nderwriters' Laboratories. Industrial Control Equipment; 1931. Includes auto-transformer Underwriters' starter, requirements on number of operating positions, operating characteristics, load test and temperature rise allowances for various parts,

dielectric strength test.

Underwriters' Laboratories. Transformers: 1931. For bell ringing transformers, requirements on thickness of metal and construction of inclosures, mounting, treatment of coils, sizes, types, insulation, and installation of connecting leads and terminals, voltage ratings, open circuit voltage, primary input limit, heating and dielectric test,

for 2-coil type. Laboratories. Transformers: 1931. For gas tube sign transformers, 2-coil type, requirements on thickness of metal and construction of inclosures, treatment of coils, types, spacing, and mounting of terminals, sizes and spacing of leads, grounding, maximum voltage ratings, open circuit voltage and input test, short circuit,

heating, dielectric, and open circuit tests. Underwriters' Laboratories. Transformers; 1931. For oil burner ignition transformers, 2-coil type, requirements on thickness of metal and construction of inclosures, treatment of coils, sizes, types, insulation, and spacing of connecting leads and terminals, grounding, tests for open circuit secondary voltage, input, endurance, heating, dielectric strength, and short circuit, for high voltage and low voltage types.

Underwriters' Laboratories. Transformers; 1931. For toy transformers, 2-coil type, requirements on design and thickness of metal of inclosure. mounting, treatment of coils, length, insulation, and attachment of flexible cord, sizes and mounting of terminals, voltage ratings, open circuit voltage, input and output limits, tests for dielec-

tric strength and heating.

713.6 CHOKE COILS, IGNITION COILS

Automotive Electric Assn. Ignition Coil and Timer Test; 1925. Test procedure and set up of apparatus using calibrated spark gap and testing at various voltages applied to ignition coil.

Radio Manufacturers Assn. (Inc.). M4-251; 1930. Inductors. Recommended practice on rating in henries and frequency for alternating voltage and direct current and on giving the direct current resistance.

References.—Definitions, symbols, frequency standards, methods of test, safety codes. See also 710, Impedance track bonds and reactors. See 718.50. Choke coils for lightning protection. See 715.50. Reactors. See 713.5.

American Railway Assn. Signal Section. taining and Operating Rectifiers: 1930. Instructions for maintaining and operating motor-generators, mereury arc rectifiers, gas tube rectifiers, mechanical or vibrating rectifiers, electroyltic rectifiers, copper oxide rectifiers, alternating current floating storage battery system.

References.—Rectifier bulbs. See 718.62. Synchronous converters. See 713.2.

714. SWITCHES. PANELS, METERS, AND CONTROLLING EQUIPMENT

714.1 CONTROLLING EQUIPMENT

714.11 Electric Controllers and Starters

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Controllers. Requirements on protection, temperature rises in circuit breakers and contactors, voltage operating range for contactors, operation of tripping devices and contactors under vibration and at inclined angles, permissible temperature rises in

resistors, dielectric strength test.

American Institute of Electrical Engineers, Standard No. 15; 1928. American Standards Assn. C 19-1928. National Electrical Mfrs, Assn. Industrial Control Apparatus. Includes motor, industrial heating, and generator field control, and auto starters, but excludes control apparatus for marine auxiliaries and propulsion, mine locomotive and railway control. Classification of controllers, switches, resistors, relays; definitions, duty classification, rating, heating limits and measurement, range of operation, and dielectric test. 1925 edition available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 16; 1925. Approved by American Standards Assn. as C36-1928. Railway Control and Mine Locomotive Control Apparatus. Definitions and classification of controllers, switches, resistors, current collectors, relays, etc., rating, heating limits and measurement, range of operation, dielectric test. Available in Spanish from Bureau of Foreign and Domestic Commerce, U. S.

Dept. of Commerce.

American Institute of Electrical Engineers. Report on Standards for Railway Control Apparatus; 1930. A proposed revision of Standard No.

16: 1925.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Control, Direct Current. For other than propulsion equipment control, recommendations on general structural features for manual and for magnetic types, standard voltages, drip proof inclosing cases, operating features of manual control, corrosion and vibration resisting qualities of resistors, noncorrodible small parts, limits of temperature rise for various parts, voltage operating range of contactors, operation at inclined angle and resistance to vibration features for contactors and circuit breakers, spare part list, type of control applicable to various auxiliaries.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Control Equipment, Propulsion. For alternating current turbine electric drive and for Diesel electric drive, recommendations on mounting and material of switchboard, protection about live parts, types and vibration proof qualities of switches, ground detector and meter equipment, strength, and interlocking of switch operating levers, minimum size of instrument wiring, overload protection for direct current generators, etc., testing in accordance with A. I. E. E. standards 15 or 27.

American Institute of Electrical Engineers. Standard No. 45; 1930, Recommended Practise for Electrical Installations on Shipboard, Manual Starters and Controllers, Alternating Current. For starting squirrel cage motors, recommendations on provision of self-contained auto-transformers, break action of switch, operating features of lever, overload and low voltage protection, type of switch, spill test for oil type switch, temperature rise tests.

American Railway Assn. Mechanical Div. Recommended Practice. Axle Generator Equipment: 1930. Includes automatic generator regulator and lamp regulator for controlling charging of battery and supplying proper voltages for lights, recommendations as to the operating characteristics and regulatory requirements for each.

American Railway Assn. Signal Section 13029; 1929. Drawbridge Circuit Controller. For control of connection of electrical circuits between shore spans and bridge ends, purchaser to furnish drawings, minimum stroke of movable memgeneral structural requirements, types of binding posts and contacts, surface leakage dis-

tance and dielectric test requirements.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes direct current and alternating current controllers, reversing drum or flat type, permissible temperature rise, minimum number of acceleration steps, for automatic and remote control controllers, slate panels on angle iron frames, equipment on panel, interlock requirements, construction and operation of master controller, for a. c. controllers range in voltage at which operative.

Associated Factory Mutual Fire Insurance Companies, Centrifugal Fire Pumps; 1931, Controllers for starting and operating electric motors driving pump, requirements on type, rating, and operating features of switches, circuit breakers, fuses, etc., requirements for inclosures, for manual, and combined manual and automatic types

of controllers.

Assn, of Iron and Steel Electrical Eugineers. A. c. Motors for Main Roll Drive. Undated. Includes specifications for liquid slip regulator for control of large induction motor, general construction, requirements on range of adjustment and range of resistance, accuracy of setting markings, and temperature rise

Assn. of Railway Electrical Engineers 1929 Manual. Electric Train Lighting; 1928. Includes generator regulator and lamp regulator for axle generator, mounting and wiring requirements for panels, operating characteristics requirements for regulator, rating and insulation test requirements.

Underwriters' Laboratories, Industrial Control Equipment; 1931. Requirements on types and application of inclosures, thickness of metal, mesh of wire screening, mounting and operation of switches, types, ratings, and operating features of fuses and relays, protection features against low voltage, phase failure, and phase reversal, types of wire and terminals, spacing of live parts, standard ratings, capacity requirements and tests of contactors, capacity and load tests of starting and continuous duty resistors, load test and temperature rise of auto-trans-former starters, dielectric test of current carrying parts of controller, for controllers for use in hazardous locations, requirements on strength of inclosures, length of path in joints, explosion tests.

U. S. Gov., Dept. of Commerce. Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Controllers. Requirements for approval for use in gassy and dusty mines, including provision of explosion proof casing, clearance of live parts, construction for lead entrances, inclosure joints and bolting, inspection openings and covers, thickness of walls, resetting provisions, explosion tests, etc.

U. S. Gov., Dept of Commerce, Bureau of Standards. H7; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installa-tion and Maintenance of Electric Utilization Equipment. For control equipment accessible to other than qualified electrical operators, requirements on thickness of metal in inclosure, clearances for live parts, overload protection, provision of lock for the "off" position, etc.

714.12 Resistors and Rheostats

American Institute of Electrical Engineers, Standard No. 15; 1928. Joint sponsors with National Electrical Mfrs. Assn. under auspices of American Standards Assn. A. S. A. No. C 19-1928. Industrial Control Apparatus. Includes motor, industrial heating, and generator field control, and auto starters, but excludes marine, mine locomotive, and railway control. Classification of controllers, switches, resistors, relays; defini-tions, duty classification, rating, heating limits and measurement, range of operation, dielectric test. 1925 edition available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 16, 1925. Railway Control and Mine Locomotive Control Apparatus. Includes resistors, definitions, classification, rating, heating limits and measurement, range of operation, dielectric test requirements. Available in Spanish from Bureau of Foreign and Domestic Commerce

of U. S. Dept. of Commerce.

American Railway Assn. Signal Section 10628; 1928. Resistor. Rating to give total resistance. resistance between taps, minimum resistance, and continuous current capacity, permissible temperature rise at rated current, insulation and conductor requirements, surface leakage distance, test requirements for dielectric strength and for excess voltage.

American Railway Assn. Telegraph and Telephone Section. 2-G-24; 1927 and 2-G-25; 1927. Resistance Units ARA-6-B and ARA-8-B. 1,500 ohm, 0.051 ampere unit, and 275 ohm, 0.147 ampere unit for use in ferrule type mountings, protected winding of resistance wire on porcelain tube fitted with brass ferrules, construction and dimensions, test requirements for agreement with rating, for variation of resistance with temperature, for rise in temperature, and for behavior with overload.

American Railway Assn. Telegraph and Telephone Section. 2-G-31; 1928. Resistance ARA-2-A. For resistance wire wound on an insulating core, mechanically protected and fitted with medium size Edison base, covers 26 sizes from 10 to 5,000 ohms and current ratings of 1 to 0.045 ampere, main dimensions, variation of resistance from rating, test requirements for variation of resistance with temperature, continuous carrying ca-

pacity, and behavior with overload.

American Railway Assn. Telegraph and Telephone Section. 4-13; 1927. Protective Resistances and Mountings. For protection of telegraph and telephone plant against currents from operating voltages, includes resistances with ferrules or lugs those with terminals for fitting into sockets, and resistance lamps, current carrying capacity requirements of resistance, insulation resistance and dielectric strength requirements of mountings, general requirements for materials.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes rheostats for motor controllers, of cast grid type for current above 25 amperes, permissible temperature rise for 5 minutes of maximum load, mounting, insulation and provision for removal of parts, to comply with standardization rules of American Institute of

Electrical Engineers.

American Society for Testing Materials. Tentative Method of Test. B77-30T; 1930. Test for Thermoelectric Power. For determining the suitability of different metals for use in resistance apparatus iu which a low thermoelectric power is desired, measurement made with respect to copper, definition of thermoelectric power, requirements on form of test specimen and test procedure.

Assn. of Iron and Steel Electrical Engineers. A. c. Motors for Main Roll Drive. Undated. Includes grid resistors for control of large induction motor, requirements on rigidity, current carrying ca-pacity for regulating, accelerating, and plugging portions with specified temperature rises.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Resistors and Reac-Requirements regarding noncombustible fors. supports, air space about resistors, marking of terminals, operating, and design requirements for motor starting rheostats, insulation and installation of connecting wires, requirements on mounting and inclosures, mounting of resistance lamps,

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 322-411. Resistors. Recommended practice on filament resistor marking and method of mounting on panel, standard marking of radio resistors, requirements on accuracy of rating, dimensions of grid resistor.

Radio Manufacturers Assn. (Inc.). M4-211 to M4-212; 1930. Resistors. Standard designations for the resistance of resistors, permissible variation

from rated resistance.

Underwriters' Laboratories. Industrial Control Equipment; 1931. Includes operating characteristics of starters, full load and overload test requirements for starting resistors and continuous duty resistors.

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Rheostats. Requirements for approval for use in gassy and dusty mines, including provision of explosion proof casing, thickness of walls, entrance of leads, casing joints and bolting, clearance of live parts, explosion tests, etc.

U. S. Gov., Dept. of Commerce. Bureau of Standards LC221; 1927. Tests of Resistance Apparatus. Structural and design features considered essential for precision resistance apparatus submitted to the bureau for test and certification, including low temperature coefficient, small thermoelectromotive force against copper, accuracy of adjustment, type of support, dissipation of heat, ete

U. S. Gov., Dept. of Commerce, Bureau of Standards S107; 1908. A New Form of Standard Resistance. Describes the design and construction of resistance standards made of wire coils immersed in oil and sealed in a brass cylinder, with test data showing constancy of resistance values. They do not displace primary resistance standards but make frequent reference to them unnecessarv.

References.—Definitions, symbols, rating basis, methods of test, marking of terminals, service standards, safety codes. See also 710. Resistance wire. See also 715.43. Cast iron. See 611.11. Porcelain for electrical purposes. See 532.22.

714.13 Automatic Stations

American Institute of Electrical Engineers. Standard No. 26; 1930. Automatic Stations. Definitions, rating, heating limitations and measurement, sequence and adjusting test, device function numbers.

References.—Definitions, symbols, rating basis, voltage and frequency standards, methods of test, service standards, safety codes. See also 710. Automatic switchgear. See also 714.50.

714.14 Relays.

American Institute of Electrical Engineers. port on Standards for Relays, No. 23; 1931. Committee report covering relays used in power transmission and distribution field, standard definitions, duty classification, voltage ratings, temperature rise limits, operation at variations from rated voltage, dielectric test requirements.

References.—Track and railway signal relays. See 718.43. Definitions, symbols, rating basis, voltage and frequency standards, methods of test, service standards, safety codes. See also 710.

714.2 FUSES AND FUSE HOLDERS

714.21 Fuses

American Railway Assn. Mechanical Div. Recommended Practice. Car Lighting; 1927. Includes open end ribbon type link fuses, recom-mended dimensious and design for 100 to 200

amperes, 250 volts.

American Railway Assn. Signal Section 9630;
1930. Fuses. Fuses for signal purposes, requirements on design of casing, types of contacts, and labeling of capacity for various ratings of inclosed fuses, type of cap opening in plug fuses, types of contacts for link fuses and for plug fuses, ratings of fuses and test requirements on ratings, dimensions in conformity with National Electric Code.

American Railway Assn. Signal Section 10720; 1921. Switchboard. Includes fuses of 250 volt and 600 volt classes, dimensions of screw contact type, ferrule type, and knife blade type of cartridge inclosed fuses of various capacities.

American Railway Assn. Telegraph and Telephone Section. 4-3; 1924. Line Fuses for Telegraph and Telephone. Tubular type, readily replaceable for 7 to 15 amperes, meeting the requirements of National Electrical Code for "fuses of signaling system protectors," current carrying capacity test requirements.

American Railway Assn. Telegraph and Telephone Section. 4-6; 1924. Instrument Fuses. For protection of railroad telegraph and telephone plaut, for capacities of 1 ampere or less, readily replaceable type, operating and current capacity test requirements, maximum allowable resist-

ances for various sizes.

American Railway Assn. Telegraph and Telephone Section. 4-7; 1924. Heat Coils. For protection of telephone instruments and wiring, readily replaceable type, for capacities of 0.2 to 1 ampere, capacity, operating, and maximum resistance requirements for various sizes.

ual. Electric Train Lighting; 1928. Includes open-end link fuses and fuse holders, design and over-all dimensions for 60 to 200 amperes at 250 volts for use on panels or in battery boxes.

National Board of Fire Underwriters, National Electrical Code; 1931. Approved by American Standards Assn., C1–1931. Inclosed Fuses. Construction of casings, marking and labeling, dimensions of standard N. E. C. inclosed fuses, approved applications of ferrule and knife types,

fuse sizes for lighting, appliances, and motors. National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Link Fuses. Allowable capacities, construction of tips, rating, clear-

ances required, approved applications.

National Electrical Manufacturers Assn. book of Apparatus Standards; 1928. 124-900. Fuses and Fuse Mountings for 2,500 Volts and Above. Standard color for porcelain insulators, standard maximum ampere ratings of primary fusible cutouts and of fuse links not including inclosed fuses, standard interrupting capacities of primary fusible cutouts for outdoor applications, standard voltage ratings.

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 226. Cartridge Inclosed Fuse Standards. Covers renewable and nonrenewable type, ampere and voltage ratings to which ferrule contact and knifeblade contact apply, materials, construction, dimensions and tolerances, marking with colored labels, temperature test, rating test, and short circuit test requirements.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. SG-910. Distribution Cutouts. Renewable inclosed cutouts for 15,000 volts and below, requirements on information to be included in rating, basis of ratings, standard current ratings for cutout and standard current ratings for fuse links, standard voltage ratings, standard dimensions of universal fuse

links.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. SG8-70. High Voltage a. c. Fuse Cutouts. Requirements on information to be included in rating, basis of current rating and standard current ratings, basis of voltage rating and standard voltage ratings, for 7,500 volts and above, for other than renewable fuse cutouts for distribution service.

Society of Automotive Engineers 1931 Handbook. Fuses and Fuse Clips; 1926. For circuits up to 40 volts and 30 amperes, dimensions of cartridge type fuses and fuse clips, requirements as to marking, visual indicator of blown fuse, continuous current carrying capacity, fusing current, and temperature rise when carrying rated current.

Underwriters' Laboratories. Cartridge Inclosed Fuses; 1928. Covers renewable and nonrenewable cartridge inclosed fuses of ferrule and knifeblade types. Type of contact for various capacities, materials and construction of tubes, ferrules, caps, and fuse connections, dimensions and tolerances, labeling, test requirements for current rating, temperature rise, and short circuit

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Fuses. Requirements for approval for use in gassy and dusty mines, including provision of explosion proof casing, clearance of live parts, interlocking of fuses and switches, construction of inclosure, thickness of walls, design of joints in casing, conductor entrances, explosion tests, etc.

Assn. of Railway Electrical Engineers. 1929 Man- | U. S. Gov., Federal Specifications Board. 56; 1923. Nonrefillable Cartridge Fuses. Requirements on styles of terminals for various voltage and current ratings, construction, materials, dimensions, rating test, temperature test, and short circuit

> U. S. Gov., Federal Specifications Board. W-F-801; 1931. Renewable Inclosed Cartridge Fuses. Covers unpacked and powder packed types, ordinary and increased time-lag types, ferrule and knife blade types for 250 and 600 volts. Requirements on dimensions, ratings, temperature, rat-

ing, and short-circuit tests.

U. S. Gov., Federal Specifications Board 346; 1925. Nonrenewable Plug Fuses. Requirements on general structural features, test for carrying 110 per cent rated current, time to blow, temperature rise, and short circuit test, using test methods of Underwriters' Laboratories.

References.—Fuse blocks, cut-out bases. See also 714.22. Definitions, symbols, service standards, safety codes. See also 710.

714.22 Fuse Blocks, Cut-out Bases, and Clips

American Railway Assn. Mechanical Div. Recommended Practice. Car Lighting; 1927. Includes link fuse holder for use in battery fuse boxes and on regulator panels of railway cars, recommended dimensions and design for one standard

American Railway Assn. Telegraph and Telephone Section. 2-G-5; 1924 and 2-G-6; 1924. Fuse Block ARA-1-A and ARA-2-A. Base of porcelain, general quality and absorption test requirements, clips of german silver, thickness, hardness, and chemical composition requirements, composition of insulating filler, detail dimensions of 6-fuse and of 10-fuse fuse blocks.

Assn, of Electragists, International. Electragist Standards for Wiring Installations; 1928. Includes cut-out bases, requirements for buses, protective devices, barriers, circuit numbering,

suitable materials for base.

Assn. of Railway Electrical Engineers 1929 Man-ual. Electric Train Lighting; 1928. Includes fuse clips for knife fuses and fuse holders for open end link fuses, design and overall dimensions for 60 to 200 amperes at 250 volts for use on panels or in battery boxes.

National Board of Fire Underwriters, National Electrical Code; 1931. Approved by American Standards Assn., C1-1931, Cut-out Bases, Capacity limits, spacing of metal parts, break distance for link fuse, for mountings on slate, marble or composition bases, classification of plug and cartridge cut-outs according to voltage and cur-

rent capacity.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 226 Cartridge Inclosed Fuse Standards. Includes cutout bases for inclosed cartridge, plug, and link fuses, requirements on properties of insulating bases, number of supporting screws, leakage distances, materials for metal parts, thickness of metal, dimensions, and spacing of contact parts, standard ratings, dimensions of stude and soldering lugs, form and dimensions of Edison screw shell.

National Electrical Manufacturers Assn. book of Supply Standards; 1927. No. 232-415. Knife and Inclosed Switch. Covers cutout bases for use with knife and inclosed switches, requirements on properties of insulating base material, structural features, standard ratings, dimensions, thicknesses of metal, and spacing of contact parts for cartridge, link, and plug fuses, form and dimensions of Edison type screw shells. Society of Automotive Engineers 1931 Handbook, 714.33 Voltmeters Fuses and Fuse Clips; 1926. For circuits up to 40 volts and 30 amperes, dimensions of cartridge type fuses and fuse clips, requirements as to marking, continuous current capacity and tem-

perature rise when carrying rated current. Underwriters' Laboratories. Cutout Bases; 1927.

Insulating base for fuse, not including car-lighting cut-outs. For bases of slate, marble, or porcelain, or other acceptable insulation, detail requirements on screw holes, mounting, threaded parts, contact clips, sealing, carrying capacity of metal parts, spacing of metal parts and break distances for link fuse bases, dimensions of standard cut-out bases for plug fuses, and for ferrule contact and knife blade contact cartridge fuses.

U. S. Gov., Federal Specifications Board 55; 1923. Cut-out Bases. Requirements on general qualities for marble, slate, or porcelain insulating materials, thickness, spacing, and dimensions of terminals and contact clips, ampere and voltage classification, for ferrule, knife blade, and screw

shell contacts.

References.—State for electrical purposes. See also 511.53. Porcelain insulation for fuse blocks. See also 522.22. Definitions, symbols, basis of rating, methods of testing, service standards, safety codes. See also 710. Terminal blocks. See also 715.39.

714.3 INSTRUMENTS AND METERS, ELECTRICAL

714.30 General Items

American Institute of Electrical Engineers. Standard No. 33; 1927. Electrical Measuring Instru-ments. Definitions of instruments and parts, classification, heating limitations and measurement, dielectric test and insulation resistance, construction. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Railway Assn. Signal Section 10720; 1921. Switchboard. Includes electrical measuring instruments, indicating device to be damped, permissible error in reading when used with instrument transformers and when used without.

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 2C; 1930. Explosion Proof Mine Equipment. Meters. Requirements for approval for use in gassy and dusty mines, including provision of explosion proof casing, thickness of casing walls and of meter glass, protection for glass, entrance of leads, explosion tests, etc.

References.—Automobile instrument mountings. See 72.32. Measurement of temperature coefficient of resistance of manganin and constantan wire. See 715.43.

714.31 Ammeters

American Railway Assn. Signal Section 11221; 1921. Portable a. c. Ammeters. Divided into 2 classes according to accuracy and 7 ranges, ranges, scales and resistances, general structural requirements, heating and permissible error due to heating, impedance limits and accuracy requirements, dielectric test requirements.

References.—Voltammeter. See 714.32. Definitions, symbols, classification, test requirements, construction, error, safety codes. See 714.30, 710. Meter binding posts. See also 714.37. Copper wire. See 715.44.

714.32 Voltammeters

American Railway Assn. Signal Section 8519; 1920. Portable Direct Current Volt-Ammeters. For railway signal testing, d'Arsonval type, 100 ohms per volt and 50 ohms per volt classes, voltage and current ranges, size and division of scales, structure of pointer, mirror slot, provision of jewel bearings, magnetic shielding, etc., requirements on sensitivity, temperature error, and

714.38 Demand Wattmeters

Assn. of Edison Illuminating Companies. Joint sponsor with National Electric Light Assn. and Nat. Bureau of Standards. Approved by American Standards Assn. as C 12-1928. Code for Electricity Meters. Includes curve drawing demand meters, d. c. and a. c., requirements on design and construction, preliminary procedure and methods of test, rules for acceptance, allowable deviation in indications for variation in voltage, power factor, frequency, and temperature requirements on damping, sensitivity, thining

and legibility of record.

and regionity of record.

Assn. of Edison Illuminating Companies. Joint sponsor with National Electric Light Assn. and Nat. Burean of Standards. Approved by American Standards Assn. as C 12-1928. Code for Electricity Meters. Includes integrated-demand meters, requirements on design and construction, preliminary procedure and methods of test, rules for acceptance, tests for acceptability of measuring portion, requirements on legibility of record and equality of energy intervals, accuracy requirements of demand intervals, of contact mechanism, of registering mechanism, of clock or timing motors, installation methods.

Assn. of Edison Illuminating Companies. Joint sponsor with National Electric Light Assn. and Nat. Bureau of Standards. Approved by American Standards Assn. as C 12-1928. Code for Electricity Meters. Includes lagged-demand meters, requirements on design and construction, preliminary procedure and methods of test, rules for acceptance, tests for accuracy of indication, requirements on equality of winding elements, allowable deviations in indications for variation in voltage, power factor, frequency and tempera-

ture, methods of installation.

References.—Watthour meters. See 714.34. Definitions, classification, symbols, test requirements, construction, error, safety codes, standard voltages and frequencies. See also 714.30, 710. Copper wire. See 715.44.

714.39 Miscellaneous Electrical Measuring Instruments

U. S. Gov., Dept. of Commerce, Bureau of Standards S 285; 1916. Summary of Experiments on the Silver Voltameter and Proposed Specifications. Recommendations on preparation and purity of electrolyte, on size of cathode clamber, on type and material of cathode and anode.

714.4 PANELS, PANEL BOARDS, SWITCHBOARDS 714.41 Panels and Panel Boards

Assn. of Electragists, International. Electragist Standards for Wiring Installations; 1928. Includes panelboards for lighting or power distribution, requirements for bases, buses, protective devices, switches, barriers, and circuit numbering.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. Cl.–1931. Panel Boards. Location, clearances, accessibility, grounding requirements, construction of non combustible materials, arrangement of switches and fuses, distances be-

tween live parts.

National Electrical Manufacturers Assn. Publ. No. 31-4; 1931. Panel Board and Distribution Board Standards. Rule PB4-10. Standards on Design and Construction of Panel Boards. Requirements on motion of switch blades and handles, permissible loads on branch panel boards, fuse arrangement and connection of neutral, general properties and minimum thickness of base, mounting and spacing of buses, fuses, and switches, dimensions of fuse clips and plug fuse terminals, construction, current carrying capacity, and contact area of buses, switch capacities, structural features of panelboard, temperature rise and insulation resistance requirements.

Underwriters' Laboratories. Panel Boards: 1931. Permissible arrangement and operation of main and branch switches and fuses, thickness, material, and design of insulating base, methods or mounting apparatus, spacing of current carrying parts and clearances from metal walls, dimensions of fuse holder terminals, allowable current carrying capacities, design of terminals, connections, insulation resistance requirements.

U. S. Gov., Dept. of Commerce, Bureau of Standards H7; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For panel boards, requirements on method of connecting in plug-fuse shells on panels without switches, properties of the insulating

hoard.

714.42 Switchboards

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Switchboards. For impregnated asbestos lumber or slate panels for lower voltages, permissible size and minimum thickness, required equipment on auxiliary generator switchboards, permissible temperature rises for switches, circuit-breakers, bus bar contacts, etc., dielectric strength test for switching and control apparatus.

American Institute of Electrical Engineers. Standard No. 27; 1930. Switchboard and Switching Equipment for Power and Light. Definitions of classes of switchboards and types of switching equipment, rating definitions, permissible temperature rise for panels and panel supports.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Switchboards. Recommendations on installation, material and freedom from metallic veins for panels, maximum size of panels and minimum thickness of slate panels, construction of metal frame work, equipment to be provided on generator switchboard and on distribution switchboard.

American Railway Assn. Signal Section 6217; 1917. Switchboard Material. Covers practically the same ground as requisition 10720 for switchboard for a. c. signal system, except that 6217 contains more standard section dimensions and requirements for beveling and drilling for supports, and length of pipe supports, and requirements for reverse current air circuit breakers.

American Railway Assn. Signal Section 10720; 1921. Switchboard. For alternating current signal system, general quality and dimensions of slate panels, pipe or angle iron supports, dielectric strength requirements according to rules of Am. Inst. of Elec. Engrs., general design requirements for instruments, instrument transformers, fuses, switches, circuit breakers, disconnecting switches.

American Railway Assn. Signal Section. Installation and Operation of Switchboard; 1928. To comply with Nat. Bd. of Fire Underwriters, foundation, assembly, recommended clearances, insulation, wiring, grounding, compartment construction, operating instructions as regards safety, putting board into operation, operation of

switches, etc.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Bridges; 1922. Includes slate panel switchboard, thickness and general quality, meter and switch equipment to be provided, general design and operating requirements for circuit breakers, knife switches, magnetic switches, shunt colls, metal covers, wring.

National Board of Fire Underwriters, National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Switchboards and Panel Boards. Of noncombustible material, location, clearances, accessibility, grounding requirements, insulation of wires, overload protection and grounding requirements for instruments.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 124-400. Safety Inclosed Switchboards, Removable Truck Type. Standard voltage ratings, minimum thickness allowance on sheet steel panels and on sheet steel covering or housing, standard switchboard sizes, requirements on provision of automatic disconnection of wiring, location of buses, provision of barriers, insulation, truck and housing interlocks.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 124–500. Automatic Switching Equipment, Requirement on standard sizes and bevel for slate panels, standard device numbers for use on wiring diagrams of machine automatic switching

equipments.

National Electrical Manufacturers Assn. Publ. No. 31-4; 1931. Panelboard and Distribution Board Standards. Rule PB5-10. Standards on Design and Construction of Switchboards. Requirements on material, thickness, standard sizes and finish of slate panels, sizes of pipe and angle iron framework, size of sill, minimum size and insulation of small wiring, ratings and application of buses.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. Installation, Operation and Care of Power Switchboards; 1931. Instructions on erection of panels, recommendations on construction of concrete and brick structures, quality and size of aggregates, mix proportion of concrete and mortar, construction of connections, calculation of stresses in bar supports due

to short circuits.

National Electrical Mfrs. Assn. Publ. No. 31–10; 1331. Switchgear Standards. Power Switchboards; 1930. Standard ratings of buses, standard sizes and dimensions of slate and of steel panels, standard sizes of metal frames and sills, small wiring practice, rules on application of ground detectors, switching devices, field switches, instruments, etc.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. Safety Inclosed Switchboards. For removable truck type, rating standards, standard sizes and thickness of steel panels, thickness of metal and depth of bousing, requirements on bus location, provision of barriers, grounding device, interlocking of truck and housing, etc.

Underwriters' Laboratories. Electric Lighting Plants; 1921. Includes switchboards for isolated plants, spacing of wiring, insulation resistance,

and dielectric strength requirements.

U. S. Gov., Dept. of Commerce. Bureau of Standards HT: 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For switchboards accessible to other than qualified electrical operators, requirements on grounding, inclosure of current carrying parts, means of disconnecting fuses, etc.

References.—Controllers, resistors, fuses. See also 714.11, 714.12, 714.2. Instruments, instrument trans-

formers. See also 714.3, 713.5. Circuit breakers, switches. See also 714.51, 714.52. Telephone panels. See 718.22. Slate for electrical purposes. See also 511.53. Steel plates and sheets. 714.5 SWITCHES AND CIRCUIT BREAKERS

714.50 General Items

National Electrical Light Assn. Publ. No. 149; 1931. Suggested Guide for Specification Covering Metal Clad Switch Gear. For 5 standard units of bus, circuit breaker, cable terminal chamber, current and potential transformers, requirements for tests in accordance with A. I. E. E. rules, insulation provisions, accessibility and removability of parts, types and operating features of interlocks, etc.

National Electrical Mfrs, Assn. Publ. No. 31-10; 1931. Switchgear Standards. Automatic Switchgear; 1931. Rating standards of circuit breakers, use of device function numbers, list of standard device function numbers for machine equipments and their corresponding functions.

National Electrical Mfrs. Assn. Publ. No. 31–10; 1931. Switchgear Standards. Installation, Operation and Care of Power Switching Equipment and High Voltage Fuses. 1931. Instructions on erection, installation of conductors, construction of mounting structure, weatherproofing, etc.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. Metal Clad Switchgear; 1931. Standard voltage ratings, temperature rises in accordance with A. I. E. E. standards, standard current ratings of bus structure, requirements on grounding, interlocks and locking, small wiring connections, standard bus and

connection arrangements.

National Electrical Mfrs. Assn. Publ. No. 31-10: 1931. Switchear Standards. Power Switching Equipment; 1931. Basis of ratings, standard current ratings for outdoor disconnecting switches, standard voltage ratings of disconnecting and horn gap switches, short time ratings, standard control voltages flashover values and dimensions of insulators, phase spacing of switches, steel specifications for outdoor substations, current ratings for bare solid wire, cable, and copper tubing used as conductors, standard current and voltage ratings for fuse cutouts.

714.51 Circuit Breakers

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Circuit Breakers. Requirements on range of adjustment, vibration and inclination-proof characteristics of tripping devices, dielectric strength test, permissible temperature rise of various parts at rated current.

American Institute of Electrical Engineers. Standard No. 19; 1925. Oil Circuit Breakers. Definitions, rating, heating limits and measurement, dielectric test. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S.

Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 20; 1930. Air Circuit Breakers. For Indoor alternating current and direct current alrectricuit breakers exclusive of inclosed types, definitions including rating definitions, permissible temperature rise and methods of measurement, dielectric test requirements.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Circuit Breakers. Recommendations on circuit opening capacity, range of adjustment, temperature rise for current carrying parts at rated load, general

ing to Nat. Electric Code.

American Railway Assn. Signal Section 6217; 1917. Switchboard Material. Includes air cir-cuit breakers of carbon break type for overload Signal Section 6217; and reverse current, provision for calibrated tripping device, permissible temperature rise, percentage of reverse current and limits on operating voltage for reverse current breakers.

American Railway Assn. Signal Section 10720; 1921. Switchboard. For a. c. signal system. Includes circuit breakers, permissible temperature rises for contacts and coils for various conditions of location in air or immersed in oil and for various types of insulation, requirements as to range in voltage for operation of remote controlled breakers, some general design and current

rupturing test requirements.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Circuit Breakers. General structural and trip device requirements, location, approved applications, and current setting requirements, fuse and circuit breaker capacity requirements for lighting and appliance branch circuits and for motor circuits.

National Electrical Manufacturers Assn. book of Apparatus Standards; 1928. 124-700. Oil Circuit Breakers. Standard ampere ratings based on tests of Am. Inst. of Elec. Engrs., standard voltage and frequency ratings, requirements for determining interrupting capacity rating, standard tripping voltages for manually operated circuit breakers, rating limits on panel mounting

breakers

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 212. Air Circuit Breaker. Requirements on rating limits for front connected breakers and for round stud and laminated stud rear connected breakers, standard control voltages and range, dimensions of studs, dimensions of soldering lugs, standard ampere ratings of breaker.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. Installation, Operation and Care of Large Air Circuit Breakers; 1931. Instructions on installation, making of connections, maintenance rules for dash-pots,

tripping coils, resistors, etc.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. Installation, Operation and Care of Oil Circuit Breakers; 1931. Instructions on mounting, sampling, testing, and drying of oil, filling tanks, making of connections,

control wiring, etc.

National Electrical Mfrs, Assn. Publ. No. 31-10; 1931. Switchgear Standards. Large Air Circuit Breakers; 1931. Standard ampere ratings, basis of ampere rating and of interrupting capacity, short time ratings, standard operating duty, calibration range, standard control voltages and range, dimensions of round and laminated studs.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. Oil Circuit Breakers. 1931. Standard ampere and voltage ratings, ratings based on A. I. E. E. rules, interrupting capacity ratings, standard steps of interrupting capacity and ampere rating for outdoor circuit breakers, short time ratings, control voltage standards, tripping voltages for manually op-erated circuit breakers, standard ratings and arrangement of bushing type current transformers, standard sizes of drain valves for tanks. Society of Automotive Engineers 1931 Handbook.

Recommended Practice. Breaker Contacts; 1922. Size of threads and dimensions of hexagon head

and lock nuts.

construction of contacts, proof against vibration. | Underwriters' Laboratories. Circuit Breakers, Air and operation at an inclination of 30°, conform- | Break Type; 1920. For 600 volts or less, supporting and material requirements of base, minimum spacing of live parts from supporting screws, method of mounting, current-carrying capacity, closeness of calibration, and general construction, test requirements for current breaking capacity and high voltage.

Underwriters' Laboratories. Service Entrance and Branch Circuit Circuit-Breakers; 1928. Inclosure requirements, materials and mounting of insulating base and current carrying parts, operating requirements, spacing of live parts, rating, test requirements for overload, endurance, calibration, breaking capacity, and dielectric strength

References.—Oil for oil circuit breakers. See 504.8. Definitions, symbols, rating basis, standard voltages methods of test, installation, scrives estandards, safety codes. See also 710. Circuit breakers in conjunction with controllers. See also 714.11. Power switching and automatic switchgear equipment, metal clad switchinger. See also 714.50.

714.52 Switches

American Institute of Electrical Engineers. Standard No. 16; 1925. Railway Control and Mine Locomotive Control Apparatus. Includes switches definitions and classification, rating, heating limits and measurement, range of operation, dielectric test. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. Standard No. 22; 1925. Disconnecting and Horn Gap Switches. Definitions, rating, heating limits and measurement, dielectric tests. Available in Spanish from Bureau of Foreign and Domestic Com-

merce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. ard No. 27; 1930. Switchboard and Switching Equipment for Power and Light. Includes definitions of types and parts of switching equipment,

rating definitions.

American Institute of Electrical Engineers. ard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Switches. For watertight and nonwatertight types, recommended requirements on area of contact surfaces, provision of soldering lugs, meeting requirements of Underwriters Laboratories, clearance in box and leakage test for watertight switches.

American Railway Assn. Signal Section 10720; 1921. Switchboard. Includes disconnecting switches, of knife type with provision for operation by rod, material of base and type of mounting for various voltages, permissible temperature rise at rated current carrying capacity

American Railway Assn. Signal Section 10720; 1921. Switchboard. Includes knife switches, of cold-rolled copper, requirements on conductivity, permissible temperature rise at contacts or other parts when carrying rated current, type of handle on multiple pole switch.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures, Movable Railway Bridges; 1922. Includes knife switches, maximum current density, minimum capacity. minimum thickness of blades, current density at

contact areas.

American Railway Engineering Assn. 1929 Manual. Iron and Steel Structures. Movable Railway Bridges; 1922. Includes magnetic switches for switchboards, a few operating and constructional requirements, provision of magnetic blowouts for direct current switches, shunt coil insulation to withstand induced voltage kick.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Switches. Open knife

switches, spacing of parts and break distances for switches up to 600 volts, installation, mounting positions, method of connection, and operation requirements. Snap switches, material of

subbase, clearance of wires,

National Electrical Manufacturers Assn. 124-900. book of Apparatus Standards; 1928. Disconnecting Switches, Horn Gap Switches, Choke Coils, Bus Supports, Fuse Mountings for 2.500 Volts and Above. Standard ampere, voltage, and frequency ratings, to meet tests of Am. Inst. of Elec. Engrs.; short time rating definition, standard color of porcelain insulators, standard stud shapes for rear connected switch.

National Electrical Manufacturers Assn. Hand-book of Supply Standards 1927; No. 232–320. Exposed Type Front Connected and Rear Connected Knife Switches. Requirements on properties and minimum thickness of insulating base, construction, permissible temperature rise at rated current, minimum dimensions of blades and jaws, hinge and terminal construction, standard ratings, spacing of switch and fuse parts.

National Electrical Manufacturers Assn. book of Supply Standards; 1927. No. 232-415. Knife and Inclosed Switch. Requirements on size of knockout openings for inclosed switches, construction, ratings, spacing, and dimensions of parts of cutout bases, dimensions of rear connected studs, dimensions of soldering lugs.

Underwriters' Laboratories. Inclosed Switches: 1930. Covers air-break switches having current carrying parts inclosed in metal cases with external operating handles. Thickness of metal, tightness, joint structure, reinforcement, length of threads, spacing of hinges, and general construction of inclosing cases and doors; for switches, material of base, construction details of switch, operating temperature rise, minimum dimensions of parts of knife-blade switches; for fuse cutout bases, minimum dimensions and spacings; for operating mechanism, general construction; spacing requirements between live parts and inclosure walls, provisions for grounding, test requirements for heating, overload, endurance, and dielectric strength, for switch operating in inclosure.

Underwriters' Laboratories. Knife Switches; 1923. Thickness of insulating base, mounting requirements, thread engagement, construction, materials and minimum dimensions of blades, break and hinge jaws, and cross bar, standard spacing of parts, repeated operation test at overload, temperature rise at rated current and dielectric

strength test requirements.

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 2C: 1930. Explosion Proof Mine Equipment. Switches. Requirements for approval for use in gassy or dusty mines, including provision of explosion proof inclosure, interlocking of fuses and switch, construction of inclosures, inclosure joints, inspection openings and covers, lead entrances, etc., explosion test of inclosure.

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 4A: 1922. Procedure for Establishing a List of Permissible Electric Switches and Junction Boxes for Use at the Outer End of Trailing Cables. Requirements on ruggedness of construction, protection of contacts and terminals, tightness of joints, interlocking of switch mechanism and fuses with cover outside operating handle, etc., test requirements for operation of devices in explosive gas mixtures, scope of bureau's approval, fees.

U. S. Gov., Dept. of Commerce, Bureau of Standards H7; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For inclosed air-break switches (not including snap switches), requirements on provision of locks for locking in "off" position, marking, grounding, thickness of metal of inclosure, provision for automatic disconnection of fuses, etc.

U. S. Gov., Federal Specifications Board 175: 1924. Knife Switches. Requirements on properties and thickness of insulating base, mounting, threading, and fit of parts, minimum dimensions of blades and jaws, material of cross bars, overload operation test, temperature rise test, and high voltage

test, standard spacing of parts.

See also 714.50.

715. TRANSMISSION AND DISTRIBUTION APPARATUS

715.1 CONDUITS AND SWITCHBOXES

715.11 Electric Conduit, Wire Raceways, and Fittings

American Electric Railway Engr. Assn. D200-29; 1929. Specification and Form of Contract for Electrical Conduit Construction. Includes tile duct and fiber duct. For tile duct, single, requirements on length, minimum bore and thickness of walls, structural features, glazing, alignment, permissible cracks and blisters, absorption test. For fiber duct, requirements on saturation, heat test, standard sizes, length, trueness of bore, thickness, type of joint.

American Institute of Electrical Engineers. ard No. 45: 1930. Recommended Practice for Electrical Installations on Shipboard. Conduit Terminal and Bulkhead Stuffing Tubes. bronze, brass, or galvanized malleable iron, recommended requirements on general construction, threading, design and application of stuffing and

terminal tubes.

American Institute of Electrical Engineers. Standard No. 45: 1930. Recommended Practice for Electrical Installation on Shipboard. Conduit. Recommendations on zinc treating of steel conduit, flake test for paint, steel conduit to meet requirements of Underwriters Laboratories. For brass conduit, recommended seamless construction with dimensions the same as for steel conduit.

merican Railway Assn. Electrical Section. XVIII-a-21; 1921. Underground Conduit Con-struction for Power Cables. Fiber Conduit. For American wood pulp or fiber conduit impregnated with bituminous insulating compound, requirements on solidity of impregnating compound, resistance to acids, alkalies, and moisture, unit length, tolerances on dimensions, standard thicknesses, mandrel test, joint construction for socket, drive, and screw joints, dimensions of joint sleeves, deflection test, compression test, and water-absorption test, method of installation.

American Railway Assn. Electrical Section. XVIII-a-21; 1921. Underground Conduit Construction for Power Cables. Vitrified Clay Ducts. Requirements on general quality and construction, permissible defects, standard length, tolerance on inside dimensions, minimum wall thickness, mandrel test, water-absorption test, freedom from alkalies and acids, installation rules. American Railway Assn. Electrical Section. XVIII-b-21; 1921, Stone Conduits. Requirements on screen grading of limestone screenings, mix proportions with Portland cement, standard dimensions, joint construction, mandrel test, water absorption test, hammer test for cracks, installation rules.

American Railway Assn. Signal Section 2412; 1912. Vitrified Clay Conduit. Covers sewer pipe style round or square bore and multiple duct square bore conduit for wires and cables, dimensions, general quality and permissible size of definish, test requirements for straightness,

alkalinity, and water absorption.

American Railway Assn. Signal Section 3613; 1913. Steel Pipe Conduit. General quality of soft steel conduit, dimensions according to Briggs standard for pipe, dimensions of bends, coating requirements and permissible types, tension, hydrostatic pressure, and flattening test requirements, bending and acid test for enamel, test of zinc coatings by reference to A. R. A. specifications.

American Railway Assn. Signal Section 3713; 1913. Wrought Iron Pipe Conduit. General quality, dimensions according to Briggs standard for pipe, dimensions of bends, coating requirements and permissible types, tension, hydrostatic pressure, and flattening test requirements, bending and acid test for enamel, test of zinc coatings indicated by reference to A. R. A. specifications.

American Railway Assn. Signal Section 5728; 1928. Trunking and Capping, Wood trunking as conduit for insulated wire, finish, dimensions, quality requirements for lumber, permissible defects in white or Norway pine, longleaf yellow pine, fir, cedar, cypress, and redwood.

American Railway Assn. Signal Section 6418; 1918. Impregnated Fiber Conduit for the Pro-tection of Insulated Wires and Cables. Made of wood pulp or fiber impregnated with bituminous insulating compound, dimensions of conduit, joints, and fittings, acid test, heat test, insulation test of wetted sample, deflection test, crushing test and moisture absorption test requirements.

American Railway Assn. Signal Section 12429; 1929. Concrete Trunking and Capping. For protection of insulated signal wire, size and type of reinforcement steel, cement according to A. R. A. specifications, permissible clay in sand, size of stone or gravel, mixing proportions, placing con-

crete, dimensions of forms, curing.

American Railway Assn. Telegraph and Telephone Section. 1-C-3; 1928. Creosoted Wood Conduit. For conduit of southern yellow pine, Norway pine, or black gum, permissible defects in wood, range in lengths of one size square conduit with circular bore, dimensions of tenons and mortises, required weight of preservative, method of creosoting according to A. R. A. specification 1-A-10.

American Railway Assn. Telegraph and Telephone Section. 1-C-4; 1928. Creosoted Pine Plank. Plank for use in underground construction, southern yellow pine, permissible defects, dimension requirements, method of creosoting and creosote according to A. R. A. specifications.

Assn. of Electragists, International. Electragist Standards for Wiring Installations; 1928. Includes electrical metallic tubing, installation requirements, ends and joints, supports, protection

and grounding.

Assn. of Electragists, International, Electragist Standards for Wiring Installations; 1928. Includes flexible metal conduit, installation requirements, joints, number and kinds of supports, protection, number of bends, continuity, grounding, use in wet places.

Association of Electragists, International. Electragist Standards for Wiring Installations; 1928. Includes rigid metal conduit, installation requirements, construction of joints, number of supports, number of bends, continuity, grounding. Material requirements, diameters, wall thicknesses, lengths, threads, dimensions of elbows, some requirements are in addition to those of Underwriters Laboratories standards.

Assn. of Electragists, International. Electragist Standards for Wiring Installations; 1928. Includes surface metal raceways, requirements on installation, bends, supports, protection,

grounding.

National Electric Light Assn. Suggested Specificaations D180-24T; 1924. Ground Wire Molding (Material). D190-24T; 1924. Ground Wire Molding (Dimensions). For wood molding of oak, chestnut, or rock elm, permissible amount of defects, dimensions and allowable variations. Published in 1924 N. E. L. A. proceedings.

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 238–215. Metal Moulding. Covers metal raceways of mild sheet steel for surface wiring, requirements on design, securing features, wire capacity, thickness of metal, electrical continuity, test requirements

for quality of zinc or enamel coatings.

Society of Automotive Engineers 1931 Handbook. Flexible Conduit Ferrules; 1928. Dimensions of ferrules or bushings for various sizes of conduit, made of soft sheet brass or soft sheet steel, salt spray test requirements for zinc or cadmium plated steel ferrules.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Flexible Steel Conduit and Tubing; 1926. Includes conduit for protection of electrical wiring, of square locked type, requirements on construction, rust proof coating, dimensions, tension test, breaking test, and corrosion test.

Underwriters' nderwriters' Laboratories. Flexible Metallic Conduit; 1920. For use as a raceway for installation of electric wires for circuits under 550 volts, requirements for interior surfaces, internal diameter, thickness of strips used, weight of conduit, test requirements for zinc coating, tension, and flexibility.

Underwriters' Laboratories. Metal Raceways for Surface Wiring; 1925. Constructed of mild sheet iron or sheet steel of one or two pieces, design, method of and frequency of attachment and fastening of capping, limiting dimensions, thickness of metal, test requirements for zinc and

enamel protective coatings.

Underwriters' Laboratories. Rigid Steel Conduit; 1931. Requirements on application of protective coatings, bend tests of sheet samples and of coated conduit for testing elasticity of enamel coatings, bend tests of zinc coated conduit for testing elasticity of zinc coatings, copper sulphate test for adequacy of zinc coating, threading and reaming, standard lengths and weights, radii of elbows, and weights of nipples.

Underwriters' Laboratories. Wooden Raceways for Surface Wiring; 1920. For electric circuits of 300 volts or less, for use in dry places, design, minimum thicknesses of walls, and finish

requirements.

U. S. Gov., Federal Specifications Board 311; 1925. Rigid Conduit, Enameled. For mild steel tube, preparation of surfaces, general quality requirements for enamel coating, flake test requirements,

Weights of 10-100t lengths.

References.—Nonmetallic flexible conduit. Sec 715.13.

715.12 Switch Boxes, Outlet and Junction Boxes, Cabinets

American Electric Railway Engr. Assn. mended Specification D102-29; 1929. Overhead Line Material for Direct and Catenary Suspension. Includes wooden switch boxes, general requirements on construction, painting, inclination of lead entrance holes, guarding of switch handle.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practice for Electrical Installations on Shipboard. Connection Boxes. Boxes for interior communication circuits, recommended watertight construction of noncorrodible material, test for water-tightness, thickness of walls and cover, provision of terminal tubes.

American Institute of Electrical Engineers. ard No. 45: 1930. Recommended Practise for Electrical Installations on Shipboard. Feeder, Junction, and Branch Boxes. For cast-brass, cast-bronze, cast-iron, or galvanized welded sheet steel boxes, recommended requirements on thickness of walls, cover, and mounting bosses, conduit connections, sizes and material of screws, gaskets for watertight construction,

American Railway Assn. Telegraph and Telephone Section. 2-G-21; 1926. Metal Boxes. Boxes for use as panel, terminal, and resistance cabinets, hinged cover type and lift off cover type, dimensions and construction of boxes, thickness of sheet steel, sizes of hinges and handles.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Boxes, Cabinets and Outlet and Terminal Fittings. Requirements for protective coatings, minimum thickness of metal on small boxes, construction and required clearances of current carrying parts for cabinets and cutout boxes of metal or lined wood, minimum depth of outlet boxes, installation requirements of boxes, cabinets, outlet and terminal fittings.

National Electric Light Assn. Publ. 289-39; 1929. Suggested Specifications for Service Entrance Meter Cabinets. For cabinets with accessible fuses and for cabinets with fuses under seal, for meter terminal chamber extending into cabinet and for meter chamber abutting cabinet, dimensions of standard openings for abutting type and of adapter openings for other type, requirements on installation of fuses, circuit breakers, and

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 246-215. Outlet Box. Includes Switch Box, recommended practice for 4 standard units of flush mounting boxes with adjusting ears, for nonmetallic flexible conduit, armored cable and 1/2-inch conduit, design, standard dimensions, threading of switch attachment lugs, size of knockouts, etc.

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 246-230. Outlet Box. Covers 3 and 4 inch diameter outlet boxes of square, octagonal, and round shape, extension rings and covers, dimensions, type of protective coating, size of knockouts, spacing of mounting and cover attachment holes requirements.

dimensions and length of threads, minimum National Electrical Manufacturers Assn. Hand-veolobts of 10-foot lengths. Hand-book of Supply Standards; 1927. No. 248-230. Overhead Trolley Line Materials. Switch Boxes. General design for wooden box, illustrated,

National Electrical Manufacturers Assn. Publ. No. 31-4; 1931. Panelboard and Distribution Board Standards. Rule PB6-10, Design and Construction of Cabinets and Equipment Boxes. Requirements on construction and reinforcement of sheet metal boxes, sizes of wiring spaces, thicksneet metal boxes, sizes of wiring spaces, inck-ness of barriers, spacing from live parts, min-imum depths of cabinets, thickness of cast and sheet metal for bodies, frames, and doors, assembly methods, hardware types and attachment features, finish, sizes of knockouts.

National Electrical Manufacturers Assn. book of Supply Standards: 1927. No. 250-705. Standard Sizes of Knockout Openings. Minimum diameter of circular opening for conduit up to 3-inch, for loom knockouts, and for cable knockonts

Underwriters' Laboratories. Cabinets and Cutout Boxes: 1929. Requirements on size and arrangement of wiring space and inclosing barriers for various capacity mains, spacings required between mountings, current carrying parts, and walls of cabinets, minimum thicknesses of cast iron or sheet steel for walls and doors, construction of boxes, type and mounting of doors, hinges, and latches.

Underwriters' Laboratories. Outlet Boxes; 1928. Approved by American Standards Assn. as C33a-1929. Covers outlet boxes, armored cable boxes, concrete boxes, conduit boxes, flexible nonmetallic tubing boxes, flush device boxes, junction boxes, nonmetallic sheathed cable boxes, pull boxes, extension rings and covers. Requirements on minimum thickness of sheet or cast metal, coating of metal, supports and mounting, conduit connection, strength, design, thicknesses of clamps and fasteners, strength and twist tests of fixture etnde

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Junction Boxes. Requirements for approval for use in gassy and dusty mines, including requirements on thickness of walls, construction of joints and bolting, conductor entrance construction, provision of interlocked plug for trailing cable, explosion tests, ability safely to open circuit under load, recommends incorporation of fuses or automatic circuit interrupting devices with requirements for safe renewal and resetting, etc.

U. S. Gov., Dept. of Commerce, Bureau of Mines, Schedule 2C; 1930. Explosion Proof Mine Equipment. Switch Inclosures. Requirements for approval of explosion proof switch inclosures for use in gassy and dusty mines, including structural requirements for lead entrances, thickness of walls, construction and design of joints, bolting, inspection openings and covers, etc., explosion tests.

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 4A; 1922. Procedure for Establishing a List of Permissible Electric Switches and Junction Boxes for Use at the Outer End of Trailing Cables. Requirements on ruggedness of construction, protection of contacts and terminals, tightness of joints, interlocking of switch mechanism and fuses with cover, outside operating handle, etc., test requirements for operation of devices in explosive gas mixtures, scope of bureau's approval, fees.

References.—Inclosures for inclosed switches. See also 714.52. Zinc coatings. See also 600.3. Cast iron, cast brass, cast bronze. See also 611.11, 645.21, 646.41. Steel sheets. See also 604.22, 604.23.

715.13 Flexible Tubing for Wire Protection

National Electrical Manufacturers Assn. book of Supply Standards; 1927. No. 242-215. Nonmetallic Flexible Conduit. For single and double walled tubing for protection of exposed wires, requirements on general structural features, standard sizes, moisture proofing, tensile test, combustion test, kinking test, and heating test requirements.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Non Metallic Conduit; 1929. Recommended requirements on dimensions, weight, paper filler diameter, size and weave of cotton yarn, general construction, saturation with compound, finish, tests for water absorption, softening in oil, bending and flattening, tensile

strength, fire resistance.

Underwriters' Laboratories. Flexible Nonmetallic Tubing; 1930. For mechanical protection of insulated electric wires, general structural requirements, standard sizes, test requirements for tension test, flame proofing test, kinking and flattening test, flexibility test, drip test, and moisture absorption test.

U. S. Gov., Federal Specifications Board 57; 1923. Flexible Nonmetallic Tubing. For protection of insulated wire, requirements on construction, tension, flameproofing, flexibility, kinking, flattening,

and drip tests.

715.2 SOCKETS, RECEPTACLES, LIGHTING SWITCHES, ROSETTES

715.21 Sockets, Receptacles, Plugs

American Institute of Electrical Engineers Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Plugging receptacles, plugs, switches. For watertight and nonwatertight types, recommended requirements on area of contact surfaces, polarity type for plugs and receptacles, provision of soldering lugs, meeting requirements of Underwriters Laboratories, clearance in boxes and watertight test for watertight types.

American Railway Assn. Mechanical Div. Recommended Practice. Car Lighting; 1927. Includes recommendations on dimensions and design of battery charging receptacle and plug.

American Railway Assn. Mechanical Div. Rec-ommended Practice. Car Lighting; 1927. In-cludes train line receptacle and connectors, recommended dimensions and design.

American Society of Mechanical Engineers. tional Electrical Mfrs, Assn. Rolled Threads for Screw Shells of Electric Sockets and Lamp Bases. Approved by American Standards Assn. as C44-1931. For miniature, candelabra, intermediate, medium, and mogul types, standard pitch, dimensions, shape of threads, gage tolerances.

Assn. of Railway Electrical Engineers 1929 Manual. Electric Train Lighting: 1928. Includes charging receptacle and plug, train line receptacle and train line connector, dimensions and design.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Lamp Holding Devices and Plug Receptacles. Classification of lamp sockets, rating, method of operation, general construction requirements, installation requirements for sockets, attachment plugs and receptacles.

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 216. Attachment Plug. For interchangeable separable attachment plugs and receptacles having parallel blade type of contact, of flush, surface, and pendent type, requirements on material in body and cap, dimensions, spacing of parts, etc.

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 234-225. Lamp Receptacle and Socket. Requirements on properties of insulating material, minimum thickness of brass cap and shell, number of threads and threading for nipple and screw parts, thickness of lining, structural features, standard form and dimensions for Edison screw shells, spacing of parts, rating, endurance and overload test requirements for switch type sockets, permissible heating at rated current for all types.

Society of Automotive Engineers 1931 Handbook. Bases, Sockets, and Plugs; 1930. Standard dimensions of single and double contact lamp bases. bayonet sockets and plugs, of connector socket for two filament lamps of heavy-duty triple and double contact bayonet sockets and plugs, of socket caps, of base, socket and plug gages, and of triple, double, and single contact screw-type plug and socket connectors.

Society of Automotive Engineers 1931 Handbook. Charging Plug and Receptacle for Electric Vehicles; 1929. Dimensions of 100 amp. and 150 amp. plugs and receptacles.

Society of Automotive Engineers 1931 Handbook. Temperature Test of Insulating Materials; 1914. For connection plugs, sockets, and similar devices used on automobiles, ability for withstanding 300° F. for 30 minutes.

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Receptacles and Plugs. Requirements for approval for use in gassy and dusty mines, including requirements on locking to receptacle or to switch for plugs for storage battery locomotives, provision for insertion and withdrawal of plugs without creating ignition hazard, etc.

U. S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. American National rolled threads for screw shells of electric sockets and lamp bases. Mandatory for material purchased and used by War and Navy Depts. Requirements on form of thread, threads per inch, and dimensions for miniature, candelabra, intermediate, medium, and mogul sizes, tolerances on threads and on inspection and working gages.

715.22 Lighting Switches

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 256-2-25. Snap Switch. Requirements on properties of insulated base, design of base, spacing of supporting screws, structural details, size of wire entrance holes, properties of buttons and handles, thickness of insulating linings and of flush plates. standard ratings in amperes, overload, endurance, and heating tests.

Underwriters' Laboratories. Snap Switches; 1927. Classification, material and mounting of insulating base and of switch parts, sizes of wire holes, clearance required for wires and mounting screws, requirements for terminals, covers, buttons, bushings, etc., test requirements for overload, endurance, and heating.

U. S. Gov., Federal Specifications Board 62; 1923. Snap Switches. Classification, requirements on properties and design of insulating base, mounting of switch parts, nonsoftening of handles, design of terminals and covers, ampere and voltage

ratings, overload, endurance, and heating test | requirements.

References.—Knife and other type switches. See 714.52. Automobile lighting switches. See also 722.32. Definitions, symbols, standard voltages, service standards. See also 710.

715.23 Rosettes

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Rosettes. Required number of holes, clearance to be provided for

715.3 WIRING AND WIRING SUPPLIES

715.30 General Items

American Electric Railway Engr. Assn. Recommended Rules. E109–25; 1925. Regulations for Wiring Electric Cars and Locomotives (under 60 tons). Minimum sizes of wire, types of conduit, fuses, for signal, lighting, heating, and motor circuits, regulations for wiring, lighting, power and auxiliary apparatus.

American Railway Assn. Signal Section 11020; 1921. Wire Joints, Illustrated method of construction and insulation of wire joints for copper line wires, iron line wires, and for joints between line wires and branch wires, tinning and

soldering procedure.

American Railway Assn. Telegraph and Telephone Section. 1-A-23; 1927. Dynamometer Testing of Copper Wire. Rules for testing old line wire on the poles by means of tension dynamometer, loads to be applied and number of breaks allowable before replacement required.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Electric Light Wiring; 1926. In accordance with National Board of Underwriters' Rules and Regulations. general installation requirements, allowable voltage drop, spacing of wires, maximum size of

solid wire, etc.

Association of Electragists, International. Electragist Standards for Wiring Installations; 1928. Definitions, types of wiring suitable for use under various conditions, general requirements relating to safety and to operating efficiency, specifications for materials and methods of installing wiring, cables, cabinets, electrical apparatus, etc.

Association of Electragists, International. Electragist Standards for Wiring Installations; 1928. Includes conductors, installation requirements in conduit, in surface metal raceways, in electrical metallic tubing, in underfloor raceways, in open wiring on insulators, in knob and tube wiring, maximum size of wire, type of insulation, number of conductors, spacing of conductors, voltages, etc.

Assn. of Electragists, International. Engineering Design of Residence Wiring; 1931. Recommendations on number and location of outlets and switch control for the various rooms, number and capacity of branch circuits, designs of circuits for fixed appliances, calculation of ca-pacity required for service leads, wiring for

signaling and telephone work.

Assn. of Railway Electrical Engineers. 1929 Manual. B-IV-V; 1928. Lamps, Wiring and Accessories. For locomotives, size and base of 32 volt lamps for cab and headlight service, installation of wiring, conduit, junction boxes, terminal blocks, construction requirements for boxes and terminal blocks, conduit according to Am. Rwy. Assn. specifications.

Automotive Electric Assn. Recommended Practice as to Installation and Wiring; 1925. Recom-

mended minimum wire sizes, voltage drops, resistance of ammeter, fuses, etc., installation and insulation of wiring.

National Board of Fire Underwriters. Electric Railway Car Houses and Cars; 1925. wiring requirements, for electric railway cars and locomotives, permissible voltages for lighting circuits, type of conduit, size and installation of ground wires, minimum sizes of conductors. rules for installation, enclosures for control devices, kind of insulation, sizes of fuses.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1–1931. Outside Supply Conductors. Clearances for overhead lines, number of services per building, insulation, protection and clearance of service wires, entrance service wiring and entrance switch installation require-

ments, grounding.
National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Wiring Methods, and installation rules, supports, voltage limits, protective guards, conductors per conduit, sizes and insulation of conductors, grounding, dimensions of cleats, knobs, and tubes, installation requirements for open wires, concealed knob and tube work, conduit work, surface metal raceways, armored cable, underfloor raceways, nonmetallic

sheathed cable, metallic tubing.

National Electric Light Assn. Commercial National Section. Minimum Specification for Adequate Wiring of Lighting Circuits in Commercial and Public Structures: 1930. Recommendations on wiring installations based upon 15 ampere fusing of branch circuits, covering number of outlets and size of wire for convenience outlet circuits, spacing of outlets, area per circuit, wattage and wire sizes for lighting circuits, current capacity and voltage drop requirements for feeders, wiring for store buildings, show windows and show cases, convenience outlets for office buildings.

Railway Fire Protection Assn. Handbook: 1925. Electricity as a Fire Danger and Hazards of Electric Wiring and Apparatus. Lists many causes in installation and operation of wiring and apparatus that cause fires, recommends installations be made according to rules of Na-

tional Electrical Code.

Society for Electrical Development (Inc.). Franklin Specification for Good Lighting; 1929. For commercial and industrial interiors, includes recommendations on wiring, such as area and loading of lighting circuits, sizes of branch circuit wires and feeders, spare circuit, space on panels, and excess size of conduit.

715.34 Lugs

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 212. Air Circuit Breaker, Includes soldering lugs regularly supplied with air circuit breakers, knife and inclosed switches, fuse blocks, panel boards, and switchboards, dimensions of lugs, depth of cable hole, size of stud hole, for wrought copper lugs and cast alloy lugs up to ratings of 1,200

amperes.

Society of Automotive Engineers 1931 Handbook. Cable Terminals; 1928. Copper or brass terminal lugs, made from sheet material with bent-up wings for reception of wire. Dimensions of straight type for generators, switches, meters, and starting motors, dimensions of side type, (wire and lug at 90°), for generators, switches, and meters.

Underwriters Laboratories. Soldering Lugs; 1930.
For lugs of copper, brass, or bronze, cast, stamped or swaged, requirements on carrying capacity, diameter and depth of cable hole, thickness of wall, and contact area for various wire sizes.

References.—Other lugs and terminals. See 715.35. Castings of copper, brass, bronze. See also 642.21, 645.21, 646.41. Sheet material of copper, brass, bronze. See also 641.2, 644.2, 646.2. Wiring practice. See 715.30.

715.35 Terminals and Tags

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 322-311. Receiver Terminals and Binding Posts. Dimensions of standard cylindrical type cord tip and of standard pin type cord tip, test requirements for strength of soldered connection of tips and terminals, dimensions of standard spade type cable terminal for battery connection conductors, drilling of binding posts to receive cord tips.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 322-313. Spade Type Cable Terminal, for battery connecting conductors of radio receiving sets, dimensions of standard terminal for use with binding posts having No. 8 or No. 6 screws, test requirements for strength of soldered joint at terminal.

Radio Manufacturers Assn. (Inc.). M2-112, M4-111, M4-112; 1930. Cord Tips. For cylindrical type tip and for pin type tip, for use on loud speaker and head-set cords, standard dimensions for several standard sizes, pull test for strength of soldering,

Radio Manufacturers Assn. (Inc.). M4-114; 1930. Cable Terminal. Standard dimensions of spade type cable terminal for outer end of battery connecting conductors on radio receiving sets.

References.—Lugs. See 715.34. Battery tray terminal lugs. See 721.2. Storage battery terminals. See 712.9. See references under 715.34.

715.36 Cable Reels and Wire Spools

American Electric Railway Engr. Assn. Recommended Design D109–28; 1929. Trolley Wire Reels, Reel Bushings, and Reel Braking Device. Design for 3 sizes of wooden reel, cast-iron bushing and a braking device, with main dimensions and trolley wire capacities for various sizes of wire.

American Institute of Electrical Engineers. Standard No. 61; 1928. Approved by American Standards Assn., C 8 b2–1928. Soft or Annealed Copper Wire. Includes table of standard package weights, dimensions of standard reels and spools. Insulated Power Cable Engineers Assn. Shipping

Insulated Power Cable Engineers Assn. Shipping Reels for Lead Covered Cable. Undated. Standard sizes and dimensions of cable reels for 7 standard and 1 tentative size with length of cable for each reel for lead covered cable up to 4 inches in diameter.

U. S. Gov., Dept. of Commerce, Bureau of Standards R63; 1928. Metal Spools. Simplified practice recommended and accepted by industry es-

tablishing a limited list of standard capacities of metal spools used for annealing, handling, and shipping wire, from 2 to 100 pound capacities,

715.39 Miscellaneous Wiring Supplies

Assn. of Railway Electrical Engineers. 1929 Manual. B–V; 1928. Wiring and Accessories. Includes terminal blocks, general quality requirements, recessing for bolts and creepage distance requirements.

715.4 WIRES, CORDS, AND CABLES

715.40 General Items

American Electric Railway Engr. Assn. D5-14; 1914. Standard electric wire and cable termi-

nology.

American Institute of Electrical Engineers. Standard No. 63; 1928. Joint sponsor with American Electric Railway Assn., American Railway Engineering Assn., American Society for Testing Materials, Assn. of Edison Illuminating Companies, Assn. of Railway Electrical Engineers, National Board of Fire Underwriters, National Electric Light Assn., National Electrical Manufacturers Assn., National Fire Protection Assn. under auspices of American. Standards Assn. as C8 d1-1928. Specifications for 30 Per Cent Rubber Insulation for Wire and Cable for General Purposes. For voltages up to 5,000, requirements on thickness of insulation, its chemical properties, tensile strength and specific gravity, high voltage and insulation resistance test requirements for wire and cable, mechanical tests of insulation.

National Electrical Mfrs. Assn. Publ. No. 31-10; 1931. Switchgear Standards. SGS-61. Current Ratings for Bare Conductors. Standard 60 cycle current ratings for outdoor and indoor installations for 3 conductivity grades of solid copper wire, stranded copper cable, standard and extra

heavy iron pipe size copper tubing.

U.S. Gov., Dept. of Commerce, Bureau of Standards C31; 1914. Copper Wire Tables. Tables based on international standard values for restitivity, temperature coefficient, and density of copper as defined by International Electrotechnical Commission. Tables give diameter, cross-sectional area and resistance at various temperatures of copper and of aluminum wire and cable American Wire Gage (B. & S.) with comparison tables for other gages.

American wire Gage (B. & S.) with Comparisons tables for other gages.

U. S. Gov., Dept. of Commerce, Bureau of Standards C67; 1948. Wire Gages. Combined tables of sizes of American (B. & S.) wire gage, steel wire gage, Birmingham (Stubs) wire gage, British standard wire gage, and metric wire gage, with diameters in mils, inches, and metric units, and cross section in square mils, square inches, and metric units.

715.41 Cables, Electrical

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Conductors and Cables. For varnished cambric and rubber insulated cables, requirements on thickness of insulation for various wire sizes and working voltages, high voltage and insulation resistance tests, stranding and dimensions for braided cable, armored cable, and leaded and armored cable, construction, chemical composition of rubber compound, thickness, dielectric strength, and bend test of varnished cambric, thickness of insulation, covers single, two-conductor, three-conductor, and interior communication cable.

American Electric Railway Engr. Assn. D3-14; 1914. High Voltage Three-Conductor Paper Insulated Lead Covered Cable. Requirements on construction, dimensions of stranded conductors, insulating materials, dielectric and insulation resistance tests, sampling, installation of cable, tests after installation.

American Electric Railway Engr. Assn. D4-12; 1912. Single-Conductor Paper Insulated Lead Covered Cable for 1,200 Volts. Requirements on size and stranding of conductors, type and application of insulation, thickness of sheath, dielectric and insulation resistance tests, sampling, installation, and tests after installation.

American Electric Railway Engr. Assn. D10-30; 1930. Rubber Insulated Wire and Cable for Power Distribution Purposes. Requirements on stranding, tests of tinning, thickness of insula-tion, chemical and physical properties of 30 per cent rubber insulation, electrical tests of con-ductor, requirements for weatherproof compound. braid tape, lead sheath and armor.

American Electric Railway Engr. Assn. methods and practices E216-27; 1927. Minimum recommended sizes of cables, extra flexible, rubber insulated with water proof braid, for various horsepower motors. Recommended connectors, supports, and uniform mark-

ing of motor leads.

American Institute of Electrical Engineers. Standard No. 30: 1928. Wires and Cables. For bare. rubber insulated, varnished cloth insulated, paper insulated wire and cable, definitions, methods of making high voltage test, of measuring insulation resistance and capacitance, standard stranding, stranding for flexible cables, high voltage test requirements. 1925 edition available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engineers. ard No. 45; 1930. Recommended Practice for Electrical Installations on Shipboard. Cables. Recommended requirements on construction, stranding, size of individual wires, dimensions over braids, various insulations, lead sheath and armor, for rubber insulated and for varnish cambric insulated single conductor, 2 conductor, and 3 conductor cables, thickness and quality of in-sulation, maximum load for continuous and for intermittent service, quality of braid, sheathing, and armor, voltage and insulation resistance tests. Covers braided, armored, leaded and armored power and lighting cable, interior communication cable, telephone cable, two and three conductor portable cable, and bell wire.

American Railway Assn. Electrical Section, XIX-a-21; 1921. Electric Wires and Cables. Rea-21; 1921. Electric Wires and Cables. Requirements on construction and stranding. permissible variations from nominal dimensions, conductivity, and elongation of soft and of hard drawn copper wire and cable, extensometer test and tensile strength of hard drawn wire, chemical composition of 30 per cent and of 33 per cent rubber insulation, thickness of rubber insulation for various voltages, elasticity, elongation, permanent set, and tensile strength tests of rubber, general quality of varnished cloth insulation, application and thickness of varnished cloth insulation, general quality of paper and impregnating compound for paper insulation, thickness of paper insulation, tensile strength of paper, high potential and insulation resistance tests for wires and cables insulated with rubber, varnished cloth, or impregnated paper, application and thickness of braids, thickness and composition of lead sheath, armoring, sizes, strength, and galvanizing of armor wire, sizes and galvanizing of steel tape armor, galvanizing and test of galvanizing.

American Railway Assn. Signal Section. 1916. Aerial Aluminum Cable. Steel Reinforced. One steel core wire and 6 aluminum wires, tensile strength requirements for aluminum wire. for steel wire, and for cable for different sizes, conductivity requirements for aluminum.

American Railway Assn. Signal Section. 1930. Aerial Braided Cable for 660 Volts or Less. Requirements on conductivity of copper, taping, filling, and braiding, proportion of ingredients in the dry materials used in rubber compound, thickness and chemical composition of rubber insulation, tensile test and specific gravity of insulation, high voltage and insulation resistance test requirements for insulated wire.

American Railway Assn. Signal Section 9031: 1931. Armored Submarine Cable for 660 Volts or Less and for 2,300 Volts or Less. Quality and percentages of rubber, whiting, etc., in dry ingredients of insulation, construction, taping, thickness of insulation, of lead, size of armor wire. weight of impregnated outer cover, test requirements for conductivity, elongation, wrapping, and tinning of copper conductor, galvanizing and strength of armor wire, strength, specific gravity, and chemical test of insulation, high voltage and

insulation resistance of cable.

American Railway Assn. Signal Section 9131: 1931. Lead Covered Cable for 660 Volts or Less and for 2,300 Volts or Less. Quality and percentages of rubber, whiting, etc., in dry ingredients of insulation, construction, taping, thickness of insulation and of lead, test requirements for conductivity, elongation, wrapping and tinning of copper conductor, tensile, specific gravity, and chemical test of rubber, high voltage and insulation resistance of cable.

American Railway Assn. Signal Section. 1921. Underground Braided Cable for 660 Volts or Less. Quality and percentages of rubber, whiting, etc., in dry ingredients of insulation, construction, taping, braiding, thickness of rubber, test requirements for conductivity, elongation, wrapping, and tinning of copper conductors, tensile, specific gravity, and chemical test of rubber, high voltage and insulation resistance of

cable

American Railway Assn. Signal Section 14529; 1929. Parkway Cable. Mineral matter rubber compound insulated signal wire, lead sheathed and steel armored for 660 volts or less, elongaand steet armored for 600 voits of less, elongation, conductivity, and tinning test requirements for copper conductor, construction of cable, thickness and quality of lead, asphalt impregnation of jute coverings, dimensions and strength of steel tape, percentage requirements for rubber, whiting, zinc oxide, etc., in rubber mixture, thickness of insulation, chemical composition and extract percentages for vulcanized rubber, tensile test and specific gravity of rubber insulation, high voltage and insulation test requirements for cable.

American Railway Assn. Telegraph and Telephone Section. 1-A-9; 1925. Paper Insulated, Lead Covered Telegraph and Telephone Cable with Insulation. Dimensions and tensile strength requirements for the copper conductors, construction, strength, and resistance of joints in conductors, thickness of insulating paper and of lead sheath, construction of cable, color code of pairs, test requirements for conductor resistance, dielectric strength, dissipation constant, electrostatic capacity, capacity unbalance, insulation re-sistance for 2 grades of cable dependent on dielectric strength, shipping weights. American Railway Assn. Telegraph and Telephone Section. 2-G-1; 1924. Lead Sheath Office Cable.

Cable on nonquadded twisted pair of cotton covered enameled or silk and cotton covered enameled No. 18 copper conductors, wrapping test of enameled wire, number of layers of insulation, code, conductor resistance, dielectric strength, insulation resistance, electrostatic capacity, and

mutual capacity requirements.

American Railway Assn. Telegraph and Telephone Section. 2-G-2: 1924. Braided Office Cable. Cable of nonquadded twisted pairs of rubber insulated No. 16 copper conductors, construction of cable and number of pairs, thickness and general quality requirements of insulation, tinning test, quanty requirements of insulation, thining test, tensile test of insulation, chemical composition of rubber, conductor resistance, dielectric strength, and insulation resistance test require-

American Railway Assn. Telegraph and Telephone Section. 2–G–19; 1926. Lead Sheath Office Cable Quadded, Cable constructed of quads of No. 18 copper conductors enameled and with cotton or silk and cotton covering, permissible type and strength of joints, thickness of enamel and wrapping test requirements, number of layers, structure, and colors of braid, construction of cable, thickness of sheath, conductor resistance, dielectric strength, insulation resistance, electrostatic capacity, and capacity unbalance test requirements

American Railway Assn. Telegraph and Telephone Section, 2-G-22; 1927. Braided Office Cable of Quadded Rubber Insulated No. 16 A. W. G. Con-Quadded Rubber Insulated No. 16 A. W. G. Conductors. Rubber according to A. S. T. M. specifications, construction and weatherproofing of braid, construction, thickness of insulation, and color code for 12 and 20 conductor cables, tinning test, tensile test of rubber, chemical test of rubber, resistance, dielectric strength, and insulation resistance test requirements.

American Society for Testing Materials B 8-27; 1927. Bare Concentric-Lay Copper Cable, Hard, Medium Hard or Soft. Covers class A for bare, weatherproof, slow-burning, slow-burning weatherproof cable for aerial use; class B for rubber, paper, varnished cloth insulated cable; class C for a more flexible cable than provided in class B. Wires to be according to A. S. T. M. specifications for hard drawn, medium hard drawn, and soft copper wire construction, tension tests of wires, standard dimension, and stranding of cables.

American Society for Testing Materials. Tentative Specifications D 27-31T: 1931. Insulated Wire and Cable : 30 Per Cent Hevea Rubber. Requirements on construction, tolerances on dimensions, tension test, conductivity, and tinning test for conductors; chemical composition, percentages of various extracts, permissible sulfur, and tension test requirements for 2 classes of rubber insulation of which one contains antioxidants and organic accelerators; thickness of insulation, dielectric strength and electrical resistance test requirements for wire and cable; dimensions, construction and application of rubber filled tape, cotton braid, and lead sheath.

Assn. of Electragists, International. Electragist Standards for Wiring Installations; 1928 Includes armored cable, installation requirements, connectors, bushings, supports, protection, ground-

Insulated Power Cable Engineers Assn. Recommended Walls of Insulation and of Lead Sheaths for Paper Lead Power Cables; 1930. Recommended thicknesses of paper insulation and of lead sheath for 3-conductor cable, shielded type and belted type, grounded neutral and un-grounded neutral, sizes up to 2/0 and voltages up to 35,000; for single conductor cable, shielded or nonshielded type, grounded or ungrounded neutral, sizes up to 4/0 and larger, voltages up to 69,000.

composition and thickness of lead sheath, color | Insulated Power Cable Engineers Assn. Varnished Cambric Insulated Cables; 1932. For lead covered or braided cable, underground, aerial, or station cable, for voltages up to 17,000, requirements on stranding, tensile test and resistance of copper, tensile strength, thread count, thickness of cloth and of insulation, dielectric test. and heat test of varnished cambric cloth, recommended thicknesses of insulation and of lead sheath for various cable sizes and voltages, single and multiple conductor cable, required thickness of braid for braided cables, requirements on resistance test, high voltage test, insulation resistance and test, and bend test.

International Assn. of Municipal Electricians, Underground and Aerial Cable for Fire Alarm, Police, Telegraph, Traffic Signal and Street Lighting Service; 1928. Includes rubber insulated cables lead encased also lead encased and steel armored for underground signalling and lighting circuits, and rubber insulated cotton braid covered cables for aerial signal circuits. Elongation, twist, wrap test, tinning, and conductivity test requirements for copper conductor, thickness, chemical composition, specific gravity, tensile strength, dielectric strength, and insulation resistance requirements for rubber insulation, construction of cable, thickness of lead sheath and of steel armor, construction of woven cotton sheath.

National Board of Fire Underwriters, National Electrical Code; 1931, Approved by American Standards Assn., C1-1931. Conductors. Type and thickness of insulation, voltage limits, braid coverings, standard stranding for armored cable and nonmetallic sheathed cable, demand calcula-

tions for feeder sizes.

National Electrical Manufacturers Assn. Hand-book of Supply Standards; 1927. No. 254-221. Standards for Intercommunicating Telephone Cable. Requirements on size of conductors for talking circuits and for common wires, copper conductors insulated with single silk and single cotton saturated with beeswax, cotton braiding or lead sheath for outer covering, color code for cable up to 31 pairs.

Radio Manufacturers Assn. (Inc.). M4-505, M4-506; 1930. Power Cable. For receiving equip-ment with separate power supply, standard terminal markings for the power cable supplying A

and B power.

Society of Automotive Engineers 1931 Handbook, Insulated Cables; 1926. For low-tension and high-tension ignition cables, dimensions of stranded copper wire and insulated cable for plain rubber insulated, for rubber insulated with braid cover, for varnished cambric insulated with braid cover, for rubber and varnished cambric insulated with braid cover; quality and tension test requirements for rubber, thickness and high voltage test requirements for varnished cambric tape, construction and impregnation of braid, oll test requirements for braid, tinning test requirements for wire.

Society of Automotive Engineers 1931 Handbook. Insulated Cable; 1926. Lighting and Starting Motor Cable. For rubber insulated and braid covered, for varnished cambric insulated and braid covered, for rubber insulated and armored, and for varnished cambric insulated and armored cables, quality and tension test requirements for rubber, construction, impregnation, and oil test requirements for braid, application, thickness, and high-voltage test requirements for varnished cambric, construction and dimensions of galva-nized or sherardized steel, brass, aluminum, or copper armor.

Underwriters Laboratories. Armored Cable and American Railway Assn. Telegraph and Telephone Armored Cord; 1929. For cord and cable made up of standard rubber covered conductors, requirements on braid coverings, lay of twist, over all dimensions, minimum thickness of armor, its internal diameter, weight, and convolutions for various wire sizes, test requirements on armor for zinc coatings, crushing, tension, ohmic resistance, tightness on conductor, test requirements on cord and cable for elongation, flexibility, and dielectric strength.

Underwriters' Laboratories. Motion-Picture Cable and Stove Wire; 1921. Single copper conductors with asbestos covering for exposed leads in motion picture machines, heaters and stoves, but not suitable for moist places or use in conduit. Conductivity, limiting sizes of and stranding of conductors, thickness and carbon content of asbestos covering, flame and bend test requirements.

Underwriters' Laboratories. Nonmetallic Sheathed Cables; 1927. Limiting sizes and number of conductors, construction and limiting diameters for rubber insulated braid covered conductors, covered with fibrous saturated protective sheath and assembled into cable with outer cotton braid covering, test requirements for moisture absorption, flame retardation, flexibility, tension, crushing, dielectric strength.

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. For Trailing Cables for connection of portable apparatus, rubber insulated, requirements for approval including tests in which 7-ton mine car is run over cable, how approval for use in gassy and dusty mines is obtained, etc.

U. S. Gov., Federal Specifications Board. 65; 1923. Rubber Covered Wires and Cables (For Ordinary Purposes). Wire sizes according to A. I. E. E. standards, dimensional tolerances, conductivity, splicing, and tinning requirements, adhesion requirements for rubber, construction of fibrous covering, construction of lead covered cables and thickness of lead, chemical and tensile test requirements for rubber, high voltage and insulation resistance test requirements for cables.

American Railway Assn. Telegraph and Telephone Section. 2-G-11; 1924. Single Conductor Cord ARA-5-A. For use on telephone switchboards of the pin-jack type, size of wire and number of strands for conductor, thickness of rubber insulation, asbestos braid and of cotton braid, details of construction of cord and of ends, conductor resistance and dielectric strength requirements.

American Railway Assn. Telegraph and Telephone Section. 2-G-28; 1927. Double Conductor Patch-ing Cord ARA-2-A. For use with telephone switchboards of pin-jack type, consisting of two tinsel conductors with filler of twine, detail dimensions and construction, resistance, strength of soldered joints, and dielectric strength test requirements.

Section, 2-G-29; 1927. Double Conductor Switchboard Cord ARA-3-A. For use in cutting operators' set, consisting of two copper tinsel conductors with filler of twine, detail dimensions and construction, resistance, strength of soldered joints, and dielectric test requirements.

American Railway Assn. Telegraph and Telephone Section. 2-G-32; 1928. Reverse Double Con-ductor cord ARA-4-A. For use with pin-jack type switchboards, consisting of two copper tinsel conductors and twine filler covered with cotton braid, construction details and dimensions, test requirements for conductor resistance, strength of soldered joint with cord tip, and dielectric strength.

American Railway Assn. Telegraph and Telephone Section. 2-G-33; 1928. Single Conductor Cord ARA-1-A. For cutting in operators at telephone switchboards, consisting of one copper tinsel conductor and twine filler covered with cotton braid, detail construction, dimensions, test requirements for conductor resistance and strength of soldered connections.

Association of Electragists, International Electragist Standards for Wiring Installations; 1928. Includes flexible cords, general installation requirements, types of flexible cords approved for given uses.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. C1-1931. Conductors, Includes flexible cords and fixture wire, type and thickness of insulation, voltage limits, number and treatment of braid coverings, standard stranding, and approved uses for flexible cords.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 323-211. Connection Cords. Dimensions, colored thread tracer standards, and voltage breakdown test requirements for radio head set, radio loud speaker, and extension cords.

Underwriters Laboratories. Armored Cable and Armored Cord; 1929. For cord and cable made up of standard rubber covered conductors, requirements on braid coverings, lay of twist, overall dimensions, minimum thickness of armor, its internal diameter, weight, and convolutions for various wire sizes, test requirements on armor for zinc coatings, crushing, tension, ohmic re-sistance, tightness on conductor, test of cord and cable for elongation, flexibility, and dielectric strength

Underwriters' Laboratories. Flexible Cord; 1928. Covers small flexible cable insulated to withstand wear, sizes of wires, conductivity, construction, chemical, tensile, and adhesion test requirements for rubber insulation, thickness of rubber, saturation of braids and fillers. Covers lamp cord, reinforced cord, parallel cord, twisted portable, moisture proof reinforced, braided heavy-duty cord, and elevator cable.

Underwriters' Laboratories. Heat Resisting Fixture Wire and Flexible Cord; 1929. For single conductor fixture wire and multiple conductor flexible cord, asbestos insulated type and cotton insulated type, limiting sizes, stranding of conductors, conductivity of copper, thickness and construction of insulation, carbon content of asbestos, adhesion, flexibility, dripping of compound, flame-resisting properties, and dielectric strength test requirements.

Underwriters' Laboratories. Heater Cord; 1927. For portable use on voltages up to 300, minimum strand wire sizes, conductivity, tinning or separator requirements, construction of coverings, thickness and sulphur content of rubber in rubber insulated cord, closeness, weight, thickness, carbon content of asbestos in asbestos insulated cord, durability requirements of cords on twist

testing machines.

Underwriters' Laboratories. Rubber Sheathed Cords; 1922. Type for use in garages and factories, and type for office and dwelling use. Size of conductors, construction of cord, quality of rubber, thickness of insulation, outside dimensions, chemical and tensile test requirements on insulation and outer sheath, continuity and kluk test of cord.

715.43 High Resistance Wire

American Railway Assn, Signal Section 2211; 1911. Galvanized E. B. B. Bonding Wires. No. 8 B. W. G. wire for bonding rail joints of steam railroads, general quality, diameter, strength, elongation, and resistance requirements, test requirements for galvanizing by copper sulphate method.

American Railway Assn. Signal Section 3212;
1912. Double Braided, Weatherproof Galvanized
B. B. Line Wire. General quality, diameter,
strength, elongation, resistance requirements for
wire, galvanizing test requirements, thickness
and application of saturated braid, melting and
freezing test requirements for weatherproof
braid

American Railway Assn. Signal Section 7018; 1918. Copper Clad Steel Bonding Wire. For bonding joints of steam railroads, size No. 6, general quality, diameter, elongation, conductivity, and test for separation of copper requirements.

American Railway Assn. Signal Section. 7131; 1931. Double Braided Weatherproof Thirty Per Cent Conductivity Copper-Covered Steel Line Wire. Copper cover welded onto steel core, requirements on diameter, strength, resistance, and bend test for 5 sizes of wire, weave and impregnation of weatherproof covering, drip test, bending test, melting and freezing test, of insulated wire, standard weights.

American Railway Assn. Telegraph and Telephone Section. 1-A-14; 1927. Galvanized from Wire Resistrity, tensile strength, dimensions, and ductility test requirements for 5 sizes of B. W. G. gaze, galvanizhng according to A. R. A. serial

1-D-5.

American Railway Assn. Telegraph and Telephone Section. I.-A-16; 1927. Galvanized Iron Tile Wires. Diameter and length, wrapping and tensile strength test requirements, galvanizing according to A. R. A. specification 1-D-5, for 2 sizes.

American Society for Testing Materials A 111-30; 1930. Zinc Coated (Galvanized) Iron or Steel Telephone and Telegraph Line Wire. Weight of coating, tensile strength, elongation, twist, and electrical resistance test requirements, permissible variations from nominal sizes, minimum length of wire in coil, test procedure according to A. S. T. M. method A 110.

American Society for Testing Materials A 112-30; 1930. Zinc Coated (Galvanized) Iron or Steel Tie Wires. For use in trying telephone or telegraph line wire to insulators, zinc according to A. S. T. M. specifications B 6, weight of coating, tensile strength, elongation requirements, size and permissible variations, test procedure according to A. S. T. M. method A 110.

American Society for Testing Materials B 63–29; 1929. Method of Test for Resistivity of Metallic Materials for Resistors. Methods of making measurements of dimensions of specimen and computation of resistivity from resistance measurement, for an accuracy of 1 per cent.

American Society for Testing Materials B 70-30; 1930. Method of Test for Change of Resistance with Temperature of Metallic Materials for Electrical Heating. Applicable at temperatures up to 500° C, or higher. Preparation of specimen, size and type of leads, determination of proper test current, method of test and accuracy required for determination of resistance and temperature, using electric furnace.

American Society for Testing Materials. Tentative Methods B 71–29T; 1929. Methods of Chemical Analysis of Metallic Materials for Electrical Heating. Reagents required and methods of determination of nickel, chromium, iron, manganese, carbon, insoluble residue, silicon, sulphur, copper, descriptions and illustrations of test apparatus.

American Society for Testing Materials. Tentative Test Method B 76-29T; 1929. Accelerated Life Test for Metallic Materials for Electrical Heating. Covers determination of resistance to oxidation at high temperatures by heating a wire specimen through a prescribed schedule of high temperature and rest periods until burnout of specimen, dimensions and design of test board, requirements for auxiliary measuring apparatus and interrupter, size of specimen, test procedure.

American Society for Testing Materials. Tentative Standard B 77-30T; 1930. Method of Test for Thermoelectric Power. For determining the suitability of different metals for use in resistance apparatus in which a low thermoelectric power is desired, measurement made with respect to copper, definition of thermoelectric power, requirements on test specimen and test procedure.

conjust, technology in the more requirements on test specimen and test procedure. American Society for Testing Materials. Tentative Specifications B 82–31T; 1931. Drawn or Rolled Alloy, 80 Fer Cent Nickel, 20 Fer Cent Chromium, for Electrical Heating Elements. For wire, ribbon, rod, requirements on annealing, chemical composition, resistance, temperature coefficient of resistance, packing, life test where required, using A. S. T. M. test methods B 71, B 63, B 70, B 76.

American Society for Testing Materials. Tentative Specifications B 83-31T; 1931. Drawn or Rolled Alloy, 60 Per Cent Nickel, 15 Per Cent Chromium, and Balance Iron, for Electrical Heating Elements. For wire, ribbon, or rod, requirements on annealing, chemical composition, resistance, temperature coefficient of resistance, packing, life test where required, using A. S. T. M. test methods B 71, B 63, B 70, B 76.

American Society for Testing Materials. Tentative Standard B 84-31T; 1931. Method of Test for Determining the Temperature Resistance Constants of Resistance Alloys. For wires of the manganin and constantan types to be used in precision electrical instruments, sampling and

test procedure.

International Assn. of Municipal Electricians. Underground and Aerial Cables for Fire Alarm and Police Telegraph and Traffic Signal Service. Weather proof Copper Covered Steel Wires; 1926. For aerial service, No. 10 and No. 12 A. W. G. sizes, requirements on conductivity, breaking strength, resistance, test of weld of copper to steel, permissible variations in diameter, elon-

gation, thickness of braid, melting and freezing ! test of impregnating compound, testing methods.

Assn., National Fire Protection Assn. under auspices of American Standards Assn. C 8 j3-1928. Speci-fications for Enameled Round Copper Magnet Wire. Minimum and maximum addition of enamel, solubility, adherence, flexibility, aging,

softening, and high-voltage tests.

nerican Railway Assn. Electrical Section. XIX-a-21; 1921. Electric Wires and Cables. American Requirements on construction and stranding, permissible variations from nominal dimensions, conductivity, and elongation of soft and of hard drawn copper wire, extensometer test and tensile strength of hard drawn wire, chemical composition of 30 per cent and of 33 per cent rubber insulation, thickness of rubber insulation, elasticity, elongation, permanent set, and tensile strength tests of rubber, general quality of varnished cloth insulation, thickness of insulation, high potential and insulation resistance tests for wires insulated with rubber or with varnished cloth, application and thickness of braids.

American Railway Assn. Signal Section 4113; 1913. Enameled Copper Magnet Wire. Resistivity, permissible variation in diameter of soft drawn copper wire, diameter limits for enameled wire, tension test requirements for copper wire, flexibility, resistance to cracking, peeling, and scratching test requirements for enamel, softening in oil and dielectric strength test requirements.

American Railway Assn. Signal Section 7218; 1918. Double Braided, Weather proof Hard Drawn Copper Line Wire. General quality, diameter, strength, elongation, and conductivity requirements for 6 sizes of wire, thickness of braid.

application of weatherproof compound, melting | American Society for Testing Materials B and freezing test requirements for weather proof

compound.

American Railway Assn. Signal Section 10820; 1921. Copper Bond Wire; 1921. Soft drawn No. 6 circular wire, conductivity, diameter, and elon-

gation requirements.

American Railway Assn. Signal Section 11129; 1929. Mineral Matter Rubber Compound Insulated Signal Wire. For 660 volts or less, requirements for size, quality, and percentages of dry rubber, whiting, zinc oxide, etc., in rubber compound, thickness of insulation, chemical composition, tensile test, high voltage test, and insulation resistance requirements for insulation, elongation and tinning test of wire, hardening and absorption test requirements for braid.

American Railway Assn. Telegraph and Telephone Section. 1-A-13; 1927. Hard Drawn Bare Cop-per Wire. Resistivity requirements, test requirements for dimensions, and tensile strength, length and weight of wire coils, for 2 sizes of

B. W. G. and 5 sizes of A. W. G.

American Railway Assn. Telegraph and Telephone Section. 1-A-15; 1927. Annealed Copper Tie Wires. For commercially pure copper wire, dimensions, lengths and wires per bundle, tensile

strength requirements, for 6 sizes.

American Railway Assn. Telegraph and Telephone
Section. 2-G-16; 1925. Twisted Pair Inside
Wire. Twisted pair, waxed braid, rubber insulated, annealed copper wire of No. 18 or No. 16 sizes, size of braid thread, weatherproofing material, quality and thickness of rubber insulation, color code, lay of wire, tinning, elongation, and wrapping test requirements for conductor, tensile strength, specific gravity, chemical composition, dielectric strength, insulation resistance requirements of rubber insulation, adhesion test of braid, melting test of weather proofing, resistance of conductor

American Railway Assn. Telegraph and Telephone Section. 2-G-16; 1925. Single Conductor Inside Wire. For waxed braid rubber insulated wire of No. 18 or No. 16 size, thickness of insulation, construction of cotton braid, tinning, elongation, wrapping, and resistance test requirements for conductor, tensile strength, specific gravity, chemical composition, wrapping test, dielectric strength, insulation resistance test requirements for the rubber insulation, adhesion test requirements for braid, and melting test for weather

proofing compound.

American Society for Testing Materials. B 1-27; merican Society for resting materials 22, 1927. Hard-Drawn Copper Wire. Approved by American Standards Assn. as H 14–1929. Requirements on tensile strength, resistivity, and unit for designating diameter, permissible variations in dimensions.

American Society for Testing Materials B 2-27; 1927. Medium Hard-Drawn Copper Wire. Tension test requirements, resistivity, dimensions and

permissible variations.

American Society for Testing Materials B 9-30; 1930. Bronze Trolley Wire. For round and grooved trolley wire, of high strength and of medium strength, copper according to A. S. T. M. specifications, tension test and resistivity requirements, twist test requirements for round wire, di-

ments, twist test requirements for round wire, di-mensions and permissible variations.

American Society for Testing Materials B 33-21; 1921. Approved by American Standards Association as C8b1-1928. Tinned Soft or An-nealed Copper Wire for Rubber Insulation. Test requirements for quality of tinning, tensile strength, resistivity, permissible variation in

dimensions.

47-30; 1930. Round and Grooved Hard Drawn Copper Trolley Wire. Material to be in accordance with A. S. T. M. specifications for electrolytic copper wire bars (Serial B5) or for lake copper wire bars (Serial B4), twist test requirements for round wire, tension test requirements, resistivity, dimensions, and permissible varia-tions for round and grooved wire.

