UNITED STATES DEPARTMENT OF COMMERCE
National Institute of Standards and Technology
Gaithersburg, Maryland 20899

Dear Colleague:

This directory identifies laboratories accredited under the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology (NIST). The NVLAP-accredited laboratories have fulfilled the stringent technical and managerial requirements for demonstration of competence built into the accreditation process for the designated fields of testing and calibration. Such recognition is provided by the annual Certificate and Scope of Accreditation granted to the laboratory.

The directory is arranged to provide easy access and use by state and federal government agencies, manufacturers, and laboratories; it is revised annually and updated with supplements quarterly. The directory is distributed to all laboratories currently accredited by NVLAP, to state governments and federal agencies, and to national accreditation bodies of other countries. Copies are made available on request to this office.

Laboratory accreditation continues to grow in importance as industry and governments establish or enhance their efforts to improve the quality of testing and calibration services. Accreditation is a major component of assurance of conformity assessment and is related to the intensified focus on quality in manufacturing and services. Concurrent with the growth of attention to accreditation is the spreading interest in quality systems registration. This interest has derived from the establishment of the ISO 9000 series of standards for "Quality Management and Quality Assurance." A laboratory accredited by NVLAP, using the provisions of ISO Guide 25, will be in compliance with ISO 9000 standards.

Significant new laboratory accreditation programs (LAPs) are under development for testing laboratories and calibration laboratories. Implementation of the Fastener LAP will embrace accreditation in five fields-of-testing (Chemical, Dimensional, Mechanical, Physical, and Metallographic) involving a wide range of test methods. Development of the Calibration LAP will embrace eight fields-of-calibration composed of 75 parameters. These developments, coupled with the revision of NVLAP policies and procedures to conform with international standards and guidelines, will offer current and future NVLAP-accredited laboratories national and international recognition of specific technical competence as well as broader quality program recognition.

We will be pleased to furnish you with further information about NVLAP and its accredited laboratories, and welcome your suggestions for improvements in our program and services.

Sincerely,

Albert D. Tholen, Chief
Laboratory Accreditation Program

NVLAP AND THE NVLAP LOGO

The term NVLAP and the NVLAP logo are Federally registered trademarks of the National Institute of Standards and Technology and the Federal Government, who retain exclusive rights therein. Permission to use the term and/or the logo is granted to NVLAP-accredited laboratories for the limited purpose of announcing their accredited status, and for use on reports that describe only testing and calibration within the scope of accreditation. NIST reserves the right to control the quality of the use of the term NVLAP and of the logo itself.

INTRODUCTION

The National Institute of Standards and Technology's National Voluntary Laboratory Accreditation Program (NVLAP) is designed to improve the competence of testing and calibration laboratories and the reliability of laboratory measurements.¹ NVLAP determines laboratory ability to meet established criteria and technical requirements for accreditation of specific test and calibration methods, through on-site assessments by technical experts and laboratory participation in proficiency testing programs. NVLAP publication of results of proficiency testing and participation in standards development contribute to improved test and calibration methods and laboratory performance.

The accredited laboratories have been found to have the skilled people, necessary facilities and equipment, documentation and quality assurance systems to produce reliable data. We recommend that consideration be given to the use of these laboratories whenever their accredited capabilities satisfy needs.

Current information on the accredited status of a laboratory can be obtained:

- (1) directly from the laboratory;
- (2) by writing to: Chief, Laboratory Accreditation Program
National Institute of Standards and Technology
Building 411, Room A162
Gaithersburg, MD 20899;
- (3) by computer-to-computer communication with the NVLAP electronic bulletin board on 301-948-2058;
- (4) by FAX on 301-926-2884; or
- (5) by calling NVLAP on 301-975-4016.

¹ No laboratories have been accredited under the Calibration LAP; therefore, all accreditations referenced in this edition of the Directory are for laboratories accredited under one or more of the testing LAPs.

The National Science Foundation (NSF) is pleased to announce the results of the review of the proposal submitted by the Department of Energy (DOE) for the construction of a new research facility. The review was conducted by a panel of experts in the field of nuclear physics. The panel has recommended that the proposal be funded at the level of \$10 million per year for a period of five years. This funding will allow the DOE to complete the construction of the facility and to begin the research program. The panel also recommended that the DOE be given the authority to manage the facility and to conduct the research program. This authority will be given to the DOE as part of the funding agreement. The panel's recommendation is based on the following factors: the scientific merit of the proposal, the quality of the research team, the feasibility of the project, and the potential for significant scientific discoveries. The panel believes that the construction of the facility and the research program will lead to important advances in the field of nuclear physics.

