Disclaimer

This report has been reviewed by the Minerals Management Service (MMS) and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of MMS, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

1. Introduction

This handbook for the Bering Region provides the necessary input data to run the MMS-sponsored coastal zone oil spill model (called Cozoi or Smear). Data are included on (a) shoreline characteristics, (b) oceanographic conditions, (c) meteorologic conditions, and (d) ice conditions. All data were derived from previous studies. In addition to this hard-copy of the data base, a complete set is provided in digital format using a database called R:base.

A generalized location map of the study region is provided in Figure 1. More detailed maps of the study site containing the digitized shoreline as submitted to MMS are presented in Figures 2 through 4.

All enclosed data sets are referenced to segment number and subsegment number. The segments represent the Mineral's Management Service's designation of the shoreline (for example, the Beaufort Sea is divided into 22 segments). Subsegments are individual shoreline lengths (with shoretype number, azimuth, and latitude/longitude coordinates of line beginning and end). Within each segment, shore lengths are numbered sequentially running with the water to the left. Gaps in the subsegment sequence (e.g. 12.128, 12.129, 12.500), indicate where an island begins.

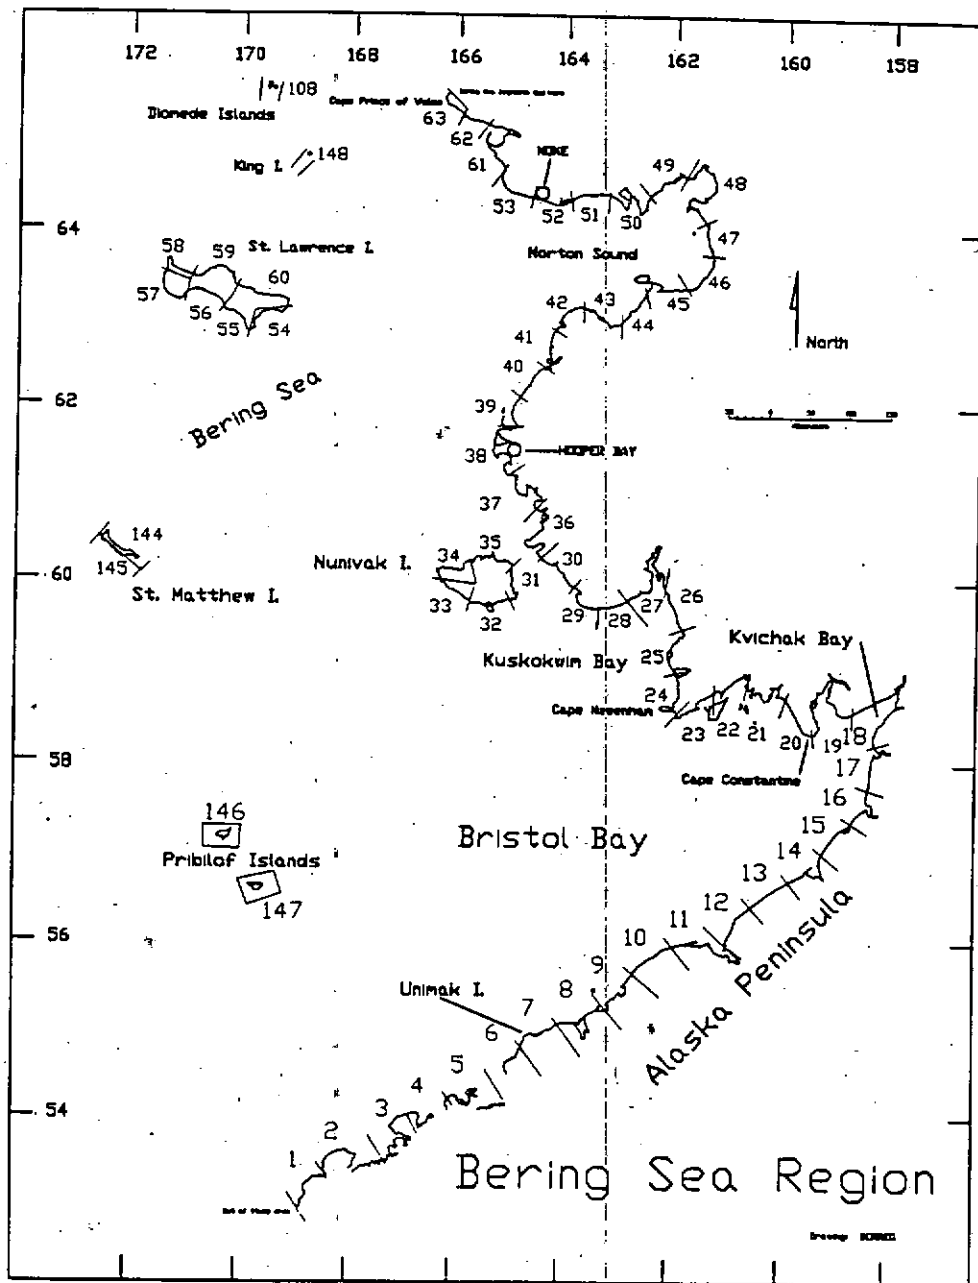

Figure 1. Location of Bering Region segments and digitized shoreline.

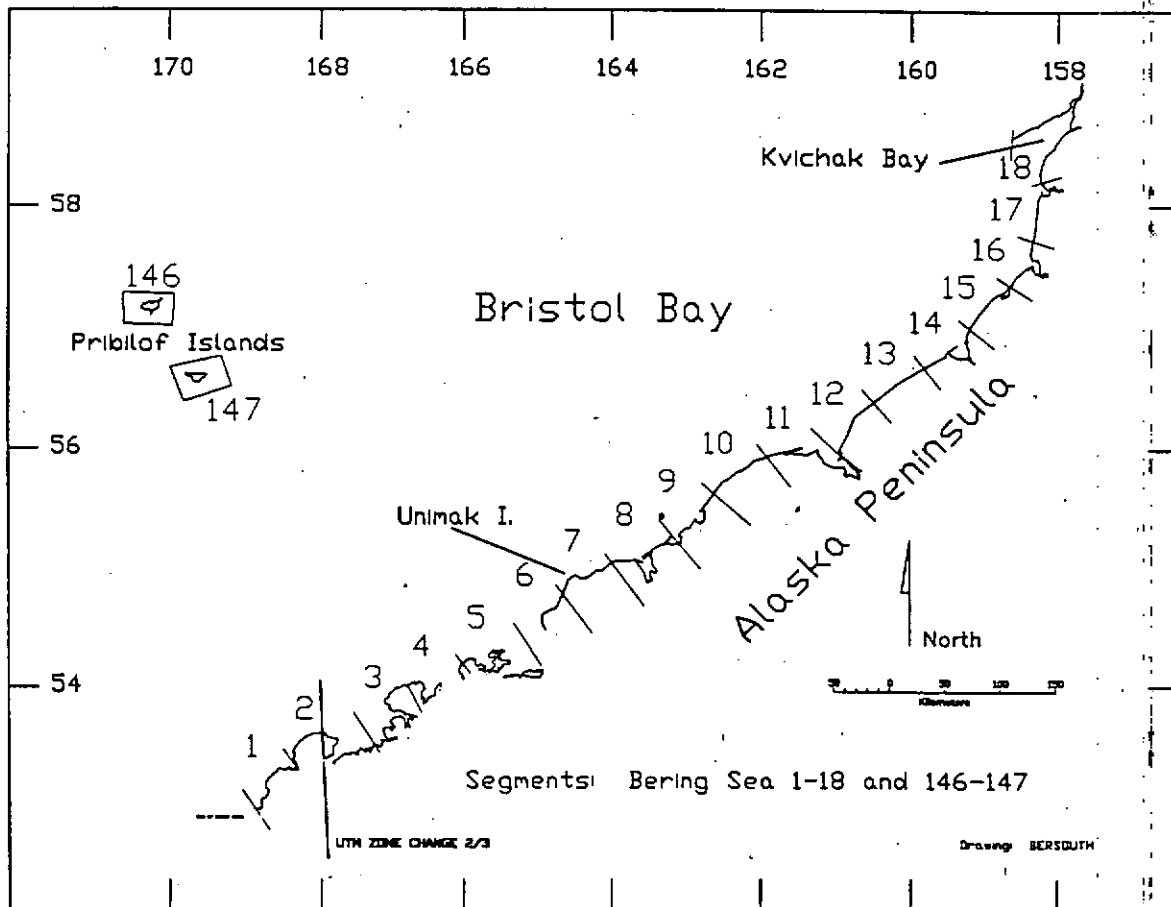

Figure 2. Location of segments and digitized shoreline along the southern end of the study area.

