## COLON TO BARBADOS, CALLING AT TRINIDAD.

Atrato	R. M. Tuesday	Mar. 2
Trent	R. M. Tuesday	Mar. 16

The next sailing of the Leyland Line for New Orleans via Kingston, Ja., will be as follows: Steamship *Memphian* about March 6.

The following steamers have recently arrived at La Boca: February 12, *Horda*, collier from Newport News; February 14, *Glacier*, United States supply ship from Callao; February 15, *Ripley*, collier from Newport News; February 17, *Peru*, from Valparaiso; February 18, *San Juan*, from San Francisco; February 19, *Ecuador* from Guayaquil. Departures were: February 18, *Sierre* for Southern ports, and *Huasco* for Valparaiso.

## Concert by the I. C. C. Band.

TOBOGA SANITARIUM, TOBOGA ISLAND.

Sunday, February 23, 1909, at 2:30 p. m.

## PROGRAM

1	March—Old Faithful	Holzman
2	Selection—A Knight for a Day	Hubbell
3	a Intermezzo—Rainbow	Wenrich
3	Southern novelty—Moonlight in Dixie	Clement
4	Waltz—Autumn Smiles	Bagley
5	Medley selection—Hits of the Day	Remick
6	Porto Rican dance—Rosita	Missud
7	Tone poem—Apple Blossoms	Roberts
8	Overture—Raymond	Thomas
9	Patrol—American	McFarland
10	March—Boys of the Militia	Boehlelein

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Hotel Tivoli, Sunday, March 7.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

### THE CANAL RECORD

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Roosevelt on Canal Plans and Work.

*To the Senate and House of Representatives;*

I submit herewith the report of the engineers appointed by me to accompany the ex-Secretary of War, the Hon. William H. Taft, to the Isthmian Canal to look into the condition of the Canal work, and especially to report upon the feasibility and safety of the Gatun Dam project, with a view to deciding whether or not there should be any change in the plans in accordance with which the Canal is being constructed, these plans having been adopted by the Congress. I am happy to report to you that the accompanying document shows in clearest fashion that the Congress was wise in the position it took, and that it would be an inexcusable folly to change from the proposed lock canal to a sea-level canal.

In fact, this report not only determines definitely the type of canal, but makes it evident that hereafter attack on this type—the lock type—is in reality merely attack upon the policy of building any Canal at all. The board of engineers who signed this report are, of all the men in their profession within or without the United States, the men who are, on the whole, best qualified to pass upon these very questions which they examined. I commend to you the most careful consideration of their report. They show that the only criticism that can be made of the work on the Isthmus is that there has sometimes been almost an excess of caution in providing against possible trouble. As to the Gatun Dam itself, they show that not only is the dam safe, but that, on the whole, the plan already adopted would make it needlessly high and strong, and, accordingly, they recommend that the height be reduced by 20 feet, which change in the plans I have accordingly directed.

Every American citizen should feel not

merely gratification, but a very keen sense of pride in the statement made by this distinguished body of engineers as to the way in which the work has been done and in which it is now proceeding. The American people are to be heartily congratulated on everything of importance that has been done in connection with the building of the Panama Canal.

THEODORE ROOSEVELT.

THE WHITE HOUSE, February 17, 1909.

[The full text of the engineers' report is published in other columns.]

#### Reduced Height of Gatun Dam.

The reduction of 20 feet in the height of the dam, authorized by President Roosevelt, will save about 2,600,000 cubic yards of fill, reducing the total fill of the dam to 21,800,000 cubic yards. The top of the dam, as planned by the Consulting Engineers in 1906, was to be 135 feet above sea-level, and the plan as changed will place the top at 115 feet above sea-level, and 30 feet above the normal level of water in Gatun Lake.

#### Taft's Pledge of Support.

The Panama Canal is going to be built and what I want you to do, and what I want every American citizen to do, is to stand by the men who are building it (Voices: "We will do it.") Do not set a fire in the rear; do not distrust the men that are giving up their strength and energy and enterprise to put that great work through. When you have agents who are doing your work, you stand behind them. If you do not you cannot get your work done. The men who do your work are entitled to your help and confidence, and you ought not to allow yourselves to be led astray by buncombe speeches on the floor of the House of Representatives, or by headlines in sensational newspapers, and go back on the men that are doing your work.

I do not care whether you are Democrats or Republicans, you want the work done, and when the army engineers who are doing this work are giving all their time to the carrying out of this work, you are not men to go back on them or to believe every idle story that comes from the mouth of some politician who is seeking to make himself prominent, or to give himself the advertisement of a little unfounded sensational statement.

That work is being done honestly. I know what I am talking about. The Canal will be built, and all the windy opposition that comes merely from a desire to exalt and exploit the man who makes himself responsible will not obstruct it.

I know what the people of the United States want in that regard, and in so far as I have power as the Executive of this country, I am going to push that work, and I am

going to stand behind the men who are doing it.—Mr. Taft in speech at Meridian, Miss., February 13.

#### Power Plants at the Locks.

Six Curtis 1500-K. W. steam turbines, with their accessories, have arrived on the Isthmus and will be installed as soon as the power houses at Gatun and Miraflores are ready to receive them. They were shipped from the Schenectady plant of the General Electric Company in twenty-two carloads, and formed the largest unit turbine shipment ever made from that plant. The accessories include the generators, oil pumps, and all other necessary machinery excepting the vacuum and circulating pumps. The pumps, have been shipped by the Alberger Condenser Company of New York. Twelve boilers, six for each plant, with piping and induced draft equipment, will be shipped by the D'Olier Engine Company of Philadelphia about April 15, and when they arrive on the Isthmus the equipment for the power plants will be complete.

Work on the power houses is being pushed so that the foundations may be ready for the boilers at the earliest possible date. These are the plants that will furnish power for operating the concrete mixing and handling apparatus for constructing the locks at Gatun, Pedro Miguel, and Miraflores. After the locks are built the steam power plants will be held in reserve to operate the locks in times when there is not sufficient water to run the hydraulic plants.

#### Bridge over the Cut—New Highways.

Work has begun on the foundations for the suspension bridge over Culebra Cut at Empire. The bridge will run from Cerro, the labor camp immediately south of the Central Division offices, directly across the Cut. The towers will be built of creosoted timber, and will be 60 feet high. On the west side they will rest on a concrete foundation built on rock, and on the east side on concrete built on piles, which will be driven down to bed rock. The anchorages will be of concrete, reinforced with old French steel. The cables will be of 2¾-inch galvanized steel suspension bridge wire, two on each side, with the cables of each pair only an inch apart. The total length of the four cables will be 3,480 feet; the length of the bridge between towers will be 600 feet, and the width of the roadway 7 feet. The total dead load will be 230,000 pounds, the live load capacity, 54,000 pounds, and the breaking strain of the four cables 2,480,000 pounds. While the primary purpose of the bridge is to carry the air and water pipes used in the Cut across the channel and so avoid the necessity for moving them constantly, when the lower levels are reached, the bridge will also be used as a highway, and will be the only means of crossing the

## NOTES OF PROGRESS.

(Continued.)

Canal between Gamboa and Paraiso. The plans call for a structure that will be serviceable for seven years, before which time it will be necessary to take it down as the distance of the center above the water level in Culebra Cut will be only 108 feet 6 inches and therefore ships could not pass under it.

The opening of the suspension bridge will give access to the country on the east side of Culebra Cut which is now almost inaccessible. Authority has been granted and work has been begun on the road to Las Cascadas Plantation, a distance of three miles from the end of the bridge. The road will cross the Obispo Diversion on a small bridge and will then run through the bush on an easy grade to the plantation. A survey and estimate have been ordered for a road that will connect with the east end of the bridge and run to Paraiso. The reconnaissance shows that the best route will be to follow the east side of the Obispo Diversion to Gold Hill, run over the dumps at Gold Hill, and then east of the hill and east of Cucaracha and Paraiso Hills to Paraiso. If this highway is built there will be connection by road from Panama to Las Cascadas.

**Injured Canal Employees.**

The Mann bill, relative to compensation for injured Canal employees, the full text of which was published in THE CANAL RECORD of December 23 last, and which passed the House of Representatives on January 5, was passed without amendment by the Senate on February 19. Its certain approval by the President will make it a law.

**Obispo Diversion.**

The last big cut on the Obispo Diversion, that through the hill which rises between the Chagres river and the ravine opposite Bas Obispo is nearing completion, and it is expected that the water of the Obispo will be flowing into the Chagres above Gamboa by the middle of May. Four steam shovels are doing the excavating, making a cut 97 feet deep and 250 feet wide on the top. The material excavated is dumped on the dikes opposite Bas Obispo and in the ravine near the hydraulic station at Gamboa.

**Commissary Goods Labeled.**

In order to prevent the disposal of goods bought at the commissary by dishonest persons having the commissary privilege, and to prevent the sale of commissary goods by outsiders, all cartons containing goods bought by the Commissary Department will be branded, and all individual articles, such as shirts, shoes, and other articles wherever possible, will bear the label "C. P. R." All goods recently purchased that are now on sale at the commissary bear this label.

**A Dance for the Catholic Church.**

THE CANAL RECORD:

The Catholic Ladies' Club of Gorgona gave a dance at the Y. M. C. A. clubhouse on the night of February 16, for the benefit of the Church of the Holy Redeemer at Culebra, the only American Catholic Church on the Zone. A special train from Pedro Miguel brought a large delegation from that place, Culebra, and Las Cascadas. A contest to decide who is the most popular lady in the three clubs was won by Mrs. Wade of Gor-

gona, with Miss McGowan of Las Cascadas second. The club wishes to thank the managers of the Y. M. C. A. for their kind assistance and also all those who contributed to the success of the entertainment. The sum of \$638 was realized and has been turned into the building fund.

MRS. C. I. CATE,

President C. L. Club, Gorgona, C. Z.

**Death of Willis J. Rodman.**

COLON, R. P., March 1, 1909.

**ALL AGENTS AND OPERATORS:**

It is with extreme regret and deep sorrow that we are compelled to announce the death of Mr. Willis J. Rodman, who has been acting as Superintendent of Telephones and Telegraph for this company for several years. Flags on all buildings of the Panama railroad will be displayed at half mast Monday, Tuesday, and Wednesday, and as a further mark of respect, all business will be suspended in the general office building at Colon, Wednesday afternoon, March 3.

H. J. SLIFER, General Manager.

Willis J. Rodman, Superintendent of Telephones and Telegraph of the Panama railroad, died at Colon hospital, February 28, after a long illness. He was employed in the United States on August 23, 1905, and began work on the Isthmus on September 4, 1905. For several months prior to September 10, 1906, he acted as train dispatcher. A wife, a daughter, and father survive him.

**Bas Obispo Explosion.**

All of the rock and earth thrown into Culebra Cut at Bas Obispo by the explosion of December 12, has been removed. No bodies have been found since January 13. The total number of deaths resulting from the explosion was 26, of which 5 bodies were unidentified.

**Visit of the Pacific Fleet.**

The first squadron of the United States Pacific Fleet under command of Rear Admiral William T. Swinburn will leave Panama Bay on Thursday, March 4, for the following ports:

The *Washington* and *Tennessee* for Punta Arenas, Costa Rica; *Colorado* and *South Dakota*, for Corinto, Nicaragua; *West Virginia* and *Maryland*, for Acajulta, Salvador. The *Pennsylvania* and *California* sailed on Sunday, February 28, for Amapala, Honduras.

**Isthmian Construction Foremen.**

A general business meeting of the Order of Isthmian Construction Foremen will be

held at Culebra hall on Sunday, March 7, at 2.30 p. m. All members are earnestly requested to attend as matters of importance will be decided.

**Locomotive Engineers.**

A regular meeting of Division No. 756, Brotherhood of Locomotive Engineers, will be held at Cristobal on March 7, at 1 p. m.

**Isthmian Canal Lodge, No. 1, I. O. O. F.**

Isthmian Canal Lodge No. 1, I. O. O. F., Gorgona, C. Z. meets every Tuesday at 7 p. m. in the I. C. C. clubhouse. All Odd Fellows are cordially invited to attend these meetings.

**Kangaroo Dance.**

The members of the Independent Order of Panamanian Kangaroos residing in Corozal, will give a Shirt Waist Dance at the hotel in Corozal on Saturday evening, March 6, 1909. A special train will be run from Panama, returning after the dance. All Kangaroos are cordially invited. The I. C. C. band will play.

**Kangaroo Meeting.**

Cristobal Court No. 8, I. O. P. K., will hold a regular meeting at I. C. C. Lodge Hall, Cristobal, on Sunday, March 7, at 2 p. m. All members are requested to be present.

## LIST OF EMPLOYEES WHO ARE ENTITLED TO CANAL MEDALS.

The publication of names of employes of the Isthmian Canal Commission and Panama Railroad Company who are entitled to receive Canal Medals, which was begun in THE CANAL RECORD of February 10, is continued in this issue. The names thus far published are those of employes of the Isthmian Canal Commission. When all these have been given the names of employes of the Panama Railroad Company will follow. Address communications relating to corrections in Medal list to Assistant to the Chairman, Culebra, C. Z.

The following names should have been included in the 1905 list which was printed in THE CANAL RECORD of February 24:

Name.	Medal service begins.
Putney, George H.	Dec. 2
Scannell, Edward J.	Dec. 2
Stephens, Fred H.	Dec. 2
Tireman, Claude K.	Dec. 2
Weidman, Charles E.	Dec. 2
Johnson, August.	Dec. 2
Schutt, Oscar.	Dec. 2
Cole, John H.	Dec. 8
Agee, James.	Dec. 9
Bolich, David W.	Dec. 9
Brink, A. Earl.	Dec. 9
Cassidy, Frank.	Dec. 9
Chambers, John W.	Dec. 9
French, Archie W.	Dec. 9
Herrington, Walter W.	Dec. 9
Jennings, Edward F.	Dec. 9
Keyser, Elgie M.	Dec. 9
Kyte, Edward M.	Dec. 9
Lagerquist, John.	Dec. 9
Melton, James M.	Dec. 9
O'Connor, David C.	Dec. 9
Rall, Emil J.	Dec. 9
Rhodes, Jessie O.	Dec. 9
Ebert, Clarence W.	Dec. 11
Millelot, Fred.	Dec. 13
Stevenson, Alex W.	Dec. 13
Turner, Edward G.	Dec. 14
Bennett, Arthur R.	Dec. 16
Bliss, Gerald De Leo.	Dec. 16
Bremner, Fleming.	Dec. 16
Browning, Walter S.	Dec. 16
Getman, Adolph.	Dec. 16

## 1906.

Wickham, Clarence A.	May 11
Byrd, Robert L.	May 14
Bokard, John.	May 15
Christian, William F.	May 15
Colburn, Alvin.	May 15
Cronau, Charles.	May 15
Davies, Richard M.	May 15
Hartigan, Fred L.	May 15
Hartley, Edwin B.	May 15
Howson, William A.	May 15
Martin, Nan.	May 15
Miller, Edward C.	May 15
O'Haire, William J.	May 15
Rice, Willard.	May 15
Steele, Russell L.	May 15
Tudor, Abraham L.	May 15
Wager, Andrew F.	May 15
Wundes, William N.	May 15
Cochran, James P.	May 16
Lavin, James.	May 16
Rube, Albert.	May 16
Finley, Thomas.	May 17
Kenyon, William.	May 17
Brennan, Charles F.	May 21
Cretors, Cheney F.	May 21
Deane, Edward S.	May 21
Fagan, Claud C.	May 21
Gayer, William C.	May 21
Girdner, Harry.	May 21
Heckman, Henry L.	May 21
Kaynor, Walter L.	May 21
McConahy, John.	May 21
Mend, Charles H.	May 21
O'Donovan, William J.	May 21
Richmond, Veua E.	May 21
Stoehr, George P.	May 21
Deer, Edgar H.	May 26
Donaldson, Bert A.	May 26
Duncan, Samuel.	May 26
Earhart, Troy W.	May 26
Gottsch, John W.	May 26
Guyant, Claude K.	May 26
Kemp, James.	May 26
Luther, Arthur P.	May 26
McClinton, Joseph L.	May 26
McCormick, Joseph.	May 26
Maney, Frank L.	May 26
Stewart, Malcolm.	May 26
Stewart, William.	May 26
Zeiler, Avrum H.	May 26

Name.	Medal service begins.
Wheeler, Christopher O.	May 28
Brumer, Jasper H.	May 31
Chamcey, William L.	May 31
Clark, Fred P.	May 31
Davies, Pinkney A.	May 31
Hail, John.	May 31
Julien, Clark.	May 31
Kane, John H.	May 31
Loomis, Howard H.	May 31
McIlverne, Joseph.	May 31
Payne, Burd W.	May 31
Seiders, David E.	May 31
Walker, Alfred J.	May 31
Walling, Clifford T.	May 31
Jackson, Bertram Y.	June 4
Browne, Frank A.	June 5
Corcoran, Anthony T.	June 5
Cotton, Harold L.	June 5
Gage, Clarence E.	June 5
Harrington, Charles R.	June 5
Lawlor, William A.	June 5
Tracy, Edmund H.	June 5
Woodward, William B.	June 5
Wood, Stanley W.	June 6
Chnte, Frank E.	June 9
Clifton, Robert B.	June 9
Crosgrove, James.	June 9
Farrow, William E.	June 9
Pitter, Peter.	June 9
Kendall, Joshua W.	June 9
McDavid, William H.	June 9
Morley, John F.	June 9
Nevins, Chester E.	June 9
Pilson, Frank K.	June 9
Randall, Ortez G.	June 9
Windsor, Joseph W.	June 9
Wolverton, David R.	June 9
Wuerz, Robert.	June 9
Young, Thomas H.	June 9
McLean, Leonard.	June 13
Daughtrey, Talbert H.	June 15
Gorham, Frederick L.	June 15
Hammer, James L.	June 15
Jury, Frank J.	June 15
Loulau, James A.	June 15
Perry, William H.	June 15
Pope, Henry.	June 15
Richmond, John.	June 15
Robinson, Rennie R.	June 15
Soule, Edgar C.	June 15
Waldron, Frank K.	June 15
Finn, Michael J.	June 16
Burnham, Howard D.	June 20

## ENGINEERS ON CANAL.

## Full Text of the Report of the Special Board of Engineers Submitted to Congress by the President.

WASHINGTON, February 16, 1909.

SIR: In accordance with your instructions, we have visited the Isthmian Canal, in company with Hon. William H. Taft, and have examined the work in progress and the plans for the structures as far as now developed.

We have given especial consideration, under the instructions of Mr. Taft, to the foundations for the Gatun Dam, and the feasibility of constructing and maintaining thereon a safe dam for retaining water at 85 feet above sea-level.

We have examined the slides in the banks of the Canal and the surveys, plottings, and sections that have been made of them. The subsidence in the fills in the toes of the dams and in the railway embankments has also been examined, and we have considered the effect of the qualities of materials thus disclosed upon the construction of the various works and upon their ultimate stability.

We have also considered the evidence that has been accumulated as to the permeability of the different materials and the possible loss of water by percolation through the bed and banks of the future Gatun Lake; and the question whether such loss of water by seepage would result in materially reducing the water supply or in undermining and ultimately crippling the structure.

## GATUN DAM.

The Gatun earth dam is the central point of discussion, and we were instructed by Mr. Taft to give it first consideration in the light of all new evidence.

We are satisfied, both from the records of the experiments that have been made and from our own personal examination of the materials, as seen in cuts now open and as disclosed by samples from test borings, that there will be no dangerous or objectionable seepage through the materials under the base of the dam, nor are they so soft as to be liable to be pushed aside by the weight of the proposed dam so as to cause dangerous settlement.

We are also satisfied that the materials available and which it is proposed to use are suitable and can be readily placed to form a tight, stable, and permanent dam.

The type of dam now under construction is one which meets with our unanimous approval. It is a combination of rock fill and hydraulic fill, in which the exterior faces are to be composed largely of rock of all sizes obtained from the canal excavation, dumped and laid on slopes much flatter than are ordinarily found in earth dams, while the interior of the great mass will consist of clayey material obtained by hydraulic dredging from large deposits at a little distance from the dam and carried by water through pipes to the places where it is to be used. The material as delivered is a mixture of earth and water. The material held in suspension slowly deposits, finally forming a solid, water-tight embankment. The pond necessarily maintained on the top of the dam during construction tests the embankment at all stages of its growth, searches out any weak points, and leads to the closure of any voids or cracks.

The most practical question in the construction of the Gatun Dam is the possible slipping and sliding of the materials underneath and in the body of the dam. The materials, speaking broadly, are of a clayey nature, generally impervious to water, but sometimes slipping when subjected to heavy unbalanced pressure or on high steep slopes when saturated with water. In this respect the materials differ radically from the sandy and gravelly materials which have been frequently used in the construction of other earth dams.

In order to build a dam of these clayey materials that will be stable and permanent, it is necessary that the slopes should be flatter than would be needed to secure the stability of a dam of siliceous, sandy, or gravelly materials.

The evidence that has been accumulated as to the degrees of slope that are stable with these materials seems to us conclusive. The fact that the materials are slippery does not mean that a dam built from them is necessarily less stable than a dam built of materials that do not slip so easily. It does mean that, in order to secure stability and permanency, the dam must be built with a greater thickness at the bottom.

The dam as proposed is more than a third of a mile in horizontal thickness at its base, including the rock-fill portions.

The design upon which the work is now being prosecuted abundantly fulfills the required degree of stability and goes far beyond the limits of what would be regarded as sufficient and safe in any less important structure.

As a matter of convenience and economy during construction, materials have been piled up on slopes

much steeper than those contemplated in the finished work. Generally, the materials so placed have remained in position, but in some cases slips have occurred. The occurrence of these slips is of no serious consequence either in the practical execution of the work or in the ultimate stability of the structures. We can readily understand how incorrect deductions may have been drawn from these occurrences, especially by those not fully informed as to the character of the materials and the ample dimensions and much less steep slopes of the proposed structures in their final form.

We were requested to consider the proper height for the crest of the Gatun Dam, and after consideration concluded that it could be safely reduced 20 feet from that originally proposed, namely, to an elevation of 115 feet above sea-level, or 30 feet above the normal level of the water against the dam. We are also of the opinion that the sheet piling recently proposed under the base of the dam may be safely omitted. The narrow cut-off trench now in progress through the upper earth stratum on Gatun Island and elsewhere and designed to be refilled with sluiced material should be continued.

Changes in these respects will facilitate the work of construction and will reduce somewhat the cost of the proposed work.

A full study of all the data at hand, and of the materials, and of the plans that are proposed with the above modifications, leaves no doubt in our minds as to the safe, tight, and durable character of the Gatun Dam.

## CHANGES IN PLAN OF CANAL.

It was suggested to us by Mr. Taft that we give special consideration to those changes which have been made in the plans of the minority of the Board of Consulting Engineers of 1905 since the adoption of the project.

## Change in Position of Lower Pacific Locks.

One of the most important of these changes is the moving of the lower locks on the Pacific end of the Canal from La Boca, on the shore of Panama Bay, to Miraflores, about 4 miles inland.

This change involved abandoning the construction of two earth dams at and near La Boca and the substitution of about 4 miles of deep-sea level channel 500 feet wide from La Boca to Miraflores in place of a wider channel through the lake that would have been created by the dams.

Before this change was made work had been commenced upon the toes of one of the dams. The material had been piled up to a considerable height on slopes steeper than were capable of being supported by the underlying material. Under these conditions settlements occurred with lateral displacement of some of the underlying material. Your board, after carefully inspecting the ground and the partially completed work, is of the opinion that these settlements cause no reason to doubt the stability of the proposed dams. We are unanimously of the opinion that stable and water-tight dams of substantially the proposed dimensions could have been constructed on the proposed sites without recourse to dredging out the underlying soft material.

The report of the minority of the Board of Consulting Engineers of 1905 recognized that an objection might be made from a military point of view to placing locks on the shore of a bay, exposed to guns of hostile ships. We now understand that the controlling reason for the change was a military one. This change in the plans will result in an increase in cost of the Canal by an amount judged from evidence at our disposal to be not less than \$10,000,000. We are informed, however, that this change would greatly lessen the cost of fortification.

## Increased Width of Canal.

Another change is the increase of the minimum bottom width of the Canal from 200 feet to 300 feet. This applies to a length of about 4.7 miles in the Culebra Cut. We understand that this change will increase the cost of the work by about \$13,000,000. The work upon the excavation of the Culebra Cut under the revised plan has now so far advanced that this widening will not delay the completion of the Canal.

The widening will permit ships to pass one another in this portion of the Canal, as they may under the original plan in all other portions, and will otherwise facilitate navigation through it.

If slides occur after the completion of the Canal, the wider Canal is not as likely to be blocked as a narrow one.

We understand that this change was authorized directly by you on the presentation of its advantages by the Chief Engineer, and we merely call attention to it as one reason for the increased cost of the Canal.

## Increased Size of Locks.

Another change is the increase of the dimensions of the locks from 95 by 900 feet to 110 by 1,000 feet. The increase in width we understand has been made

in compliance with a request from the General Board of the Navy Department, in order to allow the passage of the largest war vessels contemplated.

A large increase in cost is involved in these enlarged dimensions.

## Changes in Breakwaters.

An important change is proposed in the location of the breakwater at the Atlantic end of the Canal. The plan provisionally adopted by the Board of Consulting Engineers of 1905, and adopted for the purpose of estimate by the minority of that board, was for a breakwater generally parallel with the channel, which included less than one third of Limon Bay; whereas the breakwater in the location now proposed will protect the entire bay and furnish a more commodious harbor not only for ships using the Canal, but for all other shipping which makes use of the port. A considerable increase in cost is involved in this change.

We had an opportunity to view the present harbor during what is said to have been the only severe norther of the past two years, and have no doubt that a good breakwater is a desirable adjunct to the Canal. We are not prepared to pass on the precise location, form, or cost of this.

A change of less importance has been made at the Pacific end by relocating the dredged channel leading to deep water and increasing its width from 300 feet to 500 feet and by constructing a breakwater from the shore at La Boca to Naos Island with material excavated from the Culebra Cut. This breakwater, now under construction, serves to prevent currents across the Canal cut and tends to prevent deposits in the dredged channel and to increase the safety of navigation. The breakwater may also serve to carry a roadway to Naos Island. These changes involve some additional expense.

## Relocation of Panama Railroad.

The alignment of the Panama railroad has been materially changed south of Gatun. This change was made because it was found that the swamp near the Gatuncillo River would not support the very high railroad embankment required, if made with ordinary slopes, and a line crossing at a point higher up the river was selected, which does not, however, materially increase the length of the railroad. The construction of the railroad will cost much more than was estimated by the minority of the Board of Consulting Engineers, who were unable to procure surveys of the proposed location. The recent change in location affords more ample and convenient anchorage immediately above the locks.

## Other Changes.

Some further changes or additions which have not yet been fully worked out have been mentioned to us as likely to be made as the work progresses, namely, the dredging out of a broad anchorage basin immediately downstream from the Gatun Locks, another for anchorage and room for turning of long ships near La Boca, and possibly another just below the Miraflores Locks. These can all be delayed until the completion of the main work of canal excavation and lock building, and then executed by the dredges that have done the main work. The work can thus be done without additional equipment, and at a low price per cubic yard.

## PRESENT CONDITION OF WORK.

It has been suggested that we report upon the condition of the work and the progress being made, and, if found possible in the time at our disposal, upon the probable time of completion.

## Organization.

We have seen the work under way on all parts of the Canal. We have become acquainted with the engineers in responsible positions and have noted the organization and equipment.

It is our impression that the work is well organized and is being conducted energetically and well.

The work is done by day labor and not by the contract system.

The men are well paid, well housed, well fed, and well cared for in case of sickness or accident. Houses, furniture, fuel, water, drainage, and lights are furnished to employees without cost. Roads are built, schools supported, and Young Men's Christian Association buildings provided, which are practically club buildings. Parts of the running expenses are also paid. The premises are cleared and drained and the grass kept cut. The climate is especially adapted to outdoor life, and the ample porches, entirely enclosed by bronze-wire screens, give the greatest facility for this. We are especially pleased with the architectural arrangements of the houses. They are admirably adapted to the climatic conditions.

Bachelor quarters and hotels furnishing meals at moderate prices are also provided by the Government.

Hospitals are provided, free medical attendance is furnished to employees, and medical attendance at low rates is supplied to families of employees.

A limited amount of free transportation, namely, one excursion trip each month to any station, is fur-

nished on the Panama railroad to employes, and half rates are given in all other cases, and also half rates to families of employes. Free transportation in some cases, and in all other cases transportation at reduced rates to and from the Isthmus, is provided to employes and their families.

Six weeks' leave of absence each year, with full pay, is given to all monthly employes, and this includes not only office and engineering forces, but also the mechanical forces on the monthly basis.

The medical and sanitary department is especially to be commended for its success in exterminating yellow fever and controlling malaria, and for other measures which have made the Isthmus a thoroughly healthful place in which to live.

The cost of the sanitary department, which represents the cost of keeping the Isthmus healthful, amounts to about \$2,000,000 per year. This is a large sum, but the work is well done, and any decrease in the efficiency of the sanitary service might readily prove disastrous to the prosecution of the main work.

We believe that in no other great construction work has so much been done for employes in the way of furnishing necessities, comforts, and luxuries of life at the cost of the work as has been done in this case. This is one reason for the high cost of the Canal.

#### Progress and Time of Completion.

We have examined diagrams and statistics showing the amount of work accomplished by years and by months since the work was taken over by the United States, and showing the amounts of the various classes of work remaining to be done and the estimated rates of progress and times required for completion. It has been impossible for us to check these in detail, but we have compared them with other estimates, and with the work obviously done, and they seem reasonable to us. In the light of this showing, we see no reason why the Canal should not be completed, as estimated by the Chief Engineer, by January 1, 1915; in fact, it seems that a somewhat earlier completion is probable if all goes well, but in view of possible contingencies it is not prudent at this time to count on an earlier date.

#### Cost of Work.

In examining the expenditures thus far made it must be borne in mind that large sums have been paid for steamships, dredges, steam shovels, locomotives, cars, tracks, shops, and all the equipment that is necessary to prosecute a work of this magnitude, and also that large sums have been spent for dwellings, offices, buildings of various kinds, for waterworks, sewers, paving, and other equipment, and that these expenditures have been made, in large measure, for the whole work, and that corresponding disbursements hereafter will be very much less in proportion than they have been to date.

Colonel Goethals has presented to us an estimate of the quantities of materials and the cost involved in the construction of the Canal as now planned, including all disbursements thus far made and the estimated amounts required for completion. These cover the greater width of excavation, the increased size of locks, the extra canal channel required by moving the Pacific Locks from La Boca to Miraflores, the improved harbor arrangements at Colon, and all other changes which have been adopted or which are now seriously contemplated. The payments to the New Panama Canal Company are included, and also the payments to the Republic of Panama and the cost of sanitation and Zone government, for which items the Board of Consulting Engineers of 1905 stated that it presented no estimates.

The estimates and allowances so made seem ample to us. In some items it would seem that considerable reductions could be made, but on the other hand, the work is large and novel and unforeseen contingencies must be expected, so that it may be that the aggregate estimate as presented is not too large.

After deducting \$15,000,000, representing the estimated receipts from the return of money loaned the Panama railroad, and from the collection of water rates to cover the cost of municipal improvements made in Panama and Colon, and from miscellaneous sources, this present estimate of the complete cost of the lock Canal amounts to \$360,000,000.

In making this estimate no reduction has been made for whatever salvage may be realized from the construction plant at the termination of the work, which plant has cost to date about \$30,000,000.

The cost of the Canal as estimated in 1905, is frequently stated to be \$140,000,000, but this is incorrect, as the minority report expressly excluded sanitation and Zone government, and the payments to Panama and the French company had already been made. Adding these amounts, using the present estimates of sanitation and Zone government, we have in round numbers the following:

Estimate of the minority of the Board of Consulting Engineers for the cost of construction, exclusive of sanitation and Zone government.....	\$140,000,000
Payments made to the Republic of Panama and to the New Panama Canal Company.....	50,000,000
Sanitation and Zone government, as now estimated.....	27,000,000
<b>Total.....</b>	<b>\$217,000,000</b>

The difference between this cost and the total cost as now estimated is therefore \$143,000,000. Of this amount nearly one-half can be accounted for by the changes in the Canal and appurtenant works to which we have already referred, and the remainder is to be attributed mainly to the higher unit cost of the different items of the work, caused in part by the higher prices for plant, supplies, and labor which have prevailed in the United States since the estimate of 1905 was made, and which made it necessary to offer very high wages and special inducements in order to obtain the requisite force in a locality where the reputation for health was not good in the earlier years, in part to the adoption of an eight-hour day for most of the work instead of a ten-hour day, in part to the much greater expenditure for housing and care of employes and for auxiliary works than was anticipated, and in part in our opinion, to the evident purpose to make the estimates ample and to provide liberally for contingencies.

When the work at Panama is completed, in addition to having the Canal, the United States will own the Panama railroad and the steamship line operated in connection therewith.

#### TYPE OF CANAL.

In view of the fact that the cost of the lock canal, as now proposed, will largely overrun the estimate of the minority of the Board of Consulting Engineers of 1905, and that the excavation in the Culebra Cut is being made somewhat more rapidly than was anticipated, we have considered in a very general way the relative cost and time of construction of a sea-level canal.

Most of the factors which have operated to increase the cost of the lock canal would operate with similar effect to increase the cost of the sea-level canal, and at the present time there are additional factors of even greater importance to be considered as affecting the time of completion and cost of a sea-level canal. One of these is to be found in the Gamboa dam, proposed to be nearly 200 feet in height above its foundations, which would be about 60 feet below the normal river level. Prior to the construction of this dam a long and deep diversion channel must be provided of far greater magnitude than that for the Gatun Dam which has been about two years in progress, and is not yet completed.

Judging by the time required for the construction of dams of similar magnitude in the United States, it is probable that were work on the Gamboa dam to be started as soon as possible this one feature of the sea-level project of the Board of Consulting Engineers of 1905 could not be completed until after the time required for the completion of the lock canal. The construction of this dam at Gamboa for the control of the Chagres is an essential preliminary to the excavation of the sea-level canal for the 13 miles from Bohio to Bas Obispo.

Furthermore, in addition to the Gamboa dam, the sea-level project provides for building for the control of tributary streams three large dams, the sites of which have not been examined.

Work is already far advanced on nearly all parts of the lock Canal, and a change in the type would result in abandoning work done which represents large expenditure.

Under the plan now being carried out, the River Chagres and each of the other rivers on the Isthmus tributary thereto is made an ally of the project. The waters of these rivers are handled economically and in such a way as to facilitate the operation of the Canal. With the sea-level project, these rivers instead of being allies would be enemies of the Canal, and floods in them would greatly interfere with the work.

The excavation of the Canal would be carried to 40 feet or more below sea-level and to a much greater depth below the bottoms of the valleys in which the upper streams now flow.

It would further be necessary to cut long and large diversion channels on each side of the canal for streams entering the Chagres Valley. The cost of such lateral channels to protect the Culebra Cut alone from the comparatively small streams formerly entering it, including work done by the French, has probably been not less than \$2,000,000. The channels required for the lower valley of the Chagres would be necessarily much longer, larger, and far more expensive.

#### ROCK EXCAVATION UNDER WATER.

Much has been said about the economy of excavating rock under water by modern appliances as compared with the cost of such excavation in the dry with steam shovels after blasting.

We concur in the opinion of those in charge of work at the Isthmus that it is more economical, where the conditions are favorable, to excavate rock in the dry than by any under-water process now in use. Experience is not yet available to us which will justify the belief that, with the depth of cut and the quality of rock found on the Isthmus, the general adoption of subaqueous methods would prove more expeditious or cheaper.

It is probable that more economical subaqueous methods will be sometime developed, but it would

not be wise to base a change in plan of important work upon prospective results to be obtained by any method not yet thoroughly tried.

#### EARTHQUAKES.

It has been suggested that the Canal region is liable to earthquake shocks and that a sea-level canal would be less subject to injury by earthquakes than a lock canal.

We have seen, in the city of Panama, the ruins of an old church, said to have been destroyed by fire, containing a long and extremely flat arch of great age, which convinces us that there has been no earthquake shock on the Isthmus during the one hundred and fifty years, more or less, that this structure has been in existence, that would have injured the work proposed.

Dams and locks are structures of great stability and little subject to damage by earthquake shocks. The successful resistance of the dams and reservoirs supplying San Francisco with water, even when those structures were located near the line of fault of the earthquake, gives confidence in the ability of well-designed masonry structures and earth embankments to resist earthquake shocks.

We do not regard such shocks as a source of serious damage to any type of canal at the Isthmus, but if they were so their effect upon the dams, locks, and regulating works proposed for the sea-level canal would be much the same as upon similar structures of the lock canal. The Gamboa dam for controlling the floods of the Chagres in connection with the sea-level canal provides for a lake having an area of 29 square miles when full, and if this water were suddenly let loose into the sea level canal it would seriously injure large portions thereof and wreck ships therein. A similar result would be reached if the other three dams of the sea-level canal retaining lakes, having an aggregate area of 10 square miles, were to be suddenly destroyed.

#### WATER SUPPLY.

We believe that the sufficiency of the water supply for a lock canal has never been seriously questioned. It is true that during the dry season the natural flow of the streams would not be sufficient to furnish the water required for numerous lockages. There would even be times when the natural flow would not suffice to make good the loss by evaporation from the surface of the water in Gatun Lake. During the rainy season there is a great excess of water which can be readily stored in Gatun Lake with its area of 163 square miles. It is proposed to fill this lake during the rainy season 2 feet above its normal level, and to draw it as needed during the dry season. It is computed that by drawing it 5 feet below normal level, which draft would leave 41 feet of water through Culebra Cut, the supply in a dry year would be sufficient to serve from 30 to 40 lockages up and an equal number of lockages down daily. Each lockage might consist of a single large vessel or a fleet of smaller vessels capable of being in the lock at one time, as is common at Sault Ste. Marie. For comparison the published record shows that an average of only 1 ship per day passed through the Suez Canal in 1907.

Ultimately, if needed for increased traffic additional water may be held from wet seasons and made available in dry ones. This may be accomplished either by raising further the high-water level in Gatun Lake or by lowering the low water level in the lake, this lowering being accompanied if necessary, by the deepening of the Canal, or storage may be provided by an entirely independent reservoir, for which there are excellent sites.

From our examinations in the neighborhood of Gatun Dam, we can find no reason to apprehend important loss of water by seepage through the ridges surrounding the lake, while in our judgment the bed of the lake will be practically impervious to water.

The water supply in sight is so much greater than any need that can be reasonably anticipated that the best method of securing more water when the time of need arrives does not require to be considered now.

#### CONCLUSIONS.

Your board is satisfied that the dams and locks, the lock gates, and all other engineering structures involved in the lock canal project are feasible and safe, and that they can be depended upon to perform with certainty their respective functions.

We do not find any occasion for changing the type of Canal that has been adopted.

A change to a sea-level plan at the present time would add greatly to the cost and time of construction, without compensating advantages, either in capacity of canal or safety of navigation, and hence would be a public misfortune.

We do find in the detailed designs that have been adopted, or that are under consideration, some matters where other arrangements than those now considered seem worthy of study. As these proposed changes are of a tentative nature and do not in any case affect the main questions herein discussed, they are not taken up in this report.

Very respectfully,

FREDERIC P. STEARNS, JAMES D. SCHUYLER,  
ARTHUR P. DAVIS, ISHAM RANDOLPH,  
HENRY A. ALLEN, JOHN R. FREEMAN,  
ALLEN HAZEN.

The President.

## COMPARISON OF WORK AND COST, AS ESTIMATED IN 1906 AND IN 1908—ATLANTIC DIVISION.

A summary of the amount of work and the cost, as estimated by the Board of Consulting Engineers in 1906 and by the Isthmian Canal Commission in December, 1908, and the details of the Board's estimate and that of the Commission for the Central Division were published in THE CANAL RECORD of February 24. The summary includes, in addition to a comparison of the amounts required for construction, an estimate of the amount that will be required for sanitation, for the Department of Civil Administration, the amounts paid to the New French Canal Company and the Republic of Panama, and an estimate of reimbursements to the United States Treasury from various sources. The details of the estimate for work and costs in the Pacific Division will be published on March 10, and for the Panama Railroad relocation, loans to the Panama Railroad, general expenses, construction and repair of buildings and municipal improvements, in the issue of March 17.

## BOARD OF CONSULTING ENGINEERS, 1906.

## ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

## BREAKWATER IN LIMON BAY.

From Mile 0 to Mile 3.30 as per estimate of the Board.....	\$5,000,000
Extension from Mile 3.30 to head of bay (Mile 4.45), 400,000 cubic yards, at 75 cents per yard.....	300,000
Total.....	\$5,300,000
The breakwater contemplated by the Minority consisted of—	
An east jetty (extending from deep water to Manzanilla Point).....	0.95 miles
A west jetty (extending from deep water to head of Limon Bay, practically parallel to the axis of the Canal).....	4.55 miles
Total.....	5.50 miles
No quantities were given by the Board for the first 3.30 miles.	

## BREAKWATER IN LIMON BAY.

4,234,000 cubic yards, at \$2.70 per yard.....	\$11,432,000
The breakwater upon which this estimate has been made consists of—	
A west jetty with outer end in 44 feet of water and trending toward Toro Point.....	1.96 miles
An east jetty from 44 feet of water and extending eastwardly parallel to a line drawn between the light houses at Manzanilla and Toro Point.....	1.00 miles
Total.....	2.96 miles

The difference in money between the estimate of the Minority and the present estimate is largely because of the difference in unit prices. The estimate made in 1906 by the Minority of the Board of Consulting Engineers was based upon a breakwater, the foundations largely to be of material taken from the Canal prism.

The estimate of 1908 is based upon all material for the breakwater being obtained from Porto Bello. The present excavation from the Canal cannot be used economically, as the breakwater now contemplated is not in close proximity to the excavation, and there is also a lack of suitable material from the Canal excavation.

## CHANNEL FROM MILE 0 TO GATUN LOCKS—500 Feet Wide.

Dredging Mile 0 to Mile 4.55—Mud and sand, 8,300,000 cubic yards, at 15 cents per yard.....	\$1,245,000
Dredging Mile 4.55 to Gatun Locks—Soft material, suction dredges, 10,000,000 cubic yards, at 25 cents per yard.....	2,500,000
Indurated clay suction dredges without cutters, 2,030,000 cubic yards, at 70 cents per yard.....	1,421,000
Total, 20,330,000 cubic yards, at 25.4 cents per yard.....	\$5,166,000

## CHANNEL FROM MILE 0 TO GATUN LOCKS—500 Feet Wide.

Dredging—	
Mud and sand, 13,260,682 cubic yards, at 20 cents per yard.....	\$2,652,000
Earth requiring cutting and some blasting, 6,862,000 cubic yards, at 45 cents per yard.....	3,088,000
Rock blasted and dredged, 1,105,313 cubic yards, at \$1.50 per yd..	1,658,000
Rock under water, 851,267 cubic yards, at \$2.50 per yard.....	2,128,000
Excavation—	
Earth in dry, 152,234 cubic yards, at 45 cents per yard.....	69,000
Earth in dry blasted, 608,895 cubic yards, at 60 cents per yard....	365,000
Rock, 3,078,596 cubic yards, at \$1.55 per yard.....	4,772,000
Total, 25,918,987 cubic yards, at 56.8 cents per yard.....	\$14,732,000
Maintenance of channel after July 1, 1909, 6,500,000 cubic yards, at 20 cents per yard.....	1,300,000
Total, 32,418,987 cubic yards at 49.4 cents per yard.....	\$16,032,000
Widening channel north of Gatun Locks, from 500 feet wide to 1,000 feet for a distance of 4,000 feet.	
Excavation—Dredging, earth, 3,786,137 cubic yards, at 45 cts. per yd..	1,704,000
Grand total, 36,205,124 cubic yards, at 48.9 cents per yard.....	\$17,736,000

## Excess of present estimate over Minority, 1906—

By reason of maintenance.....	\$1,300,000
By reason of widening channel north of Gatun Locks.....	1,704,000
By reason of increase in quantities, 5,583,987 cubic yards, at 56.8 cents per yard.....	3,178,000
By increase in unit prices due largely to rock, 20,330,000 cubic yards, at 31.4 cents per yard.....	6,388,000
Total.....	\$12,570,000
The widening of the channel at the entrance to Gatun Locks is necessary to provide a basin for mooring and handling vessels.	

## GATUN LOCKS—Flight of three twin locks 95 feet by 900 feet usable dimensions; total lift 85 feet.

Excavation—	
Earth, 920,000 cubic yards, at 40 cents per yard.....	\$368,000
Indurated clay (rock), 2,740,000 cubic yards, at 70 cents per yard.....	1,918,000
Total, 3,660,000 cubic yards, at 60 cents per yard.....	\$2,286,000
Locks, exclusive of excavation and approach walls.....	\$13,075,000
Emergency gate.....	1,000,000
Approach walls.....	500,000
Total.....	14,575,000
Back fill and embankment, 660,000 cubic yards.....	330,000
Grand total.....	\$17,191,000

## GATUN LOCKS—Flight of three twin locks 110 feet by 1,000 feet usable dimensions; total lift 85 feet.

Excavation—	
Earth, 837,667 cubic yards, at 35 cents per yard.....	\$293,000
Rock, (indurated clay), 2,948,237 cubic yards, at 65 cents per yard.....	2,211,000
Rock by hand, preparing foundations, 100,000 cubic yards, at \$2 per yard.....	200,000
Rock for curtain walls, 103,400 cubic yards, at \$5.50 per yard.....	569,000
Dredging, 1,150,000 cubic yards, at 33 cents per yard.....	280,000
Total, 5,139,304 cubic yards, at 69.1 cents per yard.....	\$3,553,000
Concrete, including approach walls, 2,096,000 cubic yards, at \$7.75 per yard.....	\$16,244,000
Emergency dam, gates, valves, operating machinery, electric capstans, etc.....	5,220,000
Total.....	21,464,000
Back fill, 949,000 cubic yards, at 85 cents per yard.....	807,000
Grand total.....	\$25,824,000

Present estimate exceeds Minority estimate of 1906 by \$8,633,000. The following are:

Due to increased size of locks and change in plans:	
Excavation—Curtain walls, 103,400 cubic yards, at \$5.50 per yard.....	\$569,000
Other excavation, 1,375,994 cubic yards, at 50.7 cents per yard.....	698,000
Increase.....	\$1,267,000
Concrete—Present estimate, 2,096,000 cubic yards, at \$7.75 per yard.....	\$16,244,000
Minority estimate, 1,300,000 cubic yards, at \$8 per yard.....	10,400,000
Increase.....	5,844,000
Gates, operating machinery, etc—Present estimate.....	\$5,220,000
Minority estimate.....	4,175,000
Increase (due principally to furnishing 6 intermediate lock gates).....	1,045,000
Back fill.....	477,000
Total increase.....	\$8,633,000

## BOARD OF CONSULTING ENGINEERS, 1906.

## ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

## GATUN DAM.

Earth embankment—	
Below elevation +50 dredged material pumped into dam, 12,170,000 cubic yards, at 20 cents per yard.....	\$2,434,000
Between elevation +50 and elevation +80, dredged material pumped into dam, 5,770,000 cubic yards, at 30 cents per yard.....	1,731,000
Above elevation +80, material from excavation placed in dam, 3,260,000 cubic yards, at 25 cents per yard.....	815,000
Total, 21,200,000 cubic yards, at 23.4 cents per yard.....	\$4,980,000
Excavation for diversion channel and regulating works (spillway):	
Earth, 1,100,000 cubic yards, at 40 cents per yard.....	\$440,000
Indurated clay (rock), 480,000 cubic yards, at 70 cents per yard.....	336,000
Total, 1,580,000 cubic yards, at 49.1 cents per yard.....	776,000
Concrete in regulating works and diversion channel, 189,000 cubic yards, at \$8 per yard.....	\$1,512,000
Regulating gates and machinery.....	320,000
Preparatory and miscellaneous.....	1,832,000
	200,000
Grand total.....	\$7,788,000

## GATUN DAM.

Earth embankment.	
Dredged material pumped into dam—	
7,000,000 cubic yards, at 20 cents per yard.....	\$1,400,000
7,000,000 cubic yards, at 30 cents per yard.....	2,100,000
7,000,000 cubic yards, at 45 cents per yard.....	3,150,000
Rock fill, 3,400,000 cubic yards, at 20 cents per yard.....	680,000
Total, 24,400,000 cubic yards, at 30 cents per yard.....	\$7,330,000
NOTE—Since this estimate was made the proposed height of the dam has been reduced from 135 feet above sea-level to 115 feet, and the estimated amount of fill necessary has been reduced 2,600,000 cubic yards.	
Excavation—	
For spillway, etc., 1,312,882 cubic yards, at 70 cts. per yd. ....	\$919,000
For sheet piling, and stripping, 350,000 cubic yards, at \$1.20 per yard.....	432,000
For curtain walls of regulating works, 60,000 cubic yards, at \$2.10 per yard.....	126,000
Total, 1,732,882 cubic yards, at \$5.2 cents per yard.....	1,477,000
Concrete, 200,000 cubic yards, at \$8.25 per yard.....	\$1,650,000
Regulating gates and machinery.....	320,000
	1,970,000
Sodding.....	100,000
Sheet piling, linear feet, 7,000, at \$60 per foot.....	420,000
Rip-rap, 700,000 cubic yards, at \$2 per yard.....	1,400,000
Miscellaneous (includes filling trestles, pumping out old channels, etc.).....	875,000
Grand total.....	\$13,572,000

Present estimate exceeds Minority estimate of 1906 by \$5,784,000, as follows:

Embankment—Due to rock fill (new item), 3,400,000 cubic yards, at 20 cents per yard.....	\$680,000	
Due to increase in unit prices.....	1,670,000	\$2,350,000
Spillway excavation—For curtain walls (new item), 60,000 cubic yards, at \$2.10 per yard.....	\$126,000

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Gatun Woman's Club discussed the merits of long school hours and home study as against shorter hours and a longer period of school life, at its meeting on February 26. The committee appointed to procure rooms for regular meetings of the club expects that a satisfactory meeting place will soon be obtained. The meeting on Friday, March 5, will be at the home of Mrs. H. C. Oersted, house No. 13, and on March 12, with Mrs. A. L. Kerr, house No. 10.

The social meeting of the Las Cascadas Woman's Club, held at the home of Mrs. Charles Lingo, February 25, was well attended. Games were played, the prize in progressive euchre being won by the president. Some weeks ago the club took up the matter of convenience in purchasing at the commissary and the request made by the committee that negro servants be obliged to purchase on the "silver side," was granted. The regular business meeting will be held at the lodge rooms on Thursday, March 4.

The Bas Obispo Volunteer Fire Company, gave its first annual ball on the evening of February 20, in the I. C. C. hotel, which was artistically decorated with flags, bunting, fire axes, brass lanterns, flowers and palms. Steamers of fire hose were tastefully arranged from the ceiling to which were knotted a profusion of tropical flowers tied with red, white and blue ribbon. The arrangements were in charge of Mr. M. Willauer, secretary of the company. Luncheon and soft drinks were served to the three hun-

dred guests, who represented every part of the Canal Zone. Music was furnished by the Gorgona orchestra, and dancing continued until 1 o'clock in the morning.

## Red Cross Meeting.

The general meeting of the Canal Zone Branch of the Red Cross called by the president, was held at the Hotel Tivoli on Sunday afternoon, February 28, at 3 o'clock. Delegates were present from the twelve stations in the Zone where local committees have been authorized.

Col. W. C. Gorgas was elected vice-president and Mrs. Lorin C. Collins, Lieut.-Col. John L. Phillips, Maj. Chester Harding and Mr. A. Bruce Minear members of the executive committee. A committee on the organization of First Aid lectures appointed by the president consisted of Colonel Gorgas, Colonel Phillips, and Mr. H. D. Reed. Mr. W. W. Warwick was elected auditor of accounts for the branch. The treasurer reported 1,020 paid memberships. In connection with the emergency fund three entertainments have been given at Corozal, Las Cascadas and Ancon.

## Fire Department Race and Banquet.

Members of the Gatun Fire Company will be guests of the Las Cascadas Fire Company at a banquet to be held in the Washington Hotel, Colon, on the evening of March 6. Eighty-five covers will be laid. The banquet is the outcome of a hub-to-hub race held at Cristobal on Washington's Birthday between these two volunteer companies, in which the challenging company, Gatun, won

the race, a pennant presented by the Chief of the Division of Fire Protection, and the privilege of being guests at the banquet to be given by the losing team. The race was run on Front street, Cristobal, over a course measuring 118 yards. The Gatun company ran the full distance with a hose-cart carrying 200 feet of hose, laid 150 feet and connected it with a hydrant, broke the hose from three full threads, put on the pipe and had water from the nozzle in 40½ seconds. Two minor contests were also won by the Gatun company.

## Personal.

Mr. Henry Savage Landon, the well known English traveler and author, is on a visit to the Isthmus with a view of informing himself thoroughly in regard to the various phases of Canal work.

## Missing Men.

Information is wanted in regard to Charles E. Miller, age 18, height 5 feet 11 inches, dark gray eyes, and dark hair, who formerly lived in Indiana. He left home May 3, 1908. Anyone having knowledge concerning him is requested to communicate with Benjamin F. Miller, R. F. D. No. 2, Montgomery, Alabama.

Information is desired as to the present whereabouts of the following men: Matthew Campbell, Will R. Primm, Otto A. Jansson, Harkens J. Porter, George B. Wehmeyer, G. E. Marshall, P. L. Hardin, William G. or James G. Brady.

Any one having knowledge concerning any of these men is requested to communicate with the American Consul General, Panama, R. P.

## OFFICIAL CIRCULARS.

## Request on Panama Railroad Company.

CULEBRA, C. Z., February 17, 1909.  
CIRCULAR No. 197-B.

Hereafter nine (9) copies of requests on the Panama Railroad Company for work to be performed, Form 159-C. R., will be required, instead of eight (8) as heretofore.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## Passes for Laborers and Foremen.

CULEBRA, C. Z., February 26, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

When second-class transportation is issued for gangs of laborers, accompanied by foremen who desire to ride first-class, separate passes must be issued covering the two classes of transportation.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## Requests for Leaves of Absence.

CULEBRA, C. Z., February 25, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

In future, when submitting requests for leave of absence, please state on the form used for that purpose the employee's place of residence on the Isthmus, and whether occupying bachelor or family quarters.

By direction of the Chairman.

M. B. DEPUTRON, Assistant to the Chairman.

## Requests for Sixty-Trip Tickets.

CULEBRA, C. Z., February 27, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

In the future, when requesting sixty-trip tickets, please fill out Form 147-C. R. in triplicate instead of in duplicate as heretofore.

By direction of the Acting Chairman.

M. B. DEPUTRON, Assistant to the Chairman.

## Inspector of Corrals.

CULEBRA, C. Z., February 25, 1909.

## TO ALL CONCERNED:

Veterinarian H. M. Launchlin is hereby designated as Inspector of Corrals pertaining to the Quartermaster's Department on the Canal Zone.

His duties as Inspector will include all general matters relating to the administration of corrals, and as Veterinarian apply particularly to pathology and duties of farriers.

C. A. DEVOL, Chief Quartermaster.

## Pedro Miguel and Paraiso Quartermaster.

CULEBRA, C. Z., February 27, 1909.

## TO WHOM CONCERNED:

Effective March 1, 1909: The Pedro Miguel and Paraiso Districts of the Quartermaster's Department will be consolidated, and placed in charge of Mr. Roy R. Watson, District Quartermaster, with headquarters at Pedro Miguel.

Mr. Harry Dundas will be Assistant District Quartermaster, and will be located at Paraiso.

C. A. DEVOL, Chief Quartermaster.

## Cristobal Laundry Work

To all I, C. C. and P. R. R. Departments, and individuals having charge accounts:

Effective March 1, 1909: No laundry work, the cost for the laundering of which amounts to less than 25 cents for one job will be accepted from departments or individuals having charge accounts.

