inch Girder Guard Rail. Detail dimensions of standard section of

American Electric Railway Engr. Assn. W16-29 · 1929. Carbon Steel Rails of Standard Section. Requirements on chemical analysis for 5 weight grades up to 140-pound size, drop test, fracture test, standard lengths, finish, tolerances on location and sizes of bolt holes. Identical in many

respects with A. S. T. M. spec. A1–27.

American Electric Railway Engr. Assn. W28–28;
1928. Standard Design for Light Seven Inch Girder Grooved Rail, Detail dimensions of standard section for 7-inch, 103-pound rail.

American Electric Railway Engr. Assn. W31-30; 1930. Design of Plain Girder Rails and Splice Standard section design and dimensions Bars. for 7-inch 82-pound, 7-inch 92-pound, and 7-inch 102-pound plain girder rails for use in paved streets, section data, drilling for splice bars.

American Railway Engineering Assn. 1929 Manual, Drop Test Machine; 1910. For testing railroad rails by dropping a weight on transversely supported rail, minimum height of fall and range of adjustment of span supports, construction requirements for anvil and supporting springs, base plate, substructure, pedestals, leads, design and weight of tup.

American Railway Engineering Assn. 1929 Manual and 1930 Supplement to Manual. Open Hearth Carbon Steel Rails; 1925. Chemical composition and drop test requirements, classification into 3 classes dependent on quality and defects, standard lengths, permissible variations in dimensions

and weight.

American Railway Engineering Assn. 1929 Manual. Open-Hearth Steel Girder Rails of Plain, Grooved and Guard Types; 1929. Chemical composition and hardness test requirements, permissible variations in dimensions and weight, drilling and finish requirements, classification according to quality.

American Railway Engineering Assn. Relayer Rail for Various Uses; 1920. Classification according to wear, grades according to de-

fects and length.

American Railway Engineering Assn. 1929 Manual. Standard Rail Sections; 1924. Dimensioned drawings with section data for 90, 100, 110, 120, 130, 140, and 150 pound rails, and for 128, 149, 159, and 174 pound girder and girder guard rails.

American Society for Testing Materials. A 1-30; 1930. Open-Hearth Carbon Steel Rails. Chemi-

cal composition for rails of various weights, drop test requirements, standard length and weight, quality classification. 1924 edition available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 2-27: 1927. Manufacture of Open-Hearth Steel Girder Rails of Plain, Grooved and Guard Types. Chemical composition and impression test requirements for three classes of rails, standard dimensions and permissible variations. Agree with those specs of A. E. R. E. A. and A. E. R. A. 1924 edition available in Spanish and 1927 issue available in Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

keferences.—Alloy steel rails. See 622.2. Methods of testing, general requirements for metals. See also 600 1. Classification of railway materials. See 600.2. Track construction. See 606.0.

606.2 RAIL JOINT PLATES AND TIE PLATES

American Electric Railway Engr. Assn. W4-22; 1922. American Standards Assn. E 2-1923. Standard Design for Joint Plates for 7-inch Girder Groved and Girder Guard Rails. Standard design and dimensions.

design and dimensions.

American Electric Railway Engr. Assn. W5-22;

Standards Assn. E 3-1923. Standard Design for Joint Plates for 9-inch Girder Groved and Girder Guard Rails. Standard

design and dimensions.

607. TUBULAR PRODUCTS AND FITTINGS, COCKS, AND VALVES

607.0 GENERAL ITEMS

American Gas Assn. and Nat. Bureau of Standards, sponsors under auspices of American Standards Assn. A. S. A. serial K 2-1927. Gas Safety Code. For Installations and Work in Buildings. Definitions, rules for gas fitting and for installation of gas appliances with notes amplifying the rules.

American Gas Assn. Requirements for House Pip-ing and Appliance Installation; 1928. Funda-mental requirements stated that will insure safety and satisfactory service in installation of piping and approved appliances, and recommended practice in piping, turning on gas, metering, appliance installation and flue connection to

meet the requirements.

American Marine Standards Committee. O No. 10-1926. Distinctive Markings for Piping. Charts showing the markings for piping for various services. Markings coincide with those of U. S. Navy.

American Petroleum Institute. Code No. 5; 1928. Care and Use of Oil Country Tubular Goods. Unloading and handling, 10 rules for running casing, strength, use and care of casing, drill pipe, and A. P. I. tubing, reconditioning tubular material.

American Petroleum Institute. Standard No. 3; 1930. Dimensional Standards for Cable Drilling Tools. Includes basic thread form standard for cable drilling tool joints and gages, recommended practice for turning threads.

American Petroleum Institute. Standard No. 7-B; 1931. Rotary Drilling Taper Joints. Includes basic thread form, pitch and taper of joint and essential dimensions for rotary tool joints, fishtail bits, drill collars, rotary driving stem and couplings, swivel gooseneck connections, specifications and tolerances for master tool joint gages.

American Society of Mechanical Engineers, joint sponsor with National Safety Council under pro-cedure of American Standards Assn. A 13-1928. Scheme for the Identification of Piping Systems. Classification of piping according to the character of material carried, assignment of one color to each main class, use of a color band and auxiliary color strip or legend to identify each pipe as to main class and subclass.

American Society of Mechanical Engineers and American Gas Assn. under auspices of American Standards Assn. B 2-1919. Pipe Thread. Formula and table of dimensions for standard taper pipe thread, gages and methods of gaging, gage and working tolerances, table of dimensions of standard straight pipe thread, of standard locknut thread, of standard and extra strong pipe, of corrections in diameter for errors. National Board of Fire Underwriters. Installa-

tion, Maintenance and Use of Piping and Fittings

for City Gas; 1920. Applies to gas piping in buildings, minimum sizes of pipe, installation of pipe, types and locations of valves, threading, branching and bending of pipe, pipe supports, size

and location of outlets, maintenance rules.

Power Piping Society. Specifications for Power
Piping; 1928. Requirements on application of
wrought pipe, various types of valves and fittings to steam lines of various pressures and degrees of superheat and to boiler feed water lines, thicknesses and sizes of pipe, materials and structural features of valves and fittings, hydrostatic tests, inspection limits on dimensions, materials and dimensions in accordance with standards of American Standards Assn., steel

pipe in accordance with A106-27T of A. S. T. M. Society of Automotive Engineers. 1931 Handbook. Taper Pipe Thread; 1921. Taper and thread data for pipe up to 6-inch size. Abstracted from American Standards as approved

by American Standards Assn.

U. S. Gov., Dept. of Commerce. Bureau of Standards R57; 1926. Wrought-Iron and Wrought-Steel Pipe, Valves, and Fittings. Simplified practice recommended and accepted by industry establishing a limited list of pipe sizes, valve and fittings sizes as standard, with dimensions for standard weight, extra strong, and double

extra strong pipe.

U. S. Gov., Federal Specifications Board. 238; 1924. Pipe Threads. Covers taper and straight pipe threads, dimensions of threads for pipe up to 12 inches, gaging requirements, tolerances on dimensions of new inspection gages. Conforms to report of National Screw Thread Commission, 1921 and Am. Standards Assn. standard B2-1919.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Hangers, Supports, Etc. For overhead horizontal pipe runs, required spacing for heavy adjustable wrought or malleable iron hangers, chain, perforated bar iron, or wire hangers not permitted, requirements for heavy wrought iron clamps or collars for vertical runs of pipe.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures. (For Land Use.) Piping. Types of fittings required, methods of making joints, material and application of supports and

hangers.

U. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. American National pipe threads. Manda-

tory for material purchased and used by War and Navy Depts. Requirements on form of thread, length of engagement, and dimensions for taper and straight pipe threads for pipe and couplings, tolerances on gages. Indorsed by Am. Soc. Mech. Engrs. and Am. Gas Assn.

References.—Pipe gaskets. coupling threads. See 974.0. See 707.1. Fire hose

607.1 CAST-IRON PIPE, FITTINGS, AND CONNEC-TIONS

607.10 General Items

Associated Factory Mutual Fire Insurance Companies. Rules for Laying Cast-Iron Water Pipes in Factory Yards; 1931. Standards of pipe and fittings for fire-protection purposes, depth of laying and protection of pipe, weight of lead and jute in joints, locating and setting hydrants and gate valves, connection with water supplies, pressure test of pipe after installation.

607.11 Cast-Iron Pipe Culverts, Drains, and Sewers

American Assn. of State Highway Officials. Tentative Method. T-33. Undated. Method of Testing Culvert Pipe. For cast-iron pipe same as C 76-30T of Am. Soc. for Testing Materials, sections 20 to 27.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Cast-Iron Culvert Pipe. Requirements on manufacture and general quality, coating with coal tar, minimum thicknesses for various diameters, transverse test for casttest specimen, strength requirements under A. S. T. M. method in spec. C 14-24 for drain tile.

American Railway Engineering Assn. 1929 Man-ual. Buildings for Railway Uses. Plumbing; 1926. Includes cast-iron soil pipe, extra heavy grade, minimum length, weight, asphaltum coat-

ing requirements.

American Society for Testing Materials. A 74-29; 1929. Cast-Iron Soil Pipe and Fittings. General quality, chemical composition, transverse and hydrostatic pressure test requirements, method of coating with pitch, standard weights and dimen-

sions and permissible variations.

. S. Gov., Federal Specifications Board. 343a; 1928. Pipe and Fttings, Soil, Cast Iron, Coated and Uncoated. Covers extra heavy grade of soil pipe, hub and spigot type. Required thicknesses of walls and parts and permissible variations, design of hub and spigot ends, standard dimensions and weights for pipe, weights of bends, tees, and Y branches, hydrostatic test and hammer test requirements for pipe, hammer test requirements for fittings.

References.—Methods of testing, general requirements for metals. See also 600.1. Installation rules for pipe. See 607.0, 607.10. Other specifications for cast fron. See 611.11.

607.12 Cast-Iron Gas and Water Pipe

American Gas Assn. Standard Specifications for Cast-Iron Pipe and Special Castings; 1925. For bell and spigot joint and special castings, tables of dimensions, allowable variation in dimensions and weight, treatment of defective spigots, quality and test of the iron, pressure test of pipe and method of casting.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Cast-Iron Pipe and Special Castings; 1922. The 1908 specifications of American Water Works Assn. have been adopted by the A. R. E. A. and are reprinted in

above manual.

American Society for Testing Materials. A 44-04; 1904. Cast-Iron Pipe and Special Castings. Standard dimensions, weights and permissible

variations, method of casting, coating of pipe, transverse and hydrostatic test requirements, for hub and spigot joint cast iron pipe. Available in Spanish and French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Water Works Assn. Cast-Iron Water Pipe and Special Castings; 1908. Tables of dimensions and weights for standard bell and spigot cast-iron pipe for 8 classes of pressure service, dimensions and weights of standard special castings as curves, branches, Ys, reducers, caps and plugs, transverse and hydrostatic pressure test and method of casting requirements.

U. S. Gov., Federal Specifications Board. WW-P-421; 1931. Cast Iron Water Pipe (Bell and Spigot). Covers centrifugally cast types in metal contact molds and in sand-lined molds, and horizontally cast type in sand molds. For 150 and 250 pounds classes, requirements on dimensions, weights, tolerances, coating, construction of cement lining, chemical composition, hardness, transverse and pressure tests.

References.—Methods of testing, general requirements for metals. See also 600.1. Installation of pipe. See 607.0, 607.10. Other specifications for cast iron. See 611.11.

607.13 Cast-Iron Pipe for Railings and Poles

607.14 Cast-Iron Pipe Fittings and Connections

American Bureau of Shipping. Rules for Building and Classing Steel Vessels: 1930. Pipe Fittings. For cast-iron or semisteel fittings for pressures up to 300 pounds, requirements on general quality and tensile and transverse strengths of the cast iron, design formula for thickness, hydrostatic test of fitting.

American Society of Mechanical Engineers joint sponsor with Heating and Plping Contractors National Assn., and Manufacturers Standardization Society of Valve and Fittings Industry under procedure of American Standards Assn. B 16a-1928. Cast-Iron Pipe Flanges and Flanged Fittings. For 125 steam and 175 hydraulic pressures. Requirements as to tensile strength and maximum sulphur of material. facing and bolting of fittings, tables of dimensions of drilling templates, and of flanged fittings, theoretical weights.

American Society of Mechanical Engineers joint sponsor with Heating and Piping Contractors National Assn. and Manufacturers Standardization Society of Valve and Fittings Industry under procedure of American Standards Assn. Cast Iron Pipe Flanges and Flanged Fittings. Serial B 16b-1928 for fittings rated at 250 pound steam and 400 pound hydraulic pressures. Serial B 16b1-1931 for fittings rated at 800 pound hydraulic pressure. Serial B 16b2-1931 for fittings rated at 25 pound steam pressure. Requirements on chemical composition of cast iron, standard dimensions and thickness of metal for flanges, elbows, tees, etc., dimensions of drilling templates for flanges, theoretical weights. Covers sizes up to 30 inches diameter for the 250 pound steam pressure class, sizes up to 12 inches diameter for the 800 pound hydraulic pressure class, and sizes up to 72 inches for the 25 pound steam pressure class. Requirements on raised faces, number, dimensions, and spacing of bolt holes, sizes of bolts.

American Society of Mechanical Engineers joint sponsor with Heating and Piping Contractors National Assn. and Manufacturers Standardization Society of Valve and Fittings Industry under procedure of American Standard Assn. B 16d-1927. Cast-Iron Screwed Fittings. For steam pressures of 125 and 250 pounds. Tables of dimensions of fittings including center to end dimension and inspection limits for this dimension. American Society of Mechanical Engineers. Joint

umerican Society of Mechanical Engineers. Joint sponsor with Heating and Plping Contractors National Assn. and Manufacturers Standardization Society of Valve and Fittings Industry. Approved by American Standards Assn. as B 16g-1929. Cast-Iron Long Turn Sprinkler Fittings (Screwed and Flanged). For maximum hydraulic working pressures of 150 and 250 pounds. Tensile strength and chemical composition requirements for light, medium and heavy castings, dimensions of elbows, tees and crosses for various combinations of flanged and screw ends.

American Society for Testing Materials. A 74-29; 1929. Cast-Iron Soil Pipe and Fittings. General quality, chemical composition, transverse and hydrostatic pressure test requirements, method of coating with pitch, standard weights and dimensions and permissible variations.

American Society for Testing Materials. A 126-30; 1330. Gray Iron Castings for Valves, Flanges, and Pipe Fittings. Covers regular gray iron castings and higher strength gray iron including semisteels, chemical composition, tension, and transverse test requirements.

Heating and Piping Contractors National Assn. Welding Neck Flanges; 1929. Dimensions of flanges for welding on to pipe, for sizes 2-inch to 18-inch, standard and extra heavy flanges for standard and extra heavy pipe.

Refrigerating Machinery Assn. Recommended Practice. Ammonia Pipe Flanges and Flanged Fittings; 1931. Submitted to American Standards Assn. for approval. For cast iron flanges and flanged fittings for pressures up to 300 pounds, requirements on chemical composition and tensile strength of sted for metal, dimensions of elbows, for metal, dimensions of elbows,

tees, crosses, flanges.
Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Crankcase Drainpluss; 1927. Dimensions and thread of three sizes.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Cast Iron Flanges. For use with iron or steel water and steam pipe on steamships, mandatory requirements on tensile strength of material, depth and thickness of flange.

U. S. Gov., Federal Specifications Board. 343a; 1928. Pipe and Fittings, Soil, Cast-fron, Coated and Uncoated. Includes extra heavy grade of soil pipe fittings, hub and spigot type. Thicknesses of walls and parts and permissible variations, design of hub and spigot ends, weights of bends, tees, and Y branches, hammer test requirements for fittings.

U. S. Gov., Federal Specifications Board. 489; 1927. Pipe Fittings, Cast-Iron, Threaded. Two types for 125 pounds and 250 pounds, respectively. General quality and construction requirements, standard dimensions and tolerances for ells, tees, crosses, Ys, and couplings, nominal sizes of reducing fittings, hydrostatic or air pressure test requirements.

References.—Methods of testing, general requirements for metals. Sec also 600.1. Installation of pipe. See 607.0, 607.0. Threading standards. See also 607.0. Other specifications for cast iron. See 611.11.

607.2 MALLEABLE IRON PIPE, FITTINGS, AND CONNECTIONS

American Railway Assn. Mechanical Div. Pipe Unions; 1916. Standard dimensions of malleable pipe unions up to 4-inch size. American Railway Assn. Mechanical Div. Recommended Practice. Unions and Combination Union Fittings, Black and Galvanized, for 300-pound Pressure; 1930. Pipe unions of malleable iron or of steel, for locomotive use, requirements on hydrostatic proof test, tensile-strength test, dimensions of detail parts, standard sizes, for nut and nipple unions, union elbows and union tees, for locomotives.

American Society of Mechanical Engineers joint sponsor with Heating and Piping Contractors National Assn. and Manufacturers Standardiza-tion Society of Valve and Fittings Industry under procedure of American Standards Assn. B 16c– 1927. Malleable Iron Screwed Fittings. For 150

pounds steam pressure. Tables of dimensions of fittings including dimensions of center to end. Heating and Piping Contractors National Assn. Welding Neck Flanges: 1929. Dimensions of flanges for welding on to pipe, for sizes 2-inch to 18-inch, standard and extra heavy flanges for

standard and extra heavy pipe. U. S. Gov., Dept. of Commerce, Bureau of Standards, CS7-29; 1929. Standard Weight Malle-

able Iron or Steel Screwed Unions. A commercial standard selected and accepted by industry, covering brass seated black or galvanized unions for standard weight pipe, requirements on dimen-

sions, air pressure tests, and tensile test. U. S. Gov., Federal Specifications Board, 393; 1926. Unions, Mallephle Iron or Steel Fur-Unions, Malleable Iron or Steel. nished in 2 types, black, brass seated, and galvan-ized, brass seated, for pressure up to 250 pounds. General quality requirements, dimensions and threads, tensile test and air pressure test require-

ments for unions, galvanizing requirements for galvanized unions.

S. Gov. Federal Specifications Board. 535; 1927. Pipe Fittings, Malleable Iron, Threaded, 150-pound. General quality and hydrostatic test or air pressure test requirements, dimensions and tolerances for ells, tees, couplings, crosses, street ells and tees, return bends and reducing fittings.

S. Gov., Federal Specifications Board. 580; 1928. Malleable Iron or Steel Unions, 300-pound, For black and for galvanized unions with and without brass seats, requirements on general quality, threading, dimensions for sizes up to 3-inch, tensile strength, internal pressure test, structural features, and galvanizing, methods of

References.—Methods of testing, general requirements for metals. See also 600.1. Zince coatings and coatings and seeds of the seed of the

607.3 WROUGHT-IRON PIPE, FITTINGS, AND CONNECTIONS

American Petroleum Institute, Standard No. 5A: 1931. Pipe Specifications. Covers lap-welded and seamless steel and iron tubular goods for oil country purposes including drill pipe, casing and tubing. For wrought-iron or open-hearth iron goods, requirements on manufacture, permissible impurities in open-hearth iron, tensile strength tests, hydrostatic tests, flattening tests, and drift tests, standard weights, lengths, and threads.

American Petroleum Institute. Standard No. 5-L; 1931. Line Pipe. Includes welded iron pipe for conveying gas, water, or oil, including light weight, standard, and extra strong classes, of wrought or open-hearth iron, permissible impurities in open-hearth iron, requirements on tension tests, hydrostatic tests, flattening tests, and bend tests, standard weights, lengths, threads, and thread gages.

American Railway Assn. Mechanical Div. Dimensions and Threads of Wrought Pipe; 1908. Standard dimensions, inside and outside diameter of pipe, thickness of metal, threads per inch length of perfect screw using Briggs standard section for thread.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1925. Welded Wrought-Iron Pipe. Black and galvanized iron pipe of coiling or bending quality for locomotives and cars. Materials, tension, hydrostatic, fracture, bend, etch test requirements, standard weights.

American Railway Assn. Signal Section 12324; 1924. One Inch Wrought Iron Signal Pipe. Tensile test requirements, and if required, twist and bend test requirements, threading of pipe and coupling, construction of joint and plug.

American Society for Testing Materials. A 72-31; 1931. Welded-Wrought Iron Pipe. Covers standard weight, extra strong, and double extra strong pipe. Tension, hydrostatic, fracture, and bend test requirements, standard weights and lengths and permissible variation in weight.

Heating and Piping Contractors National Assn.
Welding Neck Flanges; 1929. Dimensions of
flanges for welding on to pipe, for sizes 2-inch to 18-inch, standard and extra heavy flanges for

standard and extra heavy pipe.

U. S. Gov., Dept. of Commerce. Bureau of Standards CS6-31; 1931. Wrought-Iron Pipe Nipples. Bureau of Stand-A commercial standard selected and accepted by industry, requirements on dimensions and threading, nominal weight per foot, for black and galvanized pipe of standard weight, extra strong, and double extra strong, used in making nipples, pine according to A. S. T. M. Spec, A72-30, stand-

ard stock sizes and lengths of nipples.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Welded Steam and Water Pipes of Wrought Iron. For use on steam vessels, mandatory requirements on hydrostatic pressure test for all sizes, on flattening and tensile test for larger sizes, material and general design of flanges.

U. S. Gov., Federal Specifications Board. WW-P-441; 1931. Wrought-Iron Pipe, Welded, Black and Galvanized. For standard weight, extra strong, and double extra strong types, requirements on general quality, type of weld for various sizes, weight of zinc coating, standard weights of pipe, dimensions, tolerances, hydrototic for determined for the coating standard determined for the coating termined for th static test, flattening, bend, and tension tests, suitable for steam, water, air, gas, and oil. U. S. Gov., Federal Specifications Board.

N-351; 1930. Pipe Nipples, Brass, Steel and Wrought Iron. For 3 weight grades of wroughtiron nipples as defined in F. S. B. Spec. WW-P-441 for wrought-iron pipe, threading according to F. S. B. Spec. GGG-P-351, requirements on dimensions for close, short, long, and extra long pipe nipples, conforming in dimensions to CS5-29, CS6-29, and CS10-29 of U. S. Dept. of Commerce

References.—Methods of testing, general requirements for metals. See also 690.1. Zine contings and tests. See also 600.3. Standard pipe sizes. See also 607.0. Installation, identification, care of piping. See also 607.0. Iron-boiler tubes. See 703.2. Wrought-iron conduit for electric wiring. See 715.11.

607.4 STEEL PIPE, FITTINGS, AND CONNECTIONS

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Pipe Fit-tings. For cast-steel fittings for all pressures and temperatures, requirements on tensile and bend test of material, pressures for which flanged end construction required, formula for designing thickness, hydrostatic test.

American Bureau of Shipping, Rules for Building and Classing Steel Vessels; 1930. Pipes. For lap-welded steel pipes and seamless steel pipe, requirements on tension, flattening, and hydrostatic tests, formula for thickness as re-lated to working pressure, for 2 strength grades

of steel. American Electric Railway Engr. Assn. D11–26; 1926. American Standards Assn. C 13–1926. Specification for Tubular Steel Poles. Material, design, fabrication, drop and deflection tests, weight and dimensions, table showing deflections

under load. American Marine Standards Committee. H No. 21 to H No. 25, incl.; 1927. Tubular Steel Cargo Booms for Ships. H No. 30 and H No. 31. Heel Fittings and Caps for Tubular Steel Booms. For 4 and 5 standard sizes of 5, 10, 15, 20, and 30 ton booms, dimensions, general construction, and tension test requirements of steel for booms, standard sizes and dimensions of fittings.

American Petroleum Institute. Standard No. 5A; 1931. Pipe Specifications. Covers lap-welded and seamless steel and iron tubular goods for oil country purposes including drill pipe, casing and tubing. For steel goods, requirements on chemical composition, tensile strength tests, hydrostatic test, flattening and drift tests, standard weights and lengths, standard threads.

American Petroleum Institute. Standard No. 5-L; 1931. Line Pipe. Applies to welded and seamless steel, and welded iron tubular goods for conveying gas, water, or oil, including light weight, standard and extra strong classes. For steel pipe, requirements on chemical composition, tension, hydrostatic, flattening, and bend tests, standard weights and lengths, threads, thread

American Petroleum Institute. Standard No. 11A and Supplement No. 1; 1931. Oil Well Pumps. Standard dimensions and tolerances for 4 stand-ard sizes of cold drawn and of machined liner working barrels, of plungers, valves, couplings, etc., dimensions of measuring gages for the various parts, tentative standard dimensions for inserted cast-iron liner and cold-drawn barrel

American Railway Assn. Mechanical Div. Recommended Practice. Unions and Combination Union Fittings, Black and Galvanized for 300pound Pressure; 1930. Pipe unions of malleable iron or of steel, for locomotive use, requirements on hydrostatic proof test, tensile strength test. dimensions and standard sizes of detail parts of nut and nipple unions, union elbows and union tees, for locomotives.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1925. Welded and Seamless Steel Pipe. Black and galvanized steel pipe of three strength grades of coiling or bending quality for locomotives and cars. Chemical composition, tension, hydrostatic and flattening test

requirements, standard weights. American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Hose Clamps, except tank hose, list of recommended standard sizes of

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Mechanical Steel Tubing. Dimensions of 70 recommended standard sizes.

American Railway Assn. Signal Section 12227; 1927, One Inch Welded Steel Pipe. For operation of mechanical signal units, chemical composition, tensile properties, weights, dimensions, hydrostatic pressure capacity requirements, test requirements for bending and flattening, threading and joint construction.

American Society of Mechanical Engineers. Joint sponsor with Heating and Piping Contractors National Assn. and Manufacturers Standardiza-tion Society of Valve and Fittings Industry under procedure of American Standards Assn. A. S. A. serial B 16e-1927. Steel Pipe Flanges and Flanged Fittings. For steam pressures of 250, 400, 600, 900 and 1,350 pounds and hydraulic pressures of 500 to 2,250 pounds, tension and chemical composition requirements for material, facing and bolting requirements, inspection limits and tables of dimensions of fittings.

American Society for Testing Materials. A 53-30; 1930. Welded and Seamless Steel Pipe. Covers standard weight, extra strong, and double extra strong grades for coiling, bending, flanging and purposes. Chemical composition tests, tension, hydrostatic, flattening, and bend test requirements, standard weights and permis-

sible variations.

American Society for Testing Materials. A 95-29; 1929. Carbon Steel Castings for Valves, Flanges and Fittings for High Temperature Service. Heat treatment, chemical composition, tension, bend, and hydrostatic test requirements for mate-

rials to be used up to 750° F.

American Society for Testing Materials. A 105-28: 1928. Forged or Rolled Steel Pipe Flanges for High Temperature Service. Three classes of which class A is intended for forge welding. Annealing or normalizing procedure for classes B and C, chemical composition and tests, tension test requirements.

American Society for Testing Materials. A 106-29; Lap-Welded and Seamless Steel Pipe for High Temperature Service. For working pressures up to 1,350 pounds and for temperatures of 450° to 750° F., covers 2 grades of seamless pipe of which one is suitable for cold bending, fusion, or forge welding. Construction, chemical composition, tension, hydrostatic pressure, flattening and bend test requirements, standard dimensions, weights and permissible variations.

American Society for Testing Materials. Tentative Specifications. A 120-28T; 1928. Black and Hot Dipped Zinc Coated Welded and Seamless Steel Pipe for Ordinary Uses. For low pressure service in steam, water, and gas lines, not in-tended for close bending or high temperature service, hydrostatic pressure test requirements, standard weights and dimensions for standard weight, extra strong, and double extra strong.

Heating and Piping Contractors National Assn. Welding Neck Flanges; 1929. Dimensions of Dimensions of flanges for welding on to pipe, for sizes 2-inch to 18-inch, standard and extra heavy flanges for

standard and extra heavy pipe.

Society of Automotive Engineers, 1931 Handbook, Cable, Conduit and Tubing Clips; 1928. Dimensions of full circle mounting or hold-down clips of soft cold rolled steel.

Society of Automotive Engineers, 1931 Handbook, Cold-Drawn Seamless Steel Tubing; 1911. Dimensions and tolerances up to 31/2-inch size.

Society of Automotive Engineers, 1931 Handbook, Water-Pipe Flanges; 1926. Standard dimensions of 5 standard sizes of water pipe flanges for automobile radiators.

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS5-29; 1929. Steel Pipe Nipples. A com-mercial standard selected and accepted by industry, requirements on dimensions and threading, nominal weight per foot, for black and gal-vanized pipe used for making pipe nipples,

standard weight, extra strong, and double extra strong grades, pipe according to A. S. T. M. Spec. A120-28T, standard stock sizes and length of

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS7-29: 1929, Standard Weight Malleable Iron and Steel Screwed Unions. A commercial standard selected and accepted by industry, covering brass seated black or galvanized unions for standard weight pipe, requirements on dimensions, air pressure tests, and tensile test.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Welded and Seamless Steel Steam and Water Pipe. For use on steam vessels, mandatory requirements on absence of surface defects, hydrostatic, flattening, and tensile test, material, general design, and method of attachment of flanges.

U. S. Gov., Federal Specifications Board. 393; 1926. Also No. 580; 1928. Unions, Malleable Iron or Steel. No. 393 for pressures up to 250 pounds, No. 580 for 300 pounds pressure. For black and for galvanized types, brass seated, and for 300 pound type without brass seats, requirements on dimensions, threading, tensile test,

internal pressure test, galvanizing, structure. U. S. Gov., Federal Specifications Board. WW-N-351; 1930. Pipe Nipples, Brass, Steel and Wrought Iron. For 3 weights of steel nipples as defined in F. S. B. spec. WW-P-431 for steel pipe, threading according to F. S. B. Spec. GGG-P-351, requirements on dimensions for close, short, long, and extra long nipples, conforming in dimensions to CS5-29. CS6-29, CS10-29 of U.S. Dept. of

Commerce.

U. S. Gov., Federal Specifications Board, WW-P-431; 1930. Welded Steel Pipe, Black and Zinc Coated. For standard weight, extra strong, and double extra strong types, requirements on general physical qualities, standard weights and dimensions and tolerances, hydrostatic test, bend and flattening tests, purity of zinc bath and galvanizing requirements, tension test requirements for extra strong and double extra strong.

607.5 SHEET IRON AND STEEL PIPE

American Assn. of State Highway Officials, Ten-tative Specification; M-36. Undated. Base Metal for Corrugated Metal Sheets for Culverts. Chemical composition requirements for pure iron, copper bearing pure iron, copper iron, copper molybdenum iron, copper steel, tolerances on check analysis.

American Assn. of State Highway Officials. tative Method T-64, Undated, Method of Test and Inspection of Corrugated Metal Culvert. Requirements on general inspection and measurement of gage, etc., chemical analysis according to A 33-24 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Circ. 331, of Dept. of Agriculture; 1925. Standard Specifications for Corrugated Metal Pipe Culverts. Approved by Sec. of Agriculture for use in connection with federal-aid road work. Requirements on chemical composition of base metal, tolerance on weights of sheets, weight and application of zinc coating, length and thickness of sheets and width of lap for various pipe sizes. sizes of corrugations and rivets, laving of pipe, etc

American Electric Railway Engr. Assn. Misc. Methods and Practices. B209–26; 1926. Design of Small Bridges, Culverts, and Trestles. Shows maximum recommended sizes of pipe and drawings of typical designs of concrete box culverts, concrete arch culverts, I-beam spans on concrete

abutments, frame and pile trestles.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Corrugated Metal Culvert Pipe for Railroad Use. Requirements on use of open-hearth steel, chemical composition of base metal, size of corrugations, weight tolerance for sheets, lap of longitudinal joints, riveting, end reinforcement, amount of galvanizing, amount of engagement of coupling bands.

National Electric Light Assn. Proceedings, vol. 80. p. 413; 1923. Suggested Specifications for the Fabrication of Riveted Steel Pipe. For hydraulic penstocks to be erected in the field, steel in accordance with A. S. T. M. specifications, strength requirements, shearing, punching, reaming, planing of plates, etc., standard dimensional details for single riveted lap joints, double and triple riveted lap and double butt joints, and for quadruple riveted double butt joints.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Corrugated Galvanized Metal Pipe. Chemical composition requirements for base metal of pure iron, copper-bearing pure iron, copper-iron, copper-molybdenum iron, or copper-steel, permissible variation from theoretical weight, weight and application of galvanizing metal, construction, metal gage, and weight requirements for pipe of various sizes, depth and spacing of corrugations, riveting, and joint construction requirements. etc.

U. S. Gov... Dept. of Commerce. Bureau of Standards R29; 1924. Eaves Trough, Conductor Pipe, Conductor Elbows, and Fittings. Simplified practice recommended and accepted by industry establishing a limited list of standard types and sizes and minimum thicknes of material for iron and copper pipe, eaves trough, and elbows.

References.—Iron and steel sheets. See also 604.12, 604.32, Standard thicknesses of plates and 604.92, 604.32, Standard thicknesses of plates and 604.02 of the standard thickness of sheets. 607.6 VALVES, COCKS, AND HYDRANTS, FERROUS AND NONFERROUS

merican Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Carbonated Water and American Sirup Valves. Recommended designs illustrated of a high pressure valve for carbonated water and a low pressure valve for sirup, particularly suited to the materials handled.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Valves. For cast-steel, cast-iron, semisteel, or bronze valves, requirements on pressures and temperatures for which each material applicable, flanged end and bolted bonnet type, tensile and bend tests for cast steel, tensile and transverse tests for cast iron, and tensile test requirements for bronze, formula for thickness of material, hydrostatic

test for valves.

American Gas Assn. Approval Requirements for Gas Water Heaters; 1928. Includes plug type gas cock, drawing showing minimum dimensions, American Gas Assn. Standard Gas Fixture Specifications; 1920. Includes construction and some dimensional requirements for standard gas fix-

ture cock.

American Railway Assn. Mechanical Div. Determining the Size of Safety Valves, Their Application to Locomotives and Their Repairs: 1912. Formula for determination of safety valve size from boiler data, number, location, and setting of safety valves, bronze material recommended, standard pipe thread connections for various sizes.

American Railway Assn. Mechanical Div. Cars: 1923. Includes safety valves for tank cars. detail dimensions and design of valve, dimensions and physical properties requirements for valve springs for 25 and 12 pound release prescurec

American Railway Assn. Mechanical Div. Recom-mended Practice. Triple Valve, Test Require-ments for Freight Service; 1911. Required testing apparatus, test procedure and requirements for charging test, service application tests, emergency application tests, for individual triple valve tests and for similar tests on test rack.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. Auxiliary Reservoir Re-lease Valve. Standard ½-inch pipe thread connection for connecting to air brake system.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Hydrants and Valves; 1922. The 1916 specifications of the American Water Works Assn. have been adopted by the A. R. E. A. and are reprinted in above manual

American Society for Testing Materials. A 95-29; Carbon Steel Castings for Valves, Flanges 1929. and Fittings for High Temperature Service. Heat treatment, chemical composition, tension, bend, and hydrostatic pressure test requirements for materials to be used up to 750° F.

American Society for Testing Materials. A 126-30; 1930. Gray Iron Castings for Valves, Flanges, and Pipe Fittings. Covers regular gray iron castings and higher strength gray iron including semisteels, chemical composition, tension, and transverse test requirements.

American Water Works Assn. Hydrants and Valves; 1916. Transverse test requirements for cast iron, tensile strength of wrought iron and of the noncorrodible metals specified. For valves, construction and noncorrodible material requirements for gate valve stems, weights of valves,

sizes of bypasses.

Associated Factory Mutual Fire Insurance Com-Rubber Facings for Dry Pipe Valves and Check Valves; 1923. Requirements as to percentage of Para Rubber, allowable percentages of organic acetone extract, free sulphur, alcoholic potash ether extract, and total sulphur, plasticity and tensile strength and elongation requirements.

Associated Factory Mutual Fire Insurance Com-Valves, Indicator Posts and Hydrants; panies. Requirements for the sizes, material, construction and design, and tests for the following items and their component parts; outside screw and yoke gate valves, inside screw gate valves, straightway and angle hose valves, regular and special swing check valves, indicator posts, hydrants for mill yards.

Chlorine Institute (Inc.). Standard Valve; 1929. For 100, 105, and 150 pound chlorine containers, requirements on design, materials, detail dimensions and design of all parts, chemical composition of brass body of valve and of fusible metal in fusible plug, pressure test requirements, as-

sembly.

Chlorine Institute (Inc.). Standard Valve: 1929. For 1-ton chlorine containers, requirements on design, materials, detail dimensions and design of all parts, assembly, chemical composition of

brass in body, pressure test requirements. Heating and Piping Contractors National Assn. Radiator Valves; 1929. Standard roughing-in

dimensions of angle type valves up to 2-inch size. National Board of Fire Underwriters. Emergency Gas Shut-off Valves; 1924. For valve provided with positive mechanical connection to accessible control for operation by firemen, location and protection of valve, location and construction of pull box, operating handle, and connection from valve to handle.

Power Piping Society. Specifications for Power Piping; 1928. For gate, globe, angle, and check valves, requirements on types, materials of various parts, hydrostatic tests for application of valves to steam lines and feed water lines of various pressures and temperatures, provision of drain bosses on gate valves, materials and dimensions to conform to standards of American Standards Assn.

Refrigerating Machinery Assn. Recommended Practice. Ammonia Pipe Flanges and Flanged Fittings. 1931. Submitted to American Standards Assn. for approval. Includes cast iron ammonia flanged valves for pressures up to 300 pounds, requirements on chemical composition and tensile strength of material, strength of bolts, thickness of metal, dimensions from center

to contact surfaces.

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Drain Cocks. Recommended minimum passage diameters for four

sizes from ½ to ½ inch thread size.
Underwriters' Laboratories (Inc.), Hazardous Liquid Valves, Construction and Performance; 1930. For valves incorporated in discharge devices at gasoline filling stations and for valves in containers and pipe lines handling gasoline, etc., for shut-off valves, hose nozzle valves, and hose drain valves, requirements on material, thickness of walls, type of joints, engagement of threads, construction of valve, stuffing box, and valve stem, hydrostatic and leakage tests, drop tests for hose nozzle valves, endurance tests.

Underwriters' Laboratories. Pressure Regulators or Reducing Valves; 1928. For reducing storage clyinder pressures in oxygen, acetylene, etc., used in welding and cutting. Normal operation test and excess pressure test requirements. Underwriters' Laboratories. Outside-Screw-And-

Yoke Gate Valves; 1921. Standard sizes for fire systems, materials bronze and cast iron for larger sizes, general design, standard flanges and bell ends, design and dimensions of stems, stuffing boxes, hand wheels, strength test of bronze valve stems, of cast iron for bodies, and pressure test

requirements for valve.

S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Lever Safety Valve. For installation on marine boilers, mandatory requirements on area of valve, length of lever and fulcrum link, width of bearings, general construction and arrangement, materials,

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Valves. For use on steam vessels, valves of cast steel, cast iron, semisteel, malleable iron, brass or bronze, mandatory requirements on tensile strength of material, on size limits for each material, hydrostatic pressure test, and on disallowance of screwed bonnets for cast iron valves, for pressures up to 300 pounds.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) 448; Ball Cocks. Float-operated supply cock for flush tanks, size, material, working pressure, hush tube requirements, ball float construction, dimensions of lever bearing pins, supply cock of brass.

U. S. Gov., Federal Specifications Board. 448; Use.) 1926. Plumbing fixtures (For Land Use.) Check Valves. Composition of brass, acceptable types of disks for horizontal swing check valves.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Combination Faucet. For compression type faucet, with piping connections, chemical composition of brass, nickel plating requirements and tests, minimum weight of faucet.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Compression Stops. Requirements for working pressure, construction, material, finish, type of handle, standard weight globe pattern valve.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Flushing Valves. Flushometer type of approved pattern, capacity and pressure range for waterclosets and urinals, operating requirements, provision of cut-off cocks, size of supply pipe, material and finish of valve.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Gate Valves, For 125 pounds, composition of brass, structural requirements, weight of various sizes up to 4 inches for both flange and screw types, rising and nonrising stems.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Globe and Angle Valves. For 150 pounds, composition of brass, structural requirements, weight up to 2-inch size.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Laundry Tray Bibb. Brass compression type, 2 sizes. as illustrated, minimum weight, nickel plating requirements and test, chemical composition of brass.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Lavatory Supplies, with Compression Faucets. General dimensions and shape of brass compression faucet and handle, minimum weight, chemical composition of brass, nickel plating requirements and tests. For self-closing faucets, addition requirements as to material of spring, pressure against which faucet shall close, bearings and check lug requirements.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures. (For Land Use.) Mixing Valve. General construction requirements and capacity for compression type valve for shower fixtures.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Sill flange Cock. Brass compression type with tapped for 34-inch pipe, connection for 34-inch hose as illustrated.

NS. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Sink Bibb. Brass compression type, with or without shank and adjustable flange as illustrated, 2 standard sizes, minimum weight, type of handle, nickel plating requirements and tests, chemical composition of brass.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use.) Street Washers. Construction, materials and finish for underground valve in cast-iron box with pipe extensions to surface for hose attachment and valve operating rod, automatic nonfreezing drain.

drain.

S. Gov., Federal Specifications Board. 448;
1926. Plumbing Fixtures (For Land Use.)
Wall Hydrant. For %-inch hose, construction
and materials for pipe extending through wall
with valve inside of building and hose connection and valve operating key on outside.

607.7 METALLIC HOSE, FERROUS AND NONFER-

American Marine Standards Committee. O No. 2–1926. Specification for ¾-inch and 2-inch Flexible Metallic Hose, Description, hydrostatic test requirements, fittings, standard lengths.

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Flexible Steel Conduit and Tubing; 1926. Includes flexible steel tubing for carbureter intake and for exhaust and heater tubing, of square locked and interlocked types, construction details, rust proof coating, dimensions, tension test, breaking test, and corrosion test requirements.

References.—Methods of testing, general requirements for metals. See also 600.1, Rust-proof coatings. See also 600.3, Rust-proof coatings. See 202.32. Flexible metallic conduit for electric wiring. See 15.51. Plexible metallic casing for tachometer drive.

608. NAILS, SCREWS, BOLTS, NUTS, AND RIVETS

608.0 GENERAL ITEMS

American Railway Assn. Mechanical Div. Screw Threads; 1926. The Sellers or Franklin Institute (U. S. Standard) system of screw threads, bolt heads and nuts, is standard of A. R. A. ex-

cept for pipe work and special locomotive work. American Society of Mechanical Engineers. Joint Sponsor with Society of Automotive Engineers under procedure of American Standards Assn. B 1a-1924, American Standard Screw Threads for Bolts, Machine Screws, Nuts, and Commercially Tapped Holes. Definitions, form of thread, classification of fits, tables giving dimensions of threads for various fits for the coarse thread and the fine thread series.

Society of Automotive Engineers. 1931 Handbook. Screw Threads; 1926. Basic diameters and thread data for standard screw series for coarse thread, for fine thread, extra fine thread, for fine thread over 11/2-inch diameter series, loose, free, and medium fit data for screws and nuts in above series, applications of various series and fits. Approved as an American Standard by

American Standards Assn.

Society of Automotive Engineers. 1931 Hand-book. Tap Drill Reference Tables: 1930. Tables giving the nearest drill sizes for the basic, maximum, and minimum minor diameters specified in American Standard for Screw Threads, for extra fine, fine, and coarse threads, tap sizes and corresponding tap-drill sizes for coarse and fine threads.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS24-30; 1930. American National Stand-

ard Screw Threads (Coarse and Fine Thread Series.) A commercial standard accepted by industry, making available for convenient use six of the most essential tables of dimensions of fastening screws as published in the 1928 Report of the National Screw Thread Commission (Sec. III and Appendix 4), Bureau of Standards publication M89.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS25-30; 1930. American National Special Screw Threads. A commercial standard accepted by industry and presenting in compact form the tables of dimensions of special screw threads having the American National form of thread (60°) as published in 1928 report of National Screw Thread Commission (Secs. IV and XD), Bur. Standards Publ. M89.

U. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. American National Acme Screw Threads. Thread profile dimensions, recommended pitches and corresponding mimimum diameters, definitions of 4 classes of fits, 2 for traversing screws and 2 for lead screws, allowances, thread proportions, pitch, diameter and length of engagement

increments, tolerences on gages.

U. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of Nat'l Screw Thread Commission; 1928. Screw threads for bolts, machine screws, nuts, tapped holes, etc. Mandatory requirements for material purchased and used by the War and Navy Depts., including standard form of thread, standard dimensions of coarse thread series and of fine thread series, definitions of 4 classes of fits with tables of allowances and tolerances. cludes sizes taken from the standards of Am. Soc. of Mech. Engrs. and Soc. of Automotive Engrs.

. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. Screw threads of special diameters, pitches, and lengths of engagement. Mandatory for material purchased and used by War and Navy Depts. Recommended pitches with special recommendation of 12 threads per inch, dimensions of threads

of standard profile for 4 classes of fit.

U. S. Gov., National Screw Thread Commission, Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission: 1928. Wrench fit for threaded studs (tentative specifications). Covers a class 5 of wrench fit not in-cluded in National American standards, dimensions, allowances and tolerances for studs and tapped holes for coarse threaded studs and fine threaded studs in hard material,

U. S. Gov., National Screw Thread Commission. Publ. M98 and M99 of Nat. Bureau of Standards. American National Screw Thread Tables for Shop Use. Essential tables of 1928 report of N. S. T. C are published in a more convenient form, M98 for standard threads of coarse and fine series and

M99 for special threads.

608.1 NAILS, BRADS, STAPLES, AND TACKS

608.11 Nails

American Railway Engineering Assn. 1929 Manual and 1930 Supplement to 1929 Manual. Dating Nails. For dating railroad ties, to be of iron or steel, galvanized; requirements on test for thickness of zinc coating, dimensions and design of nail and of figures.

American Society for Testing Materials. D 249– 27; 1927. Heavy Weight Slate Surfaced Asphalt Roll-Roofing and Heavy Weight Slate Surfaced Asphalt Shingles. Includes specifications for nails, limiting gage sizes, minimum diameter of head, lengths, and zinc coating requirements. nailing requirements for roll-roofing.

Asphalt Shingle and Roofing Institute. Nails. Zinc in Protective Coating; 1921. Recommends hydrochloric acid-antimony chloride method for determining amount of zinc in protective coating, apparatus requirements, test procedure,

Asphalt Shingle and Roofing Institute. Nails to be Used for Laying Composition Shingles; 1921. For smooth or barbed zinc coated nails, gauge of wire, length of nail, size of head, size of barbed shank, count per pound, amount of zinc

coating.

Asphalt Shingle and Roofing Institute. Nails to be Used for Laying Roll Roofing; 1920. For smooth or barbed zinc coated nails, gage of wire, length of nail, size of head, count per pound, amount of zinc coating.

Asphalt Shingle and Roofing Institute. Recommended Test. Nails, Accelerated Corrosion Test; 1923. Use salt spray test described in Bureau of Standards Circular No. 80, dimensions and design of test box, preparation of solution and some test requirements.

Underwriters Laboratories. Class C Asphalt Rag-Felt Sheet Roofing and Shingles; 1929. Nails for sheet roofing, requirements on dimensions of nail

and head, and amount of zinc coating.

U. S. Gov., Dept of Commerce. Bureau of Standards. R47-28; 1928. Cut Tacks and Small Cut Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, styles, and finishes for clout nails, trunk and basket nails, shoe nails and tacks, and various other types of tacks.

S. Gov., Federal Specifications Board. 214; 1924. Asphalt Prepared Roofing, Includes specifications for zinc coated roofing nails, gage of wire, diameter and thickness of head, length of

shank.

U. S. Gov., Federal Specifications Board, 423; 1926. Slate Surfaced Asphalt and Asbestos Prepared Roofing. Includes roofing nails, requirements on gage of wire size and thickness of head, length

of shank, coating with zinc.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Box, Basket, Barrel, and Broom Nails. For Iron, steel, copper, zinc, brass, Muntz metal, and copper bearing steel nails, with various coatings of zinc, tin, cement, and brass, chemical composition and ductility requirements of materials, requirements for coating, dimensions, tolerances, and weights for various sizes and finishes of box, barrel, basket, and broom nails.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Builders Nails. Iron, steel, copper, zinc, brass, Muntz metal, and copper bearing steel, nails, with various coatings of zinc, tin, cement, and brass, chemical composition and ductility requirements of material, requirements for coatings, dimensions, tolerances, and weight for various sizes and finishes of barbed nails, boat nails, brads, and for car, casing, eement, clinch, clout, and common nails, cut nails, double head, finishing, flooring, and hinge nails, lath nails for wood and metal lath, plaster board, purlin, roofing, sheathing, and shingle nails, siding, slating, and stem nails, dowel and escutcheon pins, copper storm nails, foundry nails.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Cobblers, Saddlers, and Upholsterers Nails. For iron, steel, copper, zinc, brass, Muntz metal, and copper bearing steel nails, chemical composition and ductility requirements for materials, dimensions, tolerances, and weights for various sizes of iron and steel wire and cut heel nails, iron or steel hob and shoe nails, saddle and saddlery nails,

and upholsterers nails.

U. S. Gov., Federal Specifications Board. 534; 1927.
Nails, Spikes, Tacks, and Staples. Fence Nails. For iron, steel, copper, zinc, brass, Muntz metal, and copper bearing steel fence nails, smooth, or cement coated wire nails, plain or zinc coated cut fence nails, chemical composition and ductility requirements for materials, requirements for coatings, dimensions, tolerances, and weight for various sizes and finishes of wire and cut fence nails.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Horse Nails. Chemical composition and ductility requirements of material, dimensions, tolerances and weights for various sizes of horse nails.

U. S. Gov., Federal Specifications Board. NN-B-621; 1930. Wood Boxes, Nailed and Lock-Corner. Includes cooler nails, sinker nails, and standard box nails, requirements on length, diameter, and steel wire gage number for sizes from 2-penny to 10-penny.

References.—Methods of testing, general requirements for metals. See also 600.1. Noncorrosive coatings and test. See also 600.3. Steel and iron wire gages. See 603.40.

608.12 Brads

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Wire Brads, list of recommended standard sizes.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Brads. For iron, steel, copper, zinc, brass, Muntz metal, and copper bearing steel brads, with various coatings of zinc, tin, cement, and brass, chemical composition and ductility requirements of material, requirements for coatings, dimensions, tot errances, and weight for various finishes and sizes of common brads, flooring brads, and moulding nails.

References.—Methods of testing, general requirements for metals. See also 600.1. Noncorrosive coatings and test. See also 600.3. Steel and iron wire gages. See 603.40.

608.13 Staples

American Railway Engineering Assn. 1929 Manual. Standard Right-of-Way Fences; 1926. Includes staples, size of galvanized steel wire stock, lengths for hardwoods and for softwoods.

National Electric Light Assn. Suggested Specifications D315-22; 1922. Staple. Dimensions and allowable variations for 2 and 3 inch steel staples, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22. Published in 1924 N. E. A. L. proceedings.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Staples. Electricians staples, metal lath staples, poultry netting staples, wire fence staples, and double pointed tacks, bright, coppered, and zinc coated finishes, chemical composition and ductility requirements for materials, requirements and tests for coatings, dimensions, tolerances, and weights of various sizes.

References.—Methods of testing, general requirements for metals. See also 600.1. Noncorrosive coatings and tests. See also 600.3. Steel and iron wire gages. See 603.40.

608.14 Tacks

U. S. Gov., Dept. of Commerce. Bureau of Standards. R47-28; 1928. Cut Tacks and Small Cut

Nails. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, style, and finishes for bill posters tacks, carpet, upholsterer, trimmer, basket, trunk, solid head lining, gimp, lace, hide tacks, clout nails, trunk and basket nails, copper and galvanized tacks, show nails and tacks.

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Tacks, Bill posters tacks, carpet tacks, copper or brass tacks, galvanized tacks, double pointed tacks, gimp tacks, saddle tacks, she tacks, upholsterers tacks. Chemical composition and ductility requirements for materials, requirements for coatings, dimensions, tolerances, and weights for various sizes.

U. S. Gov., Federal Specifications Board. 600; 1928. Thumbtacks. For nickel-sliver heads, brass or steel heads, stamped steel tacks, center pull tacks, colored head thumbtacks, requirements on materials for each type, general design and construction of each type, packing.

References.—Methods of testing, general requirements for metals. See also 600.1. Noncorrosive contings and tests. See also 600.3. Steel and Iron wire gage. See 603.40.

608.15 Spikes

U. S. Gov., Federal Specifications Board. 534; 1927. Nails, Spikes, Tacks, and Staples. Spikes, Earge and boat spikes, common cut iron or steel spikes, gutter spikes, round wire spikes, froi ron, steel, copper, zinc, brass, Muntz metal, or copper bearing steel spikes, plain or zinc coatel, chemical composition and ductility requirements for materials, requirements for coating, dimensions, tolerances, and weights for various sizes.

References.—Railway track spikes. See 606.5. Methods of testing, general requirements for metals. See also 600.1. Steel and iron wire gages. See 603.40.

608.2 SCREW

American Electric Railway Engr. Assn. Recommended Specification D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes steel lag screws, requirements on construction, dimensions and permissible variations for 2 sizes, material according to A. S. T. M. Spec. A-9 for structural steel.

American Marine Standards Committee. E No. 11-1927. Propeller IIub Studs, Nuts, and Lock Screws. For lock screws, dimensions of standard sizes, threading requirements, corresponding to nut sizes from 1½ to 4½ inches, workmanship and quality of materials in conformity with standards of Am. Bureau of Shipping.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1930. Report of committee recommending list of standard sizes to be carried in stock of flat, oval, and round head briss wood screws, of flat and round head iron wood screws, of flat, oval, and round head iron machine screws, and of flat, fillister, and round head iron machine screws.

American Railway Assn. Telegraph and Telephone Section. 1-A-20; 1927. Pole Line Hardware, Includes % inch and ½ inch fetter drive screw, mild steel, galvanized, dimensions and tolerances, tensile and bend test requirements for the steel stock.