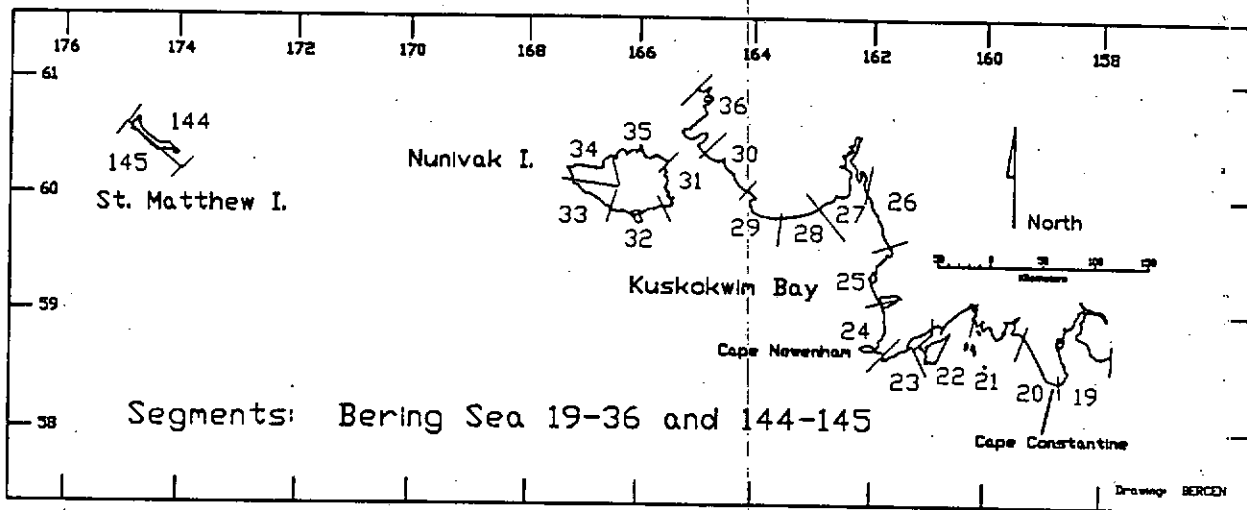

Figure 3. Location of segments and digitized shoreline along the central portion of the Bering Region.

