#### **ACKNOWLEDGMENTS**

We are grateful to the 449 police departments throughout the United States who contributed their time and knowledge to make this report possible. Special thanks go to the police departments whose officers and administrators helped the survey team during the developmental and testing phases of the work. The support and assistance of the NBS Law Enforcement Standards Laboratory, Jacob J. Diamond, Chief, and Lester D. Shubin, NILECJ, project monitor and consultant, are also gratefully acknowledged.

We thank the many members of the Technical Analysis Division who provided support: William L. O'Neal for his help in computerizing the sample selection and for helping to design and program the interactive recordkeeping system; Jenny L. Eldreth and P. Clare Peiser for helping maintain the computerized recordkeeping system; Sandra J. Mumford for supervising the coding/editing of the questionnaires; Dr. June R. Cornog for her advice, support, and help with initial interviews; Gail B. Hare for conducting pretest interviews; Diana R. Beall for the many typings of the various versions of the questionnaires; Suellen Halpin, Mary L. Friend, Susan E. Bergsman and Dwight F. Doxey, for making follow-up telephone calls; Lorraine S. Freeman for her administrative support; Karen Jackson, a summer employee, for her help with questionnaire coding and recordkeeping; Cassandra Streeter and Janice Davis, summer employees, for their help with recordkeeping; and Mary Hawkins for typing the report. Michael R. Vogt receives special thanks for his help in carrying out the computerized edit and tabulation of the data. We also gratefully acknowledge the help of Dr. Robert J. Cunitz in editing and reviewing the report.

#### **FOREWORD**

The Law Enforcement Standards Laboratory (LESL) of the National Bureau of Standards (NBS) furnishes technical support to the National Institute of Law Enforcement and Criminal Justice (NILECJ) program to strengthen law enforcement and criminal justice in the United States. LESL's function is to conduct research that will assist law enforcement and criminal justice agencies in the selection and procurement of quality equipment.

LESL is: (1) Subjecting existing equipment to laboratory testing and evaluation and (2) conducting research leading to the development of several series of documents, including national voluntary equipment standards, user guidelines, state-of-the-art

surveys and other reports.

This document is a law enforcement equipment report developed by LESL under the sponsorship of NILECJ. Additional reports as well as other documents are being issued under the LESL program in the areas of protective equipment, communications equipment, security systems, weapons, emergency equipment, investigative aids, vehicles, and clothing.

Technical comments and suggestions concerning the subject matter of this report are invited from all interested parties. Comments should be addressed to the Law Enforcement Standards Laboratory, National Bureau of Standards, Washington, D.C. 20234.

Jacob J. Diamond, Chief
Law Enforcement Standards
Laboratory

#### **EXECUTIVE SUMMARY**

### I. SUMMARY OF BACKGROUND AND METHODOLOGY

# A. Background

- ° Law Enforcement Standards Laboratory (LESL) was established in 1971 under the sponsorship of the NILECJ Advanced Technology Division (ATD).
- ° NILECJ asked the Behavioral Sciences Group of the National Bureau of Standards to develop and carry out a procedure to get information from the users of law enforcement equipment.
- "User" information would aid NILECJ in setting priorities for LESL programs and would provide some detailed information in support of the research to develop standards and guidelines.
- ° In addition, gathering information from the users would help to make police agencies aware of LESL and ATD.
- ° A nationwide mail sample survey was selected as the best procedure to collect user information.
- ° An Equipment Priorities Questionnaire (EPQ) and six detailed Questionnaires (DQs) were developed and administered. A separate report was prepared for each of these seven questionnaires.

# **B.** Design of Questionnaires

- ° Questionnaires were developed in conjunction with NILECJ, LESL, and cooperating police departments. Questionnaires were pretested at various times with approximately 45 police departments.
- ° The EPQ was designed to provide information about priority needs for standards for various types of equipment.
- ° In addition, the EPQ asked for data about numbers of full- and part-time officers, activities performed in the department, budget, size of jurisdiction, etc.
- ° The six DQs (Alarms, Security and Surveillance Equipment; Communications Equipment and Supplies; Handguns and Handgun Ammunition; Sirens and Emergency Warning Lights; Body Armor and Confiscated Weapons; and Patrol Cars) were each developed separately.
- ° The DQs asked about kinds and quantities of equipment in use, problems with existing equipment, suggestions for improving equipment, needs for standards related to the equipment, etc. Although entitled Detailed Questionnaires, these questionnaires were designed to give an overview of the use of specific items of equipment.

# C. Sample

- ° The population sampled was made up of all police departments listed in a computerized file and maintained by the LEAA Statistical Service.
- ° Courts, correctional institutions, forensic labs, special police agencies, etc., were excluded.
- ° The sample was stratified by LEAA geographic region (10 regions) and by department type (7 department types: state police; county police and sheriffs; city departments with 1-9 officers; city departments with 10-49 officers; city departments with 50 or more officers, excluding the 50 largest cities; the 50 largest U.S. cities by population; and township departments).

- ° Overall, approximately 10 percent of the 12,836 departments in the population were selected as respondents (see table 1.2-2).
- ° The Equipment Priorities Questionnaire was sent to every sample department (1,386). Each Detailed Questionnaire was sent to all states, to all of the 50 largest cities, and to a randomly selected subsample of the main sample (about 530 departments received each DQ).
- ° Thus, states and the 50 largest cities were asked to fill in all 7 questionnaires. Each of the remaining 1,286 departments was asked to fill in the EPQ and 2 of the DQs.
  - ° The sample for the Patrol Car DQ consisted of 530 departments (see table 1.2-3).

### D. Questionnaire Administration

- ° Stringent control of administration was required.
- ° Introductory letters were sent to heads of departments asking cooperation.
- ° On June 1, 1972, questionnaire packages were mailed.
- ° In July 1972, follow-up by self-return post card was begun.
- ° In August 1972, follow-up by telephone was begun. Departments which had not returned questionnaires were called. Also, calls were made to clear up ambiguities in the returned questionnaires. About 1,300 calls were made. About 70 percent of the sample departments were called at least once.
- ° Each questionnaire was edited and coded by a specialized team to ensure consistency; it was then keypunched and tabulated.
  - ° Completed questionnaires were accepted for tabulation through January 7, 1973.

#### E. Rates of Return

- ° Eighty-three percent of the 1,386 departments returned usable EPQs.
- ° Eighty-five percent of the 530 departments returned usable Patrol Car DQs.
- ° Between 81 and 85 percent of the other DQ subsamples returned usable questionnaires.
- ° Highest rates of return (over 90%) were from states, the 50 largest cities, and cities with 50 or more officers.
  - ° Lowest rates of return were from counties and townships (less than 75%).

# F. Characteristics of Responding Departments

- ° The activities most commonly carried out by the respondents (to the EPQ) were serving traffic and criminal warrants (88%), traffic safety and traffic control (87%), and intradepartmental communications (87%).
- ° All of the responding 50 largest cities said they provided inhouse training and criminal investigations. This compared to 68 percent and 86 percent, respectively, of all responding departments.
- ° Only 13 percent of all respondents had crime laboratories. Seventy-three percent of the largest cities and 55 percent of the states had crime laboratories.
- ° About three-fifths of the departments in all department types were providing emergency aid and rescue, ranging from 60 percent of the cities with 50 or more officers to 67 percent of the counties.
- ° Overall, the reported equipment budgets represented somewhat over 10 percent of the total budgets reported.
- ° Among department types, there was a wide range of total equipment expenditures, from a mean of about \$10,000 for cities with 1-9 officers to a mean of almost \$2.7 million for the 50 largest cities.
  - ° One of the 50 largest cities reported an equipment budget of \$40 million.
- ° Overall, the 50 largest cities reported a mean of 2,491 full-time sworn officers. However, one of the 50 largest cities had 27 percent of all the full-time officers reported by that department type and another had about 12 percent.

# G. Presentation of Data

- Oata in this report are presented in two forms: text tables and full tables (app. B). Text tables do not always present a complete breakdown of the data.
- ° All tables (text and full) present the data in unweighted form (i.e., numbers and percentages of the responding departments from the sample for this questionnaire, not figures that have been weighted to expand the data to the total population of police departments in the U.S.).
- ° The sample selected for this questionnaire was not proportional to the total population of police departments. If decisions are to be made which require estimates of population figures, the appropriate extrapolation must be performed. (See app. B, p. B-1.)

#### **II. SUMMARY OF RESULTS**

#### A. Use of Patrol Cars

- ° More than four-fifths (84%) of patrol cars used by the responding departments were full-sized 4-door models.
  - One-tenth (9%) were intermediate-sized 4-door models.
- ° Only 1 percent of patrol cars in use were compacts, but 29 percent of the departments said they would have use for a compact designed for police use.
- <sup>o</sup> Based on the responses, it was estimated that about 160,000 patrol cars were being used by police departments in the United States in 1972.
- ° More than half (57%) of the responding departments reported that their patrol cars were being used 17-24 hours per day, about one-third said they were being used 9-16 hours, and only 11 percent said 8 hours or less.
- ° Four-fifths of large city departments were using patrol cars 17-24 hours a day, but only 17 percent of counties and 6 percent of states were using their cars this long.
- ° Almost half (45%) of the responding departments reported that each patrol car had three different drivers per day, but two-thirds of state departments and half of counties had only one driver per car per day.
- ° State police averaged about 1.5 officers per patrol car compared to an average of 7.8 officers per car for the 50 largest cities.
- ° Most (69%) responding departments reported officer shifts of 8 hours, but almost two-thirds of the states and about half of the counties reported officer shifts of more than 8 hours.
- ° City police departments reported that most of their driving (84%) was at speeds less than 51 mph, with many stops. State police said that about two-thirds (64%) of their driving was at speeds of 50 mph or more.
- ° More than half of the responding departments rated both the control and handling and the braking of their patrol cars as "excellent" at speeds under 30 mph but only 10 percent rated these characteristics as "excellent" at 70 mph or more, and more than one-fourth rated these aspects "poor" at over 70 mph.
- ° Nine-tenths of departments said their patrol cars got less than 10 miles per gallon of gasoline.
- ° More than half of the responding departments reported routinely carrying in their patrol cars the following equipment items: clipboard (84%), fire extinguisher (83%), flares (81%), first aid kit (79%), shotgun (73%), batons (67%), blankets (69%), extra ammunition (55%), and brief case (53%).
- ° State police commonly reported carrying riot equipment (77%) whereas other departments did not (18-28%).

# **B.** Replacement of Patrol Cars

- ° About two-thirds of the departments which reported using mileage in determining when to replace patrol cars did not replace cars until they had over 60,000 miles and about one-third replaced them between 40-60,000 miles.
- ° About two-fifths of the departments which reported using age of car in determining when to replace it, replaced their cars every 2 years. More than one-fourth replaced cars every year and the remaining 31 percent used their cars 3 years or more before replacement.
- ° Almost all responding departments (92%) reported that it took officers less than a week to get used to the controls and instruments in a new patrol car, but only three-fourths (74%) felt it was possible to become accustomed to the handling and performance in this time period.
- ° Virtually all (98%) departments reported that they installed a siren and mobile radio when they bought new patrol cars. Three-fourths installed a public address system, 69 percent flashing lights, 61 percent spotlights and more than half said they installed gun racks, bubble lights and mounting racks.
- ° The problems most commonly indicated by departments in making changes in standard automobiles were that there was lack of room for police equipment, the car had to be modified to allow for installation of equipment (which adds to expense) and/or that yearly design changes in cars caused problems.
- ° Ninety percent or more of responding departments had specified the options of automatic transmission, 8-cylinder engine and power steering when they bought their last patrol cars; more than 80 percent had specified power brakes, disc brakes and heavy duty suspension; and about 60 percent had specified air conditioning.
- ° Almost three-fourths (72%) of the responding departments reported they pay between \$3,000 and \$4,000 for a new patrol car (without trade-in).
- ° The features of patrol cars felt to be most important by the responding departments were air conditioning, heavy duty suspension, built-in crash bars, barriers between seats, and communications consoles.