Current information on the progress of the project is available from the DOE. The DOE is currently in the process of completing the construction of the facility. The research program is also well advanced. The DOE is currently conducting experiments on the properties of the new particles. The results of these experiments are being published in the scientific literature. The DOE is also conducting theoretical studies on the properties of the new particles. The results of these studies are also being published in the scientific literature. The DOE is currently in the process of completing the construction of the facility. The research program is also well advanced. The DOE is currently conducting experiments on the properties of the new particles. The results of these experiments are being published in the scientific literature. The DOE is also conducting theoretical studies on the properties of the new particles. The results of these studies are also being published in the scientific literature.

- (1) The DOE is currently in the process of completing the construction of the facility. The research program is also well advanced. PROGRAM SUMMARY

The National Institute of Standards and Technology (NIST) administers the National Voluntary Laboratory Accreditation Program (NVLAP). NVLAP is comprised of a series of laboratory accreditation programs (LAPs) which are established on the basis of requests and demonstrated need. Each LAP includes specific calibration and/or test standards and related methods and protocols assembled to satisfy the unique needs for accreditation in a field-of-testing, field-of-calibration, product, or service. NVLAP accredits public and private laboratories based on evaluation of their technical qualifications and competence to carry out specific calibrations or tests. Accreditation criteria are published in the Code of Federal Regulations as a part of the NVLAP Procedures. Accreditation is granted following successful completion of a process which includes submission of an application and payment of fees by the laboratory, an on-site assessment, resolution of any deficiencies identified during the on-site assessment, participation in proficiency testing, technical evaluation, and administrative review. The accreditation is formalized through issuance of a Certificate of Accreditation and Scope of Accreditation (fig. 1) and publicized by announcement in various government and private media.

NVLAP accreditation is available to commercial laboratories; manufacturers' in-house laboratories; university laboratories; and federal, state, and local government laboratories. Foreign-based laboratories may also be accredited if they meet the same requirements as domestic laboratories and pay any additional fees required for travel expenses.

NVLAP provides an unbiased third party evaluation and recognition of performance, as well as expert technical assistance to upgrade laboratory performance. NVLAP accreditation signifies that a laboratory has demonstrated that it operates in accordance with NVLAP requirements in the following areas: quality system, staff, facilities and equipment, calibration, records, calibration or test method procedures, and calibration or test reports. NVLAP accreditation does not imply any guarantee (certification) of laboratory performance or test/calibration data; it is solely a finding of laboratory competence.

This Directory of accredited laboratories is published annually and lists the name, address, contact person, phone number, accreditation renewal date and scope of accreditation for each accredited laboratory. An updated listing of accredited laboratories is published quarterly as a supplement to the Directory.

A laboratory may cite its accredited status and use the NVLAP logo on reports, stationery, and in business and trade publications provided that this use does not imply product certification.

On-Site Assessment

Before initial accreditation and every two years thereafter, an on-site assessment of each laboratory is conducted to determine compliance with the NVLAP criteria. The assessment is conducted by one or more NVLAP assessors selected on the basis of their expertise in the field of testing or calibration to be reviewed. They may be engineers or scientists currently active in the field, consultants, college professors or retired persons. Their services are generally contracted as required; they are not NVLAP staff members.

Assessors use checklists provided by NVLAP so that each laboratory receives an assessment comparable to that received by others. However, assessors have some latitude to make judgments about a laboratory's compliance with the NVLAP criteria.