JOHN BURKE, Manager.

Approved:

EUGENE T. WILSON, Subsistence Officer.

## LEGAL NOTICE.

EMPIRE, C. Z., February, 27, 1909.

Circuit Court, Second Judicial Circuit, Canal Zone.

The last will and testament of Lee J. Putnam having been presented to the Court for probate, notice is hereby given that on Friday, the 19th day of March, 1909, at two o'clock in the afternoon, in the Circuit Court house at Empire, there will be a hearing when all concerned shall appear to contest the allowance of the will.

E. M. GOOLSBY,  
Circuit Court Clerk.

## SALE OF REAL PROPERTY.

By virtue of a decree of foreclosure of real property, to me directed from the Circuit Court in and for the Second Judicial Circuit, Canal Zone in favor of Pascal Canavaggio against A. Rome, I shall sell, at public auction, to the highest bidder for cash, at the east door of the court house of the Circuit Court, in the city of Empire, Canal Zone on the 4th day of March, 1909, at three o'clock in the afternoon of said day, the following described property, situated in the city of Empire, Canal Zone and more particularly described as follows: A certain three-story frame building, together with all the appurtenances there-

unto belonging, known as the Pennsylvania Hotel, and designated as by number 163, more particularly described as bounded on the north by the property of Muller, on the south by the property of Jose Garavel, on the east by the Panama railroad tracks, and on the west by the property of the Panama Banking Co., and Fishbaugh, respectively.

The above described property is to be sold at public auction as above described by virtue of a decree of foreclosure issued by the Circuit Court in and for the Second Judicial Circuit, Canal Zone, in which said cause, I, L. Toledano was the plaintiff, and A. Rome, Pascal Canavaggio, and F. P. Peterson were the defendants.

GROSVENOR A. PORTER, Marshal.

## NOTICE OF SALE.

United States of America, ) In the matter of John  
in the Circuit Court, Sec- ) Chong Wing & Co.,  
ond Judicial Circuit, at ) Bankrupts.  
Empire, Canal Zone.

By virtue of authority vested in me by the Court of the Second Judicial Circuit on the 27th day of February, 1909, I shall receive sealed bids for the stock of dry goods, boots, shoes, silks, groceries, fixtures, of John Chong Wing & Co., situated in Culebra, Canal Zone. Said bids must be addressed to me at Ancon, Canal Zone, accompanied with a deposit of \$100 by not later than the 18th day of March, 1909, 12 m., the receiver reserving the right to reject any and all bids. A copy of the inventory of the said stock can be seen either at my office in Panama, or on file in the Circuit Court at Empire, Canal Zone.

SAM B. DANNIS, Receiver

Panama, March 1, 1909.

## NOTES OF PROGRESS.

### February Excavation.

The grand total of excavation during the month of February was 3,148,879 cubic yards, 224,328 more than were taken out in January, although there were only 23 working days in February as compared with 25 in the previous month. All of this amount except 124,175 cubic yards was taken from the Canal prism. Of the grand total for February, 1,879,480 cubic yards were removed by steam shovels and 1,269,399 by dredges. The mean rainfall for the month in the territory in which excavation was in progress, was 2.85 inches as compared with 4.39 inches in January and with 1.15 inches in February, 1908.

The average daily excavation in February was 136,908 cubic yards, the highest since American occupation. The highest previous daily average, 133,856 cubic yards, was made in March, 1908, when the highest record of monthly excavation was also made. The daily average for each month for the past twelve months is as follows:

	Cubic Yards.
March, 1908.....	133,856
April, 1908.....	131,844
May, 1908.....	108,157
June, 1908.....	117,704
July, 1908.....	121,878
August, 1908.....	125,096
September, 1908.....	126,355
October, 1908.....	119,431
November, 1908.....	126,978
December, 1908.....	127,533
January, 1909.....	116,982
February, 1909.....	136,908

In the Atlantic Division the total excavation was 702,485 cubic yards, which is 49,480 cubic yards less than that of January. Of this amount 125,284 cubic yards were taken out by steam shovels and 577,201 by dredges.

All previous records in the territory now included in the Central Division were broken by an excavation of 1,644,636 cubic yards, an average of 71,506 cubic yards per day. The highest previous monthly record was

made in March, 1908, when 1,624,900 cubic yards were removed, a daily average of 62,496. The number of shovels at work during each month was about the same. Of the 1,644,636 cubic yards removed, 1,095,826 cubic yards were taken from the Culebra Cut, 450,182 cubic yards from the Canal prism elsewhere than in the Cut, and 98,628 cubic yards from the Obispo Diversion, which is outside the Canal prism.

In the Pacific Division the total excavation was 801,758 cubic yards, which is 168,820 cubic yards more than was taken out in January. Of this amount 109,560 cubic yards were removed by steam shovels and 692,198 by dredges. The detailed statement of excavation in the three divisions follows:

### ATLANTIC DIVISION.

LOCALITY.	From Canal Prism.	Outside Canal Prism.	Total excavation.
<i>Dry excavation—</i>	<i>cu. yds.</i>	<i>cu. yds.</i>	<i>cu. yds.</i>

Dry excavation.....	1,755,305	124,175	1,879,480
Wet excavation.....	1,269,399		1,269,399
Total.....	3,024,704	124,175	3,148,879

Mean rainfall along Canal (eleven stations) 2.85 inches.

### Crushed Rock from Porto Bello.

Rock was crushed at Porto Bello in the new crusher plant on March 2. The plant is practically completed and deliveries of crushed stone can now be made at any time and in any quantities that may be desired. The quarries are about fifteen miles distant from Colon on the Caribbean sea, and the rock will be conveyed to Cristobal, and thence through the old French canal to Gatun, in barges towed by tugs. The tugs and barges are ready for the service. Crushed rock for

the concrete work in Gatun spillway will be delivered in a few days.

The sand service from Nombre de Dios will also open in a few days.

### Widening Culebra Cut.

Work on the widening of Culebra Cut between Las Cascadas and Paraiso was begun the middle of November and already considerable progress has been made. Authority for the change from a 200-foot to a 300-foot channel at the bottom of the Cut, was given at an advantageous time from the construction point of view, as the steam shovels had not excavated to so low a level that they could not be taken to the higher levels with advantage. Most of the excavation for the widening is to be on the east side of the channel, although cuts are made on each side and in places fifty feet will be taken from both sides. The width of the Cut at the top and at the lowest levels yet reached is not uniform, as it depends on the nature of the material in the upper slopes. The width is 1,000 feet at Gold Hill and other points, and is only 500 feet at the top at Paraiso.

At the angle at Gold Hill little or no additional excavating will be necessary at the present levels, as a 350-foot turning basin is under construction at this tangent.

At the point between Gold Hill and Cucaracha, where there was a small angle in the line of the 200-foot channel, there will be none in the 300-foot canal.

Slides have been taken advantage of in the plan for the 300-foot channel. The slides on the west bank at Culebra had been removed to such an extent that steam shovel No. 205 made only one cut on the widening and this completed the excavation necessary at about elevation 180. At Cucaracha, where the big slide is still creeping into the prism and where several hundred thousand yards of material have already been taken out outside the slopes necessary for the original 200-foot

## NOTES OF PROGRESS.

(Continued.)

channel, the line has been turned so as to eliminate the angle mentioned above and to include much of the excavation already done. On the east bank between Empire and Culbra shovel No. 257 is taking out material so unstable that it would have been necessary to remove it even if the width of the Canal at the bottom had not been increased, and the widening does not make it necessary to remove any more material from this point than would have been removed for the 200-foot canal. Shovels Nos. 205, 220, 225, and 232, working on the east slope of the Cut, and shovels Nos. 257, 206, and 211, working on the west slope, are all engaged on the widening.

**Highest Daily Excavation.**

The record for daily excavation in the Central Division was broken on February 27, 1909, for the fifth time during the month. On that date, 59 shovels excavated 77,064 cubic yards, an average of 1,306 cubic yards per shovel for the eight hour day. The material excavated was loaded in 2,177 Lidgerwood flats, 352 large Western dump cars and 2,754 small Western and Oliver dump cars, a total of 5,283 car loads.

**Width of the Canal.**

Through nearly 80 per cent of the whole length of the Canal at present under construction, ships will steam in a channel at least 500 feet wide, and through nearly one-third of the whole distance they will be in a channel at least 1,000 feet wide, this broad channel being through part of Gatun Lake. The average width will be 647 feet. A statement showing the width of the channel from the Atlantic to the Pacific follows:

LOCATION.	Width.	Miles.	Per cent.
Atlantic entrance channel.	500	6.00	11.8
Gatun basin.	1,000	0.76	1.5
Locks and approaches (Colon, Pedro Miguel, and Miraflores Locks).	110	2.82	5.6
Between Gatun Locks and Tabernilla.	1,000	15.82	31.3
Between Tabernilla and Mamei.	800	3.25	6.4
At Mamei.	700	0.50	1.0
South of Mamei to Bas Obispo.	500	4.02	8.0
Bas Obispo to Pedro Miguel.	300	8.11	16.1
Miraflores Lake.	500	0.97	1.9
Pacific entrance channel.	500	8.31	16.4
Total.		50.56	100.0

**Gatun Handling Plant.**

The unloading dock for sand and stone at the Gatun locks is finished. Barges will tie up at this dock and the unloading cableways will take out the rock and sand, and carry them to their respective storage piles.

The substructure of the cement dock is also completed. There yet remain, before the whole dock is completed, the building of a storehouse for cement and the installation of machinery to handle the cement from barges to the warehouse, and from the warehouse to the cars on which it will be hauled to the mixing plant.

**U. S. Mine Planters.**

The U. S. Mine Planters, *Colonel George Armistead*, Capt. F. K. Fergusson, C. A. C., commanding, and *Major Samuel Ringgold*, Lieut. Clifford L. Corbin, C. A. C. com-

manding, arrived in Panama Bay on March 5. These vessels are operated by the Coast Artillery Corps of the Army and are used in placing mines for the defense of harbors in time of war. They are on their way to San Francisco and have come around South America, having sailed from Norfolk on December 1.

**Physician's Certificate of Illness.****THE CANAL RECORD:**

Will you kindly republish the following notice of the Chairman's Office, dated December 27, 1907:

Employees do not seem to understand that in order to receive payment on account of illness or injury under the regulations of the Commission, it is necessary to present themselves at a dispensary for treatment, or have a physician visit them in quarters in all cases where they are detained from their duties. Under the Chairman's circular, No. 144, which was published in THE CANAL RECORD of October 2, 1907, the physician's certificate must state specifically that the illness was contracted through no fault of the employee, and it is obvious that such certificate cannot be given unless the physician has personal knowledge of the employee's condition.

This is published for the information of all employees in view of the criticism to which physicians have been unjustly subjected for refusing to furnish certificates in cases where they were not consulted by the employees.

It has been construed that the "personal knowledge" of disability, mentioned above, means that the physicians shall see the patient each day for which he gives a certificate, and for this purpose either the patient should present himself at the dispensary at the time appointed by the physician, or, if unable to do this, should notify the physician, who will visit him at his quarters.

The time (the hour) at which a patient is first seen by, or calls upon, the physician is the first hour that will be covered by a certificate of disability.

H. R. CARTER,  
Director of Hospitals.

Ancon, C. Z., March 6, 1909.

**Employees Who Eat at Gatun.**

Thirty-eight per cent of all the negro laborers, twenty-two per cent of the European laborers, and ten per cent of the American employees eating at Commission kitchens, messes, and hotels, take their meals at Gatun. The number of employees taking their meals at Commission hotels, messes and kitchens, and the number eating at Gatun, are as follows:

	Total.	At Gatun.
Americans.	1,850	10
Europeans.	3,200	700
Negroes.	3,000	1,150
Total.	8,050	2,030

Two kitchens for negro laborers, two mess halls for European laborers, and one hotel are in operation at Gatun.

**United Fruit Company's Steamers.**

The agent of the United Fruit Company announces that the steamers of that line will discontinue stopping at Puerto Barrios,

Guatemala, either north or south bound, after the sailing of the *Parismina* from New Orleans on March 6. Steamers will sail from New Orleans every Saturday at 11 a. m. direct to Colon. North bound steamers will sail from Colon every Tuesday at 2 p. m., putting in at Port Limon for about ten hours, whence they will sail direct for New Orleans, making the trip from Port Limon in about four days.

For the information of employees who contemplate taking their annual leave in Costa Rica the agent of the company also announces that the railroad from Port Limon to San Jose is now in operation. Trains are run between these points without the necessity of transferring either passengers or baggage.

**Tariff for Special Trains.**

The General Manager of the Panama railroad announces that the tariff for the movement of special passenger trains is as follows:

The regular tariff rate for each movement of a special train is \$100 gold.

Trains consuming more than eight hours on week days or four hours on Sundays will be counted as two movements.

Trains turning with midnight intervening will be counted as two movements.

The regular tariff rate for each special car on a regular passenger train is \$10 gold, switching extra.

Payments must be made in advance to the agent at the point of departure.

Each passenger on train or car must be provided with regular form of ticket or pass.

Special tariffs for Isthmian Canal Commission will not apply, unless authorized by the office of the Chairman and Chief Engineer, after which arrangements of details may be taken up, in accordance with the foregoing.

**Tivoli Lawn Tennis Club.**

The Tivoli Lawn Tennis Club was organized at a meeting held at the Hotel Tivoli on Friday evening, February 19, when the following board of governors was elected: B. C. Poole, chairman; W. S. Crocker, J. O. Meadows, Dr. T. R. Brown, George H. Bartholomew, and Harry E. Bovay, secretary and treasurer.

It was decided that the entrance fee should be \$2.00, and the board of governors is authorized to make assessments from time to time to cover necessary expenses for equipment. Gold employees of the Isthmian Canal Commission and Panama Railroad Company are eligible to membership. Anyone wishing to join the club is asked to communicate with the secretary at Ancon.

**Preparing for the Lock Foundations.**

In the lock chambers at Gatun a force of men is at work stripping the loose earth from the slopes so as to insure the safety of the hand laborers who will presently begin excavating for the foundations of the walls.

## LIST OF EMPLOYEES WHO ARE ENTITLED TO CANAL MEDALS.

The publication of names of employees of the Isthmian Canal Commission and Panama Railroad Company who have earned Canal Medals, up to December 31, 1903, which was begun in THE CANAL RECORD of February 10, is continued in this issue. The publication of names of employees of the Isthmian Canal Commission is completed in this number and that of the names of employees of the Panama Railroad Company is begun. Address all communications relating to corrections in the Medal list in writing to the Assistant to the Chairman, Culebra, C. Z.

There were also 172 cubic yards removed by steam shovels outside of the prism during October, 1908.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The annual meeting of the Canal Zone Federation of Women's Clubs, at which officers will be elected for the ensuing year, will be held in the last week of March.

The work of the Botanical Committee of the Federation has been outlined by the President as follows: In each club there will be a chairman of the local Botanical Committee, who will have a committee of three to assist her. Each member of the club is urged to take active part in the collecting of specimens consisting of flowers and leaves, properly arranged and, when possible, the root of the plant as well. The specimens will be pressed and a description of the locality, and conditions under which it grew will accompany each specimen. The specimens will be forwarded to the Chairman of the Federation Committee, who will send them to the Field Columbian Museum of Chicago.

The report of the delegates to the January convention was read at the business meeting of the Cristobal Woman's Club on February 24, and other reports were also made. The dramatic entertainment arranged for March 3 was postponed, owing to the continuing illness of Mrs. John D. Sherman and the death of Mr. W. J. Rolman, whose wife has been a member of the Club since its organization.

The Gatun Woman's Club is planning for outdoor entertainments, including lawn tennis and croquet. Plans were discussed at the meeting on March 5, when the subject of an entertainment by the club was also considered. Mrs. A. B. Hillerman, of Empire, was the guest of the occasion and gave an informal talk on club work. The next meeting will be held at the home of Mrs. A. L. Kerr, House No. 10, on March 12, and a meeting will be held at the home of Mrs. Lorin A. Clark on March 19.

The committees of Las Cascadas Woman's Club for the month of March are: Entertainment—Mrs. W. B. Green, Mrs. T. F. Stocchini, Mrs. Garret and Mrs. C. F. Merry. Visiting—Mrs. R. M. Naylor and Mrs. T. C. Williamson. The Botanical Committee of this club consists of Mrs. W. D. Stanton, Mrs. C. W. Decker, Mrs. W. L. Kaiser and Mrs. J. E. Martin.

Mr. H. F. Schultz, horticulturist, gave an address on the "Fruits of the Isthmus" at the meeting of the Empire Woman's Club, March 4, and an exhibition of native fruits was given in the Club rooms. The attendance was large and included several guests from along the Line. Refreshments were served.

An entertainment will be given, under the auspices of the Culebra Woman's Club, during the first week of April, by Mr. J. W. Holland, impersonator, and Arthur Howard, pianist. The Club listened to a program of readings at its meeting on March 4.

"The Pottery of Old Spain" was the subject of a talk given by Miss Marie G. Le Prince at the meeting of the Ancon Woman's Club on March 3. The talk was illustrated with clay modelings and studies. At the meeting on March 17, Col. W. C. Gorgas will speak on "A Trip Through Chili."

The Bas Obispo Dancing Club held its first informal dance on Saturday evening, March 6, at the I. C. C. Hotel, Bas Obispo.

A number of out of town people attended. The next regular dance will be given on Saturday, March 20.

## Personal.

Major Eugene T. Wilson left on March 5 for the States where he will be occupied for several days with business connected with the Subsistence Department.

## Obituary.

James P. Murphy was killed by a Panama railroad train near Tabernilla sometime during the night of February 28. He had been ten months on the Isthmus, residing at San Pablo, and was working as a locomotive engineer. He is survived by his mother, Mrs. Catherine Heenan, of Wheeling, W. Va.

## Missing Men.

Information is desired in regard to Leandro Fernandez Crespo, a contract laborer who, in September, 1903, was employed in the Pacific Division. Anyone having knowledge concerning him is requested to communicate with M. B. DePutron, Assistant to the Chairman, Culebra, C. Z.

Mr. Harry Fowler is requested to send his address to B. F. Falkner, Las Cascadas, C. Z., who has something of interest to communicate to him.

Information is desired with regard to the whereabouts of Axel Edward Bring, a blacksmith of Fredriksdal, Sweden, who left that country in September, 1907, and is supposed to have come to the Canal Zone from Chicago in March, 1903, in search of work. Information should be addressed to THE CANAL RECORD.

## THE CANAL RECORD:

I have the honor to request that you cause to be inserted in the next issue of THE CANAL RECORD, the following:

The commanding officer of marines, Camp Elliott, C. Z., Panama, desires an interview with J. P. Egan, who during the months of January, 1903, and February, 1904, conducted a canteen in Haute Obispo.

B. H. FULLER,

Major, U. S. Marine Corps, Commanding.  
Camp Elliott, March 3, 1909.

## Sunday Schools.

An undenominational Sunday school has been opened at Corozal. The attendance is large and regular sessions are held in any available vacant house at present, but steps have been taken to secure a regular meeting place. Mr. Moore is the superintendent.

The Union Sunday School at Empire has a membership of ninety and the attendance is regular.

Mrs. Abbie B. Hillerman, of Empire, entertained the members of her bible class at her home on the evening of March 2. About twenty persons were present. At the close of the evening a meeting was held at which class work was discussed and a class organization was effected.

## School Gardens.

A garden has been planted by the school children at Gatun and so much interest has been evinced in it that a larger plot of ground has been granted for this purpose. In Gorgona the public school has also taken up the matter. The Gorgona Woman's Club is co-operating with the school authorities in establishing a garden and will make an effort to have Arbor Day observed.

## COMMISSION CLUBHOUSES

## Activities of the Young Men's Christian Association.

The concerts of the Lyric Glee Club of Chicago, which is giving entertainments under the auspices of the Y. M. C. A., will be given as follows: Gatun, Wednesday, March 10; Las Cascadas, Friday, 12; Camp Elliott, Saturday, 13; Culebra, Monday, 15; Porto Bello, Tuesday, 16; Paraiso, Wednesday, 17; Gorgona, Thursday, 18; Empire, Friday, 19; Cristobal, Saturday, 20.

The men of the Pacific squadron under command of Rear Admiral W. T. Swinburne, who were granted shore leave, were extended the same entertainment and courtesies by the Young Men's Christian Association and Citizens' Committee, as upon their visit in December. They arrived here at noon, February 22, and remained until March 4. The activities carried on at the Y. M. C. A. headquarters, in Panama, were the same as described in THE CANAL RECORD of December 30, 1908.

## CRISTOBAL.

The number of members of this association for March is 427. This is larger than for any preceding month since the association was organized.

Entertainments are scheduled: Wednesday, March 10, entertainment by the Woman's Club; Saturday, March 13, basketball Y. M. C. A. vs. Lincoln House; Wednesday, March 17, St. Patrick's Day, entertainment by Machinists' organization; Saturday, March 20, tournament, duck pins, Culebra vs. Cristobal; Saturday, March 20, return engagement Lyric Glee Club; Saturday, April 3, moonlight athletic meet on the new cinder track.

The winners in the local duck pin tournament are as follows: Butte, 1735 pins, average 89%; Lauch, 1733 pins, average, 86 13-20; Thatcher, 1695 pins, average 84%; Corbill, 1660 pins, average, 83; Burke, 1652 pins, average 82; W. Russell, 1611 pins, average, 80 4-5.

The first meet on the new Y. M. C. A. 13 1/2-year cinder track was held on Friday night, March 5, by moonlight. Following are the winners: One lap race—Hertz first; Weller's cond; Luce third. Three lap race—Bessler first; Sinka second; Bailey third. Six lap race—Luce first; Smith second; Bart third. Twelve lap race—Sinka first; Copeland second; Smith third. Relay race—won by Tuttle, Berte, Hertz, and Faulbee. Total score: P. R. R. 2, points, 1 C. C., 20 points. Judges: Lieutenant B. Egan, Arthur Richards, and Harry Bell. Another meet will be held during the next full moon on Saturday, April 3.

A local chessfest is held each Saturday night. On Saturday, April 13, Mr. Sourin, from Culebra, will play 11 corners in simultaneous games.

## Concert by the I. C. C. Band

EMPIRE, C. Z.,

Sunday, March 14, 1909, at 6 p. m.

## PROGRAM.

- 1 March—To the Front.....Baines
- 2 Selection—A Gay Musician.....Edwards
- 3 Porto Rican Dance—Rosita.....Missud
- 4 Moroccan—Narcissus.....Nevin
- 5 Paraphrase on *Neaver, My God, to Thee*.....Reeves
- 6 With mariaphone solo performed by Wm. G. Howe.
- 6 1 fantasia—Gems of Stephen Foster.....Tobani
- 7 Waltz—American Student.....Missud
- Introducing several college songs.
- 8 Overture—*Schauspiel*.....Bach
- 9 March—*Old Faithful*.....Holzman

CHAS. E. JENNINGS, Musical Director.

The next concert will be given at Tabernilla, Sunday, March 21.

## Misdirected Letters.

Division of Posts, Customs and Revenues,

Ancon, C. Z., March 10, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Aldis, Floyd	Mannoil, James
Anderson, Louis	McElroy, G. Normaa

Keeney, H. L. (pkg.)	Thompson, Newton
Keeney, John J.	Vickers, Miss Nettie
Lucas, Captain	Wannamaker, C. W.
Manion, James E.	

## COMPARISON OF WORK AND COST, AS ESTIMATED IN 1905 AND IN 1908—PACIFIC DIVISION.

A summary of the amount of work and the cost, as estimated by the Board of Consulting Engineers in 1905 and by the Isthmian Canal Commission in December, 1908, and the details of the Board's estimate and that of the Commission for the Central Division were published in THE CANAL RECORD of February 24. The summary includes, in addition to a comparison of the amounts required for construction, an estimate of the amounts that will be required for the Department of Civil Administration, the amounts to be paid to the New French Canal Company and the Republic of Panama and an estimate of reimbursements to the United States Treasury from various sources. The details of the estimate for work and costs in the Atlantic Division were published in the issue of March 3, and details for the Panama Railroad relocation, loans to the Panama Railroad, general expenses, construction and repair of buildings and municipal improvements, will be published in the issue of March 17.

## BOARD OF CONSULTING ENGINEERS, 1905.

*PEDRO MIGUEL LOCKS—One Twin Lock, 95 feet by 900 feet usable dimensions 30 foot lift:*

Excavation—Earth, 650,000 cubic yards, at 40 cents per yard.....	\$251,000
Rock, 320,000 cubic yards, at \$1.15 per yard.....	368,000
Total, 1,170,000 cubic yards.....	\$619,000
Back filling, 390,000 cubic yards, at 50 cents per yard.....	195,000
Locks, exclusive of excavation and approach walls.....	5,945,000
Emergency gate.....	1,000,000
Approach walls.....	300,000
Total.....	\$8,289,000

*PEDRO MIGUEL DAM:*

Earth embankment, 1,100,000 cubic yards, at 25 cents per yard.....	\$275,000
Preparatory work.....	50,000
Total.....	\$325,000

## ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

*PEDRO MIGUEL LOCKS—One Twin Lock, 110 feet by 1,000 feet usable dimensions 30 foot lift:*

Excavation, 950,000 cubic yards, at \$1.15 per yard.....	\$1,111,000
Excavation, 220,000 cubic yards, at \$1.30 per yard.....	286,000
Total, 1,250,000 cubic yards, at \$1.15 cents per yard.....	\$1,500,000
Back filling, 830,000 cubic yards, at 55 cents per yard.....	456,500
Concrete, 922,600 cubic yards, at \$3.25 cents per yard.....	7,611,000
Emergency dam, gates, valves, operating machinery, electric capstans, etc.....	3,100,000
Miscellaneous.....	250,000
Total.....	\$12,993,000

*PEDRO MIGUEL DAM:*

Excavation and pile core, 21,200 cubic yards, at \$1.20 cts. per yd.....	\$25,000
Embankment—Earth, 230,500 cubic yards, at 95 cents per yard.....	219,000
Miscellaneous.....	7,000
Total.....	\$251,000

The increase of the present estimate for Pedro Miguel Locks over the Minority estimate of 1906, is due to increase in size of locks and changes in plans, and amounts to \$4,405,000, as follows:

Increase due to excavation, 97,900 cubic yards.....	\$645,000
Increase due to back fill, 444,000 cubic yards.....	264,000
Increase in concrete due to increase in size of locks, 220,000 cubic yards at \$5.25 per yard.....	1,848,000
Due to change of plans, 100,000 cubic yards at \$8.25 per yard.....	825,000
Increase due to gates, operating machinery, etc., including intermediate gates added.....	825,000
Total.....	\$4,405,000

*CHANNEL, PEDRO MIGUEL TO DEEP WATER—1.87 miles, 500 feet wide, Pedro Miguel to new Miraflores; 3.61 miles not less than 1,000 feet wide in Sosa Lake; 1.23 miles, 300 feet wide, in Panama Bay:*

<i>Pedro Miguel to La Boca:</i>	
Excavation—Dredging, 1,680,000 cubic yards, at 25 cts. per yard.....	\$420,000
<i>La Boca to deep water:</i>	
Excavation—Dredging, 4,760,000 cubic yards, at 15 cts. per yard.....	714,000
Rock under water, 200,000 cu. yds., at \$1.50 per yd.....	300,000
Rock under water, 370,000 cu. yds., at \$2.50 per yd.....	925,000
Total, 7,010,000 cubic yards, at 33 cents per yard.....	\$2,359,000

*CHANNEL, PEDRO MIGUEL TO DEEP WATER—500 Feet Wide:*

Excavation—Dredging, 32,768,051 cubic yards, at 20 cents per yd.....	\$6,553,000
Rock under water, 1,630,000 cu. yds., at \$2.50 per yd.....	4,075,000
Dry, 2,141,548 cubic yards, at \$1 per yard.....	2,141,000
Total, 35,531,599 cubic yards, at 35 cents per yard.....	\$12,770,000
Removing wrecks.....	100,000
Breakwater to Naos Island.....	300,000
Grand total.....	\$13,170,000

From Pedro Miguel Locks to the Pacific, the estimates of the Minority of the Board are not comparable, item for item, with present estimates, on account of change in plan.

The Minority's plan contemplated the formation of a lake on the Pacific side by the construction of earth dams at the Pacific entrance, with a flight of two locks on the west side of Sosa Hill. Their estimates for the locks did not include the removal of the soft material overlying the rock. Subsequent investigation showed that this would be necessary, and that the dams would have to be built of selected material. This would treble the cost of the dams as estimated by the Minority. A report was made in December, 1907, giving estimated cost as of that date of different plans based on different location for the Pacific locks, and showing that the most suitable and economical location was at Miraflores. This change in location, of the Pacific locks from La Boca to Miraflores was approved by the President December 20, 1907. The cost of the locks at Miraflores as compared with the Minority estimate of locks at La Boca is greater on account of both increased size of the locks and increased cost of foundations. The increased cost of channel work from Miraflores to the Pacific by present estimate, over the Minority estimate for the earth dams, modified so as to represent the cost of the dams as they would have to be constructed, is due largely to change in location and dimensions of channel, as from east to west of Naos Island, etc.

The increased quantity of work itemized above, therefore, is due both to extending the sea-level channel from La Boca to Miraflores, and to shifting the position of the channel between La Boca and deep water.

*PACIFIC LOCKS AND DAMS:**LA BOCA LOCKS—Flight of two twin locks, 95 feet by 900 feet usable length; total maximum lift, 64.7 feet.*

Excavation—Earth, 480,000 cubic yards, at 40 cents per yard.....	\$192,000
Rock, 950,000 cubic yards, at \$1.50 per yard.....	1,425,000
Total, 1,430,000 cubic yards, at \$1.13 per yard.....	\$1,617,000
Back fill and embankment.....	475,000
Locks, exclusive of excavation and approach walls.....	11,000,000
Approach walls.....	450,000
Total.....	\$13,542,000

*DAMS:*

Embankment, Ancon-Sosa and Ancon-Corozal dams, 5,940,000 cubic yards, at 25 cents per yard.....	\$1,495,000
Embankment, La Boca dam, 6,300,000 cubic yards at 25 cents per yard.....	1,575,000
Shutting off the tidal flow at La Boca.....	100,000
Diversion channel and regulating works between Sosa and Ancon.....	275,000
Preparation of sites, etc.....	150,000
Total.....	\$3,595,000

*PACIFIC LOCKS AND DAMS—**MIRAFLORES LOCKS—Flight of two twin locks, 110 feet by 1,000 feet usable length; total maximum lift, 64.7 feet:*

Excavation—Dry, 1,132,577 cubic yards, at \$1.15 per yard.....	\$1,215,000
Dry, rock, 258,850 cubic yards, at \$1.50 per yard.....	388,000
Dry, rock, 845,345 cubic yards, at \$2.25 per yard.....	1,902,000
Dredging, 1,611,164 cubic yards, at 25 cents per yard.....	402,791
Total, 3,701,172 cubic yards, at \$1.05 per yard.....	\$3,900,000
Back fill, 1,912,400 cubic yards, at 45 cents per yard.....	861,000
Piling, 121,900 linear feet, at 50 cents per foot.....	60,950
Rip-rap, 43,000 cubic yards, at 40 cents per yard.....	17,200
Concrete, 61,500 cubic yards, at \$6.50 per yard.....	400,000
Concrete, 1,258,800 cubic yards, at \$4.25 per yard.....	10,355,000
Emergency dam, gates, valves, operating machinery, electric capstans, etc.....	3,500,000
Miscellaneous.....	330,000
Total.....	\$19,715,000

*MIRAFLORES DAMS—*

Excavation, 131,686 cubic yards, at \$1 per yard.....	\$185,000
Filling, 1,015,900 cubic yards, at 50 cents per yard.....	507,950
Concrete, 68,500 cubic yards, at \$1 per yard.....	68,500
Regulating works.....	325,000
Miscellaneous.....	300,000
Total.....	\$2,156,000

The present estimate for locks at Miraflores exceeds the Minority estimate for locks at La Boca. The increase is due principally to increased work from changing size of locks from 95 feet by 90 feet to 110 feet by 1,000 feet, and also to changes in plans, such as providing intermediate gates, etc., viz:

Increased excavation, 2,278,172 cubic yards.....	\$2,287,000
Increased back fill.....	300,000
Piling, rip-rap and miscellaneous (new items).....	409,000
Increased concrete due to deeper foundation required at Miraflores, 69,500 cubic yards, at \$5.50 per yard.....	452,000
Increased concrete due to changes in plans, 210,000 cubic yards, at \$8.25 per yard.....	1,980,000
Increase due to gates, operating machinery, etc.....	655,000
<b>Total.....</b>	<b>\$6,173,000</b>

The Minority estimate for the Pacific dams as given above is not comparable with the estimate of December, 1908, for Miraflores dams, as the work is not in the same location, and dams as proposed by the Minority, if built, would have had to be modified in plan with largely increased cost.

## CANAL ZONE HEALTH IN 1903.

## Lowest Death Rate Since American Occupation—Disease Decreasing.

OFFICE OF CHIEF SANITARY OFFICER.

ANCON, C. Z., February 25, 1909.

To the Acting Chairman Isthmian Canal Commission, Colon, C. Z.

Sir: I herewith forward report of the Department of Sanitation for the calendar year 1908:

I would like to call your attention to several points in this report. In the first place, to the low death rate among employees. The figures for the past five years are as follows:

YEAR.	Force.	Deaths.	Rate per thousand
1907.....	6,213	82	13.26
1908.....	16,511	427	25.86
1909.....	26,703	1,105	41.37
1907.....	39,343	1,132	18.77
1908.....	43,890	571	13.01

This means that out of every thousand employees, we had in 1908 one-third the number die that we had die in 1905, and one-half the number that we had die in 1907.

In this connection, it is particularly interesting to note how the death rate among the blacks has fallen:

YEAR.	Force.	Deaths.	Rate per thousand
1905.....	13,482	351	26.25
1906.....	21,441	1,013	47.24
1907.....	28,534	953	33.23
1908.....	31,507	402	12.76

This means that in 1905, out of every thousand blacks on our rolls, 47 died, whereas in 1908, out of every thousand on our rolls, only 12 died. The black death rate was slightly less in 1908 than the white death rate. This is the first year, since we have been on the Isthmus, that the black death rate has been smaller than the white death rate. In 1905 the death rate among the blacks was nearly three times as high as that among the whites.

Considering the total population of Panama, Colon and the Canal Zone, we have the following:

YEAR.	Population.	No. of deaths.	Rate per thousand
1904.....	35,000	1,224	52.45
1905.....	42,699	2,793	65.41
1906.....	66,011	3,544	49.10
1907.....	102,133	3,435	33.63
1908.....	120,097	2,983	24.83

This means that out of every thousand

people on the Zone considerably less than one-half as many died in 1908 as died in 1905.

Taking special diseases, we find that in 1906 we had among the 26,705 employees, 69 deaths from dysentery; in 1907, with 39,343 employees, 48 deaths; and in 1908, with 43,890 employees, 16 death. That is, with 43,890 employees in 1908 we had less than one-quarter the number of deaths from dysentery than we had among 26,705 employees in 1905.

In 1905, we had from malaria 233 deaths; in 1907, 154 deaths; and in 1908, 73 deaths. That is, with a force more than one-third larger in 1908, we had, from malaria, less than one-third the deaths that we had in 1905.

In 1907, we had from typhoid fever 98 deaths, and in 1908, with a larger force, we had only 19 deaths.

In the number of deaths from pneumonia there has also been a great fall. In 1906 we had 431 deaths from this disease; in 1907, 328 deaths, and in 1908, 93 deaths.

Among white Americans from the United States we had 42 deaths during the year. Exactly one-half of these were from violence. Our death rate, from disease, among this class, was 3.84 per thousand, about the same rate as occurred in the year 1907 in our Army.

During the year we had on the Isthmus 2,674 American women and children connected with the Commission. The death rate among these was 9.72 per thousand. This is an exceptionally small rate for this class of population.

I consider malaria the best measure of the sanitary work done. In 1906, out of every thousand employees, we admitted to our Hospitals, from malaria, 821; in 1907, 424; and in 1908, 282. That is, we now have only about one-third the amount of malaria among our employees that we had three years ago.

Beriberi is also a disease that has considerably decreased in the past three years. In 1905 we had 63 deaths in the total population from this disease; in 1907, we had 53 deaths; and in 1908, 38 deaths.

It has been more than three years now since a case of yellow fever has developed on the Isthmus. The last occurred in November, 1905. The last case of plague occurred in August, 1905. No case of smallpox occurred during the year.

Taken as a whole, the health report for 1908 shows very much better conditions than have occurred in any previous year since we have been on the Isthmus, and the death rates and sick rates among our employees will compare favorably with those of most parts of the United States.

Very respectfully, WM. C. GORGAS,  
Chief Sanitary Officer.

## Stages of the Chagres.

Maximum height of Chagres above low water for the week ending midnight March 6, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gambua.	Bohio.	Gatun (Canal).	Gatun (W. River).
Height of low water above mean sea level, feet.....	125	92	16	1	0	0
Maximum height above low water, feet:						
Sunday, Feb. 28.....	.85	1.10	1.80	2.3	1.3	1.2
Monday, Mar. 1.....	.90	1.10	1.80	2.2	1.3	1.2
Tuesday, Mar. 2.....	.75	1.08	1.80	2.1	1.2	1.0
Wednesday, Mar. 3.....	.70	1.42	1.80	2.1	1.2	1.1
Thursday, Mar. 4.....	.55	1.42	1.80	2.0	1.1	1.0
Friday, Mar. 5.....	.50	1.42	1.75	1.9	1.1	1.0
Saturday, Mar. 6.....	2.30	1.20	1.75	2.0	0.9	0.8

An error of 3 feet was discovered in the elevation of the benchmark at Vigia, and the "Height of Low Water" heretofore published in the THE CANAL RECORD should be 126 feet above sea level instead of 129 feet above sea level. The river at this point has recently fallen below what was assumed as the low water plane, and this is, therefore, now fixed at 175 feet above sea level. The heights above low water previous to February 28 are referred to the 126-foot level instead of the 129-foot, and those since that date are referred to the 125-foot level.

## LEGAL NOTICE.

EMPIRE, C. Z., February, 27, 1909.

Circuit Court, Second Judicial Circuit, Canal Zone.

The last will and testament of Lee J. Putnam having been presented to the Court for probate, notice is hereby given that on Friday, the 19th day of March, 1909, at two o'clock in the afternoon, in the Circuit Court house at Empire there will be a hearing when all concerned shall appear to contest the allowance of the will.

E. M. GOOLSBY,  
Circuit Court Clerk.

## OFFICIAL CIRCULARS.

## Volunteer Fire Companies.

CULEBRA, C. Z., March 1, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

The following letter from the Head of the Department of Civil Administration to the Acting Chairman, is brought to the attention of all concerned.

It is estimated that the property of the Commission and railroad on the Isthmus protected by the Division of Fire Protection maintained by the Commission reaches in value about \$22,000,000. Paid fire companies are maintained at Cristobal, Gorgona Empire, Culebra, and Ancon. At all other places the work of protecting Commission and railroad property against fire devolves entirely upon companies of volunteer firemen recruited from the employees of the Commission and railroad.

The duties of the Fire Chief, in connection with the work of the volunteer companies are to keep membership up to the necessary strength to see that they drill at regularly appointed times, and in case of fire to have a paid fireman, if one is available, direct their efforts. The volunteer firemen have shown commendable efficiency when they have been called upon to save Government property from destruction by fire. Under authority of the Chairman employees who are members of volunteer companies are excused from their work for one hour twice a month to attend drill. The time of drill is usually from four to five in the afternoon.

At times the attendance of employees at fire drill causes more or less inconvenience to the regular work on which they are engaged. Some time ago \* \* \* the Chairman directed that transportation and excavation men should not be required to attend drill during work hours \* \* \* In other cases department and division heads have requested individual employees to resign from membership in volunteer companies, or have requested me to relieve individual employees from such membership.

These conditions indicate that the serious character of the work of volunteer fire companies, the necessity for their existence, and for the co-operation of all officials of the Commission in the maintenance of their efficiency, are not sufficiently understood. While the men themselves are interested in the volunteer fire service, their efficiency in that service depends on the support of their superiors. It is to be expected that some inconvenience will result from the absence of employees while attending fire drill, but only in exceptional cases is such inconvenience sufficient to justify refusal to permit the employees to attend drill. It is also to be expected that employees who can ordinarily be spared from their usual work to attend drill will at times be unable to do so. Their occasional inability to be present at drill does not seriously impair their efficiency as firemen. But unless the general efficiency of the volunteer fire service can be maintained by the cooperation of department and division heads, and at times, by some sacrifice on their part, it will be necessary for the Commission to install paid companies at many places in the Zone where such companies do not now exist, and to enlarge the present paid companies. This will result in considerable increase in the cost of fire protection.

It might be well to bring this matter to the attention of department and division heads, with a request that they will submit lists of the classes of employees whose duties, in their opinion, are such that they cannot be spared for fire drill without serious inconvenience to the service. Such lists could then be approved by you so far as you think they should be approved. The subject is submitted to you for this or such other action as you may think proper.

The suggestion contained in the last paragraph of the foregoing letter is approved, and heads of departments and divisions are requested to submit the lists mentioned, at an early date, for consideration.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

## Compensation for Injuries.

CULEBRA, C. Z., March 1, 1909.

## CIRCULAR No. 235.

By the Act of Congress approved May 30, 1908, which took effect on August 1, 1908, it is provided that any person employed as an artisan or laborer in hazardous employment under the Isthmian Canal Commission who is injured in the course of such employment shall be entitled to receive for one year thereafter unless sooner able to resume work, the same pay as if he continued to be employed. This law requires the approval by the Secretary of Commerce and Labor of a claim for compensation before payment can be made, and prohibits payment of compensation where injury is due to the negligence or misconduct of the employee injured, and in all cases where such injury does not continue for more than fifteen days.

By the Act of February 24, 1909, it is provided that

nothing contained in the Act of May 30, 1908, shall prevent the Isthmian Canal Commission, under rules to be fixed by the Commission, from granting to its injured employees, whether engaged in hazardous employment or otherwise, leave of absence with pay for time necessarily lost as the result of injuries received in the course of employment, not exceeding in the aggregate thirty days per annum.

Effective February 24, 1909, the following rule will apply to payment of all injured employees whether engaged in hazardous or other employment.

An employee may be granted, in the discretion of the head of the department or division in which employed, with the approval of the Chairman, pay for time necessarily lost as a result of injuries received in the course of employment, not exceeding in the aggregate, thirty days in any calendar year. The amount of compensation to be paid an employee for time lost on account of injury will be calculated on the basis of an eight hour day for consecutive days, including Sundays and holidays. Leave on account of injury shall not be cumulative, and payment for same will be made on the first pay roll following its authorization.

The foregoing rule will also cover cases of injury which occurred prior to February 24, 1909, so far as time lost on and after that date is concerned.

The following instructions will govern in the case of all employees:

When an employee is injured in the performance of duty, the preliminary report of accident now in use (Form C. E. 177) will be immediately sent by his foreman, or other superior officer, to the office of the head of the department or division in which he is employed. It will there be held in suspense until the employee returns to duty, or until fifteen days have elapsed from the date of the accident.

If the time lost on account of injury does not exceed fifteen calendar days, or, regardless of the time lost, if the injured employee is not entitled to compensation under the Act of May 30, 1908, Form 206-C. E., will be prepared by the head of the department or division, and forwarded in triplicate to the Chairman for his action, accompanied by the certificate of the attending physician. Upon the return of this form approved, payment will be made on the regular pay roll as "meritorious sick leave" in the manner provided for in the foregoing rule.

Should the employee be in the class of employees covered by the Act of May 30, 1908, and be still incapacitated on the fifteenth day after the accident, an "Immediate Report of Accidental Injury" (Form C. A. 1) will be prepared by the head of the department or division and forwarded in duplicate not later than the sixteenth day after the accident, to the Claim Officer, Empire, Canal Zone, who will prepare claim for compensation and transmit it to the Department of Commerce and Labor.

When an employee whose claim has been forwarded as provided in the preceding paragraph returns to duty, Forms C. A.-2, "Report of Return to Work" and C. A.-7, "Certificate of Disability" shall be immediately sent in duplicate to the Claim Officer.

All cases of accidental death shall be reported on Forms C. A.-1A and C. A.-3, through the Claim Officer, in accordance with the present practice.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

CULEBRA, C. Z., March 8, 1909.

## CORRECTION TO CIRCULAR No. 235:

A typographical error was made in some of the copies sent out of Circular No. 235. The concluding words of the first sentence of paragraph 4 should be "calendar year" instead of "calendar month." Please make correction.

By direction of the Acting Chairman.

M. B. DEPUTRON, Assistant to the Chairman.

## Acting Subsistence Officer.

CULEBRA, C. Z., March 5, 1909.

## CIRCULAR No. 236.

In the absence from the Isthmus of Maj. E. T. Wilson, Subsistence Officer, Isthmian Canal Commission, all his duties in connection with the Subsistence Department, Isthmian Canal Commission, and the Commissary Department, Panama Railroad Company, will be performed by Lieut. F. O. Whitlock, Assistant Subsistence Officer, Isthmian Canal Commission.

H. F. HODGES,  
Acting Chairman and Chief Engineer.

H. J. SLIFER,  
Assistant to the President, P. R. R. Co.

LOST—From car window, left side of car from Panama to Colon, in the vicinity of the corral near Corozal, one pair of oval-shaped nose glasses. Finder will be suitably rewarded if glasses are delivered to Felix E. Porter, Disbursing Office, Empire, C. Z.

LOST—Fraternity pin, gold anchor with a white enamel shield and cross bar inscribed with Greek letters, marked with name and S. W., 1902. Reward for return to Mrs. W. D. Stanton, Las Cascadas, C. Z.

## MOVEMENT OF OCEAN VESSELS.

## NOTES OF PROGRESS.

### President Taft on the Canal.

The Panama Canal will have a most important bearing upon the trade between the Eastern and far Western sections of our country and will greatly increase the facilities for transportation between the eastern and the western seaboard, and may possibly revolutionize the transcontinental rates with respect to bulky merchandise. It will also have a most beneficial effect to increase the trade between the eastern seaboard of the United States and the western coast of South America, and indeed with some of the important ports of the east coast of South America reached by rail from the west coast. The work on the Canal is making most satisfactory progress. The type of the Canal as a lock canal was fixed by Congress after a full consideration of the conflicting reports of the majority and minority of the Consulting Board and after the recommendation of the War Department and the Executive upon those reports. Recent suggestion that something had occurred on the Isthmus to make the lock type of the Canal less feasible than it was supposed to be when the reports were made and the policy determined on, led to a visit to the Isthmus of a board of competent engineers to examine the Gatun dam and locks, which are the key of the lock type. The report of that board shows that nothing had occurred in the nature of newly revealed evidence which should change the views once formed in the original discussion. The construction will go on under a most effective organization controlled by Col. Goethals and his fellow army engineers associated with him, and will certainly be completed early in the next administration, if not before.

Some type of canal must be constructed. The lock type has been selected. We are all in favor of having it built as promptly as possible. We must not now therefore keep

up a fire in the rear of the agents whom we have authorized to do our work on the Isthmus. We must hold up their hands, and speaking for the incoming Administration, I wish to say that I propose to devote all the energy possible and under my control to the pushing of this work on the plans which have been adopted and to stand behind the men who are doing faithful hard work to bring about the early completion of this the greatest constructive enterprise of modern times.—From Mr. Taft's Inaugural address.

### American-made Dredge Buckets.

The first American-made dredge buckets to be used in the construction of the Canal have been delivered at La Boca and will presently be tested on one of the old Scotch ladder dredges left here by the French and utilized by the Americans. The buckets are made of cast steel and have lips and bushings of manganese steel. Unlike the buckets on the old Scotch dredges they are in one piece. They have a capacity of about one-half a cubic yard. The buckets hitherto used were left on the Isthmus by the French.

### New Pacific Quarantine Station.

The new quarantine station at Culebra Island was opened on March 1, when a case of yellow fever brought from Gnayaquil was placed in one of the isolation pavilions. Passengers are now detained at this station, the old station at La Boca in the house known as "La Folie Dingler" having been turned over to the Quartermaster's Department. Ships coming from ports against which quarantine has been declared are not allowed to land their passengers until the prescribed period has elapsed. Passengers are transferred in a tug to Culebra Island. A description of the accommodations afforded at the new station appeared in THE CANAL RECORD Vol. I., pages 307, 345. Visitors are not allowed on the island except by special permission. While any one is detained in quarantine a yellow flag flies over the island as an indication that no one, excepting those on official business, will be allowed to land.

### Recruiting Laborers for P. R. R.

During the month of February a call was received from the Panama Railroad Company for 250 West Indian laborers. This number of idle laborers was easily found in the Canal Zone, and in the cities of Panama and Colon, but few of them would accept the class of work offered. While it is true that there is a large surplus population of laborers on the Isthmus, many of them are of the idle and worthless class who cannot be depended upon to work as common laborers at the 20-cent silver rate. The Panama Railroad Company requires a large number of additional men in connection with the relocation work, and the Commission's agent in Barbados has been instructed to recruit

1,000 men to arrive on the Isthmus in two shipments—500 on March 18 and 500 on April 15. No difficulty is anticipated by the Chief Quartermaster in securing any additional number of West Indian laborers that may be required.

### Highest Single Shovel Day Record.

All records for a single day's excavation by one shovel were surpassed, on March 2, in the Empire Construction District, Central Division, when shovel No. 220 removed 3,941 cubic yards of rock and earth in a working day of eight hours. The shovel was actually at work 6 hours and 50 minutes of this time and was waiting for cars one hour and ten minutes.

### Wireless Station at Porto Bello.

A wireless telegraph station to be operated under the Navy Department will soon be opened at Porto Bello. A contract for the equipment has been let and the materials are on the way to the Isthmus. A mast 130 feet high will be erected on one of the hills at the entrance to the harbor. The work is being done under the supervision of Major Fuller of the Marine Corps, in command at Camp Elliott. The station will be used for general naval purposes and, in addition, official messages of the Isthmian Canal Commission will be transmitted between Porto Bello and the wireless station at Colon.

### La Boca Landing Stage.

A landing stage for transferring the crews of the dredges has been erected at La Boca between the machine shop and the docks. It consists of a pontoon which floats in the water and a permanent caisson connected by a swinging bridge 126 feet long. The permanent caisson is built of two diving bells left at La Boca by the French, and the swinging bridge is part of the conveyor mechanism of an old French excavator which was found in the storeyard at Tabernilla. The bridge is so attached to the caisson and the pontoon that it rises and falls with the tide. This is the bridge that was originally intended for a landing stage at the Culebra Island Quarantine Station.

### February Money Order Business.

During the month of February, 1909, the 16 post-offices in the Canal Zone at which money order business is done sold 14,473 money orders, aggregating \$416,149.81, an increase of \$6,909.77 over the amount reported for January. Of the \$416,149.81 in February, \$302,828.17 was drawn in orders payable in the United States and elsewhere, and \$113,321.64 in orders payable in the Canal Zone. The fees collected amounted to \$1,744.02, and the amount paid and repaid was \$111,712.65.

In the number of orders drawn, Cristobal was first with 2,817, Empire was second with 1,750, and Ancon third with 1,740. In the

## NOTES OF PROGRESS.

(Continued.)

total amount issued, Cristobal was first with \$80,677.44, Empire second with \$44,969.22, and Gorgona third with \$43,471.59. Of the amount payable in the United States, Cristobal was first with \$67,300.95, Empire second with \$36,183.34, and Ancon third with \$34,420.15. In orders payable in the Canal Zone, Gorgona was first with 17,928.45, Cristobal was second with \$13,376.49, and Pedro Miguel was third with \$11,886.70. In the amount paid and repaid, Cristobal was first with \$19,271.26, Empire second with \$15,458.14, and Gorgona third with \$12,920.28.

The average of all the orders issued was \$28.75, the highest being at Corozal, where 278 orders amounting to \$10,181.20 were sold, an average of \$36.62, and the lowest was at Ancon, where orders aggregating \$39,268.67 were sold, an average of \$22.57.

**Lidgerwood Unloaders in February.**

The eleven Lidgerwood unloaders in the Central Division, during the month of February, unloaded a total of 2,692 trains, composed of a total of 47,129 cars. Of this number, 1,327 trains, composed of 22,559 cars, were unloaded by five unloaders at Tabernilla; 583 trains, composed of 10,494 cars, were unloaded by three unloaders at the Miraflores dumps, and 782 trains, composed of 14,076 cars, were unloaded by three unloaders at La Boca. As all the cars were of 20-yard capacity, the material unloaded represented about 942,580 cubic yards.

**Dredging in February.**

Dredging for the hydraulic fill of Gatun Dam is not considered as Canal excavation, and, therefore, is not included in the excavation report published in THE CANAL RECORD of March 10. Including dredging for the dam and from the old French canal at Gatun, the excavation by dredges in February amounted to 1,420,820 cubic yards, of which the Atlantic Division did 728,622 cubic yards, and the Pacific Division 692,198.

In the Atlantic Division suction dredge No. 85 excavated from the lower lock 132,291 cubic yards. At this rate the excavation in that lock chamber will be completed by the first week in May. The dredge is doing more work than two steam shovels would in similar material, and is doing it at about one tenth the cost. A total of 115,732 cubic yards was excavated by suction dredges Nos. 82 and 83 and pumped into Gatun Dam during the month. Dredge No. 82 worked 15 days and excavated 59,860 cubic yards. On February 20 it was sent to the Cristobal marine shops for repairs, and dredge No. 83 substituted. The February record of the dredges in the Atlantic Division is as follows:

DREDGES.	CUBIC YARDS.		
	Earth.	Rock.	Total.
20-inch suction, No. 85.	132,291	.....	132,291
20-inch suction No. 83.	55,872	.....	55,872
20-inch suction, No. 82.	59,860	.....	59,860
Dipper, Mudi.	23,714	5,975	35,689
Ladder, No. 1.	90,634	.....	90,634
Ladder, No. 6.	52,781	16,315	69,096
Sea-going suction, Ancon.	285,180	.....	285,180
Total.	706,332	22,290	728,622

The dredges of the Pacific Division excavated 692,198 cubic yards in February, all

but 24,222 yards of which were taken from the Canal prism. The sea-going suction dredge *Culebra* was working in the outer end of the channel near deep water, excavating mud and some small rock. The marine ladder dredge *Mole* put in part of the month working in the Canal prism opposite the wharf, and spent several days in the channel leading up to the machine shop. In the latter work it was greatly hampered by a large amount of wire cable, iron rods, anchors, chain, and other old iron which had been dropped into the channel at various times in the past, and which clogged the buckets. The marine ladder dredge *Gopher* was working on the east bank of the channel about three miles from deep water excavating the channel at this point to its final width of 500 feet. Ladder dredge No. 14 was excavating in the old French canal, in the prism of the present canal, between La Boca and Miraflores. The dipper dredge was taking out mud and clay in the prism of the Canal opposite the machine shop. At Miraflores the 20-inch suction dredge *Sandpiper* continued excavating in the site of the lower locks. The work was greatly hampered by the large amount of rock encountered, a class of material for which this dredge is not adapted. The record of the Pacific Division dredges follows:

DREDGES.	CUBIC YARDS.		
	In prism.	Outside prism.	Total.
Ladder, No. 14.	111,468	.....	111,468
Ladder, Gopher.	125,958	.....	125,958
Ladder, Mole.	39,669	24,222	63,891
Dipper Dredge.	84,743	.....	84,743
Sea-going suction, Culebra.	285,417	.....	285,417
20-inch suction, Sandpiper.	20,721	.....	20,721
Total.	667,976	24,222	692,198

**February Record of Track Shifters.**

The seven track shifting machines in the Central Division moved a total of 572,847 feet, or 108.5 miles of track during February. In the Tabernilla District track shifter No. 5 moved 41,800 feet, or 7.9 miles and No. 7 moved 145,700 feet, or 27.6 miles, a total of 187,500 feet or 35.5 miles for the district. At San Pablo and Caimito shifter No. 6 moved 91,914 feet, or 17.4 miles. At Matachin and Tower C. (Empire) No. 9 moved 109,199 feet, or 20.7 miles. At Santa Cruz No. 1 moved 40,450 feet or 7.7 miles. At Miraflores No. 8 moved 50,239 feet, or 9.5

miles, and at the La Boca and Big Tree dumps, track shifter No. 2 moved 93,545 feet, or 17.7 miles.