## C. Maintenance of Patrol Cars

- ° The majority of responding departments (62%) reported an average of less than 3 days of downtime per patrol car per month and 94 percent reported 5 days or less per month.
- ° About half of the state police cited delays in getting parts as a cause of downtime (compared to only one-fourth of the respondents as a whole).
- ° Large cities most often said that a shortage of mechanics was the main cause of their downtime.
- ° The brake system and engine were chosen by more than half of the responding departments as the areas requiring the most service and repair.

#### D. Need for Standards

- ° The two systems or aspects of patrol cars most often chosen as needing standards were the braking system and the stability and control of the patrol car.
- ° More than three-fourths of the departments felt that separate safety standards (different from those for civilian cars) were needed for patrol cars.
- ° Reasons most often given for favoring separate standards were that patrol cars are subjected to different kinds of use and/or more use than civilian cars and patrol cars are more often used in high speed situations.
- ° Almost half (48%) of the responding departments listed at least one patrol car feature they felt to be dangerous to occupants.

#### LEAA POLICE EQUIPMENT SURVEY OF 1972

#### Volume VII: Patrol Cars

#### E. Bunten and P. Klaus

Institute for Applied Technology, National Bureau of Standards, Washington, D.C. 20234

The report outlines the methodology of and summarizes a portion of the data from the LEAA Police Equipment Survey of 1972. One of a series of 7 reports resulting from this nationwide mail survey of a stratified random sample of police departments, the present report summarizes the answers of 449 police departments concerning their patrol cars: Purchasing practices, types of options and accessories usually selected, types of equipment stored in the patrol car, typical patterns of use, and needs for standards for systems or aspects of patrol cars. The data are presented by all responding departments and by seven department types.

Key words: Patrol car; police; police vehicles; standards.

#### 1. INTRODUCTION

# 1.1. Project Background

During the past several years, law enforcement agencies in the United States have become more aware of the importance of equipment in the performance of their duties. Much of their equipment had originally been designed for other uses and had to be modified. Other equipment items had to be used as given. No standards existed against which equipment performance could be measured nor were any standard test methods or procedures available. It has been difficult for agencies to compare the performance of equipment items. Recognizing this problem, the Law Enforcement Assistance Administration (LEAA) of the Department of Justice began a concentrated program in 1971, toward the improvement of law enforcement equipment.

As the first step in its program, LEAA in cooperation with the Department of Commerce established the Law Enforcement Standards Laboratory (LESL) at the National Bureau of Standards (NBS). The broad goal of LESL is to prepare performance standards which can be promulgated by LEAA as voluntary aids for the selection of equipment by law enforcement agencies. Additionally, LESL is developing standard test methods and procedures, so that the relative performance of similar items may be evaluated by departments themselves.

In order to provide equipment user information for the program, the National Institute of Law Enforcement and Criminal Justice (NILECJ) of LEAA in 1971 asked the Behavioral Sciences Group of the Technical Analysis Division at NBS to gather information from the users of law enforcement equipment about their specialized equipment needs and problems. Although face-to-face interviews with a large sample of representatives from law enforcement agencies would have been desirable, time and manpower constraints led to the development of a nationwide, mail sample survey having two general objectives: (1) To assist NILECJ in the establishment of priorities for LESL's standards development activities; and (2) to obtain detailed information about certain broad equipment categories in support of the research to develop standards and guidelines in these areas.

This report fulfills part of the second general objective and the associated survey questionnaire (see app. A) will be referred to as the Patrol Car Detailed Questionnaire (DQ). The remainder of the second objective is accomplished in the reports of the other five DQs: Alarms, Security Equipment, Surveillance Equipment; Handguns and

Handgun Ammunition; Sirens and Emergency Warning Lights; Body Armor and Confiscated Weapons; and Communications Equipment and Supplies. The first general objective (above) is accomplished in the report on the Equipment Priorities Questionnaire (EPQ).

# 1.2. Sample Design

Although the objective of ATD is to serve all types of law enforcement agencies, this particular study was purposely limited to police departments as the largest single group of law enforcement agencies with identifiable equipment needs. No attempt was made to survey correctional institutions, courts, forensic laboratories, or special police agencies such as park police, harbor patrols, or university police. The computerized directory of approximately 14,000 police agencies, compiled and maintained by LEAA's Statistics Division, provided the population from which the sample was drawn. Care was taken to exclude the double listings that existed for some agencies. (Details of the selection process are given in app. B of the Equipment Priorities Questionnaire.)

The final list of 12,842 departments was cross-stratified by LEAA geographic region and department type by the mutual agreement of NBS and NILECJ. The assignment of states to regions and the seven departments types chosen for study are shown in table 1.2-1.

The breakdown of the population of police departments by cross-strata is exhibited in table 1.2-2. As can be seen from the table, there were no townships in regions 4, 6, 7, 8, 9, and 10. Almost 63 percent of the departments were city police, 43 percent having 1-9 full-time officers. County departments comprised about 24 percent of the population. By region, the smallest (region 10) contained only 3.4 percent of the police departments, while region 5, the largest, had 22.5 percent. The variation in the number of departments in a cell (region/department type combination) was even greater than that across the strata, i.e., the number of departments in each cell ranged from 0 to 1,470.

The considerations discussed in the previous paragraph led to the sampling plan discussed briefly below. All of the state departments and the 50 largest city departments were included in the sample and were asked to complete all 6 DQs, i.e., they were sent the entire package of 7 questionnaires. For the remaining cells the variation in cell size presented a problem: If the same fraction of the entire population was to be selected from the members of each cell, a constant sampling fraction small enough to make the total sample manageable would yield too few sample units in small cells. To solve this problem, a fixed sample of 30 police departments/cell was chosen, wherever possible, resulting in a different sampling fraction for each cell. A fixed sample size of 30 departments/cell was chosen to facilitate the equitable distribution of the 6 DQs. This plan resulted in sending the Patrol Car DQ to 536 departments.

The departments were selected randomly within each cell, from the total cell population, each department (other than the states and 50 largest cities) receiving 2 DQs. Thus, in cells having 30 sample units, the Patrol Car DQ was mailed to 10 departments; cells having fewer sample units were allocated proportionally fewer Patrol Car DQs. Table 1.2-3 presents the total sample for the Patrol Car DQ by region and department type. Once the sample was selected, each sample unit was assigned a unique seven-digit identification number, coding region, type, and questionnaire assignment.

LEAA Police Equipment Survey of 1972, Vol. I: The Need for Standards-Priorities for Police Equipment.

TABLE 1.2-1. Stratification categories

Department types	LEAA geographic region
State police	1 = Conn., Maine, Mass., N.H., R.I., Vt.
County police and sheriffs	2 = N.J., N.Y.
City with 1-9 officers	3 = Del., Md., Pa., Va., W. Va., D.C.
City with 10-49 officers	4 = Ala., Fla., Ga., Ky., Miss., N.C., S.C., Tenn
City with 50 or more officers 1	5 = Ill., Ind., Mich., Ohio, Wis., Minn.
The 50 largest U.S. cities <sup>2</sup>	6 = Ark., La., N. Mex., Okla., Tex.
Township departments	7 = Iowa, Kans., Mo., Nebr.
	8 = Colo., Mont., N. Dak., S. Dak., Utah, Wyo.
	9 = Ariz., Calif., Nev., Hawaii
	10 = Alaska, Idaho, Oreg., Wash.

Does not include the 50 largest cities.

By population, U.S. 1970 census.

TABLE 1.2-2. Number of police departments by region and type

	LEAA region										
Department type	1	2	3	4	5	6	7	8	9	10	Total

Questionnaires were actually sent to 56 state police departments since there were 6 state departments which listed 2 police agencies without reference to a common central agency. However, only one set of questionnaires was accepted from each of these six states as described in vol. l, app. B, p. B-2.

<sup>&</sup>lt;sup>1</sup>Questionnaires were actually sent to 56 state police departments since there were 6 state departments which listed 2 police agencies without reference to a common central agency. However, only one set of questionnaires was accepted from each of these six states.

Township departments exist only in regions 1, 2, 3, and 5.

#### 1.3. Questionnaire Administration

From the beginning of the project, it was evident that stringent control would be required in administering the questionnaires to ensure a high rate of response. Computer-stored daily status records were input via a teletypewriter for each sample department. In general, the following procedure was used:

- (1) Each department in the sample was mailed a letter, signed by the director of NILECJ, addressed to the head of the department. This letter introduced the survey and requested cooperation.
  - (2) About 1 week later, the questionnaire packages were mailed.
- (3) Departments not returning the questionnaires within a month were identified by the computer and were sent a self-return post card requesting information as to the status of the questionnaires. Departments not receiving the questionnaire package were sent another; those not returning the post card were placed on a list for telephone follow-up.
- (4) About a month and a half later, departments with which no contact had been made were called by telephone.
- (5) Returned questionnaires were reviewed for completeness and either coded for keypunching or filed for telephone callback to supply missing data or to resolve ambiguities.

Considerable effort was expended to ensure a high rate of response, and this effort was rewarded with an 85 percent response for the Patrol Car DQ, and between 80 percent and 85 percent for each of the other questionnaires. In the course of the survey more than 70 percent of the sample departments were contacted at least once by telephone. More than 1,300 phone calls were made by the survey team.

The distribution of respondents (departments which returned usable Patrol Car DQs) is exhibited in table 1.3-1. The highest percentages of response were from the states and larger cities (89-94%), while counties and townships had the poorest response rates (under 70%).

Township departments exist only in regions 1, 2, 3, and 5.

# 1.4. Development and Design of the Patrol Car DQ

The survey plan and questionnaire design (of all seven questionnaires) evolved over a 12-month period. During this time, the survey team consulted at length with NILECJ equipment experts, LESL program managers, and equipment manufacturers. In addition, the officers and administrators of about 40 police departments served as consultants and/or as respondents for pretests of various versions of the questionnaires.

The Patrol Car DQ, in its final form, is reproduced in appendix A. This DQ asked respondents to describe their general use of patrol cars, their purchasing practices, the types of options and accessories they usually select, the types of equipment they store in their patrol cars and their need for standards. The questionnaire was limited to general topics because: (1) It was not possible, considering the scope of the present survey, to explore in a detailed manner all of the complex components, accessories and systems normally found in these vehicles, and (2) it was felt that the general data gathered in the present effort would provide important direction for research in the development of standards, the main objective of the survey.

# 1.5. Characteristics of Subsample Groups

The EPQ of the LEAA Police Equipment Survey requested data from each department about population served, physical size of jurisdiction served, type of jurisdiction, number of full- and part-time officers, approximate total, equipment, and personnel budgets during 1971, and activities handled by the department.

Table 1.5-1 presents a partial tabulation, by department types, of the responses to a checklist of 30 typical police activities by the respondents to the EPQ. (The EPQ respondents include, but are not limited to, the respondents to the Patrol Car DQ. See sec. 1.2.). The activities most frequently checked by all departments were: (1) serve traffic and criminal warrants (88%), (2) traffic safety and traffic control (87%), and (3) communications for own department (87%). The activity with the most consistent level across all department types was that of emergency aid and rescue, ranging from 60 percent (cities with 50+ officers) to 67 percent (counties).