American Society of Mechanical Engineers, Joint Sponsor with Society of Automotive Engineers under procedure of American Standards Assn. A. S. A. serial B 18b-1927. Wrench Head Bolts and Nuts and Wrench Openings. Includes cap screws, dimensions and tolerances for hexagonal cap screw heads adopted as standard. American Society of Mechanical Engineers and Society of Automotive Engineers, sponsors, approved by American Standards Assn. as B 18c-1930. Slotted Head Proportions of Machine Screws, Cap Screws, and Wood Screws. Head and slot proportions for slotted flat head, round head, oval head, fillister head machine screws and for flat head, button head, and fillister cap screws, and for round head, flat head, and oval head wood screws, including brass wood screws,

National Electric Light Assn. Suggested Specifications. Publ. No. 289-45; Spec. D264-28T. Tentative, 1928. 4-inch Lag Screw. D264.1-28T. Tentative, 1928. %-inch Lag Screw. Dimensions for 2 sizes of each with allowable variations, for steel lag screws, material according to N. E. L. A.

Spec. D200-22, galvanizing according to D210-22. National Electric Light Assn. Suggested Specifications. D265-22; 1922. ¾-inch Lag Screw. D266-22; 1922. ¾-inch Lag Screw. and allowable variations for steel lag screws, material according to N. E. L. A. specifications D200-22 and D209-22, galvanizing according to D210-22. Published in 1924 N. E. L. A. proceedings.

Society of Automotive Engineers. 1931 Handbook. Cap Screws, Bolts and Nuts, and Wrench Openings; 1930. Standard dimensions of steel, fin-ished hexagonal cap screws, set screws, flat head, oval head, fillister head, and round head machine screws, flat head, fillister head, and button head cap screws. The first two listed conform to American Standards, the others conform to April 1929 report of committee on bolt, nut and rivet proportions under American Standards Assn. procedure.

Society of Automotive Engineers, 1931 Hand-book. Wood Screws; 1930. Dimensional standards of round head wood screws, flat head wood screws, and oval head wood screws, length tolerances. Conform to April 1929 report of committee on bolt, nut, and rivet proportions under

American Standards Assn. procedure.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS37-31; 1931. Steel Bone Plates and Screws. A commercial standard selected and adopted by industry for bone plates, includes requirements on chemical composition, design, dimensions, and hardness for 11 sizes of self tapping screws made of chromium-vanadium steel.

U. S. Gov., Federal Specifications Board. FF-S-111; 1931. Screws, Wood. Standard size numbers, diameters, and pitches, dimensions and tolerances for oval head, round head, and flat head screws, standard sizes of steel screws and

of brass screws.

. S. Gov., Federal Specifications Board. 548; 1928. Bolts, Nuts, and Machine Screws. Includes cap screws, of hexagon-head, flat-head, button-head, and oval fillister-head designs, machine screws, headed and headless set screws, dimensions, general design, tension and bend test requirements.

S. Gov., National Screw Thread Commission. Cap Screws. Standards of N. S. T. C. for cap screws have been adopted by Federal Specifications Board and are incorporated in Specifica-

tion No. 548.

U. S. Gov., National Screw Thread Commission. Wood Screws. Standards of N. S. T. C. for wood screws have been adopted by Federal Specifications Board and are incorporated in Specification FF-S-111.

References.—Methods of testing, general requirements for metals. See also 600.1. Noncorrosive coatings and tests. See also 600.3. Standard threads. See also 600.3. Standard threads. See also 600.3.1. 608.3 BOLTS AND NUTS. EXCEPT RAILWAY TRACK BOLTS

608.30 General Items

National Electric Light Assn. Suggested Specifi-cation. D209-22; 1922. Bolts and Nuts (Gen-eral). Heads and nuts with one face rounded or chamfered, threads per inch for different sizes using U. S. standard threads, eyes of bolts or anchor rods to be forged. Published in 1924 N. E. L. A. proceedings.

608.31 Bolts

American Electric Railway Engr. Assn. mended Specification, D102-29: 1929, Overhead Line Materials for Direct and Catenary Suspension. Includes guy anchor bolts, guy clamp bolts, anchor rods, carriage bolts, eye bolts, spacing bolts, stud bolts, tap bolts, and through bolts, requirements on construction, dimensions and permissible variations, steel according to A. S. T. M. Spec. A-9 for structural steel.

American Marine Standards Committee. E No.

11-1927. Propeller Hub Studs, Nuts, and Lock Screws. For collar studs and plain studs, di-mensions and threading of standard sizes from 1½ inch to 4½ inch, quality of materials and workmanship in conformity with standards of

Am. Bureau of Shipping.

American Railway Assn. Mechanical Div. Recommended Practice; 1916. Specifications for Bolts and Nuts. Table of dimensions of threads, of hexagonal and square nuts and bolt heads of wrought iron or steel with material according to A. R. A. specifications.

American Railway Assn. Mechanical Div. Castle Nuts, Cotter Pins, and Location of Cotter Pinholes in Projecting Bolt Ends; 1926. For bolt ends, size, and location of cotter pin holes for use with castle nuts, for bolt sizes 1/2 to 31/2 inches.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1926. Carriage Bolts, Square Head Machine Bolts, Dimensions of recom-

mended standard sizes.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Flexible Staybolts. Recommends 1 inch steps in lengths of the generally used sizes and two inch steps for longer lengths. American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Stove Bolts. List of sizes of flat head and round head stove bolts recommended as standard.

American Railway Assn. Telegraph and Telephone Section. 1-A-20; 1927. Pole Line Hardware. Includes % inch carriage bolt, crossarm bolt, double arming bolt, 1/2 inch machine bolt, material, dimensions, finish and assembly requirements, tensile and bend test requirements for the

steel

American Society of Mechanical Engineers. sponsor with National Machine Tool Builders Assn., and Society of Automotive Engineers under procedure of American Standards Assn. B 5a-1927. T Slots, their Bolts, Nuts, Tongues and Cutters. Tables of dimensions and tolerances of standard sizes.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers under procedure of American Standards Assn. A. S. A. serial B 18b-1927. Wrench Head Bolts and Nuts and Wrench Openings. Tables of dimensions and tolerances for square and hexag-onal bolt heads, nuts, hexagonal cap screw heads, machine screw and stove bolt screw nuts.

and open end wrench openings,

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and Procedure of American Standards Assn. practice recommended and accepted by industry B 18e-1928, Round Unslotted Head Bolts. Tables of dimension and threads for square neck, fin neck, and ribbed carriage bolts, for step bolt, for button head machine bolt, and for countersunk carriage bolt.

American Society of Mechanical Engineers. merican Society of Mechanical Engineers, some sponsor with Society of Automotive Engineers under procedure of American Standards Assn. A. S. A. serial B 18f-1928. Plow Bolts. Tables of dimensions and threads for round head, square neck; for square head; for round head, heavy key; for round head reverse key countersunk

plow bolts.

National Electric Light Assn. Suggested Specification; D235-22; 1922. %-inch Carriage Bolt. Dimensions and allowable variations for 4 to 5 inch sizes, steel according to N. E. L. A. spec. D 200-22 and D 209-22, galvanizing according to N. E. L. A. spec. D210-22. Published in 1924

N. E. L. A. proceedings.

Dimensions and allowable variations, material according to N. E. L. A. spec. D200-22 and D209-22, galvanizing according to N. E. L. A. spec. D210-22, material steel. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specification. D250-22; 1922. 5%-inch Double Arm Bolt. For attachment of crossarms to poles, dimensions and allowable variations, material according to N. E. L. A. specifications D200-22 and D209-22, galvanizing according to D210-22, material steel. Published in 1924 N. E. L. A. pro-

ceedings.

National Electric Light Assn. Suggested Specifications. D255-22; 1922. ½-inch Eye Bolt. D257-23; 1923. %-inch Eye Bolt. Dimensions and allowable variations, material according to N. E. L. A. specifications D200-22 and D209-22. galvanized according to D210-22, material steel. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications. D330-28T; 1928. Tentative. ¼-inch Expansion Bolt. D332-28T; 1928. Tentative. ½-inch Expansion Bolt. For steel bolt with lead alloy sleeve and cast iron cone, dimensions and allowable variations, material according to N. E. L. A. specifications D200-22 and D209-22 galvanizing according to D210-22.

Society of Automotive Engineers. 1931 Handbook. Cap Screws, Bolts and Nuts, and Wrench Openings; 1930. Includes standard dimensions of rough and semifinished square and hexagonal regular bolt heads, finished square and hexagonal bolt heads. In conformity with standards of

American Standards Assn.

Society of Automotive Engineers. 1931 Handbook.
Eye Bolts, Aeronautic. 1928. Bend and tensile
strength requirements, dimensions.

Society of Automotive Engineers. 1931 Handbook, Plain Hexagon Head Bolts, Aeronautic; 1928. Tensile strength and bend test requirements, dimensions of sizes No. 8 to %.

Society of Automotive Engineers. 1931 Handbook. Round Unslotted-Head Bolts; 1929. Dimensions of square neck carriage bolts, fin-neck carriage bolt, ribbed carriage bolt, step bolt, button-head machine bolt, countersunk carriage bolt.

Society of Automotive Engineers. 1931 Handbook. Spring Center Bolts; 1931. Standard dimensions and type of thread for center bolts for springs for passenger automobiles and motor trucks.

establishing a limited list of standard sizes and types of plow bolts.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R60-30; 1930. Packaging of Carriage, Machine, and Lag Bolts. Simplified practice recommended and accepted by industry establishing standard packings for bolts, with number and gross weight of various sizes in packages for full case packing (bolts papered or in cartons) and for bulk packing and bulk packing in cases or kegs.

U. S. Gov., Federal Specifications Board. 548; 1928. Bolts, Nuts, and Machine Screws. Machine bolts and nuts, rough, semifinished, and finished; cap screws, machine screws, stove bolts, round unslotted-head bolts; set screws, studs, tap bolts, tap rivets. Machine bolts made by pressing, punching, or forging, dimensions, tension test, and bend test requirements for machine bolts. square neck, fin neck, and ribbed carriage bolts, step bolts, button-head machine bolts, countersunk carriage bolts, tap bolts, studs and tap rivets.

U. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1929. Wrench head bolts and nuts and wrench openings. Standards are the same as those of Am. Soc. of Mech. Engrs. and Soc. of Auto. Engrs. given in American Standards Assn. se-

rial B 18b-1927.

608.4 RIVETS, IRON OR STEEL

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Iron rivets. Requirements on cold bend test, and hot flattening of head test.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Rivets for boilers. Requirements on tension test of rivet bar, on bending and flattening test of rivets.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels: 1930. Steel Rivets. Requirements on tension test for rivet bars, cold bending and hot flattening test for rivets.

American Railway Assn. Mechanical Div. Rivet Steel and Rivets for Locomotive Tenders, Passenger and Freight Equipment Cars; 1925. Chemical composition, tension, bend, and flattening test requirements, dimensions and permissible variations.

American Railway Assn. Mechanical Div. Recommended Practice; 1923. Rivet Steel and Rivets for Steam Boilers and other Pressure Vessels. Chemical composition, tension, bend and flattening test requirements, permissible variations in dimensions.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1926. Locomotive Boiler Rivets, Structural Rivets. Dimensions of recommended stand-

ard sizes.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers under procedure of American Standards Assn. B 18a-1927. Small Rivets, under $\frac{7}{10}$ -inch diameter. Chemical composition, strength, ductility, and hardness tests for the rivet material, tables of standard dimensions and tolerances for the standard types, flat head, countersunk head, button head, pan head, and truss or wagon-box head rivets.

American Society of Mechanical Engineers. sponsor with Society of Automotive Engineers under procedure of American Standards Assn. A. S. A. serial B 18g-1929. Tinners, Coopers' and Belt Rivets. Chemical composition, strength, ductility, and hardness requirements for the steel,

tables of dimensions for the rivets.

American Society for Testing Materials. A 13-24; 1924. Rivet Steel for Ships. For rolled bars, required chemical composition and tests, tension and bend test requirements, permissible variation in diameter; for the rivets, bend and

flattening test requirements.

American Society for Testing Materials. A 31-24; 1924. Boller Rivet Steel. Chemical composition and tests, tension and bend test requirements, permissible variations in diameter for the rolled bar, bending and flattening test requirements and variation in diameter for the rivets. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

Society of Automotive Engineers. 1931 Handbook. Split and Tubular Rivets; 1929. Dimensions of tubular rivets of flat head, oval head, cupped countersunk head, flat countersunk head types, dimensions of split rivets of flat countersunk and oval head type, dimensions of rivet caps, for

brass, wrought iron, or steel rivets.

U. S. Gov., Federal Specifications Board. 548; 1928. Bolts, Nuts, and Machine Screws. For threaded tap rivets, standard dimensions of tap rivet heads for 7 sizes up to 11/4 inches.

References.—Alloy steel rivets. See 622.9. Methods of test, general requirements for metals. See also 600.1. Noncorrosive coatings and tests. See also 600.3. Stock for steel and alloy steel rivets. See also 603.21, 621.31.

608.5 PINS AND SHAFT KEYS

608.51 Pins, Cotter, Dowel, Rod End Pins, Etc.

American Railway Assn. Mechanical Div. Castle Nuts, Cotter Pins, etc.; 1926. For cotter pins and for taper pins, standard dimensions for 14 sizes of cotter pins, length and taper of 15 sizes of taper pins.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Cotter Keys. List of rec-

ommended standard sizes.

Society of Automotive Engineers. 1931 Handbook. Cotter Pins; 1923. Dimensions, up to 3 inches long, of standard sizes.

Society of Automotive Engineers. 1931 Handbook. Flat Head Pins, Aeronautic; 1930. Standard dimensions and minimum shear strength of cylindrical pins for 9 sizes from 1/8 to 5/8 inch.

References.—Methods of testing general requirements for metals. See also 600.1. Bolt and rivet steel stock. See also 603.21. Rod ends and pins, automotive. See 722.33.

608.52 Shaft Kevs

American Marine Standards Committee. E No. 6-1927. Propeller Keys. Dimensional drawing with dimensions of 16 standard sizes of keys and securing screws for tail shafts from 5 to 20 inches in diameter.

American Petroleum Institute. Standard No. 6. 1930. Rig Iron Standards. For gib head taper keys and keyways for 4 to 6 inch standard sand reel and crank shafts, requirements on dimen-

sions and tolerances.

American Petroleum Institute. Standard No. 7; 1930. Transmission Standards. Standards on shaftling and square, flat, and taper keys given were selected from American Standards on Shaftling and Keys of American Standards Assn. B-17a, B-17b, B-17d, and B-17e as published by Am. Soc. of Mech. Engineers. American Society of Mechanical Engineers under

American Society of Mechanical Engineers under procedure of American Standards Assn. B 17b-1925. Square and Flat Stock Keys, Standard Widths and Heights. Tables of dimensions and tolerances of keys for various shaft diameters.

American Society of Mechanical Engineers under procedure of American Standards Assn. B 17d– 1927. Plain Taper Stock Keys, Square and Flat. Table of dimensions and tolerances for standard keys for various shaft sizes.

American Society of Mechanical Engineers under procedure of American Standards Assn. B 17e-1927. Gib Head Taper Stock Keys, Square and Flat. Table of dimensions and tolerances for

standard keys for various shaft sizes.

American Society of Mechanical Engineers. Woodruff Keys, Keyslots and Cutters. Approved by

American Standards Assn. as B 17f-1930. Dimensions and tolerances for standard Woodruff
keys, keyslots, and cutters, standard key numhers.

Society of Automotive Engineers. 1931 Handbook. Key-Slot and Keyway Details; 1929. For Wood-ruff keys, general information on detail dimensions of key slots, keys above shaft and keyways for various sizes of shafts for 27 key sizes.

Society of Automotive Engineers. 1931 Handbook. Woodruff Keys; 1929. Dimensions of standard Woodruff keys from ½ by ½ to % by 1½-inch sizes. Dimensions of standard key slots and keyways.

608.6 Washers

American Electric Railway Engr. Assn. Recommended Specification. D102–29; 1929. Overhead

Line Material for Direct and Catenary Suspension. Includes commercial steel washers, round and square types for bolts and rods, requirements on dimensions for sizes % to 1 inch.

National Electric Light Assn.
tions. D270-28T; 1928.
Washer. Dimensions and allowable variations for steel washers for %-inch to %-inch machine bolt, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22. Included in Publ. No. 259-45 of N. E. L.

National Electric Light Assn. Suggested Specifications. D275–24T; 1924. Tentative. Square Washer. D276–24T; 1924. Tentative. Anchor Rod Washer. Dimensions and allowable variations for steel washers % to 1-inch sizes, material according to N. E. L. A. specifications D200–22, galvanizing according to D210–22. Published in 1924 N. E. L. A. proceedings.

Society of Automotive Engineers. 1931 Handbook. Flat Washers, Aeronautic; 1928. Dimensions of two sizes of washers for each bolt size

from No. 8 to %.

Society of Automotive Engineers. 1931 Handbook. Lock Washers; 1922. Dimensions of machine screw and of bolt lock washers of standard, special light, and special heavy grades.

Society of Automotive Engineers. 1931 Handbook. Plain Washers; 1923. Dimensions of washers for bolt screw sizes up to 1½ inch.

References .- Lock washers and nuts for ball bearings. See 766,2.

608.7 TURNEUCKLES

American Marine Standards Committee. H. No. 6-1928. Rigging Screws with Spliced Rope. Dimensioned drawings of turnbuckles for various loadings, dimensions and threading of 12 standard sizes, strength requirements of the stee.

American Marine Standards Committee. H. No. 7-1928. Rigging Screws with Sockets, Dimensioned drawings for turnbuckles for various loads, dimensions and threading of 12 standard sizes, strength requirements for the steel.

Society of Automotive Engineers. 1931 Handbook. Turnbuckles, Aeronautic; 1928. Dimensions, tensile strength requirements for short and long turnbuckles, with brass barrels and various combinations of cable-eye and pin-eye connections, dimensions, strength and bend test requirements for cable-eyes, pin-eyes, and forks.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R71-28; 1928. Turnbuckles. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of turnbuckles with and without stubs and of turnbuckles with hook, eye, and jaw ends.

References.—Methods of testing, general requirements for metals. See also 600.1. Noncorrosive coatings, See also 600.3. Standard threads. See also 608.0.

610-619

IRON AND STEEL MANUFACTURES

611. CASTINGS AND FORGINGS

611.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Cast iron. Samples No. 4d, No. 5f, No. 6d, No. 7b, and No. 74 for various cast irons, No. 55 for ingot iron, and No. 82 for nickel-chromium cast iron, prepared and sold by the bureau with a certificate giving the analysis, for use by industrial organizations and others as a comparison standard for checking the accuracy of anal-

ysis of cast irons, etc., the average analysis of each sample is given in supplement to C 25.

611.1 GRAY IRON CASTINGS

611.11 Gray Cast Iron

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Iron castings for machinery and boilers. Requirements on general quality, tension test, and transverse test.

eral quanty, tension test, and transverse test.

American Electric Railway Engr. Assn. Recommended Specification. W104-28; 1928. Approved as tentative standard by American Standards

Assn. Serial E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes gray iron castings, both Trackwork. Includes gray from casings, own general and high test grades. Chemical com-position requirements, for the high test grade, tension test requirements. General class of cast-ings for switches, fillers, braces, and appurte-nances, high test class of castings for high strength parts subject to wheel shock and not readily machinable.

American Railway Assn. Signal Section 1630; 1930. Gray Iron Castings. General quality re-quirements, chemical composition and transverse test requirements for light, medium, and heavy

castings.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Buildings for Railway Purposes. Includes cast iron specifica-tion. Agrees with A48–29 of American Society for Testing Materials.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Steel Railway Bridges; 1924. Cast Iron. Requirements on chemical composition, classification into 3 weight classes, transverse test requirements for each

American Society for Testing Materials. A 48-29; 1929. Gray Iron Castings. For light, medium, and heavy castings, chemical composition, transverse and tension test requirements using A. S. T. M. standard test methods and test bars. 1918 edition available in Spanish and French from Bureau of Foreign and Domestic Commerce of

U. S. Dept. of Commerce.

American Society for Testing Materials. A 64-27; 1927. Standard Methods of Sampling and Chemical Analysis of Pig and Cast Iron. Sampling and treatment of samples from pig and casting, permissible variations in chemical analyses from different sources, determination of total carbon, of manganese, phosphorus, sulphur, silicon, small amounts of chromium, nickel, copper, titanium, arsenic.

American Society for Testing Materials. A 88-31; 1931. High Test Gray Iron Castings. For high strength castings including those known as semi-steel castings. Tension tests made only when specified, general quality, transverse and tension test requirements, using A. S. T. M. standard test bar and methods of test.

American Society for Testing Materials. 29; 1929. The Arbitration Test Bar and Tension Test Specimen for Cast Iron. Form and dimensions of pattern and mold for casting test bar intended for transverse testing and dimensions of tension test bar machined from a portion of arbitration test bar, correction factors for transverse test bars of diameter differing from standard.

American Society for Testing Materials. A 126-30; 1930. Gray Iron Castings for Valves, Flanges, and Pipe Fittings. Covers regular gray iron castings and higher strength gray iron including semisteels, chemical composition, tension.

and transverse test requirements.

U. S. Gov., Federal Specifications Board. 140; 1924. High Test Gray Iron Castings (Semi-steel). Light, medium, and heavy castings. General quality requirements, chemical composition, transverse test, and tension test requirements.

U. S. Gov., Federal Specifications Board, 141; 1924. Gray Iron Castings. For light, medium, and heavy castings, chemical composition, transverse test, and tension test requirements.

References.—Methods of testing, general requirements for metals, See also 600.1. Standard samples.

See 611.0. Other specifications for cast iron. See specifications of individual commodities made of cast iron.

611.12 Manhole and Conduit Castings

American Railway Assn. Telegraph and Telephone Section. 1–C–1; 1927. Communication Under-ground Conduit Construction. Includes manhole frames and covers of cast iron, dimensions of 2 types of manhole frames and covers and one type of inside cover. Includes also cast-iron caps for

connecting U guards to pipe bends, dimensions.
S. Gov., Federal Specifications Board. 448;
1926. Plumbing Fixtures (For Land Use).
Manhole for Main Sewer. Dimensions and weight of two weights of cast-iron curb and solid cover, requirements for quality of brick, mixture of mortar and of concrete, size and quality of aggregate, construction requirements of manholes as illustrated.

References.—Methods of testing, general requirements for metals. See also 600.1. Standard samples. See 611.0. Other specifications for cast iron. See 611.11. Masonry sewers. See 518.67.

611.13 Sluice Gates and Mooring Bitts

American Marine Standards Committee. H No. 2-1925. Mooring Bitts, Cast-Iron. Dimensions of 12 standard sizes, standard arrangements of fastenings, material in conformity with Am. Bureau of Shipping specifications for gray cast iron.

References.—Methods of testing, general requirements for metals. See slep 600.1 Standard samples of cast iron. See 611.0. Specifications for gray cast iron. See 438 611.11. Cast steel moring bit. See 611.49. Cleats, cast-iron, for docks. See 611.49. Bollards, for docks. See 611.49.

611.14 Floor Drains and Traps

American Marine Standards Committee. H No. 36-1928. Deck Drain, Plain Type. Dimensioned drawing for cast iron or composition drains, dimensions of 4 standard sizes for steel decks and for covered decks.

American Marine Standards Committee. H No. 37-1928. Deck Drain, Trap Type. Dimensional drawing of cast-iron or composition drain, dimensions of standard drain for steel decks, one standard drain for covered decks less than 3% inches thick, and one for decks over 3% inches thick.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Area Cess-pool. Heavy cast iron area drain with hinged perforated cover plate, without bell trap, dimen-

sions, illustrated.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Combined Drain and Trap. Heavy pattern cast-iron type with brass strainer, dimensions and finish, depth of water seal.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Running Trap. For installation in manholes, provision and dimensions of fresh air inlet and clean-out plug, as illustrated, trap of cast iron.

References.—Methods of testing general requirements for metals. See also 6001. Standard samples of cast iron. See 611.0. Plumbing practice and fixtures. See also 600.6, 617.7. Specifications for gray cast iron. See also 611.11. Brass traps and drains. See 645.4.

611.18 Cast-Iron Wheels

American Electric Railway Engr. Assn. E 13-26; 1926. Standard Design for Tread and Flange of Wheel. Dimensional drawings of tread and flange contours for steel and chilled iron wheels.

American Railway Assn. Mechanical Div. Wheel Tread and Flange for Cast-Iron Wheels; 1930. Approximate dimensions of tread and flange contour, dimensions should not be used in layout of

contour.

American Railway Assn. Mechanical Division. Recommended Practice; 1928. Wheels, Cast Iron, for Locomotives, Tenders and Cars. For 33-inch wheels, requirements as to fracture, chill, chemical composition, dimensions, weights, drop test, chill test, and thermal test requirements, foundry practice requirements.

American Railway Assn. Mechanical Div. mended Practice. Maximum Flange Thickness Gage for Cast-Iron Wheels; 1930. Dimensions

and design.

American Railway Assn. Mechanical Div. Recommended Practice. Wheels, Mounting; 1926. Table of standard mounting pressures for castiron wheels and for steel wheels for various wheel seat diameters, mounting details and procedure.

American Railway Assn. Mechanical Div. Wheel Flange Thickness Gages for Cast-Iron Wheels, Height and Throat Radius Gages for Solid Steel and Steel Tired Wheels; 1930. Dimensions and

design.

American Railway Assn. Mechanical Div. Wheel Mounting and Check Gage for Cast-Iron Wheels:

1931. Dimensions and design.

American Railway Assn. Mechanical Div. Wheel Circumference Measure for Cast-Iron, Cast Steel, Wrought Steel and Steel Tired Wheels: 1919. Dimensions and graduation of tape measure and method of use.

American Railway Assn. Mechanical Div. ommended Practice. Wheels, Cast-Iron, 33-inch Diameter; 1928. Detail dimensions and tread contour for 3 standard sizes for cars of weight 136,000 to 210,000 pounds, corresponding weights

of wheels and sizes of axles.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Economics of Railway Labor. Standardization of Parts and Accessories for Railway Maintenance Motor Cars; 1929. For 11/2-inch axle assembly, requirements on dimensions of axle and boring of wheels for both tight and insulated wheels, dimensions of wheel tread and flange for 16-inch and 20-inch wheels,

on chemical composition, permissible variations from specified dimensions, weights of A. R. A. standard wheels.

American Society for Testing Materials. Tentative Specifications. A 46-30T; 1930. Chilled Tread Cast-Iron Wheels. General quality, chemical composition, thermal test, drop test, and chill test requirements, permissible variations from specified dimensions, weights of A. R. A. standard wheels.

Assn. of Manufacturers of Chilled Car Wheels. Chilled Tread Wheels for Locomotives, Tenders and Cars; 1930. For standard railway uses and for industrial uses, depth of chill, chemical composition, dimensions and tolerances, weight, and design requirements, maximum load on wheel.

Assn. of Manufacturers of Chilled Car Wheels. Foundry Standard, Inspection and Tests for Chilled Tread Wheels; 1930. Sampling, heating of ladles, pouring time, shaking out time, pit requirements and rate of cooling, construction of drop test apparatus, drop test and A. R. A. thermal test requirements, depth of chill requirements.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 116-201. Mining Locomotives. Includes requirements on dimensions of standard contour of locomotive

wheels.

611.19 Miscellaneous Manufactures of Gray Cast Iron

American Marine Standards Committee. E No. 23-1928. Built-up Propellers. For cast-iron or cast-steel hubs and cast-steel or cast-bronze blades, general quality requirements, materials according to American Bureau of Shipping, hammer test for blades, machining requirements for propeller parts, assembly and balance requirements.

American Marine Standards Committee. E. No. 25–1928. Propellers Cast in One Piece. For cast-iron propellers, materials according to American Bureau of Shipping specifications, general quality requirements, hammer test and machining requirements, recommendations on de-

gree of balance.

American Railway Assn. Mechanical Div. Recommended Practice; 1924. Welding Wire and Rods, Includes cast-iron rods for gas welding of gray cast iron, requirements on chemical compo-

sition, dimensions and tolerances.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, sec. 12-B. Ornamental and Misc. Metal Work. Ornamental castings. Requirements on type of molding sand, maximum thickness of metal, general quality and finishing, permissible stresses, to be cast from plaster reproduction of clay model. Cast iron to comply with A. S. T. M. Spec. A-48.

National Board of Fire Underwriters. Building Code; 1931. Cast Iron Columns and Column Bases. Permissible minimum diameter or side of column, minimum thickness of metal for col-

umn or base.

S. Gov., Federal Specifications Board. 1926, Plumbing Fixtures (For Land Use). Floor, Wall, and Ceiling Plates. Minimum thickness and type of set screw for cast brass or cast iron or steel plates for uncovered pipes passing through partitions.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Roof Drains. Cast-iron cup type, requirements as to integral flange or attached flashing flange as regards dimensions and material, design of outlet and strainer, construction of expansion joint where such is specified.

where such is specified.

611.2 MALLEABLE IRON CASTINGS

611.21 Malleable Cast Iron

American Electric Railway Engr. Assn. Recommended Specification. W104-28; 1928. Approved as tentative standard by American Standards Assn. Serial E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes malleable iron castings. Manufacture according to A. S. T. M. specifications for malleable castings, heat treatment, tension test requirements when specified.

American Railway Assn. Mechanical Division. Recommended Practice; 1928. Malleable Iron Castings. Tension and annealing test require-

American Railway Assn. Signal Section. 1730; 1930, Malleable Iron Castings, Castings for railway signaling, clean and reasonably free from flaws, tension test requirements.

American Society for Testing Materials. A 47-30; 1930. Malleable Castings. Cover castings for railroad, motor vehicle, agricultural implement, and general machinery purposes. Tension test

requirements.

Malleable Iron Research Institute. Malleable Castings; 1929. Castings for railroad use identical with specifications for malleable iron castings adopted by American Railway Assn. in 1929. Requirements on tensile strength, yield point, elongation, destruction test, annealing test, dimensions and casting of test specimen.

Malleable Iron Research Institute. Malleable Castings; 1924. Specifications for malleable castings for all work other than railroad work are identical with specifications A 47-24 of American

Society of Testing Materials.

National Electric Light Assn. Suggested Specifications. D400-22; 1922. Malleable Castings (Material). Specifications conform to American Society for Testing Materials specifications A47-19, requirements on tensile strength and elongation. Published in 1924 N. E. L. A. proceedings.

Society of Automotive Engineers. 1931 Handbook. Malleable Iron Castings; 1922. For general automotive purposes, tension test requirements. Practically conforms to A. S. T. M. Spec. A47-19.

U. S. Gov., Federal Specifications Board. 378a; 1928. Iron, Malleable, Castings. For 1 grade of galvanized or ungalvanized casting, general quality and annealing requirements, tension test and impact test requirements.

References.—Methods of testing, general requirements for metals. See 600.1. Zinc coatings and tists. See 428 600.3. Other specifications for malleable cast fron. See specifications for the individual commodities made of malleable cast iron.

611.22 Journal Boxes

American Electric Railway Engineering Assn. E2-30; 1930. Journal Boxes and Contained Parts. Standard designs and dimensions for journal boxes, bearings, wedges, and dust guards for 6 sizes of bearings.

American Railway Assn. Mechanical Div. Recom-mended Practice. Driving Boxes and Engine Truck Boxes; 1928. Recommended dimensions and design of cast steel boxes for various sizes

of journals.

American Railway Assn. Mechanical Div. Guards; 1930. For excluding dust from journal boxes and to retain oil, requirements on clearance from axle, noncutting material in contact with axle, method of closing, service life, for wood guards a 3-ply construction specified, thickness and tolerance.

American Railway Assn. Mechanical Div. Dust Guards for Journal Boxes A, B, C, D, E, and F.; 1920 and 1921. Standard dimensions of guards

for 6 journal sizes.

American Railway Assn. Mechanical Div. Jour-nal Boxes A, B, C, D, E, and F.; 1930. Dimen-sions and design of standard journal boxes for 6 sizes of journals, material cast iron, malleable iron, pressed steel, or cast steel, for freight and for passenger cars.

American Railway Assn. Mechanical Div. Jour-nal Boxes Gages for Journal Boxes, classes C. D. E and F, ; 1923. Dimensions and design for inside

gage, bolt hole gage, dust guard opening gage, bolt hole hinge lug gage.

American Railway Assn. Mechanical Div. Journal Bearing Wedges; 1930. Of malleable iron, forged or cast steel, dimensions and design of 6 standard sizes.

American Railway Assn. Mechanical Div. Jour-nal Box Lids; 1929. For malleable iron, cast steel, or pressed steel lids, requirements on thickness of material, construction, hinging, method of operation, and tightness of closure require-

611.4 STEEL CASTINGS

611.40 General Items

American Railway Assn. Mechanical Div. Drop Test Machine for A. R. A. Couplers and Axles; 1911. Dimensions and design.

611.41 Cast Steel

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel Castings. For open-hearth process type, requirements on tension test, cold bend test, drop test, and hammer test

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel castings for machinery and boilers. Requirements on annealing, tension test, and bend test, for 2

grades dependent on strength.

American Electric Railway Engr. Assn. R mended Specification. W104–28; 1928. proved by American Standards Assn. as tenta-tative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes specifications for carbon steel track castings: for Class A castings not exposed to wheel wear, chemical composition requirements, for class B-hard, chemical composition, tension test and heat treatment requirements

American Railway Assn. Mechanical Division. Recommended Practice; 1923. Steel Castings, Carbon. Grade A unannealed and annealed for special castings, grade B annealed for castings of high stress such as truck side frames, bolsters, couplers, locomotive frames and wheel centers, annealing requirements, chemical analysis, tension test requirements.

American Railway Engineering Assn. ual. Iron and Steel Structures. Steel Railway Bridges: 1924. Includes cast steel specifications, in agreement with A27-24 of American Society for Testing Materials except for minimum yield

point for cast steel.

merican Society of Mechanical Engineers. Boiler Construction Code. Section II. Specifica-tions for Steel Castings; 1930. Chemical compo-American Society of

sition of annealed and unannealed castings, tension test requirements of annealed castings. Based substantially on A. S. T. M. specifications for steel castings, A 27-24 and specifications for

carbon steel castings, A 21-24 and spectnearings for carbon steel castings for railroads, A 37-27. American Society for Testing Materials. A 27-24; 1924. Steel Castings. For general service and ships, covers class A in which no physical requirements are specified, and class B in which there are physical requirements and which is divided into hard, medium, and soft grades. Heat treatment procedure, chemical composition and tests, tension and bend test requirements, special requirements for ships including percussion tests for certain parts. Available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

Domestic Commerce of U. S. Dept. of Commerce.
American Society for Testing Materials. A 87–
27; 1927. Carbon Steel Castings for Railroads. For Iocomotive and car equipment and
miscellaneous use, grade A annealed and unannealed, grade B for highly stressed truck side frames, bolsters, couplers, locomotive frames, of annealed steel castings. Chemical composition and tests, tension test requirements.

American Society for Testing Materials. A 95-29; 1929. Carbon Steel Castings for Valves, Flanges,

and Fittings for High Temperature Service. Heat treatment, chemical composition, tension, bend, and hydrostatic pressure test requirements for materials to be used up to 750° F

Society of Automotive Engineers. 1931 Handbook. Steel Castings; 1922. Chemical composition, tension test, and bend test requirements for hard, medium and soft grades of castings. Substantially the same as A. S. T. M. Specification No. A27-14.

U. S. Gov., Federal Specifications Board. 170: 1924. Steel Castings. Includes special, hard, medium, soft, and common grades. Preparation, repair, and annealing requirements for castings, chemical composition, tensile and bend test requirements for the 5 grades.

611.43 Railway Brake Shoes, Cast Steel and Cast | 611.49 Miscellaneous Manufactures of Cast Steel

American Electric Railway Engr. Assn. E1-27; 1927. Design of Brake Shoes, Brake Shoe Heads, Brake Shoe Keys and Gages. Dimensional drawings of brake shoes and parts and their gages for wheels of various diameters, tread widths and contours, including American Railway Assn. standard wheel contours.

American Railway Assn. Mechanical Division. Specifications for Brake Shoes: 1910. Requirements on coefficient of friction test and shoe wear test for both cast iron and steel tired wheels.

American Railway Assn. Mechanical Div. Recommended Practice. Brake Beams. Brake Shoe, Reinforced Back; 1922. Recommended dimensions and design of reinforced back for brake

American Railway Assn. Mechanical Div. Recommended Practice. Brake Beams. Brake Shoe, Reinforced: 1922. Recommended dimensions and design for reinforced brake shoe with 17-inch radius.

American Railway Assn. Mechanical Div. Brake Beams. Brake Shoe Key; 1922. Dimensions and design of standard wrought iron key.

References.—Methods of testing, general requirements for metals. See also 600.1. Classification of railway materials. See 600.2. Standard samples of cast iron. See 611.0. Gray cast iron. See also 611.11.

611.44 Railway Couplers, Cast Steel and Forged Steel

American Electric Railway Engr. Assn. mended Specification. E100-29; 1929. Recom-Automatic Couplers for Interurban Cars and Radial Draft Rigging. For vertical plane type for coupling with standard steam railroad couplers, requirements on certain dimensions and operating features of couplers and draft rigging, details of guard arm and abutting wall, annealing, chemical composition, and tension test for cast steel.

American Railway Assn. Mechanical Division.

Specifications for Purchase and Acceptance of
A. R. A. Standard "D" Couplers, Knuckles. Locks and Other Parts; 1925. Covers cast steel for couplers and parts. Annealing, chemical analysis, tension test requirements, permissible variation in weight and gage, list of gages, drawings of standard "D" couplers and parts, and

coupler limit gage.

American Railway Assn. Mechanical Div. merican Kaliway Assn. Mechanical Div. Recom-mended Practice; 1930. Type E. Coupler. Di-mensions and design of 5 by 7 inch shank, 6¼ by 8 inch shank, and shank details, design of coupler detail parts, dimensions of knuckle pivot pinhole.

American Railway Assn. Mechanical Division. Specifications for Coupler Knuckle Pivot Pins; 1928. Steel pins, chemical analysis, drop test requirements, permissible variation in dimensions.

American Railway Assn. Mechanical Div. Gages 1, 2, 3, 4 and 5 for Coupler and Yoke; 1909. Dimensions and design.

American Railway Assn. Mechanical Div. Cou-pler Limit Gage; 1918. Dimensions and design. American Railway Assn. Mechanical Div. Stand-ard "D" Coupler, 5 by 7 inch shank; 1916. Standard "D" Coupler, 6 by 8 inch Shank; 1926. Dimensions and design of standard couplers and coupler parts and of shank detail parts, detail of No. 10 contour.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Anchors. For cast steel anchors, of ordinary or stockless types, requirements on proof tests for various weights, duration of annealing, drop test, hammer test, and bend test, number and sizes required to equip vessels of various tonnages.

American Marine Standards Committee. E No. 23-1928. Built-Up Propellers. For cast-iron or caststeel hubs and cast-steel or cast-bronze blades, general quality requirements, materials according to American Bureau of Shipping, hammer test for blades, machining requirements for propeller parts, assembly and balance requirements.

American Marine Standards Committee. E No. 25– 1928. Propellers Cast in One Piece. For caststeel propellers, materials according to American Bureau of Shipping specifications, general quality requirements, hammer test and machining requirements, recommendations on degree of balance.

American Marine Standards Committee. H No. 8-1926. Chain Plates. Dimensioned drawing for cast-steel chain plates, dimensions of 12 standard sizes, permissible working load, material in accordance with requirements of Am. Bureau of Shipping for steel castings.

American Marine Standards Committee. H No. 13-1926. Pad Eyes and Links. Dimensioned drawing for cast-steel pad and wrought-steel link, dimensions of 15 standard sizes, permissible working loads, materials in conformity with requirements of Am. Bureau of Shipping for steel castings and for chains.

American Marine Standards Committee. H No. 17-1926. Mooring Bitts, Cast-Steel. Dimensions and methods of fastening for 12 standard sizes, material to be in accordance with Am. Bureau of Shipping specifications for grade 1 steel casting. American Marine Standards Committee. H No. 35-

1928. 4-inch Weather Deck Scupper. Dimensional drawing, material cast iron or cast steel, galvanized, for 1 standard size and type,

American Marine Standards Committee, P No. 1-1931 to P No. 4-1931, Bollards and Cleats for Docks. Standard design and dimensions of 5 sizes of single bollards, cleats, and bollard cleats. and of 3 sizes of double bollards for both cast iron and cast steel construction, materials in accordance with specifications of Am. Soc. for Testing Materials.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. Coupler Yokes. Design test requirements for freight coupler yokes of horizontal or vertical plane types, material cast steel, structural steel, or forged iron or steel in accordance with A. R. A. specifications, requirements on minimum tension area, test requirements for maximum set and for breaking load.

American Railway Assn. Mechanical Div. Recom-mended Practice. Driving and Trailer Wheels for Locomotives. Recommended dimensions and design for 7 sizes of driving wheels and 4 sizes

of trailer wheels of cast steel.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. Truck Bolsters. Design test requirements for freight bolsters with integral or separable center plate, of cast steel, structural steel, or forged iron or steel in accordance with A. R. A. specifications, maximum permissible stresses, test load requirements and permissible deflections.

American Railway Assn. Mechanical Div. Recommended Practice; 1929. Truck Side Frames, Cast Steel. Design test requirements for freight truck side frames with integral or separable journal boxes, vertical test load and permissible deflection requirements for 4 sizes, material of

Grade B of A. R. A. specifications.

U. S. Gov., Federal Specifications Board. Plumbing Fixtures (For Land Use). Floor, Wall, and Ceiling Plates. Minimum thickness and type of set screw for cast brass or cast iron or steel plates for uncovered pipes passing through parti-

611.5 STEEL FORGINGS

611.50 General Items

American Railway Assn. Mechanical Div. Drop Test Machine for A. R. A. Couplers and Axles; 1911. Dimensions and design.

611.51 Forged Steel

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Ingot steel forgings, and welded steel forgings. Requirements on reduction in area in forging, annealing, and tension test

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steel forgings for machinery. For 3 grades, No. 1 for all purposes, No. 2 for all purposes except propeller shafts, and No. 3 for all engine forgings, except main shafting, piston and connecting rods, requirements on reduction of area in forging, an-

nealing, tension test, and bend test.

American Railway Assn. Mechanical Div. Recommended Practice; 1929. Normalized and Tempered Carbon Steel Forgings. For carbon steel shafts, engine axles, crank pins, main, side, and piston rods, etc., requirements on total reduction from ingot, on heat treatment and cooling procedure, chemical composition, tension tests, micrographic and macroscopic test requirements.

American Railway Engineering Assn. 1929 Man-ual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes forged steel, chemical composition and tension test requirements for various sizes of annealed steel forgings.

American Society of Mechanical Engineers. Boiler Construction Code. Section II; 1930. Specifications for Seamless Steel Drum Forgings. Chemical analysis, annealing, tension and bend test requirements, permissible variation in dimensions.

American Society for Testing Materials. A 18-30; 1930. Carbon Steel and Alloy Steel Forgings. Covers class A for welding or case hardening, classes B and C for structural purposes, classes D to M for machinery. Annealing, quenching and tempering procedure, chemical composition and tests, tension test requirements. 1921 edition available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. Tentative Specifications. A 20–31T; 1931. Carbon Steel Forgings for Locomotives. Covers untreated and annealed carbon steel driving axles, engine, and trailing truck axles, side rods, crank pins, piston rods, and annealed car and tender axles. Heat treatment procedure, chemical composition and tests, tension test requirements. 1916 edition available in Spanish and the 1921 edition available in Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Com-

Testing machine for forgings. See 480 611.50. Other specifications for forged steel. See specifications of individual commodities made of forged steel.

611.52 Axles, Shafts, and Similar Forgings

American Electric Railway Engr. Assn. E3-30; 1930. Design of Axles for Electric Railway Motors. Detail dimensions and tolerances for 15 standard designs for capacities up to 57,000 pounds, wheel sizes 26 to 36, permissible eccentricity, wheel, gear, and axle stress data.

American Electric Railway Engr. Assn. E5-24; 1924. Standard Specification for Quenched and Tempered Carbon Steel Axles, Shafts and Similar Forgings. Heat treating, rough turning, chemical analysis, tensile and bend tests of open-

hearth or electric furnace steel.

American Electric Railway Engr. Assn. E6-23; 1923. Standard Specification for Annealed Carbon Steel Axles, Shafts and Similar Forgings. Heat treating, turning, chemical analysis, tensile and bend tests of open-hearth or electric furnace steel

American Petroleum Institute. Standard No. 6; 1930. Rig Iron Standards. For sand reel shafts and crank shafts, requirements on dimensions and tolerances for 3 standard sizes of each.

American Petroleum Institute. Standard No. 7-C; 1930. Dimensional Standards for Line Shafts for Rotary Drilling. Dimensions of standard shafts, bores of mating members, and associated keys and keyways, for 4, 5, and 6 inch sizes, the classes of fits and tolerances were selected from American Standards Assn. spec. B4-A, 1925.

American Railway Assn. Mechanical Division. Recommended Practice; 1926. Axles, Carbon Steel, for Cars and Locomotive Tenders. Covers tapered axles up to 61/2-inch diameter. Chemical

analysis, drop test requirements, weights. American Railway Assn. Mechanical Division. Recommended Practice; 1926. Axles, Shafts, and Other Forgings, Carbon Steel, Annealed and Unannealed. Medium grade for large locomotive forgings as axles, etc., and mild grade. Chemical analysis and tension test requirements,

American Railway Assn. Mechanical Division. Axles, Shafts and Other Forgings, Carbon Steel, Quenched and Tempered; 1925. For locomotive construction. Boring, heat treatment, chemical analysis, test requirements for tension, bending, and impact.

American Railway Assn. Mechanical Div. Recommended Practice. Driving Axles for Locomotives. Engine Truck Axles and Trailing Truck Axles; 1927. Recommended dimensions and de-

sign of several standard sizes.

American Railway Assn. Mechanical Div. ommended Practice; 1930. Journal Length Gage. Gage for measuring length of journals on class "A to F" axles,

American Railway Assn. Mechanical Div. Axles; 1928. Standard dimensions of 6 axle sizes, letter designation for each size with load it is

designed to carry.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Economics of Railway Standardization of Parts and Accessories for Railway Maintenance Motor Cars; 1929. For 1½-inch axle assembly, requirements on dimensions of axle and boring of wheels for both tight and insulated wheels.

American Society of Mechanical Engineers under procedure of American Standards Assn. B 17a-1924. Cold-Finished Shafting, Standard Diameters and Lengths. Tables of dimensions and tolerances of transmission shafting and machinery shafting.

American Society of Mechanical Engineers under procedure of American Standards Assn. B 17c-1927. Code for Design for Transmission Shaft-Design formulas and diagrams for solid ing. and hollow shafts subjected to torsion, flexure,

and axial loading.

American Society for Testing Materials. A 19-27; 1927. Quenched and Tempered Carbon Steel Axles, Shafts, and Other Forgings for Locomotives and Cars. Heat treatment procedure, chemical composition and tests, tension, bend, and impact proof test requirements. Available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. Tenta-tive Specifications A 20-31T; 1931. Carbon Steel Forgings for Locomotives. Covers untreated, annealed, and normalized and tempered axles, side rods, crank pins, and piston rods. General heat treating requirements, chemical composition, tension test requirements for various sizes and degree of heat treatment, bend test

requirements where specified.

American Society for Testing Materials. A 21-27; 1927. Carbon Steel Car and Tender Axles. Covers tapered axles up to 61/2 inches diameter. Chemical composition and tests, drop test requirements including the American Railway Assn, drop tests for five standard axles and drop test machine specifications, permissible variations in dimensions and weights. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 22-21; 1921. Cold-Rolled Steel Axles. Chemical composition and tests, tension and bend test require-

ments.

National Machine Tool Builders Assn. T-2; 1928. Simplified List of Shaft Diameters. Standard shaft diameters for machine tool construction from 1-inch size to 6-inch size.

611.53 Wheels and Tires, Steel

American Electric Railway Engr. Assn. E7-21; 1921. Standard Specification for Solid Wrought Carbon Steel Wheels for Electric Railway Service. Same as Am. Soc. for Testing Materials. Type of steel, chemical composition, and dimensional tolerances of wheel.

American Electric Railway Engr. Assn. E8-26; 1926. Standard Limit of Wear Gages for A. E. R. E. A. and A. R. A. Standard Flange Contours.

Drawings showing dimensions of three gages.

American Electric Railway Engr. Assn. E9-19;
1919. Standard Plane Gage for Solid Steel

Wheels. Drawing of gage for use in checking warp in wheel by placing it on back of rim.

American Electric Railway Engr. Assn. E10-25; 1925. Standard Wheel Mounting Gage. Dimensional drawing and details of gage for eight wheel contours.

American Electric Railway Engr. Assn. E11-19; 1919. Standard Rotundity Gage for Solid Steel Wheels. Drawing of gage for fitting center of tread of wheel.

American Electric Railway Engr. Assn. E13-26; 1926. Standard Design for Tread and Flange of Wheel. Dimensional drawings of tread and flange contours for steel and chilled iron wheels.

American Electric Railway Engr. Assn. E14-29; 1929. Standard Dimensions of A. E. R. E. A. Steel Wheel Designs. Dimensions of parts of wheels 21 to 36 inches in diameter, various flange thicknesses, flange heights, etc.

American Electric Railway Engr. Assn. Recommended Design. E112-26; 1926. Wheel Checking Gage for A. E. R. E. A. Contours A, B, C, and D. Drawing of gage for checking wheels in

service and not for mounting wheels.

American Electric Railway Engr. Assn. mended Design. E113-26; 1926. Wheel Mounting and Check Gage for A. R. A. Contours E and F. Drawing of gage. Same as gage adopted by Am. Railway Assn. except that a center point has been added.

American Railway Assn. Mechanical Div. mended Practice. Mounting Gage for Wrought Steel Wheels; 1927. Dimensions and design.

American Railway Assn. Mechanical Div. Tires, Master Gage for Boring; 1908. Dimensions for 13 sizes.

American Railway Assn. Mechanical Div. Wheel Centers, Master Gage for Turning; 1908. Dimensions for 13 sizes, 38 to 90 inches.

American Railway Assn. Mechanical Div. Wheel Circumference Measure for Cast-Iron, Cast-Steel, Wrought-Steel and Steel-Tired Wheels; 1919. Dimensions and graduation of tape measure and method of use.

American Railway Assn. Mechanical Div. Wheel Tread and Flange for Steel Tired Wheels on Cars and Tenders; 1930. Detail dimensions for one

standard size.

American Railway Assn. Mechanical Div. Wheel Tread and Flange for Wrought Steel Wheels on Cars and Tenders; 1923. Detail dimensions for

one standard size.

American Railway Assn. Mechanical Div. and Track, Terms and Gaging Points for; 1894. Definitions and standard dimensions for gage of track, inside gage of wheel flanges, gage of wheels, thickness of flange, width of tread, check gage distance, and over all gage.

American Railway Assn. Mechanical Div. Wheels Steel, Rotundity Gage for; 1917. Dimensions of ring gage for 33, 36, or 38 inch wheels.

American Railway Assn. Mechanical Div. Wheels Wrought Steel, Plane Gage for; 1917. Dimensions and design of 3 sizes.

American Railway Assn. Mechanical Div. Recommended Practice. Wheels, Mounting; 1926. Table of standard mounting pressures for cast iron wheels and for steel wheels for various wheel seat diameters, mounting details and procedure.

American Railway Assn. Mechanical Div. Recommended Practice. Wheels, Steel Tired, Tire Fastenings for; 1930. Dimensions and design of recommended tire fastening means, bolted type.

American Railway Assn. Mechanical Div. Wheels, Wrought Steel, 36-inch Diameter; 1923. Detail dimensions and design of 2 standard sizes for use with 4 axle sizes.

American Railway Assn. Mechanical Div. Wheels, Wrought Steel, 33-inches Diameter; 1923. Detail dimensions and design for 2 sizes for use with 4

axle sizes.

American Railway Assn. Mechanical Div. Section of Tire; 1930. Detail dimensions of standard tire sections for steel tired engine and tender truck wheels and flanged driving tires in switching service, for flanged driving and trailing wheel of locomotives in road service, and for plain tires.

American Railway Assn. Mechanical Div. Tires, Shrinkage Allowances for; 1907. Standard shrinkage allowances for tires for cast iron and cast steel wheels.

American Railway Assn. Mechanical Div. Tires, Steel, Minimum Thickness for; 1923. Minimum thicknesses for tires using 5 different methods

of attachment to wheels.

American Railway Assn. Mechanical Division. Wheels, Solid Wrought Carbon Steel; 1926. Chemical analysis, mating, dimensions and tolerances, list of standard gages required.

American Railway Assn. Mechanical Division.

Recommended Practice; 1920. Tires, Steel for
Locomotives and Cars. Three classes according to carbon content, chemical analysis, tension test requirements, mating, permissible variations in dimensions.

American Society for Testing Materials. A 25-24; 1924. Wrought Solid Carbon Steel Wheels for Electric Railway Service. Chemical composition and tests, permissible variations in dimensions.

American Society for Testing Materials. A 26-16; 1916. Steel Tires. Covers three classes, for driving tires for passenger locomotives, driving tires for freight locomotives and tires for car wheels and miscellaneous scrvice, driving tires for switching locomotives. Chemical composition and tests, tension test requirements, permissible va-riations in dimensions. Available in French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. 1929. Wrought Solid Carbon Steel Wheels for Steam Railway Service. Chemical composition test requirements, permissible variations from specified dimensions. 1924 edition available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Com-

merce.

Assn. of Iron and Steel Electrical Engineers. Electric Overhead Traveling Cranes, Heavy-Duty Steel Mill Service. Includes rolled or forged steel wheels for bridge track and trolley track. standard tread diameters and standard bores.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 116-201. Mining Locomotives. Includes requirements on dimensions of standard contour of locomotive wheels.

References.—Methods of testing, general requirements for metals. See also 600.1, 611.50. Classification of railway materials. See 600.2. Heat treatments. See also 600.5. Testing machine for forgings. 611.54 Springs, Helical and Elliptical, and Parts

American Railway Assn. Mechanical Division. Recommended Practice; 1917. Springs, Elliptical. Carbon steel chemical composition, permanent set test requirements as measured by the compression method and by the release method, table of test loads to correspond to maximum allowable fiber stress.