An assessment normally takes one to three days depending on the extent of the laboratory's application. Every effort is made to conduct an assessment with as little disruption as possible to the normal operations of the laboratory. During the assessment, the assessor carries out the following functions:

- meets with management and supervisory personnel responsible for the laboratory's activities to review the assessment process and to set the assessment agenda;
- examines the laboratory's quality assurance system, selects and traces the history of one or more samples from receipt to final issuance of reports, conducts a thorough review of the laboratory's quality manual or equivalent, evaluates the training program, examines notebooks or records pertaining to the samples, checks sample identification and tracking procedures, determines whether the appropriate environmental conditions are maintained, and examines copies of completed reports;
- reviews records of periodic internal audits, use of check samples or participation in round robin testing or other similar programs, personnel records including resumes and job descriptions of key personnel, competency evaluations for all staff members who routinely perform the testing or calibration for which accreditation is sought, calibration or verification records for apparatus used, reports, and sample control records;
- observes demonstrations of laboratory techniques and discusses them with the technical personnel to assure their understanding of the procedures; and
- examines major equipment, apparatus, and facilities.

At the conclusion of the assessment, the assessor will conduct an exit briefing to discuss observations and any deficiencies with responsible laboratory staff. A written assessment report will be left with the laboratory, and a copy forwarded to NVLAP.

If the on-site inspection reveals deficiencies that pertain to NVLAP requirements, the laboratory must respond in writing to NVLAP within 30 days of such notification. The response must provide documentation, signed by the Authorized Representative, that the specified deficiencies have either been corrected or include a plan of action that is being taken to make corrections.

Monitoring Visits

Monitoring visits may be conducted at any time during the accreditation period for cause or on a random selection basis. These visits serve to verify reported changes in the laboratory's personnel, facilities, or operations, or to explore possible reasons for poor performance in proficiency testing. The scope of a monitoring visit may range from checking a few designated items to a complete review.

Proficiency Testing

Proficiency testing is an integral part of the NVLAP accreditation process. On-site demonstration of appropriate facilities, equipment, personnel, etc., is essential, but may not be sufficient for the continuing evaluation of laboratory competence. The production of test/calibration data using special proficiency testing samples or artifacts provides NVLAP with a means to determine the overall competence of the laboratory. Information obtained from proficiency testing helps to identify problems in a laboratory. When problems are found, NVLAP works with the laboratory staff to solve them.

Each laboratory accreditation program (LAP) has unique proficiency testing requirements. Data submitted by the laboratories in response to specific NVLAP requirements are analyzed and summary reports of the results of interlaboratory comparisons are sent to the participants and other interested parties; e.g., professional societies and standards writing bodies. The identity and performance of individual laboratories are kept confidential.

Satisfactory participation is based on specially tailored exercises designed to evaluate the ability of the laboratory to produce the services for which they are accredited. Some methods define pass/fail criteria. In other cases, individual laboratory results must fall within statistically acceptable limits of overall group performance. In a number of programs, NVLAP requires satisfactory participation in proficiency testing as a condition of initial, as well as continuing, accreditation.

Technical Evaluation

A final technical evaluation is performed by one or more NVLAP technical experts. Their recommendations regarding accreditation are based on:

- information provided on the application;
- results of quality system documentation review;
- on-site assessment reports;
- actions taken by the laboratory to correct deficiencies;
- results of proficiency testing; and
- information from any monitoring visits of the laboratory.

If the technical evaluation reveals additional deficiencies, written descriptive notification will be sent to the laboratory. The laboratory must respond as specified in the previous section, *On-Site Assessment*. Clarification of some issues may be requested by telephone. All deficiencies must be resolved before accreditation can be granted.

Accreditation Actions

After the technical evaluation has been completed and all financial and administrative requirements have been satisfied, NVLAP takes one of the following accreditation actions:

Accreditation The laboratory is issued a Certificate of Accreditation and a Scope of Accreditation.

Denial The laboratory is notified of a proposal to deny accreditation and the reason(s).

If an accredited laboratory is found to be out of compliance with the NVLAP criteria, NVLAP may take one of the following actions:

Suspension Suspension is a temporary removal of the accredited status of a laboratory when it is found to be out of compliance with the terms of its accreditation. The laboratory will be notified of the reasons for and conditions of the suspension and the action(s) that the laboratory must take to have the accreditation reinstated.

Reasons for suspension include: loss of key personnel, loss of major equipment, damage to laboratory by fire, changing laboratory location, proficiency test failure.

Revocation Revocation is the removal of the accredited status of a laboratory when it is found to have violated the terms of its accreditation. The laboratory may be given the option of voluntarily terminating the accreditation. If accreditation is revoked, the laboratory must return its Certificate of Accreditation and cease use of the NVLAP logo on any of its reports, correspondence, or advertising.