Higher percentages of state and 50 largest city departments than of other department types were handling certain of the 30 activities. For example, all of the 50 largest city departments responding, and 98 percent of the responding state departments said that their departments provided police training for their own department. These compare to 68 percent for all responding departments. All of the responding 50 largest cities said that they handled criminal investigation in their own departments. This compares to 86 percent of the total sample of departments. Although only 13 percent of the departments overall had crime laboratories, 73 percent of the 50 largest cities and 55 percent of the states had them.

Counties appeared to be the only department type with significant responsibilities for custody and detention for more than 1 week. Seventy-eight percent of those departments had custody/detention up to 1 year, as compared with 22 percent of all responding departments.

Tables 1.5-2 and 1.5-3 present summaries of descriptive data by department type and LEAA region, respectively. As can be seen from the column for "Annual equipment budget" (table 1.5-2), there was a wide range of expenditures among different department types: from a mean of about \$10,000 for cities (1-9) to almost \$2.7 million for the 50 largest cities. Overall, equipment budgets represented somewhat over 10 percent of the annual total budgets.

The mean number of part-time officers was based on those respondents having part-time officers in their departments. Of the 45 responding from the 50 largest cities, only 6 had part-time officers, including 1 city which had nearly 6,000. Thus, the mean value of 1,115 for this department type is somewhat misleading. It should be noted that

TABLE 1.5-1. Activities handled by at least one-third of the departments by department type, and percent of total departments having each activity

7	2,379	112,094	84	9	1,220,385	121,001	983,696
8	6,346	83,023	54	9	728,549	77,081	568,463
9	4,218	372,094	281	46	5,743,553	728,801	4,528,692
10	3,580	104,877	69	9	1,253,894	82,198	1,011,604

the category part-time officers included officers described as auxiliary, volunteer, reserve, school-crossing guard, dispatcher, summer, special agent, traffic supervisor, posse, and cadet. All of these classifications were counted in the part-time officer category since it has different meanings for different departments.

Variations in these descriptive averages by LEAA region (table 1.5-3) were considerably smaller than variations by department type. Regions 1 and 8 had smaller budgets than the others primarily because each had only 1 of the 50 largest cities.

### 2. QUESTION BY QUESTION DISCUSSION

#### 2.1. Advice to the Reader

In reading section 2, certain points should be kept in mind:

- (1) This report is not an evaluation of any of the equipment described or discussed within it. It is a presentation of information and opinions of a stratified random sample of police departments given in response to a specific set of questions. It does not, in any way, reflect objective testing of any equipment by the National Bureau of Standards.
- (2) The report reflects only what police departments were willing and able to say in response to a specific set of questions. In most cases, no attempt was made to verify the accuracy of the information given or the level of sophistication of the respondent.
- (3) Each discussion begins with the presentation of the question that appeared in the questionnaire, and in most cases the choices supplied, if any, set off in bold face type. However, the reader is cautioned to become familiar with the questionnaire sent to sample departments (see app. A) and to evaluate the data in terms of the exact questions asked.
- (4) The text tables that appear in section 2 are almost never the complete tables that were tabulated for that question. Data categories for text tables may have been collapsed from the full table, or certain categories of interest may have been singled out for fuller discussion. Appendix B contains the complete tables from which the text tables were extracted. Text tables have been numbered after the question number (e.g., the text tables for Question 6A would be numbered 6A-l, 6A-2, etc.). The tables in appendix B are also numbered the same as question number, in the same manner. In some cases, tables that appear in the appendix B will not have been discussed at all in the text.
- (5) Data in the text of this report are usually presented by nearest whole percent of the group under consideration. In appendix B, the data are usually presented by number of respondents and percent. Because of statistical limitations imposed by the

sample sizes used in this study, the reader is cautioned to be wary of assigning importance to percentage differences of less than 5 percent when percentages are based on the total number of respondents, and to percentage differences of less than 10 percent when percentages are based on one of the subsample groups, (e.g., a particular department type or region). No statistical tests of significance are reported.

- (6) Data were always tabulated by each of the choices supplied, if any, in the questionnaire. Any "other" choices written in by the respondents were also tabulated and/or recorded verbatim. In most cases, the numbers of respondents giving a specific "other" response do not reflect the numbers of respondents who might have marked that choice if it had been one of those provided. Therefore, in most cases, this report lists or gives examples of "other" responses, but does not present numbers or percents of departments giving that response. For those questions for which choices were not provided in the questionnaire, coding categories were developed after approximately one-fourth of the questionnaires had been returned.
- (7) The following convention has been adopted in the report to designate the four city department types:

City with 1-9 officers=city (1-9)

City with 10-49 officers=city (10-49)

City with 50 or more officers=city  $(50+)^2$ 

The 50 largest cities=50 largest<sup>3</sup>

In table headings this same convention has been used.

- (8) Questions which asked departments to identify manufacturers of their equipment were asked in this manner only to make the question clearer; not to evaluate a manufacturer's product.
- (9) In an attempt to make this report more readable, the main topics of the questionnaire have been reordered in the report; the discussion of the findings does not follow the order of the questions. To find the discussion of a particular question quickly, consult the Contents or the List of Tables.
- (10) When the subsample groups are discussed (e.g., "counties said..." or "cities (1-9) said...") the reference is to the responding departments from one of the sample strata. It is particularly important to note that when the text or tables refer to "all departments" or "all responding departments," the reference is to all responding departments from the sample described in section 1.2. This sample was not proportional to the total population of police departments, and although it is possible to do so, the data in this report have not been weighted to allow direct extrapolation to the total population. (See app. B, p. B-1.)

## 2.2. Discussion

# 2.2.1. Characteristics of Respondents

# a. Rank/Title of Respondents

All of the questionnaires in the LEAA Police Equipment Survey were mailed to the chief (or highest official) of the department with a request that the questionnaires be directed to the person or persons within the department who were best qualified to answer the questions.

In general, the Patrol Car DQ was filled by officers with high rank. In 63 percent of the smallest city departments, the questionnaire was completed by the chief of the department; in township departments, 52 percent were filled in by the chief; and in cities (10-49), 49 percent of the patrol car questionnaires were filled in by the chief. As

<sup>&</sup>lt;sup>2</sup>Excluding the 50 largest U.S. cities.

By population, 1970 U.S. Census.

the size of the city department type increased, the percentage of chiefs completing this questionnaire decreased. In the larger cities, greater percentages of respondents were captains and lieutenants.

In county and state departments too, relatively high ranking officers filled in the patrol car questionnaire: in 47 percent of the state departments the questionnaire was completed by either a captain or a lieutenant; in 63 percent of the county departments the form was answered by the sheriff or deputy sheriff.

In about one-fourth of the state (23%) and 50 largest city (26%) departments the questionnaire was completed by a person with some title that was not a police rank. Usually these persons were fleet personnel or other civilians in charge of patrol car maintenance or purchase.

# b. Number of Years of Law Enforcement Experience of Respondent

In general, the respondents to the patrol car questionnaire had been in law enforcement work for several years when they answered the questionnaire. In 51 percent of the 449 responding departments the responding officer had more than 15 years of experience in law enforcement. Eighty-four percent of the total had 6 or more years of experience. Only 5 percent of all respondents had less than 3 years of such experience. (In the questionnaire, space was provided for the person who filled in the questionnaire and for two persons who may have helped fill in the questionnaire. Only the information from the primary respondent was included in the tabulation.)

More than 48 percent of the respondents from every department type had more than 10 years of experience in law enforcement. State departments and the two groups of largest city departments had the highest percentages of respondents with lengthy police service.

TABLE i. Title of respondent to patrol cars DQ by city types and township

			Depart (in		
Rank/title of respondent	City (1-9)	City (10-49)	City (50+)	50 largest	Township
Chief	63	49	22	4	52

More than 25 years	21	11	11	16	13	17	13				

#### 2.2.2. Need for Patrol Car Standards

1. What two general systems or aspects of the patrol cars used by your department need standards most? (Mark X by 2 of the Following)

Cooling system

Braking system

Collision capacity

Transmission system

Suspension system

Restraint system

Convenience of equipment & controls

Engine

Other (specify)

Each department had a chance to "vote" twice in reply to this question. In the few cases in which a department marked three choices, all three were counted because there was no way to distinguish the first two.

Across all respondents, braking system and stability and control were chosen by about one-third of the departments (36% and 33% respectively). The other patrol car systems that were said to be in need of standards by at least 20 percent of all respondents were: engine (24%), convenience of equipment and controls (22%), and cooling system (21%). These five most chosen systems/aspects are presented below by department type. (See table 1.)

The most interesting aspect of the department type breakdown was the relative consistency among the seven department types in the systems they selected as needing standards most. This consistency was striking because, as will become apparent in the following discussion, there was a great deal of difference in the ways the different department types used their patrol cars and in the options and modifications they required to transform a regular automobile into a patrol car.

Table 1. Aspects or systems of patrol cars said to need standards most, by department type

				Dep	artment typ	e		
Aspect	All departments	City (10-49)	State	50 largest	Township	City (1-9)	City (50+)	County
Braking system Stability and	36	43	40	39	34	33	33	32
control	33	29	38	35	41	33	28	35
Engine	24	28	26	9	21	29	24	25
Equipment/control								
convenience	22	27	17	15	31	32	13	17
Cooling system	21	18	32	24	10	21	14	28

# 2.2.3. Numbers and Types of Patrol Cars

2.A. How many of the following types of patrol cars do you now have in your department?

Full size 2-door Full size 4-door Intermediate size 2-door

Intermediate size 4-door Station Wagon Compact

In the questionnaire, examples were given of each of the size designations listed above. When respondents listed both marked and unmarked patrol cars, both were counted. It is possible that some departments did not include unmarked cars in their answers. Since the question asked specifically for numbers of patrol cars, most departments were assumed to have excluded auxiliary police vehicles not used for patrol purposes.

The great majority (84%) of all patrol cars currently in use by responding departments were full size 4-door models. About 9 percent of the total were intermediate size 4-door models, which were used relatively more by counties than any other department type. Only 1 percent were compacts. (See table 2A-1.)

A total of 46,562 patrol cars was reported by the 449 responding departments—an average of 104 patrol cars per department (excluding 4 departments which gave no answer). This average is a misleading one, as will be shown below, since the 47 state department responses accounted for more than half (27,403) of the patrol cars reported by the total respondents; and the 50 largest cities (46 departments) accounted for an additional 31 percent (14,541) of the patrol cars reported. (See table 2A-2.)

Table 2A-1. Proportions of full size 4-door and intermediate size 4-door patrol cars, by department type

Model				Departm (in			
	State	County	City (1-9)	City (10-49)	City (50+)	50 largest	Township

50 largest	321	50	16,055
Township	4	1,574	6,296
Estimated total U.S	. patrol cars		159,327

The mean number of patrol cars within each department type varied generally with the size of the department as indicated by numbers of full-time sworn officers<sup>4</sup> with one exception: State police departments had many fewer officers per patrol car than any other department type. (See table 2A-3.)

Using these averages, it appears that state police departments had approximately one patrol car for every 1.5 officers. In contrast, the 50 largest cities had approximately 1 patrol car for every 8 officers. The ratios for the other department types fall between these two figures.

Using the figures discussed above, it was possible to estimate the total number of patrol cars that were in use during 1972. If the mean number of patrol cars reported by each department type is multiplied by the total population of departments of that type, the sum of these subtotals is an estimate of patrol cars in use by all departments in the United States. (See table 2A-4.)

This estimate of approximately 160,000 patrol cars in use in the United States should probably be considered a minimum estimate. The calculations were based on the total number of departments listed in LEAA's computer file. The LEAA Statistics Division has estimated that between 5 and 10 thousand more small, part-time departments may exist that were not listed on the LEAA tape. (See table 2B-1.)

<sup>&</sup>lt;sup>4</sup>Data for average number of full-time sworn officers per department type were drawn from the Equipment Priorities Questionnaire of the LEAA Police Equipment Survey.