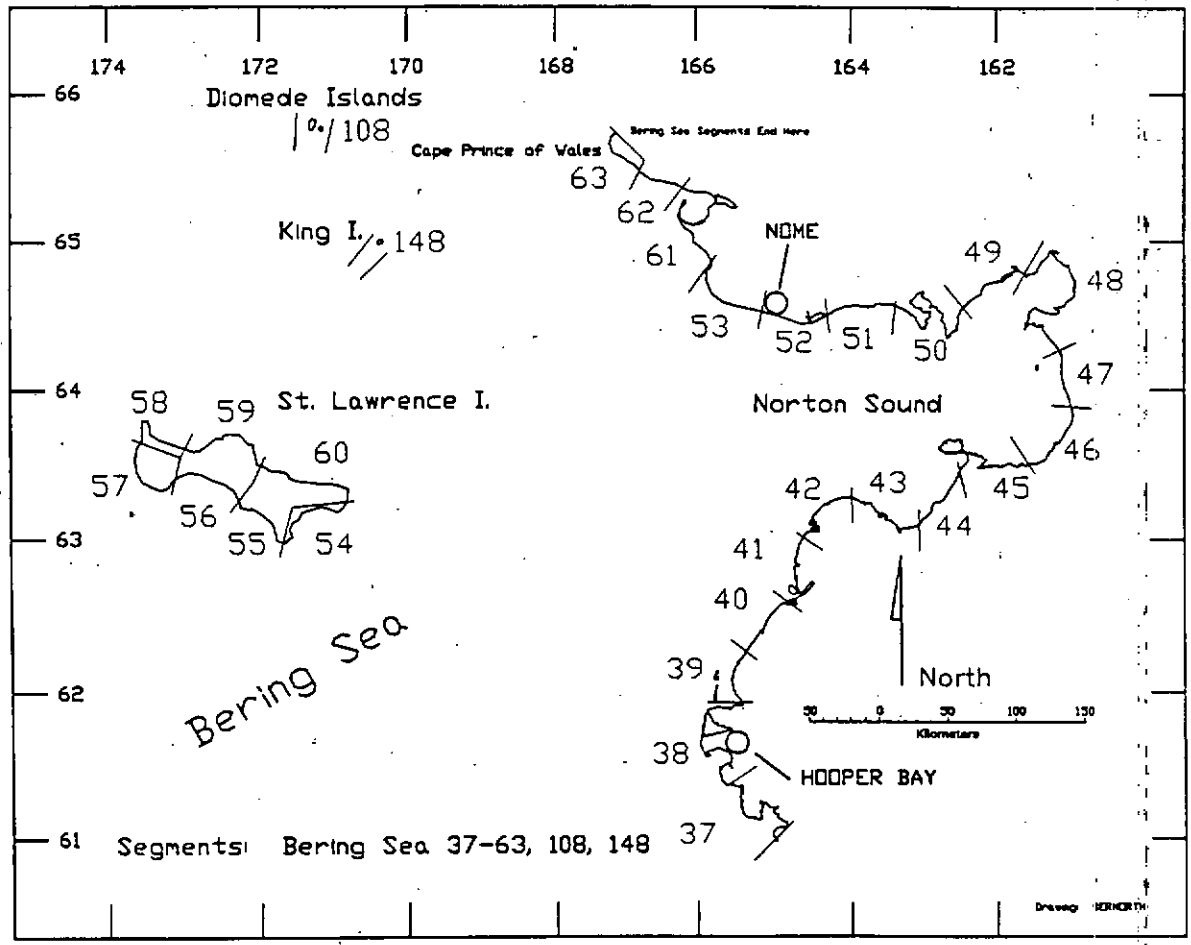

Figure 4. Location of segments and digitized shoreline along the northern portion of the Bering Region.

2. Methods

2.1 Shoreline Characteristics

Shoreline types and offshore depths were digitized from full-sized, 1:63,360 USGS topographic maps. For most of the region, shoretypes were previously determined by two shoreline sensitivity mapping projects: Gundlach et al (1981) for the Norton Sound region and by Michel et al (1982) for the Bristol Bay region. These were sponsored by MMS through the NOAA Outer Continental Shelf Assessment Program. In the Umnak area of the Aleutian Islands where no sensitivity maps are available, the intertidal survey maps of Sears and Zimmerman (1977) were used. For St. Lawrence Island, vertical aerial photographs were used to mark primary shoretype (gravel or rocky shores). For St. Matthew Island (no photographs available) and for the Diomedes, similar primary shoretypes were marked based on topography from 1:250,000 USGS maps.

A summary of the data sources by segment is presented in Table 1. On maps where latitude/longitude notations were omitted or wrongly represented (e.g.m Michel et al, 1982), maps were corrected or shoretype data were transposed onto 1:63,360 USGS topographic maps to maintain an accurate and reproducible shoreline.

The shoreline classes mapped for the Bering Region, and their respective Cozoi classification is presented in Table 2.

Digitization was performed using a 48x60 inch digitizing tablet, and specialized software utilizing an interface (GEO/SQL software) between AutoCad software (the visual image) and R:base (the database where the information is stored). Shoreline characterization was measured in UTM coordinates and transposed to the required latitude/longitude picture via Tralaine conversion software.

Special Lisp routines (the programming language used by AutoCad) were written to capture offshore distances (perpendicular to the subsegment) to various depths as the shoreline was digitized. Offshore depths (60 feet, 30 feet, 10 feet, 3 feet, 1 foot as available) were obtained from the topographic maps. In many cases, interior bays and rivers have no indicated depths and could not be extrapolated from offshore depths.

Table 1. Shoretype data sources for the Bering Region.

Segment number	Source and Approx. Scale
Bering 1-4	Sears and Zimmerman (1977) 1:63,360
Bering 4-36	Michel et al (1982) 1:63,360
46-53, 61-63	Gundlach et al (1981) 1:80,000
54-60	Vertical Aerial Photographs 1:10,000
108, 148	USGS Topographic Maps 1:250,000
146-147	Gundlach et al (1981) 1:250,000

Table 2. Summary of Bering Region Cozoil shoretypes. The MMS shoretypes are 1 = exposed cliffs, 2 = gravel/cobble/boulder, 3 = eroding peat scarps), 4 = sand beaches, 5 = mixed sand and gravel beaches, 6 = tidal flats, and 7 = marshes.