**Canal Zone Lands.**

The following is the full text of the Act passed at the recent session of Congress and approved by the President, relating to the use, control, and ownership of lands in the Canal Zone:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the President is hereby authorized to grant leases of the public lands in the Canal Zone, Isthmus of Panama, for such period, not exceeding twenty-five years, and upon such terms and conditions as he may deem advisable. No lease, however, shall be granted for a tract of land in excess of fifty hectares, nor to any person who shall not have first established, by affidavit and by such other proof as may be required, that such person is the head of a family or over the age of twenty-one years, and that the application for a lease is made in a good faith for the purposes of actual settlement and cultivation, and not for the benefit of any other person whatsoever, and that such person will faithfully comply with all the requirements of law as to settlement, residence, and cultivation. In granting such leases preference shall be accorded to actual occupants of lands in good faith.

SEC. 2. That no portion of the lands of the United States within the Canal Zone shall be leased hereunder unless it shall first be made to appear, by a statement or plat filed by the Isthmian Canal Commission with the Collector of Revenues for the Canal Zone, that it is not contemplated to use such lands in the work of Canal construction or to set the same aside as a town site; and all leases shall be made subject to the provision that if at any time it shall become necessary, notwithstanding, for the United States to occupy or use any portion of the leased lands, it shall have the right to so do without further compensation to the lessee than for the reasonable value of the necessary improvements made upon said tracts by the lessee, the same to be determined by the courts of the Canal Zone.

SEC. 3. That all leases of lands hereunder shall reserve to the United States all mineral, oil, and gas rights in the lands leased.

SEC. 4. That the President may, in his discretion, require a land survey to be made of the Canal Zone.

SEC. 5. That the powers conferred upon the President under this Act may be exercised by him through the Isthmian Canal Commission or in such other manner as he may designate.

Approved, February 27, 1909.

**Concert by the I. C. C. Band.****TABERNILLA, C. Z.**

Sunday, March 21, 1909, at 2.30 p. m.

**PROGRAM.**

- 1 March—*Boys of the Militia*.....Boehnlein
- 2 Selection—*A Gay Musician*.....Edwards
- 3 a Intermezzo—*Rainbow*.....Wenrich
- 3 b Southern novelty—*Moonlight in Dixie*.....Clement
- 4 1st—*The Glow Worm*.....Lincke
- 5 Selection—*Huts of the Day*.....Remick
- 6 Chilian Dance—*Manana*.....Missud
- 7 Waltz—*Autumn Smiles*.....Bagley
- 8 Fantasia—*Gems of Stephen Foster*.....Tobani
- 9 Patrol—*American*.....Meacham
- 10 March—*Old Faithful*.....Holzman

CHAS. E. JENNINGS, Musical Director.  
The next concert will be given at Gorgona, Sunday March 28

**STATEMENT OF CLASSIFIED EXPENDITURES TO DECEMBER 31, 1908.**

The following table shows expenditures for Canal work, classified monthly, since July 1, 1908. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Civil Administration.	Sanitation.	Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907.	\$1,446,407.73	\$4,636,630.37	\$13,410,795.01	\$4,296,732.98	\$19,345,697.87	\$43,136,263.96
Fiscal year 1908.	704,610.15	2,310,212.01	16,680,660.46	1,494,956.41	11,684,215.15	32,874,654.18
Fiscal year 1909:						
July, 1908.	84,898.15	197,963.07	1,452,698.88	91,901.17	544,083.23	2,371,544.50
August, 1908.	77,019.80	145,870.37	1,599,556.90	60,798.76	517,046.09	2,401,291.92
September, 1908.	69,867.03	129,725.40	1,636,253.17	52,809.20	703,633.09	2,592,287.89
October, 1908.	59,612.51	155,676.68	1,448,614.64	67,696.17	727,544.14	2,859,144.14
November, 1908.	59,374.12	147,957.24	1,369,805.86	77,406.64	480,139.10	2,134,682.96
December, 1908.	65,526.32	166,321.70	1,500,404.77	70,936.43	893,337.24	2,696,526.46
Total.	\$2,567,315.81	7,890,356.54	39,098,789.69	6,213,237.76	34,895,695.91	90,665,396.01

## BUILDING GATUN DAM.

## Work Advancing on All Parts of It.

In the construction of the great dam at Gatun three features are prominent—the building of the toes, the placing of the impermeable core or hydraulic fill, and the construction of the spillway. Work on all of these features has reached the stage where, in spite of the magnitude of the project, the labor of each week marks a noticeable stage in the progress of the construction. At present efforts are confined almost wholly to the spillway and the part of the dam between the lock site and the spillway, although the trestles for the toes have been partly driven west of the spillway and the enrockment of the south toe between the spillway and the west diversion is well under way.

The purpose of the rock toes is to enclose and protect the hydraulic material of the interior of the dam. These toes will extend clear across the valley and in the space between them will be deposited the material of the hydraulic fill. The south or upstream toe has been built to a height of 60 feet for over half the distance from the lock site to the spillway, with inclines at each end to enable trains to reach this height. The dumping of spoil and rock continues and the toe is daily becoming heavier. It was in this ridge of rock, in the spot where it crosses the old French canal, that a slide occurred in November, causing some anxiety to people not familiar with the work. Dumping has been resumed at this point and the enrockment carried to within five feet of its former elevation. No further sliding has occurred.

The north or downstream toe is to be only half as high as the upstream, and the material is miscellaneous spoil, like that of the other toe. Bas Obispo rock has been used on both toes for facing purposes. Along the north of the dam site the toe has reached an elevation of 24 feet, the old channel of the Chagres and the French canal have been closed, and the ridge of earth and rock extends from the Panama railroad tracks to the spillway.

In the space between the toes on the north and south, and the spillway and the lock site on the west and east, two steam shovels and several gangs of men are stripping the surface soil, preparing the foundation for a close connection with the hydraulic material. On the level where the stripping is now in progress a strip 800 feet wide is being cleared, as that is the width determined upon for the hydraulic fill at this elevation. The channel of the French canal was stripped by dredging, and the banks graded to a slope by sluicing before the fill was begun on December 24; and now, between the toes of the dam, there is only a slight depression where the canal used to be. Into this ditch dug by the French 225,000 cubic yards of sand and clay were pumped, which practically filled it.

The old canal is one of three channels that run through the dam site. Another is the old channel of the Chagres River, and the third is the west diversion, through which the river now flows. The loose earth on the sides of the old river channel is being sluiced off, all debris is being removed from the bottom and the banks, and a discharge pipe for the suction dredge has been laid so that the filling of the channel may begin as soon as the bed is prepared.

The 20-inch pipe-line suction dredges that

have been tried out in the hydraulic fill are doing good work. Between the 1st and 17th of February, dredge No. 82 pumped 59,860 cubic yards into the dam, an average of 3,991 cubic yards a working day of two shifts. This dredge is now being overhauled and its sister, No. 83, is pumping from the old French canal near the north toe of the dam and depositing the material into a marsh within the limits of the north toe. It excavated 55,872 cubic yards in the six working days from February 20, to the close of the month, an average of 9,321 cubic yards a day. It is too early to give a fair statement of the cost of the hydraulic fill per cubic yard at the present level, but the indications are that it is considerably below the 15-cent estimate made in December, 1908.

Work has been stopped on the line of sheet piling that was being driven along the axis of the dam across the valley. The line of sheeting has been completed across the old channel of the Chagres, and had been started in two other places. It is probable this work will not be resumed.

Concrete will be laid in the spillway this week. The mixing plant is ready, the cement is in the storehouse, and rock from Porto Bello and sand from Nombre de Dios will be delivered in as large quantities as desired. The handling plant for the spillway materials has been ready for some time, the railroad from the mixer to the spillway channel has been completed, the cars for the concrete have arrived and are set up, and the forms are ready for use. The work to be done on the spillway is the lining of the channel that runs from the point where the regulating works will be built to the north toe of the dam, a distance of 1,200 feet. Through this channel, which when finished will be 285 feet wide, at elevation 10 feet above sea-level, with side walls 20 feet higher, the Chagres River will be diverted within a year, thereby allowing construction of the west end of the dam to proceed to completion. The concrete mixing and handling plant has been designed to place an average of 300 cubic yards per day, the maximum probable output in any day being estimated at 500 cubic yards.

## Injured Canal Employees.

The Mann bill, relative to compensation for injured Canal employees, the full text of which was published in THE CANAL RECORD of December 23 last, passed the House of Representatives on January 5, was passed without amendment by the Senate on February 19, and approved by the President on February 24, 1909.

## The United States-Panama Treaty.

Following is the text of the resolution adopted by the United States Senate at the time the new Treaty with the Republic of Panama was ratified:

*Resolved (two-thirds of the Senators present concurring therein).* That the Senate advise and consent to the ratification of a Treaty between the United States and the Republic of Panama relating to the Panama Canal signed on January 9, 1909.

*Resolved.* As a part of this ratification that the United States approves the Treaty between the United States and Panama, with the understanding that, so far as the United States is concerned, no question shall be submitted to arbitration herein provided for which in any way affects the vital interests of the United States in the construction, operation, maintenance, sanitation, and protection of the Panama Canal, and that this understanding will be mentioned in the ratifications of the Treaty and will, in effect, form part of the Treaty.

## FEBRUARY HEALTH REPORT.

## Excellent General Health Conditions.

ANCON, C. Z., March 10, 1909.

To the Acting Chairman, Isthmian Canal Commission, Culebra, C. Z.

Sir: I herewith forward the report of the Department of Sanitation for the month of February, 1908:

I would like to call attention to the following death rates among employees:

Year.	Rate.
February, 1906.....	43.00 per thousand.
February, 1907.....	25.62 per thousand.
February, 1908.....	12.72 per thousand.
February, 1909.....	10.98 per thousand.

You will see that this is the lowest death rate among employees for any February since we have been on the Isthmus.

If we consider the total population, we have the following death rates:

Year.	Rate.
February, 1905.....	40.20 per thousand.
February, 1906.....	38.09 per thousand.
February, 1907.....	36.07 per thousand.
February, 1908.....	21.40 per thousand.
February, 1909.....	18.59 per thousand.

This is also the smallest death rate among the total population that we have had for any February since we have been on the Isthmus.

There has been a large decrease in the amount of sickness among employees during February as compared with January. During January we had sick every day among our employees 1,116 men; during February this average was reduced to 951.

During the month of January we admitted to our hospitals 1,258 cases of malaria among employees; during February only 852.

During the month no case of yellow fever, plague or smallpox occurred on the Isthmus.

The general health of the Isthmus I consider excellent, and the health of our laboring force is about as good as it would be at home.

Very respectfully,

W. C. GORGAS,  
Chief Sanitary Officer.

## February Police Report.

The February report of the Chief of the Division of Police and Prisons shows that 472 persons, representing 35 nationalities, were arrested in the Canal Zone during the month. This is a decrease of 52 for the month there having been 524 arrests in January. Of the 472 persons arrested, 444 were men and 28 were women, and they were charged with 51 different offenses. They were divided among the towns of the Zone as follows: Ancon, 30; Las Sabanas, 2; La Boca, 31; Corozal, 5; Miraflores, 21; Pedro Miguel, 19; Paraiso, 11; Culebra, 59; Empire, 70; Las Cascadas, 14; Bas Obispo, 14; Gorgona, 46; San Pablo, 10; Tabernilla, 12; Bohio, 10; Gatun, 59; and Cristobal, 59. The total effective police force on February 28 was 188 and the pay roll amounted to \$20,237.30.

Ninety seven cases were tried in the Circuit Courts, 22 of which were dismissed, 62 continued, and 13 in which convictions were secured. Of the 13 persons convicted, one was fined, one received a jail sentence, 10 were sentenced to the penitentiary, and one man was sentenced to be hanged. Seventeen convicts were discharged from the penitentiary during the month, leaving a total of 117 in the penitentiary on February 28. The number of district prisoners on the same date was 134, a decrease of 4 for the month. The value of work performed by the convicts on roads, etc., amounted to \$1,605.60. There were 4 deaths by violence requiring action by the coroner in February. One of these deaths was caused by a railroad accident, and one by drowning.

## COMPARISON OF WORK AND COST, AS ESTIMATED IN 1906 AND IN 1908—PANAMA RAILROAD AND OTHER ITEMS.

A summary of the amount of work and the cost, as estimated by the Board of Consulting Engineers in 1906 and by the Isthmian Canal Commission in December, 1908, and the details of the Board's estimate and that of the Commission for the Central Division were published in THE CANAL RECORD of February 24. The summary includes, in addition to a comparison of the amounts required for construction, an estimate of the amounts that will be required for the Department of Civil Administration, the amounts to be paid to the New French Canal Company and the Republic of Panama, and an estimate of reimbursements to the United States Treasury from various sources. The details of the estimate for work and costs in the Atlantic and Pacific Divisions were published in the issues of March 3 and March 10, respectively.

### ISTHMIAN CANAL COMMISSION, DECEMBER 1908. GENERAL EXPENSES.

This includes all general expenses and over-head charges of the Commission not properly chargeable directly to any one item of construction work, and includes the following:—

All expenses in the United States, all expenditures in the Office of the Chairman and Chief Engineer, Office of the Examiner of Accounts, and the Disbursing Office. It includes certain expenses of the Subsistence Department borne by the Commission, expenditures for telegraph and telephone service, transportation on the Isthmus, meteorological work, Young Men's Christian Association work, etc.

Expenditures to October 1, 1908.....	\$4,980,000
After October 1, 1908, 6½ years at \$3,000,000.....	18,750,000
	\$23,730,000

The estimate of \$3,000,000 a year or \$250,000 a month is based on the following:

Office of Chairman and Chief Engineer.....	\$20,000
Office Secretary of Commission.....	2,000
Engineering and technical force, attached to office of Chief Engineer.....	9,000
Meteorological and river hydraulic work, experimental work and general surveys.....	6,000
Salaries of Y. M. C. A. secretaries and expenses in connection therewith.....	3,000
Quartermaster's department.....	125,000
Office Examiner of Accounts.....	20,000
Office Disbursing Officer.....	7,500
Proportion of expenses of Subsistence Department.....	8,500
All expenses in the United States, including those of Washington Office and elsewhere.....	27,000
Transportation on the Isthmus (paid to P. R. R.).....	15,000
Telephone and telegraph service (paid to P. R. R.).....	7,000
	\$250,000

### CONSTRUCTION AND REPAIR OF BUILDINGS FOR THE DEPARTMENT OF CONSTRUCTION AND ENGINEERING, ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

Expenditures to October 1908 (including over \$1,000,000 for Departments of Civil Administration and Sanitation, for which the Department of Construction and Engineering has not yet been credited).....	\$9,951,000
Estimate from October 1, 1908 to July 1, 1909.....	900,000
Estimate after July 1, 1909—Atlantic Division.....	535,000
Central Division.....	965,000
Pacific Division.....	1,000,000
Quartermaster's Department.....	1,300,000
	\$14,651,000

Total .....

Of the above amount, about \$10,000,000 is for new construction, the remainder being for improvements, maintenance and repair to old French and new American buildings.

About 3,500 buildings of all classes are covered by the estimate. The above expenditures up to October 1, 1908, include over \$1,000,000 for the Departments of Sanitation and Civil Administration prior to July 1, 1907, for which the appropriations for the Department of Construction and Engineering cannot be credited without special provision by law.

For expenditures after July 1, 1909, amounting to \$3,800,000, as above, it has been assumed that work under the head of "Repairs" will amount to 5 per cent per annum on the first cost of the buildings, to take care of deterioration of paint, woodwork, screening, etc., due largely to climatic conditions. The balance is inserted as a contingent item to provide for any new construction that may be found necessary.

### RELOCATION OF THE PANAMA RAILROAD.

#### BOARD OF CONSULTING ENGINEERS, 1906.

#### ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

Gatun to Bohio.....	\$2,000,000
Bohio to Pedro Miguel.....	1,300,000
Pedro Miguel to Panama.....	400,000
Total.....	\$3,700,000
Land damages in Gatun and Sosa Lakes.....	\$300,000

Before October 1, 1908.....	\$1,783,000
October 1, 1908, to July 1, 1909.....	1,020,000
After July 1, 1909:	
Engineering.....	\$90,000
Real estate and right of way.....	20,000
Grading:	
Earth excavation, 330,000 cubic yards, at 40 cents per yard.....	\$132,000
Rock excavation, 405,500 cubic yards, at \$1 per yard.....	405,500
Borrow, 4,800,500 cubic yards, at 40 cents per yard.....	1,920,200
	2,457,700
Bridges and culverts, 63,960 cubic yards concrete, at \$10 per yard.....	639,600
Temporary trestles and structures.....	395,000
Temporary track, 48,720 feet at \$2 per foot.....	97,400
Permanent track:	
35 miles ties, (spaced 21 inches,) 105,600 ties, at \$1.25 per tie.....	\$132,000
70 miles 70-lb. rail and fastenings, at \$1 per foot of track.....	184,800
35 miles of ballast at \$4.752 per mile.....	166,320
35 miles of track laying and surfacing at 50 cents per foot.....	92,400
	575,520
Fencing.....	30,000
Interlocking and signals.....	30,000
Telegraph and telephone lines.....	50,000
Station buildings and section houses.....	75,000
Water stations.....	10,000
Fuel stations.....	20,000
Miscellaneous structures.....	10,000
General expenses.....	75,000
Tools.....	120,000
	4,695,000
Maintenance: 37 miles for two years, at \$9,000 per mile per annum.....	666,000
	\$3,164,000
Land damages in Gatun Lake.....	\$500,000

## MUNICIPAL IMPROVEMENTS, ISTHMIAN CANAL COMMISSION, DECEMBER, 1908.

Expenditures under this head include everything for the construction, operating maintenance, and repair of roads, walks, water works, pumping plants, reservoirs, sewers, special grading, etc., required for Canal construction work proper, in the Canal Zone; *i. e.*, for its employees, and also for the above work performed in the cities of Panama and Colon for sanitation, under Article VIII of the Treaty.

These expenditures in and for the cities of Panama and Colon have amounted to about \$2,500,000 to date, and this will be returned to the United States Treasury by water rates collected by the United States. For further improvements in Panama and Colon for sanitation, a supplementary estimate of \$1,200,000 was forwarded to Congress in December, 1908, which if appropriated, will likewise be returned to the United States Treasury.

Expenditures for these purposes in the Canal Zone for the benefit of native villages and those not employed by the Commission, are not paid from Congressional appropriations, but from the Canal Zone funds, derived from taxes collected by the District Tax Collectors and no allowance for same is made in figures given below:

Expenditures to October 1, 1908.....	\$5,932,000
Estimates from October 1, 1908, to July 1, 1909.....	700,000
Estimates after July 1, 1909:	
Atlantic Division—Construction.....	\$535,000
Maintenance.....	\$75,000
Central Division.....	1,160,000
Pacific Division.....	1,800,000
Quartermaster's Department.....	822,000
Cities of Panama and Colon—grading, paving, waterworks, sewers and sanitation.....	450,000
	1,200,000
Total.....	\$12,114,000

## LOANS TO PANAMA RAILROAD.

This item includes appropriations to date, amounting to about \$1,200,000 for the reconstruction and re-equipment of the Panama Railroad, which has been expended for the purchase of new equipment and other improvements properly classed as "betterments and renewals," and for which the resources of the railroad were insufficient.

In accordance with the Appropriation Acts, the repayment of the above sums to the United States has been secured by notes bearing 4 per cent interest, deposited in the United States Treasury.

It is estimated that additional appropriations amounting to \$1,100,000 will be required for similar purposes as a loan to the Panama railroad before the completion of the Canal for improved and enlarged dock and wharf facilities at La Boca and Cristobal, viz:

Expenditures to July 1, 1909, for reconstruction and re-equipment of Panama railroad.....	\$1,200,000
Estimate for year 1909-1910—Construction and extension of docks.....	\$700,000
Year 1910-1911—Reconstruction and extension of docks.....	1,400,000
Year 1911-1912—New coal-handling plant and reconstruction of docks.....	2,000,000
	4,100,000
Grand total.....	\$5,300,000

## LIST OF EMPLOYES WHO ARE ENTITLED TO CANAL MEDALS.

The publication of names of employes of the Isthmian Canal Commission and Panama Railroad Company who have earned Canal Medals, up to December 31, 1908, which was begun in THE CANAL RECORD of February 10, is concluded in this issue. The publication of names of employes of the Isthmian Canal Commission was completed in the issue of March 10. The publication of the names of employes of the Panama Railroad Company which was begun on that date is completed in this number. Address all communications relating to corrections in the Medal list in writing to the Assistant to the Chairman, Culebra, C. Z.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

Large frame pictures of Shoshone Falls and Blue Lakes Farms, Snake River, Idaho, have been hung in each Commission clubhouse. They were presented by Mr. Charles T. Manning of Gooding, Idaho, formerly of Gorgona.

Shuffle boards have just been added to the game equipment of the clubhouses and are proving very popular. Rand-McNally globes of 18-inch diameter have been placed in the reading rooms of all the clubhouses.

## CRISTOBAL.

A game of basket-ball between teams from the Y. M. C. A. and Lincoln House on Saturday night, March 13, was won by Y. M. C. A. 33 to 17. A return game will be played at the Lincoln House.

The Y. M. C. A. duck pin team took three straight games from Gorgona Saturday night. Scores: 420 to 395, 404 to 403, 437 to 434.

Mr. V. N. Sourin of Culebra played the Cristobal chess team eight simultaneous games on Saturday evening, March 13, winning all games in one and one-half hour play.

Mr. A. A. Simka has been elected captain of the

basket-ball team. The athletic club has elected the following officers: R. H. Luce, president; G. C. Taulbee, vice-president; L. B. Curdiss, secretary. The physical department schedule is as follows: Monday, indoor baseball; Tuesday, outdoor athletics; Wednesday, basket ball; Thursday, indoor baseball; Friday, outdoor athletics; Saturday, matched games.

A boys' athletic meet between the four associations will be held at Cristobal on Saturday, March 20.

The standing of the Duck Pin League is as follows:

	Played.	Won.	Lost.	Percent.
Cristobal.....	21	14	7	66 2/3
Empire.....	21	14	7	66 2/3
Gorgona.....	21	8	13	380
Culebra.....	21	6	15	285

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The annual meeting of the Canal Zone Federation of Women's Clubs will take place at Cristobal the last week in April and not in March as stated in the last issue of THE CANAL RECORD.

At a recent meeting of the officers of the Canal Zone Humane Society it was decided to make the annual dues for active members one dollar and for junior members fifty cents.

At the regular business meeting of the Cristobal Woman's Club, March 10, Mrs. Claude Passett was appointed treasurer to fill the vacancy left by the resignation of Mrs. W. J. Rodman. The art and literature department gave in open evening on March 10, when a program was given consisting of musical numbers and a farce entitled "Obstination."

An election of officers for the next six months will be held at the meeting of the Gorgona Woman's Club on March 18. At a recent meeting of the club an amendment to the by-laws was adopted, which provides for weekly meetings instead of semi-monthly as heretofore.

The study meeting of the Gatun Woman's Club was held at the home of Mrs. A. L. Kerr, on Friday, March 12, the president in the chair. The meeting on March 19 will be held at the home of Mrs. Lorin A. Clark, and on March 26, at the home of Mrs. Chester Harding.

The Paraiso Woman's Club gave a card party on Friday evening, March 12. The Club rooms were decorated and lighted with Japanese lanterns for the occasion.

The Pedro Miguel club holds its business meeting on each alternate Thursday in the club room, and social meetings are held at the home of members. Mrs. Taylor Curran of Culebra, a member of the club, was the hostess on Thursday, March 11. A number of former residents of Pedro Miguel, who have removed to other stations, still retain their membership in the local club.

The children's service at the Ancon Protestant chapel will be held on Thursday afternoon at four o'clock, instead of Wednesday, as heretofore. A service for children is held during Lent at St. Mary's Church, Empire, on Friday afternoon.

In the Union Church at Cristobal a series of before-Easter sermons is being delivered by the pastor, Rev. Carl H. Elliott. A sermon will be delivered each Sunday night at 7.30 o'clock.

The subordinate and auxiliary lodges of the Independent Order of Odd Fellows have received orders to celebrate the ninetieth anniversary of the institution of the order on April 26. There are three lodges in the Zone, at Cristobal, Gorgona and Culebra, with an approximate membership of 270, and one auxiliary lodge, the Daughters of Rebekah, at Gorgona, with a membership of 53. This lodge is arranging to give a flower dance at the Gorgona clubhouse on April 17, for the purpose of raising money for the benefit fund.

The institution of the Loyal Temperance Legion, or junior auxiliary, of the W. C. T. U. was effected at Empire at the home of Mrs. R. E. Ball, superintendent of the Legion, on Tuesday, March 9, with 15 members. Officers were elected as follows: President, Margaret Hollowell; vice-president,

Eva Williams; secretary, Corinne Browning; treasurer, Florence Benninger. Superintendents for the departments of flowers, missions, and mercy were also elected. The title selected was the Victory Junior Legion of Empire. The hibiscus was selected as the legion emblem. At the meeting of the W. C. T. U., at Empire on March 11, four departments were organized as follows: Mothers', Sunday school, evangelistic, and literature. The next regular meeting will be held in the I. C. C. chapel on Thursday, March 25, at 3 p. m. All members are urgently requested to be present as matters of importance will be discussed, as well as an interesting program provided. All ladies who are not members are cordially invited to attend. On Sunday evening, March 28, the services in the I. C. C. chapel will be under the auspices of the W. C. T. U., and Justice Owen of the Supreme Court of the Canal Zone will be the speaker for the evening. A musical program will be given, and everybody is invited to be present.

### American Women on the Isthmus.

THE CANAL RECORD:

I do not wish to be regarded as taking part in the dispute as to the relative value of married and unmarried men at Panama, having seen too many that were of equal merit or lack of it in both classes. Neither would I wish to interfere with any cherished illusions of the ambitious young Caesars who may be on the Isthmus and who may, like your Gorgona correspondent in your issue of February 17, date the commencement of canal work from a time four years ago, more or less, which I take it must have been not later than his arrival on the Isthmus. I fear that those who had then spent a year at Panama failed to note the arrival of these "Hopeful Young Men" amid "the fearful ravages of yellow fever." As to the extent of these ravages, one can better ascertain the facts by consulting the records of the Sanitary Department than by counting the pine boards in Ancon Cemetery.

In the interest of accuracy, however, and for the benefit of those whose knowledge of the history of the commencement of canal work is as limited as that of "Young America" appears to be, it should be recorded that one of the first employees to die of yellow fever was a married American woman, wife of Mr. Wallace's secretary. In my own party the first one of those who died of yellow fever during the first year of canal work was a married man.

From personal experience I can testify that many men brought their families to the Isthmus before it was possible to "subsist out of the kindness of a beneficent country" and before our young friends of nineteen had cleared a "path of cheerfulness in the Satanic Paradise."

I could give your correspondent many names of American women who came with their husbands to the Isthmus before the present comfortable quarters were provided, when it was necessary either to occupy old French houses inferior to the present negro quarters, or to rent houses or flats in Panama of even worse quality, at rates which would be excessive in New York; not to speak of our predecessors, the employees of the Panama Railroad Company, who during the past 50 years have had their families on the Isthmus without the compensation of

knowing that they were heroes. Particularly I could name to him one lady who was among the first of the wives of the employees to go to the Isthmus, who began her housekeeping in an unscreened shack, now occupied by negroes, but secured in 1904 at an outrageous rental as the only available quarters, and who lived in the city of Panama for three years following, seeing two neighbors in the next house die of yellow fever during the first year, and having as her liveliest distraction at that time, in the intervals in the war on vermin, the pleasure of watching the daily passage of the Ancon hearse and recording the American deaths by the flag draped coffins.

The women on the Isthmus then made homes under conditions far rougher than any encountered now by the energetic young men with whom "Young America" classes himself, and can be proud of having been each more than "a small iota" in the work of making the Isthmus comfortable for their successors.

H. W. DURHAM,

Resident Engineer, 1904 to 1907.

New York, March 2, 1909.

### Personal.

Dr. J. F. Leyes, Superintendent of Colon Hospital, Dr. F. M. Shook of Colon Hospital, and Dr. W. F. Shaw, of Ancon Hospital, sailed for the States on the *Panama*, on March 9, on their annual leave of absence.

### Missing Men.

Information is desired in regard to Harkens J. Porter, who was in the employe of the Commission during the spring of 1905. Anyone having knowledge concerning him is requested to communicate with THE CANAL RECORD.

Mr. William Jerowe is requested to send his address to A. G. Bedell, Cristobal, C. Z., who has something of interest to communicate to him.

### Pacific Masonic Club.

Rev. J. W. Holland will entertain the Pacific Masonic Club and its friends on Saturday night, March 20, at 8 o'clock. Friends of the club are invited. The next meeting of the club will be held March 27.

### Steam Shovel and Dredge Men.

Local No. 19, I. B. of S. S. and D. M., will hold their regular meeting in the I. C. C. lodge hall, Empire, on Sunday, March 21, at 2 p. m. Important business.

### Dance at La Boca.

The La Boca Bachelor Club will give an informal dance at the I. C. C. hotel, on Saturday evening, March 20. A special train will leave Corozal at 7.30, and Panama at 7.45 p. m., returning after the dance.

### Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., March 17, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Cotton, Joseph	Slater, Col. J. E.
Erist, Mrs. Al	Sterphens, Fred A.
Flood, James	Stoddard, Richard
Fulman, W.	Tate, William E.
Hitchcock, Wm. P.	Warner, Fred
Lord, Mrs. M.	

## GOLD PAY-ROLL ECONOMIES.

## Reductions Effected Between July and December, 1908.

Attached to this memorandum are (1) a comparative statement of the gold pay-rolls of the Isthmian Canal Commission for July and December, 1908, and (2) a statement of the net additions to and net separations from the gold forces, from the week ended July 4, 1908, to the week ended January 16, 1909. These statements show (1) a net reduction of 6.53 per cent in the monthly gold pay-rolls, which represents a saving of \$47,303.95 a month or \$567,647.40 a year, and (2) a net decrease in the gold personnel of 497 men.

The following explanation is offered of the decrease or increase of the monthly gold pay-rolls of the various departments and divisions:

*Department of Sanitation*—A comparison of the gold pay-rolls of this department for the month of December, 1908, with the gold pay-rolls for the month of July, 1908, shows a net decrease of \$6,018.38, or 11.05 per cent. The saving is due to a reorganization of the clerical force, to a reduction of force at Colon Hospital, and in part to the transfer of the work of ditching and draining, grass cutting, and the collection of garbage in the Canal Zone, to the Department of Construction and Engineering and the Quartermaster's Department. The saving to the Department effected by this latter transfer of work is more conspicuous in the silver roll than the gold roll.

*Department of Civil Administration*—The organization of this Department was not changed during the period covered by this statement, and the pay-roll expenses were practically the same in December as in July.

*Mechanical Division (Motive Power and Machinery)*—The gold pay-roll of this division has been cut down 19.26 per cent, with a net monthly saving of \$27,349.33. This has been due to a simplification of accounting methods and redistribution of the clerical force, the closing of the Paraiso repair shops, and a general reduction of force which eliminated men whose work was below standard and tended to increase the efficiency of those who were retained.

*Central Division*—This Division, during the period covered by the attached statement, took over the work of building construction, municipal improvement, and ditching and draining for sanitary purposes, within its territories, and maintained the rate of excavation previously established, with an increase in its monthly gold pay-roll of only 2.62 per cent, or \$5,372.84.

*Atlantic Division*—The pay-rolls of this Division show an increase of \$34,880.67 a month, or 49.85 per cent. This large in-

crease has been due to construction of handling plants at the site of the Gatun locks and dam, an increased rate of dry excavation, additions to the dredging fleet and subsidiary marine equipment, which involved corresponding increases in the erecting and repair shop at the Cristobal drydock, the development of the quarry at Porto Bello, and the installation of a plant for securing sand at Nombre de Dios. In other words, the work in the Atlantic Division was in an incipient stage at the beginning of the fiscal year, while six months later the necessary preparatory and preliminary work was well under way, and more rapid progress was being made in the actual construction of the locks and dams and the excavation of the sea-level channel.

*Pacific Division*—The gold rolls of this Division show a monthly increase of \$14,361.71, or 32.53 per cent. The explanation of this increase is similar to that given above for the increase in the Atlantic Division.

*Quartermaster's Department*—This Department has charge of 90 per cent or more of all buildings belonging to the Isthmian Canal Commission, is responsible for the assignment and maintenance of quarters, receives and distributes all material and supplies, and accounts for property. It has also taken over the work of grass cutting and the collection of garbage formerly handled by the Department of Sanitation, and minor repairs to buildings formerly handled by the Division of Building Construction. The pay-rolls of the Department have been reduced 21.23 per cent, whereby according to the figures furnished, a monthly saving of \$11,027.56 has been effected. A portion of this apparent decrease should, however, be applied to offset an apparent increase in the expenses of the Subsistence Department, since the rolls of the two departments in July were not wholly separated, and the figures appearing in this statement are, on that account, somewhat misleading.

*Subsistence Department*—The rolls of this Department show an apparent increase of 138.09 per cent, which is equivalent to \$5,025.15 a month, but as explained above, these figures do not accurately represent the facts, owing to the imperfect separation of the Subsistence Department from the Quartermaster's Department in July, 1908. The actual increase in the gold pay-rolls of the Subsistence Department, if there has been any at all, is very slight.

*Miscellaneous*—This item includes the Chief Engineer's office, the Division of Meteorology and River Hydraulics now incorporated in the Chief Engineer's office, the office of the Disbursing Officer, the office of the Examiner of Accounts, and the I. C. C. band. The monthly increase in the gold pay-rolls of \$6,869.79, or 16.30 per cent, was

entirely in the office of the Chief Engineer, and was due to the transfer of various minor fragments of the organization to the roll of this office, from departments or divisions which were reorganized or abolished. There were transferred to the Chief Engineer's office in this manner, during the period from July to December, 1908, the personnel records formerly in the Department of Labor, Quarters and Subsistence, the employees of the Divisions of Building Construction and Municipal Engineering who were retained after those divisions were abolished, August 1, 1908, to wind up the work; the architect and architectural draftsmen formerly in the Division of Building Construction, the designing engineers and draftsmen engaged on plans for the locks, who were transferred from the Washington office; the entire personnel of the Division of Meteorology and River Hydraulics, with the exception of the Division Engineer formerly in charge of the work; engineering parties engaged on special surveys including the survey of the Chagres River water shed; the Surveying Officer and his assistant.

*Economics Due to Reorganization*—The economies effected by the reorganization of the Department of Construction and Engineering appear less conspicuous on account of the development of work on the locks and dams in both the Atlantic and Pacific Divisions, which has resulted in material increases in the pay rolls of those Divisions for December, as compared with the pay rolls for July; but, in spite of this development, the statement shows a net reduction in the gold rolls of the Department excluding the office of the Chief Engineer, amounting to \$42,186.63 a month. A part of this is to be ascribed to decrease in the volume of work of a preliminary character—for instance, the construction of buildings, sewers, roads, etc., but material economies have been effected by more concentrated and efficient organization.

Excluding from consideration the Department of Construction and Engineering, the reorganization has been most radical in the Quartermaster's Department, the Division of Material and Supplies (now combined with the Quartermaster's Department), the Subsistence Department, the office of the Examiner of Accounts, and the office of the Disbursing Officer. There has been an entire redistribution and reorganization of the work of these departments, with the result that the work, which in July cost \$80,223.76 in gold salaries, was handled in December for \$69,256.44, a net saving of \$10,967.32 a month.

*Silver Rolls*—A comparison of the December silver rolls with those for July shows a net reduction of \$12,046.75 (U. S. Currency). In one year this would amount to \$144,561. The economies in gold and silver rolls combined will aggregate \$712,208.40 per annum.

COMPARATIVE STATEMENT OF GOLD PAY-ROLLS, FOR JULY AND DECEMBER, 1908.

## RESOLUTIONS OF SYMPATHY.

## Memorial to Willis J. Rodman.

Born, January 23, 1863. Died, February 28, 1909.

WHEREAS, by the inevitable incident of death, Mr. Willis J. Rodman, who has faithfully performed the duties of Superintendent of Telegraph and Telephones for the Panama Railroad Company since August, 1905, has been removed from the official ranks of the Panama Railroad Company; and

WHEREAS, in this, his wife and daughter have lost a loving husband and father, and the Panama railroad official family and the American colony on the Isthmus have lost an efficient and much respected member; therefore, be it

Resolved, That we express to Mrs. Rodman and Miss Rodman our deep sorrow, and extend to them our sincere sympathy in their sad bereavement.

Hiram J. Slifer, General Manager; J. A. Smith, Superintendent; P. G. Baker, Master Mechanic; R. H. Wardlaw, Cashier; H. L. Stuntz, Local Auditor; John Burke, Manager Commissaries; E. L. Hubbard, Storekeeper; R. Budd, Chief Engineer.  
Colon, R. P., March 1, 1909.

## Bert Gamble.

Gorgona Court No. 3, Independent Order of Panamanian Kangaroos, has passed the following resolutions:

Since God in his infinite wisdom, has seen fit to call from this world our beloved brother, Bert Gamble, we now wish to express our heartfelt sympathy to the bereaved family. Brother Gamble was known to many of us as a personal friend and an earnest Kangaroo, who lived up to the principles of the fraternity in his every act. We realize the depth of sorrow of his family and of friends on the Canal Zone, for such gentle souls and living examples of fraternity men are not common.

WHEREAS, Brother Gamble had those qualities which distinguish a noble life, lived for others, and the good of his fraternity; and

WHEREAS, it is most fitting that in the departure from us of such a strong, upright and enthusiastic fraternity man as Brother Gamble ever was, that more than passing mention should be recorded in our minutes of his membership in the Independent Order of Panamanian Kangaroos; and

WHEREAS, The loss of such a high-minded gentleman, is not only a personal loss to those of us who knew and admired him for his kind and gentle disposition, but it is as well a public loss to the community in which he lived; and

WHEREAS, We deeply feel our great loss occasioned by the death of this noble brother, "and for our lost comradeship we'll sigh with tenderness and tears;" now therefore be it

Resolved, That this Court of Independent Order of Panamanian Kangaroos record its appreciation of the splendid character of Brother Gamble, of his unusual attainments, of his useful life among those with whom he labored, and of his loyal devotion to our fraternity; and be it further

Resolved, That by the official action of this Court of Independent Order of Panamanian Kangaroos, a copy of these resolutions shall be spread upon the minutes and sent to THE CANAL RECORD, and a copy shall be sent to sorrowing family.

A. GEDMAN, E. M. ROBINSON, Committee.  
Gorgona, February 11, 1909.

## E. J. Sampson.

Empire Lodge No. 2, Knights of Pythias, adopted the following resolutions at a recent meeting:

WHEREAS, It has pleased Almighty God, to remove from our midst, Brother E. J. Sampson, formerly of Empire, Canal Zone, on January 8, 1909, in whom we have lost a most worthy brother and the bereaved family a kind husband and loving companion; therefore be it

Resolved, That we, his brothers of Empire Lodge No. 2, Knights of Pythias, desire to express our sympathy to his loved ones in this their hour of affliction; and furthermore, be it

Resolved, That we, his brothers, in mourning for thirty days and that a copy of these resolutions be spread on our minutes, one copy sent to the bereaved family, one copy each to the local papers, and one copy to the *Alexandria Gazette*.

L. M. FORSYTH, A. E. BRONK, ROBT. E. MURPHY.  
Committee

## Joseph P. Clancy.

At a session of Ancon Court No. 7, Independent Order of Panamanian Kangaroos,

held March 5, 1909, the following resolutions of sympathy were adopted:

WHEREAS, The Great and All Merciful God has seen fit to remove from our midst our esteemed and honored brother, Joseph P. Clancy, be it now

Resolved, That, while our loss has been great, we bow in accordance with the will of the Supreme Being and look forward to the meeting in that world of everlasting sunshine where we shall meet again, never more to part; and be it further

Resolved, That we extend to his dear mother and relatives our sincere sympathy in this their great hour of sorrow, and our regret at his untimely death; and be it further

Resolved, That this hall be draped in mourning for a period of thirty days; and be it further

Resolved, That a copy of these resolutions be spread upon the minutes of this meeting and that a copy be sent to the bereaved mother and relatives, and that a copy be sent to THE CANAL RECORD and the press for publication.

A. T. CUTLER, O. M. EWING, W. H. BERG,  
Ancon, C. Z., March 6, 1909. Committee.

## AUCTION SALE.

There will be sold at public auction, at Ancon Police Station, at 2 o'clock p. m., March 24, 1909, the following described public animal: Sorrel native pony, No. 11. Animal may be seen at Ancon Police Station. Full information may be obtained from the Head of Department of Civil Administration, Ancon, C. Z.

## LEGAL NOTICE.

EMPIRE, C. Z., February, 27, 1909.

Circuit Court, Second Judicial Circuit, Canal Zone.

The last will and testament of Lee J. Putnam having been presented to the Court for probate, notice is hereby given that on Friday, the 19th day of March, 1909, at two o'clock in the afternoon, in the Circuit Court house at Empire, there will be a hearing when all concerned shall appear to contest the allowance of the will.

E. M. GOOLSBY,  
Circuit Court Clerk.

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

Sailings of the French Line (Cie. Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailings of the Leyland Line for New Orleans via Kingston, Ja., will be as follows: Steamship *Asian* about March 27.

## NOTICE OF SALE.

United States of America, } In the matter of John  
in the Circuit Court, Sec- } Chong Wing & Co.,  
ond Judicial Circuit, at } Bankrupts.  
Empire, Canal Zone.

By virtue of authority vested in me by the Court of the Second Judicial Circuit on the 27th day of February, 1909, I shall receive sealed bids for the stock of dry goods, hoots, shoes, silks, groceries, fixtures, of John Chong Wing & Co., situated in Culebra, Canal Zone. Said bids must be addressed to me at Ancon, Canal Zone, accompanied with a deposit of \$100 by not later than the 15th day of March, 1909, 12 m., the receiver reserving the right to reject any and all bids. A copy of the inventory of the said stock can be seen either at my office in Panama, or on file in the Circuit Court at Empire, Canal Zone.

SAM B. DANNIS, Receiver

Panama, March 1, 1909.

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### Chairman's Monthly Report.

The report of the Acting Chairman of the Isthmian Canal Commission for the month of February is published in other columns of this issue of THE CANAL RECORD. The grand total of excavation for the month was 3,148,879 cubic yards, of which 1,857,315 cubic yards were removed by steam shovels, 1,269,399 cubic yards by dredges, and 22,165 cubic yards by hand and scraper.

Work on the handling plant at Gatun, in the Atlantic Division, is advancing steadily. The unloading cableway dock is practically completed and the cement shed dock is ready for roofing. The timber work on the storage pile tunnels is 99 per cent completed a total of 364,000 feet B. M. of creosoted lumber having been used in these tunnels.

The roadbed for the automatic electric road is 90 per cent completed and work on the cableway towers was actively prosecuted. At the end of the month the walls and turbine foundations at the power house were completed to the level of the main floor and the steel in the east end of the building was in place. The framing of the mixer building and its approach channel, and the foundations for the driving machinery were completed. At Gatun Dam a total of 239,795 cubic yards of material was placed in the dam, 19,772 cubic yards of this amount being rock from Bas Obispo. The erection of the air compressor plant at Porto Bello was completed during the month and compressed air is now being furnished to the rock drills at the quarry. The electric light plant at Porto Bello was put in operation on February 27.

In the Pacific Division work was continued on the handling plants for the Pacific locks and dams. At Pedro Miguel the work of filling the west dam was begun, over that portion of the dam for which the core trench has been completed. At Miraflores the in-

stallation of machinery for laying concrete was begun. The borings along the Canal prism were completed and additional borings were made on the axes of the east and west dams at Pedro Miguel, and of the west dam at Miraflores, to verify the depth of rock at certain points. Work was begun on the sand storage wharf at La Boca.

The average daily number of laborers employed on actual canal construction was 14,330. There were 331.89 tons of explosives used, and 438,270 feet, or 83 miles of rock drilling were accomplished.

On the relocation of the Panama railroad 85,004 cubic yards were excavated and 281,175 cubic yards placed in embankment during the month, making a total of 886,028 cubic yards of excavation and 3,563,464 cubic yards of embankment accomplished to date. A total of 74,138 linear feet, or 14 miles of permanent track has been laid on the relocated line. The average daily force of laborers on this work was 1,487.

During the month a net profit of \$3,131.61 is shown in the operation of the Line hotels, messes, and kitchens, and the Hotel Tivoli showed a profit of \$4,614.41.

The total revenues of the Canal Zone in February aggregated \$19,980.51 and the general revenues amounted to \$12,353.89.

The total enrollment in the white schools during the month was 694, and the average daily attendance was 599. In the colored schools the total enrollment was 1,340 and the average daily attendance 855.

### Depth of the Old French Canal.

A hydrographic survey of the old French canal between Cristobal and Gatun Dam has been completed. It shows that the ruling depth from Cristobal to the entrance of the channel which leads up to the handling docks at Gatun locks is 12 feet, and 9 feet up to the spillway docks. In several places the canal is 30 feet deep and throughout the greater part of the distance from Cristobal to Gatun it is over fifteen feet. The survey was made preparatory to placing a dipper dredge at work which will excavate until the least depth is 15 feet. This depth is necessary in transporting rock and sand to Gatun. At present the rock and sand barges coming to Gatun are not loaded to full capacity.

### Slide on P. R. R. Relocated Line at Gatun.

Another slide occurred at the Panama railroad embankment near Gatun on Saturday, March 20, when a section of the fill three hundred feet long settled about thirty feet. The embankment had reached practically the final height, 95 feet above sea-level, and was the full width required, throughout nearly its entire length.

The occurrence was identical with the other slides which have taken place in this vicinity, the heavy rock that had been

dumped settling and displacing the soft mud and clay below. In all previous slides at this place the movement has been westward, towards the Chagres valley. In this case the movement was eastward toward the hills of Gatun ridge, indicating that the wide flat slope built along the west side of the embankment had stopped further movement in that direction.

Pile drivers are at work building a trestle across the depression made by the slide, and when finished, more material will be dumped in the embankment until it is again brought up to the proper grade, 95 feet above sea-level. In case other settlements occur, the same process will be repeated until the equilibrium of the embankment is established.

### Concrete in Gatun Spillway.

The first concrete to be laid in the Canal work proper was placed in the spillway of Gatun Dam on the morning of March 17. The plant worked well and in less than five hours on the first day 122 cubic yards of concrete were laid. It is not expected that the plant will reach its full capacity this month, but early in April it is probable that between 300 and 400 cubic yards of concrete will be turned out every day of 9 hours. At this rate the lining of the spillway will be completed before the beginning of the rainy season of 1910, when it is proposed to turn the Chagres river through the new channel.

The channel to be lined is 1200 feet long and 300 feet wide, and the width of the completed spillway will be 284 feet. The floor will be from four feet to 18 inches thick, with the surface at 10 feet above sea-level. The walls will be 8 feet thick at the surface of the floor. They will rise on a 1 to 10 slope on the face, and in four steps at the back to 3 feet thick at the top, which will be 20 feet above the floor. The building of the concrete dam and other concrete work in connection with the regulating works will bring the amount of concrete to be laid in the spillway up to about 200,000 cubic yards.

The mixing plant for the spillway concrete is located on the French canal about one hundred yards north of the north toe of Gatun Dam and 4,000 feet from the north end of the spillway. A dock has been built on the canal and barges of rock from Porto Bello, sand from Nombre de Dios, and cement from the ships at Cristobal tie up alongside. On the dock are a storehouse for cement, and storage bins for rock and sand. Two narrow gauge railroads extend under the cement storehouse and storage bins, and on them run the cars that convey the materials to the mixers. These cars are built in two compartments.

A car moves under the cement house and a chute is opened which delivers two barrels of cement into the smaller compartment. The car then moves forward and is stopped under the sand bin, where the compartment

## NOTES OF PROGRESS.

(Continued.)

into which the cement has been run is filled with sand, when the car again moves forward and the larger compartment is charged with rock under the rock bin. The proportions are one part of cement, three of sand, and six of rock. The charged car is pulled by a cable up an incline 24 feet high to a platform above the mixers, and when in position to deliver its load into the hopper its side doors are opened automatically, allowing the rock, sand, and cement to fall into the mixers.

The plant is in duplicate; that is, two railroad tracks run from the charging bins to two mixers. The mixers are of the Chicago cube type, of two cubic yards capacity, and are driven by an old French engine supplied with steam from two old French boilers. Each mixer delivers its load into a large iron bucket with moveable bottom. The buckets are carried on flat cars, two on each car, and the cars are hauled to the spillway on a narrow gauge track by 18-ton tractor's engines. When the plant is working at its full capacity four trains, each carrying four cubic yards of concrete, will be running all the time.

In the spillway the buckets are lifted from the cars by a locomotive crane which swings them over the forms in which the concrete is laid. The forms are built of wood and are 30 feet long and 20 feet wide.

**Trains between Mindi Junction and Gatun.**

Beginning in a few days a shuttle train, which will meet all passenger trains at Mindi Junction, will be operated between the new Gatun station and Mindi Junction for the benefit of first-class passengers to Gatun. A sheltered platform is being built at Mindi Junction for the transfer of passengers. Through passenger trains on the Panama railroad will run on the main line

to a point near the old Gatun passenger station, where they will take the construction track that runs behind the station around the side of the large fill to the Gatun cut-off, following that until the main line is reached again at Tiger Hill. A stop will be made near the Gatun lock site for the accommodation of second-class passengers.

**Highest Daily Excavation.**

The record for daily excavation in the Central Division was broken on Friday, March 19, when 55 shovels removed 78,033 cubic yards of material, an average of 1,419 cubic yards per shovel for the eight hour day. The highest previous daily record was made on February 27, when 59 shovels excavated 77,064 cubic yards, an average of 1,306 cubic yards per shovel.

On March 19 the shovels were under steam a total of 437 hours, but were actually digging only 291 hours and 45 minutes, being idle from various causes 145 hours and 15 minutes. The material excavated was loaded into 2,314 Lidgerwood flats, 239 large Western Dump cars and 2,769 small Western and Oliver Dump cars.

**February Shovel Records.**

The steam shovels at work on canal excavation in February, removed 1,857,315 cubic yards of material, all but 116,047 cubic yards of which was taken from the Canal prism.

The high record for the month was made by shovel No. 253 (90-ton shovel) at work in the Tabernilla District, which took out 44,498 cubic yards, in 23 working days, an average of 1,935 cubic yards per day. The best record for shovels in the 70-ton class was made by shovel No. 112, working in the lock site at Gatun, which removed 38,059 cubic yards in 23 days, an average of 1,655 cubic yards per day.

The highest daily record during the month was made by shovel No. 262 (90-ton shovel) in the Empire District on February 27, when 3,225 cubic yards were removed. The

best daily record for a 70-ton shovel was made by shovel No. 131 in the Tabernilla District on February 9, when 2,330 cubic yards were excavated.

The highest daily record of excavation since American occupation, in the Central Division, was broken five times during February. The best record previous to February 1 was made on December 18, 1908, when 50 steam shovels excavated 70,087 cubic yards, an average of 1,402 cubic yards per shovel. That record was surpassed as follows:

DATE.	No. shovels at work.	Total yardage.	Average per shovel.
February 5.....	56	73,412	1,311
February 9.....	56	74,123	1,324
February 10.....	58	76,438	1,318
February 11.....	59	76,920	1,304
February 27.....	59	77,064	1,306

The best montaly and daily records of steam shovels in the three divisions for the month of February is as follows:

**LABOR FORCE FOR FEBRUARY.**

The report of the Chief Quartermaster for the month of February shows that the number of Isthmian Canal Commission employes actually at work on February 24, was 25,192, of whom 4,334 were "gold" employes, and the remainder were on the "silver" or labor roll. The Panama railroad force was 5,874, and the Panama railroad commissary force numbered 749. Thus the total number of persons at work on the Canal and railroad on the 24th day of February was 31,815. During the month 181 people were added to the "gold" roll and there were 227 separations, the net decrease in the force being 46. No laborers were imported, as

the supply on the Isthmus was in excess of the demand.

The number of family quarters occupied by "gold" employes was 1,472, and the occupants numbered 4,490; bachelor quarters by "gold" employes, 2,015, and the occupants numbered 3,325. The family quarters occupied by West Indians numbered 968, and the occupants 3,128; bachelor quarters, 276; number of occupants, 4,909. The family quarters occupied by European laborers numbered 343, and the occupants 1,076; bachelor quarters, 147; number of occupants 5,462.

A statement of the force actually at work on February 24, 1909, follows:

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

At the business meeting of the Gorgona Woman's Club on Thursday afternoon, March 18, the following officers were elected to serve for the ensuing six months: President, Mrs. F. W. Morrison; vice-president, Mrs. C. H. Toberer; secretary, Mrs. J. F. Phillips, re-elected; treasurer, Mrs. B. F. Henckle. The club will probably remain open during the summer months. The art department accepted an invitation to meet at the home of Mrs. B. F. Henckle, Tuesday, March 23.

"The Isthmus—Its People, Its History, Its Arts," was the subject presented by the education department of the Cristobal Woman's Club at its meeting March 17. Papers were read by Mrs. J. J. Jackson and Mr. Tracy Robinson, and exhibits of native needlework and Chiriqui pottery were shown by Mrs. R. W. Fenn, of Ancon, and Mr. Robb, of Cristobal.

A branch of the W. C. T. U. was organized at Gorgona, on Friday, March 12. Officers elected were: President, Miss Minnie Berry; vice-president, Mrs. J. S. McConaughy; recording secretary, Miss Minnie Otis; treasurer, Mrs. George Lowe. The next meeting will be held at the chapel on March 24, at 3 p. m.

Plans for the flower dance to be given at the Gorgona clubhouse, on April 17, for the benefit of Rebekah lodge, are well under way. The hall will be decorated with the colors of the order, pink and green, and flower costumes will be worn by the ladies. Tickets are being sold at \$1 each.

Mrs. R. W. Fenn, of Ancon, was the guest and speaker at the meeting of the Empire Woman's Club on March 18, the subject being Panamanian needlework, arts, and crafts. An exhibit of native work, gold and silver ornaments, beads, musical instruments and other articles was made. Refreshments were served during the social half hour which followed the program. The next meeting, on April 1, will be a social meeting with exercises of an informal character.

A dance was given at the Empire clubhouse on Wednesday, March 17, for the benefit of the Church of the Holy Redeemer, now in course of construction at Culebra.

The Paraiso Woman's Club is holding its meetings regularly with good attendance. Mrs. T. M. McLaughlin has been elected recording secretary in the place of Mrs. William Downs, resigned, and the office of corresponding secretary has been created, Mrs. W. Dorsey being elected to that position. Mrs. A. R. Stroup is chairman of the entertainment committee.

The social meeting of the Pedro Miguel Woman's Club, on March 24, will be held at the home of Mrs. Morley, Ancon. Efforts are being made to revive the activities of the Social and Recreative Club of Pedro Miguel and a dance was given at the club rooms, Saturday evening, March 20.

The social meeting of the Las Cascadas Woman's Club was held, by invitation, at the home of Mrs. O. G. Randall, at Empire, on Thursday, March 18. On March 25 the meeting will be held at the home of Mrs. W. D. Stanton, and the occasion will be in the nature of a farewell reception to Mrs. Randall, Mrs. C. F. Merry and other club members who are leaving the Isthmus.

The formal dedication of the Commission

chapel, Gatun, was held on Sunday, March 6, with appropriate exercises. Addresses were made by Col. W. C. Gorgas and Maj. W. L. Sibert, and Commission Chaplain J. Wesley Holland preached the sermon. The music was rendered by a choir of twelve voices, and Miss Kenshaw sang a solo. The regular session of the Sunday school is held at 9.30 and the Christian Endeavor Society meets on Sunday evening for a service which is preceded by fifteen minutes of song service. It is expected that a regular chaplain will be appointed.