Table 2B-1. Percent of departments with use for a compact patrol car

	Use for co	for police use? No answer	
Department type	Yes	No	don't know
City (50+)	39	59	2
City (1-9)	35	65	0
City (10-49)	31	68	1
50 largest	28	72	0
Townships	28	72	0
Counties	22	76	1
States	13	85	2
All department types	29	69	1

Table 2B-2. Reasons why departments would use compact (or smaller) patrol cars specially designed for police use

Per who said "yes" to	ho said "yes" to the need for compact patrol cars 1			
45	Economy			
23	For special purpose use			
17	Handling/maneuverability			
12	Not need big engine/car			
8	Refer to design, not size			
6	Comment/caveat, not reason			
6	Other			
10	No answer			

Respondents could give two reasons, percentages add to more than 100.

# 2B. Would it be of any use to your department to be able to buy standard compact (or smaller) cars that were specifically designed for police use?

Why, or Why Not?

Although compacts made up only 1 percent of patrol cars being used by responding departments, more than one-quarter (29%) of the departments said they would have use for a compact or smaller patrol car. State departments less often expressed a need for compacts than did other department types.

### 2B. (If "Yes") Why?

Forty-five percent of the departments which said that compact patrol cars would be useful for police work gave economy as their reason (e.g., they would cost less, get better gas mileage, have cheaper maintenance, etc.) and 23 percent said that compacts would be useful for special purposes (e.g., for detectives, for the chief's car, for stakeouts, etc.). (See table 2B-2.)

## 2B. (If "No") Why not?

The majority of the 449 respondents (312 or 69%) said that they did not think it would be of any use to their departments to be able to buy standard compact or smaller cars that were specially designed for police use. Most of the reasons for saying "no" related to the belief that compacts would be generally too small for police needs: Too small for officer comfort and/or convenience (20%), too small for prisoner and/or passenger transport (16%), too small for necessary equipment (8%), and too small or too light in general (11%). Another fairly large group of respondents said they thought compacts would be unsuitable as patrol cars because they thought current models did not perform as well (16%), were not as safe (8%), and were not as durable (8%) as larger cars. Objections such as these might not necessarily be relevant if the car were, in fact, specially designed to be a patrol car. (See table 2B-3.)

TABLE 2B-2. Reasons why departments would not use compact (or smaller) patrol cars specially designed for police use

Percent of the 312 departments ho said "no" to the need for compact patrol cars 1					
20	Too small for officer comfort/convenience				
16	Too small for passenger/prisoner transport				
16	Roadability, stability, performance				
12	Satisfied with present car				
11	Too small/light in general				
8	Too small for necessary equipment				
8	Not suitable for all purpose use				
8	Not as durable as larger car				
8	Not as safe as larger car				
8	Other				

Respondents could give two reasons, percentages add to more than 100.

#### 2.2.4. Use of Patrol Cars

3. On the average, about how many hours is one of your patrol cars in use during a typical day?

**Under 4 hours** 

4-8 hours

9-16 hours

17-24 hours

There was great variation in the average number of hours of daily patrol car use among the seven department types. In general, city departments of medium size and larger (10 or more officers) had the highest average daily use of patrol cars. (See table 3.)

Only a few of the smallest and medium sized cities had patrol cars in use less than 9 hours per day, and about 80 percent of all large city departments (with 10 or more officers) said their patrol cars were in use 17 or more hours per day.

State departments and counties reported lower average daily use of patrol cars than did cities. More than one-fourth of the state and county departments reported that, on the average, a patrol car in their departments was in use only 4-8 hours per day.

TABLE 3. Average daily patrol car use by department type

Department type		e daily hours by percent o		
	17-24 hours	9-16 hours	4-8 hours	Under 4 hours
50 largest	80	20	0	0
City (50+)	80	19	0	0
City (10-49)	79	18	3	0
City (1-9)	62	30	2	5
Township	52	34	14	0
County	17	47	29	7
State	6	68	26	0

The small percentage of state departments (6%) reporting patrol cars in use for more than 16 hours a day as compared to departments in the larger cities (80%) appears to be directly related to the answers to Question 2A: State departments averaged about 1 patrol car to each 1.5 full-time sworn officers while the 50 largest cities had an average of 1 patrol car for each 8 officers.

# 4. On the average, how many different officers drive one patrol car in a day?

One

Two

Three

More than three

Larger city departments tended to have more different drivers per patrol car per day than did smaller city departments; and city departments, in general, reported more drivers per car than either state or county departments. For example, 66 percent of the state departments reported only one driver per car per day, while 93 percent of the 50 largest cities said that each patrol car had three or more different drivers each day. The differences between the state and county departments and the city departments in this aspect of patrol car usage is again consistent with the general differences in patrol car utilization reported in Questions 2A and 3. (See table 4.)

Table 4. Number of drivers per patrol car per day, by department type

	Average number different drivers each day (by % of departments)					
Department type	One	Two	Three	More than		
State	66	28	4	2		
County	51	25	18	7		
City (1-9)	12	20	45	23		
Township	10	17	55	14		
50 largest	4	2	52	41		
City (50+)	1	10	64	27		
City (10-49)	0	4	61	34		

# 5. How long is an officer's shift in your department?

Under 4 hours 4-8 hours 9-12 hours Over 12 hours

Although most departments reported an officer's shift to be 4-8 hours, one-fourth of the departments reported a shift of 9-12 hours. State police (64%) and county police departments (53%) most often had officers working shifts of more than 8 hours. (See table 5.)

Comparing these responses to those for Question 3 ("About how many hours is one of your patrol cars in use during a typical day?") it appears that most state departments were using a patrol car for one shift only and that city departments were using a patrol car for at least three shifts.

TABLE 5. Length of officers' shifts, by department type

	0	th of officer % of departn	
Department type	4-8 hours	9-12 hours	12+ hours
City (10-49)	91	9	0

50 largest	78	20	0
Townships	72	14	10
City (1-9)	61	34	4
County	46	31	22
State	36	62	2

### 6. What determines when your patrol cars are replaced?

Mileage? (If "yes," What mileage?)
Years of use? (If "yes," How many years?)
Other? (If "yes," Please specify.)

Departments were asked to indicate whether their patrol cars were replaced on the basis of the number of miles on the car, the age of the car, or other factors. About half (51%) of the respondents said that patrol car replacement was based on only one of these three factors, and the other half selected some combination of the three. About two-thirds (64%) selected the age of the car (alone, or in combination with other factors) and almost two-thirds (61%) selected mileage (alone, or in combination) as a criterion for deciding when to replace the car. About one-third of the sample indicated other criteria (in addition to, or instead of, mileage or age) such as: General condition of the car, budget/administrative policy, the fact that repair costs had become too high, or the fact that the car had been in a major accident. (See table 6-1.)

Almost all state police (94%) used mileage (alone, or in combination with other factors) in determining when a car was to be replaced. Small city departments (less than 10 officers) most often reported that they considered the number of years the car had been is use when making their decision. (See table 6-2.)

Of those departments using mileage as one of the criteria for patrol car replacement, about two-thirds replaced the cars when they had over 60,000 miles and about one-third replaced them when they had between 40,000-60,000 miles. Few departments replaced cars with less than 40,000 miles.

Table 6-1. Mileage and years of use as criteria for patrol car replacement, by department type

	Mileage	(by % of a	Years of u departments)	ise
Department type	Mileage in combination with other factors	Only mileage on car	Years in combination with other factors	Only years of use
State	94	36	47	6
50 largest	74	9	63	9
County	68	17	65	14
City (10-49)	58	27	62	32
City (50+)	55	18	58	27
Townships	52	10	62	24
City (1.9)	39	6	80	40
All department types	43	18	40	24

Table 6-2. Of those which used mileage in replacement decisions (61% total, n=272) percentages replacing patrol cars at each mileage level, by department type

Department type	40,000- 60,000 miles	Over 60,000 miles
City (50+) [n=46]	43	57
City (10-49) [n=52]	42	52
City (1-9) [n=32]	37	59
State [n=44]	36	64
50 largest [n=34]	26	71
Townships [n=15]	13	73
County [n=49]	12	84
All departments	32	65

Table 6-3. Of those which used age in replacement decisions (64% total, n=286) percentages replacing patrol cars at each age level, by department type

	Number of years to replacement					
Department type	l year	2 years	3 years or more			
City (10-49)	54	39	7			
Township	44	39	17			
City (50+)	35	46	14			
City (1-9)	24	39	37			
50 largest	10	38	50			
State	5	45	50			
County	4	36	55			
All departments	27	40	31			

Of those departments (64% of the respondents) which used the age of the car as one of the criteria for determining patrol car replacement, 40 percent replaced their cars every 2 years. States, counties and departments in the 50 largest cities more often reported using their cars for 3 years before replacement than did other department types. (See table 6-3.)

7. About what percent of all the miles driven by all the patrol cars in use in your department is at each of the following speeds?

25-30 miles/hour with many stops 30-50 miles/hour with many stops 35-50 miles/hour with few stops

50-70 miles/hour
Over 70 miles/hour
Other (please specify)

This question was designed to elicit approximate percentages from each department for each of the speed/type responses provided. Average percentages for each department type were calculated from these answers. Nine percent of the 449 respondents placed an "X" in one of the spaces rather than a percentage. Telephone calls were made to about half of these "indefinite" respondents, and it was determined from these calls that almost all of these respondents were indicating "100 percent" by marking a single response. In the tables, these 41 responses were counted as "100 percent" to the choice marked. (See table 7.)

The responses of the city departments to this question were very similar to one another and were different from the responses of state, county and township departments. The mean percentages for all 301 city departments showed that 84 percent of the driving by city departments was at speeds less than 50 mph with many stops (59% at 25-30 mph and 25% at 30-50 mph). Little driving was done by city departments at the higher speeds (5% at 50-60 mph; 2% over 70 mph) or in areas where it was possible to travel without frequent stopping (8% at 35-50 mph with few stops).

State departments reported most of their driving to be at high speeds and to have few stops. State departments said that about 64 percent of all their driving was at speeds of 50 mph or more. The mean percentages compiled for county departments were more evenly distributed among the five speed ranges than those for any other department type. About 35 percent of all county driving was said to be at speeds of 25-50 mph with many stops; about 19 percent was 35-50 mph with few stops, and about 37 percent was at speeds of 50-70 mph. The mean percentages for township departments showed that most of their driving occurred at speeds between 25 and 50 miles per hour (89%). A small number of departments (n=15, 4%) reported other kinds of driving. Most of these responses were "idling" or "less than 25 mph."

Table 7. Mean percentages of total driving time expended in each speed/type category, by department type

	Mean percentage of the total driving done in that department type						
Speed/type	City (50+)	City (1-9)	City (10-49)	50 largest	Township	County	State
25-30 mph, many stops	63	59	59	54	23	13	4
30-50 mph, many stops	26	25	22	28	41	22	10
35-50 mph, few stops	6	6	8	8	25	19	22
50-70 mph	4	5	6	6	8	37	51
Over 70 mph	1	2	2	2	2	7	13

8A and B. Please tell us how well your patrol cars usually perform with regard to (A) Control and Handling, and (B) Braking at each of the following speeds.

Under 30 Miles per Hour 30 to 70 Miles per Hour Over 70 Miles per Hour

The majority of departments rated both the control and handling and the braking of their patrol cars satisfactory or better at all speeds. Both of these performance characteristics were given lower ratings at higher speeds: More than half of the departments rated both control and braking excellent at speeds under 30 mph while only 10 percent of departments rated these characteristics excellent at speeds over 70 mph (and about one-fourth of the total respondents rated these characteristics poor at over 70 mph). (See table 8A and B-1.)