American Railway Assn. Mechanical Div. Springs, Helical; 1930. Chemical composition requirements in conformity with A. R. A. specifications for carbon steel bars for railway springs, permissible variations in solid height, free height, and loaded height from amount specified, permanent set test requirements, permissible test loads.

American Railway Assn. Mechanical Div. Springs and Spring Caps for Freight Car Trucks; 1915 and 1924. For 8 sizes of springs and spring clusters, standard dimensions of caps and of springs, free and loaded heights of springs and of spring clusters, load capacities.

American Railway Assn. Mechanical Div. Tenta-tive Standard. Springs and Spring Caps for Freight Cars, Classes L, M, N, O, and P; 1924. Dimensions and design of spring caps, dimensions of springs, free and loaded height of springs and of various spring groupings, load capacities.

American Society for Testing Materials. A 61-16; 1916. Helical Steel Springs for Railways. Chemical analysis, test requirements for solid, free, and loaded heights, and for permanent set, table of test loads for helical springs for given

fiber stress.

American Society for Testing Materials. A 62–16; 1916. Elliptical Steel Springs for Railways. Chemical analysis, compression test requirements for free height, loaded height and length, and per-

manent set, test requirements by release method. American Society for Testing Materials. Tentative Specifications. A 125-31T; 1931. Heat Treated Carbon Steel Helical Springs. Covers hot coiled compression springs of round bars for railroad use. General construction and heat treatment requirements, chemical composition requirements, tolerances from specified values for diameter, solid height, free height, loaded height; uniformity of pitch, and permanent set requirements.

Society of Automotive Engineers. 1931. Hand-book. Recommended Practice. Leaf Springs; 1929. Tolerances on diameter of spring eyes and bushings, on width and thickness of bars, and allowable variations in the required concavity of

bars, test requirements of spring eyes.
Society of Automotive Engineers. 1931. Handbook. Spring Center Bolts; 1931. Standard dimensions and type of thread for center bolts for springs for passenger automobiles and motor trucks.

Society of Automotive Engineers. 1931. book. Recommended Practice. Spring Rebound Clips, Spacers and Bolts; 1931. Standard dimensions of spring parts for spring widths up to 31/2-inches for passenger automobiles and motor trucks.

References.—Alloy steel springs. See 622.7. Methods of testing, general requirements for metals. See also 600.1; 611.50. Classification of railway materials. See 600.2. Heat treatments. See also 600.5. Steel for springs. See also 603.33, 621.34. Bed springs. See 613.1.

611.55 Pinions and Gears

American Electric Railway Engr. Assn. E15-24; 1924. Standard Web Holes for Railway Gcars. Tables of hole diameters and center distances for various diameters and widths of gears.

American Electric Railway Engr. Assn. Recom-mended Specification. E117-29; 1929. Case Hardened Forged Steel and Quenched and Tempered Forged Carbon Steel Gears. Requirements on chemical composition, hardness and depth of case hardening for case hardened pinions, dimensions and tolerances, tooth data and dimensions for long and short addendum spur and helical gearing, diametrical pitch 2 to 41/4.

American Electric Railway Engr. Assn.

Recommended Specification. E118-29; 1929. Case Hardened Forged Steel and Quenched and Tempered Forged Carbon Steel Pinions. Requirements on chemical composition, hardness and depth of case hardening for case hardened pinions, dimensions and tolerances, tooth data and dimensions for long and short addendum spur

amh ellical gearing, diametrical pitch 2 to 4½.

American Society of Mechanical Engineers. Joint sponsor with American Gear Mfrs. Assn. under procedure of American Standards Assn. B 6b-

1927. Spur Gear Tooth Form. 14½ degree Composite System and 20° Stub Involute System. Diagrams of tooth forms and formulas for di-

mensions.

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Starting Motor Phinons; 1929. Number of teeth, pressure angle, and pitch specified for standard phinon and also for heavy duty starting motor phinons.

611.56 Turbine Bucket Wheels

611.59 Miscellaneous Manufactures of Steel Forgings

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Anchors. For forged steel anchors of ordinary or stockless types, requirements on proof tests for various weights, number and sizes required to equip ships

of various tonnages.

American Electric Railway Engr. Assn. Recommended Specification. W104-25; 1928. Approved by American Standards Assn. as tentative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes mild carbon steel forgings for parts not exposed to wheel wear and hard steel forgings for parts subject to wheel wear. Chemical composition and tension test requirements.

American Railway Assn. Mechanical Div. Recommended Practice. Draff Gear Followers; 1930. Where separate followers are used with friction draft gear, steel to meet physical and chemical requirements of A. R. A. specifications for axles, shafts, and other forgings, requirements on dimensions and tolerances method of cutting.

References.—Alby steel forgings. See 622.6. Methods of testing, general requirements for metals. See also 603 of testing, general requirements for metals. See also 600.1. 611.50. Heat Treatments. 612. CUTLERY, HOLLOW WARE, AND OTHER HOUSEHOLD UTENSILS

612.1 CUTLERY, EXCEPT TOOLS

612.11 Pocket Knives

U. S. Gov., Dept. of Commerce. Bureau of Standards R99-30; 1930. Pocketknives. Simplified practice recommended and accepted by industry limiting the number of sizes and shapes of handles for pocketknives and the maximum number of varieties any one manufacturer may produce, standard colors of celluloid given for celluloid-handled knives.

612.12 Razors

U. S. Gov., Dept. of Commerce. Bureau of Standards R69; 1928. Packaging of Razor Blades. Simplified practice recommended and accepted by industry establishing standard packaging for the various makes of razor blades, covering blades per package and packages per carton.

612.13 Scissors and Shears

U. S. Gov., Federal Specifications Board. 361a; 1929. Shears and Scissors, Office. Bankers type, double pointed; straight trimmer type, one point sharp and one point blunt; Grade 1, mild steel frames with carbon steel blades; Grade 2, solid forged steel. Finish, percentage of carbon in steel, construction, and cuttling test requirements.

References.—Methods of testing, general requirements for metals. See also 600.1. Metal cutting shears. See 615.33. Forged steel. See also 611.51.

612.14 Table and Kitchen Cutlery

612.2 HOLLOW AND STAMPED WARE, IRON AND STEEL

612.20 General Items

U. S. Gov., Dept. of Commerce. Bureau of Standards C830-31; 1931. Colors for Colored Sanitary Ware. A commercial standard selected and accepted by industry establishing 6 standard colors for sanitary ware, standard samples being kept at the Bureau of Standards, requirements on procedure for making color comparisons with sample. Applicable to plumbing fixtures and

allied products.

U. S. Gov., Dept. of Commerce. Bureau of Standards R55; 1926. Tinware, Galvanized, and Japanned Ware. Simplified practice recommended and accepted by industry establishing a limited list of standard stock items for stamped ware, as bowls, covers, cups, dippers, molds, pans, plates, etc., for metallic sieves, for pieced tinware boilers, buckets, kettles, pans, etc., for heavy tinware coffee boilers, cake cutters, dippers, etc., for japanned ware baths, cake boards, etc., for galvanized baths, buckets, cans, hods, palls, etc. Items are listed according to catalogue numbers of catalogue No. 35 of the National Enameling & Stamping Co. to which reference must be made for determining sizes, gages of metal, and trade capacities.

References .- Enamel for enamel ware. See 531.6.

612.21 Bath Tubs

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbling Fixtures (For Land Use). Bath Tubs. For one-piece east-iron flat bottom pattern with legs; for one-piece cast iron tubs of recessed and corner types. General dimensions and construction, quality of enameling, sizes and types of supply and waste fittings.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Enameled Ironware. Requirements as to freedom from defects of cast ironware having a porcelain enamel

coating fused on surface.

References.—Porcelain and vitreous ware bath tubs. See 532.23. Gray cast iron. See also 611.11. Standard sizes of japanned ware and of galvanized baths. See also 612.20. Standard colors for colored sanitary ware. See 612.20.

612.22 Hotel and Household Hollow and Stamped Ware

References .- Standard stock sizes. See 612.20.

612.23 Water-closets and Sinks

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Cast-Iron Lavatories. General dimensions and shape, quality of enameling, general construction, waste and supply accessories, for enameled iron pedestal supported type, and enameled iron wall supported type.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures. (For Land Use). Enameled Ironware. Requirements as to freedom from defects of cast ironware having a porcelain enamel

coating fused on surface.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Kitchen Sinks. For one-piece cast-iron sinks with integral drain board, general dimensions and shape, quality of enameling, waste and supply accessories, for wall supported type and combined wall and floor supported type.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Slop Sink. For one-piece cast-iron sink supported on trap standard, general dimensions and construction of sink and trap, quality of enameling, dimensions of brass rim guard, supply accessories required.

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbing Fixtures (For Land Use). Steel Scullery Sink. For two compartment sink of galvanized sheet steel, with and without drain boards, general dimensions and construction, types and sizes of supply and waste accessories.

613. METAL FURNITURE AND FIXTURES 613.1 BEDS, BED SPRINGS, COTS

American Marine Standards Committee. H No. 53-1929. Shallow Berths for Ships. Dimensions of 2 standard lengths and 2 standard widths of shallow berths made of tubular steel with angle iron end rails, requirements on thickness of wall and size of upper and of lower tubular rails and size of angle iron rail, dimensions and design of corner fittings, etc.

American Marine Standards Committee. H No. 54-1929. Deep Berths for Ships. Dimensions of 1 standard length and 2 standard widths of deep berths, made of tubular steel with angle iron end rails, requirements on construction and assembly, size of tubing and angle iron, di-mensions and construction of corner fittings, etc. merican Marine Standards Committee. H No.

American Marine Standards Committee. H No. 55-1929. Bracket for Fixed Berths. H No. 56-1929. Bracket and Optional Retainer for Hinged Berths. H No. 57-1929. Chain Lug for Hinged H No. 58-1929. Hook for Hinged Berths. Berths. All of above are stanchion fittings for

Am. Mar. standard berths, requirements on dimensions and design, castings of malleable iron. American Marine Standards Committee. H No. 59-1929. Box Type Wall Support for ship berths. H No. 60-1929. Bracket Type Wall Support for Ship Berths. Requirements on dimensions and

design, castings of malleable iron.

U. S. Gov., Dept. of Commerce. Bureau of Standards R2-30; 1930. Bedsteads, Springs, and Mattresses. For iron, steel, or brass beds, simplified practice recommended and accepted by industry establishing a limited list of standard sizes with width and length dimensions for straight foot and bow foot beds and coil spring and metal

fabric bed springs.

U. S. Gov., Dept. of Commerce. Bureau of Standards R 24; 1924. Hospital Beds. Simplified practice recommended and accepted by industry establishing a limited list of standard bed sizes covering length, height to top of springs, and width.

S. Gov., Federal Specifications Board. 186a; 1927. Beds, Hospital. Standard dimensions, con-struction details for headpiece and foot piece of steel tubing, for corner lock, for wire fabric and fabric frame, mosquito bar rods, and wooden

shoes or casters, illustrated.

. S. Gov., Federal Specifications Board. 187a; 1928. Beds, Surgical. General dimensions of assembled bed, construction details and dimensions for headpiece of steel tubing, foot piece of steel tubing, corner lock, mechanically adjustable spring bottom with outer and inner frame of angle iron, mosquito bar rods, and wooden shoes or casters, illustrated.

S. Gov., Federal Specifications Board, 188; 1924. Folding Hospital Cot. Details of con-struction and dimensions for cot with ends of steel tubes, fabric frame of steel angles, wire fabric with helical end springs, iron or steel rod T canopy, cot ends to fold under and within

frame, illustrative sketch.

10. S. Gov., Federal Specifications Board. 189; 1924. Adjustable Spring Bottom, Gatch Frame. Adjustable spring bottom for standard folding hospital cot. Details of construction, dimensions, and operating requirements for frame with outer part of steel angles, inner frame of steel tubing, handles, wire fabric, and supporting helical side springs, illustrated.

U. S. Gov., Federal Specifications Board, 190; 1924. Liberty Steel Cot. For cot made with ends of steel tubing and fabric frame of steel angles, details of construction and dimensions, wire sizes for double or single link fabric and helical end springs, fabric frame locking device requirements. illustrative sketch, ends fold under and within frame.

References.—Steel tubular goods. See also 607.4. Mooden beds and cots. See 431.11, 431.13.

613.2 BOOK CASES

U. S. Gov., Federal Specifications Board. AA-F-791; 1930. Sectional Steel Office Furniture and Cabinets. Includes bookcase sections with disappearing glass panel doors, requirements on dimensions, chemical composition of bronze hardware, thickness of metal for various parts, construction details including spot welding.

-Iron and steel sheets. See also 604.0. References.— 604.22, 604.23.

613.3 CHAIRS AND STOOLS

References.-Wooden chairs and stools. See 435.2, 438.

613.4 DESKS

U. S. Gov., Federal Specifications Board. AA-D-191; 1931. Desks, Steel. Flat top, single and double

pedestal desks; flat top, double desks; typewriter | 613.6 TABLES desks, drop center, single and double pedestal, flat top; typewriter desks, double pedestal, pedestal device, flat top; roll top, double pedestal desks. Knock down construction of sheet steel material, pretreatment and final finish of material, construction requirements and material gages for drawers, tops, shelves, legs, panels, etc., hardware and locks, height of writing bed.

References.—Sheet iron and steel. See also 604.0, 604.22, 604.23. Desk locks. See 617.21. Wooden desks. See 435.3.

613.5 LOCKERS AND SAFES

nderwriters' Laboratories. Minimum Burglary Resistance of Key-Locked Safes; 1927. Prac-Underwriters' tibility and durability of safe and locking mechanism, time limit on resistance to burglar attack, mounting requirements, tests for lock picking, drifting and drilling, door sledging and wedging, dismounting, and fishing test.

Underwriters' Laboratories. Relocking Devices for Safe and Vault Doors; 1927. General design requirements, test requirements for relocking when combination is tampered with, and for

releasing.

Underwriters' Laboratories. Safes and Insulated Cabinets; 1918. Classification according to fire resistance and strength, general design and strength requirements, fire retardant, impact, and fire stream test requirements.

U. S. Gov., Dept. of Commerce. Bureau of Standards R35-28; 1928. Steel Lockers. Simplified practice recommended and accepted by industry establishing a limited schedule of stock sizes and dimensions for single, double, and multiple tier steel lockers.

U. S. Gov., Federal Specifications Board. 60a; 1928. Safes and Cabinets, Insulated. Type I with structural frame, Type II without structural frame, 3 classes of each type dependent on degree of heat insulation. Construction and sectional area of iron or steel structural frames and metal shells, maximum weights, construction, materials, and design of base, doors, locking devices fire test and impact test requirements.

U. S. Gov., Federal Specifications Board. 68a; 1925. Sterilizers, Dressing Containers, etc. For portable lockers of terneplate, requirements on dimensions, watertightness, thickness of metal, and finish, to be located under combination of

sterilizing outfits.

U. S. Gov., Federal Specifications Board. 471; 1927. Cupboard and Locker Equipment, Steel. Type A, clothing cupboard; type B, stationary cupboard; type C, double tier locker; type D, single tier locker; in 3 classes full louvered, semilouvered, and full perforated. Gages of black sheets for cupboards and lockers, for shelves and doors, construction and finish requirements, requirements for locks and handles, dimensions of

double and single tier lockers.

U. S. Gov., Federal Specifications Board. AA-S-71; 1930. Burglar Resisting Safes. For safes offering resistance to edge cutting tools, explosives, and heat destruction, of 2 types dependent on resistance to oxyacetylene torch, requirements on construction of 5 ply steel, quality of packing, of steels and bronze, thickness and construction of walls and door by laminated method, construction of parts and compartments, hardening of outer layer of body, test of fit of door, drill-ing resistance, strength, dutellity and hardness of steels, fire and acid proof qualities of packing, requirements and methods of oxygen lance test and cutting torch test, minimum dimensions.

References.—Masonry vaults. See 518.59. Sheet iron and steel. See also 604.0, 604.21, 604.22. Terneplate. See also 604.31.

American Railway Assn. Telegraph and Telephone Section. 2-G-38; 1928. Telegraph Table. Units for building up tables of any number of operating positions, frame work of steel angles and sheet steel, top of veneered wood, dimensions and construction details, assembly schedule.

American Railway Assn. Telegraph and Telephone Section. 2-G-39; 1928. Dispatchers' Tables. For single position and double position tables, made of sheet steel with steel shelves and drawers, gage of metal, construction details and di-mensions, material and finish of hardware and

accessories.

American Railway Assn. Telegraph and Telephone Section. 2-G-40; 1928. Table Rail. For use on telegraph table, dimensions of oak table rail and support, of holding down bolts, and assembled

rail with table, enamel finish.

American Railway Assn. Telegraph and Telephone Section. 2-G-42 and 2-G-43; 1929. Apparatus Shelf ARA-1-A and ARA-2-A. Requirements on materials and method of construction of wooden shelf with angle iron supports for mounting on standard telegraph tables ARA-1-A and ARA-2-A respectively, design and dimensions.

American Railway Assn. Telegraph and Telephone Section. 2-G-45; 1929. Train Order Table Top ARA-1-A. For use in connection with framework of telegraph table ARA-2-A, requirements on table top construction of chestnut with oak

veneer finish, dimensions and design.

American Railway Assn. Telegraph and Telephone Section. 2-G-49; 1929. Telegraph Table ARA-2-A. For tables of steel framework with wood tops and typewriter drops, list of main and intermediate units required for various length tables, list of parts making up each unit, construction of top of chestnut with oak veneer. design and dimensions of assembled units and of detail parts.

U. S. Gov., Federal Specifications Board. OO-L-131; 1931. Laundry Appliances. Laundry tables and starch tables. Requirements on dimensions of white wood top, supported on metal legs, general quality of wood, height of legs for laundry tables, acceptable materials for metal covering for

starch table tops.

References.—Iron and steel sheets. See also 604.0, 604.22, 604.23. Wooden tables. See 431.51, 435.3.

613.7 FILING FURNITURE

S. Gov., Federal Specifications Board. AA-F-791; 1930. Sectional Steel Office Furniture and Cabinets. All sections to intermember with and match with standard sections adopted by the General Supply Committee. Includes small sections, horizontal sections, upright sections, and card filing cabinets, requirements on chemical composition of bronze hardware, sheet metal thicknesses for various parts, construction details, including spot welding and drawer suspension, dimensions, including dimensions of bookcase sections with disappearing glass doors.

References.—Iron and steel sheets. See also 604.0, 604.22, 604.23. Wooden filing furniture. See 435.5.

613.9 MISCELLANEOUS METAL FURNITURE AND FIXTURES

National Board of Fire Underwriters. Containers for Storing and Handling Flammable Liquids; 1927. Includes cabinets for storing cans of flammable liquids, gage of sheet iron, provision of double walls, type of lock requirements.

References.—Iron and steel sheets. See also 604.0, 604.22, 604.23.

614. STOVES AND FURNACES, EXCEPT ELECTRIC

614.0 GENERAL ITEMS

American Gas Assn. Requirements for House Pip-Ing and Appliance Installation; 1928. Fundamental requirements stated that will insure safety and satisfactory service in installation of piping and approved appliances, and recommended practice in piping, turning on gas, metering, appliance installation and flue connections to meet the requirements.

American Gas Assn. and Nat. Bureau of Standards, sponsors under auspices of American Standards Assn. A. S. A. serial K 2–1927. Gas Safety Code, for Installations and Work in Buildings. Definitions, rules for gas fitting and for installation of gas appliances with notes amplifying the rules.

Associated Factory Mutual Fire Insurance Companies. Fuel Oil Installations for Furnaces and Engines; 1928. Includes precautions to be observed in the installation of fuel oil burners, as regards reheating and atomizing the oil, the use of automatic interlocking valves and the arrangement of furnaces.

National Board of Fire Underwriters. Installation, Maintenance and Use of Piping and Fittings for City Gas; 1920. Applies to gas piping in buildings, minimum sizes of pipe, installation of pipe, types, and locations of valves, threading, branching and bending of pipe, pipe supports, size and location of outlets, maintenance rules.

Railway Fire Protection Assn. Handbook; 1925. General Recommendations in Connection with Chimneys, Flues, Stoves, and Furnaces. Recommendations on construction, location, protective coverings, nearness to combustible materials and structures, type of ash containers, etc.

614.1 COAL STOVES AND RANGE BOILERS

U. S. Gov., Dept. of Commerce. Bureau of Standards R8-29; 1929. Range Boilers and Expansion Tanks. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes and capacities of range boilers and expansion tanks, diameters and lengths, limitation to 2 pressure classes, standard location of tappings.

References.—Installation rules. See also 614.0. Unfired pressure tanks. See also 605.23. Other tanks. See 956.2. House heating boilers, coal burning. See 614.4. Coal burning tank heaters. See 614.9.

614.2 GAS STOVES, RANGES, AND WATER HEATERS

American Gas Assn. Approval Requirements for Gas Ranges; 1930. Construction requirements as regards sheet metal, frame, lining, burners, cocks, etc., performance as regards burner and heating capacities, heat distribution, leakage, safety features, thermal efficiency, diagrams of standard range types and gas cocks.

American Gas Assn. Approval Requirements for Gas Water Heaters; 1931. Classification, data to be furnished by manufacturer, construction and performance requirements for all types of gas water heaters, including combustion, fire hazard, relief valve operation, the thermal efficiency, standby loss, and drawing showing minimum di-

mensions of plug type gas cock.

American Gas Assn. Approval Requirements for Hot Plates and Laundry Stoves; 1929. Requirements on thicknesses of metal parts, sizes of bolts, structural features, test requirements for burner capacities and operating characteristics, lighters, fire hazard, non-production of carbon monoxide, burner efficiency, coating of sheets, etc.

FURNACES, EXCEPT | American Gas Assn. Approval Requirements for Space Heaters; 1931. Construction of body, burner, gas connections and shut-offs, flue outlet, etc., performance with standard gases and pressure, burner operation, adjustments of air and gas, venting, heating efficiency etc. definitions.

gas, venting, heating efficiency, etc., definitions. Underwriters' Laboratories. Compressed Gas Systems other than Acetylene for Lighting and Heating; 1928. Includes stoves and ranges, of non-combustible material, minimum gage of sheet metal used, requirements for drip pans and construction and attachment of stove legs.

U. S. Gov., Dept. of Commerce. Bureau of Standards T304; 1926. Method for Testing Gas Appliances to Determine Their Safety from Producing Carbon Monoxide. For forced tests and normal operation tests, description of tests developed at bureau for determination of flash-back, blowoff, and yellow-tip curves, determination of limit of complete combustion, and of normal injection curve, typical test results.

References.—Installation rules. See also 614.0. Other heating and ventilating equipment. See 792. Unfired pressure tanks. See also 605.23. Other tanks. See 950.2. Gas house heating equipment. See also 614.4. Gas and gas appliances. See also 967.2. Acetylene equipment and lamps. See 997.5. Gas garage heater. See 614.9.

614.3 OIL AND GASOLINE STOVES, RANGES, AND WATER HEATERS

Underwriters' Laboratories. Compressed Gas Systems other than Acetylene for Lighting and Heating; 1928. Includes stores and ranges, of noncombustible material, minimum gage of sheet metal, requirements for drip pans, construction and attachment of store legs, etc.

Underwriters' Laboratories, Gasoline Stoves for Cooking and Heating; 1928. General construction, design, thickness requirements, and operating characteristics of stove frame, lift out tanks, pressure tanks, generators and burners, valves, piping, fittings, gages, antiflooding devices, pressure test requirements for pressure tanks, stability requirements for portable stoves.

Underwriters' Laboratories. Kerosene Stores for Cooking and Heating; 1927. Stationary type not requiring other fuels for securing generation, general design requirements for frame and legs, minimum thickness of sheet metal supporting parts, capacity, general design, material and thickness of walls of liftout tanks and founts and of pressure tanks, pressure test requirements for pressure tanks, general design, types, materials and operation of generators, burners, valves, piping, and antiflooding device.

Underwriters' Laboratories. Portable Kerosene Heaters; 1924. Construction and thickness of sheet metal of drum radiator, center section, lower drum and legs, construction and attachment of handle, latch and hinge, thickness of brass or terneplate in fuel reservoir, design of wick operating mechanism, stability, fire safety test of heater, pressure test requirements for reservoir.

References.—Installation rules. See also 614.0. Unfired pressure tanks. See also 605.23. Other tanks. See 956.2. Other healing and ventilating equipment. See 792. Gasoline, fuel oil, kerosene. See 503.3, 503.4, 503.5. Oil burners and heaters. See also 614.9.

614.4 HOUSE HEATING BOILERS, RADIATORS, AND HOT-WATER TANKS

American Gas Assn. Approval Requirements for Central House Heating Gas Appliances; 1930. Burners, cocks, air mixer, regulating and safety feature requirements for gas boliers and gas warm air furnaces, performance requirements as regards pressure regulation, burner and pilot operation, heating efficiency, and fire hazard. American Society of Heating and Ventilating Engineers. Code for Testing Radiators; 1927.
Measurements and method of making them for determining the rating of each type and style of radiator in capacity for heat emission instead of

a heating surface rating.

American Society of Heating and Ventilating Engineers. Proposed Code for Testing Steam Heating Boilers Burning Oil Fuel; 1931. Requirements on set-up of oil burner and boiler, test equipment, fuel sampling, test procedure for the continuous test and for the intermittent test, data forms, calculations, for determining heat efficiency and performance characteristics.

American Society of Heating and Ventilating Engineers. Pipe Sizes for Steam Heating Systems. See Heating and Piping Contractors National

Aven

American Society of Heating and Ventilating Engineers. Committee Report on Rating Low Pressure Heating Bollers; 1929. Definition, required rating data, chart for determining rating for solid fuel boilers, including anthracite rating

and bituminous rating.

American Society of Heating and Ventilating Engineers. Code for Testing Low-Pressure Steam Heating Solid Fuel Boilers; 1929. Definitions, test apparatus, set-up, and measurements required, fuel sampling, methods of conducting tests, forms and formulae for determining heat balance and efficiency, and for constructing performance charts.

American Society of Heating and Ventilating Engineers, National Assa. Sheet Metal Contractors, and National Warm Air Heating Assa. Standard Code Regulating the Installation of Gravity Warm Air Heating Systems; 1929. Definitions, flue and chimney specifications, multipliers and divisors and their use in determining sizes of warm air pipes, wall stacks and furnaces for use in residences, installation rules for furnaces,

pipes, and registers.

American Society of Mechanical Engineers. Boiler Construction Code. Section IV; 1927. Boilers Used Exclusively for Low-Pressure Steam Heating, Hot-Water Heating, and Hot Water Supply. Cast Iron Boilers. (Does not include range boiler and gas water heaters for domestic hotwater supply.) Working pressure and temperature limits, requirements as to boiler openings, installation, fittings and appliances, and hydrostatic tests.

American Society of Mechanical Engineers Boller Construction Code. Section IV; 1927. Bollers Used Exclusively for Low-Pressure Steam Heating, Hot-Water Heating, and Hot-Water Supply. (Does not include range boiler and gas water heaters for the production of domestic hot-water supply.) Steel-Plate Bollers. Limiting working pressure and temperatures, strengths of material for use in design, minimum thickness of plates and tubes, efficiency of joints, construction and allowable working pressure for braced and stayed surfaces, requirements as to boiler openings, setting and installation, fittings and appliances, hydrostatic tests, requirements for autogenously welded boilers including design, construction and materials.

Heating and Piping Contractors National Assn. Figuring Radiation; 1930. Methods of computing required area of heat radiators for houses based on heat transmission through various types of walls, ceilings, floors, and windows, with allowances for relative location of room as regards exposure to wind, and location of house

as regards usual winter temperatures, allowances for crack leakage.

Heating and Piping Contractors National Assn. Net Square Feet Radiation Loads in 70° F, Recommended for Low Pressure Heating Boilers; 1928. Tables of radiation loads as a function of grate area for round boilers of various types with minimum chimney areas and for square boilers, based on direct cast-iron column radiation and on use of coal of a given heat value, for steam and hot water heat.

Heating and Piping Contractors National Assn., American Society of Heating and Ventilating Engineers. Pipe Sizes for Steam Heating Systems; 1930. Published by H. P. C. N. A. Tables of equivalent radiation loads for various pipe sizes supplying the radiator system for lengths of run up to 600 feet based on chosen pressure drop, for 1 and 2 pipe gravity systems,

vapor systems, and vacuum systems.

Institute of Boiler and Radiator Manufacturers. Steam Heating Boiler Testing Code; 1929. For solid fuel burning, low pressure steam boilers, rules for set-up for test, starting and stopping test, test procedure and readings, computations

and forms.

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Section V, Warm Air Furnaces. Definitions of terms, standard code for installation of gravity warm air heating systems for residences, heating and ventilating symbols, firing methods, design data on pipe capacities, humidity, heat transmission through walls, and typical designs for residences, stores, forced air systems, factory and garage systems, 45 illustrative drawings and graphs.

National District Heating Assn. Rules for Computing Required Radiation; 1919. Formulas for computing radiator area for heating buildings with steam, vapor, or hot water allowing for specified number of air changes in given time and computing radiation through walls, windows, ceiling, etc. by use of tabulated constants, tables of coefficients of heat transmission from radi-

ators, etc.

National Warm Air Heating Assn. Standard Code Regulating the Installation of Gravity Warm Air Heating Systems in Residences; 1930. Definitions, flue and chimney specifications, multipliers and divisors and their use in determining sizes of warm air pipes, wall stacks, and furnaces, installation rules for furnaces, pipes, and registers.

U. S. Gov., Dept of Commerce. Eureau of Standards R25; 1924. Hot Water Storage Tanks. Simplified practice recommended and accepted by industry establishing a limited list of standard dimensions and capacities, limitation to 2 pressure classifications, standard location and number of tappings and other openings, standard sizes and lengths of heating coils, factors of safety, thicknesses, etc., in accordance with Am. Soc. of Mech. Engrs. code for "Nonfired pressure yessels."

U. S. Gov., Federal Specifications Board. 448; 1926. Plumbling Fixtures (For Land Use). Water Heater and Horizontal Storage Tank, Water Heater and Vertical Storage Tank. For circular cast-iron coal burning heater, depth of fire pot, hydrostatic test requirements for heater sections, type of grate, main dimensions for 3 sizes of heater. For steel tank, dimensions for 3 sizes, requirements for strength of steel, hydrostatic test of tank, size of pipe, method of support and piping connections, sizes and types of

relief valves, thermometer, and regulator, heating surface and general construction of steam heating coils where such are installed inside tank.

References.—Installation rules. See also 614.0. Boller plates. See also 604.11. Gray cast fron. See also 611.11. Fire brick. See also 534.12. Other heating and ventilating equipment. See 792. Unfired pressure vessels. See also 605.23. Gas and gas appliances. See also 907.2.

614.9 MISCELLANEOUS HEATING AND COOKING EQUIPMENT

American Oil Chemists' Society. Methods of Chemical Analysis; 1930. Jacketed Oven. Official oven used for determination of moisture, requirements on dimensions and general design for oven jacketed with glycerine and water.

Associated Factory Mutual Fire Insurance Companies, Gravity Water Tanks and Steel Towers, vol. 2; 1929. Piping, Fittings and Heating Systems. For water tanks, general requirements for steam heaters and for coal burning heaters, recommended designs and makes of heaters.

National Board of Fire Underwriters. Installation and Operation of Acetylene Equipment for Lighting, Heating, and Cooking; 1930. Covers 6 classes of equipment, as stationary, automatic, portable, dissolved acetylene, etc., for use in and about buildings, requirements on location of generator, on construction, ventilation, and heating of outside generator houses, sizes and capacites of pipe, requirements for conductor and escape piping, operation of generators, storage and installation of cylinders, storage of calcium carbide.

National Board of Fire Underwriters. Ovens for Japan, Enamel, and Other Flammable Finishes; 1931. Regulations on location, general arrangement and construction of brick, concrete, or steel and noncombustible material ovens, provision of explosion relief, ventilation and heating equipment, fire protection, water sprinkler equipment etc.

Underwriters' Laboratories. Fuel Oil Burners for Domestic Use; 1928. Flashpoint requirements for fuel oil, general assembly and operation requirements, general design, operation and permissible use of oil lines, strainers, oil regulating valves, draft regulators, pumps, packing, valves, antifooding devices, floats, overflow cups, drains, base, fire pots, gas pilots, electric ignition transformers, leads, electrodes, and insulators, oil pilot lights, steam generators, vacuum tanks, sight feed, and electrical equipment and wiring.

Underwriters' Laboratories. Gas Garage Heaters; 1917. General construction and installation of heat radiating drums, thickness of metal, dimensions and perforation of inlet screens, general construction of outside easing, rain caps, flue and air inlet pipes, doors, ignition devices, piping

and valves, brackets and supports.
Underwriters' Laboratories. Proposed Standard.
Oil Burner High Tension Electric Ignition Systems; 1928. Installation and safety requirements for ignition transformers and high tension leads, installation and flash over test of ignition electrodes and bus bars, design of porcelain insulators for ignition.

Underwriters' Laboratories. Oil Heated Incubators; 1927. General construction of wooden case and protection of parts near heater, construction and mounting of heaters, metal gauge, galvanizing, joint structure requirements for lamps, and drip pan.

References.—Installation rules. See also 614.0. Other heating and ventilating equipment. See 792. Other acetylene equipment. See 997.5. Gas and gas appliances. See also 997.2. Electric heating and cooking equipment. See 717.1. Starte cookers for laundry.

See 787. Heating equipment for power bollers. See 703.9. Oil burner ignition transformers. See also 713.5.

615. HAND TOOLS, METAL WORKING

615.1 CHISELS, DRILLS, PUNCHES, REAMERS, TAPS, AND DIES

615.11 Chisels

U. S. Gov., Dept. of Commerce. Bureau of Standards R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of track chisels, blacksmith chisels, agricultural tools and blacksmith tools.

References.—Heat treatment of chisels. See 600.5. Chisels for pneumatic tools. See 615.9. Wood working chisels. See 616.13. Railway track chisels. See 616.8.

615 12 Drille

U. S. Gov., Federal Specifications Board 417; 1926. Drills, Breast. For single speed type equipped with spirit level, materials, construction, and general dimensions.

U. S. Gov., Federal Specifications Board, 509.
Drills, Hand, with Hollow Handle. Frame of
malleable iron or other material, general construction requirements and materials for hand
drill with wooden handles, chucks to accommodate drill shanks from 0 to % inch, approximate
dimensions and weight.

References—Tool steel, alloy tool steel. See also 603.32, 621.35. Heat treatment of tool steels. See also 600.5. Electric drills. See 711.24.

615.13 Punches

U. S. Gov., Dept. of Commerce. Bureau of Standards. R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited number of standard sizes and types of tools including blacksmith punches, backing out punches, bull points, track and the plug punches, drift pins.

615.14 Reamers

References .- Electric reamers. See 711.24.

615.15 Taps and Dies

American Society of Mechanical Engrs. Joint sponsor with Society of Automotive Engrs. and Nat'l Machine Tool Builders Assn. Approved by American Standards Assn. as B 56–1930. Taps, Cut and Ground Threads. Dimensions and tolerances for machine screw taps, hand taps, tapper taps, nut taps, and pulley taps, the same as those recommended by National Screw Thread Commission.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R51-29; 1929. Die-Head Chasers for Self-Opening and Adjustable Die Heads. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes and threads per inch for national coarse thread and fine thread series, for S. A. E. spark plug and bushing thread, for lighting fixture and fitting thread, for railway sizes, and for pipe thread.

U. S. Gov., National Screw Thread Commission.
Publ. M89 of Bureau of Standards; 1929. Report
of National Screw Thread Commission; 1928.
Recommended practice for taps. For American
National coarse and fine thread series, dimensions
and tolerances for cut and ground thread machine screw taps, hand taps, tapper taps, nut
taps, and cut thread pulley taps, tolerances for
taps for special diameters and pitches, taper pipe

thread tap dimensions, Acme screw thread tap di-

References.—Tool steel, alloy tool steel. See also 603.32, 621.35. Heat treatment of taps. See also 600.5. Machine tool elements. See also 765.

615.2 HAMMERS AND SLEDGES

615.20 General Items

U. S. Gov., Dept. of Commerce. Bureau of Standards R17-31; 1931. Forged Tools. Simplified ards R17-29; 1929. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of sledges and heavy hammers, sizes of eyes, blacksmith tools, and soil working tools.

615.21 Hammers

References.—Standard sizes. See also 615.20. Carbon tool steel. See 603.22, 603.22. Alby tool steel. See 621.35. Forged steel. See 611.51, 622.6. Wooden handles. See 428.20, 428.29. Heat treatment. See also 600.5

615.22 Sledge Hammers

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Double Faced Sledge; 1929. Design, dimensions and tolerances, for 6 sizes from 6 to 16 pounds, hardness requirements, dimensions of handle.

References.—See references under 615.21. Railway spike maul. See also 616.8.

615.3 PINCERS, PLIERS, PLIER CUTTERS, AND SHEARS

615.31 Pincers

615.32 Pliers and Plier Cutters

615.33 Shears

U. S. Gov., Federal Specifications Board. 451; 1926. Shears, Tinners', Hand (Snips). Two types, straight cut, and circular type, construction, minimum weight and length, length of cut, made entirely of steel.

References.—Office scissors. See 612.13. Carbon and alloy tool steels. See 603.22, 621.35. Forged steel, See 611.51, 622.6. Heat treatments. See 600.5.

615.39 Miscellaneous Cutting Tools

U. S. Gov., Federal Specifications Board. 437; 1926. Cutters, Pipe. 3-Wheel cutter type, construction and dimensions for 3 sizes with malleable iron or steel frame.

References.—Carbon and alloy tool steels. See 603.22, 621.35. Malleable cast iron. See 611.21. Heat treatments. See 600.5.

615.4 VISES, WRENCHES, AND VISE CLAMPS

615.41 Vises

615.42 Wrenches

American Railway Engineering Assn. 1030 Supplement to 1929 Manual. Track Wrenches; 1929. Design, dimensions and dimension tolerances on double end and single end wrenches for bolt sizes from ¾-inch to 1½-inch, hardness requirements.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers under procedure of American Standards Assn. A. S. A. serial B 18b-1927. Wrench Head Bolts and Nuts and Wrench Openings, Tables of dimensions and tolerances for square and hexagonal bolt heads, nuts, hexagonal cap screw heads, set screw heads, machine screw and stove bolt screw nuts, and open end wrench openings.

Society of Automotive Engineers, 1931 Handbook. Cap Screws, Bolts and Nuts, and Wrench Openings; 1930. Standard dimensions of wrench openings as approved by American Standards Assn. as American Standards.

as American Standards.
U. S. Gov., Dept. of Commerce. Bureau of Standards. R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by Industry establishing a limited number of standard sizes and varieties of tools including single end and

double end track wrenches.

U. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. Wrench head bolts and nuts and wrench openings. Standards are the same as those of Am. Soc. of Mech. Engrs. and Soc. of Auto. Engrs. given in Am. Standards Assn. B 18b-1927.

615.43 Vise Clamps

615.5 ANVILS, BELLOWS, HARDIES, AND FORGES

615.51 Anvils

615.52 Bellows

615.53 Hardies

References .- Standard sizes. See 615.55.

615.54 Forges

615.55 Miscellaneous Blacksmith Tools

U. S. Gov., Dept. of Commerce. Bureau of Standards. R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of blacksmith anvil tools and tongs, track chisels, rivet tongs, hammers, and soil working tools.

References.—Carbon and alloy tool steels. See 603.22, 621.35. Forged carbon and alloy steel. See 611.51, 622.6. Heat treatments. See 600.5.

615.6 FILES, RASPS, HACK SAWS, AND SCRIBERS

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1928. Standard Files (except special purpose). List of recommended standard types and sizes of files.

U. S. Gov., Dept. of Commerce. Bureau of Standards R6; 1923. Files and Rasps. Simplified practice recommended and accepted by industry establishing a limited list of standard types and

sizes of files and rasps.

References .- Dental files. See also 915.10.

615.62 Hack Saws

U. S. Gov., Dept. of Commerce. Bureau of Standards R90-29; 1929. Hack-Saw Blades. Simplified practice recommended and accepted by industry covering a limited selected list of standard sizes of hand and of power hack-saw blades, standard tungsten and carbon-steel, and high-speed types, widths, thicknesses, and number of teeth.

U. S. Gov., Federal Specifications Board. 415a; 1928. Blades, Hack saw. In 4 types; hand frame blades, all hard and flexible; machine blades, all hard and all hard for cutting corrosion resisting steels, all types of alloy tool steel, the fiexible type being hardened on cutting edge only. Dimensions and number of teeth, work value test requirements for blades of 10 to 32 teeth per inch.

U. S. Gov., Federal Specifications Board. 479; 1927. Frames, Hack Saw. General construction requirements for ordinary type of hack-saw frame made of steel and adjustable for 8, 10, and 12 lnch blades, minimum clearance 2¼ inches, illustrated. U. S. Gov., Federal Specifications Board. 480: 1927. Saws. Band saw, metal cutting, and hand hack saw. General requirements for steel, and of wooden handle for the metal cutting hand saw, type of set, points per inch, and dimensions of various sizes.

References.—Carbon and alloy tool steels. See 603.22, 603.32, 621.35. Heat treatment. See also 600.5. Wood saws. See 616.17.

615.63 Rasps

U. S. Gov., Dept. of Commerce. Bureau of Standards. R6; 1923. Files and Rasps. Simplified practice recommended and accepted by industry establishing a limited list of standard types and sizes of files and rasps.

615.64 Scribers

U. S. Gov., Federal Specifications Board. 441; 1926. Scribers, Machinists. Double point type of tool steel, with hardened and tempered points, and adjustable grip sleeve, construction requirements and dimensions.

References.—Carbon tool steel. See 603.32. Heat treatment. See 600.5.

615.7 TINNERS AND COPPERSMITHS TOOLS

615.71 Soldering Coppers

U. S. Gov., Federal Specifications Board. 439; 1923. Coppers, Soldering. For regular tinners point and for flat wedge point, dimensions of various sizes of wrought copper body and of iron or steel handle rod, illustrated shapes of the two types.

References .- Copper rods. See also 642.11.

615.72 Blow Torches and Soldering Pots

615.73 Bench Plates and Stakes

615.8 MEASURING TOOLS

References.—Levels, plumbs, rules, squares, tapes. See 616.3. Hydrometers, thermometers, and scientific measuring instruments. See 919.

615.81 Calipers and Dividers

U. S. Gov., Federal Specifications Board. 436; 1926. Dividers. For machinists dividers of 3 types, spring, firm joint, and wing or adjusting arc types, made of high-grade steel, requirements on general structural features, sizes, with general illustrations of types, samples may be requested by purchaser.

615.82 Gages, Dimension

American Petroleum Institute. Standard No. 5-A: 1931. Pipe Specifications. Including plug and ring thread gages for drill pipe, casing, and tubing, requirements on dimensions and tolerances, recommendation for use of alloy steel, notes on gaging practice.

American Petroleum Institute. Standard No. 5-L; 1931. Line Pipe. Includes plug and ring thread gages for line pipe, requirements on dimensions and tolerances, recommendations for use of alloy steel in construction, notes on gaging practice.

American Petroleum Institute. Standard No. 7-B; 1931. Rotary Drilling Taper Joints. Includes master plug gages for taper joints, requirements on structural features, basic thread, dimensional tolerances.

American Petroleum Institute, Standard No. 11-A and Supplemental No. 1; 1931. Standard gages with dimensions and tolerances for measurement of working barrels of oil-well pumps.

American Petroleum Institute. Standard No. 11-B; 1931. Sucker Rods for Pumping Purposes. Includes threads, dimensions, and tolerances for plug and ring gages for threads of sucker rods.

American Railway Assn. Mechanical Div. Recommended Practice. Round Iron, Limit Gages for; 1911. For double end, "go" and "no go" gages, dimensions of large end and of small end for nominal round iron for taking Sellers' standard screw thread.

American Railway Assn. Mechanical Div. Decimal Gage; 1895. Dimensions of elliptical solid notch gage for diameters from 0.002 inch to 0.250 inch.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Track Gage; 1929. Design, dimensions, and tolerances for standard track gage.

American Society of Mechanical Engineers under procedure of American Standards Assn. B 4a-1925. Tentative Standard Tolerances, Allowances and Gages for Metal Fits. Definitions, classifications of fits, tables of diameter tolerances for various fits for shaft and hole members, tables of negative tolerances for force fits and the force required for pressing in shaft. Glass Container Assn. of America. Glass Finish

Glass Container Assn. of America, Glass Finish and Gages; 1929. Includes dimensions of standard diameter gages for more than 30 finishes for jar and bottle tops,

National Electric Light Assn. Suggested Specification. D 107-22; 1922. Cross Arm Gage. Dimensions of steel plug type gage for measurement of pin and bolt holes in cross arms, allowable variations. Published in 1924 Proceedings of N. E. L. A.

National Electric Light Assn. Suggested Specifications, D996-28T; 1928, Tentative, 1-inch and 1%-inch Insulator Gages, D995-28T; 1928. Tentative, 1-inch and 1%-inch Insulator Gage Thread, Dimensions and design for tool steel thread gage, detail dimensions and allowable variations for gage thread for 4 threads per inch.

National Electric Light Assn. Suggested Specifications. D997-28T; 1928. Tentative. 1-inch and 1%-inch Insulator Pin Gages. Dimensions of tool steel gage for insulator pin threads, details of thread according to N. E. L. A. specification Decad-28T.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CSS-30; 1930. Plain and Thread Plug and Ring Gage Blanks. A commercial standard recommended by the American Gage Design Committee and accepted by industry. Establishes standards of design and construction, with dimensions of standard sizes of gage blanks, handles, and mating parts, for taper lock and reversible designs of plain cylindrical plug and thread plug gages, design, dimensions, and construction of standard sizes of plain and thread ring gage blanks; dimensions and design of taper plug and ring gages for checking taper lock handles and gaging members.

lock handles and gaging members.

U. S. Gov., Dept. of Commerce. Bureau of Standards. LC22; 1919. Measurement of Taper Gages. Describes standard methods used by the gage section of Bureau of Standards for measuring tapered plug and ring gages of single and multiple tapers, with illustrations of computations.

U. S. Gov., Dept. of Commerce. Bureau of Standards. LC23; 1923. Measurement of Pitch Diameter of Screw Thread Gages. Describes and illustrates standard methods of measurement used in gage section of bureau for plug and ring screw thread gages, straight and tapered, symmetrical and unsymmetrical, including the 3-wire and 3-ball methods and design of check plug for ring gages, etc.

U. S. Gov., Dept. of Commerce. Bureau of Stand- | 616.12 Augers and Carpenters' Braces ards. S436; 1922. Interference Methods for Standardizing and Testing Precision Gage Blocks. For gage blocks with plane and parallel ends a specified distance apart and used for checking micrometers, methods of measuring the length of gage, the planeness and parallelism of ends are described using light waves as standards and using the interference phenomena of light waves. Method of comparing gages with standards are described and illustrated.

S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards, 1929. Report of National Screw Thread Commission; 1928. Screw thread gages, for American National threads, for special threads, for fire hose coupling threads, for pipe threads, and for Acme threads, limiting dimensions and tolerances. Includes 3 classes of gages based on accuracy, for

bolt and machine screw thread gages.

References.—Gages for railway car wheels. See 611.53. 611.18. Gages for railway car gears. See 611.55. Gages for failway trake shoes. See 611.55. Gages for callway trake shoes. See 611.43. Gages for car journal bearings. See 692.3. Rules and measuring tapes. See also 616.33. 616.35. Gages for railway car truck bolsters, center plates, and truck sides. See 605.13. Pressure and vacuum gauges. See 793.2, Carbon and alloy tool steels. See 603.22, 603.32, 621.35. Heat treatment. See also 600.5. Gages for cable drilling tool joints. See 754.

615.9 MISCELLANEOUS METAL-WORKING TOOLS

Compressed Air Society. Trade Standards; 1930. For pneumatic tools, standard dimensions of tool heads and sleeves for riveting hammers, chisels,

and scaling hammers.

U. S. Gov., Federal Specifications Board. 440; 1926. Sets, Hand Saw. Hinged lever type saw set operated by hand, incorporating a plunger and anvil, operating and construction requirements, for saws up to 0.065 thickness, 4 to 16 teeth per inch.

S. Gov., Federal Specifications Board. 474; 1927. Ladles, Plumbers. Double-lip type of wrought iron or steel, general design, dimensions of 6 sizes.

References. - Electric tools, drills, reamers, buffers, and grinders. See 711.24.

616. HAND TOOLS OTHER THAN METAL-WORKING TOOLS

616.1 EDGE TOOLS

616.11 Adzes, Axes, and Hatchets

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Track Adz; 1929. Design, dimensions and tolerances, for 3 standard sizes, hardness requirements, dimensions of handle.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited number of standard sizes and types of tools including 3 sizes of track

U. S. Gov., Federal Specifications Board. 433; 1926. Hatchets. Shingling hatchets only, of forged tool steel, hardened, tempered, and ground, dimensions and tolerances, finish, handles according to F. S. B. specifications for hickory handles.

U. S. Gov., Federal Specifications Board. 449; 1926.
Adzes. Four types, carpenter's adze, plain; ship carpenter's adze, plain type, lipped type; railroad adze, plain. Of forged tool steel with handles according to F. S. B. specifications for hickory handles, construction described and illustrated, dimensions.

References.—Carbon tool steel. See also 603.32. Forged steel. See also 611.51. Wooden tool handles. See 428.20, 428.29.

U. S. Gov., Federal Specifications Board. 416; 1926. Braces, Ratchet. General construction and materials for various parts, for steel brace with ball bearing wooden head, for taking round cylindrical and taper shank bits of 1/8 to 1/2 inch, main dimensions.

U. S. Gov., Federal Specifications Board. 438; 1926. Chisels, Gouges, and Slicks, Woodworders'. A, chisels, socket firmer; B, chisels, socket framing; C, Chisels, tanged turning; D, gouges, socket firmer, outside or inside bevel; E, gouges, tanged turning; F, slicks. Hardened, tempered and ground blades, rough dimensions for chisels and handles for various widths, cutting and turning test requirements on specified woods.

References.—Heat treatment of chisels. See 600.5, Chisels for pneumatic tools. See 615.9. Track chisels. See 615.11.

616.14 Drills

616.15 Knives

U. S. Gov., Federal Specifications Board. 442; 1926. Knives, Shoe. Tool steel blade, hardened and tempered, with square point, inserted in wooden

handle, approximate dimensions.

U. S. Gov., Federal Specifications Board. 488; 1927. Knives, Drawing. Fixed handle and folding handle types, blades of tool steel, hardened, tempered, ground, construction, dimension of 3 sizes, cutting test requirements, and hardness test where specified.

References.—Pocket knives. See 612.11. Carbontool steel. See 603.32. Heat treatment. See also 600.5.

616.16 Planes and Scrapers

U. S. Gov., Federal Specifications Board, 450; 1926. Shaves, Spoke. Raised handle type, frame and handles of malleable iron, adjustable cutter of tool steel, hardened and tempered, principal dimensions, illustrated.

References.—Carbon-tool steel. See 603.32. Heat treatment of steel. See 600.5.

616.17 Saws

U. S. Gov., Federal Specifications Board. 480; 1927. Saws. Back saw, miter box saw, band, butcher, circular, compass, and 2-man crosscut saws, hand saw, keyhole and web saws. General requirements for steel for blades and of wood for handles, type of set, points per inch, method of attachment of handles, dimensions of various sizes of crosscut and rip saws.

References.—Carbon-tool steel. See 603.32. Heat treatment of steel. See also 600.5. Saw sets for saws. See 615.9. Hack saws. See 615.62.

616.18 Glass Cutters

 S. Gov., Federal Specifications Board. 435;
 1926. Cutters, Glass. Turret head type, single renewable wheel type, both embodying for cutting element a hardened steel wheel. Construction and cutting test requirements.

616.2 AWLS, PUNCHES, AND SCREW DRIVERS

616.21 Awls

616.22 Punches

References.—Railway track punches. See 616.3. Blacksmith punches. See 615.13. 616.23 Screw Drivers

616.3 LEVELING AND MEASURING TOOLS

References.—Calipers, dividers, dimension gages for metal working. See 615.81, 615.82.

616.31 Bevels and Miter Boxes

616.32 Levels and Plumbs

616 33 Rules

U. S. Gov., Federal Specifications Board. 360; 1925. Rulers. For 4 lengths of maple wood rulers, 12 to 24 inches long, requirements on width and thickness, provision of brass edge.

U. S. Gov., Federal Specifications Board. 419; 1926. Rules. For caliper rules, carpenter's folding rules, multiple folding rules, and steel rules, requirements on types of wood, brass binding and joints, for caliper and folding rules, sizes, dimensions, and graduation of all types, types of joints, and structural features.

616.34 Squares

616.35 Tapes

American Electric Railway Engr. Assn. Recommended Design. E115-26; 1926, Wheel Circumference Measuring Tape for Contours A, B, C, and D. Drawing of tape and method of application to wheel.

American Electric Railway Engr. Assn. Recom-mended Design. E116-26; 1926. Wheel Circumference Measuring Tape for Contours E and F. Drawing of tape and method of application to wheel.

References.—Calibration of engineer and other steel tapes. See 916.21. Tolerances on standard tapes. See 919.1.

616.4 HOOKS AND PULLERS

616.41 Hooks, for Manual Handling of Commodities References.—Vehicle and harness hooks. See 603.57. Slip hooks, grab hooks, boist or sling hooks, bale hooks and box hooks, barrel hooks and stone hoist hooks, hogshead hooks, and can hooks. See 603.57.

616.42 Nail Pullers

U. S. Gov., Federal Specifications Board. 418; 1926. Pullers, Nail. Rammer type nail pullers, general design and construction, principal dimensions, nail pulling test requirements.