American Society for Testing Materials B 48-27; 1927. Soft Rectangular Copper Wire. Quality according to A. S. T. M. specifications for copper wire bars, tension test requirements, resistivity, dimensions and permissible variations.

American Society for Testing Materials. Tentative Specifications. D 27-31T; 1931. Insulated Wire and Cable: 30 Per Cent Hevea Rubber. Requirements on construction, tolerances on dimensions, tension test, conductivity, and tinning test for conductors; chemical composition, percentages of various extracts, permissible sulphur, and tension test requirements for 2 classes of rubber insulation of which one contains antioxidants and organic accelerators; thickness of insulation, dielectric strength and electrical resistance test requirements for wire and cable; dimensions, construction and application of rubber filled tape, cotton braid, and lead sheath.

G-I-6; 1928. Enameled Round Copper Magnet Wire. All the above are the same as those of same title of Am. Inst. of Elec. Engrs. as approved by Am. Standards

Assn.

International Assn. of Municipal Electricians. Underground and Aerial Cable for Fire Alarm, Police, Telegraph, Traffic Signal and Street Lighting Service; 1928. Includes flame proof single conductor rubber insulated wire and weather proof single conductor rubber insulated wire, the latter for offices and switchboards for signalling systems. Elongation, twist, wrap test, tinning and conductivity test requirements for copper conductor, thickness, chemical composi-tion, specific gravity, tensile strength, dielectric strength, and insulation resistance requirements for the rubber insulation, weave and saturation requirements for braid.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Conductors. Type and thickness of insulation, voltage limits, number and treatment of braid coverings, and standard stranding for rubber covered wire, varnished cambric insulated wire, asbestos covered and slow burning wire, weather proof wire, fixture wire, flexible cords, armored cable, nonmetallic sheathed cable. Demand calculations for feeder sizes, approved uses for flexible cords.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Magnet Wire; 1924. Covers cotton covered, silk covered, enameled, enameled with cotton or silk covering, both single and double coverings, requirements for thickness of coverings, toughness and solubility of enamel, wrapping test of the insulated wire, and for enameled wire elongation, temperature, and high voltage test requirements, dimensions of standard

packing spools.

Society of Automotive Engineers 1931 Handbook. Soft or Annealed Copper Wire; 1924. Tensile test and resistivity requirements for untinned

round wire.

Underwriters Laboratories. Heat Resisting Fixture Wire and Flexible Cord; 1929. For single conductor fixture wire and multiple conductor flexible cord, asbestos insulated type and cotton insulated type, limiting sizes, stranding of conductors, conductivity of copper, thickness and construction of insulation, carbon content of asbestos, adhesion, flexibility, dripping of compound, flame resisting properties, and dielectric strength test requirements.

Underwriters' Laboratories. Motion-Picture Cable and Store Wire; 1921. Single copper conductors with asbestos covering for exposed leads in motion-picture machines, heaters, and stoves, but not suitable for moist places or use in conduit. Conductivity, limiting sizes of and stranding of conductors, thickness and carbon content of asbestos covering, flame and bend test require-

ments

Underwriters' Laboratories. Rubber Covered Fixture Wires; 1927. Minimum sizes of conductors and strands, conductivity, tinning requirements, chemical, adhesion, and tensile test requirements for rubber, thickness of rubber, type and satura-

tion of outer coverings.

Underwriters' Laboratories. Rubber Covered Wire; 1927. Copper conductors, permissible variations from standard sizes, conductivity, tinning requirements, adhesion and thickness of rubber, construction and number of fape or braid coverings, construction and dimensions of cables, thickness of lead coverings, voltage, insulation resistance, and wrapping test for wire, chemical and tension test requirements for rubber insulation.

Underwriters' Laboratories. Slow Burning and Slow Burning Weather proof Wires; 1920. Of soft copper, conductivity, number and thickness of cotton braid coverings, saturation requirements, flame proofing and heating test requirements.

flame proofing and heating test requirements.
Underwriters' Laboratories. Varnished Cloth Wires
and Cables; 1928. Construction and thickness of
varnished cotton cloth insulation, fibrous or lead
outer covering same as for rubber covered wire,
voltage and insulation resistance test requirements for wire, width, tensile strength, dielectric
strength, and heat effect test requirements for

the varnished cloth strips.

U.S. Gov., Federal Specifications Board 65; 1923. Rubber Covered Wires and Cables (For Ordinary Purposes). Wire sizes according to A. I. E. E. standards, dimensional tolerances, conductivity, splicing, and tinning requirements, adhesion requirements for rubber, construction of fibrous coverings, chemical and tensile test requirements for rubber, high voltage and insulation resistance test requirements for wire and cable, wrapping test for small single conductor insulated wires.

lighting outfits. See 710.39.

715.49 Miscellaneous Wires, Cords, and Cables

U. S. Gov., Dept. of Commerce. Bureau of Standards R56-28; 1928. Carbon Brushes and Brush

Shunts. For brush shunts, standard lengths, sizes, stranding, and size of terminal established as standard in simplified practice recommended and accepted by industry.

715.5 PROTECTIVE APPARATUS FOR ELECTRICAL EQUIPMENT

References.—Fuses, circuit breakers. See 714.21, 714.51.

715.50 General Items

American Railway Assn. Signal Section. Requisites for Choke Coils for Signaling; 1915. General requirements of operation and construction that the design of the choke coil will be required to meet.

American Railway Assn. Telegraph and Telephone Section. 4-8; 1924. Protector Mountings. Covers mountings for fuses and arresters, operating voltage, dielectric strength, and insulation resistance requirements, protection against ignition. American Railway Assn. Telegraph and Telephone

American Railway Assn. Telegraph and Telephone Section. 4-9; 1924. Protectors. Various combinations of protectors and protector mountings for fuses and arresters, shall meet the specifications of A. R. A. for the various fuses and arresters and for the mountings, except as to packing and marking.

Associated Factory Mutual Fire Insurance Companies. Lightning Rod Equipments on Smokestacks and Chimneys; 1929. Recommendations on minimum size and number of copper cable or tape, on supporting, protection against corrosion, on size, shape, and number of copper air termi-

nals, on method of grounding.

National Board of Fire Underwriters. National Standards Assn., Cl.–1931. Approved by American Standards Assn., Cl.–1931. Grounding requirements for interior wiring circuits, metal inclosures, and electrical equipment, construction of grounds and permissible resistances, sizes, type and installation of ground wire and clamps and methods of grounding.

National Fire Protection Assn. Code for Protection Against Lightning; 1929. Based on Parts I and II of the Lightning Safety Code as published by Nat. Bureau of Standards and approved by American Standards Assn. and is identical therewith except for editorial and other minor differ-

ences.

Underwriters' Laboratories. Tentative Standard. Construction and Installation of Materials for Lightning Rod Equipments; 1925. Conductor materials of copper, alloys, copper clad steel, or galvanized steel, form and minimum weight of conductor, strength and resistance of joints, construction and mounting of fasteners and points, weight and stiffness of elevation rods, installation of elevation rods, location of air terminals, coursing of conductors, number of down conductors, interconnection of metallic masses, number, location, and construction of ground connections, rules applicable to special installations as metal roofed and metal clad buildings, spires, poles, water towers, smokestacks, chinneys, live stock in fields, trees, vessels and marine structures, balloons, airships, hangars, and oil tanks.

U. S. Gov. Dept. of Commerce, Bureau of Standards

U. S. Gov., Dept. of Commerce, Bureau of Standards M92; 1929. Joint sponsor with American Institute of Electrical Engrs, approved by American Standards Assm., as C 5-1929. Code for Protection Against Lightning. For protection of buildings and miscellaneous property, fundamental principles of protection, materials for lightning rods, requirements on minimum sizes and weightning of rods, strength and electrical resistance of joints, size and installation of elevation rods, coursing of conductors, number and location of down conductors, grounding, interconnection of metallic masses, recommendations on structural features of oil and gas tanks for self-protection

against lightning.

U. S. Gov., Dept. of Commerce, Bureau of Standards M95; 1929. Protection of Electrical Circuits and Equipment Against Lightning. Preliminary report of committee working under auspices of American Standards Assn. presenting informa-tion about present methods and practices which have been found satisfactory, it indicates how and where lightning arresters should be installed at power houses, substations, transmission lines, railway lines, locomotives and car equipment, kinds of grounds and methods of testing.

References.—Slate insulation, porcelain insulation. 8.ee also 511.53, 582.22. Copper cable, wire, rods. See also 715.41, 715.44, 642.11. Other safety codes for electrical apparatus. See 710.

715.51 Lightning Arresters

American Institute of Electrical Engineers. Report on Standards No. 28; 1931. Standards for Lightning Arresters and Other Apparatus for Protection against Abnormal Transient Voltages. Definitions, classification, rating, performance, tests for protective and performance characteristics, dielectric test.

American Railway Assn. Signal Section. Requisites for Lighting Arresters for Signaling; 1915. General operating requirements that the design of the arrester will be required to meet.

American Railway Assn. Signal Section. 5215; 1915. Vacuum Gap Lightning Arresters. For signal circuits of 175 volts or less, temperature requirements on permanence of corrosion resistive coating, general design requirements for binding posts, insulating base, clearance of live parts, breakdown voltage and load discharge test requirements.

American Railway Assn. Signal Section 6031; 1931. Installation of Made Ground for Protection Against Abnormal Potentials. Ground elements of iron pipe or rod, or copper plate, size and material of ground lead, terminal pipe clamp, ground point, installation, materials according to A. R. A. specification 1424, location, proportions of charcoal, salt, etc., about element, maximum allowable resistance of ground.

American Railway Assn. Telegraph and Telephone Section. 4-4; 1924. Office Arresters for Telegraph and Telephone. Replaceable type to be used with line fuses, requirements on voltage

used with line ruses, requirements on votage operating characteristics, current carrying capacity, and insulation resistance.

American Railway Assn. Telegraph and Telephone Section. 4-5; 1924. Cable Arresters for Telegraph and Telephone. Replaceable type to be used with line fuses of more than 7 amperes, requirements on voltage operating characteristics current carrying capacity and insulation resistance.

References.—Lightning codes, lightning rod protec-tion. See 715.50. Definitions, symbols, standard volt-ages, methods of test, safety codes. See also 710.

716. ELECTRIC LAMPS AND LIGHTING EQUIPMENT

716.0 GENERAL ITEMS

American Institute of Electrical Engineers. Standard No. 37; 1925. Illumination Engineering Society. American Standards Assn., Z 7-1925. luminating Engineering Nomenclature and Photometric Standards. Definitions referring to illumination in general, color nomenclature, difusing and reflecting surfaces, illuminants, definition referring to photometry, tabulated photometric units and conversion factors. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society of Mechanical Engineers. Symbols for Photometry and Illumination. Approved by American Standards Assn. as Z10d-1930. Joint sponsors, Am. Assn. for Advancement of Science, Am. Inst. of Electrical Engineers, Society for Promotion of Engineering Education. and Am. Soc. Mech. Engineers. Comprises a revision of the symbols given in ASA standard Z7-1925 on Illuminating Engineering Nomenclature. Symbols and defining equations, adopted as standard, given for radiant flux, luminous flux, luminous intensity, illumination, etc.
U. S. Gov., Dept. of Commerce, Bureau of Stand-

ards T325: 1926. Recent Developments in Lamp Life-Testing Equipment and Methods. Describes the test methods and the construction and use of computing scales and other accessory equipment used in connection with bar and sphere photometers at the bureau for making photometric measurements on incandescent lamps while

under life test.

716.1 ELECTRIC LAMPS

716.10 General Items

American Railway Assn. Electrical Section. XIIIa-30; 1930. Incandescent Lamp Standards. Standard watt and voltage ratings, standard bulb types and base types for general lighting service, for high voltage lighting service, for rough service, for limited lighting service, for sign lighting, floodlighting, train lighting, switch indicators, for use with resistor units, locomotive lighting, street lighting, electric street railway lighting, hand lantern service, flashlights, signal lamp, and motor coach lighting.

American Railway Assn. Mechanical Div. Recommended Practice. Schedule of Incandescent Lamps; 1930. Recommended types and sizes.

American Society of Mechanical Engineers. National Electrical Mfrs. Assn. Rolled Threads for Screw Shells of Electric Sockets and Lamp Bases. Approved by American Standards Assn. as C41-1931. For miniature, candelabra, intermediate, medium, and mogul types, standard pitch, dimensions, shape of threads, gage tolerances.

Assn. of Railway Electrical Engineers. 1929 Man-

ual. E-II; 1928. Incandescent Lamp Standards.

Types and sizes for various railway services.
S. Gov., National Screw Thread Commission. Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. American National rolled threads for screw shells of electric sockets and lamp bases. Mandatory for material purchased and used by War and Navy Depts. Requirements on form of thread, threads per inch, and dimensions for miniature, candelabra, intermediate, medium, and mogul sizes, tolerances on threads and on in-spection and working gages.

716.11 Ordinary Incandescent Lamps

American Railway Assn. Electrical Section. XIIIb-30; 1930. Large Tungsten Filament Incandes-cent Lamps. Requirements on goneral construction, initial rating test, life performance test, initial rating tolerances, with manufacturers' schedules of commercial ratings

American Railway Assn. Signal Section 5115; 1915. Incandescent Electric Lamps. Carbon and tungsten lamps for signal lights, dimensions, construction, candlepower and life test requirements, initial candlepower, wattage, and life requirements for 10-watt, 115-volt lamps, and for 5-watt,

12-volt lamps.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Incandescent Lamps. Limit of ratings for medium and mogul bases. protection requirements of gas filled lamps in

show windows.

U. S. Gov., Federal Specifications Board. W-L-101; 1930. Large Electric Incandescent Lamps, Tungsten Filament, For 115 and 230 volt multiple circuits and for series street lighting circuits, with medium and mogul screw bases, requirements on overall length, light center length, hours life, rated watts and lumens and tolerances, methods of sampling and testing, rules for reiections.

References.—Illumination nomenclature, lamp testing methods. See also 716.0. Standard thread and screw base sizes, railway sizes and types. See 716.10. Definitions, symbols, standard voltages, safety codes, See also 710. Dial lamps for radio receivers. See

716.12 Lamps for Automobiles and Motorboats

Illuminating Engineering Society, Society of Automotive Engineers. Approved by American Standards Assn. as D 2-1922. Published by I. E. S. and U. S. Dept. of Labor. Laboratory Tests for Approval of Electric Headlighting Devices for Motor Vehicles. Requirements on submission of samples, use of standard lamps, photometric test procedure, intensity of illumination at various points in the field.

Society of Automotive Engineers 1931 Handbook. Bases, Sockets, and Plugs; 1930. Includes standard dimensions of single and double contact bases

for automobile lamps.

Society of Automotive Engineers 1931 Handbook. Electric Incandescent Lamps; 1928. Outside dimensions of lamps, location of filament and locking pin for four focusing type lamps, outside dimensions and location of locking pin for two nonfocusing lamps, two standard voltages, candle-power requirements for specified gas-filled head

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Laboratory Tests of Optical Characteristics of Electric Signal Lamps for Motor Vehicles; 1931. Requirements on set-up for test, minimum luminous area of signal, light intensity of luminous area and at angle from

Society of Automotive Engineers 1931 Handbook. Specifications for Laboratory Tests of Optical Characteristics of Electric Head Lamps for Motor Vehicles; 1930. Definitions, methods of test for measuring illumination, candlepower requirements for different points on measuring screen and for different focus adjustments, includes lower beam requirements for dual beam lamps.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Laboratory Tests of Op-tical Characteristics of Electric Signal Lamps for Motor Vehicles; 1930. Requirements on area and brightness of luminous signal area for red

or amber stop signal indicator, methods of test. Society of Automotive Engineers 1931 Handbook. Laboratory Tests of Optical Characteristics of Tail Lamps for Motor Vehicles; 1930. Candlepower requirements for the red light and illumination requirements for license plates, relative

location of lamp and license plate.

Society for Automotive Engineers 1931 Handbook. Recommended Practice. Motorboat Electric Incandescent Lamps; 1930. Tables of dimensions of standard lamps for 6, 12, and 32 volts, for various candlepowers and wattage, covering bayonet base lamps and medium screw base lamps.

U. S. Gov., Federal Specifications Board W-L-111; 1930. Miniature Incandescent Electric Lamps,

Tungsten Filament. For screw base flashlight lamps, and single contact and double contact bayonet base lamps for automobile service, trade numbers, voltage and current ratings, candle power ratings for automobile lamps, requirements on construction, overall lengths, light center lengths, and hours life, and for automobile lamps required maintenance of candlepower and initial watts rating per candlepower, toler-ances, rules for rejection, methods of sampling and testing.

References.—Illumination nomenclature, lamp testing methods. See also 716.0. Standard thread and base for screw base lamps. See also 716.10.

716.13 Electric Hand Lamps and Lanterns

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 10A, 1922. Procedure for Establishing a List of Permissible Electric Hand Lamps, Trip Lamps, Animal Lamps, and Rescue Lamps for Use in Gaseous Mines. Requirements on locking of battery, on provision of safety device for broken bulb, short circuit capacity of battery, tests of extinguishing feature of safety device for broken bulb, scope of approval, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards R68; 1927. Metal and Fiber Flash-Light Cases. Simplified practice recommended and accepted by industry establishing a limited list of standard stock types, sizes, and finishes for cases

for 2-cell and 3-cell flash lights.

U. S. Gov., Dept. of Commerce. Steamboat In-spection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Flash Lights and Batteries, As life boat equipment on ocean and lake vessels, for an all-metal flash light, mandatory requirements on diameter of reflector head, shape and coating of reflector, for 3 cell in line dry batteries, general construction of sal ammoniac type batteries.
U. S. Gov., Federal Specifications Board W-L-111;

1930. Miniature Incandescent Electric Lamps, Tungsten Filament. For screw base flashlight lamps, trade numbers, voltage and current ratrequirements on construction, overall lengths, light center lengths, and hours life, tolerances, rules for rejection, methods of sampling

and testing.

References.—Miner's lamps. See 716.17. Illumina-no nomenclature, lamp-testing methods. See also 716.0. Standard thread and base for screw base lamps, See also 716.10. Flash-light batteries. See 712.1. Dia lamp for radio receivers. See 716.14.

716.14 Dial Illuminating Lamps

book of Radio Standards; 1928. 322-616. Pilot National Electrical Manufacturers Assn. Lamp for Radio Receiver. Dimensions of standard base and lamp using standard miniature size of Edison type screw shell, standard ratings for

lamps for 5-volt and for 2½-volt circuits.
Radio Manufacturers Assn. (Inc.). M4-122 to M4126, incl.; 1930. Dial Lamps. For standard miniature screw base lamp, requirements on dimensions of base and of lamp, rating of lamps for use on 5-volt circuits and for lamps for use on 2.5-

volt circuits.

References.—Illumination nomenclature, lamp testing methods. Sce also 716.0. Standard thread and base for screw base lamps. See also 716.10.

716.15 Mercury Vapor Lamps

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Mercury Vapor Lamps. Requirements for grounding, overload protection, and enclosures for resistances and regulators.

716.16 Arc Lamps

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Arc Lamps. En-closure, clearance and mounting requirements of parts, requirements on leads, overload protection,

and operating switch.

Underwriters Laboratories. Therapeutic Carbon Arc Lamps; 1930. Requirements on stability, thickness of metal inclosure, design features of inclosure, carbon holders, and screens, insulation of wiring, provision of terminals, spacing of live parts, test of lamp insulation, test of current in-terrupting device, permissible heating, etc.

References.—Illumination nomenclature. See 716.0 Definitions, symbols, methods of test, electric service standards, safety codes. See also 710. Arc projectors and searchlights. See 716.2.

716.17 Miner's Lamps and Gas Detectors

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 6B; 1926. Permissible Electric Cap Lamps. Requirements on angle of light beam, on light distribution, on explosion safety device at lamp and at battery, on nonspillability of bat-tery liquid, on time of burning and candle power, on one battery charge, on bulb life, bulb uniformity, prevention of corrosion, etc., how approval is granted.

S. Gov., Dept. of Commerce, Bureau of Mines Schedule 8B: 1926. Portable Methane Detectors. Requirements on safety against ignitions when used in gaseous mines, on general construction of seals, glasses, battery, nonspillability of electrolyte, on tests for sensitivity of detection of methane, on accuracy and range of indicating detec-

tors, on drop test for mechanical strength, how approvals are granted.

References.—Hilumination nomenclature, lamp testing methods. See also 716.0. Standard thread and screw base sizes. See 716.10. Flame type miners lamp. See 997.6.

716.2 SEARCHLIGHTS, PROJECTORS, LOCOMOTIVE HEADTIGHTS

American Institute of Electrical Engineers. ard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Searchlights. Recommendations on provision of glass mirrors of mangin or parabolic type, protection of mirror and exclusion of moisture, simplicity of operating gear, mounting and sturdiness of resistors, location of searchlight on ship.

American Railway Assn. Mechanical Div. Recommended Practice. For electric headlight, requirements on spacing and size of bolt holes in mounting base, method of photometry and of physical measurement of reflectors, provision of

dimmer.

American Railway Assn. Mechanical Div. Recommended Practice. Dimensioning of Headlight Reflectors; 1924. Recommendations on points of origin from which the dimensions of glass re-flectors should be taken, standard dimensions illustrated.

Assn. of Railway Electrical Engineers. 1929 Man-ual. B-II; 1928. Headlight Cases. For locomotive electrical equipment, dimensions and spacing

of bolt holes in base of headlight case. Assn, of Railway Electrical Engineers. 1929 Manual. B-III; 1928. Headlight Reflectors. For locomotive electric headlight, methods of dimensioning metal reflectors and glass reflectors with a few tolerances.

U. S. Gov. Dept. of Commerce, Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Headlights. Requirements for approval for use in gassy and dusty mines, including requirements for machine and locomotive headlights for provision of explosion proof casings, for thickness of casing walls and headlight glass, construction and bolting of casing joints, explosion tests, etc.

References .- Motion-picture projectors. See 912.

716.3 LIGHTING REQUIREMENTS AND EQUIP-MENT

716.30 General Items

American Electric Railway Engr. Assn. Recom-mended Practice E122–30; 1930. Shop, Office and Yard Lighting. Properties of multiple and arc resisting series incandescent lamps, of reflectors and lighting units, recommendations on type of lighting and the minimum intensity for the different applications in shop, office and yard.

American Institute of Architects. Code of Light-

ing School Buildings. See Illuminating Engi-

neering Society.

American Society of Mechanical Engineers, Symbols for Photometry and Illumination. Approved by American Standards Assn. as Z10d-1930. Joint sponsors, Am. Assn. for Advancement of Science, Am. Inst. of Electrical Engrs., Society for Promotion of Engineering Education, and Am. Soc. Mech. Engineers. Comprises a revision of the symbols given in ASA standard Z 7-1925 on Illuminating Engineering Nomenclature. Symbols and defining equation, adopted as standard, given for radiant flux, luminous flux, luminous intensity, illumination, etc.

Artistic Lighting Equipment Assn., Assn. of Edison Illuminating Companies, Illuminating Engineering Society, and National Electric Light Assn. Appendix A. Specifications for Residence Lighting Equipment; 1928. Luminaires are appraised by use of a numerical system of relative weights for the several stipulated qualities, specifications and tests for arriving at the number to be assigned and limiting values for certain of the qualities. Covers illumination qualities as regards illuminating power, light distribution, and freedom from glare; construction and finish; and appearance.

Assn. of Railway Electrical Engineers. 1929 Manual. E-I; 1928. Manual of Lighting Practice for Railroads. Fundamentals of illumination and general design data, recommended practice for lighting of railway shop and roundhouse, office and drafting room, passenger and freight station, storchouse, warehouse, pier, yard, car, including specifications of Post Office Dept. for lighting

of mail cars.

of man cars. Illuminating Engineering Society. Approved by American Standards Assn. as A 11–1930. Pub-lished by I. E. S. and U. S. Dept. of Labor, Code of Lighting Factories, Mills and Other Work Places. Requirements on minimum foot-candles illumination for various work spaces, avoidance of glare, diffusion and distribution of light, exit, and emergency lighting, information on good lighting practice, classification of light sources from standpoint of glare, etc. Work going forward looking toward revision of this code.

Illuminating Engineering Society, American Institute of Architects. Approved by American Standards Assn. as A 23-1924. Published by I. E. S. and U. S. Dept. of Labor. Code of Lighting School Buildings. Requirements on minimum and recommended values of illumination for various rooms and grounds of school buildlight, color and finish of interior, exit and emergency lighting.

Illuminating Engineering Society. Approved by American Standards Assn. as Z 7-1925. Illuminating Engineering Nomenclature and Photometric Standards. Definitions of lumen, candle power, lux, phot, lambert, relative visibility factor, hue and color saturation, types of reflecting surfaces, illuminants, photometric units and ab-

breviations, etc.

Society for Electrical Development (Inc.). lin Specification for Good Lighting; 1929. For factory, office, store, and public building, includes tables of recommended and of minimum intensity of illumination for many types of industrial and commercial interiors, and tables for determining the size and spacing of lamps for various types of lighting equipments, room and mainte-nance conditions, and desired intensity of illumination. Recommendations on wiring included.

References.—Wiring methods and practice. See 715.30.

716.31 Electric Signs

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. C1-1931. Signs and Outline Lighting. Minimum thickness of sheet metal, provisions for drainage, weather proof cabinets, switches, and fuses, types of sockets and receptacles, minimum size and insulation of wire, method of installing wire, capacity of branch circuits, inclosure of live parts, and grounding requirements.

National Board of Fire Underwriters, National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Vacuum and Inert Gas Tube Systems of over 600 volts. Support of tube, protective mounting of terminals, protection of transformers and tubes, maximum voltage of transformer secondary, minimum size, insulation, and insulation of conductors, overload pro-

tection requirements.

Underwriters Laboratories. Electric Signs; 1930. Covers incandescent lamp and gas tube signs, requirements on thickness of metal in body parts. on structural features, thickness of glass and of fastenings for glass panels and letters, wiring requirements, permissible current carrying capacities, spacing of wires, enclosure of transformers, insulation of cable and tube supports, dielectric

Strength, etc.

Beforece—Wiring methods and practice. See also
715.30. Safety code for signs. See 710. Copper wire,
electric lamps. See also 715.44, 716.11. Steel sheets.
See also 604.23. Transformers, high frequency apparatus. See also 715.45, 717.3.

716.32 Electric Lighting Fixtures

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practice for Electrical Installations on Shipboard. Permanent Watertight Fixtures. For outside lighting fixtures, recommended requirements on permissible temperature rise of fixture, provision of watertight globe and of guard about lamp, threading for 2 sizes of globes and of base of fixture

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Fixtures, Construc-tion of lighting fixtures, wireways, thickness of metal tubing, inlinium size of wire, method of wiring, grounding, mounting requirements for va-

rious locations.

Underwriters' Laboratories. Electric Fixtures: 1928. Minimum thickness of tubing walls, threaded and locked joint construction, electrical assembly, construction of wire ways, minimum size and current-carrying capacity of wire, wire insulation, wiring methods, electrical tests of wiring, operating temperature requirements.

Underwriters' Laboratories. Insulating Joints and Studs: 1920. Intended for use in insulating straight electric and combination gas and electric fixtures from grounded metal work. Metal materials of malleable iron, steel or brass, general design, finish, and threading, test requirements for softening of insulating material, torsion strength of joint, bending, leakage, and dielectric strength.

References.—Wiring methods and practice. See also 715.30. Safety codes, symbols, testing methods. See also 710. Moided insulation. See also 715.25. Sockers and receptacles. See also 715.21. Copper wire, gas fixtures. See 715.44, 997.2.

716.39 Miscellaneous Lighting Equipments

American Electric Railway Engr. Assn. Recom-mended Practice E121–30; 1930. Car Lighting. Recommends a minimum intensity of illumination, general type of lighting, location of lights in car and at entrances and exits, gives characteristics of lamps and reflectors, drawings of car lighting layouts.

American Electric Railway Engr. Assn. Recommended Practice E123-30; 1930. Motor Coach Lighting. Recommendations of minimum illumination intensity, sizes of lamps for various locations and uses, data on representative lamps and reflectors, typical layouts that give recommended illumination intensities, recommended types and construction for headlights and rules for adjust-

ment, construction and illumination of signs, types of step lights and stop lights, total recommended wattage requirements for various sizes

of motor coaches, sizes of wire.

American Railway Assn. Mechanical Div. Recom-mended Practice. Car Lighting; 1927. Standard voltages, recommendations on mounting and clearance of axle generator, or dimensions and design of generator pulleys, battery boxes, charging receptacle and plug, train-line receptacle and connectors, mountings for link fuses, open end link fuses, recommended material on switchboard, installation of wiring and conduit, wire according to specifications of Assn. of Railway Electrical Engrs.

American Railway Assn. Mechanical Div. Recommended Practice. Locomotive Lighting; 1927. Requirements on system voltage, capacity, range of operation, and mounting of turbo-generator,

mounting of electric headlight.

Assn. of Railway Electrical Engineers 1929 Manual. Electric Train Lighting; 1928. Requirements for system voltages, mounting clearances, and specifications for axle generator, dimensions and design of pulleys, pulley bushings, battery boxes, charging receptacles and plug, train line connector, installation of conduit and wire, connecting and fusing of wire; specifications for generator regulator and lamp regulator.

Underwriters Laboratories. Christmas Tree and Decorative Lighting Outfits; 1931. For series type with miniature base lamp holders and for parallel type with intermediate and medium base lamp holders, for indoor and outdoor use, requirements on voltage and current ratings, type, insulation, and minimum sizes of wire, depth and heat softening test for lamp holders, connections,

strain relief, etc.

References.—Lighting codes, illumination nomenclature. See also 716.30. Electric lamps. See 716.1. Wiring methods and practice, safety code. See 715.30, 710

717. HOUSEHOLD DEVICES, HEATERS, AND X-RAY APPARATUS

717.0 GENERAL ITEMS

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1–1931. Electrical Appliances for domestic and commercial use. Branch circuit requirements for various capacity appliances, application and location of disconnecting switch, construction requirements for plug connector on portable appliances, approved types of cords for portables, fuse requirements for circuits.

717.1 ELECTRIC HEATING AND COOKING DE-

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Electric Heaters. For convector and radiant type, recommended standard voltages and sizes, number of heat ranges for various sizes, material and structural features of framework and protective guards, protection against corrosion, noncorrodibility and ease of removal of heater units, permissible temperature rise of inclosing cases or adjacent deck or bulkhead.

Underwriters' Laboratories.

Domestic Electric Ranges; 1930. Thickness of sheet metal casings and linings, permissible application of rubber insulated and of asbestos insulated wire, installation of wire, high-voltage test of wiring, general requirements on installation of terminal box, terminals, cut-out bases, receptacles, switches, and grounding, operating temperature effects permissible on nearby surfaces and in terminal

boxes, rating requirements.
Underwriters' Laboratories. Electric Car Heaters;
1925. Classification of stationary heaters, requirements on protection of heating elements, wiring, and terminals, test requirements on heating effects on adjacent materials, on dielectric

strength, and on overload.

Underwriters' Laboratories (Inc.). Electrically Heated Appliances; 1930. Requirements on stiffness of sheet metal for frames or inclosures, stability of device, support and protection of heating element, permissible insulation materials for wiring for various temperatures encountered, use of fusible links, use and types of terminals, voltage test for insulation, types of switches, receptacles, cords, and plugs required, temperature tests, permissible current leakage for liquid heating appliances, etc.

U. S. Gov., Federal Specifications Board 68a; 1925. Sterilizers, Dressing Containers, Etc. Electric heaters for sterilizers, requirements on 3 heat control, tolerance on rated capacity, type of switch, dielectric test of insulation, freedom from

oxidization, etc.

References.—Resistant heater wire. See also 715.43.
Heater cord. See also 715.42. Plugs, connectors, snap switches. See 115.24, 717.0, 715.22. Insulated wire. See 215.44. Wiring for heaters. See 717.0. Steel sheets. See also 604.22, 604.23. Zinc and nickel plating. See also 604.22, 604.23.

717.2 MOTOR-DRIVEN HOUSEHOLD DEVICES

References .- Electric fans. See 711.23.

717.3 X-RAY APPARATUS AND EQUIPMENT

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. X-Ray and High Frequency Apparatus. Requirements for barriers or separate inclosures, insulation and location of operating handles, high voltage leads, and tube terminals, requirements for circuit breaker and automatic switch in transformer circuit, ground-

U. S. Gov., Dept. of Commerce, Bureau of Standards RP56; 1929. The Precise Measurement of X-Ray Dosage. Includes a definition of the international unit of X radiation, describes the equipment at the Bureau of Standards and the method of use in the standard measurement of X-ray

77255°-32--23

dosage.

U. S. Gov., Dept. of Commerce, Bureau of Standards RP211; 1930. An Improved Form of Standard Ionization Chamber. Describes a modification of the open-air parallel plate ionization chamber that is portable and is used in the measurement of X-ray intensity. Measurements are as accurate as those made with the primary standard described in RP56.

718.2 TELEPHONE APPARATUS

718.20 General Items

American Railway Assn. Telegraph and Telephone Section. 11–4; 1926. Standardization of Trans-mission Unit. Defines transmission unit, de-scribes its application and compares it with previous unit of "mile of standard cable."

718.21 Telephone Instruments

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 9A; 1922. Procedure for Establishing a List of Permissible Telephones for Use in Coal Mines. Requirements on housing of magneto. hook switch batteries, etc., in explosion proof compartments, construction of joints in casings, short circuit capacity of battery, tests for explosion safety in explosive gases, scope of approval,

References.—Telephone head set for radio. See 88.69. Safety code for telephone apparatus exposed to electric supply lines. See 710.

718.22 Telephone Switchboards

American Railway Assn. Telegraph and Telephone Section. 2-G-9; 1924. Porcelain Jack Panel ARA-4-B. Panel for mounting 16 jacks on switchboard frame, insulation resistance test and absorption of water test requirements for porce-

lain panel, color of glaze, dimensions.

American Railway Assn. Telegraph and Telephone
Section. 2-G-37: 1928. Molded Composition
Jack Panel ARA-4-C. Made of molded homo-

American Railway Assn. Telegraph and Telephone Section. 2-G-46; 1929. Switchboard Framework, ARA-2-F. For telegraph and telephone switchboard, list of tees, angles, straps, braces, bolts, etc., comprising the assembly, requirements on fillet sizes of angles and tees, on size of tapped holes, dimensions and design of assembled framework and of detail parts.

ace reverse.—Porcelain for electrical purposes. See also 532.22. State for electrical purposes. See 511.53. Moded insulation. See also 719.53, Symbols, methods of testing, safety codes. See also 719. Switchboard equipment. See also 718.29. References .- Porcelain for electrical purposes.

718.29 Miscellaneous Telephone Equipment

American Railway Assn. Telegraph and Telephone Section. 2-G-7; 1924. Block Mountings. Sheet steel mountings for terminal or fuse blocks in cabinets, annealing requirements for steel, dimensions of one size of mounting.

American Railway Assn. Telegraph and Telephone Section. 2-G-8; 1924. Terminal Block ARA-2-C. Terminal block for 10 wires, general quality and absorption test requirements for porcelain base, dimensions of brass terminal punchings and screws, dimensions of assembled terminal board.

tinning requirements.

American Railway Assn. Telegraph and Telephone Section. 2-G-10; 1924. Jack ARA-200-A. De-tail dimensions of each part, composition of brass for body of jack, composition and hardness requirements of german silver contacts, test requirements on dimensions, assembly clearances, and force required to force in plug.

American Railway Assn. Telegraph and Telephone Section. 2-G-12; 1924. Single Conductor Plug ARA-1-A. For use in connection with patching cords on pin jack switchboards, detailed dimensions of brass body, fiber sleeve, screws, and test gage.

American Railway Assn. Telegraph and Telephone Section, 2-G-13; 1924. Designation Card Holder ARA-34-A. For use in connection with porcelain jack panel ARA-4-B, dimensions of sheet brass blank and of finished holder, enameling requirements.

American Railway Assn. Telegraph and Telephone Section. 2-G-14; 1924. Porcelain Filler Button ARA-3-A. For use with porcelain jack panel ARA-4-B, general quality and water absorption

test requirements, dimensions.

American Railway Assn. Telegraph and Telephone Section. 2-G-17; 1925. Jack ARA-202-A. For use in switchboards, body of cast brass, contacts of german silver, insulation pieces of mica or micanite, composition and hardness requirements for german silver, composition and hardness requirements of rolled brass parts, detailed dimensions of parts, test requirements for dimensions, assembled clearances and force to operate contacts and insert plug.

American Railway Assn. Telegraph and Telephone Section. 2-G-27; 1927. Double Conductor Plug ARA-3-B. For use with cords on pin jack switchboards, body of brass with inner steel rod insulated with hard rubber, construction, detail

dimensions of parts and test gage.

American Railway Assn. Telegraph and Telephone Section. 2-G-35; 1928, and 2-G-36; 1928. Jacks ARA-221-A and ARA-228-A. Body of cast brass, contacts of german silver, composition of brass and German silver, detail dimensions of parts, test requirements for electrical breakdown, contact operation and clearances of assembled jack, and force to push in plug, for jacks insulated with mica.

geneous black composition, dimensions, insula-tion resistance test requirements. | American Railway Assn. Telegraph and Telephone Section. 2-G-41; 1928. Dummy Plug ARA-165-A. For use on switchboards and test panels, dimensions of maple plug.

American Railway Assn. Telegraph and Telephone Section. 2-G-47; 1929. Distributing Frame ARA-1-A. For angle-iron framework, requirement on design and dimensions of assembled unit and of detail parts, enamel finish, list of parts for one unit

American Railway Assn. Telegraph and Telephone Section. 2-G-48; 1929. Wall Distributing Frame ARA-4-A. For angle-iron frame, requirements on design and dimensions of assembled unit and of detail parts, enamel finish, list of

parts for one unit.

U. S. Gov., Federal Specifications Board. W-W-101; 1931. Watchman's Report Apparatus. Includes telephone jack and plug, for jack requirements on material of spring, minimum pressure between spring and plug and between contacts when plug is inserted. For plug, requirements on minimum diameter and maximum length, protection against short circuit and exposure of live parts when inserted.

References.—Structural steel shapes. See also 605.12, 621-14. Plugs and jacks for radio apparatus. See 713.69. Prorelain for electrical purposes. See also 532.22. Switchboard cords. See 715.42. Standard symbols, definitions of circuits. See also 713.40.

718.3 SIGNAL DEVICES, OTHER THAN RAILWAY AND HIGHWAY SIGNALS

718.30 General Items

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Signal Systems. Includes fire and burglar alarms, requirements on insulation and separation from light and power wires, spacing on cross arms, permissible kinds of insulation for aerial cables, thickness of rubber on wire entering building, requirements for arresters, fuses, and grounding.

National Board of Fire Underwriters. Protective Signaling Systems; 1931. For fire alarm, except municipal fire alarms, and for watchmen's signals, size and insulation of underground and aerial wires, requirements for storage batteries, chargers, and motor generators, for electric power service and primary battery sources, trouble signal requirements, circuit arrangements, equipment, tests, operation for various types of fire alarm, watch service, supervision circuits, of manual and automatic types.

718.31 Burglar Alarms

Underwriters' Laboratories. Bank Vault Local Burglar Alarm Systems; 1923. Applies to systems used to signal by means of outside sounding device, if entrance is attempted through protection provided. Requirements on maintenance, range of sounding device, continuance of signal, installation, and type of circuit. Rating of systems according to practicability, durability, reliability. resistance to defeat, fire hazard, uniformity, and workmanship.

Underwriters' Laboratories. Central Office Burglar Alarm Systems on Mercantile Establishments, Vaults, Safes, and Bank Vaults; 1929. Direct wire systems, requirements on protection of central office, provision of and installation of duplicate storage batteries and charging equipment, operation requirements for protection circuits, minimum strength and resistance of overhead wires, requirements for operating and guard forces and their equipment, procedure for answering alarms. For transmitter systems, connection.

operation, types of circuit, and installation. Rules for classification of alarm systems.

Underwriters' Laboratories. Local Mercantile Burglar Alarm Systems; 1928. Alarm systems of outside gong type, insulation and minimum size of wire, installation, operation, and protection of operating circuit, electrical apparatus and batteries, alarm housing, and cabinets, type of protection circuit, dielectric strength of relay coils, gauge of sheet metal in housings, rules for classification.

U. S. Gov., Federal Specifications Board. W-W-101; 1931. Watchmen's Report Apparatus. For a battery operated system for registering at a central office through visible and audible means each report of a watchman, for making a permanent record of the time of each report, and for providing telephone communication between local and central station. Requirements on con-struction and location of report station boxes and telephone jacks, material of jack springs, and pressure to operate, type and length of plugging in cord, dimensions and construction of plug, minimum size of wire for wiring between stations, equipment to be provided at central office, general requirements on construction and accuracy of register, dielectric test of signal circuit and attached mechanism, type and operating features of annunciator, operating features of

References.—Burglar alarm systems. See also 718.30. Alarm bells. See also 718.33. Cables and insulated wire. See also 715.41, 715.44.

718.32 Fire Alarms

National Board of Fire Underwriters. Municipal Fire Alarm Systems; 1926. Insulation, protection, construction, minimum sizes of conductors and installation requirements for underground and aerial cable and of inside wiring, requirements for fuses and arresters, sources of current supply, capacity of storage batteries and installation requirements, construction and operating characteristics of alarm boxes, protector boards, switchboards, testing, visual indicating, recording, and sounding device requirements, types of circuits provided, and system test requirements. U. S. Gov., Federal Specifications Board W-F-391;

U. S. Gov., Federal Specifications Board W-F-391; 1980. Hand Operated Electric Fire Alarm Systems. For a battery operated, presignal, positive noninterfering, code type, manual fire-alarm system using electromechanical signal gongs, requirements on operating features of system, on operating features, materials, and finish for punch register, take-up reel, gongs, gear trains, cabinets, etc., types and materials of inclosures and panels, high voltage test of insulation, etc.

References.—Fire alarm system. See also 718.30. Alarm bells. See also 718.33. Cables and insulated wire. See also 715.41, 715.44. Watchmen's report apparatus. See 718.31.

718.33 Bells, Buzzers, and Push Buttons

American Railway Assn. Signal Section 4427; 1927. Direct Current Vibrating Highway Crossing Bell. 12-inch diameter, gong type for 8-volt operation, general construction requirements, permissible variation in coll resistance, electric surface leakage distance, high voltage and operation at reduced voltage test requirements.

Underwriters' Laboratories Electric Bells; 1925. For general uses and for fire alarm systems, inclosed type, requirements for noncombustible materials, corrosion prevention, thickness of metal cover, method of mounting, connections, operating and dielectric strength test requirements, operation test at reduced current.

References.—Methods of testing, safety codes. See also 710. Zinc and nickel plating. See also 600.3.

Insulated wire. See 715.44. Bell ringing transformers. See 713.5.

718.34 Sirens

718.35 Time-Clock Systems

U. S. Gov., Federal Specifications Board W-T-411; 1930. Electric Time-Clock Systems. For 4 types, a battery or motor operated, minute impulse master and secondary clock system, for clocks operated from synchronous motors, for a self-winding, hourly corrected clock system, and for a combination system, requirements on operating features, structural features, materials for cases, movements, dials, pendulums, relays, etc., accuracy of regulation, etc.

718.39 Miscellaneous Signal Devices

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Telegraphs, Mechanical and Electrical. Recommended requirements on accuracy and permanence of indication for engine telegraphs, provision of audible signal, number and type of indications, visibility, illumination of dials, sizes of pulleys and wire for mechanical telegraph, noncorrodible qualities of materials, installation rules.

References.—Noncorrosive coatings for metals. See also 600.3. Aircraft signals and signal equipment. See 724.3.

718.4 RAILWAY SIGNAL AND TRACK CONTROL EQUIPMENT

718.40 General Items

American Electric Railway Engr. Assn. S1–25; 1925. Standard Use of Semaphore Signals. Arranged to indicate two or three positions in upper left-hand quadrant.

American Electric Railway Engr. Assn. S2-25; 1925. Standard Fundamental Indications in Signaling. Five indications for signals controlled by track circuits.

American Electric Railway Engr. Assn. S3-25; 1925. Standard Aspects in Three-Position Signaling. Chart showing aspects for color light signals and for semanhore signals.

signals and for semaphore signals. American Electric Railway Engr. Assn. S6-16; 1916. Standard Clearance Diagrams for Semaphore Signals. Two diagrams for steam road equipment operated over electric lines, one where trainmen are not allowed to climb side or ride on top of cars, and one where they are allowed.

American Electric Railway Ergr. Assn. Recommended Practice. S101-25; 1925. Aspects for Two-Position Signaling. Chart showing recommended aspects for color light signals and for semaphore signals.

American Electric Railway Engr. Assn. Recommended Practice. S102-25; 1925. Use of Continuous Track Circuits for the Control of Automatic Signals for Interurban Service. Above is recommended where complete protection is recontrod.

American Electric Railway Engr. Assn. Recommended Practice; S103-25; 1925. Methods Of Signalling Double Track Railways Employing Track Circuit Controlled Signals. Signals operated in the train occupied block and in blocks to rear of train.

American Electric Railway Engr. Assn. Recommended Practice. \$104-25; 1925. Methods of Signaling Single Track Railways Employing Track Circuit Controlled Signals. Operation of signals in blocks ahead of train and in blocks to rear of train with the addition of direction indicators where operation is controlled entirely by signal indication.

American Institute of Electrical Engrs. Report on Standard 17g5. Joint sponsor with American Assn. for Advancement of Science, American Society of Civil Engineers, Society for Promotion of Engineering Education, and American Society of Mechanical Engineers under procedure of American Standards Assn. Graphical Symbols used for Electric Traction Including Railway Signalling. Committee report on symbols, including symbols for railway signalling.

American Railway Assn. Operating Division. The Standard Code of A. R. A.; 1928. Train Rules,

Block Signal Rules, Interlocking Rules.

American Railway Assn. Signal Section. Applica-tion of Signals; 1929. A. R. A. code rules for indications for various signal aspects for typical semaphore and equivalent color light, position light, or color position light signals, location and application.

American Railway Assn. Signal Section. taining and Testing Motor Semaphore Signals: 1930. Instructions applicable to installed equip-

American Railway Assn. Signal Section. Technical Terms Used In Signaling: 1930. Definitions

of terms and abbreviations.

American Railway Assn. Signal Section. Take Siding Indicator and Leave Siding Indicator; 1930. The aspect for order to take siding or leave siding to be display of letter "S," requirements on location of indicator and visibility distance.

American Railway Assn. Signal Section. Maintaining and Testing Light Signals; 1930. In-

structions.

American Railway Assn. Signal Section, Cir-cuit Nomenclature and Written Circuits; 1914. Abbreviated designations for electrical signaling units, track circuit numbering, wire nomenclature, symbols for written circuits, abridged and simplified signal circuit diagrams.

American Railway Assn. Signal Section. mizing the Effect of Lightning on Direct Current Track Circuits; 1927. Construction of resistors and connections on relays for minimizing light-

ning damage.

American Railway Assn. Signal Section. 11929; 1929. Wiring. Installation of wires and cables in interlocking plants, classification yard plants, block signals, and highway crossing signals, both underground and on poles, details of branch connections, references to A. R. A. specifications for grounding and parkway cable.

American Railway Assn. Signal Section.

sites for Light Signals for Day and Night Indi-cations; 1921. Range, disallowance of phantom

signals, and spread requirements.

718.41 Railway Signals

American Railway Assn. Signal Section. Highway Crossing Signals; 1931. To give aspect of swinging red light, height, spacing, flash frequency, range and spread for flashing light type; size and transmission values of lenses and roundels; length and frequency of stroke, size of disc for wig-wag type.

American Railway Assn. Signal Section. Train Approach Signals; 1929. Approves recommendation 67 in 1929 report of the Committee of American Engineering Council on Street Traffic Signs, Signals and Markings for two types of signals at grade crossings, the swinging target and red light, and the two alternately flashing red lights

spaced 30 inches horizontally.

American Railway Assn. Signal Section. Current Automatic Block Signaling Circuits; 1922. General design and installation require-ments, specific control indications required for

specified conditions.

American Railway Assn. Signal Section. Switch Indicators; 1930. Their use as adjuncts to automatic block signal system, preferred locations. installation.

American Railway Assn. Signal Section 2029; 1929. Direct-Current Semaphore Signal. Dimensions and design of signal mast, bases, bracket posts, ladders, semaphore spectacle, lamps, lamp brackets, roundels and blades, design requirements for mechanism, mechanism case, bearings, shafts, motor, hold clear device, etc., insulation, surface leakage distance, tests for dielectric strength and excess voltage.

American Railway Assn. Signal Section 6329; 1929. Direct-Current Automatic Block Signals. Allowable voltage drop in feeders, types of apparatus, materials and apparatus specified by reference to A. R. A. specifications, insulation requirements for pipe and switch fittings, dimensions of signal masts, bracket posts, bases, foundations, ladders, etc., wiring and some construc-

tion requirements.

American Railway Assn. Signal Section 7919; 1920. Alternating Current Motor Semaphore Signal. General design requirements for housing, operating connection, bearings, etc., design and operating requirements for motor and hold-clear device, insulation and surface leakage distance, test requirements for dielectric strength, current for motor and hold-clear device, time to clear signal, clearances.

American Railway Assn. Signal Section 8029; 1929. Electric Color Light Signal. General design requirements for case, references to A. R. A. specifications for lenses, roundels, electric lamps, and transformers, wiring and dielectric strength test requirements, blanks for other items for

filling in by purchaser.

American Railway Assn. Signal Section 8119; 1920. Electric Position Light Signal. Some general design requirements for high signal and for dwarf signals, for cover glass, background and hood.

American Railway Assn. Signal Section 8620; 1921. Alternating-Current Automatic Block Signal System. Allowable voltage drop in feeders, accuracy of voltage ratings of transformers, minimum sizes of wire, materials and apparatus specified by reference to A. R. A. specifications,

some constructional requirements.

American Railway Assn. Signal Section 9720; 1921. Alternating-Current Indicator or Repeater. General design requirements for parts and contacts, surface leakage distance, test requirements for dielectric strength, clearance of moving parts, voltage to pick up contacts and to drop away contacts, and operation on reduced voltage.

American Railway Assn. Signal Section 10020; 1921. Direct-Current Motor Operated First Range Voltage High Signal Mechanism. General design requirements, shaft torques, construction of case, design requirements for operating connections, bearings, hold clear device, and circuit controller, load requirements of motor, operation of motor and hold-clear device on reduced voltages, surface leakage distances, dielectric test requirements for electrical apparatus.

American Railway Assn. Signal Section 13123; 1923. Direct-Current Indicator. Apparatus to indicate visually by semaphore, disc, or light the approach of a train or occupancy of a section of track, general design requirements for armature and armature bearings, air gap adjustment, mounting and insulation of colls, permissible variation in resistance and winding, drop-away and pick-up values, surface leakage distance, and dielectric strength test requirements.

American Railway Engineering Assn. and Man-ganese Track Society. A. R. E. A. Trackwork Plans; 1930. Switch Stands. Standard heights, general design and operating features of switch stands, standard details of lamp tip, target shapes, day target discs for switch lamps, and switch stand connecting rods.

switch stand connecting rods.

718.42 Switch Operating Mechanisms and Signals

American Railway Assn. Signal Section. Mechan-ically Interlocking the Levers of Interlocking Machines; 1927. Required locking by and between derails, switches, facing point locks, signals, traffic levers, and special locking.

American Railway Assn. Signal Section. Inspecting and Testing Mechanical Locking of an Interlocking Machine; 1926. Required length of stroke of locking bars, permissible movement of locked levers or latches, list of prescribed locking

American Railway Assn. Signal Section. Testing Electric Locking; 1926. Testing intervals, testing requirements for proper locking, operation of locks, and time intervals for electric approach locking, electric time locking, electric indication locking, electric switch lever locking, and electric traffic locking.

American Railway Assn. Signal Section 6528; 1928. Installation of Electric Interlocking. Contract specification form with blanks and provisions for filling in specific requirements, general requirements for equipment and installation with reference to A. R. A. specifications where available, including buildings, power supply and distribution, interlocking machine, switch operating mechanism, signals, wire and cable, etc.

American Railway Assn. Signal Section. 6628; 1928. Installation of Electro-Mechanical and Mechanical Interlocking, Contract specification form with blanks and provisions for filling in specific requirements, general requirements for equipment and installation with reference to A. R. A. specifications where available, including buildings, power supply and distribution, inter-locking machine, leadout, pipe lines signals cir-

cuits, trunking, etc.

American Railway Assn. Signal Section 6725; 1925. Electro-Pneumatic Interlocking. Contract specification with blanks for filling in specific requirements, general requirements for equipment and installation, with reference to A. R. A. specifications where available, includes buildings, power supply and distribution, compressors, air pipe lines, levers, switch mechanism, signal, wiring, etc.

American Railway Assn. Signal Section 7530; 1930, Mechanical Interlocking Machine, S. & F. Locking. General design, materials of parts, and some dimensions of machine, height of legs, con-

nection of parts, design of levers and locking. American Railway Assn. Signal Section 7630; 1930. Electric Interlocking Machine. General design requirements for locking and for levers, inclosures, indicators, and contacts, surface leakage distance and dielectric strength test requirements for electrical apparatus.

American Railway Assn. Signal Section 9530; 1930. Universal Switch Circuit Controllers. Cam shaft type for 2 or 3 position operation and various combinations of front and back contacts, general design requirements for cast-iron case and cover, operating cam shaft, bearings, cams, crank, binding posts, contacts, surface leakage distance and dielectric test requirements.

American Railway Assn. Signal Section 9931; 1931. Electric Lock. Lock for lever of interlocking machine or for hand operated switch, general construction of lock and contacts, construction and insulation of coils, permissible variation in resistance, surface leakage distance and dielectric

strength test requirements.

American Railway Assn. Signal Section 10131; 1931. Electric Motor Switch Operating Mechanism. Operating requirements, design requirements, surface leakage distance and dielectric strength test requirements for electrical electrical apparatus.

American Railway Assn. Signal Section 11430; 1930. Mechanical Interlocking Machine, Style "A" Locking. General design, materials of parts, and some dimensions of machine, height of legs, connection of parts, design of levers and locking.

American Railway Assn. Signal Section 12127; 1927. Compensation of Pipe Lines for the Operof Mechanical Units. Dimensions crank type compensators, lengths of pipe line for which compensation is to be provided for a given temperature range and for various strokes, for switch operating and signal operating pipe lines. American Railway Assn. Signal Section 12526;

1926. Electro-Mechanical Interlocking Machine, S. & F. Miniature Locking. General design requirements for machine, height of legs, connection of parts, general design and installation of levers and locking, leakage distance and dielectric strength test requirements for electrical apparatus, operating requirements for electrical indication and switch lever locking.

American Railway Assn. Signal Section 12729; 1929. Time lock. Lock for interlocking machine, range in time adjustments, general design requirements, surface leakage and dielectric strength test requirements for electrical appa-

ratus.

American Railway Assn. Signal Section 13226; 1926. Electro-Mechanical Interlocking Machine, Unit Electric Levers, S. & F. Locking. General design and materials requirements for machine, connection of parts, general design requirements for levers and locking, surface leakage and dielectric strength test requirements for electrical apparatus.

American Railway Assn. Signal Section 13430; 1930. Electro-Mechanical Interlocking Machine, Vertical Locking. General design requirements for levers and their operating features and for locking, insulation and surface leakage distance, and dielectric strength and excess voltage test

requirements.

American Railway Assn. Signal Section. 13831; 1931. Interlocking Lever Circuit Controller. For application to lever of interlocking machine, requirements on general design features, material and minimum opening of contacts, mounting, surface leakage distance and dielectric test for electrical apparatus.

American Railway Assn. Signal Section 14128; 1928. Installation of Automatic Interlocking. Contract specifications with blanks for filling in drawings and individual specifications, dielectric test requirements for electrical apparatus, materials and apparatus specified by reference to A. R. A. specifications, covers power supply and distribution, foundations, signals, circuits, control apparatus, trunking and conduit, instrument and battery shelters.

American Railway Assn. Signal Section. 14731; 1931. Car Retarder System. For slowing down cars during distribution from hump, contract specification form for installation of system with materials according to various A.R.A. Signal Section specifications, requirements on

sizes and installation of air pipe lines, inclosure and general structural features for control machine, car retarder operating mechanism, switch operating mechanism, and skate operating mechanism, time of operation requisites for latter two. American Railway Assn. Signal Section. 14931;

1931. Centralized Traffic Control System. Installation specifications for signal and switch operating systems with equipment and materials specified by reference to A. R. A. standard specifications, blank spaces for filling in quantities, sizes, etc, dependent on particular installation.

American Railway Assn. Signal Section. 15031; 1931. Centralized Traffic Control Machine. Machine for the electric control of signals, switches, and other units. Requirements on design features, materials of contacts, insulation of windings, surface leakage distance, dielectric tests

References.—Signaling standard aspacts, symbols, wiring, circuits, etc. See also 718.40. Railway sisnals. See also 718.41 and references thereunder. Methods of making electrical tests. See also 710. Wrought-iron pipe and steel pipe for signal and switch operation. See also 007.3, 007.4.

718.43 Relays

American Railway Assn. Signal Section. Instructions for Inspecting and Testing Alternating Current Relays and Indicators; 1931. Requirements on flexibility of contact fingers, compression of contact, contact openings, clearances of moving parts, armature end play, testing for pick-up, drop-away, and operating current or voltage, phase displacement, inspection.

American Railway Assn. Signal Section. Formula for Computing Limiting Resistances in Series with Track Battery; 1922. Formula and minimum allowable drop-away current for 2-ohm and

4-ohm track relays.

American Railway Assn. Signal Section. Inspecting and Testing Direct Current Relays; 1927. Permissible variation in resistance of coils, requirements on flexibility of contact fingers, operation, contact openings, contact resistances, armature end play and air gap, testing for pickup, drop-away, and operating current or voltage.

American Railway Assn. Signal Section. Resistance of D. C. Relays; 1926. Eight recommended resistances of direct current neutral and polarized relays between 2 and 1,000 ohms.

American Railway Assn. Signal Section 7830; 1930. Alternating Current Relay. General design requirements for inclosures, binding posts, contacts, permanence of coating material with change in temperature, surface leakage distance for live parts, insulation of colls, test requirements for dielectric strength, excess voltage, clearances, pick-up and drop away values, and normal operation.

American Railway Assn. Signal Section 10529; 1929. Tractive Armature Direct Current Neutral Relay. Provided with first voltage range contacts, over-all dimensions, mounting of parts, construction of armature supports, air gap, coils, permissible variation in resistance and number of turns, contact design and resistance, torque, surface leakage distance, test requirements for dielectric strength. for drop-away and pick-up currents.

American Railway Assn. Signal Section. 14830; 1930. Alternating Current Power Transfer Relay. Requirements on number of front and back contacts, construction of enclosure, minimum relay air gap, type of binding posts, size of flexible connections and coil winding wire, adjustment, capacity, and resistance of silver contacts, dielectric test and permissible surface leakage distance.

References.—Track signals. See 718.40, 718.41, 718.41, 719.42. Industrial controllers and testing. See 714.11. Definitions, symbols, voltage and rating standards, methods of test, safety codes. See also 710. Fower transmission and distribution relays. See 714.1.

718.44 Emergency Signals

References.—Track torpedoes and fusees. See 863. Signaling flags. See 306.4.

718.49 Miscellaneous Railway Signals

American Railway Assn. Signal Section 2330; 1930. Channel Pin. For fastening bond wires into railroad rails, requirements on carbon content of steel or iron pin, dimensions, quality of tin in plating, driving, bend, and tin plating test requirements.

American Railway Assn. Signal Section 7419; 1920. Impedance Bond. General requirements for cast-iron case and cover, for surface leakage distance, for high voltage test of windings, permissible temperature rise, permissible variations in resistance, impedance, and power factor from specified values.

American Railway Assn. Signal Section 10420; 1921. Air-Cooled Reactor for Line and Track Circuits. Some general design requirements, quality of sealing compound, definition of capacity, required range in adjustment of impedance, temperature rise allowance according to rules of Am. Inst. of Elec. Engrs, surface leakage distance, test requirements for dielectric strength and excess voltage.

American Railway Assn. Signal Section. 12831; 1931. Time Release and Time Lock. Mechanical apparatus for introducing a time interval in the control of signal and switch circuits and levers of interlocking machines. Requirements on general structural features, material and minimum opening of contacts, dielectric test and surface leakage distance for electrical apparatus, blank spaces for entering sizes, etc.

American Railway Assn. Signal Section. 13530; 1930. Bonding for Track Circuits. For channel pin, plug, or welded type of bond, requirements on conductivity of bonded track for open track and tunnel track joints, drilling rail and applying bonds, weight of hammer for driving pins

and plugs, installation features.

American Railway Assn. Signal Section. 15131; 1931. Plug Type Rail Bonds and Track Circuit Connectors. For bonds and connectors made of copper wire surrounded by steel wires, requirements on construction and dimensions, mechanical and electrical properties of steel and of copperwire, drive and bend test for plugs, welding, tin plating, stretching test of bond or connector.

718.5 TRAFFIC AND HIGHWAY SIGNALS

American Assn. of State Highways Officials. Nat. Bureau of Standards. National Safety Council, sponsors. Approved by American Standards Assn. as D 3-1927. Colors for Traffic Signals, For highway traffic signals, traffic significance of colors red, yellow, and green, traffic significance of vertical, inclined, and horizontal forms of luminous signs and signals, qualitative and quantitative definitions of colors for signals.

American Assn. of State Highway Officials. Nat. Bureau of Standards. National Safety Council, sponsors. Approved by American Standards Assn. as D 3-1927. Colors for Traffic Signals. For highway traffic signals at railroad crossings, requirements on prior warning time of operation of automatic approach warning signals; for flashing light type, requirements on height, spacing, range, and frequency of flashes, spread of beam, size of lenses; for wig wag type, requirements on length of stroke, size of disk, frequency of stroke; for nonautomatic signals, required significance of colors, qualitative and quantitative definitions of colors.

American Engineering Council. Street Traffic Signs, Signals and Markings; 1930. Submitted to American Standards Assn. for approval. (D-5.) Street Traffic Control Signals. Definitions of terms, classification of systems of control, 3 standard colors, color meanings and order of appearance, size of signal lense, capacity of lamp, visibility, position of colors, location and height of signal, timing intervals, types of train approach and of beacon signals, and other recommendations. Includes recommendations on colors, shape, and sizes of traffic signs, markings of street and curbs for traffic control, types and design of safety zones.

American Railway Engineering Assn. 1929 Manual. Grade Crossings. Highway Crossing Signs; 1929. Dimensions and finish of standard wood post crossing sign, approximate location of sign and signal for wig-way or flashlight signal on signs so equipped, dimensions of advance

warning sign.

National Conference on Street and Highway Safety.

Manual on Street Traffic Signs, Signals and
Markings; 1930. For train approach signals and
for beacon signals, permissible types for each,
required horizontal spacing of the 2 red lights
in the flashing light train approach signal.

National Conference on Street and Highway Safety.

Manual on Street Traffic Signs, Signals and
Markings; 1930. For traffic control signals, permissible minimum size of signal lens, capacity of
lamp, requirements on separate illumination of
lenses, distance light is visible, relative position
of colors, height of signals, time periods, location of signals on street.

718.6 RADIO APPARATUS AND EQUIPMENT

718.60 General Items

American Institute of Electrical Engineers. Report on Standards for Graphical Symbols Used in Radlo Communication (17g3); 1929. A committee report recommending standard symbols for use in wiring diagrams. etc.

for use in wiring diagrams, etc.

Associated Factory Mutual Fire Insurance Companies. Radio Installation Rules; 1925. Rules as taken from the 1925 edition of the National

Electrical Code, sections 3702, 3703.

Institute of Radio Engineers. Report of Committee on Standardization; 1928. Abbreviations. Standard abbreviations for some radio terms, for metric prefixes, and letter symbols for vacuum

tube notation.

Institute of Radio Engineers. Report of Committee on Standardization; 1931. Definitions of Terms Used in Radio Engineering. Definitions of terms referring to waves and wave propagation, transmission, reception, vacuum tubes, circuit elements and properties, antennas, direction finding, and electro-acoustic devices.

Institute of Radio Engineers. Report of Committee on Standardization; 1928. Standard Graphical Symbols Used in Radiocommunication. Illustrated list of defined standard symbols, list of suggested symbols for electro-acoustic devices.

Institute of Radio Engineers. Report of Committee on Standardization; 1928. Transmission Unit. Definition of the decibel and neper, the former being widely used in the United States.

Institute of Radio Engineers. Report of Standardization Committee; 1931. Safety Standards. For protecting operating personnel of radio transmitting stations, requirements on insulation and protection of antenna and antenna leads, protective requirements for transmitter and for power supply.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928, 302 and 303 Standard Terms and Definitions. Definitions of radio terms of general application, engineering definitions of terms used in connection with waves, frequency, coupling, amplification, etc. as adorted from Inst. of Radio Engineers.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC280; 1930. Measurement of the Frequency of Distant Radio Transmitting Stations, Describes the use of the standard frequencies transmitted by the Bureau of Standards for measuring a piezo oscillator or station frequency using a radio-frequency generator, an audio-frequency generator and a receiving set.

U. S. Gov., Dept. of Commerce, Bureau of Standards H9; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for Radio Installations. Requirements on location, installation, and guarding of antenna and counterpoise, material and size of lead-in, type of construction at entrance to building, type and size of grounding conductor and ground, protective devices, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards S530; 1926. Establishment of Radio Standards of Frequency by the Use of a Harmonic Amplifier. Describes method of use of harmonic amplifier in producing, selecting, and amplifying harmonics of high frequency from a known low frequency source and using these frequencies for calibrating a wavemeter.

718.61 Antennas and Equipment

Institute of Radio Engineers. Report of Standardization Committee; 1931. Tentative suggested Methods of Testing and Rating Radio Transmitters and Antennas. For low frequency antennas, definitions of capacity and inductance, resistance, radiation resistance, power input and output, radiation efficiency, effective height, definitions of types of high frequency antennas, methods of resistance and impedance testing.

National Board of Fire Underwriters, National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Radio Equipment, Not applicable to shipboard equipment. Minimum sizes and allowable materials for antenna, counterpoise, lead-in, and grounding conductors, clearance requirements, construction of lead-in bushings, location and operating characteristics

of lightning arresters, grounding and grounding

switch requirement.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928, 321, Receiver Antenna Devices, Standard nomenclature, list of materials and amounts of each in standard antenna unit package.

Radio Manufacturers Assn. (Inc.). M4-551; 1930. Antenna Unit Package. For a kit for radio receiver antenna, required material, such as size and lengths of antenna wire, ground wire, number and types of insulators, ground clamps, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards H9; 1926. Approved by American Standards Assn. as part of C2-1927 (National Electrical Safety Code). Safety Rules for Radio Installations. For receiving and transmitting antennas, of copper, bronze, or copper covered steel, requirements on minimum conductor sizes, insulators for high power stations, permissible supports, clearance from ground and from other conductors, special constructions, etc.

References.—Symbols, definitions, installation. See so 718.60. Wire. See also 715.44. Safety codes. See 718.60.

718.62 Electron Tubes

Institute of Radio Engineers. Report of Committee on Standardization: 1931. Methods of Testing Vacuum Tubes. Test procedure for determina-tion of grid characteristic, plate characteristic, mutual, filament, and emission characteristics, tube constants, grid conductance, amplification factor, plate conductance, mutual conductance, ionization and leakage currents, capacitance, undistorted power output, detection characteristics, measurement of phototube characteristics.

Institute of Radio Engineers, American Institute of Electrical Engineers, Approved by American Standards Assn. as C 16c1-1929. Vacuum Tube Bases. Standard dimensions of the standard 4pin vacuum tube bases, small type and large type, order of connection of elements of tube to the

4 pins in a triode.

Institute of Radio Engineers, Vacuum Tube Base Standards: 1930. Committee report on tentative draft of standards, giving dimensions and toler-ances for small standard UX base, large standard UX base with bayonet pin and without bayonet pin, standard 5 prong UY base, cap for receiving tubes, 50-watt transmitting tube base, 3-pin large transmitting tube base, and plate cap of large transmitting tube, standard connections of termi-

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 340–111 Vacuum Tube. Engineering definitions of types, parts, characteristics, etc., dimensions, connections of pins, and numbering of pins for vacuum tube bases, for 4-pin small and large types, for 5-pin, and for small transmitting tubes, standard tube characteristics for various general purpose tubes and audio output tubes, including dimensions, rating, mutual conductance, impedance, and plate current.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 343-211 Rectifier Tube. Standard connections for elements of tube to pins of standard pin type tube base for hot cathode and for cold cathode rectifier tubes, standard dimensions and ratings of rectifier tubes for capacities up to 0.11 amperes.

U. S. Gov., Federal Specifications Board. 410; 1926. Radio Receiving Electron Tubes. For a low power tube with nominal base diameter of 1-inch and a nominal filament voltage of 1 volt, requirements on material of base, general tube construction, noise on vibration, interelement capacity, impedance, amplification constant not less than 5, emissivity, insulation resistance, gas test. grid characteristic test, mutual conductance test, dimensions of tube and contacts.

References.—Definitions, symbols. See also 718.60. Tube sockets. See 718.69.

718.63 Radio Transmitting Apparatus

American Institute of Electrical Engrs. Standard No. 45; 1930. Recommended Practice for Electrical Installations on Shipboard. Radio Equipments. For tube transmitters, recommended requirements on production of various frequencies in specified frequency range, continuity of frequency adjustments, frequency stability, plate current rise test, permissible time constant of key clicks, permissible power supply voltage variation, heat run test for key locked and for keying.

Institute of Radio Engineers, Report of Standard-ization Committee; 1931. Tentative Suggested Methods of Testing and Rating Radio Transmitters and Antennas. Definitions of power rating for continuous wave modulated and telegraph transmitters, methods of power measurement, definitions and methods of measurement for frequency tolerance, operational stability, percentage modulation, distortion.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 316-319. Transmitof Radio Standards; 1928. 316-319. Transmitter Section. Engineering definitions of general terms and of terms referring to antennas as adopted from the Inst. of Radio Engineers, standard devices for control of constancy of transmitter frequency, standard ratings of broadcast transmitters, methods of rating station coverage, audio-frequency characteristics and modulation capability of broadcast stations, recommended standard practice in supervising modulation,

References.—Symbols, definitions, installation, transmission unit, frequency calibration, safety code. See also 718.60. Radio fixed condensers. See 713.6. 11.3. Luductors, power transformers. See also 713.6. 713.5. Laminated insulating materials. See also 718.61, 718.62, 718.63. Safety codes. See 718.60. 718.61, 718.62, 718.65.

718.64 Radio Receiving Apparatus

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Radio Receiving Equipment. Recommended requirements on frequency range, number of tuned circuits and stages of amplification, emergency use of crystal detector, number of head receivers.

Institute of Radio Engineers. Tests of Broadcast Radio Receivers; 1931. Committee report, includes definitions of terms as sensitivity, selectivity, fidelity, normal test output, etc., requirements of testing apparatus, procedure for input and for output measurements, tests for sensitivity tuning range, selectivity, fidelity, overloading at high output, volume control, and hum.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 320. Receiver Section, Engineering definitions adopted from Inst. of Radio Engineers, requirements for stand-

ard humidity test for receivers.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 322-411. Re-sistors, Inductors, Capacitors for Receiving Sets. Recommended practice on filament resistor marking and method of mounting on panel, standard marking of resistors, requirements on accuracy of resistor rating, dimensions of grid resistor, standard dimensions of extension shafts and of holes in dials for panel mounted capacitors, recom-mended method of mounting adjustable capacitors, method of rating inductors.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 322-614. External Output Devices for Receiving Sets. Requirements on exposure of input and output terminals, voltage test requirements for connecting

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 324-011. Receiving Sets. Nomenclature, requirements on frequency range of broadcast receivers, standard markings of binding posts and terminals and terminal markings of power cable, standard color designations for external wiring, polarity of jacks, protection against high voltages, direction of motion of dials, knobs, and switches.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 325-011. Radio Receiver Cabinet. Requirements on standard

sizes of B-battery compartments.

Radio Manufacturers Assn. (Inc.). M1-111 to M1-211: 1930. Definitions. Definitions of terms relating to radio receiving equipment, nomencla-

ture of antenna parts.

Radio Manufacturers Assn. (Inc.). M2-131; 1930. Audio Coupling Devices. Standard methods of test for measuring the amplification per stage of interstage coupling devices in broadcast receivers.

Radio Manufacturers Assn. (Inc.). M3-111 to M3-221; 1930. Radio Receivers. Definitions of terms relating to receiving sets, their types and parts, standard on and off positions for lever and push pull switches, attachment of power cable, stand-ard direction of rotation of controls and drum type dials, provision of fuses, insulation of leads for external output devices, terminal markings, etc.

Underwriters Laboratories. Power Operated Radio Receiving Appliances; 1930. For alternating current equipment, requirements on inclosure, use of standard parts in supply circuit, insulation of transformer, insulation of wires, accessibility and spacing of live parts, permissible operating temperature, dielectric test, maximum input test,

nameplate marking.

Underwriters Laboratories. Power Operated Radio Receiving Appliances; 1930. For direct-current equipment, requirements on inclosure, use of standard parts in supply circuit, insulation of wiring, accessibility and spacing of live parts, interrupting capacity of tube sockets, operating temperatures, dielectric strength test, nameplate marking.

U. S. Gov., Dept. of Commerce, Bureau of Standards T256; 1924. Some Methods of Testing Radio Receiving Sets. Describes methods for testing sensitivity, selectivity, convenience of operation and simplicity of manipulation, effectiveness in covering the broadcast range, and rug-

gedness of construction.

References.—Symbols, definitions, installation, safety code. See also 718.60. Methods of electrical testing. See also 710. Fixed radio condensers. See also 713.1. Inductors. See also 713.6. Socket power units, bead sets, loud speakers, plugs, jacks, magnetic pick-ups, tube sockets, binding posts. See also 718.69.

718.65 Radio Instruments and Testing Apparatus

U. S. Gov., Dept. of Commerce. Bureau of Standards LC103; 1923. Description of a Series of Single Layer Inductance Coils Suitable for Radio-Frequency Standards. Gives construction features of 17 coils, number of turns, spacing,

dimensions of framework, and the approximate inductance of the coils so constructed, covering range of 8 to 5,000 microhenries.

U. S. Gov., Dept. of Commerce. Bureau of Standards LC183; 1928. Directions for Use of the Piezo Oscillator and Auxiliary Generator for Calibration of a Radio Frequency Meter. Di-rections with diagrams for operation of auxfrom auxiliary generator to frequency meter, for operation of piezo oscillator, and for calibration of wave meter.

U. S. Gov., Dept. of Commerce. Bureau of Standards LC185: 1926. Portable Frequency Meter for Frequencies from 1,500 to 15,000 kilocycles, Bureau of Standards Type K. Specifications of instrument designed for use by radio inspectors, requirements on precision, dimensions, materials, and construction of condenser, dial, inductance

coils, panel, and cabinet.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC186; 1928. Portable Piezo Oscillator, Bureau of Standards Type N. Specifications of type designed for use by radio inspectors for calibration of frequency meters and maintaining constant frequency of transmitting stations, requirements on general design, connection, winding of coils, dimensions of quartz plate and plate holder, dimensions and material of panel and cabinet, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC187; 1926. Portable Auxiliary Generator, Bureau of Standards Type O. Specifications for radio-frequency generator designed for use by radio inspectors, for use with piezo oscillator for calibration of frequency meters, requirements on general design, on connections, panel material and construction, capacity of condenser, winding of coils, construction of cabi-

net, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards S489; 1924. Primary Radio-Frequency Standardization by Use of the Cathode Ray Oscillograph. Describes method of high accuracy for calibrating a wave meter from a tuning fork using Lissajous patterns produced by the oscillograph for adjusting radio-frequency generating sets to multiples of the frequency of the standard tuning fork.

References.—Meters for measurement of electrical quantities. See also 714.3. Frequency calibration. See also 718.60.

718.66 Applications of Radio

American Institute of Electrical Engineers. ard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Radiocompass. Recommendations on the amount and types of equipment required, rotational feature of antenna, balancing out property of receiver to give one direction indication, location and instal-lation rules, calibration tests, list of spare parts, tests for sharpness of minima, sensitivity, selectivity, determination of sense, battery voltage drop, interference from local induction.

adio Manufacturers Assn (Inc.). M9-111 to M9-121, incl.; 1930. Television. Definitions of Radio terms relating to television, recommended practice on standard direction of scanning and 3 standard combinations of lines per frame and

frames per second.

References.—Radlo receiving equipment. See also 718.64. Photo tubes. See 718.62.

718.69 Miscellaneous Radio Apparatus and Equipment

Institute of Radio Engineers. Report of Standard-ization Committee; 1931. Performance Indexes

and Tests of Electro-Acoustic Devices. For radio loud speakers and microphones, defines relative loudness efficiency and response, gives standard methods of measuring and preferred

method of presenting data.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 322-114 Receiver Vacuum Tube Sockets. Standard dimensions and spacing of holes in socket for receiving 4-pin and 5-pin tubes, standard terminal markings.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 322-211 Re-ceiver Plugs and Jacks. Dimensions of one standard size of each, dimensions tolerances, contact pressures in spring jacks and voltage breakdown test requirements for plugs and jacks.

National Electrical Manufacturers Assn. Hand-book of Radio Standards, 1928. 322-311. Receiver Terminals and Binding Posts. Dimensions of standard cylindrical type cord tip and of standard pin type cord tip, test requirements for strength of soldered connection of cord tips or of terminals, dimensions of standard spade type cable terminal for battery connecting conductors, drilling dimensions for binding posts to receive cord tips.

National Electrical Manufacturers Assn. book of Radio Standards; 1928. 323-114. Speakers. Requirements on voltage breakdown test, humidity test, and impedance of loud

speakers.

National Electrical Manufacturers Assn. book of Radio Standards; 1928. 323-311. Radio Head Sets. Requirements on impedance limits and method of measurement, marking of polarity.

National Electrical Manufacturers Assn. Handbook of Radio Standards; 1928. 323-511. Magnetic Pickups. For magnetic pickups for phonograph records, standard method of connecting pickup to plug for plug and jack connection to receiving set.

National Electrical Manufacturers Assn. Hand-book of Radio Standards; 1928. 333-011 Socket Hand-Power Units for Receiving Sets. Nomenclature, requirements on type of output terminals, standard marking of all terminals, provision of disconnect switch, standard voltage ratings, safety rules based on Underwriters Laboratories specifications, including requirements on parts to be inclosed and type of inclosure, kinds of insulating materials, insulation of transformers, inaccessibility or automatic opening of high-voltage circuits when cover is opened, maximum power output on high voltage terminals. M2-111, and

Radio Manufacturers Assn. (Inc.). M4-117 to M4-121, incl.; 1930. Plugs and Jacks. Standard dimensions and tolerances for 6 standard sizes of radio plugs and 7 standard sizes of radio jacks, polarities and polarity markings for jacks, required contact pressures for jacks of spring type, voltage test for breakdown and

where applied.

Radio Manufacturers Assn. (Inc.). M4-113: 1930. Binding Posts. For binding posts for radio receiving sets, standard dimensions of cord tip openings and fastening screw locations to accommodate the standard pin type and cylindrical type of cord tip.

Radio Manufacturers Assn. (Inc.). M4–127 to M4–129, incl., 1930. Vacuum Tube Socket. Standard dimensions and spacing of pin receptacles in sockets, standard spacing of mounting holes, for 4-pin tube bases and 5-pin tube bases.

Radio Manufacturers Assn. (Inc.). M4-501 to M4-504, incl.; 1930. Socket Power Unit Requirements on type of output terminal, standard terminal markings, provision of switch and by-pass condenser.

Radio Manufacturers Assn. (Inc.). M5-111 and M5-112; 1930. Electro-Dynamic Speakers. Standard method of measuring the cone size of speaker, recommended practice on expressing the direct current resistance of voice coil in specifying electrical characteristics.

Radio Manufacturers Assn. (Inc.). M5-151 and M5-152; 1930. Radio Head Set. Permissible range of impedance of standard head sets, stand-

ard markings for polarity.

References .- Telephone plugs and jacks. See 718.29. 718.7 SOUND RECORDING AND REPRODUCING APPARATUS

Underwriters Laboratories. Sound Recording and Reproducing Equipment; 1930. Requirements on inclosing equipment and thickness of metal in enclosures, insulation of transformer windings, exposure of live parts, grounding, attachment of sound head to projector, permissible temperatures, dielectric strength test requirements.

719. MISCELLANEOUS ELECTRICAL APPA-RATUS

719.1 AUXILIARY ELECTRICAL EQUIPMENT

References.—Auxiliary motors for ships. See 711.21,

719.3 MAGNETOS

Society of Automotive Engineers 1931 Handbook. Magneto Mountings; 1923. For motorboats, standard dimensions of magneto coupling and shaft end, dimensions of mountings.

Society of Automotive Engineers 1931 Handbook. Recommended Practice, Magneto Mountings; 1923. Standard dimensions of Magneto coupling and shaft end, dimensions of mountings, for

motorcycles.

Society of Automotive Engineers 1931 Handbook, Magneto Mountings, Aeronautic; 1929. Dimensions for mounting flanges and bolt holes for standard mountings for 2 bolt and 3 bolt flanged type mountings.

Society of Automotive Engineers 1931 Handbook. Magneto Mountings; 1923. Dimensions of standard magneto coupling and shaft end, standard dimensions of mounting, for motor trucks and for passenger cars.

719.4 SPARK PLUGS

Society of Automotive Engineers; 1931 Handbook. Aeronautic Spark Plug Terminal; 1929. Dimen-

sions of standard terminal.

Society of Automotive Engineers 1931 Handbook.

Aeronautic Spark Plugs; 1929. Standard dimensions of spark plug, spark plug thread tolerances. tapped hole thread tolerances, same as those of regular S. A. E. metric spark plug specifications, dimensions of spark plug terminal.

Society of Automotive Engineers 1931 Handbook. Metric Spark Plugs; 1930. Dimensions of Standard 18 mm spark plug, tolerances on threads for spark plug and for tapped hole.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Spark Plug Terminals; 1926. Standard terminal thread of spark plugs, dimensions of post type, ball type, and slip type terminals.

Society of Automotive Engineers 1931 Handbook. Spark Plugs; 1928. Dimensions of threaded portion for %-inch spark plugs for two sizes of hex-

agonal heads, tolerances for plug thread and for tapped hole thread.

719.5 FLECTRICAL INSULATING MATERIALS

719.50 General Items

American Institute of Electrical Engineers. Standard No. 4; 1928. Measurement of Test Voltage in Dielectric Tests. Standard methods of measurement with voltmeter, needle spark gap and sphere spark gap, tables of spark-over voltages, requirements for testing equipment.

American Institute of Electrical Engineers. Standard No. 41; 1925. Insulator Test Specifications. Defines the methods of making the various tests when such are required. Definitions, design tests and routine tests for both pin and suspension insulators. Available in Spanish from Bureau or Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Society for Testing Materials. Tentative Test Methods D 149-31T; 1931. Methods of Test-ing Sheet and Tape Insulating Materials for Dielectric Strength. For rubber insulating tape use A. S. T. M. method D 119 and for friction tape use A. S. T. M. method D 69. Dimensions and design of testing electrodes for both tapes and sheet, test procedure for short time, one minute step by step method, and endurance at 100° C. test for dielectric strength. Method of making dielectric tests of laminated sheet material.

American Society for Testing Materials. Tentative Test Methods D 150-31T; 1931. Methods of Testing Electrical Insulating Materials for Power Factor and Dielectric Constant at Frequencies of 100 to 1,500 Kilocycles. For solid insulating ma-Definitions, preparation of test speciterials. mens and test procedure for testing molded and sheet material, varnish films, and laminated tubes, substitution method and bridge method.

American Society for Testing Materials. Tenta-tive Test Methods D 176-29T; 1929. Methods of Testing Cable Splicing and Pothead Compounds. Apparatus and test procedure for brittleness, dielectric strength, and coefficient of expansion. other tests in accordance with following A. S. T. M. methods; melting point, D 127; softening point, D 36; flash and fire points, D 92; evapora-

tion, D 6; viscosity, D 88; penetration, D 5.

American Society for Testing Materials. Tentative
Test Methods D 236–28T; 1928. Methods of Testing Insulating Materials for Resistance to Impact. For determination of relative toughness, dimensions and design of test specimen, test pro-

cedure for Charpy or simple beam method, and for Izod or cantilever beam method.

American Society for Testing Materials. Tentative Test Methods D 257-29T; 1929. Methods of Test for Resistivity of Insulating Materials. Design and application of test electrodes to tubular, flat, and liquid insulating materials, apparatus and circuits, control of humidity, procedure for measurement of volume resistance and for surface resistance, calculations.

American Society for Testing Materials. Tenta-tive Method of Test D325-31T; 1931. Method of Test for Comparing the Thermal Conductivity of Solid Electrical Insulating Materials. For flat sheets, specifications for test apparatus and test specimen, test procedure using method analogous to potentiometer method for comparing

electrical resistances.

U. S. Gov., Dept. of Commerce, Bureau of Standards S471; 1923. Methods of Measurement of Properties of Electrical Insulating Materials. Describes methods and apparatus found practicable at the bureau for measuring phase difference and dielectric constant, voltage effects at radio frequencies, electrical resistivities, density. moisture absorption, tensile and transverse

strength, hardness, impact strength, permanent distortion, machining qualities, thermal expansivity, effects of chemicals.

19.51 Asbestos and Mica

American Society for Testing Materials. Tenta-tive Specifications. D 315-31T; 1931. Asbestos Tape for Electrical Purposes. Cotton content and tensile strength requirements for yarn, construction and yardage requirements for tape, tolerances on width and thickness. Test methods for cotton content according to A. S. T. M. method D 299.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Nonmetallic Conduit: 1929. Dimensions of nonmetallic, nonconducting, flexible conduit for protection of insulated wires, waterproofing requirements, tension, bending, flattening, water absorption, flame, and softening under heat, test requirements.

References.—Methods of testing asbestos yarns. See 545.4. Textile testing machines. See 770. Methods of testing for insulating qualities. See also 719.50.

719.52 Insulating Fiber and Paper

American Railway Assn. Signal Section 1323; 1923. Hard Fiber. For railway track joints, switch rod. and track circuit insulation, allowable variations in size, test requirements for electrical surface leakage, specific gravity, compression, and water absorption.

American Society for Testing Materials. Tentative Test Methods D 202-30T; 1930. Methods of Testing Untreated Insulating Paper. Sampling and conditioning of sample, apparatus requirements and test procedure for moisture content. thickness, tensile strength, tearing and bursting strengths, absorption, apparent density, resistance to air passage, ash, acidity or alkalinity, conducting paths, dielectric strength by A. S. T. M. method D 149.

National Electrical Manufacturers Assn. Publ. No. 31-7; 1931. Vulcanized Fiber. For vulcanized fiber sheets, strips, tubing, and rods, standard colors, standard tolerances on thickness and di-

ameter

National Electrical Manufacturers Assn. Publ. No. 31-7; 1931. Vulcanized Fiber. For commercial grade and hard bone laminated fiber sheets and tubing, allowable variations in thickness from nominal sizes for sheets and strips, requirements on tensile strength, transverse strength, dielectric strength, water absorption, hardness, and specific gravity, methods of testing.

References.—Methods of electrical testing of insulating materials. See also 719,50. Methods of physical testing of paper and fiber. See also 470.3. Other fiber board (nonelectrical). See 472,93. Paper in paper insulated cable. See also 715.41.

719.55 Rubber Compounds and Tapes

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Rubber Insulation for Conductors and Cables. Requirements on content of Hevea rubber, permissible waxy hydrocarbons and free sulphur.

American Institute of Electrical Engineers. Stand-ard No. 63; 1928. Joint sponsor with American Electric Railway Assn., American Railway En-

gineering Assn., American Society for Testing Materials Assn. of Edison Illuminating Com-panies, Assn. of Railway Electrical Engineers. National Board of Fire Underwriters, National Electric Light Assn., National Electrical Mfrs. Assn., National Fire Protection Assn., under aus-ASSI, National Fire Flockedon Assi, and Russell Bernell Research Fig. 1928. American Standards Assn. as C 8d1–1928. Specifications for 30 Per Cent Rubber Insulation for Wire and Cable for General Purposes. For use on voltages up to 5,000 volts, requirements on thickness of insulation, its chemical properties, tensile strength and specific gravity, high voltage and insulation resistance test requirements of wire and cable, mechanical tests of insulation.

American Railway Assn. Electrical Section. b-27; 1927. Rubber Insulating Tape. Requirements on chemical composition of rubber compound, tensile strength and dielectric strength, fusion test, standard weights, dimensions, and

variations

American Railway Assn. Signal Section 5616; 1916. Rubber Insulating Tape. Unvulcanized. percentage, sizes, and quality of dry rubber, whiting, zinc oxide, and other ingredients, test requirements for tensile strength, specific gravity, fusion by heat, chemical composition, and di-electric strength, dimensions.

American Railway Assn. Telegraph and Telephone Section. 2-G-34; 1928. Rubber Insulating Tape ARA-2-A. Quality requirements of rubber. modified A. S. T. M. method of chemical analysis, test requirements for tensile strength, dielectric strength, and fusion at room temperature, stand-

ard weight, dimensions, and variations.

American Society for Testing Materials. D 48-30; 1930. Methods of Testing Molded Insulating Materials. Applicable to all solid insulating materials formed in molds by application of pressure, with or without heat, dimensions of molded test specimens and of holder, test procedure for determination of tensile, compressive and transverse strength, for dielectric strength, distortion under heat, absorption.

American Society for Testing Materials. Tentative Specifications D 119-28T; 1928. Rubber Insula-tion Tape. For insulating joints in electric wires and cables, construction, chemical composition, tensile strength, dielectric strength, and fusion test requirements, standard weight, dimen-

sions and permissible variations.

American Society for Testing Materials. Tentative Methods D 297-31T; 1931. Methods of Chemical Analysis of Rubber Products. Includes a short procedure for determination of acetone extract, free sulphur, alcoholic-potash extract, total sulphur, and ash. Also a complete procedure for 30 per cent Hevea rubber compounds, including above determinations and total sulphur, antimony, free carbon, etc.

U. S. Gov., Federal Specifications Board 292; 1925. Rubber Insulating Tape. Requirements on general quality, percentage of Hevea rubber, allowable sulphur and waxy hydrocarbons, thickness and weight for 1/2, 3/4, and 1-inch widths, tensile strength, vulcanizing quality, dielectric strength, methods of test as specified in F. S. B. 59 for

rubber goods.

U. S. Gov., Federal Specifications Board 587; 1928. 30 Per Cent Rubber Insulation for Wire and Cable for General Purposes. Requirements of this specification are identical with those of Am. Inst. of Elec. Engrs. and other organizations as approved by American Standards Assn.

References.—Methods of testing. See also 719.50. Methods of testing rubber goods. See also 200, Rubber insulated cables, cord, wire. See 715.41, 715.42, 715.44. Rubber matting for use around electrical apparatus. See 203.1.

719.56 Textiles Used for Electrical Insulation

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Varnished Cambric. Cloth for insulation of electrical conductors and cables, requirements on general quality, thickness, number of varnish coatings, dielectric strength, bending test in cable.

American Institute of Electrical Engineers. Standard No. 45; 1930. Recommended Practise for Electrical Installations on Shipboard. Varnished Cambric Insulation. For the insulation as used on cables, recommended requirements on thread count, thickness, freedom from wrinkles and blisters, number of varnish coatings, bending test, tensile strength of varnished cloth, resistance of varnish to heat.

American Railway Assn. Electrical Section. VIII-a-26; 1926. Friction Tape. Requirements on general quality and thread count of cotton sheeting used, permissible sulphur in rubber base frictioning compound, impregnation of fabric, adhesive test, tensile strength, pinhole test, and dielectric strength test requirements, standard thicknesses and roll sizes, permissible variations.

American Railway Assn. Signal Section 8226; 1926. Friction Tape for Railroad Use. Requirements as to quality, number of threads, and weight of cotton sheeting, composition of rubber base frictioning and method of application, test requirements for adhesion, tensile strength. pinholes, and dielectric strength, standard

weights and dimensions.

American Rallway Assn. Telegraph and Telephone Section. 2-G-30; 1927. Friction Tape. Weave and weight of cotton sheeting base, maximum sulphur content of rubber base insulating compound, permissible number of pinholes in finished tape, adhesive, tensile strength, and dielectric test requirements, standard weight, dimensions and variations.

American Society for Testing Materials. D 69-28; 1928. Friction Tape for General Use for Electrical Purposes. General construction, test requirements for presence of sulphur, for pinholes, tensile strength, adhesion between layers, and dielectric strength, standard dimensions, weight

and permissible variations.

American Society for Testing Materials, D 259-27; 1927. Tolerances and Test Methods for Electrical Silk and Cotton Tapes. Tolerances on width, thickness, weight, and weave, test procedure for measurement of above items, and for tensile strength.

American Society for Testing Materials. tive Specifications D 259-31T; 1931. Tolerances and Test Methods for Silk and Cotton Tapes. complete revision of D 259-27 of A. S. T. M., permissible tolerances on thickness, width, weight, and construction, methods of testing for thickness, width, weight, construction, and tensile strength.

American Society for Testing Materials. tive Test Methods D 295-29T; 1929. Methods of Testing Varnished Cloths and Varnished Cloth Tapes. Applicable to straight cut and bias cut materials. Selection and conditioning of sample. measurement methods for thickness, tensile strength, elongation and deformation of bias material and effect on dielectric strength, resistance to oil and petrolatum, weight, and threads per

American Society for Testing Materials. tive Specifications D 335-31T; 1931. 0.007 inch. Cotton Tape. For cotton tape used in electrical industry, permissible sizing, requirements on nonacidity, on number of ends, picks, weight, and

tensile strength for tapes ½ inch to 1½ inches width, using test methods of D 259 of A. S. T. M. Insulated Power Cable Engineers Assn. nished Cambric Insulated Cable: 1929. Includes varnished cambric insulation, requirements on thickness, thread count, thickness of coating, ten-

sile strength, dielectric test, heat test.

U. S. Gov., Federal Specifications Board HH-T-101; 1930. Friction Tape. For 2 grades, one for general use and one for tropical conditions, requirements on general quality of cotton sheeting, freedom of impregnating compound from sulphur, friction test, adhesion of compound, thickness of tape, permissible number of pinholes, weight, dielectric strength for 5 widths, methods of test according to F. S. B. spec. 59.

719.57 Electrical Insulating Varnishes

American Railway Assn. Signal Section. Varnish Treatment of Electrical Windings; 1922. To protect winding against moisture or corrosion by carbonic acid, animal salts, salt air, etc., not to become dry, dusty, nor soften or crumble, to be elastic and not to harden, crystallize or flake be-

tween the temperatures given.

American Society for Testing Materials. Tentative Test Methods D 115-31T; 1931. Methods of Testing Insulating Varnishes. Preparation of speci-men and test procedure for measuring specific gravity, time of drying, dielectric strength, water absorption, heat endurance, oil proof, draining, evaporation, nonvolatile matter, volume of volatile matter, dielectric strength in liquid state.

References.-Varnish. See 846. Contractments of windings. See 719.59. Other impregnating

719.58 Molded and Laminated Insulating Materials Bakelite and Similar Products

American Society for Testing Materials D 48-30; 1930. Methods of Testing Molded Insulating Materials. Applicable to all solid insulating materials formed in molds by application of pressure, either with or without heat, dimensions of molded test specimens and of tension specimen holder, test procedure for determination of tensile, compressive and transverse strength, for dielectric strength, distortion under heat, and water absorption.

American Society for Testing Materials. Tentative Test Methods D 149-31T; 1931. Methods of Testing Sheet and Tape Insulating Materials for Dielectric Strength. Includes test procedure for dielectric tests of laminated sheet materials at

room temperatures and at other temperatures.

American Society for Testing Materials. Tentative
Test Methods D 229-31T; 1931. Methods of Testing Laminated Sheet Insulating Material. Di-mensions and selection of test specimens, test procedure for tensile, flexural, and compressive strengths, for total absorption and rate of absorption of water, for volatile matter, dielectric strength test according to A. S. T. M. D *149, power factor, D 150.

National Electrical Manufacturers Assn. Hand-book of Supply Standards, 1927. No. 236-210. Laminated Phenolic Products. Tolerances on thickness and dimensions of plates and on diameters of tubes for laminated phenolic plate with duck, asbestos, or paper base, and for laminated

phenolic tubing.

References.—Methods of electrical testing. See also 719.50. Methods of physical testing of paper and of fiber board. See also 470.3.

719.59 Miscellaneous Electrical Insulating Materials

American Railway Assn. Signal Section. Impregnating Compound Treatment of Oil Proof Electrical Windings; 1922. To protect windings against moisture or corrosion by carbonic acid, animal salts, salt air, etc., not to become dry or dusty, soften or crumble, coils to be so treated that surface is uninjured by oil, compound to be plastic and not to drip, flow or flake in range of temperature given.

American Railway Assn. Signal Section. pregnating Compound Treatment of Partially Oil Proof Electrical Windings; 1922. To protect winding against moisture, or corrosion by car-bonic acid, animal salts, salt air, etc., not to become dry or dusty, soften or crumble, not to dissolve or disintegrate from drops of oil or grease, to be plastic, not to drip, flow or flake in

the range of temperature given.

American Railway Assn. Signal Section. Impregnating Compound Treatment of nonoil-Proof Electrical Windings; 1922. To protect winding against moisture, or corrosion by carbonic acid, animal salts, salt air, not to become dry and dusty or soften, to be plastic, not drip, flow or flake within specified temperatures.