The majorities of departments within all seven department types also gave better ratings to control and handling at lower speeds. State police and townships more often gave ratings of excellent at lower speeds than did the other department types. (See table 8A and B-2.)

Overall, and within the seven department types, the ratings given for patrol car braking were similar to the ratings of control and handling. Only at speeds of over 70 mph was there a tendency for braking to be rated poor. This increase in poor ratings was contributed mostly by state departments; only 6 percent of the state departments said patrol car control and handling was poor at speeds over 70 mph; but 26 percent of state departments said braking was poor at those higher speeds. Note that state departments spend a greater proportion of their driving time at higher speeds than any other department type (see preceding discussion of Question 7).

TABLE 8A and B-1. Ratings given to patrol car control and handling and patrol car braking at various speeds

		Percent of	all departme	nts giving tha	t rating		
	Exc	ellent	Satisf	actory	Poor

9A. On the average, how long does it take an officer to become accustomed to the controls and instruments of a new patrol car?

Less than a day

More than a day, less than a week

More than a week, less than a month

More than a month

9B. On the average, how long does it take an officer to become accustomed to the handling and performance of a new patrol car?

Less than a day

More than a day, less than a week

More than a week, less than a month

More than a month

Almost all responding departments (92%) reported that it took less than a week to get used to the controls and instruments in a new patrol car. Fewer departments (74%) felt that it was possible to become accustomed to the handling and performance in this time period. About one-fifth of the departments said it took more than a week to get used to the handling and performance of a car, while only 7 percent felt it took this long to become familiar with the instruments. (See table 9A and B.)

TABLE 9A and B. Time needed by officers to become accustomed to a new patrol car, by all respondents

Time	Controls and instruments	Handling and performance			
	(by % of departments)				
Less than a day	41	20			
1 day to 1 week	51	54			
l week to 1 month	7	20			
More than 1 month	1	2			

10. About how many miles per gallon of gas do your patrol cars get?

Less than 8 miles/gallon

8-11 miles/gallon

12-15 miles/gallon

More than 15 miles/gallon

Ninety percent of the responding departments said their patrol cars got less than 12 miles/gallon of gasoline. Seven-tenths of the departments got between 8 and 11 miles/gallon, cities and townships more often reported getting less than 8 miles to a gallon (17%-37%) than did counties and states (6-7%). Almost all state departments (94%) reported getting 8-11 miles/gallon. (See table 10.)

TABLE 10. Miles per gallon of gasoline per patrol car, by department type

Miles/gallon	Department type (by %)								
	All department types	City (50+)	50 largest	City (10-49)	Township	City (1-9)	County	State

# 2.2.5. Patrol Car Features and Options

11A. When your new patrol cars come from the manufacturer, what changes or additions are made for your department (either by you or your dealer)? (X Each Item That Applies)

(For the choices supplied, see table 11A-1)

Police departments indicated that they, or their dealers, were making many changes to the manufacturers' basic models in order to adapt them to patrol use. In addition to the 12 more common changes listed in the questionnaire for check-off, 29 percent of the respondents listed at least one other item which did not appear on that original list.

Table 11A-1. Percentages making each change in manufacturers' basic models, by all respondents

Accessory/change	Percent of all departments <sup>1</sup> [n=449]
Install siren	98
Install mobile radio	98
Install P.A. system	75
Install bar flashing lights	69
Install spotlights	61
Install gun racks	56
Install bubble lights	54
Install mounting racks	51
Install barrier between seats	43
Install trunk racks	38
Special engine changes	2
Remove chrome	0
Other	29

<sup>&</sup>lt;sup>1</sup> Percentages add to more than 100 percent since each department could mark each choice that applied.

Townships and larger city departments (more than 10 officers) reported more additions than did states, counties and cities (1-9). The most common changes made, according to all respondents, were installations of sirens (98%), mobile radios (98%), P.A. systems (75%), and bar flashing lights (69%). Table 11A-2 highlights the results of this question.

Many other changes were specified by the departments. Because mention of these items was scattered across respondents, the percentages are not presented. The general categories of other additions/changes are listed below:

- ° Special tires
- ° Writing desk
- ° Seat covers/floor mats
- ° Interior trunk release
- ° Radar installation
- ° Remove door/window handles
- ° Disconnect interior lights
- ° Map/interior light
- ° Wiring
- ° Electronic device to compute speed from time and distance

- ° Fuel changeover system
- ° Fire extinguisher mount
- ° Console/controls for lights/sirens
- ° Push bumpers
- ° Baton/flashlight holder
- ° Rear flashing lights
- ° Grille lights
- ° Flashing headlights
- ° Painting/decals

Table 11A-2. Percentages of all departments and ranges of percentages within department types making each accessory/change

Accessory/change	All departments	Lowest department type	Highest department type
Siren	98	Township=93	City 1-9=100
Mobile radio	98	County=94	City 50+=99
P.A. system	75	City 1-9=60	50 largest=85
Bar flashing lights	69	State=47	City 10-49=87
Spotlights	61	State=23	Township=79
Gun racks	56	State=34	City 10-49=69
Bubble lights	54	City 10-49=43	50 largest=72
Mounting racks	51	State=17	City 10-49=67
Barrier between seats	43	State=17	50 largest=61
Trunk racks	38	State=26	Township=52
Special engine changes	2	State, County=0	Township=7
Remove chrome	0		Township=3
Other	29	County=17	State=60

<sup>&</sup>lt;sup>1</sup>Percentages for total and for each department type add to more than 100 percent since each department could mark each item that applied.

# 11B. What problems do you have making these changes to the "Manufacturer's regular model"? (For the items you marked in Question 11A.)

This question was left open-ended to allow respondents to write in any problems they had had with converting standard automobiles into police patrol cars. Slightly more than half (57%) of the departments listed some problems; the others wrote in "no problems" (30%) or left the question blank (13%).

Codes were developed to handle the answers given by departments. The problems most commonly encountered by departments while making changes in standard automobiles are shown in table 11B.

# 12. Which of the following options were included the last time your department bought patrol cars? (X Each Item That Applies) (For choices supplied, see table 12-1.)

Of the 14 options listed for check-off, all but 3 (bulletproof glass, locking gas cap, and bucket seats) had been specified by at least one-third of the respondents when they last bought patrol cars. Six of the 14 had been specified by more than 80 percent of the

Table 11B. Problems in converting standard automobiles to patrol cars for police use, by all respondents

Problem	Percent of all departments [n=499]
Lack or room/appropriate place to install/mount	17
Must modify car/buy new equipment to install	13
Year-to-year design/model changes cause problems	11
Takes time/adds costs/depreciates vehicle	10
Lack of appropriate support to install/mount	6
Wiring problems	6
"Other"	5
Availability of mechanics	1
Slight problems, unspecified	6
None, no problems	30
No answer	13

Percentages, except for "No answer," "None, no problems," and "Slight problems," may represent double counting since each department could give two answers.

Table 12-1. Percentages of departments which specified each option the last time they bought patrol cars

Option	Percent of all departments [n=449]
Automatic transmission	95
8-cylinder engine	94
Power steering	90
Power brakes	86
Disc brakes	84
Heavy duty suspension	83
Air conditioning	59
Tinted glass	52
Interior hood release	49
Light in trunk	45
Interior trunk release	37
Locking gas cap	10
Bucket seats	4
Bulletproof glass	0
Other	30
No answer	1

<sup>&</sup>lt;sup>1</sup>Percentages add to more than 100 percent since each department could mark each option that applied.

TABLE 12-2. Options specified by 60 percent or more of the departments in each department type

	Department type							
Option	All departments	State	50 largest	City (10-49)	City (50+)	City (1-9)	Township	County
Automatic transmission	95	98	100	98	95	95	90	87
8-cylinder engine	94	98	100	94	93	95	93	85

Tinted glass	52	70	-		67		-	
Interior hood release	49	81	63					
Light in trunk	45	66					-	
Interior trunk release	37	60					62	

responding departments. In addition, 30 percent of the departments listed at least one "other" option that they had asked for the last time they bought patrol cars.

As can be seen in table 12-2, state police had specified more options than the other department types. The top six options on the list (automatic transmission, 8-cylinder engine, power steering, power brakes, disc brakes and heavy duty suspension) were chosen by 80 percent or more of the departments in every department type except counties and cities (1-9), where the lowest percentage observed was 68 percent.

Thirty percent of the 449 departments specified at least one other option in addition to those listed on the questionnaire. Heavy duty battery, alternator or electrical system was volunteered by 8 percent of departments which listed other options, a striking rate since the item was not originally listed. Other options listed were:

- ° Special tires/tire size
- ° Special cooling system
- ° Heavy duty seats
- ° Special gauges or dials
- ° Special interior light
- ° Rear window defroster
- ° AM radio
- ° Special seat covers/upholstery
- ° Spotlight
- ° Power windows
- ° Special engine
- ° Floor mats/carpet
- ° Special traction device
- ° Special mirrors
- ° Special hand throttle
- ° Special suspension
- ° Heavy duty shock absorbers
- ° Fuel transfer kit
- Special gearing
- ° Split-bench front seat

## 13. About how much does a new patrol car cost without trade-in? (Include costs for changes, specified by you, which the dealer makes.)

Under \$2500 \$2500-2999 \$3000-3499 \$3500-3999 \$4000-4499 \$4500-4999 \$5000 or more

About half (51%) of the respondents said new patrol cars for their departments cost less than \$3,500. The majority (72%) of all departments and the majority of departments in every department type said new patrol cars cost between \$3,000 and \$3,999. (See table 13-1.)

Departments with the smaller fleets of patrol cars (counties, townships, cities (1-9), and cities (10-49)) had higher percentages of departments paying more than \$4,000 for their patrol cars than did the larger cities and state departments. (See table 13-2.)

TABLE 13-1. Amount paid for new patrol cars by responding departments

Price of new patrol cars	Percent of all departments
Under \$3,000	12
\$3,000-3,499	39
\$3,500-3,999	33
\$4,000-5,000	13
Over \$5,000	1

TABLE 13-2. Amount paid for new patrol cars, by department type

Department type	Price range (by % of department type)							
	\$4,000 or more	\$3,000- 3,999	Under \$3,000	No answe				
Township	24	62	13	0				
County	23	55	13	8				
City (1-9)	19	69	12	0				
City (10-49)	16	73	10	2				
State	9	91	0	0				
City (50+)	5	83	12	2				
50 largest	4	74	22	0				

### 14. What equipment is normally carried in your patrol cars? (X Each Item That Is Carried in Nearly Every Patrol Car)

(For choices supplied, see table 14.)

More than half of the departments routinely carried in their patrol cars the following equipment items: clipboard, fire extinguisher, flares, first aid kit, shotgun, batons, blankets, extra ammunition and brief case. Further, more than one-fourth (29%) of the departments said they carried at least one item of equipment in addition to those in the questionnaire. (See table 14.)

State police departments carried more equipment items in their patrol cars than other department types. State police more commonly carried riot equipment (77%) than other department types (18-28%). Two-thirds, or more, of the 50 largest cities carried the first 6 items listed in table 14, but less than half of them carried any of the other items.