References.—Pullers for railway track spikes. See

616.5 TOOLS FOR LINE CONSTRUCTION MEN

References.—Linemen's safety belts. See 069.3, 311.8. Rubber lineman's gloves. See 203.2. Timber tongs. See 616.8.

616.6 SOIL WORKING TOOLS

616.60 General Items

U. S. Gov., Dept. of Commerce. Bureau of Standards. R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of picks, mattocks, hoes, bars, wedges, blacksmith anvil tools and tongs, track chisels, rivet tongs, sledges and heavy hammers, sizes of eyes.

616.61 Bars, Digging and Tamping

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Chisel End Tamping Bar, Spear End Tamping Bar; 1929. Design, dimensions and tolerances, for one standard size of each type, hardness requirements.

References.—Standard sizes. See 616.60. Tool steel. See 603.32. Chisel bars, crow bars, pinch bars. See also 616.91.

616.62 Hoes, Rakes, and Forks

References.—Standard sizes, See 616.60. Wo handles, See 428.1. Tool steel, forged steel. 603.22, 611.51.

616.63 Scoops, Shovels, and Spades

U. S. Gov., Dept. of Commerce. Bureau of Standards. R48; 1927. Shovels, Spades, and Scoops. Simplified practice recommended and accepted by industry establishing a limited list of standard types and sizes of shovels, spades, and scoops with dimensions of blade, type of handle, type of back, kind of finish designated.

References.-Wooden handles. See 428.1.

616.64 Picks and Mattocks

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Clay Pick. Design, dimensions, and dimension tolerances for one standard size, hardness requirements, dimensions of handle

American Railway Engineering Assn. plement to 1929 Manual. Tamping Pick: 1929. Design, dimensions, and dimension tolerances for one standard size, hardness requirements, dimensions of handle.

References.—Standard sizes. See 616.60. Tool steel, forged steel. See 603.22, 611.51. Wooden handles. See 428.1, 428.20.

616.7 HARVESTING, PRUNING, AND TRIMMING TOOLS

616.71 Sickles and Scythes

616.72 Shears, Grass and Hedge Cutting

616.73 Lawn Mowers

616.8 TRACK TOOLS

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Spike Maul; 1929. Design, dimensions and dimension tolerances for two standard sizes, hardness requirements, dimensions of handle.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Tie Tongs: 1929. Design, dimensions and tolerances, for one standard

size

American Railway Engineering Assn. 1930 Sup-plement to 1929 Manual. Rail Tongs. Design, dimensions and tolerances, requirements on maximum opening, for one standard size.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Timber Tongs; 1929. Design, dimensions and tolerances, for one stand-

ard size.

American Rallway Engineering Assn. 1930 Supplement to 1929 Manual. Spike Puller. Design, dimensions and tolerances, for one standard size, hardness requirements.

American Railway Engineering Assn. 1930 Sup-plement to 1929 Manual. Rail Fork; 1929. Design, dimensions and tolerances, for one standard

size

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Track Chisel; 1929. Design, dimensions and tolerances, and hardness requirements for 2 sizes of standard design No. 1 and 1 size of standard design No. 2, dimensions of handle.

American Railway Engineering Assr. 1930 Supplement to 1929 Manual. Round Track Punch; 1929. Design, dimensions and tolerances, and hardness requirements for one standard 5-pound punch, dimensions of eye for handle.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Tie Plug Punch; 1929. Design, dimensions, and tolerances, and hardness requirements for one standard size, dimensions

of eye for handle.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R17-31; 1931. Forged Tools. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes and types of tools including the following track tools: Clay and tamping picks, spike mauls, wrenches, lining bars, rail tongs, timber and tie tongs.

spike puller, rail fork, claw bar, track adzes, tamping bars, track chisels, tie plug and track punches, and track gage.

References.—Clay pick and tamping pick. Sec 616.64.

sledge. Sec 615.22. Tamping bars. Sec 64.61. Track
age. Sec 615.52. Tool handles. Sec 438.20, 438.29.

616.9 MISCELLANEOUS HAND TOOLS OTHER THAN METAL WORKING

616.91 Jacks, Levers, and Leverage Bars

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Lining Bar; 1929. Design, dimensions and dimension tolerances for 3 sizes of lining bars of pinch type, wedge type, and diamond point type, hardness requirements.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Claw Bar; 1929. Design, dimensions, and tolerances, for one standard size,

hardness requirements.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R97-30: 1930. Bell Bottom Screw Jacks. Simplified practice recommended and accepted by industry establishing a list of standard sizes, sets up 38 sizes with stand heights from 6-inches to 24-inches, screw sizes from 1-inch to 3-inches, in-

U. S. Gov., Federal Specifications Board. 434; 1926. Bars, Chisel, Crow, and Pinch. Dimensions, tolerances, chemical composition, and hardness test

requirements, illustrated.

U. S. Gov., Federal Specifications Board. 481; 1927. Jacks. Seven types, bevel-geared screw; bevelgeared journal; hydraulic; lever jacks, automatic; planer or levelling jacks; screw; and motor truck jacks. Construction requirements, materials of various parts, design, dimensions of various sizes, for steel or malleable iron bevel-geared jacks, lever jacks, planer jacks, motor truck jacks, for steel hydraulic jacks, and for cast or malleable iron screw jacks, load lifting and overload test requirements.

References.—Methods of testing and general requirements for metals. See also 600.1. Tool steel, forged steel. See 603.32, 611.51. Standard sizes. See also 616.60.

616.92 Mallets

616.93 Trowels

U. S. Gov., Federal Specifications Board. 584; 1928. Trowels, Plastering, Cement, Brick, and Pointing. Requirements on structural features, dimensions and thickness of blades, length and largest diameter of handle, test requirements for bending under ordinary usage.

616.99 Hand Tools Not Elsewhere Classified

American Railway Assn. Mechanical Div. Pack-ing Tools for Journal Boxes; 1928. Dimensions and design of standard packing iron and packing hook made of spring steel.

References .- Spring steel. See 603.33.

617. FURNITURE HARDWARE, BUILDERS HARDWARE, AND PLUMBING

617.1 HANGERS, HINGES, HASPS, AND STAPLES 617.11 Sash-Pole Hangers, Hooks, and Sash-Pole Plates

U. S. Gov., Dept. of Commerce. Bureau of Stand-ards. CS22-30; 1930. Builders' Hardware (Nontemplate). Sash pole hangers, sash pole hooks, sash pull plates. Sizes selected and accepted by industry as standard, materials cast iron or bronze.

U. S. Gov., Federal Specifications Board, FF-H-101; 1930. Builders' Hardware, Nontemplate. Pole Hangers, Sash Pole Hooks, Sash Pull Plates, Transom Eyes. Requirements on main dimensions and finish for bronze and cast iron types of pole hangers, cast-bronze and cast-iron types of sash pole hooks, for cast bronze and cast iron sash pull plates, and for cast bronze transom eves.

References.—Gray cast iron. See 611.11. Cast bronze. See 646.41.

617.12 Hinges

Society of Automotive Engineers. 1931. Hand-book. Recommended Practice. Door Hinges; 1925. Dimensions of curved, semicurved, and straight type door hinges for passenger automobiles.

U. S. Gov., Dept. of Commerce, Bureau of Standards. CS9-29; 1929. Builders' Template Hard-Template Butt Hinges. A commercial standard selected and accepted by industry covering dimensions, clearances, tolerances, screw sizes and varieties for full mortise, half surface, full surface, and half mortise template butt hinges of cast bronze or iron and wrought bronze or steel.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware (Nontemplate). Nontemplate Butt Hinges, Types and sizes selected and accepted as standard by industry for east and wrought bronze butts, east-iron butts, wrought and forged steel butts, light loose pin butts, narrow butts, fast pin cast bronze, broad, hospital type, half surface, and full surface butts, nominal weights for regular heavy weight, and extra heavy weight butts, including bushed and ball bearing types, rules for sizes of butts for various sizes of doors.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware (Non template). Spring Hinges. Types and sizes selected and accepted by industry as standard for steel and cast iron spring hinges for screen doors, for steel, brass, or bronze butt type spring hinges and floor type spring hinges, and for nickel plated brass or bronze layatory door spring hinges

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware (Nontemplate). Strap and Tee Hinges. Types, ards. sizes and kinds of finish of steel strap and tee hinges selected and accepted by industry as standard.

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS29-31; 1931. Staple Seats for Water-Closet Bowls. Includes brass hinges for seats, a commercial standard selected and accepted by industry establishing 4 standard types, requirements on composition of brass, finish, length of studs, threading, size of bar for bar hinges, minimum weights of each type.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Butt Hinges. Requirements on general design, sizes, structural features, weight, or thickness of leaves, rules for application of the various types to various thicknesses and sizes of doors and dependent on frequency of operation, for wrought bronze, cast bronze, cast iron, and wrought steel hinges, various weights, loose pin types for cupboards, light narrow type, transom type, loose pin reversible type, wide throw type, hospital type, and half surface butt hinges, plain bearing and ball bearing types of hinges, requirements on finishes, plating, and clearances, number of balls, etc. Types illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Checking Floor Hinges. For liquid controlled types with mechanism set in floor, for double acting and single acting types, ball bearing and nonball bearing types, requirements on structural features, properties of checking fluid, adjusta-bility of speed, sizes for various weights of doors, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Floor Surface Spring Hinge. Double acting type, exposed parts of bronze, requirements on structural features, use of ball bearings, automatic hold open feature, thickness of door to which

applicable, illustrated.

U. S. Gov., Federal Specifications Board, FF-H-101; 1930. Builders' Hardware, Nontemplate. Hinges for Blinds. For wrought steel strap type and for cast-iron or cast-steel type, requirements on main dimensions and general design of strap type for frame and for brick construction, operating features, dimensions and weight of 3 sizes of cast type, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Lavatory Door Spring Hinges. For nickel plated bronze type and nickel bronze type, single acting, requirements on adjustability, dimensions, thickness of metal, structural features for various types of application of hinges, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Scuttle Hinges. For wrought-iron and wroughtsteel types, requirements on dimensions, finish,

and general design, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930, Builders' Hardware, Nontemplate. Spring Hinges. Double acting, butt type, for Spring Hinges. Double acting, but type, to hanging strip, of wrought bronze, antifriction washers or ball bearings, requirements on dimensions of hinge, door width, and thickness to which applicable, adjustability of spring tension, for several sizes of springs.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Strap Hinges. Requirements on dimensions and thickness of metal for 6 sizes of steel strap

hinges, galvanized.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. T Hinges. For ordinary type and for heavy ball bearing garage type, requirements on dimensions and thickness of metal for 2 weights of steel regular T hinges and for one weight of reversed pad T hinges, on construction and dimensions of garage hinges, type of finish required, illustrated.

References.—Cast iron, malleable iron. See 611.11, 611.21. Wrought-iron plates. See 604.14. Cast brass. See 645.21. Cast and wrought bronze. See 646.41, 646.21. Nickel plating, zinc coatings. See also 600.3.

617.13 Hasns and Staples

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware (Nontemplate). Hinge Hasps. For wrought steel, adjustable staple, safety type hinge hasps, lengths and thicknesses selected and accepted by industry as standard.

U. S. Gov., Federal Specifications Board. FF– H-101. 1930. Builders' Hardware, Nontemplate. Hinge Hasps. For steel hasps, open pattern and safety pattern types, requirements on length of hasp, size of screws, thickness of metal, and finish for various sizes, illustrated.

References,-Zinc coatings, See 600.3.

617.2 LOCKS, LATCHES, AND LOCK PARTS 617.21 Locks

American Marine Standards Committee. H No. 61-1930. Locks and Accessories for Ship Doors. Covers rim locks, regular bevel and reverse bevel for ordinary wood doors; rim lock, reverse bevel, for heavy wood doors; rim lock for steel plate doors, unfinished; rim locks, reversible, for ordinary metal doors and for heavy metal doors; rim lock, reverse bevel, for wardrobe doors and for small locker and cupboard doors; mortise lock, reversible, for light wood doors and for heavy wood doors; mortise lock for sliding doors; half mortise lock, nonreversible, for sliding doors; and mortise dead locks; made of cast bronze. Requirements on dimensions, general design, number of tumblers and key changes, types of keeper, escutcheon, and knobs, finish, application, and chemical composition of bronze.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS9-29; 1929. Builders' Template Hardware. Template Locks. A commercial standard selected and accepted by industry covering 1 and 2 bolt cylinder locks applicable to hollow metal doors, dimensions and tolerances of standard fronts and strikes, limiting dimensions of lock

case, backset, bevel of front.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS22-30; 1930. Builders' Hardware (Nontemplate). Door Locks. Types selected and accepted by industry as standard with overall dimensions, backset, number of tumblers, if master keyed, general type of spring mechanism. material of the lock parts, for mortise (bit key) locks for inside doors, bathroom doors, communicating doors, front doors, vestibule doors, hotel, schoolhouse, and store doors, and sliding doors, for mortise dead locks, for upright, horizontal, and ornamental, rim-knob locks, for rim dead locks, for cylinder locks for front, vestibule, and office doors, sliding doors, schoolhouse doors, for cylinder mortise dead locks, etc.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Cabinet Locks. Covers chest locks, cupboard locks, desk locks, drawer locks, and wardrobe locks. Requirements on dimensions, material, and general design, types for various thicknesses of wood, thicknesses of sheet metal, for both brass and steel locks, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Cylinder Front Door Locks, Cylinder Vestibule or Office Door Locks, Cylinder Office Locks, Cylinder Office or Front Door Locks, Cylinder Locks for Public Toilet Rooms, Cylinder Mortise Deal Locks, Cylinder Entrance Door Locks. Require-ments on dimensions, materials, finish, construction, and operation of several types, japanned iron cases, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Cylindrical Case Locks and Latches. For cylinder vestibule or office door lock and for cylinder front or office door lock, where lock case is cylindrical and inserted in large hole in door stile, requirements on installation, some dimensions, type of knobs, structural and operating features, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Elevator Door Lock. Requirements on dimensions and general design, case of cast bronze,

illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101: 1930. Builders' Hardware, Nontemplate, Inside Door Locks, French Door Locks, Bathroom Door Locks, Mortise Dead Locks, Upright Rim Knob Locks. Requirements on dimensions, materials, finish, construction, and operation, japan-

ned iron cases, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders Hardware, Nontemplate, Tubular Locks and Latches. Includes dead bolt lock, case of galvanized or cadmium plated steel. requirements on construction, installation, and operating features of 5 types with and without turn knobs.

S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate, Unit Type Locks and Latches. Completely factory assembled type slipped into cut-away in door stile. Bathroom Door Lock, Communicating Door Lock, Cylinder Front Door Lock, Cylinder Vestibule or Office Door Lock, Cylinder Office Lock, Cylinder Office or Front Door Lock, Cylinder Locks for Public Toilet Room. Requirements on installation, dimensions, structural and operating features, knobs and escutcheons of cast

U. S. Gov., Federal Specifications Board, FF-P-1930. Padlocks. For 7 design types, in-101 . cluding 1 to 3 sizes of each type, with pin tumbler mechanisms, lever tumbler mechanisms, and warded mechanism secure type, with bronze or brass cases, plated steel cases, and laminated or solid steel cases, requirements on use of noncorrosive materials for mechanisms, structural features, weights and principal dimensions, corrosion

test

References.—Locks for safes. See 613.5. Desk locks. See also 613.4. Padlock eyes. See 617.23. Bolt locks. See 617.61. Methods of testing, general requirements for metals. See also 600.1, Cast iron. See 611.11. 611.21. Cast bronze. See 646.41

617.22 Latches

American Marine Standards Committee, H No. 61-1930. Locks and Accessories for Ship Doors. For rim latch, reversible, for light wood doors, made of cast bronze, requirements on application, type of keeper, rosette and knobs, finish, dimensions and general design, chemical composition

U. S. Gov., Dept. of Commerce. Bureau of Stand-ards. CS22-30; 1930. Builders' Hardware (Non-template). Latches. Types and sizes selected and accepted by industry as standard, with amount of backset, materials of parts, for mortise knob latches, rim night latches, cylinder mortise night latches, tubular and cylinder rim night latches, thumb latches, and secret gate latches

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Cylindrical Case Locks and Latches. For 4 types of knob latches, latch case is cylindrical and inserted in large hole in door stile, requirements on installation, some dimensions, type of knobs, structural and operating features, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Mortise Knob Latches, Rim Knob Latches, Cylinder Mortise Night Latches. Requirements on dimensions, materials, finish, construction, and operation of several types, cases of japanned

iron, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Rim Night Latches. Includes one type of tubular and 3 types of cylinder rim night latches, requirements on dimensions, materials, finish, construction and operation, cases of japanned iron, illustrated.

Door Locks, Communicating Door Locks, Front | U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Secret Gate Latches, Thumb Latches. For cast bronze secret gate latches, requirements on size, single acting type, illustrated. For steel thumb latches, requirements on finish, length of handles and handle plates, thickness of doors to which applicable, illustrated.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Tubular Locks and Latches. For knob latch and cylinder night latch, case of galvanized or cadmium plated steel, 4 and 5 types of each kind. requirements on construction, installation, and

operating features.

U. S. Gov., Federal Specifications Board. FF-H-101; 1930. Builders' Hardware, Nontemplate. Unit Type Locks and Latches. For completely factory assembled type slipped into a cut-away in door stile. Knob Latch. Requirements on installation, knobs and escutcheons of cast bronze, dimensions, structural and operating features.

References.—Methods of testing, general requirements for metals. See also 600.1. Cast iron. See 611.11, 611.21. Cast bronze. See 646.41. Zinc coatings and tests. See 600.3.

617.23 Lock Parts

American Marine Standards Committee. H No. 61-1930. Locks and Accessories for Ship Doors. Escutcheons and Rosettes, Requirements on thickness of plate and dimensions of escutcheons and rosettes of cast bronze for use with various types of doors, knobs, and ring handles, general design, chemical composition of bronze.

U. S. Gov., Dept. of Commerce. Bureau of Standards, CS22-30; 1930. Builders' Hardware (Nontemplate). Escutcheons. Types and sizes selected and accepted by industry as standard for

cast bronze and for wrought designs.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Padlock Eyes. Dimensions of 2 sizes of plate and hole selected and accepted by

industry as standard.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Escutcheons, Cylinder Collar, Roses, Key Plates. Requirements on dimensions, general design and construction, and finish for mortise key and mortise cylinder lock escutcheons, collars, roses, and key plates of cast bronze and of wrought bronze, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Padlock Eyes. For galvanized steel plates for screw attachment to doors, with integral eyes for pad-locks, requirements on size of plate and of hole.

References.—Knobs and handles. See also 617.31, 617.32. Methods of testing, general requirements for metals. See also 600.1. Zinc coatings and tests. See 600.3. Cast bronze. See 646.41.

617.3 KNOBS, HANDLES, AND PULLS

617.31 Door Knobs

American Marine Standards Committee H No. 61-1930. Locks and Accessories for Ship Doors. Knobs. For knob for use against metal surface without escutcheon plate or rosette and for knob for use with escutcheon plate or rosette, requirements on general design, dimensions and chemical composition of cast bronze used.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware, Nontemplate. Door Knobs. Types selected and accepted by industry as standard with sizes, shapes, and finishes for brass, bronze, steel, porcelain, jet,

and glass door knobs,

1930. Builders' Hardware, Nontemplate. Glass Door Knobs, Metal Door Knobs, Pottery Door Knobs. Requirements on shape, dimensions, finish, size of steel spindle, material of shank, metal knobs of cast bronze and of wrought bronze, pottery knobs of white porcelain.

617.32 Door and Drawer Handles

American Marine Standards Committee H No. 61-1930. Locks and Accessories for Ship Doors. Handles. For east bronze ring handles for doors in place of knobs, covering ring handles with socket and ring handles with spindle, for use with escutcheon plate or rosette and for use without escutcheon plate or rosette, requirements on dimension, general design, and chemical composition of bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Entrance door handles. Types and sizes selected and accepted by industry as stand-

ard for cast bronze designs.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Handles. Types and sizes selected and accepted by industry as standard, materials used, for drawer handles with drop bails, flush rings, lifting handles, and trapdoor handles.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Entrance Door Handles. For handles on plates with thumb piece for latch, requirements on dimensions of wrought bronze or cast iron plates and handles, dimensions of cast bronze plates for sectional trim type, illustrated. Specifications for dummy

References.—Door locks and handles for automobiles. See 722.33. Methods of testing, general requirements for metals. See also 600.1. Cast bronze. See 646.41. Door and drawer pulls. See 617.33.

617.33 Door and Drawer Pulls

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Door Pulls and Drawer Pulls. Types and sizes selected and accepted by industry as standard.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Pulls. For door pulls on plate, sectional door pulls with round bases, ordinary 2-screw and 4screw door pulls, materials cast and wrought bronze with steel also for the 2-screw type requirements on main dimensions, general design

duftered of the state of the st minimum permissible diameter. For steel and bronze types of cup pattern drawer pulls, requirements on size, finish, and general design and metal thickness for wrought bronze type. For cast bronze bar pattern drawer pull, requirements on size and design.

References.—Cast bronze. See 646.41. Cast See 611.11, 611.21. Door and drawer handles. 617.32. Cast Iron.

617.34 Push and Kick Plates and Bars

U. S. Gov., Dept. of Commerce Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Push Bars. Sizes of bars selected and accepted by industry as standard.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Push Plates. Types and sizes of plain cast bronze push plates selected and accepted by industry as standard.

U. S. Gov., Federal Specifications Board FF-H-101; U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Push Bars. For single bar vertical type and for multiple bar types, bases and brackets of cast bronze, rods of tubing or solid material, requirements on dimensions, general design, installation, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Push Plates. Rrequirements on dimensions, general design, and finish for cast bronze, wrought bronze, and plate glass push plates.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Kick Plates. Material wrought bronze, requirements on thickness of plate and general design, illustrated.

References.—Cast bronze. See 646.41. Bronze plates and sheets. See 646.21. Bronze bars and rods. See 646.12, 466.31.

617.35 Sash Lifts

American Marine Standards Committee H No. 63-1930. Sash Hardware for Ships. Sash lifts. For 2 types of cast bronze flush sash lifts and for 1 type of cast bronze and 1 type of cast or wrought bronze hook sash lifts, requirements on general design, main dimensions, and chemical composition of bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Sash Lifts. Sizes selected and accepted by industry as standard for flush and bar

types, materials steel, bronze, iron.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Hook Sash Lifts, Flush Sash Lifts, Bar Sash Lifts, Screen Lifts. Requirements on finish, size, and thickness of metal for bronze and steel types of hook sash lifts, on finish, size, and general design of flush sash lifts of bronze and steel, size and weight of cast bronze bar sash lifts, and on length of brass and steel screen lifts.

References.—Methods of testing, general requirements for metals. See also 600.1. Cast bronze. See 646.41.

617.4 CHECKS, CATCHES, AND FASTENERS

617.41 Door Closers and Checks

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Closers. For overhead type, single acting, combined spring and liquid check, requirements on adjustibility of spring, permissible acidity, viscosity, pour point of liquid, general construction and material of parts, case of cast bronze, other types of cast iron, 7 sizes and types of doors to which applicable.

References.—Cast bronze. See 646.41. Cast iron. See 611.11. Cast brass. See 645.21. Checking floor hinges. See 617.12.

617 42 Catches

American Marine Standards Committee H No. 62-1930. Bolts and Catches for Ship Doors. Elbow catch. For one size of cast bronze catch, requirements on general design, main dimensions, and chemical composition of bronze.

American Marine Standards Committee H No. 62-1930. Bolts and Catches for Ship Doors. Turn catch for cupboard and locker doors. For one standard size of cast bronze turn, requirements on general design and controlling dimensions, and on chemical composition of bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Catches. Sizes and types selected and accepted by industry as standard for steel,

iron, brass, and bronze catches for screen doors, |

cupboards, and transoms.

U. S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate. Elbow Catches. For plated cast iron and brass types, requirements on sizes.

U. S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate. Transom Catches. For bronze, steel, and iron types, requirements on dimensions, thickness of case, and finish, illustrated.

References .- See references under 617.41.

617.43 Door, Casement, and Sash Fasteners

American Marine Standards Committee H No. 63-1930. Sash Hardware for Ships. Hook sash fastener. For one type and size, requirements on general design and main dimensions, chemical composition of cast bronze used.

American Marine Standards Committee H No. 63-1930. Sash Hardware for Ships. Meeting rail sash lock. For bronze sash fastener of rotating cam type, requirements on main dimensions and general design, chemical composition of bronze.

American Marine Standards Committee H No. 63-1930. Sash Hardware for Ships. Pawl sash catch. For right or left hand cast bronze fastener with one or more ratchet stops, requirements on general design, main dimensions, and chemical composition of bronze.

American Marine Standards Committee H No. 63-Sash Hardware for Ships. Spring bolt sash fastener. For right-hand or left-hand fastener with one or more stops, made of bronze, requirements on main dimensions, general design, and chemical composition of bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Fasteners for door, casement, and sash. Types and sizes selected and accepted by industry as standard, materials of parts.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Casement Fasteners, Cellar Window Fasteners, and Sash Fasteners. Requirements on main dimensions and finish for cast iron and cast bronze types of casement fasteners, for a cast iron type and a steel type of cellar window fastener, and for cast bronze and cast iron crescent type and cast bronze car window types of sash fasteners.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Fasteners, With Chain. For wrought bronze, wrought steel, cast bronze, and cast iron types, requirements on length of plates and fin-

ish, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Fasteners for Blinds. Turnbuckles for Blinds. For steel double acting gravity type of hook fastener, for rod type of combined fastener and holder, and for S pattern of steel turnbuckle type of holder, requirements on sizes, materials, finish, operating features and general design for frame and brick applications, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Scuttle Fasteners. For galvanized wrought iron type, requirements on main dimensions, illus-

trated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Window Screen Fastener. Galvanized, 10-inch size, to hold screen open or closed, illustrated.

References.—See references under 617.41. for fasteners. See also 603.56.

617.44 Door Holders and Stops

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders Hardware (Nontemplate). Door Holders, Types and sizes selected and accepted by industry as standard, materials cast iron and bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Door Stops. Types, sizes, and methods of attachment selected and accepted by in-dustry as standard, for wall and floor types, ma-

terials steel, iron, and bronze.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Holders. For overhead shock absorber type, lever type, floor type with bumper, plunger type, and overhead garage type with chain. Requirements on operating features, general design as illustrated, materials, finish, main dimensions or weight, and sizes, lever type of cast bronze, plunger type with bronze, iron, and steel type Cases

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Stops. Includes wall types and floor types with rubber tips, with and without hook and keeper, wall types of cast bronze, cast iron, and wood, with screw point and screw attachment plates. floor types of cast bronze, requirements on main dimensions and number of screws, illustrated.

References .- See references under 617.41.

617.5 TRANSOM AND SASH DEVICES

American Marine Standards Committee H No. 63-1930. Sash Hardware for Ships. Antirattlers. For cam type, right or left hand, and for screw type, requirements on general design, main dimensions, and chemical composition of bronze. American Marine Standards Committee H No. 63-

1930. Sash Hardware for Ships. Sash pivots. For straight type and for offset type of cast bronze pivot for sash, requirements on general design, main dimensions, and chemical composition of bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Casement Adjusters. Types and sizes selected and accepted by industry as standard for steel, cast iron, and bronze adjusters.

U. S. Gov, Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontem-plate). Pulleys. Includes sash pulleys. Types, sizes and kinds of finish selected and accepted by industry as standard.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontem-plate). Sash or Transom Pivots. Types and sizes selected and accepted by industry as standard with type of finish and material specified in

ard with type of finish and material specified in several of the types.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontem-plate). Sash rollers, sash sheaves, shutter sheaves. Types and sizes selected and accepted by industry as standard, materials iron, brass, steel, and cast iron for shutter sheaves.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontem-plate). Transom Chains. Types selected and accepted by industry as standard, with type of plate and material of and length of chain.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontem-plate). Transom Lifters. Sizes and lengths of rods selected and accepted by industry as standard, materials steel and bronze, for various types of transoms.

U. S. Gov., Federal Specifications Board 348; 1925. Standard Miscellaneous Chain and Attachments, Sash Attachments. Dimensions of illustrated steel wire attachment to weight, sheet steel socket attachment to sash, and steel wire attachment to socket.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Casement Adjusters. Requirements on lengths and sizes of rods and bases, operation features, for inswinging and for outswinging casements, of bronze, cast iron, and steel, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Sash Cord Irons. For attaching end of sash cord to sash, of cast iron, requirements on length, type

of screw, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Sash Operators. For vertically pivoted sash, requirements on general design, size and length of rods, for bronze and steel types, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate. Sash or Transom Pivots. For cast iron full mortise types, cast bronze and cast iron rabbeted types, cast bronze and malleable iron friction types, requirements on dimensions and finish, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Sash Pulleys. Requirements on sizes of wheel, dimensions, and thickness of front plate for 3 sizes of pulleys, for various types with steel or iron wheels and cases, brass wheels with iron cases, etc., plain and ball bearing types, round groove and combination groove for cord or chain, required thickness of sheet metal and shafts.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Sash Weights. For round and square types of cast iron and cast lead types, requirements on exterior

U. S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate. Transom Chains. For steel type and for bronze type, requirements on length of plate, thickness of metal in chain, chain according to F. S. B. spec. RR-C-271, type of finish, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Transom Lifters. To have automatic grip, for bronze and plated steel types, various types for bottom hung and top hung sash, opening out and opening in sash, etc., requirements on sizes and lengths of rods, provision of spring, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate. Transom operators. For heavy sash horizontally pivoted or hinged, hand crank and miter gear type of operator, requirements on self-locking feature, diameter and weight of steel rods, brackets of cast iron.

U. S. Gov., Federal Specifications Board FF-H-101: 1930. Builders' Hardware, Nontemplate. Window Stop Adjusters. For flat adjustable steel washer type and for cup type adjustable bronze washer, requirements on size of round head screw.

References.—Sash pull plates. See 617.11. Sash lifts. See 617.35. Sash chains. See also 603.56, Window spring boits. See 617.43. Sash fasteners. See 617.43. Transom catches. See 617.42. Sash pulleys. See diso 617.9. Transom eyes. See 617.49.

617.6 BOLT LOCKS, BRACKETS, AND HOOKS

617.61 Bolt Locks

American Marine Standards Committee H No. 62-1930. Bolts and Catches for Ship Doors. For 2 and 3 standard sizes of each of barrel bolts,

light straight bolts, heavy straight bolts, light neck bolts, heavy neck bolts, light flush bolts, heavy flush bolts, and for 1 standard size of spring bolt, all of cast bronze, requirements on controlling dimensions, general design, and composition of bronze.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Bolts. Types and sizes selected and template). Botts. Types and sizes selected and accepted by industry as standard, with materials of parts, for barrel bolts, chain bolts, cremone bolts, cupboard bolts, espagnolette, flat, flush, extension flush, lever flush, extension lever flush, foot, lavatory door, mortise, neck, shutter, and

surface bolts.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Barrel Bolts, For wrought steel bolts, plated barrel Botts. For wrought steel botts, patent and galvanized types, for japanned steel bolts, for wrought brass bolts and for cast bronze bolts, requirements on bolt length and tbickness of plate in steel bolts, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Chain Bolts. For round or square case bolts of steel, cast bronze, or cast iron, requirements on type of protective coating, length of bolt, thickness of plate for steel bolts, illustrated, 3 stand-

ard lengths

S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Cremone Bolts, Espagnolette Bolts. For bronze, iron, and steel types of cremone bolts, for ordinary use and extra heavy for garage use, espagnolette bolts of steel for garage use, requirements on sizes of rods, knobs, and handles, finish,

operating features, illustrated.
U. S. Gov., Federal Specifications Board FF-H101; 1930. Builders' Hardware, Nontemplate. Exit Bolt Locks. For locks operated from inside of building by slight push or pull on bar, require-ments on general design of bronze exit bolts of top and bottom locking type and of side latching type, sizes of cross bar and rods, design and operating features of lock for side latching type, illustrated.

S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Flush Bolts, Extension Flush Bolts, Lever Flush Bolts, Extension-Lever Flush Bolts. Bolts for locking top of door, steel, iron, and bronze types, requirements on dimensions of face plate and

bolt, standard sizes, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Foot Bolts. For 3 general types of bolts for fastening bottom of door, 2 and 3 sizes of each type, cast-bronze, cast-iron, and wrought-steel types, requirements on main dimension, finish, operating features, thickness of plate in steel types, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Lavatory Door Bolts. For swinging flat lever type and for turn button bolt type, cast bronze and nickel bronze types, requirements on mate-

rial, main dimensions, and finish, Illustrated.
S. Gov. Federal Specifications Board FF-H101; 1930. Builders' Hardware, Nontemplate.
Mortise Bolts, Neck Bolts, Square Bolts, Surface Bolts. Bolts of brass type and of steel type except surface bolts which are of wrought bronze, requirements on main dimensions, sizes, thickness of metal in steel types, finish, illustrated.

U. S. Gov. Federal Specifications Board FF-H101; 1930. Builders' Hardware, Nontemplate.
Window Spring Bolt. Requirements on mate-

rials and finish for iron or steel bolt with spring, for sash % to 1% inches wide.

References.—Cast brass. See 645.21. Cast bronze. See 646.41. Cast iron. See 611.11, 611.21. Nickel plating and zinc coatings. See also 600.3. Nickel bronze. See 655.5.

617.62 Brackets, Handrail and Shelf

U. S. Gov., Dept. of Commerce, Bureau of Stand-ards CS22-30; 1930. Builders' Hardware, Non-template. Handrail Brackets. Commercial standard selected and accepted by industry for 6 types of handrail brackets, steel, cast-iron, cast-bronze and cast-brass construction, and for various methods of attachment, requirements on main dimensions.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30: 1930. Builders' Hardware, Nontemplate. Pole Brackets. Commercial standard selected and accepted by industry for cast-iron brackets for 1½-inch poles, including one type for two poles at same height. Brackets support poles to which coat and hat hooks are attached.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware, Nontemplate. Shelf Brackets, Shelf Rests. Com-mercial standards selected and accepted by industry. For shelf brackets, requirements on main dimensions of 10 sizes of wrought steel brackets with corrugated braces and embossed For wrought or cast-iron shelf rests,

standard diameter of milled pin.
U. S. Gov., Federal Specifications Board FF-H101; 1930. Builders' Hardware, Nontemplate,
Handrail Brackets. For cast-bronze and castiron types, requirements on projection distance,

finish, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Shelf Brackets. For shelf brackets of sheet steel, requirements on dimension, on sizes of screws, thickness of metal, for 6 bracket sizes, plated, galvanized, and japanned types, illustrated

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Shelf Rests. For cast-iron pin type of rest for inserting in holes in bookcase end pieces, re-

quirement on size of pin.

References .- See references under 617.61.

617.63 Hooks

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Hooks. Types and sizes selected and accepted by industry as standard, materials cast iron and bronze, number of prongs and number of screws specified for baggage hooks, ceiling, display, coat and hat hooks, clothesline hooks, harness, school house, store rack, toilet, and towel hooks.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Coat Hook. For cast brass coat hook, dimensions, chemical composition of brass, nickel plat-

ing requirements and tests.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Ceiling Hooks, Coat and Hat Hooks. Clothing hooks, of cast-bronze and cast-iron screw at-tached type, and steel wire screw point types, requirements on projection distance, number of screws for screw attached types.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Hooks, Hooks and Eyes. For cast bronze door hooks, screw attached type and expansion bolt type, requirements on length. For brass

wire and steel wire types of hooks and eyes, requirements on lengths and finish. For cast bronze cabin door hooks, screw attached, requirements on lengths.

617.79 Miscellaneous Plumbing Fixtures

U. S. Gov., Dept. of Commerce, Bureau of Standards R101-29; 1929. Metal Partitions for Toilets and Showers. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of partitions, fronts, doors, and posts for metal toilet and dressing room inclosures, recommended dimensions of inclosures.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Shower Fixtures. Main dimensions and materials of supply pipes, valves, sprinkler head and perforations, curtain frame, and duck curtain, one outfit for use over bath tubs and two outfits for shower bath inclosures, with floor drains. Metal

parts of nickel plated brass.

References.—Plumbing practice and symbols. See 600.6. Nickel plating. See also 600.3. Iron and steel sheets and plates. See 604.2, 604.1.

617.9 MISCELLANEOUS BUILDERS AND FURNI-TURE HARDWARE

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Cupboard Turns. Types and sizes selected and accepted by industry as standard.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Non-

template). Door Buttons. Sizes selected and accepted by industry as standard for iron, steel,

and brass door buttons.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Letter Box Plates. Types and sizes selected and accepted by industry as standard, material bronze, steel, iron.

U. S. Gov., Dept. of Commerce, Bureau of Standards (CS22-30; 1930. Builders' Hardware (Nontemplate). Pulleys. Types, sizes, and kinds of finish selected and accepted by industry as standard for awning pulleys, ceiling pulleys, clothes line, dumb waiter, hothouse, sash, screw, side, in-cased swivel, upright, and wagon brake pulleys.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Nontemplate). Shutter Bars. For bar and hood types, sizes and types selected and accepted by industry as standard, materials brass and steel.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS22-30; 1930. Builders' Hardware (Non-template). Sliding Door Rails. Types and sizes selected and accepted by industry as standard, materials brass, steel and brass.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Clothes-Hanger Bar. Telescoping steel tubing for clothes closets, requirements on finish, thickness of metal, degree of adjustability of dif-ferent lengths, provision of metal wall plates.

U. S. Gov., Federal Specifications Board FF-H-101; Builders' Hardware, Nontemplate. Cupboard Turns. For cast-bronze, wrought-bronze, cast-iron, and wrought-steel types, requirements on finish, dimensions, thickness of plate, shape of

knob, illustrated.

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Door Buttons. For galvanized cast iron or wrought steel door buttons, requirements on length for 2

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware, Nontemplate. Scuttle Operators. For heavy scuttles, worm gear type operator with endless chain and sprocket wheel, requirements on general design, material of arms, bearings, and brackets, finish of parts, illustrated,

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders' Hardware Nontemplate. Skylight Operators. For lifting rod operated by single cord, self-locking, requirements on size of cord, finish and size of lift rod or rods, amount of lift, illustrated.

619. MISCELLANEOUS IRON AND STEEL MANUFACTURES

619.1 FIREARMS AND ORDNANCE

U. S. Gov., Dept. of Commerce. Bureau of Stand-ards R31-31; 1931. Loaded Paper Shot Shells. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes and varieties of paper shot shells for va-rious gages, including black powder loads, smoke-

less powder loads, brush loads, etc. U. S. Gov., Dept. of Commerce. Bureau of Standards R62; 1927. Metallic Cartridges. Simplified practice recommended and accepted by industry establishing a limited list of types and varieties of metallic cartridges, such as black, semismokeless, smokeless ungreased, smokeless greased, etc., for rim fire cartridges (ball, shot, and blank), center-fire pistol and rifle cartridges.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Line Carrying Guns for ocean vessels. For cast bronze guns of cannon type, and for steel guns of cannon type, mandatory requirements on tensile test of material, on line carrying capacity and method of testing.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Service Projectile Lines and Projectiles. For line carrying guns on ocean vessels, mandatory requirements on length and strength of line, minimum weight and permissible windage of projectile, ease of removal of projectile from gun, recommended size of powder charge, etc

References.—Methods of testing, general requirements for metals. See also 600.1. Cast bronze. See also 646.4.1. Forged steel. See 611.51. Cartridge brass. See 644.21, 645.9. Explosives. See 862, 863.

Flax shot line. See also 331.21.

619.2 MANUFACTURES OF SHEET IRON AND SHEET STEEL

American Automobile Assn. 1929 Catalogue. Warning, Route, Speed, Etc., Signs. Shape, sizes, colors of standard enameled sheet iron signs.

American Electric Railway Engr. Assn. Recom-mended Specification D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes trolley wire supporting bracket arms of pipe or tubing construction, sheet steel guy plates and hub guards, and thimbles for guy cable. Steel according to A. S. T. M. spec. A-9 for structural steel for buildings, requirements on dimensions and variations.

American Society for Testing Materials. D 310-31; 1931. Method of Test for Size of Anthracite. Includes specifications for test screens of metal plates with round openings, requirements on size of openings, general construction of screen for

various coal sizes.

American Society for Testing Materials. Tentative Definition E 13-2ST; 1928. Definition of the Term Screen (Sieve). Covers plate, sheet, or

woven cloth types.

National Assn. of Sheet Metal Contractors, Standard Practice in Sheet Metal Work; 1929. A compilation of drawings with descriptive items of standard construction and typical designs for sheet metal structural items, covering roofing, gutters, conductors, flashings, corrugated iron work, skylights, ventilators, metal cornices, metal ceilings, warm air furnaces, heating and ventilating systems, blow pipe and exhaust systems, fire door and kalamein doors, hollow metal doors and trim, hollow metal windows, restaurant, kitchen and hotel equipment, protective coatings and paints, a total of 356 drawings.

and paints, a total of 396 drawings.

References.—Iron and steel sheets and plates. See 601.2, 604.1. Steel desks, lockers and cupboards, and office filing furniture. See 613.4, 613.5, 613.7. Stoves, ranges, house heating furnaces. See 614. Metal partitions for shower inclosures. See 617.79. Switchboard panels of sheet steel. See 714.4. Raceways of sheet iron or steel for electric wire. See 715.11. Switch boxes and cabinets. Illuminating torch, sheet steel. See 997.1. Sheet metal hollow ware. See 612.20.

619.3 SCREW POSTS, METAL FENCE POSTS

American Railway Engineering Assn. 1929 Manual. Metal Fence Posts; 1928. Of steel or wrought iron, tensile strength, flexure test and bend test requirements, variations in dimensions, amount of zinc coatings, and general design requirements

References.—Methods of testing and general requirements for metals. See also 600.1. Zinc coatings and tests. See also 600.3. Wooden fence posts. See 401.2.

619.4 BUOYS OF IRON OR STEEL

6195 WATER FILTERS

American Water Works Assn. Water Works Practice Manual; 1925. Pressure Water Filters, Specifications. Permissible rates of filtration dependent on use of water, requirements on dimensions and capacities for filters and pipe connections and minimum wash water for various filtration rates, required thickness of shell and head for various working pressures for vertical steel and cast-iron filters.

Associated Mfrs. of Water Purifying Equipment. Pressure Water Filters. Undated. Requirements on rates of filtration for water for various uses, dimensions of vertical and horizontal filters and pipe connections for various rates of filtration, thickness of shell and head and dishing of head for various working pressures for steel and for cast iron filters, strength of materials. 619.9 MANUFACTURES OF IRON OR STEEL NOT COVERED IN ABOVE CLASSIFICATION

American Electric Railway Engr. Assn. Recommended Specification D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes angle iron cross arm braces, guy clamps, guy hooks, over support rods, pole bands, and pole steps. Material steel according to A. S. T. M. spec. A-9 for structural steel for buildings, requirements on construction, dimensions and permissible variations.

American Marine Standards Committee. H No. 3-1925. Fixed Lights for Ships, Type A, Pressed Steel Frame. Dimensions of frame, sizes of bolt holes and bolts, sizes of glass, for 3 standard sizes

of fixed lights.

American Marine Standards Committee. H No. 12-1926. Thimbles for Manila Rope. For wrought steel thimbles, dimensions and design for 20 standard sizes for % to 2% inch size rope.

620-629 FERRO-ALLOYING ORES. METALS, AND METAL MANUFACTURES

621. FERRO-ALLOYING ORES AND METALS

621.1 ORES, FERRO-ALLOYING

621.11 Chrome Ores

American Society for Testing Materials. C 18-21; 1921. Methods of Ultimate Chemical Analysis of Refractory Materials, Including Chrome Ores and Chrome Brick. Preparation and strength requirements for reagents, determination of moisture, percentage of silica, alumina, iron oxide, titania, lime, magnesia, alkalies, and chromium. U. S. Gov., Federal Specifications Board 125; 1924.

Ground Chrome Ore. For one grade fine enough to use as a refractory for open hearth furnaces, requirement on percentage of chromic oxide.

References .- Iron ore. See 601.1.

621.12 Manganese Ores

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl. 1927. Standard Samples. Manganese Ore. Sample No. 25b prepared and sold by the bureau with a certificate giving percentage manganese and available oxygen, for use by industrial organizations and others as a comparison standard in checking the accuracy

comparison standard in checking the accuracy of analysis of manganese ores, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C26; 1921. Analyzed Iron and Manganese Ores, Methods of Analysis. With special reference to standard samples Nos. 25b, 26, 27a, 28, and 29 of iron ores, the methods used by the bureau are given for mixing and drying of material, for determination of silica, phosphorus, sulphur, aluminum, titanium, vanadium, iron, etc., standardization of permanganate solutions.

U. S. Gov., Federal Specifications Board 142; 1924. Manganese Ore. For one grade of ore consisting of pyrolusite or psilomelane, requirements on minimum percentage of manganese.

References .- Iron ore. See 601.1.

621.13 Silicon Ores

621.2 FERRO-ALLOYS

621.20 General Items

American Society for Testing Materials. A 103-27; 1927. Standard Methods of Sampling Ferro-Alloys. Sampling methods for (a) ferro-silicon, high carbon ferro-manganese and silico-manganese, (b) high carbon ferro-chromium, chromium metal, low carbon ferro-manganese and manganese metal, (c) low carbon ferro-chromium, speci-

fications for mortar and pestle.

American Society for Testing Materials. A 104-27: 1927. Standard Methods of Chemical Analysis of Ferro-Alloys. Determination of silicon, manganese, carbon, phosphorus, sulphur, chromium, vanadium, aluminum, tungsten, for the various alloys, method depending on the alloy being analyzed.

621.21 Ferrochrome

American Society for Testing Materials. A 101-27; 1927. Ferro-Chromium. Chemical composition requirements for four grades of material, recommendation for use of A. S. T. M. standard methods of sampling and chemical analysis for ferroalloys, A 103 and A 104.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Ferrochromium. Sample No. 64 for high carbon ferrochromium, prepared and sold by the bureau with a certificate of analysis, for use by industry and others as a comparison standard for checking the accuracy of analyses of similar products.

etc. C25.

U.S. Gov., Federal Specifications Board 139; 1924. Ferro-Chrome. For lump material, chemical composition requirements for 4 grades dependent on carbon content

Average analysis shown in supplement to

References.—Methods of sampling and testing and general requirements for metals. See also 600.1, 621.20. Pig iron. See 601.2.

621.22 Ferromanganese, Spiegeleisen

American Society for Testing Materials A 98-27: 1927. Spiegeleisen. Chemical composition requirements, with recommendation for use of A. S. T. M. standard methods of sampling and chemical analysis, A 103 and A 104.

American Society for Testing Materials A 99-27: 1927. Ferro-Manganese. Chemical composition requirements, with recommendation for use of A. S. T. M. standard methods of sampling and chemical analysis for ferro alloys, A 103 and

A 104.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Ferromanganese. Sample No. 66 for spiegeleisen. No. 67 for manganese metal, and No. 68 for ferromanganese, prepared and sold by the bureau with a certificate of analysis in each case, for use in industry and by others as a comparison standard for checking the accuracy of analyses of similar materials, etc. Averaged analyses shown in supplement to C 25.

U. S. Gov., Federal Specifications Board QQ-F-161; 1931. Ferro-Manganese. Chemical composition requirements for 2 grades, furnished in pigs, crushed in screen sizes, or lumps. Grade A is known as pure carbon-free manganese metal.

U. S. Gov., Federal Specifications Board 273; 1925. Spiegeleisen. Chemical composition of 2 grades of manganese alloy furnished in pigs or lumps.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.20. Pig iron. See 601.2. Manganese ores. See 621.12.

621.23 Ferromolybdenum

U. S. Gov., Federal Specifications Board 143; 1924.
Ferro-Molybdenum. Chemical composition requirements for one grade.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.20. Pig iron. See 601.2.

621.24 Ferrosilicon

American Society for Testing Materials A 100-27; 1927. Ferro-Silicon. Chemical composition requirements for three grades of material, with recommendation for use of A. S. T. M. standard methods of sampling and chemical analysis of ferro-alloys Nos A 103 and A 104.

of ferro-alloys, Nos. A 103 and A 104.
U. S. Gov., Dept of Commerce, Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Ferrosilicon. Sample No. 57 for refined silicon, No. 58 for 75 per cent silicon, and No. 59 for 50 per cent silicon, prepared and sold by the bureau with a certificate of analysis in each case, for use by industrial organizations and others as a comparison standard for checking the accuracy of analyses of similar materials, etc. Averaged analyses shown in above-mentioned supplement.

U. S. Gov., Federal Specifications Board, 145; 1924, Ferro-Silicon, Silicon content for 3 grades of ferro-silicon, methods of sampling.

References.—Methods of testing general requirements for metals. See also 600.1, 621.20. Pig iron. See 601.2.

621.25 Ferrotungsten

U. S. Gov., Dept. of Commerce, Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Ferrotungsten. Sample No. 75 prepared and sold by the bureau with a certificate of analysis, for use in industry and by others as a comparison standard in checking the accuracy of analyses of similar materials, etc. Average analysis shown in supplement to C25.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.20. Pig iron. See 601.2. Tungsten powder. See 696.

621.26 Ferrotitanium, Ferrouranium, Ferrovanadium

American Society for Testing Materials A 102–27; 1927. Ferro-Vanadium. Chemical composition requirements for four grades of material, recommendation for use of A. S. T. M. standard methods of sampling and chemical analysis for ferroalloys, A 103 and A 104.

U. S. Gov., Dept. of Commerce, Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Ferrovanadium (high carbon). Sample No. 61 prepared and sold by the bureau with a certificate of analysis, for use by industry and others as a comparison standard for checking the accuracy of analyses of similar material, etc. Average analysis shown in supplement to C25.

U. S. Gov., Federal Specifications Board 135; 1924.
Ferro-Vanadium. Chemical composition requirements for 2 grades, furnished in lumps.

U. S. Gov., Federal Specifications Board 144; 1924. Ferro-Titanium. Chemical composition requirements for 2 grades.

References.—Methods of testing, general requirements for metals. See 600.1, 621.20. Pig iron. See 601.2.

621.27 Ferrophosphorus

U. S. Gov., Dept. of Commerce, Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Ferrophosphorus. Sample No. 90 prepared and sold by the bureau with a certificate showing the percentage of phosphorus, for use in industry and by others as a comparison standard in checking the accuracy of analyses of similar materials, etc. Average content of phosphorus shown in supplement to C25.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.20. Pig iron See 601.2.

621.3 CRUDE AND SEMIFINISHED FERRO-ALLOYS

621.30 General Items

American Society for Testing Materials A 8-29; 1929. Structural Nickel Steel. Includes rivet steel, chemical composition, tension, bend, and fracture test requirements.

American Society for Testing Materials A 55-24, 1924. Standard Methods of Chemical Analysis of Alloy Steels. Methods of analysis, reagents required for determination of nickel, manganese, silicon, chromium, phosphorus, vanadium, sulphur, tungsten, cobalt, molybdenum, with reference to A 33-24 analysis of plain carbon steel for determination of carbon, manganese, phosphorus, sulphur, silicon, for the various alloy steels.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples, Alloy steels. Sample No. 30c for chrome-vanadium steel, No. 32b for chrome-nickel, No. 33b for nickel steel, No. 50a for chrome-tungsten-vanadium, No. 72 for chrome-molybdenum, and No. 73 for stainless steel, as prepared and sold by the bureau with a certificate of analysis in each case, for use by industrial organizations and others as a comparison standard for checking the accuracy of analyses of similar steels, etc. Averaged analyses of samples shown in supplement to C 25.

621.31 Ferro-alloy Billets, Bars, and Rods

American Railway Assn. Mechanical Div. Reommended Practice; 1929. High Chrome Steel Rivet Material and Rivets for Nitric Acid Tank Cars. For electric furnace steel, requirements on chemical composition, tension tests, bend tests, oil quench bend tests, and permissible variations in diameter of rivet stock bars.

American Society for Testing Materials A 17-29; 1929. Carbon Steel and Alloy Steel Blooms, Billets and Slabs for Forgings, Includes nickel steel, 4 grades of chrome-nickel steel, chrome steel, and chrome-vanadium steel, requirements on reduction from ingot, chemical composition tests and permissible amount of chipping.

Society of Automotive Engineers. 1931 Handbook, Chromium Steels; 1929. Chemical composition requirements for 4 grades, including grades suitable for casehardening, for heat treated automobile forgings, and for balls, rollers, and races of

bearings.
Society of Automotive Engineers. 1931 Handbook.
Chromium-Vanadium Steels; 1929. Chemical
composition requirements for 9 grades, including
grades suitable for casehardening, for heat
treated forgings and machined parts, and for
tool steel.

Society of Automotive Engineers, 1931 Handbook. Molybdenum Steels; 1929. Chemical composition requirements for 4 grades, for heat treated forgings with one grade for casehardening and gears.

Society of Automotive Engineers. 1931 Handbook. Nickel Steels; 1929. Chemical composition requirements for 10 grades, including grades suitable for casehardening and gears, for massive parts to be case hardened, for heat treated parts of strength and toughness, and for large section gears.

Society of Automotive Engineers. 1931 Handbook. Nickel-Chromium Steels; 1929. Chemical composition requirements for 21 grades, including grades for casehardening, structural parts, for heat treated forgings, machined parts, oil hard-

ened parts, gears, etc.

U. S. Gov., Federal Specifications Board 316; 1925. Steel Blooms, Billets, Slabs, and Bars for Reforging, Carbon and Alloy. For 2 grades of For 2 grades of nickel steel, 2 grades of nickel chromium steel, one grade of chromium molybdenum steel, and one grade of chromium vanadium steel. General quality requirements, amount of ingot discard, minimum reduction in area in rolling from ingot to billet, sampling, chemical composition, tensile test and cold bend test requirements for above 6 grades of alloy steel and for 4 grades of carbon steel

U. S. Gov., Federal Specifications Board 372; 1926. Structural Nickel Steel. Grade A, plates, shapes, and bars; grade B, rivet steel; grade C, eye bars and rollers. Chemical composition, tension test, and bend test requirements, permissible varia-tions in dimensions or weight from the ordered

References.—Tolerances on weight and sizes. See also 30.18. Methods of testing, ceneral requirements at 50 at 50.18. See also 30.18. See also

621.32 Ferro-alloy Plates, Sheets, and Strips

American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. High Chrome Steel Tank Plates for Nitric Acid Tank Cars. For electric furnace steel, requirements on chemical composition, on bend tests, permissible variations in thickness, finish, and method of pickling. American Society for Testing Materials A 8-29; 1929. Structural Nickel Steel. Includes plates,

chemical composition, tension, fracture, bend, and drift test requirements, permissible variations in weight and thickness from specified values.