MMS	Sears/Zimmerman	Michel et al/Gundlach et al
1	Bedrock	Exposed/Sheltered Rocky Wave-cut Platform
2	Boulder	Gravel/Cobble
3		Peat Scarp
4	Sand	Fine/Coarse Sand
5	Gravel	Mixed Sand/Gravel
6	Mud	Tidal flat
7		Marsh

In these cases, a 1 foot depth was approximated as adjacent to the shoreline and digitized. In cases where only tidal flats are found between two segments, a 1 foot depth was placed in the middle of the flat. In the enclosed table, the distance to a depth of 60 feet was interpolated to a 20 meter depth distance, 30 feet to 10 meter, 3 feet to 1 meter, and 1 foot to 33 centimeters. In cases where the distance to additional depths was not

measured, the distance of the deeper depth was extrapolated to provide approximate values for shallower depths (e.g., the distance to the 30 foot depth was divided by 3 to provide the distance to the 10 foot depth).

The azimuth or angle of the shoreline with the water to the left measured clockwise from north was captured internally using the angle information determined via Autocad. Rounding occurred in the translation from UTM coordinates captured at the meter level to latitude/longitude at three decimal places. Therefore, distances were recalculated based on the latitude/longitude coordinates to ensure accuracy when used in the Cozoil model.

In the enclosed data set, islands are included although the Cozoil model has not yet been modified to accept them. Islands are commonly indicated by a gap in the number series (e.g., a gap from 12.129 to 12.500 where the island begins). Likewise, a break occurs in the latitude/longitude connections between subsegments.

The conformity in number series and latitude/longitude links was verified using an external Fortran program.

The enclosed Bering Sea Region data set contains information on 10,881 subsegments representing 8,970 kilometers of shoreline. The average line length is 8241 meters, ranging from 46 meters to 11,947 meters depending on the curvature and type of coastline. Represented shoretypes are 1 (1,679 kilometers), 2 (692 kilometers), 3 (910 kilometers), 4 (1,107 kilometers), 5 (1,790 kilometers), 6 (650 kilometers), 7 (2,060 kilometers), 8 (11 kilometers) and 9 (71 kilometers).

2.2 Foreshore and Backshore Characteristics

The characteristics of the Bering Sea shoretypes were determined from original topographic profile data from the Norton Sound mapping project (Gundlach et al, 1981), the Bristol Bay mapping project (Michel et al, 1982), and (3) original profile plots provided by the United States Geological Survey (Sallenger et al, 1978). All data utilized were located within the study area and ties to a specific subsegment.

In the case of a classical beach profile (Fig. 5), the foreshore runs from the low-tide line to the spring-tide berm; the backshore continues from the spring-tide berm to dunes or a scarp backing the beach. In many

cases, a scarp was found directly behind the foreshore, with little to no backshore present. Shoreline characteristics are presented as values obtained at shoreline subsegments and as default values.

The shoreline types characterized in the handbook are rocky shores (type 1), gravel/cobble/boulder beaches (type 2), eroding peat or tundra shores (type 3, classified as "eroding peat shores" in the MMS model), sand beaches (type 4), mixed sand and gravel beaches (type 5), tidal flats (type 6), and wetlands or vegetated shores (type 7, called "marshes" in the MMS model).

Data utilized to derive these characteristics are presented below in the following tables. All data are included in the measured and default characteristics databases.

Figure 4. Typical beach profile with a well-developed berm and backshore. The location of the foreshore and backshore are indicated.

Table 3. Shoretype 1, rocky shores and riprap.