Reasons for revocation include: obtaining accreditation through fraud, refusal to resolve deficiencies, no longer providing the type of calibration or testing service for which accreditation was issued.

If denial or revocation has been proposed, the laboratory may appeal the decision to the Director of NIST. If an appeal is not requested, the action becomes final upon the expiration of the 30-day period following receipt of the notification.

Accreditation Renewal Date

The period of NVLAP accreditation is one year. A laboratory can be accredited until January 1, April 1, July 1, or October 1 of the following year; its accreditation will terminate on that date unless renewed. Users of this Directory who are considering selection of accredited laboratories should be aware of the renewal date and verify if the laboratory has retained its accreditation at the time its services are to be provided. Verification can be obtained by asking the laboratory for a copy of its Certificate of Accreditation or by contacting NVLAP.

LABORATORY PARTICIPATION SUMMARY

The following table shows the number of laboratories in each laboratory accreditation program (LAP). Since some laboratories are accredited in more than one LAP, the total number of accredited laboratories listed by LAP (see Index B) is greater than the number of laboratories in the system (see Index A). The NVLAP Code prefix is used in Index D to identify individual test methods.

<i>Laboratory Accreditation Program (LAP) (NVLAP Code Prefix)</i>	<i>Accredited Laboratories</i>
Acoustical Testing Services (08/)	11
Asbestos Fiber Analysis (18/)	
Airborne (TEM)	108
Bulk (PLM)	505
Carpet Testing (03/)	18
Commercial Products Testing	
Paint (09/)	2
Paper (09/)	3
Plastics (15/)	1
Plumbing (19/)	1

HOW TO USE THIS DIRECTORY

The *1993 Directory* lists laboratories accredited by NVLAP. It consists of four indexes which are cross-referenced by NVLAP Lab Code, a unique identifier assigned to each laboratory; e.g., 1000 or 1000-00.

The Directory enables the user to locate name, address, telephone and accreditation information about laboratories of interest. The user should contact the laboratories directly to get information beyond that provided here.

INDEX A, LISTING BY LABORATORY NAME, lists all accredited laboratories in alphabetical order by laboratory name. An ellipsis (...) after a laboratory's name indicates that the name was too long to fit within the available space. (The ellipsis notation is also used in Indexes B and C.) The full laboratory name is given in Index D, Listing by NVLAP Lab Code.

INDEX B, LISTING BY LABORATORY ACCREDITATION PROGRAM (LAP), lists all accredited laboratories in alphabetical order by laboratory name within LAP. The index is organized by the 11 major LAPs (see page 6). In addition, four LAPs, Asbestos Fiber Analysis, Commercial Products Testing, Computer Applications Testing, and Electromagnetic Compatibility and Telecommunications, are subdivided into sub-LAPs. Laboratories accredited in more than one LAP will have more than one listing.

INDEX C, LISTING BY STATE/COUNTRY, lists all accredited laboratories in alphabetical order by laboratory name within state. The states are designated by the standard two-letter postal abbreviations. Laboratories located outside of the United States are listed at the end of the index. Index C also indicates the major LAPs for which each laboratory is accredited.

INDEX D, LISTING BY NVLAP LAB CODE, lists all accredited laboratories in numerical order by NVLAP Lab Code. There is only one listing per Lab Code in Index D.

Each accredited laboratory receives a Certificate of Accreditation for each LAP and a Scope of Accreditation which details the methods and services for which accreditation has been granted in each LAP. Index D gives a condensation of the Scope(s) of Accreditation for each laboratory. Users of laboratory services may ask a laboratory for a copy of its Scope and Certificate as proof of accreditation for specific methods and services.

The following information is presented for each laboratory in Index D:

- (a) NVLAP Lab Code
- (b) Laboratory name and address
- (c) Contact person
- (d) Phone number
- (e) Accreditation renewal date
- (f) Scope of Accreditation.

HOW TO LOCATE SPECIFIC INFORMATION

For a laboratory whose name is known

Refer to Index A and note the laboratory's NVLAP Lab Code. Look up the Lab Code in Index D to obtain specific information about the laboratory; e.g., address, phone number, Scope of Accreditation, etc.