U. S. Gov., Federal Specifications Board JJJ-W-151; 1930. Sealing Wax. Includes one grade for sealing bottles, use as insulation, etc., requirements on general quality, flame carrying capacity, resistance to conversion, and consistency at tem-

perature of use, test methods.

References.—Varnish treatment of windings, See 719.5.7. Transformer oil. See 504.8. Wooden insulators and insulator plans. See 40.7. Glass insulators, support. See 719.6.3. Globe, composition, and Brooklyn strain insulators. See 719.63. Petrolatum for use in impedance bonds. See 504.6. Petroleum asphaltum for protecting wires in trunking. See 505.14.

719.6 ELECTRICAL LINE MATERIALS, AERIAL AND UNDERGROUND

719.60 General Items

American Electric Railway Engr. Assn. Misc. Methods and Practices. D203–14; 1914. Speci-fication for Joint Use of Wood Poles. Classification of attachments, position and vertical spacing of attachments, attachment of line wires, cables, lateral and vertical wires, transformers, cable boxes, electric lamp fixtures, railway span wires and brackets, guys, provision of climbing

space, and illustrative drawings.

American Railway Assn. Electrical Section. VIa-23; 1923. Electric Light, Power Supply and Trolley Lines Crossing Railways. Construction requirements including requirements on mini-mum clearance between lines of various voltages and top of rail, vertical clearance between lines. clearance of conductors from supports, guy wires, and other conductors, separation of conductors at supports, loadings to be used in design, minimum sizes of conductors, factors of safety in design of conductors, insulators, insulator pins, and supporting structures, flashover voltages of insulators, sizes of cross-arms, minimum size and setting of wood poles, structural requirements for steel structures and foundations, permissible unit stresses in wood poles, wood cross-arms, steel supporting structures, rivets and bolts, concrete, and conductors. Construction requirements for underbridge crossings and for underground crossings.

American Railway Assn. Electrical Section. b-25; 1925. Construction of Overhead Electric Supply Lines for Railroad Use on Railroad Property. Requirements on relative levels of high voltage circuits, line clearance from tracks,

ground, other lines, trees, buildings, etc., separation of conductors at supports, mechanical loadings to be used in design, minimum sizes of conductors, flashover voltage requirements for insulators, minimum size and strength of cross-arms, minimum size and depth of setting of wood poles, construction and minimum sizes of elements for steel towers, strength of foundations, guying, grounding, permissible unit stresses for wood and for steel supporting structures for 2 types of construction dependent on location of line

American Railway Assn. Electrical Section. VI-c-26; 1926. John Use of Poles for Power, Communication, and Signal Circuits. Classification of circuits into 4 classes, relative location and spacing requirements for the various classes, requirements on climbing space, methods of supporting and minimum sizes of conductors, etc.

American Railway Assn. Telegraph and Telephone Section. 1-A-24; 1927. Joint Use of Poles for Power, Communication, and Signal Circuits. Classification of circuits, requirements on relative position and spacing of circuits, climbing space, methods of supporting conductors and cables, minimum sizes of conductors, insulation and support of vertical conductors, installation of cable boxes, pole steps, guy insulators, dimensions of cross arms.

American Railway Assn. Telegraph and Telephone Section. 1–B–1; 1929. Wire Crossings. Specifications for telegraph, telephone, and other communication wires and cables crossing the tracks of steam and electrified railroads, for overhead, underbridge, and underground crossings, construction requirements for various types of con-

American Bailway Assn. Telegraph and Telephone Section. S-1; 1923. Electric Light, Power Supply, and Trolley Lines Crossing Rallways. Clearances, sizes of conductors, insulators, permissible stresses and types of construction.

U. S. Gov., Dept. of Commerce, Bureau of Standards H8; 1926. Approved by American Standards Asan, as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Operation of Electrical Equipment and Lines. Precautions and rules to be observed in handling supply lines and equipment, killing lines or equipment, making protective grounds, for overhead and underground power lines and communication systems, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards H10; 1927. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. For overhead lines, requirements on relative levels on pole of various classes of lines, on clearance between supporting structures and other objects, between wires and ground or ralls, between crossing lines, between conductors of same line, climbing and working spaces, grades of construction, assumed loadings, strength requirements for various parts of line construction, requirements of insulators, tables of recommended normal sags of copper conductors, minimum permissible sags with tensions and stresses, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards H10; 1927. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. For underground lines, requirements on location and construction of duct systems and manholes, location, separa-

tion, and protection of conductors, guarding of live parts in manholes, etc.

719.61 Electric Wire and Cable Supports

American Railway Assn. Telegraph and Telephone Section. 1-A-20; 1927. Pole Line Hardware. Includes break iron pin, and cross arm steel pins, tensile and bend test requirements of steel, dimensions and bend test requirements for the insulator pins, galvanizing requirements according to A. R. A specifications.

American Railway Assn. Telegraph and Telephone Section. 2-G-3; 1924. Cross Connecting Ring ARA-1-A. and 2-G-4; 1924. Cross Connecting Ring ARA-2-A. Made of soft steel band and rod, dimensions and construction, pull test requirements for riveted joint, galvanizing requirements. Used for grouping and supporting the connecting wires between protectors and terminal blocks in metal boxes.

National Electric Light Assn. Suggested Specifications D340–28T; 1928. Tentative. 1-inch Steel Pin (Low Voltage). For insulator pins of shell type (patented), lead type, spring type (patented), lag screw type, and machine bolt type, dimensions and allowable variations, for one size, threads per inch, detail of thread according to N. E. L. A. specifications D992–993–994, material according to D200–22 and D209–22, galvanizing according to D210–22.

National Electric Light Assn. Suggested Specifications. D350-28T; 1928. Tentative. Steel Pin (Medium Voltage). For drop forged insulator pin, bolt type, dimensions and allowable variations for 1-inch and 1%-inch thread diameters, material according to N. E. I. A. specifications D200-22, D209-22, galvanizing according to D210-22.

National Electric Light Assn. Suggested Specifications D355-287; 1928. Tentative. Pole Top Pipe Pin. Insulator pin made of steel pipe, design, dimensions and allowable variations, using lead thimble with thread according to N. E. L. A. specification D992-28T.

specification 1992—251.
National Electric Light Assn. Suggested Specifications D920–287; 1928. Tentative. Secondary Rack. Steel rack for large type spool insulators (D581–23) for attachment to pole, dimensions, and permissible variations, general construction of 3 types, material according to N. E. L. A. specifications D200–22, galvanizing according to D210–22.

National Electric Light Assn. Suggested Specifications D992-28T; 1928. Tentative. 1-inch and 1%-inch Cast Lead Pin Thread — D993-28T; 1928. Tentative. 1-inch and 1%-inch Wire Pin Thread — D994-28T; 1928. Tentative. 1-inch and 1%-inch Pressed Steel Pin Thread. For 4 threads per inch, detail dimensions of thread and allowable variations.

719.62 Poles and Appurtenances

American Electric Railway Engr. Assn. Recommended Specification D102-29; 1929. Overhead Line Materials for Direct and Catenary Suspension. Includes steel cross arm braces, guy clamps, guy hooks, pole bands, pole steps, lag screws, hangers, round and square washers, guy plates, hub guards, thimbles, and insulator pins of steel and malleable iron; porcelaln insulators; wood crossarms, insulator pins, strain insulators, and switch boxes; steel cable. Requirements on dicording to A. S. T. M. Spec. A-9 for structural steel for buildings, and malleable iron according to A. S. T. M. Spec. A-41 for refined

wrought iron bars.

American Railway Assn. Telegraph and Telephone Section. 1-A-20; 1927. Pole Line Hardware. For two grades of steel, with tensile and bend test requirements for the better grade, galvanizing requirements according to A. R. A. specifications 1-D-5. Covers material, dimensions, finish, and 1-D-5. Covers material, dimensions, finish, and assembly for rock guy anchors, %-inch carriage bolt, crossarm bolt, double arming bolt, 1/2-inch machine bolt, flat cross-arm braces, angle cross-arm braces, H fixture braces, break iron, 2 and 3 bolt guy clamps and messenger clamps, guy hook, messenger reinforcing link, break iron pin, cross-arm steel pin, guy rods, fetter drive screws, pole step, reinforcing strap, safety strap, pothead support, hub guard, guy plate, thimbles, washers, wooden cobs for steel insulator pins.

American Railway Assn. Telegraph and Telephone Section. 1-A-26; 1928. Cast-Iron Strand Con-nector. Dimensions and permissible variations for galvanized egg shaped connectors, galvanizing according to A. R. A. specification 1-D-5.

American Railway Assn. Telegraph and Telephone Section. 1-A-27; 1928. Dead-Ending Shackle. Tensile strength and bend test requirements for pin, bend test requirements for shackle of sheet steel, galvanizing according to A. R. A. specifica-tion 1-D-5, dimensions and permissible variations.

National Electric Light Assn. Suggested Specifica-Arm Brace D230-28T; 1928. Tentative. Flat Cross
Arm Brace D230-28T; 1928. Tentative. Angle Cross Arm Brace, Dimensions and allowable variations for steel braces of various sizes, material according to N. E. L. A. specifications D200-22, galvanized according to D210-22. Publ.

No. 289-45 of N. E. L. A. National Electric Light Assn. Suggested Specifications D220-22, Flat Cross-Arm Brace D225-22, Alley Arm Brace D227-22, 26-inch Vertical Brace D228-22, 50-inch Vertical Brace. Above dated 1922. D230-24T, 1924, Tentative, Angle Cross-Arm Brace, D231-23, 1923, 6-foot Angle Cross-Arm Brace, Dimensions and allowable variations for steel braces, steel according to D200-22, galvanizing according to D210-22 of N. E. L. A. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifica-tions D261-24T; 1924. Tentative. %-inch Anchor Rod. D262-24T; 1924. Tentative. %-inch An-chor Rod. D263-23; 1923. 1-inch Anchor Rod. Dimensions and allowable variations, material Dimensions and allowable variations, material according to N. E. L. A. specifications D200–22 and D209–22, galvanizing according to D210–22, material steel. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications D282-28T; 1928. Tentative. Guy Wire Protector (Patented). Dimensions of 8-foot sheet steel guy protector attached with U-bolts, allowable variations, material in accordance with N. E. L. A. specifications D200-22, galvanizing in

accordance with D210-22.

National Electric Light Assn. Suggested Specifica-tions D283-22. Pole Guard. Dimensions and permissible variations for sheet steel pole guard, permissible variations for sheet seek pine guard, material according to N. E. L. A. specifications D200–22, galvanizing according to D210–22. Published in 1924 N. E. L. A. proceedings.

mensions and permissible variations, steel ac- National Electric Light Assn. Suggested Specifications D285-23; 1923. Guy Clamp. D290-22; 1922. Guy Clip (Crosby Pattern). Dimensions and allowable variations for 6-inch steel clamps and for 9 sizes of guy clips, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22, guy clips also according to general bolt specification D209-22. See 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications D280-22; 1922. Pole Step. Dimensions of 10-inch steel pole step with allowable variations, material according to N. E. L. A. specifications, galvanizing according to D210-22. Published in

1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications D295-24T. Tentative. Guy Hook, For supporting guy cable, dimensions and allowable variations for one size of steel hook, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications D298-22; 1922. Guy Plate. Dimensions of one size of sheet steel guy plate, allowable variations, steel in accordance with N. E. L. A. specifications D200-22, galvanizing in accordance with D210-22. Published in 1924 N. E. L. A. proceed-

ings.

National Electric Light Assn. Suggested Specifications D299-28T; 1928. Tentative. Molding Guy Plate. Sheet steel plate for protection of molding passing under guy wire on pole, shape, dimensions and permissible variations, material according to N. E. L. A. specifications D200-22. galvanizing according to D210-22.

National Electric Light Assn. Suggested Specifications D320-24T; 1924. Tentative. Spool Strap. Dimensions and allowable variations for sheet steel spool strap with pin for 3-inch length spool, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22. Pub-

lished in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications D322-28T; 1928. Tentative. Pressed Steel Split Clevis (Patented). D324-28T; 1928. Tentative. Drop Forged One Piece Clevis. Dimensions and allowable variations for two sizes of steel clevises of each type, for use with guy strain insulators, material according to N. E. L. A, specifications D200-22 and D209-22, galvanizing according to D210-22.

National Electric Light Assn. Suggested Specifications. D362-28T; 1928. Tentative. Ridge Pin Support. Sheet steel insulator pin support, design, dimensions and allowable variations, terial according to N. E. L. A. specifications D200-

22, galvanizing according to D210-22.

National Electric Light Assn. Suggested Specifications D415-22; 1922. Driving Point. Dimensions and allowable variations for 3 sizes of mal-leable cast driving points for ½ to 1 inch size pipe, material in accordance with N. E. L. A. specification D400-22. Published in 1924 N. E. L. A. proceedings.

National Electric Light Assn. Suggested Specifications D430-28T; 1928. Tentative 8-inch Anchor Plate. D431-28T; 1928. Tentative. 12-inch Anchor Plate. For anchor plates of malleable iron or of gray cast iron, dimensions and allowable

variations.

National Electric Light Assn. Suggested Specifica-tions D910-28T; 1928. Tentative Service Bracket. For steel clevis and strap type bracket used with small type spool insulator (D580-23), dimensions and allowable variations for 3 types, material according to N. E. L. A. specifications D200-22, galvanizing according to D210-22.

719.63 Railway Trolley and Track Material

American Electric Railway Engr. Assn. Recommended rules, B101-25; 1925. Regulations for wiring of electric car houses and auxiliary buildlngs operated by electric traction companies. Supports, guards for trolley wires and third rails, minimum sizes of trolley wire, trolley feed and bond wires, and general wiring regulations.

American Electric Railway Engr. Assn. Recommended design D100-14; 1914. Diagram of Clearances For Overhead Working Conductors. Clearances between car running board and trolley wire for trainman giving signal and for cars with-

out trainman.

American Electric Railway Engr. Assn. Recommended Specification, D101-16; 1916. American Standards Assn., O 15-1923. Recommended Specification For 600-Volt Direct Current Overhead Trolley Construction. Classification, design and erection of overhead trolley systems, including the supporting structures and systems, but not the material.

American Electric Railway Engr. Assn. Recommended Specifications D102-29: 1929 Overhead Line Material for Direct and Catenary Suspension. Includes steel oversupport rods and trolley wire supporting brackets of pipe or tubing, malleable iron fittings for support brackets, malleable iron ears, trolley frogs, crossings and suspensions, cast bronze trolley wire crossings, frogs, clinch ears, feed-in yokes. Requirements on construction, and dimensions except for frogs and crossings, strength of bronze, malleable castings according to A. S. T. M. spec. A-47.

ording to A. S. T. M. spec. A-47.
American Electric Railway Engr. Assn. Recommended Design D103-24; as revised in 1927 on page 502 of Proc. of A. E. R. E. A. Ruling Dimensions for Through Suspensions. Dimensional

drawing of hanger for trolley support.

American Electric Railway Engr. Assn. Recommended Specification D104-28; 1928. Catenary Overhead Construction for Other Than Steam Railroad Electrification. Definitions, spacing and setting of poles, attachment of spans and guys, types, design, and construction of supporting systems, design and installation of catenary systems, sag-tension-temperature curves, turnout and crossover designs.

American Electric Railway Engr. Assn. Recommended Specification D106–25; 1925. Specification For Overhead Line Construction For Trackless Trolleys Drawings of typical spans, line loops and wyes, trolley frogs and crossovers.

American Electric Railway Engr. Assn. Recommended Design D107-25; 1925. Devices for Temporary Connections To Trolley Wire. Drawings of two devices and illustrations of method of use, one requiring removal and the other not requiring removal when trolley car passes.

American Electric Railway Engr. Assn. W3-15: 1915. American Railway Engr. Assn. Standard Location of and Clearances for Third-Rail Working Conductors, Structures and Rolling Equipment. Diagram showing clearance lines for third-rail and permanent way structures and rolling equipment,

American Institute of Electrical Engineers Standard No. 16; 1925. Railway Control and Mine Locomotive Control Apparatus, Includes current collectors; definitions, classification, rating, heating limits and measurement, dielectric test requirements. Available in Spanish from Bureau of Foreign and Domestic Commerce of U. S. Dept. of Commerce.

American Institute of Electrical Engrs. Report on Standard 1755. Joint sponsor with American Assn. for Advancement of Science, American Society of Civil Engineers, Society for Promotion of Engineering Education, and American Society of Mechanical Engineers under procedure of American Standards Assn. Graphical Symbols used for Electric Traction Including Railway Signalling. Committee report on symbols for electrical equipment in power houses, substations, transmission and distribution systems, electrically operated cars and locomotives, and in railway signalling.

American Railway Assn. Electrical Section. I-a-21; 1921. Definitions. Includes definitions of bond, bracket support, bridge support, catenary suspension, clearance line, contact conductor, contact conductor and rail, cross-span support, direct suspension, jumper, mandrel, pulling and splicing chambers, substation, third rail, etc.

American Railway Assn. Electrical Section. X-b-15; 1915. Clearance Lines for Equipment and Permanent Way Structures. Clearance requirements between equipment and third rail, between equipment and overhead contact wire. clearance lines for pantagraph, permanent way structure, etc.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No 248-215. Overhead Trolley Line Materials. Globe Strain Insulators. For 3 sizes, requirements on nominal diameter, tensile strength, voltage test, size of bolt with which used.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-216. Overhead Trolley Line Materials. Composition Strain Insulator. For 2 sizes, requirements on nominal diameter, tensile strength, voltage test, diameter of bolt with which used.

National Electrical Manufacturers Assn. Handbook of Sunply Standards; 1927. No. 248-217. Overhead Trolley Line Materials. Brooklyn Strain Insulator. For 2 sizes, requirements on tensile strength, voltage test, size of eye, dimension, threads and take-up of eye bolt, materials and coating of metal parts.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-218.
Overhead Trolley Line Materials. Insulated Bolts. Requirements on dimensions of %-inch insulated bolt, minimum insulation test voltage.
National Electrical Manufacturers Assn. Hand-

book of Supply Standards; 1927. No. 248–219. Overhead Trolley Line Materials. Cap and Cone Insulators. One size, requirements on dimensions and minimum test voltage.

National Electrical Manufacturers Assn. Handbook of Supply Standards: 1927. No. 248-220. Overhead Trolley Line Materials. Insulated Straight Line Suspensions. For two sizes of round top hangers, requirements on tensile strength, insulation test voltage, dimensions, construction, hanger shell of malleable iron.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-221. Overhead Trolley Line Materials. Timber Roof Mine Suspensions, Rock Roof Mine Suspensions, Combined Mine Suspensions, Mine Suspensions, for Pipe Attachments. For malleable iron shell construction, construction, dimensions, insulation

test voltage requirements.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-225. Overhead Trolley Line Materials. Pole Brackets. Requirements on dimensions and threading of over-support rods, dimensions of beveled washer, dimensions and design of bracket pole castings for wood pole and for steel pole, of bracket intermediate castings, and outer end castings, for heavy service and for light service, castings of malleable iron, dimensions of pipe bracket arms.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-226. Overhead Trolley Line Materials. Feed In Yokes (Bronze). Requirements on construction, dimen-

sions, and size of tap bolt.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248–228 Overhead Trolley Line Materials. Clinch Trolley Ears. For brass ears, requirements on chemical composition, dimensions and construction, including strain ears.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248-229.
Overhead Trolley Line Materials. Uninsulated Pullover Bodies. For single and double types, requirements on design, and dimensions, material of malleable iron protectively coated.

National Electrical Manufacturers Assn. Handbook of Supply Standards; 1927. No. 248–231. Overhead Trolley Line Materials. Trolley Wire Splicers. General design requirements for a

mechanical splice not using solder.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R65-31; 1931. Packaging of Overhead Electric Railway Material. Simplified practice recommended and accepted by industry covering standard number of units in package for protecting trolley armor, pole bands, fork bolts with insulators, cross-arm braces, crossings or crossovers, clinch ears, trolley frogs, insulators, cross-

arm pins, pullovers, splicing sleeves, and line section switches.

719.7 CUT-OUT BASES AND CONNECTORS

719.71 Cut-out Bases

References .- Cut-out bases. See 714.22.

719.72 Connectors and Clips

Society of Automotive Engineers 1931 Handbook. Cable, Conduit and Tubing Clips. Standard dimensions of 11 sizes of steel strap clips, standard design.

Society of Automotive Engineers 1931 Handbook, Heavy Duty Connectors; 1927. Dimensions of standard triple contact bayonet socket, triple contact plug, double contact bayonet socket, double contact plug, insulating caps for connectors, dimensions of base, socket, and plug gages, dimensions of single contact, double contact, and triple contact, serew type socket or connector.

Underwriters' Laboratories. Ground Clamps; 1918. For use with ground wires up to No. 4 B. & S. gage in connection with conduit or pipe up to 2-inch size, required area of contact for flat bands, thickness, material and width of sheet metal clamps, protection against corrosion.

References.—Sockets and plugs. See also 715.21. Fuse clips. See 714.22.

720-729 VEHICLES, EXCEPT AGRICULTURAL VEHICLES AND STEAM LOCOMOTIVES

721. ELECTRIC VEHICLES

721.1 ELECTRIC LOCOMOTIVES

American Mining Congress. Mine Locomotives (Coal Mines); 1928. Does not include combinations of trolley and storage battery types. Standard d. c. voltage ratings and weights for trolley type and storage battery type locomotives, drawbar pull, locomotive and motor rating methods.

American Mining Congress, under auspiees of American Standards Assn. M 18-1928; Underground Transportation in Metal Mines. Includes standard weight of locomotive for motor haulage. American Railway Assn. Mechanical Div. Recom-

American Railway Assn. Mechanical Div. Recommended Practice. Standard Method of Rating Electric Locomotives; 1930. Requirements on data to be given in standard ratings for maximum start, one hour, and continuous ratings, one hour motor ratings to start with motor cold, reduction in motor torque adopted for determining tractive effort, formulas for tractive effort and miles per hour.

National Board of Fire Underwriters. Electric Railway Car Houses and Cars; 1925. Electric wiring requirements, for electric railway cars and locomotives, permissible voltages for lighting circuits, type of conduit, size and installation of ground wire, minimum sizes of conductors, rules of installation, enclosures for control devices, kind of insulation, sizes of fuses.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 116–201. Mining Locomotives, Trolley Type. Standard basis of motor rating, standard voltage ratings and locomotive weights, requirements on permissible temperature rise, on method of determining draw bar pull, on contour of wheel, recommended standard track gages and standard brushes and brush shunts.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 116–420. Mining Locomotives, Storage Battery Type. Recommended practice on weight, draw bar pull, speed, and motor power ratings, and on maximum size of battery, requirements on permissible temperature rise, contour of wheel, method of determining draw bar pull.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 116–517. Industrial Locomotives, Trolley or Third Rail Types. Standard voltage ratings, recommended practice on locomotive weights, single and double trucks, number and horsepower of motors, and locomotive speed, requirements on permissible temperature rise, type of control equipment, wheel contour, recommended size of air compressor.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 116-547. Industrial Locomotives, Storage Battery Type. Recommended practice on motor rating for different weights of locomotives, on determination of weight of locomotive, on determining nominal draw bar pull, on type of control equipment, requirements on permissible temperature rise, wheel contour, etc.

U. S. Gov., Congress. Public, No. 113; 1893; amended 1896. An act to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate comperes and continuous brakes and their locomotives with driving-wheel brakes, and for other purposes. Besides above, there are requirements for appliances on locomotives for operating the train brake system, provision of grab irons and handholds, and standard height of drawbars.

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 2C; 1930. Explosion Proof Mine Equipment. Storage Eattery Locomotives and Power Trucks, Requirements for approval for use in gassy or dusty mines, including requirements on provision of explosion-proof inclosures for motors, controllers, fuses, switches, headlights, meters, rheostats, electromagnets, etc., on automatic protection of circuits and batteries, on attachment, insulation, and protection of conductors, grounding of parts, construction of inclosing casings, explosion tests for inclosures, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards H7; 1926. Approved by American Standards Assn. as part of C2-1927. (National Electrical Safety Code.) Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For industrial electrical locomotives, requirements on guarding live and moving parts, types of power disconnecting means, provision of locking or removable operating handles

U. S. Gov., Interstate Commerce Commission. Bu-reau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Locomotives Other Than Steam; 1926. Requirements mandatory by law, regarding provision and capacity of safety valves for air brake reservoir, operating characteristics of compressor governor and testing of air brake compressors and reservoirs, maximum brake cylinder travel, lost motion in articulated connections or between chafing irons or couplers, permissible side motion and fit requirements at pin and rod bearings, perissible lateral motion in wheel bearings, intermembering of truck center plates, clearance of side bearings, uniform diameter of wheels, pressing of wheels on axle, minimum width of fires, windows in cab, cab heating, location of cab lights, of whistles, bells, and sanders, locking and grounding of pantagraphs, voltage test of jumpers, provision of safety cut out valve for fuel, grounding of tanks, and provision for starter for internal combustion engines, for boilers the minimum allowed factor of safety, permissible stresses in stay bolts and braces, design strength of materials and rivets, inspection and hydrostatic test of boiler, testing of stay bolts, location, testing and connection of steam gauges, number, location, and setting of safety valves, water glass and gauge equipment, connection of tubes into tube sheets of feed water appliances, etc., permitted wear limits and defects appearing in service.

Tolerances for metal fits. See also 615.6.

721.2 ELECTRIC AUTOMOBILES AND TRUCKS

Railway Fire Protection Assn. Handbook; 1925. Electric Trucks and Tractors in Freight Depots and Terminals. For trucks and tractors approved by Underwriters Laboratories, requirements on nonarcing of controllers, installation of wiring and resistors, fusing, cutout switch operated by weight of operator, inclosure of contacts and charging connections, inclosed motor, etc.

Society of Automotive Engineers 1931 Handbook. Battery Tray Terminal Lugs; 1925. Dimensions of three sizes of terminals with corresponding

size of steel bolt.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Battery Trays for Electric Commercial Vehicles. Tray dimensions and tray arrangements for lead-acid batteries and for nickel-iron batteries.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Brakes, Industrial Truck and Tractor. Brakes to be released by depressing the brake pedal and applied by removing the foot.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Clearance Radii, Industrial Truck and Tractor; 1920. Definition of outside and of inside clearance radius.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Electric Vehicle Battery Cells; 1915. For electric passenger cars and trucks, specifies the number of cells for both leadacid batteries and nickel-iron storage batteries. Society of Automotive Engineers 1931 Handbook.

Recommended Practice. Electric Vehicle Ratings; 1916. Speed and mileage ratings defined. Society of Automotive Engineers 1931 Handbook. Recommended Practice. Storage Battery Trays for Industrial Truck and Tractor; 1920. One type of 12-cell tray for lead batteries, one tray unit for industrial trucks and two tray units for tractors.

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 2C; 1930. Explosion Proof Mine Equipment. Storage Battery Locomotives and Power Trucks. Requirements for approval for use in gassy or dusty mines, including requirements on explosion proof inclosure provision for motors, controllers, fuses, switches, headlights, meters, rheostats, electromagnets, etc., on automatic protection of circuits and batteries, on attachment, insulation, and protection of conductors, grounding of parts, construction of inclosing casings, explosion tests for inclosures, etc.

722. MOTOR TRUCKS AND AUTOMOBILES, EXCEPT ELECTRIC

722.0 GENERAL ITEMS

National Conference on Street and Highway Safety. Uniform Vehicle Code; 1930. Act IV— Uniform Act Regulating Traffic on Highways. Act proposed for enactment by the States includes requirements on equipment of automobiles such as number and illuminating efficiency of lamps, provision and efficiency of horns, mirrors, windshield wipers, and mufflers, limitations on width, height, and weight of vehicles, tire requirements.

Society of Automotive Engineers 1931 Handbook. Automobile Nomenclature; 1930. Standard names for the parts of an automobile and for body types arranged under 19 headings.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Turning Radius; 1927. Definition of turning radius for automotive vehicle

Society of Automotive Engineers 1931 Handbook. Weight of Vehicle; 1916. Definition of what constitutes the weight of a motor vehicle.

722.1 AUTOMOBILE MOTOR TRUCKS

National Fire Protection Assn. Recommended Practice for Construction and Operation of Automobile Gasoline Tank Trucks; 1929. Requirements on thickness of steel plates for various ca-pacity tanks, structural features of tanks, air pressure test, division into compartments, emergency and discharge control, safeguards for truck fuel system, electrical equipment, and exhaust systems, grounding requisites.

Society of Automotive Engineers 1931 Handbook. Practice. Body Hold-Down Requires use of U-clamps and Recommended Clamps; 1923. wood filler blocks and not drilling of frames for

hold-down clamps for motor trucks.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Motor-Truck Dump-Bodies; 1929. Dump bodies larger than 1½ cu. yd. to be hand-hoist or power-hoist operated.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Motor Truck Frames; 1926. Frame width for straight and offset frames for speed wagons and various capacity trucks.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Vertical Dumping-Hoist Platforms; 1923. Requires that mounting holes be drilled on neutral axis of frame section.

References.—Fire trucks, See 722.2. Truck accessories and parts. See 722.3. Power take off. See 722.34. Propeller shaft midship mountings. See 722.34. Motor truck frames. See 722.37.

722.2 AUTOMOBILE FIRE TRUCKS

National Board of Fire Underwriters. Fire Engine Tests and Fire Stream Tables; 1931. For determining the condition of automobile fire engines or for acceptance tests for new engines, requirements on service test procedure, types of test apparatus, tabulation of data, computation of results. Tables showing discharge characteristics and pressure head requirements for various lengths of hose.

National Board of Fire Underwriters. Suggested Specifications; 1928. Gasoline Automobile Fire Apparatus. Combination pumping engine and hose wagon, combination hose wagon, combination service ladder truck, aerial ladder truck, standard sizes of pumpers, power requirements of engine, axle ratio, dual ignition system, requirements on accessories, capacity and other requirements for gasoline, chemical, and water tanks, carrying capacities of hose wagons, list of fire equipment to be carried, road test and pumping test requirements.

National Fire Protection Assn. Rural Fire Departments, Equipment and Organization; 1929. Includes motorized combination pumping engine and hose cart, requirements on load carrying capacity of gasoline motor, permissible types of pumps, hydrostatic pressure and load test of pump, protection against corrosion, types and arrangement of connections, ignition, clutches, brakes, lubrication, etc.

References.—Industrial automobile trucks. See 722.1. Truck accessories and parts. See 722.3. Stationary fire pumps. See 755.1. Other fire extinguishing equipment and supplies. See 970 to 979.

722.3 AUTOMOBILE ACCESSORIES AND PARTS

722.31 Automobile Power-Plant Parts

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Carbureter Air-Horn Dimensions for Air-Cleaner Mounting; 1928.

Society of Automotive Engineers 1931 Handbook. Carbureter Flanges; 1923. Dimensions of flanges, bolt holes and threads for two-bolt, three-bolt, and four-bolt types.

Society of Automotive Engineers 1931, Handbook. Recommended Practice. Carbureter Flanges, Duplex Type; 1928. Dimensions of 4 and 6 bolt

flanges for one to two inch sizes.

Society of Automotive Engineers 1931 Handbook. Recommended Practice, Carbureter Intakes: 1921. Nominal inside diameter to vary by even 1/4 inch.

Society of Automotive Engineers 1931 Handbook. Engine Rear Support Arms; 1929, Standard bolt hole spacing and dimensions of support arms for 5 sizes of support arms, 1 tractor size.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Engine Trunnions: 1926. Diameters and lengths of two sizes each for start-

ing-crank bracket type and gear cover type. Society of Automotive Engineers 1931 Handbook. Fan Belts and Pulleys; 1928. Dimensions of pulleys for various widths of V-fan belt and flat belt, dimensions of pulley spindles for slotted fanbrackets, dimensions of flat and V-belt fan assemblies.

Society of Automotive Engineers 1931 Handbook. Flywheel and Clutch Housings; 1929. Dimensions, cap screw sizes, and tolerances on bore and

eccentricity, for seven sizes,

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Fuel Pump Mounting Flanges: 1929. Recommended dimensions and bolt hole spacings for standard mounting flange for reciprocating pump and for standard flange for rotary type pump.

Society of Automotive Engineers 1931 Handbook. Hood-Ledge Lacings; 1928. Width and thickness, impregnation and weave requirements for cotton

woven material.

Society of Automotive Engineers 1931 Handbook. Piston and Piston-Ring Oversizes; 1926. Standard oversizes.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Piston-Pin Diameters; 1925. Finished to even 16-inch diameters with two standard oversizes.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Piston Ring Widths; 1926. Standard tolerance for the nominal piston

ring width.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Poppet Valves; 1925. Dimensions of valve heads and valve stem tips, hardness requirement for valve stem tips.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Radiator Shutters: 1926. Minimum distance between radiator core and head-lamp tie rod specified to permit application of shutters.

Society of Automotive Engineers 1931 Handbook. Radiators: 1929. Dimensions of inlet and outlet fittings, of tie rod fittings, of tapped drain hole, of header plates, of hood ledge, of header flange, and pressure test requirements for cast-type radiators, dimensions of copper or brass overflow tube for tubular radiators, requirements for tie rods and hood ledges for shell-type radiators.

Society of Automotive Engineers 1931 Handbook. Rubber Hose, Clamps and Fittings; 1916. Inside and outside diameters of hose, inside diameters

of clamps, for 1 to 4 ply hose, length of fitting. Society of Automotive Engineers 1931 Handbook. Recommended Practice. Starting Cranks; 1926. Dimensions of fittings for starting crank shaft and for engine crank shaft for four jaw type, heavy pin type, and light pin type.

Society of Automotive Engineers 1931 Handbook. Thermostat Connections; 1918. Cooling medium thermostats, rubber hose connections to conform to dimensions of S. A. E. standard clamps and fittings for rubber hose, metallic connections to conform to dimensions of 2-bolt carbureter flanges.

Society of Automotive Engineers 1931 Handbook. Vacuum Brake Manifold Connection:

Standard tapped hole, %-inch pipe thread. Society of Automotive Engineers 1931 Handbook. Recommended Practice. Water Pipe Flanges; 1926. Dimensions of standard 2-bolt flanges and standard sizes of cap screws.

References.—Flexible carbureter and exhaust steel tubing. See 607.7. Acetylene head lamp. See 722.33. Crank case drain plug. See 607.14. Engine test codes. See 705.0, 700. Tolerances on metal fits. See also 615.82.

722.32 Automobile Electrical Equipment

American Assn. of State Highway Officials. Nat. Bureau of Standards. National Safety Council, sponsors. Approved by American Standards Assn. as D 3-1927. Colors for Traffic Signals. For vehicle lights and signals, requirements on permissible colors for headlights, tail lights warning signal lights, and dimension limit lights

American Automobile Assn. Headlight Testing and Adjusting Campaigns for A. A. A. Clubs; 1928. Standard methods of setting up and operating headlight testing and adjusting stations.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Automobile Wiring; 1927. Recommendations as to minimum size cable and maximum voltage drop, methods of in-stallation of wiring, metal conduit, methods of grounding, battery installation, provision of protective devices, wiring color code.

Society of Automotive Engineers 1931 Handbook. Recommended Practice 7-MM. Distributor Nip-

ple; 1927. Dimensions.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Dome Light Lamp Socket; 1927. Recommends double contact type.

Society of Automotive Engineers 1931 Handbook. 1929. Dimensions Generator Mountings; adapter-flange type, of flange type, and of base-

type mountings.

Society of Automotive Engineers 1931 Handbook. Head Lamp Construction; 1931. Recommended Practice. Structural features of head lamp, construction of focusing mechanism and minimum adjustment of filament, flare of reflected beam. tests for rigidity of lamp mounting.

Society of Automotive Engineers 1931 Handbook. Head Lamp Mountings; 1931. Recommended Practice on design of universal type of adjustable mountings for passenger cars and for motor coaches, recommended degree and amount of adjustability and spacing of lamps.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Instrument Mountings: 1927. Dimensions and location of holes for clamp type and flanged screw type mountings.

Society of Automotive Engineers 1931 Handbook. Magneto Mountings; 1923. Dimensions of magneto coupling and shaft end, dimensions of mounting, for motor truck and passenger cars.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Passenger Car Body Lighting Switches: 1927. Mounting hole dimensions of barrel type and of rectangular type

switches.

Society of Automotive Engineers 1931 Handbook. Starting Motor Mountings; 1929. Dimensions and layout of bolt holes for two standard flange type mountings. Recommended Practice for medium duty outboard installations, for heavy duty outboard installations and for barrel type outboard installations, standard inboard installation.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Tail and Signal Lamp Mountings; 1926. Dimensions of mounting screw

and socket

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Tail-Lamp Construction: 1930. General requirements on rigidity. weather and dust proofness, covering of license plate window.

Society of Automotive Engineers 1931 Handbook. Timer-distributor Mountings, Passenger Type; 1929. Dimensions of two types of Standard mountings and of hold down arm and screw, recommended dimensions for heavy duty type for motor-coach and taxicab engines.

722.34 Automobile Transmission Parts

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Clutch Facings; 1929. For multiple disk clutch and single disk clutch, dimensions of woven type and of molded type

Society of Automotive Engineers 1931 Handbook. Control and Gearshift Positions; 1929. Diagrams showing gear shift lever positions for 3-speed and for 4-speed transmission, and for motor trucks the location of gearshift, brake, clutch, accelerator levers and pedals, and of hand throttle and spark levers.

Society of Automotive Engineers 1931 Handbook Control Lever Handle-Balls; 1926. Thread and length of thread on the upper end of control lever, one for passenger cars and one for trucks, for

gear shift lever.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Differentials; 1925. Dimensions of 10-tooth and 11-tooth pinions and of 18-tooth and 20-tooth side gears for both case and spider mounting, dimensions of spiders and gear cases for the two types of mounting.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Flexible Disks; 1927. Dimensions of 6, 8, and 12-hole metallic shaft coupling disks and of 4-hole non-metallic shaft

coupling disk.

Society of Automotive Engineers 1931 Handbook.

Passenger Car Bumpers; 1929. Standard heights Power Take-Off; 1926. Transmission tire-pump Power Take-Off; 1926. Transmission tire-pump mounting dimensions for power take-off drive in motor trucks the same as for passenger cars.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Propeller Shaft Mid-ship Mounting: 1927. Dimensions of 3-joint propeller shaft midship mounting for motor trucks.

Society of Automotive Engineers 1931 Handbook. Tire Pump Mounting, Transmission Type; 1922. Dimensions of small mounting and large mounting

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Universal Joint Hubs; 1921. Dimensions of hubs up to 2-inch size.

References.—Silent chain, roller chain, roller chain sprocket. See 766.1. Roller and sprocket chain cutters. See 765. Tractor power take off speed. See 729.5. Tractor belts and pulleys. See 729.5.

722.35 Automobile Axles and Wheels

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Tenon Holes for Steel Felloes; 1923. Wood spoke size and tenon hole diameter for four pneumatic tire diameters.

References.—Rims, cleats, and lugs for tractor wheels, See 729.5.

722.36 Automobile Tires and Rims

Society of Automotive Engineers 1931 Handbook. Solid Tire Base-Bands; 1929. Standard dimensions and design of 12 sizes of base bands from 3 to 16 inch sizes.

Society of Automotive Engineers 1931 Handbook. Solid Tire Felloe-Bands; 1926. Dimensions of bands and wood felloes for solid tire equipment,

allowable felloe-band tolerances.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Dual Spacing for Truck and Motorcoach High Pressure and Balloon Tires: 1931. Center to center spacing of tires and rims for sizes up to 10-inches, for dual tires. Conforms to standards of Tire and Rim Assn. adopted in 1929.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Industrial Truck Tires; 1931. Tire widths and wheel diameters for flat base tires and for channel base tires, for nominal wheel diameters from 5 to 24 inches, dimensions of base bands, maximum loads. Conform to

standards of Tire and Rim Assn.

Society of Automotive Engineers 1931 Handbook. Tire and Rim Sizes; 1931; Standard tire sizes and rim diameters for balloon tires for passenger cars, dimensions of standard sizes of rims; standard tire and rim sizes and rim dimensions for balloon and high pressure tires for motor trucks and motorcoaches. Conform to standards of Tire and Rim Assn.

Tire and Rim Assn. (Inc.), 1931 Year Book. Passenger Car Tires, Truck and Bus Tires, Includes standard rim sizes for the various standard tire sections for passenger cars, and standard rim

dimensions for truck and bus tires.

Tire and Rim Assn. (Inc.). 1931 Year Book. Solid Tires; 1928. Includes solid tire base bands, di-mensions of standard sizes for motor trucks, tentative standard base band circumferences.

Tire and Rim Assn. (Inc.). 1931 Year Book. Standard Rim Contours. Dimensions of standard rim contours for various standard sizes of straightside, drop center, semi-drop base split, and clincher passenger car rims, and for truck and bus rims, tolerances on dimensions, gages for above rims, rim diameters and circumferences.

References.—Rubber tires, casings and inner tubes. See 206. Passenger car brake drums. See 722.38.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Running Board Brack-

ets; 1923. Dimensions.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Door Locks and Handles for Passenger Car Bodies; 1923. Requirements for sizes and spacing of screws in escutcheon plates, angle between sides of lock face plates, size and clearance of bar door handles, dimensions of door handle squares, etc.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Front Bumper Mountings; 1924. Location of mounting bolt holes on

frame.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Hinge Rods; 1923. Size of top and side hinge rods for engine hoods.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Top-Bow Supports; 1923. Requirements on threading of threaded end and length of stud.

722.38 Automobile Control Equipment

American Automobile Assn. Joint sponsor with Nat. Bureau of Standards under procedure of American Standards Assn. A. S. A. serial D4-1927. Safety Code for Automobile Brakes and Brake Testing. Minimum acceptable retardation for various types of motor vehicles under the action of brakes, methods of making actual service tests of brakes.

Society of Automotive Engineers 1931 Handbook. Brake Lining, 1926. Width and thickness up to

6-inch width.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Brakes, Industrial Truck and Tractor. Brakes to be released by depressing the brake pedal and applied by removing the foot.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Carbureter Throttle Levers; 1925. Size and throw of throttle lever, diameter and threads of rod-end for carbureters

up to 3½ size. Society of Automotive Engineers 1931 Handbook. Recommended Practice. Passenger Car Brake Drums; 1924. Diameters, maximum height of wall and maximum eccentricity, for 9 sizes.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Steering Wheel Tests; 1928. Recommended methods for performing static-load tests and impact tests and for determination of moment of inertia, no values for test results specified.

U. S. Gov., Dept. of Commerce, Bureau of Standards R66; 1927. Automobile Brake Lining. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of brake linings, covering widths and

thicknesses

U. S. Gov., Federal Specifications Board. HH-L-361; 1931. Brake Band Linings. Requirements on flexibility, uniformity of composition, standard widths, thicknesses and tolerances, rating test on Bureau of Standards brake-lining testing machine for value and uniformity of coefficient of friction, smoothness of operation, resistance to stresses and heat, scoring of drum, durability, giving of service ratings to samples on "rating list."

724. AIRCRAFT

724.0 GENERAL ITEMS

American Standards Assn. Z 10e-1930. Aeronautical Symbols. Sponsor organizations, Am. Assn. for Advancement of Science, Am. Inst. of Elec. Engrs., Am. Soc. of Civil Engrs., Soc. for Promotion of Engineering Education, Am. Soc. of Mech. Engrs. Standard symbols for quantities used in the design of aircraft.
S. Gov., Dept. of Commerce.

Aeronautics Branch. Aero, Bull, 7-A; 1929. Airworthiness Requirements of Air Commerce Regulations. Requirements that must be met by conventional types of airplanes in order to be licensed by Dept. of Commerce for general commercial service, including structural features such as number of exits, provision of firewall, location and strength of fuel tanks, piping, protection of electrical equipment, clearance of propellers, etc.; load factors to be used for design calculations, computa-tion of wing loads, etc.; design loads for light aircraft; required practice in construction and design of wings, fuselage, landing gear, fittings, Streamline Tie Rods and Internal Tie Rods, design of wings, fuselage, landing gear, fittings, control system, etc.; ignition requirements for engine, block and flight tests and teardown inspection of engine; power absorption and whirl test of propellers.

References.—Gas welding of aircraft joints, procedure. See 767. Airdromes and landing fields. See 518.51.

724.1 BALLCONS

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Balloons, Free and Captive. Requirements on safety factors on envelope bursting strength and strength of rigging, capacities of valves and rip panel, weight of drag rope, control cord attachment, standard dimensions and resultant stresses in material for 7 sizes of coal gas filled spherical balloons, recommended instruments and equipment, inflation and deflation rules, operating rules.

724.2 AIRCRAFT ACCESSORIES AND PARTS

724.21 Aircraft Power-Plant Parts

Society of Automotive Engineers, Aeronautic Safety Code; 1925, Approved by American Standards Assn, as D1-1925, Part 2, Power-plants, Requirements on use of dual ignition, starting means, design of intake system, engine characteristic test, durability test, idling test, over-speed test, and flight test, pressure tests and arrangement of fuel and oil tanks and piping, design and efficiency of cooling system, location and motion of engine controls.

Society of Automotive Engineers 1931 Handbook. Engine-Starter Mounting, Aeronautic; 1928. Dimensions of starter motor mounting flange, for large type and small type mountings.

Society of Automotive Engineers 1931 Handbook. Fuel Pump Mounting, Aeronautic; 1928. Dimen-

Society of Automotive Engineers 1931 Handbook. Magneto Mountings, Aeronautic; 1929. Dimen-

sions of generator mounting flange.

Society of Automotive Engineers 1931 Handbook. Magneto Mountings, Aeronautic; 1929. Dimensions for mounting flanges and bolt holes for standard mountings for two bolt and three bolt flanged type mountings.

References.—Aeronautic spark plugs. See 719.4. Aircraft storage batteries. See 712.2. Requirements for engine. See also 724.0. Tolerances for metal fits. See also 515.82.

724.22 Aircraft Parts and Fittings

Society of Automotive Engineers 1931 Handbook. Plain Pulley Spacers, Aeronautic; 1930. Standard dimensions of 2 sizes of spacers of cylindrical

form, size of bolt required.

Society of Automotive Engineers 1931 Handbook. Pulleys, Nonmetallic. For aeronautic equip-ment, dimensions of 5 standard sizes of plain bearing pulleys and of 4 standard sizes of antifriction bearing pulleys for flexible cable up to is-inch size, side bearing test for antifriction bearing type.

Society of Automotive Engineers 1931 Handbook. Rigid Terminals for Airplane Stays; 1928. Dimensions of hole and slot terminals for various sizes and specified minimum tensile strengths,

bend test requirements.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Shock-Absorber Strut-Ends, Aeronautic. Standard dimensions of 12 strut ends for static loads up to 12,000 pounds, for steel of 125,000 pounds strength.

Aeronautic; 1930. Standard dimensions, crosssectional shape, and threading of various strength sizes of each type.

Society of Automotive Engineers 1931 Handbook. Tachometer Drive, Aeronautic; 1929. Standard dimensions of engine end connection and of instrument end connection of tachometer drive shaft, dimensions of engine tachometer shaft and

of tachometer connection.

Society of Automotive Engineers 1931 Handbook. Tail-Skid Shoe Mountings; 1928. For airplanes under 4,500 pounds weight, dimensions and loca-

tion of mounting holes.

. S. Gov., Dept. of Commerce, Aeronautic Branch, Aero, Bull. 7-A; 1929, Airworthiness Requirements of Air Commerce Regulations, Design requirements for fittings, tie-rods and wires, landing gear, wings, etc., which must be met in order to obtain license from Dept. for commercial use of airplane.

724.23 Aircraft Wheels

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Landing Gear. Includes requirements on wheel size, maximum loading on wheels, and general design of wheel bearings.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Airplane Wheel Rims; 1929. Recommended standard dimensions for 7

rim sizes.

Society of Automotive Engineers 1931 Handbook. Recommended Practice, Airplane Wheels and Axles; 1929. Recommended dimensions of plain bearing wheel hubs and axle ends for 10wheel sizes, recommended dimensions of anti-friction bearing wheel hubs and axle ends for 3 sizes of tail wheels and 7 sizes of landing wheels.

Tire and Rim Assn. (Inc.). 1931 Year Book. Airplane Tires; 1931. Standard airplane tire and wheel combinations, recommended practice on axle, rim, and tire dimensions, load, inflation, and valve equipment for low pressure and extra

low pressure airplane tires.

Tire and Rim Assn. (Inc.). 1931 Year Book. Standard Rim Contours. Dimensions and tolerances for standard airplane rims for 3-inch to 14-inch sizes, gage for above rims, recommended practice on dimensions of low pressure airplane

References .- Airplane tires. See 206.2.

724.24 Aircraft Propellers

Society of Automotive Engineers, Aeronautic Safety Code; 1925, Approved by American Standards Assn. as D1-1925, Propellers, Permissible tolerances on dimensions, clearance distances and operation requirements, whirl test,

Society of Automotive Engineers 1931 Handbook. Recommended Practice; 1929. Propeller Blade Clamp Rings, Bolts and Nuts. Recommended di-mensions of 2 bott sizes and 4 clamp ring sizes, S. A. E. steel specifications which apply to each, tensile and hardness test requirements for steel, for aircraft propellers.

Society of Automotive Engineers 1931 Handbook, Propeller Blade Ends; 1929. Standard dimensions of 6 sizes of aluminum alloy propeller blade

ends for aircraft engines.

Society of Automotive Engineers 1931 Handbook. Propeller Hubs and Shaft Ends. Splined Shafts; 1929. Standard dimensions of splined shaft end and hub using 16 splines, for 4 shaft sizes for aircraft engines.

Society of Automotive Engineers 1931 Handbook. Propeller Hubs and Shaft Ends. Taper Shafts; 1930. For 3 standard taper shaft ends, dimensions of shaft end and key, threads in general use on shaft.

U. S. Gov., Dept. of Commerce. Aeronautics Branch. Aero. Bull. 7-A; 1929. Airworthiness Requirements of Air Commerce Regulations. For propellers, power absorption and whirl test requirements, and general requirements on approval of design in order that license may be issued for commercial use of airplane.

724.25 Aircraft Control Equipment

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Control Arrangements. For pilot's control, requirements on type, direction of motion of control, provision against jamming, provision of stirrups or foot rests on foot-bar or pedals, permissible types of control connections, guiding of cables, maximum force to operate controls.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Airplane Stick Control; 1917. Drawing showing arrangement and function of parts for controlling altitude, balance and

direction of flight.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Airplane Wheel Control. Undated. Drawing showing arrangement and function of parts for controlling altitude, balance and direction of flight.

U. S. Gov., Dept. of Commerce. Aeronautics Branch. Aero. Bull. 7-A; 1929. Airworthiness Requirements of Air Commerce Regulations. General design and operation requirements of control system to be met in order to obtain license for commercial use of airplane.

724.26 Aeronautical Instruments

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Aircraft Instrument Cases and Mountings; 1929. Recommended basic mounting and case dimensions for 1½-inch and for 2½-inch dial instruments.

Society of Automotive Engineers 1931 Handbook. Tachometer Drive, Aeronautic; 1929. Dimensions and threading of standard engine tachometer shaft connection, engine end of tachometer drive shaft, tachometer connection, and instrument end of tachometer drive shaft.

Society of Automotive Engineers 1931 Handbook. Thermometer Bulbs; 1929. Dimensions of standard threaded thermometer bulb presumably for vapor pressure type thermometers for use with aircraft engines.

References .- Barometers and altimeters. See 917.2.

724.27 Parachutes and Equipment

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Parachutes. Permissible maximum landing speed, general requirements on attachment and disengagement of harness, requirements on airworthiness test, normal opening test, test for opening with suspension lines twisted, and strength test, routine tests and tests for deterioration.

724.29 Miscellaneous Aircraft Accessories and Parts

*References.**—Turnbuckles, aeronautic. See 608.7.

Bolts and nuts, aeronautic. See 608.31, 608.32. Airplane cloth. See 396.

724.3 AIRPLANES

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. For airplanes, requirements on stability characteristics, control arrangements, landing gear design, accommodations for pilot and passengers, materials according to recognized specifications, design features of wood and metal structural parts, fire prevention and protection, classification of airplanes, structural stress analysis of wing truss, fuselage, etc., power plant design features, assembly, and tests, equipment and operation of airplanes, signals and signal equipment, traffic and pilotage rules.

724.4 AIRSHIPS

Society of Automotive Engineers. Aeronautic Safety Code; 1925. Approved by American Standards Assn. as D1-1925. Airships. Requirements on safety factors in design of rigid airships and of fabric in nonrigid or semirigid airships, capacity of gas valves, bonding of metal parts, amount and discharge rate of ballast, fire prevention, recommended equipment, parachutes and life preservers, rules for infation and deflation, operating and pilotage rules.

725. CYCLES, BOATS, SHIPS, AND ACCESSORIES

725.1 BICYCLES

References .- Bicycle tires. See 206.2.

725.2 MOTOR CYCLES AND ACCESSORIES

Society of Automotive Engineers 1931 Handbook. Recommended Practice; 1923. Magneto Mountings. Dimensions of magneto coupling and shaft end, dimensions of mountings, for motorcycles.

Society of Automotive Engineers 1931 Handbook. Motorcycle Head Lamp Mounting; 1921. Dimensions and thread of mounting bolt and dimensions

of mounting lug.

Society of Automotive Engineers 1931 Handbook. Motorcycle Spokes; 1921. Dimensions and tolerances, material, bend and tension test requirements.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Motorcycle Wheels; 1918. Dimensions of hub and spoke angles for 28 by 3 inch clincher rim with 40 spokes.

Tire and Rim Assn. (Inc.). 1931 Year Book. Standard Rim Contours; 1929. For motorcycle rims, dimensions and tolerances for standard contours for drop center and for clincher motorcycle rims, gages for rims.

References .- Motorcycle tires. See 206.2, 206.4.

725.3 BOATS, RAFTS, AND PARTS

American Marine Standards Committee. H No. 26-1927. Standard Lifeboats. Double-en de open type. Specifications for block coefficient, form of blige, mean shear, carrying capacity and certain dimensions.

Society of Automotive Engineers 1931 Handbook. Magneto Mountings; 1923. Dimensions of magneto coupling and shaft end, dimensions of

mounting, for motorboats.

Society of Automotive Engineers 1931 Handbook. Recommended Practice Marine Shafti-Ends; 1929. Dimensions of coupling nuts and washers, of taper, of keyways, cotter pins, and threads, up to three inch shaft size.

Society of Automotive Engineers 1931 Handbook. Motorboat Controls; 1920. Direction of motion

of spark, throttle, and gear shift levers.

Society of Automotive Engineers 1931 Handbook. Recommended Practice, Motorboat Lighting Voltages; 1922. Recommended voltages for combined starting and lighting equipment and for larger cruisers having separate lighting equipment. Society of Automotive Engineers 1931 Handbook. Recommended Practice. Propeller Hubs; 1929. Dimension of bores, keyways and hub lengths for shafts up to 3-inch size, for steel or other high material. Dimensions of coupling strength nuts, washers, and shaft ends.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Propeller Shaft Couplings; 1929. Dimensions of marine shaft couplings up to 3-inch shaft size, for steel or other

high strength material.

Society of Automotive Engineers 1931 Handbook. Tachometer Drive for Marine Engines; 1931, Standard dimensions of tachometer end and of engine end of tachometer shaft, thread dimension.

U. S. Gov., Dept. of Commerce, Bureau of Naviga-tion and Steamboat Inspection Service, Dept. Circular 236; 1928. Regulation of Motor Boats. For vessels propelled by machinery up to 65 feet length, except steam tug boats and tow boats. Mandatory requirements on number, color and location of running lights and sizes of lamp lenses, on provision of whistle, fog horn, life preservers, and fire extinguishing apparatus. Copy of law and regulations thereunder included.

U. S. Gov., Dept. of Commerce, Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Clark Life Rafts. For use on ocean vessels, mandatory requirements on tensile strength of material, thickness of metal, and construction of seams in cylinders, air space and deck area for each person, reversibility, and

buoyancy.

U. S. Gov., Dept. of Commerce, Steamboat Inspec-tion Service, General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Life Rafts of Catamarin Type, Mandatory requirements on tensile strength of material, thickness of metal, attachment of cylinders, construction, size, and pressure test of cylinders,

reversibility of raft, passenger capacity.
U. S. Gov., Dept. of Commerce, Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Metallic Life Boats. Mandatory requirements on size and number of life lines, life preservers, oars and other equipment, on tensile test of metal, on material, sizes, and general construction of keels, stems, stern posts, etc., thickness and riveting of plates and attachment to stem, etc., material, thickness of plates, capacity, location, and testing of air tanks, passenger capacity of boat.

References.—Incandescent lamps for motorboats. See 716.12. Steel plates and structural steel for ships. See also 604.13, 605.15. Ships. See 725.4. Tolerances on metal fits. See also 615.82.

725.4 SHIPS

725.40 General Items

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. For steel ocean vessels, rules for construction and periodical inspection to be complied with in order that vessel receive and retain a Certificate of Class issued by A. B. S. Requirements on types of construction, sizes, thicknesses, spacings, riveting, etc., for keels, stems, stern frames, double bottoms, rudders, keelsons, frames, web frames, floors, beams, stringers, stanchions, girders, bulkheads, etc., construction, formulas for design, tests, and installation, for boilers, engines, pumps, piping, electrical equipment, and other machinery, types of materials required, their quality, testing, etc. American Marine Standards Committee, Special No. 1-1928. Stability and Loading of Ships. Applies to new passenger vessels. Definitions, minimum initial stability when light and when operating, method of making inclining experiment.

U. S. Gov., Dept. of Commerce, Steamboat Inspection Service. Laws Governing the Steamboat Inspection Service; 1925. Includes mandatory requirements on inspection of vessels, boilers, machinery and appurtenances, on inspection and stamping of boiler plates, on plate thickness and spacing of flues, on hydrostatic test of boilers, on fire extinguishing equipment and pumps, on provision of life preservers, life boats, etc., on number of bulk heads, etc.

725.41 Ship Hull Details

American Marine Standards Committee H No. 2–1925. Mooring Bitts, Cast-Iron. Dimensions of 12 standard sizes, standard arrangements of fastenings, material in conformity with Am. Bureau of Shipping specifications for gray cast iron.

American Marine Standards Committee. H No. 3-1925. Fixed Lights for Ships, Type A, Pressed Steel Frame. Dimensions of frame, sizes of glass and of bolt holes, for 3 standard sizes of lights.

American Marine Standards Committee. H No. 4-1925. Fixed Lights for Ships, Type B, Cast-Brass Frame. Dimensions of cast-brass frame, size of glass, spacing and sizes of screw holes, for 3 standard sizes of lights.

American Marine Standards Committee. H No. 5-1925. Fixed Lights for Ships, Type C, Cast-Brass Finished Frame. Dimensions of frame, size of glass, spacing and size of screw holes, for

3 standard sizes of lights.

American Marine Standards Committee. H No. 8-1926. Chain Plates. For cast-steel chain plates, dimensions of 12 standard sizes, working loads, material in accordance with requirements of Am. Bureau of Shipping for steel castings. American Marine Standards Committee. H. No.

13-1926. Pad Eyes and Links. For cast steel pad and wrought steel link, dimensions of 15 standard sizes, working loads, materials accord-ing to requirements of Am. Bureau of Shipping.

American Marine Standards Committee. H. No. 14-1926. Railroad Iron Sling for Cargo Handling Gear for Ships. Dimensioned drawing of standard sling, to conform to Am. Bureau of Shipping specifications for chains,

American Marine Standards Committee. 15-1926. Chain Sling for Cargo Handling Gear for Ships. Dimensioned drawing of standard sling, to be in conformity with Am. Bureau of

Shipping specifications for chains.

American Marine Standards Committee. H No. 17-1926. Mooring Bitts, Cast-Steel. Dimensions and methods of fastening for 12 standard sizes. material to be in accordance with Am, Bureau of Shipping specifications for grade 1 steel casting.

American Marine Standards Committee. H No. 20-1927. Pilot Ladder. Standard dimensions of hemp or manila rope ladder with wooden side

pieces and steps,

American Marine Standards Committee. H No. 21–1927 to H No. 25, inclusive. Tubular Steel Cargo Booms for Ships. Capacities of 5, 10, 15, 20, and 30 tons. Dimensions of the standard sizes, general construction requirements, tension test requirements for the steel.

American Marine Standards Committee. 27-1928. Scupper Valves. Standard dimensions of the 3, 4, 5, and 6 inch standard sizes.

American Marine Standards Committee. H No. 28–1928. Cargo Boom Fittings. Dimensions of standard bracket type boom steps for 5, 10, and 15 ton booms.

American Marine Standards Committee. H No. 29-1928. Cargo Boom Fittings. Dimensions of standard deck type boom steps for 15, 20, and 30

ton booms.

American Marine Standards Committee. H No. 30-1928. Heel Fittings for Tubular Steel Cargo Booms. Dimensions of standard heel fittings for 5, 10, 15, 20, and 30 ton booms. American Marine Standards Committee. H No.

31-1929. Caps for Tubular Steel Cargo Booms. Dimensions of standard caps for 5, 10, 15, 20,

and 30 ton booms.

American Marine Standards Committee. H. No. 35-1928. 4-inch Weather Deck Scupper. Material cast iron or cast steel, galvanized, dimen-

sions of 1 standard size and type.

American Marine Standards Committee. H No. 36-1928. Deck Drain, Plain Type. For cast-iron or composition drains, dimensions of 4 standard sizes for steel decks and for covered decks.

American Marine Standards Committee. H No. 37-1928. Deck Drain, Trap Type. Cast-iron or composition drain, dimensions of 3 standard types of which one is for steel decks.

American Marine Standards Committee. H No. 38-1928. Deck Drain Strainers, Type A. Di-mensions and design of 4 standard sizes of brass strainers.

American Marine Standards Committee. H No. 39-1928. Deck Drain Strainers, Type B. Dimensions and design of 4 standard sizes of brass

strainer.

American Marine Standards Committee. H No. 40-1929, Lifeboat Disengaging Apparatus. General operating characteristics required, strength of parts, shop test requirements of tackle releasing devices, service test of apparatus under various specified conditions of loading and suspension.

American Marine Standards Committee. H No. 41-1929. Rat Proofing of Ships. Instructions for rendering rat proof the ceilings, sheathing, bulk-heads, partitions, trunks, floors, doors, openings, pipes, ventilators, furniture, lockers, bins, etc.

American Marine Standards Committee. H No. Harman Marine Standards Committee: 17 130.

42–1929, Plain Open Chocks. H No. 43–1929, Open Chocks with One End Roller. H No. 45–1929. Closed Chocks with One End Roller. H No. 46-1929, Open Roller Chocks. H No. 47-1929, Closed Roller Chocks. H No. 48–1929, Open Chocks with Center Pillar and Plain Ends. H No. 49–1929, Open Chocks with Center Pillar, Plain and Roller Ends. H No. 50-1929, Open Chocks with Center Pillar and Roller Ends. Chocks or rope guides of cast iron or cast steel, material according to specifications of American Bureau of Shipping, or A. S. T. M., construction, dimensions, methods of fastening.

American Marine Standards Committee. H No. 51-1929 and H No. 52-1929. Mooring Pipes for Ships, Oval and Circular Types. For east iron or cast steel mooring pipes, dimensions, design, pitch diameter of fastenings, size and number of rivets, and weight for 12 standard sizes.

American Marine Standards Committee. H No. 65-1931 to H No. 68-1931. Cleats for Ships. Standard design and dimensions of 3 to 5 sizes of 3 types of light cleats dependent on type of base and method of fastening, made of forged or cast steel or malleable iron, standard design and dimensions of 8 sizes of cast iron or cast steel heavy cleats, materials in accordance with specications of Am. Soc. for Testing Materials.

U. S. Gov., Dept. of Commerce, Steamboat Inspec-tion Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Steam Vessels. Mandatory requirements for vessels of each of above 4 classes as regards number and construction of life boats and life rafts, equipment and test of davits, number, materials, and construction of life preservers, number and location of bulkheads, fire extinguishing and fire detecting equipment.

ing and fire detecting equipment.

725.42 Ship Engineering Details

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Propellers. For solid propellers and built up propellers of cast iron, semisteel, cast steel, or bronze, requirements on hammer test, thickness of blades for standard design, formula for area of stud bolts. tensile and transverse test of cast iron and semisteel, tensile and bend tests for cast steel.

American Marine Standards Committee, E No. 3-1927. Couplings for Propeller Shafting, Flanged Couplings for Propeller Shafting. Dimensions of 78 standard sizes of flanges with their bolts and nuts, for line shaft sizes from 41/2 to 181/4 inches, quality of material and workmanship to conform to requirements of Am. Bureau of Shipping.

American Marine Standards Committee. merican Marine Standards Committee. 1927. Couplings for Propeller Shafts. Loose ard dimensions of 56 sizes of flanges, their bolts, nuts and keys for line shaft sizes from 41/2 to 181/4 inches, quality of materials and workmanship to conform to requirements of Am. Bureau of Shipping.

American Marine Standards Committee. E No. 5-1927. Tail Shafts and Stern Tube Bearings. Dimensions of 81 standard sizes of shafts, liners, and tube bushings for shaft sizes from 5 to 20 inches in diameter, quality of materials and workmanship to be in conformity with requirements of Am. Bureau of Shipping.

American Marine Standards Committee. E No. 6-1927. Propeller Keys. Standard dimensions of 16 sizes of keys and securing screws for tail shafts from 5 to 20 inches in diameter.

American Marine Standards Committee. E No. 7-1927. Propeller Nuts. Standard sizes and dimensions of nuts, for tail shafts from 5 to 20

inches in diameter.

American Marine Standards Committee. E No. 8-1927. Stern Tube Stuffing Boxes. For stuffing box with cast-iron gland for 2 types of shafts, dimensions of 81 standard sizes of stuffing boxes, number and sizes of stud bolts, for tail shaft sizes from 5 to 20 inches, quality of materials and workmanship in conformity with requirements of Am. Bureau of Shipping.

American Marine Standards Committee. E No. 9-1927. Hubs for Built-Up Propellers With Recessed Blades. For 3-bladed and for 4-bladed propellers, dimensions of 13 standard sizes of hubs for each type, for shaft sizes from 8 to 20 inches, quality of materials and workmanship to be in conformity with requirements of Am. Bureau

of Shipping.

American Marine Standards Committee. E No. 10-1927. Fair-Water Caps for Built-Up Propellers with Recessed Blades. Dimensions and bolting requirements for 13 standard sizes of caps for jack shaft sizes from 8 to 20 inches, quality of materials and workmanship to be in conformity with requirements of Am. Bureau of Shipping.

American Marine Standards Committee. E No. 11-1927. Propeller Hub Studs, Nuts and Lock Screws. For collar studs, plain studs, nuts and lock screws, dimensions of standard sizes for sizes 1½ to 4½ inches, threading, workmanship and quality of materials in conformity with standards of Am. Bureau of Shipping.

American Marine Standards Committee. E No. 12– 1927. Packing Gland for Propeller Hubs. Di-mensions of 57 standard sizes of packing glands corresponding to tail shaft sizes from 8 to 20 inches, number of stud bolts, quality of materials and workmanship to be in conformity with requirements of Am. Bureau of Shipping.

American Marine Standards Committee. E No. 21-

1928. Hubs for Built-Up Propellers, with Flush Facings. Dimensions of 13 standard sizes corresponding to tail shaft sizes from 8 to 20 inches. quality of materials and workmanship to be in conformity with requirements of Am. Bureau of

Shipping.

American Marine Standards Committee, E No. 22 1928. Fair-Water Caps for Flush Faced Propeller Hubs. Dimensions of 13 standard sizes corresponding to tail shaft sizes from 8 to 20 inches, quality of materials and workmanship to be in conformity with requirements of Am. Bureau of

American Marine Standards Committee. E No. 23-1928. Built-Up Propellers. List of component parts of built-up propellers, materials according to American Bureau of Shipping rules for building and classing steel vessels, general quality requirements for cast iron or cast steel hubs and cast steel or cast bronze blades, allowable materials for studs, nuts, lock screws, fair-water cap, packing gland, hammer test for blades, machining requirements for component parts of propeller, assembly and balance requirements.

American Marine Standards Committee, E No. 24-1928. Templates for Propeller Blade Flanges and Bolt Holes. Instructions for making templates, one for diameters and taper of blade flange and one for location of bolt holes, for cases where blades and hubs are purchased separately.

American Marine Standards Committee. E No. 25– 1928. Propellers Cast in One Piece. Materials according to specifications of American Bureau of Shipping, general quality requirements for cast iron, semisteel, cast steel, and cast bronze propellers, hammer test and machining require-

ments, recommendations for degree of balance.

American Marine Standards Committee. E No. 28-1929 and E No. 29-1929. Sleeve Couplings for Ship Propeller Shafts. For solid couplings (E No. 28) and for split couplings (E No. 29), requirements on design and dimensions, keying and bolting for wrought steel solid coupling and cast steel split coupling, materials according to specifications of Am. Bur. of Shipping.

American Marine Standards Committee. E No. 30-1930. Fair-Water Caps for Propellers. For ships fitted with a contrapropeller or a streamline rudder, standard dimensions and design of fair-water caps for tail shaft sizes from 8 to 21 inches, using gray cast iron or other material conforming to specifications of Am. Bureau of Shipping,

Machinery Builders Society. Bronze Propellers; 1924. For complete propellers, cast in one piece or built up, and for propeller blades for installa-

tion on hubs, requirements on chemical composition of the manganese bronze, method of casting blades, tensile test requirements, machine work, permissible steel scrap in grey iron cast hubs.

National Fire Protection Assn. Regulations Gov-erning Marine Fire Hazards; 1930. Requirement on installation and structural features of boiler lagging, boiler foundations, fire room floors, stacks, coal and oil bunkers, oil burning and heating systems, galley range, fire extinguishing

equipment, electrical equipment, etc.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Steam Vessels. Mandatory requirements for vessels of each of above 4 classes as regards physical and chemical properties of boiler plate, design, test and construction of boilers, material and strength of piping, connections, valves, evaporators, feed water heaters, separators, and steam trans.

725.43 Ship Operation Details and Supplies

American Marine Standards Committee, O No. 5-1925. Instructions for Care and Maintenance of Steel Hulls. Cleaning, types of coatings and periods of application to bottoms, decks, topsides,

cargo space, bunkers, and tanks.

American Marine Standards Committee. O No. 12-1926. Essential Machinery Spare Parts, Accessories, and Supplies for Seagoing Ships. Lists of spare parts for steam engines, turbines, condensers, boilers, for reduction gears, for Diesel and gas engines, for feed, fire and other pumps, for heaters and distillers, for deck and refrigerating machinery, for deck and navigation outfits, for electrical generators, motors, batteries. for electrical generators, motors, batteries, switchboards, and cable and wire.

American Marine Standards Committee. O No. 13-1926. Equipment and Methods for Safety on Recommended equipment for safety in navigation, fire protection, personal welfare and

safety, and emergency provisions.

726. STEAM, ELECTRIC, AND GASOLINE RAILWAY CARS

726.0 GENERAL ITEMS

American Electric Railway Engr. Assn. Misc. Methods and Practices. E207-24; 1924. Protective Devices for Car Equipment. Recommendations on installation of choke coils, lightning arresters, circuit breakers, fuses, ground wire, and rating of circuit breakers, grounding practice.

American Electric Railway Engr. Assn. Misc. Methods and Practices. E208-26; 1926. Lubrication of Car Equipment. Inspection, kind of lubricant, amount of lubricant for slow speed and for high speed service, lubrication of motors, journals, air compressors, trolley bases and wheels.

American Rallway Assn. Purchases and Stores Div. Standard Material Classification; 1922. Classification of the materials used by rallroads under main numbered headings with detail lists of materials under each heading and the unit in which purchased.

References.—Devices for protection against lightning. See 715.5.

726.1 RAILROAD CARS

American Electric Railway Engineering Assn. E4-27; 1927. Dimensions for height of bumpers for interurban cars.

American Electric Railway Engr. Assn. Recommended specification. E101-27; 1927. Specification for the location of the end connection on interurban cars used in car exchange service. Dimensional drawing showing location.

American Mining Congress, under auspices of American Standards Assn. M 18-1928. Underground Transportation in Metal Mines. Includes haulage cars, type of bearings, side or end dumping, capacity, for both hand tramming and motor

American Railway Assn. Mechanical Div. Car Construction, Fundamentals and Details; 1929. Includes requirements on uniformity of section of car sills, recommended practice on framing for box cars, on design and strength of box car ends, standard splicing of steel and wooden sills.

American Railway Assn. Mechanical Div. Car Design, Fundamentals of; 1927. Standard dimensions of car, such as height from rail to various car parts, distance between center sills, inside dimensions of box cars, minimum draft capacity, ratio of unit stress to end load for draft attachments, etc.

American Railway Assn. Mechanical Div. Classification of Cars, Definitions and Designating Letters of; 1930. Standard class letters and definitions for freight equipment cars, recommended practice for passenger equipment cars.

American Railway Assn. Mechanical Div. Couplers, Height of; 1924. Standard maximum and minimum heights of draw bars for freight cars on standard gage railroads and on narrow gage railroads, standard height of coupler for passenger car equipment.

American Railway Assn. Mechanical Div. Tank Cars; 1926. For 6 types of tank cars classified according to strength, date of manufacture, and design features, requirements on bursting pressure. thickness of plates, riveting and sizes of rivets, dishing of heads, capacity and construction of dome, design of outlet valve, lagging strength of center sills and draft attachments, anchorage to underframe, safety-valve ceupment, hydrostatic test of tank, safety-valve test, materials and other equipment according to A. R. A. standards, specifications and recommended practices, requirements on construction and installation of hand brakes, running boards, handholds, railings, ladders, steps, safety valves, heater pipes.

American Railway Assn. Mechanical Div. Tank Cars; 1931. For transporting dangerous materials, explosives, etc., the specifications of the Interstate Commerce Commission effective Oct. I, 1930, have been adopted and are published with additional A. R. A. details consistent with the I. C. C. requirements.

American Railway Assn. Mechanical Div. U. S. Safety Appliances for All Classes of Cars and Locomotives; 1928. For compliance with the safety appliance act, requirements on number, dimensions, location, and manner of application of hand brakes, running boards, steps, ladders, handholds, uncoupling levers, and safety railings, with dimensioned drawings.

American Railway Assn. Telegraph and Telephone Section, 1-A-21; 1927. Standard Outfit Cars for Construction Forces. Typical dimensions and layout of cars, equipment and hot water heating system for dining, sleeping, and tool cars.

Railway Fire Protection Assn. Handbook; 1925. Fire Cars for Terminal, Classification and Storage Yards. Recommendations on water capacity, pump duty, size and amount of hose and other fire fighting equipment.

Rallway Fire Protection Assn. Handbook 1925.
Rail Motor Cars. Gasoline Motor Type, GasElectric Type, and Oil-Electric Type. Recommendations on location of fuel tanks, filler openings, and hot water and hot air heaters, on fire
protection of heaters, on total enclosure of motors, resistances, and make and break contacts, on
incombustible material construction for oil-electric type.

U. S. Gov., Congress. Public, No. 113; 1893, amended 1896. An act to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their cars with automatic corplers and continuous brakes and their locomotives with driving-wheel brakes, and for other purposes. Besides above, there are requirements for appliances on locomotives for operating the train brake system, provision of grab irons and handholds, and standard height of drawbars.

U. S. Gov., Congress, Public, No. 133; 1910. An Act to supplement "an act to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their cars with automatic couplers, etc.," and other safety appliance acts, and for other purposes. Includes requirements for equipment of cars with sill steps, hand brakes, running boards, and ladders.

U. S. Gov., Dept. of Commerce, Bureau of Standards H5; 1923. Approved by American Standards Assn. as B 13–1924. American Logging and Sawmill Safety Code. For log railroad cars, requirements on provision of log bunks or safety chains, equipment with handholds, steps, and brakes, design features of brake wrench.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 103 and 103A. Riveted Steel Tanks to be Mounted on or to Form Part of a Car. For cylindrical tank with dished head, mandatory requirements on bursting strength, thickness and width of plates, riveting, calking, capacity of expansion dome, safety valve equipment, etc., pressure test, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerber Lined Riveted Steel Tanks to be Mounted on or to Form Part of a Car. For cylindrical tank with dished head, mandatory requirements on bursting strength, lining with acid resisting rubber, thickness and width of plates, riveting, calking, capacity of expansion dome, fixtures, etc., pressure test, dangerous articles for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 103C. Riveted Alloy Steel Tanks to be Mounted on or to Form Part of a Car. For cylindrical tanks, manda. tory requirements on bursting strength, test of plates for resistance to acid, thickness and width of plates, riveting, calking, capacity of expansion dome, safety valve equipment, etc., pressure test, dangerous materials for which authorized

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 104 and 104A. Lagged Riveted Steel Tanks to be Mounted on or to Form Part of a Car. For cylindrical tank with dished heads, mandatory requirements on thermal efficiency of lagging, bursting strength of tank, thickness and width of plates, riveting, calking, capacity of expansion dome, outlets and safety valve equipment, etc., pressure test, dan-gerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 105A300, 105A400, 105A500, and 105A600. Lagged Welded Steel Tanks to be Mounted on or to Form Part of a Car. For spherical tanks or cylindrical tanks with dished ends, mandatory requirements on thickness of plates, welding, manhole nozzle equipment, safety valve equipment, etc., thermal efficiency of lagging, pressure test of tanks at 300 pounds, 400 pounds, etc., dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 106A500 and 106AS00. Welded Steel Tanks to be Mounted on or to Form Part of a Car. For cylindrical tanks with inwardly dished heads, mandatory requirements on tension and bend test of plate material, thickness of plates, construction of heads, welding and heat treatment, safety valve and other equipment, pressure test of tanks of 500-pound and 800-pound types, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Reg-ulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 107A3350. Seamless Steel Tanks to be Mounted on or to Form Part of a Car. Mandatory requirements on hollow forged or drawn construction, attachment of ends, capacity, chemical composition, elongation, and bend test of steel, thickness of plates, heat treatment, safety valve and other equipment, pressure test of tank at 3,350 pounds, dangerous materials for which authorized,

U. S. Gov., Interstate Commerce Commission. Regulations for the Transportation by Rail of Dangerous Articles; 1930. Container Spec. 108. Lined, Coated, or Treated Wooden Stave Metal Hooped Tanks for Mounting on or to Form Part of a Car. For cylindrical, elliptical, or rectangular tanks with flat heads or covers, manda-tory requirements on thickness of tank stock and hoops, construction of heads or covers, lining with rubber or coating with asphaltum or coal tar, or treating, pressure test, dangerous materials for which authorized.

ous Articles; 1930. Container Spec. 103B. Rubber Lined Riveted Steel Tanks to be Mounted lations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 108A. Metal Jacketed, Coated, Wooden Stave Metal Hooped Tanks for Mounting on or to Form Part of a For cylindrical tank inclosed in metal jacket, mandatory requirements on thickness of metal jacket and of tank material, lining with rubber or coating with asphaltum or coal tar, filling between tank and jacket, pressure test, dangerous materials for which authorized.

S. Gov., Interstate Commerce Commission. United States Safety Appliance Standards; 1911. Order of The Commission. Mandatory requirements on number, location, dimensions, and manner of application of hand brakes, running boards, sill steps, ladders, handholds, and uncoupling levers, and standard height of drawbars, for all types of freight cars, passenger cars, and locomotives.

U. S. Gov., Post Office Dept. Construction of Mail Apartment Self Propelled Cars and Trailer Mail Apartment Cars Operated in Connection with Self Propelled Cars; 1929. Specifications cover the same main items listed under the more general specifications for the construction of steel full and apartment railway post office cars.

U. S. Gov., Post Office Dept. Construction of Steel Full and Apartment Railway Post Office Cars; 1929. Permissible types of construction as regards method of support of load, materials according to Am. Rwy. Assn. specifications, trucks according to Am. Rwy. Assn. specifications, buffing load requirement for design, general construction requirements for underframe, side frame, end, and roof, permissible stresses in members, material, thickness and construction of floors, doors, and windows, car insulation and heat conductivity of material, lighting equipment. location of lights, intensity of illumination, circuit arrangements, fuse and switch installations, location of fans, heating and installation of radiators, interior equipment, painting, drawings showing floor plans.

726.2 PARTS AND FITTINGS FOR RAILROAD CARS

American Electric Railway Engr. Assn. Recom-mended Practice E110-26; 1926. Factors Affecting Foundation and Hand Brake Rigging Design. Terminology, design formulas for foundation brake rigging and parts, requirements on total leverage ratio, truck braking ratio, braking ratio, governor and safety valve adjustment.

American Electric Railway Engr. Assn. Recommended Specification E124-29; 1929. Trolley Poles, Wheels, Harps and Bases. For seamless cold-drawn steel trolley poles, recommended di-mensions for 3 sizes each for light service and for heavy service, gauge of metal. For bronze trolley wheels, requirements on chemical composition and hardness, recommended design and dimensions for 3 sizes. For harp, general design and operating features required. For trolley bases, requirements on general design, provision of current shunts, permissible fiber stress in springs, permissible materials, dimensions, current carrying capacities.

American Electric Railway Engr. Assn. Misc. Methods and Practices E214–26; 1926. Proper Air Brake Installation. Kind of pipe and installation recommendations for various parts.

American Railway Assn. Grain Circular No. 1; 1920. Temporary Grain Doors and Grain Door Lumber. Specifications indorsed by Interstate Commerce Comm., requirements on dimensions of doors and of lumber, on construction and nailing for grain tightness.

American Railway Assn. Mechanical Div. Recommended Practice. Single Car Testing Device for Testing Air Brake Equipment; 1926. General

design and application illustrated.

American Railway Assn. Mechanical Div. Recommended Practice. Stake Pockets for Flat Cars; 1928. Dimensions of 3 recommended standard types, 1 of wrought iron or rolled steel and 2 of malleable iron or cast steel.

American Railway Assn. Mechanical Div. Coupler Yokes; 1914. Standard dimensions of yoke for twin spring gear, tandem spring gear, and fric-

tion gear.

American Railway Assn. Mechanical Div. Front and Back Draft Stop; 1907. Dimensions of castings, spacing of bolt holes for standard stops.

American Railway Assn. Mechanical Div. Hopper Door Operating Shaft, End for; 1914. Stand-

ard dimensions of square end.

American Railway Assn. Mechanical Div. Doors for Box Cars; 1920. Minimum requirements on number, type, and dimensions of door fixtures for outside hung side door and for flush side door, fixtures of malleable iron, recommended practice for construction and reinforcing of outside hung box car doors.

American Railway Assn. Mechanical Div. Recom-mended Practice. Ice Tanks, Refrigerator Cars; 1911. Minimum capacities of ice tanks recommended for fresh meat cars and for fruit and

dairy cars.

American Railway Assn. Mechanical Div. Brine Valve and Operating Riggings, Rules for; 1922. Requirements on minimum diameter of iron operating rod, lever, and pins, minimum thickness of malleable iron casting for valve and hand-hole covers, general operating requirements for valve, galvanizing, etc.

American Railway Assn. Mechanical Div. Safety Appliances for Cars and Locomotives. Various dates 1911 to 1916. For various types of freight and passenger cars and locomotives, requirements on provisions for hand brakes, number, dimensions and design of hand holds, hand rails, uncoupling levers, sill and side door steps, running boards, ladders, their location and applica-

American Railway Assn. Mechanical Div. Hand Brakes; 1924. Load-test requirements for which hand brake equipment must be designed to meet.

American Railway Assn. Mechanical Div. Recommended Practice. Steam and Air Connections for Passenger Cars; 1930. Standard diameter for train line pipe, recommended diameters and lengths of air brake hose and air signal hose, and diameters of flexible metallic steam heat connections, recommended dimensions and design of steam and air hose couplings and clamps.

American Railway Assn. Mechanical Div. Air Brakes, General Arrangement and Details; 1930. Requirements on thickness of levers and pins, diameter of rods, diameter of holes for brake pins, size of brake chain, recommended size of brake cylinders and triple valves, diameter of

brake pipes, etc.

American Railway Assn. Mechanical Div. Recommended Practice. Brake Levers, Rods, Connections and Pins for Passenger Equipment Cars

Foundation Brake Gear; 1928. Design requirements such as required braking force, pressures in brake cylinder, stresses in levers, rods, and pins, bearing value of pins, brake leverage ratio.

American Railway Assn. Mechanical Div. Recommended Practice. Bottom Rod Support. Brake

Beam Hangers and Attachments; 1926. Stand-

ard dimensions and design.

American Railway Assn. Mechanical Div. Recommended Practice. Hatch Plugs for Refrigerator Cars; 1927. Requirements on dimensions, construction and design of wooden hatch plugs.

American Railway Assn. Mechanical Div. Draft Gear Followers; 1907. Thickness requirements for flat followers of wrought iron or steel for tandem spring gear and for twin spring and

friction draft gear.

friction draft gear.

727. CARRIAGES. BUGGIES. COACHES. BABY CARRIAGES AND CARTS

729. MISCELLANEOUS VEHICLES AND VE-HICLE PARTS

729 1 WHEETBARROWS

U. S. Gov., Dept. of Commerce, Bureau of Standards. R105-29; 1929. Wheelbarrows. Simplified practice recommended and accepted by industry covering the rating of all steel-tray barrows according to the cubical contents of the struck capacity and the limitation of stock sizes and types to the ones listed in the publication, thickness of metal for each type.

729.2 TRAILERS

729.3 TRUCKS

Institute of American Meat Packers, Packing-house Supplies, Packs, and Equipment; 1928. Hand Trucks. For 850-pound sausage meat truck. Requirements on truck dimensions, sheet thickness of sheet steel body, general construction and galvanizing, dimensions of malleable iron wheels, and caster, dimensions of steel axle.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Hand Trucks. For general purpose trucks, requirements on dimensions, sheet gage of steel body, general construction, galvanizing, dimensions of steel shaft and of steel or wood wheels.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Hand Trucks. For hide truck, made of maple with oak frame, requirements on dimensions of truck, of steel wheels, cast iron hub, and steel axle, thickness of wood in body and frame.

house Supplies, Packs, and Equipment; 1928. Hand Trucks. For steel ham and bacon trucks. requirements on dimensions of truck, malleable iron wheels, and steel axle, thickness of steel,

general construction.

Institute of American Meat Packers. Packing-house Supplies, Packs, and Equipment; 1928. Hand Trucks. For tank charging truck, requirements on over-all dimensions and body dimensions, on gage of steel and general construction, galvanizing, dimensions of steel axle, of steel or wood wheels.

729.6 SLEDS AND SLEIGHS

Amateur Athletic Union of the U.S. Official Athletic Rules. 1931. Publ. No. 117R of American Sports Publishing Co., 45 Rose St., New York, N. Y. Bob-Sleighs, Two sizes for 2 member crew and for 4 member crew, requirements on maximum length and weight, standard widths between runners, required type and width of brakes.

AGRICULTURAL MACHINERY AND IMPLEMENTS 730-739

731. MILK, CREAM, AND CHEESE MACHIN-ERY

International Assn. of Milk Dealers. Blueprint No. 2; 1923. Standard Sanitary Fitting. Dimensions and thread for standard union type fitting for tubes from 1-inch to 5-inch outside diameter.

International Assn. of Milk Dealers, Drawings No. 1186, 1187, 1188, 1190, 1237, 1238, 1239, 1242, 1243, 1246. Dated 1929. Sanitary Pipe Union with Paper Gasket. Drawings showing dimensions, threading, and assembly of union parts and gasket for 11/2, 2, 21/2, and 3-inch unions made of

International Assn. of Milk Dealers. Sketch 4667-D: 1926. Standard Sanitary Thermometer Connection for Vats. Detail dimensions and thread requirements for spud fitting.

International Assn. of Milk Dealers. 4667-E; 1926. Standard Thermometer Connection for Glass Lined Tanks. Detail dimensions and threading.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Reprint No. 1154; 1927. Definitions of Pasteurization and Their Enforcement. Includes recommended tentative specifications for pas-teurization apparatus, for vat type apparatus, pocket type apparatus, and continuous flow type apparatus. Requirements on prevention of cold pockets, provision of leak escape valves, thermometers, and heat above milk.

References.—Cream and butterfat test scales. See 793.5.

HOES, RAKES, AND MOWERS

National Assn. of Farm Equipment Manufacturers. Book of Standards; 1926. List of sizes chosen as standard for steel walking plows, riding and wheel walking plows, disk plows, chilled plows, corn planters, corn and cotton riding drill planters, stalk cutters, peg-tooth harrows, disk harrows, spring-tooth harrows, walking and riding cultivators, beet implements, solid and wing sweeps of plows, corn shovels, straight shovels,

American Society of Agricultural Engineers. Disk Blades for Disk Plows, Harrows, Drills, Listers and Cultivators; 1931. Standard dimensions, bevel and concavity of disks, and recommended gages for a limited number of standard sizes of disks for disk harrows, vertical and standard disk plows, grain drills, etc.

732. PLANTERS, PLOWS, CULTIVATORS, | 733. FERTILIZER DISTRIBUTORS AND SPRAYING MACHINES

CONSTRUCTION, CONVEYING, AND HOISTING MACHINERY

740. GENERAL ITEMS

National Sand and Gravel Assn. (Inc.). Report of Committee on Standard Depreciation Scale; 1926. For sand and gravel excavation equipment, including cars and locomotives, years of economical life for each piece.

741. EXCAVATING AND DREDGING MA-CHINERY

References .- Mining machinery and mining equipment. See 751,

741.1 PILE DRIVERS

741.2 BORING MACHINES

References .- Diamond core drill fittings. See 741.3.

741.3 DRILLING MACHINES

U. S. Gov., Dept. of Commerce, Bureau of Standards CS17-30; 1930. Diamond Core Drill Fittings. A commercial standard selected and accepted by industry covering 4 sizes of fittings, dimensions of rod couplings and casing couplings, dimensions of threads of rod couplings, drill rods, core barrel bits, casing, casing coupling, and casing bit.

References .- Oil well machinery, See 754.

741.4 POWER SHOVELS

741.5 DREDGING MACHINERY

References .- Dredging sleeves. See 209.1.

742. CONCRETE MIXERS

Associated General Contractors of America Concrete Mixer Standards; 1931. Includes construc-tion mixer and paving mixer. Rating and standard sizes, requirements for standard size water measuring tanks, water connections, kinds of tools and accessories and number required. mounting and traction speed for paving mixers, standard reach for paver boom and bucket at-tachments and for batch-box derricks.

References.—Donkey engines. See 703.1. Automobile truck engines, tractors. Sec 722.31, 729.5.

743. ROAD-MAKING EQUIPMENT

American Assn. of State Highway Officials. State Highway Standard Cutting Edge Punchings; 1929. For grading machines, drawing showing standard dimensions of replaceable cutting edge with size and spacing of bolt holes.

American Road Builders' Assn. Convention Proceedings; 1931. Steel Side Forms for Concrete Pavements, Standardization of, Recommendations on standard widths of base for various heights of form, permissible vertical tolerance on the top and lateral tolerance on the upstanding leg.

References.—Concrete mixers, tractors, plows. See 742, 729.5, 732. Weighing equipment for concrete aggregates. See 793.5.

744. CRANES, HOISTS, AND JACKS

744.1 CRANES

Assn. of Iron and Steel Electrical Engineers. Recommended Rules for the Safe Operation of Electric Overhead Traveling Cranes; 1926. Rules for crane operators and rules for floor men.

Assn. of Iron and Steel Electrical Engineers. tric Overhead Traveling Cranes, Heavy Duty Steel Mill Service; 1921. Includes hot metal cranes and general mill service cranes, requirements for safety factor of crane parts, stress in castings, standard dimensions of shafting, track wheels and rails, capacity of brakes, general construction of bridge girder, trolley, cab, railings, gears, and accessories.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. C1-1931. Cranes. Insulation and minimum sizes of wire, clearance and spacing of exposed wire and collector wire, switch and cutout requirements, mounting of controller re-

sistances, grounding.

U. S. Gov., Dept. of Commerce, Bureau of Standards. H7; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For electric cranes, requirements on guarding live and moving parts, guarding or isolating of collector wires, grounding, types of power disconnecting means, provision of locking or removable operating handles, provision of limit switches and reverse-phase relays.

References.—Cast Iron, malbable cast iron, cast steel. See also 61.11, 611.21, 611.41. Structumal steel. See also 605.1. Electric motors, electric controllers. See 11.2, 711.3, 714.11. Methods of testing motors. See 710, 711.20. Electric wire. See 715.44. Tolerances for metal fits. See also 615.82.

744.2 HOISTS

Electric Hoist Manufacturers Assn. Portable Overhead Hoists; 1925. Using motors of intermittent duty rating, permissible temperature rise of motors and of controller resistors, requirements on inclosure of controllers, materials and cutting of gears, speed limiting and load holding capacity of brakes, size and reeling capacity of cast iron drums, construction of plow steel hoist rope, provision of limit switch, etc.

VISION OF HIRIT SWICE, etc.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. C1-1931. Hoists. Insulation and minimum sizes of wire, clearance and spacing for exposed wire, switch and cutout requirements, mounting of controller resistances, grounding.

mounting of controller resistances, grounding.
U. S. Gov., Dept, of Commerce, Bureau of Standards. H7; 1926. Approved by American Standards Assn. as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For electric hoists, requirements on guarding live and moving parts, guarding or isolating of collector wires, grounding, types of disconnecting means, provision of locking or removable operating handles, provision of limit switches and reverse-phase relays, etc.

References.—Mine hoists. See 751. Elevators. Sec 745.3. Steel wire rope. See also 603.42. Cast iron, malleable iron, cars treel. See 611.11, 611.21, 611.41. Electric motors and controllers. See olso 711.2, 711.3, 714.11. Methods of test, protection, safety codes for motors. See also 710, 711.20. Electric wire. See 715.44.

7443 JACKS

References.-Screw jacks and hydraulic jacks. See 616.91.

745. ELEVATORS AND CONVEYORS

745.1 CONVEYORS

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Trolleys. Requirements on dimensions of one standard size of single wheel trolley with cast iron wheel and steel housing for transportation of meats on overhead track.

745.2 DUMB-WAITERS

745.3 ELEVATORS

American Society of Mechanical Engineers, joint sponsor with the Bureau of Standards and American Institute of Architects under procedure of American Standards Assn. A 17-1931. A Safety Code for Elevators. Covers construction, inspection, maintenance, and operation of elevators, dumbwaiters, escalators and their holstways excepting belt, bucket, or roller conveyors for freight, piling machines, skip hoists, wharf ramps, amusement devices, elevators of over 30,000 pounds capacity and elevators used during building construction. Requirements as to hoistway construction, guards and landings, elevator requirements as to guides, buffers, counter-weights, car construction, safeties for car and hoisting machinery, cables and signal systems, rules for inspection, maintenance and operation.

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn. C1-1931. Elevators. Permissible voltages on various parts, types, insulation, minimum sizes, protection, installation of conductors for various circuits, requirements on enclosure of live parts, grounding, clearance around controller panels, location of disconnecting switch, elevator machine and controller.

National Board of Fire Underwriters. Recommended Building Code; 1922. Construction and Operation of Elevators. Construction of incombustible materials, provision of trap door and safety devices, construction requirements for shaft, counterweights, number of door openings

in shaft, etc.

U. S. Gov., Dept. of Commerce, Burean of Standards. H7; 1926. Approved by American Staudards Assn, as part of C 2-1927 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. For electric elevators, requirements on guarding live and noving parts. provision of locking or removable operating handles, location of controller lever, provision of limit switches and of reverse-phase relays.

References.—Industrial hoists, mine hoists. See 744.2, 751. Steel cables. See also 503,4.2. Electric motors, controllers. See also 711.2, 711.3, 714,11. Methods of test, protection, safety code for motors See also 710, 711.20. Electric wire. See 715.4 Till.

750-759

MINING, OIL WELL, AND PUMPING MACHINERY

750. GENERAL ITEMS

American Institute of Mining and Metallurgical Engineers; 1928. Proposed Safety Code for Coal Mine Ventilation. Definitions, provision of a ventilation map, specifications of intakes and returns, requirements on overcusts, stopings, doors and brattices, provisions against contamination of air, safety lamps, installation and use of faus.

American Institute of Mining and Metallurgical Engineers. Adopted by American Standards Assn. as M 13-1925. Recommended Practice for Rock Dusting Coal Mines to Prevent Coal Dust Explosions. Kind, size, and amounts of dust to be used, parts of mine to be dusted, sampling of dust after mine has been dusted, for all bituminous mines.

American Mining Congress. Approved by American Standards Assn. as M15-1931. Safety Code for Coal Mine Transportation. Requirements on bonding of tracks, clearances along track, installation and operation of stopblocks and derails, signal systems, slope and shaft hoists, permissible types of haulage, location of trolley wires, operation of man trips, hauling explosives, inspection rules.

U. S. Gov., Dept. of Commerce. Bureau of Mines. Bull. 277; 1928. Safety in Coal Mining. Practices and methods recommended by the bureau for increase of safety in coal mining, covering prevention of explosions by ventilation design, rock dusting, use of permissible explosives, permissible safety lamps and lighting, proper use of electrical machinery, prevention of falls of ground, haulage accidents, mine fires and fire equipment.

751. MINING AND QUARRYING MACHIN-ERY

American Mining Congress, sponsor under auspices of American Standards Assn. M 6-1931. Drainage of Coal Mines. Requirements for pumps and pumping stations, specifications for electric driven plunger pumps, for centrifugal pumps, for pump accessories, construction of sunps. practice in priming piston, plunger and centrifugal pumps, semiremote control, safety precautions and attendance, natural drainage, unwatering abandoned workings, mine water and its action upon mine drainage equipment, recommendations of metals and alloys to use.