A variety of items was carried by the responding departments in addition to the items listed in the questionnaire:

#### "Other" equipment items

- ° Pry bar/wrecking bar
- ° Flashlight
- ° Measuring tape/wheel
- ° Oxygen/resuscitator
- ° Rope
- ° Dog equipment
- ° Rain gear/bad weather gear
- ° Axe
- ° Shovel
- ° Traffic cones/reflectors
- ° Lug wrench
- ° Snow chains
- ° Life ring/life jacket
- ° Jumper cables
- ° Broom
- ° Report forms/books
- ° Radar
- ° Equipment box
- ° Tow chain
- ° Water or gasoline container
- ° Portable barricades
- ° High visibility clothing
- ° Tear gas/gas mask
- ° Jack
- ° Spare tire
- ° Splint
- ° Tape recorder
- ° Rifle

Table 14. Equipment routinely carried in patrol cars by 50 percent or more of the departments in a particular department type and percentage of total respondents carrying this equipment

	Department type										
Equipment item	All departments	Township	City (1-9)	County	State	City (10-49)	City (50+)	50 largest			
Clipboard	84	97	95	86	85	83	72	70			
Fire extinguisher	83	100	76	81	96	86	83	70			
Flares	81	100	87	81	91	77	76	67

Camera and film	32				55						
Hand-held radio	30										
Riot equipment	28				77						
Fingerprint kit	19				-						
Field detection kit	6				-						
Other	29				57						

## 14A. What problems have you had, if any, storing in the car the equipment that is usually carried in your patrol cars? (Name the Item of Equipment and Describe the "Problem" in the Spaces Provided.)

More than one-third (39%, n=175) of all respondents listed at least one problem associated with storing equipment items in their patrol cars. The answers given by these departments were tabulated in three ways: (1) number of departments citing a specific item of equipment as having a problem associated with it; (2) number of departments citing a specific problem; and (3) a cross-tabulation of specific equipment item with a specific problem. This third tabulation will not be discussed because the numbers in each equipment item/problem group are too small to draw any generalizations. (See table 14A-1.)

The shotgun was the only item presenting equipment storage problems for a significant percentage (16%) of the respondents. These respondents, however, had differing storage problems; no one problem was cited by more than 2 percent of the respondents. (See table 14A-2.)

The larger city department types (50 largest, 50+) most often reported problems storing equipment; counties least often reported such problems. The shotgun was the item of equipment most frequently listed as a storage problem by all department types except townships (in which 14% listed first aid kits) and counties (in which no single item was listed by many departments). Within department types, the shotgun was most often mentioned as a storage problem by medium sized cities (10-49 officers, 50 or more officers). (See table 14A-3.)

The storage problems listed by departments were coded into 11 general categories. Most of the responses fell into three of the categories: no appropriate place to store, item gets dirty or damp, or not enough room to store in place desired.

T<sub>ABLE</sub> 14A-1. Equipment items named as being associated with storage problems, by all responding departments

Equipment item	Percent of all departments (n=449)
Shotgun	16
First aid kit	7
Flares	6
Trunk items in general	6
Fire extinguisher	5
Communications equipment	4
Blankets	3
Storage box	2
Equipment in general	2
Batons	2
Camera and film	2
Clipboard	2
Hand-held radio	1
Extra ammunition	1
Briefcase	1
Riot equipment	1
Oxygen tanks	1
Flashlight	1
Dog equipment in general	1
Spare tire/spare tire mounts	1
Siren	1
None/no problem	24
No answer	37

Percentages, except for "None" and "No answer," may represent double counting since departments could list up to four equipment items/problems.

TABLE 14A-2. Departments which had no storage problems, and departments which had problems storing shotguns, by department type

Department type	Have had no problems in storing equipment ("no problems," "no answer") (in %)	Listed shotguns as an equipment storage problem		
County	75	4		
City (1-9)	67	11		
State	66	9		
Township	66	7		
City (10-49)	57	27		
City (50+)	50	25		
50 largest	48	15		

Table 14A-3. Storage problems listed as being associated with storing equipment items in the patrol cars

Storage problem	Percent of all departments [n=449]
No appropriate place to store (general)	18
Gets dirty or damp	16
Not enough room to store in place desired	14
Difficult to store/mount (general)	9
No appropriate place to store that is	
also accessible	6
Not enough support to install/mount	2
Year-to-year design/model changes	2
Problems with equipment, not storage	2
Threatens safety	1
Problem unspecified	1
None/no problems	24
No answer	37

Percentages, except for "None" and "No answer" may represent double counting since each department could cite up to four equipment items/problems.

15. Which of the following features do you think should be on all of your patrol cars? (Check Each Item That Applies Regardless of Whether You Know It Is Now Available or Not.)

(For choices supplied, see table 15 or 15A-1.)

15A. Which three of the above features (items checked in Question 15) would be most important to have on all of your patrol cars?

Twenty-three features were listed in the questionnaire for check-off. Of those, 17 were felt to be essential in all the patrol cars of more than half of the responding departments. The feature receiving the lowest percentage (noise soundproofing) was still felt to be essential to one-third of the departments. Since none of the features listed was standard on current automobiles, these answers imply that current model cars probably require many optional features and modifications in order to make them well suited for patrol use.

A comparison of the answers to Questions 15 and 15A (see table 15 and 15A-1) revealed that there were relatively large differences between patrol car features the departments would like to have on all of their cars and those they thought to be most essential. Those features that were said to be among the three most important (Question 15A) were not always the ones that received the highest percentages of votes (Question 15). For example, although 76 percent of the respondents said that interior map lights should be on all their patrol cars, only 1 percent of them said that this was one of the three most important features among the choices supplied. (See table 15 and 15A-1.)

The features felt to be among the three most important by 20 percent or more of the responding departments were: air conditioning, heavy duty suspension, built-in crash bars, barriers between seats and communications consoles. (See table 15 and 15A-2.)

Among the department types, state police more often placed air conditioning and additional headroom among the three most important features than did other department types. The 50 largest cities and states placed greater importance on heavy duty suspension than other department types.

TABLE 15 and 15A-1. Features which departments said should be on all patrol cars; features chosen as the three most important to have on all patrol cars, by all responding departments

Feature	Total saying it should be on all patrol cars (Question 15) <sup>1</sup>	Total saying it is one of three most important (Question 15A) <sup>2</sup>
Heavy duty suspension	94	38
Interior trunk/hood release	85	7
Air conditioning	85	42
Tinted glass	83	3
Interior map light	76	1
More durable seat springs	72	7
Barrier between seats	_ 72	31
Central door lock	71	10
Better ventilated upholstery	7,1	7
Built-in crash bars	/70	32
Communications console	69	24
Additional headroom	63	14
360° mirror	63	6
Built-in mounting brackets	62	7
Bumpers with push bars	58	6
Built-in shelves in trunk	56	6
Locking gas cap	50	2
Additional legroom	44	5
Larger glove compartment	40	2
Bullet-proof glass	38	10
Fold-out desk in front	37	3
Bucket seats with console	37	8
Noise soundproofing	33	1
Other	22	12

<sup>&</sup>lt;sup>1</sup>Percentages add to more than 100 percent since each department could mark each answer that applied.
<sup>2</sup>Percentages add to approximately 300 percent since each department was allowed three answers.

TABLE 15 and 15A-2. Features chosen among the three most important by 25 percent or more of departments, by department type

Feature	Department type (in %)								
	All departments	State	City (1-9)	City (10-49)	50 largest	County	Township	City	
Air conditioning	42	62	43	42	41	40	38	35	
Heavy duty suspension	38	51	39	30	61	33	38	30	
Built in crash bars	32	34	30	36		33	24	37	
Barrier between seats	31		38	36	30	28	34	35	
Communications console	24		29			31	24	29	
Additional headroom	14	30	-			_			

Twenty-two percent of the responding departments listed at least one other feature that they said should be on every patrol car, and 12 percent of the total said that some other feature was one of the three most important features.

"Other" categories

- ° Power windows
- ° Special tires
- ° Special cooling system
- ° Disc brakes/power disc brakes
- ° Heavy duty electrical system
- ° Larger engine
- ° Special door locks
- ° Special bumpers
- ° Fuel transfer
- ° Special restraint system
- ° Heavy duty transmission
- ° Special built-in equipment
- ° Spotlight
- ° Roll bars in roof
- ° Rear window defroster/defogger
- ° Special storage
- ° Additional room/bigger door in rear
- ° Special suspension
- ° Special traction
- ° Front window vents
- ° Split bench front seat

#### 2.2.6. Maintenance and Repairs

16. What is the average downtime per patrol car per month for service and repair?

Less than 3 days per month

3-5 days per month

6-8 days per month

9-11 days per month

12-14 days per month

More than 14 days per month

The majority of all departments (62%) said they had an average of less than 3 days of downtime per patrol car per month, and 94 percent said they had 5 days or less. The larger city departments (10 or more officers) appeared to be losing more patrol car time to service and repair than the other department types. (see table 16.)

TABLE 16. Days of downtime per patrol car per month, by department type

Days of downtime per month	Department type (in %)									
	Township	City (1-9)	County	State	City (50+)	City (10-49)	50 largest			
Less than 3	79	76	75	72	53	51	37			
3-5	14	23	18	28	39	43	48			
More than 6	3	1	4	0	8	4	13			

17. Listed below are four factors that may be causes of patrol car "downtime." Look over the entire list, and then place an X by the item that most often causes patrol car "downtime" in your department.

Length of time to actually perform the service/repair.

Frequent need for service/repair.

Delay in getting parts.

Shortage of mechanics/repairmen (heavy workload in service facility)

Other (specify)

The responses of the 449 responding departments were about evenly divided among the four causes of patrol car downtime. Among department types, about half of the state police cited delays in getting parts compared to only about one-fourth of the departments as a whole. The largest cities (50 largest, 50+ officers) most often said that a shortage of mechanics was the main cause of their downtime while townships most often reported time to actually perform service/repair. (See table 17.)

The "other" responses to this question were varied, and no categories were developed. Examples of these are "distance from service facility," "poor mechanics," "time for insurance claims," "car not heavy duty enough," etc.

TABLE 17. Causes of downtime in patrol cars, by department type

				Departr (in		ре		
Cause	All departments	50 largest	City (50+)	County	City (1-9)	City (10-49)	State	Township
Shortage of mechanics/								
repairmen	30	43	42	33	29	22	17	10
Delay in getting parts	26	26	22	26	21	22	49	21
Frequent need for service/								
repair	24	22	25	17	27	34	21	10
Time to actually perform								
service/repair	23	15	23	21	20	23	15	59

18. In what three areas does the majority of your patrol car service/repairs occur. (Do not include oil changes and scheduled tune-ups.)

Body work
Brake system
Standard transmission system
Automatic transmission system
Replacement of tires

Front end alignment

Service of air conditioner Electrical system Auxiliary (non-automotive) electrical equipment Rear end maintenance Engine Other (specify)

Two of the choices, engine (56%) and brake system (51%) were selected by more than half of the respondents. Five more of the 11 choices were selected as high service/repair areas by one-fourth or more of the responding departments. (See table 18-1.)

There were considerable differences among the seven department types in the areas they selected as having the highest requirements for service and repair. Table 18-2

TABLE 18-1. The three areas of highest service repair

Service/repair	Percent of all departments [n=449]
Engine	56
Brake system	51
Replacement of tires	45
Front end alignment	38
Electrical system	29
Automatic transmission system	26
Body work	24
Auxiliary electrical equipment	9
Service of air conditioning	6
Rear end maintenance	2
Standard transmission	0
Other	6

Percentages add to approximately 300 percent since departments were asked to select the three major areas.

Table 18-2. The three highest votes (percentages) within each department type for cause of patrol car service/repair

	Department type (in %)							
Service/repair	All departments	State	County	Township	City (1-9)	City (10-49)	City (50+)	50 largest
Engine	56	87	47	52	57	53	59	
Brake system	51	40		-	41	59	63	74
Replace tires	45	-	62	66	62	59	-	
Front alignment	38		62	55			-	-
Electrical system	29	43						-
Automatic transmission	26							43
Body work	24						39	59
Auxiliary electrical								
equipment	9							
Service AC	6							
Rear end maintenance	2							
Standard transmission	0							

<sup>&</sup>lt;sup>1</sup>Each department was allowed to give three answers to this question.

presents the three choices within each department type which received the highest percentages of votes.