American Society for Testing Materials A 94-29; 1929. Structural Silicon Steel. Includes plates, chemical composition, tension, and bend test requirements, permissible variations in weight and thickness from quantities specified.

Assn. of American Steel Manufacturers. Standard Permissible Variations in Gage Weight, Gage Thickness, Size, and Flatness of Sheets and Light

Plates Blue Annealed; 1929.

U. S. Gov., Federal Specifications Board 372; 1926. Structural Nickel Steel. Grade A, plates, shapes, and bars; grade B, rivet steel; grade C, eye bars and rollers. Chemical composition, tension test, and bend test requirements, permissible variations in dimensions or weight from the ordered quantities.

References.—Methods of testing, general requirements for metals, See also 600.1, 521.30. Heat treatments. See also 600.5. Standard thicknesses. See 604.0. Carbon steel sheets and plates. See 604, 605.1. Alloy steel structural plates. See also 621.33.

621.33 Structural Shapes of Ferro-allovs

American Society for Testing Materials A 8-29; 1929. Structural Nickel Steel. Chemical composition, tension, bend, fracture, and drift test requirements, for structural and rivet steel, permissible variations in cross-section and weight, and in thickness of plates, tension test requirements for full size eyebars.

American Society for Testing Materials A 94-29; 1929. Structural Silicon Steel. Chemical composition, tension, and bend-test requirements, permissible variations in cross-section and weight, and in thickness of plates from amounts specified.

American Society for Testing Materials A 113-29; 1929. Structural Steel for Locomotives and Cars. Not including boiler and firebox plates. Chemical composition, tension, and bend-test requirements for structural steel for cars, structural steel for locomotives, plates for cold pressing, and rivet steel, permissible variations in weight and dimensions from quantities specified. 1924 edition of structural steel for cars available in Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

Society of Automotive Engineers 1931 Handbook. Nickel Steels; 1929. Chemical composition requirements for 10 grades, including grades suitable for heat treated parts of strength and tough-

ness for automotive uses.

Society of Automotive Engineers 1931 Handbook. Nickel-Chromium Steels; 1929. Chemical composition requirements for 21 grades, including grades for structural and automotive parts.

U. S. Gov., Federal Specifications Board 372; 1926. Structural Nickel Steel. Grade A, plates, shapes, and bars; grade B, rivet steel; grade C, eye bars and rollers. Chemical composition, tension test, and bend-test requirements, permissible variations in dimensions or weight from the ordered quantities.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.30. Standard thicknesses of plates. See 604.0. Tolerances on weight and thickness. See also 600.7. Carbon structural steel. See 605.1.

621.34 Alloy Steel for Springs

American Society for Testing Materials A 59-27; 1927. Silico-Manganese Steel Bars for Railway Springs. Chemical composition and tests, permissible variations in dimensions.

American Society for Testing Materials A 60-27; 1927. Chrome-Vanadium Steel Bars for Railway Springs. Chemical composition and tests, per-

missible variations in dimensions,

Society of Automotive Engineers 1931. Handbook. Silico-Manganese Steels; 1929. Chemical composition requirements for 2 grades, suitable for springs.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.30. Heat treatments. See also 600.5. Tolerances on weight and thickness. See also 600.7. Carbon spring steel. See

621.35 Alloy Steel for Tools

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stock; 1930. Report of committee recommending list of standard sizes to be carried in stock of high speed steel, flat, rounds, and squares. American Society for Testing Materials A 92-26;

1926. High-Speed Tool Steel. Suitable for lathe and planer tools, milling cutters, drills, etc. Permissible variations from chemical composition specified, methods of sampling, tolerances in dimensions, with an inclusion of recommended practice for the heat treatment of 18 per cent tung-sten high-speed steel of the American Society for Steel Treating.

American Society for Testing Materials A 115-28; 1928. Alloy Tool Steel. Permissible variations in chemical compositions agreed upon, methods of sampling, tolerances in dimensions.

Society of Automotive Engineers 1931 Handbook. Chromium-Vanadium Steels; 1929. Chemical composition requirements for 9 grades, including one grade suitable as a tool steel.

Society of Automotive Engineers 1931 Handbook. Tungsten Steels; 1929. Chemical composition requirements for 3 grades.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.30. Heat treatments. See also 600.5. Tolerances on weight and thickness. See also 600.7. Carbon tool steel. See

621.36 Alloy Steel for Magnets

Reserves .- Methods of test for magnetic properties.

622. MANUFACTURES OF FERRO ALLOYS

622.1 BOLTS, FERRO-ALLOY

American Electric Railway Engr. Assn. Recommended Specification G101–25; 1925. Specification for Alloy Steel Bolting Material for High-Temperature Service. (Identical with A.S. T. M. tentative specification A96-25T.) Material, heat treatment, chemical analysis and tests, tension and hardness tests. (Covers rolled, forged or cold drawn bars and bolts, screws and studs used as bolting material for valves and fittings for temperatures from 400° to 750° F.)

American Electric Railway Engr. Assn. W22-23; 1923. Standard Specification for Quenched, Alloy-Steel Track Bolts. Heat treatment, chemical composition and tests, tension and bend tests, permissible variations in dimensions. Identical in substance with A. S. T. M. specification A51-21.

American Railway Engineering Assn. 1929 Man-ual, Quenched Carbon Steel and Alloy Steel Track Bolts; 1924. Chemical composition, tensile test and bend test requirements for the bolt, strip test for bolt and nut, permissible variations from drawing dimensions, standard design.

American Society of Mechanical Engineers. Joint sponsor with Heating and Piping Contractors National Assn. and Manufacturers Standardization Society of Valve and Fittings Industry under procedure of American Standards Assn. B 16e-1927. Steel Pipe Flanges and Flanged Fittings. For steam pressures of 250 to 1,350 pounds and hydraulic pressures of 500 to 2,250 pounds. For alloy steel bolting material and forged steel flanges, tension and chemical composition requirements, facing and bolting requirements, inspection limits and tables of dimensions of fittings.

American Society for Testing Materials A 51-21; 1921. Quenched Alloy Steel Track Bolts. Quenching temperature, chemical composition and tests, tension and bend test requirements, permis-

sible variation in dimensions.

American Society for Testing Materials A 96-31; 1931. Alloy Steel Bolting Material for High Temperature Service. Covers rolled, forged or cold-drawn bars, and bolts, screws and studs for valves, flanges and fittings subject to high temperatures, material of nickel, chrome-nickel, chrome-vanadium, chrome-manganese, or other alloy specified. Heat treatment procedure, chemical composition limitations and tests, tension and hardness test requirements.

Society of Automotive Engineers 1931 Handbook. Connecting-Rod Bolts; 1920. Dimensions and hardness test for material, nickel or nickel

chromium steel recommended.

Society of Automotive Engineers 1931 Hand-book. Recommended Practice. Propeller Blade Clamp Rings, Bolts and Nuts, Aeronautic; 1929.

Dimensions and design of 2 recommended standard sizes of cadmium plated bolts and nuts, chemical composition, tensile strength, and hardness requirements for permissible types of alloy steel for bolts, composition of carbon steel nuts.

Reference.—Methods of testing general requirements for metals. See also 600.1, 62.3 or feet treatment. See also 600.5 of the feet treatment. See also 600.5 of the feet treatment. See also 600.5 of the feet treatment. See also 600.7. Classification of railway materials. See 600.2. Carbon steel bolts, track bolts. See 600.3, 1606.4.

622.2 RAILWAY RAILS, FERRO-ALLOY

American Electric Railway Engr. Assn. Recommended Specification W104-28; 1928. Approved as tentative standard by American Standards Assn. Serial E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes rolled manganese steel rails, Chemical composition and physical test requirements, permissible variations in size and location of bolt and bond holes.

References.—Methods of testing, general requirements for metals. See also 600.1.621.30. Classification of railway materials. See 600.2. Track construction. See 606.0. Carbon steel rails. See 606.1.

622.3 TUBULAR PRODUCTS AND FITTINGS. FERRO-ALLOY

American Railway Assn. Mechanical Div. Recommended Practice; 1929. Seamless High Chrome Steel Tubing for Nitric Acid Tank Cars. For electric furnace steel, requirements on chemical composition, on flattening and bend tests.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.30. Carbon steel tubular goods. See 607.4.

622.4 FERRO-ALLOY WIRE AND MANUFACTURES

U. S. Gov., Federal Specifications Board 174; 1924.
Welding Wire, Iron and Steel. Includes grade G for a nickel steel gas welding wire. General physical quality and chemical composition requirements.

References.—Electrical resistance wire. Sec 715.43. Methods of testing, seneral requirements for metals. Sec also 600.1, 621.30. Wire gages. Sec 603.40. Carbon steel wire. Sec 603.41. Welding rod and wire. Sec also 603.28. Foundrinier wire cloth of stainless steel wire. Sec 645.39.

622.5 FERRO-ALLOY CASTINGS

American Electric Railway Engr. Assn. W29-27; 1927. Standard Design of Solid Manganese Steel Crossings; Steam Railroad Over Electric Railway for 7-inch and 9-inch Girder Rails. For angles 90° to 60°, inclusive. Plan and sectional drawings with dimensions, for cast manganese steel crossings.

American Electric Railway Engr. Assn. W30-27; 1927. Design of Solid Manganese Steel Crossings; Steam Railroad Over Electric Railway for 7-inch and 9-inch Girder Rails. For angles be-low 60° to 40°, inclusive. Plan and dimensioned sectional drawings of cast manganese steel

crossings, standard designs.

American Electric Railway Engr. Assn. W37-28 and W38-28; 1928. Design of Solid Manganese Steel Crossings; Steam Railroad over Electric Railway. W37 for angles of 90° to 60°, inclusive, and W38 for angles from 60° to 40°, for standard section rails, standard design of crossing, structural features, dimensions and design of various sections.

American Electric Railway Engr. Assn. Recommended Specification W104-28; 1928. Approved by American Standards Assn. as tentative standard E10-1929. Specification for Materials for Use in the Manufacture of Special Trackwork. Includes specifications for manganese steel track castings, their chemical composition requirements and the bend test where specified.

American Railway Assn. Mechanical Div. Recommended Practice; 1929. High Chrome Steel Castings for Valves for Nitric Acid Tank Cars. For electric furnace steel, requirements on chemical composition, on heat treatment, finish, and porosity test.

American Railway Engineering Assn. and Manganese Track Society. A. R. E. A. Trackwork Plans, Appendix B; 1930. Manganese Steel Track Castings. Requirements on chemical composition, bend tests, and permissible kinds and

location of defects.

American Society for Testing Materials. Tentative Specifications A128-30T; 1930. Austenitic Manganese Steel Castings. Often referred to as Hadfield's manganese steel, requirements on heat treatment, chemical composition, and (where specified) the bend-test requirements, permissible methods of manufacture.

References.—Methods of testing general requirements for metals. See also 6001, 021.30. Heat treatments for metals. See also 6001, 021.30. Heat treatments for metals See 600.2 Reliably construction and special track work. See 606.0, 606.3. Carbon steel castings. See 611.41. Other specifications for cast alloy steel. See specifications for individual commodities made of cast alloy steel.

622.6 FERRO-ALLOY FORGINGS

American Railway Assn. Mechanical Division.

Axles, Shafts and Other Forgings, Alloy Steel,
Quenched and Tempered; 1925. Cover chromenickel and chrome-vanadium steel forgings for
locomotives. Two classes dependent on type of
machine work required, boring, heat treatment,
chemical analysis, tensions, bend, and impact
test requirements.

American Society for Testing Materials A 18-30; 1930. Carbon Steel and Alloy Steel Forgings. Covers carbon steels of classes A to G, and alloy steels for machinery forgings, classes H to M. Annealing, quenching and tempering procedure, chemical composition and tests, tension test requirements. 1921 edition available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. A 63-27; 1927. Quenched and Tempered Alloy Steel Axles, Shafts, and Other Forgings for Locomotives and

Cars, Covers class K for main and side rods, straps, piston rods, class L for driving and trailing truck axles and crank pins. Heat-treatment procedure, phosphorus and sulphur content, tension, bend and impact test requirements. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce. American Society for Testing Materials. Tentative Specifications. A 133-31T; 1931. Normalized and Tempered Alloy Steel Forgings for Locomotives. For 2 grades as regards strength, requirements on heat treatment, chemical composi-

tion, tensile tests and elongation, bend tests.

References.—Methods of testing general requirements for metals. See also 600.1, 221.30. Heat treatments. See also 600.5. Classification of railway materials. See 600.2. Carbon steel forgings, axles, and shatts. See 611.51, 611.52.

622.7 FERRO-ALLOY SPRINGS

References.—Alloy steel stock for springs. See 621.34.

622.9 MISCELLANEOUS MANUFACTURES OF AL-LOY STEEL

American Electric Railway Engr. Assn. W44-28; 1928. Design of Bolted Manganese Steel Crossings; Steam Railroad over Electric Railway. For angles from 45° to 30°, standard design and construction of crossing with some dimensions.

American Railway Assn. Mechanical Div. Recommended Practice; 1929. High Chrome Steel Rivet Material and Rivets for Nitric Acid Tank Cars. Chemical composition and physical test requirements for bar stock, requirements on temperatures at fabrication, bend tests, and flattening tests for rivets, permissible variations in di-

ameter and size of rivet heads.

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS37-31; 1931. Steel Bone Plates and Screws. A commercial standard selected and adopted by industry for Sherman type bone plates made of chromium-vanadium steel, requirements on chemical composition of plates and screws corresponding to S.A.E. steel No. 6150, hardness, dimensions, and design for 14 plate sizes and 11 screw sizes.

References.—Methods of testing, general requirements for metals. See also 600.1, 621.30. Heat treatments. See also 605.5. Special trackwork. See also 606.3. Hack saw blades of alloy steel. See 615.62. Measuring gages of alloy steel. See 615.62.

630-639 ALUMINUM, ANTIMONY, BISMUTH, CADMIUM, AND COBALT

631. ALUMINUM

631.0 GENERAL ITEMS

American Society for Testing Materials. Tentative Methods B 40-287; 1928. Methods of Chemical Analysis of Aluminum and Light Aluminum Alloys. For aluminum of not less than 98 per cent aluminum, preparation of reagents and determination of silicon, titanium, iron, copper, and manganese; for light aluminum alloys, determination of silicon, iron, copper, calclum, magnesium, manganese; sinc, nickel.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Aluminum. Sample No. 44b, prepared and sold by the bureau with a certificate giving the melting point, for use in industry and by others as standards for calibrating pyrometers, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of aluminum, their chemical analyses, freezing points, and degree of purity,

their use for the standardization of thermocouples, pyrometers, etc.

631.1 ALUMINUM ALLOYS, INGOTS, AND BARS References.—Aluminum bronze. See 647.1.

631.11 Alloys, Aluminum

Society of Automotive Engineers 1931 Handbook, Aluminum Alloys; 1930. Chemical composition requirements for 15 aluminum alloys, including duralumin or 17s, and alloys suitable for forgings, castings, rolled parts, types resistant to salt water, shock, etc., information on their tensile properties, dimensions and tolerances when furnished as sheets, shapes, rods, etc., usual uses in automobiles,

References.—Methods of testing, general requirements for metals. See also 600.1, 631.0. Other aluminum alloys. See also 631.12, 631.23, 631.31, 631.41. Magnesium alloy castings. See 695.

631.12 Ingots, Aluminum

American Society for Testing Materials B 24-29; 1929. Aluminum Ingots for Remelting. Covers 3 grades of virgin aluminum, permissible types and amounts of impurities, sampling procedure, tests of chemical composition according to A. S.

T. M. method B 40.

American Society for Testing Materials B 37-26; 1926. Aluminum for Use in the Manufacture of Iron and Steel. Chemical composition of two grades of virgin and four grades of secondary aluminum, methods of sampling, in form of ingots, rods, or shot.

American Society for Testing Materials B 58-31; 1931. Aluminum Base Sand Casting Alloys in Ingot Form. Specific gravity not exceeding 3.0, requirements on chemical composition and sampling for 10 alloys. For suitability of various alloys see spec. B 26-31T of A, S, T, M, under 631.41.

U. S. Gov., Federal Specifications Board 134; 1924. Aluminum Ingot. For 2 grades, general quality requirements, chemical composition requirements. Grade A suitable for castings and for rerolling and forging purposes, grade B for deoxidizer and for lower grade castings.

References.—Aluminum alloys. See also 631.11. Methods of testing, general requirements for metals. See also 600.1, 631.0.

631.13 Bars, Aluminum

References .- Aluminum alloy bars. See 631.11.

631.2 ALUMINUM FLATES, SHEETS, SHAPES, AND STRIPS

631.21 Plates, Aluminum

U. S. Gov., Dept. of Commerce, Bureau of Standards C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). American wire gage for aluminum. Known also as Brown & Sharpe gage as used for sheets and wire, table of gage numbers, thick-nesses and weights for sheets and plates, permissible variations in thickness.

References.—Aluminum alloy plates. See 631.11. Methods of testing, general requirements for metals. See also 600.1, 631.0.

631.22 Shapes, Aluminum

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Body Molding; 1924. Dimensions of aluminum belt molding and of aluminum drip molding for automobile bodies.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Extruded Structural Shapes of Aluminum Alloy, Aeronautic. Section dimensions, moment of inertia, section modulus, area, radius of gyration, and weight per foot for equal and unequal angles, bulb angles, shallow and deep channels, bulb channels, tees, and zees up to 2 and 3 inch sizes.

References.—Aluminum alloy. See also 631.11. Methods of testing, general requirements for metals. See also 600.1, 631.0.

631.23 Sheets, Aluminum

American Society for Testing Materials. B 25-29; 1929. Aluminum Sheet. Chemical purity, tension and bend test requirements for 3 grades of aluminum sheet dependent on temper, permissible variations from specified dimensions.

American Society for Testing Materials. B78-31: 1931. Aluminum Alloy (Duralumin) Sheet. Requirements on nonuse of scrap material, chemical composition, tension test and bend test for quenched and aged temper grade and for annealed temper grade, permissible variation in thickness from specified amounts.

American Society for Testing Materials B79-31; 1931. Aluminum Manganese Alloy Sheet. Covers flat aluminum alloy (duralumin) sheet, requirements on nonuse of scrap material, chemical composition, tension test and bend test for 3 hardness grades, tolerances on thickness.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Aluminum Body Sheets; 1924. Size and temper requirements for No. 14 gage and No. 16 gage sheets conforming to S. A. E. specifications for aluminum sheet.

Society of Automotive Engineers 1931 Handbook. Aluminum Sheet and Strip; 1930. Chemical composition and tensile test requirements for 4 temper grades, permissible thickness tolerances.

References.—Other aluminum alloy sheet. See 631.11. Methods of testing, general requirements for metals. See also 600.1, 631.0. Heat treatments, See also 600.5. Standard gage and thicknesses for sheets. See 631.21.

631.24 Strips, Aluminum

Society of Automotive Engineers 1931 Handbook. Aluminum Sheet and Strip; 1930. Chemical composition and tensile test requirements for 4 temper grades, permissible thickness tolerances.

References.—Aluminum alloy strips. See also 631.11. Methods of testing, general requirements for metals. See also 600.1, 631.0. Standard gage and thicknesses for strips. See 631.21.

631.3 AULMINUM RODS, WIRES, AND RIVETS

631.31 Rods, Aluminum

American Railway Assn. Mechanical Div. Recom-mended Practice: 1924. Welding Wire and Rods. Includes 2 classes of aluminum rods for gas welding of aluminum, requirements on chemical composition, dimensions and tolerances.

U. S. Gov., Federal Specifications Board 269a; 1929. Nonferrous Welding Rods for Gas Welding. Includes type D, aluminum rods, for general welding of aluminum, general quality and chemical composition requirements, to conform to F. S. B.

Spec. 339 for metals.

U. S. Gov., Federal Specifications Board 269a; 1929. Nonferrous Welding Rods for Gas Welding. Includes type E, aluminum alloy rods, for general welding of aluminum-copper alloys, general quality and chemical composition requirements, to conform to F. S. B. Spec. 339 for metals.

References.—Other aluminum alloy rods. See 631.11. Welding apparatus and procedure. See 767. Methods of testing, general requirements for metals. See also 600.1, 631.0

631.32 Wires, Aluminum

American Electric Railway Engr. Assn. Misc. Methods and Practices D201-10; 1910. Hard Drawn Aluminum Wire Table. Dimensions and resistance, Am. Wire Gage. Same as Bureau of Standards Circular 31, second edition,

American Institute of Electrical Engineers. ard No. 46; 1927. American Standards Assn. C 11-1927. Hard Drawn Aluminum Conductors. Standard values of resistivity, resistance-tempera-ture coefficient, density, and length-temperature coefficient and explanatory notes.

American Railway Assn. Signal Section 5416: 1916. Aerial Aluminum Cable, Steel Reinforced. One steel core wire and 6 aluminum wires, tensile strength requirements for aluminum wire, for steel wire, and for the cable for different sizes, conductivity requirements for aluminum.

References.—Aluminum welding wire. See 631.31. Electric cables and wire of copper. See 715.41, 715.44. Methods of testing, general requirements for metals. See also 600.1, 631.0. Aluminum alloys in form of wire. See 631.11

631.33 Rivets, Aluminum

Society of Automotive Engineers 1931 Handbook. Rivets, Aluminum and Aluminum Alloy Types,

Aeronautic. For flat head type and button head | 631.42 Tubes, Aluminum type, standard dimensions and tolerances for diameters up to % inch.

631.4 ALUMINUM CASTINGS AND TUBES

631.41 Castings, Aluminum

American Society for Testing Materials. B 26-31; 1931. Aluminum Base Alloy Sand Castings. Specific gravity not exceeding 3, requirements on chemical composition and tensile tests for 10 alloys, including alloys suitable for general casting, automotive castings, pumps, manifolds, pistons, cylinder heads, valve guides, high strength parts for street cars, busses, gas engines, outboard motor parts, marine castings, aircraft cylinder heads and pistons, cooking utensils, architectural castings, radiators, meter cases, etc.

American Society for Testing Materials. Tentative Specifications. B 85-31T; 1931. Aluminum Base Alloy Die Castings. For 7 alloy compositions, requirements on chemical composition, permissible variations in percentages of alloying elements, analysis according to A. S. T. M. method B 40-

Society of Automotive Engineers 1931 Handbook. Aluminum Alloys; 1930. Chemical composition requirements for 15 aluminum alloys, including duralumin or 17s, and alloys suitable for castings, forgings, etc., types resistant to salt water, shock, etc., usual uses in automobile construction.

U. S. Gov., Dept. of Commerce, Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Aluminum base casting-alloy. Sample No. 86 prepared and sold by the bureau with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material, etc. Analysis shown in supplement.

633. BISMUTH

633 1 RISMUTH METAL

References .- Chemical compounds of bismuth. See

634. CADMIUM

References.—Chemical compounds and medicinals of cadmium. See 839.39. Cadmium plating. See 600.3.

635. COBALT

635.1 COBALT COMPOUNDS AND SALTS

References.—Chemical compounds of cobalt. See 839.32.

640-649

COPPER, BRASS, AND BRONZE

640. GENERAL ITEMS

640.1 THICKNESS TOLERANCES FOR NONFER-ROUS SHEETS AND STRIPS

Society of Automotive Engineers 1931 Handbook. Wrought Nonferrous Metal Alloys. For bronze and brass sheets and strips, 2 tables give 2 sets of permissible variations in thickness of sheets and strips for various gages and widths.

641. COPPER

641.0 GENERAL ITEMS

American Society for Testing Materials B 34-20; 1920. Approved by American Standards Assn. as K 12-1921. Standard Methods of Battery Assay of Copper. Sampling, assay of electrolytic and low resistance lake copper, assay of low grade or casting copper by one of four methods dependent on composition of the copper.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Copper. Sample No. 45a, prepared and sold by the bureau with a certificate giving the melting point, for use in industry and by others as standards for calibrating pyrometers, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of copper, their chemical analyses, freezing points, and degree of purity, their use for the standardization of thermocouples. pyrometers, etc.

641.1 COPPER INGOTS AND BARS

641.11 Ingots and Cast Bars, Copper

American Society for Testing Materials B 4-27; 1927. Lake Copper Wire Bars, Cakes, Slabs, Billets, Ingots, and Ingot Bars. Resistivity and purity requirements for low resistance lake or electrical copper and for high resistance copper. dimensions and permissible variations in weight

for 200 to 300 pound wire bars.

American Society for Testing Materials B 5-27;
1927. Electrolytic Copper Wire Bars, Cakes, Slabs, Billets, and Ingot Bars. Metal content and resistivity requirements, standard dimensions of 200 to 300 pound wire bars and permissible vari-

ation in weight.

American Society for Testing Materials. Tentative Specifications B 72-28T; 1928. Fire Refined Copper Other Than Lake. For use in rolling into sheets and shapes for mechanical purposes, not intended for electrical uses, chemical composition, requirements tested according to A. S. T. M. specifications B 34, permissible variations from specified dimensions and weight,

National Metal Exchange, (Inc.). By-Laws and Rules; 1931. Tenderable Grades of Copper. A list of standard grades of copper which may be delivered against the standard copper contract of the Nat. Metal Exchange, such as prime electrolytic copper, prime lake copper assaying 99.90 per cent, and discount grades such as best selected copper, casting copper, bilster copper, etc., with required assay, prime electrolytic copper to be in accordance with spec. B 5-27 of Am. Soc. for Testing Materials.

U. S. Gov., Federal Specifications Board 120; 1924. Ingot Copper. Grade A for manufacture of high-grade bronzes and brasses, grade B for commercial brass, serew pipe fittings, etc. Chemical composition requirements for the 2 grades.

References.—Methods of testing, general requirement for metals. See also 600.1, 641.0.

641.12 Rolled Bars, Copper

American Society for Testing Materials B 12-21; 1921. Copper Bars for Locomotive Staybolts. For arsenical and nonarsenical grades, chemical composition, tension, and bend test requirements, permissible variation in diameter.

U. S. Gov., Federal Specifications Board 467; 1927. Copper Rods, Bars, Shapes, Plates, Sheets, and Strips. For one grade of copper, soft and hard. General physical quality requirements, purity, tension test, and bend test requirements, permissible variations in dimensions, for copper bars.

References.—Methods of testing, general requirements for metals. See also 600.1, 641.0.

641.2 COPPER PLATES, SHEETS, SHAPES, AND STRIPS

641.21 Plates and Sheets, Copper

American Bureau of Shipping. Rules for Bullding and Classing Steel Vessels; 1930. Copper plates and shapes. Requirements on tension test, hot and cold bending test, and hammering test.

American Society for Testing Materials B 11-18; 1918. Copper Plates for Locomotive Fireboxes. Chemical composition, tension and bend test requirements, permissible variations in weight and thickness for arsenical and nonarsenical grades of copper plate.

Society of Automotive Engineers 1931 Handbook. Copper Sheet; 1929. Chemical composition, tensile test, and thickness tolerance requirements

for soft and hard copper sheets.

U. S. Gov., Dept. of Commerce, Bureau of Standards C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). American wire gage for copper. Known also as Brown and Sharpe gage as used for sheets and wire, table of gage numbers, thicknesses and weights for copper sheets and plates, permissible variations in thickness.

U. S. Gov., Federal Specifications Board 467; 1927. Copper Rods, Bars, Shapes, Plates, Sheets, and Strips. For one grade of copper, soft and hard, sultable for making pipes, tubing, shapes, receptacles. General physical quality requirements, purity, tension test, and bend test requirements, permissible variations in dimensions, for copper plates and sheets.

References.—Methods of testing, general requirements for metals. See also 600.1, 641.0. Bar for rolling into sheets. See 641.11. Thickness tolerances. See also 640.1.

641.22 Shapes, Copper

American Bureau of Shipping. Rules for Bullding and Classing Steel Vessels; 1930. Copper plates and shapes. Requirements on tension test, hot and cold bending test, and hammering test.

U. S. Gov., Federal Specifications Board. 467; 1927. Copper Rods, Bars, Shapes, Plates, Sheets, and Strips. For one grade of copper, soft and hard, general physical quality requirements, purity, tension test, and bend test requirements, permissible variations in dimensions, for copper shapes.

References.—Methods of testing, general requirements for metals. See also 600.1, 641.0. Bars for rolling into shapes. See 641.11.

641.23 Strips, Copper

U. S. Gov., Federal Specifications Board. 467; 1927. Copper Rods, Bars, Shapes, Plates, Sheets, and Strips. For one grade of copper, soft and hard, general physical quality requirements, purity, tension test, and bend test requirements, permissible variations in dimensions, for copper strips.

References.—Methods of testing, general requirements for metals. See also 600.1, 641.0. Standard gage and thicknesses for copper strips. See 641.21.

641.3 COPPER COMPOUNDS AND SALTS

References.—Chemical compounds of copper. See 839.33.

642. MANUFACTURES OF COPPER

642.1 COPPER RODS, WIRES, AND SLEEVES

642.11 Rods, Copper

American Society for Testing Materials. B 49–26; 1926. Hot-Rolled Copper Rods for Wire Drawing. Quality to be in accordance with A. S. T. M. specifications for Lake Copper Wire Bars (Serial B-4), or Electrolytic Copper Wire Bars (Serial B-5), tension and resistivity test requirements, dimensions and permissible variations.

U. S. Gov., Federal Specifications Board 269a; 1929. Nonferrous Welding Rods for Gas Welding. Includes type C, copper rods for welding of copper sheets and rods, general quality and chemical composition requirements, to conform to F. S. B.

spec, 339 for metals.

U. S. Gov., Federal Specifications Board. 467; 1927. Copper Rods, Bars, Shapes, Plates, Sheets, and Strips. For one grade of copper, soft and hard, general physical quality requirements, purity, tension test, and bend test requirements, permissible variations in dimensions, for copper rods.

References.—Methods of testing, general requirements for metals. See also 600.1, 641.0. Bars for rolling into rods. See 641.12. Welding apparatus and procedure. See 767.

642.12 Wires, Copper

References.—Electric cables, cord, and wire. See 715.41, 715.42, 715.44.

642.13 Sleeves, Copper

National Electric Light Assn. Suggested Specifications D 950-28T; 1923. Tentative. Splicing Sleeve. For sleeves of annealed copper tubing, dimensions and thickness for various size wires in single, 7, and 19 strand arrangement.

References .- Copper tubing. See 642.24.

642.2 COPPER CASTINGS, FERRULES, PIPES, AND TUBES

642.21 Castings, Copper

References.—Other specifications for copper castings. See specifications of individual commodities made of cast copper.

642.22 Ferrules, Copper

642.23 Pipes, Copper

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Plpes, For seamless copper and brass pipe, requirements on tension, flattening, bending, expanding, and hydrostatic test, formula for thickness as determined by working pressure.

American Society for Testing Materials. B 42-24; 1924. Copper Pipe, Standard Sizes. Covers seamless tubes and pipe for plumbing, boiler feed lines, etc. Chemical composition and sampling requirements, tension, bend, flange, and hydrostatic test requirements, table of standard weights and di-

mensions, permissible variations.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Copper Pipe. For installation on steam vessels, mandatory requirements on thickness of pipe wall as a function of pressure, minimum bend radius of installed pipe.

U. S. Gov., Federal Specifications Board WW-P-378; 1930. Seamless Copper Pipe and Tubing. For pipe of standard iron pipe sizes, requirements on physical appearance, purity of copper, dimensions and weights and permissible variations, hydrostatic test, bending test, hammering test, flanging test, and tension-test requirements.

References.—Copper tubing. See also 642.24. Pipe installation and threads, iron or steel pipe. See also 607.0. Methods of testing, general requirements for metals. See also 600.1, 641.0.

642.24 Tubes, Copper

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Seamlessdrawn copper pipes and tubes. Requirements on tension test, flattening test, flanging test, and hy-

drostatic pressure test.

American Society for Testing Materials, B 13-18; 1918. Seamlies Copper Boller Tubes. For locomotive bollers. For arsenical and nonarsenical grades, chemical composition requirements, methods of sampling, flange, crush and hydrostatic test requirements, standard weights and permissible variations.

American Society for Testing Materials. Tentative Specifications: B 68-30T; 1930. Seamless Copper Tubing, Bright Annealed. Suitable for use in refrigerators, oil lines, and gasoline lines, requirements on annealing, size of grain, chemical composition, tensile strength and elongation, per missible variations from specified dimensions.

American Society for Testing Materrials. B 75–30; 1930. Seamless Copper Tubes. Suitable for general engineering purposes, furnished hard drawn unless otherwise specified, purity requirements for copper, sampling, hammering test, opening test, bend, flange, and hydrostatic pressure test requirements, permissible variations from specified dimensions.

Society of Automotive Engineers 1930 Handbook. Copper Tubing; 1922. Chemical composition, expanding test, and bend test requirements for hard-drawn and annealed tubes, dimensional

tolerances.

U. S. Gov., Federal Specifications Board WW-P-378; 1930. Seamless Copper Pipe and Tubing. For 4 types dependent on pressure for pressures from 100 to 400 pounds, requirements on physical appearance, purity of copper, dimensions and weights and permissible variations, hydrostatic test, hammering test, flanging test, and tension test.

References.—Copper pipe. See also 642.23. Methods of testing, general requirements for metals. See also 600.1, 641.0. Automobile fuel and lubrication tube fittings. See 722.33.

642.3 GRAVITY BATTERY COPPERS

References .- Gravity battery copper. See 712.5.

642.4 COPPER WIRE CLOTH

American Society for Testing Materials. B 50-29; 1929. Nonferrous Insect Screen Cloth. For cloth made of copper wire and cloth of 90 copper-10 zinc alloy wire, for 5 grades of mesh and weight, copper according to A. S. T. M. standard specifications, chemical composition requirements for brass wire, standard sizes, weights, dimensions and tolerances.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R122-31; 1931. Wire Insect Screen Cloth. Simplified practice recommended and accepted by industry establishing a limited number of stock varieties of black painted and electrogalvanized steel wire screen cloth and of copper and commercial bronze wire screen cloth, included standard mesh openings, sizes of wire, widths of roll, length of roll, packing, required percentage of copper for copper and bronze screen wire.

References.—Brass sieves. See 645.31. Brass and bronze wire cloth. See 645.39, 646.52. Methods of testing, general requirements for metals. See also 600.1, 641.0.

643. COPPER ALLOYS

643.1 MANGANESE COPPER

643.2 PHOSPHOR COPPER

American Society for Testing Materials B 52-27; 1927. Phosphor Copper. Chemical composition requirements for two grades, methods of sampling.

U. S. Gov., Federal Specifications Board 118; 1924. Phosphor Copper. Chemical composition requirements for 2 grades furnished as slabs or ingots.

References.—Methods of testing, general requirements for metals. See also 600.1, 641.0.

643.3 SILICON COPPER

American Society for Testing Materials B 53-27; 1927. Silicon Copper. Chemical composition requirements, methods of sampling. U. S., Gov., Federal Specifications Board 119; 1924. Silicon Copper. Chemical composition requirements for one grade furnished as slabs or ingots.

References.—Methods of testing, general requirements for metals. See also 600.1 641.0.

643.4 COPPER-TIN-ZINC ALLOY

American Society for Testing Materials B 10-18; 1918. The Alloy: Copper 88 Per Cent, Tin 10 Per Cent, Zinc 2 Per Cent. Covers the alloy commercially known as government bronze, admiralty gun metal, gun metal, or 88-10-2 mixture, when used in castings, requirements on chemical composition and tension test, methods of sampling and testine.

American Society for Testing Materials B 60-28; 1928. Sand Castings for the Alloy: Copper 88 Per Cent, Tin 8 Per Cent, Zinc 4 Per Cent. For use where strength, resistance to steam or salt water are required, as in pipe fittings and pumps, requirements on chemical composition and ten-

sion test.

References.—Other copper-tin-zinc alloys. See 646. Methods of testing, general requirements for metals. See also 600.1, 641.0.

643.5 COPPER-NICKEL ALLOY

643.9 MISCELLANEOUS COPPER ALLOYS

References .- Silver Solder. See 693.3.

644. BRASS

644.1 BRASS INGOTS AND BARS

644.11 Ingots, Brass

American Society for Testing Materials. Tentative Specifications. B 30-31T; 1931. Copper Base Alloys in Ingot Form for Sand Castings. Chemical composition requirements for 20 brass ingot metal compositions, information on tensile and compressive properties, hardness, shrinkage, and weight, ease of machining and foundry characteristics; includes commercial bronze for general service, brass for high and moderate pressure steam fittings, red brass and yellow brass, brass for earings, etc.

American Society for Testing Materials B 45–27; 1927. Methods of Chemical Analysis of Brass Ingots and Sand Castings. Determination of copper, lead, tin, iron, antimony, sulphur, alumi-

num, solutions required.

References .- Brazing solder ingots. See 693.2.

644.12 Bars, Brass

U. S. Gov., Federal Specifications Board 392; 1926. Brass Rods, Bars, Shapes, Plates, Sheets, and Strips, Commercial. Includes in grade A, bars for forging, in grade B, bars, soft and half hard, free cutting in types 1 and 2. General quality requirements, chemical composition and tension test requirements, flattening test requirements for grade A, bend test requirements for grade B, type 1, permissible variations in dimensions.

References.—Methods of testing general requirements for metals. See also 600.1, 644.11. Brass shapes. See 644.22. Brass rods. See 645.11. Brass brazing rods. See 693.2.

644.2 BRASS PLATES, SHEETS, SHAPES, AND

644.21 Plates and Sheets, Brass

American Bureau of Shipping, Rules for Building and Classing Steel Vessels; 1930. Brass plates and shapes. Requirements on tension test, hot and cold bending test, and hammering test. American Society for Testing Materials B 19-29;

American Society for Testing Materials B 19-29; 1929. Cartridge Brass. Sheet brass for making rifle and small arms cartridges, copper according to A. S. T. M. specifications B 4 or B 5, zinc according to A. S. T. M. specifications B 6, chemical composition and hardness test requirements for brass, permissible variations in specified dimensions.

American Society for Testing Materials B 20-29; 1929. Cartridge Brass Disks. Covers brass disks for making artillery cartridge cases, brass according to A. S. T. M. specifications B 19, hardness test requirements, permissible variations

from specified dimensions.

American Society for Testing Materials B 36-27; 1927. Sheet High Brass. Covers sheet brass commonly used for drawing, forming, stamping and bending. Material according to A. S. T. M. specifications for lake or electrolytic copper wire bars and for spelter, chemical composition and tests, tempering and annealing grades, hardness and tension test requirements for hard and soft brass, permissible variations in dimensions.

American Society for Testing Materials B 57-27; 1927. Muntz Metal Condenser Tube Plates. For surface condenser tube sheets. Chemical composition requirements, method of sampling, tension and bend test requirements, permissible va-

riation in dimensions.

Commercial Brass Sheet; 1929. Chemical composition, tension test, and hardness test requirements for 8 grades of material according to hardness, thickness tolerances.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples Brass, sheet. Sample No. 37b prepared and sold by the bureau with a certificate of analysis, for use by industry and by others as a comparison standard for checking the accuracy of analyses of similar materials, etc. Average analysis

shown in supplement to C25.

U. S. Gov., Dept. of Commerce, Bureau of Standards C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). American wire gage for nonferrous alloys. Known also as Brown and Sharpe gage as used for sheets and wire, table of gage numbers, thicknesses, and weights for sheets and plates of commercial brass, naval brass, red brass or gilding metal, cupro-nickel, and nickel silver, permissible variations in thickness.

U. S. Gov., Federal Specifications Board 392; 1926. Brass Rods, Bars, Shapes, Plates, Sheets, and Strips, Commercial. Included in grade C, types 1 and 2, plates, sheets, and strips, of various tempers, type 1 suitable for forming and stamping, type 2 for tags and nameplates. General quality requirements, chemical composition and hardness test requirements, tension test requirements for type 1, permissible variations in discontinuous control of the cont

mensions.

References.—Methods of testing, general requirements for metals, See also 600.1, 644.11. Thickness tolerances. See also 640.1.

644.22 Shapes, Brass

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Brass plates and shapes. Requirements on tension test, hot

and cold bending test, and hammering test.

U. S. Gov., Federal Specifications Board 392; 1926.

Brass Rods, Bars, Shapes, Plates, Sheets, and
Strips, Commercial. Grade A, rods, bars, and
shapes for forging, grade B, types 1 and 2; rods,
bars, and shapes, soft and half hard, free cutting,
grade C, types 1 and 2; shapes, plates, sheets,
and strips, various tempers. General quality and
surface appearance requirements, chemical composition and tension test requirements for grade
A and type 1 of grades B and C, bend test requirements for type 1 of grade B, flattening test
requirements for grade A, hardness test requirements for grade C, permissible variations in
dimensions

References.—Methods of testing general requirements for metals. See also 600.1, 644.11. Brass bars and rods. See also 644.12 645.11.

644.23 Strips, Brass

Society of Automotive Engineers 1931 Handbook. Commercial Brass Sheet; 1929. Includes brass strip, requirements on chemical composition, tension tests, and hardness test for 8 grades of material, graded according to hardness, thickness tolerances.

U. S. Gov., Federal Specifications Board 392; 1926. Brass Rods, Bars, Shapes, Plates, Sheets, and Strips, Commercial. Includes grade C, types 1 and 2, and strips, of various tempers, type 1 suitable for forming and stamping, type 2 for tags and nameplates. General quality requirements, chemical composition and hardness test requirements, tension test requirements for type 1, permissible variations in dimensions.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11. Thickness tolerances. See also 640.1. Standard gage and thicknesses. See 644.21.

645. MANUFACTURES OF BRASS

645.1 BRASS RODS AND WIRES

645.11 Rods, Brass

American Railway Assn. Mechanical Division. Recommended Practice; 1924. Welding Wire and Rods. Includes brass rods for gas welding of brass and grey cast iron, two classes of aluminum rods for gas welding of aluminum. Chemical compositions, dimensions and tolerances.

American Society for Testing Materials. B 15-18; 1918. Approved by American Standards Assumas H 7-1925. Brass Forging Rod. Covers rods that can be forged hot and easily machined. Chemical composition and tests, method of sampling, flattening test requirements, permissible variations in dimensions.

American Society for Testing Materials. B 16–29; 1929. Free Cutting Brass Rod for Use in Screw Machines. For rods finished by cold drawing, chemical composition and bend test requirements, permissible variations from specified dimensions.

American Society for Testing Materials. B 21-29; 1929. Naval Brass Rods for Structural Purposes. For hot-rolled rods with cold draw finish, chemical composition, tension, bend, and internal strain test requirements, permissible variations from specified dimensions.

Society of Automotive Engineers 1931 Handbook. Brass Rod; 1924. Chemical composition and flattening test requirements, dimensions and tolerances, for hot forging and machining.

Society of Automotive Engineers 1931 Handbook. Free-Cutting Brass Rod; 1929. Chemical composition and bend test requirements, dimensions and tolerances.

Society of Automotive Engineers 1931 Handbook. Naval Brass (Tobin Bronze) Rod; 1924. Chemical composition, tensile test, bend test, and strain test requirements, dimensions and tolerances.

U. S. Gov., Federal Specifications Board 269a; 1929. Nonferrous Welding Rods for Gas Welding. Includes type B, naval brass rods, for general welding of brass. general quality and chemical composition requirements, to conform to F. S. B. Spec. 339 for metals.

U. S. Gov., Federal Specifications Board. 392; 1926. Brass Rods, Bars, Shapes. Plates, Sheets, and Strips, Commercial. Includes grade A, rods for forging, grade B, types 1 and 2, rods, soft and half hard, free cutting. General quality requirements, chemical composition requirements, tension test requirements for grade A and type 1 of grade B, bend test requirements for type 1 of grade B, flattening test requirements for grade A, permissible variations in dimensions.

References.—Methods of testing, general requirements for metals. See also 600.1. 644.11. Welding apparatus and practice. See 767. Welding wire, brass. See 645.12. Brass brazing solder. See 693.2.

645.12 Wires, Brass

Society of Automotive Engineers 1931 Handbook. Brass Wire. Intended for springs, chemical composition requirements, tensile strength requirements for two grades. dimensional tolerances.

Society of Automotive Engineers 1931. Handbook. Brass Wire; 1924. Suitable for brazing and torch welding, chemical composition requirements

for soft annealed wire.

U. S. Gov. Federal Specifications Board QQ-W-321; 1930. Brass Wire. Covers 3 grades, soft annealed wire for beading, seizing, etc., wire as drawn for hinge pins, rivets, lamp guards, etc., and spring temper wire for springs, locking rings, etc., requirements on diameter tolerances, chemical composition, tensile strength, ductility test, testing methods to conform to F. S. B. Spec. 339a for metals.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11. Brass brazing wire. See 692.3.

645.2 BRASS CASTINGS, FERRULES, PIPES, AND TUBES

645.21 Castings, Brass

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Brass Castings for machinery and boilers. For 2 grades, one for general purposes and other for propeller blades, etc., requirements on tension test and general quality.

American Marine Standards Committee. H No. 4-1925. Fixed Lights for Ships. Type B, Cast Brass Frame. Dimensions of cast brass frame, size of glass, spacing and sizes of screw holes, for 3

standard sizes of lights.

American Marine Standards Committee. H No. 5-1925. Fixed Lights for Ships, Type C, Cast Brass Finished Frame. Dimensions of cast brass frame, size of glass, spacing and sizes of screw holes, for 3 standard sizes of lights.

American Marine Standards Committee. H No. 38— 1928. Deck Drain Strainers, Type A. Dimensions and design of 4 standard sizes of brass

strainers.

American Marine Standards Committee. H No. 39-1928. Deck Drain Strainers, Type B. Dimensions of 1 standard type of brass strainer in 4 standard sizes.

American Society for Testing Materials B 45-27; 1927. Methods of Chemical Analysis of Brass Ingots and Sand Castings. Determination of copper, lead, tin, iron, antimony, sulphur, aluminum, solutions required. American Society for Testing Materials B 62-28; 1928. Composition Brass or Ounce Metal Sand Castings. Commercially known as composition metal, 85-5-5, or ounce metal and used for pressures up to 350 pounds. Chemical composition and tension test requirements.

American Society for Testing Materials B 65-28; 1928. Yellow Brass Sand Castings for General Purposes. Chemical composition requirements, optional tension test or fracture test require-

ments

Society of Automotive Engineers 1931 Handbook. Cast Brass to be Brazed; 1922. Chemical composition requirements, information on melting point and type of brazing solder to use.

Society of Automotive Engineers 1931 Handbook. Cast Brass Alloys, Red Brass; 1922. Chemical composition requirements, information on

strength and casting qualities.
Society of Automotive Engineers 1931 Handbook. Cast Brass Alloys, Yellow Brass; 1922. Chemical composition requirements, information on tensile properties, for use in commercial castings.

U. S. Gov., Federal Specifications Board 272; 1925. Naval and Commercial Brass Castings. General quality requirements, chemical composition requirements for naval brass castings and for commercial brass castings, tensile test requirements for naval brass castings.

U. S. Gov., Federal Specifications Board 286; 1925. Brass Castings To Be Brazed. General requirements on appearance and surface defects, method of sampling, chemical composition requirements and permissible variations for two grades of

castings.

References—Methods of testing, general requirements for metals. See also 600.1 Brass fittings and plumbles, the second of the se

645 22 Ferrules Brass

American Marine Standards Committee. E No. 1-1926. Condenser Tube Ferrules and Tube Sheets. Dimensioned drawings showing standard ferrules and tube sheets for three sizes of condenser tubes, where tube is packed at both ends and where expanded at one end and packed at other.

Society of Automotive Engineers 1931 Handbook. Flexible Conduit Ferrules: 1928. Dimensions of ferrules or bushings for various sizes of conduit, made of soft sheet brass or soft sheet steel, salt spray test requirements for zinc or cadmium plated steel ferrules.

References.—Metbods of testing, general requirements for metals. See also 600.1, 644.11. Ferrule stock. See 645.24.

645.23 Pipes, Brass

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Pipes. For seamless copper and brass pipe, requirements on tension, flattening, bending, expanding, and hydrostatic test, formula for thickness as deter-

mined by working pressure.

American Society for Testing Materials B 43-24; 1924. Brass Pipe, Standard Sizes. For use in plumbing, boiler feed lines, etc. Annealing, chemical composition, and sampling requirements, hammering, flattening, strain, threading, and hydrostatic test requirements, standard weights and dimensions and permissible variations.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS 10-29; 1929. Brass Pipe Nipples. A commercial standard selected and accepted by

industry covering 3 grades of red brass, yellow brass, and Muntz metal, respectively, requirements on general quality of material, chemical composition, standard weights and dimensions of iron pipe sizes of standard and extra strong, internal pressure test, threading, stock, sizes for close, special short, short, and long nipples.

U. S. Gov., Federal Specifications Board. WW-P-351; 1930. Pipe, Brass, Seamless, Iron Pipe Size, Standard and Extra Strong. For 3 grades dependent on copper content, and 2 weights, standard and extra strong. General physical appearance requirements, weights, threads, and dimensions, chemical composition, hydrostatic test, bending test, internal stress test, flattening test, and threading test requirements. Grade A is suitable for salt water, Grade B for corrosive fresh water, and Grade C for fresh water.

References.—Methods of testing, general require-tions for metals. See also 600.1, 644.11. Pipe threads and pipe installation. See 607.0. Brass tubes. See also 645.24. Gas faxture tubing and pipe. See 645.9. Brass pipe nipples. See also 607.4.

645.24 Tubes, Brass

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Seamless Admiralty condenser tubes and ferrule stock. Requirements on chemical composition and grain size of material, hammering test, expanding test, internal strain test, and hydrostatic pressure test, tolerances on specified dimensions and calculated weights.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Seamless-drawn brass pipes and tubes. Requirements on tension test, flattening test, bending test, expanding test, and hydrostatic pressure test.

American Institute of Electrical Engineers. Standard No. 45; 1930. Electrical Installations on Shipboard. Conduit Terminal and Bulkhead Stuffing Tubes. Recommended practice on construction and method of assembly of bronze, brass, or galvanized malleable iron stuffing tubes.

American Society for Testing Materials, B 14-18; 1918. Seamless Brass Boiler Tubes. For locomotive boilers. Chemical composition and tests, flange, flattening, and hydrostatic test requirements, standard weights and permissible varia-

tions.

American Society for Testing Materials. B 44-29; 1929. Seamless Admiralty Condenser Tubes and Ferrule Stock. For cold-drawn tubes, copper according to A. S. T. M. specifications B 4 or B 5, zinc according to A. S. T. M. specifications B 6, chemical composition, grain size, hammering, expanding, internal strain, and hydrostatic pressure test requirements, permissible variations in specified dimensions.

American Society for Testing Materials. B 55-25; 1925. Seamless 70-30 Brass Condenser Tubes and Ferrule Stock. Material according to A. S. T. M. specifications for electrolytic or lake copper wire bars and for spelter, chemical composition requirements, methods of sampling, microscopic, hammering, expanding, strain, and hydrostatic test requirements, permissible variations in dimensions.

American Society for Testing Materials. B 56-25; 1925. Seamless Muntz Metal Condenser Tubes and Ferrule Stock. Material according to A. S. T. M. specifications for electrolytic or lake copper wire bars and for spelter, chemical composition requirements, methods of sampling, microscopic, hammering, expanding, strain, and hydrostatic test requirements, permissible variations in

dimensions of tubes.

Society of Automotive Engineers 1931 Handbook. Annealed Seamless Brass Tubing; 1922. Chemical composition, tensile test, and expanding test requirements, dimensional tolerances.

Society of Automotive Engineers 1931 Handbook. Naval Brass (Tobin Bronze) Tubing; 1922. Chemical composition, tensile test, and expanding test requirements, dimensional tolerances.

U. S. Gov., Federal Specifications Board 374; 1926. Condenser Tubes and Tubes for Ferrule Stock (Admiralty Metal). For condenser tubes suitable for packing or expanding into tube sheets, seamless construction, dimension and weight tolerances, annealing requirements, chemical composition, hydrostatic test, compression test, expanding test, internal strain test, metallographic examination, and flattening test requirements. For ferrule stock tubes, seamless construction, annealing requirements, chemical composition, dimensional and weight tolerances, hydrostatic test, and internal strain test requirements.

U. S. Gov., Federal Specifications Board WW-T-791; 1931. Tubing, Brass, Seamless. For 3 grades dependent on copper content, 4 types dependent on pressure capacity, for pressures of 100 to 450 pounds, standard weights, dimensions, permissible variations, hydrostatic test, internal stress test, flattening test, bend test, flange test, and tension test requirements, chemical composition. Grade 1 is suitable for salt water or salt air,

other grades for fresh water.

References.—Methods of testing general requirements for metals. See also 600.1, 644.11. Bronze tubes. See also 646.42. Brass pipe. See 645.23. Flexible metallic hose. See 607.7. Gas fixture tubing and pipe. See 645.0.

645.25 Pipe Fittings, Brass

References .- Brass pipe fittings. See 645.4.

645.3 BRASS-WIRE MANUFACTURES

645.31 Sieves, Brass

American Society for Testing Materials E 11-26; 1926. Sieves for Testing Purposes. Construction of woven wire sieves of brass, bronze or other suitable wire, micron designation and corresponding U. S. standard sieve series number, sieve openings, wire diameters, and tolerances for 30 sizes, permissible methods of measurement of openings and wire diameters.

American Society for Testing Materials. tive Definition. E 13-28T; 1928. Definition of the Term Screen (Sieve). Covers plate, sheet,

or woven cloth types.