American Mining Congress. American Standards | Assn. M 10-1928. Miscellaneous Outside Coal Handling Equipment. Hoisting signals, safety requirements for man haulage equipment, safety methods around tipple, fire protection, dimensions of shafting, bearings, pedestals and motor shafts at pulley end.

American Mining Congress, sponsor. Approved by American Standards Assn. as M 12-1928. Construction and Maintenance of Ladders and Stairs for Mines. Requirements on construction and protection of mine ladderways, required use and minimum dimensions of stairways and ladders, ladders in conformity with Safety Code for Ladders, A 14-1923 of Am. Standards Assn.

American Mining Congress, under auspices of American Standards Assn. M 18–1928. Underground Transportation in Metal Mines. Standard type of car, track gage, rail weight, grade of track, and dimensions of drift for hand tramming and motor haulage, weight of locomotive

for motor haulage.

American Mining Congress under auspices of American Standards Assn. M 19–1928. Mechanical Loading Underground in Metal Mines. Mechanical shovelers; classification, working conditions, repairs, personnel; recommended requirements on design and size of scrapers, hoists, wire rope, sheaves, lights, and slides.

American Mining Congress. Mine Locomotives. (Coal Mines); 1928. Does not include combinations of trolley and storage battery types. Standard d. c. voltage ratings and weights for trolley type and storage battery type locomotives, drawbar pull, locomotive and motor rating methods.

National Crushed Stone Assn. Drilling Equipment; 1926. Drill tool joint standards of American Petroleum Institute adopted. Four sizes of holes for use in quarry work selected as stand-

ard. See 754.

U. S. Gov., Dept. of Commerce. Bureau of Mines. Schedule 2C; 1930. Explosion Proof Mine Equipment. Longwall Mining Machines. Requirements for approval for use in gassy and dusty mines, including provision of switch for opening all power circuits with fuse or automatic circuit interrupter for each power conductor, or the use of a junction box containing these devices.

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 12A; 1930. Single Shot Blasting Units, Requirements for Permissibility. For battery type units, requirements on inclosure and locking of battery casing, plug and receptacle operation, drop test, shelf depreciation test, design to prevent ignition of explosive mixture. For magneto type, requirements on locked casing, automatic disconnect of drive, repeated service tests, maximum current and pressure rating permitted, drop test, etc. How approval is granted.

U. S. Gov., Dept. of Commerce, Bureau of Mines. Schedule 16; 1920. Procedure for Establishing a List of Permissible Multiple-Shot Blasting Machines. For use in nongaseous mines and quarries, requirements on operation in presence of moisture and dust, on operation at end of plunger stroke, rating test and life test, scope of

approval, fees.

approval, fees.

752. ORE CRUSHING AND ORE SORTING MACHINERY

753. SMELTING AND ROASTING MACHIN-

754. OIL WELL MACHINERY

American Petroleum Institute. Standard No. 3; 1930. Dimensional Standards for Cable Drilling Tools. Standard dimensions of cable drilling tool joints and tool joint gages, tolerances on gages, thread form, standard dimensions of rope socket necks, diameters of jars over reins and standard length of stroke, check testing of reference gages, recommended thread turning practice.

American Petroleum Institute. Poster No. 4; 1928. Recommended Practice. Standard Groove Form for Wire Rope and Manila Cordage. Dimensional specifications and design formulas.

American Petroleum Institute. Standard No. 4; 1931. Standard Rigs and Derricks, Standard major dimensions of steel, and of wood derricks, including heights, bases, and water table openings, dimensions of sampson posts, walking beams, bull wheels, calf wheels, and band wheels, requirements on dead and wind load capacities of derricks and working capacities of sampson posts and walking beams.

American Petroleum Institute. Standard No. 6; 1930. Rig Iron Standards. For 3 standard sizes, requirements on dimensions for cranks and shafts, wrist pins, band wheel flanges, band wheel flange keys, shaft set collars, jack post boxes, gudgeons, pitman stirrups, crown sheaves, sand line sheaves, casing line sheaves, sand reels; and for the 6-inch size, dimensions of calf wheel rim, clutch sprocket and strap, and clutch.

American Petroleum Institute. Standard No. 7-A; 1931. Miscelleanous Rotary Standards. Recommended Practice on Methods of Measurements, Etc. Method of measurement of sheaves and hoisting blocks and drilling hooks, standard taper for spider or master bushing in rotary drilling machine, threads for extra bowls on over shots.

American Petroleum Institute. Standard No. 7-B; 1931. Rotary Drilling Taper Joints. Basic thread form, requirements on pitch and taper of joint and essential dimensions for rotary tool joints, fishtail bits, drill collars, rotary driving stem and couplings, swivel gooseneck connections, alignment test for tool joints, specifications and tolerances for master tool joint gages.

American Petroleum Institute. Standard No. 11-A and Supplement No. 1; 1931. Oil Well Pumps. Standard dimensions and tolerances for 4 standard sizes of cold drawn and of machined liner working barrels, of plungers, valves, couplings, etc., dimensions of measuring gages for the various parts and tentative standard dimensions for inserted cast iron liner and cold drawn barrel numps.

American Petroleum Institute. Standard No. 11B 1931. Sucker Rods for Pumping Purposes. Requirements on sucker rod dimensions, threads and contact dimensions, for 3 standard sizes, specifications for master gages, gaging practice.

American Petroleum Institute. Standard No. 11-D; 1930. Miscellaneous Pumping Equipment Standards. Standard dimensions for polished rods, pull rods, counter shafts for belted pumping units, reduction gear pumping units, well head taps and fittings, rotary counterbalances, and screen pipe openings.

References.—Oil field boilers. See 703.0, 703.1. Internal combustion engines. See 705.3. Roller or sprocket cbain. See 766.1. Leather belting. See 066.3. Rubber belting, balata belting. See 207.3. Cotton belting, hair belting. See 314.1. Manila cord-

age, wire rope. See 331.16, 603.42. Tanks. See 605.23. Line pipe, drill pipe, casing and tubing. See also 607.3, 607.4. Line shafts for rotary drilling. See 611.52. Diamond core drill fittings. See 741.3. Induction motors. See 711.21. Tolerances on metal fits. See also 615.82.

755. PUMPS, POWER-DRIVEN AND HAND PUMPS

755.0 GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code. Centrifugal and Rotary Pumps; 1927. Applies to tests for determining the performance of pump only and not to piping or driving apparatus or auxiliaries. Methods of measurement of quantity of water delivered and of speed, methods and illustrations of gages with their formulas for measuring dynamic head, measurement of power input, calculation of efficiency, forms for tabulating test data and calculations.

American Society of Mechanical Engineers. Power Test Code. Reciprocating Steam-Driven Displacement Pumps; 1925. Applies to tests for performance of pump and engine, including heaters, jacket pumps, circulating, condensate or vacuum pumps which are concerned in their operation. Required measurements, preparatory tests, starting and stopping instruction, calculations, forms for tabulation of data and calculations for effi-

ciency and duty.

American Society of Mechanical Engineers. American Assn. for Advancement of Science. American Institute of Electrical Engineers. American Society of Civil Engineers. Society for Promotion of Engineering Education. Approved by American Standards Assn. as Z 10b-1929. Symbols for Hydraulics. Hydraulic engineering symbols including standard symbols used in design of water turbines and pumps.

of water times and pumps.

Hydraulic Society. Standards; 1931. Definitions
of efficiency, head, horsepower, viscosity applicable to hydraulic machinery. Classification of
pumps, types and parts of pumps defined and
illustrated for steam driven reciprocating displacement pumps, rotary displacement and centrifugal pumps, for deep well pumps, installation

and operation.

755.1 PUMPS, POWER DRIVEN

American Mining Congress. Mine Drainage. Approved by American Standards Assn., Me-1927. Centrifugal Pnmps. For horizontal type with split casing, requirements on general design, provision of vent cocks and wearing rings, acid resisting metal for impellers and shaft, requirements on size, general design and material of stuffing boxes and bearings, protective shield for motor.

American Mining Congress. Mine Drainage. Approved by American Standards Assn., M6-1927. Electric Driven Plunger Pumps. For outside packed type, requirements on sectionalized design, cast iron or acid resisting metals for cylinders, bronze bushings for stuffing boxes, provision of drains and vents, plungers and glands of acid resisting materials where used with acidnlous water, rellef valve and fittings to be furnished.

Associated Factory Mutual Fire Insurance Companies. Centrifugal Fire Pumps; 1981. Requirements on discharge pressures, standard capacities and speeds, minimum efficiencies, characteristic curves, strength tests of casing and bolting, material and design of casing, water passages, impeliers, bed plate, shaft, bearings, stuffing boxes, valve fittings and piping connections, installation, acceptance tests. For electric drive, requirements on power supply, specifications for motor and controller, installation rules. For steam tur-

bine drive, requirements on steam consumption, speed, general specifications, and installation of turbine. For gasoline engine drive, requirements on power and speed, general specifications, and installation of engine.

Associated Factory Mutual Fire Insurance Companies, National Board of Fire Underwriters, Steam Fire Pumps; 1926. Duplex type, standard sizes, capacities and speeds, strength of parts, design and construction requirements for cylinders, yokes, bolts, ports, clearance, pistons, valves, cushion valves, rock shafts, etc., for both steam and water end, test requirements for internal friction, strength, tightness, safety features, slip, and operation at maximum pressure and capacity, installation requirements, suction pipe sizes.

Associated Factory Mutual Fire Insurance Companies. Steam Pump Governors and Auxiliary Pumps; 1929. Requirements on construction and operating characteristics for automatic governor and recommendations as to size and type of auxiliary pump for a fire protection system, installa-

tion rules, recommended governor sizes.

Associated General Contractors of America. Contractors Pump Standards; 1931. For 2 standard sizes of road pumps, rated discharge, pressnre, and engine speeds, minimum sizes of intake and discharge openings, minimum pistom displacement of engine; for 3 standard sizes of open type suction diaphragm pumps, capacity and lift ratings, minimum power of engine, size of intake.

National Board of Fire Underwriters. Centrifugal Fire Pumps; 1929. Single stage, horizontal or vertical type, standard capacities and speeds, required efficiency and characteristics, sizes of passages and outlets, rules for installation. Electrical driven pumps, sources of power, size of line, speed regulation and heating test requirements for motor, controller equipment requirements, inclosures and installation requirements. For steam turbine driven pumps, capacity, speed, construction, and installation requirements of turbine. For gasoline engine driven pumps, type, starting equipment, power, speed, accessory, and installation requirements for engine, requirements for gasoline supply and tanks. Acceptance test requirements, rules for operating.

755.2 ACCESSORIES AND PARTS FOR PUMPS

References .- Rubber pump valves. See 707.3.

755.3 HAND PUMPS

References.—Gasoline filling station pumps. See 793.6.

756. GAS PRODUCERS

American Society of Mechanical Engineers. Power Test Code. Gas Producers; 1928. Measurements required, preparations, starting and stopping instructions, method of making spot tests and of making short tests, calculation of efficiency and heat balance, itemized forms for tabulation of test data and calculations.

of test data and calculations.

National Board of Fire Underwriters. Internal
Combustion Engines and Coal Gas Producers;
1922. For coal gas producers, permissible location, installation requirements for smoke and
vent pipes, general structural requirements to
take care of particular operating features.

References.—General test code requirements. See 700. Oil efficiency for water gas operation. See 997.2. Gas codes and gas testing. See 997.2.

760-769

METAL-WORKING MACHINERY

760. GENERAL ITEMS

American Drop Forging Institute and National Safety Council, sponsors of American Standards Assn. Serial B 24-1927. Safety Code for Forging and Hot Metal Stamping. Drop forgings and other hammer forgings; includes all hazards peculiar to the forging industry and associated with such machines, but not including cold extrusion of non-ferrous metals or hydraulic presses, except small types of the latter. Hot pressing, bull dozing, bolt heading, and rivet making machines, not included.

National Machine Tool Builders Assn. T-1; 1927.
Driving Speeds. Five recommended standard speeds for machine tool drives, two recommended standard speeds for constant speed motors for machine tool drive, recommended standard sizes of machine pulleys resulting in 9 standard ratios between motor and machine speeds

between motor and machine speeds.

National Machine Tool Builders Assn. T-2; 1928. Simplified List of Shaft Diameters. Standard shaft diameters for machine tool construction

from 1-inch size to 6-inch sizes.

National Safety Council. Approved by American Standards Assn. as B11–1926. Safety Code for Power Presses and Foot and Hand Presses. Covers presses fitted with rams or plungers for blanking, trimming, drawing, punching, or stamping material, plate shears and plate punches. Rules for providing proper foundations, for working space, lighting, means of disconnecting power, guarding of belts, pulleys, shafts, gears, switches, feeding mechanisms, inclosure of ram, limitation of ram stroke, gate guards, two hand tripping devices, sween guards, etc.

761. MACHINE TOOLS

761.1 LATHES

762. POWER PRESSES AND FORGING HAM-MERS

762.1 POWER PRESSES

References .- Safety codes. See 760.

762.2 FORGING HAMMERS

References .- Safety codes See 760.

763. THREAD-CUTTING AND SCREW MA-CHINES

References.—Standard shaft sizes, standard driving speeds. See 760.

764. PUNCHING, SHEARING, AND ROLL-ING MACHINES

References.—Safety code for punching machines and shearing machines. See 760.

765. PARTS AND TOOLS FOR METAL-WORKING MACHINERY

American Society of Mechanical Engineers. Woodruff Keys, Keyslots and Cutters. Approved by American Standards Assn. as B 17f-1930. Includes milling cutters for keyslots, dimensions, number of teeth, tolerances for standard sizes of fine and coarse types.

American Society of Mechanical Engineers, National Machine Tool Builders Assn. and Society of Automotive Engineers. Approved by American Standards Assn. as B 55-1929. Tool Holder Shanks and Tool Post Openings. Standard dimensions of tool shanks, tool post openings, lathe center and lip heights.

American Society of Mechanical Engineers. Joint sponsor with National Machine Tool Builders Assn. and Society of Automotive Engineers under procedure of American Standards Assn. B 5a– 1927. T Slots, Their Bolts, Nuts, Tongues and Cutters. Tables of dimensions and tolerances,

includes milling cutters.

American Society of Mechanical Engrs. Joint sponsor with Nat'l Machine Tool Builders Assn. and Society of Automotive Engrs. Approved by American Standards Assn. as B 5e–1930. Milling Cutters. Standard nomenclature, diameters, thicknesses, sizes of holes and other important dimensions.

American Society of Mechanical Engrs. Joint sponsor with Society of Automotive Engrs. and Nat'l Machine Tool Builders Assn. Approved by American Standards Assn. as B 5e-1930. Taps, Cut and Ground Threads. Dimensions and tolerances for machine screw taps, hand taps, tapper taps, nut taps, and pulley taps, the same as those recommended by National Screw Thread Commission.

American Society of Mechanical Engineers. American Genr Mfrs. Assn., Society of Automotive Engineers. Roller Chains, Sprockets and Cutters. Approved by American Standards Assn. as B29a–1930. Includes cutters for sprockets, types of space cutters, construction, data for laying out cutter outlines, recommended cutter sizes for standard roller chain and block roller chain sprockets.

American Society for Steel Treating. Haudbook page 105; 1927. Recommended Practice for the Heat Treatment of Taps and Milling Cutters. Applies to tools of plain carbon tool steel, 150 per cent tungsten high-speed steel, and 1.50 to 2 per cent tool steel of chemical compositions specified. Instructions for annealing of steel after forging and before machining, and for annealing for removing machining strains.

National Die and Special Tool Builders Assu. Classfication Sheets for Dies; 1928. For class A, class AA, class B, and class C dies, requirements on parts to be hardened, provision of automatic stops, dimension tolerances on cutting parts, degree of taper, provision of busiings, assembly and construction, for punch dies.

U. S. Gov., Dept. of Commerce, Bureau of Standards. R36; 1925. Milling Cutters. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, types, and styles of milling cutters, giving various di-

mensions and size of hole.

U. S. Gov., Dept. of Commerce, Bureau of Standards, R61–29; 1929. Die-Head Chasers for Self-Opening and Adjustable Die Heads. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes and threads per inch for national coarse thread and fine thread series, for S. A. E. spark plug and bushing thread, for lighting fixture and fitting thread, for railway sizes, and for pipe thread.

U. S. Gov., Dept. of Commerce, Bureau of Standards R115–30; 1930. Full Disk Buffing Wheels.

by industry covering a standard schedule of stock varieties of buffing wheels, diameters 4 to 20

inches, ply 20.

S. Gov., National Screw Thread Commission Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. Recommended practice for taps. For American National coarse and fine thread series, dimensions and tolerances for cut and ground thread machine screw taps, hand taps, tapper taps, nut taps, and cut thread pulley taps, tolerances for taps for special diameters and pitches, taper pipe thread tap dimensions, Acme screw thread tap dimensions and tolerances.

S. Gov., National Screw Thread Commission Publ. M89 of Bureau of Standards; 1929. Re-port of National Screw Thread Commission; 1928. Recommended Practice for threading tools. For single point tool and for multiple tooth chasers and hobs, outline of tooth form, table of dimensions for determining shape of threading tool threads for American National coarse and fine threads, and for standard Acme threads.

766. POWER TRANSMISSION MACHINERY

766.0 GENERAL ITEMS

American Society of Mechanical Engineers, joint sponsor with National Bureau of Casualty and Surety Underwriters and International Assn. of Industrial Accident Boards and Commissions under procedure of American Standards Assn. B 15-1927. Safety Code for Mechanical Power-Transmission Apparatus. Requirements on guards and guarding for connecting rods, cranks, flywheels, shafting, pulleys, belts, link belts, chains, ropes, gears, sprockets, cams, couplings, clutches, counterweights, up to but not including point of operation, requirements for bolts, keys, set screws, and oil cups, rules for care and operation of equipment,

766.1 POWER TRANSMISSION AND CONVEYOR CHAINS AND SPROCKET WHEELS

American Bottlers of Carbonated Beverages. Bull. No. 4; 1930. Conveyor Chains for Bottling Plant Equipment. For pintle type chain, standard pitch, sprocket width, pin diameter, and link dimensions for 2 standard sizes, strength requirement for chain,

American Petroleum Institute. Standard No. 7; 1930. Transmission Standards. For roller chain, requirements on standard pitches and roller di-mensions for 3 sizes, stock chain lengths.

American Society of Mechanical Engineers. American Gear Mfrs. Assn. Society of Automotive Engrs. Roller Chains, Sprockets and Cutters. Approved by American Standards Assn. as B29a-1930. Covers material commonly used in transmission of power in industrial machinery, machine tools, motor trucks, motorcycle and tractor drives, standard nomenclature and dimensions of standard series and extra heavy series of roller chains, test and measuring loads for the standard series. Types, tooth form, and dimensions of spreckets for standard chains and for twin roller chains.

Simplified practice recommended and accepted | Society of Automotive Engineers 1931 Handbook. Silent Chains; 1917. Over-all width for various chain numbers and pitches up to 7 inches width.

References.—Safety codes. See 766.0. Methods of testing, general requirements for metals. See 600.1. Cutters for roller chain sprockets. See also 765. Tolerances on metal fits. See also 615.82.

766.2 BALL AND ROLLER BEARINGS

Assn. of Iron and Steel Electrical Engineers. Report of Special Bearing Committee on Applica-tion of Roller Bearings to Mill Type Motors; 1929. Includes data sheets showing the bearing sizes applicable to various size motors, for bearings of various make and motors of various manufacture.

Society of Automotive Engineers. American Society of Mechanical Engineers. Ball and Roller Bearings. Approved by American Standards Assn. as B3-1930. Standard dimensions and tolerences for annular ball bearings, covering dimensions that affect interchangeability of bearings, for light, medium, and heavy series, for wide type of annular ball an roller bearings, recommended practice on dimensions and tolerances that affect interchangeability for regular light, medium, and heavy series, and for extended light and medium series.

Society of Automotive Engineers 1931 Handbook. Ball Bearings; 1930. Dimensions and tolerances for standard bore sizes of annular ball bearings. single row type; annular separable (open) type; angular contact ball bearings; annular ball and roller bearings, wide type; thrust ball bearings of flat face type and self aligning type, single direction and double direction, light, medium, and

heavy, inch and metric dimensions

Society of Automotive Engineers 1931 Handbook, Recommended Practice. Lock Nuts and Washers for Ball Bearings. Dimensions and threading of lock nut and shaft, keying of washer, nut, and shaft, for shaft sizes from $\frac{7}{16}$ to $2\frac{5}{8}$ inches with assembly shown for retaining ball bearing.

Society of Automotive Engineers 1931 Handbook, Roller Bearings; 1929. Table of dimensions of standard bearings arranged according to bore,

with bearing number.

U. S. Gov., Dept. of Commerce, Bureau of Standards R67; 1927. Roller Bearings. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of roller bearings from 5% to 4½ inch size, giving inside and outside diameters and depth.

References.—Steel for ball and roller bearings, See 621.31.

766.9 MISCELLANEOUS POWER TRANSMISSION MACHINERY

References.—Leather belting, rubber and balata belting. See 066.3, 207.3. Cotron belting, hair belting See 314.1. Shafts and shafting. See 611.52. Pulleys, pinions and gears. See 611.16, 611.55.

767. WELDING AND FLAME-CUTTING MA-

American Bureau of Welding. Bulletin No. 1; 1921. Standards for Testing Welds. For comparing sample welds. Definitions, shop standard tests the bending test; for commercial standard tests, bending and tensile tests; for research standard tests, chemical analysis, bending, tension, fatigue. and metallographic examination of base metal, of weld and of filled-in metal, no specific limits or values given.

American Bureau of Welding. Bulletin No. 3; 1922. Standards for Arc Welding Apparatus. Recommends subscription to A. I. E. E. standards when such have been prepared. Classification of welding apparatus, definitions, information on apparatus, temperature rise and efficiency requirements by reference to rules of A. I. E. E.

American Bureau of Welding. Bulletin No. 4; 1923. Committee Report. Training Course for Oxy-

Acetylene Welders.

American Bureau of Welding. Bulletin No. 5; 1923.
Welded Pressure Vessels. Recommendations to
Boiler Code Committee of American Society of
Mechanical Engineers in their revision of the
Code for Unfired Pressure Vessels.

Code for Unfired Pressure Vessels. American Bureau of Welding. Bulletin No. 7; 1924. Training Course for Electric Arc Welders. Outline of type jobs and the purpose of each in the

training of the welder.

American Bureau of Welding. Test Specimens, Their Preparation and Testing. Journal of American Welding Society, p. 7, vol. 7, Nov., 1928. Specifications which apply only to an investigation being carried on by committee into the properties of welded joints. Qualification tests for welders on fillet and butt welds, for d. c. metal are and gas arc, welding requirements and gaging of welds on test specimens, inspection, dimensions and types of test specimens used in investigation, procedure for testing and equipment required.

American Bureau of Welding. Committee Report. General Procedure Control for Gas Welding of Aircraft Joints for Investigational Purposes. Journal of American Welding Society, p. 40 of vol. 7, Dec., 1928. Requirements for gas regulators, pressure gauges, welding torches, hose, and goggles, weldability tests of base metal, preparation of material, method of welding, etching, pneumatic leak tests, specifications for welds and welding procedure for testing welders.

American Electric Railway Engr. Assn. Recommended Rules. W124-30; 1930. Rules for Arc Welding. Recommended practice and procedure in welding rail joints, welding cupped rail ends.

welding of manganese castings.

American Institute of Electrical Engineers. Standard No. 38. American Bureau of Welding; 1925. Electric Arc Welding Apparatus. Includes d. c. generators, motor generator sets, a. c. transformers, and resistors, used in arc welding. Definitions, duty classification, rating, heating limits and methods of testing, measurement of efficiency, dielectric test, standard values for current and voltage. Efficiency limits not stated.

American Institute of Electrical Engineers. Standard No. 39; 1926. Resistance Welding Apparatus. Applies to resistance welding transformers and apparaus for electro-percussive welding. Definitions, duty classification, rating, heating limits and measurement, measurement of input to

transformer, dielectric test.

American Welding Society. Code I, part A; 1928. Code for Fusion Welding and Gas Cutting in Building Construction. General applications of gas cutting and welding, definitions, requirements for welding wire, permissible stresses in weld, design of welded joints for girders, beams, columns, and butt joints, general rules for erection of steel, general rules for gas cutting.

American Welding Society. Arc Welding and Cutting; 1927. Information and instruction for

the making of arc welds.

American Welding Society. Resistance Welding; 1927. Instructions for beginners in the operation of resistance welders.

American Welding Society. Thermit Welding; 1927. Instructions for the making of thermit welds. Assn. of Railway Electrical Engineers 1929 Manual. F-I-II-III. Arc Welding, Spot Welding, Butt Welding, Recommended practice for electric welding and applications to railroad shops and to fabrication of structural steel.

Assn. of Railway Electrical Engineers 1929 Manual. F-VIII; 1928. Gas Welding and Cutting. Equipment for oxyacetylene welding and cutting.

care of equipment, welding procedure.

Gas Products Assn., International Acetylene Assn., National Board of Fire Underwriters, National Screw Thread Commission No. 107. Standard Hose Connections for Welding and Cutting Torches; 1925. For two sizes of hose connections, dimensions of nipple, shank and nut, size of thread, right hand thread for oxygen, lefthand thread for fuel gas, N. S. T. C. design and dimensions of gages

International Acetylene Assn. Drawing No. 101: 1925. Standardized Hose Connection. Standard dimensions and threads for hose nozzles on oxyacetylene blowpipes for "B" size and "A" size, R. H. thread for oxygen, L. H. thread for fuel

gas.

National Board of Fire Underwriters, Gas Systems for Welding and Cutting;; 1931. Capacity of generator, construction and heating of generator house, construction and materials for inside generator compartment, relief piping, permitted use of portable generators, pipe installation and pressure test, construction and strength requirements for header piping connecting gas cylinders, storage requirements for fuel, oxygen cylinders and of calcium carbide.

National Board of Fire Underwriters. Installation and Operation of Acetylene Equipment; 1924. Includes use of acetylene for welding and cutting, location of generator, construction of generator houses, requirements for conductor and relief piping, storage and installation of cylinders of

dissolved acetylene.

National Electrical Manufacturers Assn. Handbook of Apparatus Standards; 1928. 114-201. Electric Welding Machines (Direct Current Arc Machine). Requirements on standard ampere rating, basis of rating, voltage ratings, permissible temperature rise at rated load, horsepower ratings of direct connected motors.

Railway Fire Protection Assn. Handbook; 1926. Installation and Operation of Gas Systems for Welding and Cutting. Recommendations on storage of calcium carbide, dissolved neet lene and other fuel gases and oxygen, general requirements on generator house and generator foundation construction, on piping and testing of piping, installation of portable generator, shop rules,

Underwriters' Laboratories. Blowpipes or Torches for Welding, Cutting, Heating, Lead Burning and Soldering; 1928. Requirements on hose connecting unions, general construction of nozzle, test requirements for normal and abnormal operation,

definitions.

Underwriters' Laboratories. Portable Automatic Acetylene Generators for Oxy-Acetylene Welding Systems; 1928. Covers 1-pound and 15-pound pressure types, requirements for automatic operation on overload, permissible metals, construction of joints, types of accessories and assembly, condensation removal, design of operating chamber, carbide holders, feed mechanism, rellefs, connections, flash back check, requirements for stability.

Underwriters' Laboratories. Stationary Automatic Acetylene Generators for Oxy-Acetylene Welding and Cutting; 1928. For 1-pound and 15-pound pressure types, definition of rating, of iron or steel construction, operation as regards heating. stoppage of automatic feed, etc., assembly, removal of condensation, design, thickness of metal, operation of generating chamber, carbide holder, feed mechanism, gas holder, piping, flash-back

check, and appurtenances.

U. S. Gov., National Screw Thread Commission Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. American National standard hose connections for Welding and Cutting Torches. Mandatory for material purchased and used by War and Navy Depts. includes requirements on dimensions of hose connections and threading, tolerances on gages, hand designation for threads for oxygen and for fuel gas connections, same as standards of Internat. Acetylene Assn., Gas Products Assn., and Nat. Bd. of Fire Underwriters.

776. SHOE MACHINERY

780-789 MISCELLANEOUS INDUSTRIAL PLANT MACHINERY

781. WEIGHING, PACKAGING, BOTTLING, AND MAILING MACHINERY

American Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Carbonating Equipment Units. Recommended practice on number of drums comprising gas outfit and number of drums in operation, minimum size of regulator for various ca-

pacities of carbonators.

American Bottlers of Carbonated Beverages. Educ.
Bull. No. 4; 1930. Carbonator Connections.
Standard minimum pipe sizes for water supply
for various capacities of carbonators, dimensions
of standard swivel and union nut connections for
carbonator-filler carbonated water connections
for various carbonator capacities.

References.-Conveyor chains for bottling plant. See 766.1.

782. CHEMICAL-PLANT EQUIPMENT, CE-MENT PLANT, PULP AND PAPER, AND CLAY-WORKING MACHINERY

National Safety Council. Approved by American Standards Assn. as P1-1925. Safety Code for Paper and Pulp Mills. Safety rules covering unloading and storage of pulp wood, guarding of saws, hand barkers, barking drums, etc., guards and safe operation in rag and old paper preparation, acid making, chemical processes of making pulp, preparing pulp for paper machine, machine room, and finishing room.

783. GLASS-FACTORY EQUIPMENT, PAINT MACHINERY, BREWERS MACHIN-ERY, RUBBER-MILL MACHINERY

International Assn. of Industrial Accident Boards and Commissions. National Safety Council, Sponsors. Approved by American Standards Assn. as B 28a-1927. Safety Code for Rubber Mills and Calenders. Requirements on installation of safety-trip controls and quick-stop facilities, determination of distance of travel of rolls, limits on stopping distances.

784. WOODWORKING MACHINERY

784.0 GENERAL ITEMS

International Assn. of Industrial Accident Boards and Commissions. National Board of Casualty

and Surety Underwriters. Sponsors. Approved by American Standards Assn. as O 1-1930. Safety Code for Woodworking Plants. General requirements on conditions of floor and aisles, Cartons. For ice creates. recommended and maximum speeds of circular saws, requirements on types, installation of guards, inclosures, etc., for various woodworking machines, veneer machinery, and cooperage machinery, operating rules.

U. S. Gov., Dept. of Commerce, Bureau of Standards H5; 1923. Approved by American Standards Assn. as B 13–1924. American Logging and Sawmill Safety Code. Requirements on structural features, provision of guards, and rules of operation and procedure, which increase safety for employees, covering felling and logging, sawmill operations, sawmill machinery, and yard operations.

784.1 WOODWORKING MACHINERY

785. REFRIGERATING, ICE MAKING, AND ICE-CREAM MACHINERY

785.0 GENERAL ITEMS

American Society of Mechanical Engrs, and American Society of Refrigerating Engrs. Test Code for Refrigerating Systems. Requirements on measurements to be made, kinds of measuring instruments, starting and stopping test, duration of run, calculation of output expressed in standard tons of refrigeration, formulas and methods of calculation of horsepowers, efficiencies, per-formance of auxiliaries, heat balance, etc., test data forms for compression system and for absorption system.

American Society of Refrigerating Engineers. Safety Code for Mechanical Refrigeration; 1928. Approved by American Standards Assn. as B9-1930. Definitions, classification of refrigerating systems, restrictions on location, required minimum test pressures, specifications for safety de-

wices and their use, operating precautions.

American Society of Refrigerating Engineers.

Circular No. 3; 1926. Test Code for Steam

Driven Ice Manufacturing Plants. Required

measurements, for capacity and economy test, method of obtaining economy of plant.

American Society of Refrigerating Engineers.

Circular No. 4; 1926. Standard Ton of Refrigeration. Adopted by American Society of Me-chanical Engineers. Refrigerating Machinery chanical Engineers, Refrigerating Machinery Assn. and National Assn. of Practical Refrigerating Engineers. Definition of the standard ton of refrigeration, the standard commercial ton of refrigeration and the standard rating of a refrigerating machine, tables of properties of saturated vapors of various refrigerants at standard-tonof-refrigeration saturation-temperatures and of properties of superheated ammonia vapor at pressures corresponding to standard-ton-of-refrigeration saturation-temperatures.

785.1 REFRIGERATING SYSTEMS

Refrigerating Machinery Assn. Compression System of Refrigeration; 1925. Specifications for installation in a form suitable for incorporation in a construction contract. Gives main and auxiliary equipment to be installed by the refrigerating contractor leaving types and ratings for determination and insertion on the individual contract. Includes pressure test requirements for castings, ammonia coils, and ammonia piping, and use of safety devices in accordance with Am. Soc. Refrig, Engrs, safety code,

Active mess—Definitions testing code, safety code, See 783.0, 700. Air compressors, See 791.2, Cast iron. See also 611.11. Shafts and forged steel. See also 611.2, 611.51. Copper tubing for refrigerators, See also 642.24. Household refrigerators, See 959.4. Synchronous motors for compressors. See 711.2.

U. S. Gov., Dept. of Commerce, Bureau of Standards R120-31; 1931. Ice Cream Brick Molds and Cartons. For ice cream brick mold, simplified practice recommended and accepted by industry establishing dimensions of one standard size of

786. BAKERY MACHINERY

American Society of Bakery Engineers. Bulletin 43; 1929. Dump Bins, Blending Bins, Storage Bins. Maximum dumping heights and volume for dump and blending bins, volume per 100 pounds of unsifted and of sifted flour for storage

American Society of Bakery Engineers. Bulletin 43; 1929. Flour Hoppers. Minimum angle,

shape, material, and capacity.

American Society of Bakery Engineers. Bulletin 43; 1929. High-Speed Dough Mixers. Maximum height, minimum openings for ingredients, flour, and water, dumping height and water jacket pressure for various standard capacities.

American Society of Bakery Engineers. 43; 1929. Sifters and Bolters. Standard capacities, maximum mesh of screen over storage bin

and of screen over hopper.

References .- Water tanks for bakery. See 956.2.

787. LAUNDRY MACHINERY AND APPLI-ANCES

Assn. of Governmental Officials in Industry in U. S. and Canada, Laundryowners National Assn. National Assn, of Mutual Casualty Companies, Sponsors. Approved by American Standards Assn. as Z 8-1924. Safety Code for Laundry Machinery and Operations. Requirements for the provision of interlocks, guards, enclosures, trip bars, etc., for washing machines, extractor, starching, drying, finishing machines, etc., operating rules

Laundryowners National Assn. L. N. A. Formulas for Washroom Practice; 1928. In form of 3 wall charts. Requirements on softness of water, size of load, washwheel speeds, water levels, bath formulas and laundry procedure for white goods, colored goods, stockings, overalls, knit underwear, woolens, butchers aprons, white curtains,

silks and rayons, etc.

Laundryowners National Assn. Manual of Standard Practice for the Power Laundry Washroom; 1927. Text book on alkalies, soaps, bleaching, sours, blues, starches, etc., their properties and application to laundering; includes standard formulas for washes for bundles of various degrees of soiling, number, temperature, and composition of baths, duration of rinse, etc. Laundryowners National Assn. Removal of Stains;

1928. In form of 2 wall charts. Procedure for removal of various listed stains in cotton, linen, wool, silk goods and in colored garments, prepa-

ration of solutions required.

National Board of Fire Underwriters. Dry Cleaning and Dry Dyeing Plants; 1925. Construction of buildings, acceptable types and construction for ventilating, heating, light and power equipment, construction, installation and equipment requirements for tanks, purifiers, clarifiers, pumps, washers, drying tumblers, extractors, separators, stills, and scouring tables, operating requirements, fire protection, and air conditioning.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Collar former and edger. Requirements on mounting and thickness of curved steel or iron band, use of electrically heated iron, automatic maintenance of uniform

ironing pressure, finish.

1931. Laundry Appliances. Collar ironers. For one size using one padded roll and one steam heated roll, dimensions of rolls, requirements on material and mounting of rolls, kinds and amount of cloth for padded roll, provision of pressure, feeding, and safety devices, electrical equipment and loading of motor in accordance with standards of Nat. Elec. Mfrs. Assn.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Draw dry rooms and truck dry rooms. Requirements on sizes, dimensions, number of draws, thicknesses of galvanized iron or steel, construction of draws, casing, trucks, provisions for heating and

ventilating.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Drying tumblers. Household types not included, electrical parts and permissible loading of motor in accordance with standards of Nat. Elec. Mfrs. Assn., for recirculating type and once-through type, requirements on standard dimensions and capacities, evaporation test, materials, thicknesses of sheets, and structural features of shell and cylinder, types of delinting devices, fans, heating coils, air circulation, control of drying and cooling periods, motor controllers, interlocking device, etc.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Flat work ironers, cylinder type and chest type, not including, household types, requirements on ironing capacity, material and structural features of frame, guards, steam cylinders, steam chests, rolls, ribbon feeds, aprons, sizes of cylinders and rolls, electrical equipment and motor loading according to standards of Nat. Elec. Mfrs. Assn.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Hot tube collar shaper. Of vertical type for mounting on table top, requirements on size of porcelain lined cast iron tube, provision for steam heating, struc-

tural features.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Ironing boards. Not including household types, requirements on height of cast-iron frame, thickness, and dimensions of white wood ironing top, dimensions of sleeve board, provision of dampening cup, electric outlet for iron, pilot light.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Laundry presses. For 4 types, dimensions of ironing surface and types of garments to which applicable, requirements on materials and structural features of head and buck, hydrostatic pressure test of head and buck, structural features of manual operated, electrically operated, and steam operated types, heating by steam, operating features.

- U. S. Gov., Federal Specifications Board OO-L-131: 1931. Laundry Appliances. Over-driven and under-driven extractors. Household types not included, electrical parts and permissible loading of motor according to standards of Nat. Elec. Mfrs. Assn., standard diameters, capacities, and speeds, requirements on structural features of curb, frame, base, basket, spindle and bearings, provision and operating features of timer, brake, safety cover, location of electric motor, type of controller, etc.
- U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Seam dampeners. Of gravity type with cast-iron base for table mounting, provision and operation of water reservoir and dampening means, provision of automatic tripping device, needle valve for spout, material and finish of parts.

U. S. Gov., Federal Specifications Board OO-L-131; | U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Soap kettles. quirements on construction using galvanized iron or steel, or of noncorrodible alloy, provision of steam pipe valve, capacity 30 or 60 gallons, thickness of metal.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Starch cookers. Requirements on capacities, thickness of inner and outer shells of copper or noncorrodible metal, thickness of asbestos insulation, mounting, provision of cover, steam and drain connections,

blow-off cock, content indicator.

U. S. Gov., Federal Specifications Board OO-L-131; 1931, Laundry Appliances. Truck tubs. Requirements on dimensions of tub of galvanized iron or steel, thicknesses of metal and construction of sides and bottom, size of wheels, provision of wooden drain board and of drain cock.

U. S. Gov., Federal Specifications Board OO-L-131: 1931. Laundry Appliances. Washing Machines. Not covering household types, electrical appliances according to standards of Nat. Elec. Mfrs. Assn., requirements on standard dimensions and capacities of cylinder, construction of shell and cylinder, use of noncorrodible alloy plates, thickness of plates, provision of doors, noiseless gears, gage, thermometer, and piping, sizes of pipe and outlets, type and operation features of electrical controller, interlocking and reversing provisions. guards and protection.

U. S. Gov., Federal Specifications Board OO-L-131; 1931. Laundry Appliances. Wood stationary tubs. For cypress tubs, requirements on thickness of wood, dimensions of compartments, height, size of drain, provision of metal legs.

chinery, fire protection. National Board of Fire Underwriters. National Fire Protection Assn. U. S. Dept. of Agriculture. Sponsors. Approved by American Standards Assn. as Z 12e-1927. Prevention of Dust Explosions in Starch Factories. Construction and arrangement of buildings, bins, kilns, regulations for grinding, grading, handling of materials, for removal of suspended dust and static dust and

prevention of ignition.

National Board of Fire Underwriters. National Fire Protection Assn. U. S. Dept. of Agriculture. Sponsors. Approved by American Standards Assn. as Z 12d-1928 and Z 12e-1928. Prevention of Dust Explosions in Flour and Feed Mills. Prevention of Dust Explosions in Terminal Grain Elevators. Requirements on arrangement and construction of buildings, bins, regulations for grinding, grading, handling of materials, for regulating, grading, handling of materials, for re-

moval of suspended dust and static dust and prevention of ignition.

National Fire Protection Assn. Joint sponsor with U. S. Dept. of Agriculture. Approved by American Standards Assn. as Z 121-1930. Regulations for Coal Pneumatic Cleaning Plants. For prevention of dust explosions, regulations on construction of building, screen room arrangement, window arrangement, ventilation and dust collection, regulations for coal driers and storage bins, fire and explosion protection, electric wiring.

References.—Motors and controllers for explosive atmospheres. See also 711.25, 714.11. Blower and exhaust systems. See 791.0.

790-799 MISCELLANEOUS INDUSTRIAL PLANT AUXILIARY EQUIPMENT

791. BLOWERS AND COMPRESSORS

791.0 GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code. Displacement Compressors and Blowers; 1925. Applies to both piston and rotary apparatus of the positive displacement type. Measurements required, instructions for measurement of dimensions, method of computing volume of air compressed, computation of air horse-power, volumetric, mechanical, compression, and overall efficiency, forms for tabulating test data and calculations.

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Section VII. Blow Pipe and Exhaust Systems. Typical designation and application of various types of fans, typical designs illustrated with sizes of ducts, thickness of sheet metal, for exhausting dust, fumes, etc., in various industrial plants, and for conveying dust, instruments and

methods of testing blower systems.

National Board of Fire Underwriters. Blower and Exhaust Systems; 1929. Covers heating and ventilating systems, systems for removal of flammable vapors, dust, stock and refuse conveying systems, requirements for fire resistive construction of ducts, automatic dampers for duct passages through walls, location of motors, protection of openings, location of fans and ducts, thickness of metal and general construction of conveyor ducts, construction and sizes of dust collectors and refuse receptacles.

791.1 FANS AND BLOWERS

American Society of Heating and Ventilating Engineers. National Assn. of Fan Manufacturers. Standard Test Code for Disk and Propeller Fans, Centrifugal Fans and Blowers. 1931. Definitions and formulas, drawings and instructions for set-up of apparatus, required observations and calculations, performance and efficiency curves.

National Assn. of Fan Manufacturers. Standard Method of Designating Discharge and Rotation for Centrifugal Fans, Arrangement or Drive. 16 standard designations of discharge and rotation illustrated and defined, 7 standard arrangements of belt and direct connected drive.

References.—Test codes. See also 791.0, 700. Ventilation systems. See 791.0. Portable desk and wall fans. See 711.23. D. c. motors for ventilating fans. See 711.25.

791.2 COMPRESSORS

Compressed Air Society. Trade Standards; 1930. For air compressors, description of low pressure nozzle test for measurement of air flow, recommended speeds for belt driven, steam driven, and electric driven compressors for various piston strokes, installation, plant layout, lubrication requirements and care of compressor plants standard pressures and capacities.

References.—Test codes. See also 791.0, 700. Compressors for refrigerating machinery. See 785.0, 785.1. Synchronous motors for compressors. See 711.21.

792. HEATING AND VENTILATING EQUIP-MENT

792.0 GENERAL ITEMS

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Heating; 1926. Covers two pipe gravity hot water heating, and one and two pipe gravity steam heating systems, general installation, insulation, support, and equipment requirements.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Hot Air Heating; 1926. General installation requirements.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Hot Blast Heating System; 1926. For hot air distributed by fans, general design and installation.

American Society of Heating and Ventilating Engrs. Code on Heating and Ventilating Garages; 1929. Requirements on types and thickness of walls, permissible types and capacities of electric motors, heating systems, and ventilating systems.

American Society of Heating and Ventilating Engineers. Standard Test Code for Heat Transmission Through Walls; 1928. Definitions and formulas, method of test, construction of guarded hot box, construction of test specimens.

National Board of Fire Underwriters. Blower and Exhaust Systems; 1929. Covers heating and verillating systems, systems for removal of flammable vapors, dust, stock and refuse conveying systems, requirements for fire resistive construction of ducts, dust and refuse collectors, etc.

National Research Council, Committee on Heat Transmission. Standard Test Codes; 1928. Test codes for determining the thermal conductivity of insulations in the 100° to 1000° F. field, of building materials and wall construction, and of solid electrical insulations. Recommended standard test procedure for flat and for cylindrical forms of insulation of various types, includes guarded hot plate method for flat pieces.

792.1 HEATING EQUIPMENT

American Soc. of Heating and Ventilating Engrs. Industrial Unit Heater Assn. Code for Testing and Rating Steam Unit Heaters; 1930. For fan unit heaters using steam as a heating medium, definitions, rating to include fan speed, heat output, air delivery, horsepower consumption of fan, final temperature, with standard conditions of steam and air defined as a basis of rating, test apparatus and test procedure for rating test.

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Section VI. Heating and Ventilating. Requirements on suitable materials, minimum sheet metal weights, sizes and spacing of angle iron stiffeners for various sizes of ducts, requirements on fittings, descriptions and illustrations of typical duct systems, typical methods of duct construction and installation, for residences, office buildings and industrial buildings.

References.—Heating systems, beat transmission tests. See also 792.0. Electric heaters. See 717.1. House heating bollers and radiators. See 614.0, 614.4. Heating equipment for power and heating bollers. See 703.9. Sheet iron and steel. See also 604.2, 604.3. Fans and blowers. See also 701.1. Gas and gas appliances. See 997.2. Gasoline vapor machines and systems. See 997.4. Acetylene equipment for heating. See 907.5.

792.2 VENTILATING EQUIPMENT

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Section VI. Heating and Ventilating Requirements on suitable materials, minimum sheet metal weights, sizes and spacing of angle iron stiffeners for various sizes of ducts, requirements on fittings, descriptions and illustrations of typical duct systems, typical methods of duct construction and installation, for residences, office buildings, and industrial buildings.

References.—Ventilation systems. See also 792.0. Safety code for coal mine ventilation. See 751. Blowers and fans. See 791.1, 791.0. Sheet iron and steel. See also 604.2, 604.3.

793. MEASURING AND RECORDING APPA-RATUS

793.0 GENERAL ITEMS

American Society of Mechanical Engineers, Power Test Code. Instruments and Apparatus. Part I. General Considerations; 1923. Items affecting accuracy of measurements, items affecting the accuracy of instruments, their sluggishness, sensitivity and variance, and suggestions relative to calibration in consideration of these effects.

793.1 COUNTERS. TAXIMETERS. SPEEDOMETERS

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M55 of U. S. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Taximeters. Requirements on permissible bases on which fare shall be calculated, kinds of indications and their readibility, marking with statement of rates, provision of flag, permanence of construction, permissible tolerances on indications for mileage tests and time tests. National Conference on Weights and Measures.

Report of 23rd Conference. Published as M116 of U. S. Bureau of Standards; 1309. In agreement with standards recommended by Bur. of Standards for adoption by the States. Odometers. Tentative specifications applicable to commercial instruments for determining charges for hire of a vehicle, requirements on actuation of indicators, readibility and visibility of indications, provision for sealing, permanence of functioning, tolerances on accuracy of indications. Includes hubometers, cable driven odometers and mileage recording parts of speedometers.

793.2 GAUGES, EXCEPT DIMENSION GAGES

American Marine Standards Committee. E No. 2-1926. Specifications for Pressure and Vacuum Gauges for Ships. Standard requirements on parts, sizes of dial and figures, standard scales, pipe thread connections, endurance and calibration test requirements for pressure, vacuum, ammonia, oil and air gauges.

Associated Factory Mutual Fire Insurance Companies. Water Pressure Ganges; 1924. Of noncorrodible materials, construction of tube, movement, dial and ring, pressure test requirements

for tube.

Underwriters' Laboratories. High Pressure Gas Gauges; 1922. For high pressure containers of gases used in welding and cutting, internal explosion test requirements, accuracy of indication requirements on original calibration, and after over pressure test, impulse test, and vibration test, minimum size of dial.

References.—Water level gauge glass, lubricator glasses. See 526.6. Calibration of gauges. See also 793.0. Dimensional gages, hand gages. See 615.82.

793.3 INDICATORS, ENGINE CYLINDER

793.4 WATER METERS

American Water Works Assn., New England Water Works Assn.; 1923. Cold Water Meters, Compound Type. Definition of type, bronze or cast iron case, indication requirements for dials, dimensions and design of connections, construction requirements for measuring chambers, pistons, and wheels, for gear trains, strainers, and controlling valves, accuracy of registration, capacity and working pressure requirements, recommended tests, care of meters.

American Water Works Assn., New England Water Works Assn.; 1923. Cold Water Meters, Current Type. Cases of bronze or cast iron, indication requirements for dials, construction requirements for measuring cages, measuring wheels, gear trains, accuracy of registration and capacity requirements, for meters, working pressure, recommended tests for capacity, registration and pressure, test equipment required, care of meters.

American Water Works Assn., New England Water Works Assn.; 1923. Cold Water Meters, Disc Type. For outer case of bronze or cast iron, indication requirements for dials, dimensions and threads of connections, construction requirements for disks, meter chambers, gear trains, and strainers, requirements on accuracy of registration, capacity for giving loss of head, and working pressure, equipment needed to test meters, recommended tests for capacity, registration, and pressure, standard lengths of meters, care of meters.

Mercean Water Works Assn., New England Water Works Assn.; 1923. Cold Water Meters, Fire Service Type. Definition of type, bronze or castiron case, indication requirements for dials, dimensions and designs of connections, construction and design requirements for measuring chambers, pistons and wheels, for gear trains, main line and by-pass valves, accuracy of registration, capacity, and working pressure requirements, recommended tests, test equipment, care of meters.

References.—Calibration of meters. See also 793.0. Cast iron. cast bronze. See also 611.11, 646.41.

793.5 WEIGHING SCALES AND BALANCES

American Assn. of State Highway Officials. Tentative Specifications for the Bin Batcher Type of Equipment for Weighing Concrete Aggregates; 1930. Requirements on general structural features of bin and hopper, some dimensions and operating features of hopper, general structural features of beam or springless dial types of scales, provision of indicating means for warning of

test weight equipment.

American Railway Assn. Grain Circular No. 1; 1920. Automatic Scales. Specifications indorsed by Interstate Commerce Comm. for weighing of bulk grain on railroads, requirements on structural features, scale graduation, sensibility reciprocal, operation, excess capacity, installation, test requirements for ratio, sensibility reciprocal, and repetition of readings.

American Railway Assn. Grain Circular No. 1; 1920. Hopper Scales. Specifications endorsed by Interstate Commerce Comm. for weighing bulk grain on railroads, requirements on structural features, scale graduations, minimum travel of beam, sensibility reciprocal, maximum unit stresses permissible, installation, test requirements for accuracy, rules for weighing grain.

American Railway Assn. Grain Circular No. 1; 1920. Track Scales, Specifications endorsed by Interstate Commerce Comm. for weighing bulk grain on railroads, for heavy service type and for light service type, permissible working stresses, standard scale lengths, physical property requirements for various steels used for pivots and knife-edges, design and mounting requirements for pivots, nose irons, lever fulcrum stands, weigh beams, etc., requirements on graduation, sensibility reciprocal, design features and some dimensions of foundation, pit, scale house, deck, etc., required sizes of weigh bridge girders, rules for weighing.

American Railway Engineering Assn. 1929 Manual. Yards and Terminals. Four Section Railway Track Scales; 1920. Knife-edge scales, heavy and light service classes, allowable working stresses for iron and steel parts, knife-edge bearings, formulas for stress calculations, standard scale lengths, general design requirements for scale levers, pivots, knife-edges, and other scale parts, requirements for sensibility reciprocal, and tolerance on field test, general design requirements for concrete foundations, scale pit, approach walls, scale beam house, weigh bridge girder and bracing, approach rails, deck, dead rails and dead rail beams, rules for location, maintenance and testing routine for track scales, design requirements for master scales and test weight cars.

American Railway Engineering Assn. 1929 Man-ual, Yards and Terminals, Motor Truck, Built-In, Self-Contained and Portable Scales for Railway Service; 1927. Knife-edge scales of straight and torsion lever type, capacity and sizes, corner and end loading capacities, allowable working stresses, formulas for stresses, scale tolerances, general design requirements for scale levers, pivots, knife-edges, and other scale parts, foundations, scale beam house or box, platforms, and

approaches.

American Railway Engineering Assn. 1929 Manual. Yards and Terminals. Nonretroactive Tolerances for Heavy Duty Automatic Indicating Scales; 1925. Not applicable to track scales or those that automatically weigh out commodities. Tolerances in excess or deficiency, on ratio and

on dial or beam for various loads,

American Railway Engineering Assn. 1929 Manual. Yards and Terminals. Two Section Knife Edge Railway Track Scales; 1927. For weighing without use of dead rails or relieving gear, 2 capacity classes, allowable working stresses, formulas for stress sensibility reciprocal requirements and scale tolerance, general design requirements for scale lever, pivots, knife-edges and other scale parts, foundation, scale beam house, weigh-bridge girders and bracing, approach rails and deck.

nearness of required load, required scale accuracy, | American Road Builders' Assn. Convention Proceedings; 1931. Standardization of Weighing Devices for Concrete Aggregates. Covers weighing devices to be used in connection with small mixers for bridge and similar structure work. general requirements on scales, levers, and pivots, provision for leveling, scale equipment to be provided and their general characteristics, tell tale dials, accuracy of weighing, provision of test weights.

American Road Builders' Assn. Convention Proceedings; 1930. Standardization of Weighing Devices for Concrete Aggregates. Recommended specifications, same as the specifications of Am. Assn. of State Highway Officials for the bin batcher type of equipment for weighing concrete

aggregates.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Bureau of Standards: 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Prescription Scales and Balances. For 2 classes dependent on accuracy, requirements on gradua-tion markings of scales and indicators, leveling provision, sensibility reciprocal, allowable tolerances on measurement, material in knife-edges and bearings, etc.

National Conference on Weights and Measures, Commercial Weighing and Measuring Devices. Published as M85 of Bureau of Standards; 1929. In agreement with standards recommended by Bur, of Standards for adoption by the States. Cream Test and Butterfat Test Scales. Requirements on scale graduation, leveling provision, sensibility reciprocal, shift of weight test, toler-

ance on measurement.

National Conference on Weights and Measurcs. Commercial Weighing and Measuring Devices. Commercial weighing and Measuring Devices Published as M85 of National Bureau of Standards; 1929, with some revisions in M116 as adopted at 23rd national conference. Scales. General Specifications. Definition of rated capacity, requirements on use of hardened steel for knife-edges and bearings, structural features, minimum width of graduations, definitions of balance and sensibility reciprocal.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur, of Standards for adoption by the States. Computing Scales. Requirements on value intervals on computing chart, location of indicators for weight and value, size and spacing of graduations, leveling provisions, toler-

ances on measurement.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices, Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Spring Scales. Requirements on size and spacing of graduations, structural and design features, tolerances on accuracy of indications and for shift of load test at half capacity.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Suspension Scales of the Lever Type. For large sizes and for small sizes the specifications and tolerances of platform scales and of counter scales, apply respectively.

National Conference on Weights and Measures, Commercial Weighing and Measuring Devices, Published as M85 of Nat. Bureau of Standards;

1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Wheel-Load Weighers. Used for determining the axle loads of trucks on highways, re-

quirements on accuracy.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recom-mended by Bur. of Standards for adoption by the States. Large Capacity Automatic-Indicating Scales. Not including railroad or counter scales, tolerances on accuracy of indications, kind of material for knife-edges, etc. National Conference on Weights and Measures.

Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Counter Scales. Requirements on general structural features, material of bearings, limits on size and spacing of graduations, leveling provisions, allowable sensibility reciprocal, al-

lowable tolerances on measurements.

National Conference on Weights and Measures.
Commercial Weighing and Measuring Devices.
Published as M85 of Nat. Bureau of Standards; In agreement with standards recommended by Bur, of Standards for adoption by the States. Platform Scales, including counter platform scales, requirements on general structural features, use of hardened steel in bearings, etc., level adjustment, weighing test for corner loadings, travel of beam in trig-loop, sensibility reciprocal, allowable tolerances in measurement for 2 classes of scales.

National Conference on Weights and Measures. Report of Twenty Third Conference. Published by Nat. Bureau of Standards as M116; 1930. Specifications and Tolerances for Automatic Indicating Scales. Definition, requirements on width of graduations and clear intervals, zero graduation, clearances between indicator and face, accessibility of adjustable parts, tolerances to be those of class of scale to which the indi-

vidual scale belongs.

National Scale Mens Assn. Bull. No. 1, 1929 with Supplements A and B, 1930. Overhauling and Repair of Heavy Capacity Scales. For knifeedge type scales, requirements on repair and replacement of pivots and bearings, hardness of pivots, repair of weighbeams and accessories, accuracy in setting pivots, protection from corro-sion, setting of reinstalled scales, weighing per-

formance of reinstalled scales.

National Scale Mens Assn. Bull. No. 2; 1930. Light Industrial Service Track Scales. For cars weighing less than 180,000 pounds and wheel base of 45 feet or less, for knife-edge scales only, requirements on length, sectional capacity, permissible working stresses in materials, requirements for materials, design, and mounting of pivots, knife-edges, bearing blocks, design of weigh beam,

fulcrum stands, etc.

National Scale Mens Assn. Bull. No. 3; 1931.

Railway Track Scale Test Weight Cars. For cars which are essentially test weights, self-contained type and compartment type, requirements on weight and weight limits, all metal construction, two axle construction, uniform distribution of load, no air brakes, frictionless bearings, drain-

age, etc., types of wheels, axles, couplers, etc.
U. S. Gov., Dept of Commerce, Bureau of Standards C83; 1920. Specifications for the Manufacture and Installation of Railroad Track Scales.
Prepared by a joint committee of Am. Rwy.
Assn., Am. Rwy. Fngr. Assn., Railroad and
Warehouse Commission of Minn., Nat'l Scalemens Assn., Scale Mfrs. Assn., and Bureau of Standards. Does not cover scales for weighing of grain. Permissible stresses for various materials used, for knife-edge bearings, and for concrete bearings, formulas for stresses in loops and projecting pivots, standard scale lengths, physical requirements of materials and design of pivots and knife edges, design requirements and mounting of various scale parts, design requirements for foundations, scale beam house, scale weigh bridges, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C199; 1925. Hand-Operated Grain Hopper Scales. Informally approved by Interstate Commerce Commission. Requirements on permissible working stresses in various materials, in steel pins, and in concrete, design requirements on levers, nose irons, pivots, knife edges, bearings, loops, lever and beam fulcrum stands, weighbeam, hopper, and foundation, installation, test

requirements.

U. S. Gov., Dept. of Commerce, Bureau of Standards C333; 1927. Specifications for the Manufacture and Installation of Two-Section, Knife-Edge Railroad Track Scales. Adopted by Am. Rwy. Engr. Assn., approved by Nat'l Scale Mens Assn. and Scale and Balance Mfrs. Assn. See Am. Rwy. Engr. Assn. for description of specifications.

U. S. Gov., Dept. of Commerce, Bureau of Standards T199; 1921. Method for Precision Test of Large-Capacity Scales. Outlines a scientific and systematic method used by the bureau for testing railroad master and grain hopper scales, includes means for accurately measuring the posi-

tion of the beam.

U. S. Gov., Federal Specifications Board 314; 1925. Railroad Track Scales. The specifications and tolerances set forth in Nat. Bureau of Standards publication C83, 1920, "Specifications for Manufacture and Installation of Railroad Track Scales," shall be complied with,

U. S. Gov., Federal Specifications Board 473; 1927. Weighing Scales. A general specification appli-cable to all types of commercial scales closely following the general specifications for scales adopted by Nat'l Conference on Weights and Measures with some additional material included from Am. Rwy. Engr. Assn. specifications for motor truck, built-in, self-contained, and portable scales for railroad service.

References.—Weights for use with scales and balances. See 919.1. Railway cars. See also 726.1.

793.6 LIQUID MEASURING DEVICES

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur, of Standards for adoption by the States. Liquid Measuring Devices. For mechanically operated retail dispensing devices such as gasoline pumps, requirements on level installation, units of delivery, indication of filled condition and amount of delivery, sensitiveness, constancy of delivery, elapsed time test for constancy, structural features of pointers, indicators, gradua-tions, and positive stops, time allowed for com-pletion of delivery, permissible types of computing charts, permissible tolerances on measurements of liquid. Publication M116 of Bureau of Standards on Report of 23rd Conference gives permission to use word "full flow" on meters.

Underwriters' Laboratories. Hand Operated Discharge Devices; 1929. For dispensing motor fuels at auto filling stations, design requirements, assembly, operating characteristics, material, min-imum thicknesses of material, of base, housing, pump and pump parts, piping, accessories, and electrical equipment, hydrostatic pressure and

operating test requirements.

Underwriters' Laboratories. Outside Visible-Measure Discharge Devices; 1929. For dispensing motor fuels at filling stations, design and minimum
metal thicknesses for iron or steel base and housing, structural and operating requirements for
various types of pumping units and control mechanisms, design, construction and assembly of
measuring compartment, hydrostatic pressure,
leakage test.

Underwriters' Laboratories. Power Operated Discharge Devices; 1929. For dispensing motor fuels at filling stations, design and minimum thickness of metal of iron or steel base and housing, design requirements for pumping unit stuffing box, visible indicators, other appurtenances, installation of piping, accessories, and electrical equipment, hydrostatic pressure and operating

test requirements.

underwriters' Laboratories. Power-Operated Pumps and Discharge Device Accessory Pumps; 1925. For use with dispensing devices for motor fuel at filling stations, design requirements, material, and minimum thicknesses of metal for iron or steel base, pump body, stuffing box, piston rod, and other pump parts, piping, and relief valve, hydrostatic pressure and operating test requirements. U. S. Gov., Federal Specifications Board. 362; 1925. Liquid Measuring Devices, Retail Type. This

U. S. Gov., Federal Specifications Board. 362; 1925. Liquid Measuring Devices, Retail Type. This specification is based upon and closely follows the text of the code of specifications and tolerances for liquid measuring devices adopted by the National Conference on Weights and Measures.

References.—Other power operated pumps. Se 755.1. Water meters. See 793.4.

793.7 GREASE-MEASURING DEVICES

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Grease Measuring Devices. Tentative specifications, requirements on units of delivery, sensitiveness, constancy of delivery, structural features of indicators, graduated scales, positive stops, allowable tolerances on measurements of grease. Revised as regards indication of delivery in Report of 23rd Conference, B. S. publ. M116, 1930.

793.9 MISCELLANEOUS MEASURING AND RE-CORDING APPARATUS

References.—Fabric measuring devices. See 390.4. Electric meters. See 714.3. Standard weights and measures. See 919.1.

794. LUBRICATING DEVICES

American Railway Assn. Mechanical Div. Lubricators, Fittings for; 1926. Dimensions and designs of standard pipe joints and fittings, and of holding arm, number of threads.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Lubricator Cups; 1921. Capacity, dimensions of glass, size of taper pipe

thread for 8 sizes.

Society of Automotive Engineers 1931 Handbook. Recommended Practice. Oil and Grease Cup Threads; 1928. Width of hexagon, size, length of threaded section, and number of threads for pipe thread fittings and for machine screw fittings.

795. MECHANICAL GOVERNORS

American Society of Mechanical Engineers. Power Test Code. Speed-Responsive Governors; 1927. Scope is limited to the performance of speed responsive governors as applied to steam or hydraulic turbines, reciprocating steam or gas engines when used for driving electric generators, mills, etc., and does not include speed limit safety stops. Tests for determining speed regulation with variable and constant load, tests for sensitiveness, rapidity, and governing force, itemized form for tabulating test data and calculations.

References.—General requirements for test codes. See 700. Steam turbines. See 701.2.

800–809 COAL-TAR PRODUCTS

801. CRUDE COAL-TAR PRODUCTS 801.1 BENZENE (BENZOL)

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Benzene. Reagent for chemical analysis, physical properties, identity tests, test requirements for purity.

References.—Testing of lacquer solvents and diluents. See 822.0.

801.2 TOLUENE

References.—Testing of lacquer solvents and diluents. See 822.0.

801.3 CREOSOTE AND WOOD PRESERVATIVES

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931.

Preservative for Creosoted Wood Blocks. For coal-tar paving oil and for coal-tar distillate oil as preservatives, requirements on content of distillate of coal gas or coke oven tar, permissible water and matter insoluble in benzol, specific gravity, distillation, float test and coke residue. American Assn. of State Highway Officials. High-

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931.

Timber Preservatives. For creosofe oils and creosote-coal-tar solution for pressure treatments, for anthracene oil and heavy creosote oil for surface treatment, requirements on permissible water, fluidity, permissible matter insoluble in benzol, specific gravity, distillation ranges, float test, and coke residue.

American Assn. of State Highway Officials. Tentative Method T-60. Undated. Methods of Sampling and Analysis of Creosote Oil. Same as D 38-30 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method T-61. Undated. Method of Test for Coke Residue of Cressote Oil. Same as D 168-30 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials, Tentative Method T-62. Undated. Method of Test for Distillation of Creosote Oil. Same as D 246-30 of Am. Soc. for Testing Materials.

American Assn. of State Highway Officials. Tentative Method T-74. Undated. Method of Test for the Determination of the Specific Gravity, 38°/15.5° C., of Creosote Fractions. Same as D 38-30T of Am. Soc. for Testing Materials.

American Electric Railway Engr. Assn. Recommended Specification WP108-96; 1926. Specification for No. 1 Grade Creosote Oil (For Pressure Treatments). Allowable percentage of water and of matter insoluble in benzol, specific gravity, percentage distilling at given temperatures and the percentage coke residue.

American Electric Railway Engr. Assn. Recommended Specification WP109-26; 1926. Specification for No. 2 Grade Creosote Oil (for pressure treatments). Allowable percentage of water and of matter insoluble in benzol, specific gravity, percentage distilling at given temperatures, and coke residue.

American Electric Railway Engr. Assn. Recommended Specification WP110-26; 1926. Specification for No. 3 Grade Creosote Oil (for pressure treatments). Allowable percentage of water and of matter insoluble in benzol, specific gravity, percentage distilling at given temperatures, and coke residue.

American Electric Railway Engr. Assn. Recommended Specification WP111-26; 1926. Specification for Creosote-Coal-Tar Mixture (for pressure treatments). Required percentage of distillate of coal tar, allowable percentage of water and of matter insoluble in benzol, specific gravity, percentage distilling at given temperatures, and coke residue. Precautions in purchase and use of the mixture.

American Electric Railway Engr. Assn. Recommended Specification WP114-29; 1929. Preservative Oils Suitable for Nonpressure Open Tank. Brush and Spray Treatments. For anthracene oil and for heavy creosofe oil, requirements on specific gravity, fluidity, percentage of water and of matter insoluble in benzol, distillation test, float test, coke residue, test methods of Am. Rwy. Engr. Assn.

American Electric Railway Engr. Assn. Recommended Specification WP115-26; 1926. Specification for Heavy Creosote Oil Suitable for Brush and Open Tank Treatment. Allowable percentage of water and of matter insoluble in benzol, liquid state and specific gravity at definite temperatures, percentage distilling at definite temperatures, coke residue.

American Electric Railway Engr. Assn. Recommended Specification WP116-26; 1926. Methods of Sampling for Creosote Oils. Continuous drip sample and sampling from small containers.

American Electric Railway Engr. Assn. Recommended Specification WP118-26; 1926. Determination of Specific Gravity of Creoste Oil. Drawings and specified dimensions of apparatus, test procedure.

American Electric Railway Engr. Assn. Recommended Specification WP119-26; 1926. Determination of Matter Insoluble in Benzol for Creosote Oils. Drawing and specification of apparatus, test procedure.

American Electric Railway Engr. Assn. Recommended Specification WP120-26 as revised in 1927 on page 194 of 1927 Proceedings of A. E. R. E. A. Specifications for Distillation of Creosote Oil, Dimensioned drawings and specifications of apparatus, preparation of sample and test procedure.

American Electric Railway Engr. Assn. Recommended Specification WP121–26; 1926. Determination of Specific Gravity of Fractions of Creosote Oils. Recommends Westphal balance for liquid fractions and platinum or nickel pan of dimensions shown for solid and semisolid fractions, method of test.

American Electric Railway Engr. Assn. Recommended Specification. WP122-26; 1926. Specification for Float Test of Residue (Creosote Oil Analysis). Dimensioned drawings and specifications for aluminum float and specification for low softening point thermometer, preparation of sample and test procedure.

American Electric Railway Engr. Assn. Recommended Specification WP123-26. Determination of Coke Residue (Creosote Oil Analysis). Appa-

ratus and test procedure.

American Electric Railway Engr. Assn. Recommended Specification WP124–26; 1926. Specification for Analysis of Carbolineum and Similar Oils. Procedure for determining specific gravity, separation of solids, flashing point, burning point, sulphonation residue, tar acids, solubility in benzol, ash, and description of distillation apparatus and method.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Creosote. Description and properties, preparation and standard strengths of tincture, dilutions, and

medications.

American Railway Engineering Assn. 1929 Manual and 1930 Supplement to Manual. Wood Preservation. Measuring, Sampling and Analyzing Preservatives; 1926. For crososole, standard method of sampling from tank cars, apparatus and procedure for determination of water, mater insoluble in beazol, specific gravity, distillation, specific gravity of fractions, float test, and coke residue.

American Railway Engineering Assn. 1929 Manual. Wood Preservation. Preservatives; 1926. For 3 grades of creosote and 1 grade of creosote coal-tar solution, allowable percentage of water and of matter insoluble in benzol, specific gravity, fractional distillation quantities and tempera-

tures, float test, residue.

American Railway Engineering Assn. 1929 Manual. Wood Preservation. Treating Processes; 1927. Includes water-gas-tar solution in place of creosote for the zinc chloride and creosote-card process of treatment. For the distillate of watergas-tar, permissible water, and matter insoluble in benzol, specific gravity, distilling temperatures, float test, and residue.

American Society of Municipal Engineers. Creosoted Wood Block Paving; 1921. Includes proservative oils, moisture content, solubility, specific gravity, distillation fractions, and residue requirements for coal tar paving oils, coal tar distillate oil, and refined water gas tar.

American Society for Testing Materials. D 38-30; 1930. Methods of Sampling and Analysis of Creosote Oil. Requirements for taking continuous drip sample from loading or discharge pipe, dimensions and design of test apparatus and test procedure for determination of water, matter insoluble in benzol, specific gravity, and distillation; float test of residue and coke residue test by A. S. T. M. methods D 139 and D 168.

American Society for Testing Materials, Tentative Method of Test D 38-30T; 1930. Test for the Determination of the Specific Gravity, 38°/15.5° C., of Creosote Fractions. For relatively small amounts of the distillation fractions, test pro-

cedure using pycnometer method.

American Society for Testing Materials. D 43–25; 1925. Creosote Oil for Priming Coat with Coal Tar Pitch in Damp Proofing and Waterproofing Below and Above Ground Level. For application to concrete and masonry surfaces, method of sampling, requirements on dryness, onesistency, specific gravity, insolubility in benzol, and distillation test using A. S. T. M. method of analysis, D 38.

American Society for Testing Materials. D 168-30; 1930. Method of Test for Coke Residue of Creosote Oil. Requirements on dimensions of crucible, test procedure using residue obtained from "tentative method of test for distillation of creosote oil," A. S. T. M. serial D 246-27T.

American Society for Testing Materials. D 246-30, 1930. Method of Test for Distillation of Crossot Oil. Method suitable to all types and grades of creosote and to mixtures with tars and oils used for timber preservation. Dimensions of distilling flask, condenser, etc., dimensions and design of thermometer, preparation of sample, test procedure.

American Society for Testing Materials, Tentative Definitions D324-30T; 1930. Definitions of Terms Relating to Timber Preservatives. Definitions of creosote, creosote coal-tar solution, creosote distillate, coal tar, coal-gas tar, coke-oven

tar, and water-gas tar.

American Wood Preservers' Assn. 3b; 1931. Defi-

nition of Creosote.

American Wood Preserver's Assn. 4c; 1924. Crosote Oil for Ties and Structural Timbers. Requirements for allowable water, insoluble matter, specific gravity, distillation, float test, coke residue for 3 grades in accordance with A. W. P. A. test method for creosote.

American Wood Preserver's Assn. 5a; 1923. Creosofe Coal-Tar Solution for Ties and Structural Timber. Requirements on allowable water, insoluble matter, specific gravity, distillation, float test, coke residue, using A. W. P. A. method of

analysis for creosote.

American Wood Preservers' Assn. 6b; 1926. Float Test of the Residue in Creosote Oil. Includes a total immersion mercury thermometer, dimensions, design, graduation, standardization, permissible scale error, graduated from -2° to 80° C. or 30° to 180° F.

American Wood Preserver's Assn. 7c; 1931. Method for the Determination of Coke Residue in Creosote Oil. Design of crucible, test procedure using residue from distillation test of A. W. P. A. Standard Distillation of Creosote

Oils, 11c.

American Wood Preserver's Assn. 8a; 1921.

Method for the Determination of the Amount of
Material Insoluble in Benzol. Requirements for
apparatus, test procedure where oil is subjected
to direct washing by the boiling vapors of the
solvent.

Method for the Determination of the Specific Gravity, 38*/15.5° C., of Creosote Fractions. For small quantities, test procedure using pyc-

nometer, calculations.

American Wood Preserver's Assn. 10c; 1929.
Method for Determination of Amount of Water in Creosote Oil. Procedure using still and condenser for determination of water in the distillate obtained in A. W. P. A. Standard Distillation of Creosote Oil, 11c. Alternate method of distilling the sample with a volatile solvent where no other work is to be done on the creosote.

American Wood Preserver's Assn. 11c; 1929. Standard Distillation of Creosote Oil. Dimensions and design of distilling flask, condenser tube, shield, thermometer, assembly of apparatus, preparation of sample, test procedure.

American Wood Preserver's Assn. 13b; 1929. Volume and Specific Gravity Factors for Creosote Oil. Table of factors for use in correction of specific gravity and volume of oil at 60° to 220°

F, to the values at 100° F.

American Wood Preserver's Assn. 15a: 1923. Preservatives for Flooring and Paving Blocks. Includes coal-tar paving oil and coal-tar distillate oil, requirements on allowable water, insoluble matter, specific gravity, distillation, float test, and coke residue tests in accordance with A. W. P. A. method for analysis of creosote. ity of Creosote Oil. Test procedure using hy-

drometer and cylinder.

American Wood Preserver's Assn. 24c; 1929. Preservative Oils for Nonpressure Treatments. For 3 grades of creosote oil for open-tank treatment, 1 grade for brush of spray treatment, and 1 grade of anthracene oil, requirements on fluidity, specific gravity, percentage water, in-soluble matter, distillation, float test, and coke residue, tests according to A. W. P. A. standard analysis of creosote.

American Wood Preserver's Assn. 25b; 1931. Method of Sampling Creosote Oil in Tank Cars. Dimensions and design of sampling cylinder, procedure using zone sampling method and tables of combining factors for computing percentage of

water in tank.

American Wood Preserver's Assn. 26a; 1923.

Methods for Determination of Tar Acids in
Creosote Oil. Dimensions and design of taracid separatory funnel, test procedure for distillation method and for liberation method.

American Wood Preserver's Assn. 31a; 1924. Water-Gas Tar Distillate for Use with Zinc Chloride. Requirements on allowable water, insoluble matter, specific gravity, distillation, float test, and coke residue, tested in accordance with A. W. P. A. standard analysis of creosote.

American Wood Preserver's Assn. 32a; 1924. Water-Gas Tar Solution for use with Zinc Chloride. Requirements on composition, percentage water, insoluble matter, specific gravity, distillation, float test, and coke residue, tested in accordance with A. W. P. A. standard analysis methods for creosote.

National Electric Light Assn. Suggested Specifi-cations D90-28T; 1928. Tentative. Pole Stain. Covers coal-tar distillate or coal-tar creosote for the preservative treatment of wood, requirements on purity, specific gravity, melting point, solubility, water content, distillation, coke residue.

U. S. Gov., Federal Specifications Board. TT-W-556; 1931. Coal Tar Creosote Wood Preservative for Ties and Structural Timbers. The technical requirements of this specification are the same as those of spec. No. 4c of the Am. Wood Preservers Assn.

U. S. Gov., Federal Specifications Board. TT-W-561; 1931. Creosote Wood Preservative for Brush and Spray Treatment. The technical requirements of this specification are the same as those of spec. No. 24c of the Am. Wood Preservers' Assn.

U. S. Gov., Federal Specifications Board. TT-W-566; 1931. Creosote Coal Tar Solution, Wood Preservative for Ties and Structural Timbers. The technical requirements of this specification are the same as those of Spec. No. 5a of the Am.

Wood Preservers Assn.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Creosote. As a medicinal, physical properties, specific gravity, distillation test and other test for purity and identity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References.—Zinc chloride as wood preservative. See 839.38. Pressure process, brush and open tank processes of preservative treatments of lumber. See 400.42, 400.43. Creosote carbonate, medicinal agent. See 803.23.

801.4 NAPHTHALENE, NAPHTHOL

American Institute of Homeopathy, Homeopathic Pharmacopoeia of the U. S.; 1914. Naphthalin. Description and properties, preparation and standard strengths of triturations for medicinal purposes.

American Wood Preserver's Assn. 18b; 1931. Assn. of Official Agricultural Chemists. Official and Method for the Determination of Specific Gravtives and Artificial Sweeteners. Beta-Naphthol. Tentative method of qualitative test for presence

U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Naphthalene. Sample No. 38a prepared and sold by the bureau with a certificate giving calorimetric value, for use in industry and by others as a standard in calorimetry.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Betanaphthol. A naphthalene used for medicinal purposes, description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

801.5 CRUDE COAL TAR

References .- Crude coal tar. See 505.3.

802. INTERMEDIATE COAL-TAR PRODUCTS 802.1 ACIDS

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Carbolic Acid. Description and properties, preparation and standard strengths of tincture, dilutions, and medications for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Benzoic Acid, Picric Acid, Salicylic Acid. Descriptions and properties, preparation and standard strengths of triturations, tincture, dilutions, and medications

for medicinal purposes.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Drugs. Acetylsalicylic acid. Tentative methods for determination of melting point, presence and amount of free salicylic acid, official and tentative methods for determination of total salicylates and combined acetic acid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Benzoic Acid. Preparation of sample, qualitative test

and quantitative test methods.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Salicylic Acid. Preparation of sample, qualitative test and quantitative test methods.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Salicylic Acid in the Presence of Other Phenols. Tentative method for determining amount of

salicylic acid.

- U. S. Gov., Dept. of Commerce. Bureau of Standards. C25 and Suppl.; 1927. Standard Samples. Benzoic acid. Sample No. 39c prepared and sold by the bureau, for use in industry and by others as a standard in checking acidimetric and calorimetric values, preparation of standard solutions,
- U. S. Gov., Dept. of Commerce, Bureau of Standards. S183; 1912. Benzoic Acid as an Acidimetric Standard. Gives comparative test results from standardizing hydrochloric acid with benzoic acid as compared with other methods, states some of the advantages in using benzoic acid as a standard in acidimetry and alkalimetry.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Acetylsalicylic Acid. As a medicinal, strength requirements, physical properties, tests for identity and purity, assay tests for strength, dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Benzoic Acid. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal

food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Phenol, Carbolic Acid. As a medicinal, physical properties, test for identity and purity, assay test for strength, minimum strength requirement, dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharma-copoeia of U. S. A.; 1926. Picric Acid. As a chemical reagent for testing and as a medicinal, physical properties, test for identity, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoelal Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Pyrogallol (Pyrogallic Acid). For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Fed-

eral food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Salicylic Acid. As a chemical reagent and also as a medicinal, physical properties, tests for identity, test requirements for purity and assay test for strength, average dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharma-copoeia of U. S. A.; 1926. Trinitrophenol (Picric Acid). For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement

of Federal food and drugs act.

802.2 ANILINE OIL AND SALTS

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Anilin. Description and properties, preparation and standard strengths of tincture and dilutions for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Anilin Sulphate. Description and properties, preparation and standard strengths of triturations.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Acet tanilid and Acetphenetidin (Phenacetin). Tentative Methods. Tests for presence of acetphenetidin, preparation of reagents and determination of acetanilid and of acetphenetidin.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Acetanilid and Caffeine. Tentative Methods. Preparation of sample and reagent, determination of

caffeine and of acetanilid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Acetanilid and Sodium Salicylate. Tentative Methods. Preparation of sample, determination of amount of acetanilid and of sodium salicylate.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Acetanliid. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized

as standard in enforcement of Federal food and drugs act.

802.3 DIPHENYLAMINE FOR SMOKELESS POW-

803. FINISHED COAL-TAR PRODUCTS

803.1 COAL-TAR COLORS, DYES, AND STAINS

303.10 General Items

American Assn. of Textile Chemists and Colorists 1930 Year Book. Tabulation of American Dyes. Tabulated list of American dyes, listed alphabetically and according to color index numbers, reference table for finding corresponding Schultz numbers, classification of dyes as acid, mordant

acid, mordant, oil, vat, direct, etc.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Coloring Matters in Foods. Tentative Methods. Commercial Coal-Tar Food Colors. Determination of moisture, matter insoluble in water, sodium chloride, sodium sulfate, sulphated ash, metals, arsenic, ether extractives, sulphated ash, pure dye, matter insoluble in carbon tetrachloride, water extractives, melting point, etc. Assn. of Official Agricultural Chemists. Official

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Tentative Methods. Coloring Matters in Foods. Methods for separation of insoluble pigments, of water-soluble coal tar dyes, of oil-soluble coal tar dyes, separation and identification of permitted coal tar food colors, identification of coal tar dyes by changes in color with acids and alkalies, separation and identification of natural coloring mat-

ters.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Laboratory Test No. 20. To Determine the Class of Dye in Fabric. Test methods for the dyes turkish red, para red, direct red (benzo, diamine, congo, etc.), sulphur black, aniline black, and logwood black, test for direct colors and for basic colors, to distinguish sulphur from indigo blue, sulphur from mineral khaki, and indigo blue from indianthrene blue.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. Dept. Bulletin 1399. 1927. Chemistry and Analysis of the Permitted Coal-Tar Food Dyes. Methods of analysis of 12 coal-tar food dyes permitted under Federal food and drugs act, covering ponceau 3R, amaranth, erythrosine, orange I, naphthol yellow S, tetrazine, yellow A B, yellow O B, guinea green B, light green S. F. yellowish, fast green F. C. F., and indigotine.

References.—Standard color card for fabrics. See 306.0. Methods of testing fastness of dyestuffs on fabrics. See 300.4.

803.11 Indigo, Natural and Synthetic

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Indigo, Description and properties, preparation and standard strengths of triturations for medicinal purposes.

Laundryowners National Assn. Laundry Supplies. Undated. Blues. Requirements on color, solubility and method of use given in general terms.

803.12 Color Lakes

803.13 Coal-Tar Food Colors

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 3 and Suppl. No. 2; 1929. Certification of Coal-Tar Food Colors. List of coal-tar dyes which may be certified by Dept. of Agriculture as safe for food colors when application and test affidavit are made in accordance with regulations, minimum allowable percentages of pure coal tar color in package. Comprises Ponceau 3R, amaranth, erythrosine. Ponceau SX, orange I, naphthol yellow S, tartrazine, yellow AB, yellow OB, sun-set yellow FCF, guinea green B, light green SF yellowish, fast green FCF, indigotine, brilliant blue FCF

References.-Methods of test and analysis, See 803.10.

803.19 Miscellaneous Coal-Tar Colors, Dyes, and Stains

Commission on Standardization of Biological Stains. Specifications of Certain Stains; 1927. Published in Stain Technology for Jan., 1927. Aniline blue, water soluble; brilliant cresyl blue; congo red; eosin B; light green, sf, yellowish; methyl green; nile blue sulfate; rose bengal; phloxine; toluidine blue O. Requirements on color index number, maximum value on absorp-

tion curve, dye content, stain test.

Commission on Standardization of Biological Stains, Specifications for Stains, Published in Stain Technology for July, 1931. Includes methyl orange, congo red, brilliant green, methyl violet, crystal violet, acid fuchsin, safranin O, esthetical violet, acid fuchsin, safranin violet, acid fuchsin, safranin violet, acid fuchsin violet, methylene blue, chemical names and formulas, requirements on appearance, solubility in alcohol and in water, behavior with acids and with alkalies, and dye content. The Commission tests and certifies stains, there now being 50 stains on a certification basis.

U. S. Gov., Federal Specifications Board. 318; 1925. Eosin Y (C. I. No. 768). Requirements on solubility in water, color of water solutions and alcohol solutions, color reactions with various acids, dye content and other ingredients, absorption curve test, hydrogen ion shift test.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sodium Indigotindisulphonate (Indigo Carmine). For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act

References .- Color numbers. See 803.10.

803.2 COAL-TAR MEDICINALS

803.21 Dichloramine-T

U. S. Pharmacopoeial Convention (Inc.). copoeia of U. S. A.; 1926. Creosote Carbonate, medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

803.22 Xvlene

803.23 Creosote Carbonate

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cresote Carbonate. For medicinal purposes, description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Creosote as a medicinal agent. See 801.3.

803.24 Orthocresol, Cresol

American Pharmaceutical Assn. National Formulary; 1926. Orthocresol. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cresol. For medicinal purposes, description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Commercial cresol, coal tar dips. See 803.4

803.25 Thymol

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Thymol. Tentative methods for determining percentage of thymol.

803.29 Miscellaneous Coal-Tar Medicinals

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Phenolphthalein in Tablets. Methods for preparation of sample and reagents, and for determination of purity.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis: 1930. Acetphenetidin (Phenacetin) and Caffeine. Tentative Methods. Preparation of sample, determination

of amount of each of above constituents.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Acet-phenetidin (Phenacetin) and Salol. Tentative Methods. Determination of amount of each in a sample of the mixture.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Drugs. Acetylsalicylic Acid. Methods for determination of melting point, presence and amount of free salicylic acid, official and tentative methods for

determination of total salicylates.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Drugs. Methylene Blue. Methods for preparations of sample and for determination of amount of methylene blue.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Phenolthalein in Chocolate Preparations. tive method for determining the amount of

phenthalein.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Acetphenetidin. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Phenolphthalein, Phenolsulphonphthalein, Phenyl Salicylate. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

References.—Creosote, medicinal agent. See 801.3. Betanaphthol, naphthalene, medicinal agents. See 801.4. Carbolic acid, benzoic acid, picric acid, salicylic acid, acetylsalicylic acid, progallic acid, picric acid, as medicinal agents. See 802.1. Anilue, acetanlild, as medicinal agents. See 802.2. Indigo, as medicinal agents. See 803.11.

803.4 Coal-Tar Dips and Disinfectants

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Caustic Poisons. For commercial cresol, saponified cresol solutions, coal-tar dips and disinfectants, kerosene solutions of phenols, etc., official methods for the determination of cresol.

809. MISCELLANEOUS COAL-TAR PROD-

809.1 SYNTHETIC TANNING MATERIALS

U. S. Gov., Dept. of Commerce, Bureau of Standards T316; 1926. Analysis of Synthetic Tanning Materials. Methods found most satisfactory and reliable at the Bureau for the determination of acidity, total sulphur, total inorganic matter, free sulphuric acid and sulphates, nonvolatile matter, total organic matter, and tanning material.

References.—Vegetable and other tanning materials and methods of test and analysis. See also 231.

809.2 INK POWDER

References .- Iron gallotannate ink powder.

809.3 PHOTOGRAPHIC DEVELOPER, METOL

U. S. Gov., Federal Specifications Board O-M-571; 1931. Metol. The sulphate of mono-methyl-para-aminophenol, requirements on solubility tests and mercuric acetate test for identity, permissible ash, test requirements for presence of foreign compounds such as metals and other phenolic substances and poisons.

810-819 MEDICINAL AND PHARMACEUTICAL PREPARATIONS

810. GENERAL ITEMS

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the United States; 1914. Lists several hundred drugs, mostly plant drugs, gives names and synonyms, description of plant, its habitat, the part used for drug purposes, the methods of preparation and standard strengths of tinctures, dilutions, medications, triturations,

etc., as used in homeopathic medicine.

American Medical Assn. New and Nonofficial

Remedies; 1931. Contains a descriptive list of
the proprietary drugs and medicines with the name of the manufacturers, such articles having met the rules of the A. M. A. as regards giving compositions and identification tests, absence of advertising, absence of unwarranted therapeutic claims, etc. The listing of an article does not imply a recommendation by the A. M. A. Does not contain articles given in U. S. Pharmacopoeia. American Pharmaceutical Assn. National Formula

lary; 1926. Drugs and Chemicals. Standards for crude drugs and their purity; for chemicals, with test requirements for identity and purity; not covered in U. S. Pharmacopoeia. Recognized as standards in enforcement of Federal food and

drugs act.

American Pharmaceutical Assn. National Formulary; 1926. Medicinal Preparations, Standard formulas including proportions of ingredients and method of preparation for a great number of elixirs, plasters, emulsions, extracts, fluid extracts, glycerites, infusions, liniments, solutions, lotions, mixtures, mulls, oils, pastes, pills, powders, effervescent salts, spirits, syrups, tablets, tinctures, ointments, etc. Recognized as standards in enforcement of Federal food and drugs act.

American Pharmaceutical Assn. Pharmaceutical Recipe Book, First Edition. Provides formulas for pharmaceutical preparations that are not recognized in the U. S. Pharmacopoeia or the National Formulary. It is not recognized as standard in the enforcement of the Federal food

and drugs act.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Radioactivity of Foods and Drugs. Official method for determining the presence of radio-activity in clear solutions of drugs and waters and method for determining the amount of

radium present.

U. S. Gov., Congress. 34 Stat. 768. June 30, 1906, as amended. (For text see S. R. A., F. D. No. 1, 1930, of Food, Drug, and Insecticide Administration of Dept. of Agriculture.) Federal food and drugs act. An act to prevent the manufacture, sale, or transportation of adulterated or mis-

branded or poisonous or deleterious foods, drugs, branded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein. Defines conditions which will be considered as adulteration or misbranding for drugs, confectionery, and foods, adopts for drugs the standards of U. S. Pharmacopoeia and Nat. Formulary.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., F. D. No. 1; 1930. Regulations for Enfoorcement of Federal food and drugs act. Act applies to foods and drugs shipped in interstate commerce or offered for foreign shipment, standard methods of analysis to be those of U. S. Pharmacopoeia and National Formulary, and of Assn. of Official Agricultural Chemists, regulations regarding the labeling of drugs that do not meet the standards of U. S. Pharmacopoeia or Nat. Formulary, regulations on powdering, poisonous or deleterious ingredients, and colors and preservatives, ingredients which require a statement on label, etc. Includes text of act as amended.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Toilet, medi-cinal and antiseptic preparations. For such materials in which alcohol is a part, the regulations require the addition of given amounts of any of 6 modifying agents in order to be classed as non-

beverage.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Tenth Edition. Standards for Drugs and Medicines. Covers crude drugs, chemical compounds, elixirs, emulsions, extracts, fluid extracts, infusions, tinctures, triturations, liniments, solutions, oils, ointments, pills, powders, and spirits, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

811. ALKALOIDS AND SALTS

American Institute of Homeopathy. pathic Pharmacopoeia of the U. S.; 1914. Apomorphin Hydrochlorid. Description and properties, maximum dose, preparation and standard strengths of triturations for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Atropine, Atropine Sulphate. Description, chemical properties, sources, standard triturations, tinctures, dilutions, and medications, methods of preparation.

American Institute of Homeopathy, Homeopathic Pharmacopoeia of the U. S.: 1914. Cinchona or

China, and Cinchonin Sulphate. Descriptions | and chemical properties, source, preparation and standard strengths of tinctures, dilutions, medications, and triturations of cinchona and of triturations of cinchonin sulphate.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Cocaine Hydrochlorid. Description and properties, preparation and standard strengths of triturations for

medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacoepia of the U. S.; 1914. Codeine. Description and chemical properties, test of identity, standard strength and method of preparation for homeopathic medicine.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Hydrastine. Description, chemical properties, source, preparation and standard strengths of triturations.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Hyoscyamin Sulphate. Description, chemical properties, source, preparation and standard strengths of triturations, permissible maximum dose.

American Institute of Homeopathy. Homeopathic Pharmacopoela of the U. S.; 1914. Ipecac, Nux Vomica, and Opium. Descriptions, properties, parts used in medicines, preparation and standard strengths of tinctures, dilutions, medications

and triturations.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Iron and Quinin Citrate, Iron and Strychnin Citrate. Description and properties, preparation and standard strengths of triturations for medicinal purposes.

American Institute of Homeopathy, Homeopathic Pharmacopoeia of the U. S.; 1914. Morphine, Morphine Acetate, Morphine Hydrochloride, and Morphine Sulphate. Descriptions, chemical properties, identity tests, preparation of triturations,

maximum dosage.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Quinine, Quinin Arsenate and Arsenite, Quinin Hydrochloride, Quinin Sulphate, Descriptions, chemical properties, identity tests, maximum dosages for the arsenic salts, preparation and standard strengths of triturations.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Stramonium or Thorn Apple. Description and properties, parts used, preparation and standard strengths of tincture, dilutions, and medications.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Strychnine Nitrate, Strychnine Phosphate, and Strychnine Sulphate. Description and chemical properties, maximum dosage, methods of preparation and standard strengths of triturations.

American Pharmaceutical Assn. National Formulary; 1926. Cinchonine Sulphate. Description and physical properties, test requirements for identity and purity, dosage. Recognized as standard in enforcement of Federal food and

drugs act.

American Pharmaceutical Assn. National Formulary; 1926. Hydrastine Hydrochloride. Description and physical properties, test requirements for identity and purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

American Pharmaceutical Assn. National Formulary; 1926. Quinidine. Description and physical properties, test requirements for identity and purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

American Pharmaceutical Assn. National Formulary; 1926. Strychnine. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Acetanilid and Caffeine. Preparation of reagents and of solution of sample, tentative methods for determination of caffeine and of acetanilid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Acetanilid, Caffeine, and Codeine. Tentative Methods. Preparation of sample, determination of amount

of each of above constituents.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Acetanilid, Caffeine, and Quinine. Tentative Methods. Preparation of sample, determination of amount of each of above constituents.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Acetanilid, Caffeine, Quinine, and Morphine. Tentative Methods. Preparation of sample, determina-

tion of each of above constituents.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Antipyrin and Caffeine. Tentative methods for determination of amount of antipyrin and of caffeine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Apomorphine in Tablets. Tentative method for determining amount of apomorphine hydro-

ssn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Atro-pine in Tablets. Tentative methods for determi-Assn. of Official Agricultural Chemists. nation of amount of atropine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Bioassay of Drugs. Method of determining percentage of total alkaloid in unknown solutions using the cat-eye procedure.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Cinchona Alkaloids. Tentative Methods. Prepara-tion of reagents, determination of amounts of

quinine, cinchonidine quinidine, and cinchonine. Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Cocaine. Methods for determination of amount of cocaine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Codeine in Tablets. Preparation of sample, tests for presence of and for amount of codeine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Diacetylmorphine (Heroin) in Tablets. Tests for

identity and for purity.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Eme-Hydrochloride in Tablets. Tentative tine method for determination of amount of emetine hydrochloride.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Ephedrine in Inhalants. Ephedrine in Tablets. Tentative methods for identifying and for determining the amount of ephedrine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Assay of Ergot. Tentative method of determining amount of the alkaloid in unknown solutions by tests with rabbits.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Fluid-

extract of Ipecac. Tentative method for preparation of solution and determination of amount

Assn. of Official Agricultural Chemists. Official and Tentatitve Methods of Analysis; 1930. Michrochemical Tests for Alkaloids. For alkaloids in compounds and for hypodermic tablets, method of preparing sample, examination under microscope, and identifying the alkaloid through type of crystals formed with various reagents.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Morphine in Tablets. Tests for presence of and for

amount of morphine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Pilocarpine. Tentative method for determination of amount of pilocarpine.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Procaine Hydrochloride (Novocaine). Tests for identification and for amount of procaine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Separation of Quinine and Strychnine. Tentative method of separation and determining amount

of each alkaloid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Strychnine in Liquid Preparations. Strychnine in Tablets. Tests for purity, other alkaloids

being absent.

U. S. Pharmacopoeial Convention (Inc.), Pharmacopoeia of U. S. A.; 1926. Aconitine, Apomorphine Hydrochloride, Atropine; Cocaine, Cocaine Hydrochloride, Codeine, Codeine Phosphate, Codeine Sulphate Colchicine, Cotarnine Chloride, Emetine Hydrochloride, Ethylmorphine Hydrochloride, Homatropine Hydrobromide, Hyoscyamine Hydrobromide, Morphine Hydrochloride, Morphine Sulphate, Physostigmine Salicylate, Pilocarpine Hydrochloride, Pilocarpine Nitrate, Quinidine Sulphate, Quinine and compounds of Quinine, Strychnine Nitrate and Sulphate. Physical properties, test requirements for identity and for purity, dosage. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Belladonna Leaves and Roots, Cinchona, Hydrastis, Hyoscyamus, Ipecae, Nux Vomica, Opium. Description and physical properties of unground and powdered materials, assay test for percentage of alkaloids, dosage. Recognized as standards in enforcement

of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Extract of Stramonium. Pilular and powdered extracts, composition, preparation, test requirements for percentage of alkaloid, dosage. Recognized as standard in enforcement of Federal food and drugs act.

812. BIOLOGICAL MEDICINALS

U. S. Gov., Congress. 37 Stat., 832; Mar. 4, 1913. An act making appropriations for the Dept. of Agriculture for the fiscal year ending June 30, 1914. The Virus-Serum-Toxin Law. Authorizes Sec. of Agriculture to inspect viruses, serums, etc., for domestic animal treatment, to inspect plants for manufacture, to issue permits for importation, to issue licenses for manufacture, to make regulations, etc. Copy of act appears in B. A. I. Order 276 of Dept. of Agri. U. S. Gov., Congress. Public—No. 244; 1902. An

act to regulate the sale of viruses, serums, toxins, and analogous products in the District of

Columbia, to regulate interstate traffic in said articles, and for other purposes. Requirements on licensing of manufactures and labeling of products of above types. Reprinted in Misc. Publication No. 10 of U. S. Public Health Service.