These department type differences in service/repair experience may have been a result of the different kinds of driving done (Questions 3 and 7). For example, state departments which did 64 percent of their driving at speeds over 50 mph experienced a higher percentage (87%) of engine service/repair problems than did any of the other department types. On the other hand, the data do not suggest why the smaller departments had higher percentages of departments citing replacement of tires as a major service/repair area (townships, city (1-9), city (10-49) and counties; range=59-66%, states, 50 largest, and city (50+); range=7-25%).

Other interesting trends in the data show that the larger cities had higher percentages of departments saying that the brake system was an area of high concern: City (10-49) = 59 percent; city (50+) = 63 percent; and the 50 largest = 74 percent. In addition, the two largest city types had higher percentages of departments listing body work, and over half of the counties and townships listed front end alignment as a problem area.

# 19. What features of your present patrol cars do you consider dangerous to the occupants, and how are they dangerous? (Name the Patrol Car Features and Describe the Danger in the Spaces Provided Below.)

Codes were developed from the narrative answers the respondents gave to this question. These coded responses were then tabulated in three ways: (1) number of departments mentioning a particular system or aspect of the patrol car as dangerous, (2) number of departments describing a particular danger, and (3) a cross-tabulation of those departments mentioning a specific danger with respect to a specific system or aspect of the patrol car. Each department could list up to four dangerous features/dangers. (see table 19-1.)

Almost half of the responding departments (48%) listed at least one patrol car feature that they felt to be dangerous to the occupants. States and counties least often listed dangerous features; larger cities (more than 10 officers) most often listed them.

Partially because of the open-ended nature of the question, respondents cited a wide variety of dangerous features. Thus, because of the large number of different responses, the percentages for any one feature were uniformly low with the exception of brake system (32% of those listing any dangerous feature). (See table 19-2.)

Using the narrative answers, categories were developed to describe how the features listed were felt to be dangerous. Only three of these categories approached 20 percent of the departments responding to this question: failure or lower performance at high speeds (22%); failure in general (22%), and potential cause of injury during collision (20%). Note, again, that slightly fewer than half of the responding departments did not answer this question and are not included in the tabulation.

The intent of developing these problem categories was for use in cross-tabulation with the dangerous features. However, because only about half the respondents listed any dangerous features, and because there was such a wide variety of both features cited and descriptions of how the features were dangerous, no discussion will be presented of this cross-tabulation, which may be found in appendix B (table 19-3).

Table 19-1. Departments indicating dangerous features of patrol cars, by department type

	Percent of department type			
Department type	Listed at least one dangerous feature	None/no answer		
50 largest	59	41		
City (50+)	56	42		
City (10-49)	54	46		
Township	48	52		
City (1-9)	43	57		
County	38	62		
State	36	64		
All department types	48	52		

TABLE 19-2. Patrol car features listed as dangerous

Dangerous feature	Percent of all departments listing at least one dangerous feature <sup>1</sup> [n=216]
Brake system	32
Suspension system (front and rear)	18
Body eonstruction/strength	15
Restraint system	13
Auxiliary front scat equipment	13
Lack of barrier between the seats	11
Engine performance	9
Doors/door locks	9
Shotgun mount/holder/rack	7
Tires	6
Windshield/windows	6
Lack of erash bars/roof support	6
Scats (front and rear)	5
Rear view mirror/corner post	5
Bumpers	4
Insufficient headroom/legroom	4
Design problem (general)	4
Exhaust system/ventilation	4
Light weight	3
Transmission system	2
Steering wheel/eolumn	2
Spotlight	2
Radio mount/eontrols	2
Wiring	1
Miscellaneous	24

<sup>&</sup>lt;sup>1</sup>Percentages may represent double counting since each department could list up to four dangerous features/dangers.

Problem	Percent of all departments describing at least one danger <sup>1</sup> [n=205]
Failure or lower performance	
at high speeds	22
Failure in general	22
Potential cause of injury during	
collision	20
Decreases control of vehicle	15
Insufficient for purpose	14
Prisoner transport more hazardous	13
Potential cause of injury (general)	13
Interferes with officer duty	13
Failure during collision	13
Stress or wear causes failure	10
Lack of protection (general)	9
Not strong enough (general)	9
Decreases visibility	8
Not enough room (general)	5
Design problem (general)	5
Interfers with driver	4
Not heavy enough (general)	3
Not secured (general)	2
Other	14

Percentages may represent double counting since each department could list up to four dangerous features/how dangerous.

#### 2.2.7. Safety Standards

20. Do you think that separate safety standards are needed for patrol cars? That is, do you think that the safety standards for police vehicles need to be different than the safety standards for cars used by the general public?

Why, or Why Not?

More than three-quarters (78%) of the respondents said there should be safety standards for patrol cars than those for the general public. Most departments within each department type agreed that different safety standards were needed. (See table 20-1.)

Of those who said separate safety standards were needed, the reasons given for this answer generally fell into three categories: 33 percent said that patrol cars, in general, were subjected to different uses than civilian cars, 30 percent said that the reason for this belief was that patrol cars were used in high speed situations, and 26 percent said their reason was the fact that patrol cars get more use than a civilian car.

There was some variation among the seven department types in the reasons they gave for thinking that safety standards for patrol cars should be different than those for the general public. The 50 largest cities (12%) and townships (17%) more frequently mentioned that they had many drivers for the same car than did the other department types (0-5%). States (49%) and counties (49%) more often listed high speed use as a reason for separate standards than did other departments (14-36%). (See table 20-2.)

Table 20-1. Percentages of departments which felt that separate safety standards are needed for patrol cars, by department type

Department type	Yes, separate standards needed	No, separate standards not needed	No answer
City (1-9)	84	12	4
Township	83	17	0
City (10-49)	81	18	1
State	79	21	0
City (50+)	76	22	2
50 largest	74	26	0
County	68	26	6
All department types	78	20	2

TABLE 20-2. Reasons supplied by the 349 departments which said safety standards for patrol cars should be different than the safety standards for cars used by the general public

If yes, why?	Percent of all departments saying yes to Question 20 <sup>1</sup> ·[n=349]	Percentage range among seven department types		
Different use than civilian car	33	41 27	(County) to (City 10-49)	
High speed use	30	49 14	(States, County) to (City 50+)	
More use than civilian car	26	42 14	(Township) to (County)	
Mention specific aspect of system or patrol car	18	38 8	(State) to (City 10-49, Township	
Greater risk, more exposure to accidents	15	26 4	(City 1-9) to (Township)	
Many drivers for same car	4	17 0	(Township) to (State)	
Variety of driving speeds	3	8	(Township) to (County, City 1-9)	
Other No answer	3 8			

Percentages add to more than 100 percent since each department could give two answers to this question.

Ninety departments (20% of all respondents) said that they did not think safety standards for patrol cars should be different than those for the general public. By far the most common reason for believing safety standards for patrol cars should not be different was that departments felt safety standards should apply equally to all cars: (e.g., "everyone is as important to his family as an officer is to his"; "safety standards should apply equally to all vehicles and should provide the maximum amount of protection to all drivers and passengers"; "all vehicles should have all safety features technologically possible"). More than one-third of the departments who said standards should not be different, however, gave no reason for that answer.

Because of the small numbers of departments within the seven department types who said no to this question, the table below will present percentages for the total only. (See table 20-3.)

Table 20-3. Reasons supplied by the 90 departments which said safety standards for patrol cars should not be different from the safety standards for cars used by the general public

If no, why not?	Percent of departments which said no to Question 20 <sup>1</sup> [n=90]
Safety standards should apply	
equally to all cars	37
No need (general)	9
Would cost too much	4
No high speed driving	3
Good driving eliminates need	3
Good maintenance eliminates need	2
Other	7
No answer	39

Percentages may add to more than 100 percent since each department could give two answers to this question.

#### 2.2.8. Comments from Respondents

A comments page was appended to the end of the questionnaire. As might be expected at the end of a rather lengthy questionnaire, the response rate was low. The comment page on the Patrol Car DQ drew responses from 69 of the 449 respondents (15%). These comments were well thought out and, in general, revealed a high degree of concern by the respondents for their patrol vehicles. (See table iii.)

No attempt was made actually to tabulate the comments. They have been retained verbatim, and are available for research purposes (without the information that would identify the particular department). These comments identified two areas of high concern to the departments: the need for, or possibility of, designing a police vehicle specifically for police use; and the need for examination of the currently available "police package" in terms of whether or not it is meeting police needs.

Exempletive responses follow:

We recommend that a special police car be designed and not changed each year. Checker cabs in the past proved successful along these lines. Cars could be designed so new engines could be replaced as needed. Parts could be replaced even if a car was 10 years old. Size of wheels would be standard, year after year.

Police vehicles should be specially designed vehicles because they are intended for special uses. We are putting things rear end first. We are taking cars designed for the competitive civilian and commercial markets and its uses and trying to adapt them for our specialized uses.

...the engine, etc., transmission, and rear end of some model/make cars currently offered in the "Police Package" from our experience give satisfactory service, but we have had generally poor experience with chassis and suspension failure.

Manufacturers should attempt to include the bulk of accessory equipment and electrical terminals for ease in hook-up as standard equipment in their "police-package." Optional factory installed equipment should include: console for radios and storage as well as central location for switches; roll bars and crash bars; frame mounted tow and push bars; and assorted distinctive paint designs for patrol vehicles; compensation of power loss due to antipollution devices; steel plates in back rests of front seat; partition of front and rear seat; electric door locks with provision for emergency manual operation; anti-theft and booby trap devices; reinforced hood, trunk and door panels; bulletproof glass.

Most companies are making police packages for their cars at this time, but inspection of the finished product is poor.

The automobiles produced for use by many departments are generally satisfactory but fail to meet the demands of extended periods of idling or slow moving traffic.

There is a need for a police vehicle to be designed for high performance, based on information and research of law enforcement agencies.

Table iii. Departments supplying additional comments about their patrol cars, by department types

Department type	Percent of that department type supplying a comment
State	15
County	8
City (1-9)	13
City (10-49)	17
City (50+)	22
50 largest	15
Townships	17

#### APPENDIX A

NBS-889 May 1972 OMB 41-F72030 Approval Expires June 30, 1973

U.S. Department of Commerce National Bureau of Standards

DETAILED QUESTIONNAIRE: PATROLCARS

#### POLICE EQUIPMENT SURVEY

Sponsored By:

National Institute of Law Enforcement and Criminal Justice Law Enforcement Assistance Administration U. S. Department of Justice

Directed and Conducted By:

Behavioral Sciences Group National Bureau of Standards Washington, D.C. 20234 Phone: 301-921-3558

NOTE: This questionnaire is included in this document as a supplement to the discussion in the text. It has no other intended use.

INTRODUCTION: The patrolcar is generally one of the most important and most expensive items of equipment in a police department. In talking with police departments, we have been told of the performance, safety, and comfort shortcomings of their current patrolcars. The Law Enforcement Standards Laboratory is beginning its work on writing performance standards for patrolcars. This work can go on only if the Laboratory can find out the needs of police departments throughout the country.

PURPOSE OF THIS QUESTIONNAIRE: The purpose of this "detailed" questionnaire is to get answers from YOU, the user, about the patrolcars you are currently using; the modifications you make to your current cars; and the problems you are having with them. Your answers will be used to help police departments throughout the country solve their patrolcar problems.

