CODEN: XNBSAV

U.S. GOVERNMENT PRINTING OFFICE WASHINGTON: 1974

Foreword

The National Bureau of Standards, Standards Information Services (NBS-SIS) maintains a reference collection of more than 200,000 engineering and related standards covering the activities of more than 380 U.S. technical societies, professional organizations, and trade associations; U.S. Federal and State governments; and the standards and specifications of the foreign national and international standardizing bodies.

For some time now the National Bureau of Standards has recognized a need for a one source listing of existing standards within the international community. Such a reference source, which provides easy accessibility, is open to a wide range of uses. This Index contains the standards of five international organizations, most of which are nongovernmental. However, future plans are to expand the Index to include many other international governmental organizations such as the Economic Commission for Europe (ECE), the Organization for Economic Cooperation and Development (OECD), the World Health Organization (WHO), and the International Labor Organization (ILO).

It is particularly important to world trade that better communication be developed in the standards area. Serious efforts are underway among nations and among international organizations to harmonize standards so as to provide a consistently competent body of technical specifications that will enhance world trade and not impede its flow by creating non-tariff barriers.

Sophie J. Chumas

This computer-produced Index, based on the Key-Word-In-Context (KWIC) system, contains over 2,700 standard titles of the International Organization for Standardization (ISO), the International Electrotechnical Commission (IEC), the International Commission on Rules for the Approval of Electrical Equipment (CEE), the International Special Committee on Radio Interference (CISPR), and the International Organization of Legal Metrology (OIML).

Key Words: Analyses; International Commission on Rules for the Approval of Electrical Equipment; International Electrotechnical Commission; International Organization for Standardization; International Organization of Legal Metrology; International Special Committee on Radio Interference; recommendations; specifications; standards; test methods.

1. Introduction

This Index of international standards, recommendations, test methods, analyses, and specifications, contains over 2,700 titles. It is a computer-produced Index based on the Key-Word-In-Context (KWIC) system. The standards-writing organizations represented are: the International Organization for Standardization (ISO), the International Electrotechnical Commission (IEC), the International Commission on Rules for the Approval of Electrical Equipment (CEE), the International Special Committee on Radio Interference (CISPR), and the International Organization of Legal Metrology (OIML). The standards of these international organizations have worldwide application and contribute to world progress.

The purpose of this Index is to identify existing international standards for a particular product, the characteristics or parts of products, the safety or performance of products, any related materials, vocabularies, symbols, test methods, analyses, and other aspects of standards. Criteria for inclusion are that an organization be international in scope and that it have standards published in the English language.

Many titles were editorially changed either to include another descriptive term (key word) for better subject identification or to prevent repetitious titles in the text of the Index. However, none of the titles were edited to cause any change in their meaning. Since standards titles as found in this Index are not always exact, for ordering purposes, the designation number should accompany a request. Bibliographic information is available through the Standards Information Services (NBS-SIS) of the National Bureau of Standards, the American National Standards Institute (ANSI), or the issuing organization. Ordering information for the indexed standards may be found under Section 5.

The following indexing guidelines were established for the standards in this Index:

- a. Supplements to standards were indexed only when they carried separate titles in addition to the main title.
- b. Amendments to standards were not indexed.
- c. Date of the original document was used.
- d. When the title contained a word for which

there are two spellings, both versions were usually included, e.g., aluminum, aluminium.

This source of reference, which will be updated periodically, will hopefully be of assistance to users concerned with world trade, metrication, and certification; to developing countries; to U.S. and foreign standardizers; to foreign national, regional, international, and U.S. standards bodies; to manufacturers, engineers, builders and architects; to environmentalists; to consumer-oriented organizations; and to students of the standardization discipline.

2. How to Use the KWIC Index

2.1. Index Entries

An index entry contains four items of information.

Sample Entry (Exact title of standard)

- (1) Std. for Rolling Bearings: Tolerances; Metric Series Chamfer Dimension Limits and Maximum Shaft and Housing Fillet Radius
- (2) (1972)
- (3) ISO
- (4) 582

The first item given is the title of the standard, specification, or recommendation. Generally, the key words found in the title are sufficient to identify the product or article covered; however, in some instances additional descriptive terms have been added to the title to aid in identifying the contents. Over 600 words, which are meaningless for searching purposes, do not appear as key words. Examples are: "and," "for," "general," "method," and "practice." A list of these words appears in Section 5, "Stop List." The second item denotes the year of publication. The third item is the issuing organization, identified by an acronym consisting of five letters or less. The fourth item is the standard number assigned by the organization. Items three and four make up the standard's designation number. This alphanumeric designation is always found in a column next to the right-hand margin of the Index.

2.2. Reading the KWIC Index

The title of each standard can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. Each such permuted title is assigned only one line per key word entry in the Index; therefore, titles longer than one line have been cut by the computer. This truncation is indicated by a virgule (/) at the point where the title was cut.

Sample Entry (The same title in Section 2.1., as it appears in KWIC form, edited and truncated):

imits and Maximum Shaft and Housing Fil/Std. for Rolling Bearings: Tolerances; Metric Series Chamfer Dimension L ISO 582

Occasionally both ends of a title will be truncated. When this condition occurs, the virgule will be omitted. Missing portions of a title can be found by locating in the Index one or more of the title's other key words.

An entry line is read from left to right, beginning after the longest blank space in the line and ending at the designation number. If the longest blank space is not at the beginning of the line, the entry will be continued at the left hand margin of the same line.

3. List of Organizational Names and Addresses

International Commission on Rules for the Approval of Electrical Equipment (CEE) 310 Utrechtseweg Arnhem, Netherlands

International Electrotechnical Commission (IEC) 1, rue de Varembe 1211 Geneve 20 Switzerland/Suisse

International Organization of Legal Metrology (OIML) 11 rue Turgot 75-Paris 9e, France

International Organization for Standardization (ISO) 1, rue de Varembe 1211 Geneve 20 Switzerland/Suisse

International Special Committee on Radio Interference (CISPR) 1, rue de Varembe 1211 Geneve 20 Switzerland/Suisse Secretariat: British Standards Institution (BSI)
2 Park Street
London W1Y 4AA
England

4. Availability of Standards

Standards indexed in this publication are available in the United States from the:

American National Standards Institute (ANSI) 1430 Broadway New York, New York 10018

ANSI, as a National ISO member body, serves as the sole sales agent in the United States for foreign and international standards.

The following National standardizing bodies serve as national representatives for one another. Each acts within its own country as sole sales agent and information center for the standards of the other National standardizing bodies.

Albania: STASH, Bureau de Standardisation aupres de la Commission du Plan d'Etat de la Republique Populaire, D'Albania, Tirana

Algeria: Office National de la Propriete Industrielle, 5, rue Abou Hamou Moussa, B.P. 1021

Argentina: IRAM, Instituto Argentino de Materiales, Chile 1192, Buenos Aires

Australia: SAA, AS, Standards Association of Australia, 80-86 Arthur Street, North Sidney NSW 2060

Austria: ON, ONORM, Oesterreichisches Normungsinstitut Leopoldsgasse 4A-1021 Wien 2