The Gatun Woman's Club met at the home of Mrs. D. A. Clark, March 19, the president in the chair. The club has taken up the matter of securing tennis courts for the town. The program under the literary department, Mrs. C. D. Corp, chairman, consisted of a review of the life and works of the poet Longfellow.

In the absence of the speaker announced for the day, Rev. H. Britton King, of Panama, consented to speak before the Ancon Woman's Club on March 17. Mr. King gave a review of his experience as missionary worker for fifteen years in the West Indian Islands and the Isthmus. The regular monthly excursion of the philanthropy department for March included a visit to the Panama almshouse, of which report was given at this meeting. On April 7 the business meeting of the Club will be held.

The Culebra section of the Canal Zone Branch of the American National Red Cross has effected a permanent organization, Mrs. C. A. Devol having been elected chairman, and Mrs. A. Bruce Minear, secretary and treasurer.

At a meeting of the Ancon section of the Canal Zone Branch of the American National Red Cross, held on March 21, the following officers were elected: Dr. John L. Phillips, chairman; H. D. Reed, treasurer; and Mrs. Henry B. Bryan, Mrs. T. C. Lyster, and Robert Coe, executive committee.

## Red Cross Funds.

The question of the use of Zone funds collected by the Canal Zone Branch of the American National Red Cross for the relief of individual cases in the Canal Zone, which was discussed at the last general meeting of the Zone Branch, was presented by Major Devol, the president of the Branch, to the National Red Cross Committee. Major Devol has received from the Secretary of the National Committee the following letters, which indicate that there will be no difficulty in meeting the wishes of the Canal Zone Branch in the use of funds:

March 13, 1909.

Maj. C. A. Devol, President, Canal Zone Branch, American National Red Cross, Culebra, C. Z.

Dear Sir: I have to acknowledge receipt of your letter of March 2, reporting the organization of a Branch of the American National Red Cross in the Canal Zone and quoting the by-laws of the organization and certain resolutions respecting finances, which have been adopted by the Branch Society.

In connection with the resolutions in question, I have to inform you that the Canal Zone Branch under the present Regulations for Branch Societies (paragraph 14, page 19, Regulations for Branch Societies) is authorized to consider the proceeds from entertainments as gifts specially designated for the Branch and to disburse the same in such manner and for such purposes as the Branch

may deem proper and desirable, provided that funds of such character be taken into the regular accounts of the treasurer and included in the annual audit by the War Department official designated to make such audit. Gross receipts for life membership dues and 50 per cent of the gross receipts of annual dues are, of course, to be remitted to the national treasurer in Washington.

This letter is intended to meet fully the wishes of the Canal Zone Branch as expressed in your communication.

Congratulating you in behalf of the national officers upon your large membership and evident interest and efficiency, I am,

Very respectfully yours,

CHAS. L. MAGEE, Secretary.

March 13, 1909.

Maj. C. A. Devol, President, Canal Zone Branch, American National Red Cross, Culebra, C. Z.

My Dear Major Devol: Your report of the organization of a Branch Red Cross Society in the Canal Zone was a source of much satisfaction to national headquarters. The large membership especially was an agreeable surprise, as we have I believe only three State Branches whose membership reaches or exceeds 1,000 members.

As you probably know, we desire to furnish free to all Red Cross members copies of the Red Cross Magazine, and if you will kindly send me a list of the names and addresses of your officers and members we shall be glad to mail these magazines quarterly. Sincerely yours,

CHAS. L. MAGEE, Secretary.

The membership of the Canal Zone Branch now exceeds 1,200 and is still growing.

## Red Cross Ball at Culebra.

The Culebra Section of the Canal Zone Red Cross is making arrangements for a ball to be given at the clubhouse in Culebra on the night of April 16. The Tivoli orchestra has been engaged and further arrangements are in the hands of a committee. The Culebra Section has a membership of about 200, but as only a small proportion of this number will dance and as the clubhouse floor will accommodate 200 people, arrangements will be made to run special trains from both ends of the line in order that people from other villages may take part in the dance.

## Personal.

Lieut. R. E. Wood, Assistant Chief Quartermaster, returned to the Isthmus on the *Colon* on March 21, from his annual leave of absence.

Mr. G. B. Strickler, Resident Engineer at Corozal, and Mrs. Strickler, were passengers on the *Alliance*, which sailed from Colon on March 21.

## Missing Man.

Information is desired in regard to Robert Millan, Robert Hancock, or Robert Millan Hancock, a chief engineer of seagoing vessels. He is from Kilmarnock, Ayrshire, Scotland, and came to the Isthmus, presumably from New York, about 1905-6. Anyone having knowledge concerning him is requested to communicate with G. G. Dedge, P. O. Box 151, Colon, R. P.

## Dedication of Wesleyan Methodist Church.

The dedication of the new Wesleyan Methodist Church in Panama will take place on Thursday, March 25, at 3 p. m. The exercises will be opened by Mr. Claude C. Mallet, British Minister at Panama, and the Rev. A. W. Geddes will preach the sermon. There will be a public meeting at the church in the evening of the same day at 7.30.

## WORK AT PEDRO MIGUEL.

## Amount and Variety of Work in Progress There on Locks and Dam.

Within a square mile, at Pedro Miguel, five steam shovels are excavating, preparation is being made for the laying of concrete in the locks, and the building of a dam is in progress.

At this point in the valley of the Rio Grande, the Canal will drop from the 85-foot level of Gatun Lake to the 55-foot level, the first step of the descent to sea-level that will be completed at Miraflores. Twin locks of one flight are to be built between the hills that converge at this point, a wing wall is to be run from the northeast end of the locks to the east hill, and an earthen dam from the northwest end of the locks to the west hill. The work has reached the stage where each part shows its relation to the other parts, and the outline of the completed whole appears.

The final plan on which the French worked included a lock at Pedro Miguel, and they did a large amount of excavating to that end. But the American plan involves an additional excavation of over 1,200,000 cubic yards, and all but 200,000 cubic yards of this has already been taken out. At present three shovels are working in trap rock in the lock chamber. One of them, shovel No. 259, is at an elevation 14 feet above mean sea-level and has only four feet more to remove before the level of the bottom of the lock, at elevation 10 feet, is reached. The other shovels in the lock chamber are at higher elevations, but are also nearing the bottom of the cut.

In the south approach a shovel is excavating for the center wall that will divide the twin locks, and is at 8 feet above sea-level. This excavation will be carried only far enough below the level of the lock bottom to insure a stable foundation. The cut that this shovel is making serves also as a drainage ditch for the lock site. The water that now runs out of the excavation under its own head will presently be collected in a sump and then pumped over the dike at the south end of the lock site and wasted into the channel of the Rio Grande.

From the Panama railroad trains can be seen one of the storage trestles in process of construction on the west side of the north approach to the locks. The part that will be used for storage is nearly completed. An incline will connect the trestles with the railroad that has been run along the west side of the lock. Over this railroad will be carried crushed rock from the quarry and crusher at Ancon Hill and sand from Chamé to be run onto the trestle and dumped, the sand on one side and the rock on the other. A similar trestle, to be served in the same way, will be built on the east side of the north approach. Between these two trestles two cantilever cranes will operate which will lift rock and sand from the storage piles and convey them to the concrete mixers. Immediately north of the storage trestles, and served by the same railroad, will be a storehouse for cement.

If it depends on the progress of the construction work the laying of concrete can be begun in August, as was originally anticipated. Work on the concrete foundations for the power plant at Miraflores will be begun in a few days, and this part of the plant

## TRAFFIC OVER P. R. R.

## Comparison With Railroads of Similar Length in the States.

In reply to a letter requesting a comparison between the Panama railroad and railroads of similar length in the United States, the General Manager of the Panama railroad has compiled data showing the work done by that railroad in 1906, 1907, and 1908. A comparison is made with various railroads in the Central Northern Group, the data for these roads being quoted from Poor's Manual for 1907. Railroads in the United States are operated continuously 24 hours a day, whereas almost all the business of the Panama railroad is done in eight hours, and the figures quoted below are for an eight hour day for that road. The reply to the inquiry contains the following statement:

"I have, as you will note, however, shown the operation of the Panama railroad not only for the fiscal year ended June 30, 1906, but for the two succeeding years, 1907 and 1908.

"The Panama Railroad Company received credit, in 1908, for moving 1,184,649 tons of

commercial freight. In this no figures are shown in connection with moving the dirt trains, the tonnage of which, for the corresponding period, is estimated at 28,097,000 tons; or, in other words, ton miles for the Panama railroad for the year 1908 should read 227,756,224, instead of 26,596,228 as shown in the annual report. It is with a corresponding railroad in the United States handling a corresponding amount of business over corresponding mileage that a comparison should be made, and I am free to confess that I have no knowledge of any such situation.

"For instance, I believe that everybody will admit that the Chicago Junction Railway, which serves the stockyards, must be a very busy line, and I know it was in my time. Statistics for this railroad show: Mileage, 76.34; freight train miles, 223,143; tons moved, 2,871,024; ton miles, 67,146,319; which is only about 30 per cent of the ton miles moved by the Panama railroad.

"Again, the Indiana Harbor Railroad of Illinois, which is a belt line and serves various railroads around Chicago, must be a very busy railroad: Mileage, 32.9; tons moved, 937,766; ton miles, 15,455,755.

## Comparison of Miscellaneous Railroads with Panama Railroad Company.

(Central Northern Group Railway Statistics taken from Poor's Manual of Railroads, 1907.)

NAME OF ROAD.	Mileage.	Passenger mileage.	Freight mileage.	Tons freight.	Ton miles.	Passengers.	Passenger miles
Detroit & Charlevoix .....	54.50	4,520	51,880	370,200	7,033,800	20,100	412,000

Pontiac, Oxford & Northern .....	111.44	67,589	126,580	146,732	4,450,497	142,362	3,182,631
Wisconsin & Michigan .....	131.79	146,479	155,911	50,906	2,138,561	66,522	1,294,218
Panama, 1906 .....	50.11	164,811	172,243	665,710	26,596,228	448,230	6,302,957
Panama, 1907 .....	50.11	143,871	203,560	936,346	36,785,325	882,277	11,254,152
Panama, 1908 .....	50.11	141,169	223,841	1,184,649	45,936,204	1,385,645	18,550,767

In making the estimate for ton miles the data and method used were as follows:

## Cristobal to Gatun—(Six miles single track.)

4 loaded trains...16 cars...60 tons...6 miles...300 days;  
4 empty trains...16 cars...20 tons...6 miles...300 days;  
make a total of 9,216,000 ton miles for this district.

## Gatun to Tabernilla—(Fifteen miles double track.)

6 loaded trains...25 cars...55 tons...15 miles...300 days;  
6 empty trains...25 cars...21 tons...15 miles...300 days;  
make a total of 51,300,000 ton miles for this district.

## Tabernilla to Las Cascadas—(Eleven miles double track.)

6 loaded trains...25 cars...55 tons...11 miles...300 days;  
6 empty trains...25 cars...21 tons...11 miles...300 days;  
40 loaded trains...17 cars...60 tons...11 miles...300 days;

40 empty trains...17 cars...20 tons...11 miles...300 days,  
make a total of 217,140,000 ton miles for this district.

## Las Cascadas to Miraflores—(Nine miles, three miles double track, six miles single track.)

6 loaded trains...17 cars...60 tons...3 miles...300 days;  
36 empty trains...17 cars...20 tons...3 miles...300 days;  
40 loaded trains...17 cars...60 tons...1 mile...300 days;  
10 empty trains...17 cars...20 tons...1 mile...300 days;  
make a total of 29,784,000 ton miles for this district.

This makes a total of 281,820,000 ton miles of dirt against 45,936,204 ton miles commercial tonnage, the latter figures being those shown on the Panama Railroad Company's operating sheets for the year 1908.

will also be in readiness. The boilers will be on the Isthmus in April and the turbine generators are already here. Power for handling and mixing concrete at Pedro Miguel will be furnished from this plant. A representative of the Pacific Division is now in the United States consulting with the contractors who are to supply the concrete mixers and the cantilever cranes for handling the concrete. On his return, the latter part of this month, the exact time of the delivery of the handling plant for Pedro Miguel will be known.

Compared with the great barrier that is being built across the Chagres valley at Gatun, the Pedro Miguel dam is small, but it involves a fill of over a quarter million cubic yards, and is being constructed as carefully as the Gatun Dam itself. Instead of the hydraulic fill that will form the impermeable portion of Gatun Dam, a clay core is being placed in the dam at Pedro Miguel.

A trench 20 feet wide and ten feet below the surface of the ground on which the fill is made has been dug along the axis of the dam, in order to make a close connection between the earth and the clay core. Fine yellow clay from the lock site at Miraflores is dumped along the axis and this clay is puddled by a stream of water pumped on it. In this way the same close packing of the core, as characterizes the material pumped into Gatun Dam by suction dredges, is procured. Over twenty thousand cubic yards of selected material will be placed in this core. Meanwhile, the dumping of rock and earth from the lock pit is in progress and each week the dam grows appreciably larger.

The force on the work at Pedro Miguel consists of 50 gold roll men, and 575 silver roll men or laborers. In addition to the five steam shovels mentioned, the equipment includes 11 locomotives and 80 ten-yard dump cars.

## PAY WHILE ON LEAVE.

### Rules Governing Compensation to Employees Granted Leave of Absence.

THE CANAL RECORD:

I should like to know why a man on leave for 42 days with pay is not entitled to 42 days' pay? I do not see why the 31st day of a month is not counted as a day of pay, as according to the provisional appointment a man gets pay by the day and not by the month while on vacation, therefore, I do not see why the 31st day of a month should not be counted. This gives an employee vacation by days and pay by the month. Please advise me through THE CANAL RECORD about this matter.

EMPLOYEE.

Ancon, C. Z., March 4, 1909.

The above letter was referred to the Examiner of Accounts who makes the following explanation:

An employee on a monthly salary receives the same amount of pay while on leave as he would have received had he been at work. The mistake that is frequently made by employees is, that when granted 42 days' leave and they receive pay for but 41 days, they assume that one-thirtieth of a month's salary is the pay for a day of service. This is not correct. When a man is employed at a monthly salary he has no daily rate of compensation, but the law provides when he serves a fractional part of a month how his proportion of a month's pay shall be calculated.

It is quite evident that there is nothing in the provisional appointment or the regulations of the Commission providing for leave pay of monthly employees on a per day basis. The provisional appointment provides for not exceeding six weeks' leave. This is of course equivalent to 42 days, and in the granting of leave of absence is usually stated to be 42 days. A leave of 42 days cannot of course give a man forty-two-thirtieths of a month's salary. The number of calendar days that he may be absent does not determine his pay. If he were granted 42 days' leave of absence effective February 1, 1909, the leave would expire March 14, and he would receive a month's pay for February and fourteen-thirtieths of a month's pay for March, being a total of forty-two-thirtieths. If he went on 42 days' leave of absence March 1, his leave would expire April 11, and he would receive a month's pay for March and eleven-thirtieths for April, a total of forty-one-thirtieths. He would then receive nineteen-thirtieths for the balance of the month of April, and so receive sixty-thirtieths, or two months' pay for the calendar months of March and April.

I enclose a copy of a circular of July 5, 1906, of the Comptroller of the Treasury upon this subject. The method of calculation is simple when it is examined carefully. Any employee who takes 42 days' leave with pay, will find that in the two or three months into which his leave runs, he will receive the full pay per month if he serves all the time he is not on leave of absence.

The question has been discussed by employees for a long time, and their objection is always due to the fact that they do not receive forty-two-thirtieths of a month's pay for 42 calendar days. This they do not receive at work if one of the months has 31 days, but when a man is receiving what he would have received if at work, he certainly

has not been underpaid, and that is all that is granted by a leave of absence. The practice of giving an employee going on leave, pay for the fractional part of a month served up to the date he goes on leave, is what has caused many employees to get an erroneous impression. If they drew two months' pay on their return and did not have a fractional month's payment before going on leave, they would readily see that they were being paid in full; and so they will in all cases if they will take the trouble to calculate the amount they have received covering services in two or three calendar months during which they had leave of absence.

TREASURY DEPARTMENT,  
OFFICE OF COMPTROLLER OF THE TREASURY.  
WASHINGTON, July 5, 1906.

1906—DEPARTMENT CIRCULAR NO. 67.

To All Disbursing Officers of the United States: All disbursing officers will take notice that hereafter all persons in the Government service receiving a yearly or monthly compensation will be paid for such service under the following Act of Congress, approved June 30, 1906—Sundry Civil Appropriations Act:

SECTION 6. Hereafter, where the compensation of any person in the service of the United States is annual or monthly the following rules for division of time and computation of pay for services rendered are hereby established:

Annual compensation shall be divided into twelve equal installments, one of which shall be the pay for each calendar month, and in making payments for a fractional part of a month one-thirtieth of one of such installments or of a monthly compensation, shall be the daily rate of pay. For the purpose of computing such compensation and for computing time for services rendered during a fractional part of a month in connection with annual or monthly compensation, each and every month shall be held to consist of 30 days, without regard to the actual number of days in any calendar month, thus excluding the 31st of any calendar month from the computation and treating February as if it actually had 30 days. Any person entering the service of the United States during a 31-day month and serving until the end thereof shall be entitled to pay for that month from the date of entry to the 30th day of said month, both days inclusive; and any person entering said service during the month of February and serving until the end thereof shall be entitled to one month's pay, less as many thirtieths thereof as there were days elapsed prior to day of entry: *Provided*, That for one day's unauthorized absence on the 31st day of any calendar month one day's pay shall be forfeited.

1. For pay purposes all months in the year will be reckoned as containing 30 days.

2. Where a promotion or demotion occurs during any month from a place to another place carrying different compensation, service under such promotion or demotion will be considered as fractional service.

3. One-thirtieth of a monthly installment of salary will be deducted for every day's absence in a month, where such absentee is not in a pay status during such absence.

R. J. TRACEWELL,  
Comptroller.

Approved: LESLIE M. SHAW,  
Secretary of the Treasury.

N. B.—This will be found to confirm supplement No. 11 to Circular No. 3 of July 12, 1906.

### Fourth of July Celebration.

THE CANAL RECORD:

In order that the Fourth of July may be properly celebrated it appears to me that preparations cannot be begun any too soon for outlining the principal features of the celebration and the point at which it shall be held, and I respectfully submit the following:

The celebration for prior years has been held as follows: 1905, Corozal; 1906, Cristobal; 1907, Ancon; 1908, Ancon.

I was informed that the understanding was that the next celebration should be held at Empire and I believe that this would be quite in order, Empire being well equipped to care for the crowd and make the celebration a success. Her people are hospitable and generous; the large clubhouse with its many conveniences can be utilized; the ball park, with its grandstand and bleachers, would provide more room than any other park on the Isthmus can to care for the crowds and permit them to see comfortably the various

athletic feats which would naturally take place. The Kangaroo hall and the clubhouse are both very convenient for a dance. In addition is the fact that Empire is more centrally located than either Cristobal or Ancon. Never having had this celebration Empire should be given the preference this time.

As a rough outline of the entertainment I would suggest: A tennis tournament, with entries from the different tennis clubs on the Isthmus, for which Empire will be well equipped with its three double courts, one of which is an old court and the other two in course of construction; parade, speeches, horse races, field meet of the Canal Zone athletes, wall scaling, sack and other novelty races; a meet of the gun clubs of the Isthmus; baseball contest between selected teams and fireworks and balls at night. The crowd could be fed by means of a good old fashioned Texas barbecue, of which there never has been one on the Isthmus, and Empire is well equipped with experienced barbecuers to pull it off.

I believe that Empire can put on a celebration of the Fourth which will be long and enjoyably remembered by the inhabitants of the Isthmus.

W. M. WOOD.  
Empire, C. Z., March 20, 1909.

### COMMISSION CLUBHOUSES.

#### Activities of the Young Men's Christian Association.

An accurate count of the attendance at the four Commission clubhouses for the week ending Saturday, March 20, showed a total of 10,720 persons using the buildings, an average of 1,531 per day, or a daily average of 383 for each of the four clubhouses. These figures represent the normal patronage.

The series of entertainments by the Lyric Glee Club of Chicago was attended by about 3,000 persons. In addition to their performances in the clubhouses they gave seven entertainments in other towns, which were under the auspices of the Y. M. C. A.

The Edwin R. Weeks Company has been engaged for a series of entertainments beginning the latter part of May. Mr. and Mrs. Weeks will be remembered by all who witnessed their performances nearly two years ago. Miss Lulu Sinclair will be the third member of the party as accompanist and violinist.

CULEBRA.

A farewell reception was held at the Culebra clubhouse on Friday, March 19, in honor of Mr. W. H. Baxley, the local secretary who will sail for the States on March 27. Musical numbers by Mr. Howard, Mr. Holland and the Lyric Glee Club, readings by Mr. Canady, a guitar and a mandolin duet by Messrs. McFarland and Tragsdorf and short talks by Messrs. Minear, Stokoe, Weaver, Warner, Kirk, Pullen and a reply by Mr. Baxley constituted the program. Mr. Lee, the chairman of the local council, was the chairman of the evening.

The local interdepartmental duck pin tournament is arousing a good deal of interest. Games are bowled every Tuesday and Friday evenings by the following teams: The Chief Engineer's Office, the Quartermaster's, the Meteorology and River Hydraulics, the Cutmen, the All Stars, the Miscellaneous, and the Draftsmen.

The result of the local billiard tournament is as follows: C. L. Bayne, first; F. H. Doty and W. E. Tragsdorf, tied for second place.

#### Concert by the I. C. C. Band.

GORGONA, C. Z.,  
Sunday, March 28, 1909, at 6 p. m.

##### PROGRAM.

- 1 March—Col. Estey.....Bagley
- 2 Selection—A Knight for a Day.....Hubbell
- 3 a Intermezzo—Rainbow.....Weinrich
- 3 b A Southern novelty—Moonlight in  
Dirie.....Clement
- 4 Waltz—Autumn Smiles.....Bagley
- 5 Medley Selection—Hits of the Day.....Remick
- 6 Porto Rican Dance—Rosita.....Missud
- 7 Two-Step—Hoop & Kick.....Allen
- 8 Overture—Schauspiel.....Bach
- 9 Patrol—American.....Mecham
- 10 March—Victorious Eagle.....Rosey

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Hotel Tivoli, Sunday, April 4.

## CANAL WORK FOR FEBRUARY.

Monthly Report of the Acting Chairman to the Secretary of War.

CULEBRA, C. Z., March 15, 1909.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of February, 1909:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
<i>Steam Shovel Excavation—</i>					
In prism.....	Cubic yards.....	107,865	1,526,059	101,432	1,735,356
Auxiliary.....	Cubic yards.....	17,419	95,628	5,912	121,959
Total.....	Cubic yards.....	125,284	1,624,687	107,344	1,857,315
<i>Dredge Excavation</i>					
In prism.....	Cubic yards.....	577,201		692,198	1,269,399
<i>Hand and Scraper Excavation—</i>					
In prism.....	Cubic yards.....		19,949		19,949
Auxiliary.....	Cubic yards.....			2,216	2,216
Total.....	Cubic yards.....		19,949	2,216	22,165
Total excavation.....	Cubic yards.....	702,485	1,644,636	501,758	3,148,879
Explosives used.....	Tons (2240 lbs.)	32.38	277.7	21.81	331.89
Rock drilling.....	Feet.....	55,905	345,591	36,774	438,270
New track laid.....	Miles.....	3.927	10.2	2.79	16.917
Track removed.....	Miles.....		9.1		9.1
Material placed in dams.....	Cubic yards.....	220,023	19,772	29,566	269,361
Rock crushed.....	Cubic yards.....	1,416	6,688.5	5,207	11,895.5
Cement used.....	Barrels.....			511	1,957
Concrete placed.....	Cubic yards.....	1,136		338	1,474
New roads built.....	Miles.....	.03	.682	5.25	5.935
Water mains laid.....	Feet.....	2,776	2,352	3,124	8,252
Sewers laid.....	Feet.....	3,874	2,016	356	6,246
Open drains and ditches dug.....	Feet.....		1,305	400	1,705
Open drains and ditches cleaned.....	Feet.....			214,739	214,739
Daily average number of laborers.....		3,170	8,112	3,048	14,330
Wash drilling.....	Feet.....	1,100		414.2	1,514.2
Diamond drilling.....	Feet.....			210.2	210.2
House connections made.....				1	1
Rainfall.....	Inches.....	4.12	1.50	3.26	

## Atlantic Division.

## GATUN LOCKS.

*Unloading Cableway Dock*—With the exception of the laying of a small amount of bracing below the floor and a small amount of track above, this dock is completed.

*Cement Shed Dock*—On this dock 80 piles were driven and 42,000 square feet of decking laid during the month. It is now ready for the erection of the roof. All posts for the cement house have been cut, and the continuation of the framing will be resumed on arrival of the necessary material.

*Storage Pile Tunnels*—Work on these tunnels was continued, and the timber work is now 99 per cent completed. A total of 364,000 feet B. M. of creosoted timber was used. The broken stone filling over the drains on the sides of the tunnel was continued during the month, and is 90 per cent completed. The remaining work to be done to complete these tunnels consists of placing a small amount of sheathing and broken stone at the sides, and the installation of the valves.

*Automatic Electric Road*—The excavation for the roadbed of this road was continued, and 5,000 cubic yards of earth and loose rock removed. The excavation and trestles for carrying the Panama railroad tracks in the Gatun yard over this road was completed. Approximately 90 per cent of this roadbed is ready for ballast.

*Cableway Towers*—During the month four tail towers for the lock cableways were erected and riveting commenced. Riveting on two tail towers for the unloading cableways was completed, and forms for the counterweight placed. The bases for two

unloading head towers were erected, and the main driving machinery placed on one of them.

*Power House*—Work on the erection of the power house was satisfactorily continued, and at the end of the month the walls and turbine foundations were completed to the level of the main floor. The steel in the east end of the building has been put in place, and about half the bolts put in.

*Mixer Building*—Framing of the timber work for this building and its approach channels was completed. Approximately 100 cubic yards of excavation for the footings was made, and 83 cubic yards of concrete

dations, and erection of generator and engines was completed and light furnished on February 27. Three locomotives and eight Oliver 6-yard cars were erected, as well as a 15-ton crane one No. 9 and one No. 6 crusher.

*Quarry Operation*—Three steam shovels cast over from 2½ per cent climbing cut, widening same, and on switch back into quarry, handling 15,092 cubic yards. In ditching and draining, 210 cubic yards were handled. The hydraulic stripping in the quarry amounted to 27,161 cubic yards.

*Carpenter Work*—Work was continued on the crusher house, shipping bins, conveyor, help quarters, Quartermaster's storehouse, hospital and the railroad trestle east of the crusher house.

## NOMBRE DE DIOS

Work progressed satisfactorily at this point, preparatory to taking out sand.

## HARBOR AND CHANNEL SECTION.

*Dry Excavation Below Sea-level Mindi*—Two 70-ton shovels operated at this point during the month, excavating 7,951 cubic yards of earth and 38,095 cubic yards of rock.

*Dredging, Ocean to Mindi*—Three dredges removed from the prism 428,595 cubic yards of earth and 16,315 cubic yards of rock. In addition, the *Mindi* removed 29,714 cubic yards of earth and 5,975 cubic yards of rock from the approach channel to the Gatun Locks. On February 28, 40 feet of water could be carried from 0 to Mile 2 + 4,550 feet; 30 feet to Mile 3 + 650 feet; 20 feet to Mile 3 + 5,200 feet; and 15 feet to Mile 4 + 4,640 feet, the end of the cut.

## MUNICIPAL ENGINEERING AND BUILDING CONSTRUCTION.

The usual work of this subdivision was satisfactorily performed, consisting of the maintenance and construction of roads and bridges, construction of fences, the completion of the installation of the sewer system in the new town of Gatun, and other special jobs of minor importance.

## Central Division.

During the month of February, the total amount of material excavated in the Central Division was 1,644,636 cubic yards, of which 606,991 cubic yards were classified as earth and 1,037,645 cubic yards as rock. Of this quantity, 1,624,687 cubic yards were removed by steam shovels and 19,949 cubic yards by hand near Bobio. The quantity of material removed from the Canal prism was 1,546,008 cubic yards, while 98,628 cubic yards were removed from the Obispo Diversion. The daily average number of steam shovels at work during the month was 56.05 as compared with 51.80 for the month of January.

For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	W'kg days in month	Av. amount excavated per shovel per 8-hour day.
		Rock	Earth			
1908:						
Feb.....	cu. yds. 1,441,263	cu. yds. 813,832	cu. yds. 627,431	54.00	24	1,112
1909:						
Feb.....	1,624,687	1,028,865	595,822	56.05	23	1,260

Rainfall at Empire: 1908, 0.00 ins.; 1909, 1.50 ins.

The above table shows that the average

laid. The foundations for the driving machinery and main footings were completed.

*Excavation*—During the month the shovel excavation in the Canal prism was continued with two shovels, and auxiliary excavation with one shovel. This auxiliary excavation consisted in widening the cut made for the east towers of the lock cableways, and in preparing the site for the concrete mixers, and the roadbed for the industrial railway leading south from the concrete mixers.

The dredge excavation consisted of excavation in the approach channel, and in the slip between the cableway dock and cement house by the dredge *Mindi*, and the hydraulic excavation in the north end of the lock chamber by Dredge 85.

In the drafting room plans for alteration of Panama railroad lighters for carrying cement, for refuse flight conveyors, and for burning plant for cement shed, were completed. Studies were made for the connection between the south end of the lock and the dam, and a satisfactory solution has been reached. The re-design of the steel forms for the lock walls was commenced, and at the end of the month the design was 90 per cent completed.

## GATUN DAM.

Pile driving, dredging and excavation were continued in the dam operations. The quantity of material placed in the dam is shown in the foregoing table.

## PORTO BELLO.

*Power Plant Site*—The erection of the Laidlaw-Dunn-Gordon air compressor and two receivers was completed, and air was furnished for rock drills. The erection of foun-

output per shovel day was over 13 per cent greater in February, 1909, than in the corresponding month of the previous year.

During the month, 137,367 cubic yards of material excavated from the Cut were transported to the relocation of the Panama railroad between Caimito and Bas Obispo and dumped as filling in the embankment for the new roadbed, the total to date for this purpose being 587,258 cubic yards.

During the month 19,772 cubic yards of rock from Bas Obispo were transported to Gatun, a distance of 23 miles, and dumped in the toe of the dam, making a total to date for this purpose of 281,814 cubic yards.

In building construction work, eight new buildings were completed, three of which were turned over to the Quartermaster's Department, one to the Marine Corps, one to the Division of Meteorology and River Hydraulics, and three were retained for the use of the Central Division. Nine new buildings were worked upon during the month, but were not completed. Three jobs of alterations to buildings were completed, and nine partly completed. Six buildings had rescreening completed, and three were partly rescreened. Four repair jobs, other than rescreening, were completed, and five were partly completed. Eighteen jobs of repairs to screening were completed. Plumbing was installed in three buildings.

#### Pacific Division.

##### DISTRICT NO. 1—LOCKS AND DAMS.

At Pedro Miguel, the storage trestle and dump tracks leading to same were continued, and the filling of the west dam begun over that portion for which the core trench was completed. The excavation for a tail track on the west side of the Canal above the lock site was also continued.

At Miraflores, the excavation for the upper lock and the diversion of the Cocoli River were continued; also the core trench for the West dam. Grading for the power house was continued, and the installation of machinery for laying concrete begun. The 100-ton powder magazine was practically completed. The dredge *Sandpiper* at the lower end of the lock site made slow progress, due to the hard material encountered, but cut through same toward the end of the month.

The construction of tracks leading to Ancon quarry was continued, and the excavation for the crusher foundations begun.

##### DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAYS.

Five dredges were in operation during the month, the output being as follows:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxiliary	
Culebra	Suction	285,417	.....	Scow measurement
Gopher	Ladder	125,958	.....	Place measurement
Mole...	Ladder	39,669	24,222	Place measurement
No. 14.	Ladder	111,468	.....	Place measurement
Dipper.	Dipper.	84,743	.....	Place measurement
Total.	.....	647,255	24,222	

The necessary maintenance of floating equipment was satisfactorily taken care of, and a large amount of other mechanical work was performed at the shops.

Boring along the Canal line was continued and completed, the work accomplished being as follows:

Diamond drilling.....	181.3 linear feet.
Wash drilling.....	316.7 linear feet.

Total..... 498.0 linear feet.

In addition, borings were made along the

axes of the east and west dams at Pedro Miguel, and in the west dam at Miraflores, to verify the depth of rock at certain points below the surface.

The clearing of the Canal line was temporarily abandoned and the men transferred to the work of clearing the diversion along the east side of the Canal from the Cardenas River south. On this work there was cleared and grubbed 417,100 square feet.

Work was begun on the new sand storage wharf at La Boca, this work consisting in setting up the pile driver and manufacturing pile shoes, caps, etc., preliminary to beginning work.

##### DISTRICT NO. 3—MUNICIPAL AND BUILDING WORK.

The work of this subdivision was satisfactorily performed.

#### Mechanical Division.

The manufacturing and repair work of this division was satisfactorily performed, as usual.

#### Relocation of Panama Railroad.

During the month, 85,004 cubic yards of excavation were accomplished on the relocated line, and 281,175 cubic yards of embankment. At the end of the month a total of 886,028 cubic yards of excavation had been accomplished, and 3,563,464 cubic yards of embankment. The work of constructing trestles for filling, bridges and culverts was continued.

The full section heading of Miraflores tunnel has been completed through to the south end. The tunnel has been completed from the south portal for a distance of 130 feet, and arrangements made preparatory to loading the tunnel barrel with Bas Obispo rock.

During the month, 14,984 linear feet of permanent track were laid, making a total at the end of the month of 74,138 linear feet.

The force of laborers during the month averaged 1,487 men.

In addition to the above work on the relocated line, 2,699 linear feet of temporary track were laid in prosecuting the Corozal line revision, with 5,027 cubic yards of excavation and 7,894 cubic yards of embankment.

#### Quartermaster's Department.

During the month, 181 men were employed on the gold roll, and the separations numbered 227, making the net separations 46. Of the men employed, 46 were employed in the United States, and 135 were employed or re-employed on the Isthmus, or transferred from the Panama Railroad Company.

The Commission's agent in Barbados was instructed to recruit 1,000 West Indian laborers.

#### Subsistence Department.

During the month, a net profit of \$3,131.61 is shown in the operation of the line hotels, messes, and kitchens. The Hotel Tivoli, during the month, showed a profit of \$4,614.41.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court was in session twice during the month. In the circuit courts 12 civil and 26 criminal cases were disposed of, and in the district courts 58 civil and 457 criminal cases were disposed of.

#### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues of the Canal Zone in February aggregated \$19,980.51. The general revenues amounted to \$12,363.89.

The postal revenues were \$5,869 on ac-

count of stamp sales, \$3.60 on account of newspaper postage, and \$1,744.02 on account of money order fees. Money order sales during the month amounted to \$416,145.01, of which \$302,414.17 were payable in the United States and foreign countries, and \$113,730.84 in the Canal Zone. Eighty-two dispatches of mail were made to foreign ports by the Cristobal exchange office.

Seventeen vessels entered at and sixteen cleared from the port of Ancon, and nineteen vessels entered at and eighteen cleared from the port of Cristobal during February.

Three estates were settled by the Administrator of Estates during February, six were entered for settlement, and on February 28, there were in the hands of the Administrator sixteen unsettled estates.

#### DIVISION OF POLICE AND PRISONS.

The number of arrests during February was 472, as compared with 524 in January.

There were 134 prisoners confined in the district jails at the close of the month. Ten convicts began penitentiary sentences during the month, 17 were discharged at the expiration of their sentences, and on February 28, 117 convicts were confined in the penitentiary.

#### DIVISION OF PUBLIC WORKS.

The usual business of this division was conducted during the month. The amount of water consumed in February in the city of Panama amounted to 26,207,000 gallons, and in the city of Colon 19,814,075 gallons.

#### DIVISION OF FIRE PROTECTION.

Thirteen fires occurred during the month, 11 involving Commission and railroad property valued at \$50,895. The estimated damage to Commission and railroad property was \$190.

#### DIVISION OF SCHOOLS.

The total enrollment in the white schools during the month was 694, and the average daily attendance 599. In the colored schools the total enrollment was 1,340, and the average daily attendance 855.

#### Department of Sanitation.

[The substance of the report of this department was published in THE CANAL RECORD last week.]

Respectfully,  
H. F. HODGES,  
Acting Chairman and Chief Engineer.

#### Visit of the U. S. S. "Washington."

The U. S. S. *Washington*, Capt. Austin M. Knight, commanding, arrived in Panama Bay about noon Saturday, March 20, from Corinto, Nicaragua. She took coal and supplies aboard on Sunday and Monday, and sailed Tuesday morning for Amapala, Honduras.

#### Division No. 405, B. of L. E.

A regular meeting of Division No. 405, grand international auxiliary to the Brotherhood of Locomotive Engineers, will be held at Las Cascadas, on Friday, March 26, at 2.30 p. m.

#### Knights of Columbus.

An important meeting of Panama Council, No. 1371, Knights of Columbus, will be held at Empire in the lodge hall on Sunday, March 28, at 10 a. m. All brothers on the Zone are requested to be present.

#### Pennsylvanians.

All Canal diggers from the State of Pennsylvania are requested to send their names and State address on a postal card to the Keystone State Club, Cristobal, C. Z.

## OFFICIAL CIRCULARS.

## Applications of Panamanians for Employment.

CULEBRA, C. Z., March 8, 1909.

CIRCULAR No. 237.

There is quoted below a translation of the latter part of Decree No. 11, promulgated by the President of the Republic of Panama, February 22, 1909, concerning the evidence of citizenship to be submitted by applicants for employment on the gold rolls of the Isthmian Canal Commission, who claim to be citizens of the Republic of Panama:

"ARTICLE 1. Native Panamanians who aspire to be employed in the service of any of the official departments in the Canal Zone, must previously present to this office\* their certificate of baptism, or a judicially acknowledged sworn declaration drawn up on stamped paper of the first class, if such certificate is not available, by which their Panamanian nativity is established. The said certificate of baptism or judicial declaration, will be exchanged at this office\* by a certificate setting forth the identity of the applicant.

"ART. 2. Naturalized Panamanian citizens who desire employment with some of the official departments of the Canal Zone, shall address a petition to this office\* in which they must state the date on which they obtained their naturalization papers, and this office\* will then issue the corresponding certificate, attesting to the Canal Zone authorities their Panamanian citizenship by adoption.

"ART. 3. The office of the Secretary of Foreign Affairs will keep a record of all certificates issued by it, in which shall be set forth all the details regarding the Panamanian citizens in whose favor they are issued.

"\*The office of the Secretary of Foreign Affairs of the Republic of Panama."

No Panamanian will be appointed to a position on the gold rolls until he has presented one of the two forms of certificate provided for in this decree. The certificate should be forwarded to the office of the Chairman, attached to the application for increase of force or change of rating.

H. F. HODGES.

Acting Chairman and Chief Engineer.

## Shipment of Heavy Castings.

CULEBRA, C. Z., March 19, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Attention has been called by the Panama Railroad Company to the fact that express shipments of heavy castings and large packages have caused delays in the time of passenger trains. In future shipments of this nature will not be handled on passenger trains, except in cases of absolute necessity. If advance notice is given the Panama Railroad Company will arrange to handle emergency shipments on freight trains without delay. Please issue the necessary instructions to all concerned.

H. F. HODGES, Acting Chairman.

## Accountable Officials.

## OFFICE OF THE CHIEF QUARTERMASTER.

CULEBRA, C. Z., March 19, 1909.

## ALL ACCOUNTABLE OFFICIALS:

A list of all accountable officials who are authorized to assume accountability for Isthmian Canal Commission property is herewith enclosed for your information. Receipts of Form Q. M. D. 4, signed by other than accountable officials, except in cases of sales, will not be accepted in support of property returns. By direction of the Acting Chairman.

Respectfully,

C. A. DEVOL,

Chief Quartermaster.

Officials of the Isthmian Canal Commission who are authorized to assume accountability for public property.

## CONSTRUCTION AND ENGINEERING.

Division Engineer, Atlantic Division.  
Division Engineer, Central Division.  
Division Engineer, Pacific Division.  
Subsistence Officer.  
Assistant Engineer, M. and R. H. (Third Division, Office of Chief Engineer).  
Superintendent of Motive Power and Machinery.  
Electrical Engineer, M. P. and M.  
Master Mechanic, Gorgona shops.  
Master Mechanic, Empire shops.  
Depot Quartermaster, Mount Hope.  
Storekeeper, Empire.  
Storekeeper, Gorgona.  
District Quartermaster, Porto Bello.  
District Quartermaster, Cristobal.  
District Quartermaster, Gatun.  
District Quartermaster, Tabernilla-San Pablo.  
District Quartermaster, Gorgona.  
District Quartermaster, Bas Obispo.  
District Quartermaster, Las Cascadas.

District Quartermaster, Empire.  
District Quartermaster, Culebra.  
District Quartermaster, Pedro Miguel-Paraiso.  
District Quartermaster, Corozal.  
District Quartermaster, Ancon-La Boca.

## CIVIL ADMINISTRATION.

Head of Department of Civil Administration.  
ZONE SANITATION.

## Chief Sanitary Officer.

The following officials are authorized to execute the certificate on Form Q. M. D. 5, certifying that material has been applied to the work, but do not assume accountability for property:

Chairman and Chief Engineer.  
Examiner of Accounts.  
Disbursing Officer.  
General Secretary of clubhouses.  
Secretary to the Isthmian Canal Commission.  
Chief Quartermaster.

## Cabin Rates Between New York and Cristobal.

The General Manager of the Panama Railroad Steamship Company announces the following rates on the steamers of the company between New York and Cristobal (Colon), which went into effect May 9, 1908:

S. S. ADVANCE.	
Berths in promenade deck rooms 17, 18, 19, 20, 21, 22, 26, 27.....	\$80.00
All main deck berths and berths in rooms 11 to 16 and 23, 24, 25.....	75.00
S. S. COLON.	
Berths in numbered rooms 21 to 45 midship saloon deck.....	80.00
Berths in numbered rooms 46 to 53 after house saloon deck; berths in numbered rooms 59 to 67 on main deck; berths in rooms 1 to 19 on boat deck.....	75.00
S. S. PANAMA.	
Berths in numbered rooms 20 to 43 and 45 midship saloon deck.....	80.00
Berths in numbered rooms 44 and 46 to 57 after house saloon deck; berths in numbered rooms 58 to 67 on main deck; berths in rooms 1 to 19 on boat deck.....	75.00
S. S. ALLIANCA.	
Berths in suites with privilege of bath.....	90.00
Berths in rooms on saloon deck.....	80.00
Berths aft on main deck.....	75.00
A whole room guaranteed for use of one passenger will be at an additional cost of half rate for each berth.	

## Stages of the Chagres.

Maximum height of Chagres River above low water for the week ending midnight Saturday, March 20 1909:

	STATIONS.

## PROPOSALS FOR BUILDING.

Bids are being asked by the Purchasing Agent on the Isthmus for the construction by contract at Culebra, of one type-ten house. Bids will be opened at Mount Hope on April 3, 1909. Plans and specifications can be obtained at the office of the Depot Quartermaster, Mount Hope, upon deposit of \$5 to insure their return.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, MARCH 31, 1909.

No. 31.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

**THE CANAL RECORD**

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Work on the Trinidad Watershed.

The survey of the watershed of the Chagres River has been extended to the valley of the Trinidad, where a party is now operating about ten miles from the mouth of the river.

As the lock canal project of the French did not take into consideration the water supply of the Trinidad and Gatuncillo Rivers, since these rivers empty into the Chagres north of Bohio, no records of the run-off of their watersheds were kept by the French. The only gaugings made heretofore were those of the Walker Commission covering a period of a few months only. For about twenty-two months stations have been in operation at Lagartera, about fourteen miles from the mouth of the Trinidad, and at a point on the Gatuncillo about six miles from its mouth.

Diamond drill borings are being made along the Trinidad-Atlantic divide to determine the quality of the material in the ridges.

#### Sand Dredging at Nombre de Dios.

The sand that is being delivered at the Gatun spillway from the pits at Nombre de Dios is loaded on barges by a clam shell dredge that is not well adapted to the work. No difficulty is experienced, however, in supplying the amount needed at the spillway mixing plant. The dipper dredge is developing the sand deposits at a depth of twenty feet or more, and cannot work to an advantage at a less depth. In the course of two weeks the old French suction dredge which was found on the bank of the Chagres at Chagrecito, and is undergoing repairs at the Cristobal dry dock, will be put in service at Nombre de Dios to assist in stripping the surface clay and silt from the sand. A new dredge with a clam shell bucket erected on each end, built especially for the Nombre de Dios work, will be put in service

sometime in April, and the best sand to be obtained in that locality can then be handled in any quantities that are likely to be required.

#### New Commissary at Gatun.

Work will begin presently on the new commissary at Gatun. It will be located just north of the new Panama railroad station on the level of the railroad tracks, and therefore about twenty feet below the level of the railway bridge. It will be a two-story building, with an entrance from the level of the railway bridge to the second floor, on which the commissary will be situated. On the first floor will be two storerooms, one for hotel supplies, and the other for commissary supplies. The building will be 107 feet 4 inches long and 30 feet wide. Unlike the other commissaries along the Line the shelves will be on the outside walls, and the office and counters in the center. It will be divided as usual into a side for "gold" employees and one for "silver" employees, but a system of gates will make it possible to contract the size of the "gold" side and enlarge the "silver" side at those times during the day when there is a large influx of "silver" employees. The same force of clerks will wait on both classes of employees. In the center of the roof will be a large skylight and ventilator. A refrigerator, 16 by 20 feet, and an elevator for ice form part of the plan. Back of the commissary will run a spur track, on which the supply cars will be unloaded.

#### Office and Storehouse at La Boca.

A new office and storehouse for the La Boca section of the Pacific Division is in course of construction at La Boca near the machine shop. The office will be 20 feet by 60 feet, two stories high, with three rooms on each floor. One room will be set apart as the office of the storekeeper, and the remaining five rooms will be used by the resident engineer. The storehouse will be 100 feet by 60 feet and one story high. It is not likely that the old store room, a building erected by the French, will be torn down immediately as the additional storage space afforded by the new building will be needed to place under cover materials now in the yard. The new building will be ready for use in about a month.

#### Change in Sailings to Taboga.

Effective Thursday April 1, the *Sanidad* will leave from La Boca (dredge landing) at 9 a. m., for Taboga and Palo Seco, on Tuesday, Thursday and Saturday of each week, instead of from Panama at 10 a. m., on these days.

The train for La Boca leaves Panama at 7.55 a. m. from what is known as the "bull pen," two squares from the station at Panama, immediately after the arrival of train No. 3 from Colon. An I. C. C. brake will

be at the station to transfer passengers for Taboga to La Boca, who cannot catch the train or who desire to go by brake.

Returning from Taboga the boat will reach La Boca at 4 30 p. m., connecting with train from La Boca to Panama, which in turn connects with train leaving Panama at 5.35 p. m.

#### Pile Driving on Naos Breakwater.

The work of driving piles on the Naos Island breakwater trestle at the Pacific entrance has been resumed after about six weeks of enforced idleness, due to lack of piles. It is probable that the building of the breakwater will continue without cessation from this time on.

#### New Schoolhouse at Gatun.

The new schoolhouse under construction at Gatun is nearing completion. The plans call for a building 88 feet 6 inches by 65 feet 6 inches over all, divided into four rooms each 36 feet 6 inches by 25 feet; the ceiling to be 14 feet above the floor. Separate toilets for boys and girls will be built at opposite ends of the building. The construction will be of the Commission style, with a screened veranda running around the building.

#### The Dredge "Marmot."

The *Marmot*, an old French ladder dredge of the Belgian type, was launched at La Bocashipways on March 25. Within a month it will be at work in the Pacific entrance to the Canal, doing the excavation work for which it was designed 25 years ago, but never entered upon. It is a composite dredge made of a hull taken from the beach at La Boca opposite the Panama railroad wharf, plates dug out of the mud at San Pablo, and machinery from an old dredge at Gorgona left on the banks of the Chagres by the French. The cost of rebuilding is about \$35,000, and the capacity of the dredge will be about 6,000 cubic yards a day of two 12-hour shifts.

The hull of the dredge had been erected by the French and then anchored at La Boca. Before the machinery was installed work was suspended, and the hull, an iron box 130 feet long, 38 feet wide, and 12 feet deep, was abandoned. Early in the American occupation it was sunk in the old French canal in order to get it out of the way. When the project for dams at La Boca was abandoned the hull was found to be again in the way and it was raised and sunk outside the prism of the Canal, opposite the steamship wharf. It was floated last fall and on November 10 was drawn up onto the shipways. The bottom and a few of the frames were completely rotted away, but the plates above the water line were in good condition.

The frames amidship were renewed, and new plates put on the bottom. A set of bilge plates, unimpaired excepting one

## NOTES OF PROGRESS.

(Continued.)

corner, were found in the mud at San Pablo where they had been left by the French. These plates were used, and the corner that was lacking was supplied from an old dredge at Gorgona. The decks were also renewed. The deck machines, including the training engine, are the only new machinery installed.

Three return tubular Scotch marine boilers, taken from one of the old dredges at Gorgona, supplied with new tubes and made equal to new American boilers of the same type, were installed and fitted with burners for using oil as fuel. Two vertical double compound, reciprocating engines, likewise taken from an old French dredge at Gorgona, have been repaired and will be put in. The high pressure cylinders are 320 millimeters in diameter; low pressure, 650 millimeters; revolutions, 57 per minute; stroke, 750 millimeters; and the combined horse-power is 190. The total horse-power of the dredge is 250. The ladder tower was on the hull, but the ladder was taken from an old dredge left by the French at San Pablo. New half-yard buckets recently purchased in the United States will be used.

The dredge is of the type that makes its own flotation, and on this account will be especially useful excavating in the old French canal where the Scotch type of dredges can work only after a sufficient depth of water to float them has been procured.

**Concrete Mixers for Gatun Locks.**

Six of the eight concrete mixers to be used in the construction of the Gatun locks have been delivered at Gatun. They are of the Chicago cube type and have a capacity of two yards.

**Gatun-Mount Hope Road.**

A barge of rock quarried and crushed at Porto Bello has been unloaded at Mindi for use in surfacing the road between Mount Hope and Gatun. The road is graded throughout its entire length and the bridges are now in process of construction. Between 15,000 and 18,000 cubic yards of crushed rock will be used in surfacing this road.

**Sand and Repair Wharf at La Boca.**

The sand and dredge repair wharf authorized for the Pacific Division at La Boca is in progress of construction, and 200 feet out of the 900 feet to be built have been completed. The primary purpose of the wharf is a landing place for sand from Chamé. The sand will be hauled in cars to Miraflores and Pedro Miguel where it will be used in the concrete work of the locks and spillway.

**Surgical Wards for Negro Employees.**

Wards 7 and 8, the surgical wards for negro employees at Ancon Hospital, are to be torn down and two new buildings will take their places. These wards are in old buildings left by the French, and are in such poor condition that it is more economical to erect new buildings than to make repairs. The new wards will be in the shape of a "T," and although two distinct buildings, will be under one roof. Each building will be two stories high, built on the foundations of the present wards, and will have a capacity of 136 beds. There will be four isolation wards. On each floor of each ward will be a dining room, diet kitchen, surgeon's dressing room and toilet rooms.

## SOCIAL LIFE OF THE ZONE.

**Women's Clubs and Other Features.**

There will be a meeting of the Board of Directors of the Canal Zone Federation of Women's Clubs at the Cristobal clubhouse on Saturday, April 3, at 2 o'clock.

Meetings for effecting a permanent organization in Paraiso and Pedro Miguel have been called for Wednesday and Thursday evening, March 31 and April 1, respectively.

Canal Zone Lodge, No. 699, International Association of Machinists, gave an entertainment in the Y. M. C. A. hall in Cristobal on the night of March 16. Stories, recitations, music, and a moving picture exhibition occupied the early part of the evening, and a dance and refreshments the latter part.

Panama Lodge No. 1, Knights of Pythias, Cristobal, gave a dance at Lincoln House, Colon, on Saturday night, March 27. Over three hundred couples were present. The floor was in the best possible condition and the music furnished by the Panama railroad orchestra under the direction of Mr. Thompson was exceptionally good. A special train took the guests to all points on the line after the dance. The Empire Company of the Uniform Rank were present in a body and the Cristobal Company of Uniform Rank acted as aids. Both companies were in uniform.

Cristobal Court No. 8, Independent Order of Panamanian Kangaroos, has been organized with the following officers: Judge, John K. Gibson; prosecuting attorney, W. G. Young; defendant attorney, J. L. Kerr; chaplain, B. J. Burgoon; comptroller, C. A. Lester; clerk, H. M. McKeever; sheriff, Charles Mohl; inner guard, Freeman Grant; deputy sheriff, Arthur Haglia.

The regular meetings will be held on the first and third Sunday in each month, at 2 p. m., and on the second and fourth Thursday in each month, at 8 p. m., in the I. C. C. lodge hall, Cristobal.

At a meeting at the Hotel Tivoli, on Sunday evening, March 7, a South Carolina Club was organized. About twenty-five of the South Carolinians on the Isthmus are interested, and the club will be glad to know of more. The officers elected to serve until June were as follows: W. E. Russell, president; H. C. Dew, vice-president, and C. T. Lindsay, secretary and treasurer. All "Palmettos" who have been communicated with will shortly receive particulars as to the organization and its object.

All survivors of the wreck of the steamship *Finance*, which was sunk in New York harbor on November 26 (Thanksgiving Day), 1908, who are at present on the Isthmus, are requested to send their names and addresses to Frank Whiteman, Empire, C. Z., with the view of calling an early meeting.

**Church Notices.**

There will be special Easter services in the Commission chapel, Culebra, on Sunday evening, April 11. Mrs. Adolf Faure of Empire will sing and other music will be furnished by Mr. Gray of Ancon. Arrangements for the uniting of the Episcopal congregations at Culebra and Empire in Easter services have been made. The service at Culebra chapel will be at 7.30 a. m., and at St. Mary's, Empire, at 11 a. m. Special music will be rendered by an augmented choir. There will be a service at Culebra on Palm Sunday, April 4, at 11 a. m.

The weekly meetings of the Woman's Guild in connection with St. Luke's Church, Ancon will be discontinued after Easter and the regular meetings on the first and third Monday of each month will be resumed. The sewing meetings during the past six weeks have been well attended.

## PERSONAL.

Among the passengers on the *Advance*, due at Cristobal on April 2, is Lieut.-Col. Geo. W. Goethals, U. S. A., Chairman and Chief Engineer of the Isthmian Canal Commission.

Mrs. H. J. Slifer, Miss Margaret Slifer, and Master James Slifer returned to the Isthmus on the *Panama*, which arrived at Cristobal March 28, 1909.

Mr. Forbes Lindsay, author and journalist, and Mr. F. Willoughby Smith, American consul at Messina, Italy, were among the passengers who arrived at Cristobal on the *Panama* on March 28.

**Meetings to be Held.**

Cristobal Court No. 8, will hold a regular meeting in Cristobal lodge hall, on Sunday, April 4, at 8 p. m., for business and initiations. All brethren in good standing are fraternally invited to be present.

A regular meeting of Division 756 of the Brotherhood of Locomotive Engineers will be held at Pedro Miguel, Sunday, April 4, at 1.30 p. m.

The regular meeting of Division 405 of the G. I. A. to the B. of L. E., will be held Friday, April 9, at 2.30 p. m., in the lodge room at Las Cascadas.

Charter members and others desiring to become members of Ancon Lodge, Knight of Pythias, are requested to attend an important meeting at the Ancon lodge room on Tuesday, April 6, at 8 p. m., sharp. Election of officers will take place.