U. S. Gov., Dept. of Commerce, Bureau of Stand-ards C25 and Supplement of 1929. Standard Samples. Cement. Sample No. 460 for normal cement and No. 47d for extra fine cement, prepared and sold by the bureau for use in industry and by others as standards for measuring the fineness of testing sieves, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC 58; 1929. Three Inch Sieves. For sieves 3 inches in inside diameter, with wire cloth of brass, bronze, or other suitable material conforming to U. S. standard sieve series, requirements on dimensions of sieve, wire diameters, and sieve openings, with tolerances, cloth to be woven for sizes up to No. 230.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC 72; 1922. Sieve Testing Apparatus.

Describes apparatus developed at bureau for measuring openings and wire diameters in sieves by projecting an enlarged image of the sieve on a ground glass screen, measuring the image of the wires and measuring the magnification.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC 74; 1926. Standard Specifications for

Sieves, "Standard Sieve Series." Standards used by the bureau in testing and certifying sieves, including requirements for the woven sieve cloth, dimensions of sieve, sizes of wire and of sieve openings with tolerances for the standard numbered sieve sizes, wire of brass, bronze or other suitable material. A. S. T. M. specification E 11– 26 is in conformity with these standards.

U. S. Gov., Dept. of Commerce, Bureau of Standards T42; 1914. Standardization of No. 200 Cement Sieves. Includes requirements on size of and spacing of wires for standard No. 200 sieve, required sieving value by comparison test with standard sieve at Bureau of Standards. Method of testing and use of standard cement samples

for test are described.

References.-Other wire cloth. See 645.39, 603.43, 642.4.

645.32 Rings and Hooks, Brass and Bronze

References.—Door hooks and eyes, brass wire. See 617.63. Coat hooks, brass. See 617.63. Hooks, bronze (builders' hardware). See 617.63.

645.39 Miscellaneous Brass-Wire Manufactures

American Society for Testing Materials B 50-29; 1929. Nonferrous Insect Screen Cloth. For cloth made of copper wire and cloth of 90 copper-10 zinc alloy wire, for 5 sizes of mesh and weight, copper according to A. S. T. M. specifications, chemical composition requirements for wire for brass screens, standard sizes, weights, dimensions and tolerances.

Society of Automotive Engineers 1931 Handbook, Wire Cloth; 1924. For mesh sizes 8 to 200, diameter of wire and size of opening, tolerance in spacing and size of wire, materials as specified by purchaser, usually steel or brass up to 80 mesh and phosphor bronze or Monel metal above that

size

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS36-31; 1931. Fourdrinier Wire Cloth. A commercial standard selected and adopted by industry for Fourdrinier wire cloth used in paper-making machines, includes standard meshes and sizes of wire, seam requirements, packing and installation requirements. Usually made of brass, bronze, phosphor bronze, Monel metal, nickel, or stainless steel.

U. S. Gov., Federal Specifications Board 348; 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Ladder Chain, Register Chain. Wire gage, links per foot, tensile strength, and weight for several sizes of brass chains of each

type.

U. S. Gov., Federal Specifications Board 348: 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain, Lock Link, Single Jack Chains, Made of brass wire. Dimensions, weight, and

tensile strength of one size.

U. S. Gov., Federal Specifications Board. 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Single Jack Chain, Double Jack Chain. Wire gage, links per foot, tensile strength, and weight requirements for several sizes of brass chains of each type,

References.—Methods of testing, general requirements for metals. Sec also 600.1, 644.11. Other wire cloth. Sec 603.43, 642.4. Brass sieves. Sec 645.31.

645.4 BRASS FITTINGS AND PLUMBING FIX-TURES

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Drain Cocks; 1921. Passage size and pipe thread for sizes up to 1/2inch.

Society of Automotive Engineers 1931 Handbook. Fuel and Lubrication Tube Fittings; 1925. Dimensions of soldered type sleeve and nut fittings. of flared type fittings, of compression type sleeve and nut fittings for tubes up to 1/2-inch.

U. S. Gov., Dept. of Commerce, Bureau of Standards R21; 1925. Brass Lavatory and Sink Traps. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, styles, and gages for wrought brass traps, cast bend traps, wrought sink traps, wrought and cast antisyphon traps, and New York and Boston regulation traps.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Chain Stay. Dimensions of cast brass stay as illustrated, size of chain and rubber stopper, nickel plating requirements and tests, chemical composition of

brass.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Clean-Out Plug. Screw jointed brass plug, illustrated applications with brass cover plate for installations in walls and manhole and cover for installations in floors.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Clean-Sweep Trap. Clean-sweep or centrifugal trap, for floor or wall connection, connection fittings, internal construction of trap not shown but outside view illustrated, chemical composition of brass, nickel plating requirements.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Coat Hook. For cast-brass coat hook, dimensions, chemical composition of brass, nickel plating requirements

and tests.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Combined Drain and Trap. Cast-brass type with removable strainer, dimensions and finish, depth of water seal as illustrated.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Down-Spout Nozzles. Dimensions of brass nozzle for outside of building, to be connected to inside down-spout as illustrated.

U. S. Gov., Federal Specifications Board 448; 1926.
Plumbing Fixtures (For Land Use). Drain.
Brass shower or urinal drain with removable

strainer as illustrated,

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Floor, Wall, and Ceiling Plates. Minimum thickness and type of set screw for cast-brass or cast-iron or steel plates for uncovered pipes passing through partitions.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Flushing Tank Mechanism. Construction of high and of low tank flushing mechanisms, dimensions of cast brass gooseneck siphons, dimensions of brass operating chain, rubber ball, and brass overflow pipe.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Glass-Rod Towel Rack. Dimensions, for brass or white metal supporting brackets, chemical composition of metal, nickel plating requirements and tests.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Hinge. Brass spring hinge for water-closet inclosure, main dimension, chemical composition, nickel plating requirements, made of cast or wrought brass.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Lavatory Plug, Sink Plug, Tray Plug. Cast-brass drain outlets and method of fitting as illustrated, provision for strainer and stopper, size and wall thickness of tubular tailpiece, nickel plating requirements, chemical composition of brass.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Nonsiphoning Trap. Brass trap, minimum outside dlameter, connection fittings, internal construction not shown, chemical composition of brass, nickel plating requirements, illustrated.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). P Trap. 1½-inch size, construction, nickel plating requirements, illustrated, chemical composition of brass.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). S Trap. 1½ size, construction, chemical composition of brass, nickel plating requirements, illustrated.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Shower Fixtures. Main dimensions and materials of supply pipes, valves, sprinkler head and perforations, curtain frame, and duck curtain, one outfit for use over bath tubs and two outfits for shower bath inclosures, with floor drains. Metal parts of nickel-plated brass.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Soap Cup, Soap Dish with Chain Stay, Soap Dish for Bath Tub. Dimensions, materials, nickel platting requirements and test, for brass soap dishes, dimensions and size of plumbers chain and of stopper

for soap dish with chain stay.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Tollet Paper Holder. Dimensions and design of brass holder, chemical composition of brass, nickel plating requirements and tests.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Trimmings for Water-Closet and Bath Inclosures, Castbrass fittings for slabs and tubing, main dimensions, chemical composition of brass, nickle plat-

ing requirements and test thereof.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Tumbler Holder, Tumbler and Toothbrush Holder. For brass or white metal holders, dimensions, chemical composition of material, nickel plating requirements and tests.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Water-Closet Floor Flanges. Dimensions of cast-brass floor flanges for nipple connection, for fitting connection, and for lead pipe connection.

U. S. Gov., Federal Specifications Board. WW-P-448; 1931. Pipe Fittings, Brass or Bronze (Threaded), 125 Pound. Requirements on chemical composition for 2 types of cast bronze fittings and 1 type of wrought fitting, internal pressure test, detail dimensions for elbows, tees, crosses, street tees and elbows, couplings, reducers, return bends, caps, plugs.

American Electric Railway Engr. Assn. Recom-mended Specification D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes cast bronze trolley wire crossings, frogs, clinch ears, and feed in yokes. Strength requirements for the bronze, requirements on construction of crossings and frogs, dimensions and permissible variations for clinch ears and feed-in yokes.

American Marine Standards Committee. E No. 23-1928. Built-Up Propellers. For cast-iron or cast-steel hubs and cast-steel or cast-bronze blades, general quality requirements, materials according to American Bureau of Shipping, hammer test for blades, machining requirements for propeller parts, assembly and balance require-

ments.

American Marine Standards Committee. E No. 25-1928. Propellers Cast in One Piece. For cast bronze propellers, materials according to American Bureau of Shipping specifications, general quality requirements, hammer test and machining requirements, recommendations on degree of balance.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, Sec. 12–B. Ornamental and Misc. Metal Work. Ornamental castings. For bronze castings, requirements on type of metal pattern used, maximum thickness of metal, permissible stresses.

American Society for Testing Materials. B 10-18; 1918. The Alloy: Copper, 88 Per Cent, Tin, 10 Per Cent, Zinc, 2 Per Cent. Covers the alloy commercially known as Government bronze, admiralty gun-metal, gun metal, or 88-10-2 mixture, when used in castings. Chemical composition and tests, methods of sampling, tension test requirements.

American Society for Testing Materials. B 60-28; 1928. Sand Castings for the Alloy: Copper 88 Per Cent, Tin 8 Per Cent, Zinc 4 Per Cent. For use where strength, resistance to steam or salt water are required, as in pipe fittings and pumps. Chemical composition requirements, tension test

requirements.

American Society for Testing Materials. B 61–28; 1928. Steam or Valve Bronze Sand Castings. Chemical composition and tension test requirements.

American Society for Testing Materials. B 66-28; 1928. Bronze Castings in the Rough for Locomotive Wearing Parts. Chemical composition and methods of analysis for hard, medium, soft, and for phosphor bronze, fracture examination.

Society of Automotive Engineers 1931 Handbook. Hard Cast Bronze; 1922. Chemical composition requirements, information on tensile properties,

suitable as general utility bronze.
Society of Automotive Engineers 1931 Handbook.

Leaded Gun Metal; 1922. Chemical composition requirements, information of tensile properties, suitable for bushings and as general utility bronze. Society of Automotive Engineers 1931 Handbook.

Semiplastic Bronze; 1922. Chemical composition requirements, information on tensile properties, for use as soft bronze with good antifriction

qualities.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Cast bronze. Sample No. 52 prepared and sold by the bureau with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material, etc. Average analysis shown

in supplement to C25.

U. S. Gov., Federal Specifications Board. 172a; 1927. Bronze Castings. Includes 10 grades. Grade 1, a high-grade steam or valve bronze; grade 2, a standard composition for general service, also known as ounce metal, red brass, and hydraulic bronze; grade 3, a medium grade for standard and extra heavy pipe fittings; grade 4, an excellent steam metal and structural bronze; grade 6, a leaded phosphor bronze or leaded gun metal, serves as a steam metal and general structural purposes; grades 7 to 10 are bearing bronzes. Requirements on appearance and surface defects, chemical composition and tensile test requirements, methods of sampling, to conform to F. S. B. Spec. 339 for metals.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11, 646.0.

646.59 Miscellaneous Manufactures of Bronze

American Electric Railway Engr. Assn. Recommended Specification E124–29; 1929. Trolley Poles, Wheels, Harps, and Bases. Includes

American Electric Railway Engr. Assn. Methods and Practices; E209-24; 1924. Trolley Wheel Practice. Representative practice on chemical composition of the bronze, diameter, form of groove, balance, bushings of trolley wheels, inspection recommendations.

American Marine Standards Committee E No. 11-1927. Propeller Hub Studs, Nuts, and Lock Screws. For bronze lock screws, dimensions and thread for 3 standard sizes of lock screws for 13 standard nut sizes, material and workmanship in conformity with standards of American Bu-

reau of Shipping. U. S. Gov., Federal Specifications Board 348; 1925. Standard Miscellaneous Chain and Attachments. Weldless Chain. Bronze Sash Chain. Sheet metal gage, links per foot, weight, tensile strength of various sizes.

References.—Methods of testing general requirements for metals. See also 600.1, 644.11, 646.0. Bronze padlocks. See 617.21. Fire hose fittings of bronze. See 974.2. Builders hardware of bronze. See 617. Aluminum bronze products. See 647.1. Manganese bronze products. See 647.2. Phosphor bronze products. See 647.2.

647. SPECIAL BRONZES (BRONZE ALLOYS)

647.1 ALUMINUM BRONZE

647.11 Ingots, Aluminum Bronze

U. S. Gov., Federal Specifications Board 173a; 1926. Aluminum Bronze Ingots (For Remelting). Chemical composition and tensile test requirements for one grade, to conform to F. S. B. Spec. 339 for metals.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11, 646.0.

647.12 Bars, Aluminum Bronze

Society of Automotive Engineers 1931 Handbook. Wrought Aluminum Bronze; 1929. Chemical composition requirements, thickness tolerances of sheets and strips, information on tensile properties of annealed or hot rolled bars.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11, 646.0.

647.13 Rods, Aluminum Bronze

Society of Automotive Engineers 1931 Handbook. Wrought Aluminum Bronze; 1929. Chemical composition requirements of rods, information on tensile properties of annealed or hot rolled bars.

References .- See references under 647.12.

647.14 Plates and Sheets, Aluminum Bronze

Society of Automotive Engineers 1931 Handbook. Wrought Aluminum Bronze; 1929. Chemical composition requirements, thickness tolerances of sheets and strips, information on tensile properties of annealed or hot rolled bars.

References.—See references under 647.12. Thickness tolerances. See 640.1. Standard gage and thicknesses for nonferrous sheets and plates. See 644.21.

647.15 Castings, Aluminum Bronze

American Society for Testing Materials B 59-28; 1928. Aluminum Bronze Castings. Covers two grades of which one responds to heat treatment and the other does not. Copper and aluminum requirements, chemical composition and tension test requirements for each grade.

Society of Automotive Engineers 1931 Handbook. Cast Aluminum Bronze; 1922. Chemical composition requirements, information on tensile properties, for use in worm wheels and gears,

bronze trolley wheels, requirements on chemical composition and hardness, recommended design and dimensions for 3 sizes.

U. S. Gov., Federal Specifications Board 369a;
1926. Aluminum Bronze Castings. For one grade, general quality and appearance requirements, chemical composition and tension test requirements, for use in gun slides, gears, and similar parts.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11, 646.0.

647.16 Shapes, Aluminum Bronze

Society of Automotive Engineers 1931 Handbook. Wrought Aluminum Bronze; 1929. Chemical composition requirements for shapes, information on tensile properties of annealed or hot-rolled

References .- See references under 647.15.

647.17 Strips, Aluminum Bronze

Society of Automotive Engineers 1931 Handbook. Wrought Aluminum Bronze; 1929. Chemical composition requirements, thickness tolerances of sheets and strips, information on tensile properties of annealed or hot-rolled bars.

References.—See references under 647.15. Thickness tolerances. See 640.1. Standard gage and thicknesses for nonferrous strip. See 644.21.

647.2 MANGANESE BRONZE

647.20 General Items

American Society for Testing Materials B 27-19; 1919. Approved by American Standards Assn. as K 3-1921. Methods of Chemical Analysis of Manganese Bronze. Determination of lead and copper electrolytically, chemical determination of lead, tin, iron, manganese, solutions required.

U. S. Gov., Dept. of Commerce. Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Manganese Bronze. Sample No. 62 prepared and sold by the bureau with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analyses of similar material, etc. Analysis shown in supplement.

647.21 Ingots, Manganese Bronze

American Society for Testing Materials B 7-27; 1927. Manganese Bronze Ingots for Sand Cast-Covers copper-zinc alloy known as manganese bronze. Chemical composition and tension test requirements

Society of Automotive Engineers 1931 Handbook. Cast Brass Alloys, Manganese Bronze; 1922. Chemical composition and tensile test requirements. Substantially the same as A. S. T. M.

Specification No. B7-14.

U. S. Gov., Federal Specifications Board 89; 1923. Manganese Bronze Ingots (For Remelting). Chemical composition and tensile test requirements for one grade.

References.—Methods of chemical analysis, general requirements for metals. See also 647.20, 600.1.

647.22 Bars, Manganese Bronze

U. S. Gov., Federal Specifications Board 552; 1928. Bronze, Manganese, Rods, Bars, Shapes, and Plates. Includes bars, soft, half-hard, and hard. Physical appearance, chemical composition, tension test, bend test, hammer test, and internal stress test requirements, permissible variations in dimensions.

References.—Methods of testing, general requirements for metals. See also 600.1, 647.20.

647.23 Rods, Manganese Bronze

. S. Gov., Federal Specifications Board 269a; 1929. Nonferrous Welding Rods for Gas Welding. Includes type A, manganese bronze rods, suitable for welding brass and bronze sheets, plates, shapes and castings, general quality and chemical composition requirements, to conform

to F. S. B. Spec. 339 for metals.

U. S. Gov., Federal Specifications Board 552; 1928. Bronze, Manganese, Rods, Bars, Shapes, and Plates. Includes rods, soft, half hard, and hard. Physical appearance, chemical composition, tension test, bend test, hammer test, and internal stress test requirements, permissible variations in dimensions.

References.—See references under 647.22. Welding equipment and practice. See 767.

647.24 Plates and Sheets, Manganese Bronze

U. S. Gov., Federal Specifications Board 552; 1928. Bronze, Manganese, Rods, Bars, Shapes, and Plates. Includes plates, soft and half hard. Physical appearance, chemical composition, tension test, bend test, internal stress test requirements, permissible variations in dimensions.

References.—See references under 647.22. Standard gage and thicknesses for plates and sheets. See 644.21.

647.25 Shapes, Manganese Bronze

U. S. Gov., Federal Specifications Board 552; 1928. Bronze, Manganese, Rods, Bars, Shapes, and Plates. Rods, soft, half-hard, and hard; bars, soft, half-hard, and hard; shapes, soft; plates, soft and half-hard. Physical appearance, chemical composition, tension test, bend test, and internal stress test requirements, permissible variations in dimensions.

References .- See references under 647.22.

647.26 Castings, Manganese Bronze

American Society for Testing Materials B 54-27; 1927. Manganese Bronze Sand Castings. Chemical composition and tension test requirements.

U. S. Gov., Federal Specifications Board 370; 1926.
Manganese Bronze Castings. For one grade, general quality and appearance requirements, chemical composition and tension test requirements. Suitable for propellers, engine frames, gears, worm wheels, torpedo tubes, gun mounts, and where strength, toughness, or resistance to corrosion of sea water is required.

References.—See references under 647.22. Manganese bronze ingots. See 647.21.

647.27 Wires, Manganese Bronze

647.3 PHOSPHOR BRONZE

647.31 Ingots and Bearing Metals, Phosphor Bronze

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Bronzes. Includes phosphor bronze castings of 4 grades for various pressure bearings for turntables and movable bridges and for gears and nuts, chemical composition, tension, and compression test requirements.

References.—Bronze bearing metals and metal bearings. See also 647.34, 692.2, 692.3. Methods of testing, general requirements for metals. See also 600.1.

647.33 Plates and Sheets, Phosphor Bronze

References.—Standard gage and thicknesses for nonferrous sheets and plates. See 644.21.

647.34 Castings, Phosphor Bronze

Society of Automotive Engineers 1931 Handbook. Phosphor Bronze; 1922. Chemical composition requirements, information on tensile properties, for use where antifriction qualities are desirable.

Society of Automotive Engineers 1931 Handbook. Phosphor Gear Bronze; 1922. Chemical composition requirements, information on tensile properties, for use in gears and wormwheels.

U. S. Gov., Federal Specifications Board 172a; 1927. Bronze Castings. Includes grade 6, a leaded phosphor bronze serving as steam metal and for general structural purposes, and two grades of phosphor bronze bearing metals. Requirements on appearance, surface defects, chemical composition, tensile tests, and methods of sampling, in conformity with F. S. B. Spec. 339 for metals.

References.—Phosphor bronze bearing metal castings. See also 647.31. Methods of testing, general requirements for metals. See also 600.1.

647.35 Shapes, Phosphor Bronze

647.36 Strips, Phosphor Bronze

Society of Automotive Engineers 1931 Handbook. Phosphor Bronze Strip; 1922. Chemical composition requirements for two grades, tensile test requirements for three classes of hardness and one spring temper, dimensional tolerances.

References.—Methods of testing, general requirements for metals. See also 600.1. Thickness tolerances. See also 640.1. Standard gage and thicknesses for strip. See 644.21.

647.37 Tubing, Phosphor Bronze

647.38 Wires and Rods, Phosphor Bronze

American Marine Standards Committee. O No. 25-1930. Standard Wire Ropes for Marine Uses. Includes phosphor bronze rope. Requirements on diameter tolerance, lay, strength of wire, strand fabrication, lubrication, dimensions, test requirements for tensile, torsional, and wrapping test, recommended practice for storage, handling and use, chemical composition requirements of phosphor bronze.

Society of Automotive Engineers 1931 Handbook. Phosphor Bronze Wire; 1922. Intended for springs, chemical composition, bend test, and tensile test requirements, dimensional tolerances.

U. S. Gov., Federal Specifications Board 297; 1925. Wire Rope. Includes phosphor bronze wire rope. Strength and torsional test requirements of wire, construction, dimensions, weight, breaking strength, safe load for cable, sizes of sheaves or drums, information on handling, application of seizing, sockets, and clips, care and usual application.

U. S. Govt., Federal Specification Board 532; 1927. Wire, Spring, Phosphor Bronze. For one grade, permissible variations from nominal diameter, chemical composition, tension test, bend test, and fracture test requirements. For use in manufacture of helical springs.

References.—Methods of testing, general requirements for metals. See also 600.1. Iron and steel wire and wire rope. See 603.41, 603.42. Wire gages. See 603.40. Wire cloth of phosphor bronze. See 64.52.

650-659

651. LEAD

651.0 GENERAL ITEMS

American Society for Testing Materials B 35-24; 1924. Methods of Chemical Analysis of Pig Lead.

LEAD, MERCURY, AND NICKEL

| Methods and solutions required for determination

of silver, bismuth, arsenic, antimony, tin, copper, cadmium, iron, zinc, nickel and cobalt.
U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples.

Lead. Sample No. 49, prepared and sold by the bureau with a certificate giving the melting point, for use in industry and by others as standards for calibrating pyrometers, etc.

651.1 LEAD INGOTS

American Society for Testing Materials B 29-23; 1923. Pig Lead. Chemical composition limitations for corroding lead, chemical lead, and common lead, methods of sampling.

N. S. Gov., Federal Specifications Board QQ-L-171; 1931. Pig Lead. Grade A for foundry use, grade B for weights, ballast, etc., chemical composition requirements.

References.—Methods of chemical analysis, general requirements for metals. See 651.0, 600.1.

651.2 BAR LEAD

651.3 CASTINGS, LEAD

U. S. Gov., Federal Specifications Board FF-H-101; 1930. Builders Hardware. Sash Weights. General quality requirements for round and square sash weights of cast lead.

651,4 STRIPS AND SLEEVES, LEAD

651.5 SHEET LEAD

U. S. Gov., Dept. of Commerce, Bureau of Standards C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). Sheet Lead. Commonly ordered on basis of weight per square foot, table of usual thicknesses and weights, permissible variations in weight.

U. S. Gov., Federal Specifications Board 308; 1925. Sheet Lead. General appearance, thickness tolerance, and chemical composition requirements for two grades of sheet lead.

References.-Methods of test, general requirements for metals. See also 600.1. 651.0.

651.6 LEAD ALLOYS

International Assn. of Electrotypers of America. Standards for Electrotypes; 1930. For electrotype backing metal, requirements on percentages of tin, antimony, and lead.

653. NICKEL

653.0 GENERAL ITEMS

American Society for Testing Materials B 41-23; 1923. Methods of Chemical Analysis of Nickel. Determination of iron, carbon, sulphur, cobalt and nickel, reagents and solutions required.

653.1 NICKEL METAL, INGOTS, AND SHOT

American Society for Testing Materials. B39-22; 1922. Nickel. Covers four grades, electrolytic, suitable for high grades of malleable alloys, "X" shot, suitable for nonferrous alloys and nickel steel, "A" shot, suitable for anodes, and ingot, suitable for open-hearth and electric-furnace nickel steel, chemical composition and methods of sampling for each grade.

U. S. Gov., Federal Specifications Board 371; 1926. Nickel, for Remelting. For 3 grades furnished in cathodes, plates, pigs, ingots, cubes, or shot form, chemical composition requirements and methods.

of sampling.

References.—Methods of testing, general requirements for metals. See also 600.1, 653.0. Nickel plating. See also 600.3. Chemical compounds of nickel. See 839.39.

653.2 NICKEL BARS

653.3 NICKEL MANUFACTURES

653.31 Nickel Sheets

653.32 Nickel Wire

References.—Nickel-chromium wire. See 715.43. Fourdrinier wire cloth of nickel wire. See 645.39.

654. NICKEL-COPPER ALLOYS (MONEL METAL)

654.1 NICKEL-COPPER METAL, INGOTS, AND SHOT

654.2 NICKEL-COPPER BARS

U. S. Gov., Federal Specifications Board 585; 1928. Copper-Nickel Alloy Rods, Bars, Shapes, Plates, Sheets, and Strips. Requirements on chemical composition of alloy, tensile strength, elongation, bend test, permissible variations in dimensions from specified quantities, hammer test for rods and bars, F. S. B. Spec. 339 for metals applies.

References.—Methods of testing, general requirements for metals. See also 600.1.

654.3 STRIPS, NICKEL-COPPER

U. S. Gov., Federal Specifications Board 585; 1928. Copper-Nickel Alloy Rods, Bars, Shapes, Plates, Sheets, and Strips. Requirements on chemical composition of alloy, tensile strength, elongation, bend test, permissible variations in dimensions from specified quantities, harmer test for rods and bars, F. S. B. Spec. 339 for metals applies.

References.—See references under 654.2. Standard gage and thicknesses. See also 644.21, 654.52.

654.4 SHAPES, NICKEL-COPPER

U. S. Gov., Federal Specifications Board 585; 1928. Copper-Nickel Alloy Rods, Bars, Shapes, Plates, Sheets, and Strips. Requirements on chemical composition of alloy, tensile strength, elongation, bend test, permissible variations in dimensions from specified quantities, hammer test for bars and rods, F. S. B. Spec. 339 for metals applies.

References .- See references under 654.2.

654.5 NICKEL-COPPER MANUFACTURES

654.51 Castings and Forgings, Nickel-Copper

Society of Automotive Engineers 1931 Handbook, Cast Brass Alloys, White Nickel Brass; 1922. Chemical composition requirements, information on tensile properties and use as trimming.

U. S. Gov., Federal Specifications Board 578; 1928. Copper-Nickel Alloy Castings. For one grade, physical appearance, chemical composition, and tension test requirements.

References.—Methods of testing, general requirements for metals. See also 600.1.

654.52 Sheets and Plates, Nickel-Copper

U. S. Gov., Dept. of Commerce, Bureau of Standards C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). Monel Metal Gage. Thicknesses correspond to wrought iron thicknesses of U. S. standard gage for sheet and plate iron and steel, table of gage numbers, thicknesses, and weights, permissible variations in thickness.

U. S. Gov., Federal Specifications Board 585; 1928. Copper-Nickel Alloy Rods, Bars, Shapes, Plates, Sheets, and Strips. Requirements on chemical composition of alloy, tensile strength, elongation, bend test, permissible variations in dimensions from specified quantities, hammer test for bars and rods. F. S. B. Suce. 339 for metals applies.

References.—See references under 654.51. Standard gage and thicknesses for nonferrous alloy plates and sheets. See also 644.21.

654.53 Rods, Nickel-Copper

U. S. Gov., Federal Specifications Board 269a; 1929. Nonferrous Welding Rods for Gas Welding. Includes type F, Monel rods, for welding of Monel metal castings and gray iron castings, general quality and chemical composition requirements, to conform to F. S. B. Spec. 339 for metals.

U. S. Gov., Federal Specifications Board 585; 1928. Copper-Nickel Alloy Rods, Bars, Shapes, Plates, Sheets, and Strips. Requirements on chemical composition of alloy, tensile strength, elongation, bend test, permissible variations in dimensions from specified quantities, hammer test for bars and rods, F. S. B. Spec. 339 for metals applies.

References .- See references under 654.51.

654.54 Wires and Cables, Nickel-Copper

654.59 Miscellaneous Manufactures of Nickel-Copper

Underwriters' Laboratories, (Inc.). Window Cleaners' Belts and Anchors; 1930. Requirements on chemical composition of brass, monel metal, or copper-nickel forgings for belt hardware and for anchors, tension tests of belt, pull test requirements for anchor, installation of anchor to wooden and metal window frames.

References.—Fourdrinier wire cloth of mone metal. See 645.39.

655. NICKEL-COPPER-ZINC ALLOYS (NICKEL SILVER AND GERMAN SILVER)

655.1 BARS, NICKEL-COPPER-ZINC ALLOY

U. S. Gov., Federal Specifications Board. 468; 1927. Silver, Nickel, Rods, Bars, Shapes, Plates, Sheets, and Strips (German Silver). Grade A, readily machinable and with fine finish, grade B suitable for screw machine work. Physical appearance requirements, chemical composition requirements, permissible variations in dimensions.

References.—Methods of testing, general requirements for metals. Sec also 600.1.

655.2 SHEETS AND PLATES, NICKEL-COPPERZINC ALLOY

U. S. Gov., Federal Specifications Board. 468; 1927. Silver, Nickel, Rods, Bars, Shapes, Plates, Sheets, and Strips (German Silver). Grade A, readily machinable and with fine finish, grade B suitable for screw machine work. Physical appearance requirements, chemical composition requirements, permissible variations in dimensions, for nickel silver sheets and plates.

References.—Sec references under 655.1. Standard gage and thicknesses of nonferrous alloy sheets and plates. See 644.21.

655.3 SHAPES AND CASTINGS, NICKEL-COPPER-ZINC ALLOY

U. S. Gov., Federal Specifications Board. 468; 1927. Silver, Nickel, Rods, Bars, Shapes, Plates, Sheets, and Strips (German Silver). Grade A, readily machinable and with fine finish, grade B suitable for screw machine work. Physical appearance requirements, chemical composition requirements, permissible variations in dimensions, for nickel silver shapes.

U. S. Gov., Federal Specifications Board FF-H101; 1930. Builders' Hardware, Nontemplate.
Nickel bronze. Requirements on chemical composition of cast nickel bronze, nickel silver, or
white metal and of wrought nickel bronze, nickel
silver, or white metal, when these materials are
used in builders' hardware.

References .- See references under 655.1.

655.4 STRIPS, NICKEL-COPPER-ZINC ALLOY

U. S. Gov., Federal Specifications Board. 468; 1927 Silver, Nickel, Rods, Bars, Shapes, Plates, Sheets, and Strips (German Silver). Grade A, readily machinable and with fine finish, grade B suitable for screw machine work. Physical appearance requirements, chemical composition requirements, permissible variations in dimensions, for nickelsilver strips.

References .- See references under 655.1.

655.5 WIRES AND RODS, NICKEL-COPPER-ZINC

U. S. Gov., Federal Specifications Board. 468; 1927. Silver, Nickel, Rods, Bars, Shapes, Plates, Sheets, and Strips (German Silver). Grade A, readily machinable and with fine finish, grade B suitable for screw machine work. Physical appearance requirements, chemical composition requirements, permissible variations in dimensions from the specified, for nickel silver rods.

References.—See references under 655.1. Methods of analysis and testing of high resistance electrical wire. See 715.43.

655.6 HOLLOW AND STAMPED WARE, NICKEL-COPPER-ZINC ALLOY

American Railway Assn., Telegraph and Telephone Section 2-G-5 and 2-G-6; 1924. Fuse Block ARA-1-A and ARA-2-A. Includes fuse ellps of German silver, requirements on thickness, hardness, and chemical composition

References .- See references under 655.1.

655.9 MISCELLANEOUS SPECIFICATIONS FOR NICKEL-COPPER-ZINC ALLOY

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (for Land Use). Trimmings and Fittings. Where white metal is preferred for trimmings and fittings, requirements on percentages of copper, nickel, lead, tin, and zinc, permissible impurities.

References.—German silver contacts for telephone lacks. See 718.29. Drawing instruments of nickel silver. See 935. Methods of testing, general requirements for metals. See also 600.1.

656. NICKEL-CHROME ALLOY

656.0 GENERAL ITEMS

American Society for Testing Materials Tentative Methods B 71–29T; 1929. Methods of Chemical Analysis of Metallic Materials for Electrical Heating. Reagents required and method of determination of nickle, chromium, iron, manganese, carbon, insoluble residue, silicon, sulphur, copper, descipitions and illustrations of fest apparatus.

References.—Electrical testing of materials for electrical heating. See 715.43. Nickel chromium alloys for electrical heating elements. See 715.43.

660-669

PRECIOUS METALS, METAL JEWELRY, AND PLATED WARE

ELRY

662. GOLD AND DENTAL GOLD ALLOYS

U. S. Gov., Dept. of Commerce, Bureau of Standards C43; 1921. Jewelers and Silversmiths Weights and Measures. Includes gold karats, a table showing decimal equivalents of gold karats or fineness, the number of karats indicating the number of 24ths of pure gold in an alloy.

661. PLATINUM AND PLATINUM JEW- | U. S. Gov., Dept. of Commerce, Bureau of Standards S532; 1926. Analysis of Dental Gold Alloys. Describes methods developed at bureau for sampling the alloys and for detection and determination of silver, iridium, tin, gold, pal-ladium, copper, rhodium, zinc, nickel, manganese, iron, magnesium, with typical analyses of several alloys.

663. SILVER

References .- Silver and silverware. See 691,

670-679

CLOCKS, WATCHES, AND DIALS

671. CLOCKS

References.—Electric time clock systems. See 718.35. Testing of timepieces. See 672.

672. WATCHES

National Watch Case Mfrs, Assn. Ruling of the Federal Trade Commission indorsed by N. W. C. M. A. and by manufacturers of gold filled and gold plated watch cases; 1930. Requirements on minimum thicknesses of gold layers on various parts of watch cases for each of the 3 standard time guarantees of 25 year, 20 year, and 10 year; required thickness of gold with which use of the word "gold" on watch case is permitted.

U. S. Gov., Dept. of Commerce, Bureau of Standards C43; 1921. Jewelers and Silversmiths Weights and Measures. Includes a table of standard watch sizes as used in U.S. with diameters for various watch size numbers and with comparison with European standard sizes.

U. S. Gov., Dept. of Commerce, Bureau of Standards C51; 1914. Measurement of Time and Test of Timepieces. Describes test procedure at Bureau of Standards and tolerances allowed in performance of a watch for which a certificate is issued by bureau. Tests cover position test, isochronism test, and temperature test.

673. DIALS

680-689

TIN AND ZINC

681. TIN

681.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Tin. Sample No. 42b prepared and sold by the bureau with a certificate giving the melting point, for use in industry and by others as standards for calibrating pyrometers, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C66: 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of tin, their chemical analyses, freezing points, and degree of purity, used for the standardization of thermocouples, pyrometers, etc.

681.1 TIN INGOTS AND PIG METAL

National Metal Exchange, (Inc.). By-laws and Rules: 1931. Tenderable Grades of Tin. A list of the standard brands of tin which may be delivered against the standard tin contract of the Nat. Metal Exchange, such as Straits, Banka, Australian, etc., minimum tin content of above brands.

U. S. Gov., Federal Specifications Board 90; 1923. Pig Tin. Grade A of new metal, grade B may be Chinese tin or contain remelted metal, chemical composition requirements for the 2 grades.

References.—General requirements for metals. See also 600.1.

681.2 TIN SHEETS

References .- Roofing tin, terneplate. See 604.31.

631.3 TIN CASTINGS

681.4 TIN MANUFACTURES

681.41 Tin Hollow Ware

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Dust Pan. Dimensions, metal gage, and design of pan with long bail type handle, of tin or cold rolled steel.

American Railway Assn. Mechanical Div. Recommended Practice. Thrware, Standardization of; 1915. Marking Pot. Dimensions, metal gage, and design of marking pot with tubular handle, of tin or cold-rolled steel.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. One Pint, One Quart, and One Gallon Funnels. Dimensions, metal gage, and design of conical shape funnels of tin or cold-rolled steel.

References.—Standard sizes of tin ware. See also Gleon Claudia and dry measures of tin. See 919.1, Metal kits and pails. See 951.01, 951.04. The coatings, test of. See 600.3. Illuminating torch for railways, tin. See 997.1. Tin caus. See 959.1.

681.42 Tin Coatings

References,—Test of tin coatings. See 600.3. Roofing tin, terneplate. See 604.31.

681.43 Tin Alloys

References.—Bronzes. See 643., 646., 647., 692.3. Phosphor tin. See 682. Babbitt metal. See 692.1. Solder. See 693.2

681.49 Miscellaneous Tin Manufactures

American Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Rubber Hose and Block Tin Tubing. Recommended practice on standard diameters to be used for inside diameters of rubber hose and block tin tubing and for outside diameter of light gage metal syrup line tubing.

American Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Tubing Connections or Couplings. For sirup line connections, standard dimensions of union type coupling with ferrule and swivel for pipe sizes up to 2 inch. Recommended practice on compression coupling for light gage metal tubing up to 2-inch size, with dimensions

of union nut, follower, and coupling body, for carbonated water and sirup line connections. References .- Cans made from tin plate. See 959.1.

682. PHOSPHOR TIN

American Society for Testing Materials. B 51-27; 1927. Phosphor Tin. Chemical composition and

sampling requirements.

U. S. Gov., Federal Specifications Board 116; 1924. Phosphor Tin. Chemical composition requirements for one grade made of new material, furnished as slabs or ingots.

References .- General requirements for metals. See

683. ZINC

683.0 GENERAL ITEMS

American Society for Testing Materials. B 38-21; 1921. Methods of Chemical Analysis of Spelter. Based on the standard methods of analysis for spelter of the American Chemical Society, see p. 547, J. of Industrial and Engineering Chemistry, vol. 7; 1915. Determination of lead and cadmium by electrolytic and other methods, determination of iron, solutions required.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Zinc Ore D. Sample No. 2 prepared and sold by the bureau with a certificate giving percentage of zinc, for use by industrial organizations and others as a comparison standard in checking the

accuracy of analysis of zinc ores, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Zinc. Sample No. 43b, prepared and sold by the bureau with a certificate giving the melting point, for use in industry and by others as standards for calibrating pyrometers, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of zinc, their chemical analyses, freezing point, and degree of purity, their use for the standardization of thermocouples,

pyrometers, etc.

683.1 ZINC OR SPELTER INGOT METALS

American Society for Testing Materials. B 6-18; Spelter. Chemical composition requirements for five grades of virgin spelter, methods for sampling. Available in Spanish and French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

U. S. Gov., Federal Specifications Board. 91a; 1927. Zinc, Slab (Spelter). Chemical composition and method of sampling requirements for 5 grades.

References.—Methods of test, general requirements for metals. See also 600.1, 683.0.

683.2 ZINC SHEETS AND PLATES

American Society for Testing Materials. B 69-29; 1929. Rolled Zinc. Covers 3 types ribbon, sheet, and boiler or name plate zinc. Rolling requirements, classification according to temper; temper, dynamic ductility, and bend test requirements for various grades and thicknesses, permissible variations in dimensions.

U. S. Gov., Dept. of Commerce, Bureau of Standards C391; 1931. Standard Thicknesses, Weights, and Tolerances of Sheet Metal (Customary Practice). American zinc gage. Table of gage numbers, thicknesses, and weights of zinc sheets, strips, and plates, permissible variations in thickness.

U. S. Gov., Federal Specifications Board. 531; 1927. Zinc Plates, Sheets, and Strips. For one grade of zinc in 3 types; type A, ribbon zinc and sheets or strips cut from ribbon zinc; type B, sheet zinc or strips cut from sheet zinc; type C, boiler plate, name plates, tags, etc. Physical appearance, chemical composition, and bend test requirements, permissible variations from specified dimensions. References.—Methods of testing general requirements for metals. See also 600.1, 683.0. Zinc coated iron and steel sheets. See 604.32.

683.3 ZINC STRIPS

American Society for Testing Materials. B 69-29; 1929. Rolled Zinc. Covers 3 types, ribbon, sheet, and boiler or name plate zinc. Rolling requirements, classification according to temper; temper, dynamic ductility, and bend test requirements for various grades and thicknesses, permissible variations in dimensions.

U. S. Gov., Federal Specifications Board. 531; 1927. Zinc Plates, Sheets, and Strips. For one grade of zinc in 3 types; type A, ribbon zinc and sheets or strips cut from ribbon zinc; type B, sheet zinc or strips cut from sheet zinc; type C, boiler plate, name plates, tags, etc. Physical appearance, chemical composition, and bend test requirements, permissible variations from specified dimensions.

References.—Methods of testing, general requirements for metals. See also 600.1, 683.0. Standard thicknesses, weights, and tolerances. See 683.2.

683.4 ZINC MANUFACTURES

683.41 Zinc-Base Die Castings

American Society for Testing Materials. Tentative Specifications. B 86-31T; 1931. Zinc Base Alloy Die Castings. Requirements on chemical composition of alloy, permissible impurities in slab zinc used as base, requirements on expansion, tensile

test, impact test, aging.
U. S. Gov., Dept. of Commerce, Bureau of Standards. C25 and Suppl.; 1927. Standard Samples.
Zinc-base die casting alloys. Samples No. 94, No. 95, and No. 96, prepared and sold by the bureau with a certificate giving the analysis of each, for use in industry and by others as comparison standards for checking the accuracy of analyses of similar materials, etc. Analysis of each shown in supplement.

References.—Methods of test, general requirements for metals. See also 600.1, 683.0.

683.42 Gravity Battery Zincs

References .- Gravity battery zincs. See 712.5.

683.49 Miscellaneous Zinc Manufactures

References.—Nails, spikes, tacks, and staples of zinc. See 608.1.

683 5 ZINC ALLOYS

References.—Zinc base die casting alloys. See 683.41. Copper-tin-zinc alloys. See 643., 646., 647. Brass. See 644., 645. Nickel-copper-zinc alloys. See 655. Brazing solder, brass. See 693.2.

683.6 ZINC COMPOUNDS AND SALTS

References.-Chemical compounds of zinc. See 839.38.

684. ZINC COATINGS (GALVANIZING)

References.—Zinc coated sheets. See 604.32. Zinc coatings and tests. See also 600.3.

690-699 MISCELLANEOUS ORES. METALS, ALLOYS, AND METAL MANUFACTURES

691. SILVER

691.0 GENERAL ITEMS

U. S. Gov., Congress. 34 Stat. at Large, 260; June 13. 1906. National Stamping Act. Forbidding the importation, exportation, or carriage in interstate commerce of falsely or spuriously stamped articles of merchandise made of gold or silver or their alloys. Includes a definition of the word "sterling" when used to mark silver, requirements on percentage of pure silver.

691.1 SILVER METAL AND ALLOYS

American Society for Testing Materials. Tentative. Specifications, B 86-31T: 1931. Zinc Base Alloy Vol. XVII of Journal of Am. Dental Assn. for Jan. 1930. The requirements are the same as those given in U-A-451 of the Federal Specifications Board with the exception of some differences in method of determination of compressive strength and package sizes and labeling.

National Metal Exchange (Inc.). By Laws and Rules: 1931. Silver Brands or Markings. Requirements on the silver content of bars offered under brands or markings kept on the official list of brands tenderable on Exchange contracts.

U. S. Gov., Federal Specifications Board U-A-451; 1931. Amalgam Dental Alloy. For shavings and for filings, requirements on time of amalgamation, absence of granular or sandy consistency when amalgamated, length of time in which susceptible to carving and polishing, chemical com-position, compressive strength, flow, length changes on setting, methods of test.

References.—Silver solder. See 693.3. Definition of sterling. See 691.0.

691.2 SILVERWARE

American Marine Standards Committee. O No. 9-1926. Kinds and Sizes of Silverware for Ship Equipment. List of kinds and sizes of hollow ware and list of flat ware including 18 per cent alloy metal unplated.

U. S. Gov., Dept. of Commerce, Bureau of Standards R54: 1926. Sterling Silver Flatware. Simplified practice recommended and accepted by industry establishing a limited list of standard stock items in sterling silver flatware patterns, covers 3 weights of tca spoons, other items listed

by name without further qualification, divided into staples, fancy dozens, carving sets, etc. U. S. Gov., Federal Specifications Board. RR-T-51; 1931. Silver Plated Tableware. For flatware and hollow ware for frequent use and for

flatware and hollow ware for occasional use, requirements on composition of base metal, sol-dering of hollow ware, weight of flatware blanks, thickness and weight of silver, methods of measurement; chemical composition and corrosion test for corrosion resisting steel knife blades.

References .- Definition of sterling. See 691.0.

691.3 SILVER COMPOUNDS AND SALTS

References.—Chemical compounds of silver. See 839.37.

692. BABBITT AND OTHER BEARING METALS

692.0 GENERAL ITEMS

American Electric Railway Engr. Assn. Recom-mended practice E120-27; 1927. Limits of wear for parts affecting gear centers.

American Society for Testing Materials. B 18-21; 1921. Approved by American Standards Assn. as K 5-1922. Methods of Chemical Analysis of Alloys of Lead, Tin, Antimony and Copper. Methods apply particularly to babbitt metal and similar lead and tin base alloys. Two methods given of which one is slow but more accurate. Determination of lead, copper, antimony, tin, and arsenic.

692 1 DARRITT METALS

American Electric Railway Engr. Assn. Misc. Methods and Practices. E212-25; 1925. Arma-ture and Axle Liners. Chemical composition of representative bronze shells and babbitt metal for armature bearings, recommended clearances for armature and axle bearings, detailed approved method for making babbitted bearings.

American Railway Assn. Mechanical Div. Recommended Practice; 1926. Bearings, Journal, Lined. Construction, chemical analysis of brass back and of bearing metal lining, appearance of

fracture.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes babbitt metal, chemical composition requirements.

American Society for Testing Materials B 23-26; 1926. White Metal Bearing Alloys. Covers 12 typical babbitt metals. Dimensions of standard bar, chemical composition requirements and permissible variations, methods of sampling,

American Society for Testing Materials B 67-28; 1928, Car and Tender Journal Bearings, Lined. Chemical composition of and test requirements for babbitt metal lining and bronze backing, fracture and chipping tests.

Society of Automotive Engineers 1931 Handbook. White Bearing Metals; 1922. Chemical composition requirements for five grades of babbitt metal, and general applications in bearings. Suitable for die castings.

U. S. Gov., Dept. of Commerce, Bureau of Standards

C25 and Suppl.; 1927. Standard Samples. Leadbase bearing metal. Sample No. 53 prepared and sold by the bureau with a certificate of analysis. for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials, etc. Supplement shows average analysis.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Tin-base bearing metal. Sample No. 54a prepared and sold by the bureau for use in industry and by others as a comparison standard for checking the accuracy of analyses of similar materials, etc. Supplement shows average analysis.

U. S. Gov., Federal Specifications Board 536; 1927.
Metal, Antifriction, Ingots and Castings. Covers 7 grades of babbitt metal, chemical composition and sampling requirements. Grade 1 medium hard suitable for aircraft engine bearings; grade 2, hard, suitable for automotive engine bearings; grade 3 for moderately heavy pressures; grade 4, hard, for very heavy pressures and high speeds; grade 5 for low pressure and high speed as for electric motors; grade 6 for large bearings and light service; grade 7 for slightly more severe service than 6.

References.—Methods of testing general requirements for metals. See also 600.1, 692.0. Bronze backings of lined bearings. See also 692.2.

692.2 BEARING METALS, OTHER THAN BABBITT

American Electric Railway Engr. Assn. Misc. Methods and Practices E212-25. 1925. Arma-ture and Axle Liners. Chemical composition of

representative bronze shells and babbitt metal for | 692.3 METAL BEARINGS armature bearings, recommended clearances for armature and axle bearings, detailed approved method of making babbitted bearings.

American Railway Assn. Mechanical Div. Recommended Practice; 1926. Bearings, Bronze, for Locomotives. Rough bronze castings, chemical composition, appearance of fracture test.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Bronzes. Includes phosphor bronze castings of 4 grades for various pressure bearings for turntables and movable bridges and for gears and nuts, chemical composition, tension, and compression test requirements.

American Society for Testing Materials B 22-21; 1921. Bronze Bearing Metals for Turntables and Movable Railroad Bridges. Covers class A for contact with hardened steel disks under pressures over 1,500 pounds, such as turntables; class B for contact with soft steel at low speeds under pressures less than 1,500 pounds, such as trunnions of bascule bridges; class C for ordinary machinery bearings; class D for gears, worm wheels, nuts where stresses are other than compressive. Copper of the copper tin alloy to be according to A. S. T. M. specifications for electrolytic copper wire bars or lake copper wire bars (serial B 5 and B 4), chemical composition, com-

pression and tension test requirements.

American Society for Testing Materials B 31-21; 1921. Bronze Bearing Metal in Ingot Form. Covers 6 copper-tin-lead alloys made wholly or partly from scrap materials. Chemical composition requirements and permissible variations,

methods of sampling.

American Society for Testing Materials B 66-28; 1928. Bronze Castings in the Rough for Locomotive Wearing Parts. Chemical composition and tests for hard, medium, soft, and phosphor bronze,

fracture examination.

American Society for Testing Materials Tentative Specifications B 74-28T; 1928. Sand Castings of the Alloy; Copper 80 Per Cent, Tin 10 Per Cent, Lead 10 Per Cent. Intended for use for bearings and bushings and to resist mild acids as in mine waters, general quality, chemical composition, and tension test requirements.

Society of Automotive Engineers 1931 Handbook. Bronze Backing for Lined Bearings; 1922. Chemical composition requirements, information on

tensile properties.

Society of Automotive Engineers 1931 Handbook. Phosphor Bronze; 1922. Chemical composition requirements, information on tensile properties, for use where antifriction qualities are desirable.

Society of Automotive Engineers 1931 Handbook. Semiplastic Bronze; 1922. Chemical composition requirements, information on tensile properties, for use as soft bronze with good antifriction qualities.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Phosphor bronze bearing metal. Sample No. 63 prepared and sold by the bureau with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analyses of similar material, etc. Analysis shown in supplement.

U. S. Gov., Federal Specifications Board. 1927. Bronze Castings. Includes 4 grades of bronze bearing metals. Requirements on appearrance, surface defects, chemical composition, tensile test, and methods of sampling, to conform

to F. S. B. Spec. 339 for metals.

References.—Methods of testing, general requirements for metals. See also 600.1, 646.0. Brass and bronze ingot metals for bearings. See 644.11.

American Electric Railway Engineering Assn. E2-27; 1927. Journal Boxes and Contained Parts. Standard design and dimensions for journal boxes, bearings, wedges, and dust guards for 6 sizes of bearings.

American Electric Railway Engr. Assn. E12-26; 1926. Standard Gages for Journal Bearings and

Wedges. Dimensional drawings.

American Railway Assn. Mechanical Div. Recommended Practice; 1926. Bearings, Journal, Lined. Construction, chemical analysis of brass back and of bearing metal lining, appearance of fracture.

American Railway Assn. Mechanical Div. Journal Bearings; 1920. Dimensions and design for 6 standard sizes, for lined journal bearings.

American Railway Assn. Mechanical Div. Recommended Practice. Journal Bearings, Minimum Thickness for Backs of; 1921. Minimum thicknesses for backs for 6 sizes of bearings.

American Railway Assn. Mechanical Div. Jour-nal Bearing Gages and Journal Wedge Gages for Journals A to F; 1930. Dimensions and

design.

American Society for Testing Materials B 67-28; 1928. Car and Tender Journal Bearings, Lined. Chemical composition and test requirements for backing and for lining, backing of tin-lead-copper, lining of tin-antimony-lead, fracture and chipping test requirements, permissible variations in specified dimensions.

References.—Bearing metals. See 692.1, 692.2. Journal boxes. See 611.22. Ball and roller bearings.

693. SOLDERS

693.1 SOLDER (TIN-LEAD BASE)

American Railway Assn. Telegraph and Telephone Section. 2-G-20; 1926. Rosin Core Solder. Construction, composition requirements for 38 per cent tin solder, percentage of commercial rosin, di-

mensions of finished solder.

American Society for Testing Materials B 18-21; 1921. Approved by American Standards Assn. as K 5-1922. Methods of Chemical Analysis of Alloys of Lead, Tin, Antimony and Copper. Methods apply particularly to babbitt metal and similar lead and tin base alloys. Two methods given of which one is slow but more accurate. Determination of lead, copper, antimony, tin and arsenic.

American Society for Testing Materials B 32-21; 1921. Approved by American Standards Assn. as H 11-1924. Solder Metal. Covers lead-tin alloys known as soft solder. Two classes and five grades for each class, dimensions of bars or ingots, chemical composition requirements and permissible variations, methods of sampling,

National Electric Light Assn. Suggested Specifications D970-28T; 1928. Tentative. Solder. To conform with current specifications of American Society for Testing Materials, requirements on percentages of tin, lead, and antimony for string and for wiping solder.

Society of Automotive Engineers 1931 Handbook. Solder; 1922. Melting points, chemical composi-tion requirements for four grades of tin-lead solders of two classes, class A required for gal-vanized iron and zinc. First three grades are substantially same as A. S. T. M. Specification No. B32-21.

U. S. Gov., Federal Specifications Board 313; 1925. Tin-Lead Solder. For 5 grades of solder of which 3 grades are made of new metals, chemical composition requirements and method of sampling.

where half-and-half solder ordinarily is used, grades B and C for galvanized iron and zinc, grade D for plumbing and wiping, grade E for dip work on auto radiators.

References.—Methods of testing, general requirements for metals. See also 600.1, 692.0.

693.2 SOLDERS, COPPER-ZINC BASE

American Society for Testing Materials B 64-28; 1928. Brazing Solder. For two grades of copperzinc solder, chemical composition and test, grain size requirements for three grades of grain and for lump solder.

Society of Automotive Engineers 1931 Handbook. Brass Wire; 1924. Suitable for brazing and torch welding, chemical composition requirements

for soft annealed wire.

Society of Automotive Engineers 1931 Handbook. Brazing Solder; 1922. Chemical composition requirements for brass brazing solder, information

on melting point.

