INTRODUCTION

The National Institute of Standards and Technology (NIST) is the new name of the Commerce Department's National Bureau of Standards (NBS). NIST was created by the Omnibus Trade and Competitiveness Act signed by President Reagan in August 1988.

NBS was originally established in 1901 to serve as the nation's science and engineering laboratory for measurement technology and research on standards. NIST accepts a broadened role and new responsibilities that will also include the traditional functions of providing the measurements, calibrations, data, and quality assurance support that are vital to U.S. commerce and industry, together with several new programs to support the aggressive use of new technologies in American industry. Because currency of information is so critical to ongoing research, it is essential that there be a solid technical information support facility. The **NIST Research Information Center (RIC)** exists to provide this technical information base by serving as a source for both current and retrospective literature in the fields of activity at NIST.

The areas of research at NIST are constantly changing and the scope of the Research Information Center's collections shift to accommodate these changes. While the core of the collections remains chemistry, computer technology, engineering, mathematics, materials science and physics, other interdisciplinary areas of technology are included.

This edition of NIST Serial Holdings contains not only journals currently received, but also other serials. The majority of the titles listed are held in the RIC collections; however, holdings of the Fire Research Information Services (FRIS) are also included and these are identified by **FRIS** on the line above the holdings statement.

We urge you to read "Guidelines for Use" and note especially the diagrams of the physical layout of the RIC illustrated on pages v-vii. You are invited to send your comments, suggestions, and corrections to Mary Lynn Kingston, Chief, Research Resources Development. Mrs. Kingston can be reached at (301) 975-2809.

GUIDELINES FOR USE

Contents and Arrangement

NIST Serial Holdings includes periodicals, journals, annuals, memoirs, proceedings and transactions of societies, "advances in," "progresses in," and selected conferences and monographs in the collections of the NIST Research Information Center (RIC) and the Fire Research Information Services (FRIS).

Lines below the titles indicate what years and volumes are held and the assigned call number for each title.

The list is arranged alphabetically by title. Titles are as they appear on each serial except for:

1. Articles such as **THE**, **DIE**, or **LA** at the beginning of a title. These are omitted.
2. Proceedings, symposia, transactions, reports, etc., of associations and societies may be listed under the sponsoring agency, for example:

**AMERICAN SOCIETY FOR TESTING MATERIALS.
PROCEEDINGS OF THE ANNUAL MEETING**

3. Letters are substituted for diacritical marks, such as the German umlat ("). Thus, **FUR** becomes **FUER**.

Location of Material

Diagrams of the three floors of the RIC will be found on pages v-vii. The locations for both bound and unbound journals and special collections are indicated. Consult the Table on page viii for interpretation of location information given in the list.

Generally, the most recent years of a journal are unbound and shelved alphabetically by title. These unbound journals are located:

1. In the unbound journal section along the main reading area on the first floor.
2. In the Selected Periodical section. This section, located near the photocopy room on the first floor, houses approximately 80 journals that are of high interest to many NIST staff members. Science is one such title. Only the current year of each title will be found here; earlier years are shelved with the bound volumes. These titles are indicated in the list by **SEL PER**.
3. In one of the RIC's special collections, such as Intergovernmental Affairs. Location codes for these journals are given in the list.

Location information for all journals currently received is posted at the south end of each of the unbound journal stacks.

Earlier years of journals are usually bound and shelved by call number; all years of serials are shelved by call number with the bound volumes. The majority of bound journals and serials are located on the main and mezzanine floors. However, some earlier and less used volumes are located in the basement in the Non-Current Collection (NCC). Location codes for these are given in the list.

Should you experience any difficulty in locating what you need, please ask an Information Specialist. Also inquire for any journals or serials which may have been added to the collection since publication of this edition of NIST Serial Holdings. Most recent additions can be found on the New Title Shelf near the Photocopy Room on the first floor.

INTERGOVERNMENTAL AFFAIRS COLLECTION

The Intergovernmental Affairs Collection (IGA) provides information about the work of Congress, the Executive agencies and regulatory and administrative actions relevant to NIST activities. It is located in the NIST Research Information Center adjacent to the study area on the mezzanine (see diagram on page vii). IGA holdings include the following:

Annotated Code of Maryland
Budget of the United States
Congressional Information Service
Congressional Information Service Index/Annual
Code of Federal Regulations
Congress in Print
Congressional Monitor
Congressional Quarterly
Congressional Record
Decisions of the Comptroller General
Dept. of Commerce Administrative Orders (DAO's)
Dept. of Commerce Organization Orders (DOO's)
Executive Orders, Presidential Proclamations
Federal Register
Montgomery County Code
NIST Administrative Manual
NIST Appropriations Hearings
OMB Bulletins
OMB Circulars
U.S. Code
U.S. Code Annotated
U.S. Code Congressional & Administrative News
U.S. Congress Legislative Calendars
U.S. Congress Proceedings, Hearings, Bills (Microfiche)
U.S. Statutes at Large
Weekly Compilation of Presidential Documents

NIST Technical Publications

Periodical

Journal of Research of the National Institute of Standards and Technology—Reports NIST research and development in those disciplines of the physical and engineering sciences in which the Institute is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Institute's technical and scientific programs. Issued six times a year.

Nonperiodicals

Monographs—Major contributions to the technical literature on various subjects related to the Institute's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NIST, NIST annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NIST under the authority of the National Standard Data Act (Public Law 90-396). NOTE: The Journal of Physical and Chemical Reference Data (JPCRD) is published quarterly for NIST by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements are available from ACS, 1155 Sixteenth St., NW., Washington, DC 20036.

Building Science Series—Disseminates technical information developed at the Institute on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NIST under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NIST administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NIST research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order the above NIST publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.

Order the following NIST publications—FIPS and NISTIRs—from the National Technical Information Service, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NIST pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NIST Interagency Reports (NISTIR)—A special series of interim or final reports on work performed by NIST for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Service, Springfield, VA 22161, in paper copy or microfiche form.