Local No. 95, International Association of Steam, Hot Water and Power Pipe Fitters and Helpers, will hold its regular meeting in the room over the I. C. C. Hotel at Gorgona on April 4, at 2 p. m. All members are requested to be present.

L. E. Aldrich died at Ancon Hospital on March 15. He was forty-four years old, a native of New Hampshire, was married, and had been on the Isthmus 8 months, residing at Cristobal.

A concert will be given by the I. C. C. band at the Hotel Tivoli, Ancon, on Sunday night, April 4.

The Las Cascadas Palm Club, a newly organized social club, held its first dance on Saturday evening, March 27.

**Commission Clubhouses.****CRISTOBAL.**

A class in the study of the Life of Christ has been organized under the leadership of Mr. H. L. Stuntz. Candle pins have been added to the equipment of the bowling alleys.

The following events are scheduled:  
Saturday, April 3—Moonlight athletic meet on the new cinder track. The men working for the P. R. R. will be pitted against the men working for the I. C. C.  
Monday, April 5—Concert by the German band.  
Wednesday, April 14—Concert by I. C. C. band.  
Monday, April 26—Concert by Mr. Jennings' orchestra.

**CULEBRA.**

An indoor baseball game was played with Empire Friday night which Culebra won by a score of 27 to 21.

The standing of the local bowling league on March 24, was as follows:

	Won.	Lost.	Per cent.
All Stars.....	6	0	100%
Quartermaster's Dept.....	3	1	.750
Chief Engineer's office.....	5	3	.625
Culebra Cut team.....	3	3	.500
M. & R. H. Division.....	2	4	.333
Miscellaneous teams.....	1	5	.166
Transients.....	0	4	.000.

**GORGONA.**

A well attended and interesting service was held in the clubhouse under the auspices of the Association on Sunday evening, March 28. The meeting was addressed by Mr. H. L. Stuntz, auditor of the Panama railroad. A vocal solo was rendered by Mrs. G. H. Pierson, and a duet by Mrs. Pierson and Mr. T. S. Booz. Secretary Mitchell presented the matter of bible classes to the men present, with the result that three classes were formed, two for Monday evening and one for Wednesday evening of each week.

There is much activity on the bowling alleys. A local duck-pin tournament is under way, with 30 men contesting. The local pool tournament which has been running for some weeks, closed on Friday night, March 26, with Edward McInerney in first place and L. P. Robitow, second.

## THE ISTHMIAN CANAL.

Paper Read by the Chairman and Chief Engineer Before the Manufacturers' Association in Chicago on March 16.

A canal connecting the Atlantic and Pacific oceans has occupied public attention for upwards of four centuries, during which period various routes have been proposed, each having certain special or peculiar advantages. It was not until the nineteenth century, however, that any definite action was taken looking toward its accomplishment.

In 1876 an organization was perfected in France for making surveys and collecting data on which to base the construction of a canal across the Isthmus of Panama, and in 1878 a concession for prosecuting the work was secured from the Colombian Government.

In May, 1879, an international congress was convened under the auspices of Ferdinand de Lesseps, to consider the question of the best location and plan of the canal. This congress, after a two weeks' session, decided in favor of the Panama route and of a sea-level canal without locks. De Lesseps's success with the Suez Canal made him a strong advocate of the sea-level type, and his opinion had considerable influence in the final decision.

Immediately following this action the Panama Canal Company was organized under the general laws of France, with Ferdinand de Lesseps as its president. The concession granted in 1878 by Colombia was purchased by the company, and the stock was successfully floated in December, 1880. The two years following were devoted largely to surveys, examinations, and preliminary work. In the first plan adopted the canal was to be 29.5 feet deep, with a ruling bottom width of 72 feet. Leaving Colon, the canal passed through low ground to the valley of the Chagres River at Gatun, a distance of about 6 miles; thence through this valley, for 21 miles, to Obispo, where, leaving the river, it crossed the continental divide at Culebra by means of a tunnel, and reached the Pacific through the valley of the Rio Grande. The difference in the tides of the two oceans, 9 inches in either direction from the mean in the Atlantic and from 9 to 11 feet from the same datum in the Pacific, was to be overcome and the final currents reduced by a proper sloping of the bottom of the Pacific portion of the canal. No provisions were made for the control of the Chagres River.

In the early eighties after a study of the flow due to the tidal differences a tidal lock near the Pacific was provided. Various schemes were also proposed for the control of the Chagres, the most prominent being the construction of a dam at Gamboa. The dam as proposed afterwards proved to be impracticable, and this problem remained, for the time being, unsolved. The tunnel through the divide was also abandoned in favor of an open cut.

Work was prosecuted on the sea level canal until 1887, when a change to the lock type was made, in order to secure the use of the canal for navigation as soon as possible. It was agreed at that time that the change in plan did not contemplate abandonment of the sea-level canal, which was ultimately to be secured, but merely its postponement for the time being. In this new plan the summit level was placed above the flood line of the Chagres River, to be supplied with water from that stream by pumps. Work was pushed forward until 1889, when the company went into bankruptcy; and on February 4 of that year a liquidator was appointed to take charge of its affairs. Work was suspended on May 15, 1889. The New Panama Canal Company was organized in October, 1894, when work

was again resumed, on the plan recommended by a commission of engineers.

This plan contemplated a sea-level canal from Limon Bay to Bohio, where a dam across the valley created a lake extending to Bas Obispo, the difference in level being overcome by two locks; the summit level extended from Bas Obispo to Paraiso, reached by two more locks, and was supplied with water by a feeder from an artificial reservoir created by a dam at Alhajuela, in the upper Chagres Valley. Four locks were located on the Pacific side, the two middle ones at Pedro Miguel combined in a flight.

A second or alternative plan was proposed at the same time, by which the summit level was to be a lake formed by the Bohio dam, fed directly by the Chagres. Work was continued on this plan until the rights and property of the new company were purchased by the United States.

The United States, not unmindful of the advantages of an Isthmian canal, had from time to time made investigations and surveys of the various routes. With a view to government ownership and control Congress directed an investigation of the Nicaraguan canal for which a concession had been granted to a private company. The resulting report brought about such a discussion of the advantages of the Panama route to the Nicaraguan route, that by an act of Congress, approved March 3, 1899, a commission was appointed to—

make full and complete investigation of the Isthmus of Panama, with a view to the construction of a canal \* \* \* to connect the Atlantic and Pacific oceans \* \* \* and particularly to investigate the two routes known respectively as the Nicaragua route and the Panama route, with a view to determining the most practicable and feasible route for such canal, together with the approximate and probable cost of constructing a canal at each of the two or more of said routes.

The Commission reported on November 16, 1901, in favor of Panama, and recommended the lock type of canal. The plan consisted of a sea-level section from Colon to Bohio, where a dam across the Chagres Valley created a summit level 82 to 90 feet above the sea, reached by two locks. The lake or summit level extended from Bohio to Pedro Miguel, where two locks connected it with a pool 28 feet above mean tide, extending to Miraflores, the location of the final lock. The ruling bottom width of the canal prism was fixed at 150 feet, increased at the curves and in the submerged channels. In Panama Bay the width was fixed at 200 feet, and in the artificial channel in Limon Bay 500 feet was adopted, with turning places 800 feet wide. The minimum depth was 35 feet, and the locks were to have usable lengths of 740 feet and widths of 84 feet. The Commission assessed the value of the rights, franchises, concessions, lands, unfinished work, plans, and other property, including the railroad of the New Panama Canal Company, at \$40,000,000.

By act of Congress, approved June 28, 1902, the President of the United States was authorized to acquire, at a cost not exceeding \$40,000,000, the property rights of the New Panama Canal Company on the Isthmus of Panama, and also to secure from the Republic of Colombia perpetual control of a strip of land not less than six miles wide, extending from the Caribbean Sea to the Pacific Ocean, and—

the right \* \* \* to excavate, construct, and to perpetually maintain, operate, and protect thereon a canal of such depth and capacity as will afford convenient passage of ships of the greatest tonnage and draft now in use.

In event the provisions for the purchase, and for securing the necessary concession from Colombia could not be carried out, the President was authorized to secure the rights necessary for the construction of the Nicaraguan canal.

The law also provided, after the foregoing arrangements had been perfected, that—  
the President shall then, through the Isthmian Canal

Commission \* \* \* cause to be excavated, constructed, and completed a canal from the Caribbean Sea to the Pacific Ocean. Such canal shall be of sufficient capacity and depth as shall afford convenient passage for vessels of the largest tonnage and greatest draft now in use, and such as may be reasonably anticipated.

To enable the President to carry out these provisions certain sums were appropriated and a bond issue, not to exceed \$130,000,000, was authorized. By this act Congress, in accepting the estimates accompanying the report of the Commission of 1901, adopted the type proposed by the Board, or a lock canal.

Pursuant to the legislation, negotiations were entered into with Colombia and with the New Panama Canal Company, with the end that a Treaty was made with the Republic of Panama granting to the United States control of a 10-mile strip, constituting the Canal Zone, with the right to construct, maintain, and operate a canal. This Treaty was ratified by the Republic of Panama on December 2, 1903, and by the United States on February 23, 1904.

The formal transfer of the property of the New Panama Canal Company on the Isthmus was made on May 4, 1904, after which the United States began the organization of a force for the construction of the lock type of canal, in the meantime continuing the excavation by utilizing the French material and equipment and such labor as was procurable on the Isthmus.

The question of a sea-level canal was again agitated, and secured such recognition that the President convened an international board of engineers, consisting of 13 members to assemble at Washington on the 1st day of September, 1905, for the purpose of considering the various plans for the construction of the canal that would be submitted to it.

The plans submitted may be briefly summarized as—

(1) That of the Commission of 1901, which has already been explained.

(2) A lock canal with terminal lakes proposed by Mr. Lindon W. Bates, and for which three projects were proposed. The one which he appeared to favor contemplated a summit level of 62 feet above the sea, created by a dam at Bohio, and an intermediate level of 33½ feet above mean tide, effected by a dam at Mindi. This plan provided four locks—at Mindi, Bohio, Pedro Miguel, and Sosa. A variant of the plan contemplated a dam at Gatun instead of at Bohio, showing that, at least for a 30-foot head, the Gatun location was not considered by him as unfavorable or offering any difficulties respecting the foundations. His other plans were modifications of this, the summit levels being 27 or 62 feet, but in each instance the lock type was advocated.

(3) The plan proposed by Mr. Bunau-Varilla, carried out the idea of the first French company, namely, the construction of a lock canal with a summit level 130 feet above mean tide, to be ultimately converted into a sea-level canal, or what he calls the Straits of Panama. The locks were to be constructed so that as the levels were deepened by dredges they could be eliminated, navigation continuing during the enlargement and transformation. The material removed by the dredges was to be deposited in the lake formed of the upper Chagres River by a dam at Gamboa, and any suitable locations in the various pools between the locks. In commenting on this plan the Board of Consulting Engineers concluded that—

After a full and careful consideration of all the features of Mr. Bunau-Varilla's plan, the Board is of the opinion that it should not be adopted for the Panama Canal for the following reasons:

1. The construction of the large locks required under the present law and necessary for the accommodation of the traffic seeking the canal after its completion makes it quite impossible to complete the

preliminary lock canal even nearly within the period stated.

2. The excessive cost of transformation added to the loss of costly locks and other appurtenant structures required by the preliminary lock canal.

3. If the lock canal is likely to be retained for many years; it should be made for the most efficient service, and not be encumbered with modifications in lock construction which would prove inconvenient in use.

(4) A plan proposed by Maj. Cassius E. Gillette, a lock canal with a summit level 100 feet above mean tide by the construction of a dam across the Chagres Valley at Gatun.

No sea-level plan was submitted for consideration, so that the board outlined a general plan of its own, and for purposes of comparison adopted as the lock type a 60-foot summit level canal. Two levels were used, the summit level was carried by an earth dam at Bohio, and the intermediate level by an earth dam at Gatun, each dam sustaining a head of 30 feet. It is to be noted that no difficulties were anticipated in the construction of these dams, and there was no dread or fear of the foundations.

As the result of its deliberations, the board submitted a majority report and a minority report signed by five of its members, the former advocating a sea-level canal and the latter a lock canal, with the summit level 85 feet above mean tide.

The Isthmian Canal Commission, with one dissenting voice, recommended to the President the adoption of the lock type recommended by the minority, which was also strongly advocated by the then chief engineer, Mr. John F. Stevens. The President, in the message to Congress dated February 19, 1906, stated:

The law now on our statute books seems to contemplate a lock canal. In my judgment a lock canal, as herein recommended, is advisable. If the Congress directs that a sea-level canal be constructed its direction will, of course, be carried out; otherwise the canal will be built on substantially the plan for a lock canal outlined in the accompanying papers, such changes being made, of course, as may be found actually necessary, including possibly the change recommended by the Secretary of War as to the site of the dam on the Pacific side.

On June 29, 1906, Congress provided that a lock type of canal be constructed across the Isthmus of Panama, of the general type proposed by the minority of the Board of Consulting Engineers, and work was continued along these lines. As originally proposed, the plan consisted of a practically straight channel 500 feet wide, 41 feet deep from deep water in the Caribbean to Gatun, where an ascent to the 85-foot level was made by three locks in flight. The level is maintained by a dam approximately 7,700 feet long, one-half mile wide at the base, 100 feet wide at the top, constructed to 135 feet above mean tide. The lake formed by this dam, 171 square miles in extent, carried navigation to Pedro Miguel where a lock of 30 feet lift carried the vessel down to a lake 55 feet above mean tide, extending to Sosa Hill, where two locks overcame the difference of level between the lake surface and the Pacific. Nineteen and eight-hundredths miles of the distance from Gatun to Sosa Hill had a channel 1,000 feet at the bottom, a minimum channel for  $4\frac{1}{2}$  miles through Culebra of 200 feet at the bottom. The balance of the distance varied in width to 800 feet, the larger portion of the entire canal being not less than 500 feet. The depth of water was fixed at 45 feet. The lake assured a perfect control of the Chagres River.

Certain changes have been made in the original project, the most important being the withdrawal of the locks from Sosa to Miraflores, which was recommended and adopted in December, 1907. This resulted in a change in the direction of the channel in Panama Bay. A breakwater is being constructed from Sosa to Naos Island which, by cutting off the silt-bearing cross current, which has always been troublesome, protects the channel against silting.

A second change is the widening of the

$4\frac{1}{2}$  miles of Culebra Cut to a width of 300 feet at the bottom. This was done by executive order and was not made on the recommendation of the Commission.

A third change is the location of the breakwaters in Colon harbor. The necessity for these breakwaters was made apparent in the latter part of January, when a storm of some magnitude seriously interfered with shipping. As originally proposed for both the sea-level and lock types, the breakwaters were parallel to the axis of the channel excavated in Limon Bay. If so constructed, sufficient area would not be given to dissipate the waves entering head on into the channel, and they would not afford much, if any, protection to shipping. These breakwaters are to be built out from Manzanillo Island and Toro Point, so as to give a sheltered anchorage, and also an opportunity for such expansion to the waves as to break them up.

A fourth change is in the dimensions of the locks. As proposed by the minority they were 900 feet by 95 feet, usable lengths and widths. These dimensions were subsequently changed by the Commission at the instigation of the President to dimensions 100 feet wide and 1,000 feet long. The width was again increased to 110 feet on the recommendation of the General Board of the Navy, so as to accommodate any possible increase in beam of future battleships.

The Gatun dam is to consist of two piles of rock 1,200 feet apart and carried up to 60 feet above mean tide. The space between them and up to the required height is to be filled by selected material deposited in place by the hydraulic process. During the construction of the north side of the south rock pile a slip occurred in November last at the crossing of the French Canal. This was the fifth slip that occurred at this point, the rock settling to some extent, but generally slipping sidewise until the angle of repose was reached. In this connection it is to be noted that the silt deposits in the channel had not been removed. This slip would probably have passed unnoticed, as did the former ones, but for the fact that at the time a flood in the Chagres River had attained such proportions as to cover a portion of the Panama railroad tracks just south of Gatun. A newspaper correspondent, going from Colon to Panama, saw his opportunity for a sensational story, and attributed the flood to the dropping of the Gatun Dam into the subterranean lake under the dam and locks, which another faker had previously discovered, and the news of the destruction of the Gatun Dam was cabled to the States.

The slip did not affect the south slope or side of the rock pile. It was entirely local and did not in any way interfere with the work. It would not have occurred had steps been taken during construction to give the proper slope to the rock pile, but economy of time and money did not warrant such precaution. As stated by one of the engineering publications, "We can state from actual personal examination that this incident has absolutely no engineering significance."

As a result, however, the public is told that dire disaster will follow the undertaking unless the present plans are abandoned and the Straits of Panama constructed, that is, a sea-level canal across the Isthmus 500 to 600 feet wide. To accomplish this, however, a lock canal must be built first, and subsequently widened and deepened until the ideal is reached. There is no data available for such a canal. With mountains instead of hills to be removed estimates are, of course, impossible; so the most optimistic figures, suitable alone to the ideal, are offered as a bait. In any event it is also

claimed that Bohio should have been selected for the site of the dam in lieu of Gatun.

As between Gatun and Bohio, at both places the distance from the natural surface to the rock is so great that any attempt to found the dam on the last-named material will be attended by enormous expense. At Bohio the gorge in its lower strata is filled with water-bearing gravel and to make the dam safe the underflow through these strata would have to be cut off by some means extending down 165 feet. No such strata exist at Gatun, so, for this reason alone, leaving out of consideration the advantages in the control of the Chagres River and to navigation by reason of the greater extent of lake, Gatun offers the better site.

Both the majority and minority of the Board of Consulting Engineers considered Gatun a suitable location for a dam; the former adopted it for the typical lock canal used for comparison with the sea-level canal, the latter for the 85-foot summit-level canal. The majority, however, feared the existence of an underground flow in case of the higher dam, but investigations have failed to disclose any. The great mass of underlying material is not sandy and gravelly deposits as was supposed, but a mixture of these materials so firmly cemented together with clay as to make the strata in which they occur impervious to water.

I venture the statement, without fear of contradiction, that the site of no public or private work of any kind has received such a thorough and exhaustive examination and investigation as the foundation of the dam and locks at Gatun. There is no longer a doubt concerning any of the underlying strata; neither the impermeability, nor the ability of the foundations to bear the loads that will be brought upon them, can be questioned if the data be carefully and impartially examined. The investigations fail to disclose any water-bearing strata or the existence of that underground stream with a discharge equal to the Chagres River itself, which was recently asserted as a fact on the floor of the Senate.

In this connection the statement is also made that the change in the location of the locks at the Pacific end was due to our demonstrated inability to construct the dams, and that as the foundation at Gatun is of the same material, it necessarily followed that the Gatun Dam is also impossible of accomplishment.

The majority of the Board of Consulting Engineers in its report states that—

The dam at La Boca, between San Juan Point and the Sosa Hill, unless carried down to bed rock at that location, would be placed upon a far worse foundation than that proposed at Gatun or Mindi. The La Boca site is one covered by an ooze of mud or silt, with some sandy material overlying the rock. \* \* \* Unless some feature equivalent to that of a heavy masonry core characterized the design of the dam at this point or unless a resort be made to dredging down to bed rock or near to it, and refilling with suitable material, or an earth dam at this location be made very massive, it would be in grave danger of being pushed bodily out of place by the pressure due to the head of water in the reservoir.

We found the material in the foundations of these dams not only worse than at Gatun, but in nowise comparable. In the former a covering of ooze and silt, in the latter firm ground with a few soft or marshy spots.

I know that the La Boca dams could be built to safely withstand the heads of water in the resulting lake by adopting either the method of dredging out the ooze or by giving massive dimensions to the superimposed structure. The engineering committee and the majority of the Commission preferred the former method. In either case the cost would exceed the original estimates, and in addition it is a military blunder to push the locks to and beyond the proper line of defense, especially when the canal is a military necessity to this country. That the dams could be built is evidenced by the

fact that the west toe of the Sosa-Corozal dam was carried across the valley on the ooze as an embankment for a railroad to be utilized in transporting stone for the Pacific locks. The charge, therefore, that the dams could not be constructed is not true, and the analogy at Gatun does not follow. Nor is there any truth in the statement that the military necessity was an afterthought as has been insinuated.

I visited the Isthmus in 1905 with a committee of the Board of National Coast Defenses, with which I was associated at that time, for a study of the defenses of the canal. When the location of the locks at the Pacific end was fixed, I was directed to call the Secretary of War's attention to the military necessity of withdrawing the locks to the interior. This I did, with the result that in forwarding the report of the Board of Consulting Engineers to the President he calls attention to the fact as follows:

The great objection to the locks at Sosa Hill is the possibility of their destruction by the fire from an enemy's ship. If, as has been suggested to me by officers of this department entitled to speak with authority on military subjects, these locks may be located against and behind Sosa Hill in such a way as to use the hill as a protection against such fire, then economy would lead to the retention of this lake. \* \* \* If, however, Sosa Hill will not afford a site with such protection, then it seems to me wiser to place the locks at Miraflores.

In forwarding the report to Congress, the President calls attention to the change recommended by the Secretary of War in the location of the locks on the Pacific side. The so-called afterthought appears, therefore, as a conclusion reached long before I had any connection with the work.

Discredit is also thrown on the Gatun Dam because there has been a desire to reduce the height from 135 to 105 feet. The original height was arbitrarily fixed to secure an excess of weight, so as to fully compress the underlying material supposed to be largely silt deposited by the river. Subsequent investigations show that the supposed compressibility does not exist; that a marine, not a river deposit is encountered. The greater the height of the dam the greater the difficulty of constructing the upper portion, and the greater the cost, both in time and money. From present available data, if the lake should take the total discharge of the Chagres River, the water surface would not exceed 90 feet, the top of the locks, 92 feet above sea-level, would permit escape of the water long before it could reach the crest of the dam. Why then go to the expense of the extra height of the dam, and what is to be gained thereby? Assuming the crest of the dam as 100 feet wide, uniform slopes from the rock piles would give a height of 105 feet, and this height was suggested. Because as an additional reason it was mentioned that the pressure over the base would be more uniformly distributed by a dam with the cross section proposed, the opponents of the present project, without ascertaining the facts, point to the change as a desire to secure a uniform base pressure, and used it as an argument against the stability of the foundation.

Much also has been made of the fact that in the testimony before one of the Congressional committees mention was made of securing the stability of the superstructure by balancing the dam on the underlying material. Naturally the testimony is read and discussed in such a way as to leave the impression that the entire dam is to be so constructed. The ground to be covered by the dam is crossed by three water courses, the Chagres River, the French Canal, and the West Diversion, and between these streams the ground is undulating, Spillway Hill reaching a height of 110 feet above sea-level. It is not remarkable or unprecedented that there should be depressions which undrained become soft with the excessive rainfall. Ex-

cept for these the ground is firm. It is in the crossing of these soft spots that slips have occurred and are liable to occur, and to which the balancing method referred. They are relatively small in extent and when drained or filled cause no trouble, as experience at the La Boca embankment clearly proves.

As previously stated, the Gatun Dam satisfactorily solves the problem of the control of the Chagres, and there should be no doubt in the mind of any one who impartially examines the data that the solution is not only feasible, but absolutely safe. As there has never been any question raised as to the safety and stability of the dams at Pedro Miguel and Miraflores, with the Gatun Dam accepted, other things being equal, the relative merits of the lock versus sea-level canal must rest upon the ease and safety of navigation offered by the two types.

In the sea-level type offered in lieu of the lock type already described, the Chagres River is controlled by a masonry dam across the valley at Gamboa 4,500 feet long, 750 feet of which is subject to a pressure due to a head of 170 feet during the extreme flood stages of the river. Proper sluice gates are proposed for discharging the river into the canal. The difference in tides is overcome by means of a lock on the Pacific side in the vicinity of Sosa Hill. While provisions are made for damming or diverting some of the streams that would otherwise enter the Canal prism, not less than 22 flow directly into the Canal, with no provision to control the currents or check the deposits of material carried by them during flood stages.

The prism of the Canal is to have a bottom width of 150 feet through the earth sections, or for nearly one-half its length, and a 200-foot bottom width through the rock sections. Nineteen miles of the length are made of curves so that the proposed sea-level canal is not a wide, straight, and open channel, connecting the two oceans, but a narrow, tortuous ditch, with varying currents of unknown strength, impeded by a lock, and threatened by a dam resisting a pressure due to a head twice as great as that at Gatun.

To be sure, the partisans of the sea-level type are now proposing to eliminate both the Gamboa dam and the tidal lock by making the channel so wide as to reduce the currents that result from the discharge of the Chagres and the difference in tides, but fail to explain how they propose to control or divert the Chagres, the bed of which will be 50 feet above the water surface of the Canal at the juncture. As data is not available for preparing accurate estimates for even such a sea level type as was originally offered, neither they nor any one else can offer any figures as to time and cost for the construction of such a canal as they now advocate.

In any comparison, therefore, we must confine our attention to the lock type as now building, and a sea-level canal as offered by the Board of Engineers, and not by the idealist.

So far as the two prisms are concerned, for ease and safety of navigation the lock type is better because of the greater widths of channels, fewer and easier curves, and freedom from objectionable and troublesome currents, both from the Chagres and its tributaries. This must be admitted by all, but the exponents of the sea-level type concentrate their attention on the obstructions and dangers that the locks constitute in the lock type, and also on the dangers that will result from the failure of the Gatun Dam, forgetting that at least equally great disaster must follow the failure of the Gamboa dam. The lock in the sea-level canal is not mentioned, probably because the danger is not so great, since there is but one.

Experience shows that the risks to ships in narrow waterways are material and im-

portant. In such a channel as the original Suez Canal delays and losses to commerce were great, and the danger to ships considerable; although the benefit of the widening is striking, this is true even now.

It is well known that the narrow channels connecting the Great Lakes have been obstructed repeatedly by vessels aground or wrecked in such a manner as to block traffic. Even in the entrances to our seaports there is a frequency of accidents, which illustrate the difficulties encountered in navigating narrow and tortuous channels.

Accidents in locks have been relatively few, and none of a serious nature have occurred at the St. Marys Falls Canal during fifty-four years of its use. The risks to ships in such a narrow waterway, as proposed for the sea-level canal at Panama, far outweigh all hazards in the proposed lock canal, PROVIDED the latter is built so as to minimize the chance of accident at the locks. This is met by providing every possible safety device, by building the locks in duplicate and by the installation of a system by which the vessels will be controlled by powerful electric machinery on the lock walls, thus avoiding mistakes on the part of the vessels' crew or engine-room staff, which once led to an accident at the Manchester Ship Canal.

Again, it is objected that the size of the locks limits the Canal to vessels which can use them. This is true. The present lock designs provide intermediate gates dividing the locks into lengths of 600 and 400 feet. About 98 per cent of all the ships, including the largest battleships now building, can be passed through the 600-foot lengths, and the total lock length will accommodate the largest commercial vessels now building, which, I believe, are 1,000 feet long and 88-foot beam.

It is true that ships may increase in size so as to make the present locks obsolete, but the largest ships now afloat cannot navigate the present Suez Canal, nor the proposed sea-level canal at Panama. It must also be remembered that the commerce of the world is carried by the medium sized vessels, the length of only one of the many ships using the Suez Canal being greater than 600 feet.

The General Board of the Navy is on record that 110 foot width will be ample for the future needs of the Navy, and naval construction of the future will be limited not alone by the locks of the Panama Canal, but also by the available dry docks. Ships that cannot use locks 1,000 feet by 110 feet cannot use a 150-foot sea-level canal, nor can this be so easily and economically increased and maintained as is made to appear by its advocates.

Increasing the width of Culebra Cut, as recently ordered, from 200 to 300 feet, is advanced as an argument to show that the locks are too narrow. Ships do not navigate the locks in the sense that they do the Canal prism, and the wider the channel the easier will be navigation. On account of slides that developed in Culebra Cut considerably more additional work was made necessary in the upper reaches of the divide than was contemplated, and the advantages of the increased width to navigation were so great, compared with the relative amount of material to be removed in order to secure it, that the President ordered it. By this action the width of the locks is in no wise called into question.

The water supply for lockages was so exhaustively treated by the minority of the Board that it has not been called into question by any one who had carefully considered the report and data submitted therewith. Recently, however, the theory has been advanced that the water of the lake may seep through the adjacent hills or through the

bottom, and is significantly referred to as a mooted question. This possibility is emphasized by the seamy quality of the rock when exposed. The French plans, with Bohio Lake, were the result of careful and protracted study and investigation, and nothing of the kind was anticipated. The Commission of 1901 was not in doubt of the resisting power of the hill covering such a flow. The report of the geologist on the general formation of the country does not lead to any such dread or fear. The reservoirs, constructed in the hills of the same geological formation as the entire lake area, are not affected by any such leakage or seepage. At Black Swamp, an extensive area between Bohio and Gatun, the water stands above the level of the Chagres—which is within half a mile—and also above sea level the level of the water remains unchanged, clearly indicating no such leakage.

Toward the close of the last dry season certain measurements of the Chagres at Bohio indicated a less discharge there than at Gamboa; this was subsequently exploded by other observations which showed that the first ones were in error. Notwithstanding this, and in spite of the many evidences of tightness of the earth covering, the possibility of a flow through the hills was advanced and was seized upon as another argument against the lock type.

The Board of Consulting Engineers estimated the cost of the lock type of canal at \$139,705,200, and of the sea-level canal at \$247,021,000, excluding the cost of sanitation, civil government, the purchase price, and interest on the investment. These sums were for construction purposes only.

I ventured a guess that the construction of the lock type of canal would approach \$300,000,000, and without stopping to consider that the same causes which led to an increase in cost over the original estimates for the lock canal must affect equally the sea level type, the advocates of the latter argued that the excess of the new estimates was an additional reason why the lock type should be abandoned in favor of the sea-level canal.

The estimated cost by the present commission for completing the adopted project, excluding the items left out by the Board of Consulting Engineers, is placed at \$297,766,000. If to this be added the estimated cost of sanitation and civil government until the completion of the work, and the \$50,000,000 purchase price, the total cost to the United States of the lock type of canal will amount to \$375,201,000. In the preparation of these estimates there are no unknown factors.

The estimated cost of the sea-level canal for construction alone sums up to \$477,601,000, and if to this be added the cost of sanitation and civil government up to the time of the completion of the Canal, which will be at least six years later than the lock canal, and the purchase price, the total cost to the United States will aggregate \$563,000,000. In this case, however, parts of the estimate are more or less conjectural—such as the cost of diverting the Chagres to permit the building of the Gamboa dam and the cost of constructing the dam itself. Much has been said of the disadvantage of the seamy rock in connection with some experiments made at Spillway Hill test pit and of the so-called "indurated clay." Yet these same disadvantages apply to the foundation at Gamboa and the same class of material must be dealt with. The cost of constructing and maintaining a channel through the swamps of the lower Chagres is an unknown factor, and no schemes have been developed for controlling the various streams that are encountered and that must be reckoned with along the route of the canal. So that the

sea-level estimates have not the accuracy of those for the lock type.

The majority of the Board of Consulting Engineers estimated that from ten to thirteen years would be required for the completion of the sea-level canal. The Isthmian Canal Commission and the then Chief Engineer fixed the time from eighteen to twenty years. It will take at least six years to complete the dam at Gamboa, and until the control of the Chagres River is assured, little if any excavation can be carried lower than 40 to 50 feet above sea level, so that in the absence of anything more definite the time needed to construct the Gamboa dam is assumed as the additional period needed for completing the sea-level type.

Much criticism has resulted because of the excess of the present estimates over those originally proposed, arising largely from a failure to analyze the two estimates, or to appreciate fully the actual conditions.

The estimates prepared and accompanying the report of the Consulting Engineers were based on data less complete than are available at present. The unit costs in the report of 1906 are identical with those in the report of 1901, and since 1906 there has been an increase in the wage scale and in the cost of material. On the Isthmus wages exceed those in the United States from 40 to 80 per cent for the same class of labor. The original estimates were based on a ten-hour day, but Congress imposed the eight-hour day. Subsequent surveys and the various changes already noted have increased the quantity of work by 50 per cent, whereas the unit costs have increased only 20 per cent—not such a bad showing. In addition, municipal improvements in Panama and Colon, advances to the Panama railroad and moneys received and deposited to the credit of miscellaneous receipts aggregate \$15,000,000, which amount will eventually and has in part already been returned to the Treasury. Finally, no such system of housing and caring for employees was ever contemplated as has been introduced and installed, materially increasing the overhead charges and administration.

Much stress has been laid upon the fact that recent improvements in machinery have so modified conditions that the excavation can be done more economically by special devices in conjunction with dredging than is possible with the methods now adopted. The machines referred to are for shattering rock under water, and though it is claimed that such devices have given satisfactory results in connection with the Manchester Ship Canal, it is known that similar appliances have failed in certain localities in the United States where they were tried. The variations in the character of the rock on the Isthmus from soft argillaceous sandstone to hard trap are such as to make the use of such devices very problematical. Experience generally has shown that more money can be wasted on subaqueous rock excavation than in the removal of such material in the dry. Experiments are now being made on the Isthmus with one of these rock crushing devices, but thus far the results are not promising.

Much has been written recently concerning the probable effect of earthquakes. The last earthquake of any importance occurred in the seventeenth century, and existing ruins in Panama demonstrate clearly that no shock of any violence could have occurred during the eighteenth or nineteenth centuries. Should an earthquake visit the Isthmus, the chances are that the effect upon the Gatun Dam would be less disastrous than upon the Gamboa dam. The solid concrete construction of the locks, strengthened by reinforcements, will be as proof against any earth shocks as any structure which man builds

anywhere, and the sea-level canal has as much to fear as the lock canal.

The vulnerability of the lock canal in time of war is another argument advanced in favor of the sea-level type, but has little weight, as the sea-level type is equally vulnerable from attacks by land or air in its Gamboa dam as are tidal locks and the various devices for controlling the streams along the route.

The idea of the sea-level canal appeals to the popular mind, which pictures an open ditch, offering free and unobstructed navigation from sea to sea, but no such substitute is offered for the present lock canal. As between the sea-level and the lock canal, the latter can be constructed in less time, at less cost, will give easier and safer navigation and in addition secure such a control of the Chagres River as to make a friend and aid of what remains an enemy and menace in the sea-level type.

In this connection attention is invited to the statement made by Mr. Taft, when Secretary of War, in his letter transmitting the reports of the Board of Consulting Engineers:

We may well concede that if we could have a sea-level canal with a prism of 300 to 400 feet wide, with the curves that must now exist reduced, it would be preferable to the plan of the minority, but the time and cost of constructing such a canal are in effect prohibitive.

We are justly proud of the organization for the prosecution of the work. The force originally organized by Mr. John F. Stevens for the attack upon the continental divide has been modified and enlarged as the necessities of the situation required, until at the present time it approaches the perfection of a huge machine, and all are working together to a common end. The manner in which the work is being done and the spirit of enthusiasm that is manifested by all forcibly strikes every one who visits the works.

The main object of our being there is the construction of the canal; everything else is subordinate to it, and the work of every department is directed to the accomplishment of that object.

In addition to the Department of Construction and Engineering, there are the Departments of Sanitation and Civil Administration, the Quartermaster's and Subsistence Departments, the purchasing department organized in the United States, the legal department, and the Departments of Examination of Accounts and Disbursements. Subordinated to, but acting in conjunction with, the Commission is the Panama railroad.

Too much credit cannot be given to the Department of Sanitation, which, in conjunction with the division of municipal engineering, has wrought such a change in the conditions as they existed in 1904 as to make the construction of the Canal possible. This department is subdivided into the health department, which has charge of the hospitals, supervision of health matters in Panama and Colon, and of the quarantine, and into the sanitary inspection department, which looks after the destruction of the mosquito by various methods, by grass and brush cutting, the draining of various swampy areas, and the oiling of unavoidable pools and stagnant streams.

According to the statistics of the health department, based on the death rate, the Canal Zone is one of the healthiest communities in the world, but in this connection it must be remembered that our population consists of men and women in the prime of life, with few if any of the aged, and that a number of the sick are returned to the United States before death overtakes them. To the Sanitary Department are also assigned 11 chaplains employed by the Commission to attend the sick, as well as to look after the spiritual welfare of the employees. At most of the villages there is a combined church and lodge house so constructed that

the lower floor is used for divine service, while the upper part provides places for meetings of the various lodges. The assignment of time to ministers and to lodges is made by the Quartermaster's Department.

The Department of Civil Administration exercises supervision over the courts, which consist of three circuit and five district judges; the three former, sitting *in banc*, constitute the Supreme Court. The district courts take cognizance of all cases where the fine does not exceed \$100, or imprisonment does not exceed thirty days. Jury trials are restricted to crimes involving the death penalty or life imprisonment—in short summary justice rules, and so long as the Zone is nothing more nor less than a construction camp this form of law or justice will continue to be the most satisfactory.

The Department of Civil Administration has charge also of the police force, the post-offices, collection of customs and taxes, the issue of licenses, and the public-school system. The schools are improved to such an extent that the children of the employees have very nearly the same advantages as in the United States up to and including the high-school courses.

The Quartermaster's Department has charge of the recruiting of labor, the care, repair, and maintenance of quarters, the collection and disposal of garbage and refuse, the issue of furniture, and the delivery of distilled water and commissary supplies to the houses of employees, and is to have charge of the construction of all new buildings. Operating in conjunction with the purchasing department in the States, the Quartermaster's Department secures all supplies needed for construction and other purposes and makes purchases of materials on the Isthmus when required.

The common-labor force of the Commission and the Panama railroad aggregates in the neighborhood of 25,000 men, and consists of about 6,000 Spaniards, with a few Italians, the remainder being from the West Indies.

The Spaniard is the best laborer, as he possesses more strength and endurance. Under some conditions this is not true, the foreigner strenuously objecting to doing work that requires him to stand in water.

All the skilled labor, the clerical force, and the higher officials are Americans and are recruited through the Washington office.

This department also has charge of all the property records, receives semiannual returns of property from all those to whom property has been issued, and checks the returns and inventories of the storehouses, made at certain times, with the records compiled from original invoices.

The Subsistence Department has charge of the commissaries and the manufacturing plants which consist of an ice and cold storage establishment, a bread, pie, and cake bakery, a coffee roasting outfit, and a laundry. These belong to the Panama Railroad Company, as, at the time they were established, money received from sales could be reapplied, whereas if operated by the Commission the money would have reverted to the Treasury, necessitating reapropriation before the proceeds of sale could be utilized. They are, however, under the management of the Subsistence Officer of the Commission, who has charge of the various hotels, kitchens, and messes of the Commission.

There are 16 hotels from Cristobal to Panama, which serve meals to the American, or gold, employees at 30 cents per meal. There are 24 messes where meals to European laborers are served, the cost per day to such laborers being 40 cents; and there are 24 kitchens, or messes, for meals supplied to the silver laborers, or West Indians, the cost to the laborer being 30 cents per day for 3 meals. Subsistence is furnished without

profit to the Commission, though every effort is made to have the institutions self-supporting. The commissaries and manufacturing plants are operated at a profit so as to reimburse the Panama Railroad Company for its outlay in six years from January 1, 1909, at 4 per cent interest.

The Subsistence Department also has charge of the Hotel Tivoli, which is a large hotel located at Ancon, for the entertainment of the Commission's employees at a comparatively low rate, and of transient guests at rates usually charged at first-class hotels.

All moneys are handled by the Disbursing Officer who pays accounts that have been previously passed upon by the Examiner of Accounts. The last-named official makes the administrative examination required by law prior to the final audit of the accounts by the Auditor for the War Department. The pay rolls are prepared from time books kept by foremen, timekeepers, or field clerks, subsequently checked by the Examiner of Accounts, who maintains a force of time inspectors. The time inspectors visit each gang, generally daily, at unknown times to the foreman, timekeeper, or field clerk, and check the time books with the gangs of workmen; the inspectors report to the Examiner of Accounts the results of their inspection not only in connection with timekeeping, but all violations of the regulations of the Commission that may come under their observation.

Payments of pay rolls are made in cash, beginning on the 12th of each month and consuming four days for the entire force on the Isthmus. All American employees and European laborers are paid in gold; all on the so-called "silver roll" are paid in Panamanian silver.

The Department of Construction and Engineering is under the direct charge of the Chief Engineer. He is assisted by the Assistant Chief Engineer, who considers and reports upon all engineering questions submitted for final action. The Assistant Chief Engineer has charge of the designs of the locks, dams, and spillways, and supervision of these particular parts of the work. There is attached to the Chief Engineer an assistant to the chief engineer, who looks after mechanical forces on the Isthmus, and has supervision over the machine shops, the cost-keeping branch of the work, the apportionment of appropriations, and the preparation of the estimates. There is also an assistant engineer, who has charge of all general surveys, meteorological observations, and river hydraulics.

The Zone is divided territorially into three divisions, each in charge of a division engineer, the first extending from deep water in the Caribbean south to include the Gatun Locks and Dams, known as the "Atlantic Division." The second or "Central Division," extends from Gatun to Pedro Miguel, and includes the excavation through the continental divide. The third, or "Pacific Division," extends from Pedro Miguel, including the locks and dams of that locality, to deep water in the Pacific.

The general plans emanate from the office of the Chief Engineer and the details are left to division engineers, subject to the approval of the Chief Engineer. The whole idea of the organization in the Department of Construction and Engineering, and in fact of all the work, is to place and fix responsibility, leaving to each subordinate the carrying out of the particular part of the work intrusted to his charge.

Each division engineer has charge not only of the work involved in the construction of the Canal, but all municipal engineering, including water supply, building and maintaining roads, and the establishment and maintenance of sewer systems.

With the force under his charge the division engineer executes such sanitary draining as may be prescribed by the chief sanitary officer, so that all construction work, excepting the construction of buildings, concerning the location of which the division engineer is consulted, however, is directly in the hands of the division engineer.

Attached to the office of the chairman is a general Y. M. C. A. secretary, who has supervision of the Commission's clubhouses, which are operated and maintained under the auspices of the Y. M. C. A. Four of these are now constructed and in operation and four more are to be built from funds recently made available by Congress. They have done much toward securing a greater permanency to the force, in giving healthful amusement, and to a better contentment on the part of the employees.

I have endeavored to show that a channel of sufficient width, in which the waters of the many streams, especially the Chagres, will not be a menace, is one most desired for an Isthmian canal. The sea-level canal proposed by the majority of the Board of Consulting Engineers is not of sufficient width, nor is the proposed solution for the impounding and diversion of the Chagres and other streams based upon sufficient investigations to insure its success. The "ideal" sea-level canal, the Straits of Panama, recently proposed, is not based upon any investigations of the work to be done and cannot, in view of the approximate estimate of the cost of our own sea-level canal, which is about one-third the size of the "ideal" plan, be given serious consideration. Every criticism against the stability of our locks or dams can be attributed to either an argument in favor of one's own plans or to absolute ignorance of the exhaustive data concerning their safety now in existence. The several other plans of lock-type canal have nothing in their favor that the plan now adopted does not possess to a greater degree.

I have endeavored also to show that the organization on the Isthmus is compact and complete in every way, performing its duties of construction, sanitation, and government with clock like precision. I cannot do better than quote from the message recently sent to the Congress, "that hereafter attack on this type—the lock type—is in reality merely attack upon the policy of building any canal at all," for the adoption of a sea-level canal anywhere approaching the ease of navigation of the lock type will result in the ultimate abandonment of the canal; and I assure you that several years hence, no later than January 1, 1915, even the most ardent sea-level advocates will in making the voyage through the Canal, admit that the ability to navigate a battleship at a high rate of speed through the lake and wide channel from Gatun to Pedro Miguel far outweighs the small inconveniences of the safe lockages up to and down from the summit level.

#### Missing Man.

George Arthur Cox left his home in St. Augustine, Fla., on the 20th of January, 1909, and it is thought by his relatives, who have not heard from him since that date, that he came to the Canal Zone. It is requested that any one having information concerning this man communicate with Mr. M. J. Stickel, Secretary of the Commission Clubhouse, Cristobal.

#### Coal Barge for Pacific Division.

An old 16-inch suction dredge left by the French on the banks of the Chagres at San Pablo is on the shipways at La Boca being converted into a coal barge. It was cut into three sections and carried by train from San Pablo to La Boca. It is 90 feet long by 17 feet wide by 10 feet high.

## OFFICIAL CIRCULARS.

## Good Friday.

CULEBRA, C. Z., March 27, 1909.

CIRCULAR No. 238:

So far as consistent with the transaction of public business, Friday, April 9 (Good Friday), will be observed as a holiday in the Canal Zone.

Good Friday is not included in the list of holidays for which gratuity pay is allowed, and pay for services performed on that day will be calculated the same as for Sundays.

Holy Thursday will be considered an ordinary working day and payment made accordingly.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Use of French Machinery.

CULEBRA, C. Z., March 26, 1909.

CIRCULAR No. 73-REVISED.

It is hereby ordered that hereafter when it is necessary to use any of the material or equipment purchased from the French Canal Company in connection with the work in any division the head of the division in which this material is to be used shall notify the Surveying Officer, giving a list in detail of the material required, showing its location and describing it with sufficient minuteness for purposes of identification. An estimate should also be submitted of the value of each article for the purpose of the work in which it is to be used. Action will then be promptly taken by the Surveying Officer, authorizing the use of the French material required, and its valuation will be fixed and charged to the proper account.

It is also ordered that where French material has heretofore been used and it is believed by the head of the division making use of the material, that the prices charged have been unreasonable, or where material has been used and no charge made, the matter be referred to the Surveying Officer for appropriate action. In such cases full information covering a description of the material or equipment used, and its condition, the purpose for which it was used, and an estimate of its value for such use, taking into consideration the cost of its preparation, should be submitted for the information of the Surveying Officer.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Accounting for Property.

OFFICE OF THE CHIEF QUARTERMASTER.

CULEBRA, C. Z., March 13, 1909.

Effective April 1, 1909, a new form will be issued by the Quartermaster's Department to supersede the old form "Release from Quarters." This release will show that all property held on memorandum receipt has been properly accounted for. All employees on the gold roll, when going on leave of absence or leaving the service, will be required to produce such release, signed by the District Quartermaster of the district in which quartered, before payment is made on time vouchers.

In all departments and divisions gold employees and such silver employees as are responsible for property, who leave the service, go on leave of absence or transfer to another department, will be required to account satisfactorily for all property for which they are responsible and secure release for same from the official under whom they are working, this release to be attached to time voucher and termination papers and forwarded to the accountable official under whom employed. Time vouchers or pay checks will not be issued unless such release is attached.

Deduction will be made for tools lost, damaged or destroyed through the wilful neglect or carelessness of the employee, as directed in Circular No. 171 of the Chairman and Chief Engineer.

Employees who lose, damage or destroy property through no fault of their own will be required to submit an approved Survey Report covering the items lost, damaged or destroyed, or affidavits, satisfactory to the accountable official, from which a survey case may be prepared.

The release from property responsibility will be signed by such officials as designated by heads of departments and divisions.

C. A. DEVOL, Chief Quartermaster.

Approved:

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Contract House at Culebra.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z., until 2 p. m., Saturday, April 3, 1909, when they will be publicly opened, for the erection by contract of one type 10 house at Culebra, C. Z. The Commission will furnish all materials at the site of the work and the contractor is

required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with certified check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$150 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any and all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. Nixon, Purchasing Agent on the Isthmus.

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 1.30 p. m., via Port Limon, for New Orleans.

## Port of La Boca.

Arrivals and departures at La Boca for the week ending March 26, 1909, were as follows: Arrivals—March 20, *Washington*, U. S. N., from Central America, and *City of Para* from San Francisco; March 21, *Chiriqui* and *Guatemala* from Valparaiso; March 23, *Aysen* from Valparaiso, and *Astec* from Central American ports. Departures—March 21, *City of Sydney* for San Francisco; March 23, *Arica* for Guayaquil, and U. S. S. *Washington* for Central America; March 25, *Chiriqui* for Buenaventura, and *Aysen* for Valparaiso.

FOUND—On March 19, in labor train standing at P. R. R. Tivoli switch, a White Peerless sewing machine, with cover. Same will be returned to owner upon proper identification, at Ancon Police Station.

The largest shipment of dynamite to arrive on the Isthmus in several months was brought into Cristobal on March 11 by the *Havso*. It was shipped from Thompson's Point, New Jersey, and consisted of 1,250,000 pounds of dynamite.

Two ship loads of cypress ties for use on the construction railroads have arrived on the Isthmus. The cargoes were respectively 19,000 and 45,000 ties, part of an order of 200,000 ties recently placed in the States.

The highest record for steam shovels in any district of the Central Division was made on March 24, by the 19 shovels at work in the Culebra District, when 27,910 cubic yards of rock were removed, an average of 1,468 cubic yards per shovel.

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### March Excavation Nearly Four Million.

The grand total of Canal excavation during the month of March, 3,880,337 cubic yards, broke all records since American occupation. It exceeded that of March, 1908, the previous high record, by 393,050 cubic yards. Of the grand total, 2,352,903 cubic yards were removed by steam shovels and 1,527,434 by dredges. In addition to actual Canal excavation, 182,295 cubic yards were removed for the construction of handling plants, stripping of dams, etc., which are not included in the grand total, and which would carry it to 4,062,632. There were 27 working days during the month, and the mean rainfall for the month in the territory in which the excavation was in progress was 1.1 inches as compared with 0.99 inches in March, 1908.

The average daily excavation was 143,716 cubic yards, also the highest since American occupation. It was 6,808 cubic yards more than the daily average excavation in February, the highest previous record, and 9,590 cubic yards higher than the daily average excavation for March, 1908. As there are eight hours in each working day five cubic yards were removed every second.

In the Atlantic Division the total excavation was 758,380 cubic yards, which is 55,895 cubic yards more than was done in February. Of this amount 155,334 cubic yards were taken out by steam shovels and 603,046 by dredges.

All previous records in the territory now included in the Central Division were broken by an excavation of 2,054,088 cubic yards, an average of 76,077 cubic yards per day. The highest previous record was made in February, 1909, when 1,644,636 cubic yards were removed, a daily average of 71,506. The number of shovels at work during each month was about the same. Of the 2,054,088 cubic yards, 1,423,603 were taken from

the Culebra Cut, 542,691 from the Canal prism elsewhere than in the Cut, and 87,794 from the Obispo Diversion which is outside the Canal prism.

In the Pacific Division the total excavation was 1,067,869 cubic yards, which also breaks the highest previous record made in the territory of this Division, that of October, 1908, when 903,436 cubic yards were removed. Of the total for March, 143,481 cubic yards were removed by steam shovels and 924,388 by dredges.

The detailed statement of excavation in the three divisions follows:

#### ATLANTIC DIVISION.

LOCALITY.	From Canal Prism	Outside Canal Prism	Total excavation
<i>Dry excavation—</i>	<i>cu. yds.</i>	<i>cu. yds.</i>	<i>cu. yds.</i>
Gatun spillway.....	13,360	.....	13,360
Gatun Locks.....	59,598	11,663	71,261
Mindi.....	70,713	.....	70,713
Total.....	130,311	25,023	155,334
<i>Wet excavation—</i>			
Atlantic entrance.....	461,208	.....	461,208
Gatun Locks.....	141,838	.....	141,838
Total.....	603,046	.....	603,046
Total wet and dry excavation.....	733,357	25,023	758,380

#### CENTRAL DIVISION.

<i>All dry excavation—</i>			
Chagres section.....	542,691	.....	542,691
Culebra section.....	1,423,603	87,794	1,511,397
Total.....	1,966,294	87,794	2,054,088

Total.....	3,763,916	116,421	3,880,337

Mean rainfall along Canal (eleven stations) 1.1 inches.

#### Raising Wrecks at Pacific Entrance.

The hull of a Belgian type ladder dredge, which was abandoned by the French in the Chagres River at San Pablo, has been cut into four parts, loaded upon cars, and will be hauled to La Boca. There the hull will be put together again and such repairs made as are necessary to put it in condition for service as the float of a marine derrick. A crane with machinery will be installed capable of lifting 25 tons. The chief use to which it is intended to put this floating crane is in removing old wrecks from the Canal prism between Miraflores and La Boca. These wrecks are old French dredges and other

shipping sunk in the channel of the French canal near the crossing of the Rio Grande, or that had been laid up on the banks of the Rio Grande and had floated into the Canal at high water. Those that lie directly in the prism of the Canal will be blown up with dynamite and loaded upon barges to be towed out to sea and sunk in deep water.

#### Gatun Locks Concrete Plant.

In the construction of the concrete plant at Gatun and the lock handling plant the factor that will determine the completion is the power plant. The plans for the power house have been approved and the building itself is well under way, but the boilers have not yet arrived on the Isthmus.

One of the unloading cableways for the rock and sand docks will be ready for operation this week, and the construction of the other two is well advanced. The structural steel work on the cableway plant for the locks will be finished this month. Two-thirds of the machinery is already here and it is probable that the whole plant will be ready for use in June.

The rock and sand dock is completed and the floor of the cement dock is nearing completion. The tunnels through which the electric cars will run under the cement dock and the rock and sand charging bins are completed and the bed for the railway is graded up to the mixers. The eight mixers are set up and can be put in readiness for operation in a few days.

#### French Canal at La Boca Closed.

On Monday, April 5, the Pacific Division began dumping spoil from the Canal into the French channel, at the crossing of the breakwater to Naos Island. All ships entering or leaving the port of Ancon now use the new channel of the Canal, the sea entrance of which is about a mile southwest of Flamenco Island. Ships coming into the port enter this new channel between parallel lines of marking buoys and keep in about the center until abreast of the La Boca wharf.

The channel is safe at mean tide for ships drawing 18 feet or under, and for ships drawing 18 to 22 feet at three-quarters tide; but heavier draught ships should enter or depart at approximately high tide. The limiting depth in the center of the channel is about 30 feet at mean tide, which is found from along the wharf to about 4,000 feet south. During the lower 2,000 feet of this distance the channel is only 350 feet at bottom width.

The section that is undredged is on the east side of the channel. Work in this will be finished by June 1. From this point, 4,000 feet south of the wharf, to a point 10,000 feet south of the wharf, the channel is open to its full bottom width and is 40 feet deep, and from the latter point to deep sea

## NOTES OF PROGRESS.

(Continued.)

it is open to its full width and is from 45 to 55 feet deep. Any information about the new channel that is required by navigation interests will be cheerfully furnished by the Division Engineer, and in case a pilot is required one will be furnished.

## Well Preserved French Dredge.

One of the Belgian type ladder dredges left by the French on the banks of the Chagres at Frioles and floated down to Cristobal during the past rainy season, was in such good condition that not over \$10,000 will need to be expended on it before it can take up its work with the dredging fleet at the Atlantic entrance. This dredge is No. 5, and it is now at the Cristobal marine shop being rebuilt. Most of the hull, two of the boilers, and the main engines are in such good condition that they require only overhauling to make them fit for service. One new boiler will be installed. The principal change being made is the extending of the ladder so that the dredge will dig to a depth of 41 feet, the depth required at the Atlantic entrance, instead of 32 feet for which it was originally designed. It will probably be ready for work about the middle of this month. This will make the number of old French ladder dredges in use six. Another, the *Marmot* of the Pacific Division, will be put in service within a few weeks.

## Zone Police at Porto Bello.

In accordance with an agreement between the Government of Panama and the Head of the Department of Civil Administration of the Canal Zone, a Sergeant and three first-class privates of the Canal Zone police took up the work of keeping order in the American settlement at Porto Bello on March 26. The settlement is in Panamanian territory. Under the terms of the agreement the Zone police will enforce the laws of Panama and will turn their prisoners over to the Panamanian courts.

## The Dredgemaster.

Laurent Roquebert, general foreman of dredging at La Boca, has been a dredgeman at the Pacific entrance to the Canal for twenty years or more, in fact, since the time of the old French company. While at his work on the evening of March 29 he was crushed between two clapnets, and now lies critically ill at Ancon Hospital. Two days after the accident the Resident Engineer at La Boca went to see him and was greeted with the question:

"How many yards?" He referred to the amount of dredging that had been done in March, and when told that all records had been broken, he asked:

"And the *Gopher*; what did she do?"