#### GENERAL INSTRUCTIONS:

- 1. Fill in the questionnaire completely. Even if you do not have all the information you need "at your fingertips", please make your best effort to supply every answer AS ACCURATELY AS POSSIBLE.
- 2. Answer all questions for YOUR OWN DEPARTMENT. Do not attempt to supply information that might exist in some other department.
- 3. The results of this questionnaire will be at least partially compiled by computer. It is important that you follow directions and answer every question legibly and in the boxes and spaces provided.
- 4. No individual department will be identified in the report of this survey; the results will be published in tabulated form.
- 5. Additional instructions for filling in your answers appear after some questions. Follow the directions given.
- 6. Please PRINT all answers and comments CLEARLY.
- 7. When this questionnaire has been completely filled in; place it, with the other questionnaires sent to your department, in the stamped, addressed envelope supplied. Return all of them to:

Technology Building, A-110 National Bureau of Standards Washington, D.C. 20034

- 8. If you have any questions, write to the above address, or call collect:

  E. Bunten, or P. Klaus
  Phone: 301-921-3558
- 9. Remember that it is only by getting YOUR answers to these questions that it will be possible to begin solving the problems that police have with their patrolcars.

INSTRUCTION: This first question asks you to tell us which systems or aspects of your patrolcars are most important to you IN TERMS OF NEEDS FOR STANDARDS.

By this, we mean: Consider a system or an aspect of the patrolcar IMPORTANT (in terms of need for standards) if it is

- \* something that does not perform satisfactorily;
- \* something that needs improvement to really meet your needs;
- \* something that is excellent on some cars but only fair or poor on others.

Consider the system or aspect UNIMPORTANT (in terms of need for standards) if it is

- \* something that does meet your needs
- \* something that you consider generally unimportant in your patrolcars.
- 1. What two general systems or aspects of the patrolcars used by your department need standards most? (MARK X BY 2 OF THE FOLLOWING)

(10-20) ***	Cooling system
	Braking system
	Transmission system
	Suspension system
	Restraint system (i.e., safety belts)
	Stability and control
	Collision capacity
	Ride and comfort
	Convenience of equipment and controls
	Engine
	Other (Specify)
	Other (Specify)

<sup>\*\*\*</sup>Numbers in parentheses are for computer use only.

#### SECTION II: CURRENT PATROLCAR USE

	now have	in your department?		
	NUMBER	TYPE		
(21-25)		Full Size 2-door		le: Ford Custom,
(26-30)		Full Size 4-door	Impala.)	ury, or Chevrolet
(31-35)		Intermediate Size 2-door		le: Chevrolet Plymouth Satellite,
(36-40)		Intermediate Size 4-door	01 1014 10	
(41-45)		Station Wagon		
(46-50)		Compact	_	le: Chevrolet Nova ick, or Plymouth
2.B.		be of any use to you compact (or smaller) ce use?		
(51)		YesNo		
(52-53)		Why, or Why not?		
3.		verage, about how mar ng a typical day?		ur patrolcars in
(54-57)	Und	er 4 hours		
	4-8	hours		
	9-1	6 hours		
	17-	24 hours		

2.A. How many of each of the following types of patrolcars do you

4.	On the avera	ge, how many o	different off	icers drive	e one patrolcar in a day?
(58-61)	1				
	2				
	3				
	M	ore than 3			
5.	How long is	an officer's s	shift in your	department	t?
(62-65)	U	nder 4 hours			
	4	-8 hours			
	9	-12 hours			
		ver 12 hours			
6.	What determi	nes when your	department's	patrolcars	s are replaced:
(66)	6A. <u>M</u>	ileage?	Yes		ES, MARK X BY ONE OF THE
					OWING)
(67-70)			Under 20,00		
			20,000-40,0		
			40,001-60,0	00 miles	
			Over 60,000	miles	
(71)	6B. <u>Y</u>	ears of use?	Yes	No	(IF YES, MARK X BY ONE OF THE FOLLOWING)
(72-75)			_l year		
			2 years		
			3 years		
			Over 3 year	s	
(76)	6C. <u>o</u>	ther?	Yes	MIG	YES, LIST BELOW WHAT ELSE HT DETERMINE WHEN YOUR
				PAT	ROLCARS ARE REPLACED)
(77-80)	_				
	-				

7.	About what percent of all the miles driven by all the patrolcars in use in your department is at each of the following speeds?				
	PERCENT CONDITION				
(10-12)	25 - 30 miles/hour with many stops				
(13-15)	30 - 50 miles/hour with many stops				
(16-18)	35 - 50 miles/hour with few stops				
(19-21)	50 - 70 miles/hour				
(22-24)	Over 70 miles/hour				
(25-27)	Other (Specify)				
(20 2.)	100% TOTAL				
8.	Please tell us how well your patrolcars usually perform with regard to (A) Control and Handling, and (B) Braking at each of the following speeds: (PUT ONE X ON EACH LINE)				
	A. CONTROL & HANDLING: Excellent Satisfactory Poor				
(28-30)	Under 30 miles/hour				
	30 - 70 miles/hour				
	Over 70 miles/hour				
	B. BRAKING: Excellent Performance is: Satisfactory Poor				
(31-33)	Under 30 miles/hour				
	30 - 70 miles/hour				
	Over 70 miles/hour				
9.	On the average, how long does it take an officer to become accustomed to (A) the controls and instruments and (B) the handling and performance of a new patrolcar? (MARK ONE X IN COLUMN A, AND ONE X IN COLUMN B)				
	A. B.  CONTROLS AND HANDLING AND  INSTRUMENTS IN CAR PERFORMANCE OF CAR				
(34-35)	Less Than a Day				
(36-37)	More Than a Day, Less Than a Week				
(38-39)	More Than a Week, Less Than a  Month				
(40-41)	More Than a Month				

10.	About how many miles per gallon of gas do your patrolcars get? (MARK X BY ONE OF THE FOLLOWING)
(42-45)	Less than 8 miles/gallon
_	8 - 11 miles/gallon
_	12 - 15 miles/gallon
_	More than 15 miles/gallon
11.A.	When your new patrolcars come from the manufacturer, what changes or additions are made for your department (either by you or by your dealer)? (X EACH ITEM THAT APPLIES.)
(46-58)	Install siren
_	Remove chrome
	Special engine changes
_	Install spotlights
_	Install mounting racks
_	Install bar flashing lights
_	Install bubble light
_	Install gun racks
_	Install trunk racks for portable equipment (flares, etc.)
	Install public address system
-	Install barrier between front and back seats
_	Install mobile radio
_	Other (Specify)
_	Other (Specify)
_	Other (Specify)
11.B.	What problems do you have making these changes to the "manufacturer' regular model"? (For the items you marked in Question 11.A.)
(59-60)	
_	
_	
-	
-	

12.	Which of the following options were included the last time your department bought patrolcars? (X EACH ITEM THAT APPLIES)
(61-75)	Power brakes
	Automatic transmission
	Bullet-proof glass
	Light in trunk
	Interior trunk release
	Interior hood release
	Locking gas cap
	Eight-cylinder engine
	Heavy duty suspension
	Air conditioning
	Bucket seats
	Tinted glass
	Power steering
	Disc brakes
	Other (Specify)
	Other (Specify)
	Other (Specify)
13.	About how much does a new patrolcar cost without trade-in? (INCLUDE COSTS FOR CHANGES, SPECIFIED BY YOU, WHICH THE DEALER MAKES.)
(10-16)	Under \$2500 \$4500-\$4999
	\$2500-\$2999 \$5000 or more
	\$3000-\$3499
	\$3500-\$3999
	\$4000-\$4499

	hat equipment is normally carried in your patrolcars? (X EACH TEM THAT IS CARRIED IN NEARLY EVERY PATROLCAR)
(17-31)	Hand-held radio
	Shotgun
	Flares
	First aid kit
	Extra ammunition
	Batons
	Camera and film
	Clipboard
	Briefcase
	Fire extinguisher
	Blankets
	Fingerprint kits
	Field detection kits (Narcotic, alcohol detection etc.)
	Riot equipment
	Other (Specify)
	Other (Specify)
	Other (Specify)
14.A.	What problems have you had, if any, storing in the car the equipment that is usually carried in your patrolcars? (NAME THE ITEM OF EQUIPMENT AND DESCRIBE THE "PROBLEM" IN THE SPACES PROVIDED)
	EQUIPMENT ITEM PROBLEM
(32-35)	a
/26 00)	
(36-39)	b
(40-43)	c
(44-47)	d

	WHETHER YOU KNOW IT IS NOW AVAILABLE OR NOT)
(48-71)	Air Conditioning
	Tinted glass
	Additional headroom
	Additional legroom
	Bucket seats with console between for storage
	Better ventilated uphoistery
	More durable springs in front seats
	Fold-out desk in front seat
	Communications console
	Larger glove compartment
	Barrier between front and back seats
	Built-in storage shelves in trunk
	Noise soundproofing to silence droning of the motor
	Built-in mounting brackets for equipment
	Bullet-proof glass
	Interior map lamp
	Built-in crash bars in hood and doors
	Locking gas cap
	Bumpers with vertical push bars
	Mirrors allowing 360° observation
	Trunk and hood releases from inside vehicle
	Centrally located door lock control
	Heavy Duty Suspension
	Other (Specify)
	Other (Specify)
	Other (Specify)
15.A	Which three of the above features (items checked in Question would be most important to have in all of your patrolcars?
(72-73)	(a)
(74-75)	(b)
(76-77)	(c)

15. Which of the following features do you think should be on all

of your patrolcars? (CHECK EACH ITEM THAT APPLIES REGARDLESS OF

#### SECTION III: SERVICE AND REPAIR

16.	What is the average "downtime" per patrolcar per month for service and repair? (X ONE OF THE FOLLOWING)
(10-15)	Less than 3 days per month
	3-5 days per month
	6-8 days per month
	9-11 days per month
	12-14 days per month
	More than 14 days per month
17.	Listed below are four factors that may be causes of patrolcar "downtime". Look over the entire list, and then place an X by the item that most often causes patrolcar "downtime" in your department.  MARK X BY
	ONE CHOICE
(16-20)	Length of time to actually perform the service/repair
	Frequent need for service/repair
	Delay in getting parts
	Shortage of mechanics/repairmen (heavy workload in service facility)
	Other (Specify)
	Other (Specify)

	repairs	occur.	(Do not	include	oil	changes	and	scheduled	tune-ups.)

### APPENDIX B Data Tables

#### B.1. Advice to the Reader

- (a) The data presented in the following tables resulted from the responses of a stratified random sample (see sec. 1.2) of police departments in response to a specific set of questions (see app. A). These data do not, in any way, reflect objective testing of any of the equipment by the National Bureau of Standards. The reader is cautioned to become familiar with the questionnaire and to evaluate the data in terms of the exact questions asked.
- (b) Tables have been numbered after the question number (e.g., the tables for Question 6A would be numbered 6A-1, 6A-2, etc.). The data are usually presented by number of respondents and nearest whole percentage. Because of the statistical limitations imposed by the sample sizes used in this study, the reader is cautioned to be wary of assigning importance to percentage differences of less than 5 percent when percentages are based on all respondents, and to percentage differences of less than 10 percent when percentages are based on one of the subsample groups (e.g., a particular department type or region). No statistical tests of significance are reported.
- (c) These tables are based on the responding departments from the specific sample selected for this questionnaire. This sample was not proportional to the total population of police departments, and although it is possible to do so, the data in these tables have not been weighted to allow direct extrapolation to the total population.
- (d) In order to extrapolate to the total population from the respondent data presented in this report, use the following procedure: For each department type, multiply the percentage of respondents of a particular department type giving the answer of interest (see B.2 Data Tables, app. B) by the total number of departments of that department type in the population (see table 1.2-2, sec. 1.2); add those seven subtotals; and divide the total by the total number of police departments in the population (table 1.2-2). The quotient of this division will be an estimate of the percentage of all U.S. police departments that would choose the answer of interest.