U. S. Gov., Dept. of Agriculture, Bureau of Animal Industry, B. A. I. Order 276; 1922. Regulations Governing the Preparation, Sale, Barter, Exchange, Shipment, and Importation of Viruses, Serums, Toxins, and Analogous Products Intended for Use in the Treatment of Domestic Animals. Includes hog-cholera virus and antihog-cholera serum, regulations fixed by law on preparation, tests requirements for virulence and purity of virus and for potency and purity of serum, shipment and labeling regulations.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. Bull. 21. The Standardization of Diphtheria Antitoxin.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Laboratory Bulletin No. 43: Service. Hygienic Laboratory Bulletin 1912. The Standardization of Tetanus Antitoxin. Mandatory for District of Columbia and in interstate traffic. Definition of immunity unit for measuring strength of tetanus antitoxin as regards its action on a guinea pig receiving the official test dose of a standard toxin furnished by the Hygienic Laboratory.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Laboratory Bulletin No. 110; 1917. The Standardization of Antityphoid Vac-cine. Includes the procedure used in Hygienic Laboratory for making and testing typhoid

vaccine.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. Bull. 122; 1920. Standardization of Gas Gangrene Antitoxin. tion of the standard of the antitoxin of B. perfringens as determined by comparative test for potency against a standard serum kept at the Hygienic Laboratory.

Nyselic Laboratory Dept. U. S. Public Health Service. Hygienic Laboratory Leaflet; 1922. Specifications for Diphtheria Toxin for Schick Test. Requirements on size of samples to be sent to Hygienic Laboratory, definition of min-mal lethal dose, number of human doses per package, amount of toxin per human dose, vol-

ume of undiluted toxin, labelling of containers. U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. A-46; 1930. Minimum Requirements for Diphtheria Toxoid. Disallowance of use of horse meat, required size of dose, test for detoxification, minimum antigenic requirements, submission of protocols of preliminary toxicity, safety, and antigenic tests on each

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. A-59; 1930. A Sug-gested Method for the Dilution of Scarlet Fever Streptococcus Toxin for the Dick Test and for Immunization. Methods of dilution described which will assist in prevention of deterioration for the extended dating period of 6 months.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. E-10a, Rev.; 1927. Revised Minimum Requirements for Scarlet Fever Streptococcus Toxin for the Dick Test and for Immunization. Regulations regarding information to be supplied regarding source and specificity of organisms, examination for contamination, sterilization of toxic culture, reaction tests for each new batch of toxin as compared with control toxin supplied by Hygienic Laboratory, etc.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. E-10c Rev.; 1927. Revised Minimum Requirements for Scarlet Fever Streptococcus Antitoxin. Requirements on labeling, test requirements against control toxin and

also for comparative potency with control anti-toxin distributed by Hygienic Laboratory. U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. J-281; 1923. Suggestions for the Preparation of Diphtheria Toxin-Antitoxin Mixture. Directions for preparation of the mixture, specifications of test showing ideal toxicity for the mixture.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Hygienic Lab. J-743. Undated. Minimum Requirements for Antimeningococcic and Antipneumococcic Serums, Requirements on maximum intensity and maximum turbidity, titre tests and protection tests of serums as compared to control serum supplied by Hygienic Lab.,

method of performing tests.

U. S. Gov., Treasury Dept. U. S. Public Health
Service. Misc. Publ. No. 10; 1923, amendment No. 1 (1927) and Decision No. 3 (1930). Regulations for the Sale of Viruses, Serums, Toxins. Regulations for issuance of licenses to manufacturers, inspection of plant and of product, labeling, official standards of potency for diphtheria antitoxin, tetanus antitoxin, and scarlet fever streptococcus antitoxin, standard samples of other antitoxins distributed by Hygienic Laboratory, permissible solids and preservatives in liquid serums, potency expiration dates for various products.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Reprints No. 855 and No. 943; 1924. The Biological Standardization of Insulin. Recommended standard test requirements for de-termining potency of insulin by mortality and

glucose protective tests on rats.

S. Gov., Treasury Dept. U. S. Public Health Service. Reprint No. 1234; 1928. A Unit for Service. Reprint No. 1234; 1920. A Scarlet Fever Streptococcus Antitoxin, Defini-Scarlet Fever Streptococcus Antitoxin, Definiscarlet fever streptococcus serum kept at the

Hygienie Laboratory.
U. S. Gov., Treasury Dept. U. S. Public Health Service. U. S. P. H. S. Decision No. 3, under Sec. 63 of the Regulations for the Sale of Viruses, Serums, Toxins, and Analogous Products. Gives the dates set, beyond which the above products can not be expected to yield their specific results. period of time after manufacture or issue stated

for 21 types.
U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Diphtheria Antitoxin, Tetanus Antitoxin, Crude Tetanus Antitoxin. Physical properties, requirements as to source, permissible preservative and total solids, preparation only in Government licensed places, labeling and dating, strength according to standards of U. S. Public Health Service, dosage. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Smallpox Vaccine. Source, acidity or alkalinity requirements, preparation in Government licensed establishments only, preparation and examination, containers according to law and U. S. Public Health Service regulations, labeling and dating requirements. Recognized as standard in enforcement of Federal food and drugs act.

References.—Biological stains. See 803.19. Food and drugs act and regulations. See 810. Standard list of vaccines and antitoxins for ship medical supplies. See 915.50.

813. MEDICINAL OILS

813.1 CASTOR OIL

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Castor Oil.

Description and properties, preparation and standard strengths of tincture, dilutions, and medications.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Castor Oil. Physical properties, test requirements for identity and purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations.

813.2 COD LIVER OIL

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Cod Liver Oil. Description and properties, source, preparation and standard strengths of triturations,

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cod Liver Oil. Physical properties, identity tests, test requirements for purity and for vitamine A potency, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations. See 810.

813.3 COTTONSEED OIL

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cottonseed Oil. Physical properties, identity tests, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810. Cottonseed oil for other than medical purposes. See 142.4.

813.4 OIL OF ALMONDS

- U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Expressed Oil of Almond (Oil of Sweet Almond). Physical properties, identity tests, test requirements for purity, saponification and iodine values, dosage. Recognized as standard in enforcement of Federal food and drugs act.
- U. S. Pharmacopoeial Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Oil of Bitter Almond. For medicinal and not for food flavoring purposes, physical properties, identity tests, test requirements for purity and for benzaldehyde and hydrocyanic acid content, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations. See 810.

813.5 LINSEED OIL

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Linseed Oil. Physical properties, identity tests, test requirements for purity, for use as a medicinal agent. Recognized as standard in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations, See 810. Linseed oil for paints. See 848.11, 848.12.

813.6 OLIVE OIL

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Olive Oil. Physical properties, identity tests, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810. Olive oil for food purposes. See 142.5.

813.7 SESAME OIL

American Pharmaceutical Assn. National Formulary; 1926. Sesame Oil. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810. Sesame oil for food purposes. See 142.8,

813.8 THEORROWA OIL

U. S. Pharmacopoelal Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Oil of Theobroma (Cacao Butter), Physical properties, test requirements for identity and for purity. Recognized as a standard for medicinal purposes in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810. Cacao butter, food product. See 142.93.

813.9 MISCELLANEOUS MEDICINAL OILS

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Animal Oil, Oil of Cajaput, Oil of Santal, Petroleum, Oil of Turpentine. Descriptions and properties, preparation and standard strengths of tinctures, dilutions, medications, and triturations,

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Croton Oil. Source and description, preparation and strength standards of triturations, tincture, dilutions, and

medications for medicinal purposes.

American Pharmaceutical Assn. National Formulary; 1926. Oil of Bitter Orange, Oil of Orange Flowers, Oil of Bergamot, Rectified Oil of Birch Tar, Oil of Cardamom, Oil of Myrcia, Oil of Pimenta, Oil of Thyme. Descriptions and physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Chaulmoogra Oil, Tentative method of test for solubility in alcohol, determination of viscosity and determination of acid and iodine numbers of alcohol soluble portion using methods of U. S.

Pharmacopoeia.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Oil of Chenopodium. Tentative method for determining amount of ascaridole.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Turpentine Oil (Spirits of Turpentine). Tentative method for determination of color, specific gravity, refractive index, distillation, mineral oil in turpentine.

U. S. Pharmacopoelal Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Methyl Salicylate (Oll of Wintergreen, Oll of Sweet Birch, Oll of Teaberry). Physical properties, identity tests, test requirements for purity and for strength.

U. S. Pharmacopoeial Convention (Inc.). Pharma-S. Pharmacopoeial Convention (Inc.), Pharmacopoeia of U.S. A., 1926. Oils of Anise, Orange, Cade, Cajaput, Caraway, Clove, Chaulmooga, Chenopodium, Cinnamon, Corlander, Eucalyptus, Fennel, Juniper, Lavender, Lemon, Peppermint, Spearmint, Myristica, Tar, Dwarf Pine, Needles, Rosemary, Santal, Sassafras, Mustard, Turpenter, Christophill, Exceptional Numeror, therei tine, Croton Oil. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

References.—Turpentine for commercial purposes. See 211.1. Food and drugs act and regulations. See 810. Creosote oil for medicinal purposes. See 801.3.

814. IODINE AND ARSENIC

814.1 IODINE

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Iodin. Description, physical and chemical properties, preparation and standard strengths of tincture, dilutions, and medications.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Iodine. Physical properties, identity tests, test requirements for purity and percentage of iodine, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References.—Iodine for commercial uses. See 839.9. Food and drugs act and regulations. See 810.

814 2 ARSENTO

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Arsenious Oxid, Hydrogen Arsenid, Arsenious Iodid, Metallic Arsenic, Arsenious Sulphid, and Arsenic Disulphid. Description and properties, preparation and standard strengths of triturations, preparation and standard strengths of solutions of arsenious oxid and of hydrogen arsenid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Arsenicals. Tentative method for determination of arsenic in iron-arsenic tablets, official methods for determining amount of arsenic in sodium cacodylate, in iron methylasenates, in arsphen-

amine and neoarsphenamine.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Misc. Publ. No. 22; 1923 and Amend-ment No. 1 (1924). Regulations for the Control of the Manufacture, Importation and Sale of Arsphenamine. Mandatory in District of Columbia and in interstate traffic, test requirements on stability, solubility, arsenic content, and relative nontoxicity of product, forwarding of samples to

Hygienic Laboratory, etc.
U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Arsenous Iodide, Arsenic Trioxide, Arsphenamine, Neoarsphenamine. For medicinal purposes, physical properties, test requirements for identity and purity, arsphenamine and neoarsphenamine in conformity with requirements of U. S. Public Health Service. Recognized as standards in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810. Arsenic insecticides. See 881.1. Determination of arsenic in foods. See 120. Arsenic trioxide, chemical reagent. See 830.9.

815. ANESTHETICS

815.1 ETHER

American Chemical Society, Journal of Industrial and Engineering Chemistry; July 15, 1929. Ether. A reagent for chemical analysis, requirements on specific gravity, permissible kinds and amounts of impurities, methods of test,

U. S. Pharmacopoeia of U. S. A.; 1926. Ether. Physical properties, identity tests, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810.

815.2 CHLOROFORM

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Chloroform and Carbon Tetrachloride, For chloroform and chloroform mixtures, tentative methds for determining amount of chloroform.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Chloroform in Mixtures. Tentative method for determining amount of chloroform,

U. S. Pharmacopoeial Convention (Inc.) Pharmacopoeia of U. S. A.; 1926. Chloroform. Physical properties, identity tests, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations. See 810.

819. MISCELLANEOUS MEDICINAL AND PHARMACEUTICAL PREPARATIONS

819 1 POWDERS

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Lists several hundred drugs, mostly plant drugs, description of plant, part used for medicinal purposes, preparation and standard strengths of medicated powders and triturations.

American Pharmaceutical Assn. National Formulary; 1926. Powders. Aloe and Canella, Antimonial, Antiseptic, Aromatic, Rubefacient Spice, Aromatic Powder of Chalk, Aromatic Powder of Chalk and Opium, Mild Mercurous Chloride and Jalap, Compound Powder of Bayberry, Com-pound Pancreatin, Anisated Powder of Rhu-barb and Magnesia, Compound Powder of Chalk. Ingredients and their proportions, dose,

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Compound Chalk Powder, Powdered Extracts of Cascara Sagrada, of Colocynth, of Oxgall, of Rhubarb, Standard Powdered Pituitary. Composition, preparation, and dosage requirements. Recognized as standards in enforcement of Federal food and drugs

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Compound Effer-vescing Powder (Seidlitz Powder), Compound Powder of Glycyrrhiza (Comp. Licorice Powder), Mercury with Chalk (Gray Powder). Composition, preparation, physical properties, identity tests, test requirements for purity, dosage. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Compound Powder of Jalap, Compound Powder of Rhubarb (Gregory's Powder), Powder of Ipecac and Opium (Dover's Powder). Composition, preparation, physical properties, and dosage requirements. Recognized as standard in enforcement of Fed-

eral food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Powdered Opium, Powdered Extracts of Belladonna, of Colchicum, of Hyoscyamus, of Nux Vomica, of Stramonium. Composition, preparation, test requirements for percentage of alkoloid, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References.—Other alkaloids. See 811. Food and drugs act and regulations. See 810.

819.2 PREPARATIONS IN TUBES

819.3 IODUM-POTASSII

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Potassium Iodide. Physical properties, identity tests, test requirements for purity and for strength, dosage. For use as a medicinal agent and as a reagent for chemical analysis. Recognized as standard in enforcement of Federal food and drugs act.

References,-Food and drugs act and regulations. See 810.

819.4 MEDICINALS OF ANIMAL ORIGIN

American Pharmaceutical Assn. National Formulary; 1926. Extract of Beef. For medicinal purposes, description, tests for identity and

purity. Recognized as standard in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Pepsin in Liquids. Tentative methods for preparation of sample and reagents, and for percentage of pepsin.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Oxgall. Physical properties, identity and purity tests. Recognized as standard in enforcement of Federal food and

drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Pancreatin. Source, physical properties, test requirements for purity, assay test requirements for starch digestive power and for casein digestive power, dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoetal Convention (Inc.). Pharma-copoeta of U. S. A.; 1926. Pepsin. Physical properties, identity tests, assay test requirements for proteolytic power, dosage. Recognized as standard in enforcement of Federal food and

drugs act.

U. S. Pharmacopoeial Convention (Inc.). copoeia of U. S. A.; 1926. Solution of Pituitary. Strength requirements, preparation of solution, test requirements for strength, preparation of standard powdered pituitary, dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Thyroid. Thyroxin. Physical properties, identity tests, test requirements for purity and for percentage of iodine, dosage. Recognized as standard in enforcement

of Federal food and drugs act.

References.—Biological medicinal agents. See 812. Cod liver oil. See 813.2. Food and drugs act and regulations. See 810.

819.9 DRUGS AND MEDICINALS NOT ELSEWHERE CLASSIFIED

American Drug Manufacturers Assn. Pharmaceutical Standards Including Tolerances and Methods of Analysis. Tolerances and methods of analysis for 26 compressed and 17 hypodermic

American Pharmaceutical Assn. National Formulary; 1926. Vanilla. As used in preparing tincture of vanilla for medicinal purposes, description and physical properties, tests for purity and identity. Recognized as standard in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Bar-bital and Phenobarbital. Method of testing for purity, tentative test for melting point according

to U. S. P. method. Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Iodo-form. Tentative method for determining percentage of iodoform.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Menthol. Tentative method for determining percent-

age of total menthol.

Assn. of Official Agricultural Chemists. ssn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Drugs. Nitroglycerin. Methods for preparation of samples and reagents, and for percentage of nitroglycerin.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Hexamethylenetetramine in Tablets. Tentative Methods. Preparation of sample and reagent,

determination of purity.

and Tentative Methods of Analysis: 1930. Pv-

ramidon. Tests for identity and purity.
U. S. Gov., Treasury Dept. U. S. Public Health
Service. Reprint No. 1027; 1925. Standardization of Pollen Extracts by the Complement Fixation Test. For ragweed pollen, method of preparation of extract, procedure for determining strength of an extract by complement fixation method, danger in use of the standard for other than relatively stable antigenic extracts.

Assn. of Official Agricultural Chemists. Official | U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. 630 Drugs and Medicinals. Physical properties, identity tests, test requirements for purity and in some materials tests for percentage of main or controlling ingredient, dosage. Recognized as standards in enforcement of Federal food and drugs act.

820-829 ACIDS (EXCEPT COAL-TAR) AND ANHYDRIDES, ALCOHOL, ETC.

820. GENERAL ITEMS

American Chemical Society. Vol. 12, Dec., 1920, and vol. 13, May, 1921, of Journal of Industrial and Engineering Chemistry. Committee Recommendation. Unit Weights for the Purchase of Reagents. Gives the unit weight in which reagent should be ordered and packaged.

821. ACIDS AND ANHYDRIDES

821.0 GENERAL ITEMS

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., C. P. No. 1, Rev. 1: 1929; and S. R. A., C. P. No. 2: 1928. Regulations for the Enforcement of the Caustic Poison Act. Regulations on labeling of dangerous caustic or corrosive substances used in household, includes providing the common name, the word poison, and an antidote, list of substances and their strengths covered by act, list of acceptable antidotes.

821.1 ACETIC ACID AND ANHYDRIDE

American Chemical Society, vol. 18. June and July, 1926, of Journal of Industrial and Engineering Chemistry. Acetic acid, glacial, acetic anhydride. Reagents for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Acetic Acid. Description and properties, preparation and standard strengths of solution, dilutions, and triturations for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). copoeia of U. S. A.; 1926. Acetic Acid, Diluted Acetic Acid, Glacial Acetic Acid. As medicinal agents and as reagents for chemical analysis,

physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act. U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Acetic Anhydride. Reagent for chemical tests, physical properties,

identity tests, test requirements for purity and strength.

References.—Acidimetric standards (benzoic acid). See 802.1. Unit weights. See 820. Food and drugs act and regulations. See 810. Acetic acid as a laun-dry sour. See 871.25. Vinegar. See 154.70, 154.71.

821.2 BORIC ACID AND ANHYDRIDE

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Boric Acid. Description and properties, preparation and standard strengths of triturations for medicinal purposes.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis: 1930. Preservatives and Artificial Sweeteners. Boric Acid. Qualitative and quantitative test methods.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Boric Acid. As a

medicinal, physical properties, identity tests, test requirements for purity and for strength, dosage.

Recognized as standard in enforcement of Federal food and drugs act.

References.—Acidimetric standards (benzoic acid). See 802.1. Unit weights. See 820. Food and drugs act and regulations. See 810.

821.3 HYDROCHLORIC (MURIATIC) ACID

American Chemical Society, vol. 17, July, 1925, of Journal of Industrial and Engineering Chemis-try. Hydrochloric Acid. Reagent for chemical analysis, permissible impurities and amounts. test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Hydrochloric Acid. Description and properties, preparation and standard strengths for solution, dilu-tions, for medicinal purposes.

Manufacturing Chemists Assn. of the U.S. Hydrochloric Acid: 1903. Tables of specific gravity. degrees Twadell, and per cent HCl for densities from 1 to 25.5 degrees Baumé, corrections for

temperature. U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Concentrated Hydro-chloric Acid. As a reagent for chemical analysis, physical properties, test requirements for purity and strength.

U. S. Pharmacopoeial Convention (Inc.). copoeia of U. S. A.; 1926. Hydrochloric Acid and Diluted Hydrochloric Acid. As medicinal agents and as reagents for chemical analysis, physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

References.—Acidimetric standards (benzolc acid). See 802.1. Unit weights, labeling requirements. See 820, 821.0. Food and drugs act and regulations. See 810

821 4 HYDROFLHORIC ACID

American Chemical Society, vol. 18, June and July, 1926, and corrected in vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry. Hydrofluoric Acid. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Hydrofluoric Acid. Description and properties, preparation and standard strengths of solution and dilutions for medicinal purposes.

References.—Acidimetric standards (benzoic acid). See 802.1. Unit weights, labeling requirements. See 820, 821.0. Food and drugs act and regulations. See 810.

821.5 NITRIC ACID

American Chemical Society, vol. 17, July, and correction in vol. 18, June and July, 1926, of Journal of Industrial and Engineering Chemistry. Nitric Acid. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Nitric Acid. Description and properties, preparation and standard strengths of solution and of dilutions for medicinal purposes.

Manufacturing Chemists Assn. of the U. S. Nitric Acid; 1926. Tables of specific gravity, density in degrees Twadell, and percentage of HNO, for densities of 10° to 48.50° B., corrections for

temperature.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Nitric Acid. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Acidimetric standards (benzoic acid). See 802.1. Unit weights, labeling requirements. See 820, 821.0. Food and drugs act and regulations. See 810.

821.6 OXALIC ACID

American Chemical Society. Journal of Industrial and Engineering Chemistry, vol. 17, July, 1925, and Analytical Edition of J. I. E. C., July 15, 1929, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Oxalic Acid. Permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Oxalic Acid. Description, properties, sources, preparation and standard strengths of triturations, tincture, dilu-tions and medications for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Oxalic Acid. Reagent for chemical analysis, physical properties, test requirements for purity, permissible ash.

References.—Oxalic acid as laundry sour. See 871.25. Acidimetric standards (benzoic acid). See 802.1. Unit weights. See 820. Food and drugs act and regula-tions. See 810.

821 7 SULPHURIC AND SULPHUROUS ACID

American Chemical Society, vol. 17, July, 1925, of Journal of Industrial and Engineering Chemistry. Sulphuric Acid. Reagent for chemical analysis, permissible impurities and amounts, strength, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Sulphuric Acid. Description and properties, preparation and standard strengths of solution and dilutions

for medicinal purposes.

American Railway Assn. Signal Section. 1928. Electrolyte. Dilute sulphuric acid for storage batteries, allowable variation from specified specific gravity, allowable percentages of primary and secondary impurities.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Sulfurous Acid. Qualitative test, determination of total sulfurous acid and of free sulphurous acid.

Manufacturing Chemists Assn. of the U. S. Sul-phuric Acid; 1926. Tables of specific gravity, of the degrees Twadell, per cent acid, weight, per cent of V., pounds O. V. in 1 cubic foot, and freezing point for densities from 0° to 66° B., approximate boiling points, corrections for temperature.

U. S. Gov., Dept. of Commerce, Bureau of Standards C19; 1924. Standard Density and Volumetric Tables. Includes tables of density of solu-

tions of sulphuric acid.

U. S. Gov., Federal Specifications Board. W-B-131; 1930. Storage Batteries for Ignition, Light-ing, and Starting. Includes sulphuric acid electrolyte, requirements on density, absence of color, permissible suspended matter, permissible chemical impurities and amounts.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Concentrated Sulphuric Acid. As a reagent for chemical analysis, physical properties, test requirements for identity and purity.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sulphuric Acid and Diluted Sulphuric Acid. As medicinal agents and also as reagents for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sulphurous Acid. Reagent for chemical analysis, physical properties, test requirements for purity and strength.

References.—Acidimetric standards (benzoic acid).

See 802.1. Unit weights, labeling requirements. See 820, 821.0. Food and drugs act and regulations. See 810.

821.9 MISCELLANEOUS ACIDS AND ANHYDRIDES

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 20, Sept., 1928, and Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Citric Acid, Tartaric Acid. For each, permissible kinds and amounts of impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 18, June and July, 1926, and Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Perchloric Acid, Phosphoric Acid. For each, permissible kinds and amounts of impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, vol. 3, No. 2, Apr. 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Per-chloric Acid, 60 Per Cent. Requirements on purity, permissible nonvolatile matter, chloride, nitrogen compounds, sulphate, ammonia, heavy metals, and iron, methods of test.

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry. Molybdic Acid, 85 Per Cent, Molybdic Acid Anhydride. Reagents for chemical analysis, per-missible impurities and amounts, test require-Reagents for chemical analysis, per-

ments and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Chromic Acid, Hydrocyanic Acid, Nitrohydrochloric Acid, Phosphoric Acid. Description and properties, preparation and standard strengths of solutions and of dilutions, for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of of the U. S.; 1914. Citric Acid, Gallic Acid, Tannic Acid, Tartaric Acid, Descriptions and properties, preparation and standard strengths of triturations, tinctures, dilutions, and medications for medicinal purposes,

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Formic Acid, Lactic Acid. Description and properties, preparation and standard strengths of solutions, dilutions, and medications, for medicinal purposes.

American Leather Chemists Assn. Methods of Sampling and Analysis; 1930. Lactic Acid. Provisional methods for determination of free sulfuric acid, volatile acid, and of free acid and anhydride.

American Pharmaceutical Assn. National Formulary; 1926. Bromauric Acid. Description and physical properties, test requirements for purity.

Recognized as standard in enforcement of Fed- | 822.1 AMYL ALCOHOL eral food and drugs act.

American Pharmaceutical Assn. National Formulary; 1926. Formic Acid. Description and physical properties, specific gravity and test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Pre-servatives and Artificial Sweeteners. Formic Acid. Preparation of reagents, description of apparatus, and method for quantitative determi-

nation of formic acid in sample.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Acetyltannic Acid, Citric Acid, Hypophosphorous Acid, Lactic Acid, Oleic Acid, Phosphoric Acid, Diluted Phosphoric Acid, Stearic Acid, Tannic Acid, Tartaric Acid, Trichloracetic Acid. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Molybdic Acid, Phosphoric Acid, Phosphotungstic Acid, Tartaric Acid. Reagents for chemical analysis, description and physical properties, test requirements for purity.

References.—Coal-tar acids. See 802.1. Addimetric standards (benzoic acid). See 802.1. Unit weights, labeling requirements. See 820, 821.0. Food and drugs act and regulations. See 810.

822. ALCOHOLS

822.0 GENERAL ITEMS

American Society for Testing Materials. Tentative Methods, D 268-31T; 1931. Method of Sampling and Testing Lacquer Solvents and Diluents. Applies to solvents and diluents for use in manufacture of nitrocellulose lacquer, method of sampling, methods of test for specific gravity, color, distillation, residue, nonvolatile matter, residual odor, water, acidity, alkalinity, ester value, copper corrosion, sulphur, dimethylketone, and potassium permanganate test.

U. S. Gov., Congress, section 3249, Revised Statutes. Defines proof spirits as alcoholic liquor which contains 50 per cent by volume of alcohol of given specific gravity. For definition of de-grees proof see Gauger's Manual of Treasury

Dept., 1913 edition.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulations 2; 1927. Relating to Permits as Provided in Title II, National Prohibition Act for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Covers regulations on permits to make, store, transport, purchase, export, import, administer and prescribe intoxicating liquors for nonbeverage purposes.

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulations No. 3; 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol. Includes laws and mandatory regulations on issuance of permits to industrial alcohol plants, bonded warehouses, denaturing plants, on payment of taxes, on manufacture of alcohol, on transportation and sale of alcohol, etc. Appendix contains formulas for denatured alcohols,

U. S. Gov., Treasury Dept. Internal Revenue. U. S. Internal Revenue Gaugers' Manual; 1913. Proof Spirit. Definition of proof spirit as regards percentage by volume of absolute alcohol and of water, definitions of 100 proof, 200 proof,

etc.

American Chemical Society. vol. 18, June and July, 1926, of Journal of Industrial and Engineering Chemistry as corrected in July 15, 1929 issue. Amyl Alcohol. Reagent for chemical analysis, permissible kinds and amounts of impurities, methods of test.

American Society for Testing Materials. Tentative Specifications. D319-30T; 1930. Amyl Alcohol (Synthetic). Requirements on purity, specific gravity, color, distillation range, residue, odor, water, and acidity, methods of test as in A. S. T. M. Spec. D 268. For use with cellulose ester coatings.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Amyl Alcohol. Reagent for chemical analysis, physical properties, boiling point, specific gravity, permissible nonvolatile residue.

References.—Methods of testing. See also 822.0. Definitions, regulations on making and using alcohol. See 822.0.

822.2 BUTYL ALCOHOL

American Society for Testing Materials. Tentative Specifications, D 304-30T; 1930. Butanol (Normal Butyl Alcohol). For lacquer solvent or diluent, requirements for purity, specific gravity, color, distillation range, residue, odor, water, acidity, in accordance with A. S. T. M. test method D 268.

References.—Methods of testing. See also 822.0. Definitions, regulations on making and using alcohol. See 822.0.

822.3 ETHYL ALCOHOL, DENATURED

U. S. Gov., Treasury Dept. Bureau of Prohibition. Regulations No. 3; 1927, and Appendix of 1930, Industrial Alcohol and Denatured Alcohol. For specially denatured alcohols, appendix contains specifications for 70 formulas, requirements on percentages by volume of ethyl alcohol and other constituents, test requirements for physical or chemical properties of some of the constituents. lists of the preparations and manufactures in which the use of the specially denatured alcohols are permitted.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulations No. 3; 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol, Appendix contains Formula No. 1 and No. 2 for completely denatured alcohol, including percentage requirements for ethyl alcohol, wood alcohol, and other constituents, physical property and chemical composition requirements of the vari-

ous constituents.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Alcohol, Denatured. For use as a solvent in the manufacture of pharmacopoeial extracts and resins, but not remaining in the finished product, permissible addition of 5 to 10 per cent of methanol or of acetone to ethyl alcohol in order to make nonpotable.

References.—Ethyl alcohol, wood alcohol. See 822.4, 822.5. Methods of testing. See also 822.0. Definitions, regulations on making and using alcohol. See

822.4 ETHYL ALCOHOL, PURE GRAIN.

American Chemical Society, vol. 20, Sept., 1928, of Journal of Industrial and Engineering Chemistry. Ethyl Alcohol. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Chemical Society, vol. 20, Sept., 1928, of Journal of Industrial and Engineering Chemis-try. Ethyl Alcohol, Absolute. Reagent for

chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Dispensing Alcohol. Requirements on percentage of ethyl alcohol, preparation, and tests for identity.

alconol, preparation, and tests for identity.

U. S. Gov., Dept. of Commerce, Bureau of Standards. C19; 1924. Standard Density and Volumetric Tables. Includes tables of density of mixtures of ethyl alcohol and water, specific gravity of such mixtures, and percentages of volume corresponding to various percentages of

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Alcohol. Defined in regulations as ethyl alcohol or spirit of wine with proof of 160° or more and not including whiskey, brandy, rum, or gin.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Medicated Alcohol. Gives 4 formulas by which medicated alcohol is permitted to be prepared by druggists and pharmacists.

U. S. Pharmacopoeial Convention (Inc.). copoeia of U. S. A.; 1926. Alcohol, Dehydrated (absolute) Alcohol, Diluted Alcohol. For medicinal purposes and also as reagents for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act,

References.—Denatured alcohol. See 822.3. Methods of testing. See also 822.0. Definitions, regulations on making and using alcohol. See 822.0. Food and drugs act and regulations. See 810.

822.5 METHYL OR WOOD ALCOHOL (METHANOL)

American Chemical Society, vol. 20, Sept., 1928, of Journal of Industrial and Engineering Chemis-try as corrected in July 15, 1930, issue. Metha-nol. Reagent for chemical analysis, permissible kinds and amounts of impurities, methods of tests.

U.S. Gov., Dept. of Commerce, Bureau of Standards C19; 1924. Standard Density and Volumetric Tables. Includes tables of density and of specific gravity of mixtures of methyl alcohol and water, and percentages by volume corresponding properties and percentages. sponding to various percentages by weight.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulations No. 3, 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol, Ap-pendix contains specifications for wood alcohol for use in preparation of completely denatured alcohol, including manufacture, color, and specific gravity requirements, permissible acetone content and esters, required bromine absorption.

References.—Denatured alcohol. See 822.3. Methods of testing. See also 822.0. Definitions regulations on making and using alcohol. See 822.0.

822.9 MISCELLANEOUS ALCOHOLS

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Terpin Hydrate. A dihydric alcohol for medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations.

823. GLYCERINE

American Institute of Homeopathy. Homeopathic Pharmacopoela of the U. S.: 1914. Glycerin. Description, properties, specific gravity, tests for identifying material for use in homeopathic medicine

U. S. Gov., Federal Specifications Board O-G-491; 1931. Glycerin (Glycerol). For 3 grades of which U. S. P. grade is to conform to specifications of U. S. Pharmacopoeia. For high gravity or dynamite glycerine and for yellow distilled, requirements on appearance, color, odor, specific gravity, acidity or alkalinity, ash, and chlorides, methods of sampling and testing.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Glycerin, For medical purposes, physical properties, identity tests, test requirements for purity, dosage. Recognized as standard in enforcement of Federal food and drugs act.

References.-Food and drugs act and regulations. See S10.

824. ALDEHYDE

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Formaldehyde Solutions. Official methods for determination of formaldehvde

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservative and Artificial Sweeteners. Formaldehyde. Preparation of sample, test methods for indicating presence of formaldehyde,

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Benzaldehyde. For medical purposes, physical properties, test requirements for purity and strength, dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.), Pharmacopoeia of U. S. A.; 1926. Oil of Cinnamon containing 80 per cent of Cinnamic Aldehyde. For medical purposes, physical properties of the oil, identity tests, test requirements for purity, test requirements for content of cinnamic aldehyde. dosage. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Paraformaldehyde. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U.S. A.; 1926. Paraldehyde (Paracetaldehyde). For medical purposes, physical properties, identity tests, test requirements for purity, dosage. Recognized as standard in enforcement

of Federal food and durgs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Solution of Formaldehyde. For medical purposes, physical properties, identity tests, test requirements for purity and strength. Recognized as standard in enforce-ment of Federal food and drugs act.

References.—Preservatives and artificial sweeteners. See also 892. Insecticides. See also 881. Food and drugs act and regulations. See 810.

830-839 CHEMICAL COMPOUNDS (EXCEPT MEDICINALS, ACIDS, ALCOHOLS, AND COAL-TAR PRODUCTS)

830. GENERAL ITEMS

American Chemical Society, vol. 12, Dec., 1920, and vol. 13, May, 1921, of Journal of Industrial and Engineering Chemistry. Unit Weights for the Purchase of Reagents. Gives the unit weight in which the reagent should be ordered and packaged. A committee recommendation.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. S. R. A., C. P. No. 1, Rev. 1; 1929 and S. R. A., C. P. No. 2; 1928. Regulations for Enforcement of the Caustic Poison Act. Regulations on labeling of dangerous caustic or corrosive substances used in household, included providing the common name, the word poison, and an antidote, list of substances and their strengths covered by act, list of acceptable antidotes.

U. S. Gov., Dept. of Commerce, Bureau of Standards C19; 1924. Standard Density and Volumetric Tables. Includes tables of density and weight of water at various temperatures.

weight of water at various temperatures.
U. S. Gov, Dept. of Commerce, Bureau of Standards C35; 1919. Melting Points of Chemical Elements, and Other Standard Temperatures.
Table of melting points of elements and boiling points of some liquids, with the values indicated which are used by the bureau as standard temperatures for calibration of thermometers and pyrometers.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulations No. 3; 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol. Appendix contains formulae for 70 specially denatured alcohols, requirements on percentages by volume of alcohol and other constituents, test requirements for physical or chemical properties of some of the constituents, lists of the preparations and manufactures in which the use of the specially denatured alcohols are permitted.

831. AMMONIUM AND AMMONIUM COM-POUNDS

831.1 ANHYDROUS AND AQUA AMMONIA

American Chemical Society, vol. 17, July, 1925, of Journal of Industrial and Engineering Chemistry. Ammonium Hydroxide. Chemical reagent, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Ammonium Hydrate. Description and properties, preparation and standard strength of solution and of dilutions for medicinal purposes.

Manufacturing Chemists Assn. of the U. S. Aqua Ammonia; 1903. Tables of specific gravity and per cent NH, for densities from 10° to 29° B., corrections for temperature.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC124; 1924. Recommended Specification for Powdered Ammonia. For a mixture of sodium carbonate and ammonium salts in powdered form, requirements on percentage of ammonia, alkalinity, permissible insoluble matter and free alkali, methods of inspection and test.

und the area, hericover to the control of the control of the copies of U. S. A.; 1926. Aqua Ammonia. Physical properties, identity tests, test requirements for purity and strength. Recognized as standard in enforcement of Federal food and drugs act.

 $\it References.—Unit$ weights. See 830. Food and drugs act and regulations. See 810.

831.2 BICHROMATE, AMMONIUM

831.3 CARBONATE AND BICARBONATE, AMMO-NIUM

American Chemical Society, vol. 18, June and July, 1926, of Journal of Industrial and Engineering Chemistry as corrected in July, 1930, issue. Ammonium Carbonate. Reagent for chemical analysis, permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoela of the U. S.; 1914. Ammonium Carbonate. Description and properties, preparation and standard strengths of solution and of

dilutions for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Ammonium Carbonate. Reagent for chemical analysis, physical properties, identity tests, test requirements for purity and strength.

U. S. Pharmacopoelal Convention (Inc.). Pharmacopoela of the U. S. A.; 1926. Ammonium Carbonate. Physical properties, identity test and test requirements for purity and strength. Recognized as standard in enforcement of Federal food and drugs act.

References.—Unit weights. See 830. Food and drugs act and regulations. See 810.

831.4 CHLORIDE, AMMONIUM

American Chemical Society, vol. 18, June and July, 1926, and vol. 29, Sept., 1928, of Journal of Industrial and Engineering Chemistry. Ammonium Chloride. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Ammonium Chlorid. Description and properties, preparation and standard strengths of solutions, dilutions, medications, and triturations for medicinal pur-

pose

U. S. Gov., Federal Specifications Board O-A-491; 1930. Ammonium Chloride (Sal Ammoniae). Grade for battery purposes, grade B for galvanizing purposes, requirements on percentage of ammonium chloride and screen grading for each grade, heavy metal test for grade A, using test methods of U. S. Pharmacopoeia.

U. S. Pharmacopoelal Convention (Inc.). Pharmacopeia of U. S. A.; 1926. Ammonium Chloride. Reagent for chemical analysis, physical properties, identity tests, tests for purity and for

strength.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A. : 1926. Ammonium Chloride. Physical properties, identity tests, tests for purity and strength. Recognized as standard in enforcement of Federal food and drugs act.

832. POTASSIUM AND POTASSIUM COM-POUNDS

832.1 CYANIDE OF POTASSIUM

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Potassium Cyanid. Description and properties, maximum dose, preparation and standard strengths of triturations for medicinal purposes.

References.—Unit weights, labeling of poisons. See 830.

832.2 CARBONATE OF POTASH.

American Chemical Society. Journal of Industrial and Engineering Chemistry, vol. 18, June and July, 1926, and vol. 3 of Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Potassium Carbonate, anhydrous. Permissible kinds and amounts of impurities, methods of test. American Institute of Homeopathy. Homeopathic

Pharmacopoeia of the U. S.; 1914. Potassium Carbonate. Description and properties, preparation and standard strengths of triturations for

medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Potassium Carbonate. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Unit weights. See 830. Food and drugs act and regulations. See 810.

832.3 CRUDE POTASH AND CAUSTIC POTASH (HYDROXIDE)

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 17, July, 1925, vol. 18, June and July, 1926, and vol. 3 of Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Potassium Hydroxide. Permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy, Homeopathic Pharmacopoeia of the U. S.; 1914. Potassium Hydrate. Description and properties, preparation and standard strengths of solution, dilutions, and medications for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Potassium Hydroxide (Caustic Potash). As a medicinal agent and as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Unit weights, labeling of poisons. See 830. Food and drugs act and regulations. See 810.

832.4 POTASH SALTS

American Chemical Society, vol. 18, June and July, 1926, of Journal of Industrial and Engineering Chemistry. Ammonium and Potassium Sulfate. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1929, and April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Potassium and Sodium Tartrate. Permissible kinds and amounts of impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 19, May, 1927, and vol. 3 of Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Potassium Bromate, Potassium Bromide, Potassium Iodate, Potassium Iodide, Potassium Phosphate. For each, permissible kinds and amounts of impurities, methods of test.

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry as corrected in July 15, 1930, issue. Potassium Chlorate. Reagent for chemical analysis, permissible kinds and amounts of impurities, meth-

ods of test

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 18, June and July, 1926, and vol. 3 of Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Potassium Chloride, Potassium Permanganate. Permissible kinds and amounts of impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry. July 15, 1929. Potassium Chromate. A reagent for chemical analysis, permissible kinds and amounts of im-

purities, and methods of test.

purities, and methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 17, July, 1925, and Analytical Edition of J. I. E. C., July 15, 1929, and Apr. 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Potassium Dichromate. Permissible kinds and amounts of impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 20, Sept., 1928, and vol. 3 of Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Potassium Ferricyanide and Potassium Ferrocyanide. Permissible kinds and amounts of impurities, methods of test.

American Chemical Society, vol. 18, June and July, 1926, of Journal of Industrial and Engineering Chemistry. Potassium Sulfate. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Potassium Acetate, Potassium Permanganate. Description and properties, preparation and standard strengths of solutions and dilutions for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Potassium Arsenite. Description and properties, preparation and standard strengths of solution, dilutions, and

medications for medicinal purposes.

American Institute of Homeopathy, Homeopathic Pharmacopoela of the U. S.; 1914. Potassium Bromid, Potassium Chlorate. Descriptions and properties, preparation and standard strengths of triturations, solutions, allutions, and medications for medicinal purposes.

833. CALCIUM AND CALCIUM COMPOUNDS. INCLUDING LIME

833.1 CALCIUM CARBIDE

U. S. Gov., Federal Specifications Board O-C-101; 1930. Calcium Carbide. For production of acety-lene gas, requirements on general quality, yield and quality of acetylene gas per pound of carbide, screen grading for 4 size grades, methods of test for gas yield and for phosphine in gas, shipment in drums.

833.2 CALCIUM CHLORIDE

American Chemical Society, vol. 20, Sept., 1928, of Journal of Industrial and Engineering Chemistry. Calcium Chloride, Anhydrous. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1930, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Calcium Chloride, CaCl₂·2H₂O. Requirements on content of calcium chloride, alkalinity, acidity, permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Calcium Chlorid. Description and properties, preparation and standard strengths of solution, dilutions, and

medications for medicinal purposes.

American Society for Testing Materials. Tentative Specifications D 98-30T; 1930. Calcium Chloride for Dust Prevention. For use on highways, screen analysis and chemical composition requirements.

American Water Works Assn. Water Works Practice Manual; 1925. Chemicals Used in Water Purification. Chloride of Lime. Requirements

on percentage of available chlorine.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Calcium Chloride. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test re-quirements for identity and for purity. Recog-nized as standard in enforcement of Federal food and drugs act.

References.—Chloride of lime bleach. See 891. Unit Weights. See 830. Food and drugs act and regulations. See 810.

833.3 CALCIUM CARBONATE

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1930, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals, Calcium Carbonate, Requirements on alkalinity, permissible kinds and amounts of

impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1930, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Calcium Carbonate, Low in Alkalies. Permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Calcium Car-bonate of Hahnemann. Preparation and standard strengths of triturations for medicinal pur-

poses.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Calcium Carbonate. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

834.5 SODIUM BICARBONATE

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 18, June and July, 1926, and vol. 3 of Analytical Edition of J. I. E. C., April 15, 1931. Recommended Speci-fications for Analytical Reagent Chemicals. Sodium Bicarbonate. Permissible kinds and amounts of impurities, methods of test.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sodium Bicarbonate. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food

and drugs act.

References.—Baking soda, laundry soda. See 155.2, 834.7. Unit weights. See 830. Food and drugs act and regulations. See 810.

834.6 SODIUM SILICATE (WATER GLASS)

American Railway Assn. Freight Container Bu-reau. Tentative Specifications. Circulars No. 6

Boxes for Boots and Shoes, and Corrugated Strawboard Boxes for Boots and Shoes. In-cludes silicate of soda used in construction of boxes, requirements on composition and specific

834.7 HYDRATED OR SAL SODA (WASHING SODA)

U. S. Gov., Federal Specifications Board P-S-641; 1930. Laundry Soda (Washing Soda). For powder composed of sodium carbonate and bicarbonate, requirements on alkalinity, matter insoluble in water, methods of sampling and testing

834.8 CAUSTIC SODA OR LYE

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 17, July, 1925, vol. 18, June and July, 1926, and vol. 3 of Analyti-cal Edition of J. I. E. C., April 15, 1931. Recom-mended Specifications for Analytical Reagent Chemicals. Sodium Hydroxide. Permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Sodium Hydrate. Description and properties, preparation and standard strengths of solution, dilutions, and medications for medicinal purposes.

American Water Works Assn. Water Works Prac-tice Manual; 1925. Chemicals Used in Water Purification. Caustic Soda. For 76 per cent test sodium oxide, solid, ground, and flake, requirements on content of sodium hydroxide.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Soda Lye. Official methods for determination of carbonate and of

hydroxide.

U. S. Gov., Federal Specifications Board P-S-631; 1930. Caustic Soda (Lye). In flake, powdered or granular form, for cleaning purposes, requirements on percentage of sodium hydroxide and of

carbonate, methods of test.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Sodium Hydroxide. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References,—Unit weights, labeling of poisons. See 832. Food and drugs act and regulations. See 810.

834.9 MISCELLANEOUS SODIUM COMPOUNDS

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1929, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Potassium and Sodium Tartrate. Permissible kinds and amounts of impurities, methods of test.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930 Waters, Brine, and Salt. Brine, Tentative Meth-ods. Determination of iodine in presence of chlorine and bromine, of bromine in presence of chlorine but not iodine, and of bromine in pres-

ence of chlorine and iodine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930 Waters, Brine, and Salt. Salt. Tentative methods for determination of moisture, matters insoluble in water, sulphate, calcium, and magnesium.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Sodium oxalate. Sample No. 40b prepared and sold by the bureau, for use in industry and by others as an oxidimetric standard, but may be

used for acidimetry. For use as a standard in volumetric analysis see also Bur. of Standards (lirc. No. 40. The use of sample No. 40c (which is to replace 40b) as a standard in volumetric analysis is described in B. S. Circ. No. 381.

U. S. Gov., Dept. of Commerce, Burcau of Standards C381; 1930. Sodium Oxalate as a Standard in Volumetric Analysis. Describes the preparation of sodium oxalate as a primary volumetric standard, tests for impurities, stability, recommended procedure for use in oxidimetry

U. S. Gov., Federal Specifications Board 558; 1928. Trisodium Phosphate, Technical (Phosphate Cleaner). Granulated product used for cleaning typewriter parts, floors, metals, etc., where abrasive action is not desired, requirements on alkalinity, percentage of phosphoric anhydride, insoluble matter, and sieve grading, methods of sampling and test.

U. S. Gov., Federal Specifications Board O-S-601; 1930. Sodium Fluoride, Insecticide, A powder suitable for dusting, requirements on general physical quality, content of sodium fluoride, permissible impurities, methods of sampling and test.

U. S. Gov., Federal Specifications Board O-S-606; 1930. Anhydrous Sodium Sulphite for Photography. Requirements on solubility, permissible insoluble matter, permissible sodium carbonate content, heavy metal content, iron content, percentage of pure material, methods of sampling

- U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sodium Acetate, Bromide, Chloride, Nitrite, Phosphate, Thiosulphate. As medicinal agents and as reagents for chemical analysis, physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.
- U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.: 1926. Sodium Benzoate, Bi-phosphate, Cacodylate, Citrate, Indigotindisul-phonate, Iodide, Salicylate, Sulphatc. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.
- U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Sodium Bisulphite, Bitartrate, Tartrate, Oxalate, Sulphide. Reagents for chemical analysis, physical properties, test requirements for purity.

References.—Table salt and dairy salt. See also 1814. Bisulphite bleach. See also 8914. Unit weights, labeling of poisons. See 830. Food and drugs act and regulations. See 810. Test for arsenic in sodium cacodylate. See 814.2.

835. BARIUM COMPOUNDS

835 1 BARTUM CARBONATE

American Chemical Society, Journal of Industrial and Engineering Chemistry, vol. 19, May, 1927, and Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analyti-cal Reagent Chemicals. Barium Carbonate. Permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Barium Carbonate. Description and properties, preparation and standard strengths of triturations for medicinal purposes.

References .- Unit weights. See 830.

835.2 BARIUM CHLORIDE

American Chemical Society, vol. 17, 1925, July, 1925, of Journal of Industrial and Engineering

Chemistry. Barium Chloride. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

amounts, test requirements and procedure.
American Institute of Homeopathy. Homeopathic
Pharmacopoeia of the U. S.; 1914. Barium
Chlorid. Description and properties, preparation and standard strengths of solution, dilutions, medications, and triturations for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Barium Chloride. Reagent for chemical analysis, physical properties, test requirements for purity.

References .- Unit weights. See 830.

835.3 BARIUM DIOXIDE

835.4 BARIUM HYDROXIDE

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry as corrected in July 15, 1929, issue. Barium Hydroxide. Reagent for chemical analysis, permissible impurities and amounts, test procedure.

U. S. Pharmacopoeial Convention (Inc.). copoela of U. S. A.; 1926. Barium Hydroxide. Reagent for chemical analysis, physical proper-ties, test requirements for purity and for

References .- Unit weights. See 830.

835.5 BARIUM NITRATE

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry. Barium Nitrate. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopocia of U. S. A.; 1926. Barium Nitrate. Reagent for chemical analysis, physical properties, test requirements for purity.

References,-Unit weights. See 830.

835.6 BARIUM SULPHIDE

835.7 BARIUM IODIDE

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Barium Iodid. Description and properties, preparation and standard strengths of tincture, dilutions, medications, and triturations.

835.8 BARIUM ACETATE

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Barium Acetate. Description and properties, preparation and standard strengths of solutions, dilutions, medications, and triturations for medicinal purposes.

835.9 MISCELLANEOUS BARIUM COMPOUNDS

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Barium Sulphate. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Barium sulphate paint pigments. See 842.86, 842.87. Food and drugs act and regulations. See 810.

836. BISMUTH COMPOUNDS

836.1 BISMUTH CHLORIDE

836.2 BISMUTH NITRATE

836.3 BISMUTH SUBNITRATE

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.: 1914. Bismuth

medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Bismuth Subnitrate. For medicinal purposes, description and physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.-Food and drugs act and regulations. See 810.

836.9 MISCELLANEOUS BISMUTH COMPOUNDS

American Chemical Society, vol. 19, May, 1927, and corrections in same vol. of Journal of Industrial and Engineering Chemistry. Sodium Bismuthate. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Bismuthous Oxid. Description and properties, preparation and standard strengths of triturations for medic-

inal purposes.
U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Bismuth Subcarbonate, Bismuth Subgallate, Bismuth Subsalicylate. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act.

References .- Unit weights. References.--Unit weights. See 830. Food and drugs act and regulations. See 810.

837. CHROMIUM AND MOLYBDENUM COM-POUNDS

837.1 CHROMIUM POTASSIUM SULPHATE

837.2 CHROMIUM TRIOXIDE

American Chemical Society, Journal of Industrial and Engineering Chemistry, Journal or Industrial and Engineering Chemistry, Analytical Edition, vol. 3, No. 2, Apr. 15, 1931. Recommended Speci-fications for Analytical Reagent Chemicals. Chromium Trioxide. Requirements on purity, permissible insoluble matter, chloride, sulfate, alkali salts, iron, aluminum, barium, etc., methods of test.

merican Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Chromium Trioxida (Chromia 1913) American Institute of Homeopathy. Trioxide (Chromic Acid). Description and properties, preparation and standard strengths of solution and of dilutions for medicinal pur-

poses.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of the U. S. A.; 1926. Chromium Trioxide. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Unit weights, labeling of poisons. 8.0. Food and drugs act and regulations. See 810.

837.3 MOLYBDIC OXIDE

837.9 MISCELLANEOUS CHROMIUM AND MOLYB-DENUM COMPOUNDS

American Chemical Society. Journal of Industrial and Engineering Chemistry. July 15, 1929. Potassium Chromate. Reagent for chemical analysis, permissible kinds and amounts of impurities. and methods of test.

American Chemical Society, vol. 17, July, 1925, of Journal of Industrial and Engineering Chemistry as corrected in July 15, 1929, issue. Potassium Dichromate. Reagent for chemical analysis, permissible impurities and amounts, test procedure,

Subnitrate. Description and properties, prepara-tion and standard strengths of triturations for Journal of Industrial and Engineering Chemistry. Molybdic Acid, 85 per cent, Molybdic Acid Anhydride. Reagents for chemical analysis, permissible impurities and amounts, test requirements and procedure.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Molybdic Acid. Reagent for chemical analysis, description and physical properties, test requirements for purity.

References,-Unit weights. See 830.

838. ALUMINUM COMPOUNDS

838.1 ALUMINUM HYDROXIDE (REFINED BAUX-ITE)

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U.S.; 1914. Aluminum Preparation of crude product, description and properties, preparation and standard strengths of triturations for medicinal purposes, U. S. Gov., Dept. of Commerce, Bureau of Stand-

ards C25 and Suppl.; 1927. Standard Samples. Bauxite. Sample No. 69 prepared and sold by the bureau with a certificate giving a complete analysis, for use by industrial organizations and others as a comparison standard for checking the accuracy of analysis of similar material, etc.

838.2 ALUMINUM POTASSIUM SULPHATE (ALUM)

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Alum (Alumi-num and Potassium Sulphate). Description and properties, preparation and standard strengths of triturations and solution for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Alum, and Exsiccated Alum. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations.

838.3 ALUMINUM SULPHATE

American Pharmaceutical Assn. National Formulary; 1926. Aluminum Sulphate. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Sulphate of Alumina to be Used in Water Treatment; 1922. For basic sulphate of alumina, sampling and

chemical composition requirements.

chemical composition requirements.
American Water Works Assn. Water Works Practice Manual; 1925. Chemicals Used in Water Purification. Sulphate of Alumina. Requirements on percentage of water-soluble alumina, permissible iron and insoluble matter, size of lumps or grain.

838.9 MISCELLANEOUS ALUMINUM COMPOUNDS

American Institute of Homeopathy. Homeopathic Pharmacopoela of the U. S.; 1914. Metallic Aluminum. Description and properties, preparation and standard strengths of triturations for medicinal purposes.

References,-Aluminum bronze paint and powder. See 847.1.

839. CHEMICALS AND CHEMICAL COM-POUNDS NOT ELSEWHERE CLASSI-

839.1 ACETONE

American Chemical Society, vol. 18, June and July, 1926, of Journal of Industrial and Engineering Chemistry. Acetone, Reagent for chemical analysis, permissible impurities and amounts, test

requirements and procedure.

American Society for Testing Materials. Tenta-tive Specifications. D 329-31T; 1931. Acetone. Requirements on purity, specific gravity, color, distillation range, permissible nonvolatile matter, water, acidity, water solubility, alkalinity, potassium permanganate test, using test method D 268-30T of A. S. T. M. for testing lacquer solvents and diluents.

U. S. Gov., Federal Specifications Board O-A-51; 1931. Acetone. For 2 grades, requirements on color, miscibility with water, specific gravity, distillation, residue after evaporation, acidity, alkalinity, and purity, methods of sampling and

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Acetone. As a medicinal agent and as a reagent for chemical analysis. physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Unit weights. See 830. Food and drugs act and regulations. See 810. Testing of lacquer solvents and diluents. See 822.0.

839.2 AMYL ACETATE

American Society for Testing Materials. Tentative Specifications D318-30T; 1930. Amyl Acetate (Synthetic). Requirements on specific gravity, (Symhetic). Requirements on specific gravity, color, distillation range, residue, odor, water, acidity, and ester value, using A. S. T. M. methods of test D 268. For use with cellulose ester coatings

References.—Methods of testing lacquer solvents and diluents. See 822.0.

839.3 COMPOUNDS, MIXTURES, AND SALTS OF METALS

839.31 Antimony Compounds and Salts

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Antimonious Arsenate, Sulphid, Iodid, Oxid, Sulphid (yellow). Descriptions and properties, preparation and standard strengths of triturations for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Tartar Emetic (Potassium Antimonyl Tartrate). Description and properties, preparation and standard strengths of triturations for medicinal purposes.

American Parmaceutical Assn. National Formulary; 1926. Antimony Oxide. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Antimony and Potassium Tartrate. Description and physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References .- Food and drugs act and regulations.

839.32 Cobalt Compounds and Salts

American Institute of Homeopathy. Homeopathic Pharmacopoela of the U. S.; 1914. Metallic Cobalt. Description and properties, preparation and standard strengths of triturations for medici-

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cobaltous Chloride. Reagent for chemical analysis, physical proper-ties, test requirements for purity.

References .- Unit weights. See 830.

839.33 Copper Compounds and Salts

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1929, and April 15, 1931, editions. Rec-ommended Specifications for Analytical Reagent Chemicals. Cupric Ammonium Chloride. Permissible kinds and amounts of impurities, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1929, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Cupric Oxide, Powdered and Granular. Permissible kinds and amounts of impuri-

ties, methods of test.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1930, and April 15, 1931, editions. Re-ommended Specifications for Analytical Reagent Chemicals. Cupric Oxide, Wire Form. Permissible kinds and amounts of impurities, methods of test.

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry as corrected in July 15, 1929, issue. Cupric Sulphate. Reagent for chemical analysis, permissible impurities and amounts, test procedure.

American Chemical Society, Journal of Industrial and Engineering Chemistry. July 15, 1930. Cuprous Chloride. Reagent for chemical analysis. requirements on content of CuCl, permissible kinds and amounts of impurities, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Cupric Acetate. Description and properties, preparation and standard strengths of triturations, solutions, and dilutions for medicinal purposes.

and unutions for medicinal purposes.

American Institute of Homeopathy. Homeopathic
Pharmacopoeia of the U. S.; 1914. Hydric Cupric Arsenite, Cupric Carbonate, Metallic Copper, Cupric Sulphate. Descriptions and properties, preparation and standard strengths of triturations for medicinal purposes.

American Railway Assn., Signal Section, 5028; 1928. Copper Sulphate. For use in gravity batteries, size range of crystals, chemical composi-

tion requirements.

American Water Works Assn. Water Works Practice Manual; 1925. Chemicals Used in Water Purification. Copper Sulphate. Requirements on content of crystalline copper sulphate, permissible arsenic.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Copper Carbonate. Official method for determination of copper

oxide.

copoeia of U. S. A.; 1926. Anhydrous Cupric Sulphate. Reagent for chemical analysis, physical properties, test requirements for identity and purity.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cupric Acetate. Reagent for chemical analysis, physical properties,

test requirements for purity.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Cupric Sulphate. As a medicinal agent and as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs

839.36 Mercury Compounds and Salts

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, vol. 3, No. 2, Apr. 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Mercuric Chloride. Permissible nonvolatile matter. solubility in ether, and iron content, methods of

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, vol. 3, No. 2, Apr. 15, 1931. Recommended Speci-fications for Analytical Reagent Chemicals. Mercurous Chloride. Permissible nonvolatile matter, mercuric chloride, and sulphate, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Mercuric Chloride, Mercuric Cyanide. Descriptions and properties, preparation and standard strengths of tincture, dilutions, medications, and triturations

for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Mercurous Chloride, Mercurous Iodide, Mercuric Iodide, Mercuric Nitrate, Mercur-Ammonium Chloride, Mercuric Oxide, Hahnemann's Soluble Mercury, Mercuric Sulphate, Mercury, Potassium Mercuric Iodide. Descriptions, preparation and standard strengths of triturations for medicinal purposes. American Pharmaceutical Assn. National Formu-

lary; 1926. Red Mercuric Oxide. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Mercurous Chloride (Calomel) in Tablets. Calomel in Calomel Ointment. Methods for determining amount of calomel.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Mercurous Iodide. Tentative method for determining amount of mercurous iodide in tablets.

Assn. of Official Agricultural Chemists. Tentative and Official Methods of Analysis; 1930. Drugs. Mercuric Iodide in Tablets. Tentative method of determining the amount of mercuric iodide.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Mercurous Iodide, Mercuric Iodide, Mercuric Salicylate, Ammoniated Mercury. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Mercuric Bromide. Reagent for chemical analysis, physical proper-

ties, permissible ash.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Mercury, Mercuric Chloride, Mercuric Oxide, Mercurous Chloride. For medicinal purposes and as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act.

References.—Unit weights, labeling of poisons. See 830. Food and drugs act and regulations. See 810. Mercury base paint pigments. See 842.9. Mercurial seed disinfectants. See 881.9.

839.37 Silver Compounds and Salts

American Chemical Society, vol. 17, July, 1925, of Journal of Industrial and Engineering Chemistry as corrected in issue of July 15, 1929. Silver Nitrate. Reagent for chemical analysis, permissible impurities and amounts, test procedure,

American Chemical Society, Journal of Industrial and Engineering Chemistry. July 15, 1929. Silver Sulphate. A reagent for chemical analysis, permissible kinds and amounts of impurities and methods of testing.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Argentum Cyanid, Iodide, Chloride, Oxide, Phosphate and Metallic Silver. Descriptions and properties, preparation and strength standards for triturations for medicinal purposes.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U.S.; 1914. Argentum Nitrate. Description and properties, preparation and standard strengths for solution and dilutions

for medicinal purposes.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Silver Proteinates. Methods for determining amount of silver, detection and estimation of ionizable silver compounds, and tentative test for acidity or alkalinity.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Silver Nitrate. As a medicinal agent and as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs

act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Silver Nitrate, Fused Silver Nitrate, Strong Silver Protein, Mild Silver Protein. For medicinal purposes, descriptions and physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

References.—Unit weights, labeling of poisons. See 830. Food and drugs act and regulations. See 810.

839.38 Zinc Compounds and Salts

American Assn. of State Highway Officials. Highway Bridges and Incidental Structures; 1931. Timber Preservatives. For zinc chloride, requirements on freedom from acid, permissible iron, required amount of chloride of zinc for the fused or solid material and for the concentrated liquid.

American Chemical Society. Journal of Industrial and Engineering Chemistry. July 15, 1929. Zinc, Low in Arsenic. A reagent for chemical analysis, permissible arsenic, iron, and matter insoluble in sulphuric acid, methods of test.

American Chemical Society. Journal of Industrial and Engineering Chemistry. July 15, 1929. Zinc, Low in Lead and Iron. A reagent for chemical analysis, permissible arsenic, lead, and iron, methods of test.

American Chemical Society. Journal of Industrial and Engineering Chemistry, vol. 20, Sept., 1928, and Analytical Edition of J. I. E. C., April 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Zinc Chloride. Permission sible kinds and amounts of impurities, methods of test.

Americau Chemical Society. Journal of Industrial and Engineering Chemistry. July 15, 1930. Zinc Sulphate. Reagent for chemical analysis, permissible kinds and amounts of impurities, meth-

ods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Zinc Acetate, Bromide, Carbonate, Cyanid, Iodid, Chloride, Oxide, Phosphide, Sulphate, Valerianate, and Metallic Zinc. Descriptions and properties, preparation and standard strengths of triturations for medical purposes.

American Pharmaceutical Assn. National Formu-

lary, 1926. Zinc Phenolsulphonate. Description and physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

American Railway Engineering Assn. 1929 Manual. Wood Preservation. Chemical Analysis of Zinc Chloride; 1926. Standardization of solutions, determination of insoluble zinc chloride, and of zinc, estimation of iron and alumina, and

method for determining the strength of zinc chloride solution.

American Railway Engineering Assn. 1929 Manual. Wood Preservation. Preservatives; 1926. cludes zinc chloride, minimum percentage of iron and of soluble zinc chloride, freedom from acid.

American Society for Testing Materials D 199-27; 1927. Methods of Chemical Analysis of Zinc Chloride. For wood preservative, preparation and standardization of reagents, procedure for determination of insoluble or basic zinc chloride, determination of zinc by volumetric and gravimetric methods, estimation of iron and alumina.

Wood Preserver's Assn. 1a; Method of Analysis for Zinc Chloride. Preparation of reagents, method for determination of insoluble basic zinc chloride, of zinc, iron and

American Wood Preserver's Assn. 17a; 1921. Zinc Chloride. Requirements for percentage of chloride of zinc and allowable iron, freedom from

American Wood Preserver's Assn. 21a; 1922. Properties of Zinc Chloride Solutions at 60° F. Based on Chemically Pure Zinc Chloride. Tables showing percentage of zinc chloride in solutions of various specific gravities and degrees Baumé density, weight of solutions, pounds of zinc chloride per gallon for solutions expressed in percentage strengths.

American Wood Preserver's Assn. 22a: 1922. Methods of Calculating Dilutions and Concentra-tions of Zinc Chloride Solutions. Formula method and rectangle method explained and

illustrated.

American Wood Preserver's Assn. Gravimetric Method of Analysis for Zinc Chloride. Test procedure for determination of insoluble basic zinc chloride and for zinc.

American Wood Preserver's Assn. 46a; 1931. Test for Determining the Approximate Strength of Zinc Chloride Solution. For weak solutions used in wood treating, test procedure for a rapid method by titration against silver nitrate.

Manufacturing Chemists Assn. of the U. S. Zinc Chloride Solution; 1922. Tables of specific gravity, percentage of zinc chloride, weight of chloride, residutes and characteristics. solution, weight of zinc chloride in 1 cubic foot, percentage of 50 per cent zinc chloride, pounds of 50 per cent zinc chloride in 1 cubic foot, approximate corrections for temperature.

U. S. Gov., Federal Specifications Board TT-W-576; 1931. Zinc Chloride Wood Preservative for Ties and Structural Timbers. The technical requirements of this specifications are the same as those of spec. No. 17a of the Am. Wood Preservers

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U.S.A.; 1926. Zinc Acetate, Chloride, Oxide, Stearate, Sulphate. For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Zinc Oxide. Reagent for chemical analysis, physical properties, identity tests, test requirements for purity and

strength.

839.4 GASES

839.41 Carbon Dioxide

839.42 Hydrogen

Underwriters' Laboratories. Tentative Standards.
Oxygen and Hydrogen for Industrial Uses, Electrolytic Oxygen and Hydrogen Plants; 1923.
Type and color of pipe, maximum size for high pressures, joint luting materials, threading of tubes to oxygen and hydrogen cylinders, provision of vents, seals, taps, pressure reliefs, and gages. Rules for starting and stopping generation, for changing connection, methods of sampling and testing purity of gases, care and operation of plant.

839.43 Oxygen

Underwriters' Laboratories. Tentative Standards. Oxygen and Hydrogen for Industrial Uses, Electrolytic Oxygen and Hydrogen Plants; 1923. Type and color of pipe, maximum size for high pressures, joint luting materials, threading of tubes to oxygen and hydrogen cylinders, provision of vents, seals, taps, pressure reliefs, and gages. Rules for starting and stopping generation, for changing connection, methods of sampling and testing purity of gases, care and opera-

tion of plant.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Oxygen. For medical purposes, physical properties, identity test, test requirements for purity and strength. Recognized as standard in enforcement of Federal food and drugs act.

References.—Food and drugs act and regulations. See 810.

839.44 Chlorine

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Chlorin. Description, properties, and preparation, preparation and standard strengths of solution and of dilutions for medicinal purposes.

839.45 Nitrous Oxide

U. S. Pharmacopoelal Convention (Inc.). Pharmacopoela of U. S. A.; 1926. Nitrogen Monoxide. (Nitrous Oxide.) For medicinal purposes, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.-Food and drugs act and regulations. See 810.

839.49 Miscellaneous Gases

References .- Illuminating gas. See 997.2.

839.5 HYDROQUINONE (HYDROCHINONE)

839.6 CARBON DISULPHIDE

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry. Carbon Disulphide. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. Carbon Disulphide. Description and properties, preparation and standard strengths of tincture, dilutions, and medications for medicinal purposes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Carbon Disulphide. Reagent for chemical analysis, physical properties, identity tests, test requirements for purity.

References .- Unit weights. See 830.

839.7 CARBON TETRACHLORIDE

American Chemical Society. Journal of Industrial and Engineering Chemistry, vol. 19, May, 1927, and Analytical Edition of J. I. E. C., vol. 3, No. 2, Apr. 15, 1931. Recommended Specifications for Analytical Reagent Chemicals. Carbon Tetrachloride. Permissible kinds and amounts of impurities, methods of test. Assn. of Official Agricultural Chemists. Official

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Chloroform and Carbon Tetrachloride. For carbon tetrachloride as a medicinal, carbon tetrachloride in capsules, and carbon tetrachloride mixtures, tentative method for determining amount of car-

bon tetrachloride.

U. S. Gov., Federal Specifications Board O-F-880; 1930. Fire Extinguishing Liquid. Carbon Tetrachloride Base. Suitable for hand fire extinguishers in fighting incipient electrical fires, requirements on general qualities, appearance, specific gravity, noncorrosive qualities, permissible impurities, cold test, distillation test, electrical conductivity test.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Carbon Tetrachloride. As a medicinal agent and also as a reagent for chemical analysis, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Unit weights. See 830. Food and drugs act and regulations. See 810.

839.8 LIQUID CHLORINE

American Water Works Assn. Water Works Practice Manual; 1925. Chemicals Used in Water Purification. Liquid Chlorine. Shall be practically chemically pure and anhydrous.

839.9 MISCELLANEOUS SPECIFICATIONS FOR CHEMICALS AND CHEMICAL COM-

American Chemical Society, vol. 19, May, 1927, of Journal of Industrial and Engineering Chemistry. Arsenic Trioxide. Reagent for chemical analysis, permissible impurities and amounts, test requirements and procedure.

American Chemical Society, vol. 17, July, 1925, of Journal of Industrial and Engineering Chemistry. Iodine. Reagent for chemical analysis, permissible impurities and amounts, test require-

ments and procedure.

American Chemical Society, Journal of Industrial and Engineering Chemistry, Analytical Edition, July 15, 1929, and April 15, 1931, editions. Recommended Specifications for Analytical Reagent Chemicals. Bromine. Requirements on specific gravity, nonvolatile matter, iodine, organic bromine compounds, and sulphur compounds, methods of test.

American Institute of Homeopathy. Homeopathic Pharmacopoeia of the U. S.; 1914. A compilation of many chemical compounds used in homeopathic medicine with descriptions and properties of the compound, methods of preparation and standard strengths of triturations, tinctures,

solutions, dilutions, and medications.

American Institute of Homeopathy. Homeopathic Pharmacopoela of the U. S.; 1914. Bromin. Description and properties, preparation and standard strengths of solutions and dilutions for medicinal purposes.

medicinal purposes.

American Institute of Homeopathy. Homeopathic
Pharmacopoeia of the U. S.; 1914. Sulphur.
Description and properties, preparation and
standard strengths of triturations, tincture, dilutions, and medications for medicinal purposes.

American Pharmaceutical Assn. National Formulary; 1926. Acetic Ether (Ethyl Acetate). Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

American Pharmaceutical Assn. National Formulary; 1926. Bromine. Description and physical properties, test requirements for identity and purity. Recognized as standard in enforcement

of Federal food and drugs act.

American Society for Testing Materials. Tentative Methods D 268-317; 1931. Method of Sampling and Testing Lacquer Solvents and Diluents. Applies to solvents and diluents for use in manufacture of nitrocellulose lacquer, method of sampling, methods of test for specific gravity, color, distillation, residue, nonvolatile matter, residual odor, water, acidity, alkalinity, ester value, copper corrosion.

American Society for Testing Materials. Tentative Specifications D 302-30T; 1930. Ethyl Acetate (85 to 88 Per Cent Grade). Requirements for specific gravity. color, distillation range, residue, odor, water, acidity, and ester value according to A. S. T. M. method D 268. For

use with cellulose ester coatings,

Butyl Acetate (88 to 92 per cent Grade). Requirements on specific gravity, color, distillation range, residue, odor, water, acidity, and ester value, according to A. S. T. M. method D 268. For use with cellulose ester coatings.

American Society for Testing Materials. tive Specifications D320-30T; 1930. Butyl Propionate (90 to 93 per cent grade). Requirements on specific gravity, color, distillation range, residue, odor, water, acidity, and ester value, using A. S. T. M. methods of test D 268. For use

with cellulose ester coatings.

American Society for Testing Materials. Tentative Specifications D321-30T; 1930. Ethyl Lactate (Synthetic). Requirements on specific gravity, color, distillation range, residue, odor, water, acidity, and ester value, using A. S. T. M. methods of test D 268. For use with cellulose ester coatings.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Abrastol (Asaprol). Tentative method for tests for presence

of

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Insoluble Fluorides, Fluoborates, fluosilicates, etc., preparation of sample, test methods for indicating presence of insoluble fluorides.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Preparation of sample, qualitative test methods,

quantitative test.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Soluble Fluorides. Qualitative test methods for indicating presence of.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Preservatives and Artificial Sweeteners. Sucrol or Dulcin, Tentative test methods for indicating

presence of.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 47. Tincture of Iodine. Required amounts of potassium iodide, water, and iodine, method of preparation, for use in testing fabrics.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples.

Arsenic trioxide. Sample No. 83 prepared and sold by the bureau, for use in industry and by others as an oxidimetric standard.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Refined silicon. Sample No. 57 prepared and sold by the bureau with a certificate of analysis. for use by industrial organizations and others as a comparison standard for checking the accuracy of analyses of similar material, etc.

American Society for Testing Materials. Tentative Specifications D 303-30T; 1930. Normal Regulations No. 3; 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol. Pyridine bases included in Appendix, used in preparation of specially denatured alcohol permitted in the manufacture of acetphenetidin, chloral hydrate, dichlorethane, ethyl chloride, and other compounds, requirements on behavior with cadmium chloride and with Nessler's reagent, boiling point, and water content.

U. S. Gov., Treasury Dept., Bureau of Prohibition. Regulations No. 3; 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol. Appendix contains specifications for calol ethatate used for denaturing ethyl acetate, requirements on specific gravity, sulphur content, distillation range, reaction with Schiff's reagent, and solu-

bility in alcohol.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulations No. 3; 1927, and Appendix of 1930. Industrial Alcohol and Denatured Alcohol. Appendix contains specifications for aldehol, grade A, used in the preparation of completely denatured alcohol, requirements on specific gravity, distillation range, behavior with Schiff's reagent, solubility in alcohol, and iodine number.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Amidopyrine, Amyl Nitrite, Antipyrine. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standards in enforce-

ment of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Arsenic Trioxide. Reagent for chemical analysis, physical properties, test requirements for identity and for purity.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Bromine. Reagent for chemical analysis, physical properties, identity tests, test requirements for purity and for

strength.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Ethyl Aminobenzoate, Ethyl Chaulmoograte, Ethyl Chloride. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standards in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Phosphorus, For medicinal purposes, physical properties, test requirements for identity and for purity. Recognized as standard in enforcement of Federal food

and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Washed Sulphur, Precipitated Sulphur, Sublimed Sulphur. For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Other chemicals for medicinal purposes. See 810-829. Iodine for medicinal purposes. See 814.1. Unit weights, labeling of poisons. See 830. Food and drugs act and regulations. See 810.

840-849

840. GENERAL ITEMS RELATING TO PAINTS AND PAINTING

840.1 PAINTS AND PAINTING

American Railway Assn. Signal Section 12022; 1922. Paint and Painting. Ingredients of paint and of drier, allowable volatile matter, general quality of linseed oil, fineness test requirements for pigment, preparation of surfaces and application of paint, number of coats.

American Railway Engineering Assn. 1929 Manual. Buildings for Railway Uses. Painting and Glazing; 1929. Number of coats and kinds of paint, general procedure for painting exterior and interior wood work, steel and iron work, sheet metal work, plaster, brick, concrete, signs, radiators, piping, etc.

PIGMENTS, PAINTS, AND VARNISHES

XII. Protective Coatings and Paints. Includes recommendations on painting practice and suitable pigments for tin and galvanized roofing, gutters, cornices, metal doors and trim, coloring and oxidizing procedure and solutions for sheet copper structural parts.

U. S. Gov., Dept of Commerce, Bureau of Standards, T274; 1924. Use of U. S. Gov. Specification Paints and Paint Materials. Comments on the properties and recommended methods of use of various paints and paint materials for which Federal specifications exist, but all paints covered by Federal specifications are not com-

mented on.

840.2 SAFETY CODES FOR HANDLING AND STOR-AGE OF PAINTS AND VARNISHES

Associated Factory Mutual Fire Insurance Companies. Pyroxylin Lacquer; 1930. Information on hazards present and safeguards recommended in storage, mixing, spraying, dipping, and spreading of pyroxylin lacquer as regards location of buildings or rooms, ventilation, protection of electrical equipment, provision of automatic sprinklers, good housekeeping, etc.

Associated Factory Mutual Fire Insurance Companies. Safeguards for the Application and Drying of Japan, Enamel, Paint, and Varnish; 1929. Recommended safeguards for use in storage and mixing and application of finishes as regards isolation of materials and rooms, ventilation, provision of automatic sprinklers, provision of overflow pipes and drains for dip tanks, construction of drying and baking ovens, etc.

National Board of Fire Underwriters. Paint Spraying and Spray Booths; 1928. Location, waterproofing and drainage of floors, construction of metal spray booths, ventilation and exhaust systems, electrical equipment, requirements for containers, piping, sprinkler equipment, and maintenance

References.—Dip tanks for application of varnish, See 956,2. Enameling and japanning ovens. See 614.9.

840.3 TERMS RELATING TO PAINT

American Society for Testing Materials. D 16-24; 1924. Definitions of Terms Relating to Paint Specifications.

840.4 PAINT COLORS

International Soc. of Master Painters and Decorators (Inc.). Color Card and Color Pack; 1930. Standard paint colors with a number designation for each color, standard backgrounds for graining, and light reflective values for various colors.

U. S. Gov., Dept. of Commerce, Bureau of Standards, Limitation of Variety No. 1; 1924. Paints and Varnishes. Limitation recommended by industry for the number of shades or tints to be produced by any one concern for various kinds of paint, as house paint, interior paint, etc., permissible minimum sizes of containers.

840.5 TESTS OF PAINTS AND VARNISHES

American Society for Testing Materials D 34-30; 1930. Methods of Routing Analysis of White Pigments. Approved by American Standards Assn. as K15-1930. Method of analysis of lead and other pigments where there are very small amounts of iron, methods of analysis for basic carbonate of lead, basic sulphate of lead, zinclead and leaded zinc, zinc oxide, lithophone, calcium pigments, gypsum, terra alba, plaster ef paris, barium pigments and silica pigments.

National Assn. Sheet Metal Contractors. Standard | American Society for Testing Materials D 50-27; | Practice in Sheet Metal Work; 1929. Section | 1927. Methods of Routine Analysis of Yellow, Orange, Red, and Brown Pigments Containing Iron and Manganese. Methods of test for tinting strength and for added coloring matter. analysis of indian reds, red oxides, ochers, venetian red, siennas and umbers, for chemical compo-

American Society for Testing Materials D 56-21; 1921. Approved by American Standards Assn. as K8-1923. Methods of Test for Flash Point of Volatile Flammable Liquids. For liquids flashing below 175° F. except fuel oils for which A. S. T. M. method D 93 is preferred, dimensions of Tag closed tester, dimensions, graduation and accuracy of thermometer, test procedure.

American Society for Testing Materials D 126-27; 1927. Methods of Routine Analysis of Yellow and Orange Pigments Containing Chromium Compounds, Blue Pigments and Chrome Green. Test methods for tinting strength, added coloring matter and chemical composition for yellow and orange pigments, blue pigments, ultra-marine blue, cobalt blue, sublimed blue lead, and green

pigments.

American Society for Testing Materials. D 153-27: 1927. Methods of Test for Specific Gravity of Pigments. Description of apparatus and testing procedure for (a) routine testing of several samples simultaneously, (b) for tests requiring highest accuracy, (c) for rapid and accurate testing of single samples.

American Society for Testing Materials. D 185-29; 1929. Methods of Test for Coarse Particles in Dry Pigments and Coarse Particles and Skins in Mixtures of Pigments and Vehicles. Using 3-inch No. 325 sieve, test procedure for dry pigments practically insoluble in water, for water soluble pigments, pastes in oil, pastes in japan, mixed paints and enamels.

American Society for Testing Materials. D 215-29; 1929. Methods of Routine Analysis of White Linseed Oil Paints. Preparation of sample, preparation of reagents, methods for determina-tion of water, volatile tbinner, nature of thinner, percentage of pigment and of nonvolatile matter, test of nonvolatile vebicle for mineral oil, iodine number, rosin, qualitative and quantitative analysis of pigment.

American Society for Testing Materials. D 278-31: 1931. Method of Test for Alkalinity or Acidity of Pigments. Test procedure.

American Society for Testing Materials. D 279-31: 1931. Methods of Test for Bleeding of Pigments. Test procedure for dry pigments to be used in cellulose ester lacquers, for dry pigments to be used in oil or oleo-resinous paints and enamels, for pastes in oil, and for pastes in japan. American Society for Testing Materials. D 280-31;

1931. Methods of Testing Materials. 1920-01, (and Other Matter Volatile under Test Condi-tions) in Pigments. Apparatus and test proce-dure for pigments that do not decompose at 110° C., and for pigments that do decompose at 110° C. American Society for Testing Materials D 281-31;

1931. Method of Test for Absorption of Pigments. Test procedure using raw linseed oil. American Society for Testing Materials D 307-30; 1930. Method of Analysis for the Color Char-acteristics of Paint in Terms of Fundamental Physical Units. Recommended apparatus and test procedure using standard reflecting surface

and photometer.

American Society for Testing Materials. Tentative Specifications. D 332-31T; 1931. Method of Test for Tinting Strength of Pigments. Requirements on apparatus and test procedure for comparison tests of sample and agreed upon standard white pigment, formula for computing tinting

strength.

American Society for Testing Materials. Tentative Method D 333-31T; 1931. Methods of Test for Nitrocellulose Clear Lacquers and Lacquer Enamels. Test procedure for determination of weight, drying time, color, gloss, homogeneity, print test, bending test, and outdoor exposure test

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. White Linseed Oil Paints. Tentative methods of analysis are the same as specification D 215-29 of the American Society for Testing Materials.

840.9 MISCELLANEOUS REQUIREMENTS FOR PAINTS

References .- Lime for use in manufacture of varnish.

841. MINERAL PIGMENTS, DRY AND PASTE

841.1 ASBESTINE PIGMENTS

841.2 BARYTES PIGMENTS

841.3 GRAPHITE PIGMENTS

841.4 IRON OXIDE PIGMENTS

841.41 Iron Oxide, Red Pigments

American Railway Assn. Mechanical Division. Recommended Practice; 1922. Paste, Oxide of Iron. Semipaste paints of red or brown for freight cars. Composition of the scmipaste and of the pigment.

American Society for Testing Materials D 84-27; 1927. Mineral Iron Oxide. Covers iron oxide and iron hydroxide pigments in dry or paste form, red and brown colors, limiting percentages of ferric oxide, other materials, loss on ignition, and coarse particles in dry pigment, of pigment, linseed oil, moisture, and coarse particles in paste.

U. S. Gov., Federal Specifications Board 13b; 1925. Iron Oxide and Iron Hydroxide Paints. For pigment, requirements on percentages of ferric oxide, insoluble siliceous matter, and loss on ignition, freedom from organic colors, for semipaste, percentages of pigment, linseed oil, moisture, coarse particles and skins, methods of sampling and test.

References.—Definitions, methods of testing pigments. Sec 840.3, 840.5.

841.42 Iron Oxide, Brown Pigments

References,-Brown pigments. See 841,41.

841.49 Miscellaneous Red, Brown, and Maroon Pigments

References .- Ocher pigments of iron oxide. Sec 841.5. 841.5 OCHER (PIGMENT)

American Society for Testing Materials D 85-27; 1927. Ocher. Covers ferrous earthy pigments in dry or paste form, limiting percentages of coarse particles, iron oxide, lime, lead chromate, and organic colors in dry pigment, and of pigment, linseed oil or japan, coarse particles, moisture, nonvolatile matter in japan, for the paste.

U. S. Gov., Federal Specifications Board TT-0-111; 1931. Ocher, Dry and Paste. For pigment, requirements on percentages of coarse particles, iron oxide, lime, and absence of lead chromate and organic colors, for paste in oil and paste in japan, percentages of pigment, linseed oil or japan, moisture, coarse particles and skins, methods of test and sampling.

References.—Ceramic whiting, calcium carbonate. See 546, 833.3.

842. CHEMICAL PIGMENTS (DRY AND PASTE)

842.1 BLANC FIXE AND TITANIUM OXIDE (PIG-MENTS)

American Society for Testing Materials D 186-29; 1929. Methods of Routine Analysis of Titanium Pigments. Test requirements for color and for tinting strength, methods of qualitative analysis, determination of moisture, matter soluble in water, titanium oxide, barium sulphate, calcium sulphate, and iron oxide, preparation of reagents, coarse particle determination according to A. S. T. M. method D185.

References.—Titanium mixed pigments. See 842.87. Definitions of terms. See 840.3.

842.2 CHINESE, PRUSSIAN, OR BRONZE BLUE (PIGMENTS)

American Society for Testing Materials D 261-28; 1928. Prussian Blue. Dry pigment or paste, also known as Chinese or iron blue, for dry pigment the maximum percentage soluble in water; for paste in oil, limiting percentages of pigment, linseed oil, moisture, and coarse particles; for paste in japan, percentages of pigment, japan, coarse particles, and nonvolatile matter.

References.—Definitions of terms, methods of testing pigments. See 840.3, 840.5.

842.3 ULTRAMARINE BLUE (PIGMENT)

American Society for Testing Materials D 262-28; 1928. Ultramarine Blue. For dry pigment, percentage of coarse particles; for paste in oil, percentages of pigment, linseed oil, moisture and volatile matter, and coarse particles; for paste in japan, percentages of pigment, japan, coarse particles, and nonvolatile matter.

U. S. Gov., Federal Specifications Board TT-U-451; 1930. Ultramarine Blue, Dry, Paste in Japan, and Paste in Oil. For dry pigment, requirements on composition, percentage of coarse particles, absence of organic colors or lakes. For paste in oil and paste in japan, requirements on percentages of pigment, vehicle, volatile matter, and coarse particles, methods of sampling and test.

References.—Definitions of terms. See 840.3. Methods of testing pigments. See also 840.5.

842.4 CARBON BLACK, LAMPBLACK, BONE BLACK, ETC.

American Society for Testing Materials D 209-30; 1930. Lampblack. Limiting percentages of coarse particles, ash, and acetone extract for dry pigment, and of pigment, vehicle, and coarse particles in the paste, percentage of volatile matter in oil paste and of nonvolatile matter in the vehicle of japan paste.

American Society for Testing Materials D 210-30; 1930. Bone Black. Limiting percentages of ash, coarse particles, and acetone extract for dry pigment, and of pigment, linseed oil of japan vehicle. and coarse particles in the paste, percentage of nonvolatile matter in japan.

American Society for Testing Materials D 305-31; 1931. Method of Routine Determination of Acetone Extract in Dry Lampblack and Dry Bone Black. Standard test procedure requiring strict following.

U. S. Gov., Federal Specifications Board TT-B-601; 1930. Bone Black, Dry, Paste in Japan, and Paste in Oil. For dry pigment, requirements on | 842.6 LEAD PIGMENTS manufacture, percentages of coarse particles, ash, ash insoluble in acids, acetone extract, test of tone. For paste in oil and paste in japan, requirements on percentages of pigment, volatile matter, vehicle, and coarse particles, methods of

sampling and test.

U. S. Gov., Federal Specifications Board TT-L-71; 1930. Lampblack, Dry, Paste in Japan, and Paste in Oil. For dry pigment, requirements on manufacture, percentages of coarse particles, ash, acetone extract. For paste in oil and for paste in japan, requirements on general quality, percentages of pigment, vehicle, volatile matter, and coarse particles, methods of sampling and testing.

References.—Other black pigments. See 842.81, 843.31. Definitions, methods of testing pigments. See also 840.3, 840.5.

842.5 CHROMIUM COLORS (PIGMENTS) (GREEN, YELLOW)

American Society for Testing Materials D 211-27; 1927. Chrome Yellow. Limiting percentages of soluble matter, other substances other than insoluble lead compounds, organic colors, and coarse particles for dry pigment, and of pigment, linseed oil or japan vehicle, and coarse particles in the paste, volatile matter in oil paste, and nonvolatile matter in japan vehicle.

American Society for Testing Materials D 212-27; 1927. Pure Chrome Green. Limiting percentages of lead chromate, impurities, and coarse particles in dry pigment, and of pigment, linseed oil or japan vehicle, and coarse particles in the paste, percentage of nonvolatile matter in japan vehicle.

American Society for Testing Materials D 213-27; 1927. Reduced Chrome Green. Limiting per-centages of barium sulphate and insoluble siliceous material, of insoluble lead compounds and iron blue, of lead chromate, calcium oxide, and coarse particles in the dry pigment, and of pigment, linseed oil or japan vehicle, and coarse particles in the paste, nonvolatile matter in japan

American Society for Testing Materials D 263-28; 1928. Chrome Oxide Green. For dry pigment, limiting percentages of chromium and coarse particles; for the paste, percentages of pigment, linseed oil, and coarse particles.

U. S. Gov., Federal Specifications Board TT-C-291; 1931. Chrome Yellow. Covers grade commonly known as "C. P." pigment and paste, for pigment requirements on allowable percentages of coarse particles, matter soluble in water, substances other than lead compounds, organic colors or lakes, for paste in oil and for paste in japan, required pigment, allowable vehicle, volatile matter, and coarse particles, methods of test.

U. S. Gov., Federal Specifications Board TT-C-231: 1930. Chrome Oxide Green. For dry pigment, requirements on percentages of total chromium, coarse particles, and matter soluble in water. For paste in oil, requirements on percentages of pigment, linseed oil, water and other volatile matter, coarse particles and skins, methods of

testing.

U. S. Gov., Federal Specifications Board TT-C-236; 1930. Pure Chrome Green, Dry, Paste in Japan, and Paste in Oil. For dry pigment, requirements on composition, percentages of coarse particles and of matter soluble in water. For paste in oil and for paste in japan, requirements on percentages of pigment, vehicle, volatile matter, and coarse particles, methods of sampling and testing.

References.—Definitions, methods of testing pigments. See also 840.3, 840.5. Green chromium pigments. See also 842.85.

842.61 Blue-Lead Pigments

842.62 Litharge Pigments

842.63 Red-Lead Pigments

American Railway Assn. Mechanical Division. Recommended Practice: 1922. Lead, Red. 85 per cent and 95 per cent grades of dry red lead pigment, chemical composition, fineness, and color requirements.

American Railway Assn. Mechanical Division. Recommended Practice; 1922. Lead, Red, and Oil. Composition, properties and color of the

paste, composition of the pigment,

American Railway Assn. Mechanical Division. Recommended Practice; 1922. Lead, Red, Extended Paste Paint. Paste paint of red lead extended with an inert pigment, composition, properties and color of the paste, composition of the pigment.

American Society for Testing Materials D49-29; 1929. Methods of Routine Analysis of Dry Red Lead. Approved by American Standards Assn. as K16–1930. Methods for determination of moisture content, presence of organic coloring matter, determination of total lead and insoluble matter, lead peroxide, true red lead, zinc, matter insoluble in water, silica, carbon dioxide,

soluble sulphate, and iron oxide.

American Society for Testing Materials D 83-31; 1931. Red Lead. Limiting percentages of true red lead, impurities, lead monoxide, and coarse particles in the dry pigment, and of pigment, lin-seed oil, moisture and coarse particles in the paste, mixing proportions of the red lead with oil, turpentine, and drier which shall produce good brushing paint.

U. S. Gov., Federal Specifications Board TT-R-191; 1931. Red Lead, Dry and Paste. For 85 per cent and 95 per cent grades of pigment, requirements on percentages of true red lead, impurities, lead monoxide and coarse particles, for paste, percentages of pigment, linseed oil, moisture, coarse particles and skins, brushing quality tests, methods of sampling and testing.

References.—Definitions, methods of testing pigments. See also 840.3, 840.5.

842.64 White-Lead Pigments

American Railway Assn. Mechanical Division. Recommended Practice; 1925. Lead, White, for Lettering. Composition of the paste and of the pigment for two grades of white lead paste, fineness of pigment.

American Society for Testing Materials D 81-31; 1931. Basic Carbonate White Lead. For dry pigment, paste in oil, or semipaste in oil used as pigment or in putty, requirements on content of coarse particles, lead carbonate and impurities for dry pigment, and on content of pigment, linseed oil, moisture, and coarse particles for paste

and semipaste.

American Society for Testing Materials D 82-24; 1924. Basic Sulphate White Lead. In dry pigment or paste form, limiting percentages of coarse particles, lead oxide, zinc oxide, and impurities, for the dry pigment, limiting percentages of pigment, linseed oil, moisture, and coarse

particles for the paste. U. S. Gov., Federal Specifications Board TT-W-261; 1931. Basic Sulphate White Lead, Dry and Paste in Oil. Requirements on fineness, chemical composition and impurities of dry pigment, composition of the paste, method of sampling, labora-tory examination of pigment and paste, prepara-

tion of reagents.

U. S. Gov., Federal Specifications Board TT-W- | 842.82 Blue Pigments 251; 1930. Basic Carbonate White Lead, Dry, Paste in Oil, and Semipaste in Oil. For dry pigment, requirements on composition, percentages of coarse particles, lead carbonates, and impurities. For paste and semipaste in oil, requirements on percentages of pigment, oil, moisture and volatile matter, coarse particles and skins, methods of testing.

References.—Other white lead pigments. See 842.87. Definitions, methods of testing pigments. See also 840.3, 840.5.

842.69 Miscellaneous Lead Pigments

References .- Lead chromate pigments. pigments. See 842.5. See 842.7. Pigments Leaded zinc oxide pigments. according to color. See 842.8.

842.7 ZINC OXIDES AND ZINC SULPHIDES (PIG-MENTS)

American Society for Testing Materials D 79-24; 1924. Zinc Oxide. In form of dry pigment or ground in oil to form paste, grade size and permissible amounts of impurities for dry pigment of American process or French process types, percentages of pigment, of linseed oil, and allowable amounts of impurities in the paste.

American Society for Testing Materials D 80-24; 1924. Leaded Zinc Oxide. Dry pigment or paste, for high-leaded and for low-leaded dry pigment, required percentage limits for coarse particles, zinc oxide, soluble salts, and impurities, for the paste required percentage limits for pigment, oil,

moisture, and coarse particles.

American Society for Testing Materials D 208-26; 1926. Lithopone. Limiting percentages of coarse particles, zinc sulfide, zinc oxide, soluble material, and barium sulfate in the dry pigment, and of pigment, linseed oil, and coarse particles in the paste.

U. S. Gov., Federal Specifications Board TT-Z-301; 1931. Zinc Oxide, Dry and Paste. For American process and for French process types, requirements on percentages of coarse particles, zinc oxide, sulphur, and impurities in pigment, percentages of pigment, linseed oil, moisture, coarse particles and skins in the paste, methods

of sampling and test.

U. S. Gov., Federal Specifications Board TT-Z-321; 1931. Leaded Zinc Oxide, Dry and Paste. For high-leaded and low-leaded pigment, requirements on percentages of coarse particles, zinc oxide, water soluble salts, moisture and impurities for pigment, and percentages of pigment, linseed oil, moisture, coarse particles and skins in the paste, methods of sampling and test.

References.—Definitions, methods of testing pigments. See also 840.3-840.5. 842.87.

842.8 MISCELLANEOUS PIGMENTS, DRY AND PASTE, CLASSIFIED BY COLOR

842.81 Black and Gray Pigments

American Railway Assn. Mechanical Division. Recommended Practice; 1922. Paint, Black. A semipaste paint for use as a protective or finishing paint on freight cars. Composition of the

semipaste and of the pigment.

U. S. Gov., Federal Specifications Board 14b; 1925. Black Paint, Semipaste and Ready Mixed. For pigment, requirements on percentages of carbon, of lead oxide, and total of lead oxide, iron oxide, insoluble mineral matter, and loss on ignition, for semipaste, percentages of pigment, linseed oil, moisture, coarse particles and sinks, methods of sampling and test.

References.—Specifications and methods of test for lampblack and bone black pigments. See 842.4. Definitions, methods of testing pigments. See also 840.3, 840.5.

842.83 Brown Pigments

References .- Iron oxide brown pigments. See 841.41.

842.84 Buff, Drab, and Slate Pigments

842.85 Green and Olive Pigments

- U. S. Gov., Federal Specifications Board 137a; 1927. Olive Drab Paint (Semipaste and Ready-Mixed). For pigment, requirements on percentages of white lead, zinc oxide and white mineral pigments, methods of test.
- U. S. Gov., Federal Specifications Board TT-P-71; 1930. Green Paints, Ready Mixed and Semi-paste. For the pigment, requirements on composition, percentages of color, acid soluble CaO, barium sulphate, insoluble materials, and coarse particles. For the semipaste and ready-mixed paint, requirements on content of pigment, linseed oil, volatile matter, and coarse particles, weight of paint, methods of testing.

References.—Chromium pigments. See also 842.5.
Definitions, methods of testing pigments. See also 840.3, 840.5.

842.86 Red Pigments

American Society for Testing Materials D 264-28; 1928. Commercial Para Red. Composed of para nitraniline red toner precipitated on barium sulphate base, for dry pigment limiting percentages of organic coloring matter, barium sulphate, siliceous material, coarse particles; for paste in oil, percentage of pigment, linseed oil, moisture, coarse particles; for paste in japan, percentages of pigment, japan, coarse particles, nonvolatile matter.

References.—Definitions, methods of testing pigments. See 840.3, 840.5. Iron oxide pigments, red. See 841.41. Red lead pigments. See 842.63.

842.87 White Pigments

U. S. Gov., Federal Specifications Board 10b; 1925. White Paint and Tinted Paints Made on a White Base, Semipaste and Ready Mixed. For pigment, requirements on percentages of white lead, zinc oxide, and other white pigments and tinting colors, for semipaste, requirements on content of pigment, linseed oil, moisture, coarse particles and skins, methods of sampling and test.