The *Gopher*, like the dredgemaster, is a

heritage from the French. It is a sea-going Scotch ladder dredge that has been at work at La Boca almost constantly for twenty-five years. Roquebert was at one time the master on this dredge, and his confidence that it was the best worker in Canal excavation was unshaken until October, 1908, when dredge No. 1 of the Colon fleet took the record.

In answer to the question, "And the *Gopher*; what did she do?" he was told, "She holds the record by over 3,000 yards."

The dredgemaster closed his eyes, sighed in satisfaction and said: "I am so happy!"

## Visiting Hours at Ancon Hospital.

The physicians and nurses at Ancon Hospital are considerably inconvenienced by requests for permission to visit patients in the hospital at other than visiting hours. The regular visiting hours are from 2 to 4.30 p. m., Tuesday, Thursday and Saturday, and on Sunday from 9.30 to 11.30 a. m., and 2.30 to 4.30 p. m. Visitors may be admitted at other times, with the permission of the Superintendent and the sanction of the physician in charge of the ward, but under no circumstances before 9.30 a. m. Sunday or 10.30 a. m. on week days.

## Panama Humane Society.

The Panama Humane Society has been organized to work in conjunction with the Canal Zone Humane Society for the purpose of protecting children and animals in the Zone and Panama from cruel treatment. Already the Panama Society has secured the passage of a humane law to be effective in all parts of the Republic. The annual dues for active members are \$1 gold, for associate members \$3 gold, and for children under 16 years of age 50 cents gold. Each member will be given a certificate of membership and will have authority to make or cause arrests in a manner prescribed by the authorities.

## DREDGING IN MARCH.

## All Records Broken by Atlantic and Pacific Dredges—Work of the "Gopher."

Of the 3,880,337 cubic yards of Canal excavation in March the dredges of the Atlantic and Pacific divisions took out 1,527,434 cubic yards. This establishes a new dredging record for Canal excavation as will be seen from the following table showing by months the work of the dredges since March, 1908:

MONTH.	Atlantic dredges.	Pacific dredges.	Total.
	<i>Cu. yds.</i>	<i>Cu. yds.</i>	<i>Cu. yds.</i>
March, 1908.....	515,223	783,281	1,298,504
April, 1908.....	496,366	676,539	1,172,905
May, 1908.....	564,386	530,466	1,094,852
June, 1908.....	572,749	656,621	1,229,370
July, 1908.....	625,497	696,170	1,321,667
August, 1908.....	638,217	737,774	1,375,991
September, 1908.....	624,776	750,080	1,374,856
October, 1908.....	595,260	762,276	1,267,536
November, 1908.....	570,832	609,089	1,179,921
December, 1908.....	679,604	729,960	1,409,564
January, 1909.....	521,050	490,584	1,011,634
February, 1909.....	444,910	692,532	1,137,442
March, 1909.....	603,046	924,388	1,527,434

These figures do not represent the total amount of dredging each month as considerable excavation has been done for building purposes that is not charged against Canal excavation. In the Atlantic Division the figures for March fall 207,029 cubic yards short of the amount of dredging actually done, because neither the work of the dipper dredge *Mindi* in the channel to the handling plant at Gatun Locks, 45,047 cubic yards, and at pier 14 in Cristobal, 2,400 cubic yards, nor the amount of material pumped into Gatun Dam, 34,721 cubic yards and onto the north toe of the dam, 124,861 cubic yards, by dredge No. 83, was counted as "Canal excavation."

Suction dredge No. 85 was at work all month excavating in the chamber of the north lock at Gatun. The sea-going suction dredge *Ancon* and ladder dredge No. 6 lost six days from their work while undergoing repairs. A statement of the work of the Atlantic dredges follows:

DREDGE.	Type.	Earth.	Rock.	Total.
Ancon.....	Suction.	290,030	.....	290,030
No. 1.....	Ladder.	118,051	.....	118,051
No. 6.....	Ladder.	18,783	34,344	53,127
No. 85.....	Suction.	141,838	.....	141,838
Mindi.....	Dipper.	16,447	31,000	47,447
No. 83.....	Suction.	159,582	.....	159,582
Total.....		744,731	65,344	810,075

All the dredging in the Pacific Division during March was in the Canal prism and therefore is counted as "Canal excavation." The record for last month exceeds the previous high record, that of March, 1908, by 141,107 cubic yards. The performance of the *Gopher* establishes a new record for ladder dredges on the Isthmus, exceeding the record made by dredge No. 1 of the Atlantic fleet in October, 1908, by 3,681 cubic yards.

All the Pacific dredges were working in the entrance to the Canal, excepting the 20-inch suction dredge *Sandpiper*, which was excavating in the lower lock chamber at Miraflores. A statement of the work of the dredges of the Pacific Division follows:

DREDGE.	Type.	In prism.	Remarks.
		<i>Cu. yds.</i>	
Gopher.....	Ladder.	172,477	Place measurement.
No. 14.....	Ladder.	140,141	Place measurement.
Mole.....	Ladder.	125,159	Place measurement.
Dipper.....	Dipper.	117,758	Place measurement.
Culebra.....	Suction.	310,161	Scow measurement.
Sandpiper.....	Suction.	58,692	Scow measurement.
Total.....		924,388	

## EXPLOSIVES FOR 1909-10.

## Supply of Explosives and Other Blasting Accessories.

Over nine million pounds of dynamite will be required for the Canal work in the fiscal year 1910, according to estimates made by the division engineers. The estimates have been embodied in a requisition, and bids will be requested in a few days. It is estimated that the dynamite will cost \$1,026,514. Supplies of fuse, caps, and connecting wire have already been ordered for the calendar year 1909. As compared with last year the amount of dynamite for which requisition is made is 2,011,400 pounds less.

The requisition is divided among divisions and into classes as follows:

<i>Dynamite, Saltpetre, 60 per cent Nitroglycerine:</i>		Pounds	Pounds.
Atlantic Division.....	982,000		
Central Division.....	1,800,000		
Pacific Division.....	600,000		
			3,382,000
<i>Dynamite, Saltpetre, 45 per cent Nitroglycerine:</i>			
Atlantic Division.....	225,000		
Central Division.....	5,400,000		
Pacific Division.....	200,000		
			5,825,000

The size of the cartridge for the above is to be 1½ inch diameter by 8 inches long.

<i>Dynamite, Saltpetre, 45 per cent Nitroglycerine:</i>			
Pacific Division.....	5,000		
<i>Dynamite, Saltpetre, 60 per cent Nitroglycerine:</i>			
Pacific Division.....	60,000		
The size of the cartridges for the above is to be 2 ins. in diameter by 16 ins. long.			
Total.....			9,272,000

The conditions on which the contract is to be awarded are:

The Commission reserves the right to increase or reduce the amount of dynamite to be furnished by 20 per cent at any time before shipment is made. The delivery of the 45 per cent and 60 per cent dynamite in cartridges 1½ inches by 8 inches is to be made in monthly shipments extending over a period of one year. The delivery of the 40 per cent dynamite, and of the 60 per cent dynamite in cartridges 2 inches by 16 inches, is to be made in one or more shipments as early as possible after August 1, 1909. All the explosives are to be packed in moisture-proof cases of 10-pound cartons; in 50-pound wooden boxes; cartridges to be wrapped in a distinctive color of paper and stamped "I. C. C." in common red letters.

Bids will be received for Trojan powder and Nitro powder equivalent in disruptive effect to the grades of nitroglycerine dynamite hereinbefore specified. Bidders on such explosives must guarantee the performance of their explosives and that the safety and keeping properties of the same will be equal to those of the equivalent grades of dynamite, and that they will prove in all other respects equally efficient and satisfactory for use on the Isthmus. Failure to fulfill such guarantee in any respect, as demonstrated by actual use on the Isthmus, will be regarded as just ground for the annulment of the contract. All bids to be sent to the Isthmus.

## BLASTING SUPPLIES.

Blasting supplies to suffice until December 31, 1909, taking into consideration stock on hand and on order, have been contracted for as follows:

<i>Electric Fuses.</i>			
2 feet long.....	4,000	30 feet long.....	150,000
3 feet long.....	4,000	35 feet long.....	106,000
10 feet long.....	13,000	40 feet long.....	13,000
16 feet long.....	40,000	50 feet long.....	6,500
20 feet long.....	80,000	60 feet long.....	2,500
24 feet long.....	106,000		

All of the above to be double strength wires, double insulated and waterproofed. To come forward weekly in shipments of not less than 1-35th part of each length. First shipment to arrive May 1, 1909.

*Blasting Caps.*

Five hundred thousand blasting caps of quintuple strength to be delivered weekly at the rate of not less than 18,000. First shipment to arrive on the Isthmus June 1, 1909.

*Triple Tape Fuse.*

One million feet of triple tape fuse to be delivered weekly at the rate of not less than 37,000 feet. First shipment to arrive June 1, 1909.

*Connecting Wire.*

Twenty-four hundred pounds of No. 20 B. & S. gauge double insulated quality and waterproof. To be in spools of 2 pounds each, and to come forward in monthly shipments of 400 pounds. First shipment to arrive June 1, 1909.

*Leading Wire.*

Three hundred and thirty thousand feet of No. 12 B. & S. leading wire. Wires to be in pairs, 500 linear feet each. Thirty thousand feet to be delivered at

Once, and thirty thousand feet to be delivered the first of each month thereafter.

*Insulating Tape.*

Eighteen hundred pounds of insulating tape to be delivered at the rate of 150 pounds per month. First shipment to come forward immediately and to follow regularly thereafter.

## OFFICIAL CIRCULARS.

## Panamanians on Gold and Silver Rolls.

CULEBRA, C. Z., April 2, 1909.

CIRCULAR No. 237-A.

Attention is invited to the fact that the order of the Secretary of War, dated December 23, 1908, permits the employment of citizens of Panama on the gold rolls but does not prohibit their employment on the silver rolls. Both citizens of Panama and citizens of the United States may be carried on the silver rolls if they are engaged for services ordinarily compensated in silver. Citizens of Panama who are now carried on the silver rolls should not be transferred to the gold rolls unless they are performing duties of the same grade and character as are commonly performed by gold employees. If the duties of Panamanian employees are such as to warrant transfer to the gold roll they should be paid at standard gold rates.

H. F. HODGES, Acting Chairman.

## Boiler Inspection.

CULEBRA, C. Z., March 31, 1909.

CIRCULAR No. 239.

Section No. 9-(a) of "Boiler Inspection Rules and Regulations" is hereby amended to read as follows: "All boilers in noncondensing plants shall be thoroughly washed out not less frequently than once in every two weeks.

"All boilers in condensing plants shall be thoroughly cleaned not less frequently than once every month."

All departments and divisions will be governed accordingly.

H. F. HODGES, Acting Chairman and Chief Engineer.

## Bills Against Department of Civil Administration.

CULEBRA, C. Z., March 31, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Effective April 1, 1909, only completed jobs should be included on bills rendered against the Department of Civil Administration or the Government of the Canal Zone. If the work extends over more than one month, one bill covering the entire cost will be rendered upon the completion of the job, instead of rendering a bill for the work performed during each month, as has been the practice heretofore. The accumulated charges in suspense will be reported to the Examiner of Accounts monthly, on Form 132-C. E., under their proper headings.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## Castings at Gorgona Shops.

CULEBRA, C. Z., April 3, 1909.

## NOTICE TO ALL CONCERNED:

The Gorgona foundry is prepared to make gray-iron castings up to six tons in weight, and brass castings up to two tons in weight. Gray-iron castings are poured regularly every working day and brass castings twice a day.

When the situation requires quicker delivery than by forwarding work request, Form C. E. 159, through regular channels, order may be placed by telephone or written memorandum by any authorized representative of the head of a division or department directly to the office of the Master Mechanic at Gorgona shops, in which case the work request should follow in the customary manner, with notation thereon to the effect that the work has previously been ordered direct of the Master Mechanic. All such "Rush" orders should state whether overtime work is desired, which statement should be confirmed on Form C. E. 159 following.

In cases of actual emergency work will be started any time during the day or night. To protect emergency cases developing outside of regular working hours, which require overtime work to produce the castings at the earliest possible moment, orders should be telephoned or sent direct to general foreman, J. J. Eason, at his residence in Gorgona.

To assist in obtaining the fullest utilization of the foundry facilities for all concerned, when castings are desired for quicker delivery than ordinary, the orders should show what proportion of each item will relieve the immediate pressing needs.

As a general rule, work can be started during the night within 30 minutes after receipt of order and, brass castings can be made within two hours after receipt of order, provided a pattern is furnished or is on hand at the foundry. If desired, in any case, patterns will be furnished.

By special arrangement with the Panama railroad, castings are shipped daily in special cars from Gorgona to La Boca and to Cristobal, and intermediate points.

GEO. D. BROOKE,

Supt. of Motive Power and Machinery.

Approved:

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## UNIQUE EXCAVATION.

## Steam Shovels and Dredges Working at the Atlantic Entrance.

Two classes of excavation are in progress between the Atlantic entrance to the Canal and Gatun, that are unique not only in the Canal work, but also in general engineering. One is the dredging from Limon Bay to the Mindi Hills, and the other is the excavation below sea-level in the hills. From the shore line of Limon Bay inland for two miles the channel runs through a bed of silt overlying argillaceous sandstone, and the work referred to is in that section.

The excavation in the Mindi Hills begins at the point where the present Canal crosses the old French canal, and extends south a half mile. A channel 500 feet wide has been cut through a hill about 50 feet high, and in August, 1908, after a year of excavation, the cut had reached sea-level. Instead of blasting the rock below sea-level, flooding it, and taking it out by dipper dredges, as was at first intended, two pumps were installed to keep the cut dry, and steam shovel work was continued. The record since July, 1908, is as follows:

MONTH.	Earth.	Rock.	Total.
July, 1908.....	5,045	18,470	23,515
August, 1908.....	10,552	5,757	16,309
September, 1908.....	10,759	21,353	32,112
October, 1908.....	6,383	39,092	45,475
November, 1908.....	10,991	36,192	47,183
December, 1908.....	14,559	47,694	62,253
January, 1909.....	8,096	37,568	45,664
February, 1909.....	7,951	38,095	46,046
March, 1909.....			70,713
Total.....	74,336	244,221	389,270

The total amount of material to be excavated at Mindi when work was begun in July, 1907, was about 2,800,000 cubic yards, and 927,229 cubic yards had been taken out on April 1, 1909. In July and August, 1908, only one 70-ton shovel was constantly at work, and between August and March two 70-ton shovels were operated.

Since the first week in March two 70-ton and one 95-ton shovels have been working at this point, and one of the shovels is 24 feet below sea-level. Only rock is excavated, as it is more economical to allow the earth to be taken out by dredges, which will be done when the rock excavation is finished and the cut is flooded. The spoil is dumped on the relocated line of the Panama railroad at Gatun, on the toes of Gatun Dam, and one train load a day is sent to Colon to be used in various fills in process there. Three pumps are ready for use in keeping the cut dry, but up to the present time one has generally been found adequate.

From the shore line to the hills at Mindi the work is being done by dredges. Subaqueous rock excavation, usually very expensive, is done here for less than \$1 a cubic yard. Holes are drilled in the rock which is blasted without springing with 60 per cent dynamite. This blasting has been done so successfully that the rock is shattered into pieces small enough to be handled by the ladder and dipper dredges. The channel must be 40 feet deep below mean sea water at the Atlantic entrance, and the lowest point reached at present is 38 feet.

This excavation is being done by two reconstructed Scotch ladder dredges left on the Isthmus by the French, and two modern dipper dredges. The ladder dredges handle material to a depth of 20 to 25 feet readily. It is intended to remove the bottom rock by the dipper dredges. Both the dipper dredges have been withdrawn for the present, one to Nombro de Dios and the other to Gatun, to excavate the approach channel and slip to lock entrances and to deepen the French canal from Gatun to Cristobal.

There were also 172 cubic yards removed by steam shovels outside of the prism during October, 1908.

## UTILIZING SPOIL.

**Material Excavated from Canal is of Value in Various Places.**

A considerable portion of the material excavated from the Canal is of permanent value. It is used in the construction of dams, a breakwater at La Boca, embankments on the relocated Panama railroad, and in reclaiming land for sanitary and other purposes.

The breakwater at the Atlantic entrance to the Canal will not be constructed of spoil from the work, as was recommended by the Board of Consulting Engineers in 1906, but will be built of rock from the quarries at Porto Bello. At the Pacific entrance, however, spoil is being utilized. The channel runs out from the mainland into Panama Bay, a distance of five miles. To lessen the silting up of this channel a breakwater is being built from La Boca to Naos Island, a distance of about two and one-half miles. This breakwater is a long embankment of earth and rock excavated from Culebra Cut, dumped from a trestle that is built out toward the island in advance of the rapidly lengthening fill. Over it a railroad can be constructed and as it is alongside the channel, the breakwater will afford a good location for docks when the traffic at the Pacific entrance grows beyond facilities at La Boca. It will join the island to the mainland, and thus throw open a large additional amount of land that will be available for terminal purposes. If piles for the trestle are delivered promptly it is probable that Naos Island will be connected with the mainland within a year.

At the point where the breakwater juts out from the mainland is a tidal flat which is covered by several feet of water at high tide and is a mass of mud when the tide is out. This flat is also being filled and already several acres of land have been made above high-tide level, and the filling is continuing. The value of this made land will depend largely on the growth of trade at the Pacific entrance, but its location near the present wharf at La Boca and the fact that railroad tracks from it connect with the main line of the Panama railroad, make it a desirable site for warehouses.

In the building of the dams necessary for impounding the water at Gatun, Pedro Miguel and Miraflores, a large amount of excavated material is used. The Gatun Dam involves a fill of 21,800,000 cubic yards, the greater part of which will be the selected material pumped in by suction dredge. In addition to the rock from Culebra Cut that will go to make up the remainder of the necessary fill, a large amount of miscellaneous spoil taken from the prism at Mindi, the spillway of the dam and the lock site, will be placed in the toes of the dam. The amount of material thus utilized will depend on the amount available, as no fill additional to the 21,800,000 cubic yards will be necessary.

The dam at Pedro Miguel will be an earth embankment with a core of selected material, and will require 230,000 cubic yards of excavation. Back filling for the locks will take 834,500 cubic yards of material. Most of this filling is spoil from the lock site. Similar conditions exist at Miraflores. There the earthen dam will require over 1,000,000 cubic yards of material, and the back filling for the locks will require

about 2,000,000 cubic yards. All of this material is taken from the lock site, and practically all of the excavation at Miraflores is being utilized in the lock and dam construction there.

Of the 174,000,000 cubic yards to be excavated in the prism of the Canal, 74,000,000 cubic yards are to be dredged and will not be utilized in the construction work. Of the 100,000,000 cubic yards of dry excavation, 89,800,000 cubic yards are in the Central Division. The following table shows the amount of material placed in the Central Division dumps up to February 1, 1909, and the amount that may still be placed in them:

NAME OF DUMP.	Material placed in dumps up to Jan. 31, 1909.	Remaining capacity.
Tabernilla.....	7,737,161	5,639,505

Cucaracha.....	48,438	4,331,590
Paraiso.....	74,885	249,750
Pedro Miguel.....	661,017	115,463
Miraflores.....	2,633,662	9,115,693
La Boca.....	3,982,647	20,836,240
New P. R. R. at various points.....	829,403	6,802,359
San Pablo.....	1,311,640	1,454,784
Caimito.....	1,021,390	3,353,565
Matachin.....	1,313,277	390,271
Santa Cruz.....	528,040	1,688,510
Cartagena.....	262,369	302,253
Buena Vista.....	74,045	7,521
Other dumps.....	6,815,907	
Total.....	32,523,302	

The material placed in the dumps at Tabernilla is wasted, as is that placed in most of the dumps of the Central Division, although an increasingly larger portion of the spoil is being utilized. Within the coming year the dump at Tabernilla will be gradually abandoned and new dumps will be opened along the relocated line of the Panama railroad between Gamboa bridge and Caimito. This will shorten the haul from Culebra Cut and will relieve the main line of the Panama railroad of a large part of the dirt traffic from Las Obispos north.

An essential part of the Canal work is the relocation of the Panama railroad, and several million cubic yards of spoil will be utilized in this work before it is completed. At Gatun where the relocation lies across a small valley, a fill was made, and a slide developed. It is estimated that enough material was dumped into this fill to raise it 200 feet before the slide was arrested and the required 95-foot level was established. On what is known as the Tiger Hill cut-off near Gatun the railroad crosses the valley of the Gatuncillo River, and a fill was made there of about 1,000,000 yards before the new relocation of the railroad was decided upon. In its course from Gatun to the beginning of Culebra Cut the relocated line runs across a number of small valleys and the construction is alternate cut and fill. A number of the trestles within easy reach from Culebra Cut are being filled with spoil from that part of the Canal. At Gamboa and Santa Cruz about 275,748 cubic yards have already been used and the dumping is still in progress. At Caimito 174,153 yards have been dumped from the excavation at that place.

Embankments yet to be made on the relocated line that can be made to advantage by the Central Division aggregate nearly 7,000,000 cubic yards. Where the relocated line runs out of Culebra Cut at Paraiso over 30,000 cubic yards of material have been used. At Pedro Miguel a large part of the 65,000 cubic yards in the long dump is utilized as the roadbed of the railroad, and south of Miraflores tunnel the dump between that village and Corozal will also be used.

In the drainage of Culebra Cut it has been necessary to build a canal along the east bank to take the water of the Obispo River. Up to January 31, 1909, there had been placed in embankments along this diversion channel 743,927 cubic yards of material. A similar diversion for the Camacho River involved the use of over 30,000 cubic yards. Many thousand yards of spoil have also been utilized in the building of dykes at Santa Cruz and Matachin, and other parts of the work.

The dumps at Miraflores and La Boca are the only ones now used for spoil from the south slope of Culebra Cut. It is probable that between 6,000,000 and 8,000,000 cubic yards of material will be added to that already placed in the dumps at Miraflores, while the La Boca dumps may be extended indefinitely.

The half million cubic yards of material that are being taken out at Tabernilla will be wasted into the Chagres River and into a new dump that has been opened up at the Cano River, opposite Tabernilla. The excavation at Buena Vista will be wasted into the Chagres River.

**Towing Sand from Nombre de Dios.**

Towing sand barges from Nombre de Dios to Cristobal is very dangerous, that part of the coast between Nombre de Dios and Porto Bello being especially menacing. Twelve towing machines, equipped with wire hawsers instead of the manila rope now in use, have arrived on the Isthmus, and when they are put in service the tugs will tow the sand barges out to sea for some distance from Nombre de Dios before turning west for the run to Cristobal, thus avoiding the dangerous reefs and shoals along the coast. Seven of the towing machines and their boilers are being placed on the sand and rock barges at Cristobal and five will be placed on the tug boats.

**A Long Tow.**

In the concrete work at Gatun locks and spillway 3,750 barges of crushed rock, each barge carrying 600 cubic yards, will be used. The sand required for this work would fill 1,875 barges of that capacity. Each barge is 150 feet long and they are towed with a distance of 1,200 feet between the tug and the first barge and between each of the barges. If all these barges were made into one tow, allowing one tug for four barges, the tow would be almost 1,500 miles long. It would reach three-fifths of the distance from Colon to New York.

The pumping of material into Gatun Dam, which was suspended about the middle of March, was resumed on April 1. Dredge No. 85, a 20-inch pipe-line suction dredge, is pumping sandy clay from a point half a mile north of the north toe of the dam into the old channel of the Chagres River between the north and south toes.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

Mrs. Goethals, Mrs. Gaillard, Mrs. Rousseau, and Mrs. Devol will be the patronesses at the Red Cross dance to be held in Culebra on April 16.

The date set for the annual meeting of the Canal Zone Federation of Women's Clubs is Saturday, May 15. The meeting will be held at Cristobal.

Final arrangements for the opening of a kindergarten under the protection of the Gatun Woman's Club were made at the business meeting of the club on Friday, April 2. The kindergarten will be held in the Commission chapel building, and will be supported by the monthly tuition fee of \$2.00 (gold) and entrance fee of 50 cents for each child. It is proposed to open the kindergarten as soon as the benches and tables, which are now in the hands of the carpenter, are ready. The club is holding its meetings at the chapel, instead of at the homes of the members, as heretofore.

A number of Gatun women gave a tea on Tuesday, March 31, a small sum being charged for refreshments. The money is to go toward a scholarship fund in the Methodist school in Panama.

Social life at Porto Bello has been active during the dry season. There are now about twenty families living there, and the social intercourse has been of an interesting and pleasant character. A card club of twelve members was organized a short time ago, Mrs. William Waltham being president and Mrs. Quido Pompeige secretary and treasurer. The club was entertained by Mrs. M. J. Nolan on March 25. Prizes were won by Mrs. J. R. Sweeney and Mrs. George Werner.

A Thimble Club has also been organized at Porto Bello. The club meets at the homes of the members. On April 1 the club was entertained by Mrs. W. J. Thomas, who gave an "April Fool" party. The afternoon was devoted to social diversions, games and guessing contests. Mrs. W. H. Storm won the prize. Refreshments were served by the hostess.

An Outing Club has been formed for the study of Spanish history in Porto Bello and the surroundings. The members are at present engaged in the study of such books and literature as they can command on the subject, prior to completing arrangements for excursions and practical study.

On March 14 the first religious service in Porto Bello was held, the Rev. Carl H. Elliott officiating. The collection taken at the service was turned over to the Cristobal section of the Canal Zone Red Cross.

The semiannual election of officers of the Pedro Miguel Woman's Club will take place at the meeting April 14. The club was organized in October, 1907, and now has 22 members.

Under the new administration the year's work for the Gorgona Woman's Club has been outlined. None of the committees has yet been appointed. The art committee will continue to work as heretofore. It has been decided to take up the making of fancy articles in the art department, aprons, collars and ties included, which will be sold for the benefit of the club.

The regular board meeting of the Ancon Woman's Club will take place at the club

rooms on Monday afternoon, April 5, at 2.30. The quarterly business meeting of the club will be held on Wednesday, April 7, at 3 p. m.

An entertainment under the auspices, and for the benefit of the Culebra Woman's Club will be given at the club house on Tuesday evening, April 13. The program will consist of a series of Riley readings by Mr. J. W. Holland. Arthur Howard will play.

The guests of honor at the reception given by the Las Cascadas club on Thursday, March 25, were Mrs. O. G. Randall, Mrs. F. L. Crosby, Mrs. C. F. Merry and Mrs. A. N. Naylor. Mrs. Randall, the founder and first president of the club, who is leaving the Isthmus for her home in Seattle, Wash., was elected an honorary member. There was a large attendance. Refreshments were served by the hostess and the gathering was a very enjoyable one. The Las Cascadas club was formed on October 17, 1907, its purpose being primarily social. The club was admitted to the Canal Zone Federation of Women's Clubs January, 1908. At the meeting on April 1, the following committees were appointed: Entertainment, Mrs. C. W. Decker, Mrs. J. P. Doyle, Mrs. G. L. Lingle, Mrs. M. V. Enright; visiting, Mrs. W. D. Stanton, Mrs. H. H. Baylau.

The next program meeting of the Empire Woman's Club will be April 15, the subject being "The Animals of the Isthmus." At the meeting on April 29 the concluding paper on the History of Panama will be read. At the social meeting April 1, a program was given in which all the members took part. Miss Smith gave several violin solos. Ices and cakes were served.

"Life in European Russia and Extracts from Letters on a Journey through Asiatic Russia, or the Caucasus," was the subject of a paper read before the Gatun Woman's Club at its meeting on Friday afternoon, March 26, by Mrs. H. R. Trask of Ancon. The paper was illustrated with photographs. Mrs. O. L. Brownell presided in the place of the president, who was not present. There was a good attendance. The business meeting on April 2 was held at the home of the president, Mrs. E. L. Bandy.

### Culebra Union Christian League.

The council of the Union Christian League of Culebra held its quarterannual business meeting on April 1, and reports submitted showed the following activities for the three months ending March 31:

Regular Sunday services, 13; average attendance, 78. Regular midweek services, 11; average attendance, 17. Special week-night services, 5; average attendance, 75. Musicales, 1; attendance, 150. Total number meetings, 30; total attendance, 1,745.

All regular services of the League are conducted by the Commission Chaplain, Rev. J. Wesley Holland. One or two numbers of special music are given at each Sunday evening service. The League is a union of all denominations and extends a cordial welcome to the general public to attend the services.

### Red Cross Section Organizations.

The Gatun Section of the Canal Zone Branch of the National Red Cross has been organized with Maj. William L. Sibert chairman and R. M. Gamble secretary and treasurer.

The Paraiso Section has chosen Mr. Henry Dundas chairman, Miss Beattie secretary

and treasurer, and has appointed an executive committee of three. Arrangements are being made for an entertainment to be given during April.

The Pedro Miguel Section was organized on April 1, with Mr. Ernest Bitely as chairman and Mrs. A. T. Webber as secretary and treasurer. A dance will be given in the near future and a committee of five has been appointed to complete arrangements.

The Cristobal organization has chosen the following officers: Chairman, Dr. M. E. Connor; treasurer, Mrs. Louis Broome; secretary, Mr. M. J. Stickle; executive committee, Mrs. Lorin C. Collins and Mrs. C. Nixon. An entertainment committee has been appointed to devise a means of raising funds.

### Personal.

The Ven. Archdeacon Bryan returned to the Isthmus on the *Advance*, which arrived at Cristobal on April 3.

Joseph Beaumont has been appointed Superintendent of Telegraph and Telephone of the Panama Railroad Company. His department includes in addition to the telegraph and telephone service, the signal, and the electric light and power services.

### Missing Men.

The friends of Manuel Gomez Vilor, a Spanish laborer at one time employed by the Isthmian Canal Commission, have not heard from him since last September. Any one who knows of his whereabouts should inform the Assistant to the Chairman, Culebra, C. Z.

Information is desired in regard to Alois Trentman, who was employed by the Commission previous to July 1, 1906. Any one having knowledge concerning him is requested to communicate with the Collector of Revenues, Ancon, C. Z.

Information is desired in regard to Jos. F. Rian (or Rion), who is supposed to be on the Isthmus. Any one having knowledge concerning him is requested to communicate with THE CANAL RECORD.

Information is wanted in regard to Arthur Dale, aged 22, who is thought to have sailed from New York to Panama between the 10th and 18th of March. Any one having information concerning him is requested to communicate with A. Bruce Minear, general secretary V. M. C. A., Culebra.

### Knights of Columbus.

Panama Council, No. 1371, Knights of Columbus, will be formally instituted at Empire, C. Z., on Easter Sunday, April 11, 1909, commencing with mass in the Roman Catholic chapel at 9 a. m. All Knights of Columbus (any degree) are requested to attend these exercises.

Local No. 5, Associated Union of Steam Shovel and Dredgemen, will meet at Fraternal Hall, Culebra, Sunday, April 25, at 2.30 p. m. It is especially requested that all members be present.

The suction dredge *Ancon* was in dry dock at Cristobal for six days during March while new stern bushings, new tail shafts, and new propellers were put in.

The work of laying concrete in the foundations at Miraflores power station was begun last week.

## FOURTH OF JULY.

## Meeting at Cristobal—Ancon Suggested by Cristobal Man.

All citizens who are interested in a Fourth of July celebration at Cristobal are requested to meet on Friday evening, April 16, at 8 o'clock, at the Y. M. C. A. clubhouse, for the purpose of organizing committees.

## THE CANAL RECORD:

I have read the article in THE CANAL RECORD of March 24, advocating Empire as the place to hold the next Fourth of July celebration. I think that any one who attended the celebration last year will agree that Ancon is the logical spot for such an event. In the first place, the Tivoli Hotel is the only hotel on the Isthmus where a crowd of two or three thousand people can be fed within a space of two or three hours. Neither the I. C. C. hotel at Empire, nor any other hotel on the Line can hope to do this. It should be remembered, too, that the celebration will take place on either the third or fifth of the month, and many would undoubtedly like to take advantage of the two successive holidays to arrive early on the scene of festivities and remain both days. The Tivoli Hotel has ample accommodations for all who desire to stay there. Its spacious parlors and lobbies will be a resting place during the heat of the day for those who do not care to attend the athletic contests, and its broad piazzas afford an excellent view of the fireworks at night. I do not know what kind of accommodations Empire has for a dance on such a large scale, but I do know that even the large ballroom of the Tivoli was found inadequate last year, and to have dances at different buildings would be to detract from the unity of the occasion, and in addition might impart a clannish aspect to the affair.

While the suggestion of a barbecue may have its attractive features it does not eliminate the cold and insurmountable fact that subsistence for a large number of people for at least three or four meals must be provided. Furthermore, the celebration in Empire, together with a barbecue, would necessarily take the character of a picnic, and there are many persons to whom the picnic idea does not appeal strongly even under the most favorable conditions. This tropical climate, with its redbugs, ants, and other innumerable insects, will not allow us to give ourselves up to such unrestrained enjoyment of nature as we revel in under the elms and maples of the north.

As free trains are run on the Fourth from Colon to Panama, the fact that Empire is centrally located is of little significance, as it is no trouble to ride on for ten or fifteen miles farther.

Our friend from Empire states: "Never having had this celebration Empire should be given the preference this time." I hope it is not intended to establish a "town's rights" principle to govern the distribution of Fourth of July celebrations. If so, we will have Mount Hope, Miraflores, and other metropolitan centers along the Line applying for their share of the spoils. The place for the celebration should be selected from the standpoint of the greatest amount of enjoyment for the greatest number, and not with a view to enhancing the notoriety or flattering the civic pride of any particular town.

This is not intended as a protest against

holding the celebration at Empire, but a protest against holding it at any place but Ancon. While Cristobal "holds my heart and soul," I unhesitatingly cast my vote for Ancon. As the Fourth occurs only once a year, and as it constitutes a day of enjoyment for every American in the Zone, I earnestly hope that this matter will be looked at in a broad light.

## EMPLOYE.

## Misdirected Letters.

Division of Posts, Customs and Revenues,  
Ancon, C. Z., April 7, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Barrett, W. M.	Manning, J.
Birch, Geo. H.	Mansfield, Henry
Beeler, Chas.	McGuigan, John
Bischoff, Mrs. Fred	McKee, J. Frank
Bristol, Mrs. Edith C.	McLeer, Mrs. R. E.
Clarke, James F.	Morgan, Geo. W.
Cristy, Thomas	Namur, Mrs. Bruno
Dye, Ira Williard	Pedersen, H. C.
Fabyan, Guy	Rounsvell, G. K.
Farrar, Michael	Schaefer, Joseph
Garriott, Clyde	Stephens, Fred A.
Gleason, Dr. J.	Summer, D.
Graham, Alexander P.	Wheeler, Maj. Homer W.
Grund, W. E.	Wilson, Mr. Ben
Hayes, H. S.	Woodford, Earl
Higgins, Mrs. Nellie	Wright, A.
Lee, Mrs. E. E.	

## Commissary Hours.

The hours during which commissaries are open are as follows:

Cristobal, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.  
Culebra, 8 a. m. to 12.30 p. m.; 2.30 p. m. to 7 p. m.  
All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Lost—In Ancon, a Venetian glass necklace. Reward for return to the office of the Superintendent of Schools.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

## CRISTOBAL.

The Pool Tournament resulted in a tie for the first three places. Davis won on the play-off, with White second. The score of games was as follows:

	Won	Lost		Won	Lost
Davis.....	9	2	Russell.....	6	5
White.....	9	2	Burke.....	5	6
Billingslea.....	9	2	Saunders.....	3	8
Chute.....	8	3	Vance.....	2	9
Fowler.....	7	4	Owens.....	1	10
Larsen.....	6	5	Stanford.....	1	10

The second in the series of moonlight athletic meets held on the new cinder track resulted in a victory for the I. C. C. team over the P. R. K. team, 21 to 20.

A consignment of books has been sent from the Cristobal Y. M. C. A. library to Porto Bello for use of the men there.

The Boys' Isthmian athletic meet, held on the Cristobal athletic field, Saturday, March 20, resulted in a victory for the Empire team; Cristobal, second; Culebra, third; and Gorgona, fourth. The winners in the different events were as follows:

100-pound 1-lap race—Lincoln, Empire, first; Morrison, Gorgona, second; Morris, Cristobal, third.

80-pound 1-lap race—Warner, Culebra, first; Smith, Cristobal, second; Daughtrey, Cristobal, third.

Standing broad jump—Wade, Empire, first; Sims, Cristobal, second; Morrison, Gorgona, third.

100-pound 1-lap race—Wade, Empire, first; Sims, Cristobal, second; Kerruish, Cristobal, third.

Running broad jump—Wade, Empire, first; Sims, Cristobal, second; Lincoln, Empire, third.

100-pound 50-yard dash—Wade, Empire, first; Sims, Cristobal, second; Turner, Cristobal, third.

80-pound, 50-yard dash—Roe, Culebra, first; Warner, Culebra, second; Daughtrey, Cristobal, third.

Running high jump—Sims, Cristobal, first; Wade, Empire, second; Johnson, Empire, third.

Relay race: Cristobal—Smith, Jennings, Billet, Daughtrey, Sims, Morris, first. Culebra—Roe, F. McGovern, M. Mitchell, T. McGovern, C. Mitchell, Warner, second. Empire—Lincoln, Davies, Von Oustrand, Catto, Johnson, Wade, third.

Judges—Weidman, Goodman, Booz. Starter, Taulbee. Clerk of course, Cundiff.

The boys of the public school in Cristobal have been given a thorough physical examination by Physical Director Condiff.

## EMPIRE.

The Empire duck pin bowlers captured three games from the Culebra bowlers on the Empire alleys Saturday night, April 3. This places the Empire team first; by the narrow margin of four games, Cristobal being second. Empire has six more games to roll before the closing of the tournament, three at Culebra and three at Cristobal.

Work has been resumed in the gymnasium. The baseball men were out for practice last week, and efforts are being made to organize a "gym" class which will meet two evenings each week. Light calisthenics, work on the horse and bars, and indoor games will constitute the work of the class.

## Contract Fire Station at Gatun.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z., until 2 p. m., Monday, April 12, 1909, when they will be publicly opened, for the erection by contract of a fire station at Gatun, C. Z. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with certified check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$150 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest and to waive defects or informalities in proposals. C. Nixon, Purchasing Agent on the Isthmus.

## Launch Service to Taboga.

The steamer *Sanidad* leaves the dredge landing at La Boca at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at La Boca about 4.30 p. m. in time to make connections for the 5.30 train at Panama.

One of the steam shovels working in the Cut at Bas Obispo is excavating at elevation 38, which is two feet below the bottom of the Canal. This shovel is digging a sump for drainage purposes.

## PERFORMANCE OF STEAM SHOVELS

\*Pedro Miguel.

The *Carlago*, of the United Fruit Company Steamship Line, which ran on the reef at Utila Island off the Coast of Honduras on November 14, left New Orleans for Colon on April 3, and will leave Colon on the return voyage on April 13, stopping at Port Limon.

**Auction of Ponies.**  
There will be sold at public Auction, at Empire police station, at 2 o'clock p. m., April 9, 1909, the following described public animals:  
One dark bay native pony, No. 17.  
One gray native pony, No. 23.  
One gray native pony, No. 47.  
The animals may be seen at the Empire corral. Full information may be obtained from the Chief of Police, Ancon.

## MOVEMENT OF OCEAN VESSELS.

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Tagus.....	R. M. Tuesday.....	Mar. 30
Atrato.....	R. M. Tuesday.....	Apr. 13
Magdalena.....	R. M. Tuesday.....	Apr. 27
Orinoco.....	R. M. Tuesday.....	May 11

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 1.30 p. m., via Port Limon, for New Orleans.

The next sailings of the Leyland Line for New Orleans via Kingston, Ja., will be as follows: Steamship *Tampican* about March 27, and steamship *Cuban* about April 5. The *Tampican* will call at Tampa, Fla., after leaving Kingston.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The arrivals and departures at Ancon for the week ending April 3, 1909, were: Arrivals—March 27, *Ecuador* from Guayaquil; March 28, *Pen* from San Francisco; March 29, *Taboga* from intermediate ports; March 30, *Quito* from intermediate ports; March 31, *Ituri*, Kosmos Line, from Central America; April 2, *Limari* from Valparaiso, and *Maryland* U. S. N., from Central America. Departures—March 27, *Guatemala* for Valparaiso; March 29, *City of Para* for San Francisco; March 31, *Taboga* for intermediate ports; April 2, *Ecuador* to Guayaquil.

**THE CANAL RECORD**

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Use of Oil as Fuel to Be Continued.

The revocable license granted the Union Oil Company of California January 10, 1906, to operate and maintain a pipe-line for the transmission and delivery of oil in the Canal Zone, has been amended. The license provided that the company should pay into the treasury of the Canal Zone the sum of \$500 a month for the support of the public schools, and should furnish to the Isthmian Canal Commission and the Panama Railroad Company such crude oil as might be desired at the rate of 90 cents a barrel. The license as amended does away with the monthly payment of \$500, places the price of oil at \$1.10 per barrel for a period of six years from April 1, 1909, guarantees the use of between 30,000 and 60,000 barrels of oil per month, and provides that no taxes be collected on account of the government of the Canal Zone during the term of the agreement, which expires April 1, 1915.

The first deliveries of oil were made in August, 1906. The pipe-line was completed across the Isthmus in November, 1907, and the oil has been used by the Commission in quantities varying from a few hundred barrels to 20,000 barrels or more each month since that time. Experience of two years demonstrated to the Union Oil Company that it could not continue the contract except at a loss, and arrangements were therefore made to withdraw from the Isthmus. As the use of oil as fuel has proved convenient and economical to the Commission and the Panama Railroad Company, the license has been amended on condition that the Union Oil Company will continue the delivery of oil. Before the license was amended an investigation was made to ascertain whether oil of satisfactory grade could be delivered in the Canal Zone at less cost than \$1.10 per barrel, and whether it would be cheaper to continue the use of coal. It was found that the new contract was in the interest of econ-

omy. At present about 35,000 barrels of oil are used each month, and the amount consumed will increase as the installation of oil burners now in progress is completed.

#### New Quarters Authorized.

Authority has been granted for the construction by contract of two type-18 bachelor quarters at Gatun and one type-10 house and four type-17 houses at Ancon. The quarters at Gatun will be two stories high and contain 24 rooms with the usual bath and toilet rooms. The quarters at Ancon are erected at the instance of the Department of Sanitation. The type-10 house is a two-story one-family house, and will be located at Ancon, outside of the hospital reservation. The type-17 quarters are one-story one-family houses, and will be located within the hospital reservation. The work will be done by contract, and bids will be advertised for in a few days.

#### Standard Supplies for 1910.

The first bids for supplies of standard articles to be used in the Canal work during the year ending June 30, 1910, will be opened on April 18, in the office of the General Purchasing Agent at Washington. These bids will be for steel and articles made of steel, and they will be followed at short intervals by bids for supplies of articles made entirely or partly of rubber, paints, oils, and other articles that have become standard in the Canal work.

This method of contracting for standard supplies for a year is the same as that followed in other branches of the Government service and in large business establishments. Until recently it was not practicable to put it into effect in the Canal work, because it is only by experience that a conclusion can be reached as to what articles are standard and what quantities of each are needed. It was first proposed to ask for bids for a six months' supply, or for the period between January 1 and June 30, 1909, but the task of compiling the schedules was so great that advertisement could not be made before January 1, and the method of making separate contracts for supplies as they are needed will therefore be continued until the beginning of the next fiscal year.

The new method is to place a contract for one class of articles with a qualified bidder on the condition that he will supply all of that article needed in the fiscal year at a fixed price. Over eight thousand articles are required, and these have been grouped into a convenient number of classes. For instance the schedule for materials made wholly or partly of rubber includes 28 classes, on any one of which a bid will be received. Each class is composed of a number of separate articles. Class 1 of this schedule is made up of four items, each item including various quantities of four-ply armored air

hose, in 25-foot lengths, covered with flat steel galvanized wire braided about the hose. The first item includes five different sizes of hose. Bids are made on classes, not on items.

The schedule for standard supplies shows (1) the item number, (2) the quantity of each size required, (3) a complete description of the article, (4) Proposition A, (5) Proposition B. Proposition A is a proposal to furnish a certain quantity at a certain price subject to the right of the Commission to increase or reduce the quantity by 50 per cent or less. Proposition B is a proposal to furnish the articles subject to the right of the Commission to purchase any part or none of the quantities advertised for, and to increase or to diminish the quantities purchased by 50 per cent or less. The purpose of the alternate proposition is to determine whether bidders in certain lines will make better prices when the amount of material to be taken is known within certain limits, or will make the same price regardless of whether they are sure of a sale or not.

The acceptance of any supplies is contingent on their passing inspection in the States, and in some cases articles must stand the additional test of use for a certain period on the Isthmus.

#### Porto Bello Wireless.

The project for a wireless telegraph station at Porto Bello has been approved. The expense of building the station will be borne by the Isthmian Canal Commission, and the equipment will be furnished by the Navy Department. When the desirability of providing a means of quick communication between Porto Bello and the Canal Zone became apparent a telephone line was projected. It was found that the cost of installation alone would be about \$15,000, and that the cost of maintenance would probably be very high. Investigation of the cost of a submarine cable was then made, and it was estimated that a cable would cost twice as much as a telephone line. The wireless station at Porto Bello will transmit messages to the wireless station at Colon, and from there will be transmitted to any part of the Canal Zone by telegraph or telephone. Communication with any station within reach will also be established. The cost of installation, including the buildings, will be about \$7,000, and the cost of maintenance will be very low.

#### Equipment of Canal Zone Railroads.

An inspector from the Interstate Commerce Commission left New York on the *Colon*, which is due to arrive at Cristobal on April 14. He comes to the Isthmus to pass on some questions with regard to the effect of interstate carrier laws recently enacted on the equipment of the Canal Zone railroads.

## CANAL MEDALS.

## Minting Begun—Corrections in List Previously Published.

Samples of the first Canal Medals struck at the Philadelphia Mint have been received on the Isthmus, and the minting of the first order of five thousand has begun. Corrections of the list as published in THE CANAL RECORD are still coming in, but it is probable that practically all will be in hand by June 1. Persons who wish to make corrections should do so at once, addressing the Assistant to the Chairman at Culebra, because the list as compiled and corrected cannot be changed after the engraving is begun. Each medal is to have the name of the person to whom it is awarded engraved on the obverse, and the number and the dates between which it was earned on the reverse side.

The first issue will be of medals earned up to January 1, 1909. The number of persons entitled to medals and the number to the bar, which indicates four years of service, is shown in the following statement:

Entitled to Medals up to January 1, 1909.	
Isthmian Canal employees.....	1975
Panama Railroad employees.....	247
	2222
Entitled to Service Bars up to January 1, 1909.	
Isthmian Canal employees.....	97
Panama Railroad employees.....	48
	145

## ISTHMIAN CANAL COMMISSION EMPLOYEES.

The publication in THE CANAL RECORD of the list of employees who are entitled to Canal Medals has enabled the Chairman's office, through the persons interested, to make the following corrections in the list:

Ferguson, Howard, from May 30, 1904, to May 31, 1904.  
 Gorkas, William C., from June 20, 1904, to June 28, 1904.  
 Carter, Henry R., from June 23, 1904, to June 28, 1904.  
 Kenealy, Patrick, from June 29, 1904, to June 28, 1904.  
 Sinclair, Joseph M., from Nov. 1, 1904, to July 19, 1904.  
 Rerdell, Montfort C., from Aug. 9, 1904, to Aug. 16, 1904.  
 Maguire, James M., from Aug. 15, 1904, to Aug. 16, 1904.  
 Rowe, Hartley, from Jan. 12, 1905, to Nov. 1, 1904.  
 Ruggles, Wm. B., from Aug. 10, 1904, to Aug. 9, 1904.  
 Maher, Edward, from Dec. 1, 1904, to Oct. 1, 1904.  
 Padgett, Monroe L., from Dec. 1, 1904, to Oct. 10, 1904.  
 Duey, Charles W., from Feb. 7, 1905, to Feb. 6, 1905.  
 Keys, James C., from Feb. 7, 1905, to Feb. 6, 1905.  
 White, Samuel M., from June 20, 1905, to Feb. 23, 1905.  
 Olsen, Louis, from Mar. 16, 1905, to Dec. 26, 1904.  
 Simpson, Stephen S., from Apr. 16, 1906, to June 22, 1905.  
 Jenkins, Ben., from July 13, 1905, to July 17, 1905.  
 Lawton, John M., from Aug. 17, 1905, to Aug. 4, 1905.  
 Johnson, August, Dec. 5, 1905, to Aug. 10, 1905.  
 Batz, Leonard, Sept. 23, 1905, to Sept. 25, 1905.  
 Cooper, John B., from Nov. 27, 1905, to Nov. 26, 1905.  
 Craddock, John D., from Nov. 25, 1905, to Nov. 26, 1905.  
 McGimsey, Jas. V., from Nov. 27, 1905, to Nov. 26, 1905.  
 Roper, Cecil T., from Nov. 27, 1905, to Nov. 26, 1905.  
 Rourke, Louis K., from Dec. 19, 1905, to Dec. 16, 1905.  
 Groves, Richard B., from Apr. 6, 1906, to Nov. 1, 1905.  
 Potts, Frederick A., from July 5, 1905, to July 6, 1905.  
 Storka, John L., from Oct. 24, 1905, to Oct. 23, 1905.  
 Atwood, F. Stanley, from Nov. 12, 1905, to Nov. 13, 1905.  
 Schutt, Oscar, from Dec. 2, 1905, to Dec. 5, 1905.  
 Robinson, E. M., from Jan. 12, 1906, to Dec. 21, 1905.  
 Tannehill, John W., from Oct. 15, 1906, to Jan. 13, 1906.  
 Brown, Perry F., from Apr. 1, 1905, to Apr. 3, 1906.  
 Lewis, Fitz J., from Apr. 18, 1906, to Apr. 11, 1905.  
 Oyster, William M., from July 20, 1906, to July 30, 1906.  
 Yeakle, Charles E., from Sept. 10, 1906, to Sept. 8, 1906.  
 Burson, William B., from June 28, 1904, to May 24, 1904.

Corrections have been made in names as follows:

Walkers, Frederick G., to Walters, Frederick G., Sept. 1, 1905.  
 Jose De Lavandeyra, to J. de Lavandeyra, July 16, 1905.  
 Van Hardeveld, to Van Hardeveld, J. A., July 5, 1905.  
 Kendall, Charles R., to Kendall, Charles E., July 7, 1905.  
 Hibbard, Mary E., June 22, 1904, to Hibbard, M. Eugene, June 28, 1904.  
 Haskin, William C., to Hawkins, William C., July 5, 1904.  
 Sprangler, Chas. J., Apr. 1, 1904, to Spangler, Chas. J., July 17, 1904.  
 Parker, Charles C., to Parker, Charles L., Nov. 1, 1904.  
 Bates, Phil E., to Bates, Phil M., Dec. 6, 1904.  
 Alexander, Edigio E., Jr., to Alexander, Elias E., Sept. 14, 1904.

Fogerty, John E., to Fogerty, John E., Mar. 22, 1905.  
 Kennedy, Sydney J., to Kennedy, Sydney J., Apr. 4, 1905.  
 Davis, Sydney L., to Davis, Sidney L., Apr. 24, 1905.  
 Ensey, Charles R., to Ensey, Charles R., Apr. 25, 1905.  
 Bryon, Charles E., to Bryon, Charles R., July 11, 1905.  
 Green, Henriette B., to Green, Harriette B., July 12, 1905.  
 Hale, David H., to Hale, David J., July 12, 1905.  
 Pitman, William P., to Pittman, William P., August 14, 1905.  
 Grisson, James T., to Grissom, James T., Aug. 19, 1905.  
 Gorham, George A., to Gorham, George H., Oct. 31, 1905.  
 Conrad, Moise, to Conrad, Moise, Nov. 21, 1905.  
 McCormack, William T., to McCormack, William T., Jan. 13, 1906.  
 Surles, Clarence O., to Surles, Clarence C., Jan. 22, 1906.  
 Furguson, Robert N., to Ferguson, Robert N., Feb. 22, 1906.

 Lowe, George, May 21, 1906.  
 Peterson, Walter, July 9, 1906.  
 Jones, John W., Oct. 21, 1906.  
 Kittel, Charles, Oct. 26, 1906.  
 Rutledge, Richard B., Nov. 20, 1906.

The following names have been omitted from the list pending settlement of the question of citizenship:

Huntington, Linn M., Aug. 10, 1904.  
 Jakoby, Joseph, Sept. 5, 1905.  
 Piaella, Antoine, April 1, 1905.  
 Hammel, Otto, April 13, 1905.  
 Norton, Francis J., Aug. 14, 1905.  
 Hinselmann, August, Sept. 1, 1905.  
 Oersted, Hans C., Sept. 12, 1905.  
 Beckwith, George G., Feb. 22, 1906.

## PANAMA RAILROAD EMPLOYEES.

Corrections have been made in names as follows:

Chester, W. E., to Chester, W. C., May 4, 1904.  
 Stevens, J. A., to Stevens, J. E., May 11, 1904.  
 Cannon, Harry F., to Gannon, Harry F., May 15, 1905.  
 Notte, John G., to Notte, John G., Mar. 22, 1905.  
 Beterbenner, H., to Beteheinner, H., May 23, 1905.  
 Beckel, W. O., to Beckell, W. O., May 29, 1905.  
 Trasher, Leon C., to Thrasher, Leon C., May 31, 1905.  
 Dedge, Graham, to Dedge, Graham G., Sept. 19, 1905.  
 Goerlich, Samuel E., to Goerlich, Clarence S., Mar. 26, 1906.  
 Johnson, H. E., to Johnson, Horace E., June 15, 1906.  
 Gransberry, O. E., to Granberry, O. E., June 19, 1906.  
 Hoffmark, H. F., to Hoffmark, R. F., June 24, 1906.  
 Williams, Minnie, to Williams, Minnie E., July 1, 1906.  
 Hill, J. C., to Hill, Iver G., July 17, 1906.  
 Crop, Charles D., to Corp, Charles D., Sept. 4, 1906.  
 Germandt, M., to Germandt, Max, Nov. 6, 1906.  
 McLean, Neal, to McLean, Neil, Nov. 6, 1906.

The following changes have been made in date:

Hill, George, July (?), 1904, to June 24, 1904.  
 Nunn, Numa, July 1, 1905, to July 1, 1904.  
 Monk, Bert H., Dec. 17, 1905, to Dec. 25, 1905.  
 Bain, W. H., Dec. 5, 1906, to Feb. 1, 1906.  
 Zook, E., Dec. 16, 1906, to Dec. 17, 1906.  
 Parker, F. E., Dec. 17, 1906, to Dec. 18, 1906.

The following names have been added:

Ilia, John D., Dec. 14, 1904.  
 Stewart, David, Dec. 9, 1905.  
 Stubner, Charles E., Feb. 22, 1906.  
 Omelia, Ruth, June 19, 1906.  
 Lester, Clarence A., July 25, 1906.  
 Andrews, Rollen F., Oct. 14, 1906.  
 Renton, A. J., Nov. 20, 1906.

## STATEMENT OF CLASSIFIED EXPENDITURES TO JANUARY 31, 1909.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1908. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907.....	\$1,446,407.73	\$4,636,630.37	\$13,410,795.01	\$4,296,732.98	\$19,345,697.87	\$43,136,263.96
Fiscal year 1908.....	704,610.15	2,310,212.01	16,680,660.46	1,494,956.41	11,684,215.15	32,874,654.18
Fiscal year 1909:						
July, 1908.....	84,898.15	197,963.07	1,452,698.88	91,901.17	544,083.23	2,371,544.50
August, 1908.....	77,019.80	145,870.37	1,599,556.90	60,798.76	517,046.09	2,400,291.92
September, 1908.....	69,867.03	129,725.40	1,636,253.17	52,809.20	703,633.09	2,592,287.89
October, 1908.....	59,612.51	155,676.68	1,448,614.64	67,696.17	727,544.14	2,459,144.14
November, 1908.....	59,374.12	147,957.24	1,369,805.56	77,406.64	480,139.10	2,134,682.96
December, 1908.....	65,526.32	166,321.70	1,500,404.77	70,936.43	893,337.24	2,696,526.46

## SCHOOL PROBLEMS.

## Conditions in Canal Zone that Present Peculiar Difficulties in Education.

In the work now in progress of grading the schools of the Canal Zone, three great obstacles are encountered: (1) the difficulty of harmonizing the points of view of people coming from hundreds of different places; (2) the absence and tardiness; (3) the constant changing of places of residence.