For a laboratory in a particular geographic area

Determine the states (or country) included in the geographic area of interest. Refer to Index C to obtain the NVLAP Lab Code of a laboratory within the selected geographic area for a given LAP. Look up the Lab Code in Index D to obtain specific information about the laboratory; e.g., address, phone number, Scope of Accreditation, etc.

For a laboratory in a particular LAP

Choose the LAP from the list on page 6. Refer to Index B and note the name and Lab Code of each laboratory of interest. Index B is organized by the 11 major LAPs, as well as subcategories for the Asbestos Fiber Analysis, Commercial Products Testing, Computer Applications Testing, and Electromagnetic Compatibility and Telecommunications programs. Look up the Lab Code in Index D to obtain specific information about the laboratory; e.g., address, phone number, Scope of Accreditation, etc.

SPECIAL NOTE ABOUT LABORATORIES ACCREDITED IN ASBESTOS FIBER ANALYSIS

The Scopes of Accreditation for laboratories accredited in Asbestos Fiber Analysis in Index D begin with NVLAP Lab Code 1001. The presence of a PLM Renewal Date or a TEM Renewal Date indicates that a laboratory is accredited for Bulk Asbestos Analysis (PLM) or Airborne Asbestos Analysis (TEM), respectively. The detailed description of the test method designations for PLM and TEM are printed at the beginning of the Asbestos section of Index D on page 121, rather than in the individual laboratory entries.

SECONDARY CALIBRATION

This facility has demonstrated compliance with the Criteria for the Operation of Federally-Owned Secondary Calibration Laboratories (Ionizing Radiation) for the following:

**Procedures/
Instruments****Radiation Types**

Calibration of X-ray Beam Codes M30, M50,
Survey Instruments L80, L100, and M100 over the
(Part B.2) Exposure Rate Range 2 mR/s to
100 mR/s, and the H50 Beam Code
over the range 0.5 mR/h to 4 mR/s,
with total uncertainty in the
reference field value of $\pm 5\%$.

Calibration of
Instruments for
Diagnostic Level
(Part E)

X-ray Beam Codes M20, M30,
M50, L80, L100, and M100 over
the Exposure Rate Range 2 mR/s to
100 mR/s, with total uncertainty in
the reference field value of $\pm 3\%$.

Calibration of
Reference-Class
Instruments
(Part F.2)

X-ray Beam Codes M20, M30,
M50, L80, L100, and M100 over
the Exposure Rate Range 2 mR/s to
100 mR/s, with total uncertainty in
the reference field value of $\pm 3\%$.

What does NVLAP accreditation mean?

NVLAP accreditation means that a laboratory has been found competent to perform tests or calibrations.

Competence is defined as a laboratory's ability to meet the **NVLAP** conditions and to conform to the criteria as tailored to the test methods or calibration protocols for which it seeks accreditation.

NVLAP criteria for accreditation provide the basis for the technical evaluation of a laboratory and address the following areas of laboratory operation:

- Quality System
- Staff
- Facilities and Equipment
- Calibration Procedures
- Test Methods and Procedures
- Records and Test Reports

Don't delay. Complete this request for information about **NVLAP** and mail to:

National Institute of Standards and Technology
National Voluntary Laboratory Accreditation Program
Building 411, Room A162
Gaithersburg, MD 20899

I am interested in additional information about NVLAP.

Please send me:

NIST Technical Publications

Periodical

Journal of Research of the National Institute of Standards and Technology—Reports NIST research and development in those disciplines of the physical and engineering sciences in which the Institute is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Institute's technical and scientific programs. Issued six times a year.

Nonperiodicals

Monographs—Major contributions to the technical literature on various subjects related to the Institute's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NIST, NIST annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NIST under the authority of the National Standard Data Act (Public Law 90-396). NOTE: The Journal of Physical and Chemical Reference Data (JPCRD) is published bimonthly for NIST by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements are available from ACS, 1155 Sixteenth St., NW., Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Institute on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NIST under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NIST administers this program in support of the efforts of private-sector standardizing organizations.

Consumer Information Series—Practical information, based on NIST research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order the **above** NIST publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.

Order the **following** NIST publications—FIPS and NISTIRs—from the National Technical Information Service, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NIST pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NIST Interagency Reports (NISTIR)—A special series of interim or final reports on work performed by NIST for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Service, Springfield, VA 22161, in paper copy or microfiche form.