U. S. Gov., Federal Specifications Board 21b; 1927. Interior Lithopone Paint, White and Light Tints, Flat or Eggshell Finish. For pigment, requirements on percentages of lithopone, soluble matter, and tinting matter, for semipaste, requirements on amount of pigment, liquid, coarse particles and skins, composition and nonvolatile matter in liquid, methods of sampling and test.

U. S. Gov., Federal Specifications Board 67; 1923. Gloss Interior Lithopone Paint, White and Light Tints. For pigment, requirements on content of lithopone, zinc oxide, tinting and extending pigments, soluble matter, and content of zinc sul-

phide in lithopone.

U. S. Gov., Federal Specifications Board 278; 1925. Outside White Titanium-Zinc Paint, Semipaste and Ready-Mixed. For pigment, requirements on content of titanium pigment, zinc oxide pigment, extending pigment, soluble matter, freedom from lead and sulphide sulphur, methods of test,

References.—Whiting. See 841.8. Other titanium, white lead, and zinc pigments. See 842.1, 842.64, 842.7. Definitions, methods of testing pigments. See 840.3, 840.5.

\$42.88 Yellow, Cream, and Straw Pigments

References.—Yellow chromium pigments. See 842.5. Ocher pigments. See 841.5.

842.9 MINERAL AND CHEMICAL PIGMENTS, DRY | 843.36 Red and Maroon Enamels AND PASTE, NOT ELSEWHERE CLASSI-FIED

American Concrete Institute. Proposed Recommended Practice for the Use of Pigment Admixtures in Troweled Concrete Surfaces. Proceedings of A. C. I., Vol. 27, p. 975 (April, 1931, Journal). For Inorganic pigments, requirements on insolubility, freedom from soluble salts and acids, fastness to sunlight, heat, alkalies, and weak acids, permissible calcium sulphate and moisture, fineness, purity, methods of testing pigments, use of pigments in concrete.

American Society for Testing Materials D 283–29; 1929. Method of Routine Analysis of Dry Cuprous Oxide. Method for determination of total

copper and of cuprous oxide.

American Society for Testing Materials D 284-29; 1929. Method of Routine Analysis of Dry Mercuric Oxide. Alkalinity test by A. S. T. M. method D 278, preparation of reagents, methods of determination of free mercury and of combined mercuric mercury, determination of ash.

843, MIXED PAINTS, ENAMELS, ENAMEL PAINT, AND JAPAN

843.1 FLAT FINISH PAINT

U. S. Gov., Federal Specifications Board TT-P-41: 1931. Interior Lithopone Paint. White and Light Tints, Flat and Eggshell Finish. For pigment, requirements on percentages of lithopone, soluble matter, and tinting matter, for semipaste and for ready mixed paint, required percentages of pigment, liquid, water, coarse particles and skins, composition and nonvolatile matter in liquid, methods of sampling and test.

References.—Painting practice, safety codes, definitions, colors, methods of testing. See also 840.1-840.5.

843.2 GLOSS FINISH PAINT

U. S. Gov., Federal Specifications Board TT-P-46; 1931. Gloss Interior Lithopone Paint, White and Light Tints. Frequently known as gloss mill white for use on wood, metal, and plaster and to stand washing with soap and water. For pigment, requirements on content of lithopone, zinc oxide, tinting and extending pigments, soluble matter, and content of zinc sulphide in lithopone, for paint, requirements on content of pigment, liquid, nonvolatile matter, water, coarse particles and skins, methods of sampling and test

References.—Painting practice, safety codes, definitions, colors, methods of testing. See also 840.1-840.5.

843.3 ENAMELS AND ENAMEL PAINTS

843.31 Black and Gray Enamel

U. S. Gov., Federal Specifications Board TT-E-521; 1930. Pigmented Black Enamel, Air Drying and Baking. For air drying type and for baking type, requirements on materials used and general quality of enamel, on weight, percentage of coarse particles and of nonvolatile matter, time of drying or baking, toughness, draft and gas test for safety, methods of testing, for outdoor general use.

References.—Painting practice, safety codes, definitions, methods of testing. See also 840.1-840.5. Elasticity tests of enamel on electric rigid conduit. See 715.11.

843 32 Brown Enamel

843.33 Cream Enamel

843.34 Green Enamel

843.35 Olive Enamel

U. S. Gov., Federal Specifications Board TT-E-531; 1931. Water-Resisting Red Enamel. For outside use, made from toluidine red toner and water-resisting long oil spar varnish, requirements on weight, content of pigment, permissible coarse particles and skins, content of nonvola-tile matter, time of set and drying, working properties, water resistance, and toughness, methods of sampling and test.

References.—Painting practice, safety codes, definitions, colors, methods of testing. See also 840.1-840.5.

843.38 Yellow Enamels

843.39 Miscellaneous Enamels and Enamel Paints

References.—Tests of enamel on magnet wire. See 715.44. Elasticity tests of enamel on electric rigid conduit. See 715.11.

843.4 JAPAN PAINTS

843.5 WHITEWASH AND CALCIMINE

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 27, Gov-ernment Whitewash. Formula 28, Whitewash. Required constituents and amounts of each, methods of preparation, former using unslaked lime

and latter using slaked lime.

National Lime Assn. Whitewash and Cold Water Paints; 1929. Compilation of several formulas for whitewash, preparation of surfaces, preparation and application of wash, coverage, for sheds, poles, for buildings, signs, bunkhouses, and field offices, for safety zones and traffic guide lines, for basements and plaster surfaces, for a sizing paint, for rust prevention, for a disinfectant or insecticidal whitewash, for germicidal wash, for tree protection, preparation of dry batch.

References .- Lime. See 517.2.

843.6 LEAD PAINTS, MIXED

843.61 Red-Lead Paints

U. S. Gov., Dept. of Commerce, Bureau of Standards LO S1; 1922. Paint for Use on Railroad Track Scales. A red lead paint for levers and structural steel parts, requirements on mix proportions for 6 different formulas of red paint or brown paint mixed with red lead paste, or dry red lead, lamp black, linseed oil, turpentine, drier, with purity requirements for red lead and lamp black, recommended formulas for the various coats.

References.—Red lead pigments, lampblack. See also 842.63, 842.4 Linseed oil, turpentine. See 848.1, 848.7. Painting practice, safety codes, definitions, colors, methods of testing. See also 840.1—840.5.

843.62 White-Lead Paints

References .- White lead pigments. See 842.64,

843.7 GRAPHITE PAINTS

843.8 IRON OXIDE PAINTS

U. S. Gov., Federal Specifications Board TT-P-31; 1931. Iron Oxide and Iron Hydroxide Paints. For pigment, requirements on percentages of ferric oxide, insoluble siliceous matter, and loss on ignition, freedom from organic colors, for semipaste and ready mixed paint, percentages of pigment, linseed oil, drier and thinner, moisture, coarse particles and skins, methods of sampling and test.

References.—Iron oxide pigments. See also 841.41. Linseed oil, turpentine. See 848.1, 211.1. Painting practice, safety codes, definitions, colors, methods of testing. See 840.1-840.5.

844. MIXED PAINTS AND PROTECTIVE! COMPOUNDS, NOT ELSEWHERE CLASSIFIED

844.1 ANTIFOULING AND METAL-PROTECTING PAINTS AND COMPOUNDS

American Society for Testing Materials. D 277-31; 1931. The Toxic Ingredients in Antifouling Paints. Required amounts of cuprous oxide and mercuric oxide per gallon of paint for temperate and tropical waters, fineness and oxide content requirements for the cuprous oxide powder and the mercuric oxide powder, ash and purity requirements for mercuric oxide powder.

U. S. Gov., Federal Specifications Board 239; 1924. Heavy Rust Preventive Compound. For heavy or semisolid type that can be applied by brushing, dipping or spraying, requirements on general quality, melting point, homogeneity, absence of abrasives, stability, noncorrosive, adhesive, and protecting qualities, methods of test.

References.—Methods of analysis of cuprous oxide and mercuric oxide. See 842.9. Linseed oil, turpen-tine. See 848.1, 211.1. Painting practice, safety codes, definitions, colors, methods of testing. See 840.1-840.5.

844.2 BUILDING PAINTS NOT ELSEWHERE CLAS-SIFIED

844.3 FIELD-COAT PAINTS

National Electric Light Assn. Suggested Specifications D75-28T; 1928. Tentative. Pole Paint. For summer pole paint and for winter pole paint, requirements on general quality, purity and fineness of pigment, general quality of oil and dryer, thinner in accordance with F. S. B. specifications No. 16, permissible amounts of water, required amounts of pigment, thinner, oil and dryer solids, drying time.

References.—Paint pigments. See also 841, 842. Linseed oil, turpentine. See 848.1, 211.1. Painting practice, safety codes, definitions, colors, methods of testing. See 840.1-840.5.

844.4 PRIMING PAINTS

National Electric Light Assn. Suggested Specifications D70-28T; 1928. Tentative. Primer Pole Paint. Requirements on general properties of paint, purity and fineness of pigment, general quality of oil and dryer, thinner in accordance with Government specifications, permissible amount of water, required amounts of pigment, volatile thinner, raw linseed oil and dryer solids, drying time.

References - See references under 844.3.

844.5 STENCIL PAINTS

844.6 PAINTS CLASSIFIED BY COLOR ONLY

844.61 Black and Gray Paints

American Railway Assn., Mechanical Div., Recom-mended Practice; 1922. Black Paint. A semipaste paint for use as a protective or finishing paint on freight cars, requirements on the composition of the semipaste and of the pigment.

U. S. Gov., Federal Specifications Board TT-P-61; 1931. Black Paint, Semipaste and Ready Mixed. For pigment, requirements on percentages of carbon, lead oxide, etc., for paste and paint, percentages of pigment, linseed oil, driers and thinners, moisture, coarse particles and skins, methods of sampling and test.

845.3 WOOD STAINS IN OIL

846. VARNISH AND VARNISH GUMS AND RESINS

846.0 GENERAL ITEMS

American Society for Testing Materials D 56-21; 1921. Approved by American Standards Assn. as K 8–1923. Method of Test for Flash Point of Volatile Flammable Liquids. For liquids flashing below 175° F. except fuel oils for which A. S. T. M. method D 93 is preferred, dimensions of Tag closed tester, dimensions, graduation and accuracy for thermometer, test procedure.

American Society for Testing Materials D 154-28; 1928. Methods of Testing Oleo-Resinous Varnishes. Preparation of color solutions and color test procedure, test procedure for nonvolatile matter, for elasticity or toughness by Run Kauri reduction or addition of linseed oil, for viscosity, and for water test, flash point test according to A. S. T. M. method D 56.

U. S. Gov., Dept. of Commerce, Bureau of Standards, T232; 1923. Shellac. Includes modification of McIlhiney method for the detection and estimation of adulterants in dry shellac and shellac varnish, suggested method of rating samples of shellac on basis of purity, method for determination of material insoluble in hot alcohol, and for determination of nonvolatile matter in shellac varnish. Methods differ from Am, Soc. Testing Materials methods.

References.—Methods of testing electrical insulating varnishes. See 719.57.

846.1 SPIRIT VARNISHES

846.11 Shellac Varnishes

American Bleached Shellac Mfrs. Assn. and United States Shellac Importers Assn. (Inc.). Methods of Analysis; 1929. Includes specifications for orange shellac, seed lac, and dry-bleached shellac, properties and composition, methods of analysis and solutions required for making determina-tions of rosin, melting point, matter insoluble in hot alcohol and in cold alcohol, wax, matter soluble in water, moisture, ash, arsenic, and of arsenic sulphide, testing of shellac varnish for color, volatile matter, insoluble matter, wax, purity, and drying time.

American Society for Testing Materials. Tentative Methods D 29–29T; 1929. Methods of Sampling and Testing Shellac. Methods of sampling orange shellac and bleached shellac, apparatus and test procedure for determination of matter insoluble in alcohol, iodine number, purity, moisture, wax, matter soluble in water, ash and color for various kinds of shellac and for shellac varnish.

U. S. Gov., Dept. of Commerce, Bureau of Standards T232; 1923. Shellac. Suggested specification for pure orange shellac varnish, requirements on percentage of nonvolatile matter, purity of alcohol, permissible percentage of residue soluble in petroleum ether and of residue insoluble in alcohol using modified McIlhiney test, negative test for rosin, test methods.

U. S. Gov., Federal Specifications Board TT-V-91; 1931. Shellac Varnish. Requirements on iodine number, content of matter insoluble in hot alcohol, permissible wax and ash for types 1 and 2 of each of orange shellac and bleached shellac, minimum allowable percentage of nonvolatile matter in light body, medium body, and heavy body varnish, methods of sampling and test,

References.—Methods of testing varnishes. See also 846.0. Shellac gum, alcohol. See also 846.02, 822.3 and 822.4. Safety codes, definitions, colors. See also 840,2-840.4.

846.12 Damar Varnishes

846.2 LONG OIL VARNISHES

846.21 Spar Varnish

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads, Forest Road Construction; 1929. Spar varnish for mixing with aluminum powder for making aluminum paint for painting steel bridges, requirements on transparency, percentage of nonvolatile oils and gums, toughness by Kauri reduction test, setting, spreading qualities, and viscosity, methods of test.

U. S. Gov., Federal Specifications Board TT-V-121; 1931. Water Resisting Spar Varnish. Requirements on appearance, color, flash point, percentage of nonvolatile matter, time of set and drying, viscosity, working properties, draft test, water resistance, toughness, methods of sampling and test.

References.—Aluminum powder. See 847.1. ods of testing varnishes. See also 846.0. codes, definitions, colors. See also 840.2-840.4.

846.29 Miscellaneous Waterproof Varnishes

References.-Insulating varnish for electrical wire. See 719.57.

846.3 SHORT OIL VARNISHES

846.31 Rubbing Varnish

References.—Interior varnish, rubbing quality. See 846.32.

846.32 Interior Varnishes except Floor Varnish

U. S. Gov., Federal Specifications Board TT-V-71; 1931. Interior Varnish. For general interior use, both rubbed and unrubbed, and for floors, requirements on appearance, color, flash point, nonvolatile matter, time to set and dry, toughness, working properties, water resistance test, methods of testing.

References.—Methods of testing varnishes. See also 46.0. Safety codes, definitions, colors. See 840.2-840 4

846.33 Floor Varnishes

References.—Interior varnish for floors. See also 846.32.

846.4 ASPHALT VARNISHES

846.41 Air Drying Asphalt Varnish

U. S. Gov., Federal Specifications Board TT-V-51; 1931. Asphalt Varnish. Requirements on appearance, color, flash point, mixing quality with linseed oil, percentages of matter insoluble in carbon disulphide, nonvolatile matter, and fatty matter, time to set and dry, toughness, working properties, resistances to water, oil, and mineral acids, methods of sampling and test. Covers two grades, of which one is resistant to mineral acids

References.—Methods of testing varnishes. See also 846.0. Linseed oil. See 848.1. Safety codes, definitions, colors. See 840.2-840.4.

846.42 Baking Asphalt Varnish

846.5 CELLULOSE ACETATE AND CELLULOSE NI-TRATE PRODUCTS

American Chemical Society. Journal of Industrial and Engineering Chemistry; Jan. 15, 1929. Determination of Alpha-Cellulose. Tentative 846.63 Resins and Resin Compounds method for preparation and conditioning of sam-

ple and for test procedure.

American Chemical Society. Journal of Industrial and Engineering Chemisty; Jan., 1929. Tenta-tive Standard. Method for Determining the Viscosity of Cellulose in Cuprammonium Hydroxide; 1927. Method of sampling, description of apparatus, standard test procedure.

American Society for Testing Materials. Tentative Specifications. D 301-31T; 1931. Soluble Nitrocellulose. Dimensions of recommended test tubes, reaction bulbs, etc., test requirements for ash, nitrogen, stability, consistency, solubility and appearance, film test, and toluol dilution test.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 49. Water-proof (Nonblush) Lacquer. Using base of nitrocellulose or collodion, required constituents and amounts of each, used for restoring the lacquer protective finish of cleaned metal cloth.

Pyroxylin Plastics Mfrs. Assn. Standards for Sheets. Rods, and Tubes; 1931. A limited list of standard sizes and thicknesses of sheets with tolerances on thickness, standard lengths, permissible variations in diameters and wall thicknesses for cut rods, stuffed rods, and stuffed tubing for fountain pens and other uses, tolerances on outside diameters of optical rim, oval, and other tubing.

References.—Soluble guncotton for medicinal purposes. See 862. Amyl alcohol, butyl alcohol, for use with cellulose ester coatings. See 8221, 8222. Butyl propionate, ethyl acetate, ethyl lactate, normal butyl acetate, for use with cellulose ester coatings. See 839.9. Sethodology of the seed of

846.6 VARNISH GUMS AND RESINS

846.61 Ester Gum

846.62 Shellac

American Bleached Shellac Mfrs. Assn. (Inc.). Standard Specifications for Bleached Shellac; 1929. Maximum insoluble matter, iodine number, moisture, wax, soluble matter and ash specified for regular and refined grades.

U. S. Gov., Dept. of Commerce, Bureau of Standards T232; 1923. Shellac. Suggested specification for pure orange shellac, using modified Mc-Ilhiney test method, permissible percentage of residue soluble in petroleum ether and of residue

insoluble in alcohol, requirement on negative test for rosin, description of test methods.

U. S. Gov., Federal Specifications Board TT-S-271; 1930. Orange Shellac. For flake shellac made from stick lac, requirements for 4 types as regards permissible iodine number, matter insoluble in hot alcohol, moisture and volatile matter, matter soluble in water, wax, and ash, methods of sampling and test.

United States Shellac Importers Assn. (Inc.) Rules and Regulations; 1929 as revised in 1930. Includes rules for sampling at port of arrival of sticklac, seedlac, shellac, garnetlac, and buttonlac, comparison of colors with standard types; permissible rosin, alcohol insoluble impurities, moisture, etc., for various grades beyond which price allowances must be made to buyer.

References.—Shellac varnishes. See also 846.0, 846.11. 846.11.

American Society for Testing Materials D 269-30; 1930. Method of Test for Determination of Toluol Insoluble Matter in Rosin. Treatment of sample and test procedure for determination of matter insoluble in toluol, chiefly sand, chips, dirt, and bark.

U. S. Gov., Dept. of Agriculture. Food, Drug, and Insecticide Administration. Misc. Cir. No. 22; 1924 and Supplements 1 to 5, incl.; 1929. The Naval Stores Act and Regulations for Its Enforcement. Rosin. Definitions of gum rosin and of wood rosin, type standards for 15 grades of rosin are in custody of Dept. of Agriculture, the use of which are mandatory in commercial transactions in rosin. Includes text of pertinent portions of act.

846.7 VARNISH FOR PRINTERS AND LITHOGRA-PHERS

846.9 MISCELLANEOUS VARNISH SPECIFICA-TIONS

References,—Electrical insulating varnishes. See 719.57.

847. BRONZE POWDERS AND VEHICLE

847.1 ALUMINUM BRONZE

American Society for Testing Materials D 266-31; 1931. Aluminum Powder for Paints. Covers aluminum bronze powder produced by a stamping process. Purity, fineness, and leafing property requirements.

American Society for Testing Materials. D 306-31; 1931. Method of Test for Determination of Polishing Lubricant in Aluminum Powder for Paints (Aluminum Bronze Powder). Apparatus and

test procedure.

U. S. Gov., Dept. of Agriculture. Bureau of Public Roads. Forest Road Construction; 1929. Aluminum Paint for steel bridges, requirements on percentages of aluminum powder and of spar varnish, on purity, leafing quality, sieve grade, and acetone extract of aluminum powder, on transparency, percentage of nonvolatile oils and gums, toughness, setting, spreading qualities, and viscosity of spar varnish, methods of test,

References.—Spar varnish for making aluminum paint. See 846.21. Methods of testing varnish. See 846.0. Safety codes, definitions, colors. See 840.2-840.0.

847.2 GOLD BRONZE

American Society for Testing Materials D 267-31; 1931. Gold Bronze Powder. Commonly known as gold bronze, pale gold bronze, and rich gold bronze, permissible percentage of polishing lubricant, fineness and leafing property requirements.

847.3 COPPER BRONZE

847.4 BRONZING LIQUID

References.—Spar varnish for making aluminum paint. See 846.21.

848. OILS AND THINNERS FOR PAINTS AND VARNISHES

8480 GENERAL ITEMS

American Chemical Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils; 1926. Published by American Oil Chemists Society. Applicable to raw oils used in varnish and paint industry, methods of sampling, apparatus and methods of determina-tion of moisture, volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined, free fatty acids, titer, saponification number, unsaponifiable matter, iodine number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Reichert-Meissl and Polenske numbers, Kirschner value, indices of refraction, specific gravity, acetyl value, opencup flash and fire test, standard color for commercial fat.

848.1 LINSEED OIL

848.11 Raw Linseed Oil

American Railway Assn. Mcchanical Division, Recommended Practice: 1925. Linseed Oil, Raw. For use in paint. Requirements on loss on heating, specific gravity, acid number, saponification number, unsaponified matter, iodine number, and color, methods of test.

American Society for Testing Materials D 234-28; 1928. Raw Linseed Oil. Limiting values for specific gravity, acid number, unsaponifiable matter, saponification number, iodine number, loss on heating, color, and foots, reagents required and their preparation, methods of test.

S. Gov., Federal Specifications Board JJJ-O-336; 1931. Raw Linsced Oil. For normal iodine number and high iodine number types, requirements as to percentage foots, gravity, acid nnmber, saponification number, unsaponifiable matter, iodine number, loss on heating, color, method of sampling, methods of test, preparation of re-

References.—Linseed oil for medical purposes. See 813.5. Methods of testing varnish and paint oils. See also 648.0. Methods of testing vegetable oils. See also 142.0.

848.12 Boiled Linseed Oil

American Railway Assn. Mechanical Division. Recommended Practice; 1925. Linseed Oil, Boiled. For use with paint. Loss on heating, specific gravity, acid number, saponification number, unsaponifiable matter, iodine number, amount of lead, manganese, and calcium oxides, and methods of test.

American Society for Testing Materials. Tentative Specifications D 260-28T; 1928. Boiled Linseed Oil. Preparation of reagents, test requirements for time of drying, specific gravity, acid number. saponification number, unsaponifiable matter, iodine number, loss on heating, ash, and lead,

limiting values and percentages of above. S. Gov., Federal Specifications Board JJJ-O-331: 1931. Boiled Linseed Oil. For kettle boiled and for quick process boiled linseed oil, requirements on time of drying, loss on heating, specific gravity, acid and saponification numbers, un-saponifiable matter, iodine number, percentage of ash and of lead, methods of sampling and test.

References.—Linseed oil for medical purposes. See 813.5. Methods of testing varnish and paint oils. See also 448.0. Methods of testing vegetable oils. See also 142.0.

848.2 CHINA WOOD OIL (TUNG OIL)

American Society for Testing Materials. Tentative Specifications D 12-25T; 1925. Raw Tung Oil. Preparation of reagents, sampling and test requirements for specific gravity, acid number, saponification number, unsaponifiable matter, re-fractive index, iodine number, and heating test, limiting values for above.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes, and Fats: 1924. China Wood Oil. For commercially prime oil, requirements on permissible amount of impuri-

ties, on heat or coagulation test.

References.-Methods of testing. See also 8480, 142.0.

848.3 SOYBEAN OIL

References .- Soybean oil. See 143.2.

848.4 PERILLA OIL

American Society for Testing Materials D 125-23; 1923. Perilla Oil, Raw or Refined. Preparation of reagents, percentages of and test requirements for foots, loss on heating, specific gravity, acid number, saponification number, iodine number, unsaponifiable matter, and color.

New York Produce Exchange. Rules of Transactions in Vegetable Oils, Waxes and Fats; 1924. Perilla Oil. For pure and filtered oil, allowable

amount of water and impurities.

References .- Methods of testing. Sec 848.0, 142.0.

848.5 FISH OIL

References .- Cod liver oil. See 813.2.

848.6 TURPENTINE

References .- Turpentine. See 211.1,

848.7 TURPENTINE SUBSTITUTES. MINERAL SPIRITS

American Railway Assn. Mechanical Division. Recommended Practice; 1922. Mineral Spirits. Mechanical Division. A turpentine substitute for mixing in oil paints. Appearance, gravity, flashing point, distilling temperature range, residue, and lack of sulphur requirements and methods of test, for petroleum distillate.

American Society for Testing Materials, Tentative Specifications D 235-26T; 1926. Petroleum Spirits (Mineral Spirits). Apply only to petroleum distillates. Requirements for color, flash point, and distillation test in accordance with A. S. T. M. methods D 156, D 56, and D 86. respectively, test requirements for blackening and

acidity.

U. S. Gov., Federal Specifications Board TT-T-291; 1931. Volatile Mineral Spirits for Thinning Paints. For a petroleum distillate, requirements on freedom from suspended matter and water, color, spot test, flash point, blackening of copper test, distillation range, acidity, methods

of sampling and test.

U. S. Gov., Federal Specifications Board TT-T-271; 1931. Paint Thinner for Thinning Semipaste Paints when the Use of Straight Linseed Oil is not Justified. Requirements on freedom from suspended matter and sediment, color, odor, mixing qualities with linseed oil, drying, toughness, nonvolatile matter content, acid number, methods of sampling and test. Covers a composite vehicle which contains drying oil, drier, and volatile thinner in one liquid.

References.—Definitions, methods of testing. See also 502.2, 503.0.

848.9 MISCELLANEOUS OIL AND THINNER SPEC-IFICATIONS

American Railway Assn. Mechanical Division Recommended Practice; 1925, Paint Reducing Oil. At least 17 per cent is linseed oil. Composition, iodine number, unsaponifiable matter, drier, flash point of mineral spirits, thinning, drying and elasticity test requirements.

References.—Methods of testing. See also 848.0, 142.0, 502.2, 503.0.

849. MISCELLANEOUS MATERIALS RELAT-ING TO PAINTS AND PRESERVA-TIVE COATINGS

849.1 PAINT DRYERS

849.11 Japan Dryers

American Railway Assn. Mechanical Division Recommended Practice; 1916. Japan Dryer. Drying, curdling, and residue test requirements.

849.19 Miscellaneous Paint Driers

American Railway Assn. Mechanical Division Recommended Practice; 1927. Liquid Paint Drier. Lead, manganese, or cobalt with a fatty oil, requirements for color, flash point, miscibility,

elasticity, and drying.

U. S. Gov., Federal Specifications Board TT-D-651; 1931. Drier, Paint, Liquid. Covers type for general use and type for lead-free paint. Requirements on appearance, color, flash point, per cent of nonvolatile matter, composition of volatile matter, metallic lead in ash, action with linseed oil, drying properties, methods of sampling and testing.

References.—Methods of testing. See 848.0, 142.0, 502.2, 503.0.

849.2 WOOD FILLERS AND OTHER FILLING MA-TERIALS

References .- Priming paints. See 844.4.

849.3 PUTTY

American Society for Testing Materials. Tentative Specifications D 317-80T; 1930. Glazier's Putty. For whiting putty and for white lead whiting putty, requirements on manufacture, chemical composition of pigment, composition of putty as regards amount of pigment, linseed oil, moisture, alkalinity, coarse particles and skins, general quality.

U. S. Gov., Federal Specifications Board TT-P-791; 1931. Putty. For whiting putty and for white lead-whiting putty, requirements on composition of pigment, proportions of pigment, linseed oil, moisture, alkali, coarse particles and skins, methods of test. Approved as regards technical requirements by American Standards

Assn. as A43–1930.

References.—White lead for putty. See 842.64. Ceramic whiting, calcium carbonate. See 546., 833.3. Linseed oil. See 848.1. Method of testing putty. See 840.5.

849.4 PAINT AND VARNISH REMOVERS

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 20. Paint Remover. Formula 31, Solvent for Paints, Varnishes, Etc. Formula 33, Solvent for Airplane Dope and High Grade Varnish. For each, list of required materials, required amount of each constituent.

849.5 GOLD LEAF

References .- Gold bronze powder. See 847.2.

849.6 WATERPROOFING COMPOUND FOR FAB-

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 34. Water proofing Compound for Garments. Of paraffin wax and scrap rubber, requirements on proportions of each and method of preparing mixture and its application to fabrics.

References.—Asphalt for waterproofing. See 505.16. Waterproofing of raincoats. See 392.54. Fabric waterproofed with asphalt. See 392.4. Varnished cloth and tape for electrical purposes. See 719.56. Spar varnish, electrical insulating varnish. See 84.21, 719.57.

849.7 WATER COLORS

849.8 METAL CEMENT PIGMENTS

849.9 MISCELLANEOUS MATERIALS RELATING TO PAINTS NOT ELSEWHERE CLASSI-FIED

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 24, Stock Solution for Glove Coloring. Formula 25, Glove Color Stock. Formula 26, Light Tints in Glove Paste. Formula 38, Rhodamine Stock Solution for Tinting. Formula 38, To Color Talcum or Magnesium Carbonate Powders. Formula 41, Spot Dyeing Cloths. For each, required constituents and amount of each, preparation.

National Assn. Sheet Metal Contractors. Standard Practice in Sheet Metal Work; 1929. Section XII. Protective Coatings and Paints. Includes recommendations on coloring and oxidizing effects on copper, method of application of solutions and

composition of solutions.

850-859

FERTILIZERS AND FERTILIZER MATERIALS

850. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Definitions of Terms and Interpretation of Results on Fertilizers and Liming Materials. General definitions of acidulated fish tankage; acidulated fish scrap; activated sewage products; ammoniated superphosphate; ashes from leached wood; dissolved bone; dried, pulverized, or shredded manures; fish tankage, fish scrap, dry ground fish, fish meal, fertilizer grade; garbage tankage; ground raw bone; ground steamed bone; horn and hoof meal; leached wood ashes; manure salts; superphosphate; tankage; unit of plant food; unleached wood ashes; activity of water-insoluble nitrogen in fertilizers; amount of chlorine permissible in fertilizers in which the potash is claimed as sulfate; the term lime as applied to fertilizers, order of terms in mixed fertilizers.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Fertilizers. Official methods for sampling, preparation of sample and of reagents, determination of moisture, of total phosphorie acid, water-soluble and citrateinsoluble phosphorie acid, organic and ammoniacal nitrogen only, total nitrogen, nitric and ammoniacal nitrogen, water insoluble organic nitrogen, potash.

References.—Other definitions. See 851, 852, and 859.

851. NITROGENOUS FERTILIZER MATERIALS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Definitions of Terms for Fertilizers and Liming Materials. Crude, Inert, or Slow-Acting Nitrogenous Materials. Definition, limits on plant food value.

References .- Methods of analysis. See 850.

852. PHOSPHATE FERTILIZER MATERIALS (ROCK)

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Definitions of Terms for Fertilizers and Liming Materials, Basic Phosphate Slag. Definition, required amount of total phosphoric acid and of phosphoric acid soluble in 2 per cent citric acid solution.

U. S. Gov., Dept. of Commerce. Bureau of Standards, C25 and Suppl.; 1927. Standard Samples.

Phosphate Rock. Sample No. 56 prepared and sold by the bureau with a certificate giving percentage P.O. Fe.O. Al.O., etc., for use by industrial organizations as a comparison standard for checking the accuracy of analysis of similar material, etc.

853. SUPERPHOSPHATES (ACID)

854. PREPARED FERTILIZER MIXTURES

References .- Methods of analysis. See 850.

859. MISCELLANEOUS FERTILIZER SPECI-FICATIONS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Agricultural Liming Materials, Tentative Method. Sampling, preparation of sample and of reagents, procedure for determination of neutralizing value, caustic value, calcium oxide in burnt and hydrated lime, carbon dloxide, magnesium oxide, mechanical analysis of ground limestone.

Assn of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1980. Definitions of Terms for Fertilizers and Liming Materials. Dried Blood. Definition, required percentage of nitrogen.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Definitions of Terms for Fertilizers and Liming Materials. Kainit. Definition, required percentage

of potash.

References.—Lime. See also 517.2. Muriate of potash. See 832.4. Nitrate of soda. See 834.2. Nitrate of potash, sulphate of potash, and sulphate of potashmagnesia. See 832.4.

860-869

EXPLOSIVES, FIREWORKS, AND AMMUNITION

860. GENERAL ITEMS

Mine Inspectors' Institute of America. Approved by American Standards Assı. as M14-1930. Use of Explosives in Bituminous Mines. Recommended practice on type and size of firing cable, handling and storing explosives on surface and underground, transportation, opening of cases, methods and precautions for charging holes and firing, including inspection.

U. S. Gov., Dept. of Commerce, Bureau of Mines, Schedule 1B; 1926. Procedure for Testing Explosives Used in Metal Mines, Tunnels, Quarries, and Other Engineering Operations. Test requirements for firing with electric detonator, for pendulum friction test, requirements on chemical stability and nonleakage of explosive, regulations

for obtaining tests and fees.

U. S. Gov., Dept. of Commerce, Bureau of Mines, Schedule 174, 1926. Procedure for Testing Explosives for Permissibility for Use in Coal Mines, Requirements on use with electric detonators, limited size of charge, permissible amount of poisonous gas evolved per charge, complete detonation, strength test, pendulum friction test, explosion tests in explosive gas mixtures, etc., fees.

U. S. Gov., Dept. of Commerce, Bureau of Mines, Schedule 20: 1928. Permissible Blasting Devices. For use in coal mines, prescribed conditions for use of device, test requirements as regards permissible amount of poisonous gases evolved, explosion tests in explosive gas mixtures, etc., how approvals are granted, etc.

References.—Storage of motion picture films. See 518.50.

861. POWDER

References.—Permissive explosives and blasting machines. See 860. Use of explosives in mines. See 860.

862. DYNAMITE AND OTHER HIGH EX-PLOSIVES

Institute of Makers of Explosives, Pamphlet 15-B; 1929. Standardization of Sizes of Cartridges and Strengths of High Explosives. List of recommended standard cartridge sizes and standard strengths for high explosives of nitroglycerin, ammonia, and gelatin classes.

U. S. Pharmacopœial Convention (Inc.). Pharmacopœia of U. S. A.; 1926. Pyroxylin. (Soluble guncotton.) For medicinal purposes, physical properties, test requirements for identity and purity. Recognized as standard in enforcement of Federal food and drugs act.

References—Nitroglycerine in tablets, medicinal. See 819.9. Cellulose acetate and nitrate products. See 846.5. Picric acid, medicinal. See 802.1. Metallic cartridges, loaded paper shot shells. See 619.1. Permissive explosives, recommended use of explosives in mines. See 860.

863. TRACK TORPEDOES AND FUSEES

American Railway Assn. Operating Div. Circular 2086; 1920. Five Minute Red Fusee. Construction, dimensions, and transverse strength test requirements for paper container tube, duration of burning in air and burning in water, resistance to high temperature, minimum ignition temperature, chemical composition limits.

American Raflway Assn. Operating Div. Circular D-1-35; 1924. Standard Track Torpedoes. General design requirements, immersion in water test requirements, dimensions and material of devices for fastening to rail, amount of explosive, resistance to high temperature, and fineness re-

quirements for abrasive materials.

870-879

SOAPS, COSMETICS AND TOILET PREPARATIONS

871. SOAPS

871.0 GENERAL ITEMS

American Chemical Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils; 1926. Published by the American Oil Chemists Society. Applicable to fats and fatty oils used in the soap industry, methods of sampling, apparatus and methods of determination of moisture, volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined, free fatty acids, titer, saponification number, unsaponifiable matter, melting point, iodine number, softening point, slipping point, flow test, cloud test, bleach test, Reichert-Meissel and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl value, opencup flash and fire test, standard color for commercial fat.

American Chemical Society. Standard Methods for the Analysis of Commercial Soaps and Soap Products. Published by Laundryowners National

Assn. in its Manual of Standard Practice for the Power Laundry Washroom, 1927 edition, Methods for the determination of volatile matter, matter insoluble in alcohol, total anhydrous soap, unsaponified matter, rosin, titer, acid number,

borax, carbon dioxide, phosphates, sulphates, glycerin, sugar, starch, and volatile hydrocarbons. American Oil Chemist' Society. Official Methods of Chemical Analysis; 1930. Includes soap stock and acidulated soap stock methods for determination of total fatty acid and titer.

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Soap. Official methods for determination of moisture, potassium and sodium.

National Cottonseed Products Assn. Rules; 1930. Rules 137 to 138. Soap Stock and Acidulated Soap Stock. For soap stock resulting from re-fining of vegetable oil, requirements on content of fatty acids for soap stock and for acidulated soan stock.

National Cottonseed Products Assn. Rules; 1930. Rules 243 and 276. Soap Stock and Acidulated Soap Stock. Methods of sampling, methods of chemical analysis for determination of total fatty acid including methods applicable to copra and palm kernel oil,

871.1 TOILET SOAPS 871.11 Castile Soan

U. S. Pharmacopæial Convention (Inc.). Pharmacopeia of U. S. A.; 1926. Olive Oil Castile Soap. Physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Olive oil. See 813.6, 142.5. Soap stock, methods of testing soap and soap stock. See also 871.0.

871.12 Liquid Toilet Soap

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing; 1923. Includes liquid soap, requirements on volatile matter, free alkali, solubility, odor, color, etc.

National School Supply Assn. Certified Janitor Supply Products: 1930. Liquid hand soap. Soap

content requirements for 3 grades of liquid soap.
U. S. Gov., Federal Specifications Board P-S-618; 1930. Liquid Toilet Soap. Approved by American Standards Assn. as K14-1930 with Nat. Bureau of Standards as sponsor. For a soap of pure vegetable oil potash (or potash and soda) with or without glycerol or alcohol, requirements on general quality, percentage of anhydrous soap, matter insoluble in alcohol, free alkali, chloride, sulphates, and sugar, methods of test.

References.—Soap stock, vegetable oils. See 871.0, 142. Methods of testing soap and soap stock. See also 871.0.

871.13 Milled Toilet Soap

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing; 1923. Includes milled toilet soap, requirements on volatile matter, free alkali,

solubility, odor, color, etc.
U. S. Gov., Dept. of Commerce, Bureau of Standards C62; 1923. Specifications for and Methods of Testing Soaps. Includes proposed specifications for milled toilet soap, requirements on content of volatile matter, free alkali, insoluble matter, sodium chloride, unsaponified matter, with sampling and testing methods.

U. S. Gov., Federal Specifications Board P-S-621: 1930. Milled Toilet Soap. Requirements on general quality, permissible volatile matter, free alkali, insoluble matter, sodium chloride, and unsaponified saponifiable matter, methods of inspection and test

References.—Soap stock, vegetable oils. See 871.0, 142. Methods of testing soap and soap stock. See also 871.0.

871.14 Shaving Soap

871.15 White Floating Soap

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing: 1923. Includes white floating soap, requirements on volatile matter, free alkali. solubility, odor, color, etc.

U. S. Gov., Federal Specifications Board P-S-616; 1930. White Floating Toilet Soap. For a cake soap equal to one made from soda and a mixture of tallow and coconut oil, requirements on floating, content of volatile matter, free alkali, matter insoluble in alcohol and in water, chloride, rosin, sugar, and foreign matter, acid number of prepared fatty acids, methods of sampling and testing.

References.—Soft soap. See 871.3. Soap stock, vegetable oils. See 871.0. 142. Methods of testing soap and soap stock. See also 871.0.

871.19 Miscellaneous Toilet Soaps

U. S. Gov., Federal Specifications Board P-S-576: 1930. Hand Grit Soap. For a high grade soap of about one-third weight in siliceous matter, requirements on percentage of siliceous material. fineness of siliceous material, permissible volatile matter, alkaline salts, free alkali, rosin, sugar, and foreign matter, required soap content, methods of sampling and test.

References.—Soap stock, vegetable oils. See 871.0, 142. Methods of testing soap stock and soap. See also 871.0.

871.2 LAUNDRY AND KITCHEN SOAP, CHIPS, AND POWDER

871.21 Ordinary Laundry and Kitchen Soap

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing; 1923. Includes laundry soap, quirements on volatile matter, free alkali, solubility, odor, color, etc.

Laundryowners National Assn. Laundry Supplies. Undated. Soap. For a neutral, or 88 per cent soap, requirements on percentage of total soap, moisture, free caustic, soda ash, rosin, titer of fatty acid.

U. S. Gov., Dept. of Commerce, Bureau of Standards C62; 1923. Specifications for and Methods of Testing Soaps, Includes proposed specifications for hard water grade laundry soap, requirements on content of volatile matter, free alkali, insoluble matter, sodium chloride, required acid number of fatty acids, sampling and testing methods.

U. S. Gov., Dept. of Commerce, Bureau of Standards C62; 1923. Specifications for and Methods of Testing Soaps. Includes proposed specifications for special grade laundry soap, for use with soft water, requirements on content of volatile matter, free alkali, sodium chloride, insoluble

matter, and rosin, methods of sampling and test. U. S. Gov., Federal Specifications Board P-S-591: 1931. Laundry Soap, Ordinary. Requirements on general composition, odor, volatile matter, free alkali, matter insoluble in alcohol and in water,

and rosin content, methods of test.

References.—Soda ash. See 834.4, 834.7. Caustic soda, caustic potash. See 834.8, 832.3. Soap stock, methods of testing soap and soap stock. See also 871.0.

871.22 Soap Chips

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing; 1923. Includes chip soap, requirements on volatile matter, free alkali, solubil-

ity, odor, color, etc.

U. S. Gov., Federal Specifications Board P-S-566; 1930. Chip Soap. For soap in chip form made of soda and fats, requirements on general quality, permissible volatile matter, free alkali, matter insoluble in alcohol, chloride, matter insoluble in water, titer of fatty acid; methods of sampling and test.

References.—Soda ash. See 834.4, 834.7. Caustic soda, caustic potash. See 834.8, 832.3. Soap stock, methods of testing soap and soap stock. See also 871.0.

871.23 Soap Powders

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing; 1923. Includes soap powder, requirements for volatile matter, free alkali, solu-

bility, odor, color, etc.

U. S. Gov., Federal Specifications Board O-T-671; 1930. Trisodium Phosphate, Technical (Phosphate Cleaner). Granulated product used for cleaning typewriter parts, floors, metals, etc., where abrasive action is not desired, requirements on alkalinity, percentage of phosphoric anhydride, insoluble matter, and sieve grading, methods of sampling and test.

U. S. Gov., Federal Specifications Board P-S-596; 1930. Powdered Soap for Laundry Use. Requirements on general quality, permissible volatile matter, free alkali, insoluble matter, and sodium chloride, titer of fatty acids, required fineness,

methods of test.

U. S. Gov., Federal Specifications Board P-S-606; 1930. Soap Powder. For soap and sodium carbonate in powdered form, requirements on percentage of soap, and of sodium carbonate, methods of sampling and test.

References.—Soda ash. See 834.4, 834.7. Caustic soda, caustic potash. See 834.8, 832.3. Soap stock, methods of testing soap and soap stock. See also 871.0. Metal polishes. See 891. Scouring powders. See also 571.27.

871.24 Liquid Laundry Soap

National Assn. of Dyers and Cleaners. Tech. Bulletin 1; 1929. Strong Soap Solution. For use in cleaning, requirements on preparation of strong soap solution from benzine soap and solvent, directions for use.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Includes soap for-mulas. No. 4 Soapbark (Quillai Bark), No. 7 Benzine Soap, No. 9 Naphtha Soap, Requirements on kinds and quantities of constituents,

preparation of the soaps.

U. S. Gov., Federal Specifications Board P-S-586; 1930. Liquid Soap for Laundry Uses. For a solution of pure potash soap with or without glycerol or alcohol, requirements on content of volatile organic solvent, general quality, content of anhydrous soap, permissible matter insoluble in alcohol and insoluble in water, permissible free alkali and chloride, washing test, methods of sampling and test.

References.—Soda ash. See 834.4, 834.7. soda, caustic potash. See 834.8, 832.3. Somethods of testing soap and soap stock. 871.0. Metal polishes. See 891. Caustic Soap stock,

871.25 Laundry Sours

Laundryowners National Assn. Laundry Supplies. Undated. Laundry Sours. For acetic acid a 58 per cent strength recommended, for oxalic acid a commercial grade of oxalic acid crystals is recommended.

References.-Acetic acid, oxalic acid. Sec also 821.1.

871.26 Scouring Scaps

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing: 1923. Includes grit soap, requirements on volatile matter, free alkali, solubility, odor, color, etc.

National School Supply Assn. Certified Janitor Supply Products: 1930. Scrubbing Soap. For a Certified Janitor jelly soap and for a liquid scrubbing soap, requirements on soap content, neutrality, made from vegetable oils saponified with potash.

U. S. Gov., Federal Specifications Board P-S-571: 1930. Grit Cake Soap. For 2 types, one for fine work as glass and enamel and other for scouring and scrubbing, requirements on percentage of insoluble siliceous material, composition and fineness of siliceous material, percentage of soda soap, permissible volatile matter, alkali, rosin, sugar and foreign material, nonscratching quality, method of sampling and test.

References.—Soda ash. See 834.4, 834.7. Caustic soda, caustic potash. See 834.8, 832.3. Sonp stock, methods of testing soap and soap stock. See also \$71.0. Metal polishes. See 891. Scouring powders. See 871.2.7.

871.27 Scouring Powders

American Hotel Assn. Hotel Soaps and Cleaning Compounds, Including Standard Specifications for Purchasing; 1923. Includes scouring com-pounds, requirements for volatile matter, free

alkali, solubility, odor, color, etc. U. S. Gov., Federal Specifications Board P-P-591: 1930. Scouring Powder for Floors. For 3 types, for fine marble floors, for tile or ceramic floors, and soap scouring compound, requirements on percentage of volatile matter, of sodium car-bonate and anhydrous soap, of free alkali, of insoluble siliceous matter, required fineness of siliceous material, color of powder, lack of scratching, methods of sampling and test.

References.—Soda ash. See 834.4, 834.7. Caustic soda, caustic potash. See 834.8, 832.3. Soap stock. methods of testing soap and soap stock. See olso 871.0. Other laundry soap powders. See 871.23. Metal polishes, See 891.

871.29 Miscellaneous Specifications for Laundry and Kitchen Soaps

American Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Bottle Washing Compound. Prescribes the minimum allowed percentage of sodium hydrate (caustic).

References .- Caustic soda, lye. See 834.8.

871.3 SOAPS FOR MEDICINAL AND SURGICAL USE

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Olive Oil Castile Soap. Physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Soft Soap. Composition, preparation, physical properties, test requirements for purity. Recognized as standard in enforcement of Federal food and drugs act.

References.—Soap stock, vegetable oils. See 871.0, 142. Methods of testing soap and soap stock. See also 871.0.

871.4 AUTOMOBILE SOAP

U. S. Gov., Federal Specifications Board P-S-561; 1930. Automobile Soap. For a pure vegetable oil paste soap containing no free alkali or acid, permissible volatile matter, free alkali and matter insoluble in alcohol, free acid, matter insoluble in water, unsaponified matter, and rosin, methods of sampling and test.

References.—Soap stock, vegetable oils. See 871.0, 142. Methods of testing soap and soap stock. See also 871.0. Metal polishes. See 891.

871.5 SALT-WATER SOAP

U. S. Gov., Federal Specifications Board P-S-611; 1930. Salt Water Soap. For soap made from pure ecocont oil, pure palm kernel oil, and alkali, requirements on solubility in sea water and fresh water, content of volattle matter, matter insoluble in alcohol and water, free alkali, chloride, rosin, sugar, and foreign matter, required acid number of prepared fatty acid, methods of sampling and test.

References.—Soap stock, vegetable oils. See 871.0, 142. Methods of testing soap and soap stock. See also 871.0. Soda ash, caustic soda, caustic potash. See 834.4, 834.8, 832.3.

871.6 HARNESS SOAP

References .- Leather dressings and cleaner. See 891.

871.7 DRY-CLEANING SOAP

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 6. Alcoholic Benzene Soap for Hand Brushing. Formula 8. White Dry-cleaning Soap. Formula 29. Glove Cleaning Soap. Formula 30. Bleaching Soap to Spot Fruit, Iodine, or Ink Stains from Fabric. Formula 48. Hand Brushing Soap. Required constituents and amounts of each, methods of preparation,

References.—Dry-cleaning solvent. See also 503.2. Bleaches. See 891.

872. TOILET PREPARATIONS

872.0 GENERAL ITEMS

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulation 2; 1927. Relating to Permits for the Manufacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Toilet, Medicinal, and antiseptic preparations. For such materials in which alcohol is a part, the regulations require the addition of given amounts of any of 6 modifying agents in order to be classed as nonbeverage.

872.1 TALCUM POWDER

U. S. Pharmacopoeial Convention (Inc.). Parmacopoela of U. S. A.; 1926. Purified Talc. For medical use as a filtering medium, composition, physical properties, identity tests, test requirements, grade size for filtering purposes. Recognized as standard in enforcement of Federal food and drugs act.

872.2 TOOTH PASTE AND TOOTH POWDER

American Pharmaceutical Assn., National Formulary; 1926. Dentifrice. An oxidizing tooth powder for medicinal purposes, formula giving amounts and kinds of ingredients, method of preparation, various formulas for various flavors. Recognized as standard in enforcement of Federal food and drugs act.

880-889

DISINFECTANTS AND WATER TREATMENTS

881. DISINFECTANTS AND INSECTICIDES 881.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Official methods for sampling, preparation of reagents, determination of total arsenic, water-soluble arsenic, lead oxide, copper, zinc oxide, fluorine, covers general methods.

U. S. Gov., Congress, 36 Stat., 331; 1910. The insecticide act of 1910. For insecticides and fungicides, requirements by law regarding stating on label the percentage of total arsenic, of watersoluble forms of arsenic, and of inert substances.

U. S. Gov., Dept. of Agriculture, Food, Drug, and Insecticide Administration, S. R. A., C. P. No. 1, Rev. 1; 1929 and S. R. A., C. P. No. 2; 1928. Regulations for the Enforcement of the Caustic Poison Act. Regulations on labeling of dangerous caustic or corrosive substances used in household, includes providing the common name, the word poison, and antidote, list of substances and their strengths covered by act, list of acceptable antidotes.

U. S. Gov., Dept. of Agriculture, Food, Drug, and Insecticide Administration, S. R. A., I. F. No. 1; 1928. Regulations for Enforcement of the Insecticide Act of 1910. Regulations regarding sampling and examination of materials, on misbranding and adulteration, false statements, form of guaranty, etc. Includes text of act.

U. S. Gov., Dept. of Commerce, Bureau of Standards R41; 1926. Package Sizes for Insecticides and Fungicides. Simplified practice recommended and accepted by industry establishing a limited

number of standard package sizes for arsenate of lead, calcium arsenate, paris green, and bordeaux mixture, sizes according to pounds capacity.

U. S. Gov., Treasury Dept., Bureau of Prohibition, Regulation 2; 1927. Relating to Permits for the Mannfacture of and Traffic in Intoxicating Liquors for Nonbeverage Purposes. Toilet, medicinal, and antiseptic preparations. For such materials in which alcohol is a part, the regulations require the addition of given amounts of any of 6 modifying agents in order to be classed as nonbeverages.

881.1 INSECT STOMACH POISONS

881.11 Arsenate and Arsenite of Lead

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Lead Arsenate. Official methods for determination of moisture, total arsenic, total arsenic, total arsenic, oxide, arsenic oxide, water-soluble arsenic, total lead oxide.

U. S. Gov., Congress, 36 Stat., 331; 1910. The Insecticide Act of 1910. Lead Arsenate. Defini-

U. S. Gov., Congress, 36 Stat., 331; 1910. The Insecticide Act of 1910. Lead Arsenate. Definition, requirements fixed by law for permissible percentage of water, permissible total arsenic and arsenic in water-soluble form, disallowance of mixing in other material that affects quality and strength, requirements on labeling and branding.

References .- Package sizes. See 881.0.

881.12 Arsenate and Arsenite of Lime

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Calcium Arsenate. Official methods for determination of moisture, total arsenic, total arsenious oxide, water-soluble arsenic, total calcium oxide.

References.—Labeling requirements, package sizes. See 881.0.

881.13 Arsenate and Arsenite of Soda

881.14 Hellebore (Plant Root)

881.15 Paris Green, Schlee's Green, London Purple

Assn, of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. London Purple. Official methods for determination of moisture, total arsenic, total arsenious oxide, total arsenic oxide, water-soluble arsenious oxide, water-soluble arsenic oxide.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Green. Official methods for determination of moisture, total arsenic, total arsenious oxide, sodium acetate-soluble and water-soluble arseni-

ous oxide, total copper oxide.

U. S. Gov., Congress, 36 Stat., 331; 1910. The Insecticide Act of 1910. Paris Green. Definition, requirements fixed by law for percentage of arsenious oxide, permissible arsenic, disallowance of other material that affects quality and strength of the paris green, requirements on labeling and branding.

References .- Package sizes. See 881.0.

881.16 Poisoned Grain

881.17 Powders for Dusting

U. S. Gov., Federal Specifications Board O-S-601; 1930. Sodium Fluoride, Insecticide. A powder suitable for dusting, requirements on general physical quality, content of sodium fluoride, permissible impurities, methods of sampling and test.

References.—Methods of testing, labeling requirements. See also 881.0.

881.18 White Arsenic (Arsenic Trioxide)

References.—Methods of testing, labeling requirements. See 881.0. Arsenic trioxide for medicinal purposes. See 814.2. Arsenic trioxide as chemical reagent. See 839.9.

881.19 Miscellaneous Insect Stomach Poisons

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. In-secticides and Fungicides. Magnesium Arsenate. Official methods for determination of moisture, total arsenic, total arsenious oxide, water-soluble arsenic.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. In-secticides and Fungicides. Zinc Arsenite. Official methods for determination of moisture, total arsenic, total arsenious oxide, water-soluble arsenic, total zinc oxide.

References .- Labeling requirements. See 881.0.

881.2 CONTACT INSECTICIDES

881.21 Sulphur Insecticides

Agricultural Insecticide and Fungicide Mfrs. Assn. Lime Sulphur Solution; 1928. Requirements on density of solution and percentage of calcium

polysulphide.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. In-secticides and Fungicides. Lime-Sulphur Solutions. Official methods for determination of total sulphur, thiosulphate sulphur, sulphide sulphur, sulphate sulphur, total lime, tentative method for determining monosulphide equivalent,

381.22 Soap and Cil Sprays

Assn. of Official Agricultural Chemists, and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Mineral Oil and Soap Emulsions. Methods for determination of water,

total oil, soap, unsulphonated residue, and ash. Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides, Mineral Oils. Method for determination of unsulphonated residue.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. In-secticides and Fungicides. Soap. Official methods for determination of moisture, potassium and sodium.

881.23 Bordeaux Mixture

Agricultural Insecticide and Fungicide Mfrs. Assn. The Bulletin, No. 5; 1926. Bordeaux Mixture. Allowable metallic copper content and tolerance.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Bordeaux Mixture. Official methods for determination of moisture, carbon dioxide, and copper.

Assn. of Official Agricultural Chemists.

Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Bordeaux Mixture with Lead Arsenate. Bordeaux Mixture with Calcium Arsenate. Official methods for determination of moisture, carbon dioxide, total arsenic, water-soluble arsenic, copper, lead oxide.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides, Bordeaux Mixture with Paris Green. Official methods for determination of moisture, carbon dioxide, total arsenic, total arsenious oxide, water-soluble arsenious oxide, and copper.

References.—Labeling requirements, package sizes. See 881.0.

881.24 Nicotine Insecticides

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Tobacco and Tobacco Extract. Official methods for determination of nicotine.

References.—Labeling requirements. Tobacco. See 261. See 881 0

881.25 Mercuric Chloride

References .- Mercuric chloride. See 839,36.

381.26 Insect Powder (Pyrethrum)

U. S. Gov., Federal Specifications Board O-P-571; 1930. Insect Powder (Pyrethrum Powder). Requirements on permissible species of chrysanthemum from which obtained, permissible flower stems and of ash insoluble in hydrochloric acid. methods of test.

References.—Sodium fluoride, insect powder. See 834.9, Labeling requirements, See 881.0.

881.27 Flour Paste

881.28 Naphthalene

References .- Naphthalene for medicinal purposes. Sce 801.4.

881.3 FUMIGANTS

881.31 Hydrocyanic Acid Gas

881.32 Carbon Disulphid

References.—Carbon disulphide as a reagent for chemical analysis. See 839.6.

881.33 Sulphuric Acid

References .- Sulphuric acid. See 821.7.

881.34 Sodium Cyanide

References.—Sodium cyanide, insecticide. See 834.1. Labeling requirements. See 881.0.

881.35 Sodium Fluoride

References.—Sodium fluoride, insect powder. See 834.9. Labeling requirements. See 881.0.

881.4 CAUSTIC WASHES FOR BORERS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Formaldehyde Solutions. Official methods for determination of formaldehyde.

Assn. of Official Agricultural Chemists, Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Soda Lye. Official methods for determination of carbonate and hydroxide.

References.—Formaldehyde solution. See 881.9. Labeling requirements. See 881.0.

881.5 DISINFECTANTS FOR BUILDINGS

National School Supply Assn. Certified Janitor Supply Products; 1930. Disinfectants. For a pine disinfectant and for a coal tar disinfectant, requirements on phenol coefficient.

References.—Fumigants. See also 881.3. Carbolic acid. See also 802.1.

881.9 MISCELLANEOUS DISINFECTANTS AND IN-SECTICIDES

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Copper Carbonate. Official method for determination of copper oxide.

oxnue.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Insecticides and Fungicides. Organic Mercurial Seed Disinfectants. Methods for the determination of mercury.

References .- Labeling requirements. See 881.0.

882. WATER TREATMENTS, SEWAGE TREATMENTS

882.0 GENERAL ITEMS

American Public Health Assn. and American Water Works Assn. Standard Methods of Water Analysis; 1925. Published by A. P. H. A. Includes examination of sewage, industrial wastes, sewage sludge and muds, sampling, determination of nitrogen, oxygen, relative stability, biochemical oxygen demand, solids, grease, iron, etc., microscopical and bacteriological examination of water.

American Public Health Assn. and American Water Works Assn. Standard Methods of Water Analysis; 1295. Published by A. P. H. A. Includes methods of measurement and analysis and preparation of standards for physical and chemical examination of water, including turbidity, color, olor, nitrogen, oxygen, suspended matter, hardness, alkalinity, acidity, metallic elements, etc., microscopical and bacteriological examination methods.

American Railway Engineering Assn. 1929. Manual. Water Service and Sanitation. Standard Method of Water Analysis and Interpretation of Results; 1924. Applicable to boiler waters, standard combinations of chemical constituents used in reporting results and their classification into incrustants, nonincrustants and corrosives, analysis procedure and reagents for field survey and rapid laboratory analysis. For complete laboratory examination the standard method of water analysis of the American Public Health Assn. is recommended. Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Waters, Brine, and Salt. Industrial Water. Determination of solids in solution, chlorine, combined carbonic and bicarbonic acids, nitrates, silica, iron, aluminum, calcium, magnesium, sulfuric acid, alkalinity before and after boiling, total hardness and permanent hardness.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930. Waters, Brine, and Salt. Irrigating Water. Determination of solids in solution, chlorine, carbonic and bicarbonic acids, sulphuric acid, calcium, magnesium, and black alkali.

882.1 ANTIFOAMING BOILER COMPOUND

References.—Boiler compounds. See 882.2.

882.2 ANTISCALE BOILER COMPOUND

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Hydrated Lime to be Used in Water Treatment; 1922. For high calcium and calcium classes, sampling, chemical composition and fineness requirements.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Quicklime to be Used in Water Treatment; 1922. For high calcium and calcium classes and for selected and run-of-kiln grades, sampling and chemical composition requirements.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Soda Ash to Be Used in Water Treatment; 1922. For light soda ash, sampling, minimum percentage of sodium carbonate, fineness requirement,

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Sulphate of Alumina to be Used in Water Treatment; 1922. For basic sulphate of alumina, sampling and chemical composition requirements.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Sulphate of Iron to be Used in Water Treatment; 1922. For grade (a), prime green, selects, or stick crystals, or for grade (c), granular or sugar sulphate of iron, both of ferrous sulphate, sampling and chemical composition requirements.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 17. Boiler Compound. Requirements on proportions of glaubers salt, soda ash, slippery elm, sumac and water, preparation and use.

References.—Methods of water analysis. See 882.0. Other specifications for lime, for soda ash. See 517.2, 834.4.

882.3 DRINKING WATER AND TREATMENT OF DRINKING WATER

American Society for Testing Materials C 53-27; 1927. Quicklime for Use in Water Treatment. For treatment of public water supplies, general quality requirements, required percentage of available lime using A. S. T. M. test method C 25-27T.

American Seciety for Testing Materials C 54-27; 1927. Hydrated Lime for Use in Water Treatment. For use in treatment of public water supplies, required percentage of available lime using A, S, T, M, test method C 25-27T.

A. S. T. M. Est method 2.3-21.4.
Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1930.
Waters, Brine, and Salt. For potable water, determination of turbidity, color, odor, solids in solution and suspended, nitrogen as ammonia, nitrite, and nitrate, chlorine, oxygen required, dissolved oxygen, tentative methods for lead, copper, and zine.

U. S. Gov., Treasury Dept. U. S. Public Health Service. Reprint No. 1029; 1925. Drinking PURPOSES Water Standards. Mandatory for drinking and U. S. Pharmacopoeial Convention (Inc.). Pharmaculinary water supplied by common carriers in interstate commerce. Requirements on freedom of the water source from sanitary defects, on percentage of samples of water showing presence of B. coli group, on general physical and chemical characteristics.

References .- Methods of water analysis. See also 882 0

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Water. Distilled Water. For medicinal purposes, description and physical properties, test requirements for purity. Recognized as standards in enforcement of Federal food and drugs act.

References.—Methods of water analysis. See also 822.0. Chemicals used in water purification. See 517.2, 833.2, 834.4, 834.8, 838.3, 839.33, 839.34, 839.8.

890-899

MISCELLANEOUS CHEMICAL PRODUCTS

891. BLEACHES, POLISHES, DRESSINGS

Laundryowners National Assn. Laundry Supplies. Undated. Bleach. Recommended percentage of available chloring in chloride of lime.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 12. Chlo-ride of Lime Bleach (Eau de Javelle, bleaching powder). Requirements on method of preparation, constituents and amounts of each,

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 13, Dressing for Leather Goods and Furniture. Formula 14, Black for Leather. Formula 15, High Gloss Black for Leather. Formula 39, Leather Dressing. Formula 40, Leather Cleaner. List of required materials and amounts of each, methods of preparation.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 21, Prepa-ration of Hydrogen Peroxide from Perborate of Soda. Formula 22, Preparation of Hydrogen Peroxide from Sodium Peroxide. Requirements on kinds and amounts of constituents, directions for preparation.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 23. Bisulphite Bleach. For sodium bisulphite bleach, requirements on amounts of prescribed materials for preparation of 3 grades of bleach.

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 32. Bleach to Follow Permanganate Spotting. For use in cleaning garments, requirements on proportions of hydrogen peroxide and acetic acid. U. S. Gov., Federal Specifications Board 340; 1925. Polishing Paste. For polishing of metals, requirements on general qualities, freedom from acid, cyanides, and ingredients injurious to metals, nonscratching or tarnishing qualities, methods of test

U. S. Gov., Federal Specifications Board 390; 1926. Silver Polish. For liquid, paste, and powder, requirements on composition, freedom from acids and cyanides, fineness of abrasives, general qual-

ity, methods of test.

U. S. Gov., Federal Specifications Board 558; 1928. Trisodium Phosphate, Technical (Phosphate Cleaner). Granulated product used for cleaning typewriter parts, floors, metals, etc., where abrasive action is not desired, requirements on alkalinity, percentage of phosphoric anhydride, insoluble matter, and sieve grading, methods of sampling and test.

892. PRESERVATIVES AND ARTIFICIAL SWEETENERS FOR FOODS

Assn. of Official Agricultural Chemists. and Tentative Methods of Analysis 1930. Preservatives and Artificial Sweeteners. Methods for determination of presence and amount of salicyclic acid, of benzoic acid, saccharin, boric acid, for presence of formaldehyde, of soluble and in-soluble fluorides, of beta-naphthol, of abrastol, of sucrol or dulcin, of presence and amount of sulphurous or formic acids.

References.—Salicylic acid, benzoic acid. See 812.1.
Formaldehyde. See 824. Insoluble fluorides, soluble fluorides, saccharin, abrastol, sucrol, dulcin. See 839.9.

900-999 910-919

SCIENTIFIC AND PROFESSIONAL APPARATUS AND SUPPLIES

910. GENERAL ITEMS

American Institute of Electrical Engineers. (Standard No. 17f; 1928.) Joint sponsor with American Assn. for Advancement of Science, American Society of Civil Engineers, American Society of Mechanical Engineers, and Society for Promotion of Engineering Education. Approved by American Standards Assn. as Z 10f–1928. Mathematical Symbols. List of standard mathematical letter symbols.

American Society of Mechanical Engineers. Navigational and Topographical Symbols. Approved by American Standards Assn. as Z10h-1930. Sponsor bodies, Am. Assn. for Advancement of Science, Am. Inst. of Electrical Engrs., Am. Soc. of Civil Engrs., Am. Soc. Mech. Engrs., and Soc. for Promotion of Engineering Education. Cover symbols for map making purposes, for works and structures, boundaries, monuments, drainage, relief, land classification, hydrography, obstructions, aids to navigation, aerial navigation symbols.

American Standards Assn. Z17-1927. Preferred Numbers. Informally approved and recom-mended to industry for trial in practice, tables of preferred numbers for use in size standardization with definite relations between the numbers

in each of 4 standard series.

911. PHOTOGRAPHIC GOODS

911.1 CAMERAS

Society of Motion Picture Engineers. Dimensional Standards; 1930. Approved by American Standards Assn. as Z22-1930. For motion picture cameras, standard dimensions of 16 mm camera aperture, taking speed for 35 mm sound pictures. recommended practice on camera cranking speed for standard film, width of film track for 16 mm camere

References.—Sound recording and reproducing equipment. See 718.7. Testing of lenses. See 914.0.

911.2 FILMS AND PLATES

Society of Motion Picture Engineers, Dimensional Standards; 1930. Approved by American Standards Assn. as Z22-1930. For motion picture film, standard dimensions of newly cut and perforated film for 35 mm, 28 mm, and 16 mm negative and positive film, location of frame line, making of splices, relative position of scanning line for combined sound and picture on 35 mm film, recommended practice on leaders and trailers.

Society of Motion Picture Engineers. Dimensional Standards; 1930. Approved by American Standards Assn. as Z22-1930. Safety Film. Definition of safety motion picture film, as regards burning

time and construction.

References.—Shipping containers for film. See 95 958.3. Storage of motion picture film. See 51 Cellulose acetate and cellulose nitrate products. Sce 954.21, See 518.50. 958.3. 846 5

911.3 PHOTOGRAPHIC PAPER

References .- Standard sizes of photographic paper. See 478.34.

911.9 MISCELLANEOUS PHOTOGRAPHIC GOODS

References.—Metol. Sce 809.3. Sodium carbonate for photographic purposes. See 834.4. Anhydrous sodium sulphate for photography. See 834.9. Preservers or storage envelopes for negatives. See 494.

912. PROJECTION APPARATUS

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931; 1931. Motion Picture Projectors and Equipment. Requirements on inclosure of live parts, grounding, thickness of metal in arc light housing, minimum wire sizes, general construction of film magazines and automatic shutters, requirements for fireproof projector room, sizes of vent pipes and fans, storage and rewinding of films.

Society of Motion Picture Engineers. Dimensional Standards; 1930. Approved by American Standards Assn. as Z22-1930. For projectors, standard dimensions of lantern slide mat openings, for motion picture projectors, standard dimensions of take-up, intermittent and feed sprockets, dimensions of projection aperture, external dimensions of projection lenses, projection speed for sound pictures, recommended practice on size of observation port, projection lens height, projection angle, projector speed, projector apertures for sound-on-film practice. Dimensions of sprock-ets, aperture, and width of film track for 16 mm projectors.

U. S. Gov., Federal Specifications Board. G-M-111; 1931. Lantern Slide Mats. For mats made of opaque paper, requirements on standard di-mensions, composition of paper, thickness of

mat, finish, sharp cutting of openings.

References.—Booths for projectors. See 518.54. Storage of motion picture films. See 518.50. Sound recording and reproducing equipment. See 718.7. Testing of lenses. See 914.0. Motion picture films. See 911.2.

914. OPTICAL GOODS

914.0 GENERAL ITEMS

Optical Society of America, vol. 6, Aug. 1922, of Journal of Optical Society of Am. Report of Committee on Colorimetry for 1920-21. Includes curves showing elementary color excita-tions for different wave lengths for an equal energy spectrum. Research Paper No. 163 of U. S. Bureau of Standards, entitled Reduction of Data on Mixture of Color Stimuli, includes data on the distributions of the O. S. A. excita-tions throughout the spectrum of Abbot-Priest sunlight.

U. S. Gov., Dept. of Commerce, Bureau of Standards C27; 1918. Properties and Testing of Optical Instruments. Description of test methods and list of tests which the bureau will make on demand with fees charged, for instruments such as spectacle lenses, field glasses, telescopes, etc., for single lenses, for compound lenses, such as photographic objectives, etc.

References.—Railway signal lenses, automobile head-lamp lenses. See 525.3, 525.4.

914.2 BINOCULARS AND TELESCOPES

References.—Standard tests and methods of testing. See 914.0.

914,3 MICROSCOPES

914.4 READING GLASSES

References .- Standard tests and methods of testing. Rec 914.0.

914.5 EYE AND FACE SHIELDS AND GOGGLES

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for oxy-acetylene welding, furnace work, electric arc welding and cutting, etc. For helmets and shields, requirements on properties of the materials used, scope of protection, dimensions of windows, radiant energy transmission.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for oxy-acetylene welding, furnace work, etc. Goggles, face masks, helmets, and shields are permitted, requirements on fiber face masks regarding shape, size of window, general quality of glass in lenses and cover glasses, permissible radiant energy transmission of lenses.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for oxy-acetylene welding, furnace work, etc. For 3 permissible styles of goggles, requirements on materials and structural features, general quality of glass and radiant energy transmission permissible for lenses.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for exposure to glare. For 3 permissible styles of goggles, permissible transmission of total radiant energy and of short

wave length radiant energy.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for Handling Corrosive Chemicals, Dipping, Brush Coating, Etc. For face masks, eyecup goggles, and hoods, permissible materials and general structural features of face masks and goggles, dimensions and light transmission requirements for lenses.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for babbitting, etc. For a face mask and goggles of three permissible styles, requirements on size of openings for woven wire masks, structural features and materials of goggle frames, dimensions, thickness, and

required light transmission of lenses.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for exposure to dust and wind, etc. For 3 permissible styles of goggles, requirements on transmission of light, general structural features and materials.

914.1 LENSES (NOT FITTED TO INSTRUMENTS) U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for scaling, grinding, etc. For 2 permissible styles of goggles, requirements on transmission of visible light, general features and materials of construction.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for chippers, riveters, calkers, etc. Includes goggles, face masks, and helmets, requirements on general quality and size of glass goggles, percentage transmission of light, drop test for lenses, structural features of 2 permissible types of goggles, strength and corrosion test of frames.

U. S. Gov., Dept. of Commerce, Bureau of Standards H2; 1922. Approved by American Standards Assn. as X 2-1922. National Safety Code for the Protection of the Heads and Eyes of Industrial Workers. Protectors for sandblasting. For hood, requirements on size and effectiveness, size of openings in metal screen in window.

S. Gov., Federal Specifications Board 542; 1927. Rubber Frame Goggles. For single piece flexible type, requirements on size and general structural features, composition of rubber compound, optical qualities of lenses, dimensions of lenses, sterilization test, hot water test for lenses, methods of test with rubber tested according to F. S. B. Spec. 59 for rubber goods. Used as protection against dust and harmful liquids.

U. S. Gov., Federal Specifications Board 543; 1927.
Welders' Goggles. For eyecup type, metal construction with flexible nose bridge, requirements on general structural features and dimensions, general quality of lenses and cover glasses, ra-diant energy transmission for visible, infra-red, and ultra-violet for 4 shade numbers of lenses, dimensions of lenses and cover glasses, transmission of light by cover glass, sterilization and corrosion resistance test, methods of test, 2 shades of lenses intended for glare from snow, etc., other 2 shades intended for gas cutting and arc welding up to 30 amperes.

U. S. Gov., Federal Specifications Board 544; 1927. Welders' Helmets. Requirements on general structural features of body, window container, and headgear, general quality and dimensions of windows and cover glasses, radiant energy transmission requirements for 4 shade numbers of windows, including ultra-violet, visible, and infrared, sterilization test, test methods, types of weld-

ing to which shade is applicable.

U. S. Gov., Federal Specifications Board, 545; 1927. Babbitting Masks. Of steel wire gauze type equipped with windows and leather apron, requirements on general qualities, finish, size of gauze, shaping of body of mask, provision of adjustable headgear, size of apron, location of window containers, size, quality, and optical transmission characteristics of windows, sterilization tests of masks, optical and hot water test requirements for windows.

U. S. Gov., Federal Specifications Board 546; 1927. Helmets, Sand-blasting. Type suitable for external air supply, general requirements for materials, design and construction of leather or canvas helmet, window containers, air supply and windows, dimensions of windows, air hose, and cover screens, sterilization test, optical test, and dyed

material test requirements.

U. S. Gov., Federal Specifications Board GGG-G-501; 1930. Chippers' Eyecup Goggles. Require-ments on construction, materials, and some dimen-

sions of headband, eyecups, lens container, and nose bridge, dimensions, optical properties, and transmission test for lenses, test requirements for sterilization, corrosion, optical properties, and

resistance to drop test.
U. S. Gov., Federal Specifications Board GGG-G-541; 1930. Welders' Goggles. For eyecup type goggles, permissible materials, requirements on design and construction, dimensions of lenses and goggle parts, sterilization test, corrosion resistance test, requirements on quality, radiant energy transmission, and hot water test for 5 shades of filter lenses and for cover glasses, methods of test.

U. S. Gov., Federal Specifications Board GGG-H-191; 1930. Welders' Helmets. Single window, head supported, tiltable type for protecting face, head, and neck. Permissible materials, design and construction requirements for body of helmet, window container, and head gear, quality, dimensions, and radiant energy transmission requirements for 7 shades of filter glasses and for cover glass, sterilization and hot water test for helmet and glasses, methods of testing.

U. S. Gov., Federal Specifications Board GGG-S-311: 1930. Welders' Hand Shields. For rectangular and oval types, requirements on design, construction, and dimensions of nonconducting shield and handle, radiant energy transmission tests for filter and cover glasses, quality and dimensions of filter and cover glasses, for 7 filter shades, sterilization tests, methods of testing.

References.—Gas masks. See 993. Oxygen breathing apparatus. See 993. Methods of testing rubber goods. See also 200. Methods of analysis and standard samples of glass. See 520.

914.6 LOVIBOND GLASSES

U. S. Gov., Dept. of Commerce, Bureau of Standards S547; 1927. Lovibond Color System. A Spectrophotometric Analysis of the Lovibond Glasses. An analysis of the particular set of Lovibond glasses belonging to the bureau showing the relation between the transmission at given wave lengths and the Lovibond number to be used as a basis in an attempt to standardize the Lovibond glasses used in color analysis of vegetable oils.

914.9 MISCELLANEOUS OPTICAL GOODS

References .- Marine sextants. See 916.22.

915. DENTAL, SURGICAL, AND MEDICAL EQUIPMENT AND SUPPLIES

915.0 GENERAL ITEMS

American College of Surgeons. Manual of Hospital Standardization; 1930. Minimum requirements as to provision of a staff, eligibility to staff, staff rules for hospital, complete records, diagnostic and therapeutic facilities.

915.1 DENTAL EQUIPMENT AND SUPPLIES

915.10 General Items

American Dental Trade Assn. Primer of simplified practice for the dental trade; 1927. Limited number of sizes and grades chosen as standard, including color of equipment, grinding wheels, bridge cement shades, investment containers, gold shells, brush and felt and chamois wheels, gold and vulcanite files.

U. S. Gov., Dept. of Commerce, Bureau of Standards R108-29; 1929. Dental Hypodermic Needles. Simplified practice recommended and accepted by industry for a limited standard schedule for stock varieties of dental hypodermic needles, including hexagonal hub with standard thread, American Luer standard slip hub, conductive anesthesia with hexagonal hub and slip hub, cartridge type needles and Schimmel and other

U. S. Gov., Dept. of Commerce, Bureau of Standards. R116-30; 1930. Dental Brush Wheels. And R130-31; 1931. Dental Lathe Grinding Wheels. Simplified practice recommended and accepted by industry establishing a limited list of stock varieties and sizes of brush wheels (R116-30), and grinding wheels (R130-31).

U. S. Gov., Dept. of Commerce, Bureau of Standards, R117-30; 1930. Packaging of Dental Plaster, Investment and Artificial Stones. Simplified practice recommended and accepted by industry establishing a limited list of standard package sizes as determined by net weight for investments and artificial stones, for plaster, and for separating plaster.

915.11 Dental Instruments

References.-Standard sizes and grades. See 915.10 915.12 Dental Alloys

References.—Dental gold alloys, See 662. Dental amalgam alloys, See 691.1.

915.13 Dental Rubber Goods

References .- Rubber dam. See 204.4.

915.14 Dental Films

915.19 Miscellaneous Dental Supplies

American Dental Assn. Tentative Specification. No. 3, 1930. Dental Impression Compounds. Published in Vol. XVIII of Journal of Am. Dental Assn. for Jan. 1931. Requirements on freedom from foreign materials, uniformity of grain, glossy surface, trimming qualities, hardening point, plasticity, softening point, working range, and shrinkage, methods of test.

American Dental Assn. Tentative Specification. No. 4, 1930. Dental Inlay Casting Wax. Published in Vol. XVIII of Journal of Am. Dental Assn. for Jan. 1931. For waxes of paraffin series, requirements on freedom from foreign material, color, softening qualities, trimming qualtitles, melting and vaporizing qualities, flow at mouth temperatures, softening point, working range, thermal expansion, methods of test.

References.—Calcined gypsum for use in preparation of dental plasters. See 514.2.

915.2 SURGICAL AND MEDICAL INSTRUMENTS

915.21 Bougies

915.22 Catheters

References .- Catheters. See 204.55.

915.23 Depressors

915.24 Mirrors

915.25 Sphygmomanometers

U. S. Gov., Dept. of Commerce, Bureau of Standards T352. Use and Testing of Sphygmoma-nometers. Includes methods of testing against a standard instrument, tolerances allowed for mercurial and for aneroid instruments, standard required for issuance of certificate for instruments tested.

915.26 Stethoscopes

915.27 Syringes and Needles

References .- Clinical thermometers. See 919.83.

915.3 MEDICAL AND HOSPITAL EQUIPMENT

915.30 General Items

National Board of Fire Underwriters. Anaesthetical Apparatus Employing Combustible Anaesthetics; 1929. Precautions on use, marking and location of storage cylinders or cans, ventilation of room, use of explosion proof motors and vapor proof electric lamps, grounding of machines, tables, patients, and operators, provision of luunid atmosphere, no open flames, smoking, etc.

915.31 Disinfectors, Inhalers, and Irrigators

915.32 Sterilizers

U. S. Gov., Federal Specifications Board 68a; 1925. Sterilizers, Dressing Containers, Etc. For dressing sterilizer of vacuum type, requirements on dimensions of 3 sizes, size of door, construction, materials of brass or copper, capacity of electric heater if used, capacity of vacuum device, time required to obtain sterilization, burner equipment and pressure test of heating coils where steam heat used.

U. S. Gov., Federal Specifications Board 68a; 1925. Sterilizers, Dressing Containers, Etc. For instrument sterilizers of sheet copper, requirements on dimensions of 6 sizes, thickness of metal, construction, door operating device, heating rate of electric heater where used, burner equipment and pressure test of heating coils where steam heat used.

U. S. Gov., Federal Specifications Board 68a; 1925. Sterillzers, Dressing Containers, Etc. For sheet copper utensli sterilizer, requirements on dimensions, thickness of material, construction, method of opening door, heating rate of electric heater if used, burner equipment and pressure test of heating coils where steam heat used, covers 2 sizes.

U. S. Gov., Federal Specifications Board 68a; 1925. Sterilizers, Dressing Containers, Eic. For water sterilizers, requirements on capacity and thickness of metal for 3 sizes, construction of sterilizer and of filter, pressure test of steam heating coils, burner equipment, required fittings.

References .- Electric heaters. See also 717.1.

915.46 Stands, Trays, and Carriers

915.47 Urinals, Bedpans, Commodes, and Racks

References .- Stationary urinals of vitreous ware, Sec 532.23

915.5 MEDICAL AND HOSPITAL SUPPLIES

915.50 General Items

American Marine Standards Committee. O No. 21– 1928, Medical and Surgical Supplies and Equipment for Ocean-Going Vessels. Standard unit list of vaccines and antitoxins, drugs and chemicals, surgical and general supplies and equipment.

American Marine Standards Committee. O No. 22-1928, Medical and Surgical Supplies for Coastwise and Lake Freighters. Standard Unit List. Lists of medical supplies for first aid kits, and of drugs and surgical and general medical supplies for medicine chest.

American Marine Standards Committee. O No. 23-1928. Medical and Surgical Supplies and Equipment for Small Vessels. Standard unit list of medicines, supplies and equipment, including first aid kits.

915.51 Surgical Dressings

References.—Absorbent cotton, gauze, surgical dressings. See 398.1, 398.2, 398.3.

915.52 First-Aid Supplies

References .- See references under 915.51.

915.53 Medicinal and Pharmaceutical Preparations References.—Standard unit list of supplies. See 915.50. Medicinal and pharmaceutical preparations. See 810-819.

915.54 Napkins

915.55 Surgical Silk and Tape

References.—Adhesive tape. See adhesive plaster under 204.12.

915.56 Suture Material

U. S. Gov., Federal Specifications Board 357; 1925. Boilable Catgut Ligatures (Surgical Catgut Suture Material). For plain ligatures, 10 to 20 day chromicized, and 30 to 40 day chromicized ligatures, requirements on source, preparation, length, sizes, tensile strength, pliability, storage in tubes, sterilization, boilable properties, permissible ash, freedom from sulphates, preparation and absorbability of chromicized ligature, methods of test.

915.57 Absorbent Cotton

References .- Absorbent cotton. See 398.1.

915.58. Bone Plates

U. S. Gov., Dept. of Commerce. Bureau of Standards. CS37-31; 1931. Steel Bone Plates and Screws. A commercial standard selected and adopted by industry for Sherman type bone plates made of chromium-vanadium steel, requirements on chemical composition of plates and screws corresponding to S. A. E. steel No. 6150, hardness, dimensions and design for 14 plate sizes, and 11 screw sizes.

916. SURVEYORS' AND ENGINEERS' IN-STRUMENTS AND SUPPLIES

916.1 MATHEMATICAL INSTRUMENTS

916.2 LENGTH AND ANGLE MEASURING INSTRU-MENTS

916.21 Length-Measuring Instruments

U. S. Gov., Dept. of Commerce, Bureau of Standards C328; 1927. Testing of Measuring Tapes at the Bureau of Standards. Includes specifications for standard steel tapes, requirements on placing of graduations, permissible error in length for chosen standard tensions. Method of testing steel tapes with description of bench standard, description of geodetic comparator for testing base-line tapes.

References.—Caliper rules, carpenters folding rules, steel rules, wood rulers. See 616.33. Railway wheel measuring tapes. See 616.35. Standard linear measures. See 919.1.

916.22 Angle-Measuring Instruments

U. S. Gov., Dept. of Commerce, Bureau of Standards C110; 1921. Specifications for Marine Sextants. Used as the basis for certificates issued for instruments tested by the bureau. Covers requirements on rigidity, durability, convenience of operation, range and accuracy of scales, consistent tolerances for the mirrors, shade glasses, and telescopes.

916.4 GAUGES (EXCEPT INDUSTRIAL)

916.5 TRANSITS

916.6 LEVELS (OTHER THAN CARPENTER'S)

916.7 CHESTS AND KITS

916.8 PLANE-TABLE OUTFITS

917. METEOROLOGICAL INSTRUMENTS

917.1 ANEMOMETER AND WIND VANES

917.2 BAROMETERS AND BAROGRAPHS

American Society of Mechanical Engineers Power Test Code. Instruments and Apparatus Part 2. Pressure Measurements; 1929. Chap. 1 on de-scription, explanation of use, installation and calibration of various types of barometers. Chap. 6 on standards of reference for rated vacuum or back pressure of turbines and engines, tables of corrections for barometers and mercury columns for temperature, differences in elevation, gravity, capillarity; tables of multipliers for water columns, formulas for pressure equiva-lents of velocity heads and for pressure loss due to pipe friction, pressure conversion tables.

U. S. Gov., Dept. of Commerce, Bureau of Standards C46; 1922. Testing of Barometers and Altimeters. For aneroid barometers, uses and errors, methods of test used at bureau covering the general test, the supplementary test for sample instruments, the supplementary test for experimental instruments, and the short test for service instruments, the general test including mechanical tests, sea-level corrections, and calibration, tolerances for aviation aneroid barometers and barographs, certification of tested instruments, fees.

U. S. Gov., Dept. of Commerce, Bureau of Standards C46; 1922. Testing of Barometers and Altimeters. For mercurial barometers, uses, errors, methods of test used at the bureau, giving of instrument corrections for instruments submitted for test.

917.3 PSYCHROMETERS, CASE AND SLING

917.4 GAUGES, METEOROLOGICAL

917.5 THERMOMETERS

References .- Testing of thermometers. See 919.80.

918. LABORATORY APPARATUS AND SUP-PLIES

918.0 GENERAL ITEMS

American Ceramic Society, Journal of A. C. S. for June, 1928. Tentative Methods. Analysis of Glass; 1926. Preparation and fusion of sample, method of determination of silica, iron and alumina, lime, magnesia, and alkalis.

U. S. Gov., Dept. of Commerce, Bureau of Standards C19; 1924. Standard Density and Volumetric Tables. Includes tables of temperature correction for glass volumetric apparatus.

U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples. Glass. Sample No. 80 for soda-lime glass, No. 89 for lead-barium glass, No. 91 for opal glass, No. 92 for standard low boron glass, and No. 93 for standard high boron glass (Pyrex), sample prepared and sold by the bureau with a certificate of its analysis, for use by industrial organizations and others as a comparison standard in the analysis of glass.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS21-30; 1930. Interchangeable Ground Glass Joints. A commercial standard selected and accepted by industry applicable to ground glass joints for laboratory and industrial glassware, covering 1 standard taper, 9 standard diameters and lengths of ground zone, standard gages to be kept at Bureau of Standards.

U. S. Gov., Dept. of Commerce, Bureau of Standards T107; 1918. Comparative Tests of Chemical Glassware. Covers comparative tests of beakers and flasks of foreign and domestic manufacture. Methods of chemical analysis and methods of testing for coefficient of expansion, refractive index, strain, evaporation test, heat-shock test, and drop test are included.

918.1 BURETTES AND PIPETTES

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes burettes and pipettes, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

American Society for Testing Materials. Tentative Test Method. D 285-30T; 1930. Method of Test for Distillation of Crude Petroleum. Includes specifications for special 300 cc measuring pipette,

dimensions and illustrated design.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Burettes. For 4 standard burettes, (funnel top; 3 way stopcock; bulb and 3 way stopcock with 50 ml bulb; bulb and 3 way stopcock with 75 ml bulb), requirements on general quality and annealing of glass, graduation, construction of stopcocks and burette tips, capacity and design of burette, dimensions, time of outflow, error in capacity, calibration according to Nat. Bureau of Standards methods.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Mohr Pipettes. Standard sizes, requirements on general quality and annealing of glass, design, graduation, dimensions, limits of error in graduation, calibration in accordance with methods of Nat. Bureau of Standards.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Transfer Pipettes. Standard sizes, requirements on general quality and annealing of glass, dimensions, graduation, accuracy of graduation, calibration according to Nat. Bureau of Standards methods.

References.—Analysis of glass, volume correction, ground joints. See 918.0.

918.2 BEAKERS, GLASSES, GRADUATES, AND FUNNELS

American Chemical Society, Standard Sizes and Shapes of Apparatus; 1927. Includes beakers, watch glasses, graduates and funnels, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

American Wood Preserver's Assn. 26a; 1923. Methods for Determination of Tar Acids in Creosote Oil. Includes specifications for graduated glass separatory funnel, dimensions and design

for two types.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Graduated Cylinders. For lipped cylinders with foot and for glass stoppered cylinders with foot, standard sizes, requirements on general quality and annealing of glass, design, graduation, diameter of neck of stoppered cylinders, limits of error in graduation, calibration in accordance with methods of Nat. Bureau of Standards.

National Conference on Weights and Measures, Commercial Weighing and Measuring Devices. Published as MS5 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States, Glass Graduates. Requirements on shape and proportions, quality of glass, tipping test for stability, size, spacing, and marking of graduations, tolerances allowed on capacities for various diameters.

References.—Analysis of glass, volume corrections, ground joints, physical testing methods. See 918.0. Metal funnels for commercial use. See 612.29. Buchner porcelain funnel. See 532.21.

ner porcelain funnel. See 532.21. 918.3 CRUCIBLES, BOTTLES, BRUSHES, AND JARS

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes crucibles and bottles, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

References.—Porcelain crucibles and other laboratory porcelain ware. See 532.21. Weighing bottles, tablet bottles. See 955.1. Laboratory and distillation flasks. See 918.9. Analysis of glass, volume corrections, ground joints. See 918.0.

918.4 BURNERS AND CLAMPS

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes burners and clamps, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

918.5 DISHES

References .- Porcelain dish. See 532.21.

918.6 MORTARS AND PESTLES

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes mortars, sizes selected as standard stock items, no detailed dimensions or specifications.

918.7 TUBES AND TUBING

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes tubes and tubing, sizes selected as standard stock items, no detailed specifications.

References.—Rubber tubing. See 204.6.

918.8 BIOLOGICAL APPARATUS AND SUPPLIES

918.31 Albuminometers

918.82 Amboceptors

918.83 Ampules

918.84 Chlorinators

918.85 Incubators, Biological

918.86 Haemacytometers

U. S. Gov., Dept. of Commerce, Bureau of Standards LC307; 1931. Haemacytometer Chambers. Requirements on general quality of glass, general design, permissible errors in depth, rulings, and graduations, required planeness of cover glasses. Requirements must be met in order to get Bureau of Standards precision seal.

Reference .- Analysis of glass. See 918.0.

918.87 Spatulas

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922, Porcelain Spatula. Requirements on general quality of porcelain for long spatula with knob at opposite end, standard sizes and dimensions, tolerance on capacity, test requirements for resistance to rapid heating and cooling, resistance to hot alkalies, freedom from porous surface, and softening at high temperatures, to be entirely glazed.

918.9 MISCELLANEOUS LABORATORY APPARA-TUS AND SUPPLIES

American Chemical Society. Standard Sizes and Shapes of Apparatus; 1927. Includes absorption bulbs and tubes, adapters, alkalimeters, annealing cups, ball mills, baskets, baths, calclum chloride tubes, cospales, casseroles, centrifuge tubes, color comparison tubes, combustion tubes and boats, condensers, cylinders, desiceators, distilling tubes, extraction apparatus, liter paper, flasks, funnel tubes, gas analysis apparatus, lecture apparatus, potash bulbs, rubber tubing, spatulas, stopcocks, sulphur apparatus, supports, tongs, triangles, urine analysis apparatus, weighing bottles. Sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

American Society for Testing Materials C 68-30; 1930. Method of Test for Determination of Approximate Apparent Specific Gravity of Fine Aggregate. Includes special glass flask for specific gravity determinations, design, dimensions, graduation requirements, illustrated.

American Society for Testing Materials D 20-30: 1930. Method of Test for Distillation of Bituminous Materials Suitable for Road Treatment. Includes specifications for distillation flask and class confidence tribus discontinuous designs.

glass condenser tube, dimensions and design.
American Society for Testing Materials D 86-30;
1930. Method of Test for Distillation of Gasoline, Naphtha, Kerosene, and Similar Petroleum Products. Includes standard 100 cc Engler flask, dimensions and shape, tolerances, illustrated.

American Society for Testing Materials D 158-28; 1928. Methods of Testing Gas Oils. Includes Saybolt distilling flask, condenser of brass tubing, sheet metal shield, ring support and asbestos boards, dimensions and general design. American Society for Testing Materials D 246–30; 1930. Method of Test for Distillation of Creosote Oil. Includes side neck glass distillation flask, tapered glass condenser tube, galvanized iron shield, dimensions, general design and assembly.

American Society for Testing Materials. Tentative Test Method D 285-307; 1930. Method of Test for Distillation of Crude Petroleum. Includes specifications for Hempel distilling flask, design, dimensions and tolerances, for 300 cc capacity.

American Wood Preserver's Assn. 11c; 1929. Standard Distillation of Creosote Oil. Includes specifications for distilling flask and condenser tube. Design, dimensions and permissible varia-

tions for glass flask and tube.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Boiling Flasks. For flat bottom ring neck; round bottom, short ring neck; and flat bottom, vial mouth flasks; list of standard sizes, requirements on general quality and annealing of glass, accuracy of capacity rating, dimensions, recommended requirements on resistance toward water, mineral acids, alkalies, heat shock, and mechanical shock, tested in accordance with Nat. Bureau of Standards paper T107.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Distilling Flasks. For flasks with tubulature, standard sizes, requirements on general quality and annealing of glass, design, dimensions, recommended requirements on resistance to water, acids, alkalies, heat shock, and mechanical shock using test methods given in Nat, Bureau of Standards paper Ti07.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Erlenmeyer Flasks. Standard sizes for narrow mouth flasks, requirements on general quality and annealing of glass, accuracy of rated capacity, dimensions, recommended requirements on resistance to water, acids, alkalies, heat shock, and mechanical shock using test methods given in Nat. Bureau of

Standards paper T107.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Kjeldahl Flasks. Round bottom, long neck flasks, requirements on general quality and annealing of glass, accuracy of rated capacity, list of standard sizes, dimensions, recommended requirements on resistance to water, acids, alkalies, heat shock, and mechanical shock using test methods given in Nat.

Bureau of Standards paper T107.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Laboratory Porcelain Ware. Standard sizes and dimensions for annealing cups, boats, casseroles, combustion capsules, high and low form crucibles and crucible covers, dishes, buchner funnels, gooch crucibles and covers, perforated plates for funnels, plates for color reactions, long spatula with knob, dupont nitrometer, requirements on surfaces to be glazed, general quality of porcelain, tolerance on capacity, tests for resistance to rapid heating and cooling, resistance to hot alkalies, freedom from porous surface, and softening at high temperatures.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus; 1922. Volumetric Flasks. Requirements on general quality and annealing of glass, on design, marking, dimensions, calibration according to methods of Nat. Bureau of Standards, for both stoppered and unstoppered

flasks, standard sizes.

U. S. Pharmacopoeial Convention (Inc.). Pharmacopoeia of U. S. A.; 1926. Glass Wool.

Physical properties, test requirements for freedom from lead. For use in chemical testing.

References.—Analysis of glass, volume corrections, ground joints, physical testing methods. See 918.0. Methods of sampling and testing clay and clay products. See 531.0.

919. MISCELLANEOUS SCIENTIFIC AND LABORATORY APPARATUS

919.1 WEIGHTS AND MEASURES

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. 1 Pint, 1 Quart, 2 Quart, and 1 Gallon Measures. Dimensions, metal gage, and design of liquid measures with handle and lip, of tin or cold rolled steel.

National Conference on Weights and Measures. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Commercial Weighing and Measuring Devices. Linear Measures. Requirements on permissible materials, protection of non-metallic measures, allowed length tolerances including tolerances for metallic tapes, width of gradua-

tions.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recomended by Bur. of Standards for adoption by the States. Dry-Capacity Measures. Includes baskets used as measures, permissible materials, permissible capacities, requirements on marking of capacity, shape, structural features, minimum diameters, allowed tolerances on correctness of capacity.

National Conference on Weights and Measures, Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Liquid Capacity Measures. Requirements on thickness of material for steel, iron, or copper vessels, permissible capacities, structural features, marking of capacity, per-

missible tolerances on capacity.

National Conference on Weights and Measures.
Commercial Weighing and Measuring Devices.
Published as M85 of Bureau of Standards; 1929.
In agreement with standards recommended by
Bur. of Standards for adoption by the States.
Weights. Permissible materials, requirements on
finish, protective coating, marking of value on
weight, tolcrances allowed on weights for avoirdupols system, for apothecaries' system and for
metric system, for weights up to 50 pounds.

U. S. Gov., Dept. of Commerce, Bureau of Standards of Mass. For 5 classes of weights, including highest precision and also precise commercial standards, commercial test weights, high precision laboratory standards, and analytical and similar laboratory edgents, and analytical and similar laboratory weights, requirements on allowable materials and their properties, shape and construction, plating and tests for corrosion, marking, maximum error permitted, test for constancy, regulations governing the testing and certification of weights by the Bureau of Standards.

U. S. Gov., Dept. of Commerce, Bureau of Standards C43; 1921. Jewelers and Silversmiths Weights and Measures. The international metric carat of 200 urilligrams was put into commercial use in 1913 by dealers in gems, was adopted by Treasury Dept. in the customs service, and is rec-

ognized by Bureau of Standards for certification | 919.6 NAUTICAL INSTRUMENTS of carat weights submitted for test. Tables in C43 give relations between metric and the old

carat.

U. S. Gov., Dept. of Commerce, Bureau of Standards C47 and Suppl.; 1914. Units of Weight and Measure. Definitions of units of length area, volume, capacity, and mass, distinction between units and standards of measurement, tables of comparison of metric and customary units.