U. S. Gov., Federal Specifications Board 306; 1925. Spelter Solder (for brazing). Chemical composition requirements for 2 grades of solder in granulated form and 2 grades in ingot, bar, or wire form, the latter two being suitable to parts to be subjected to heat treatment after brazing, main constituents copper and zinc.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11. Brass welding rod. See 645.11.

693.3 SILVER SOLDER

American Society for Testing Materials B 73-29; 1929. Silver Solders. For 8 grades of silvercopper-zinc alloys in wire, strip, sheet or granular form for brazing purposes, manufacture, chemical composition, and sampling requirements.

Grade A for use on galvanized iron and zinc | American Society for Testing Materials. Tentative Standard B 81-31T; 1931. Methods of Chemical Analysis of Silver Solders. Test procedure for determination of silver, copper, cadmium, zinc, tin, lead, iron, and nickel.

U. S. Gov., Federal Specifications Board 307; 1925. Silver Solder. Chemical composition requirements for 3 grades of silver-copper-zinc alloy solder, for ordinary and high strength applications but not for dental purposes, maximum dimensions of strips.

References.—Methods of testing, general requirements for metals. See also 600.1, 644.11.

693.4 SOLDERS FOR ALUMINUM

695. MAGNESIUM AND MAGNESIUM AL-LOYS

American Society for Testing Materials. Tentative Specifications B 80-31T; 1931. Magnesium Base Alloy Castings. Requirements on chemical composition and tension test for 3 grades, including strength requirements for heat treated castings.

References.—Methods of testing, general requirements for metals. See also 600.1. Other light alloys of aluminum. See 631.11, 631.41. Magnesia pipe coverings. Sec 707.43. Chemical compounds of magnesium. See 839.39.

696. ORES, METALS, AND ALLOYS NOT ELSEWHERE CLASSIFIED

American Society for Testing Materials. A 97-27; 1927. Tungsten Powder. Chemical composition requirements, with recommendation for use of A. S. T. M. standard methods of sampling and chemical analysis for ferro-alloys, A 103 and A 104.

References.—Methods of testing, general requirements for metals. See also 600.1. Ferro-tungsten. See 621.25.

700-709 POWER GENERATING EQUIPMENT, EXCEPT ELECTRICAL

700. GENERAL ITEMS

American Railway Assn. Purchases and Stores Div. Standard Material Classification; 1922. Classification of the materials used by railroads under main numbered headings with detail lists of materials under each heading and the unit in which purchased.

American Society of Mechanical Engineers. Power Test Code. Definitions and Values; 1931. Fundamental units and constants, definitions of units of load and of performance, notes on data and computation of test codes.

American Society of Mechanical Engineers. Test Code. General Instructions; 1929. Instructions common to all the power test codes, object of test, preparation, testing apparatus, starting and operating conditions, records, work-

ing up data, and report.

American Society of Mechanical Engineers. Power Test Codes, Instruments and Apparatus, Part 13: 1930. Speed Measurements. Descriptions, principles of operation, relative advantages, installation rules, range and accuracy, precautions in taking readings, for continuous counters and hand counters with watch, tachoscopes, speed indicators, centrifugal tachometers and electric tachometers, stroboscopes.

American Society of Mechanical Engineers. Symbols for Heat and Thermodynamics; 1931. Approved by American Standards Assn. as Z10c-1931. Sponsor organizations, American Assn. for Advancement of Science, American Institute of Electrical Engrs., American Society of Civil Engrs., Society for Promotion of Engineering Education, Am. Soc. Mech. Engrs. Covers general symbols, symbols for specific volume, specific heat, thermodynamic properties and quantities, symbols for saturation, vaporization, heat transmission, etc.

References.—Temperature measurements. See also 919.80. Density determination of solids, luquids, and gases. See also 503.0. Liquid fuels. See 503.0. Can and coke. See 501. Tolerances, allowances, and gages for metal fits. See also 615.82. Heat transmission measurements. See 792.0.

701. STEAM ENGINES AND LOCOMOTIVES 701.1 STEAM ENGINES

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steam Engines. For reciprocating engines and turbines, parts which require steel forgings, strength and bend test requirements for materials, structural features, design formulas to be used for shafting, crankshaft webs, propeller shaft, and coupling bolts, hydrostatic test requirements for cylinders, condenser, evaporator.

American Society of Mechanical Engineers. Power Test Code. Reciprocating Steam Engines; 1926. Applies to tests for determining the performance of the engine alone apart from that of independently driven auxiliaries and of feed water heaters or heat reclaiming apparatus. Required measurements, preparations, operating, forms for tabulation of data and calculations.

American Society of Mechanical Engineers. Power Test Code. Reciprocating Steam-Driven Displacement Pumps; 1925. Applies to tests for performance of pump and engine, including heaters, jacket pumps, circulating, condensate, or vacuum pumps which are concerned in their operation. Required measurements, preparatory tests, starting and stopping instructions, calculations, forms for tabulation and calculations for efficiency and duty.

References.—Donkey engines, see 703.1. Other ship engineering specifications. See 725.42. Steel forgings, shafts. See dos 611.51, 611.52. General requirements on power test codes. See 700. Gaskets, rod packing. See 707.1. 701.2.

701.2 STEAM TURBINES

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steam Engines. For turbines, parts which require steel forgings, strength and bend test requirements for materials, structural features, design formulas for shafting, propeller shaft, and coupling bolts, hydrostatic test requirements for condenser and evaporator.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Propelling turbines for electric propulsion. For direct current and for alternating current drive, recom-mendations on provision of and operating features for governor, overspeed release, throttle valve and trip, automatic shut-off for auxiliary exhaust, limiting means for steam flow to turhine

American Society of Mechanical Engineers. Power Test Code. Steam Turbines; 1928. Instructions and tests to determine the thermal-economy characteristics of the turbine (the heat rate, or, for simple turbines, the steam rate) and the capacity, classification of turbines, essential data, definition and measurement of net output, determination of total steam, condition of steam, conduct of test, forms for tabulating data and calculations.

Associated Factory Mutual Fire Insurance Companies. Centrifugal Fire Pumps; 1931. Steam turbine for driving pump, requirements on steam consumption and speed, provision of and operating requirements for safety valve, speed governors, and pressure regulators, material and speed test of turbine rotor, material and structural features of shaft, critical speed of shaft, installation rules.

References.—Steel forgings, shafts. See also 611.51 611.52. Cast fron, cast steel. See also 611.11, 611.41 General requirements on power test codes. See 700 Speed governors. See 795.

701.3 LOCOMOTIVES

American Railway Assn. Mechanical Div. Recommended Practice. Brackets and Other Means of Support for Air Pumps, Water Pumps, Power Reverse Gears, Feedwater Heaters, etc., on Locomotives; 1930. General types of sheet steel, bar, or cast steel brackets and methods of attachment. American Railway Assn. Mechanical Div. Efficiency Tests of Locomotives, Method of Conducting; 1914. Methods of conducting laboratory

test and road test for determining steam and coal consumption per unit of power, testing apparatus and method of attachment, test data sheets and computation forms for calculating horsepower, boiler efficiency, etc.

American Railway Assn. Mechanical Div. Recom-mended Practice. Rules for Determining Stresses in Locomotive Boilers; 1915. For new construction, rules for determining stresses in longitudinal barrel seams and patches, longitudinal gusset braces and flat surfaces, and in stay bolts.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1930. Tractive Power for Locomotive Booster. Formula recommended for computation of tractive effort of booster.

American Railway Assn. Mechanical Div. tive Power for Mallet Locomotives; 1924. mulas for computing tractive power of 4 cylinder locomotives, simple or compound, for 90 and 50 per cent cut-off.

American Railway Assn. Mechanical Div. Recommended Practice. Tractive Power for Three Cylinder Simple Locomotives; 1926. Formula for computing tractive power for maximum valve cut

off from 90 to 50 per cent.

American Railway Assn. Mechanical Div. Safety Appliances for All Classes of Cars and Locomotives; 1928. For compliance with safety appliance act, requirements on number, dimensions, location, and manner of application of hand brakes, running boards, steps, ladders, handholds, uncoupling levers, and safety railings, with di-

mensioned drawings,

American Society of Mechanical Engineers. Boiler Construction Code. Section III; 1927. Boilers of Locomotives. Selection of materials, ultimate strengths of materials to use, minimum thickness of plates and tubes, construction and maximum allowable working pressures for boilers, boiler joints, braced and stayed surfaces, requirements as to riveting, safety valves, fittings and appliances, hydrostatic pressure tests of boiler.

American Society of Mechanical Engineers. Power Test Code. Steam Locomotives; 1926. Applies to both laboratory and road tests of simple two cylinder locomotive using superheated steam. Measurements required, preparation for test, installation of testing apparatus, starting and stopping instructions, methods of calculating the various items, forms for tabulating test data and calculations for boiler, engine, and locomotive performance.

Railway Fire Protection Assn. Handbook; 1925. Locomotive Fire Hazards. Recommendations on fitting of front ends, on some design points and operation of ash pans, starting and operation of oil burners and recommended mesh and wire size of spark screens for oil burning locomotives.

U. S. Gov., Congress. Public, No. 113; 1893. amended 1896. An act to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their cars with automatic couplers and continuous brakes and their locomotives with driving-wheel brakes, and for other purposes. Besides above, there are requirements for appliances on locomotives for operating the train brake system, provision of grab irons and handholds, and standard height of drawbars.

U. S. Gov., Congress. Public, No. 165; 1908. An act to promote the safety of employees on railroads. Requires locomotives of common carriers to be equipped with ash pans, which can be dumped, emptied or cleaned without the necessity of any employee going under such locomotive.

U. S. Gov., Dept. of Commerce, Bureau of Standards H5; 1923. Approved by American Standards Assn. as B 13-1924. American Logging and Sawmill Safety Code. For steam locomotives for logging railroads, requirements on minimum allowed factor of safety, number, general location, and protection of water glasses, gauge (try) cocks, and gauges, capacity and type of safety valves, design and dimensions of footboards and handrails, equipment requisites in lamps, sand boxes, spark arrestors, and ash pan.

U. S. Gov., Interstate Commerce Commission. Bu-reau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Steam Locomotives and Tenders and Their Appurte-

nances; 1929. Also interpretations, rulings and explanations on questions raised regarding above laws, rules, and instructions; 1921. Requirements, mandatory by law, for new locomotives and for locomotives in service, as regards permissible factor of safety for boiler, allowable stress on boiler stays and braces, design strength of material and rivets, interior and exterior inspection, hydrostatic pressure test, stay bolt testing, location, siphon connection, and testing of steam gauges, number, capacity, and test of safety valves, number and location of water glass and gauge cocks, provision of glass shields, method of

brake compressors and reservoirs, maximum piston travel for brakes, windows and curtains for cabs, cab apron, provision of mechanically operated fire door, safety chains for draw gear, operated are used, safety chains for the self, fit in main and side rod bearings, headlight illumination intensity, cab lighting, minimum diameter of axles for various loads, permissible play in wheel bearings, clearance of pilot, gage of wheels and their pressing on axles, gangway of tender and relative deck height, etc., permitted wear limits and defects appearing in service.

support and height of ash pan, testing of air

U. S. Gov., Interstate Commerce Commission. Bu-reau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Steam Locomotives and Tenders and Their Appurtenances; 1929. Safety Appliance Standards for Locomotives. Requirements, mandatory by law, regarding number, dimensions, location, and application of sill steps, handholds, uncoupling levers, running boards, and handrails, provision

of automatic couplers and of hand-brakes, standard height of draw-bars.

702. ACCESSORIES AND PARTS FOR STEAM ENGINES AND LOCOMOTIVES

702.0 CENERAL ITEMS

Assn. of Iron and Steel Electrical Engineers. Suggested Rules for Guidance in Operation of Engine Stops; 1923.

702.1 CYLINDERS FOR STEAM LOCOMOTIVES

American Railway Assn. Mechanical Division. Cylinders and Cylinder Parts, Cast Iron for Locomotives; 1918. Covers cylinders and cylinder bushings, piston valve bushings, packing rings and bull rings, piston packing rings and piston head or bull rings. Chemical composition, transverse and chill test requirements.

American Railway Assn. Mechanical Div. Recommended Practice. Pressures for Applying Steam Chest and Cylinder Bushings; 1930. Requirements on fit allowances for cast iron bushings, material in accordance with A. R. A. specifications for locomotive cylinders and cylinder parts.

American Society for Testing Materials. A 45-14; 1914. Cast-Iron Locomotive Cylinders. Chemical composition and tests, requirements for transverse test and for fracture test of chilled specimen. Available in Spanish and French from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

References.—Gray cast iron. See also 611.11. Methods of testing cast iron. See also 600.1.

702.2 FRAMES FOR STEAM ENGINES AND LOCO-MOTIVES

American Society for Testing Materials A 87-27; 1927. Carbon Steel Castings for Railroads. For locomotive and car equipment and miscellaneous use, grade A annealed and unannealed, grade B for highly stressed truck side frames, bolsters, couplers, locomotive frames of annealed steel castings, chemical composition and tests, tension test requirements.

References.—Cast steel. See also 611.41. Methods of testing metal. See also 600.1.

702.9 MISCELLANEOUS PARTS FOR STEAM EN-GINES AND LOCOMOTIVES

American Railway Assn. Mechanical Div. Checking Formulas for Main and Side Rods; 1914. Standard formulas for calculating stresses in locomotive main and side rods.

American Railway Assn. Mechanical Div. Rec-ommended Practice; 1929. Crosshead or Wrist Pin. Recommended design and dimensions for several sizes of crosshead pin with maximum recommended pressure on pin, of forged steel according to A. R. A. specifications, type of lubri-

American Railway Assn. Mechanical Div. Recommended Practice; 1929. Crossheads and Guides Recommends alligator type for Locomotives. crosshead and guides, made of cast steel, recommended methods of lubrication and of taking up wear, design recommended, material according to A. R. A. specifications.

American Railway Assn. Mechanical Div. Recommended Practice. Dry Pipes; 1922. For loco-motives, recommended diameters and thickness

of 5 sizes of dry pipes.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. Front and Back Cylinder Heads for Locomotives. Recommended design of cast steel cylinder heads for cylinders up to 32 inches in diameter and boiler pressures up to 300 pounds, material according to A. R. A. specifi-

American Railway Assn. Mechanical Div. Recommended Practice. Injectors, Dimensions for Flange and Screw Couplings for; 1916. Recommended standard form and dimensions of threads for 1- to 3-inch iron or copper pipe connections, form and dimensions of flange couplings, of coupling nuts and sleeves.

American Railway Assn. Mechanical Div. Recom-mended Practice; 1929. Knuckle Joints for Locomotive Side Rods. Recommended design and dimensions of forged steel pins and rod ends, maximum bearing paper, material according to

A. R. A. specifications.

American Railway Assn. Mechanical Div. Recommended Practice. Locomotive Rods for Heavy Power; 1923. Recommendations on general design features.

American Railway Assn. Mechanical Div. Recommended Practice. Main and Other Crank Pins for Locomotives; 1928. Recommended designs and arrangements, dimensions and maximum fiber stresses and bearing pressures, for several pin

American Railway Assn. Mechanical Div. Recommended Practice. Piston Rod and Key Taper in Crosshead; 1923. Two standard recommended tapers for holes in crosshead for accommodating piston rod and piston rod key.

American Railway Assn. Mechanical Div. Recommended Practice. Pistons and Heads for Locomotives; 1928. Recommended dimensions and design of standard cast or wrought steel piston head of conical type, strength requirements for steel, for several sizes of cylinders.

703. BOILERS, FURNACES, EVAPORATORS, CONDENSERS

703.0 GENERAL ITEMS

American Electric Railway Engr. Assn. G1-24; 1924. Standard Boiler Code of A. S. M. E.: 1918 edition of A. S. M. E. Boiler Code approved as the standard of this organization.

American Marine Standards Committee. O No. 6-1926. General Instructions for Operation, Care. and Upkeep of Scotch Type Marine Boilers. Instructions on lighting off a boiler, on water level and feeding boiler, on raising steam and cutting in boilers, operation, on cutting out boilers, on safety precautions, and care and upkeep for both coal fired and oil fired boilers.

American Marine Standards Committee. O No. 14-1927. General Instructions for Operation, Care, and Upkeep of Water-Tube Marine Boilers. Instructions on lighting off a boiler, on water level and feeding boiler, on raising steam and cutting in boilers, operation, on cutting out boilers, on safety precautions, and care and upkeep for both coal fired and oil fired boilers.

American Marine Standards Committee. 26-1930. Care and Operation of Oil-burning Apparatus and Handling of Fuel Oil on Ships. Gives briefly the characteristics of fuel oil, describes the equipment for the use of fuel oil, with general instructions for its safe and proper operation, with notes on hazards in oil tanks, as regards danger of gases from standpoint of flammability and asphyxiation.

American Petroleum Institute. Code No. 2; 1928. Recommended Field Practice for Oil Field Boilers. Installation requirements for firebox type and horizontal return tubular boiler settings, for stacks, pipe, water and steam gauges, safety valves, steam, blow-off, feed water, and fuel piping, fuel burners; operation, firing and cutting in,

cutting out, cleaning boiler.

American Society of Mechanical Engineers. Boiler Construction Code; 1930. Section VI. Suggested Rules for the Inspection of Material for Boilers and of Steam Boilers. For new boilers the inspection of material and construction at the factory, inspection after installation and hydrostatic test; for installed boilers, inspection of scale, corrosion, fire surfaces, joints, tubes, fittings, etc.

American Society of Mechanical Engineers. Boiler Construction Code; 1927. Section VII. Sng-gested Rules for the Care of Power Boilers. boilers in service, for handling boilers out of service, rules for operating and maintaining boiler appliances, rules for routine inspection, rules for the prevention of direct causes of boiler failures including overpressure, overheating, feed water supply, corrosion, partial rules for boiler installation, tests for chemical treatment of feed water.

American Society of Mechanical Engineers. Test Code for Atmospheric Water Cooling Equipment; 1930. For cooling large amounts of water for power or industrial purposes, such as cooling towers, spray nozzle installations, ponds and reservoirs, objects for which tests may be necessary, requirements on types and location of instruments and test apparatus, test data sheets, calculation of results.

American Society of Mechanical Engineers. Power Test Code. Condensing Apparatus; 1925. Types of condensers, starting and stopping test, calculation of heat supplied and heat transferred, forms

for tabulation of data and results.

American Society of Mechanical Engineers. Test Code. Evaporating Apparatus; 1925. For use in testing evaporators, with or without vacuum used in concentrating solutions or distilling by transfer of heat through metal walls from one fluid to another. Measurements required for apparatus heated by steam, starting and stopping instructions, methods of calculating heat transfer, total evaporation, heat balance, forms for tabulating test data and calculations.

American Society of Mechanical Engineers. Power Test Code. Feedwater Heaters; 1925. Applies to open or closed boiler feedwater heaters. Objects for which tests may be run, formula for calculating heat transfer coefficient, forms for tabu-

lating test data and calculations,

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, Part 11; 1930. Determination of Quality of Steam. Descriptions, principles of operation, illustration of types, relative advantages, range and accuracy, installation rules, calculation of results, corrections, calibration, for throttling calorimeters, separating calorimeters, universal calorimeters, superheating calorimeters, electric calorimeters; instructions for the design and location of sampling nozzles.

American Society of Mechanical Engineers. Power Test Code. Instruments and Apparatus. Part 21, Leakage Measurement, chapter 1, Condenser Leakage Tests; 1928. Procedure for making leakage tests by qualitative silver nitrate method, by quantitative silver nitrate method, by short direct-weight method, by standard direct weight method, by electrolytic-conductance method and the specific cases in which each is applicable for

fresh and salt circulating water,

American Society of Mechanical Engineers. Power Test Code. Stationary Steam Generating Units: 1930. Applies to boiler, fuel burning apparatus, superheaters, and economizers, but not to the apparatus required for their operation. Measurements required, instructions for starting and stopping test with hand or stoker firing, forms for test data and computations for efficiency and heat balance of boiler and combinations of boiler with superheater, economizer and air heater, for solid, liquid and gaseous fuels.

National Electric Light Assn. Suggested Code Publ. 289–58; 1929. Operating Code Manual. Suggested Code Covers operation, care, and maintenance of boiler plant, boilers, coal handling equipment, pulverized coal auxiliaries, fans, boiler feed pumps, feed water heaters, evaporators, turbines, reciprocating engines, engine room auxiliaries, etc.

Rules for putting boilers in service, for handling | National Electric Light Assn. Proceedings, vol. 80, p. 373; 1923. Suggested Standards. Rules for General Operation of Stoker Fired Boilers. Covers rules for inspection, general operation, putting a boiler on line, dumping, operation of clinker crushers, procedure for high water, for low water, priming, hot stoker rams, holes in fire, broken gauge glass, shutting down boiler, taking off line, etc.

703.1 BOILERS AND DONKEY ENGINES

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Boilers. Design formulas for working pressure, efficiency of riveted joints, thickness of plates, riveting, thickness of tubes, valve and gauge equipment, hydrostatic test, tensile and bend test requirements for plates, stays and rivet stock, flange, flattening and hydrostatic test for tubes, strength test of castings, etc.

American Marine Standards Committee. E No. 26-1929. Marine Boilers and Pressure Vessels. For internally fired fire tube boilers and for water tube boilers, rules for design and construction, including formulas for working pressure, dimensions and design of cylindrical shells, riveted joints, flat surfaces, tubes, furnaces, etc., required safety factor, accessory requirements, etc.

American Petroleum Institute. Standard No. 2; 1930. Specifications for Oil Field Boilers. (locomotive type). To meet test requirements of A. S. M. E. Boiler Code, standard sizes, definition of horsepower, special construction, standard openings and fittings, stack and flange dimen-

sions, etc.

American Society of Mechanical Engineers. Construction Code. Section I. Power Boilers: 1930. Selection of materials for various parts, specified ultimate strengths of materials, minimuny thicknesses of plates and tubes, allowable working pressures for steel and wrought iron tubes, and for copper tubes, thickness of steam piping of steel, iron, brass, or copper construction and allowable working pressures for boilers, for riveted and welded joints, for ligaments, for domes, dished heads, braced and stayed surfaces, for tube sheets of combustion chambers, requirements as to manholes, safety valves, water glasses and steam gauges, fittings and appliances, specifications for boiler settings and for hydrostatic pressure tests.

American Society of Mechanical Engineers. Boiler Construction Code. Section IV; 1927. Boilers Used Exclusively for Low-Pressure Steam Heating, Hot-Water Heating, and Hot-Water Supply. Cast-Iron Boilers. (Does not include range boiler and gas water heaters for the production of domestic hot-water supply.) Working pressure and temperature limits, requirements as to boiler openings, installation, fittings and appliances, and

hydrostatic tests.

American Society of Mechanical Engineers. Boiler Construction Code. Section V; 1927. Miniature Boilers. Definition, allowable working pressure, material and construction requirements, fittings

and appliances.

U. S. Gov., Dept. of Commerce, Bureau of Standards H5; 1923. Approved by American Standards Assn. as B 13-1924. American Logging and Sawmill Safety Code. For donkey engines and boilers, requirements on minimum factor of safety, number, general location, and protection of water glasses, gauge (try) cocks, and gauges, capacity and type of safety valve, guarding of engine moving parts.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors;

(4 manuals for ocean, bay, lake, and river | vessels.) Boilers and Attachments. For use on steam vessels, mandatory requirements on computation of allowable steam pressure, on punching and drilling of holes, size and reinforcement of manholes, hydrostatic pressure test, design of steam chimneys, riveted joints, stiffeners, and stays, permissible pressures on combustion chamber bottoms and tube sheets, design of furnaces and flues, quality and test of boiler tubes, number and location of fusible plugs, gauges, and other appurtenances, design and test of safety valves, permissible pressures and hydrostatic test requirements for water tube boilers.

References.—Locomotives, Sec 701.3, House heating boilers, Sec 614.4. Fire brick, Sec 534.12, Boiler plates, Sec 604.11, Staybolt fron bars. Sec 903.1, Boiler tubes, boiler accessories, Sec 703.2, 703.2, Boiler tubes, boiler accessories, Sec 703.2, 703.3, Boiler plates, Sec 703.2, Test codes and inspection rules. Sec 700.0, 703.0, Boiler gaskets, Sec 707.11.

703.2 BOILER TUBES

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Boiler tubes. For lap-welded tubes and seamless tubes, requirements on flange test, flattening or crushing test,

and hydrostatic pressure test.

American Electric Railway Engr. Assn. Recommended Specification G100-24; 1924. Specifications for Lap-Welded and Seamless Steel and Lap-Welded Iron Boiler Tubes. (Identical with A. S. T. M. tentative specification A 83-22T.) Covers boiler tubes, boiler flues, superheater tubes, safe ends and arch tubes. Material, chemical properties and tests, flange, flattening, crush, hydrostatic, and etch tests, standard weights of boiler and small superheater tubes.

American Railway Assn. Mechanical Division. Recommended Practice: 1926. Tubes, Boiler, Lap-Welded and Seamless Steel for Locomotives. Chemical analysis, flange, flattening, and hydrostatic test requirements, standard weights and

permissible variations.

American Railway Assn. Mechanical Division. Recommended Practice; 1926. Tubes, Boiler, Lap-Welded Charcoal Iron for Locomotives. Expansion, crush, hydrostatic, etch, and flange test requirements, standard weights and permissible variations.

American Society for Testing Materials. A 83-30; 1930. Lap-Welded and Seamless Steel and Lap-Welded Iron Boiler Tubes. Chemical composition and tests, flange, flattening, crush, hydrostatic, and etch test requirements, standard weights. 1924 edition available in Spanish and Portuguese from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. 1918. Seamless Copper Boiler Tubes. For locomotive boilers. For arsenical and nonarsenical grades, chemical composition requirements, methods of sampling, flange, crush, and hydrostatic test requirements, standard weights and permis-

sible variations.

American Society for Testing Materials. B 14-18; 1918 Seamless Brass Boiler Tubes. For loco-1918. Seamless Brass Boiler Tubes. motive boilers, requirements on chemical composition, flange, flattening, and hydrostatic tests, standard weights and permissible variations.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Boiler Tubes. For use in boilers on steam vessels, mandatory requirements on general quality, flattening test, flanging test, and hydrostatic pressure test.

U. S. Gov., Federal Specifications Board 347: 1925. Lap-Welded and Seamless Steel Boiler Tubes. Suitable for boiler tubes, boiler flues, superheater tubes, safe ends, arch tubes. Chemical composition, hydrostatic test, flange test, and flattening test requirements, standard weights and dimensions and permissible variations.

U. S. Gov., Federal Specifications Board 349; 1925. Lap-Welded Charcoal Iron Boiler Tubes. able for boiler tubes, boiler flues, superheater tubes, safe ends and arch tubes. Standard weights and dimensions and permissible variations, hydrostatic test, flange test, flattening test,

and etch test requirements.

References.—Methods of testing and general requirements for metals. See 600.1. Methods of testing copper and brass. See also 641.0 and 644.11.

703.9 MISCELLANEOUS BOILER AND CONDENSER ACCESSORIES

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Steam Engines. Includes for condenser and evaporator, requirements on hydrostatic tests.

American Marine Standards Committee. O No. 26-1930. Care and Operation of Oil-Burning Apparatus and Handling of Fuel Oil on Ships. Gives briefly the characteristics of fuel oil, describes the equipment for the use of fuel oil, with general instructions for its safe and proper operation, with notes on hazards in oil tanks from standpoint of flammability and asphyxiation properties of the gases.

American Railway Engineering Assn. 1929. Manual. Iron and Steel Structures. Movable Railway Bridges: 1922. Includes steam separator as part of steam power equipment, average efficiency test requirements for separator with 66

per cent quality steam.

American Society of Mechanical Engineers. Boiler Construction Code; 1930. Section VIII. Unfired Pressure Vessels. Specifications of safety valves, allowable design stresses in materials, construction and allowable working pressures of vessel. riveted joints, dished heads, braced and stayed surfaces and openings, vessel supports, hydrostatic pressure test, rules for fusion process of welding, for forge welding, for brazing, requirements for enameled pressure vessels.

Associated Factory Mutual Fire Insurance Companies. Fuel Oil Installations for Furnaces and Engines; 1928. Includes precautions to be observed in the installation of fuel oil burners, as regards reheating and atomizing the oil, the use of automatic interlocking valves and the arrange-

ment of furnaces.

National Board of Fire Underwriters. National Fire Protection Assn., U. S. Dept. of Agriculture. Sponsors. Approved by American Assn. as Z 12a-1930. Installation of Pulverized Fuel Systems. Construction requirements of building to take care of fire and explosion hazard, area of thin glass construction, methods of ventilating and removing dust, installation requirements and and removing dust, instantion requirements and structural features of pulverizers, separators, electrical equipment, dust collectors, blowers, driers, storage and furnace bins, piping, fire protection.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Evaporators, Feed Water Heaters, Separators, and Steam Traps. For use on steam vessels, when made of cast iron, mandatory requirements on strength of material, allowable

working pressure, minimum thickness of parts, permissible stress on bolts, provision of safety

valve on evaporator.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Fusible Plugs. For use on marine boilers, mandatory requirements on shape and dimensions of bored bronze casing and on chemical composition of fusible material in bore.

References.—Brass, Muntz metal, and admiralty metal condenser tubes. See 645.24. Muntz metal condenser tube plates. See 644.21. Condenser tube packing. See 707.23, 707.25. Cast iron. See 611.11. Test codes for various steam plant accessories and equipment. See 703.0. Oll burner ignition transformers. See also 713.5.

704. OIL ENGINES

704.0 GENERAL ITEMS

Associated Factory Mutual Fire Insurance Com-panies. Fuel Oil Installations for Furnaces and Engines; 1928. Includes recommendations for oil engine installations, oil feed piping, and exhaust piping with special reference to fire hazards.

National Board of Fire Underwriters. Internal Combustion Engines and Coal Gas Producers; 1922. For engines, location of engine, location and connections to fuel tank, materials and installation of fuel piping, exhaust piping and muffler, permissible types of construction for mixing fuel, ignition, and starting, gas pressure

regulators, gas bags, etc. Society of Automotive Engineers 1931 Handbook. Diesel Engine Testing Forms; 1931. Definition of rated horsepower, rules for measuring brake loads, fuel consumption, temperatures, speed, friction horsepower, computation of indicated horsepower: forms for listing structural features of engine; curve sheets for plotting horsepower, torque, mechanical and thermal efficiencies, and fuel consumption against speed.

704.1 OIL ENGINES

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Internal Combustion Engines. Requirements on types of materials for various parts, physical test requirements for steel forgings, steel castings, and cast iron, design formulas for crank shafts for Diesel and for explosion combustion engines, design formulas for line shafts and propeller shafts, requirement for auxiliaries.

American Institute of Electrical Engrs. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Diesel Engines for electric drive. Recommendations on provision of quick acting governor to stop flow of oil, recommended maximum no-load speed as percentage

of full-load rated speed.

Diesel Engine Manufacturers Assn. Standards; For Diesel engines, standard practice in correction of ratings for high altitudes, standard conditions and heat value of fuel for fuel guarantees, minimum equipment of stationary engines and of marine engines, standard definitions of terms encountered in Diesel engine practice, notes on selection and installation of Diesel engines.

Underwriters Laboratories. Electric Lighting Plants; 1921. Includes oil engines connected to electric generators; for supply tanks, capacity, location, materials, and wall thickness, construction of joints and connection, fill and vent openings, and pressure-test requirements; for engines, general construction and location of fuel cup or mixing valve, fuel feed, fuel line valves, strainer, muffler, fuel piping and fittings, acceptable meth-

ods of ignition and of supply of ignition gasoline.
Underwriters' Laboratories. Internal Combustion
Engines, Stationary and Portable; 1920. Covers gas, gasoline, kerosene, and fuel oil engines, capacity, location and installation of tank, general design of inside tanks, materials, thickness of metal, construction of joints, connections and openings, pressure test requirements, general design and materials for fuel feed cup, carburetor or mixing valve, of fuel valves, strainer, fuel piping, exhaust piping and muffler, gas regulator and gas bag, acceptable types of ignition.

References.—Installation and fuel supply. See also 70.40, 705.0. Cast iron, cast steel, forged steel. See also 611.11, 611.41, 611.51, and 611.52. Testing forms. See 704.0. Test code for internal combustion engine. See 705.0. Metal fils. See 615.82.

705. GASOLINE ENGINES AND GAS EN-GINES

705.0 GENERAL ITEMS

American Society of Mechanical Engineers, Power Test Code. Internal Combustion Engines; 1929. Applies to the engines only, auxiliaries essential to the operation of the engine must be tested under the appropriate code and the results in horsepower absorbed introduced and used in this code. Measurements required and those useful in determining performance characteristics, preparation for test, instructions for starting and stopping, calculation of thermal efficiency, itemized forms for the tabulation of test data and calculations for constant speed and variable speed and torque tests.

National Board of Fire Underwriters. Combustion Engines and Coal Gas Producers; 1922. For engines, location of engine, location and connections to fuel tanks, materials and installation of fuel piping, exhaust piping and muffler, permissible types of construction for mixing fuel, ignition, and starting, gas pressure regulators, gas bags, etc.

Society of Automotive Engineers 1931 Handbook. Gasoline Engine Testing Forms; 1931. Rules for measuring brake loads, fuel consumption, temperatures, speed, friction horsepower, and computation of indicated horsepower; forms for listing engine structural features, computing of efficiency, etc., curves for plotting torque, horse-power, and mechanical efficiency against speed, fuel economy and thermal efficiency against horsepower.

Underwriters' Laboratories. Internal Combustion Engines, Stationary and Portable Types; 1920. Covers gas, gasoline, kerosene, and fuel-oil engines, capacity, location and installation of tank, general design of inside tanks, materials, thickness of metal, construction of joints, connections and openings, pressure test requirements, general design and materials for fuel feed cup, carburetor or mixing valve, of fuel valves, strainer, fuel piping, exhaust piping and muffler, gas regulator and gas bag, acceptable types of ignition

References.—Automobile engine parts and accessories. See 722.31, 722.32, 722.33. Test code and installation rules. See 705.0, 700.

705.2 MOTORBOAT ENGINES

References.—Motorboat requirements. Standard magneto mountings. See 705.5. See 725 3

705 3 PHMPING ENGINES

American Petroleum Institute. Standard No. 11-C; 1930. Specifications for Internal Combustion Engines and Clutches for Oil Field Service.

Standard foundation bolt sizes, dimensions of reversible clutch and engine flywheel flange connections, and of exhaust and air intake opening connections, method of making horsepower rating

test, procedure and forms for the rating test.

Associated Factory Mutual Fire Insurance Companies. Centrifugal Fire Pumps; 1931. Gasoline engine for driving pump, requirements on excess power, permissible speeds, excess speed test, inclosure of parts, accessibility, capacity of speed governor, lubrication, cooling system, double ignition, provisions for battery charging, trial run of engine, installation of engine and gascline supply.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Stationary Engine Belt Speeds; 1923. Belt speeds for various engine horsepower ratings,

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Stationary Engine Fly-wheel-Pulley Lugs; 1922. Dimensions of lugs on flywheel spokes for four diameters of bolt circles. Society of Automotive Engineers 1931 Handbook.

Recommended Practice. Water Pot or Hopper Capacities; 1921. Cooling water capacities for various engine ratings of stationary engines.

References.—Steam pumping engines. See 701.1. Test codes and installation rules. See 705.0, 700. Magneto mountings and governor. See 705.5.

705.4 GASOLINE ENGINES FOR ELECTRIC GEN-ERATORS

Underwriters' Laboratories. Electric Lighting Plants; 1921. For isolated plant of internal combustion engine and electric generator with or without storage battery, including inside supply tank systems and outside supply tank systems; capacity, location, materials and wall thickness, construction of joints and connections, fill and vent openings, and pressure test requirements for tanks, general construction and location of carburetor, fuel feed, fuel line valves, strainer; material, size and arrangement of fuel piping and fittings, acceptable ignition methods for gasoline, kerosene and fuel oil engines, design of mufiler and other accessories; for generator, type of enclosure, insulation of lead wires, temperature rise and dielectric strength test requirements; for switchboards, spacing of wiring insulation resistance and dielectric strength requirements.

References.—Test codes. See 705.0, 700. Magneto mountings and governor. See 705.5.

705.5 GASOLINE ENGINE ACCESSORIES AND PARTS

Society of Automotive Engineers 1931 Handbook. Farm Engine Governors; 1921. Requires belt operated engines to be equipped with governors and designed for attachment of speed indicators.

No specification for governors.

Society of Automotive Engineers 1931 Handbook. Magneto Mountings; 1923. Dimensions of magneto coupling and shaft end, dimensions of magneto mounting for motorboat, motor truck, passenger car, large stationary engine and tractors, recommended dimensions for same for motorcycles, lighting plant, airplane and small stationary engine, dimensions of nonmagnetic shims.

References.—Automobile engine parts. See also 722.31, 722.32. Gaskets for gas engine exhaust and fnel and water connections. See 707.11.

705.6 AIRPLANE ENGINES

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Part 2, Power-plants. Requirements on use of dual ignition, starting menns, design of intake system, engine

characteristic test, durability test, idling test, overspeed test, and flight test, pressure tests and arrangement of fuel and oil tanks and piping, design and efficiency of cooling system, location and motion of engine controls.

U. S. Gov., Dept. of Commerce. Aeronautics Branch. Aero. Bull. 7-A; 1929. Airworthiness Aeronautics Requirements of Air Commerce Regulations. Requirements that must be met in order to be licensed by department for commercial use, including for engine, requirements on type of ignition, block tests, flight tests, tear-down inspection.

705.7 GASOLINE ENGINES FOR SHIP PROPUL-SION

American Bureau of Shipping. Rules for Building and Classing Steel Vessels: 1930. Internal Combustion Engines. Requirements on types of materials for various parts, physical test requirements for steel forgings, steel castings, and cast iron, design formulas for crank shafts for Diesel and for explosion combustion engines, formulas for line shafts and propeller shafts, requirements for auxiliaries.

References.—Test codes. See 705.0, 700. Cast iron, cast steel, steel forgings. See 611.11, 611.41, 611.51 and 611.52.

706. WATER WHEELS AND WATER TUR-BINES

706.0 GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code. Hydraulic Power Plants and Their Equipment; 1927. Includes both laboratory and field tests for the whole development or for any of the integral parts. Methods for measuring water in closed and open conduits, measurements of head, speed, and power, operating conditions, calculation of power and efficiency, itemized forms for tabulation of test data and calculations.

American Society of Mechanical Engineers. American Assn. for Advancement of Science. American Institute of Electrical Engineers. American Society of Civil Engineers. Society for Promotion of Engineering Education. Approved by American Standards Assn. as Z 10b-1929. Symbols for Hydraulics. Hydraulic engineering symbols including those used in design of water turbines and pumps.

706.1 WATER TURBINES

Machinery Builders Society. Testing Code; 1917. Covers acceptance tests on completed hydraulic turbines after installation in power plant, Requirements on methods of measuring power output by measurements on generator or by absorption dynamometer, measurement of head for inclosed and open flume turbines, measurement of quantity of water by weir, current meter, pitot tube, etc., use of model for efficiency tests.

References.—Speed governors for water turbines. See 795. Metal fits, See also 615.82.

706.2 TURBINE BUCKET WHEELS

707. PACKING, PIPE COVERINGS, AND GASKETS

707.1 GASKETS

707.11 Asbestos-Copper Gaskets

U. S. Gov., Federal Specifications Board. HH-G-71; 1931. Asbestos-Copper Gaskets, Corrugated. For asbestos lined pipe gaskets, requirements on minimum thickness of copper, purity and annealing of copper, content of asbestos in lining, inside diameters, compression test.

1931. Asbestos Metallic Cloth Gaskets. For steam pressures up to 300 pounds, includes all folded gaskets for boiler manholes, handholes, and flanged joints, covers 2 grades of seamless and of jointed types of woven asbestos wire insertion cloth treated with rubber, requirements on number of plies, tolerance on thickness, bend test, size of brass or copper wire, content and quality of asbestos, weave, weight of metallic cloth and of rubber, steam pressure test, methods of test as specified in F. S. B. Spec. 59 for rubber goods.

S. Gov., Federal Specifications Board HH-G-101; 1930. Metallic Encased Gaskets. Covers asbestos copper jacketed gaskets for gas engine exhaust and other high-temperature applications; and cork copper jacketed gaskets for fuel and water connections to gas engine, requirements on thickness of metal, tolerances on gasket dimensions, water content and loss on ignition test for asbestos, oil test and boiling water test for metal cork gaskets, acceptable types of construction, to conform to F. S. B. spec. ZZ-R-601 for rubber goods.

References .- Testing of rubber goods. See 200.

707.12 Paper and Fiber Gaskets

References .- Fiber packing for gaskets. See 707.28.

707.13 Rubber Gaskets

American Railway Assn. Mechanical Div. Air Brake Hose Coupling Gasket; 1926. Dimensions and tolerances of standard gasket.

American Railway Assn. Mechanical Division. Gaskets for Air Brake Hose; 1930. Gaskets of rubber compound, deflection and tension test requirements, dimensioned drawing.

U. S. Gov., Federal Specifications Board 43; 1922. Air Brake and Signal Hose and Gaskets. gaskets for air brake hose and for signal hose, requirements on dimensions, design, deflection test, and tension test.

U. S. Gov., Federal Specifications Board HH-P-156: 1931, Rubber Packings and Gaskets 1931. Rubber Packings and Gaskets. (Molded, Sheet, and Strip.) Grade A for gaskets and packing of doors, hatches, and gun ports, grade B for gauge glasses and base plugs of projectiles, grade C for cold water and hot water, requirements on tolerances on width and thickness, content of rubber, tensile strength, elongation, set, aging and steaming tests, weight, methods of test as specified in F. S. B. Spec. 59.

References.—Methods of testing rubber products. See also 200.

707.14 Cork Gaskets

References.—Metal encased cork gaskets. See 707.11. Corkboard and compressed cork. See 425.2.

707.2 PACKING

707.21 Asbestos Packing

U. S. Gov., Federal Specifications Board HH-P-31: 1931. Asbestos Metallic Cloth Sheet Packing. Covers 2 grades for steam pressures up to 300 pounds, made of woven asbestos wire insertion cloth treated with rubber, requirements on num-ber of plies, bend test, size of brass or copper wire, content of asbestos, weave, weight, amount of rubber, steam pressure test, methods of test as

specified in F. S. B. Spec. 59. U. S. Gov., Federal Specifications Board HH-P-41; 1931. Asbestos Wick and Rope Packings. Requirements on percentage of asbestos, water of composition in asbestos, freedom from wire insertions, sizing, and lubrication, minimum unit weights, for 14-inch wicking and 3% to 114 inch

rope packing.

U. S. Gov., Federal Specifications Board HH-G-76; U. S. Gov., Federal Specifications Board. HH-P-36; 1930. Asbestos High Pressure Rod Packing. For asbestos cloth packing treated with rubber compound, requirements on construction, thread count, content of asbestos fiber and of water in yarn, content of rubber and of sulphur in rubber compound, area of core or spring back, amount of lubricant, steam test, tests according to methods of F. S. B. Spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. HH-P-46; 1930. Compressed Sheet Asbestos Packing. For steam up to 300 pounds, hot or cold water, brine, air, gases of combustion, and fuel oil, for 1 grade of asbestos fiber and rubber mixed, requirements on content of asbestos, tensile strength, tolerance on thickness, methods of test as specified in F. S. B. Spec. ZZ-R-601 for

rubber goods.

U. S. Gov., Federal Specifications Board HH-P-51; 1930. Asbestos Valve Stem Packing. For steam and water pressures up to 300 pounds, also for use with air and fuel oil, for 4 types covering braided asbestos and twisted asbestos types each of which comes in lubricated with oil type and frictioned with rubber type, requirements on construction, percentages of fiber and water in asbestos, amount of lubricant or rubber, testing according to methods of F. S. B. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. HH-P-131; 1930. Plastic Packing, Metallic and Non-metallic. A packing for rods and valve stems for steam and water pressures up to 300 pounds, also for brine, air, gas, and fuel oil. For the nonmetallic packing, requirements on percentages of asbestos fiber, graphite, and binder in packing, percentage of water in asbestos, type of binder, to conform to F. S. B. Spec. ZZ-R-601 for rubber goods.

References.—Semimetallic packing (asbestos). See 707.23. Asbestos cloth and yarn, methods of testing. See also 545.4. Methods of testing rubber goods. See 200.

707.22 Flax Packing

U. S. Gov., Federal Specifications Board HH-P-106: Flax Packing. For flax fiber impregnated with tallow, requirements on general quality of materials, length and strength of staple, content of tallow, weight per yard of packing, percentage of oleic acid, saponification number of tallow, methods of sampling and test.

707.23 Metallic Packing

American Marine Standards Committee. E No. 20-1928. Metallic Packing for Condenser Tubes. Specification of material, dimensions and weight of metallic rings, and of material and size of accompanying fiber ring, with pressure and temperature requirements. Appendix gives features of condenser design and instructions for installation of metallic packing. U. S. Gov., Federal Specifications Board 105; 1923.

Metallic Packing, Fixed Ring Type. For reciprocating rods at 300 pounds steam pressure and for gas pressures, wearing surface entirely metal, requirements on construction and high temperature test for resistance to melting and oxidation.

U. S. Gov., Federal Specifications Board 108: 1923. Solid Metallic Packing (Floating Ring Type). Suitable for reciprocating rods for steam pressures up to 300 pounds, and suitable for gas and liquid pressures, requirements on construction, and heat test for resistance to melting or oxidizing.

U. S. Gov., Federal Specifications Board HH-P-126; 1930. Flexible Metallic Packing. Suitable for rotary rod service and for slip joints, for

steam and water up to 300 pounds pressure and also for brine, air, gas, and fuel oil. Covers metal foil on jute, twine, rubber, asbestos, or plastic metallic core, metal foil twisted in form of square rope, twisted or braided metal strands, and plastic metallic material inside of braided metal jacket, requirements on quality of metal, number of strands in jute core, composition of plastic metal cores, size of wire in jacket, permissible lubricant, coil test, and heating test, to conform to F. S. B. Spec. ZZ-R-601 for rubber

S. Gov., Federal Specifications Board HH-P-131; 1930. Plastic Packing, Metallic and Non-metallic. A packing for rods and valve stems for steam and water pressures up to 300 pounds, also for brine, air, gas, and fuel oil. For the metallic packing requirements on percentages of metal particles, asbestos fiber, graphite, and binder in packing, percentage of water in asbestos fiber, type of binder, to conform to F. S. B. Spec. ZZ-R-601 for rubber goods.

U. S. Gov., Federal Specifications Board HH-P-166; 1930. Semimetallic Packing. Piston rod packing constructed of frictioned asbestos cloth fastened to metallic member, for steam pressures of 300 pounds and air pressures of 3,000 pounds, not recommended for rotary or liquid service, requirements on weave of asbestos, content of fiber and of water, percentage of metal in packing, coiling and heat resistance test, other tests conforming to F. S. B. Spec. 59 for rubber goods.

References.—Asbestos metallic cloth sheet packing. See 707.21, Methods of testing rubber goods. See 200.

707.24 Rubber Packing

U. S. Gov., Federal Specifications Board. HH-P-61; 1931. Diaphragm Packing. Requirements on construction, width, and weight of rolls, thickness of rubber layers and of packing, weight and weave of reinforcing cotton duck, chemical composition of rubber compound, tensile strength, elongation, set, adhesion of layers, and breaking strength of fabric, methods of test specified in F. S. B. Spec. 59 for rubber goods.

U. S. Gov., Federal Specifications Board. HH-P-171; 1931. Low Pressure Spiral Gland Packing. Made of slab stock built up of frictioned duck, requirements on construction, weight, thickness of rubber cover, content of new rubber, acetone extract, and sulphur in rubber cover, amount of lubricant, bending and adhesion of parts tests using methods of test of F. S. B. Spec. 59 for

rubber goods.

U. S. Gov., Federal Specifications Board. HH-P-151; 1931. Cloth Insertion Rubber Packing. Covers one grade for flanges of ventilation systems and for cold water, and one grade for cold water where separation is frequent, requirements on general quality, weave and weight of fabric, tolerance on thickness, content of new rubber, permissible acetone extract and sulphur, tensile strength, elongation, and set of rubber, adhesion test of rubber and fabric, weights, test methods as specified in F. S. B. Spec, 59 for rubber goods.

U. S. Gov., Federal Specifications Board. HH-P-156; 1931. Rubber Packings and Gaskets (Molded, Sheet and Strip). Grade A for gaskets and packing of doors, hatches, and gun ports, grade B for gauge glasses and base plugs of projectiles, grade C for cold water and hot water, requirements on tolerances on width and thickness, content of rubber, tensile strength, elongation, set, aging and

steaming tests, weight, methods of test as speci-fied in F. S. B. Spec. 59. U. S. Gov., Federal Specifications Board HH-P-181; 1931. Tuck's Packing. For square Tuck's packing of frictioned canvas layers and for round

or square Tuck's made with a rubber core, requirements on texture of plies and number per inch, boiling test, flexibility, and adhesion of plies, and cored for the type, requirements on size of rubber in core, tensile test, test methods specified in F. S. B. Spec. 59.

References.—Testing of rubber goods. See 200. Methods of testing textile fabrics. See 300.4.

707.25 Cotton and Canvas Packing

U. S. Gov., Federal Specifications Board. 99: 1923. Fabric Condenser Tube Packing. Commercially known as cotton corset lacing, requirements on weave, approximate diameter and weight.

U. S. Gov., Federal Specifications Board HH-P-181: 1931. Tuck's Packing. For square Tuck's packing of frictioned canvas layers and for round or square Tuck's made with a rubber core, requirements on texture of plies and number per inch, boiling test, flexibility, and adhesion of plies, and for the cored type, requirements on size, rubber in core, tensile test, test methods specified in F. S. B. Spec. 59.

References.—Methods of testing rubber goods. 200. Methods of testing textile fabrics. See 300.4.

707.26 Leather Packing

U. S. Gov., Federal Specifications Board 496; 1927. Hydraulic Packing Leather. For 3 grades of butt bends or sides, vegetable tanned, requirements on trim, permissible defects, finish, thickness, cracking, tensile strength and stretch, water absorption, chemical composition, methods of test.

References .- Methods of analysis. See also 060.

707.27 Jute Packing

707.28 Fiber Packing

U. S. Gov., Federal Specifications Board HH-P-91; 1931. Hard Fiber Sheet Packing. For gray fiber made by treating cotton cellulose paper with zinc chloride, requirements on general quality, specific gravity, tensile strength, tolerance on thickness, permissible water absorption. Used for gaskets in water, oil, and air connections for gas engines, and for carbon dioxide gas.

U. S. Gov., Federal Specifications Board HH-P-96; 1930. Fiber Packing for Lubricating and Fuel Oil. Covers impregnated paper sheet packing for oil and gasoline pipe joints, requirements on construction, general qualities, resistance to water, percentage of moisture, tensile strength, bend test, and weight, methods of test as specified in F. S. B. Spec. 59 for rubber goods.

References.—Methods of testing rubber goods. See 200. Methods of testing fiber board. See also 470.3. Other fiber board. See 472.93.

707.3 RUBBER VALVES FOR PUMPS

American Society for Testing Materials Tentative Specifications. D 151-31T; 1931. Rubber Pump Valves. For pumps equipped with grid type seats, for hard, medium, and soft grades for use with various water temperatures and pressures, requirements on content of rubber, hardness, dry heat test, steam test, tolerances on dimensions, chemical analysis in accordance with A. S. T. M. method D 297-29T.

U. S. Gov., Federal Specifications Board 114a; 1925. Rubber Valves. Covers hard, medium, and soft valves for pumps equipped with grid-type seats. Requirements for tolerances in dimensions, dry heat and steam heat tests, percentage of rubber, acetone extract, sulphur content, hardness, method of measuring hardness.

References .- Methods of testing rubber goods. See also 200.

707.4 PIPE COVERINGS AND BOILER LAGGING

707 40 General Items

American Marine Standards Committee. E No. 19– 1928, Cotton Duck for Insulation Coverings. Requirements on length, weave, thread count, ply, width, weight, strength, and methods of testing and sampling.

American Railway Assn. Purchases and Stores Div. Standardization and Simplification of Stores Stocks; 1926. Boiler Lagging, Flat and Curved. Dimensions of 5 standard sizes.

References.-Heat transmission tests. Sec 792.0.

707.41 Cork Pipe Coverings

American Marine Standards Committee, E. No. 14-1928. Insulation of Piping and Machinery on Includes requirements for cork insulation, types of insulation projects to which applicable, construction, thickness and application of cork coverings to pipes and fittings.

S. Gov., Federal Specifications Board LLL-C-571; 1931. Compressed Cork (Corkboard). Corkboard intended for insulation, requirements on behavior and expansion in boiling test, weight

of material, dimensions of blocks.

S. Gov., Federal Specifications Board HH-C-571; 1931. Granulated Cork for Insulating Purposes. Requirements on baking, screen grading,

and weight.

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures. (For Land Use). Pipe Covering. Sectional molded cork covering 11/4 inches thick, requirements for manufacture, type of jacket, application of covering to pipes and valves, for drinking or ice water supplies where specified.

References .- Duck for insulation coverings. 707.40.

707.42 Asbestos Coverings, for Pipes and Boilers

American Marine Standards Committee, E No. 31-1930, Molded Insulation Coverings for Temperatures Over 550° F. Requirements number and thickness of layers of high temperature covering and of magnesia coverings for various sizes of pipe, requirements on abrasion resistance of high temperature insulation and test require-ments on hardness, heat insulating value, loss of weight and shrinkage, permissible weight.

American Marine Standards Committee. E No. 14-14-1928. Insulation of Piping and Machinery on Ships. Includes requirements for asbestos in-sulation, types of insulating projects to which applicable, weave and weight requirements for asbestos cloth, reference to A. M. S. C. specifications for asbestos mill board, requirements on thickness, construction, and application of asbestos insulation to pipes and machinery.

Asbestos Bureau, (Inc.) Standard Asbestos Bureau Code; 1931. Aircell Insulation. For insulation made of corrugated asbestos paper, requirements on thickness of ply or corrugation, structural features, standard number of plies

and thickness of insulation.