SHORETYPE CHARACTERISTICS FOR INDIVIDUAL SUBSEGMENTS IN THE BERING REGION

BEACH# = Shoreline segment and subsegment number.
 STATION = Station designation from references.
 TYPE = Shoreline type; 1=rocky cliffs, 2=gravel/cobble/boulder beaches
 3=peat scarps, 4= sand beaches, 5=mixed sand and gravel beaches,
 6=tidal flats, 7=marshes, 8=coastal pond or lagoon entrance channels,
 and 9=river channels.
 BKSH (M) = Backshore length in meters.
 BK SLOPE = Backshore slope (rise/run).
 BK ANGLE = Backshore angle in degrees.
 FRSH (M) = Foreshore length in meters.
 FR SLOPE = Foreshore slope (rise/run).
 FR ANGLE = Foreshore angle in degrees.

file: BER_SUM

2.3 Tidal Range and Currents

Tidal ranges and currents were supplied for each coastal segment based on the NOAA/NOS Tide Tables and Tidal Current Tables and model results (Isaji et al, 1988; Liu and Leendertse, 1982, 1986; Spaulding et al., 1986, 1988a,b, 1989; Schwiderski, 1979, 1981). These data were checked against the Alaskan OCS Climatic Atlas data (Brower et al, 1988) for consistency.

2.4 Air/Water Temperature and Sea Ice

Air and water surface mean temperatures and ranges were obtained for each segment from Brower et al (1988). Values were linearly interpolated for each segment between adjacent contours in the OCS Atlas. The presence or absence of sea ice is from the Alaska Marine Ice Atlas (LaBelle et al, 1983).

2.5 Wind Speed and Direction

Mean wind speed and directional standard deviation for each segment were taken from the Alaska OCS climatic atlas (Brower et al, 1988). For each segment, data are reported based on the closest reported station.

2.6 Wind Fetch

The incorporation of fetch was automated. First the endpoints of all subsegments, and monthly mean locations of the ice edge were digitized. Then a directional search algorithm was programmed to search for the first encounter with land or ice, in each of eight directions from each subsegment for each month of the year. Results were selectively cross-checked by hand for accuracy. Maximum fetch is 1000 km, since wave characteristics change little for increases beyond that value.

2.7 Lagoon Characteristics

Lagoons were identified during the subsegment digitization process. Surface areas and breachway dimensions were measured from charts or topographic maps. Area was determined by overlaying a grid, counting squares within the lagoon, and multiplying by the appropriate scaling factor. Both

single- and multiple-entrance lagoons are included. For those with multiple entrances, the area of the lagoon is subdivided in proportion to the size of the entrances. A complete set of entries for "sub-lagoons", composing a single larger lagoon, is associated with each entrance.

Tidal ranges inside the lagoons were taken from the literature, as available. Otherwise, tidal range was estimated based on typical results from a tidal inlet model (Mayor-Mora, 1974).

The general "rules-of-thumb" applied were:

Case 1: $W > D$, then $TR = 2 \times TA$

Case 2: $W < L$ and $L < D$, then $TR = 1.2 \times TA$

Case 3: Intermediate $TR = 1.8 \times TA$

Where: W = breachway width, D = lagoon diameter,
 TR = tidal range in the lagoon
 L = breachway length
 TA = tidal amplitude outside the lagoon

The flushing ratio is computed as TR/h , where h is breachway depth, unless depth d within the lagoon exceeds the breachway depth, in which case the flushing ratio is estimated as TR/d . Freshwater inflow is defaulted to zero. As data become available, they can be entered as required for the mode. For river systems, shoretype 9, only channel width was determined.

3. Database Descriptions

The floppy disk accompanying this report contains all shoreline, oceanographic, and climatic parameters for input into the MMS Cozoil or Smear model. Files are in R:base format. Files 1, 2, and 3 contain 1 table each. File number 4 contains 5 tables.

3.1 BER_DEF?.rbf

Contains default values for shoretype characteristics.

Table: Shoretyp.

Columns:

SHORETYP = shoretype where 1 = rocky shore, 2 = gravel/cobble/boulder, 3 = eroding peat scarp, 4 = sand beach, 5 = mixed sand and gravel beach, 6 = tidal flat, 7 = marsh, 8 = lagoon entrance, and 9 = river channel.

BKSH_(M) = backshore length in meters.

BK_SLOPE = backshore slope (rise/run).

BK_ANGLE = backshore angle in degrees.

FRSH_(M) = foreshore length in meters.

FR_SLOPE = foreshore slope (rise/run).

FR_ANGLE = foreshore angle in degrees.

3.2 BER_TYP?.rbf

Contains measured shoretype characteristics.

Table: Shortype.

Columns:

BEACH# = segment and subsegment number.