U. S. Gov., Dept. of Commerce, Bureau of Standards C55; 1915. Measurements for the Household. Gives information as to units, methods, and instruments of measurement useful in household activities, describes suitable household weights and measures test sets and method of use in checking purchases, checking of thermome-

ters, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards H11; 1927. Weights and Measures Administration. Contains information regarding a comprehensive system of weights and measures administration, such as functions of the weights and measures official, organization of weights and measures administration in U. S., fee systems as applied to inspections, use of weights and measures standards, testing of commercial weighing and measuring devices, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC116; 1924. Conversion Tables. For square feet into square meters, square meters into square feet, cubic feet into cubic meters, and cubic meters into cubic feet.

U. S. Gov., Dept. of Commerce, Bureau of Standards S527; 1926. Short Tests for Sets of Laboratory Weights. Three kinds of tests outlined, a rough check for gross errors, the comparison with each other of just enough weights and combinations of weights so that the value of each weight can be computed from a standard weight, the comparison of weights so that the agreement of various results will be a check against errors in observations.

919.2 AERONAUTICAL INSTRUMENTS

References .- Aeronautical instruments. See 724.26.

919 3 COMPASSES

References .- Radiocompass. See 718.66.

919.4 HYDROMETERS

U. S. Gov., Dept. of Commerce, Bureau of Standards C16; 1922. The Testing of Hydrometers, Also C19; 1924. Standard Density and Volumetric Tables. For density and specific gravity hydrometers, Baumé hydrometers, hydrometers for sulphuric acid, alcoholometers, saccharometers, and thermohydrometers. Requirements to be met by instruments being submitted to bureau for test and certification, such as standard temperature of test, structural features and materials, inscription regarding use, range of graduation for various liquids, graduation according to tables in C19, permissible errors,

U. S. Gov., Dept. of Commerce, Bureau of Standards T115; 1918. New Baumé Scale for Sugar Solutions. Adopted by Manufacturing Chemists Assn. of U. S., the Bureau of Standards, and by all American manufacturers of hydrometers. Scale is based on specific gravity values of Plato, 20° C., and the modulus 145. Tables show relation between degrees Brix or per cent sucrose,

specific gravity, and degrees Baumé.

919.5 MANOMETERS

References.—Sextant for marine use. See 916.22. Radiocompass. See 718.66. Ship details and equipment. See 725.4.

919.7 THERMOGRAPHS AND HYDROGRAPHS

919.8 THERMOMETERS AND PYROMETERS

919.80 General Items

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, Pt. 3. Temperature Measurement; 1931. Includes Bourdon Tube Thermometers. Description and classification of the various types, relative advantages in the use of the liquid-filled type, the vaporpressure type, and the gas filled type, materials of parts, recording mechanisms, range and accuracy, installation rules, precautions, corrections, calibration.

American Society of Mechanical Engineers. Power Test Codes. Instruments and Apparatus, Pt. 3. Temperature Measurement; 1931. Includes Liguid-in-Glass Thermometers. Description and classification of thermometers, dimensions and installation of thermometer wells, precautions in use of thermometers, emergent stem corrections, calibration, checking of fixed points, determina-

tion of time lag.

International Assn. of Milk Dealers. Sketch 4667-D; 1926. Standard Sanitary Thermometer Connection for Vats. Detail dimensions and thread

requirements for spud fitting.

International Assn. of Milk Dealers. Sketch 4667— E; 1926. Standard Thermometer Connection for Glass Lined Tanks, Detail dimensions and threading.

Society of Automotive Engineers 1931 Handbook. Thermometer Bulbs; 1929. Dimensions of standard threaded thermometer bulb presumably for vapor pressure type thermometers for use with

aircraft engines.

U. S. Gov., Dept. of Commerce, Bureau of Standards C8: 1926. Testing of Thermometers. Regulations covering the testing and certification of thermometers by the Bureau of Standards for laboratory and working standards, clinical standards, calorimetric, Beckmann, hypsometric, hygrometric, flash point, distillation, and viscometer thermometers, and special low temperature thermometers, for household and meteorological thermometers with scales graduated on the glass stem, also platinum resistance thermometers and thermocouples within certain ranges. Standard of comparison, number and choice of test points, requirements on design, placing of reference point on scale, graduation, material, workman-ship, annealing gas filling, and accuracy, to be met before certificate is given.

met betore certificate is given.
U. S. Gov., Dept. of Commerce, Bureau of Standards C25 and Suppl.; 1927. Standard Samples.
Tin, Zine, Aluminum, Copper, and Lead. Samples No. 42b, No. 43b, No. 45h, No. 45a, and No.
49, respectively, prepared and sold by the bureau with a confident a living the suffer of the standard sold by the bureau. with a certificate giving the melting point in each case, for use in industry and by others as standards for calibrating pyrometers, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C35; 1919. Melting Points of Chemical Elements, and Other Standard Temperatures. Table of melting points of elements and boiling points of some liquids, with the values indicated which are used by the bureau as standard temperatures

for calibration of thermometers and pyrometers.
U. S. Gov., Dept. of Commerce, Bureau of Standards C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of tin, zinc, aluminum, and copper, their chemical analyses, freezing points, and

degree of purity, their use for the standardization of thermocouples, platinum resistance thermometers, pyrometers, precautions in their use, prices.

919.81 Bath Thermometers

References .- Bath thermometers for chemical and physical testing. See 919.82.

919 82 Chemical Thermometers

American Society for Testing Materials D 6-30; 1930. Method of Test for Loss on Heating of Oil and Asphaltic Compounds. Includes specifion and Asphattic Compounds, includes specifications for mercury test thermometer graduated from 155° to 170° C, dimensions, design, graduation, standardization, permissible error.

American Society for Testing Materials D 20-30; 1930. Method of Test for Distillation of Bituminous Materials Suitable for Road Treatment.

Includes specifications for total immersion thermometer, 0° to 400° C. or 30° to 760° F., dimenstons, design, graduation, standardization, permissible scale error, test for permanency of

American Society for Testing Materials D 36-26; 1926. Method of Test for Softening Point of Bituminous Materials. Includes specifications for test thermometers, for ranges of 30° to 180° F, and of 85° to 320° F, or equivalent centigrade ranges, dimensions, construction, graduation, standardization, permissible error.

American Society for Testing Materials D 56-21; 1921. Approved by American Standards Assn. as K8-1923. Method of Test for Flash Point of Volatile Flammable Liquids. Includes specifications for mercury thermometers for use with Tag closed tester, dimensions, construction, special graduation for the purpose for which used, accuracy requirements, for -7° to 110° C. or corresponding Fahrenheit range.

American Society for Testing Materials D 61-24; 1924. Method of Test for Softening Point of Tar Products. Includes specifications of mercury test thermometer of 30° to 180° F, range or equivalent centigrade range, dimensions, design, graduation, standardization, and permissible error.

American Society for Testing Materials D 86-30; 1930. Method of Test for Distillation of Gasoline, Naphtha, Kerosene, and Similar Products. Includes specifications for low-distillation and for high-distillation thermometers, graduated in centigrade or Fahrenheit, dimensions, graduation, construction, standardization, accuracy, test for permanency of range, for ranges of 0° to 300° C. and of 0° to 400° C. American Society for Testing Materials D 87-22;

1922. Approved by American Standards Assn. as Z11d-1928. Method of Test for Melting Point of Pariffin Wax. Includes thermometer for measuring melting point, range 27° to 71° C. or 80° to 160° F., dimensions, design, graduation, permissible error, and standardization requirements.

American Society for Testing Materials D 88-30; 1930. Methods of Test for Viscosity of Petro-leum Products and Lubricants. Includes specifications for bath and oil tube thermometers, one set graduated in centigrade and one in Fahrenheit, dimensions, design, graduation and ranges, permissible error, standardization, for ranges of 19° to 27° C., 34° to 42° C., 49° to 57° C., and 95° to 103° C., and the corresponding Fahrenheit

American Society for Testing Materials D 92-24; 1924. Approved by American Standards Assn. as Z11f-1928. Method of Test for Flash and Fire Points by Means of Open Cup. Includes special mercury thermometer graduated in centigrade or Fahrenheit, dimensions, graduation, permissible error, standardization, test requirements for

permanency of range, range —6° to 400° C.

American Society for Testing Materials D 97–30;
1930. Approved by American Standards Assn. as Z11b-1928. Cloud and Pour Points of Petro-leum Products. Includes specifications for thermometers, ranges -38° to 50° C, or corresponding Fahrenheit range, and -60° to 20° C., or corresponding Fahrenheit, dimensions, design, graduation, standardization, and permissible error.

American Society for Testing Materials D 139-27; 1927. Method of Float Test for Bituminous Materials. Includes specifications for test thermometer, dimensions, construction, graduation 30° to 180° F. or equivalent centigrade range, standardization, permissible error.

American Society for Testing Materials D 182-25; D 183-25; D 184-25; 1925. A. S. T. M. Partial Immersion Thermometers for General Use. Covering respective ranges of 0° to 300° F., 20° to F., 20° to 760° F. and the corresponding centigrade ranges, dimensions and design, graduation, immersion, standardization, permissible scale error, test for permanency of range.

American Society for Testing Materials D 233-26; 1926. Methods of Sampling and Testing Turpen-Includes specifications for mercury thermometer for use in turpentine distillation apparatus, graduated from 145° to 200° C., intervals and spacing of graduations, numbering, provision of reservoir and gas above mercury, accu-

racy requirements.

American Society for Testing Materials D 246-30; 1930. Method of Test for Distillation of Creosote Oil. Includes specifications for total immersion thermometer, range 0° to 400° C. or 30° to 760° F., dimensions, design, graduation, standardization, permissible error, test for permanency of range

American Society for Testing Materials Tentative Test Methods D 287-30T; 1930. Method of Test for Gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Includes thermometer of range from -20° to 102° C. or -5° to 215° F. Dimensions, design, graduation, standardization, permissible scale error.

American Society for Testing Materials. Tentative Specifications D 300-30T; 1930. Thermometers for Engler Viscosimeters. For ranges of 18° to 28° C., 39° to 54° C., and 95° to 105° C., in 0.2° C. divisions, for mercury thermometers, requirements on length, dimensions, design, graduation, standardization, permissible scale error. American Wood Preserver's Assn. 6b; 1926.

Float Test of the Residue in Creosote Oil. Di-mension, material, weight, and design of float and collar, design and graduation of thermometer, preparation of sample, test procedure, thermometer range 0° to 80° C. or 30° to 180° American Wood Preserver's Assn. 11c;

11c: 1929. Standard Distillation of Creosote Oil. Includes specifications for total immersion thermometer of 0° to 400° C. or 30° to 760° F., dimensions, design, graduation, standardization, test for permanency of range, permissible scale error.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus: 1922. Thermometers. For seven standard thermometers of which 3 are for general laboratory work including long distillation range tests, 4 are for more accurate distillation, melting and freezing ranges, all for 76 mm immersion, requirements on range, type of glass, dimensions, graduation, accuracy, using test methods of Nat. Bureau of Standards.

National Cottonseed Products Assn. Rules; 1930. Rule 277. Standard Thermometer for determination of titer. Requirements on graduation range in degrees centigrade, location of 10° mark, annealing, type glass and thickness of bulb, dimensions of bulb and thermometer, certification by Nat. Bureau of Standards, range 10° to 65° C.

U. S. Gov., Federal Specifications Board 7b; 1926. Turpentine. Includes thermometer used for turpentine distillation, 145° to 200° C., requirements on intervals and details of graduation, length and structural features of thermometer, permissible error.

References.—Thermometer fixed points, testing and certification rules. See also 919.80. Analysis of glass. See 918.0.

919.83 Clinical Thermometers

U. S. Gov., Dept. of Commerce, Bureau of Standards US1-28; 1928. Clinical Thermometers. A commercial standard selected and accepted by industry for maximum self-registering thermometers, requirements on construction, scale range, graduation, test for retention of pigment, test for entrapped gas, hard shaker test, retreat test, test for accuracy, aging, issuance of certificate of compliance with each thermometer.

U. S. Gov., Pederal Specifications Board 309; 1925. Clinical Thermometers. For Fahrenheit or cen-

U. S. Gov., Federal Specifications Board 309; 1925. Clinical Thermometers. For Fahrenheit or centigrade scale thermometers, requirements on length, thickness of stem, shape, size of bulb, and type of glass, graduation and range of scale, accuracy, repetition of reading, tests for non-receding index, hard shakers, and time required to

register.

References.—Thermometer fixed points, testing and certification rules. See also 919.80. Analysis of glass. See 918.0.

919.84 Maximum and Minimum Thermometers

919.89 Miscellaneous Thermometers

U. S. Gov., Federal Specifications Board GG-T-321; 1931. Industrial Thermometers. For 7 classes of thermometers with separable metal sockets, for refrigerating brine lines, refrigerator rooms, outboard delivery, main injection, for bearings, lubricating oil, oil-cooler oil and water, fuel oil heater, condensers, feed water, low and high pressure and superheated steam, and for flue gas, requirements on material and detail dimensions of sockets, design of case, general quality of glass tubing, structural features of thermometer, continuity of mercury column under shaking test, graduation accuracy.

References.—Thermometer connections, methods of testing and certification of thermometers. See also 919.80. Analysis of glass. See 918.0.

919.9 SCIENTIFIC AND LABORATORY APPARA-TUS NOT ELSEWHERE CLASSIFIED

U. S. Gov., Dept. of Commerce, Bureau of Standards LC94; 1923. Calibration Boxes for Testing Machines. Information on sensibility, constancy, and accuracy of portable calibration boxes used at the bureau for calibrating compression and tension testing machines, boxes are made of metal and filled with mercury, the change of volume under load being used as measure of load.

U. S. Gov., Dept. of Commerce, Bureau of Standards LC264; 1929. Proving Rings for Calibrating Testing Machines. Requirements on gradu-

ation of scale, permissible deflection of ring when loaded to capacity, constancy of readings on repeated loadings, calibration, method of use in calibration of testing machines for compres-

sion and for tension testing.

U. S. Gov., Dept. of Commerce, Bureau of Standards T112; 1919. Standardization of the Saybolt Universal Viscosimeter. Includes Engler viscosimeter, standard dimensions and tolerances as adopted in 1907 by German testing laboratories.

U. S. Gov., Dept. of Commerce, Bureau of Standards T-112: 1919. Standardization of the Saybolt Universal Viscosimeter. Gives standard dimensions of Saybolt Universal viscosimeter as proposed by the bureau and accepted by Mr. Saybolt in 1917, tables showing kinematic viscosity for various times of discharge of the standard instrument and conversion tables between standard Saybolt and the Engler.

920-929

MUSICAL INSTRUMENTS

921. PIANOS

922. PIANO ACTIONS, PARTS, AND MUSIC ROLLS

923. ORGANS

National Board of Fire Underwriters. National Electrical Code; 1931. Approved by American Standards Assn., C1-1931. Organs. Electrical circuits and parts used in control of sounding apparatus and keyboards, voltage rating of generator or battery, grounding requirements, insulation, minimum sizes, and installation of wires, requirements for fuses.

924. PHONOGRAPHS

925. BAND INSTRUMENTS

925.1 BUGLES

925.2 FIFES 925.3 TRUMPETS

929. STRINGED MUSICAL INSTRUMENTS, EXCEPT PIANOS

National Association of Musical Merchandise Mfrs.
Banjo Parts; 1925. Standard nomenclature for banjo parts, illustrated.

National Association of Musical Merchandise Mfrs. Standard Guitar; 1929. Requirements on dimensions for 3 standard sizes, thickness of veneer sounding board, and string height at twelfth fret.

National Association of Musical Merchandise Mfrs. Standard Approved Ukelele. Undated. Requirements on length for 3 sizes, number of frets, minimum depth of body, general construction, height of strings above frets.

930-939 OFFICE, PRINTING, LITHOGRAPHIC AND EDUCATIONAL SUPPLIES

931. HANDWRITING SUPPLIES

931.1 PENCILS, LEADS, AND CRAYONS

References.—Cedar lumber stock for pencils. See 413.9. Blackboard chalk. See 937.1.

931.2 PENHOLDERS, PENCIL HOLDERS, CRAYON HOLDERS

931.3 PENS

References.—Fountain pen stock, pyroxylin. See 846.5.

931.4 ERADICATORS AND ERASERS

U. S. Gov., Federal Specifications Board 539; 1927. Steel Erasers. For knife-blade type and arrow type, requirements on quality of steel, dimensions of handle and blade, testing keenness of cutting edge.

References.—Solvent for laundry marking inks. See 933.0.

931.5 DESK PADS, BLOTTER HOLDERS, AND HAND BLOTTERS

U. S. Gov., Federal Specifications Board GG-C-101; 1930. Calendar Pads and Stands. For 3 types, ordinary folding type, bound memorandum type, and large size folding executive type, requirements on substance and general quality of paper, size of sheets, punching, printed matter on sheet, dimensions and structural features of metal base, paper in accordance with specifications of U. S. Congress, Joint Committee on Printing.

References .- Blotting paper. See 471.1.

931.6 PAPER AND INKS

References.-Writing paper, composition books. See 478.1, 481. Writing inks. See 933.1.

932. OFFICE DEVICES AND SUPPLIES (EX-CEPT HANDWRITING SUPPLIES)

932.1 OFFICE MACHINES

U. S. Gov., Federal Specifications Board GG-M-71; 1930. Lever Type Numbering Machines. Requirements on general structural features of machine and handle, finish, adjustability, endurance test.

932.2 SUPPLIES FOR OFFICE MACHINES

U. S. Gov., Dept. of Commerce, Bureau of Standards C95; 1925. Inks, Typewriter Ribbons and Carbon Paper. For typewriter and similar ribbons, discusses their manufacture and desirable properties, gives typical methods of examination and testing, including serviceability tests.

U. S. Gov., Federal Specifications Board DDD-R-271; 1930. Computing and Recording Machine Ribbons. For single color record and copying ribbons of black, blue, purple, and red, and for 2 color and 3 color ribbons, requirements on general quality of cotton cloth, thread count, thickness, tensile test, degree of uniformity of inking, permanence of black lnk, writing and fading tests, fabric tests in accordance with F. S. B. Spec. No. 345.

U. S. Gov., Federal Specifications Board DDD-R-291; 1930. Hectograph Ribbons. For single color, purple, and for 2 color, purple and red, requirements on general quality of cloth, length, thread count, thickness, uniformity of writing, writing and copying tests, testing of fabric in accordance with F. S. B. Spec. No. 345.

U. S. Gov., Federal Specifications Board DDD-R-311; 1930. Typewriter Ribbons. For single color and for 2 color copying and record ribbons, and for combined record and copying ribbon, requirements on general quality of cotton cloth, length, thread count, thickness, uniformity of inking, writing test, copying test, and fading test, in conformity with F. S. B. Spec. 345 for textile materials.

References.—Methods of testing cotton fabrics. See also 300.4. Inks. See 933.

932.3 RECEPTACLES, SUPPORTS, AND HOLDERS

U. S. Gov., Federal Specifications Board DD-C-791; 1930. Pin and Sponge Cups. Requirements on dimensions and shape of 1 type of glass cup, general quality of glass, drop test requirements.

References.—Stationery holder, box type. See 435.5. Card filing trays. See 435.5, 613.7.

932.4 DESK CUTLERY

References .- Steel erasers, See 931.4.

932.5 ADHESIVES, CLIPS, AND FASTENERS

U. S. Gov., Federal Specifications Board 377; 1926. Brass Paper Fasteners. For round head fasteners and flat head fasteners, list of sizes of each type, minimum width and thickness of metal, chemical composition of brass, tensile strength.

U. S. Gov., Federal Specifications Board N-P-101; 1930. Library and Office Paste. For hard paste in water-well jars and for semiliquid paste in collapsible tubes, requirements on use of preservatives and permissible types, length of bristles and dimensions of brushes, mold test and adhesive test for paste, corrosion test for brushes and metal parts, methods of testing.

and metal parts, methods of testing.

U. S. Gov., Federal Specifications Board JJJ-M-791; 1930. Mucilage. For mucilage made from pure gum acacia, requirements on general quality, amount of aluminum sulphate, freedom from foreign matter, required use of preservatives and permissible types, mold test, adhesive test, methods of testing.

U. S. Gov. Federal Specifications Board JJJ-W-151: 1930. Sealing Wax. For stick wax for heating over a flame, and for bulk wax for heating in a pot, covering 4 grades for adhesive use on various types and surfaces of paper and 1 grade for sealing bottles, use as insulation, etc. Requirements on general quality, adhesion to paper test, flame carrying capacity, resistance to conversion, drip test, test methods.

References.—Methods of testing and general requirements for metals. See also 644.11, 600.1. Rubber bands. See 208.2. Methods of testing glue. See also 093.0.

932.6 BINDERS AND STUB FILES

932.9 MISCELLANEOUS OFFICE DEVICES AND SUPPLIES

U. S. Gov., Federal Specifications Board 360; 1925. Rulers. For 4 lengths of maple wood rulers, 12 to 24 inches long, requirements on width and thickness, provision of brass edge.

References.-Fiber waste paper baskets. See 952.14.

933. INKS

933.0 GENERAL ITEMS

National Assn. of Dyers and Cleaners. Instructor in Garment Cleaning; 1928. Formula 2, Ink Remover. Formula 19, Marking Ink (laundry) Solvent. Requirements on kinds and amounts of constituents used in preparation of the mixtures.

U. S. Gov., Dept. of Commerce, Bureau of Standards C95; 1925. Inks, Typewriter Ribbons and Carbon Paper. For inks, discusses their composition and method of preparation, gives suggested and typical methods of analysis and test for gallotannate of iron inks, carbon inks, dyestuff inks, hectograph inks, indelible inks, recording inks, canceling inks, and stamp pad inks.

933.1 WRITING INKS

U. S. Gov., Federal Specifications Board TT-L-521; 1930. Record and Copying Ink. For blue-black iron gallotannate ink for writing permanent records, formula for preparation of a stundard ink sample, test requirements for comparison of sample of purchased ink with standard sample as regards streaking of paper, fading by light and by alcohol, bleaching, molding, and corrosive action, required metallic iron content.

U. S. Gov., Federal Specifications Board TT-1-549; 1930. Red Ink. Directions and formula for preparation of a standard sample of red ink, streaking of paper and fading test requirements for comparison of samples of purchased ink with

the prepared standard.
U. S. Gov., Federal Specifications Board TT-I-563;
1930. Writing Ink. For blue-black fron gallotannate ink for ordinary use and for fountain pens, in form of fluid, concentrated fluid, powder, or tablets, formula and directions for preparation of standard sample, test requirements for comparison of standard sample with purchased ink as regards streaking of paper, blackening, fading, molding, corrosive action, required metallic iron content.

References .- Methods of testing. See also 933.0.

933.2 PRINTING AND LITHOGRAPHIC INKS

U. S. Gov., Dept. of Commerce, Bureau of Standards C53; 1915. The Composition, Properties, and Testing of Printing Inks. Includes a brief description of the methods of test used at the bureau. A more complete description appears in Tech. Paper No. 39 on analysis of printing inks; this paper is now out of print.

933.3 DRAFTING AND DRAWING INKS

U. S. Gov., Federal Specifications Board 265a; 1927. Black Waterproof Drawing Ink. For ink made from carbon black, test requirements on settling out, consistency and flowing qualifies, color and opacity, fading, drying, effect of sol-

vents, and tendency to mold.

U. S. Gov., Federal Specifications Board 379; 1926. Colored Waterproof Drawing Ink. Covers 2 types, solution of water-soluble dye type and suspension of insoluble pigment type, 7 colors of each, formula for preparation of comparison sample for dissolved dye type, test requirements for absence of deposit, line drawing qualities, nonsmudging qualities, insolubility, streaking, fading, and molding tests.

References .- Methods of testing inks. See also 933.0.

933.4 INKS FOR OFFICE DEVICES

U. S. Gov., Federal Specifications Board TT-I-556; 1930. Stamp Pad Ink. For 5 colors of ink, directions and formulas for preparation of standard samples of ink, stamping test and fading test requirements for comparison of standard sample with samples of purchased inks.

References .- Methods of testing inks. See a'so 933.0.

933.9 SPECIAL AND MISCELLANEOUS INKS

U. S. Gov., Federal Specifications Board TT-L-542; 1930. Indelible Marking Ink for Fabrics. Covers one type for laundry and household use and one type for marking blankets and unsized or unstarched materials, requirements for time test for fading, for fading test in specified soap solutions, and tests to show effect of ink on breaking strength of fabric, fabric testing according to F. S. B. Spec. 345 for textile materials.

References.—Methods of testing inks, solvent for marking inks. See also 933.0. Methods of testing textile materials. See 300.4.

935. DRAFTSMEN'S AND ENGRAVERS' DE-VICES AND SUPPLIES

U. S. Gov., Federal Specifications Board 593; 1928. Drawing Instruments (First Grade, In Sets). For nickel-silver instruments, requirements on chemical composition of nickel-silver, general qualities of steel, wood, and leather, material, design, and structural features of compasses, dividers, pens, etc., to be inspected for balance, ease of handling, alignment and operation of joints, character of threads, finish of joints.

U. S. Gov., Federal Specifications Board 602; 1928.

T Squares. For 4 wooden types—fixed head, with celluloid or composition lined blade, with ebonized hardwood lined blade, and with plain wood blade, shifting double blade with celluloid or composition lined blade; for 2 metal types, fixed head with steel blade and shifting head with steel blade, requirements on general quality of wood, kinds and grades of metal allowed, construction, blades free from bow, wind, and twist, finish, metal trimmings of brass, attachment of linings, etc.

U. S. Gov., Federal Specifications Board 601; 1928. Triangles. Of fiberloid or equal celluloid composition, requirements on freedom from twist, warp, disintegration, and loss of transparency.

finish, minimum thicknesses.

U. S. Gov., Federal Specifications Board 509; 1928. Straightedges. For hardwood straightedges lined with celluloid or composition, or wood lined and for steel straightedges with square edges or bevel edged, requirements on general quality of naterials and workmanship, freedom from bow, wind, and twist, sample to be submitted with bid.

References.—Nickel-silver bars, rods, shapes. See 655.1. Thumb tacks, steel erasers. See 608.14, 931.4.

936. PRINTING AND LITHOGRAPHING DE-VICES AND SUPPLIES

References.—Printing ink, electrotypes. See 933.2, 788. Back lining paper for case making machines, plate wiping paper, olled manila tympan paper. See 479.4. Stereotype tissue and molding paper. See 476.25.

937. EDUCATIONAL SUPPLIES

937.1 BLACKBOARD CHALK

937.2 ERASERS

References .- Steel erasers. See 931.4.

937.3 KINDERGARTEN SUPPLIES

937.4 BLACKBOARDS

U. S. Gov., Dept. of Commerce, Bureau of Standards R75-29; 1929. Composition Blackboard Simplified practice recommended and accepted by industry establishing a limited list of standard stock items covering widths and lengths of black blackboard of cement asbestos backing, of woodpulp backing, and of gypsum core backing, and green blackboard of wood-pulp backing.

References .- Blackboard slate. See 511.51.

943.92 Athletic Outfits

943.93 Golf Goods

U. S. Golf Assn. The association rule on form and make of golf clubs states that no substantial departure from the traditional and accepted form and make of golf clubs will be accepted and that the use of mallet headed type or clubs with neck bent to produce a similar effect will be regarded as illegal; 1931.

References.-Golf ball, bickory golf shafts. See 209.91, 429.9.

943.94 Field and Track Goods and Apparatus

Amateur Athletic Union of the U. S. Specifications of Apparatus; 1931. (Publ. No. 117R of Amer-ican Sports Publ. Co., 45 Rose St., N. Y.) Ham-mer Throwing Cage. Requirements on diameter and height, size of opening, size of wire and mesh, size and setting of pipe standards.

Amateur Athletic Union of the U. S. Specifications of Apparatus; 1931. (Publ. No. 117R of American Sports Publ. Co., 45 Rose St., N. Y.) Hurdes. For high and low hurdles, standard heights, width, length of base, weight, and color of top bar.

Amateur Athletic Union of the U.S. Specifications of Apparatus; 1931. (Publ. No. 117R of American Sports Publ. Co., 45 Rose St., N. Y.) Jump Standards and Pole Vault Standards. For wooden cross bars and cross bar supports, standard shape and dimensions.

Amateur Athletic Union of the U. S. Specifications of Apparatus; 1931. (Publ. No. 117R of American Sports Publishing Co., 45 Rose St., N. Y.) Sector Flags. For metal flag for marking throwing sector, requirements on dimensions and color

of flag, size and length of standard.

Amateur Athletic Union of the U.S. Specifications of Apparatus; 1931. (Publ. No. 117R of American Sports Publ. Co., 45 Rose St., N. Y.) Seven-Foot Circle. For metal, wood, or rope circle for throwing events, requirements on thickness of material used, size of circle.

Amateur Athletic Union of the U. S. Specifica-tions of Apparatus; 1931. (Publ. No. 117R of American Sports Publ. Co., 45 Rose St., N. Y.) Stop Board. For wood board, standard width,

length, and height, color.

Amateur Athletic Union of the U. S. Specifications of Apparatus; 1931. (Publ. No. 117R of American Sports Publ. Co., 45 Rose St., N. Y.) Take-Off Board. For wood board, standard

length, width, and height, color.

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.); 1931. Discus. For disks of wood and brass, requirements on dimensions, construction, shape, dimensions of brass disks, total weight.

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.); 1931. Hammer. Requirements on material and shape of head, size of wire handle, construction, length and weight of head and handle.

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.); 1931. High Jump or Vaulting Standards and Supports. Standard dimensions and cross sectional shape of wooden

cross bar and of cross-bar support.

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.); 1931. Hurdles, For high and low hurdles, requirements on height, weight, length of base and rigidity.

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.); 1931. Javelin. For wood javelin with iron or steel point, requirements on location of center of gravity, construction of grip, total length and weight.

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co., 45 Rose St., N. Y.); 1931. Shot. Requirements on shape, weight, and permissible ma-

toriale

Intercollegiate Assn. of Amateur Athletes of America (Publ. No. 45R of American Sports Publ. Co. 45 Rose St., N. Y.) Official Handbook; 1931. 35 lb. Weight. Requirements on shape, materials, and construction of lead head and triangular iron or steel handle, dimensions of handle, length and total weight of head and handle.

National Collegiate Athletic Assn. Track and Field Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Broad Jump Base. Standard width and length of

joist used for base.

National Collegiate Athletic Assn. Track and Field Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Disks. For metal rimmed wooden body disks, requirements on shape, dimensions of brass plate inserts and of discus, weight.

Track and Field National Collegiate Athletic Assn. Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Hammer. For metal sphere hammer head, requirements on size, and length of spring steel wire in handle,

total weight.

National Collegiate Athletic Assn. Track and Field Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) High Jump and Pole Vault Equipment. Requirements on shape and dimensions of cross bar and on shape and limiting dimensions of supporting pins for cross bar.

National Collegiate Athletic Assn. Track and Field Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Hurdles. For high hurdles and low hurdles, standard heights, limiting dimensions of base and of top

bar, approximate weight, painting. National Collegiate Athletic Assn. T Track and Field Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Javelin. For wooden javelin with metal point, requirements on construction of grip, length, location of center of gravity, weight. National Collegiate Athletic Assn. Track and Field

Rules; 1930. (Publ. No. 112R of American Sports Publ. Co., 45 Rose St., N. Y.) Shot. Standard

to be a 16-pound metal sphere.

943.95 Lacrosse Goods

S. Intercollegiate Lacrosse Assn. Lacrosse Rules; 1931. (Publ. No. 113R of Am. Sports Publ. Co., 45 Rose St., N. Y.) The Crosse. For any length, requirements on weaving and use of cat gut, permissible maximum width.

U. S. Intercollegiate Lacrosse Assn. Lacrosse Rules; 1931. (Publ. No. 113R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Goal. Require-ments on construction, dimensions, mesh of net-

ting, and installation.

References .- Lacrosse ball. See 209.91.

943.96 Hockey Goods and Apparatus

Amateur Athletic Union of the U.S. Official Athletic Rules. 1931. (Publ. No. 117R of American Sports Publishing Co., 45 Rose St., New York, N. Y.) Ice Hockey. For goalkeepers' pads, requirements on method of application and permissible total width when applied.

National Collegiate Athletic Assn. Ice Hockey Rules; 1930. (Publ. No. 92R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Goalkeepers Pads. Per-

missible maximum width.

National Collegiate Athletic Assn. Ice Hockey National Collegiate Athletic Assn. Ice Hockey Rules; 1930. (Publ. No. 92R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Goal Cages. Require-ments on height, width, and construction. National Hockey League. Laws of Hockey; 1929. (Publ. No. 90R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Goalkeepers Pads. Permissible max-

imum width.

References.—Hockey ball, hockey stick, puck. See 943.1, 429.9, 209.92.

943.97 Basket-Ball Goods and Apparatus

American Physical Education Assn., National Secmerican rhysical Education Assis, academa vition on Women's Athletics, Women's Official Basket Ball Rules; 1930. (Publ. No. 17R of Am. Sports Publ. Co., 45 Rose St., N. Y.) Backboards and Baskets. Required dimensions of backboards of plate glass or wood, diameter of metal ring basket, provision of net, attachment of ring and location on backboard.

Joint Basketball Rules Committee representing Y. M. C. A., Amateur Athletic Union, and Nat. Collegiate Athletic Assn. Official Basketball Rules: 1931-32. (Publ. No. 700X of Am. Sports Rules; 1931-32. (Publ. No. 700X of Am. Sports Publ. Co., 45 Rose St., N. Y.) Backboards and Baskets. For glass or wood backboards, re-quired dimensions of board, color, diameter and color of ring, recommended size of cord in net, attachment of ring to board and distance of ring

from board.

References .- Basket ball. See 069.1.

CONTAINERS

950. GENERAL ITEMS

American Railway Assn., Freight Container Bureau M-5991; 1928. Dictionary of Recommended Standard Terms to be Used in Describing Loading and Bracing Methods for Fresh Fruits and Vegetables.

American Railway Assn. Transportation Div. Dictionary of Recommended Standard Terms to be Used in Describing Loading and Bracing Methods for Fresh Fruits and Vegetables. Definitions of terms relating to car loading.

References .- Skid platforms. See 959.9.

951. BARRELS, DRUMS, AND TUBS

951.1 BARRELS

951.10 General Items

U. S. Gov., Congress. 38 Stat., ch. 158, p. 1186; 63d Cong.; 1915. An act to fix the standard barrel for fruits, vegetables, and other dry commodities. Requires sale and shipment in interstate commerce of fruits, vegetables, etc., in barrels of 7,056 cubic inch capacity or fraction thereof and of cranberries in barrels of dimensions stated in act, places enforcement with Bureau of Standards.

U. S. Gov., Congress. Public No. 228, 64th Congress (55425). 1916. An act to standardize lime barrels. Requires shipment and sale of lime in interstate commerce and foreign commerce in barrel of 280 pounds net or in barrel of 180 pounds net or in containers of fractional part of the standard small barrel, requires marking of weight on container, places enforcement with Bureau of Standards.

U. S. Gov., Dept. of Commerce, Bureau of Standards. C64; 1917. Rules and Regulations for Enforcement of the Lime Barrel Act. Mandatory requirements on shipment of lime in interstate or foreign commerce, net weight requirements for 2 standard barrel sizes and of other containers of less capacity than small barrel, marking and tagging requirements, copy of act included.

U. S. Gov., Dept. of Commerce, Bureau of Standards C71; 1917. Rules and Regulations Promulgated under Authority of the Federal Standard-Barrel Law. Gives the capacity of the standard barrel as fixed by law for fruits, vegetables, and other dry commodities (not including lime barrels) and of the standard barrel for cranberries, establishes dimensions of standard barrels and fractional barrel, length of stave, etc., tolerances. Copy of standard barrel are included.

951.11 Fiber Barrels

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 41, section 12. Fiber Barrels. For single or multiple ply construction, requirements on weight of

barrel and contents, dimensions, Mullen test, thickness and securing of metal, wood or fiber tops or bottoms, general construction, for shipment of dry and of semiliquid articles.

References,—Standard barrel sizes and dimensions. See 951.10. Container fiberboard. See also 472.93. Standard thicknesses, methods of testing fiberboard. See also 472.0, 470.3.

951.12 Wetal Barrels

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40. section 5. Barrels. For iron, steel, or alminium barrels for other than explosives and dangerous articles, requirements on thickness of metal for barrels for shipping dry articles and for barrels for liquids for capacities from 5 to 165 gallons, aluminum barrels with metal hoops or jackets up to 110 gallons capacity, capacities of single trip containers, fastening of tops, plugs, etc.

Steel Barrel Mfrs. Institute. Steel Barrels and Drums; 1931. Standard sizes, standard dinensions, and threading of countersunk plugs and of raised head plugs, standard sizes and threading of flanges, standard spacing of rolling hoops.

U. S. Gov., Dept. of Commerce, Bureau of Standards R20-28; 1928. Steel Barrels and Drums. Simplified practice recommended and accepted by industry establishing a limited list of standard stock types and capacities of bilge barrels and drums.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 5, 5A, 5B, 5C, 5D, 5E, and 5F. Steel Barrels or Drums. For blige types and straight-sided types, mandatory requirements on gage and weight of metal, outage provision, construction, coating or lining, types and sizes of rolling hoops, types of closures, drop test, hydrostatic test, and leakage tests for various sizes and strength grades, acid-resisting qualities and tests for 5C barrel or drum, rubber lining and test of lining for 5D barrel or drum, rests of 5E single trip container, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Reulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 6A, 6B, and 6C. Steel Barrels or Drums. For bilge types and for straight-sided types, mandatory requirements on gage and weight of metal, outage provisions, construction, coating or lining, type and sizes of rolling hoops, types of closures, drop test, hydrostatic test, and leakage tests for various sizes and strength grades of barrels or drums, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 6D, 6E, 6F, 6G, and 6H. Steel Barrels or Drums (Single Trip Containers). Mandatory requirements on construction of straight-sided types, thickness of metal, permitted gross weight, coating, drop test, dangerous materials for which authorized.

References.—Standard barrel sizes and dimensions. See also 951,10. Iron and steel sheets. See 604,2. Aluminum sheets. See 631,23. Zinc coatings. See also 600.3.

951.13 Wooden Barrels

American Railway Assn. Freight Container Bu-reau. Tentative Specification. Circular No. 14; 1924. Slack Barrels and Slack Casks and Inside Packing of Pottery. Classification as to size and weight, permissible moisture content and defects in lumber for staves, heads and wooden hoops, dimensions and construction of staves and heads, of wooden, wire, and steel hoops, method of packing pottery.

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 21; Slack Barrels and Inside Packing for Glass Tableware. Permissible defects and moisture in lumber, dimensions and construction of staves, heading, elm and steel wire hoops, construction of barrel, packing of glassware require-

Consolidated Classification Committee. onsongated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 5. section 6. Wooden Barrels. For transportation of oils, requirements on materials of fir, oak, etc., maximum capacity, number and weight of hoops, lining materials, painting, fastening hoops.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Woodenware and Cooperage. For pork barrels, requirements on kinds of wood, inside coating of paraffin, dimensions of staves and heads, number and dimensions of galvanized iron hoops.

National Pickle Packers Assn. Standard Fir Cooperage Specifications; 1924. For 8 sizes of kegs and barrels from 5 to 48 gallons, requirements on dimensions of staves and headings, circumference of bilge, thickness of timber, number and gage of metal hoops.

New York Produce Exchange. Rules Regulating the Naval Store Trade; 1921. Rule 6. Turpen-tine barrels, requirements on number of hoops and their location, number of coats of glue, for oak barrels of 48 to 55 gallons capacity.

New York Produce Exchange. Rules Regulating the Petroleum Trade; 1920. Rule 15. Barrels for refined petroleum, requirements on number

and size of hoops.

Standard Container Mfrs., E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Basket Barrel. Requirements on capacity (U. S. Gov. Stand.), dimensions of barrel, staves, head, etc., number and sizes of hoops, details of construction, kinds and quality of wood. For shipment of kale and spinach.

Standard Container Mfrs., E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Kuies No. 6; 1928. Open Stave Barrel. Requirements on capacity (U. S. Gov. Stand.), dimensions of staves, barrel, head, etc., number and sizes of hoops, details of construction, kinds and quality of wood. For potatoes, pears, cabbage,

apples, cucumbers. Standard Container Mfrs., E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Stave Barrel. Requirements on capacity (U. S. Gov. Stand.), dimensions of barrel, staves, head, etc.; number and size of hoops, details of construction, method of securing burlap top where used, kinds and quality of | 951.3 DRUMS

wood. For potatoes, pears, cabbage, cucumbers, apples.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 10A, 10B, and 10C. Wooden Barrels and Kegs (Tight). Mandatory requirements on permissible woods and defects in wood, on moisture content at time of jointing, number and dimensions of staves and heading pieces, number, dimensions, and strength of steel hoops, quality of glue, asphaltum, paraffin, or other lining materials, etc., thickness of rubber in rubber lining, internal pressure and leakage tests, stave spring tests, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 11A and 11B. Wooden Barrels (Slack). Mandatory requirements on permissible woods, number, quality, and dimensions of staves and heading pieces, size and number of steel or wooden hoops, construction, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 35. Wooden Barrels with Removable Heads. For oak barrels, mandatory requirements on size and number of hoops, thickness of staves, construction and dimensions of removable head and method of fastening, dangerous materials for which authorized.

References.—Standard barrel sizes and dimensions. See also 951.10. Staves, headings and hoops. See also 421.0-421.3. Iron and steel hoops. See also 604.22.

951.2 CASKS AND TIERCES

951.21 Metal Casks

951.22 Wooden Casks

American Railway Assn. Freight Container Bureau, Tentative Specification. Circular No. 14; 1924. Slack Barrels and Slack Casks and Inside Packing of Pottery. Classed as to size and weight, permissible moisture content and defects in lumber used, dimensions and construction of staves, heads, and of wooden, wire, and steel hoops, method of packing pottery.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Woodenware and Cooperage. For 1,450-pound curing casks, requirements on dimensions of oak staves and pine bottoms, with an alternate standard of dimensions, bilge diameter, number and

dimensions of hoops.

References.—Staves, headings and hoops. See also 421.0-421.3. Iron and steel hoops. See also 604.22.

951.23 Metal Tierces

951.24 Wooden Tierces

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Woodenware and Cooperage. For lard and pickled meat tierces, requirements on kinds of oak suitable, coating, dimensions of staves and head, dimensions and number of iron hoops, capacity, for pickled meat tierces, white ash or birch may also be used.

New York Produce Exchange. Rules Regulating Transactions in Lard; 1911. Packing and Cooperage. Tierces of white or burr oak, requirements on dimensions of tierce, thickness of staves

and head, hooping, for lard tierces.

References.—Staves, headings and hoops. See also 421.0-421.3. Iron and steel boops. See also 604.22.

951.31 Fiber Drums

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 149; 1930. Cheese, Rating. For Cylindrical Cheese Boxes or Drums. As outside containers of fiberboard or pulpboard or a combination of fiberboard, wood and metal, requirements on thickness and strength of parts, dimensions of rims, attach-

ment of top, construction.

Consolidated Classification Committee. dated Freight Classification No. 6; 1930. Rule
41, section 12. Fiber Drums. For single or
multiple ply construction, for various weights of drum and content, requirements on dimensions, strength test and thickness of board, thickness and securing of metal, wood, or fiber tops and bottoms, general construction, for shipment of dry and semiliquid articles.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 21A. Fiber Drums. Mandatory requirements on capacity limits, thickness and construction of shell, paper seals, wooden heads, and steel rim hoops, method of closure, drop test, dangerous materials for

which authorized.

References.—Container fiberboard. Sec also 472.93. Standard thicknesses, methods of testing fiberboard. Sec also 472.0, 470.3.

951.32 Metal Drums

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 5. Drums. For iron, steel, or aluminum drums for shipment of other than explosives or dangerous articles, requirements on thickness of metal for dry material drums and for liquid shipment drums, up to 165 gallons for iron or steel drums and 110 gallons for aluminum, securing of caps, plugs, etc., capacities, but no thickness requirements for single trip containers.

Institute of American Meat Packers. Packing-house Supplies, Packs and Equipment; 1928. Lard Cans. Includes straight side metal lard drums, dimensions, design, weight of plate metal,

details of seam and beading.

Steel Barrel Mfrs, Institute, Steel Barrels and Drums: 1931. Standard sizes, standard dimensions, and threading of countersunk plugs and of raised head plugs, standard sizes and threading of flanges, standard spacing of rolling hoops.

U. S. Gov., Dept. of Commerce, Bureau of Standards R20-28; 1928. Steel Barrels and Drums. Simplified practice recommended and accepted by industry establishing a limited list of standard stock types and capacities of standard light shipping drums, standard I. C. C. drums, bolted cover and friction cover light drums, grease drums, and bilge barrels, for minimum capacities of 10 gallons.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 5, 5A, 5B, 5C, 5D, 5E, and 5F. Steel Barrels or Drums. For bilge types and straight-sided types, mandatory requirements on gage and weight of metal, outage provision, construction, coating or lining, types and sizes of rolling hoops, types of closures, drop test, hydrostatic test, and leakage test for various sizes and strength grades, acid resisting qualities and tests for 5C barrel or drum, rubber lining and test of lining for 5D barrel or drum, tests of 5E single trip container.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 6A, 6B, and 6C. Steel Barrels or Drums. For bilge types and for straight-sided types, mandatory requirements on gage and weight of metal, outage provisions, construction, coating or lining, type and sizes of rolling hoops, types of closures, drop test, hydrostatic test and leakage tests for various sizes and strength grades of barrels or drums, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles: 1930. Container Spec. 6D. 6E. 6F. 6G. 6H. Steel Barrels or Drums (Single Trip Containers). Mandatory requirements on construction of straight-sided types, thickness of metal, permitted gross weight, coating, drop test, dangerous materials for which authorized,

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 42B. Aluminum Drums. For shipment of inflammable liquids, mandatory requirements on construction, thickness of material, size of hoops, welding of seams, leakage test, hydrostatic test, and drop test.

References.—Iron and steel sheets. See 604.2. Aluminum sheets. See 631.23. Zinc coatings. See also 600.3. Sizes and threading of flanges and plugs. See 951.12.

951.33 Wooden Drums

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 7. Drums. Wooden drums, requirements on use, plywood construction, thickness of shell, thickness and fastening of wooden ends, construction of drums with hoops and of drums without hoops.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; p. 149; 1930, Cheese, Rating. For Cylindrical Cheese Boxes or Drums. As wooden outside containers, requirements on thickness of material, dimensions of hoops, rims, reinforcements, construction of box,

fastening of top.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 22A and 22B. Wooden Drums, Glued Plywood. Mandatory requirements on general quality of lumber, number of plies and construction of shell and heads, hooping, thickness and material of head and body linings, dimensions of parts, drop test, dangerous materials for which authorized.

951.4 FIRKINS AND KEGS

951.41 Metal Firkins

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Firkins. For iron or steel firkins, general requirements on fit and attachment of tops.

951.42 Wooden Firkins

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Firkins. For wooden firkins, requirements on general construction of top, several alternate methods of securing top by nailing, strapping, etc.

951.43 Metal Kegs

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 13. Metal Kegs. Mandatory requirements on chemical composition of steel, annealing, crimp test, thickness of metal, dimensions and construction of keg, types and construction of closure, capacities, proportions for stove pipe kegs, drop test, dangerous materials for which authorized.

References.—Iron and steel sheets. See also 604.2. Methods of testing, general requirements for metals. See also 600.1.

951.44 Wooden Kegs

National Pickle Packers Assn. Standard Fir Cooperage Specifications; 1924. For 8 sizes of kegs and barrels from 5 to 48 gallons, requirements on dimensions of staves and headings, circumference of bilge, thickness of timber, number and gage of metal hoops.

U. S. Gov., Federal Specifications Board EE-S-71; 1930. Chili and Worcestershire Sauces. Keg for shipment of Worcestershire sauce, requirements on newness, inside coating, thickness of staves and heads, size and number of iron hoops, location and securing of bung, finish, for

5-gallon size.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 10A, 10B, and 10C. Wooden Barrels and Kegs (Tight). Mandatory requirements on permissible woods and defects in wood, on moisture content at time of jointing, number and dimensions of staves and heading pieces, number, dimensions, and strength of steel hoops, quality of glue, asphaltum, paraffin, or other lining materials, etc., thickness of rubber in rubber lining, internal pressure and leakage tests, stave spring tests, dangerous materials for which authorized.

References.—Staves, headings and hoops. See also 421.0-421.3. Iron and steel hoops. See also 604.22.

951.45 Fiber Firkins

Consolidated Classification Committee Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Firkins. For firkins of indurated fiber, general requirements on construction and fit of wooden tops or headings, securing of heading to body of firkin.

References.—Container fiberboard. See also 472.93. Standard thicknesses, methods of testing fiberboard See also 472.0, 470.3.

951.5 HOGSHEADS

References.—Staves, headings and hoops. See also 421.0-421.3. Iron and steel hoops. See also 604.22.

951.6 KITS AND PAILS

951.61 Metal Kits

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Kits. For iron or steel kits, general requirements on fit and attachment of tops.

Consolidated Classification Committee. Consolidated Frieght Classification No. 6; 1930. Rule 40, section 5. Kits. For iron or steel kits up to 5-gallon capacity, for shipment of other than dangerous articles, permissible minimum thickness of metal for dry material containers and for liquid containers for other than single trip containers, securing of covers.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2E. Kits and Pails. For metal kits as inside containers for shipment of dangerous materials, mandatory requirements on maximum capacity and thickness of metal dangerous materials for which author-

ized.

U.S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 6D. Steel Barrels or Drums and Kits or Pails. (Single Trip Containers.) Mandatory requirements on gage thickness of metal, permitted gross weight of container, construction, drop test, dangerous materials for which authorized.

References .- Iron and steel sheets. See also 604.2.

951.62 Wooden Kits

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Kits. For wooden kits, requirements on general construction of top, several alternate methods of securing top by nailing, strans, etc.

U. S. Čov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2E. Kits and Pails. For wooden kits as inside containers for shipment of dangerous materials, mandatory requirements on maximum capacity, dangerous ma-

terials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 13B. Wooden Kits. Mandatory requirements on construction, thickness of top, bottom, and staves, sizes of hoops, drop test, dangerous materials for which authorized.

951.63 Fiber Pails

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Fiber Bucket. For fire bucket, dimensions and design of recommended standard 3½-gallon bucket.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1980. Rule 40, section 3. Pails. For pails of indurated fiber, general requirements on construction and fit of wooden tops or headings, securing of head-

ing to pail.

Consolidated Classification Committee Consolidated Freight Classification No. 6; 1930. Rule 40, section 11. Compressed Felted Pulp Pails. Requirements on one piece construction of parts, thickness and Mullen test resistance of parts, reinforcement of bottom, construction and attachment of top.

Consolidated Classification Committee. Consolidated Freight Classification, No. 6; 1930. Rule 41, section 12. Fiber Pails. For single or multiple ply construction, requirements on weight of barrel and contents, dimensions, Mullen test, thickness and securing of tops and bottoms of metal, wood or fiber, general construction, for stave and other type pails for shipment of dry articles and semiliquids.

References.—Container fiberboard. See also 472.93. Standard thicknesses, methods of testing fiberboard. See also 472.0, 470.3.

951.64 Metal Pails

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Coal Hod. Dimensions, metal gage, and design of recommended standard hod of galvanized iron.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Two-Gallon and Four-Gallon Pails. Dimensions, metal gage, and design of straight sided pails of recommended standard, made of

galvanized iron.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Two-Gallon Tank Bucket. Sand Bucket. Sponging Bucket for Engine House Only. Dimensions, metal gage, and design of recommended

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Pails. For iron or steel pails. general requirements on fit and attachment of tons

Consolidated Classification Committee. dated Freight Classification No. 6; 1930. 40, section 5. Pails. For iron or steel pails up to 5-gallon capacity for shipment of other than dangerous articles, permissible minimum thickness of metal for dry material containers and for liquid containers for other than single trip containers, securing of covers.

Institute of American Meat Packers. Packinghouse Supplies, Packs and Equipment; 1928. Lard Cans. Includes flaring side pails with covers up to 8-pound capacity, dimensions, design, weight

of tin plate, size of wire handles, requirements.
S. Gov., Interstate Commerce Commission.
Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2E. Kits and Pails. For metal pail as inside container for shipment of dangerous materials, mandatory requirements on maximum allowable capacity. thickness of metal, dangerous materials for

which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 6D. Steel Barrels or Drums and Kits or Pails. (Single Trip Containers.) For pails, mandatory requirements on gage thickness of metal, permitted gross weight of container, construction, drop test, dangerous materials for which authorized.

References.—Iron and steel sheets. See 604.2. Zinc coatings, tin coatings. See also 600.3.

951.65 Wooden Pails

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Pails, For wooden pails, requirements on general construction of top, several alternate methods of securing top on to pail by nailing. strapping, etc.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2E. Kits and Pails. For wooden pails as inside containers for shipment of dangerous materials, mandatory requirements on maximum allowed capacity, dangerous materials for which authorized.

951.66 Fibre Kits

Consolidated Classification Committee. dated Freight Classification No. 6; 1930. Rule 40. section 3. Kits. For kits of indurated fiber, general requirements on construction and fit of wooden tops or headings, securing of heading.

References .- Container fibre board. See also 472.93.

951.7 TUBS

951.71 Metal Tubs

Consolidated Classification Committee. Consoli. dated Freight Classification No. 6; 1930. Rule 40, section 3. Tubs. For iron or steel tubs, general requirements on fit and attachment of tops.

References .- Tubs special to laundries. See 787.

951.72 Wooden Tubs

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 3. Tubs. For wooden tubs, requirements on general construction of top, alternate methods of securing top to tub by nailing, straps, etc., thickness of head where used and method of attachment.

standard bucket of each type made of galvanized | U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles: 1930. Container Spec. 31. Jugs in Tubs. For the tub, mandatory requirements on dimensions of hoops and hardwood staves, spacing between jug and tub, dangerous materials for which the jugs packed in tubs are authorized.

References .- Tubs special to laundries. See 787.

951.73 Fibre Tubs

Consolidated Classification Committee. dated Freight Classification No. 6: 1930. Rule 40. section 3. Tubs. For tubs of indurated fiber, general requirements on construction and fit of wooden tops or headings, securing of heading to

952. BASKETS AND HAMPERS

952 1 BASKETS

952.10 General Items

American Railway Assn. Freight Container Bureau M-5502; 1927. Recommended Procedure for Loading Baskets by the End-to-End Offset Method. Detailed instructions and illustrated methods of loading from end to end of car, for baskets of all sizes.

U. S. Gov., Congress, Public, No. 462, 70th Congress; 1928. Standard Container Act of 1928. An act to fix standards for hampers, round stave baskets, and splint baskets for fruits and vegetables, and for other purposes. Fixes the standard capacities and defines each standard in terms of cubic inches capacity, for 9 sizes from 1/8 to 2 bushels, authorizes Sec. of Agriculture to prescribe tolerences, makes it unlawful to manufac-ture, sell, or ship in containers of above type that do not comply with above requirements.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. S. R. A., B. A. E. 116; 1928. Rules and Regulations of the Sec. of Agriculture under the U. S. Standard Container Act of 1928. Defines container, hamper, round stave basket, and splint basket, regulations for sub-mission of dimension specifications by manufacturers for approval of their containers, permissible variations from standard cubical capaci-ties fixed by law. Includes text of standard con-

tainer act of 1928.

References.—Baskets used as standard capacity measures. See 919.1.

952.11 Fruit, Vegetable, and Berry Baskets

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 18; 1925. Four-Basket Crates with Tapered Ends for Fresh Fruits and Vegetables. Includes baskets, 3-quart capacity, construction and stapling requirements, thickness of blanks and hoops.

American Railway Assn. Freight Container Bu-reau. Tentative Specifications. Circular No. 19; 1925. Six-Basket Crates for Fresh Fruits and Vegetables. Includes 4-quart baskets, thickness of blanks and hoops, construction and stapling

of baskets.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Berry Baskets or Boxes. Requirements on per-missible standard sizes, allowed tolerances on

correctness of capacities. Standard Container Mfrs. Six-Basket Crate. dated. Includes requirements for baskets that fit into crate for shipment of fruits and vegetables, for 4-quart size, requirements on thickness of wood veneer, general construction, dimensions governed by standard dimensions of crate.

U. S. Gov., Congress. 30 U. S. Statutes at Large, p. 673. U. S. Standard Container Act of 1910. An act to fix standards for Climax baskets for grapes and other fruits and vegetables, and to fix standards for baskets and other containers for small fruits, berries, and vegetables and for other purposes. Fixes dimensions of Sandard 2-quart, 4-quart, and 12-quart Climax baskets, fixes standard capacities for baskets and containers for small fruits, berries, and vegetables, defines these capacities in cubic inches for the standard dry one-half pint, dry pint, and dry quart, makes it unlawful to manufacture for shipment, sell for shipment, or ship in interstate commerce in containers not conforming to above standards.

U. S. Gov., Dept. of Agriculture. Bureau of Agricultural Economics. Service and Regulatory Announcements No. 104; 1927. Rules and Regulations of the Sec. of Agriculture under the U. Standard Container Act of 1916. Regulations on method of measuring capacity, permissible tolerances on dimensions of standard Climax baskets, permissible tolerances in cubical capacity of baskets and containers for small fruits, berries, and vegetables from standards required by law. Includes text of standard container act of 1916.

References.—Round stave baskets. See also 958.12. Standard basket sizes. See also 952.10. Fiberboard baskets for fruits and vegetables. See 952.14.

952.12 Round-Stave Baskets

Consolidated Classification Committee. Consolidated Freight Classification No. 6; p. 418; 1930. Earthenware, Ratings. Stave Baskets for shipment of earthenware and stoneware, requirements on close weaving, number, thickness, and attachment of hoops and of metal reinforcement strips, thickness of solid wood cover and dimensions of cross batten.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 216; 1930. Fruit, Fresh, Rating. Standard Round Stave Bushel Basket for fresh fruit. Requirements on dimensions of basket, staves, hoops, and cover slats, kind of wood in staves, construction of basket and cover, provision of handles.

Dasket and cover, provision of natures.

Consolidated Classification Committee. Consolidated Freight Classification No. 6 p. 506; 1930.

Vegetables, Ratings. Round Stave Bushel Baskets for shipment of green vegetables, requirements on dimensions, capacity, thickness and wood materials for staves, dimensions of parts and construction of hoops and cover, attachment of cover.

Standard Container Mfrs. E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Round Stave Bushel Basket. Requirements on diameter, depth, and capacity, on number and dimensions of staves and hoops, on details of construction of basket and cover.

References .- Standard basket sizes. See 952.10.

952.13 Coal Baskets

952.14 Fiber-Board Baskets

Consolidated Classification Committee Consolidated Freight Classification No. 6; 1939. Rule 41, section 13. Fiberboard Baskets. For Climax type for fruits and vegetables, general construction of box, cover, wire handles, for 2 to 40 quart capacity, thicknesses of parts, Mullen test for strength, and gross weight, fastening of covers.

Includes one-piece type of construction of double inte lined board.

for their south. Standard Container Mfrs. E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Fiberboard Baskets. For standard lettue basket and standard bushel basket, requirements on dimensions, on construction of basket and cover, thickness and strength of material, waterproofing, and method of sealing, for citrus fruits and vegetables of 65 pounds gross weight.

U. S. Gov., Federal Specifications Board LLL-R-191; 1930. Fiber Waste Paper Receptacles, Office and Lobby. For round type, requirements on dimensions and construction of office type and lobby type, thickness and general quality of fiber, load bearing test, colors according to standards of General Supply Committee.

References.—Standard basket sizes See 952.10.
Container fiberboard. See also 472.93. Standard thicknesses, methods of testing fiberboard. See also 472.0, 470.3.

952.19 Miscellaneous Baskets

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 499; 1930. Traps, Ratings. Bushel Baskets for shipment of animal traps, requirements on number and thickness of hoops, construction, reinforcement and attachment of cover.

952.2 HAMPERS

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 158; 1930. Clothing, Ratings. Canvas Hampers for shipment of clothing, requirements on weight of canvas, lining with wire netting, mesh of netting, method of fastening top.

Standard Container Mfrs. Bushel Hampers; 1924. Requirements on standard inside dimensions, capacity, dimensions, design, and construction of staves, bottom, hoops, and cover, kinds and general quality of wood. For shipment of beaus, beets, onions, radishes, okra, peas, peppers, romaine, lettuce, kale, spinach, cucumbers, and sweet potatoes.

Standard Container Mfrs. Standard 1½ Bushel Hamper. Undated. Requirements on standard inside dimensions, capacity, number, dimensions, and assembly of staves, bottom, hoops, and cover, kinds and general quality of wood. For shipment of lettuce, romaine, kale, spinach, chicory, cauliflower, and cabbage.

References.—Canvas and duck. Standard sizes of vegetable and fruit hampers. See 952.10.

953.1 METAL BOXES

References .- Metal cases. Sec 954.21.

953.2 PAPER AND FIBRE BOARD BOXES

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 6; 1923. Solid Fibre and Plyboard Boxes for Boots and Shoes. Requirements for stitching or gluing closing flaps, quality and type of materials and weight in liners and fillers, compositions, specific gravity and amount of silicate of soda, dimensions of wire staples or stitches, weight and Mullen test or sealing paper tape, dimensions, thickness and Mullen text requirements for boxboards and boxes.

American Railway Assn. Freight Container Bureau. Tentative Specification. Circular No. 11; 1923. Corrugated Strawboard Boxes for Boots and Shoes. Applies to boxboard with 1 or 2 corrugated strawboards between facings, requirements for stitching or gluing of closures. weight and waterproofing test requirements for materials, composition of strawboard and of silicate of soda used, dimensions of wire staples or stitches, weight, and Mullen test of kraft paper for sealing seams, grade of glue, minimum thicknesses, and Mullen test requirements for boxboard for various size boxes, construction of corrugated boxboard and boxes,

Associated Knit Underwear Mfrs. of America. Box sizes for underwear, same as given in commercial standard CS33-32, published by Bureau of Stand-

ards of U. S. Gov.

Consolidated Classification Committee. dated Freight Classification No. 6; 1930. Rule 40, section 1b. Boxes. For solid cane fiberboard boxes and for pressed wood fiberboard boxes, requirements on reinforcement with wooden strips, attachment of strips, fit of parts, per-

missible minimum thickness.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 1c. Boxes of hardened fiberboard. For boxes made in halves of equal dimensions for telescoping over ends of 5-gallon cans, requirements on construction, strength of steel binding wire or strap, minimum thickness of sides, strength, test for waterproofness and oil-

proofness, diagonal load test.

Consolidated Classification Committee. dated Freight Classification No. 6 and Supplement No. 6; 1930. Rule 41, sections 2 and 4. Fiber Boxes without frames. For 3-ply fiberboard or double-strength or double-faced corrugated fiberboard boxes, requirements on construction, thickness of boards and of plies, weight of box and of contents, waterproofing, maximum dimension, strength, for 16 construction types, strength and application of sealing paper.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 41, section 2a. Kraft Board Boxes Without Wooden Frames. For telescope boxes, requirements on number of plies in board, number of layers of board in sides and ends, construction, waterproofing, maximum weights of box and contents, maximum dimensions, minimum thickness

and strength of board.

Consolidated Classification Committee. dated Freight Classification No. 6; 1930. Rule 41, sections 3 and 4. Boxes. For fiberboard or pulpboard boxes with wooden frames, require-ments on construction, weight of box and contents, thickness of board, Mullen test, dimensions and spacing of wooden strips, for single and 3 ply boxes, strength and application of paper sealing strips.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 41. section 5. Wire Bound Fibre Boxes. Fiberboard to be double fiber lined, requirements on number and size of wooden cleats, construction of box, size and spacing of binding wires, fastening of

binding wires.

Consolidated Classification Committee. dated Freight Classification No. 6; p. 149; 1930. Cheese, Rating. For Cylindrical Cheese Boxes or Drums. As outside containers of fiberboard or pulpboard or a combination of fiberboard, wood and metal, requirements on thickness and strength of parts, dimensions of rims, attachment of top, construction.

Consolidated Classification Committee. dated Freight Classification No. 6; p. 153; 1930. Cigarettes, Rating. Fiberboard, pulpboard, or corrugated strawboard boxes for cigarettes, requirements on cording, strapping and reinforcing in addition to requirements of rule 41 which also

Consolidated Classification Committee. Consolidated Freight Classification No. 6; p. 155; 1930. Cigars, Rating. Fibreboard, pulpboard, or corrugated strawboard boxes for cigars, requirements on use of sealing strips, cording, strapping and reinforcing in addition to requirements of rule 41 for various types of boxes.

Consolidated Classification Committee. dated Freight Classification No. 6; p. 273; 1930. Hats or Caps, Ratings. Fibreboard or Corrugated Strawboard Boxes for packing hats or caps, requirements on Mullen test resistance, to meet requirements of rule 41, section 2, except that dimensions of boxes are between 70 and 90 united

National Assn. of Hosiery and Underwear Mannfacturers. U. S. Dept. of Commerce. Bureau of Standards paper T253: 1924. Standardization of Hosiery Box Dimensions. Dimensions of selected standard packing boxes for ladies', men's, and children's hose with methods of folding and packing, for different weights and for various materials.

National Canners Assn. Canned Food Boxes; 1928. For solid fiber containers, wire-bound fiber-board boxes, and corrugated strawboard boxes, standard sizes as measured by capacity for standard cans, requirements on number of plies, thickness of ply, Mullen test strength, waterproofing, fastening of joints and seams, dimensions of cleats and

binding wires, etc.

National Paper Box Manufacturers Assn. Terminology for the Set-up Paper Box Industry. Undated. Definitions of standard terms describing box construction, materials, machines, processes of manufacture, order of giving measurements, standard types illustrated and named.

Paperboard Industries Assn. Handbook of Corrugated and Solid Fiber Containers; 1928. Standard names for the various kinds of fiber boxes, includes illustrations and descriptive matter for

the various types and method of sealing.

Standard Container Mfrs., E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Fiberboard Boxes. For citrus fruits moving under refrigeration, for ¼, ½, and 1 bushel sizes, requirements on dimensions, construction of box bodies and covers, thickness and strength of material, waterproofing and sealing, gross weight limits.

U. S. Gov., Dept. of Commerce, Bureau of Standards CS33-32; 1931. Knit Underwear (Exclusive of Rayon.) A commercial standard selected and accepted by industry. Includes standard box sizes for men's and boys' union suits, shirts and drawers, widths and lengths of 5 standard sizes,

included as recommended practice.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R64-30; 1930. One Pound Folding Boxes for Coffee. Simplified practice recommended and accepted by industry establishing standard dimensions for 2 standard sizes of paper board or fiberboard folding boxes for shipment of coffee.

U. S. Gov., Dept. of Commerce, Bureau of Standards R128-31; 1931. Corrugated Boxes. Used by department and specialty stores. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of corrugated boxes used for packing merchandise in stores, number assigned to each box, inside

dimensions given for each box.
U. S. Gov., Dept. of Commerce, Bureau of Standards R127-31; 1931. Folding Boxes. Used by

department and specialty stores. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of folding boxes used for packing merchandise in stores, number assigned to each box, dimensions

given for width, length, and depth.

U. S. Gov., Dept. of Commerce, Bureau of Standards R126-31; 1931. Set-Up Boxes. Used by department and specialty stores. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of set-up boxes used for packing merchandise in stores, number assigned to each box, dimensions given in length, width, and depth.

U. S. Gov., Dept. of Commerce, Bureau of Standards T253; 1924. Standardization of Hosiery Box Dimensions. Gives dimensions of proposed standard boxes, the number of sizes being dependent on number of pairs per box, number of folds, and the material of the hose, comprising 20 boxes for ladies hosiery, 3 for men's hosiery,

and 24 for children's hosiery.

U. S. Gov., Federal Specifications Board LLL—8-631; 1930. Corrugated Fibre Boxes. For boxes without wooden frames, 1 style of 1-piece box; 4 styles of 2-piece boxes including half-slotted box, design box, design style and taped corner style of telescope boxes; 1 style of 3-piece, triple slide box; designs illustrated. Requirements on construction of corrugated sheets, waterproofing, thickness of fiber sheets, thickness and bursting strength of gummed paper strip, width and tearing strength of gummed tape, type of metal fastenings, construction of joints and boxes, methods of testing.

U. S. Gov., Federal Specifications Board LLL-B-636; 1930. Solid Fiber Boxes. For usual styles of fiber boxes without wooden frames, 1 style of 1 piece box, 3 styles of 2 piece box including half slotted box, design box, and telescope box, illustrated construction of each style, requirements on number and thickness of piles, thickness and bursting strength of solid fiber board, types of metal fastenings, construction of joints, test of

waterproofing, methods of test.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Materials; 1930. Container Spec. 26, Fiber Cans and Boxes. As inside containers for shipment of dangerous materials, mandatory requirements on construction, thickness of materials, attachment of tops and bottoms, strength of materials, for capacities of 3 to 5 pounds, dangerous

materials for which authorized.

U. S. Gow, Interstate Commerce Commission. Requilations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 23A, 23B, 23C, 23B, and 23E. Solid Fiberboard Boxes. Mandatory requirements on number of plies, thickness of material, strength, waterproofing, construction, dimensions of parts, for 1 or 3 piece boxes, inside packing requirements, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 24A, 24B, 24C, and 24D. Corrugated Fiberboard Boxes. Mandatory requirements on materials, construction, thickness, strength, and waterproofing of corrugated fiberboard, construction of box and dimensions of parts for one piece of triple slide construction, inside packing requirements, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 25A. Hard-

ened Fiber Boxes. Mandatory requirements on limiting capacity, thickness and strength of box parts, tests of waterproofness and ollproofness of fiber, construction of box for use with rectangular metal inside containers, drop test, dangerous materials for which authorized.

953.3 WOODEN BOXES

953 30 General Items

American Society for Testing Materials, Tentative Specifications D 68-22T; 1922. General Specifications for Wooden Boxes, Nailed and Lock Corner Construction. Suitable woods grouped into 4 groups, permissible number of pieces in sides, use of corrugated fasteners, length, size, and spacing of nails for different kinds of wood, size and attachment of strapping, general box construction.

American Society, for Testing Materials. Tentative Specifications D 118-21T; 1921. General Specifications for 4-One Boxes and Similar Type Boxes. Covers 3 types, general form, boxes with wedgelock ends, boxes with detached tops. Sides of thin boards and cleats held together by binding wire and assembled around separate end boards, grouping of suitable woods, minimum thickness of wood parts and wire, assembly and stapling re-

quirements.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 1. Boxes. For wooden boxes, general requirements for closeness of fit of parts, and for strapping and cleat reinforcement for large boxes.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Stitched Covers. For 33 varieties of stitched covers for lugs, lettuce, melon, orange, apple, pear, and peach covers, requirements on number and dimensions of cleats

and slats.

National Assn. of Wooden Box Manufacturers. Charts for Correct Nailling of Wood Boxes; 1928. Sizes and number of nails per side for cement coated nails for various thicknesses of sides and ends.

National Assn. of Wooden Box Manufacturers. Wooden Box and Crate Construction; 1921. Book of 200 pages containing information on kinds of lumber, properties of wood influencing its use for box construction. box and crate de-

sign.

U. S. Gov., Dept. of Agriculture. Farmers Bulletin No. 1579; 1929. Containers Used in Shipping Fruits and Vegetables. Not a standard or specification, but a descriptive list of containers most favored by the important shipping sections of the country for shipment of apples, artichokes, asparagus, avocadoes, beans, berries, cabbage, cantaloupes, misc. melons, cauliflower, celery, cherries, citrus fruit, cranherries, green corn, cucumbers, figs, grapes, lettuce, mushrooms, okra, onions, peaches, pears, peas, peppers, pineapples, plums, prunes and apricots, potatoes, sweet potatoes, rhubarb, tomatoes, misc. foliage type and misc. root type vegetables.

953.31 Fruit Boxes

American Railway Assn. Freight Container Bureau. Tentative Specification. Circular No. 16; 1924. Boxes (Lugs) for Fresh Grapes. Inside dimensions and capacity, dimensions of individual parts, general quality of lumber, type of nails, nailing and making up requirements.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Cherry Boxes and Lugs. For 22 varieties, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Dried Fruit Boxes. For 34 varieties of boxes for dried fruit, peaches, prunes, apricots, and figs for domestic and ex-port shipment. Requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Evaporated Apple Boxes. For 5 varieties of 25 and 50 pound boxes, requirements on number and dimensions of com-

ponent pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Fresh Fig Boxes. For 16 varieties of single and double layer filler type, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Fresh Prune Boxes. For 3 varieties, requirements on number and di-

mensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1. Box and Crate Specifications. 1928. Green Apple Boxes. Requirements on number and dimensions of pieces for 46 types, divided into light, medium, heavy, and export boxes and half boxes.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications. Lemon Boxes. For 15 varieties of boxes and half boxes, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications. Orange and Grapefruit Boxes. For 8 varieties, California standard and export types, requirements on number and dimen-

sions of component pieces.

National Assn. of Wooden Box Manufacturers.

Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications, Peach Boxes. For 18 varieties, requirements on number and dimensions

of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications. Pear Boxes. For 32 varieties of boxes and half boxes, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications. Picking Boxes. For 38 varieties and sizes of picking boxes for various products, requirements on number and dimen-

sions of component pieces.

National Assn. of Wooden Box Manufacturers.

Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications. Raisin Boxes. For 21 varieties of layer, loose, carton, and bag raisin boxes, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1; 1928. Box and Crate Specifications. Sweat Boxes. For 3 varieties, requirements on number and dimensions of component pieces.

Standard Container Mfrs., E. H. Dulaney, Agent for Southeastern Railroads. Standard Contain-

ers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Citrus Fruit Crate. Requirements on standard inside dimensions, dimensions of parts, details of construction and nailing, kinds and quality of wood, permissible bulge when packed.

Standard Container Mfrs., E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Peach Boxes. Requirements on thickness of box shook used, permissible max-

imum dimensions of box.

953.32 Berry Boxes

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards: 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Berry Baskets or Boxes. Requirements on standard sizes, allowable tolerances on correctness of capacities.

References .- Cranberry boxes. See 953.34.

953.33 Vegetable Boxes

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1. Box and Crate Specifications; 1928. Artichoke Boxes. Requirements on number and dimensions of component pieces for 6 types of boxes and half boxes.

References.—Grading rules for box lumber. Sec 413.9. Box shook and crating, nails. See also 421.4. 608.1. Box construction, nailing, cover construction. See also 953.30. Shipping boxes. See also 953.39.

953.34 Cranberry Boxes

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 215; 1930. Wooden Boxes for shipment of cranberries. For half-barrel and quarter-barrel sizes, requirements on thickness of sides, cleats, or of frame and panel. Construction required in order to be given a certain freight rate.

References.—See references under 953.33.

953.35 Produce (Lug) Boxes

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Lugs, Display and Lug Boxes. For 41 varieties, requirements on number and dimensions of component pieces.

References .- See references under 953.33.

953.36 Special Shipping Boxes

American Bottlers of Carbonated Beverages Educ. Bull. No. 4; 1930. Bottle Boxes, For wooden boxes for holding twenty-four 61/2 to 9 ounce bottles, requirements on thickness of ends, sides, bottoms, and partitions, dimensions of metal straps.

American Railway Assn. Freight Container Bu-reau. Tentative Specification. Circular No. 3; 1922. Wooden Boxes for Boots and Shoes. Strapping and nailing requirements, permissible moisture content and defects of lumber, kinds of wood grouped according to strength and nail holding power, dimensions of parts and strapping, construction of boxes.

American Railway Assn. Freight Container Bureau. Tentative Specification. Circular 4; 1923. Wooden Boxes for Eggs in the Shell and Inside Packing. For center partitioned boxes, thickness, weight and Mullen test for fiber board fillers and flats, dimensions, construction

and weight of fillers and flats, construction of Pacific States Butter, Egg, Cheese, and Poultry excelsior pads, kinds of lumber, permissible moisture content and defects, dimensions, construction

and nailing of egg cases.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 110; 1930. Boots or Shoes, Ratings. For Wooden Packing Boxes. Requirements on packing of shoe cartons, types of nails and nailing, strapping, kinds of wood, dimensions of parts, sizes of nails and straps, construction of cleated, wire-bound, and plywood boxes.

Consolidated Classification Committee. dated Freight Classification No. 6, p. 149; 1930. Cheese, Rating. For Cylindrical Cheese Boxes or Drums. As wooden outside containers, requirements on thickness of material, dimensions of hoops, rims, reinforcements, construction of box,

fastening of top.

Consolidated Classification Committee. dated Freight Classification No. 6, p. 153; 1930. Cigarettes, Rating. Wooden Boxes for packages of cigarettes, requirements on construction, nailing, strapping, cording, wire binding for various type boxes.

Consolidated Classification Committee. dated Freight Classification No. 6, p. 154; 1930. Cigars, Rating. Wooden Boxes for Cigars. Requirements on nailing, cording, strapping, and

reinforcing for various types of boxes.

Consolidated Classification Committee. dated Freight Classification No. 6, p. 183; 1930. Eggs, Rating. Standard Wooden Egg Case. For hardwood case, requirements on thickness of parts, cleats, and partition, construction and nailing, material, thickness, number and weight of fillers and cushions, construction and weight of cupped trays.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 307; 1930. Liquors, Alcoholic, Ratings. Wooden Boxes for packing, requirements for type of nails, strapping or wiring and sealing of straps or wires,

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Nailed Wooden Crates and Boxes. For boxes, classification of woods, requirements on thickness for boxes of various capacities of various woods, on widths of material, surfacing, joining, nailing, size of nails, dimensions and construction of wooden or fiber boxes for various weights of lard or lard cartons.

National Assn. of Wooden Box Manufacturers. cific Coast Division. Tariff No. 1. Box and Crate Specifications; 1928. Butter Cases. For 9 sizes and types (cube, print, carton, etc.), requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Cheese Boxes. For 2 grades, requirements on number and dimensions

of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Egg Cases. For 30 dozen ventilated and nonventilated standard types, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Honey Cases. For 5 varieties, requirements on number and dimensions of

component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Oil Cases. For 4 varieties. requirements on number and dimensions of component pieces.

ments on color and general quality of wood, thickness and finish of sides, dimensions of cube, nailing, paraffining, size and saturation of paper

liners, and packing.

U. S. Gov., Federal Specifications Board EE-S-571; 1930. Baking Soda. Includes packing boxes for shipment of thirty-six 1-pound cartons, requirements on grade of box lumber, minimum thicknesses of ends, sides, tops, and bottoms, sizes of nails, sizes and strength of binding wire or strap, tolerances on size, for nailed construction, and for 4-one box construction.
U. S. Gov., Interstate Commerce Commission. Reg-

ulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 14. Wooden Boxes. For nailed boxes, nailed boxes with cleats, and lock corner boxes, mandatory requirements on general quality and thickness of lumber, construction, and nailing for various weight capacities, dangerous materials for which author-

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 15A, 15B, 15C, and 15D. Wooden Boxes, Nailed. For nailed boxes without cleats, for single cleated boxes, for double cleated boxes, and for lock corner boxes, mandatory requirements on general quality of lumber, construction, dimensions of parts, size of nails and nailing, strapping, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 16A and 16B. Wooden Boxes, Wire-bound. Mandatory requirements on general quality of lumber, strength of binding wire or strap, construction, dimensions of parts, number and size of binding wires, types of nails and nailing, setting up and closing, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 19A. Wooden Boxes, Glued Plywood. Mandatory requirements on general quality of lumber, number of plies, construction, nailing and size of nails, width of cleats, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Reg-ulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 30. Wooden Boxes, Metal Lined. For zinc lined boxes, mandatory requirements on thickness and construction of lining, construction and dimensions of parts of double cleated boxes of various capacities, nailing, dangerous materials for which authorized.

953.37 Wooden Boxes for Canned Goods

American Society for Testing Materials. Tentative Specifications D 44-20T; 1920. Wooden Boxes, Nailed and Lock-Corner Construction, for the Shipment of Canned Foods. Minimum thick-nesses of material for box parts, maximum weight of box and contents, permissible variation in inside dimension requirements, other requirements in accordance with A. S. T. M. specification D 68.

American Society for Testing Materials. Tentative Specifications D 45–17T; 1917. Canned Foods Boxes, Wirebound Construction. Veneer and

cleat construction, requirements on manufacture and permissible defects in lumber, dimensions of cleats and wires, thickness of sides, construction of boxes, for gum veneer sides and 13 kinds of wood permitted for cleats, for 2-dozen can boxes.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; Box and Crate Specifications; 1928. Cannery Cases. For 71 sizes and types for various numbers and sizes of round and square cans for fruit, asparagus, vegetables, picnic, oysters, sardines, prunes, pimento, and milk. Requirements on number and dimensions of component pieces.

National Canners Assn. Canned Food Boxes; 1928. For nailed wooden boxes, lock corner wooden boxes, and 4-one wooden boxes, requirements on capacities measured in standard size cans, tolerances on dimensions, grouping of box woods, requirements on construction, thickness of parts, cleating, and nailing for boxes constructed under each group, for domestic and export trade

U. S. Gov., Federal Specifications Board Z-F-351; 1931. Canned Figs. Includes packing boxes for the canned goods, requirements on construction, thickness of parts, type and sizes of nails, size and strength of strapping for nailed box construction and for 4-one box construction.

U. S. Gov., Federal Specifications Board JJJ-O-361; 1930. Vegetable Salad Oil. Includes specifications for shipping cases. For nailed construction, requirements on thickness of ends and sides, size of nails, size and tensile strength of binding wire or steel straps, strapping. For 4-one box construction, requirements on quality of lumber, thickness of boards and cleats, size of wire and staples, construction and nailing.

U. S. Gov., Federal Specifications Board JJJ-S-351; 1930. Sirup. Includes wooden packing cases for shipment of canned or bottled sirup, requirements on thickness of ends and sides, size of nails, strapping, size and strength of metal strap or wire, for nailed box construction. Requirements on quality of lumber, thickness of boards, cleats, wires, and staples for 4-one box construction.

954. CARTONS, CASES, CRATES, AND TUBES 954.1 CARTONS

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 509; 1930, Bicycles, Ratings. Cartons for shipment of bicycles, requirements on thickness and Mullen test resistance, packing of bloycle.

resistance, packing of bicycle.
Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 102; 1930.
Blackboards and Desks combined, Rating. Carton for shipment of combined desks and blackboards, of solid fibreboard, requirements on thickness and Mullen strength test.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 388; 1930. Envelopes, Ratings. For solid fiberboard cartons for shipment of envelopes, of telescopic construction, requirements on thickness and strength of fiberboard, and on width and strength of the paper sealing tape.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, pp. 227 to 230, 233 to 239, 241; 1930. Furniture, Ratings. Fiberboard Cartons for packing various pieces of furniture, requirements on thi

strength, and structural features.
Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 383; 1930.
Paper, Ratings. Cartons for shipment of paper made of solid fibreboard or double-faced corrugated strawboard or fiberboard, requirements on strength of board, thickness of liners, width and strength of paper sealing tape.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 163; 1930. Refrigerators, Ratings. Fiberboard Packages for shipment of refrigerators, requirements on number of ply, thickness of board, Mullen test strength, sealing of flaps, provision of skids.

Institute of American Meat Packers. Packinghouse Supplies, Packs and Equipment; 1928. Sausage, Lard, and Sliced Bacon Cartons. For rectangular paper cartons up to 10 pounds capacity, requirements on dimensions, kind and thickness of paper stock.

U.S. Gov., Dept. of Commerce, Eureau of Standards R19-31. 1931. Ice Cream Brick Molds and Cartons. For machine filled cartons, simplified practice recomended and accepted by industry establishing dimensions of 2 standard pint car-

tons and 2 standard quart cartons.

U. S. Gov., Interstate Commerce Commission Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2C. Corrugated Fibreboard Cartons. As inside containers for shipment of dangerous materials, mandatory requirements on construction and strength of the fibreboard, construction of carton, lining of outside containers, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2H. Cartons. As inside containers for shipment of dangerous materials, mandatory requirements on use of double face corrugated fibreboard, strength of fibreboard, types of construction, construction of | 954.31 Fruit Crates joints, dangerous materials for which authorized.

References.—Fibreboard boxes. See also 953.2, Standard boxboard thicknesses. See 472.0. Lineabboxboard, therboard. See also 472.16, 472.23, 472.93. Methods of testing paper and paperboard. See 470.3. Gummed paper. See 470.2.

954.2 CASES

954.21 Metal Cases

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 32A, 32B, and 32C. Metal Cases and Trunk. For shipment of motion picture films, mandatory requirements on thickness of metal and construction of riveted or seamed sheet iron or steel cases for 8 reels and of welded or riveted cases for 12 reels, construction of compartments and metal lining of trunk, general quality, thickness, weight, and construction of fibreboard lining of cases, drop test of cases

U. S. Gov., Treasury Dept. U. S. Public Health Service. Reprint No. 425; 1917. A New Water Sample Shipping Case. Dimensions and design of metal shipping case insulated with corkboard for shipment of bottled samples of water for bacteriological examination, with space provided for

cracked ice packing.

References.—Iron and steel sheets. See 604.2. Standard box board thicknesses. See 472.0. Lined boxboard, fibreboard. See also 472.16, 472.93.

954.22 Paper and Fiber Cases

954.29 Miscellaneous Cases

American Railway Assn. Signal Section 8820: 1921. Lead Type Portable Storage Battery for Signaling. Includes wooden outer case and case cover, of oak, maple, beech, birch, or ash, dimensions, construction and assembly, size and application of reinforcement strap and bolt, bail handle and painting requirements.

954.3 CRATES

954.30 General Items

American Railway Assn. Freight Container Bureau. Bulletin No. 6; 1927. The A. B. C. of Good Crating. General information on crating for shipment of articles, moisture content of lumber, methods of nailing, and construction of crates illustrated.

American Railway Assn. Freight Container Bureau. Bulletins 9 and 10. The Three Way Corner, The Three Way Corner Crate; 1927. Illustration of construction and nailing, method of disassembly and advantages.

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 2. Crates. General requirements on quality of material, protection of exposed parts, rein-

forcement, protection of contents.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Stitched Covers. For 33 varieties of stitched covers for lugs, lettuce, melon, orange, apple, pear, and peach covers, requirements on number and dimensions of cleats and slats.

National Assn. of Wooden Box Manufacturers, Wooden Box and Crate Construction; 1921. Book of 200 pages containing information on kinds of lumber, properties of wood influencing its use for box construction, box and crate design.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1. Box and Crate Specifications; 1928. Banana Cases. For 4 sizes of octagonal cases, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Fresh Fig Boxes. Includes 2 varieties of crates of basket style, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1923. Box and Crate Specifications. Fresh Prune Crates. For 4 varieties of 4 basket crates, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Grape Crates. For 40 varieties, requirements on number and dimensions

of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Melon Crates. For 33 varieties of cantaloupe, honey dew, and casaba melon crates, requirements on number and dimensions of component pieces.

Standard Container Mfrs. Bushel Crate; 1930. Requirements on standard inside dimensions, dimensions of parts, details of construction and nailing, kinds and quality of wood. Used for

fruits and vegetables.

Standard Container Mfrs. Cantaloupe and Musk Melon Crate. Undated. For standard crate, pony crate, and standard flat cantaloupe crate, requirements on standard inside dimensions, dimensions of heads, panels, slats, construction and nailing, kinds and quality of wood.

Standard Container Mfrs. Citrus Fruit Crates. Undated. Requirements on standard dimensions of standard crate and of tangerine crate, dimensions and construction of heads, panels, sides, cleats, nailing and make-up, kinds and general quality of wood, permissible bulge when packed.

Standard Container Mfrs. Pineapple Crate. Undated. Requirements on standard inside dimensions, number and dimensions of heads, panels, slats, details of construction and nailing, kinds and quality of wood.

References.—Basket crates. See 954.35. Crate construction and crating, cover construction. See also 954.30. Grading rules for box lumber. See 413.9. Box shook and crating, nails, See 48s 421.4, 608.1. Drying trays for raisins and fruits. See 959.9.

954.32 Berry Crates

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1. Box and Crate Specifications; 1928. Berry Boxes and Crates. For 14 sizes and types of strawberry, raspberry, and currant crates, drawers, and covers, requirements on number and dimensions of component pieces.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. For 2 sizes of 30-pound canned berry crates, requirement on number and dimensions of component pieces.

References.—Basket crates. Sec 954.35. Crate construction and crating, cover construction. Sec also 954.30. Grading rules for box lumber. Sec 413.9, Box shook and crating, nails. Sec also 421.4, 608.1.

954.33 Vegetable Crates

National Assn. of Wooden Box Manufacturers. Pacific Coast Division. Tariff No. 1. Box and Crate Specifications; 1928. Asparagus Crates.

For 9 types of pyramid and flat crates, requirement on number and dimensions of component

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Sweet Potato Crates.

For 7 varieties, requirements on number and dimensions of component parts.

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1; 1928. Box and Crate Specifications. Vegetable Crates. For 87 varieties of cauliflower, lettuce, pea, pepper, spinach, celery, and cabbage crates, requirements on number and dimensions of component pieces.

Standard Container Mfrs. E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Asparagus Crate. Requirements on standard inside dimensions, dimensions of parts, details of construction and nailing,

kinds and quality of wood.

Standard Container Mfrs. Bushel Crate; 1930. Requirements on standard inside dimensions, dimensions of paris, details of construction and nailing, kinds and quality of wood. Used for potatoes, cucumbers, onions, and other fruits and vegetables.

Standard Container Mfrs. Florida Cabbage Barrel Crate; 1931. Requirements on standard inside dimensions, dimensions of head frames, panels, slats, construction and nailing, kinds and quality of wood. For shipment of cabbage, squash, eggplant, beets, cauliflower, etc.

Standard Container Mfrs. Florida Celery Crate; 1931. Requirements on standard inside dimensions, dimensions of headframes, panels, and

slats, construction and nailing, kinds and general quality of wood.

Standard Container Mfrs. Florida Lettuce Crate. Undated. Requirements on standard inside dimensions, dimensions and number of heads, panels, slats, and cleats, construction and nailing, kinds and general quality of wood.

Standard Container Mfrs. One and One-Half Bushel General Utility Crate; 1930. Requirements on standard inside dimensions, dimensions of parts, details of construction and nailing,

kinds and quality of wood.

Standard Container Mfrs. Standard Five Peck Crate; 1930. Requirements on standard inside dimensions, dimensions of parts, details of construction and pailing kinds and gnality of wood

struction and nailing, kinds and quality of wood. Standard Container Mirs, E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Pepper Crate. Requirements on standard inside dimensions, dimensions of parts, details of construction and nailing, kinds and quality of wood. For peppers and egg plants.

U. S. Gov., Federal Specifications Board HHH-P-611; 1930. Irish Potatoes. Includes crates for shipping potatoes, requirements on quality of box lumber, inside dimensions of octagonal crate for 160 pounds capacity, thickness, dimensions, number of slats, and construction of ends and sides, nailing and strapping, strength of strap or binding wire.

References.—Basket crates. See 954.35. Crate construction and crating, cover construction. See also 954.30. Grading rules for box lumber. See 413.9. Box shook and crating, nails. See also 421.4, 608.1.

954.35 Basket Crates

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 18; 1925. Four Basket Crates with Tapered Ends for Fresh Fruits and Vegetables. For 3-quart baskets, permissible moisture and defects of lumber for crates, dimensions and construction of parts, nailing requirements, construction of baskets, loading rules for car loading.

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 19; 1925. Six Basket Crates for Fresh Fruits and Vegetables. For 4-quart baskets, permissible moisture and defects in lumber for crates, dimensions and construction of parts, nails and nailing requirements, construction of baskets,

loading rules.

Standard Container Mfrs, E. H. Dulaney, Agent for Southeastern Railroads. Standard Containers for Fresh Fruits and Vegetables and Loading Rules No. 5; 1928. Three Basket Crate for Tomatoes. For three 4-quart till baskets, of pine or gum veneer or sawed wood, requirements on inside dimensions, dimensions of cleats, sides, etc., details of construction and nailing.

Standard Container Mfrs. Six Bosket Crate. Undated. For shipment of tomatoes, peaches, plums, peppers, okra, perslimmons, guavas, avacado pears, grapes, etc., requirements on standard inside dimensions, number, dimensions, and construction of heads, panels, slatted sides, top, bottom, baskets, trays, requirements on nailing, kinds and general quality of wood. Covers 10 and 10½ inch height standard crates.

References.—Fruit and vegetable baskets. See 952.11. Crate construction and crating, cover construction. See also 954.30. Grading rules for box lumber. See 413.9. Box shook and crating. See also 421.4. Nails. See also 608.1. Drying trays for raisins and fruits. See 595.9.

954.36 Shipping Crates

American Railway Assn. Freight Container Bureau. Bulletin No. 5; 1926. Crates for Parlor Heaters. Bulletin No. 7; 1926. Packing and Crating Oak Heaters. Bulletin No. 8; 1926. Crates for Cast-Iron Warm-Air Furnaces. Information and illustrated construction of recomended types of crating for the heaters covered.

American Railway Assn, Freight Container Bureau. Bulletins No. 11 to No. 17; 1927 and 1928. Recommended Crates for Furniture. Illustrated construction and method of packing various types

of furniture, sizes of nails.

American Railway Assn. Freight Container Bureau. Tentative Specifications. Circulars No. 5, No. 10, No. 12; 1923. Crates for Furniture (Case Goods), Crates for Furniture and Lamps (Reed and Fiber), Crates for Upholstered Furniture. Quality and weight of wrapping paper, permissible moisture content, defects, and types of wood for crating lumber, minimum dimensions of parts, nails and nailing, crating requirements.

American Railway Assn. Freight Container Bureau. Tentative Specification. Circular No. 7; 1923. Crates for Refrigerators. Permissible moisture content and defects in lumber, minimum size of lumber, spacing of sheathing, construction

of crate, nails and nailing requirements.
American Railway Assn. Freight Container Bureau. Tentative Specifications. Circular No. 9;
1923. Cans for Eggs (Shelled and Frozen) and
Outside Containers. Includes crates for cans,
suitable kinds of wood classed according to
strength and nail holding power, dimensions of
pieces, sizes and type of nails, nailing and construction of crates recommendations.

American Railway Assn. Freight Container Bureau. Tentative Specilications. Circular No. 15; 1924. Crates for Gas and Electric Domestic Cook Stoves. Circular No. 17; 1925. Crates for Oil Cook Stoves. Circular No. 20; 1926. Crates for requirements for paper and strawboard used in wrapping and packing parts, woods for crates grouped according to strength and nail holding power, permissible moisture and defects in lumber, dimensions of crate parts, size and type of nails and nailing requirements, construction of corners, bracing, and illustrated design of crates and method of packing.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 220; 1930. Furniture, Rating. Crates for packing furniture. Requirements on dimensions of frame and bracing members for various weights of crates and contents, provision of protecting strips, thickness of strips, nailing and three way corner construction. Requirements for wire bound construction.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 266; 1930. Graphite Articles, Rating. Cylindrical Crates for packing. Requirements on maximum dimensions, minimum thickness of hardwood, dimensions and spacing of side slats, reinforcement and lining of

crate.

Consolidated Classification Committee. dated Freight Classification No. 6, p. 102; 1930. Slate Blackboards, Rating. Crates, for shipment of blackboards, requirements on width and thickness of parts and slats, permissible size of apertures, size and location of reinforcement strips, general quality of wood.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 510; 1930. Vehicles, Horse-Drawn, Ratings. Crates for packing vehicles, requirements on height of package, thicknesses of hardwood or softwood materials, corner construction, sum of widths of slats on sides and on ends of package, layout and attachment of slats.

Institute of American Meat Packers. Packing-house Supplies, Packs, and Equipment; 1923. Nailed Wooden Crates and Boxes. For crates, dimensions of crate and of cleats, thicknesses of sides, ends, etc., number of pieces, size and number of binding wire for wire bound crates, above

requirements given for various weight capaci-ties of nailed and of wire bound lard can crates. and of pork and smoked meat crates.

National Furniture Warehousemens Assn. hold Goods, Packing and Shipping Specifications. Undated. Recommendations on padding, wrapping, packing, and crating, itemized lists of kinds and amounts of materials needed for packing and crating each of many kinds of furniture and household articles.

References.—Crate construction and crating, See also 954.30. Box shook and crating, See also 421.4, Nails. See also 608.1. Lined boxboard, corrugated boxboard, fibreboard. See also 472.16, 472.23, 472.93. Wrapping paper. See also 477.

954.39 Miscellaneous Crate Specifications

954.4 TUBES AS CONTAINERS

U. S. Gov., Interstate Commerce Commission. Regulations for Transportion by Rail of Dangerous Articles; 1930. Container Spec. 29. Mailing Tubes. For 1 pint capacity or smaller for shipment of dangerous materials, mandatory requirements on thickness of tube walls, provision of metal bottom and metal screw cap.

U. S. Gov., Post Office Dept. U. S. Official Postal Guide, p. 21; 1930. Mailing Tubes for single glass bottle containing liquid. Postal regulations covering requirements on wall thickness for wood or papier-mâché tube or block for various capacity bottles, watertightness, provisions of screw top requiring 11/2 turns to disengage.

Cast Iron Cook Stoves and Ranges. Mullen test | 955. BOTTLES, CARBOYS, FLASKS, JARS, AND DEMIJOHNS

955.0 GENERAL ITEMS

Glass Container Assn. of America. Glass Finish and Gauges; 1930. Dimensioned drawings showing standard designs of glass bottle and jar top finishes for attachment of tops, caps, lids, etc., drawings of diameter gauges, for more than 30

955.1 BOTTLES

American Bottlers of Carbonated Beverages. Educ. Bull. No. 4; 1930. Bottle Simplification. Recommended practice on sizes of bottles as a result of a conference under auspices of Div. of Simplified Practice of Nat. Bureau of Standards, standard capacities, main dimensions, and weight of glass for soda and imported ginger ale shapes, water and water shape ginger ales, beers, export, select or C. S. shape.

merican Bottlers of Carbonated Beverages, Educ, Bull. No. 4; 1930. Crown Finish for Beverage Bottles, Standard dimensions and shape American Bottlers of bottle top, identical with No. 600 glass finish

of the Glass Container Assn.