It is probable that, in its extent at least, the first of these problems is unique in education. In the Canal Zone schools for white children the 722 pupils represent over 500 different schools, and a score or more distinct educational systems. Thirty-six States, two territories and the District of Columbia have representatives among the pupils, and the teachers themselves represent 16 different States. Not only are the systems of the various States different, but in only a few of the States is there a thoroughly uniform system of education, so that each city or town has some distinct features in its school system.

Twenty-one different nationalities other than American are represented by pupils in the schools for white children, and practically every one of the alien children began school work under a system differing in some respects from that in which each of the others began. The schools of the Canal Zone have reached the point where attention to grading is necessary and the difficulties that are being overcome may be surmised from a study of the following table, showing the States and countries from which the children have come, and the number from each State or country:

United States.	Foreign Countries.
Alabama..... 11	Denmark..... 1
Arizona..... 1	Nicaragua..... 1
Arkansas..... 5	Holland..... 3
California..... 8	England..... 23
Colorado..... 3	Germany..... 15

Total..... 530	

It is not only in reconciling differences in methods of teaching that difficulty is experienced. Indeed the more elemental difficulty is that the attitude of children, parents, and teachers is fixed by conditions in the particular locality from which they come. A local coloring suffuses their thought and action. The teachers themselves are the product of local conditions, and no matter how advanced their professional training may be their work reflects their school edu-

cation and professional experience. More than the teachers, the parents and children show a natural local pride in the schools of their home community, and this is occasionally reflected in their attitude toward the school system of the Zone.

One phase of this local coloring is the conviction of teachers, parents, and children that the grading of the schools with which they are familiar should be the standard. To adopt their ideas would mean several hundred different standards. It is seldom that two schools can be found in the States in which the grading is exactly the same. In one school a certain grade will carry the student farther than it will in another, and if there is a general similarity of grading it will yet be found that in the extent to which some studies are pursued there is a difference. There is no harm in this where the community schools take children from the primary grade through the high school, for there the change in the personnel of the student body is slight, and there is no conflict of grades. But in the Zone schools each pupil has been started on a different scheme, each parent has his own confirmed idea of how a school should be graded and conducted, and each teacher has a similar difficulty in overcoming his local coloring.

The burden of readjusting himself and the pupil and reconciling the parents falls on the teacher. How well the Canal Zone teachers have overcome these difficulties may be judged from the fact that the work of grading is making good progress.

In the schools for colored children the following States and countries are represented by the number of pupils indicated:

United States:	Brazil..... 2
Colorado..... 2	Central America..... 1
Iowa..... 1	British Honduras..... 1
New York..... 5	China..... 9
Ohio..... 2	Colombia..... 96
Pennsylvania..... 1	Costa Rica..... 6

Trinidad..... 9	
Turks Island..... 1	Total..... 1,215

The constant changing of parents from one part of the Zone to another is a condition that makes grading difficult, and will continue to do so until one standard has been thoroughly established. A school for white children at Gatun began the year last September with 21 pupils and by accretions from other parts of the Zone this number has been increased to 46. In one of schools for colored children there have been 50 changes in the past six months. This changing unsettles the children who are transferred and the school to which they go. It also adds to the absences.

The one great cause of absence in the schools for white children is the six weeks vacation granted to "gold" employees engaged in the States. Practically every white child in the Zone comes from a family which spends six weeks of the year away from Panama. A great majority of these are away from the Isthmus during six weeks of the school year, for it is not possible or desirable to let all employees have their vacation in the

summer months. This condition in the schools for white children has led to the appointment of two teachers who, when not substituting, spend their time in the schools along the line of the Canal giving special instruction to pupils who have missed school part of the year.

Among the colored children absence and tardiness are chronic and under present conditions are practically incurable, although efforts to lessen the absence and tardiness are not spared. A constant change of residence, indifference on the part of parents and children, the large number of pupils to each teacher, and the legal restrictions on the punishment of truants and sluggards are the more important obstacles in the way of curing absence and tardiness.

## Canal Zone Schools.

The question of a supplementary course in spelling for the schools of the Canal Zone was discussed at the teachers' meetings held in Ancon on April 3. Several weeks ago an examination in English composition was held throughout the schools and the words commonly misspelled in the compositions submitted by the pupils form the basis of the supplementary work for each grade. Number, letter, and word cards have been printed and the schools will begin to use them at the beginning of next term. The use of these cards, the matter of hand work now being introduced into the primary grade, and a new course of study in English and arithmetic were also discussed.

In the meeting of the teachers of the schools for white children a report was made concerning physical culture for the first, second, third, and fourth grades of the Canal Zone schools. Experiments have been conducted at Cristobal by a teacher especially trained in the physical culture of school children, and the report was based upon the observations made in that school. At present only a few exercises that have been found especially adapted to the grades mentioned and to the climate of the Canal Zone will be introduced.

In the meeting for teachers of the schools for colored children, new courses in English and arithmetic, and the introduction of letter, word, and number cards were also discussed. The plan of introducing school gardens was taken up. The idea behind this movement is that the negro children now in the Canal Zone schools will within a few years form a part of the adult population of the Zone, and it is believed that their prosperity and usefulness can be greatly increased if practical lessons in gardening are given them along with their regular school work.

The teachers in the schools for colored children were informed that an examination would be held in the near future to test the educational qualifications of the teachers. The subjects of the examination will be those taught in the schools for colored children. Teachers who cannot pass this test will not be retained in the service, but teachers now in the service will not be dismissed to make way for outsiders who may pass a better examination than they, provided that they come within the passing mark.

## Gatun Masonic Club.

The Gatun Masonic Club meets every Monday evening in the hall at Gatun. Visiting brothers are welcome.

## CARING FOR THE SICK.

## Origin and Work of the Sick Camp—Hospitals, Camps, Dispensaries in 1908.

The sick camp as conducted by the Department of Sanitation of the Isthmian Canal Commission is peculiar to the Canal Zone. It is the place in which laborers are treated for illness that will last but a short time, the class of cases that in gold roll men would be treated "in quarters," and in private practice by giving the patient some medicine and telling him to remain at home for a day or so.

When the Americans assumed control on the Isthmus in May, 1904, there were two small hospitals at Colon, one in Panama, and one in Ancon. In July of that year a physician was stationed at Culebra, and soon after one was assigned to Gorgona, and another to Bohio. Wherever a doctor was stationed a dispensary and field or "line" hospital was opened, all crude affairs, but not ill-adapted to the conditions, since in the first two years of American occupation there were few women on the Isthmus. The "line" hospitals, as they were called, were in fact hospitals, like those at Colon and Ancon, although the aim was to treat in them only such cases as could not be moved with safety to the hospitals at the termini of the railroad, and such as it was evident would not be ill for more than a few days. The moving of sick men from points along the "line" to Ancon and Colon was a more serious matter then than now, because the railroad service was not so good, and hospital cars had not been provided. The shock of the tedious and rough journey forbade the transportation of many cases that now could be moved with safety. At the Miraflores Hospital in 1905 two hundred acute cases were treated at one time, and in a tent hospital at Tabernilla in 1906 all of the 250 cots were occupied. These were strictly emergency hospitals and were needed because there was not sufficient ward space elsewhere.

With the decrease in the sick rate, and the building up of the hospitals at Colon and Ancon, and the improvement in railroad service, the need for "the line" hospitals grew less and finally they were abandoned, the last one to be used being that at Culebra, which was closed in October, 1907. Meanwhile the number of women in the Canal Zone increased, and the crude dispensaries of the first two years became unsuited to the character of the population. The dispensaries are now as well equipped as the office of a physician in the States, and carry a more extensive stock of medicines. At all places, excepting Gatun and Paraiso, where it was necessary to erect new buildings, the dispensaries are in old French buildings.

When the "line" hospitals were abandoned it was found necessary to provide some place at each labor camp for treating such cases as in the Army would be sent to quarters, or at home would be cared for by the family. It was found that most of the laborers who were slightly ill would go to the dispensaries, get medicine and return to their quarters. There they would remain without taking the medicine, without food, often even without water, because their fellows paid little or no attention to them. So, a man a little ill to-day would be very ill the day following. To meet this condition the "sick camps" were established, the first one being opened at Paraiso in the latter part of 1905.

It consisted of two tents with cots, and an attendant saw to it that the men sent to the camp took their medicine and got something to eat.

The sick camps now number seventeen. At Porto Bello, Nombre de Dios, and Gatun spillway tents are used, but at all other points old French buildings have been converted to this use. In each camp is an attendant who is at once janitor, nurse and steward. Some of the camps are supplied with food from the labor messes and kitchens, with little additions of more delicate fare, and in others the attendant cooks the food. A doctor visits each camp twice a day. The camps cost little in proportion to the service they perform. They save a great amount of money and trouble each year, in keeping the laborer who is slightly ill, the malingering, and the hypochondriac out of the hospitals. A statement of the cases treated in the sick camps in the year 1908 follows:

HOSPITAL.	Admitted.	Died.
Tivoli.....	2,022	.....
La Boca.....	879	.....
Corozal.....	1,143	.....
Miraflores.....	1,155	.....
Pedro Miguel.....	994	.....
Paraiso.....	1,736	1
Empire.....	2,751	1
Culebra.....	2,547	5
La Cascadas.....	1,692	8
Bas Obispo.....	2,254	1
Gorgona.....	2,305	1
San Pablo.....	949	1
Tabernilla.....	1,644	.....
Gatun.....	2,314	4
Gatun spillway.....	613	.....
Cristobal.....	682	.....
Porto Bello.....	1,848	1
Total.....	27,528	23

Total days of relief furnished.....\$1,849  
 Cost of subsistence per patient per day.....\$2.708  
 Total cost of sick camps.....\$25,566.47  
 Cost per capita per day, 49 cents.

The history of the hospitals was published in Volume I of THE CANAL RECORD, pages 381, 390, and 397. An idea of the service rendered by them and the sick camps in the calendar year 1908 may be obtained from the fact that 54,778 persons were given treatment. Patients transferred from sick camps to the hospitals and from the hospitals to Taboga Sanatorium, admissions thus duplicated in the total number of persons admitted to the hospitals and sick camps, numbered 6,711. The net admissions to the hospitals and sick camps plus 5,687 employes sick in quarters were thus 53,755. The average cost of subsistence per day for patients in hospitals and sick camps was 33 cents. The total number of days of relief furnished was 438,652; the net cost of hospitals and sick camps was \$682,133.16, and the net cost per capita per day was \$1.55. A statement of the cases treated in the hospital in 1908 follows:

HOSPITAL.	ADMITTED.			DIED.		
	Em- ployes.	Nonem- ployes.	Total.	Em- ployes.	Nonem- ployes.	Total.
Ancon.....	13,925	1,722	*15,880	247	166	†445
Colon.....	6,324	1,368	7,692	142	194	336
Culebra.....	2	79	81	.....	3	3
Palo Seco (Lepers).....	2	12	14	.....	.....	.....
Taboga Sanatorium.....	2,873	711	3,584	.....	2	2
Total.....	23,126	3,892	*27,251	389	365	†756

\*This total includes 233 insane persons.

†This total includes 32 insane persons.

In addition to the relief given in the hos-

pitals and sick camps, and to employes sick in quarters, the dispensaries gave relief as follows:

CLASS.	White.	Black.	Total.
Employes.....	235,438	170,978	406,416
Nonemployes.....	29,051	16,227	45,278
Total.....	264,489	187,205	451,694

Total cost of dispensaries.....\$166,182.07

In 1908 the number of cases sent to Colon Hospital varied greatly each month because an effort was made in the early months of the year to keep the number of patients in Ancon Hospital between 550 and 600, and in the later months between 800 and 850. Cases in excess of those treated at Ancon were sent to Colon. They usually included the sick from Cristobal, Gatun and Porto Bello, and at times from points as far south as Gorgona.

The regular "line" hospital at Culebra was closed in October, 1907. On August 1, 1908, the building was opened as a hospital for the inmates of Culebra penitentiary and it is now used exclusively for that purpose. The cost of treating prisoners in Ancon Hospital and furnishing a guard for each patient was excessive and the penitentiary hospital was established as a measure of economy.

Palo Seco Hospital is used exclusively for lepers. It was opened on April 10, 1907, with six inmates. On December 31, 1908, there were 22 and on March 1, 1909, there were 26. They are mainly natives of Panama and West Indian negroes. No Americans are confined there. A white American, a hospital steward of many years' experience, is superintendent, and a visit is made by the Superintendent of Hospitals once each two weeks.

## March Police Report.

The March report of the Chief of the Division of Police and Prisons shows that 561 persons, representing 49 nationalities, were arrested in the Canal Zone during the month. This is an increase of 89 for the month, there having been 472 arrests in February. Of the 561 persons arrested, 499 were men and 62 were women, and they were charged with 55 different offenses. They were divided among the towns of the Zone as follows: Ancon, 34; Las Sabanas, 5; La Boca, 46; Corozal, 4; Miraflores, 7; Pedro Miguel, 17; Paraiso, 16; Culebra, 41; Empire, 58; Las Cascadas, 36; Bas Obispo, 25; Gorgona, 74; San Pablo, 10; Tabernilla, 21; Bohio, 13; Gatun, 78, and Cristobal, 76. The total effective police force on March 31 was 170, and the pay roll amounted to \$19,024.46.

One hundred and eighty cases were tried in the Circuit Courts, 24 of which were dismissed, 130 continued, 25 in which convictions were secured, and one case in which bail was forfeited. Of the 25 person convicted 5 were fined, 4 received a jail sentence and a fine, 14 were sentenced to the penitentiary, and in two cases sentence was suspended. Eleven convicts were discharged from the penitentiary during the month, leaving a total of 120 in the penitentiary on March 31. The number of prisoners in the common jails on the same date was 120, a decrease of 14 for the month. The value of the work performed by the convicts on roads, etc., amounted to \$1,905.60.

There were 12 deaths by violence requiring action by the coroner in March. Three of these deaths were caused by railroad accidents, and one by drowning.

## PORTO BELLO QUARRY.

## Capacity of 2,400 Cubic Yards a Day of Eight Hours.

Two million, two hundred and fifty thousand cubic yards of crushed rock are to be used in the concrete work of Gatun Locks and the spillway of Gatun Dam. To supply this rock the quarries at Porto Bello (a port on the Caribbean Sea 18 miles east of Colon) were opened and a crusher plant with a capacity of 2,400 cubic yards a day has been built. An article in THE CANAL RECORD of September 2, 1908, reviewed briefly the conditions at Porto Bello and described what had been accomplished up to that time. Since then the opening of the quarry has continued, and the crusher plant has been practically completed.

From the beginning the construction was delayed by slow delivery of materials from the States, and the inconvenience of working at a point where a machine shop must be erected and a village constructed before the actual operations of quarrying and building the crusher plant could be carried on economically. On November 20, 1908, the earth overlying the rock on the hill above the power plant slid and pushed the boilers from their foundations, causing an additional delay of several weeks. Notwithstanding these hindrances rock was furnished for the spillway concrete as soon as the mixing plant at the spillway was ready. Two crushers are now at work turning out 600 cubic yards of rock a day. In the course of six weeks all of the eight crushers, comprising two units, will be ready for operation. If they work six days a week it will require until about January 1, 1913, for the crushers to complete their work.

## THE QUARRY.

The quarry is in a hill that rises sheer from the water on the east side of the entrance to the harbor of Porto Bello. Extensive borings indicate that the supply of rock is practically unlimited. It has been estimated at twenty million cubic yards, and only 6,734,000 yards will be required in the construction work—2,500,000 yards at Gatun and 4,500,000 in the breakwater in Limon Bay. The rock is a massive andesite with a specific gravity of about 2.70, crushes readily, and is well suited for concrete.

In opening the quarry work was begun at a point 85 feet above sea level. A steam shovel was set at work grading for the floor of the crusher plant, and has continued around the face of the hill, cutting and grading a shelf or terrace for tracks and climbing at the grade rate of  $2\frac{1}{2}$  per cent. The present plan contemplates a line of terraces or inclined planes running up to 255 feet above sea-level, but it is probable the quarry will be opened up to an elevation of 300 feet or more. The shelf is made broad enough to hold a steam shovel and a double track railroad.

Before quarrying is begun the rock is stripped of overlying earth by a stream of water forced through a 2-inch nozzle, pumped from the bay through a 10-inch main by an underwriters' pump, delivering 1,500 gallons a minute against a static and friction head of 460 feet. The pipe is laid up to the 265-foot contour and when the stripping is finished it will be used as an additional air main. The stripping is done at less than 2 cents a cubic yard, including the cost of power

pump, hose, and labor. The rock thus bared is drilled and blasted. Twenty-four 3½-inch drills and six 2½-inch tripod drills are now in use, and at the present time the average day's work for a drill is 34½ feet, but with more experienced drill runners, 40 to 50 feet per 9-hour shift will be accomplished. Compressed air for the drills is supplied through a 6-inch main which has been laid to an elevation of 265 feet. There is very little loss of air at the drills and the working pressure is about 100 pounds. The holes are drilled about 10 feet apart and are loaded at the bottom and in the middle with light charges of 60 per cent dynamite, the object being to shatter the rock without throwing it. Toe or lifting holes are also used.

After it is blasted the rock is loaded upon cars by steam shovels. Two 70-ton steam shovels are now loading rock, in addition to the two pioneer shovels that are continuing the terraces up the hill. When the plant is in full operation five 70-ton shovels will be kept busy loading. In order that they may not load stone too large for the crusher, the dippers of these shovels have a capacity of only 1¾ cubic yards, and to enable them to handle stone continuously they are constructed of extra heavy plate and have teeth of manganese steel. A two-inch water service line supplies the shovels with water. At present only a single-track railroad is in use, but when working at its full capacity the plant will use double tracks. The shovels load the rock upon specially designed Oliver steel dump cars of 6 yards capacity. Ten 40-ton, six-wheel, Porter switching locomotives, with a wheel base of 9 feet and entire load on the drivers, haul the trains from the shovels to the crushers. These locomotives were set up at the Porto Bello shop, and are working on as high as a 4½ per cent grade and on a maximum 52 degree curve. When the permanent track lay-out is completed the curves will be reduced to a maximum of 28 per cent and the grades to not over 3 per cent.

## CRUSHERS, POWER PLANT, AND SHOP.

The crushing plant is built in two units, each consisting of one No. 9 and three No. 6 McCully gyratory crushers. Rock is dumped from the cars into the No. 9 crusher, which takes stone twenty-two inches in thickness and crushes it into pieces not over six inches in size. After leaving the No. 9 crusher the rock passes through a revolving screen which allows the pieces less than three inches in size to drop into the main chute. Pieces larger than three inches are delivered to any one of the three No. 6 crushers, where they in turn are reduced to three inches or less and are dropped into the main chute. At present one No. 9 and one No. 6 crusher are in use, and they crush 600 cubic yards a day without crowding. The second No. 9 and five No. 6 crushers are being installed. The two additional No. 6 crushers on the lower bench will be erected, although it is not likely they will be used except in an emergency.

From the chute the stone discharges into a double transmitting pan conveyor. The conveyors are in duplicate, and either or both conveyors may be used for either or both crusher units. The conveyors take the rock from elevation six feet above sea-level up an incline to a point 36 feet above sea-level where they dump it through hoppers into du-

plicate cross-bucket conveyors, which move on tracks around the storage bin, the upper track being at elevation 59. From the cross conveyors the rock is tripped into the portion of the bin desired. The bin is located on the edge of the water, and the rock barges tie up alongside of it. It has a capacity of 2,500 cubic yards. At each twelve feet along the face of the bin is a chute through which the rock is loaded into the barges.

Power to run the crusher plant and compressors, generate electricity and pump water to the quarries, is supplied from a power house located between the storage bin and the face of the hill. Steam is developed by six Oswego-McNaul water tube, brick-set boilers, rated at 185-horsepower each, and two Stirling water tube boilers of the same capacity are on order. The fuel used throughout the crusher plant and quarries is coal, and a bunker capable of holding 1,000 tons has been erected on the water front near the power plant and rock storage bin. A crane mounted on top of the bunker lifts coal from barges by means of a clam shell bucket, and the coal is supplied to locomotives and for the power plant through chutes in the rear of the bunker.

Two tandem compound Ball engines, of 300-horsepower each, both driving on the same shaft, transmit power to the crusher plant. All the power is transmitted by rope drives, except that from the main shaft to the counter shafts of the No. 9 crushers and screens, and the drives to the crushers themselves, which are rubber belted. Manila rope 1½ inches in diameter turning on a 10-groove pulley is used on the main drive.

The air compressor equipment consists of one Laidlaw-Dunn-Gordon compressor, with a capacity of 2,200 cubic feet of free air a minute to 100 pounds pressure, and one Franklin compressor with a capacity of 1,200 feet of free air per minute to 100 pounds pressure. Both compressors are compound for steam and air. A 75-k. w. direct current, 115 volt dynamo, direct connected to an Ames engine, furnishes current to light the village, for night work in the quarry, and to run the machinery in the shops. A duplicate of this dynamo is on order. The accessory plant consists of two condensers with air and circulating pumps, feed-water pumps and feed-water heaters.

To assist in erecting the plant and putting the equipment in service a machine shop was built and equipped with the following machines driven by two 15-horsepower motors:

One each—1,100 pound steam hammer; 60 inch radial drill; 30-inch by 30-inch planer; 36-inch by 19 feet engine lathe; 24-inch by 22 feet engine lathe; 36-inch double punch shears; 24-inch shaper universal crank; 20-inch sliding head drill; 6-inch pipe thread and cutting machine; 2½-inch single head bolt cutter; cold saw; drill grinder; duplex emery grinder; frame and stone grindstone; portable boiler testing pump; portable hydraulic crank pin; press; valve reseating machine. A 30-ton crane, 5-foot gauge, for wrecking and heavy work, and a 15-ton crane, 3-foot 6 inch gear, for general work, are also part of the equipment.

Bids will be invited in a few days for the construction by contract of the corral at Ancon. Only the superstructure will be built by contract. The concrete and grading work is being done by the Pacific Division.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The business meeting of the Ancon Woman's Club was held in the clubrooms, April 7, the president in the chair. Designs for a club pin were submitted, the one chosen being a Chaldean triangle in gold. The Club has also authorized the ordering of a number of General Federation pins. The following officers were elected at a board meeting held on April 5: Mrs. George L. Campen, second vice-president, vice Mrs. B. W. Payne; Mrs. George Storla, recording secretary, and Mrs. George Green, librarian. The philanthropy department made a visit to Santa Tomas hospital and the Panamanian cemeteries on Thursday, April 8. The next regular program meeting will be held on April 21, and will be in charge of the educational and literary departments.

The Culebra study club had readings at the meeting on March 25, Mrs. George Brooke being the leader. Mrs. Sheridan has been elected president and Mrs. Clara Mitchell secretary for the remainder of the club year.

Social meetings of the Las Cascadas and Paraiso Women's Clubs were held on Thursday, April 8.

A church and Sunday school entertainment, an evening for the benefit of the church mission society, and a dance for the Red Cross are scheduled to take place at Paraiso in the immediate future.

The Woman's Guild of St. Luke's church will hold its next meeting April 19, at the residence of Mrs. H. R. Carter, at 3.30 p. m.

### Easter Services.

Easter services were held at nearly all the towns in the Canal Zone and the attendance at all services was large. Sunday school festivals and entertainments were given. A Sunday school was organized at Tabernilla and the new organ for the West Indian mission was dedicated, the Ven. Archdeacon Bryan officiating. At the morning services at the Union chapel, Cristobal, the sermon was preached by the Chaplain, Rev. Carl H. Elliott, and there was special music by a choir of fifteen voices. At Culebra, Rev. J. W. Holland, chaplain, Easter services were held in the morning with a Sunday school festival. At Empire music was rendered by an augmented choir at St. Mary's Church. Evening services at Empire were held in the Commission chapel. The Methodist Church, Panama, which draws its congregation from Canal employes in Ancon, La Boca and Panama, held an Easter service in the morning. The Sunday school children had a part in the celebration, and the program of music was largely given by them.

At St. Luke's, Ancon, special music was rendered and the sermon in the morning was preached by the Bishop of British Honduras and Central America, who arrived on the Isthmus on Thursday, April 8. It will be remembered that the Anglican Church Mission on the Isthmus was formerly included in his diocese and was transferred to the American Episcopal Church at the request of the prelate, in 1907, the Ven. Archdeacon Henry B. Bryan being appointed in charge. While on the Isthmus, the bishop preached at Christ Church, Colon, and administered the rite of confirmation at several of the missions. He sailed on Tuesday for Port Limon and other ports

en route to the United States, whence he will proceed to England for a visit. The bishop was accompanied by his son.

The corner stone of the new Baptist church building in Colon-Cristobal, was laid on Sunday afternoon, April 11. Addresses were made by the pastor in charge, Rev. W. L. Weiss, Judge H. A. Gudger and others. The building is of reinforced concrete and will be erected at a cost of \$5,000. There will be seating capacity for 500.

### PERSONAL.

Mr. Alban G. Snyder, U. S. Consul-general to Panama, is a passenger on the *Colon*, which sailed from New York on April 8.

Dr. J. C. Perry, Chief Quarantine Officer, sailed on April 12 to investigate the quarantine situation at the various ports on the north coast of South America.

Dr. J. E. Grant, district dentist, returned to the Isthmus on the *Allianca* on April 8 and has reopened his office at Gorgona.

### Obituary.

Philip M. Whiteman died at Ancon Hospital on April 1, 1909. He was 18 years old, a native of New York, and had been on the Isthmus two years, residing at Empire. His nearest relatives were his father, Frank Whiteman, of Corozal, and his sister, Miss Edina Whiteman, of Ancon.

Joseph N. Gauthier, a sailor from the U. S. S. *Washington*, died at Ancon Hospital on April 5. He was 23 years old and lived at Woonsocket, R. I.

### Missing Men.

Information is desired in regard to the following men:

J. B. Evans, who left his home, Columbus Grove, Ohio, on February 9, 1909, and has not since been heard of by his parents. It is thought he may be on the Isthmus.

William G. Bruce, of near Brunswick, Sheridan County, Mo., who is supposed to have come to the Isthmus in 1906. He was last heard from at Enid, Okla., in December, 1905.

Any one having knowledge concerning either of these men is requested to communicate with THE CANAL RECORD.

### Roman Catholic Services.

Rev. Father M. A. Jiamona, who arrived from New Orleans on Thursday, April 8, has been appointed by the bishop of Panama as pastor at Gatun. Father Jiamona has assumed his duties there and will conduct services at the Catholic chapel in New Gatun as follows: Mass at 7.30 a. m. on weekdays and at 9 a. m. on Sundays and Holy days; catechism on Thursdays and Sundays at 4 p. m.; baptisms on Sundays at 2 p. m.

A conference with the Roman Catholic young men of Gorgona will be held by Father Collins at the Gorgona clubhouse on Saturday evening, April 18, at 7.30.

### Kangaroo Meeting.

Cristobal Court, No. 8, will hold a regular business meeting in the Cristobal lodge hall on Sunday, April 18, at 8 p. m. A number of applications for initiation will be considered, as well as the report of the special hall committee. The comptroller expects to have a supply of the official Kangaroo buttons ready for delivery at this meeting.

### Panamanians on the Gold Roll.

#### THE CANAL RECORD:

It is my understanding that, complying with executive order of the Secretary of War, the Chairman and Chief Engineer directed that citizens of Panama be carried on the gold roll.

In this connection, I would thank you to advise me at your earliest convenience why no steps have been taken by the Gorgona storehouse, Q. M. D., to comply with the above.

PEDRO N. FANTENELLE.

Gorgona Storehouse.

GORGONA, C. Z., March 10, 1909.

[The Executive Order of December 23, 1908, issued by the Acting Secretary of War, by authority of the President, reads, in part, as follows:

On and after this date the employment by the Isthmian Canal Commission of skilled laborers, clerks, and all others who have heretofore been known as gold employes of the Commission, shall be restricted to American citizens and citizens of Panama, except where American or Panamanian labor or service of the character required is not available.

This order does not require that either Panamanians or Americans occupying positions on the silver roll shall be transferred to the gold roll; it simply means that after December 23, 1908, none but Americans or Panamanians shall be appointed on the gold roll, except in such cases where Americans or Panamanians fitted for the particular service required are not available. The approved organization provides for various positions, both on the gold and silver rolls, and in case an American or Panamanian accepts employment in a position on the silver roll he must serve as a silver employe. His occupancy of such a position does not give him the right to be carried on the gold roll, and he must be classified as a silver employe in view of the fact that his position is one covered by the silver organization. There have been, and are now, in the service of the Commission, American citizens who have accepted appointments to positions on the silver roll, when positions on the gold roll were not available, and Americans or Panamanians as long as they hold such positions must be carried on the silver roll.]

### Steam Shovel and Dredgemen.

The I. B. of S. S. and D. M. will hold their regular meeting on Sunday, April 18, at 2.30 p. m. in I. C. C. lodge hall, Empire.

### Concert at Culebra.

A concert will be given by the I. C. C. band at Culebra, on Sunday evening, April 18, at 5.45.

### Misdirected Letters.

Division of Posts, Customs and Revenues, Ancon, C. Z., April 14, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Aldis, L. C.	Lambach, Peter M.
Barber, James C.	Lowe, E. J.
Blachford, Mrs. Clifford	McFee, W. L.
Calvert, M. Fay	Namer, Bruns
Cappers, William	Perrell, Mrs. R. I.
Dalrymple, W. H.	Poyser, Arthur
Davis, Johnie	Rosegrant, J. H.
Franklin, Levi	Savage, S. W.
Gilbert, G. A.	Upson, Mrs. LeRoy
Hamilton, Sam'l	Van Fleet, Frank
Harrison, S. H.	Warner, Fred
	Wickell, Henry

Lost—On Sunday, April 4, a watch, either on train No. 22, (leaving Culebra at 10.36 a. m.) between Culebra and Gorgona, at Las Cascadas station, or at Gorgona station. A suitable reward will be paid if returned to J. H. Jansen, Culebra, C. Z.

## OFFICIAL CIRCULARS.

## Repairs to Buildings.

CULEBRA, C. Z., April 10, 1909.

CIRCULAR No. 183-C-1.

Effective this date, all work in connection with repairs of buildings, including screening, will be done by the Quartermaster's Department. This does not include work already authorized and on hand in the different construction divisions, as such work will be completed by the Division Engineers.

The Chief Quartermaster will take up with the different Division Engineers the question of transfer to his Department of deserving employees needed by him by reason of this order and arrange any other details in connection with this transfer of duties.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Vacation Leave.

CULEBRA, C. Z., April 5, 1909.

CIRCULAR No. 241.

It is provided in Circular 225 (Revised) that "Any authorized absence for two or more consecutive days should be reported to this office and covered by special order as leave without pay."

The issue of special orders in these cases has proved cumbersome and inconvenient. In future it will be sufficient if any absence for two or more consecutive days, whether authorized or unauthorized, is reported to this office by letter, in order that it may be duly recorded and deducted from the employee's service in computing his vacation privileges, but no special order will be issued.

GEO. W. GOETHALS, Chairman.

## Disbursing Officer.

CULEBRA, C. Z., April 10, 1909.

CIRCULAR No. 242.

The duties of Disbursing Officer were assumed by Mr. Wm. M. Wood, April 1, and he will continue to serve in that capacity during the absence from the Isthmus of Mr. E. J. Williams on leave.

GEO. W. GOETHALS, Chairman.

## Waste of Water from Rio Grande Reservoir

CULEBRA, C. Z., April 10, 1909.

TO ALL CONCERNED:

It is directed that any unnecessary use of water from the mains supplied by the Rio Grande reservoir be stopped immediately. This refers particularly to the wasteful use of water for gardens and plants, any infraction of this order by employees of the Commission will meet with punishment.

GEO. W. GOETHALS, Chairman.

## Charges and Credits Against the Republic of Panama.

CULEBRA, C. Z., April 2, 1909.

CIRCULAR No. 240.

Charges and credits against the Republic of Panama, on account of the installation, construction, maintenance, operation and repair of the water and sewer systems, and pavements of the cities of Panama and Colon shall be distributed, kept and stated separately for each city, as follows:

## SUMMARY OF ACCOUNTS.

## A—Water and Sewer Systems:

1. Capital cost.
2. New installation.
3. Operation and maintenance.
4. Replacement.

## B—Reservoirs, Pipe-lines, and Filtration Plants:

1. Interest on capital cost.
2. Maintenance and operation.
3. Replacement.

## C—Paving:

1. Capital cost.
2. New construction.
3. Maintenance and repairs.

## DEFINITION OF ACCOUNTS.

## A—Water and Sewer Systems.

1. *Capital Cost*—This account will be charged with the entire cost of the installation of water and sewer systems with the city, up to June 30, 1907, and two per cent per annum interest on debit balances.

This account will be credited with proportion of collections made. (Item Z-1.)

2. *New Installations*—This account will be charged monthly with all expenditures during the month on account of new installations and extensions to the water and sewer systems.

This account will be credited with any balance remaining after credits to the other accounts. At the end of each fiscal year it will be charged with interest, at two per cent per annum on balances. At the close of each adjustment period the balance in the account (less the estimated cost of any authorized uncompleted work) will be transferred to Account A-1.

3. *Operations and Maintenance*—This account will

be charged monthly with all expenditures during the month on account of operations and maintenance of the water and sewer systems.

This account will be credited yearly with an amount equal to the total expenditures.

4. *Replacement*—This account will be charged monthly with all expenditures during the month on account of replacement or removals in the water and sewer systems.

This account will be credited with amount collected under Item Z-3, and no adjustment will be made in this account until final settlement with the Republic of Panama. Interest on balance will be computed at the rate of two per cent per annum.

## B—Reservoirs, Pipe-lines, and Filtration Plants.

1. *Interest on Capital Cost*—This account will be charged annually with such proportion of the annual interest, at two per cent on the entire cost of reservoirs, pipe-lines and filtration plants to June 30, 1907, as the amount of water consumed in the city during the year bears to the total consumption from the reservoir, or total amount of water filtered.

This account will be credited with collections made under Item Z-4.

2. *Maintenance and Operation*—This account will be charged monthly with such proportion of the expenditures during the month, for the operation and maintenance of the reservoirs, pipe-lines and filtration plants, as the amount of water consumed in the city during the month bears to the total consumption from the reservoir, or to the total amount of water filtered.

This account will be credited yearly with an amount equal to the total charges.

3. *Replacement*—Each year the total expenditures under this head will be divided by the number of years the contract has to run, and the amount so obtained will be added to similar results for each preceding year, with two per cent interest per annum on deferred balance. A proportion of the total so obtained, based on the proportion that the consumption of water in the city during the year bears to the total consumption from the reservoir, or to the total amount of water filtered, will be charged this account.

This account will be credited with collections made under Item Z-6. No adjustment will be made in this account until settlement with Republic of Panama.

## C—Paving.

1. *Capital Cost*—This account will be charged with the entire cost of paving up to June 30, 1907, and two per cent interest on debit balances.

This account will be credited with collections made as per Item Z-7.

2. *New Construction*—This account will be charged monthly with all expenditures during the month for new construction and extension of pavements.

This account will be credited with any balance remaining from collections, after other accounts have been credited. It will be charged yearly with interest, at two per cent per annum on balances, and at the close of each adjustment period, the balance in this account (less the estimated cost of any authorized uncompleted work) will be transferred to Account C-1.

3. *Maintenance and Repairs*—This account will be charged monthly with all expenditures during the month on account of maintenance and repairs of pavements.

This account will be charged with two per cent interest per annum on the balances.

This account will be credited with collections made under Item Z-8.

## Basis for Water Rates.

*Water Works and Sewers.* Z-1—One-fiftieth of capital cost of water works and sewer systems in cities. One-fiftieth of two per cent interest per annum, for twenty-five years.

Z-2—Estimated cost of repairs and maintenance.

Z-3—Estimated amount required to create sinking fund to cover renewals and replacements.

*Reservoirs and Pipe-lines*—Proportion based on water used by the Isthmian Canal Commission and Republic of Panama, of

Z-4—Two per cent interest on original cost, for interest on investment.

Z-5—Estimated cost of maintenance and operation, reservoir and pipe-lines.

Z-6—One and four-tenths interest on original cost—for depreciation.

## Paving.

Z-7—One-fiftieth of capital cost of paving in cities. One-fiftieth of two per cent interest per annum for twenty-five years.

Z-8—One-fiftieth of fifteen per cent of original cost, for maintenance and repairs. One-fiftieth of two per cent per annum for twenty years on balance due at end of ten years (contract period).

The collections made on account of water rents will be credited in following order:

First: To Accounts A-3, Maintenance and Opera-

tion; B-2, Maintenance and Operation. C-3, Maintenance and Repairs.

Second: To Accounts A-4, Replacement; B-3, Replacement. An amount equal to estimates made under Items Z-3 and Z-6.

Third: To Accounts A-1, Capital Cost; B-1, Capital Cost. C-1, Capital Cost. An amount equal to estimates under Items Z-1, Z-4, and Z-7.

Fourth: To Accounts A-2, New Installation, and C-2, New Construction, any amount remaining, after crediting the other accounts.

H. F. HODGES,

Acting Chairman and Chief Engineer.

## COMMISSION CLUBHOUSE.

## Activities of the Young Men's Christian Association.

CULEBRA.

A gymnasium class was begun on Wednesday evening, April 7, which will be one of the regular features of the association as long as it is desired.

Culebra won two out of three bowling games in the duck pin tournament on April 7, the last of the series with Empire.

A Bible class was organized the past week to meet every Wednesday evening at 7.15, lasting for 45 minutes. Twenty-two men have enrolled. Mr. Minear is leading the class.

Plans are under way for the organization of an elementary Spanish class, a First Aid to the Injured class, and a male quartet is being formed.

A medal is being contested for on the bowling alleys for the man making the highest score in duck pins during the month of April.

## EMPIRE.

The Isthmian Instrumental Club gave a concert at the Empire clubhouse on Monday evening, April 5. Fruit punch was served and a large crowd was present.

A game of baseball between teams from the Culebra and Empire Y. M. C. As. was played at the Empire park on Friday morning, April 9. The score was 7 to 4 in favor of the Cristobal team. The batteries were: Culebra, Bayne and Hartman; Empire, King and Euerle.

Persons desiring to meet friends or relatives upon  
arrival of Panama Railroad steamers at Cristobal  
should apply in advance of arrival at the Customs  
office, room 8, building No. 1, Cristobal, for customs  
line permits, which are necessary to obtain admis-  
sance beyond waiting room on pier 11.

All the steamers of the Hamburg-American and  
Royal Mail lines call at Kingston enroute to Colon.

**THE CANAL RECORD**

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or request for information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Cucaracha Slide.

Throughout the dry season the Cucaracha slide has been moving perceptibly, but two steam shovels have been able to excavate the material as it moved toward the Cut and have even been able to push back the line of encroachment. On April 9, a portion of the bank in the slide into which one of the shovels was working fell of its own weight, and a few days later more material fell onto the steam shovel berm. Work was interfered with only temporarily and the berm on which the steam shovels are working was cleared in a few days. The material that fell was all within the Canal prism, and in the long run the break will be an advantage, as it will facilitate excavation.

#### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of March is published in other columns of this issue of THE CANAL RECORD. The grand total of excavation for the month was 4,062,632 cubic yards, of which 2,339,033 were removed by steam shovels, 1,695,342 by dredges, and 28,257 cubic yards by hand and scraper. This grand total includes 182,245 cubic yards of material which were removed for the construction of handling plants, stipping of dam sites, etc., which is not chargeable to actual Canal construction. The total excavation for Canal work proper amounted to 3,880,337 cubic yards.

The laying of concrete in the spillway at Gatun was begun on March 17, and 2,447 cubic yards of concrete had been placed in position at the end of the month. During the month 26,735 cubic yards of rock from Bas Obispo were dumped in the toe of Gatun Dam, the total to date for this purpose being 308,549 cubic yards.

During the month 8,020 cubic yards of crushed rock were produced at Porto Bello

and at Nombre de Dios 2,345 cubic yards of sand were dredged and shipped to Gatun.

The average daily number of laborers employed on actual Canal construction was 14,319.

During the month the Panama Government granted authority to the Commission to police its reservation at Porto Bello, and on March 27 four white officers of the Canal Zone police were stationed at that place. These officers will enforce the laws of the Republic of Panama and will deliver to the Panamanian authorities all persons arrested by them.

#### Electric Current for Colon and Cristobal.

The electrical subdivision of the Mechanical Division is working on an electric light pole-line to connect Cristobal and Colon with the large power generating plant in process of erection at Gatun. This will be a permanent plant, and when in operation will permit of the discontinuance of the electrical generating plants now in Colon and Cristobal, as the Gatun plant will furnish, in addition to the current required there, all the current necessary for the use of the Isthmian Canal Commission and the Panama railroad in Colon and Cristobal.

#### Subsistence Department Storehouse.

A storehouse for cereals and miscellaneous supplies will be built for the Subsistence Department at Cristobal, just south of the bakery, near Dock 11, and alongside one of the railroad tracks that run to the dock. It will be 200 feet long, 50 feet wide, and two stories high. The first story will be built of concrete blocks and the floor will also be of concrete. The second story will be of frame construction. In addition to the storage space it will contain a coffee roasting plant and the packing office.

About 2,500 barrels of flour are used each month in the bakery and sold at the commissaries, and it is proposed to keep in store at all times at least 1,000 barrels. Next to flour rice is used in the greatest quantity. Two grades of rice are used in the hotels and messes and sold in the commissaries. The first is Carolina rice and the second is known as Rangoon rice. Carolina rice is used principally in the hotels and sold to Americans. It is polished and looks more tempting than the Rangoon rice. The latter grade is not polished, and therefore retains the nutriment found in the outer skin of the grain. The West Indian laborers will not eat the rice from which the skin has been removed. Twenty barrels of Carolina rice are used monthly and about 100 tons of the Rangoon. The Carolina rice is purchased in the United States and the Rangoon through an agency at Hamburg, Germany.

Beans and peas also form a large factor. About 125 barrels of split peas, 40 barrels of

dried green peas, 60 barrels of red kidney beans, 40 barrels of lima beans, and 60 barrels of white navy beans are used monthly. About 50 barrels of cornmeal are sold, and in addition the Subsistence Department disposes of 50 cases of 50 pounds to the case, of corn meal, 40 cases of hominy, and 410 cases of other cereals. The new storehouse will also be used for supplies of salt, sugar and vinegar. About 900 barrels of sugar, 500 barrels of salt, and 50 barrels of vinegar are used each month.

#### March Money Order Business.

During the month of March, 1909, the sixteen post-offices in the Canal Zone in which money order business is done, sold 16,084 money orders aggregating \$444,694.16, an increase of \$28,544.35 over the amount reported for February. Of the \$444,694.16 in March, \$322,779.62 was drawn in orders payable in the United States and elsewhere, and \$121,914.54 in orders payable in the Canal Zone. The fees collected amounted to \$1,892.47, and the amount paid and repaid was \$124,470.55.

In the number of orders drawn Cristobal was first, with 3,059; Empire second, with 1,903, and Ancon third, with 1,805. In the total amount issued, Cristobal was first, with \$80,213.06; Gorgona second, with \$49,247.18, and Ancon third, with \$45,422.65. Of the amount payable in the United States, Cristobal was first, with \$67,251.91; Ancon second, with \$38,698.72, and Empire was third, with \$34,082.13. In orders payable in the Canal Zone, Gorgona was first, with \$17,908.31; Cristobal second, with \$12,961.15, and Pedro Miguel third, with \$11,349.19. In the amount paid and repaid, Cristobal was first, with \$18,541.41; Empire was second, with \$16,600.62, and Gorgona was third, with \$12,280.48.

The average of all the orders issued was \$27.65, the highest being at Pedro Miguel, where 842 orders, amounting to \$29,602.77, were sold, an average of \$35.16, and the lowest was at Empire, where 1,903 orders, aggregating \$42,506.91, were sold, an average of \$22.34.

#### Fruits and Vegetables.

Enough bananas are still raised on the Isthmus to supply the Subsistence Department with between 300 and 400 bunches each week, although it is generally supposed that the low prices offered at Colon, and the general cessation of the banana culture in the revolution of 1901, together with the fact that the native can make more money working on the Canal, had wiped out the banana industry. This supply represents the purchase at one market only, Gatun, and larger quantities could be obtained if desired. The bananas are served raw at the messes for European laborers and at the labor kitchens, and are greatly appre-

## NOTES OF PROGRESS.

(Continued.)

ciated by the men. Very little other produce grown in Panama is purchased by the Subsistence Department, because a sufficient quantity is not offered, nor is the supply steady. Oranges served in the hotels and sold in the commissary come principally from Jamaica, sweet potatoes from Barbados, and yams and avocados from Jamaica.

**Rapid Work by Steam Shovels.**

Fourteen shovels in the Empire construction district of the Central Division, on April 13, 1909, excavated 22,693 cubic yards of rock and earth in eight hours, an average of 1,621 cubic yards per shovel for the day. On the same date, 15 shovels working in the Culebra construction district, Central Division, excavated 25,165 cubic yards, an average of 1,678 cubic yards per shovel for the day.

**Compressed Air in Culebra Cut.**

The pipe-line which now runs from Miraflores to Matachin, and which is used for the purpose of furnishing compressed air for operating all sorts of machinery, including the many drills in Culebra Cut, has recently been considerably extended. That portion of it between Paraiso and Bas Obispo consists of 10-inch double strength wrought iron pipe. The line carries a pressure of 100 pounds. This line when located was clear of the Canal prism and slopes, but the recent changes in the width of the Canal through Culebra Cut, and slides in the vicinity of Culebra and Empire have necessitated the moving back of large lengths of the line. As at present located the pipe-line lies back of Culebra Hotel.

**Panamanian Machete Men.**

About a thousand men are engaged in clearing the ground in the ship basin at Gatun and up to the ten-foot contour in the bed of Gatun Lake. In the ship basin, which is about 1,400 acres in extent, all vegetation is cut low, and large stumps are grubbed out. After drying the material is burned. The clearing will be completed in a few weeks, and the burning of the material will also be finished this season unless the rainy weather begins unexpectedly early. All the work in the ship basin is done by laborers employed directly by the Central Division. In the channel the work consists of cutting trees and grass close to the ground. No stumps are removed as the water will be 75 feet deep at the shallowest point in this section of the channel, and ships will not anchor as they will in the basin. The work in the channel is done by a contractor, who employs about 200 men and by laborers of the Central Division.

This is the only part of the work where Colombians, as the native Panamanians call themselves, are employed in large numbers. Practically all the men engaged in the clearing are natives. They are more expert with the machete than are either the West Indian or European laborers, and are not averse to this class of work. Those employed by the Commission get their meals and are quartered at Gatun and at a camp recently established on the east bank of the Chagres River, opposite the mouth of the Trinidad River. No sick camp has been opened at the new camp, which is known as La Boca del

Trinidad, but a field surgical and medicine chest has been supplied, and liquid quinine is furnished free and is used by a majority of the men. The men working for the contractor are supplied with meals by him.

**Oil as Fuel at Miraflores Power Plant.**

At Miraflores the Mechanical Division is erecting a 225,000 gallon tank for the storage of oil for fuel in the electrical plant that will supply power for the construction of the locks at Pedro Miguel and Miraflores. This tank is four and one half times the size of the water tank located on Ancon Hill. The riveting work will be done by pneumatic machinery, an air line having been run to the site for this purpose.

**Visit of Congressmen.**

A Congressional party, comprising the following members of the House of Representatives, were passengers on the *Panama*, which arrived at Cristobal on April 20. They will return to the States on the *Panama*, sailing from Cristobal on Monday, April 26:

D. R. ANTHONY, JR. (R.), and wife, of Kansas.  
W. A. ASHBROOK (D.), and wife, of Ohio.  
W. P. BORLAND (D.), of Missouri.  
C. F. BOOHER (D.), of Missouri.  
G. F. BURGESS (D.), of Texas.  
P. P. CAMPBELL (R.), and wife, of Kansas.  
C. D. CARTER (D.), of Oklahoma.  
P. T. CHAPMAN (R.), and daughter, of Illinois.  
M. F. CONRY (D.), of New York.  
BEN CRAVENS (D.), and wife, of Arkansas.  
J. H. DAVIDSON (R.), of Wisconsin.  
C. V. FORTNE (D.), of New York.  
H. M. GOLDFOGLE (D.), of New York.  
J. A. GOULDEN (D.), of New York.  
R. L. HENRY (D.), of Texas.  
WILLIAM HUGHES (D.), of New Jersey.  
W. D. JAMIESON (D.), and wife, of Iowa.  
A. W. KOPP (R.), of Wisconsin.  
G. A. LOUD (R.), brother and two daughters, of Michigan.  
JAMES MCCLACHLAN (R.), of California.  
J. M. MILLER (R.), and wife, of Kansas.  
G. W. NORRIS (R.), of Nebraska.  
J. F. O'CONNELL (D.), of Massachusetts.  
J. T. ROBINSON (D.), and wife, of Arkansas.  
J. H. STEPHENS (D.), and daughter, of Texas.  
EDWARD T. TAYLOR (D.), and wife, of Colorado.

**Applicants for Married Quarters.**

There were 342 more applicants for married quarters on April 1 than could be supplied. Of this number 76 were on what is known as "List No. 1;" that is, the applicants were in the employ of the Commission on the Isthmus prior to January 1, 1908. Applicants who entered the service subsequent to that date are on "List No. 2." The number of applicants on each list is as follows:

PLACE.	List No. 1.	List No. 2.
La Boca.....	3	25
Ancon.....	.....	15
Ancon Hospital.....	4	3
Corozal.....	2	5
Pedro Miguel.....	2	7
Paraiso.....	1	1
Culebra.....	.....	34
Empire.....	.....	13
Las Cascadas.....	15	8
Bas Obispo.....	1	21
Gorgona.....	1	14
Tabernilla.....	17	32
Gatun.....	17	83
Cristobal.....	29	5
Porto Bello.....	1	.....
Total.....	76	266

The two applications on "List No. 1" at Pedro Miguel represent employees occupying quarters at other places who wish to transfer. At Cristobal 12 of the 29 applications on "List No. 1" are employees of the Panama Railroad Company. Two type-18 quarters

have been authorized for Gatun and four type-17 quarters for Ancon Hospital.

The oldest application on "List No. 1" was made for quarters at Cristobal on January 2, 1908, and the next oldest was made for quarters at Las Cascadas on October 5, 1908. None of the other applications on "List No. 1" has been standing more than five months. The oldest application on "List No. 2" was filed on January 1, 1908.

**Slide at Old Culebra.**

The earth in the slide at Old Culebra is moving slightly toward Culebra Cut. Steam shovels are at work removing the slide and making a bench around the edge of the hill in order that the railroad tracks to the air compressor and crusher at Rio Grande may be thrown back from the edge of the Cut and so kept open during the coming wet season. It has been found necessary to move the Quartermaster's saw-mill and three dwelling houses which were in the way of the shovels.

**Corrections in Medal List.**

The publication in THE CANAL RECORD of the list of employees who are entitled to Canal Medals has enabled the Chairman's office, through the persons interested, to make the following additional corrections in the lists previously published:

**ISTHMIAN CANAL COMMISSION EMPLOYEES.****Names omitted:**

Huntington, Linn M., Aug. 10, 1904.  
Gardiner, Ralph, June 24, 1905.

**Additional names:**

Zuberbier, Herman, June 1, 1904.  
Mendes, A. S., May 16, 1905.

**Changes in names:**

Wassell, Hardin H., to Wassell, H. Eugene, Oct. 9, 1906.  
Crowell, Gustavus B., to Crowell, Gustavus V., Nov. 16, 1904.  
Taylor, Richard B., to Taylor, Richard G., Oct. 24, 1906.

**Fish for Canal Employees.**

The fresh fish sold in the P. R. R. commissaries and served in the Commission hotels and messes is purchased from a merchant in the city of Panama, and between 4,000 and 5,000 pounds are consumed each week. Two grades are purchased, the first, for the Commission hotels and for sale in the commissaries, includes Spanish mackerel, red snapper and grouper; and the second grade, which is as fresh and nutritious but less in demand in the local market, is served in the European laborers' messes on Fridays. The fish are caught in Panama Bay by native fishermen every morning and are delivered to the contractor on the morning they are taken. The Subsistence Department furnishes ice in which the contractor packs the fish for delivery at the commissaries along the line.

**Improvements at Bakery.**

The machinery in the bakery at Cristobal has been rearranged with a view to greater economy in the use of power. Under the new arrangement it is possible to run the oven independently of the other machinery, and in case of a breakdown of the regular motor to run all or part of the plant by an auxiliary motor.

**Change in Panama Time.**

The clocks in the city of Panama were moved forward 18 minutes on April 16, which makes the official time of the city agree with the standard time of the 75th meridian in use on the Panama railroad.

## P. R. R. RELOCATION.

### Work in Gatun Lake Region—Methods Employed.

Work on the relocation of the Panama railroad, with the exception of that on the Miraflores tunnel, is at present confined to the stretch between Gamboa and Gatun, because this is the portion of the line that must be in operation before the water in Gatun Lake is allowed to rise above an elevation of 20 feet above sea-level, which is the elevation of the lowest points on the operated line of the railroad between Tiger Hill cut-off, near Gatun, and Bas Obispo, the beginning of Culebra Cut. The lowest point on the relocation between Gatun and Gamboa will be temporarily at elevation 50 feet. There is no hurry about the stretch of nine miles between Gamboa and Paraiso as the relocation in this section runs on a berm of the Canal through Culebra Cut and cannot be used to advantage until the excavation in the Cut is completed. From Gatun to Gamboa, however, the work must be pushed in order that the operation of the railroad may not impede the Canal construction and that railroad traffic may not be interfered with by the water in Gatun Lake. Between Paraiso and Corozal, a distance of about five miles, there is comparatively little work to be done, and this will be completed as soon as possible, as the traffic over the main line between Paraiso and Corozal is daily increasing. The purpose of completing this section of the relocation at an early date is in order that it may be used for the Panama railroad trains, and the present main line may be turned over to the construction trains.

There is no doubt that the relocated railroad will be ready for operation between Colon and Gamboa, a distance of 31 miles, within two years. The permanent track is now in use from Colon to Gatun, a distance of seven miles, and a construction track has been extended up the Gatuncillo Valley from Gatun, a distance of nearly two miles. From this point to the end of the track that extends north from Gamboa bridge, a distance of 15 miles, the work is being prosecuted at three points—Monte Lirio, at the crossing of the Gatuncillo River, seven miles south of Gatun; Frijoles, 14 miles south of Gatun, and a point near Caimito, 17 miles south of Gatun.

Closing up the gap between the end of the track that has been extended up the Gatuncillo Valley from Gatun and the north end of the stretch already laid at Frijoles forms the greater part of the work now in hand. A mile of grading has been done beyond the end of the track near Gatun, a mile has been graded at Monte Lirio running south from the Gatuncillo River, and the grading has been completed for a mile north from Frijoles. Grading gangs are at work on one-fourth of the remaining eight miles. Clearing through the jungle, which includes the cutting not only of the ordinary grass, but also of some giant hardwood timber, is half completed.

The work near Frijoles is reached by a spur track-running back from that station on the operated line along the Frijolita River east into the jungle about two miles. This work was begun at the beginning of the present dry season, and already two miles of track have been laid and an additional

mile has been graded. The additional mile that has been graded reaches south from the track toward the north end of the track near Caimito, and there is a gap of two miles between these two points. Grading is making good progress from both sides of this gap, and it is expected that by July the Frijoles stretch of track will be joined with that at Caimito, making a connection between the operated line at Frijoles and Gamboa bridge on the relocated line.