SHORETYP = shoretype where 1 = rocky shore, 2 = gravel/cobble/boulder, 3 = eroding peat scarp, 4 = sand beach, 5 = mixed sand and gravel beach, 6 = tidal flat, 7 = marsh, 8 = lagoon entrance, and 9 = river channel.

STATION# = field station number from reference.

BKSH_(M) = backshore length in meters.

BK_SLOPE = backshore slope (rise/run).

BK_ANGLE = backshore angle in degrees.

FRSH_(M) = foreshore length in meters.

FR_SLOPE = foreshore slope (rise/run).

FR_ANGLE = foreshore angle in degrees.

3.3 BER_SHO?.rbf

Contains shoreline characteristics for each subsegment.

Table: Sensitiv.

Columns:

BEACH# = segment and subsegment number.

SHORETYP = shoretype where 1 = rocky shore, 2 = gravel/cobble/boulder, 3 = eroding peat scarp, 4 = sand beach, 5 = mixed sand and gravel beach, 6 = tidal flat, 7 = marsh, 8 = lagoon entrance, and 9 = river channel.

STATION# = field station number from reference.

LENGTH = Length of the shoreline subsegment in meters.

AZIMUTH = Azimuth of the shoreline subsegment measured clockwise from north with the water to the left in degrees.

20M = distance offshore in meters to the 20 m isobath.

10M = distance offshore in meters to the 10 m isobath.

1M = distance offshore in meters to the 1 m isobath.

33CM = distance offshore in meters to the 33 cm isobath.

LLAT1 = latitude for the beginning of the subsegment measured with the water on the left.

LLONG1 = longitude for the beginning of the subsegment measured with the water on the left.

LLAT2 = latitude for the end of the subsegment measured with the water on the left.

LLONG2 = longitude for the end of the subsegment measured with the water on the left.

3.4 BER_CLI?.rbf

Contains wind fetch distance, air and water temperature, ice, wind, tide, and lagoon and river characteristics.

Table: Fetch.

Columns:

BEACH# = segment and subsegment number.
MONTH = month.
N = wind fetch distance (kilometers) from north.
NE = wind fetch distance (kilometers) from northeast.
E = wind fetch distance (kilometers) from east.
SE = wind fetch distance (kilometers) from southeast.
S = wind fetch distance (kilometers) from south.
SW = wind fetch distance (kilometers) from southwest.
W = wind fetch distance (kilometers) from west.
NW = wind fetch distance (kilometers) from northwest.

Table: Temp.

Columns:

SEG# = segment number.
MONTH = month.
AIR_MIN = minimum air temperature in degree C.
AIR_MEAN = mean air temperature in degree C.
AIR_MAX = maximum air temperature in degree C.
WAT_MIN = minimum water temperature in degree C.
WAT_MEAN = mean water temperature in degree C.
WAT_MAX = maximum water temperature in degree C.
SEA_ICE = presence (1) or absence (0) of sea ice.
FAST_ICE = presence (1) or absence (0) of shore-fast ice.

Table: Wind.

Columns:

SEG# = segment number.
MONTH = month.
SPEED = mean wind speed in meters/second.
DIR_MEAN = mean direction from which the wind blows.
DIR-SD = wind direction standard deviation.

Table: Tide.

Columns:

SEG# = segment number.

Columns:

SEG# = segment number.
TIDE_AMP = tidal amplitude in meters.
VELOCITY = tidal current in centimeters/second.
PERIOD = dominant tidal period in hours.

Table: Lagoon.

Columns:

BEACH# = segment and subsegment number.
SUR_AREA = lagoon surface area in square kilometers.
IN_WIDTH = inlet or river width in meters.
IN_DEPTH = inlet depth in meters.
TIDE_RAN = tidal range in meters of lagoon inlet.
FLU_RATI = water flushing over one tidal cycle.
FR_INFLO = inlet freshwater inflow in cubic meters/sec.
CHARGMIN = river minimum discharge in cubic meters/sec.
CHARGMEA = river mean discharge in cubic meters/sec.
CHARGMAX = river maximum discharge in cubic meters/sec.
SHORETYP = shoretype where 8=lagoon entrance and 9=river channel.