American Drug Manufacturers Assn. Standardized tablet bottles; 1923. Dimensional drawings of standard Blake tablet bottles from 1/6 to 28 ounce

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 255; 1930. Bottles, Demijohns, Jars. Requirements on minimum weight of glass for various capacities up to one-half gallon, in order to be acceptable for shipment in carload lots.

Manufacturing Chemists Assn. of the U.S. ratory Apparatus; 1922. Weighing Bottles. For flat bottom bottles with ground glass stoppers, standard sizes, requirements on design and di-

mensions

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Lubricating-Oil Bottles. For glass bottles used for selling lubricating oil, permissible heights for various sizes, requirements on marking of capacity and provision of filling mark, tolerances permitted on capacity. Amendment adopted at 23rd Conference (Publ. M116 of Bur. of Stan. 1930) covers over-all height and filling line indication for bottles with permanently attached spouts.

National Conference on Weights and Measures. Commercial Weighing and Measuring Devices. Published as MS5 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Requirements on permissible Milk Bottles. sizes, marking of capacity and maker's name on bottle, height of filling, tolerances on capacity

permitted.

U. S. Gov., Dept. of Commerce, Bureau of Standards R10; 1927. Milk and Cream Bottles and Bottle Caps. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes, capacities, and dimensions of milk and cream bottles and sizes of caps for these bottles.

U. S. Gov., Dept. of Commerce. Bureau of Standards. R 123-30; 1930. Carbonated Beverage Bottles. Simplified practice recommended and accepted by industry establishing a limited number of standard sizes and types of bottles, in-cludes standard capacities, heights, diameters,

and weight of glass, for small and large types of | 955.3 WATER COOLERS soda and imported ginger ale shapes; water and water shape ginger ales; beers, export, select, or C. S. shapes; recommended that contents clause or capacity be blown in glass of soda hottlee

References.—Bottle top finishes. See also 955.0. Vinegar bottle for table use. See 523.1. Sealing wax for bottles. See 719.59.

955 2 CARROYS

Consolidated Classification Committee. Consolidated Freight Classification No. 6; 1930. Rule 40, section 9. Glass Carboys. General requirements on enclosing of carboy in wooden box with cushioning material.

U. S. Gov. Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 1A. Boxed Carboys (Glass, Earthenware, Clay, or Stoneware). Mandatory requirements on type of closure or stopper, stopper fastening devices, capacities, weight of glass in glass carboy, thickness of side walls, construction, thickness of box sides, and nailing requirements for wooden box container, swing shock tests, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 1B. Boxed Lead Carboys. Mandatory requirements on internal pressure test, capacities, construction, quality of lead used, weight of lead per unit area in walls and top, construction, thickness of box sides, and nailing requirements for wooden box container, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 28. Metal Jacketed Lead Carboys. Mandatory requirements on thickness of lead in various parts of carboy, size of neck, material and size of closure, capacity, drop test, and for outside container, requirements on gage of metal, construction, handles, etc., dangerous materials for which authorized.

-Sheet lead, methods of analysis of lead. References.—S See 651.5, 651.0.

955.3 FLASKS

References .- Laboratory flasks. See 918.9.

955.4 JARS

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 255; 1930. Bottles, Demijohns or Jars. Requirements on minimum weight of glass for containers of capacities up to one half gallon, in order to be acceptable for shipment in carload lots.

U. S. Gov., Dept. of Commerce, Bureau of Standards R91-29; 1929. Glass Containers for Preserves, Jellies, and Apple Butter. Simplified practice recommended and accepted by industry, limits the stock sizes of preserve and apple butter jars and jelly tumblers to the content capacities given in the list in the publication.

References.—Jar top finishes. See also 955.0. Jar for water cooler. See 955.6. Rubber jar rings. See 208.6. Sealing wax for Jars. See 719.59.

955.5 DEMIJOHNS

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 255; 1930. Consoli-Bottles, Demijohns, Jars. Requirements on minimum weight of glass for various capacities up to one-half gallon, in order to be acceptable for shipment in carload lots.

U. S. Gov., Federal Specifications Board 617; 1929. Water Coolers. For metal ice container, inside water jar, glass bottle, and metal stand, requirements on thickness of metal, ice capacity, and structural features of ice container, glazing of porcelain or earthenware water jar, type, material, and finish of faucets, construction and finish of stand.

955.7 JUGS

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 31. Jugs in Tubs. Mandatory requirements on capacity and acid resisting quality of jug, dimensions of hoops and hardwood staves of tub, spacing between jug and tub, dangerous materials for which author-

956. CYLINDERS AND TANKS

956.1 CYLINDERS AS CONTAINERS

Compressed Gas Manufacturers Assn. Safe Handling and Use of Compressed Gas Cylinders. Undated. General rules and precautions applicable to individual gases as oxygen, acetylene, combustible gases, carbonic gas, sulphur dioxide, chlorine, and anhydrous ammonia.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 3A, 3B, 3C, 3D, and 3E. Seamless Steel Cylinders. For ship-ment of gases and other dangerous materials, mandatory requirements on type and general quality of steel used, chemical composition of steel, designed pressures, thickness of walls, permissible stress in material, design formula, protection of safety devices, hydrostatic test, flatten-ing test, tensile test, for cylinders for various pressures up to 500 pounds, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 4, 4A, 4B, and 4C. Welded Steel Cylinders. For shipment of gases and other dangerous materials, mandatory requirements on general quality and chemical composition of steel, construction, protection of safety devices, hydrostatic test, flattening test of crop end, tensile test, for 300 and 500 pound cylinders, dangerous materials for which authorized. 4B and 4C cylinders to be of welded or

brazed construction.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 8. Steel Cylinder. For shipment of acetylene gas, mandatory requirements on chemical composition of steel, construction of seamless cylinder, protection of connections, porosity of porous filling material, hydrostatic test, service tests, and tensile tests.

References.—Methods of testing and general requirements for metals. See also 600.1. Regulators and valves for cylinders. See also 607.6, 645.4.

American Bureau of Shipping. Rules for Building and Classing Steel Vessels; 1930. Air Containers. Steel containers for spray air, injection air, starting air for internal combustion engines, etc., requirements on flattening, tensile, and hydrostatic tests, on design formulas for shell, curved or flat heads, for seamless, lap-welded, or riveted types.

American Marine Standards Committee. E No. 26-1929. Marine Boilers and Pressure Vessels.

American Railway Engineering Assn. 1929 Manual. Water Service and Sanitation. Wooden Water Tank; 1920. 50,000 and 100,000 gallon capacities, of cypress, redwood, white pine or specified wood, dimensions of tank, staves, and plank, for cylindrical tanks, assembly, minimum size, spacing and stress allowable for tank hoops, dimensions and construction of 12 post timber or steel substructures.

American Society of Bakery Engineers. Bulletin 43; 1929. Water Tanks. Volume per pound of water for standard straight round water tanks

of noncorrosive material.

American Society of Mechanical Engineers. Boiler Construction Code; 1931. Section VIII. Unfired Pressure Vessels. Requirements for safety valves, allowable design stresses in materials, construction and allowable working pressures of vessel, riveted joints, dished heads, braced and stayed surfaces and openings, vessel supports, hydrostatic test, rules for fusion welding and forge welding, requirements for enameled vessels.

Associated Factory Mutual Fire Insurance Companies. Gravity Water Tanks and Steel Towers, vol. 1. Structural Details; 1931. For wooden water tanks, standard sizes, form, kinds of lumber permitted for staves and bottom, hoops and steel shapes according to A. S. T. M. specifica-tions, dead, live, and wind load computations,

allowable unit stresses, details of design.

National Board of Fire Underwriters. Finishing Processes other Than Paint Spraying; 1926. Din tanks, hardening and tempering tanks, flowcoat work, japanning and enameling including ovens. Storage of material, location and arrangement of dipping rooms, requirements on drains, overflows, automatic covers for fire extinguishment, hoods and curtains for various size tanks, arrangement and construction of enameling ovens of brick, concrete or steel and

plaster.
National Board of Fire Underwriters. Tanks,
Gravity and Pressure, Towers; 1926. Wooden woods, size of supports, iron and steel for hoops, etc., according to A. S. T. M. specifications, design requirements, allowable unit stresses, thickness of staves, construction requirements, accessories and their construction, painting, design and construction of concrete foundations, design of supports on buildings, required pipe connections, minimum sizes, location of valves, valve inclosures and frost protection, construction requirements for steam heating and coalburning heater installation.

National Conference on Weights and Measures.
Commercial Weighing and Measuring Devices.
Published as M85 of Nat. Bureau of Standards; 1929. In agreement with standards recommended by Bur. of Standards for adoption by the States. Vehicle Tanks, used as measures. Requirements on provision of indicators, expansion space, venting means, provision for com-plete delivery, marking of capacity, allowed tol-

erance on measurement.

National Fire Protection Assn. Suggested Ordinance Regulating Use, Handling, Storage, and Sale of Flammable Liquids; 1926. Includes specifications for steel or iron tanks, above ground and underground types, requirements on thickness of metal, on pressure test for pressure tanks, on strength of steel, general construction of tanks and foundations, venting, location of valves, piping requirements, etc.

For air containers and other nonfired pressure vessels, required formulas to be used in design of both riveted and welded types.

Underwriters' Laboratories. Electric Lighting Plants; 1921. Includes fuel tanks for installation at engine, for kerosene, gasoline, or fuel oil, made of copper, brass, or cast iron, capacity, general design, wall thickness, construction of joints, connections, vent openings, pressure test requirements.

Underwriters' Laboratories, Gasoline Stoves for Cooking and Heating; 1928. Includes lift-out tanks and pressure tanks, requirements on general construction, design, thickness of metal, op-

erating characteristics, and pressure test. Underwriters' Laboratories, Inside Tank Equipment for Oil Burners; 1927. Applies to steel tanks of 275 gallons capacity or less, individual tanks or combined storage tank and gravity tank with pump, form, material and thickness of shell, approved construction in joints and pipe

connections, coating requirements, pressure test and strength requirements.

Underwriters' Laboratories. Internal Combustion Engines; 1920. Includes fuel tanks installed at engine, made of copper, cast iron, or protected sheet steel, capacity, general design, wall thickness, construction of joints, connections, vent openings, pressure test requirements.

Underwriters Laboratories. Kerosene Stoves for Cooking and Heating; 1927. Includes fuel tanks. lift out type and pressure type. Lift out tanks of glass, copper, brass or of steel sheets, minimum thickness of sheet material, capacity. Pressure tanks of sheet steel, copper or brass, capacity, working pressure, pressure test requirements, gauge and indicator provisions.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Steel Tanks for Gasoline. Tanks up to 40-gallon capacity for use on passenger vessels, mandatory requirements on seamless or welded construction, thickness of wall, tinning, internal pressure test, vent pipe provisions.

American Marine Standards Committee. O No. 7-1926. Kinds and Sizes of Mattresses and Pillows and Woolen, Linen, and Cotton Articles for Ship Equipment. Includes laundry bags of white canvas, standard dimensions of one size.

American Society for Testing Materials D 205-27: 1927. Osnaburg Cement Sacks. Requirements, tolerances, and method of test for width, weight, thread count, and tensile strength of material,

cut and seam construction of sacks.

American Society for Testing Materials Tentative Specifications D 275-27T; 1927. Cuban (Jute) Raw Sugar Bags. For gunny sacking, requirements for weave, thread count, width, weight, tensile strength, and sizing; for bags, requirements for weight of standard bags, methods of measurement of width and length, test procedure according to A. S. T. M. method D 39.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 507; 1930. Dried Beans, Ratings. Bean Bags for shipment of beans, requirements on standard sizes, minimum weight of cotton cloth or burlap bags, stitches per inch, weight of contents.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 208; 1930. Flour, Rating. Cotton Cloth Bags for edible flour, requirements on standard capacities, width and weight of cloth, width of cut of cloth, tensile strength of warp and filling, method of testing strength.

Consolldated Classification Committee Consolidated Freight Classification No. 6, p. 201; 1930. Grain Products, Rating. Cotton Cloth Bags for packing corn meal, flour, grits, etc. Requirements on standard sizes of bags, width, weight, and tensile strength of cloth, cut of bag, methods of testing tensile strength.

Consolidated Classification Committee. Consolidated Freight Classification No. 6, p. 479; 1930. Sugar, Ratings. Burlap Bags for packing sugar, requirements on manufacture, weight, width, thread count, and tensile strength.

thread count, and tensue strength.

Consolidated Classification Committee, Consolidated Freight Classification No. 6, p. 479; 1930.

Sugar, Ratings. Cotton Cloth Bags for packing

sugar, requirements on weight, thread count, and tensile strength.

Consolidated Classification Committee Consolidated Freight Classification No. 6, p. 479; 1930. Sugar, Ratings. Osnaburg (cotton cloth) Bags for packing sugar, requirements on weight, thread count and tensile strength.

U. S. Gov., Federal Specifications Board SS-S-31; 1930. Table Salt. Includes sacks for shipment of salt, requirements on construction of double sack for 100 pounds, weight and width of burlap for burlap sacks and of Osnaburg cotton for cotton bags.

U. S. Gov., Federal Specifications Board JJJ-B106; 1930. Dry Beans. Includes specifications
for shipping sacks for 100 pounds of beans. For
double burlap sacks, requirements on weight of
burlap, for combination burlap or Osnaburg and
cotton double sacks, requirements on weight of
burlap or Osnaburg fabric in outer sack and on
weight of cotton in inner sack.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 36A. Triplex Bags. For 2 types, one of Osnaburg cloth lined with and cemented to 2 sheets of kraft paper, and one of 2 kraft paper bags inside of Osnaburg cloth bag, mandatory requirements on grade and weight of paper, weight of cloth, construction of bag, tensile strength, drop test, dangerous materials for which authorized.

References.—Jute burlap. See also 322.1. Tolerances on fabrics, methods of testing, standard sizes and weights. See also 33.0, 300.4, 300.6. Stitches and stitching. See also 300.7.

957.2 PAPER BAGS AND PAPER LINING FOR BOXES

Consolidated Classification Committee. Consolidated Freight Classification No. 6 and Supplement No. 6; 1930. Rule 40, section 10. Bags. For paper bags used as outer shipping containers, for 6 standard bag sizes. for single wall, double wall, and multiple wall bags, and for rope stock and kraft bags, requirements on capacity, weight

and Cady or Mullen test strength for individual sheets, percentage of manila rope fiber in rope stock paper.

Kraft Institute. Standards for Odd Bags; 1931. Glassine bags, flat and square types, for peanuts, collars, sandwiches, pies, cakes, popcorn, cookies, load bread, and of various weight capacities up to 2 pounds, standard dimensions, weight of

paper, quantity per bale, and bale weight.

Kraft Institute. Standards for Odd Bags; 1931.

Paper banana bags, garment bags, poultry sacks, standard sacks up to ½ barrel, nail bags, sugar bags, millinery bags, notion bags, and candy bags, standard dimensions for several sizes of each type, required weight of paper, packing quantity per bale, and width of roll.

U. S. Gov., Dept. of Commerce, Bureau of Standards R42; 1925. Paper Grocers' Bags. Simplified practice recommended and accepted by industry establishing a limited list of standard capacities by volume for grocers' bags, with colors, quality, and strength in accordance with selected brands of Union Bag and Paper Corp. and Continental Paper and Bag Mills Corp.

U. S. Gov., Dept. of Commerce. Bureau of Standards R 129-31, 13631. Notion and Millinery Papes Bags. Simplified practice recommended and accepted by industry establishing a limited list of standard sizes of notion and millinery paper bags used by department and specialty stores, width

and length given for each bag size.

U. S. Gov., Dept. of Commerce. Eureau of Standards T187; 1921. A Study of Test Methods for the Purpose of Developing Standard Specifications for Paper Bags for Cement and Lime. Includes requirements on bursting and tensile strength, on percentage of manila and jute fiber, on allowable ash and required rosin, on wet tensile strength, folding endurance, and resiliency strength, methods of test.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2D. Duplex Paper Bags. As inside containers for shipment of dangerous materials, mandatory requirements on use of No. 1 kraft or rope paper, strength and weight of paper, construction of pasted bottom and of sewed bottom types, dangerous ma-

terials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2J. Paper Bag Lining. As inside container for shipment of dangerous materials, mandatory requirements on grade and construction of paper using asphaltum cement, test for imperviousness to water, crimping, size, method of closure, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2K. Paper Bag Lining. As inside container for shipment of dangerous materials, mandatory requirements on use of No. 1 kraft paper, weight, crimping, closure, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Requiations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2L. Paraffined Paper Lining. For inside lining of boxes used in shipment of dangerous materials, mandatory requirements on tensile strength, imperviousness to water and nitroglycerine, unstaining properties, melting point of paraffin, methods test, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2M. Waterproofed Paper Lining. For inside lining of boxes

datory requirements on general qualities and construction without joints or openings, danger-

ous materials for which authorized.

S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 36A.
Triplex Bags. For 2 types, one of Osnaburg
cloth lined with and cemented to 2 sheets of kraft paper, and 1 type made of 2 kraft paper bags inside of Osnaburg cloth bag, mandatory requirements on grade and weight of paper, weight of cloth, construction of bag, tensile strength, drop test, dangerous materials for which authorized.

References .- Medicine chests. See 915.43,

959. MISCELLANEOUS CONTAINERS

959.1 CANS

American Railway Assn. Freight Container Bu-reau. Bulletin No. 1; 1926. Cans for Liquids, Semiliquids and Pastes. Recommended weight of tin plate, illustrated usual construction of seams and likely defects, recommended leakage

and drop tests.

American Railway Assn. Freight Container Bu-reau. Tentative Specifications. Circular No. 9; 1923. Cans for Eggs (Shelled and Frozen) and Outside Containers. Requirements for weight of tin, construction of seams and cover, strength of paper wrapper and twine, wrapping with paper and with burlap, for the cans. Quality of wood,

construction and nailing of crates.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Lamp Filler and One Pint Signal Oil Can. Three and Five Pint Valve Oil Cans. mensions and design of recommended standard cans, cylindrical shapes, with spout, handle, and

bail, of tin or cold rolled steel.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. One Pound Emery Can. Dimensions, metal gage, and design of recommended standard can of tin or cold rolled steel.

used in shipment of dangerous materials, man- | American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Soil Can. Garbage Can. Refuse Can. Dimensions, metal gage, and design of recom-mended standard of each type of can of galvanized iron, 22 gallon capacities except for soil can which is 10 gallon.

American Railway Assn. Mechanical Div. Recom-

mended Practice. Tinware, Standardization of; 1915. Sprinkling and Cooling Can. Dimensions, metal gage, and design of two sizes of sprinkling

cans of tin or cold rolled steel.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Squirt Oil Cans. Dimensions and design for recommended standard conical type, hemispherical type, and long spout engine oil can, of steel or tin.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; Three Gallon, Five Gallon, and Ten Gallon Oil Cans. Dimensions, metal thickness, and design of recommended standard can of each size, cylindrical shape, with lop sided conical top, with bail, of galvanized iron.

American Railway Assn. Mechanical Div. Recom-mended Practice. Tinware, Standardization of; 1915. Two Gallon Journal Oil Can. Dimensions, metal gage, and design of recommended standard can with spout and bail handle, of galvanized

iron

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Two Quart, One Gallon, and Two Gallon Oil Cans. Dimensions, metal thickness, and design of recommended standard cans of cylindrical shape, with spout, conical top, handle, and bail of tin or cold rolled steel.

Consolidated Classification Committee. dated Freight Classification No. 6; 1930. Rule 40, section 8. Jacketed Metal Cans. Requirements on thickness of sides and ends of wooden jackets, construction, thickness and strength of fiberboard or pulpboard jackets, number of hoop reinforcements, soldering or welding of can seams.

Consolidated Classification Committee. dated Freight Classification No. 6, p. 482; 1930. Sirup, Ratings. Metal Cans for packing of sirup, requirements for metal jacket frame, thickness and Mullen test of solid fiberboard facing.

Institute of American Meat Packers. Packinghouse Supplies, Packs and Equipment; 1928. Lard Cans. For flaring side pails with covers, straight side cans and drums up to 120 pounds capacity, and square cans for export trade, requirements on dimensions, design, weight of tin plate, gage of wire handles, details of side seams.

International Assn. of Ice Cream Mfrs. Bulletin No. 12: 1929. Standard Ice Cream Cans. Dimensions of cans and type of cover for high and low type 5 and 21/2 gallon cans and for high

type 1-gallon can.

International Assn. of Milk Dealers. Neck Diameters for Milk Cans. Undated. For 5-gallon size, standard diameters, tolerances, and

taper for 61% and 71% inch neck sizes.

National Canners Assn. Bulletin 47; 1928. Canned Food Boxes. Includes a list of standard can sizes, with usual dimensions for diameter and height, for No. 1, No. 1 tall, salmon 1 pound, milk sweetened, milk tall evaporated, No. 2, No. 2½, No. 3, and No. 10, packing arrangement for cans in shipping boxes.

Underwriters' Laboratories (Inc.). nderwriters' Laboratories (Inc.). Design and Construction of Safety Cans; 1930. Covers cans for storage and handling of flammable liquids inside buildings up to 10 gallons capacity, requirestruction, thickness of metal in can, construction of joints, handles, spouts, valves, leakage and pressure tests of can, endurance test of valves.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2A and 2B. Metal Cans. Inside containers for shipment of dangerous materials, mandatory requirements on capacity limits, thickness of metal, air-tightness and leak-proofness, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation by Rail of Dangerous Articles: 1930. Container Spec. 2G. Fiber Cans and Boxes. As inside containers for shipment of dangerous materials, mandatory requirements on construction, thickness of materials, attachment of tops and bottoms, strength of materials, for capacities of 3 to 5 pounds, dangerous materials for which authorized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2N. Metal Cans. As inside containers for shipment of dangerous materials, mandatory requirements on limiting dimensions and capacity, thickness of tin plate used in body and heads, construction of seams, interior pressure test, dangerous materials for which authorized.

959.2 TANK CARS

References.—Tank cars, automobile truck tanks. See 726.1, 722.1.

959.3 CASKETS AND CASKET BOXES

American Concrete Institute. Proceedings A. C. I., Vol. 27, p. 1251 (June, 1931, Journal of A. C. I.). Proposed Specifications for Concrete Burial Vaults. For reinforced vaults composed of a base and cover, cement and reinforcing according to specifications of Am. Soc. for Testing Materials, requirements on general quality and screen grading of fine and coarse aggregates, and on placing of reinforcement, suggested requirements on slump test, strength of concrete, absorption test of concrete, and strength and hydrostatic tests of vault.

959.4 REFRIGERATORS

U. S. Gov., Dept. of Commerce. Bureau of Standards R96-28; 1928. Ice Cake Sizes. Simplified practice recommended and accepted by industry limiting the weights and dimensions of ice cakes for domestic refrigerators to the ones listed in the publication.

ments on stability of filled can, provision of U.S. Gov., Dept. of Commerce. Bureau of Standvalves on openings, relief valves, bottom con- ards R109-29: 1929. Refrigerator Lee Comparts ments. Simplified practice recommended and accepted by industry, covers standard capacities and dimensions of ice compartments of domestic refrigerators for side icer and top icer types.

959.5 SPECIAL CONTAINERS

U. S. Gov., Federal Specifications Board, 68a; 1925. Sterilizers, Dressing Containers, etc. For drum shaped dressing containers of sheet copper, requirements on construction, thickness of metal, capacity of electric heater, construction of straight type container stand for 1 to 4 containers, finish.

959.6 WRAPPINGS AND COVERINGS

Consolidated Classification Committee. dated Freight Classification No. 6, p. 57 to 548; 1930. Wrappings and Coverings. Above pages include many articles for which wrappings and coverings are specified in order to obtain the freight rate given in tables, requirements usually include minimum thickness, Mullen strength test, number of layers of wrappings, tleing, etc., for paper and for fiberboard wrappings and coverings.

References.—Lined boxboard, corrugated boxboard, fiberboard. See also 472.16, 472.23, 472.93. Wrapping paper. See also 477. Gummed paper. See also 479.2. Methods of testing fiberboard and paper. See also 470.3.

959.7 DUMP AND STORAGE BINS AND HOPPERS

References.—Dump, blending, and storage bins for bakeries. See 786.

959.8 LIQUID AND DRY MEASURES

References.—Liquid measures, dry measures. See

959.9 CONTAINERS NOT ELSEWHERE CLASSI-FIED

National Assn. of Wooden Box Manufacturers. Pacific Coast Division, Tariff No. 1. 1928. Box and Crate Specifications. Trays. For 12 varieties of raisin and fruit drying trays, requirements on number and dimensions of component pieces.

U. S. Gov., Dept. of Commerce. Bureau of Standards R95-30; 1930. Skid Platforms. Simplified practice recommended and accepted by industry for skid platforms used in shipment of freight establishing 2 standard clear heights of platforms, a minimum distance between runners, and 2 standard over-all dimensions of platforms.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation by Rail of Dangerous Articles; 1930. Container Spec. 2F. Metal Containers and Liners. For inside containers and metal box lining, mandatory requirements on thickness of metal and leakproofness, dangerous articles for which authorized.

FIRE EXTINGUISHING APPARATUS AND SUPPLIES 970-979

970. GENERAL ITEMS

American Electric Railway Engr. Assn. Misc. methods and practices. B204-11; 1911. Fire protection of car houses and terminals including open yards. Recommends automatic sprinklers, universal nozzles, standard fire hose and nozzle. size of pumps, etc.

American Mining Congress. National Fire Promerican Mining Congress. National Fire Fro-tection Assn. Approved by American Stand-ards Assn. as M17-1930. Fire Fighting Equip-ment in Metal Mines. Recommendations on

type and size of hose and water supply systems for surface and for underground fire fighting equipment; equipment of extinguishers, fire pails, sprinkling systems, oxygen breathing apparatus; recommendations on ventilation, han-

dling explosives, signals, etc. National Board of Fire Underwriters. First Aid Fire Appliances; 1931. List of fire appliances for 3 fire classifications, method of operation, suitability, unit of installation, area per unit, and maintenance of fire pails, foam pails, soda-acid, foam, pump tank, calcium chloride, and special tetrachloride extinguishers, sand pails, soda and

sawdust.

National Board of Fire Underwriters. Outside Protection; 1931. Private Underground Piping Systems Supplying Water for Fire Extinguishment. Types of valves and locations, type, number, location and setting of hydrants, standard monitor nozzles and applications, size and weight of pipe and layout of piping system, rules for laying pipe.

National Board of Fire Underwriters. Standpipe and Hose Systems; 1928. For installation inside of buildings, minimum sizes of standpipes for various heights of building and size of hose, number and location of standpipes, location of hose stations, type of hose, hose racks, hose valves and nozzles, character and amount of water supply, connections and fittings, pressure and deliv-

ery test requirements.

National Board of Fire Underwriters. Suggested Fire Prevention Ordinance; 1930. For cities and towns recommended regulations for fire prevention and protection in connection with hazardous materials and processes, such as explosives, pyrotechnics and small-arms ammunition, motion-picture film, pyroxylin plastic, photographic and X-ray film, calcium carbide and acetylene, compressed gas systems, flammable liquids, application of flammable liquids, dry cleaning and dyeing, prevention of dust explosions, hazardous chemicals, combustible fibers, refrigeration, matches, garages, fire exits, fire extinguishing equipment, gas appliances and connections, penalties for violation.

National Board of Fire Underwriters, Suggested Ordinance for the Organization and Regulation

of Volunteer Fire Departments; 1930.

National Fire Protection Assn. Rural Fire Departments; 1929. A guide to the purchase of efficient fire-fighting apparatus and outlining certain essentials of department organization as relates to the operation and maintenance of the equipment. Covers location and general features of building for housing equipment, specifications for combination pumping engine and hose cart and of motor chemical car.

References.-Fire cars for railroad yards. See 726.1.

971. MOTOR FIRE APPARATUS

References.—Automobile fire apparatus. See 722.2. Stationary fire pumps. See 755.1. Fire-fighting equipment for rural fire departments. See 970.

972. HAND-DRAWN FIRE APPARATUS

973. CHEMICAL FIRE EXTINGUISHERS

973.1 CHEMICAL ENGINES

National Fire Protection Assn. Rural Fire Departments, Equipment and Organization; 1929. Includes motor chemical car, requirements on tank capacity, tinning of copper tanks, lead lining or galvanizing of steel tanks, hydrostatic pressure test of tank.

References.—Methods of testing tin, lead, and zinc coatings. See 600.3.

973.2 HAND CHEMICAL FIRE EXTINGUISHERS

Underwriters' Laboratories. Hand Fire Extinguishers, One Quart Size, Pump Type; 1919. Made of brass or lead or other noncorrosive metal, strength of container, range of stream, time for discharge, composition, volatility, and specific gravity of liquid, jar test, drop test, and fire extinguishment test.

Underwriters' Laboratories. 2½, 1½, and 1¼ Gallon Foam Extinguishers; 1929. Capacity limits, design requirements for copper shell, brass cap, handles, containers, stopple, hose, etc. composition of chemical charge, durability and adhesion of foam, stability of compounds, generated pressure limits, distance and quantity of foam thrown, standard fire extinguishment test requirements.

Inderwriters' Laboratories. 2½ Gallon Loose Stopple Soda Acid Extinguisher. 1½ and 1½ Gal. Soda Acid Extinguisher. 1½ capacity limits, metal thickness and strength of copper shell, design requirements for shell, cap, handles, outlet, cage, bottle, hose, nozzle, etc., protective coating, composition of chemical charge, generated pressure duration of stream requirements.

ated pressure, duration of stream requirements.
U. S. Gov., Federal Specifications Board O-F-351;
1931. Hand Chemical Fire Extinguishers, Carbon Tetrachloride Type. For type using pump for expelling liquid, parts of brass, lead, or corrosion resistant materials, requirements on resistance to vibration, drop test, minimum capacity, operating features, range and rate of discharge, liquid according to F. S. B. Spec. O-F-200

U. S. Gov. Federal Specifications Board O-F-355; 1931. Hand Chemical Fire Extinguisher, Soda and Aeid Type. For 2½-gallon size, using bicarbonate of soda and sulphuric acid, requirements on coating of interior with tin and lead alloy, materials and construction of cooper shell, brass collar, cap, bottle cage, etc., test on range and time of discharge, hydrostatic pressure test.

References.—Protective coatings and methods of testing. See also 600.3. Chemical charges. See also 973.3. Hose for extinguishers. See 202.21.

973.3 CHEMICAL CHARGES FOR FIRE EXTIN-GUISHERS

References.—Chemical charges for hand fire extinguishers. See 973.2. Carbon tetrachloride. See also 839.7. Sulphuric acid. See also 821.7. Methods of testing and general requirements for metals. See also 600.1.

973.4 CARBON DIOXIDE FIRE-EXTINGUISHING SYSTEMS

National Board of Fire Underwriters. Carbon Dioxide Fire Extinguishing Systems; 1929. Requirements on purity of gas, mounting of gas cylinders, automatic or manual gas relief devices for cylinders, strength of piping, size of pipe and of discharge orlinces, thermostatic and manual release devices, alarms, discharge outlets, required gas supply for various spaces and areas protected.

973.5 FOAM EXTINGUISHER SYSTEMS

National Board of Fire Underwriters. Foam Extinguisher Systems; 1931. General requirements for foam producing materials, capacity of system, means of supply, design and location of pipe lines, valves, hydrants, release devices, etc.

974. FIRE HOSE AND FITTINGS

974.0 GENERAL ITEMS

American Society of Mechanical Engineers, joint sponsor with National Board of Fire Underwriters and the American Water Works Assn. under the procedure of the American Standards Assn. B 26-1925. Fire Hose Coupling Screw Thread. Covers the threaded part of fire-hose couplings, hydrant outlets, and stand pipe connections. Tables of limiting dimensions of external and internal threads and of plug and ring gages for field inspection for 2½, 3, 3½, and 4½ inch hose sizes. Separate publications on Production of National Standard Fire-Hose Coupling Screw Thread, for the information of man-

Associated Factory Mutual Fire Insurance Companies. Committee of Manufacturers on Standardization of Fittings and Valves. National Board of Fire Underwriters. National Fire Protection Assn. Standard Threads for Hose Couplings; 1922. Standard dimensions of threads for sizes from 1/2 to 2 inches.

Associated Factory Mutual Fire Insurance Companies. Standardization of 21/2-inch Hose Threads for Fire Hose, Couplings, Hydrants and Valves; 1926. Dimensions of standard thread for hose couplings, for coupling swivels and hy-drant caps, and for hydrant nipples.

U. S. Gov., National Screw Thread Commission Publ. M89 of Bureau of Standards; 1929. Report of National Screw Thread Commission; 1928. American National hose coupling and fire-hose coupling threads. Mandatory for ma-terial purchased and used by War and Navy Depts. Requirements on thread form, dimensions and tolerances, for coupling thread and for nipple thread of hoze sizes ¾ to 4½ inches. Not in conflict with dimensions recommended by Nat'l Fire Protection Assn.

974 1 FIRE HOSE

References .- Fire hose. See 202.41.

974.2 FIRE-HOSE FITTINGS

American Railway Assn. Mechanical Div. Recom-mended Practice; 1927. Fire Hose. Includes fire-hose couplings, requirements on chemical composition and weight.

Associated Factory Mutual Fire Insurance Companies. Fire Hose, Couplings, and Playpipes; 1930. For couplings and playpipes, requirements on construction, chemical composition of material, dimensions and thread. Couplings of brass of 21/2 and 11/4 inch sizes.

National Board of Fire Underwriters. Fire Department Hose Connections for Sprinkler and Standpipe Systems; 1924. Connection coupling of bronze or cast iron, thread, dimensions, and construction, construction of check valve clappers.

and seat rings.

References.—Standard threads for couplings, hydrants, and valves. See 974.0. Methods of testing and general requirements for metals. See also 600.1, 644.11. Fire hydrants. See 607.6.

974.3 FIRE-HOSE RACKS

American Marine Standards Committee. H No. 16-1926. Fire Hose Racks for Ships. Metal Rack for 21/2-inch Fire Hose. Standard dimensions and design of wrought steel rack for 50 feet of hose, structural requirements, for stowage of coiled rubber lined hose.

American Marine Standards Committee. H No. 18–1927. Fire Hose Racks for Ships. Metal Rack, Saddle Type, For 2½-inch Fire Hose. Standard dimensions, design, and structural requirements for malleable iron or cast saddle type rack for stowage of unlined hose laid in successive layers over the saddle.

American Marine Standards Committee. H No. 19–1927. Fire Hose Racks for Ships. Wooden Rack for Fire Hose. For sheltered locations, standard dimensions, design, and structural requirements for wooden rack for 50 feet of unlined hose or for coiled jacketed hose, made of ash or equal.

ufacturers, and Field Inspection of National Standard Fire-Hose Coupling Screw Thread, for the information of fire chiefs. Fire-Hose Rack. Iron or steel rack for hanging hose in vertical loops on nondetachable pins or supports as illustrated.

975. FIRE PUMPS AND FITTINGS

References.—Fire pumps and accessories. See 755.1, 755.2, Automobile fire trucks. See 722.2. Sec 755 0

976. AUTOMATIC SPRINKLER SYSTEMS

American Railway Engineering Assn. 1930 Supplement to 1929 Manual. Railway Buildings, sec. 27. Sprinkler System. General installation requirements, permissible types of sprinkler heads, system to conform to regulations of National Board of Fire Underwriters.

Associated Factory Mutual Fire Insurance Companies. Care and Maintenance of Fire Protective Equipment; 1923. Includes standard method of sealing sprinkler valves by leather strap to prevent closure, also precautions to be taken when water supply is to be shut off from a fire pro-

tective system.

Associated Factory Mutual Fire Insurance Companies. Rules for Installing Dry Pipe Sprinkler Equipment; 1930. Maximum permissible size of system on one valve, installation rules, rules on location of dry pipe valves, construction of valve rooms, by-pass connections, capacity and equip-ment of air compressor, electrical and mechanical alarms, directions for setting and testing dry pipe valve, care and inspection of system.

-Associated Factory Mutual Fire Insurance Companies. Rules for Installing Sprinkler Equipments, Automatic and Open Systems; 1930. General information, rules for installing automatic and for installing open sprinkler equipments, suggestions regarding water supplies and general

protection.

National Board of Fire Underwiters. Sprinkler Equipments; 1931. Location and spacing of automatic sprinklers, pipe sizes, protection against frost, types and required use of valves and fittings, drips and drainage, test pipes, gages, alarms, dry pipe valve and air pressure for dry pipe systems, water supply, sizes of pumps, tanks and connections, pressure test requirements for system.

BRUSHES AND BROOMS

981. BROOMS

981.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce, Bureau of Standards R88-29; 1929. Floor Sweeps. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of floor sweeps, 6 sizes for length of block.

981.1 CORN BROOMS

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Hide Broom of corn and rattan, Warehouse Broom of corn, weight requirements, illustrated.

U. S. Gov., Federal Specifications Board 333a; 1927. Corn Brooms. For 3 sizes, requirements on general quality of broom corn and of handle, construction details and stitching, dimensions, size of binding wire, number and spacing of ties, and weight of broom.

U. S. Gov., Federal Specifications Board 511; 1927. Metal Case Brooms. For 3 sizes, requirements on general quality of broom corn, kind of wood, size, and length of handle, width, metal gage, and attachment of iron or steel head, length of broom body, nailing and tieing requirements, weights.

References.—Grades of broom corn. See 294. Whisk brooms. See 981.5.

981.2 RATTAN BROOMS

U. S. Gov., Federal Specifications Board 204; 1924. Push Rattan Broom. For one type with 16-inch block, requirements on design, dimensions, and permissible woods for block, on size, length, and weight of 1/8-inch round rattan bristles, number and size of bristle holes, dimensions of handle.

U. S. Gov., Federal Specifications Board 205; 1924. Upright Rattan Broom. For broom made of %-inch size rattan bound to a handle, requirements on construction, length, weight, and number of strands in broom proper, dimensions and length of handle.

981.3 WIRE BROOMS

U. S. Gov., Federal Specifications Board 207; 1924. Wire Push Broom. For broom made of flat steel wire bristles in 16 inch hardwood block, requirements on size of wire, dimensions of block, cover and handle, number, size, and arrangement of bristle holes, number and length of wire strands per hole.

981.4 HAIR FLOOR SWEEPS

Institute of American Meat Packers. Packinghouse Supplies, Packs and Equipment; 1928. Push Brooms. No. 16 broom of horsehair, requirements on size of block, length of trim, number of

U. S. Gov., Federal Specifications Board H-B-651; 1930. Hair Floor Sweeping Brushes. For 14, 18 and 24 inch sizes, requirements on material and general quality of bristle stock, on material, finish, and boring of wooden block, on size, threading, and finish of wooden handle, number of holes in block, minimum weight and length of hair, workmanship and quality to conform to standard sample.

References .- Standard sizes. See 981.0.

981.5 HOUSEHOLD AND WHISK BROOMS

U. S. Gov., Federal Specifications Board 332; 1925. Whisk Brooms. For 8 and 10 inch sizes, requirements on construction, stitching, dimensions, winding of handle, and weight.

References.—Grades of broom corn. See 294. Corn brooms, hair floor sweeps. See 981.1, 981.4.

981 6 BROOMS FOR INDUSTRIAL USE

981 61 Scrubbing Brooms

U. S. Gov., Federal Specifications Board 206: 1924. Scrubbing Broom. For broom made of African bass fagoted about a handle and bound with brass wire, requirements on dimensions and kinds of wood of handle, construction of broom, size of brass binding wire.

References.-Deck scrubbing brush or broom. See 982.3.

981,62 Pavement and Street Sweeping Brooms

U. S. Gov., Federal Specifications Board 201; 1924. Sidewalk Brush. For 18, 24, and 30 inch hardwood block, requirements on percentage of tampico fiber and of steel brush wire bristles, dimensions of block and handle, number and dimensions of bristle holes, attachment and length of bristles.

References.—Standard sizes of floor sweeps. See 981.0. Corn brooms, rattan brooms. See 981.1, 981.2. Push brooms. See 981.63.

981.63 Push Brooms

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Push Brooms. No. 261 of fiber, No. 16 of horsehair, requirements on size of block, length of trim, number of rows.

U. S. Gov., Federal Specifications Board 398; 1926. Fiber Garage Brush. For 3 sizes, requirements on proportions of bassine and tampico fiber, trim and setting of fiber, dimensions, shape, and finish of hardwood block and handle, number of rows and holes, size of holes, weight of fiber.

References.—Hair floor sweep. See 981.4. Wire push broom, rattan push broom. See 981.3, 981.2. Standard sizes of floor sweeps. See 981.0.

981.64 Factory and Warehouse Brooms

References.—Corn warebouse brooms. See 981.1. Rattan brooms, wire brooms, hair floor sweeps, scrubbing brooms, push brooms. See 981.2, 981.3, 981.4, 981.63.

982. BRUSHES

982.1 TOILET BRUSHES

U. S. Gov., Federal Specifications Board 198; 1924.
Military Hair Brush. For solid back type and for aluminum face type, requirements on general quality of hardwood, on thickness of aluminum, texture and length of Chungking bristles, dimensions of block or back, number and size of bristle holes, setting of bristles.

U. S. Gov., Federal Specifications Board 200; 1924. Shaving Brush. Requirements on dimensions of hardwood handle and pyroxylin plastic ferrule, on length and setting of French bristles.

U. S. Gov., Federal Specifications Board 202; 1924.
Tooth Brush. For tufted end type and sloping type, bristles to be equal to butt cut 31/4-inch white China bristles, handle of pyroxylin plastic, required number and size of bristle holes.

982.2 PAINT BRUSHES

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Stencil Brush. Of Chinese bristle, requirements on length of bristle, diameter, vulcanized in rubber, illustrated.

U. S. Gov., Dept. of Commerce, Bureau of Standards R43-28; 1928. Paint and Varnish Brushes. Simplified practice recommended and accepted by industry establishing a limited list of standard stock sizes of plasterers' and skimming brushes, smoothing brushes, leather bound wall and stucco brushes, bristle artist brushes, flat varnish, wall, calcimine, whitewash, and stencil, brushes, oval and flat oval varnish brushes, round painters' brushes, and sash brushes.

U. S. Gov., Dept. of Commerce, Bureau of Standards R121-31; 1931. Block Sizes for Calcimine Brushes. For calcimine or kalsomine brushes. simplified practice recommended and accepted by industry establishing a limited list of standard widths and thicknesses for blocks for Dutch.

semi-Dutch, and baby Dutch brushes.

U. S. Gov., Federal Specifications Board 518a; 1929. Knotted Style Roof Brushes, Three Knots. Requirements on type of Russian bristle casing and Tampico fiber middle, construction and set-ting of knots, boring of block, dimensions of inside of knot, depth of wire ferrule and bristle hold. weight and length of bristle, etc., to equal standard sample in workmanship and material.

U. S. Gov., Federal Specifications Board H-B-141; 1930. Calcimine Brushes. Requirements on finish and kinds of wood in handle, thickness and construction of iron ferrule, width and thickness of brush, weight and length of bristle, setting of bristle, types and percentages of Russian and Hankow bristles, to equal standard sample

in workmanship and materials.

U. S. Gov., Federal Specifications Board H-B-181; 1930. Long Paddle Dauber Brushes. Brush for daubing asphalt and tar, etc., requirements on dimensions and paddle shape of hardwood block, number, size and slant of bristle holes, length, weight, and attachment of tampico fiber bristle stock, finish.

U. S. Gov., Federal Specifications Board H-B-241; 1930. Fitch Flat Brush. For 6 sizes, requirements on general quality and trim of Chinese bristle, finish and shape of handle, dimensions, shape, and method of application of tin ferrule, weight, length, setting, and hold of bristle, to equal standard sample in dressing and material.

U. S. Gov., Federal Specifications Board H-B-251; 1930. Badger Hair Flowing Brushes. For 4 sizes, 1 to 2½ inches, requirements on general quality, types and percentages of mix of hair, finish of handle, depth and construction of tin ferrule, setting, weight, length, and hold of hair, width and thickness of brush, to equal standard sample in quality of hair and construction,

U. S. Gov., Federal Specifications Board H-B-256; 1930. Skunk Hair Flowing Brushes. For 5 sizes, 1 to 3 inches, requirements on general quality of hair, finish of handle, depth and construction of tin ferrule, setting, weight, length, and hold of hair, width and thickness of brush, to equal standard sample in quality of hair and construc-

U. S. Gov., Federal Specifications Board H-B-261; 1930. Squirrel Tail Hair Flowing Brush. For 4 sizes, 1 to 21/2 inches, requirements on general quality and type of hair, finish of handle, depth and construction of tin ferrule, setting, weight, length, and hold of hair, width and thickness of brush, to equal standard sample in quality of

hair and construction.

U. S. Gov., Federal Specifications Board H–B–351; 1930. Flat Lacquering Brushes. For 3 sizes, requirements on general quality and type of squirrel tail hair, size, shape, and finish of handle, material, shape, dimensions, and construction of ferrule, setting and length of hair, equal in workmanship and material to standard sample.

U. S. Gov., Federal Specifications Board H-B-371: 1930. Marking Brushes. For 3 sizes, requirements on general quality and dressing of Chinese bristle, shape and finish of handle, dimensions, shape and construction of tin ferrule, setting and length of bristles, equal in workmanship and material to standard sample.

U. S. Gov., Federal Specifications Board H-B-391; 1930. Mottling Brushes. For 5 sizes, requirements on general quality, type, and dressing of squirrel tail hair, on style and finish of hard wood handle, dimensions and attachment of tin ferrule, type and method of setting of hair, length and minimum weight of hair, equal in workmanship and material to standard sample.

U. S. Gov., Federal Specifications Board H-B-421: 1930. Flat Metal Bound Paint Brushes (High Grade). For 2 sizes, requirements on general quality and proportion of stiff material in Chinese or Russian bristles, kind of wood and finish of handle, depth, metal gage, and construction of tin ferrule, setting, weight, length, and hold of bristles, width and thickness of brushes, to equal standard sample in workmanship and materials.

U. S. Gov., Federal Specifications Board H-B-431: 1930. Flat Metal Bound Paint Brushes (Medium Grade). For 4 sizes, 3 to 5 inches, requirements on general quality and dressing of Chinese or Russian bristle, kind of wood and finish of handle, depth, metal gage, and construction of tin ferrule, setting, weight, length, and hold of bristles, width and thickness of brush, equal to standard sample in quality of bristles and construction.

U. S. Gov., Federal Specifications Board H-B-451; 1930. Radiator Bronzing Brushes. For 3 sizes, requirements on general quality of goat hair, style and finish of handle, depth and construction of tin ferrule, setting of hair, width and thickness of brush, weight and length of hair, to equal standard sample in workmanship and quality

U. S. Gov., Federal Specifications Board H-B-491: 1930. Oval Sash-Tool Brushes. For 5 sizes, requirements on general quality and dressing of Chinese bristle, shape and finish of hardwood handle, dimensions and attachment of steel ferrule, depth and type of setting of bristle, length and weight of bristle, brush to equal standard sample in material and workmanship.

U. S. Gov., Federal Specifications Board H-B-621; 1930. Stencil Brushes (Flag Ends Cut). For 2 sizes, requirements on general quality of Chinese bristles, type and finish of handle, setting of bristles, diameter and depth of steel ferrule, weight and length of bristle, hold of bristle, to equal standard sample in dressing, workmanship,

and material.

U. S. Gov., Federal Specifications Board H-B-626; 1930. Stencil Brushes (Flag Ends Preserved) For 2 sizes, requirements on general quality of Chinese bristle, finish of handle, setting of bristle, diameter and length of steel ferrule, diameter of steel plug, weight and length of bristle, bristle hold, to equal standard sample in workmanship and material.

U. S. Gov., Federal Specifications Board H-B-636; 1930. Wall Stippling Brushes. Requirements on general quality, percentage mixture, and dressing of Chinese and Russian bristle, size and construction of block, setting of bristle, size and number of holes, number of rows, length and weight of bristle, equal in workmanship and materials to standard sample.

U. S. Gov., Federal Specifications Board H-B-701; 1930. Flat Varnish Brushes (Double X Thickness). For 5 sizes, requirements on general quality and dressing of Chinese bristle, material and finish of wood handle, thickness and construction of nickeled tin ferrules, setting of bristles, width and thickness of brush, depth of ferrule and hold of bristle, length and weight of bristle, to equal standard sample in workmanship, material.

U. S. Gov., Federal Specifications Board H-B-706; 1930. Flat Varnish Brushes (Triple X Thickness). For 4 sizes with requirements of the types listed under F. S. B. Spec. H-B-701 for flat varnish brushes of double X thickness.

U. S. Gov., Federal Specifications Board H-B-731; 1930. Whitewash Brushes. For 7-inch size, requirements on general quality of Chinese or Russian bristle, thickness and attachment of Russian bristle, thickness and attachment of tin ferrule, type and finish of extension style block, setting of bristles, width and thickness of brush, weight and length of bristles, depth of band and bristle hold, to conform to standard sample for dressing, workmanship and materials.

References.—Glue brushes. dust brushes. See 982.3. See 982.9.

982.3 CLEANING BRUSHES

Institute of American Meat Packers. Packing-house Supplies, Packs, and Equipment; 1928. Fiber Brushes. Requirements on size of block, palmetto or bassine fiber, bristle length, number of rows, number of holes, includes fiber fountain brush for washing beef, etc., fountain sheep-nose brush, washing brush for beef necks, and

washing brush for beef backs.

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Wire Brushes. Requirements on size of block, flat or round wire, bristle length, ends per hole, number and rows of holes, includes butchers' block brush, metal cleaning brush for structural steel and eastings, flat wire fountain brush for brushing out hogs necks and scrubbing tables, flat back wire brush for steel and iron equipment, and shoe handle scratch brush for cleaning dies and files, illustrated,

U. S. Gov., Federal Specifications Board 199; 1924. Radiator Dusting Brush. For one grade and size of brush with horse-tail hair bristles along one of brash with horse-tail hair bristles along one edge of flat hardwood block, requirements on dimensions of block, size and number of bristle holes and amount of hair bristles.

U. S. Gov., Federal Specifications Board 201; 1924. Sidewalk Brush. For 18, 24, and 30 inch hardwood block, requirements on percentage of tampico fiber and of steel brush wire bristles, dimensions of block and handle, number and dimensions of bristle holes, attachment and length of bristles.

U. S. Gov., Federal Specifications Board 203; 1924. Window Brush. Requirements on general quality, and weight of horse-tail hair bristles, dimensions of round block, size and number of bristle holes, dimensions of handle.

U. S. Gov., Federal Specifications Board 208a; 1925.
Counter Duster. For hand brush with handle and block of one piece of hardwood, requirements on length and weight of black bristles, dimensions of block and shaped handle, number and size of bristle holes, attachment of bristles.

U. S. Gov., Federal Specifications Board 398; 1926. Fiber Garage Brush. For 3 sizes, requirements on proportions of Bassine and Tampico fiber, trim and setting of fiber, dimensions, shape, and finish

of hardwood block and handle, number of rows and holes, size of holes, weight of fiber. U. S. Gov., Federal Specifications Board 407; 1926. White Tampico Hand Scrub Brush. Requirements on kind of wood, size and shape of block, number and boring of holes in block, method of attachment and length of white Tampico fiber.

U. S. Gov., Federal Specifications Board H-B-151; 1930. Casting Brush. For one size, requirements on dimensions of hardwood block, number and size of bristle holes, dimensions of flat steel wire used for bristles, strands and length of wire in each bristle bundle, structural features.

U. S. Gov., Federal Specifications Board H-B-171; 1930. Cuspidor Brush. For fiber bristles wound on end of stick, requirements on dimensions of hardwood stick, dimensions and trim of Tampico mixture fiber brush, weight of stock, construction

of brush.

U. S. Gov., Federal Specifications Board H-B-191; 1930. Dust Brushes, Ceiling and Wall. For 8 and 12 inch sizes, using Chinese or Russian bristle, requirements of variety, length, trim, and weight of bristle, kind of hardwood, dimensions and shape of block, number and depth of holes, size, material, and finish of handle, to equal standard sample in workmanship and material.
U. S. Gov., Federal Specifications Board H-B-211;

1930. Flat Painters' Dusters. For 41/4-inch size, requirements on general quality of Chinese or Russian bristle, type and finish of handle, set-ting of bristles, size of holes, width of block, thickness of bristle, number of knots, length and weight of bristle, to equal standard sample in workmanship, material, dressing, solidity, and stiffness of bristles.

U. S. Gov., Federal Specifications Board H-B-216: 1930. Round Painters' Dust Brushes. Requirements on general quality and dressing of Chinese or Russian bristle, type and finish of handle, knotting and setting of bristles, size of holes, number of knots, size of block, length and weight of bristle, to equal standard sample in workmanship and material.

U. S. Gov., Federal Specifications Board H-B-291; Clothes Scrubbing Brush. Requirements on dimensions and shape of hardwood block, number, size and arrangement of bristle holes, secur-

ing of palmetto fiber bristles.

U. S. Gov., Federal Specifications Board H-B-531; 1930. Deck Scrubbing Brush. For 10-inch block brush with 51-inch round handle, requirements on dimensions and shape of maple or birch block and handle, number and dimensions of bristle holes, length, slant, and trim of palmyra fiber bristles, setting of bristles, finish,

U. S. Gov., Federal Specifications Board H-B-541; 1930. Hand Floor Scrubbing Brush. For one type, grade, and size, requirements on dimensions of hardwood block, number and size of bristle holes, length of palmetto fiber bristles, minimum

weight of fiber.

References .- Floor sweeps. See also 981.4, 981.0.

982.4 POLISHING BRUSHES

U. S. Gov., Federal Specifications Board 191: 1924. Blacking and Dauber Brush. For blacking brush and for dauber brush, requirements on dimensions of beech, maple or birch block, number, sizes, and arrangement of bristle holes, length and securing of horsehair bristles.

982.5 BRUSHES FOR INDUSTRIAL USE

References.—Wire and fiber cleaning brushes. See also 982.3. Paint and stencil brushes. See 982.2. Hair sweeping brushes. See 981.4.

982.6 CARBON BRUSHES

References,-Carbon brushes for electric motors. See 711.42.

982.9 MISCELLANEOUS BRUSHES

Institute of American Meat Packers. Packinghouse Supplies, Packs, and Equipment; 1928. Government Stamping Brush. Of Chinese bristle for ink pad use, size of block, length of bristle, number of rows.

- U. S. Gov., Federal Specifications Board H-B-291; 1930. Flat Glue Brushes. For 3 sizes, requirements on general quality and type of Russian bristle, on shape, size, and finish of handle, material, size, thickness and construction of ferrule, setting, length, and minimum weight of bristle, equal in workmanship and material to standard
- U. S. Gov., Federal Specifications Board H-B-301; 1930. Round Glue Brushes. For 3 sizes, requirements on quality and dressing of Chinese bristle. shape and size of wooden handle, material and size of ferrule, depth of and method of setting bristle, length and minimum weight of bristle,

equal in material and workmanship to standard sample.

References.—Dental brush wheels. See 915.10. Hair sweeping brushes. See 981.4.

983. MOPS

983.1 MOP STICKS

U. S. Gov., Dept. of Commerce, Bureau of Standards CS2-30; 1930. Mopsticks. A commercial standard selected and accepted by industry. Covers spring lever type, spring lever type with collar, both in domestic size and in janitor size, and janitor's screw type, requirements on dimensions and tolerances of wooden handle, gage thickness, materials, methods of fastening of head, spring, lever, bale, collar, coating requirements.

990-999

MISCELLANEOUS ARTICLES

991. MATCHES

U. S. Gov., Federal Specifications Board EE-M-101; 1930. Safety Matches. For 2-inch long matches, packed 50 to box, ignitable on special coating provided, test requirements for count, ignition test, damp proof test, and heating test.

992. BUTTONS

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. For gilt, silver, and bronze embossed buttons, requirements on sizes, construction, and finish of buttons and on types and construction of sewing

American Marine Standards Committee. O No. 27-1930. Uniforms for Merchant Marine Officers. Buttons. For plain buttons of bone, vegetable ivory, or composition, requirements on colors, general qualities, and finish.

993. BREATHING AND DIVING APPARA-

National Safety Council. Approved by American Standards Assn. as K13-1930. Code for Identification of Gas-Mask Canisters. Published as Bull. No. 512 of Bureau of Labor Statistics of U. S. Dept. of Labor. Assigns definite colors to gas mask canister dependent on kind of gas, smoke, or mist with which it is supposed to be used. For gas masks used in industrial plants, mines, rescue work, fire fighting, etc.

U. S. Gov., Dept. of Commerce. Bureau of Mines. Schedule 13A; 1930. Procedure for Establishing a List of Permissible Self-Contained Oxygen Breathing Apparatus. For use in irrespirable and poisonous gases, half-hour apparatus and 2hour apparatus, requirements on absorption of carbon dioxide from expired air, on temperature of inspired air, capacity of face attachment, weight, capacity of breathing bags, valves, and other structural features, permissible pressures, walking and load carrying tests with each size, etc.

U. S. Gov., Dept. of Commerce. Bureau of Mines. Schedule 19; 1927. Procedure for Testing Hose Masks for Permissibility. Requirements for approval for use in irrespirable atmospheres, tests of hose for permeation of gasoline vapor, collapsing pressure, strength and tightness of couplings and hose, resistance to air flow, structural features of face piece, eyeglasses, valves, harness. blower, tests on men walking and exercising, etc.

997. LAMPS AND ILLUMINATING DEVICES (EXCEPT ELECTRIC LAMPS)

997.1 OIL LAMPS, LANTERNS, TORCHES

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Engineers Torch. Dimensions and design for recommended standard cylindrical torch of brass and steel.

American Railway Assn. Mechanical Div. Recommended Practice. Tinware, Standardization of; 1915. Torch. Dimensions and design of recommended standard conical shape torch of tin or

cold rolled steel.

American Railway Assn. Operating Div. Circular 2091; 1920. Lantern for Use on Crossing Gates and by Highway Crossing Watchmen and Gatemen. Dimensioned drawings showing details of construction and materials for oil lantern.

American Railway Assn. Signal Section 13726; 1926. Oil Lighted Lamps. Dimensions of wire bails, method of tinning and composition of tinning alloy, requirements for and method of japanning, wind and high temperature operation tests

where required.

American Society for Testing Materials D 187-30; 1930. Method of Test for Burning Quality of Kerosene Oils. Includes dimensional specifications for test lamp, dimensions of standard brass Saybolt test lamp, of Miller No. 2 Sun hinge burner, and Macbeth-Evans No. 514 Pearl top chimney.

American Society for Testing Materials D 219-30; 1930. Method of Test for Burning Quality of Long Time Burning Oil for Railway Use. cludes specifications for test lamp, using standard Am. Rwy. Assn. semaphore lamp, dimensions of burner, dimensions of glass chimney, construction and dimensions of felt wick.

American Society for Testing Materials D 239-30; 1930. Method of Test for Burning Quality of Mineral Seal Oil. Includes specifications for test lamp, dimensions of font, burner, and chimney for Dressel No. 520 side lamp.

References.—Iron and steel sheets. See 604.2. Brass sheets and plates. See 644.21. Glass lantern globes and lamp chlimneys. See also 524. Oil lamps for incubators. See 614.9.

997.2 GAS AND GAS APPLIANCES

American Gas Assn. Approval Requirements for Clothes Dryers; 1931. For gas heated dryers of cabinet type and rack type, requirements on thicknesses of metal parts, dimensions of cocks, sizes of clothes rods, structural features of dryer, test requirements for burner operation,

pacity, drying efficiency, fire hazard, draft

hoods, etc.

American Gas Assn. Approval Requirements for Gas Heated Ironers; 1931. Construction requirements for burners, cocks, combustion chamber, thickness of metal, stability requirements, test requirements for burner operation, heat distribution, pressure distribution, explosion and fire hazards, ironer operation, and efficiency.

American Gas Assn. Approval Requirements for Portable Incinerators; 1930. Requirements on thicknesses of metal parts, materials and con-struction of parts, strength of incinerator, gas burner construction, test requirements for burner and pilot operation, incinerating efficiency, leak-

age, fire hazard, etc.

American Gas Assn. Standard Gas Fixture Specifications; 1920. For brass pipe or tubing or for iron or steel pipe fixtures. Wall thicknesses, size of threads, for goose neck, stems and arms, construction and assembly requirements, construction and some dimensional requirements for

standard gas fixture cock.

American Gas Assn. and Natural Gasoline Assn. of America. Tentative Code for Testing Natural Gas for Gasoline Content; 1927. Specification and diagram of apparatus, test procedure and calculation of results for three methods of test; compression and cooling test, oil absorption test, and charcoal absorption test.

American Gas Assn. Report of Committee on Uni-form Oil Efficiency; 1926 and 1927 Reports of Water Gas Committee of A. G. A. Committee recommends the adoption of the Pacific Coast Method with the Providence Modification as the official method for calculation of oil efficiencies for straight water gas operation with coke or anthracite coal but not bituminous coal. Explanation of method and calculations required.

American Gas Assn. Report of Water Gas Com-mittee. Published annually. Gives reports of committee on apparatus and methods used by different gas manufacturers and conclusions re-

sulting from the investigations.

National Board of Fire Underwriters. Compressed Gas Systems other than Acetylene for Lighting and Heating; 1927. Requirements on changing connections, location and storing of cylinders, location of regulating valves, dimension limits, material, and pressure test requirements for

U. S. Gov., Dept. of Commerce, Bureau of Standards C32; 1920. Standards for Gas Service. Proposed rules for State commissions and a proposed city ordinance recommended by bureau covering definition of a cubic foot of gas, general service provisions, testing equipment and testing to be provided by utility, requirements on accuracy of meters, on maintenance of heating value, permissible amounts of impurities, per-missible pressure variation, relations with public, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards C48: 1914. Standard Methods of Gas Test-Methods recommended are intended for use by State or city testing and inspection officials with some selection of methods permitted in each case. Covers measurement of quantity of gas, measurement of heating value, determination of candle power, and of impurities, meter testing procedure, determination of humidity, etc.

U. S. Gov., Dept. of Commerce, Bureau of Standards T89; 1917. Specific Gravity Balance for Gases. Describes development and construction of balance beam type of apparatus for measuring density of gases, directions for operation, accu-

racy, includes portable types.

temperature limiting devices, pilot, heating ca- U. S. Gov., Dept. of Commerce, Bureau of Standards T94; 1917. Effusion Method of Determining Gas Density. Describes the construction and use of an orifice type of apparatus for determination of density and the precautions to be used for obtaining consistent results, accuracy to be expected. For more accurate apparatus the specific gravity balance described in T89 of Bureau of Standards is recommended.

U. S. Gov., Dept. of Commerce, Bureau of Standards T114; 1919. Portable Cubic Foot Standard for Gas. Describes the design of a cubic foot volume standard for measuring gas more compact and portable than cubic foot bottles commonly in use, describes method of using new standard in

calibrating gas meter provers.

U. S. Gov., Dept. of Commerce, Bureau of Standards T304; 1926. Method for Testing Gas Appliances to Determine Their Safety from Producing Carbon Monoxide. For forced tests and normal operation tests, description of tests developed at Bureau for determination of flash-back, blow-off, and yellow-tip curves, determination of limit of complete combustion, and of normal injection curve, typical test results.

997.3 GLOBES, SHADES, LAMP CHIMNEYS

References.—Glass lantern globes and lamp chimneys, See 524.

997.4 GASOLINE VAPOR MACHINES, SYSTEMS, AND LAMPS

National Board of Fire Underwriters. Gasoline Vapor Gas Machines, Lamps, and Systems; 1926. Covers machines with outside carbureters, machines with inside carbureters, systems with outside tank and inside generator, inside tank and inside generator, and gasoline vapor lamps. Location and protection of carbureter, requirements for pressure supply equipment and mixer, installation, connection, minimum sizes, and pressure test requirements for piping and tubing, installation and operating requirements for generators and vapor lamps, capacity, construction and location of tanks.

Underwriters' Laboratories. Compressed Gas Systems other than Acetylene for Lighting and Heating; 1928. For systems introducing gas only into building, and for systems introducing liquid, maximum pressures of gas or liquid, provision of regulators, valves, gauges, mercury seal; material, thickness of metal, and construction requirements for cabinets, tubing, expansion tanks,

stoves and ranges.

997.5 ACETYLENE EQUIPMENT AND LAMPS

National Board of Fire Underwriters, Installation and Operation of Acetylene Equipment for Lighting, Heating and Cooking; 1930. Covers 6 classes of equipment, as stationary, automatic, portable, dissolved acetylene, etc., for use in and about buildings. Requirements on location of generator, construction, ventilation, and heating of outside generator houses, sizes and capacities of pipe, requirements for conductor and escape piping, operation of generators, storage and installation of cylinders, storage of calcium carbide,

Underwriters' Laboratories. Acetylene Generators for Lighting; 1926. Construction and performance of stationary automatic and nonautomatic, semiportable automatic and portable, for inside, outside installation and central station service, also dissolved acetylene in cylinders and portable table lamps. For generators of iron or steel | materials, rating, operation, permissible pressure and pressure variation with load, construction of sheet metal joints, construction, assembly, minimum gage of metal requirements for generating chamber, carbide holder, feed mechanism, gas holder, piping connections, safety reliefs, and accessories to meet certain specified operating and safety conditions. For cylinders, requirements on permissible pressure, pressure regulators and relief, testing according to I. C. C. specifications. For lamps, requirements on stability, maximum consumption in addition to above requirements for generators.

U. S. Gov., Dept. of Commerce. Steamboat Inspection Service. General Rules and Regulations Prescribed by Board of Supervising Inspectors; 1929. (4 manuals for ocean, bay, lake, and river vessels.) Self Igniting Water Lights. For ring buoys and life rafts, mandatory requirements on construction and sheet thickness of copper container, provision and operation of water admitting plug, properties of calcium carbide and calcium phosphide provided, candle power and endurance of light.

References.—Acetylene storage cylinders. See 956.1. Acetylene headlamps for automobiles. 722.33. Calcium carbide. See 833.1. See also

997.6 MINERS' LAMPS AND GAS DETECTORS -

U. S. Gov., Dept. of Commerce, Bureau of Mines Schedule 7B; 1922. Procedure for Establishing Lists of Permissible Flame Safety Lamps and Methane Detectors of Flame Type. Test require-ments on operation of lamp and detector and igniter in explosive atmospheres moving at various speeds and directions, construction requirements for lamps, detectors, locks, gauzes, glasses, recommendation on fuel capacity, candle power, angle of light, wick adjustment for lamps, scope of approval for use in gaseous mines, etc.

References.—Electric miners lamps and gas detectors. See 716.13, 716.17.

998. SIGNS AND SIGNBOARDS

American Assn. of State Highway Officials. Manual and Specifications for U. S. Standard Road Markers and Signs, 1929. Standard designs, shapes, dimensions, colors, and lettering of highway route markers, caution signs, warning signs, and information signs, specifications for materials, construction, and paint requirements for signs as proposed by Joint Board on Inter-state Highways, uniform erection and location rules

American Engineering Council. Street Traffic Signs, Signals and Markings; 1930. Submitted Street Traffic to American Standards Assn. for approval. Street Traffic Signs. Recommendations on standard shapes and dimensions for various types of traffic signs, color code for lettering and backgrounds, illumination, height and location, lettering and sign design, requirements on quality and kinds of wood, chemical composition for sheet metal, cast iron according to A. S. T. M. Spec. A 47 or A 48, cast steel according to A. S. T. M. Spec. A 88, cast aluminum according to A. S. T. M. Spec. B 26, painting and enameling requirements, composition of pigments, paints, and enamel.

American Railway Assn. Operating Div. Circular 2089; 1920. Metal Signs for Car Inspectors. Standard blue metal signals to be 10 by 14 inches. American Railway Assn. Operating Div. Exhibit "A": 1922. Approach Warning Sign. Dimen-

sions of sign and lettering, colors, for one size standard design sign warning of approach to a railroad.

American Railway Assn. Operating Div. Exhibit "B"; 1922. Hand Sign for Highway Crossing Watchmen. Dimensions of sign and lettering of standard design of stop sign for holding in hand.

American Railway Assn. Signal Section. Signs or Markers for Conveying Instructions to Enginemen; 1918. Design, dimensions, painting, and night light indication for stop, speed, whistle and

various signs.

American Railway Engineering Assn. 1929 Manual. Grade Crossings. Highway Crossing Signs; 1929. Dimensions and finish of standard wood post crossing sign, approximate location of sign and signal for wig-wag or flashlight signal on signs so equipped, dimensions of advance warning sign.

American Railway Engineering Assn. 1930 Supplement to 1929 Manual, Grade Crossings. plement to 1929 Manual, Grade Crossings, Highway Crossing Warning Sign. For Flagman Off Duty sign, requirements on dimensions and shape of sheet steel sign, size and shape of letters, colors, method of attaching sign to support

post.

National Conference on Street and Highway Safety. Manual on Street Traffic Signs, Signals and Markings: 1930. For signs of cast iron or aluminum, sheet steel or aluminum, or wood, requirements on chemical composition of sheet steel with other metals according to A. S. T. M. specifications, types and quality of wood, construction and thickness of sign, standard shapes, dimensions, colors, lettering and wording for various standard indications, requirements for paints, height and location of signs.

Outdoor Advertising Assn. of America. Manual, 1926 and Supplement; 1931. Painted Bulletins. For one standard size of city or suburban bulletin with and without platform, number and size of posts and rails, details of construction, bracing, cornice, column, base moulding details, method of construction illustrated in dimensioned drawings, standard colors used, covers wood frame and steel construction, illumination.

Outdoor Advertising Assn. of America. Manual, 1926 and Supplement; 1931. Painted Bulle-tins. Standard highway bulletin, and standard railroad bulletin, standard sizes, number and sizes of posts and rails, details and method of construction illustrated by dimensioned drawings, for wood frame or steel construction, standard paint colors, standard illumination.

Outdoor Advertising Assn. of America. Manual, 1926 and Supplement; 1931. Painted Bulletins. For standard roof bulletin, standard store bulletin, and city and suburban painted walls, requirements on standard sizes of store bulletins, illustrated standard construction of roof and store bulletin and painting of painted walls, standard

paint colors and illumination.

Outdoor Advertising Assn. of America. Manual, 1926 and Supplement; 1931. Standard Poster Panels. Requirements on number and sizes of posts, anchors, braces, rails, moulding and capping for standard panel frames of wood or metal, thickness and galvanizing of metal panel surface, number of reflectors and size of lamps, standard construction illustrated with dimensioned drawings, standard colors for mouldings.

References.—Electric signs. Sec 716.31. Iron and steel sheets. Sec 604.2, 604.3. Zinc coatings on sheets. Sec also 600.3. Yard lumber, structural timbers. Sec also 402.4, 412.

DIRECTIONS FOR OBTAINING COPIES OF SPECIFICATIONS

Copies of specifications issued by technical and trade associations may be obtained directly from the associations. A list of these associations, with the addresses of their secretaries, is given below.

Specifications of the Federal Specifications Board having alphabetical designations, such as JJJ-S-351, may be obtained by purchase from the Superintendent of Documents, Government Printing Office, Washington, D. C. For those specifications with numerical designations only, inquiry should be made of the Federal Specifications Board, Washington,

Information on method of procurement of other specifications issued by the various bureaus and agencies of the several departments or establishments of the Federal Government can best be obtained directly from the Washington, D. C., headquarters of the bureaus and agencies concerned.

In making inquiries concerning specifications, care should be taken to give both the title and designating number of the specification. In some cases the specification may be a part of some "manual" and not have any identifying number. In these cases the title of the manual or other publication is usually stated in the directory immediately following the name of the organization which issues the specification.

The specifications and standards listed under the classifications 400–499 and 500–599 of the directory will be found printed in full or abstracted in two volumes of the Encyclopedia of Specifications, (1) Standards and Specifications in the Wood Using Industries, published in June, 1927, and (2) Standards and Specifications for Nonmetallic Minerals and Their Products, published in March, 1930. These two volumes contain the nationally recognized standards and specifications which were current at the time of publication. They may be obtained from the Superintendent of Documents, Government Printing Office, Washington, for \$1.50 and \$2.75, respectively.

NAMES AND ADDRESSES OF STANDARDIZING AGENCIES

Below are listed the trade associations, technical societies, and other standardizing agencies whose specifications and standards will be found listed in the Directory of Commodity Specifications. The numbers appearing after each organization refer to the group classifications in the body of the directory under which that individual organization's specifications have been listed.

Abrasive Paper and Cloth Manufacturers Exchange, R. P. Carlton, chairman, standardization committee, care of Minnesota Mining & Manufacturing Co., 797 Forest Street, St. Paul, Minn. 304.4; 304.5; 306.36; 379.4; 470.3; 479.3; 541.4.

Agricultural Insecticide and Fungicide Manufacturers Association, G. B. Heckel, secretary, Public Ledger Building, Philadelphia, Pa. 881.21; 881.23.

Amateur Athletic Union of the United States. (For rules of this organization communicate with American Sports Publishing Co., 45 Rose Street, New York, N. Y.) 069.1; 209.91; 209.92; 429.9; 729.6; 943.1; 943.94; 943.96; 943.99.

American Association for the Advancement of Science and Associated Societies, Burton E. Livingston, general secretary, Smithsonian Institution Building, Washington, D. C. 700; 706.0; 716.0; 716.30; 719.63; 724.0; 755.0; 910.

American Association of Cereal Chemists, M. D. Mize, secretary-treasurer, 833 Omaha Grain Exchange, Omaha, Nebr. 103.0; 104.0; 107.0; 107.1; 107.3; 108.0; 117.0.

American Association of Medical Milk Commissions (Inc.), Harris Moak, secretary, 360 Park Place, Brooklyn, N. Y. 021.1; 518.51.

American Assn. of Nurserymen, Charles Sizemore, Secretary, Louisiana, Mo. 251.; 259.

American Association of State Highway Officials, W. C. Markham, secretary, National Press Building, Washington, D. C. 392.4; 400.12; 400.42; 400.43; 401.41; 401.42; 401.43; 401.44; 401.45; 401.46; 401.47; 401.49; 402.3; 412.0; 412.1; 412.2; 412.9; 500.; 503.0; 504.0; 505.0; 505.13; 505.15; 505.16; 505.19; 505.20; 505.30; 505.31; 505.32; 505.35; 511.70; 511.71; 511.72; 511.9; 512.10; 512.11; 512.12; 512.13; 512.14; 512.15; 512.16; 512.2; 516.0; 516.11; 516.3; 516.4; 518.22; 518.30; 518.37; 518.41; 518.42; 518.43; 518.44; 518.45; 518.46; 518.60; 518.61; 518.72; 518.81; 518.82; 518.83; 531.5; 534.10; 534.21; 600.1; 600.3; 603.42; 604.29; 605.11; 605.21; 605.25; 607.11; 607.5; 718.5; 722.32; 743.; 793.5; 801.3; 839.38; 844.67; 998.

American Association of Textile Chemists and Colorists, Alex. Morrison, secretary, care of American Woolen Co., Andover, Mass. 300.4; 392.3; 397.0; 770.; 803.10.

American Automobile Association, Ernest N. Smith, executive vice president, Pennsylvania Avenue at Seventeenth Street NW., Washington, D. C. 481.; 482.; 619.2; 722.32; 722.38.

American Bleached Shellac Manufacturers Association (Inc.), R. W. McClintock, secretary, 80 Cliff Street, New York, N. Y. 846.11; 846.62.

American Bottlers of Carbonated Beverages, Junior Owens, secretary, 726 Bond Building, Washington, D. C. 176.0; 607.6; 681.49; 766.1; 781.; 871.29; 953.36; 955.1.

American Bowling Congress. (For rules of this organization communicate with American Sports Publishing Co., 45 Rose Street, New York, N. Y.) 429.9; 943.1; 943.98.

American Bureau of Shipping, Charles A. McAllister, president, Stevenson Taylor Memorial Building, 24 Old Slip, New York, N. Y. 603.1; 603.21; 603.42; 603.52; 603.53; 603.57; 604.11; 604.13; 604.14; 605.14; 605.15; 607.14; 607.4; 607.6; 608.4; 611.11; 611.3; 611.41; 611.49; 611.51; 611.59; 641.21; 641.22; 642.23; 642.24; 644.21; 644.22; 645.21; 645.23; 645.24; 646.41; 701.1; 701.2; 703.1; 703.2; 703.9; 704.1; 705.7; 711.11; 711.12; 711.21; 711.22; 714.11; 714.42; 714.51; 715.41; 719.55; 719.56 725.40; 725.42; 956.2.

American Bureau of Welding, William Spraragen, secretary, division of engineering, National Research Council, 29 West Thirty-ninth Street, New York, N. Y. 767.

American Ceramic Society, Ross C. Purdy, general secretary, 2525 North High Street, Columbus, Ohio. 511.2; 512.12; 517.2; 520.; 531.0; 531.6; 534.10; 546.; 594.; 918.0.

American Chemical Society, Charles L. Parsons, secretary, Mills Building, Washington, D. C. 093.7; 142.0; 231.; 471.2; 503.0; 504.0; 532.21; 815.1; 820.; 821.1; 821.3; 821.4; 821.5; 821.6; 821.7; 821.9; 822.1; 822.4; 822.5; 830.; 831.1; 831.3; 831.4; 831.5; 831.6; 831.7; 831.9; 832.2; 832.3; 832.4; 833.2; 833.3; 834.1; 834.2; 834.4; 834.5; 834.8; 834.9; 835.1; 835.2; 835.4; 835.5; 836.9; 837.2; 837.9; 839.1; 839.35; 839.35; 839.36; 839.37; 839.38; 839.39; 839.6; 839.7; 839.9; 846.5; 848.0; 871.0; 918.1; 918.2; 918.3; 918.4; 918.6; 918.7; 918.9.

American College of Surgeons, Malcolm T. MacEachern, M. D., associate director and director of hospital activities, 40 East Erie Street, Chicago, Ill. 398.34; 915.0.

American Concrete Institute, Harvey Whipple, secretary, 2970 West Grand Boulevard, Detroit, Mich. 510.; 512.11; 512.13; 512.14; 512.2; 516.0; 516.11; 516.12; 516.19; 516.2; 516.3; 516.4; 516.5; 518.31; 518.50; 518.56; 518.58; 518.59; 518.61; 518.62; 518.63; 518.64; 518.65; 518.67; 518.71.

American Cranberry Exchange, C. M. Chaney, secretary, 90 W. Broadway, New York, N. Y. 132.11.

American Dental Trade Association, George A. Lilly, managing director, 839 Seventeenth Street, NW., Washington, D. C. 915.10.

American Drop Forging Institute, Paul A. Androus, secretary, 405 First Trust and Deposit Building, Syracuse, N. Y. 760. American Drug Manufacturers Association, Carson P. Frailey, secretary, Albee Building, Washington, D. C. 819.9; 955.1.

American Dry Milk Institute (Inc.), Roud McCann, director, 221 North La Salle

Street, Chicago, Ill. 021.7.

American Electric Railway Engineering Association, G. C. Hecker, general secretary, 292 Madison Avenue, New York, N. Y. 202.11; 363.1; 400.42; 400.43; 401.11; 401.12; 401.13; 401.14; 401.15; 401.16; 401.17; 401.18; 401.31; 401.32; 402.1; 402.1; 412.2; 427.; 429.7; 502.2; 505.37; 511.73; 516.9; 518.10; 518.20; 518.31; 518.41; 518.51; 518.65; 518.9; 525.3; 532.22; 534.29; 594.; 600.1; 600.2; 600.3; 603.1; 603.26; 603.27; 603.33; 603.42; 605.19; 605.20; 606.0; 606.1; 606.2; 606.3; 606.4; 606.5; 606.6; 607.4; 607.5; 608.2; 608.31; 608.32; 608.6; 611.11; 611.18; 611.21; 611.22; 611.29; 611.41; 611.43; 611.44; 611.52; 611.53; 611.55; 611.59; 616.35; 619.2; 619.9; 622.1; 622.2; 622.5; 622.9; 631.32; 646.41; 646.59; 692.0; 692.1; 692.2; 692.3; 703.0; 703.2; 715.11; 715.12; 715.30; 715.36; 715.40; 715.41; 715.44; 716.30; 716.39; 718.40; 719.55; 719.60; 719.62; 719.63; 723.0; 726.0; 726.1; 726.2; 767.; 801.3; 970.

American Engineering Council, L. W. Wallace, secretary, 26 Jackson Place, Washington, D. C. 718.5; 844.9; 998.

American Face Brick Association, 205 West Wacker Drive, Chicago, Ill. 534.11.

American Foundrymen's Association (Inc.), C. E. Hoyt, executive secretary, 222 West Adams Street, Chicago, Ill. 429.9; 512.12; 534.12; 574.

American Gas Association (Inc.), Alexander Forward, managing director, 420 Lexington Avenue, New York, N. Y. 202.31; 607.0; 607.12; 607.6; 614.0; 614.2; 614.4; 645.9 997.2.

American Gear Manufacturers Association, T. W. Owens, secretary, 3608 Euclid Avenue, Cleveland, Ohio. 611.55; 765.; 766.1.

American Hospital Association, W. P. Morrill, M. D., chairman, committee on simplification and standardization, Maine General Hospital, Portland, Me. 011.91; 012.91; 014.1; 015.1; 126.11; 126.13; 126.2; 126.7; 134.22; 134.24; 134.41; 134.42; 134.44; 134.45

American Hotel Association of the United States and Canada, Thomas D. Green, president, 221 West Fifty-seventh Street, New York, N. Y. 871.12; 871.13; 871.15; 871.21; 871.22; 871.23; 871.26; 871.27.

American Institute of Architects, LeRoy E. Kern, technical secretary, structural service department, 1741 New York Avenue, NW., Washington, D. C. 518.50; 605.0; 710.; 716.30; 745.3.

American Institute of Baking, Henry Stude, president, 1135 Fullerton Avenue, Chicago, Ill. 100.: 108.1.

American Institute of Electrical Engineers, F. L. Hutchinson, national secretary, 33 West Thirty-ninth Street, New York, N. Y. 524.; 532.22; 600.3; 631.32; 645.24; 646.42; 700.; 701.2; 704.1; 706.0; 710.; 711.11; 711.12; 711.21; 711.22; 711.3; 712.2; 713.1; 713.2; 713.5; 714.11-714.14, incl.; 714.30; 714.42; 714.51; 714.52; 715.11; 715.12; 715.21; 715.36; 715.40; 715.41; 715.44; 715.50; 715.51; 716.0; 716.2; 716.30; 716.32; 717.1; 718.0; 718.39; 718.40; 718.60; 718.62; 718.63; 718.64; 718.66; 719.50; 719.55; 719.56; 719.63; 724.0; 755.0; 910.

American Institute of Homeopathy, Garth W. Boericke, M. D., chairman pharmacopœia committee, care of Hahnemann Medical College, Philadelphia, Pa. 042.2; 212.; 221.; 222.; 801.3; 801.4; 802.1; 802.2; 803.11; 803.31; 810.; 811.; 813.1; 813.2; 813.9; 814.1; 814.2; 819.1; 819.9; 821.1; 821.2; 821.3; 821.4; 821.5; 821.6; 821.7; 821.9; 822.4; 823.; 831.1; 831.3; 831.4; 831.5; 831.6; 831.9; 832.1; 832.2; 832.3; 832.4; 833.2; 833.3; 833.5; 833.9; 834.2; 834.3; 834.4; 834.8; 834.9; 835.1; 835.2; 835.7; 835.8; 836.3; 836.9; 837.2; 838.1; 838.2; 838.9; 839.31; 839.33; 839.34; 839.35; 839.36; 839.37; 839.38; 839.39; 839.44; 839.6; 839.9.

American Institute of Mining and Metallurgical Engineers, A. B. Parsons, secretary, 29 West Thirty-ninth Street, New York, N. Y. 511.9; 599.; 750.

American Institute of Steel Construction (Inc.), Charles F. Abbott, executive director, 200 Madison Avenue, New York, N. Y. 605.0; 605.22.

American Leather Chemists Association, H. C. Reed, secretary, 143 West Twentieth Street, New York, N. Y. 040.; 043.0; 060.; 231.; 821.9.

American Marine Standards Committee, A. V. Bouillon, secretary, Department of Commerce Building, Washington, D. C. 202.0; 202.12; 202.22; 202.41; 202.42; 202.44; 202.46; 303.1; 303.2; 304.4; 306.34; 306.36; 311.1; 311.6; 311.92; 315.10; 315.14; 315.2; 315.30; 315.31; 315.4; 315.6; 316.1; 316.2; 316.4; 319.3; 319.4; 339.3; 339.50; 365.13; 365.16; 365.18; 365.98; 368.2; 368.82; 369.21; 369.6; 369.7; 392.53; 392.54; 395.11; 395.13; 395.14; 399.9; 505.13; 505.36; 516.3; 521.1; 523.9; 531.3; 532.1; 534.12; 545.2; 545.4; 593.; 603.42; 603.52; 604.11; 607.0; 607.4; 607.7; 608.2; 608.31; 608.32; 608.52; 608.7; 611.13; 611.14; 611.19; 611.49; 613.1; 617.21; 617.22; 617.23; 617.31; 617.32; 617.35; 617.42; 617.43; 617.5; 617.61; 619.9; 645.21; 645.22; 646.41; 646.59; 647.38; 691.2; 703.0; 703.1; 703.9; 707.23; 707.40; 707.41; 707.42; 707.43; 707.44; 707.45; 725.3; 725.41; 725.42; 725.43; 793.2; 915.43; 915.50; 956.2; 957.19; 974.3; 992.

American Medical Association, Council on Pharmacy and Chemistry, W. A. Puckner,

secretary, 535 North Dearborn Street, Chicago, Ill. 810.

American Mining Congress, J. F. Callbreath, secretary, Munsey Building, Washington, D. C. 401.10; 412.0; 504.43; 603.42; 606.0; 606.3; 710.; 721.1; 726.1; 751.; 755.1; 970.

American Oil Burner Association (Inc.), Harry F. Tapp, executive secretary, 342 Madison Avenue, New York, N. Y. 503.4.

American Oil Chemists' Society, J. C. P. Helm, secretary, 705 Tchoupitoulas Street, New Orleans, La. 112.3; 141.; 142.0; 142.1; 142.3; 142.4; 142.6; 143.2; 503.1; 614.9; 871.0.

American Paper and Pulp Association, Jesse H. Neal, general manager, 370 Lexington Avenue, New York, N. Y. 400.50; 470.1.

American Petroleum Institute, W. R. Boyd, jr., executive vice president, 250 Park Avenue, New York, N. Y. 066.3; 207.3; 314.1; 331.16; 332.; 518.9; 603.42; 605.23; 607.0; 607.3; 607.4; 608.52; 611.16; 611.52; 615.82; 703.0; 703.1; 705.3; 711.21; 754.; 766.1.

American Pharmaceutical Association, E. F. Kelly, secretary, 10 West Chase Street, Baltimore, Md. 151.2; 152.2; 211.1; 221.; 222.; 501.6; 531.4; 541.5; 803.24; 810.; 811.; 813.7; 813.9; 819.1; 819.4; 819.9; 821.9; 831.6; 831.9; 832.4; 833.9; 834.9; 838.3; 838.5; 839.31; 839.34; 839.35; 839.36; 839.38; 839.39; 839.9; 872.2.

American Physical Education Association. (For rules of this organization communicate with American Sports Publishing Co., 45 Rose Street, New York, N. Y.) 069.1; 317.7; 429.9; 943.1; 943.97.

American Public Health Association, Kendall Emerson, M. D., acting executive secretary, 370 Seventh Avenue, New York, N. Y. 021.0; 882.0.

American Railway Association, H. J. Forster, secretary, 30 Vesey Street, New York, N. Y. 726.2; 793.5.

American Railway Assn., electrical section, E. H. Fritch, secretary, 59 East Van Buren St., Chicago, Ill. 401.30; 402.1; 516.9; 531.5; 532.22; 600.3; 605.23; 715.11; 715.41; 715.44; 716.10; 716.11; 719.55; 719.56; 719.60; 719.63.

American Railway Association, freight container bureau, Edward Dahill, chief engineer, 30 Vesey Street, New York, N. Y. 402.42; 421.2; 421.3; 438.0; 472.25; 477.2; 477.3; 477.4; 477.7; 477.9; 834.6; 950.; 951.13; 951.22; 952.10; 952.11; 953.2; 953.31; 953.36; 954.30; 954.35; 954.36; 959.1.

American Railway Association, mechanical division, V. R. Hawthorne, secretary, 59 East Van Buren Street, Chicago, Ill. 200.; 202.11; 202.12; 202.31; 202.41; 202.42; 202.44; 202.45; 207.3; 211.1; 301.12; 363.1; 411.1; 411.29; 411.7; 413.20; 413.21; 413.23; 413.24; 413.25; 413.29; 470.3; 473.3; 504.13; 526.6; 601.23; 602.2; 603.1; 603.21; 603.26; 603.33;

Associated Mfrs. of Water Purifying Equipment, Arthur M. Crane, secretary, P. O.

Box, 307, Gary, Ind. 619.5.

Associated Tile Manufacturers (Inc.), H. L. Gaardsmoe, acting secretary, 420 Lexington Avenue, New York, N. Y. 516.3; 518.50; 518.53; 518.56; 518.57; 518.59; 518.73; 534.20; 534.25.

Association of American Feed Control Officials, L. E. Bopst, secretary, College Park, Md. 021.3; 021.9; 039.4; 098.1; 103.4; 112.0; 112.1; 112.2; 112.3; 112.4; 112.5; 112.9; 117.2; 118.1; 118.2; 118.3; 118.9; 119.1; 119.2; 119.3; 119.4; 119.5; 119.6; 119.9; 133.21.

Association of American Steel Manufacturers, J. O. Leech, secretary, 616 Investment Building, Pittsburgh, Pa. 600.1; 600.7; 602.2; 603.21; 603.23; 603.24; 604.10; 604.11; 604.13; 604.20; 605.11; 605.12; 605.13; 605.15; 605.25; 606.2; 621.32.

Association of American Wood Pulp Importers, G. W. Oliphant, president, 200 Fifth Avenue, New York, N. Y. 400.50.

Association of Edison Illuminating Companies, Preston S. Millar, secretary, Eightieth Street and East End Avenue, New York, N. Y. 600.3; 712.2; 713.5; 714.34; 714.38; 715.44; 716.30; 719.55.

Association of Electragists, International, Lawrence W. Davis, general manager, 420 Lexington Avenue, New York, N. Y. 710.; 714.22; 714.41; 715.11; 715.30; 715.41; 715.42.

Association of Iron and Steel Electrical Engineers, John F. Kelly, managing director, 1010 Empire Building, Pittsburgh, Pa. 611.53; 702.0; 711.20; 711.21; 711.22; 714.11; 714.12; 744.1; 766.2.

Association of Manufacturers of Chilled Car Wheels, G. E. Doke, president and secretary, McCormick Building, Chicago, Ill. 611.18.

Association of New York State Canners (Inc.), John P. Street, secretary, 1031 Lincoln-

Alliance Building, Rochester, N. Y. 134.11; 134.21; 134.22; 134.42; 134.45.

Association of Official Agricultural Chemists, W. W. Skinner, secretary, post-office box 290, Pennsylvania Avenue Station, Washington, D. C. 010; 019.0; 021.1; 021.2; 021.5; 021.6; 021.7; 021.9; 022.1; 022.2; 022.3; 022.40; 040; 060; 093.7; 098.1; 099.1; 100; 104.0; 107.3; 108.0; 110; 117.0; 119.3; 119.5; 119.9; 120; 123.1; 126.7; 130; 142.0; 142.91; 142.94; 142.97; 151.0; 152.1; 152.2; 153.0; 154.0; 154.54; 154.6; 154.70; 155.0; 160.; 162.; 164.1; 165.0; 165.3; 171; 173; 175.1; 175.2; 175.3; 175.4; 175.5; 175.6; 175.7; 175.9; 176.0; 178.0; 179; 211.1; 212.; 216.; 217.; 221.; 222.; 231.; 594.; 801.4; 802.1; 802.2; 803.10; 803.25; 803.29; 810.; 811.; 813.9; 814.2; 815.2; 819.4; 819.9; 821.2; 821.7; 821.9; 824.; 832.4; 834.1; 834.2; 834.8; 834.9; 839.33; 839.36; 839.37; 839.7; 839.9; 840.5; 850.; 851.; 852.; 859.; 871.0; 881.0; 881.11; 881.12; 881.15; 881.19; 881.21; 881.22; 881.23; 881.24; 881.4; 881.9; 882.0; 882.3; 892.

Association of Official Seed Analysts of North America, F. S. Holmes, secretary,

University of Maryland, College Park, Md. 240.

Association of Railway Electrical Engineers, J. A. Andreucetti, secretary, Chicago & North Western Terminal Station, Chicago, Ill. 505.17; 600.3; 710.; 711.12; 711.21; 711.22; 712.0; 714.11; 714.21; 714.22; 715.21; 715.30; 715.39; 715.44; 716.10; 716.2; 716.30; 716.39; 719.55; 767.

Automotive Electric Association, Earl Turner, manager, 1365 Ontario Street, Cleveland, Ohio. 711.12; 711.22; 712.2; 713.6; 715.30.

Calavo Growers of California, Miss Adeltha Peterson, assistant secretary, 4803 Everett Avenue, Los Angeles, Calif. 131.6.

California Canning Peach Growers, F. B. Schmidt, assistant secretary, 244 California

Street, San Francisco, Calif. 132.44.

California Fruit Exchange, F. W. Read, manager, standardization department, California Fruit Building, Sacramento, Calif. 131.7; 132.13; 132.22; 132.41; 132.42; 132.44; 132.45; 132.46.

California Fruit Growers Exchange, F. O. Wallschlager, assistant secretary, Los

Angeles, Calif. 131.22; 131.23; 131.25.

California Olive Association, H. Lindrose, 216 Pine Street, San Francisco, Calif. 131.4.

California Peach and Fig Growers Association, John G. Tyler, Droge Building, Fresno, Calif. 131.3; 133.44.

California Redwood Association, J. W. Williams, secretary, 405 Montgomery Street, San Francisco, Calif. 400.27; 401.29; 401.47; 402.2; 402.41; 402.42; 402.43; 402.51; 402.52; 411.1; 411.29; 411.3; 411.41; 411.42; 411.43; 411.5; 411.6; 411.7; 412.1; 413.0; 413.1; 413.4; 413.6; 413.8; 423.5.

California Walnut Growers Association, Con G. Cowan, statistician, 1745 East Seventh

Street, Los Angeles, Calif. 135.7.

California White and Sugar Pine Manufacturers Association. See Western Pine Association.

Canners League of California, Preston McKinney, vice president, 215 Market Street, San Francisco, Calif. 120.; 134.13; 134.22; 134.41; 134.42; 134.44; 134.45; 134.56.

Cast Stone Institute, C. G. Walker, assistant secretary, 33 West Grand Avenue, Chicago,

III. 516.3; 516.4; 518.89.

Chlorine Institute, Robert T. Baldwin, secretary, 30 East Forty-second Street, New York, N. Y. 607.6.

Clay Products Institute of California, Norman W. Kelch, secretary-manager, Fifth and Figueroa Streets, Los Angeles, Calif. 534.23.

Commission on Standardization of Biological Stains, H. J. Conn, chairman, Agricultural

Experiment Station, Geneva, N. Y. 803.19.

Common Brick Manufacturers' Association of America, Ralph P. Stoddard, secretary-manager, Guarantee Title Building, Cleveland, Ohio. 516.3; 518.50; 518.51; 518.53; 518.55; 518.56; 518.83.

Compressed Air Society, C. H. Rohrbach, secretary, 90 West Street, New York, N. Y.

615.9; 791.2.

Compressed Gas Manufacturers' Association (Inc.), Franklin R. Fetherston, secretary, 110 West Fortieth Street, New York, N. Y. 956.1.

Concrete Reinforcing Steel Institute, M. A. Beeman, secretary, Tribune Tower, Chi-

cago, Ill. 516.3; 518.50; 605.25.

Consolidated Classification Committee, R. C. Fyfe, chairman, 404 Chicago Union Station, Chicago, Ill. 474.5; 479.2; 951.11; 951.12; 951.13; 951.31; 951.32; 951.32; 951.33; 951.41; 951.42; 951.45; 951.61; 951.62; 951.63; 951.64; 951.65; 951.66; 951.71; 951.72; 951.73; 952.12; 942.14; 952.19; 952.2; 953.2; 953.30; 953.34; 953.36; 954.1; 954.30; 954.36; 955.1; 955.2; 955.4; 955.5; 957.19; 957.2; 959.1; 959.6.

Contracting Plasterers' International Association, Edward McDonnell, secretary-treasurer, 4755 Commonwealth Avenue, Detroit, Mich. 402.51; 514.63; 516.2; 605.24.

Cotton Textile Institute (Inc.), C. K. Everett, in charge, new uses section, 320 Broadway, New York, N. Y. 300.6.

Cover Paper Manufacturers Association, E. H. Naylor, secretary, 95 State Street,

Springfield, Mass. 475.1; 475.2; 475.3.

Diesel Engine Manufacturers' Association, M. J. Reed, research engineer, 30 Church Street. New York, N. Y. 704.1.

Douglas Fir Plywood Institute, William L. Rawn, secretary, 520 Washington Building,

Tacoma, Wash. 400.23; 413.52.

Eastern Clay Products Association, Henry T. Shelley, secretary-manager, Colonial Building, Philadelphia, Pa. 518.55; 531.5; 534.23; 534.29.