Asbestos Bureau, (Inc.) Standard Asbestos Bureau Code; 1931. Hi-Temperature Insulation. For temperatures up to 1600° F., requirements on composition, weight, continuous temperature test, and compressive strength under heat.

References.—Standard sizes of boiler lagging. See 707.40. Asbestos paper, millboard, and textile. See also 545.4. Duck for insulation covering. See 707.40.

707.43 Magnesia Coverings for Pipes and Boilers

American Marine Standards Committee. E No. 15-1928. Magnesia Molded Pipe Covering and Blocks. Specification of material, weight and thickness for 85 per cent magnesia, methods of

test for hygroscopic moisture, chemical analysis, and loss on ignition. Substantially identical with that issued by the Federal Specifications Board

American Marine Standards Committee. E No. 14-1928. Insulation of Piping and Machinery on Ships. Includes requirements for magnesia insulation, types of insulation projects to which applicable, reference to A. M. S. C. specifications for magnesia for insulation, requirements on thickness, construction and application of magnesia insulation to piping and machinery.

American Marine Standards Committee. E No. 16-1928. Magnesia Asbestos Plaster. Specifications for material for 85 per cent magnesia plaster, test methods for moisture, chemical analysis, loss on ignition. Substantially identical with F. S. B.

specification.

Asbestos Bureau, (Inc.) Standard Asbestos Bureau Code; 1931. 85 per cent Magnesia. Requirements on content of magnesium carbonate and of asbestos fiber, soaking heat test, conductivity, density, transverse strength, compressive strength, weight of canvas jacket, standard thicknesses of pipe covering.

U. S. Gov., Federal Specifications Board HH-M-51: 1931. Magnesia Asbestos Plaster. For 85 per cent magnesia material, requirement on composition, molding and heating test, weight, methods of analysis. Used for insulating pipes and other

surfaces against heat.

U. S. Gov., Federal Specifications Board HH-M-71; 1931. Magnesia Molded Pipe Covering and Blocks. For 85 per cent magnesia material for pipe covering and lagging, requirements on composition, weight, standard thicknesses of pipe covering, weight of canvas cover, size and mate-rial of attachment bands, sizes of rectangular blocks, methods of analysis,

S. Gov., Federal Specifications Board 1826. Plumbing Fixtures (For Land Use). Heater and Tank Covering. 85 per cent magnesia covering, block or plastic, minimum thickness, finish, and method of application requirements.

References.—Standard sizes of boiler lagging. See 707.40. Duck for insulation covering. See 707.40.

707.44 Felt Pipe Coverings

American Marine Standards Committee. 1928. Insulation of Piping and Machinery on Ships. Includes requirements for hair and wool felt insulation, types of insulation projects to which applicable, reference to A. M. S. C. specifications for felt insulating material, requirements on thickness, construction, and application of felt insulation to pipes and machinery.

American Marine Standards Committee. E No. 18-1928. Hair Felt for Insulation. Specification for material, weight and size of hair felt. Substantially identical with Federal Spec. Board

specification for the same material.

Asbestos Bureau, (Inc.) Standard Asbestos Bureau Code; 1931. Solid Wool Felt Insulation. Requirements on general construction, tolerance on thickness, and type of linings for cold water and for hot water pipes.

U. S. Gov., Federal Specifications Board 158; 1924. Hair Felt. For cattle hair felt suitable for pipe covering and general low temperature insulating purposes, requirements on general quality, width, weight and area per roll for thicknesses up to 2 inches

U. S. Gov., Federal Specifications Board 448; 1926. Plumbing Fixtures (For Land Use). Pipe Covering. Where required. Minimum thickness of wool felt sectional covering, lining and jacket materials, dimensions, finish, and application of bands, types of plastic materials and their applications to valves and fittings, for hot and cold water supplies.

References.—Other specifications and methods of testing for felt. See 365.98. Duck for insulation coverings. See 707.40.

707.45 Fire Clay Insulation for Boiler Furnaces

American Marine Standards Committee. E. No. 14– 1928. Insulation of Piping and Machinery on Ships. Includes requirements for fire clay insulation, types of insulation projects to which applicable, reference to A. M. S. C. specifications for fire clay insulation material, requirements on thickness, construction, and application of fire clay insulation to furnaces.

References .- Fire clay refractories. See also 534.12.

708. HEATING EQUIPMENT FOR POWER PLANTS

References .- Heating equipment. See 792.1.

710-719

ELECTRICAL MACHINERY AND SUPPLIES

710. GENERAL ITEMS

American Institute of Electrical Engineers. Standard No. 1; 1925. General Principles Upon Which the Temperature Limits are Based in the Rating of Electrical Machinery and Apparatus. Classification of insulating materials, methods of temperature determination, limiting observable temperatures and temperature rises. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Report on Standard No. 2; 1927. Standard Definitions. Definitions of electrical terms taken from the approved standards of the A. I. E. E. A committee report making recommendations to the A. I. E. E.

American Institute of Electrical Engineers. Standard No. 4; 1928. Measurement of Test Voltage in Dielectric Tests. Measurement with voltmeter, needle spark gap and sphere spark gap, tables of sparkover voltages, specification of testing equipment.

American Institute of Electrical Engineers. Standard No. 17g1; 1928. Letter Symbols for Electrical Quantities. Approved by American Standards Assn. as Z10g1-1929.

American Institute of Electrical Engineers. Report on Standards for Graphical Symbols Used for Electric Power and Wiring. (17g2); 1930. A committee report covering recommended standard symbols for use in wiring diagrams, etc., for power apparatus, instruments and relays, and for maps and connection diagrams.

American Institute of Electrical Engineers. Standard No. 42; 1023. Joint sponsors with American Institute of Architects, Assn. of Electragists-International, under American Standards Assn. procedure, C 10–1924. Standard Symbols for Electrical Equipment of Buildings. Symbols for drafting purposes.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Nature of Supply. Lists recognized standard systems of distribution as 2 wire, 3 wire, and 8 phase 3 wire, standard voltages for motors, lighting, and generators for direct current and for alternating current, standard frequency.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Standard Symbols. Standard drafting symbols are illustrated and defined for marine lighting, heating, power and interior communication systems.

American Mining Congress, U. S. Bureau of Mines, sponsors under auspices of American Standards Assn. M 2-1926. Safety Rules for Installing and Using Electrical Equipment In Coal Mines. Definitions, limitations on voltage and capacity, use of insulated platforms, grounding of frames and sheaths, guarding of circuits, installation and protection of motors and controllers, safety

devices for electric hoists, construction of underground stations and switchboards, installation of lamps, requirements for portable electrical equipment, installation and protection of circuits, trolley wires, signal and telephone circuits, and shotfiring circuits.

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, pt. 18; 1930. Speed Measurements. Descriptions, principles of operation, relative advantages, installation rules, range and accuracy, precautions in taking readings, for continuous counters and hand counters with watch, tachosopes, speed indicators, centrifugal tachometers and electric tachometers, stroboscopes.

American Society for Testing Materials. A 34–28; 1928. Methods of Test for Magnetic Properties of Iron and Steel. For induction and hysteresis measurement, definitions, requirements for test specimens, 4 methods of test listed but not described, limitations of each method; for core loss measurement, definitions, procedure, requirements of testing apparatus, and sampling; for measurement of properties at low inductions and audio-frequencies, requirements for test specimen, apparatus, and procedure, calculation of induction and permeability.

American Society for Testing Materials. Tentative Definitions. A127-31T; 1931. Definitions of Terms, With Units and Symbols, Relating to Magnetic Testing.

Assn. of Railway Electrical Engineers 1929 Manual. Section C; 1928. Electrical Construction. Installation and Maintenance of Electrical Equipment. Safety practices in construction of buildings, power plant, switchboards, motor and control equipment, wiring, grounding practice and resistance of grounds, storage battery rooms, installation and maintenance of batteries, resuscitation methods.

National Electric Light Assn. Proceedings, vol. 83, p. 622; 1926. Symbols for One Line Wiring Diagrams. Suggested standard drafting symbols for one line diagrams for a. c. rotating apparatus, d. c. rotating apparatus, power, potential, and current transformers, induction regulators, oil and air circuit breakers, disconnecting and horn gap switches, resistors, instruments, etc.

National Electrical Mfrs. Assn. and National Electric Light Assn. Preferred Voltage Ratings for A. C. Systems and Equipment; 1930. Tables of preferred voltage ratings for alternating current generators, motors, general apparatus, distribution transformers, substation and general purpose transformers, generating station transformers, interconnection transformers for reversible tie purposes.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 112-315. Approved by American Standards Assn. as C 6-1925. Connections and Marking of Terminals for Electric Power Apparatus. Significance of terminal letter and subscript numeral, terminal letters assigned to different types of windings and their functions, illustration of use of

markings on connection diagrams.

National Electrical Manufacturers Assn. book of Apparatus Standards; 1928. 120.4-15 and 112.4-25. Abbreviations. Standard abbreviations for power apparatus, switchboard, con-

trol, and switching equipment, descriptions.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 120.6-15. Graphic Symbols, Standard symbols recom-mended for electrical apparatus on wiring

diagrams.

National Electrical Mfrs. Assn. Publ. 31–10; 1931, Switchgear Standards. Definitions and Symbols. Standard definitions, including many of those of Am. Inst. of Elec. Engrs., covering properties and characteristics of apparatus, service classification, rating, relays, switches, power switch-boards, metal clad and automatic switchgear, oil and air circuit breakers, high voltage fuses, standard graphic symbols.

Society of Automotive Engineers 1931 Handbook. Insulation Test of Electrical Apparatus: 1926. High voltage test requirements for gasoline automobile electrical apparatus on circuits of 6 to 40

volts, except batteries.

U. S. Gov., Dept. of Commerce. Bureau of Standards C17; 1926. Magnetic Testing. Methods of measurement for magnetic testing used by the bureau, including several methods for normal induction and hysteresis, the Lloyd method for core loss, and the method for susceptibility, descriptions of apparatus, properties necessary in mag-netic standard test specimens for standardizing permeameters.

U. S. Gov., Dept. of Commerce, Bureau of Standards C56; 1923. Standards for Electric Service. Proposed rules for State public utility commissions regulating electric service companies, including rules on operation and maintenance, pole identification and inspection, grounding of circuits, location of meters, meter testing facilities, accuracy and periodic testing of meters, voltage and frequency standards, accident records, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards H4; 1928. Discussion of the National Electrical Safety Code. A 334-page handbook discussing the rules of the fourth edition of the code and the

method of their application.

U. S. Gov., Dept. of Commerce, Bureau of Standards H6; 1926. Approved by American Standards Assn. as part of C 2-1927. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Rules covering methods of protective grounding of circuits, equipment, and lightning arresters for stations, protective arrangements of stations and substations, protective arrangements of equipment, guarding shaft ends, pulleys, and belts, provision of working space about equipment, shielding of equipment, identification, hazardous locations, guarding live parts, for various types of station equipment.

U. S. Gov., Dept. of Commerce, Bureau of Standards H7; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For 25 to 750 volt equipment which is accessible to other than qualified electrical operators, rules on installation, grounding, protection, provision of guards, etc., for conductors, fuses, circuit breakers, switches, controllers, switchboards, motors, electric furnaces, fixtures and signs, portable devices, electric locomotives

and cranes, telephone apparatus exposed to supply lines, etc.

References.—Protection of electrical circuits and equipment against lightning. See 715.50, 715.51. Ground clamps. See 719.72. Tolerances for metal fits. See also 615.82.

711. ELECTRIC GENERATORS AND MO-TORS

711.1 ELECTRIC GENERATORS

711.10 General Items

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. as C1-1931. Generators. Requirements on protection of terminals and live parts, location of generator, permissible types and arrangement of excessive current protective devices, grounding requirements.

711.11 Alternating Current Generators

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Generators. Requirements on tension and bend test for steel forgings for shafts of propulsion generators, voltage ratings of auxiliary generators, permissible temperature rises on full load, insulation resistance and dielectric strength test requirements.

American Institute of Electrical Engineers. Standtors and Synchronous Machines in General. Does not include synchronous converters of alternating to direct current. Definitions, classifications as ard No. 7; 1927. Alternators, Synchronous Moto enclosure, protection, and duty, rating, heating limits, temperature determination, overload, short-circuit, and overspeed requirements, calculation of natural frequency, measuring efficiency, dielectric test, insulation resistance, voltage regulation, allowable deviation factor, allowable variation in voltage and frequency of motors. No limits given for efficiency and regulation. 1925 edition available in Spanish from Bureau of For-eign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Alternating Current Generators for turbine electric drive. Recommendations on structural and operating features of forced ventilation, fire extinguisher equipment, heaters for preventing of condensation, maximum voltage, provision of temperature detectors, short circuit protection, prevention of circulating currents through journals, installation, lubrication, temperature rise and test for 50° C, ambient and dielectric test in accordance

with A. I. E. E. standards.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Generating Sets, Alternating Current. For other than propulsion generators, recommendations on standard phase, voltage, and frequency, rating at 80 per cent power factor, temperature rise and insulation requirements in accordance with A. I. E. E. standard No. 7, capacity of exciter.

American Railway Assn. Signal Section. 1920. Alternator. General structural requirements, permissible variation of wave form from sine shape, overload and short-circuit capacity, test requirements for polarity, resistance of windings, dielectric strength, insulation resistance, saturation, and temperature rise according

to rules of Am. Inst. of Elec. Engrs.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG14-55.

Generators, Alternating Current (Exclusive of turbo-generators, single phase alternators, inductor alternators, or induction generators). Standard basis of rating, frequency ratings, recommended voltage ratings and permissible temperature rise, standard output and speed ratings for alternators and recommended ratings for engine type generators, requirements on standard excitation voltage, overload capacity, dielectric test, operation at 0.8 power factor, overspeed capacity, terminal markings, recommended bores for rotors.

References.—Protection requirements. See also 711.10. Definitions, symbols, voitage and frequency standards, methods of test, safety codes. See also 710. Cast iron, forged steel, shafts. See also 611.1, 611.51, 611.52. Plain bearings, ball and roller bearings. See also 692.8, 766.2. Copper wire. See 715.44.

711.12 Direct Current Generators

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Generators. Requirements on tension and bend test for steel forgings for shafts of propulsion generators, voltage ratings of auxiliary generators, permissible temperature rises on full load, insulation resistance and dielectric strength test requirements.

American Institute of Electrical Engineers. Standard No. 5; 1925. Direct Current Rotating Machines, Generators and Motors. Does not include fractional horse power, synchronous, or railway motors. Definitions, classification as to speed, inclosure, protection, ventilation, and duty; rating, heating limits, temperature tests, commutation, overspeed limits, efficiency, dielectric and insulation resistance tests, regulation tests, direction of rotation. No limits specified for efficiency and regulation. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Deut. of Commerce.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Generating Sets, Auxiliary. For direct current generating sets, recommendations on number and size of generating sets, standard voltages, voltage regulation and compounding, lubrication when tilted, parallel operation, limits of temperature rise and voltage insulation test, spare parts, installation.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Exciters. Generators for excitation of propulsion equipment, recommendations on type of drive, on maximum rated voltage, method of varying voltage, temperature rise and diectric test in accordance with A. I. E. E. standards for 50° C. ambient.

American Railway Assn. Mechanical Div. Recommended Practice. Axle Generator Equipment; 1930. Recommended capacities and sizes of axle generators for various classes of railway service, maximum speed, general structural features and insulation, chemical composition and physical properties of carbon steel for shaft, air gap clearance, heating test, high speed test, dielectric test, operating requirements for automatic generator regulating apparatus, test requirements for lamp regulator.

American Railway Assn. Mechanical Div. Recommended Practice. Locomotive Lighting; 1927. For turbo-generator, requirements on system voltage, minimum capacity of generator, steam pressure rating of turbine, capacity of speed regulator, location and method of attachment to locomotive, sizes of steam pipes, ball bearings, and brushes, setting of brush holders.

American Railway Assn. Signal Section 1411; 1911. Electric Generator. Shunt wound, self-excited generator with self-oiling bearings, maximum rated speed, continuous and overload capacity requirements and allowable temperature rise for the connected storage battery load.

Assn. of Railway Electrical Engineers 1929 Manual. Electric Train Lighting; 1928. Includes axle generator specifications, recommended sizes and capacities of 40 volt generators for various railway cars, requirements for frame, field coils, armature, bearings, air gap, leads, composition and strength of armature shaft, test requirements for rating verification at 65° C. rise, high speed, high voltage.

Assn. of Railway Electrical Engineers 1929 Manual. B-1; 1928. Turbo-Generator. 32 volt lighting turbo-generator of about 500 watts, mounting details, sizes of steam connections, ball bearings, brushes, and brush holders, lubrication requirements.

Automotive Electric Assn. Generators; 1925. Classification of generators into 5 classes, for 6-volt automotive service, requirements on speed, current, and voltage characteristics, permissible temperature rise for given conditions in each class.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG14-10 Generators, Direct Current. Basis of rating of 2-wire and 3-wire generators, standard and recommended voltage ratings, permissible temperature rise at rated load, recommended practice on degree of compounding and bore diameters, requirements on overload test, commutation, voltage regulation of 3-wire generators, dielectric test, direction of rotation.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG16-10. Prepared in cooperation with Soc. of Automotive Engrs. Isolated Electric Farm Lighting Plants. Recommended practice on voltages and number of cells of storage batteries, on output, voltage, and speed ratings of generator, on permissible temperature rise at rated load, on commutation, and on delectric test.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Voltage and Capacity Ratings for Isolated Electric Lighting Plants; 1928. Nominal generator voltage, service voltage, and speed for standard outputs, standard number of alkaline or lead tyre battery cells.

age, and speed for statute outputs, scharling number of alkaline or lead type battery cells. Underwriters' Laboratories. Electric Lighting Plants, 1921. Includes for generators, type of inclosure, insulation of lead wires, temperature rise and dielectric strength test requirements.

References.—Generators for arc welding. See 767.
Protection requirements. See also 711.10. Synchronous converters. See 713.2. Definitions, symbols, voltage standards, methods of test, safety codes. See also 710. Automobile generator mountings. See 722.32. Chast Iron, forged steel, shafts. See also 611.11, 611.51. Gil.52. Plain bearings, ball and roller bearings. See also 692.3, 766.2. Copper wife. See 715.44. Airplane generator mountings.

711.2 ELECTRIC MOTORS

711.20 General Items

Assn. of Iron and Steel Electrical Engineers. Report of Special Bearing Committee on Application of Roller Bearings to Mill Type Motors; 1929. Includes data sheets showing the bearing sizes applicable to various size motors, for bearings of various make and motors of various manufacture.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. as C1-1931. Motors. Protection of terminals and live parts, requirements on type, location and rating of disconnecting means, general requirements on acceptable types of controllers. p. 519; 1923. 1923 Revision of Motor Rules. Suggested rules on installation and use of motors. including provision of no-voltage protection, reverse phase relays, allowable starting current and allowable running current values for various sizes of motors.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG4-10. Manufacturing Practice. Standard classification of insulating materials, basis of rating of general purpose motors, standard location of terminals, standard lettering of dimension sheets, direction of rotation, recommended standard taper for

tapered shafts.

National Electrical Manufacturers Assn. and Generator Standards; 1930. Rule MG50-10. Definitions. Definitions of terms, classification of motors by power, type of inclosure, system of cooling, features of design, duty and service, speed, definitions of rating, of performance and test, of

complete machines and parts.

National Machine Tool Builders Assn. T-1; 1927. Driving Speeds. Five recommended standard speeds for machine tool drives, two recommended standard speeds for constant speed motors for machine tool drive, recommended standard sizes of machine pulleys resulting in 9 standard ratios between motor and machine speeds.

711.21 Alternating-Current Motors

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Motors. Re-quirements on tension and bend test for steel forgings for shafts of propulsion motors, lubrication and operation at 15° inclination for auxiliary motors, permissible temperature rises on full load, insulation resistance and dielectric strength test requirements.

American Institute of Electrical Engineers. Standard No. 7; 1927. Alternators, Synchronous Motors and Synchronous Machines in General. Does not include synchronous converters of alternating to direct current. Definitions, classification as to inclosure, protection, and duty, rating, heating limits, temperature determination, overload, short-circuit, and overspeed requirements, calculation of natural frequency, measuring efficiency, dielectric test, insulation resistance, voltage regulation, allowable deviation factor, allowable variation in voltage and frequency of motors. No limits stated for efficiency or regulation. 1925 edition available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 9; 1927. Induction Motors and Induction Machines in General. Definitions, classification as to speed, inclosure, protection, ventilation and duty, heating limitations, temperature tests, overspeed and torque limits, efficiency measurements, tests of dielectric strength and insulation resistance, direction of rotation, allowable variation in voltage and frequency. No limits stated for effi-ciency. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept.

of Commerce.

American Institute of Electrical Engineers. Standard No. 10; 1925. Direct and Alternating Current Fractional Horsepower Motors. Definitions, classification as to speed, inclosure, protection, ventilation, and duty, rating, heating limitations, commutation, overspeed and torque limits, efficiency measurement, dielectric test, regulation, and rotation. No limits stated for efficiency or regulation. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

National Electric Light Assn. Proceedings, vol. 80. | American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Motors. Alternating Current. For other than propulsion motors, recommendations on standard voltages, lubrication in tilted positions, provision of non-corrodible small parts, limits of temperature rise and insulation voltage tests, type of motor as regards winding, inclosure, speed variation. and time rating applicable to steering gear, deck machinery, engine room motors, blowers, and pumps. For brakes, recommendations on construction and inclosure, limits of temperature rise, short circuit and high potential tests, torque rating, application of various types.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Alternating Current Motors for turbine electric ship drive, Recommendations on type and operating features of ventilating equipment, fire extinguishing means, heater, temperature detectors, slide rails for moving stater, temperature rise test for 50° C ambient and dielectric test in accordance with A. I. E. E. standards, installation, lubrication.

American Petroleum Institute. Standard No. 11–F; 1930. Electric Induction Motor Performance Data. List of guaranteed performance data and of performance test data on the individual motor and controller to be furnished by the manufacturer, to be in accordance with standards of Am, Inst. of Elec. Engineers and Nat. Elec. Mfrs. Assn., horsepower rating based on 40 degrees temperature rise, for single power rated and double

motor rated motors.

American Railway Engineering Assn. 1929 Manual, Iron and Steel Structures. Movable Railway Bridges; 1922. Includes induction motors, slip ring and high resistance rotor squirrel cage types, stalling torque and maximum rated speed requirements, permissible temperature rise for operation at rated load for specified times, heat and high potential tests in accordance with standardization rules of American Institute of Electrical Engineers,

American Society of Refrigerating Engineers. Circular No. 5; 1926. Specifications for Synchro-nous Motors. Covers motors designed for direct connection to ammonia compressor. Specification of flywheel effect, and itemized form for tabulating the dimensions and operating data of the compressor which the motor must be designed

to meet.

Associated Factory Mutual Fire Insurance Companies. Centrifugal Fire Pumps; 1931. For alternating current motors for driving pump, requirements on starting and permissible starting current, temperature rise and overload test, impregnation of windings, types of bearings, design

of inclosures for inclosed types.

Assn. of Iron and Steel Electrical Engineers. A. C. Motors for Main Roll Drive. Undated, For induction motor, tests in accordance with rules of Am. Inst. of Elec. Engrs., rating based on 50° C. rise, general structural requirements for stator, rotor, bearings, bearing supports, rating of resistors, operating requirements for primary and secondary control, construction, operating and temperature limit requirements for liquid slip regulators, detail specifications to be furnished

Assn. of Railway Electrical Engineers, Short Time Duty Motors Such as for Turntables, Bending Rolls, Cranes, etc.; 1923. Permissible temperature rises for various time duties, general requirements for commutation, bearings, shaft.

for a. c. and d. c. motors.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG8-10. Small Power Motors, Universal. Under 1 hp., definitions of plain series and compensated series types, standard voltage and frequency ratings, standard dimensions of 7 stator sizes, dielectric test requirements, operation at variations from rated voltage and frequency, standard shaft extension dimensions.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG8-80. Small Power Motors, Alternating Current. Under 1 hp., classification, standard voltage and frequency ratings, permissible temperature rise, recommended practice on load and speed ratings, on torque characteristics, on dimensions of pulleys, belts, and shaft extensions, requirements on dielectric test, minimum efficiency and power factor, operation on variations from rated voltage and frequency, taper of shafts, direction of rota-

tion, etc.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG9-310. Large Power Motors, Single Phase. For 1 hp. and larger, 40° to 75° C. rating motors, standard voltage, frequency, load, and speed ratings, permissible temperature rise at rated load, requirements on starting, pull-in, and break down torques, on dielectric test, operation on variations from rated voltage and frequency, recommended practice on pulley and belt dimensions, on shaft extensions, standard direction of rotation, location of terminals, etc.

National Electrical Manufacturers Assn. and Generator Standards; 1930. Rule MG9-509. Large Power Motors, Polyphase Induction. For 1 hp. or over, 40° to 75° C. rating motors, standard voltage, frequency, load and speed ratings, permissible temperature rise, requirements on starting, multin and heach and speed results of the starting. starting, pull-in, and break down torque, dielectric test, operation on variations of voltage and frequency, recommended practice on pulley, belt, and shaft extension dimensions, standard shaft

taper, etc.

National Electrical Manufacturers Assn. and Generator Standards; 1930. Rule MG10-10. Large Power Motors, Synchronous. For separately excited motors, standard voltage and frequency ratings, recommended load and speed ratings for general purpose and compressor type motors, permissible temperature rise, permissible pulsating armature current with reciprocating machinery, calculation of natural frequency of motor-compressor, requirements on starting, pullin, and pull-out torques, dielectric test, operation on variations from rated voltage and frequency.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG12-50. Elevator Motors, Alternating Current. For highspeed type, basis of rating, recommended practice on torque, horsepower, and time temperature rating, on operation at variations in voltage and

frequency.

National Electrical Manufacturers Assn. and Generator Standards: 1930. Rule MG12-110. Crane Motors, Alternating Current. Standard horsepower and speed ratings, permissible temperature rise for wound rotor open type motors

up to 40 h.p.

National Electrical Manufacturers Assn. and Generator Standards; 1930. Rule MG18-15. Frequency Converters and Motors Above 60 Cycles for Industrial Purposes. For high frequency motors up to 180 cycles, recommended practice on voltage and frequency rating and on permissible temperature rise.

References.—Motors for railway signals. See 718.41, Motors for hazardous locations. See 711.25. Railway

motors. See 711.3. Definitions, symbols, voltage and frequency standards, rating standards, classification, methods of test, protection, safety codes. See also 710, 711.20. Electric tools. See 711.24. Brushes. See 711.42. Synchronous converters. See 713.2. Impression of the first seed of 13.5 of 13.5 converted at 13.

711.22 Direct-Current Motors

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Motors, Re-quirements on tension and bend tests for steel forgings for shafts of propulsion motors, lubrication and operation at 15° inclination for auxiliary motors, permissible temperature rises on full load, insulation resistance and dielectric strength test requirements.

American Institute of Electrical Engineers. Standard No. 5; 1925. Direct-Current Rotating Machines, Generators and Motors. Does not include fractional horse power, synchronous, or railway motors. Definitions, classification as to speed, inclosure, protection, ventilation, and duty; rating, heating limits, temperature tests, commutation, overspeed limits, efficiency (no limits of efficiency set), dielectric and insulation resistance tests, regulation tests (no limits set), direction of rotation. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 10; 1925. Direct and Alternating Current Fractional Horsepower Motors. Definitions, classification as to speed, inclosure, protection, ventilation, and duty, rating, heating limitations, commutation, overspeed and torque limits, efficiency measurement, dielectric test, regulation, and rotation. No limits given for efficiency or regulation. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept.

of Commerce.

American Institute of Electrical Engineers, Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Direct Current Motors for propulsion. Recommenda-tions on structural and operating features of forced ventilation, overload protection, maximum designed voltage, protection of terminals, means for jacking over rotor, installation, lubrication, temperature rise and test for 50° C. ambient and dielectric test in accordance with A. I. E. E. standards.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Motors, Direct Current. For auxiliary motors, recommendations on standard voltages, lubrication at angles of tilt, provision of noncorrodible parts, limits of temperature rise and insulation voltage tests, spare parts, installation, types of motors as regards type of winding, inclosure, speed variation, and time rating for engine room auxiliaries, steering gears, deck winches, windlasses, cap-stans, pumps, ventilating fans and blowers, galley and laundry appliances. For brakes and magnetic clutches, recommendations on construction and inclosure, limits of temperature rise and high potential tests, torque rating, types applicable to various motor equipment.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes direct current motors, series type, with commutating poles conforming to rules of American Institute of Electrical Engineers, maximum speed rating, permissible temperature rise for operation for 30

minutes at rated output.

Associated Factory Mutual Fire Insurance Companies. Centrifugal Fire Pumps; 1931. For direct-current motors for driving pump, requirements on ratio of no load to full load speed, temperature rise and overload test, impregnation of windings, types of bearings, design of inclosures for inclosed types.

Assn. of Iron and Steel Electrical Engineers. Standardize Commutating Pole Mill Type Motor; 1927. General design of split frame motor with end capsules for mounting sleeve or roller bearings, over-all dimensions, dimensions of mounting holes, of gears, of axle-shaft details for 7 frame sizes of mill and crane motors, 71/2 to 75 horsepower, speed, torque, and gear ratios.

Assn. of Railway Electrical Engineers. Short Time Duty Motors Such as for Turntables, Bending Rolls, Cranes, etc.; 1923. Permissible temperature rises for various time duties, general requirements for commutation, bearings, shaft, for

a. c. and d. c. motors,

Automotive Electric Assn. Standard Ratings for Starting Motors; 1925. Standard ratings for 4 sizes of motors as used with corresponding standard battery sizes, giving locked torque and horse-

power at 400 r. p. m.

power at 400 r. p. m.
National Electrical Manufacturers Assn. Motor
and Generator Standards; 1930. Rule MG8-10.
Small Power Motors, Universal. Under 1 hp.,
definitions of plain series and compensated series
types, standard voltage and frequency ratings,
standard dimensions of 7 stator sizes, dielectric test requirements, operation at variations from rated voltage and frequency, standard shaft ex-

tension dimensions.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG8-30. Small Power Motors, Direct Current. Under 1 hp., standard voltage ratings, standard windings, recommended load and speed ratings, permissible change in speed with load and heating, dielectric test requirements, operation at variations from rated voltage, permissible variation from rated speed, direction of rotation, permissible temperature rise, recommended practice on dimensions of

pulleys, belts, and extension shafts. National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG9-10. Large Power Motors, Direct Current. 1 hp. and larger, 40° to 75° C. rating motors, standard voltage ratings, recommended practice on load and speed ratings for constant speed, adjustable speed, and machine tool motors, on speed limitations for belt and for gear drive motors, on time rating for machine tool motors, requirements on dielectric test, permissible change in speed with load and heating, temperature rise, variation from rated speed, recommended dimensions of

pulleys, belts, shaft extensions, terminal box, standard shaft taper and direction of rotation. National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG9-120. Direct Current Motors for Direct Connection to Centrifugal Fans. Standard horsepower and speed ratings for slow speed adjustable and constant speed ventilating fan motors, permissible temperature rise, dielectric test requirements.

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG12-10. Elevator Motors, Direct Current. For geared high-speed type and for gearless type, recommended practice on voltage ratings, on load and speed ratings, temperature rise, on dielectric test, on speed variations with heating and with load, operation at other than rated voltage.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Electric Vehicle Motors; 1923. Motor rating to be based on temperature rise of 65° C. after 4-hour run, two classes of motors dependent on voltage rating for electric vehicles except industrial trucks and tractors.

711.3 RAILWAY MOTORS

American Institute of Electrical Engineers, Standard No. 11; 1925. Approved by American Standards Assn. as C35–1928. Railway Motors. Direct and alternating current motors, definitions, rating, heating limits and measurement, measurement of efficiency and insulation resistance, dielectric strength requirements. Available in Spanish from Bur. of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

References .- See references under 711.25.

711.4 ACCESSORIES AND PARTS FOR MOTORS AND GENERATORS

711.42 Carbon Brushes for Motors and Generators

Society of Automotive Engineers. 1931 Handbook. Recommended Practice. Brushes; 1921. For starting motors and lighting generators, increments of variation in dimensions, and maximum

tolerances in dimensions.

U. S. Gov., Dept. of Commerce, Bureau of Standards. R56-28; 1928. Carbon Brushes and Brush Shunts. Simplified practice recommended and accepted by industry establishing a standard schedule of sizes and dimensions of carbon brushes and brush shunts, dimensions and tolerances of round and rectangular brushes, standard bevels and chamfers, lengths, sizes and stranding of shunts, sizes of terminals on shunts.

712. BATTERIES AND ELECTROPLATING APPARATUS

712.0 GENERAL ITEMS

American Railway Assn. Signal Section. taining and Handling Dry Cells; 1927. General characteristics of ignition and heavy service cells. general purpose cells and telephone cells, interpretation of voltage and short circuit readings, maintenance, storage, effect of temperature.

Assn. of Railway Electrical Engineers, 1929 Manual C-III; 1928. Recommended Storage Battery Installation and Maintenance Practice. Construction of mastic acid-resisting floors for battery room, assembly, installation, charging, and maintenance of lead-acid and of nickel-iron storage batteries.

712.1 PRIMARY BATTERIES

American Railway Assn. Signal Section 8720; 1921. Type A Caustic Soda Primary Cells and Renewals. Dimensions of jars, bolts, and nuts, jars and bolts according to A. R. A. specifications, test requirements for capacity and operating voltages.

American Railway Assn. Signal Section 12623; 1923. Cylindrical Dry Cells. Salammoniac cells with depolarizer and nonspillable electrolyte in zinc container, dimensions, nonflow requirements for sealing compound, voltage rating, useful life test requirements for light intermittent, heavy intermittent, and continuous discharge tests.

American Railway Assn. Telegraph and Telephone Section. 2-G-23; 1927. Dry Cells. Dry cells No. 6 for telephone and telegraph, ignition, etc., salammoniac cells, construction, solidity requirements of sealing compound, dimensions of cells, useful life test requirements by light intermittent, heavy intermittent, and shelf tests.

ings and shaft clearances, lead entrances, inclo-sure joint construction, etc., explosion tests.

| Electrochemical Society. Standardization of Tests for Dry Cells Used in Radio Receiving Sets; 1924. Recommended tests for filament or A batteries and for plate or B batteries, type of voltmeter required, standard temperature.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 331-111. Dry Cell "A" Batteries. Requirements on methods of test for heavy load test and for light load test, standard location of terminals and recommended markings, standard dimensions and recommended shape.

Ommended shape.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 331-112. Dry Cell "B" Batteries. Requirements on methods of making continuous and intermittent load tests. standard designations for various types and sizes of batteries, standard location and marking of terminals, standard dimensions.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 331-113. Dry Cell "C" Batteries. Requirements on method of making life test, standard designations for various types and sizes, standard type, location, and marking of terminals, standard dimensions.

Radio Manufacturers Assn. (Inc.). M2-151, and M4-411 to M4-423, incl.: 1930. Dry Cells. For dry cell A batteries, requirements on maximum dimensions and location of terminals, recommended practice on type of and marking of terminals, maximum current drain in use, shape of carton, methods of test for heavy and light load tests.

Radio Manufacturers Assn. (Inc.) M2-152 and M4-411 to M4-423, incl.: 1930. Dry Cells, For dry cell B batteries and C batteries, standard designations of types for various sizes and arrangement of cells, standard location and marking of terminals, maximum dimensions, methods of test for continuous and intermittent load tests for B batteries and for life test of C batteries.

U. S. Gov., Dept. of Commerce, Bureau of Standards R104-30; 1930. Packaging of Flashlight Batteries. Simplified practice recommended and accepted by industry establishing a standard packaging for flashlight cells, number of cells per package for small size cell and for large size cell

for 3 standard packages.

U. S. Gov., Dept. of Commerce, Steamboat Inspec-tion Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels. Flash Lights and Batteries. As life boat equipment on ocean and lake vessels, for an all-metal 3-cell flash light, mandatory requirements on general construction of sal ammoniac type batteries.

U. S. Gov., Federal Specifications Board W-B-101: 1931. Approved as regards technical requirements, by American Standards Assn. as C18– 1930. Dry Cells and Batteries. Covers No. 6 cell for general purposes, for telephone service, and for radio "A" battery, assembled batteries of No. 6 cells, flashlight cells and batteries, radio "B" batteries, and radio "C" batteries. Requirements on standard dimensions, construction, materials, voltage test and capacity tests on intermittent and continuous loads,

712.2 STORAGE BATTERIES

American Institute of Electrical Engineers. Standard No. 36; 1928. Approved by American Standards Assn, as C40-1928. Storage Batteries. Construction, definitions of parts, of capacity, voltage, charging, discharging, efficiency, and rating.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Auxiliary Lighting and Power Batteries. Recommended requirements on life of battery for lead and alkaline types, connection of lead plates, current carrying capacity of connecting bars, marking of terminals, type and number of wood and rubber separators, flow test of sealing compound, jars and cell covers of hard rubber, spill test for portable and nonportable types, construction of wood containers for cells, provision of porcelain skids and container separators.

American Railway Assn. Signal Section 4915; 1915. Nickel-Iron Alkaline Storage Battery. Standard capacities and definition of rating, dimensions and weight, charging and discharging test requirements, weight of electrolyte required.

American Railway Assn. Signal Section 5328; 1928. Storage Battery. Stationary composite type lead batteries for signaling service, dimensions, standard capacities and definition of rating, construction of pure lead positive plate and of pure lead or pasted type negative plate, dimensions of glass jars, trays, and covers, wood separators, gravity and amount of electrolyte, charging and discharging tests.

American Railway Assn. Signal Section 5828; 1928. Storage Battery. Pure lead type station-ary battery for signaling service, dimensions, standard capacities and definition of rating, dimensions of rolled or cast Plante type plates, of glass jars, trays and covers, of wooden separators, gravity and amount of electrolyte, charging and

- discharging test.

American Railway Assn. Signal Section 8820; 1921, Lead Type Portable Storage Battery for Signaling. Standard capacities, 72-hour test requirements for rating, dimensions, construction, materials, and assembly requirements for wooden case and cover, rubber jar and cover, grids, wooden and rubber separators, strength and elongation of rubber for jars, gravity of electro-lyte, acid proofness and fluidity of sealing compound.

Assn. of Edison Illuminating Companies. Manual of Storage Battery Practice; 1926. Description, installation practice, application as stand-by source of power for power systems, operation, maintenance and repairs of stationary batteries, description and operation of vehicle batteries.

Automotive Electric Assn. Standard Ratings for Storage Batteries; 1925. For 6 volt passenger car batteries, requirements on voltage current discharge characteristics for 4 sizes of batteries.

National Battery Mfrs. Assn. Cold Weather Per-formance Test; 1930. Tentative standard rating tests for starting batteries for cold weather performance and for room temperature performance.

National Battery Mfrs. Assn. Recommended Dimensions for Battery Case Compartments. Undated. A blueprint showing recommended dimensions and tolerances with compartment lengths in conformity with Soc. of Automotive Engrs. standards

National Battery Mfrs. Assn. Standard Bushing Type Covers; 1930. Blueprint showing dimensions of 2 types of standard cell covers for storage batteries, position of positive terminal marking

shown.

National Electrical Manufacturers Assn. book of Apparatus Standards: 1928. 128-215. Storage Batteries, For Use in Mining and Industrial Locomotives. For capacity based on 6-hour rating, requirements on minimum thicknesses of tray parts, tensile strength and elongation of material of hard rubber jars, dimensions of 4 classes of hard rubber jars, design of 4-rib and of 2-rib types.

National Electrical Manufacturers Assn. Hand-book of Radio Standards: 1928, 332-311. Storage "A" Batteries. Definition of ampere-hour rating based on 100-hour discharge rate, requirements on

type and marking of terminals.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 332–311. Storage "B" Batteries. Definition of milliampere hour rating based on 200-hour discharge rate, recommended number of cells in each unit, requirements on type and marking of terminals.

Radio Manufacturers Assn. (Inc.). M4-451 to M4-454, incl.: 1930. Storage Batteries. Definitions of standard capacity rating for storage "A" batteries and for storage "B" batteries, number of cells in storage "B" batteries, marking of ter-

minals.

Society of Automotive Engineers 1931 Handbook. Aircraft Storage Batteries; 1929. For lead acid storage batteries, definitions of ratings, requirements on dimensions and allowable weight, 5-hour rating, and 20-minute rating for 3 sizes of 6-cell batteries.

Society of Automotive Engineers 1931 Handbook. Storage Batteries; 1928. For lead-acid storage battery, definition of two ratings for lighting service and starting service, respectively, location and polarity of terminal posts, dimensions of terminal posts, requirements of battery compartments, and holding down devices, dimensions of batteries for passengers, for motor trucks, and for motor coaches.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Storage Battery Ratings for Isolated Electric Lighting Plants: 1923. Definition of rating for continuous rating and for intermittent rating, method of test for determin-

ing intermittent rating.

U. S. Gov., Dept. of Commerce, Bureau of Mines, Schedule 2C; 1930. Explosion Proof Mine Equipment. Battery Boxes and Batteries. Requirements for approval for use in gassy and dusty mines, including requirements on ventilation, insulation of trays from battery box, strength of materials in battery box, provision of locked cover,

U. S. Gov., Federal Specifications Board W-B-131; 1930. Storage Batteries for Ignition, Lighting, and Starting. For several sizes of 3-cell and 6-cell batteries for automobiles, motor trucks, and motor coaches, requirements on over-all dimensions, arrangement of cells, current ratings, construction, type of scparators, dimensions of plates and terminal posts, purity and density of electrolyte, material and test requirements for cell jars and battery cases, methods of testing.

References.—Installation and maintenance. See 712.0. Battery boxes. See also 712.3. Battery terminals and lusters. See also 712.9. Sulphuric acid. See 821.7. Caustic soda. See 834.8.

712.3 BATTERY CASES

American Railway Assn. Signal Section. 8820; 1921. Lead Type Portable Storage Battery for Signaling. Includes hard rubber jars and covers for batteries, dimensions and construction, high temperature resistance, tensile strength and elongation requirements.

American Railway Assn. Signal Section 8820; 1921. Lead Type Portable Storage Battery for Signaling. Includes wooden outer case and case cover, of oak, maple, beech, birch, or ash, dimensions, construction and assembly, size and application of reinforcement strap and bolt, bail handle and painting requirements.

American Railway Assn. Signal Section 11328; 1928. Battery Jar. Dimensions, solubility in caustic soda, heating, and chilling test requirements, for primary signal batteries, material glass.

American Railway Assn. Signal Section 11622; 1922. Cement Concrete Battery Box. Dimensions of box, size, type, and placing of reinforcement, general quality of sand, quality and size of stone or gravel, mixing proportions and con-sistency of concrete, construction of sheet iron covered wooden top cover, painting, test require-ments for strength and leakage of box, and for humus content of sand.

American Railway Assn. Signal Section 11728; 1928. Battery Jar. For storage battery, dimensions, test requirements for heating and chilling,

material glass.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Storage Battery Mono-bloc Containers; 1926. Dimensions for six compartment and for three compartment containers of two standard heights and various lengths.

Society of Automotive Engineers 1931 Handbook. Storage Battery Jars for Electric Vehicles; 1921. Tensile strength and elongation requirements of hard rubber for hard rubber jars, dimensions of two and four ribbed jars for both passenger cars

and trucks.

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 2C; 1930. Explosion Proof Mine Equipment. Battery Boxes and Batteries. Require-ments for approval for use in gassy and dusty mines, including requirements on ventilation, insulation of trays from battery box, strength of materials in battery box, provision of locked cover.

U. S. Gov., Federal Specifications Board W-B-131; 1930. Storage Batteries for Ignition, Lighting, and Starting. Includes cell jars and battery case specifications. For hard rubber cell jars, test requirements for electrical breakdown, tensile strength and elongation; for battery cases, test requirements for distortion, resistance to impact, electrical breakdown, and acid absorption.

References.—Wood containers for cells, glass jars, battery trays and covers. See also 712.2. Methods of testing rubber goods. See 200.

712.4 BATTERY ELECTROLYTE

References.—Sulphuric acid, sal ammoniac. 21.7, 831.4. Caustic soda, copper sulphate. See 821.7, 831.4. 834.8, 839.33.

712.5 BATTERY ANODES AND CATHODES

American Railway Assn. Signal Section 3328; 1928. Gravity Battery Coppers. For 2 or 3 leaf coppers, gage and purity of copper leaves, size and insulation of copper lead wire, rivet and washer requirements, dimensions and assembly of leaves.

American Railway Assn. Signal Section 3428; 1928. Gravity Battery Zincs. Dimensions, weight, chemical composition.

712.9 MISCELLANEOUS BATTERY ACCESSORIES

Society of Automotive Engineers 1931 Handbook. Storage Battery Terminals: 1928. Dimensions of cable type and of strap type terminal.

713. TRANSFORMERS, ELECTRIC CON-VERTERS AND CONDENSERS

713.1 ELECTRIC CONDENSERS, STATIC

American Institute of Electrical Engineers. port on Standards for Capacitors (No. 18); 1930. Committee report recommending standards including definitions, classification, and rating of capacitors, permissible current leakage,

requirements on ground test.

National Board of Fire Underwriters. National

Electrical Code; 1931. Capacitors (Static Condensers). Requirements for installation, inclo-

sure, and grounding.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 334-011. Fixed Paper Capacitors. Test requirements for voltage breakdown and insulation resistance tests, tolerances on capacitance, standard working voltages, standard dimensions of metal containers, standard type terminals, standard size capacitor-paper roll.

Radio Manufacturers Assn. (Inc.). M2-114, and M4-311 to M4-317, incl.; 1930. Fixed Paper Capacitors. Requirements on conductor current allowed and insulation resistance, voltage test, methods of test, diameter of standard roll of capacitor paper, tolerance on rated capacity, standard working voltages for direct current and

for alternating current.

References.—Definitions, symbols, rating basis, standard voltages and frequencies, methods of test, safety code. See also 710.

713.2 SYNCHRONOUS CONDENSERS AND CON-VERTERS

American Institute of Electrical Engineers Standard No. 8; 1925. American Standards Assn. C 21-1926. Synchronous Converters. Does not include frequency or rotary phase converters. Definitions, protection, ventilation, duty, rating, heating limits, temperature tests, over-load, commutation, power factor, and over-speed limitations, measurement of efficiency, tests of dielectric strength and insulation resistance. No limits stated for efficiency. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

National Electrical Manufacturers Assn. Generator Standards; 1930. Rule MG18-15. Frequency Converters and Motors Above 60 Cycles for Industrial Purposes. For frequency converters up to 180 cycles, recommended practice on voltage and frequency ratings, on temperature rise, recommended voltage regulation for frequency converters for wood working machinery

and machine tools.

References.—Definitions, symbols, rating standards, voltage and frequency standards, methods of test, pretection, safety codes. See also 710, 711.20. Brushes, See 711.42. Alternating current motors. See 711.21. Cast Iron, forged steel, shafts. See also 611.11, 611.51, 611.52. Plain bearings, ball and rother bearings. See 692.3, 760.2. Copper wire. See 715.44.

713.3 DYNAMOTORS

713.4 MOTOR GENERATORS

National Electrical Manufacturers Assn. Motor and Generator Standards; 1930. Rule MG20-10. Synchronous Motor Generator Sets, 200 kw. and Larger. Standard voltage, output, and speed ratings for 2-unit and 3-unit sets, requirements on overload capacity, permissible temperature rise, operation at 0.8 power factor.

Reforences.—Motors, alternating current. See 711.21.
Generators, direct current. See 711.12. Synchronous
converter. See 713.2. Electric welding machines. See
767. See also references under 711.21 and 711.12.

713.5 TRANSFORMERS

American Institute of Electrical Engineers. Standand No. 12; 1930. Constant Current Transformers of the Moving Coil Type. Definitions, permissible temperature rise and methods of measurement, requirements on dielectric test and lead markings.

American Institute of Electrical Engineers. Stand-Transformers, Induction ard No. 13; 1930.

Regulators and Reactors. Not including instrument transformers, testing, series street lighting, ignition, radio, small special transformers or autostarters. Definitions and classification of apparatus including duty and rating classification, permissible temperature rise and method of measurement, requirements on short circuit capacity and dielectric strength, test methods including those for measurement of efficiency and regulation, standard lead markings for transformers. 1925 edition is available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers Standard No. 14; 1925. American Standards Assn. C 22-1925. Instrument Transformers. Definitions, rating, heating measurement and limits, short-circuit and open-circuit limits, dielectric test, polarity and terminal markings. Available in Spanish from Bureau of Foreign and Domestic

Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers Standard No. 100; 1930. Recommendations for the Operation of Transformers. Recommendations on limiting oil temperature, operation at rated load, operation at high cooling medium temperatures, and operation at greater than rated load.

American Institute of Electrical Engineers. Pro-

posed Test Code for Transformers, Preliminary Report; 1931. Covers the more generally applicable and accepted methods of conducting and reporting tests of a commercial nature, including resistance measurements, ratio test, polarity, noload loss and exciting current, load loss and impedance voltage, temperature test, dielectric test, regulation, efficiency.

American Railway Assn. Signal Section 8330; 1930. Single-Phase, Air-Cooled Track Transformer. Requirements on terminal board and connection construction, aging test for core ma-terial, insulation and surface leakage distance, size of leads, tests for dielectric strength, excess voltage, exciting current, temperature rise, po-larity, voltage ratio, and regulation, using methods of test of Am. Inst. of Elec. Engrs.

American Railway Assn. Signal Section 8431; 1931. Line Transformer, Oil Immersed. Self-Cooled. General design requirements for case, terminals and connections, composition and fluidity of sealing compound for bushings, aging test for core material, insulation of coils, test requirements for exciting current, voltage ratio, polarity, regulation, dielectric strength, and tem-

perature rise.

American Railway Assn. Signal Section 10720; 1921. Switchboard. Includes instrument transformers, load capacity and high voltage test requirements in accordance with Am. Inst. of Elec. Engrs. standards, requirements on ability to withstand high temperature, on overload capacity of current transformers, secondaries rated 5 amperes for current transformers and 110 volts for potential transformers.

American Railway Assn. Signal Section 14328; 1928. Transformers. For signal lighting and for operation of rectifiers for charging storage batteries, standard primary voltages from 115 to 575 volts, type of insulation, surface leakage distance, test requirements for dielectric strength,

excess applied voltage, exciting current, voltage ratio, polarity, regulation and temperature rise. Assn. of Edison Illuminating Companies, Joint sponsor with National Electric Light Assn. and Nat. Bureau of Standards. Approved by American Standards Assn. as C 12-1928, Code for Electricity Meters. Includes current transformers for meters, high voltage test requirements for the insulation, temperature rise according to

A. I. E. E. standards, allowable errors in ratio and phase angle for different loadings, and also

due to effect of polarization.

Assn. of Edison Illuminating Companies. Joint sponsor with National Electric Light Assn. and Nat. Bureau of Standards. Approved by American Standards Assn. as C 12-1928. Code for Electricity Meters. Includes voltage transformers for meters, high voltage test requirements for insulation, temperature rise according to A. I. E. E. standards, allowable phase angles and deviations in ratio for various loads, power factors and voltages.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Auto-Transformers. Protection of live parts, internal clearances in case, oil level indication, number of switch positions, operating, and grounding requirements,

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Transformers. For 600 volts or less, requirements for inclosures for oil filled transformers in buildings, and for air space about air cooled transformers, grounding. For over 600 volts, permissible location, provisions of circuit breakers and control apparatus, isolation of control apparatus, protective apparatus for service wiring, construction, materials, and design of transformer vaults.

National Electrical Manufacturers Assn. book of Apparatus Standards; 1928. 122.2-150. Transformers for Lighting and Power Service. Classification, standard kilovolt-ampere and voltage ratings and tap provisions, permissible temperature rise, use of Am. Inst. of Elec. Engrs. methods for temperature test, methods for testing voltage regulation and efficiency, dielectric test requirements for windings and for oil, induced voltage test requirements, standard lead markings, connections, polarities and accessories.

National Electrical Manufacturers Assn. book of Apparatus Standards; 1928. 124-810. Oil Circuit Breaker Bushing Type Current Transformer. Standard number of taps, standard current ratings, standard method of marking

polarity taps.

National Electrical Manufacturers Assn. book of Apparatus Standards; 1928. 126.2-60. Instrument Transformers. For current and potential instrument and tripping transformers, types and forms, requirements on ratio accuracy, on short circuit and open circuit limitations of current transformers, permissible temperature rise and method of test, requirements on dielectric test of transformers and transformer oil, on polarity standard and marking, on standards for primary terminals for current transformers.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 322-511. Audio Apparatus for Receivers. Requirements on insulation resistance and method of test, standard arrangement and marking of radio and audio transformers, recommended practice on insula-tion and electrolysis test of audio transformers. resistance standards for output transformers and inductors, requirements of temperature test and method of making ratio and quality tests of audio

transformers.

National Electrical Manufacturers Assn. book of Radio Standards; 1928. 333-418. Transformers for Socket Power Units for Receiving Sets. Requirements on insulation of primary, and provision of non-combustible materials in construction excepting insulation.

National Electrical Mfrs, Assn. Publ. No. 31-10; 1931. Switchgear Standards. Oil Circuit Breakers. 1931. Includes bushing type current transformers for circuit breakers, requirements on 713.7 RECTIFIERS number of taps, standard current ratings of primary, standard turn ratios, standard method of identifying leads, standard transformer connections

Radio Manufacturers Assn. (Inc.). M2-113 and M2-131; 1930. Audio Transformers. Methods of test for determining the effect of moisture on audio transformers and for measuring the ampli-

fication per stage.
Underwriters' Laboratories. Transformers; 1931. For air-cooled transformers for general use with ratings of 600 volts or less and 10 kva, or less, requirements on thickness of metal and construction of inclosures, mounting, treatment of coils, size and insulation of connecting leads, acceptable types of terminals and terminal mountings, heating test, dielectric test, and overload test.