4. Acknowledgements

We would like to thank the many people involved in this project. Software support to develop the specific routines to capture shoreline information came from Generation 5, Bill McKenzie, and Marty Rothman. Steve Vincelette completed most of the digitizing and supervised additional digitizers (John McGuin, Jeanne Murday, Harold Osborn, Steve Rake, and Eric Savetsky). Shihshing Feng completed all measurements of lagoons and developed the fortran program to measure wind fetch via the computer. NOAA graciously loaned several sensitivity atlases so that high-quality, photographically reproduced maps could be used for digitizing. Dr. Abbey Sallenger of the United States Geological Survey in St. Petersburg, Florida, is especially thanked for providing copies of original profile plots and notes from the Bering Sea. Dr. Bill Benjey of Minerals Management Service in

MMS SHORELINE CHARACTERISTICS FOR THE BERING SEA REGION, SEGMENTS 1-63, 108, 144-148

BEACH# = Shoreline segment and subsegment number.

TYPE = Shoreline type; 1=rocky cliffs or seawalls, 2=gravel/cobble/boulder beaches, 3=eroding peat scarps, 4=sand beaches, 5=mixed sand and gravel beaches, 6=tidal flats, 7=marshes, 8=coastal pond or lagoon entrance channels, and 9=river channels.

LENGTH = Length of the shoreline subsegment in meters.

AZI = Azimuth of the shoreline subsegment measured clockwise from north with the water to the left in degrees.

20 M, 10 M, 1 M, 33 CM = Distance offshore in meters to the 20 meter, 10 meter, 1 meter, and 33 centimeter isobath, respectively.

LAT1/LONG1 = Latitude and longitude position for the beginning of the subsegment measured with the water to the left.

LAT2/LONG2 = Latitude and longitude of the end of the subsegment.

SHORELINE SEGMENT DATA - BERING SEA REGION

(* = no data)

Printing Date: 06/12/90

LAGOON AND RIVER CHARACTERISTICS - BERING SEA REGION
SEGMENTS 1-63, 108, 144-148

BEACH# = Shoreline segment and subsegment number.
 TYPE = Shoreline type; 8=coastal pond or lagoon entrance channels,
 9=river channels.
 SURFACE AREA = Lagoon surface area in square kilometers.
 Rivers are indicated by 0 for surface area.
 ENTRANCE WIDTH = Inlet or river width in meters.
 ENTRANCE DEPTH = Inlet depth in meters.
 TIDAL RANGE = Tidal range in meters of lagoon inlet.
 FLUSHING RATIO/TIDE = Water flushing over one tidal cycle.
 FRESHWATER INFLOW = Freshwater inflow in cubic meters per second
 (for inlets only).

LAGOON DATA - BERING SEA REGION (*=no data) Printing Date: 03/13/90 Page: 1

MMS TIDAL AND WIND CHARACTERISTICS FOR THE BERING SEA REGION
SEGMENTS 1-63, 108, 144-148

SEG# = Shoreline segment number.
 MON = Month.
 TIDAL AMP = Tidal amplitude or range in meters.
 DOMINANT PERIOD = Dominant tidal period in hours.
 TIDAL CURRENT = Tidal current in centimeters/second.
 MEAN WIND SPEED = Mean wind speed in meters/second.
 Standard deviation is square root of mean wind speed.
 WIND DIRECTION = Mean wind direction and standard deviation.

TIDE/WIND DATA - BERING SEA REGION

Printing Date: 03/13/90

AIR AND WATER TEMPERATURES, AND PRESENCE OF SEA ICE
BERING SEA REGION
SEGMENTS 1-63, 108, 144-148

SEG# = Segment number.

MON = Month.

AIR TEMPERATURE = Minimum, mean, and maximum air temperature in degrees C.

WATER TEMPERATURE = Minimum, mean, and maximum water temperature in degrees C.

SEA ICE = Presence (1) or absence (0) of sea ice.

FAST ICE = Presence (1) or absence (0) of shore-fast ice.

TEMPERATURE/ICE DATA - BERING SEA REGION Date: 03/13/90 Page: 1

MMS WIND FETCH CHARACTERISTICS - BERING SEA REGION
SEGMENTS 1-11

BEACH# = Shoreline subsegment number.
MON = Month. If a month is not listed, the segment is under
ice cover during that month, and wind fetch is zero in
directions.
Data are directional in kilometers.

WIND FETCH (KM) DATA - BERING SEA