Eight miles of construction track have been laid in the section between Caimito and Gamboa Bridge and the grading is being pushed north toward Frijoles. The line lies across the valleys of the little rivers that flow into the Chagres from the eastern side of the watershed, and the construction is therefore alternate cut and fill, with the proportion of embankment largely in excess of the cuts. A part of the embankment was made by driving trestle and filling with spoil from Culebra Cut. Over 12,000 feet of trestle have been built, and most of it has already been filled.

Three systems of labor have been tried in the work between Gamboa and Gatun: (1) Construction by the railroad company's own labor forces; (2) an outright contract at a fixed price per yard; (3) what is known as "task work." In all work except grading and clearing the railroad company employs men by the hour and directs them through its own foremen.

The outright contract is made with a construction man on the Isthmus who agrees under bond to do excavation and grading at a flat rate; the measurement of material to be made by cross section. Three classes of material are recognized—earth, loose rock, and solid rock. The company furnishes dynamite, tools, Decauville cars and tracks. The contractor supplies labor and supervision, and agrees to accept the decision of the chief engineer of the Panama railroad with regard to the classification of material, in case dispute arises. No locality is specified in which work is to be done, the contractor agreeing to do it wherever directed and in the manner desired by the railroad company's engineers. At present he has a force of men at work in the jungle near Buena Vista, between Frijoles and Gatun, and, although this is the most isolated part of the line, no difficulty is experienced in keeping the men at work, and the grading is done to the satisfaction of the company. So satisfactory has this method proved that another contract is under consideration.

"Task work" has developed unsuspected working ability in the West Indian laborer. He is paid 10 cents for each Decauville car load of material ( $\frac{1}{2}$  cubic yard) moved. The engineers of the company give stakes and direct the work, the company furnishes Decauville cars and rail, and picks and shovels. No classification of material is made as the company does all the blasting necessary to get rock into small enough pieces to be handled by one man. A number of negroes cooperate, some doing the digging and loading and others the dumping and spreading. They work hard and steadily until their "task" is done. The company requires that at least 15 cars be loaded for each man. The work is thus advanced more rapidly than if the men were allowed to determine the length of their own "task," and the equipment furnished by the company is kept

more constantly in use. Frequently the "task" is finished in six hours while on an hourly basis one man could hardly move 15 cars of material in nine hours. The company profits, because the work moves rapidly, it saves on supervision, and as the men often work in two shifts it keeps its Decauville equipment in use from 12 to 15 hours a day. The only supervision necessary, in addition to that of the engineering force, is that of the "taskmaster" who sees to it that the cars are filled and dumped and keeps account of the number. Working under this system is economical only under certain conditions, that is, where the work is all of one class and where the amount of excavation makes it unprofitable to use steam shovels.

When Gatun Lake is at its normal level of 85 feet above the sea, all the valleys crossed by the relocated line will be filled with water on both sides of the track up to that elevation. As there is a large predominance of embankment the railroad will present the appearance of having been constructed on a series of fills that connect an alternate series of peninsulas projecting into the lake. All the valleys, excepting the Gatuncillo and Chagres, are being bridged with reinforced concrete culverts kept below subgrade, so that there will be a continuous roadbed over the openings.

The Chagres is already spanned by the bridge at Gamboa and the Gatuncillo will be crossed by a bascule bridge, which will give access to the large lake area east of the railroad. This bridge has been authorized, although the details have not been completed to the point where bids can be requested. The clear channel when the lift is up will be broad enough to permit of the passage of any ship that can pass through the Canal locks. In other words the upper lake basin will be accessible to ships larger than any now afloat.

Several smaller rivers are crossed requiring arch culverts of large size, and as the elevation at which the road is being built is high above the stream beds, many of the culverts are very long. Two of these large culverts may be seen from the operated line between Pedro Miguel and Miraflores. They are built of concrete, have a 20-foot span, and are 24 feet high. Longer than these but otherwise the same are the culverts over the Juan Grande, Frijoles, Frijolita, and Agua Salud rivers between Gamboa and Gatun.

### Red Cross Dance at Culebra.

The dance held at Culebra on the night of April 16, for the benefit of the Red Cross, added \$650 to the treasury of the local organization. Since the dance a number of people have sent in the pay for their ribbons, and a few ribbons have been returned. All those who do not wish to pay for the ribbons will kindly return them at once to the treasurer in Culebra, in order that the accounts for the dance may be closed up.

### Fourth of July at Cristobal.

A meeting of citizens of Cristobal will be held at the Commission clubhouse on Friday night, April 23, at 8 o'clock, for the purpose of effecting a permanent organization and arranging a program for the celebration of Fourth of July. A committee of nine, appointed at the meeting last Friday night, will make a report.

## CANAL WORK FOR MARCH.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., April 17, 1909.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of March, 1909:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
<i>Steam Shovel Excavation—</i>					
In prism.....	Cubic yards.....	130,311	1,941,641	139,877	2,211,829
Auxiliary.....	Cubic yards.....	25,023	87,794	.....	112,817
Total.....	Cubic yards.....	155,334	2,029,435	139,877	2,324,646
<i>Dredge Excavation—</i>					
In prism.....	Cubic yards.....	603,046	.....	924,388	1,527,434
<i>Hand and Scraper Excavation—</i>					
In prism.....	Cubic yards.....	.....	24,653	.....	24,653
Auxiliary.....	Cubic yards.....	.....	.....	3,604	3,604
Total.....	Cubic yards.....	.....	24,653	3,604	28,257

## Atlantic Division.

## GATUN LOCKS.

*Excavation*—Shovel excavation was continued in the lock chamber, and auxiliary shovel excavation was made to the south of the cement house for the barrel burning plant, and to the east of the locks for a railroad connecting the 75-foot level with the high line of the Panama railroad. Dredge excavation by dredge No. 85 was continued at the north end of the lock excavation. The dredge excavation by dipper dredge *Mindi* between the cableway dock and cement shed dock was completed.

*Unloading Cableway Dock*—The construction of this dock was completed.

*Cement Shed*—During the month the framing of the main posts and roof trusses was commenced, and at the end of the month was 50 per cent completed. The first cantilever truss was assembled and erected.

*Barrel Burning Plant*—The excavation for the fire pit in the barrel burning plant was commenced, and 416 cubic yards of hand excavation was made.

*Division Storehouse Dock*—The construction of this dock was commenced and completed, 110 piles being driven and approximately 5,000 square feet of decking laid. The dock is now ready for service, including a launch landing and incline leading from the launch landing to the level of the storehouse platform.

*Storage Pile Tunnels*—These tunnels are

completed and ready for the installation of the valves.

*Automatic Electric Road*—During the month 1,340 cubic yards of earth and loose rock were removed from the excavation for the roadbed. The grading was completed. The rock ballast throughout the entire length of the road was also completed, and the road is now ready for the track to the approach trestle of the mixer building.

*Industrial Electric Road*—The excavation for the roadbed of this railroad was commenced, and 300 cubic yards of loose rock and earth were removed. At the end of the month, 1,200 feet of 3-track and 500 feet of

completed. During the month, all forms for the first floor were built and put in place. The erection of the superstructure was commenced, and 70 per cent of the framing completed. Posts for turbine room were set up, and two trusses put in place. The discharge culvert was completed during the month, and all masonry work completed excepting finishing the paving and construction of the water table around the building. All conduit has been placed in the boiler room floor and in one-half of the turbine room floor. Three base condensers have been set.

*Drafting Room*—Work has been continued on erection details. Plans for all-steel metal forms for the locks were completed and forwarded.

## GATUN DAM AND SPILLWAY.

*Stripping*—Work was continued stripping the area to be covered by hydraulic fill in the valley east of the spillway, and was practically completed over the bottom of the valley and a short distance up the sides of the hills. The bed and banks of the old Chagres were thoroughly cleaned of rock and debris down to original clay, and by the end of the month all preparations were completed, and the dredge was ready to begin pumping material into this channel. The muck ditch across Gatun Island was completed, and its continuation along the axis of the dam carried some distance into the adjacent hills.

*Hydraulic Fill*—No material was pumped into the central part of the dam during the month, the one available dredge being utilized in filling a swampy section in the north toe and in dredging the French canal between the spillway dock and the lock slip, where stone and sand barges had been grounding. Three 20-inch drain pipes were installed along the south side of Spillway Hill, which will act as permanent outlets for the surplus of water from the hydraulic fill.

*Enrockments*—The construction of the north rock fill, east of the spillway and to elevation + 24 was continued, using Bas Obispo for the drainage system along the toe of the dam and north of same in the old river channels, and waste material from excavation at Mindi and the locks for other sections. On the south toe, dumping of material from the locks and Mindi excavations was continued both east and west of the spillway on the lower level, and east of the spillway on the higher level.

*Concreting*—The laying of concrete began on March 17, the construction of the floor north of the spillway dam being first undertaken. To the end of the month 2,447 cubic yards were placed.

## PORTO BELLO.

At this point work on the power plant site, quarry operations and carpentry work were continued. During the month 8,020 cubic yards of crushed rock were produced.

## NOMBRE DE DIOS.

Work was actively pushed at this point, and during the month 2,345 cubic yards of sand were dredged and shipped to Gatun.

## HARBOR AND CHANNEL SECTION.

*Dry Excavation Below Sea Level, Mindi*—During the month 28,957 cubic yards of earth and 41,756 cubic yards of rock were excavated by two 70-ton Bucyrus steam shovels and one Model 91 Marion steam shovel, an average of 23,571 cubic yards per month of 27 working days.

*Dredging, Uccan to Mindi*—Three dredges

2-track roadbed were completed, ready for ballast.

*Mixer Building*—All foundations and floors in this building were completed. The main timber work was erected up to the third floor. Eight 2-yard mixers, with their superhoppers, were erected and placed in position. Erection of the 4-track approach trestle was commenced, and is 75 per cent completed.

*Cableway Towers*—During the month the riveting on the four tail towers of the lock cableways was completed. The counterweights for the tail towers of the two unloading cableways were placed and the towers painted. The single unloading tail tower was erected. The single head tower of the unloading cableway was erected, and the machinery placed in it and in one of the duplex head towers. A temporary power line was brought across the lock and connected with the head towers of the unloading cableways. This line has also been extended to the tail towers of the unloading cableways and to the head towers of the lock cableways.

*Power House*—Work on the power house was satisfactorily continued during the month. About 11,250 square feet of basement floor and 2,000 square feet of walls have been given a water-proof coat of tar and Period roofing paper. About 3,000 square feet of floor was finished by masons, the boiler room section having been com-

removed from the prism 426,864 cubic yards of earth and 34,344 cubic yards of rock. In addition, the *Mindi* removed 14,047 cubic yards of earth and 31,000 cubic yards of rock from the approach channel to the Gatun locks, and 2,400 cubic yards of earth from the slip at pier No. 14.

On March 31st, 40 feet of water could be carried from 0 to Mile 2 + 4,950 feet; 30 feet to Mile 3 + 750 feet; 20 feet to Mile 3 + 1,650 feet; and 15 feet to Mile 4 + 4,900 feet, the end of the Cut.

#### MUNICIPAL ENGINEERING.

The usual work of this subdivision was satisfactorily performed during the month, and included work on the Gatun roads, roads at Cristobal, water works at Gatun, Cristobal and Mount Hope, and various building construction and maintenance.

#### Central Division.

During the month of March the total amount of material excavated in the Central Division was 2,065,827 cubic yards, of which 808,524 cubic yards were classified as earth and 1,257,303 cubic yards as rock.

Of this quantity 2,041,174 cubic yards were removed by steam shovels, and 24,653 cubic yards by hand in the Bohio district.

The quantity of material removed from the Canal prism was 1,966,294 cubic yards, while 87,794 cubic yards were removed from the Obispo Diversion, 6,342 cubic yards cast over above grade at Matachin and 5,397 cubic yards removed at incline track at Matachin.

The daily average number of steam shovels at work during the month was 56.93 as compared with 56.05 for the month of February.

For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	W/kg days in month	Av. amount excavated per shovel per 8-hour day.
		Rock	Earth			
1908:	cu. yds.	cu. yds.	cu. yds.			cu yds
Mar.....	1,617,352	830,510	786,842	53.65	26	1,159
1909:						
Mar.....	2,041,174	1,248,197	792,977	56.93	27	1,328

Rainfall at Empire: 1908, 0.41 ins.; 1909, 0.21 ins.

The above table shows that the average output per shovel day was over 14½ per cent greater in March, 1909, than in the corresponding month of the previous year.

During the month 185,816 cubic yards of material excavated from the prism were transported to the relocation of the Panama railroad between Caimito and Gorgona, and dumped as filling in the embankment for the new roadbed, the total to date for this purpose being 773,084 cubic yards.

During the month 26,735 cubic yards of rock from Bas Obispo were transported to Gatun, a distance of 23 miles, and dumped in the toe of the dam, the total to date for this purpose being 308,549 cubic yards.

The following work has been done at Gatun and Boca Mindi:

At the anchorage basin at Gatun, timber has been cut on 264 acres, 192 acres of which are completely cleared, trees burned and roots grubbed; while on the balance—72 acres—the timber has merely been cut. In

addition, approximately 100 acres have been worked by machete gangs.

In the channel clearing work between Gatun and Boca Mindi, the timber has been felled on 282 acres. Of this amount 60 acres have been burned over once, and 115 acres partially prepared for burning.

In the contract work with Charles Alberts at Gatun, 223 acres have been cut, the timber on 28 acres of which has been piled and burned.

#### Pacific Division.

##### DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 239,516 cubic yards in this subdivision.

At Pedro Miguel, in addition to the regular operations, excavation of the tail track for approaches to the storage trestle was completed; the framing of the west trestle was completed, and driving of the pile trestle approach was begun. Excavation of the core of the west dam was continued and the filling of same begun.

At Miraflores excavation for the power house was practically completed and placing of concrete footings begun. Excavation for diversion of the Cocoli River was well advanced. The excavation and foundation for the cement storage shed was begun. Filling in puddle core of the west dam was continued. Extension of the track on the dike along the east side of the prism between Miraflores and La Boca was begun, with a view to obtaining direct rail communication between the wharf for unloading sand, which is under construction, and the lock site.

At Ancon quarry the preliminary work of clearing and grading the site for the crusher plant and installation of tracks was continued.

##### DISTRICT NO. 2—DREDGING, AND LA BOCA SHIPWAYS.

Five dredges were in operation during the month, securing the following output:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxil'y	
Culebra	Suction	310,161	.....	Scow measurement
Gopher	Ladder	172,477	.....	Place measurement
Mole...	Ladder	125,159	.....	Place measurement
No. 14...	Ladder	140,141	.....	Place measurement
Dipper.	Dipper.	117,758	.....	Place measurement
Total.	.....	865,696	.....	

The necessary maintenance of floating equipment was taken care of, and a large amount of other mechanical work was performed at the shops.

General work of clearing and grubbing in in the Canal prism south of Miraflores lock site was continued until March 9, during which time an area extending over 107,000 square feet was grubbed and cleared of stumps, roots, brush, etc.

After March 9 the force was transferred to the work of clearing, grubbing and grading for the diversion ditch on the east of the Canal between the Miraflores lock site and La Boca. The excavation of this diversion has been begun with an orange peel dredge. Decauville equipment has also been used in removing a high point extending across the site of the proposed ditch.

##### DISTRICT NO. 3—MUNICIPAL AND BUILDING WORK.

A large number of jobs of building and municipal work were completed, including work at the filtration plant, Ancon steam plant, the La Boca quarry, the Rio Grande crusher, the Ancon reservoir, the Ancon

corral, the Panama-Corozal road, the Corozal-Pedro Miguel road, the maintenance of water works and sewers, the construction and maintenance of ditches and drains for sanitary work, and the construction and maintenance of buildings.

#### Mechanical Division.

The manufacturing and repair work of this division was satisfactorily performed.

#### Relocation of Panama Railroad.

Work on the Corozal line revision was continued. During the month 9,318 cubic yards of earth and rock were excavated and 10,831 cubic yards of material placed in embankment.

The above work consists in changing the line of the present Panama railroad south of Corozal, in order to reduce the great curvature in the line at that point.

During the month on the relocation work proper 101,186 cubic yards of excavation were accomplished, and 296,556 cubic yards of embankment. At the end of the month the total quantity of excavation accomplished was 987,214 cubic yards, and the total quantity placed in embankment was 3,860,020 cubic yards.

The necessary work of constructing trestles for filling and the construction of bridges and culverts was continued.

The work of excavating and timbering the full section of the Miraflores tunnel bore has progressed from each end; there remains about twenty days' work to complete this.

During the month, 9,753 linear feet of permanent track were laid, making a total to date of 83,891 linear feet.

The permanent depot at Gatun has been completed and is ready to be put into use.

The force of laborers during the month averaged 2,183 men.

#### Quartermaster's Department.

During the month there were 212 additions to the gold force and 235 separations, making a net decrease of 23.

There were received from Barbados 530 West Indian laborers, who were assigned to the Panama Railroad Company for service on the relocation work. An additional shipment of approximately the same number is expected to arrive before the middle of April.

The construction of the following additional quarters has been authorized: At Ancon—I type-10 married quarters, 1 type-20 married quarters, 4 type-17 married quarters. At Culebra—I type-10 married quarters. At Gatun—2 type-18 bachelor quarters.

#### Subsistence Department.

The operation of the Hotel Tivoli during the month shows a profit of \$3,787.06. There was a loss of \$558.11 on the line hotels, and a profit was made on the operation of the kitchens and mess halls. The net operations of the Subsistence Department for the month show a profit.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court held three sessions in March, and two civil cases were disposed of. In the Circuit Courts 14 civil and 36 criminal cases were disposed of, and in the District Courts 90 civil and 550 criminal cases were disposed of.

#### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues of the Canal Zone in March aggregated \$23,433.01. The general revenues amounted to \$14,678.29.

The postal revenues were \$6,860 on ac-

count of stamp sales, \$2.25 on account of newspaper postage, and \$1,892.47 on account of money order fees. Money order sales during the month amounted to \$444,690.16, of which \$322,780.62 was payable in the United States and foreign countries and \$121,909.54 in the Canal Zone. Eighty-one dispatches of mail were made to foreign ports by the Cristobal exchange office.

Twenty-one vessels entered at and 19 cleared from the port of Ancon, and 22 vessels entered at and 22 cleared from the port of Cristobal.

#### DIVISION OF POLICE AND PRISONS.

The Panama Government granted to the Commission authority to police its reservation at Porto Bello, and on March 27 four white police officers of the Canal Zone were stationed at that point. These officers will enforce the laws of the Republic of Panama, and will deliver to the Panamanian authorities all persons arrested by them.

On March 12 Adolphus Coulson, a Barbadian, who was convicted on March 1, 1907, of murder in the first degree and sentenced to be executed on September 13, 1907, was hanged at the Culebra penitentiary.

On March 23 a negro woman, Cecile Pelage, a native of Guadeloupe, was murdered at Bas Obispo by an American negro, Benjamin Armstrong. Armstrong, after cutting the woman's throat with a razor, attempted suicide in the same manner.

The number of arrests during March was 561, as compared with 472 in February, an increase of 89.

#### DIVISION OF PUBLIC WORKS.

The usual business of this Division was conducted during the month. The amount of water consumed in Panama during the month was 29,063,000 gallons; the total consumption in Colon during the month was 21,207,730 gallons.

#### DIVISION OF FIRE PROTECTION.

Twenty fires occurred during the month, 17 in the Canal Zone, 2 in Colon and one in the city of Panama. The estimated damage to property in the Canal Zone was \$617.

#### DIVISION OF SCHOOLS.

The total enrollment in the white schools during the month was 675, and the average daily attendance 523. In the colored schools the total enrollment was 1,421, and the average daily attendance 901.

#### Department of Sanitation.

The health conditions on the Isthmus continue to be very satisfactory, and a comparison of the death rate for the same month in former years, both for the employees and for the total population, shows a decrease.

There has been no outbreak of disease at any point, and no case of yellow fever, plague or smallpox during the month. The last case of yellow fever developed in May, 1906, and the last case of plague in August, 1905.

Respectfully,

GEO. W. GOETHALS, *Chairman.*

#### Missing Man.

Information is desired in regard to John MacDonald, who left Winthrop, Mass., for Panama in June, 1908. Any one having knowledge concerning him is requested to communicate with A. P. Mason, San Pablo, Canal Zone.

#### Concert by I. C. C. Band.

The I. C. C. band will give a concert at Las Cascadas on Sunday, April 25, at 5.30 p. m., and at Hotel Tivoli on Sunday, May 2,

## LIMON BAY BREAKWATER.

### Report of the Special Board to Investigate the Subject.

The Board appointed on September 12, 1908, to consider the projects for breakwaters in Limon Bay made its report to the Chairman and Chief Engineer on March 25, 1909. The report has been approved and is as follows:

The project for the protection of the Atlantic entrance to the Canal, on which the Board of Consulting Engineers based its estimate of \$5,300,000 in 1906, consisted of an east jetty, extending from deep water to Manzanillo Point about one mile long, and a west jetty, extending from deep water to the head of Limon Bay parallel to the Canal, about 4½ miles long.

The project submitted by Maj. Wm. L. Sibert, Division Engineer of the Atlantic Division, provides for two breakwaters; one west of the Canal entrance and 1-96/100 miles long, with its outer end in 44 feet of water and extending toward Toro Point, and one east of the Canal entrance one mile in length and extending towards Manzanillo Bay. The cost of these breakwaters is estimated to be \$11,432,000.

The Board held its first meeting at Culebra on September 17, 1908, and after reviewing all the available information and considering Major Sibert's report, decided that the Mindi River, at its mouth, should be gauged and the silt discharge ascertained both at Boca Mindi, near Limon Bay, and in the French canal below its connection with the Mindi River. The information thus obtained is contained in Major Sibert's letter of February 6, 1909, and accompanying letters. The results may be summarized as follows:

*Mindi River: (Results of 25 observations at mouth, from October 29, 1908, to December 24, 1908.)*

Maximum water discharge, 5,249 cubic feet per second.

Minimum water discharge, 2,257 cubic feet per second.

Average water discharge, 3,891 cubic feet per second.

Maximum sediment discharge in 24 hours, 1,680 cubic yards.

Minimum sediment discharge in 24 hours, 722 cubic yards.

Average sediment discharge in 24 hours, 1,231 cubic yards.

*French Canal: (Results of 22 observations.)*

Maximum water discharge, 2,507 cubic feet per second.

Minimum water discharge, 814 cubic feet per second.

Average water discharge, 1,567 cubic feet per second.

Maximum sediment discharge in 24 hours, 949 cubic yards.

Minimum sediment discharge in 20 hours, 223 cubic yards.

Average sediment discharge in 24 hours, 498 cubic yards.

The above results show that the silt deposited from the two channels in question in the Canal channel now being excavated, is only a small proportion of the total silting in this channel and as such is practically negligible.

Prior to the receipt of this information, the Board felt the necessity of ascertaining, more or less generally, the deterioration of the channel in Limon Bay, both from the effects of the prevailing strong breezes from the north—known locally as the "trade winds"—and also from the occasional severe storms, or "northerly," that occur in the winter months, and the Division Engineer of the Atlantic Division was requested to have such records kept of the condition of the channel as would give adequate in-

formation on this point. Acting Division Engineer Harding reported, under date of November 7, 1908, that the fill in the channel during one month (September 25 to October 25, 1908) in the outer three miles, and when no unusual weather conditions existed, amounted to about 272,000 cubic yards.

A "norther" of moderate severity occurred from February 1 to 3, 1909. Two members of the Board visited Colon on the morning of February 2, and observed the effects of the "norther," so far as they were in evidence. Division Engineer Sibert's report of the effect of the "norther," so far as the deterioration of the channel is concerned, is dated March 17, 1909.

This report and all foregoing reports and blue prints mentioned herein have been filed in your office.

Surveys of the channel prior to the "norther" had been made on December 24, 1908, and January 26, 1909, and surveys after the "norther" were made on February 10 and March 3.

Any results must be considered as more or less approximate. A layer one foot thick over the entire 500-foot bottom width, from the outer end of the dredge channel to the head of the cut, contains about 450,000 cubic yards. The data obtained, however, clearly show that the fill due to the "norther" was considerable, and indicate that about 700,000 cubic yards of fill occurred between the survey of December 24, 1908, and that of March 3, 1909. Of this amount the fill throughout the entire channel caused by the "norther" as shown by surveys immediately before and after the "norther," was about 400,000 cubic yards. To January 1, 1909, the fill has increased the total original excavation about two-thirds.

Based upon the information described hereinbefore, the Board is of the opinion that silting, due to sediment reaching from Limon Bay through the French canal and through Boca Mindi, is relatively of little importance and can easily be controlled by dredging. The effect of the ordinary wash of waves in Limon Bay, and the effect of "northerly" and other unusual storms, is to shoal the channel to an extent which, while it could be handled by dredging, if uniform, nevertheless should be prevented by artificial structures. Unless this be done, a single storm of unusual severity and of long duration might so fill a portion of the dredge channel as wholly to interrupt navigation for a considerable period. To obviate this possibility the Board is agreed that breakwater protection for Colon harbor is desirable.

In passing upon the trace to be given the breakwater, the Board has not omitted from consideration the fact that the Consulting Board of 1905, both in its majority and minority report, recommended a west breakwater substantially parallel to the dredge channel in Limon Bay, instead of substantially perpendicular to the same. The result of adopting the trace recommended by the Board of Consulting Engineers would be to give a relatively long and narrow sheltered area within which entering waves might not dissipate their energy sufficiently to permit vessels to ride easily within the sheltered area and at the docks on the water front. Such has been the experience on the Great Lakes with harbors entered between parallel piers. It has been found necessary

to provide a stilling basin, either within or exterior to the piers, to obviate inconvenience and dangers resulting from the racing of the waves in the channel between the piers.

While the parallel breakwater would undoubtedly protect the dredged channel, yet it would discard at once the advantage usually recognized as important, of sheltering as large an anchorage area as possible.

While it may readily be possible that there will be, south of Limon Bay, an artificial anchorage excavated so that vessels may moor closer to Gatun locks, yet the Board considers that the existence of a large sheltered basin in Limon Bay, immediately inside the throat of the entrance, will always remain a distinct advantage to navigators.

For these reasons the Board favors so directing the breakwater as to shelter an anchorage area as well as to protect the channel and inclines to the general direction recommended by the Division Engineer, rather than to that recommended earlier by the Board of Consulting Engineers.

It may be noted that while the estimated cost of the breakwater along the lines recommended by the Division Engineer is very much greater than the cost stated for the breakwater by the Board of Consulting Engineers, yet this difference does not result from the trace adopted.

The breakwaters recommended by the Consulting Board to protect the entrance of the proposed sea-level canal, although in water of less average depth than that proposed by the Division Engineer, nevertheless, on account of their greater length, would contain practically the same amount of material, if built with the same slopes, while breakwaters on similar lines, to protect the entrance now proposed for the 85-foot level canal, would be still longer and would probably contain even a greater amount of material. The discrepancy in estimated cost arises evidently from placing a different value on the unit price, and perhaps from a different estimate of the amount of material which will be lost by sinking into the soft bottom.

For the complete protection of the harbor, the breakwaters should converge in a general direction toward the outer end of the dredged channel from Toro Point, on one side of the channel, and from a point north of the mouth of Manzanillo Bay, on the other.

As the general direction of storms is from the north or west of north, the Board believes that adequate protection of the harbor and Canal channel can possibly be obtained by the construction of the west breakwater only, and that the construction of the east breakwater should be deferred until further observations have been taken and information obtained relative to the necessity for it.

If the bottom proves to be equally favorable everywhere the general direction for the breakwaters shown on the blue print submitted by Major Sibert is favored by the Board. It is the Board's view, however, that the exact location and type of the breakwaters are points intimately connected with the character of the bottom upon which they will rest, and that until more complete knowledge has been acquired no definite recommendations on these points can be made.

The Board believes that borings along and across the line of the proposed breakwaters should be made to develop the rock surface underlying the mud, over an area covering

the positions of the breakwaters recommended by Major Sibert and Major Jadwin.

It is the view of the Board that where the rock is found close to the surface, a breakwater placed with its body directly upon the bottom will probably be the most economical; if, however, it be found that for a considerable distance there is a great depth of soft material over the rock, the use of a mattress under the body of the structure may effect a saving; if this latter condition be found to exist, it is suggested that experiments be undertaken with mattresses of bamboo fascines, or other suitable material, loaded with rock, to ascertain whether they will have sufficient durability to warrant their use.

Judging from experience at different harbors in the United States, the estimate submitted for the construction of the breakwaters proposed is ample. If, however, the borings show that the material over the rock is of a depth and character such that movement under the mass of the breakwater may take place to the extent which has been found in certain other localities on the Isthmus, the amount of rock which would be required to make a suitable rubble mound cannot be estimated with accuracy. If this condition be found to exist, the Board believes that study should be given to other types of breakwaters of lighter cross-section although possibly of greater cost per unit of volume. Very respectfully,

H. F. HODGES, Senior Member of Board.  
D. D. GAILLARD, Member of Board.  
H. H. ROUSSEAU, Member of Board.

#### Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, April 17, 1909:

## COMMISSION CLUBHOUSES

### Activities of the Young Men's Christian Association.

#### REPORT FOR MARCH, 1909.

Total membership.....	1,230
Total number of bowling games.....	5,838
Number different tournaments: billiard, pool chess, etc.....	7
Total number of tournament players.....	142
Total number pool and billiard games.....	12,330
Total income from soda fountain.....	\$2,141.78
Number different men using gymnasium.....	110
Total attendance of men using gymnasium.....	601
Number enrolled in chess and checker clubs.....	34
Number enrolled in glee clubs.....	6
Number enrolled in dramatic and minstrel clubs.....	35
Number enrolled in camera clubs.....	15
Number enrolled in bible classes.....	30
Number enrolled in educational classes.....	39
Number of members of library.....	541
Total number of books withdrawn.....	1,227
Number of Sunday meetings.....	1
Average attendance.....	90
Number of imported entertainments.....	8
Attendance.....	1,796
Number of local entertainments.....	3
Attendance.....	700
Number of functions outside association management.....	10
Attendance.....	1,650
Number of afternoons for women.....	8
Attendance.....	294
Number evening functions to which women were invited.....	19
Attendance.....	805
Different men on committees.....	32
Number of men called on in hospitals.....	78
Number of letters written at public tables.....	3,979
Total attendance at buildings.....	46,884
Average attendance per day at buildings.....	1,512

#### BOYS' DEPARTMENT (AGES 10-16).

Number of members.....	59
Number of afternoons open to boys.....	44
Total attendance.....	528
Attendance at gymnasium exercises.....	333

#### CRISTOBAL.

The clubhouse has been fitted throughout with Tungsten electric lights, which add to the attractiveness of the building at night.

The pool and billiard tables have lately been thoroughly overhauled and recovered, and are now in first-class condition.

In the bowling alleys, ten pins have displaced duck pins. Local tournaments will be held for the purpose of selecting members for the regular team.

#### EMPIRE.

A chess and checker club was organized on Wednesday evening, April 14, at the Empire Y. M. C. A., and the following men were elected as officers: President, Mr. C. P. Rose; secretary, Mr. H. C. Russell; coach, Mr. Charles Pulsifer. The club will meet every Wednesday night, and all who are interested in the games of chess and checkers are invited to join.

The Empire duck pin bowlers won first place in the tournament which closed last Saturday night, with a lead of seven games over the Cristobal Y. M. C. A. team, which got second place. Each man on the Empire team will receive a gold medal, and a trophy goes to the association.

Last Saturday night, the Empire Y. M. C. A. indoor baseball team defeated the Gorgona team by a score of 18 to 16. The battery for Gorgona was Weiser and Cuff. For Empire, Moor and Ruerle; umpires, Kramer and Peutardo.

#### Tide Table.

The following table shows the time of high and low tides at Panama for the week ending April 27, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.	P. M.
April 21.....	4.22	10.33	4.38	10.57	
April 22.....	5.06	11.18	5.22	11.41	
		P. M.			
April 23.....	5.49	12.03	6.05		
		A. M.			
April 24.....		12.27	6.35	12.50	6.51
April 25.....		1.16	7.23	1.41	7.39
April 26.....		1.37	8.17	2.36	8.36
April 27.....		3.04	9.18	3.41	9.42

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## OFFICIAL CIRCULARS.

## Acting Assistant to the Chairman.

CULEBRA, C. Z., April 14, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Mr. C. A. McIlvaine will act as Assistant to the Chairman during the absence of Mr. M. B. DePutron, who has entered on his leave this date.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Maximum Age Limits.

CULEBRA, C. Z., April 12, 1909.

## CIRCULAR No. 176A.

The rule prescribing maximum age limits will not be enforced against ex-employees of the Isthmian Canal Commission or of the Panama Railroad Company, originally appointed before they had reached the maximum age, who have been separated from the service less than six months and are in sound physical condition.

GEO. W. GOETHALS, Chairman.

## Request for Reduced Rate of Transportation.

CULEBRA, C. Z., April 12, 1909.

## CIRCULAR No. 186A.

Hereafter, in making request for the reduced rate of transportation and remission of customs duties on employees' shipments, six copies of Form No. 164-C, E. will be required.

GEO. W. GOETHALS, Chairman.

## Pay of West Indian Laborers.

CULEBRA, C. Z., April 14, 1909.

## CIRCULAR No. 243.

Effective May 1, 1909, it is ordered that the designations and rates of pay of West Indian laborers be fixed as follows:

1. The designations Axeman, Carpenters' Helpers, Machetenmen, Dumpmen, Jackmen, Painters' Helper, Laborer B, and Trackman B, will be discontinued and replaced by the general designation Laborer.

2. All West Indian laborers will be paid ten cents per hour.

3. Pitmen will be paid 13 and 16 cents per hour, and the rate of 20 cents will be abolished.

4. The maximum rate for switchmen and riggers will be 13 cents per hour.

5. The rates given are United States currency value.

GEO. W. GOETHALS,  
Chairman Isthmian Canal Commission,  
President Panama Railroad Company.

## Taking Boarders Prohibited.

CULEBRA, C. Z., April 15, 1909.

## CIRCULAR No. 244.

After May 1, 1909, employees occupying quarters belonging to the Isthmian Canal Commission and the Panama Railroad Company are prohibited from taking any persons as boarders who are not members of their immediate families.

GEO. W. GOETHALS,  
Chairman Isthmian Canal Commission,  
President Panama Railroad Company.

## Waste of Water.

DEPARTMENT OF CIVIL ADMINISTRATION,  
DIVISION OF POLICE AND PRISONS.

ANCON, C. Z., April 14, 1909.

## CIRCULAR No. 456.

The attention of all police officers in this division is again called to Circular No. 422 from these Headquarters, dated April 16, 1908, relative to the misuse and unnecessary waste of water from the different stand-pipes, faucets, etc., throughout the Canal Zone.

The following paragraph showing extract of ordinance covering this subject is herewith quoted for the benefit of all concerned:

\* \* \* Nor shall any person or persons wilfully or otherwise misuse or waste or cause to be misused or wasted, water supplied from the water mains owned and operated by the Isthmian Canal Commission and the Government of the Canal Zone. Any person or persons violating any provision of this section shall be deemed guilty of a misdemeanor and upon conviction shall be punishable by a fine of not less than \$5 nor more than \$25, or by imprisonment for a term not exceeding 30 days, or by both such fine and imprisonment.

In order to obviate and correct the abuse complained of, all commanding officers are directed to immediately issue necessary instructions to all officers under their command to carefully observe and see that the provisions of section 10, above quoted, are not being violated and to arrest and prosecute any one guilty thereof.

G. A. PORTER, Acting Chief of Police.

FOUND—On south bound train, April 4, a gold watch. Owner may have same by giving train number and identifying watch. R. H. Brown, Gorgona.

## LEGAL NOTICES.

United States of America, } In the Second Judicial  
Canal Zone. } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 190 hectares of the lands known as "Palenquilla and Frijol Grande," situated in the Canal Zone near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,900; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial  
Canal Zone. } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 74 hectares of the lands known as "Santa Cruz," situated in the Canal Zone, and being a part of the lands of the upper Chagres Valley, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$740; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 72.5 hectares of the lands known as "Barro Colorado and Frijol Grande," situated in the Canal Zone, near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$725; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

## Contract Houses.

Contract 2 type-18 houses, Gatun, C. Z. Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Friday, April 30, 1909, when they will be publicly opened, for the erection by contract of 2 type-18 houses at Gatun, C. Z. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$400 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. NIXON, Purchasing Agent on the Isthmus.

Lost—Between Cristobal and Colon, on Sunday, April 11, 1909, one Eastman kodak, size 3-A; name, "C. F. Knowlton, Gorgona," inscribed in carrying case. Left in parcel rack of forward first-class coach on train arriving at Colon at 12.15 p. m. Finder please communicate with Tax Collector, Gorgona, and receive reward.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

**THE CANAL RECORD**

Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Replenishing Labor Supply

Seven hundred and fifty West Indian laborers arrived on the steamer *Solent* at Colon on April 21. Five hundred of them were assigned to the Panama Railroad Company for work on the relocated line, and the remaining 250 to the three construction divisions for work on the Canal. On March 24 the *Solent* landed 532 Barbadians at Colon for the Commission. If necessary more laborers will be imported, and no difficulty is anticipated in keeping up the force.

The importation of laborers at this time is due to increased work on the relocation of the Panama railroad, and also to the indisposition of idle laborers now on the Isthmus to accept the 10-cent rate of pay. It is estimated by the Quartermaster's Department that there are 5,000 idle West Indians on the Isthmus who came here to work on the Canal, and who were at one time in the employ of the Commission, but who will not accept work, although offered freely, at the prevailing rate of pay.

These laborers also show an increasing disposition not to work regularly, which is attributed to their living in the "bush"—away from Commission quarters and messes. Laborers living in the regular barracks and eating at the messes must work each day or be excused on account of illness. All but a few such laborers can be depended on to report each morning for work. On the other hand, the laborer who has his hut in the "bush" can work a few days a week and earn enough to subsist on for the balance of the week. The home-making instinct is proving, therefore, to be detrimental to the effectiveness of the labor force, and it is only in appearance that it makes for stability.

An instance of the instability of some of the West Indian labor force was furnished by a part of the ship load of laborers that arrived at Colon on March 24. Over 100 of them were set at work in one place, and the

following morning less than one-third reported for work. The balance had scattered to various points along the line of the Canal or had gone to Colon or Panama. It is believed that those who left their work after one day are men formerly employed on the Isthmus, who wished to work at some particular point, or who availed themselves of free transportation to the Isthmus without any intention of remaining in the service of the Commission or the Panama Railroad Company. In order to lessen this class of desertion the recruiting agent in Barbados has been directed not to accept laborers who have ever before been on the Isthmus.

#### Keeping Cars in Service.

During the month of March, 1909, the total number of dirt cars repaired by the Mechanical Division, including light and field repairs, at all points except Gorgona shops, was 11,190. The average number of cars remaining on hand in bad order each evening, exclusive of Gorgona, was 34. At Gorgona shops 372 cars were repaired, an average of between 12 and 13 per day. The low number of cars repaired at Gorgona is accounted for by the fact that at this point most of the work is on very heavy jobs, such as rebuilding and the renewal of broken sills.

Over 3000 cars were in construction service during March. The average number remaining on hand at all points in bad order each evening, including Gorgona, was only 130, which is a trifle over 4 per cent of the cars in service.

#### Supplies for the Commission.

On his recent visit to the States the Chief Subsistence Officer spent several days in the cities in which the Commission buys the greater part of its commissary supplies. He found that the general tendency of prices on foodstuffs is upwards, due principally to the short supply of cattle, and grain and the corner in wheat. Prices of foodstuffs in the commissaries in general are not higher than in the United States, and in many instances are lower. In manufactured articles, the market is good from the buyer's standpoint, and several advantageous orders for the commissaries were placed. One of these is an order for ten thousand pairs of shoes for immediate delivery.

#### Steamships Shawmut and Tremont.

In accordance with an order received from Washington the docking facilities at Cristobal are to be improved at once in order to accommodate the steamships *Shawmut* and *Tremont*, which will be used in carrying cement from New York to the Isthmus. In order to allow these ships to enter the harbor it will be necessary to do some dredging over the coral reef at Cristobal point, and to deepen the channel to the docks at Cristobal to 27½ feet. A temporary dock for cement will be constructed between dock

No. 11 at Cristobal and dock No. 14 at Mount Hope. The details of improvements in Cristobal harbor will be found in an official report published elsewhere in this issue of THE CANAL RECORD. The *Shawmut* and *Tremont* have arrived in New York after their voyage around South America from the Pacific coast of the United States, and the alterations necessary to fit them for the cement service will be made in New York.

#### New Office Building at La Boca.

The office of the Resident Engineer at La Boca was moved into the new office and storehouse building at that place on April 22. It is situated just north of the shipways and commands a view of the various activities in the shipyard. The building is 60 feet by 120 feet, one story in height with the exception of a portion of the southern end, which is two stories high. In this are the offices of the Resident Engineer and storekeeper. The northern end is used as a storehouse for spare parts of machinery, etc., and has a concrete floor.

Work on the new permanent dock and on the sand dock is in active progress. The excavation for the structure is finished, about 60 per cent of the piles have been driven, and several hundred feet of the dock timbers are in place. The rebuilding of the ladder dredge *Marmot*, which was launched at La Boca on March 25, is near completion, and it is expected that it will go into commission in a week or ten days. The rebuilding of the supply boat *Chame* is also nearly finished, and she will be in service in a short time.

#### March Record of Track Shifters.

The seven track shifting machines in the Central Division moved a total of 713,133 feet, or 135 miles of track during March. In the Tabernilla District track shifter No. 5 moved 227,095 feet, and No. 6 moved 140,463 feet, a total of 367,558 feet, or 69.6 miles, for the district. In the Bas Obispo District shifter No. 1 moved 71,017 feet, and shifter No. 7 moved 118,099 feet, a total of 189,116 feet, or 35.8 miles. In the Pedro Miguel District shifter No. 8 moved 69,429 feet; shifter No. 2 moved 50,808 feet, and shifter No. 9 moved 36,222 feet, a total of 156,459 feet, or 29.6 miles.

#### Lining Miraflores Tunnel.

Work is well advanced on the lining of the earth section of Miraflores tunnel, and there is no doubt that the concrete will be in place before the beginning of the rainy season. The rock section has been entirely lined, and the south portal has been extended so as to hold any material that may slide down that side of the hill. As originally cut the tunnel was 600 feet long and it is now 811 feet long. The greater part of the additional 211 feet representing the extension was made to hold the slide.

## EUROPEAN LABORERS.

### Contemplated Action of the Commission in Regard to Future Treatment of Them.

CULEBRA, C. Z., April 17, 1909.

HON. JUAN POTOS, *Chargé d'Affaires, Spanish Legation, Panama, R. of P.*

Sir—I have the honor to invite your attention to certain matters connected with the employment of citizens of your country by the Isthmian Canal Commission as laborers, who were engaged for this service in Spain by a duly authorized representative of the Commission under certain conditions along the same general lines, as regards procedure, as Commission representatives recruit labor in the United States for the Commission.

In the case of laborers from Spain no formal agreement or contract has been made, but the printed conditions under which they were to be transported and under which work would be furnished them after their arrival on the Isthmus are considered as contractual obligations by the Commission. They have always been carefully observed and will be adhered to. These conditions, of course, do not apply to any labor employed on the Isthmus of Panama.

You are, no doubt, entirely familiar with the specifications or conditions referred to. They prescribe that the workman must be of robust constitution and that the work will be pick and shovel work; that the cost of transportation will be advanced by the Commission, the Commission to be reimbursed by monthly deductions from the pay of the employee. The conditions prescribe the hours of work and state that the wages will be at the rate of 20 cents American currency (40 cents silver) per hour for not less than nine hours per day; that the workman will be furnished with meals at a specified price and with living accommodations, hospital service, transportation to and from work, etc., free.

The Commission has been very careful to see that these obligations on its part were scrupulously adhered to and in case any of the citizens of your country, employees of the Commission, have had just cause for complaint, the matter has been quickly remedied.

Any written or implied contract between two parties to be binding requires observance of all obligations by both parties. The Commission, in recognizing and conforming to all of its obligations, expects and requires that the laborers under contract will furnish satisfactory service, and that their conduct shall also be satisfactory and up to the standard required for efficient work. There should be no misunderstanding on the part of the men, therefore, that in accepting employment with the Commission they must work diligently and to the best of their ability during the time for which they are paid, their conduct must be orderly and they must, in all respects, come up to the standard of good workmen. As stated before, the Commission expects to meet all of its obligations to the minutest degree, and it will likewise hold the laborers to the full measure of duty required of all of its workmen.

The only remedy for the Commission, in case any of these "contract laborers," for any reason, are disinclined to carry out their obligations, will be for the Commission to declare the contract under which these men were employed to be null and void, to take up their check, and in lieu thereof to issue

a new work check to them which will entitle them to employment at such rate of pay as the value of their services warrants. This is exactly the same course the Commission has always taken in regard to American citizens, both skilled and unskilled labor, who are recruited in the United States and sent to the Isthmus under a provisional agreement guaranteeing them first-class rate of pay. This obligates the employee to furnish services equivalent thereto, and it is the policy and practice of the Commission whenever the work of any of its American employees falls below the standard set for his rate of pay to cancel his contract and either discontinue his employment completely or issue him a new contract at a lower rate of pay commensurate with the value of the services which he is capable or willing to render.

Heretofore the Commission has not followed this practice with contract laborers from Spain, that is, whenever their services have been unsatisfactory or whenever they have chosen to leave the work on which they were engaged and needed, we have allowed them to retain their special checks which distinguish them as contract laborers entitled to receive 20 cents American currency per hour (40 cents silver) so that they were free to obtain employment elsewhere on the Canal at the same rate of pay notwithstanding the fact that previously they may not have been giving satisfaction at that rate of pay. In other words, we have been treating them more leniently than required by their contracts and more leniently than we have been treating our American employees.

This is not right and just to our American employees and in addition, this lenient treatment has led some of our Spanish contract laborers to take advantage of the consideration thus shown them by deliberately reducing the output of their work so that at the present time all of our superintendents and foremen are unanimously of the opinion that the efficiency of our 20-cent (40 cents silver) contract labor is much less now than it was a year ago. In addition, several instances have been reported to me which indicate that the conduct of our contract laborers, as a whole, verges on insubordination; that the orders of foremen and others in authority are not received with respect and executed as the necessities of the work require; that the leniency above mentioned has created and fostered a spirit among the men that inasmuch as they are allowed to retain their special checks, it is immaterial to them whether they are discharged or not and that it makes no difference to them how far they carry out the orders of their superiors; and that contract laborers are daily leaving each division and going along the work in search of places where they consider the foreman will be more lenient or where the service is easier.

The situation is a serious one and must be met at once.

I have gone over this matter at length with you in order that as the representative of all citizens of Spain on the Isthmus you can see the present situation exactly and so that you may be fully informed in advance of any steps contemplated by me in regard to their employment. My views and contemplated action are as follows:

First—That the conditions of employment

governing Spanish contract labor require each laborer to give satisfactory service at his rate of pay, that is, 20 cents U. S. currency (40 cents silver) per hour.

Second—That in case his services in regard to either work or conduct are not satisfactory at that rate of pay, it is right and proper to treat him in the same manner as American citizens and other employees of the Commission would be and are treated under similar circumstances.

Third—That in execution of the above the Commission has the right, and it is its duty, in carrying on the work in an economical manner as directed by law to cancel any laborer's original contract and to reduce his pay to such a rate as will be equivalent to the value of his services.

Fourth—That it is not necessary to consider at this time a combination of circumstances which might render the employment of a Spanish contract laborer undesirable at any rate of pay whatever, as such cases would be comparatively few in number and each one should be adjudicated separately.

In line with the above statement of fact and reasoning I desire that you should have information of my intention to put into effect the interpretation of the contracts of these laborers as explained hereinbefore, and that after due notice which will be furnished to each laborer upon unsatisfactory service or conduct under a 20-cent (40 cents silver) contract, his special check will be taken up and in lieu thereof he will be given a check which will entitle him to employment at such lower rate of pay as he is willing or able to earn.

I have no doubt that you will see not only the justice and propriety of this action, but also the necessity which has forced me to take it.

I beg to request your kind cooperation with me in this matter by explaining fully and clearly to all citizens of your country who come under the class of "contract laborers" the position which the Commission has taken.

Very respectfully yours,

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

A similar letter has been sent to the Consuls of Italy and Greece in reference to laborers from those countries.

### Dredging Interrupted.

While at work in the Pacific entrance to the Canal, last week at the crossing of the Rio Grande, about a mile above La Boca, one of the ladder dredges of the Pacific Division struck an obstacle which it could not handle, and was obliged to cease work. A diver was sent down, and it was discovered that a chain of dredge buckets which had dropped from one of the dredges in the French days had been struck. The buckets will be moved from the prism after which the dredge will resume its work at the crossing.

### Repairs to the "Cristobal."

The Panama railroad tugboat *Cristobal* is in the Cristobal dry dock undergoing general repairs. After the bottom has been caulked, new planks have been put in, and the boilers and engines have been overhauled, the tugboat will be placed in commission again. It is expected that the boat will resume its work in the harbor during the first week in May.

## GATUN POWER PLANT.

## Electricity for Handling Plants and Other Purposes.

One turbine in the power plant at Gatun has been erected and is ready to be tested as soon as steam can be supplied, and two others are being placed in position. As the boiler plant construction is behind the rest of the work, a small portable boiler may be installed to furnish sufficient steam to balance the turbines, after which the generators will be imposed upon them. A representative of the D'Olier Engineering Company, of Philadelphia, which has the contract for the boilers, is on the Isthmus to superintend the setting up of that part of the plant. It is expected that the boilers will be on the Isthmus by May 5, and the contractor will then push the installation, working day and night if necessary, in order to have the boilers under steam on July 1. All the other work preparatory to laying concrete in the locks at Gatun is ahead of the power plant, so that the completion of this plant is the determining factor in the beginning of work on the locks.

The power plant in question has a dual purpose. Primarily it will furnish the power for running one single and two duplicate unloading cableways which operate over the material wharves, and the cement, rock, and sand storage piles; operating the electric cars which will carry materials to the concrete mixers; running a battery of eight 2½-cubic yard cube concrete mixers; running the cars that will carry concrete from the mixers to the unloading cableways which stretch across the lock site; supplying power for operating four duplex cableways which will take the concrete from the cars and deposit it at any point desired in the lock site, and supplying current to three 20-inch centrifugal dredge relay pumps, motor-driven, for the hydraulic construction of Gatun Dam. Its secondary use will be to supply electric current for lighting Colon, Cristobal, Mount Hope, and Gatun, and power for running the manufacturing plants of the

Subsistence Department at Cristobal. After the Canal is in operation, it will be held in reserve to operate the locks and towing machinery, in case the hydraulic power plant should fail, either from accident or from lack of water. The hydraulic electrical power plant will be run by water wasted from Gatun Lake, while the electrical plant which is now being erected will be run by steam. The building for the power plant is nearing completion and all machinery excepting the boilers is on the Isthmus.

The power plant at Gatun will occupy a building 150 feet long, 77 feet wide, and 48 feet high from the ground floor to the peak of the gables. The building is in two parts, each part having a gable roof, and running parallel with the other, the dimensions of each being 150 feet long, and 38½ feet wide. The substructure is of concrete and the cellar is lined with concrete, while the superstructure is a wooden frame, the closed parts of which will be covered with corrugated iron. A floor plan showing the location of the principal pieces of machinery is appended.

The equipment of the boiler room will consist of six water-tube boilers of the Keeler type in three batteries of twos. Each boiler has a nominal rating of 400-horsepower, is equipped with Foster superheaters, and will generate steam at 205 pounds absolute pressure and 150 degrees Fahrenheit of superheat. It is the intention to use crude oil as fuel, and to this end the combustion furnaces are very large, but they are also fitted with Ajax shaking grates in order that coal may be used if the emergency arises. The induced draft system includes two 90-inch fans, located near the stack, one directly connected to a vertical compound engine, and the other to a 100-horsepower induction motor. The induced draft fans are located on a balcony in the boiler room, on which are also located two lubricating oil filter and storage tanks. The equipment furnished under the boiler contract also includes two vertical boiler feed pumps and a Cochran open feed-water heater and purifier. The part of the boiler room not occupied by the boil-

ers, stack, and fan balcony may be utilized as a machine shop.

In the engine room will be located three Curtis 1500-k. w. vertical steam turbine base condenser generators, oil pumps, vacuum and circulating pumps, and accessory machinery. A general idea of the layout of the machinery is given in the floor plan. There are three sets of rotary converters, with three air blast transformers and reactance coil in each set, each transformer having a primary voltage of 2,200, a secondary voltage of 430, and a capacity of 185-k. w. For supplying air for the transformers two volume air blowers with direct coupled motors, having a capacity of 10,000 cubic feet per minute each, at ¾ ounces pressure to the square inch, will be installed. In the basement beneath this machinery is an air chamber into which air will be forced by the blowers to escape through flues or openings in the floor. There is one flue under each transformer and reactance coil, and air passing through these machines will carry off the heat due to electrical losses. Three rotary converters, a set of three transformers and one reactance coil, complete the three units of this part of the plant. One of these converters has a capacity of 300-k. w., and the other two of 500-k. w. each.

Between the units of transformers, reactance coils, and rotary converters, and the boiler room wall are located a controlling benchboard, an exciter switchboard, a feeder switchboard, and an air compressor. The turbo-generators are controlled from the controlling benchboard and all indicating instruments in connection with the generators and feeders are located on it. The air compressor is motor driven and supplies air at 150 pounds pressure to the square inch for the blowing system, for cleaning the electrical equipment, and to the boiler feed pump air chambers. Along the south end of the electrical room are located the "G. E., type K, form 3" oil switches by means of which each of the turbine generators and rotary converters is connected with the station bus. To this bus are connected switches of the same type controlling the feeder circuits for power for the entire handling plant.

FLOOR PLAN OF THE GATUN POWER PLANT.

A—Three turbo-generators.

B—Boilers.

1—Three sets of transformers, three transformers in each set.

2—Three reactance coils, one to each set of transformers.

3—Three rotary converters, one to each set of transformers.

4—Controlling benchboard.

5—Exciter switchboard.

6—Feeder switchboard.

7—Air compressor, motor driven.

8—Oil switches, one for each turbo-generator and rotary converter.

9—Stack 9 feet in diameter.

10—Induced draft fans.

11—Oil filter and storage tanks.

12—Machine shop.

13—Breeching connecting boilers to induced fan system.

## Card of Thanks.

THE CANAL RECORD:

I very respectfully request to be allowed the privilege of a small space in THE CANAL RECORD, that I may be able to fulfill a debt of gratitude.

In my name and in the name of my family I sincerely wish to tender our sincerest thanks to all the persons who officially or privately aided me in being able to promptly leave with my little son to be in time for treatment in Washington, D. C., thus saving his life.

We also gratefully appreciate and esteem the sympathy which has been extended to us by all friends. With sincerest gratitude to one and all, I remain very respectfully,

DANIEL QUAYLE.

Bohio, C. Z., April 15, 1909.

## Indiana Club.

All persons interested in organizing an Indiana club are requested to send their names, Isthmian address, together with their birthplace, or residence in that State, to Wayne O. Adams, Cristobal, C. Z.

## DOCKS AT CRISTOBAL.

## Atlantic Terminal Facilities—Plans for Permanent Wharves.

The Board appointed by the Chairman and Chief Engineer on February 9, 1909, to confer with the General Manager of the Panama railroad with regard to the construction of dock No. 12 at Cristobal, and the proposed extension of dock No. 11, has submitted its report and recommendations with the minutes of the meeting and charts. The recommendations of the Board have been approved in so far as they relate to dock No. 12, and such dredging as may be necessary to accommodate the steamships *Shavemul* and *Tremont*, which are to be used in the cement service between New York and Cristobal. The charts accompanying the report show Cristobal and Colon and a portion of Limon Bay, marked exhibit "B," and a plan "D" shows the style of dock found preferable by the Panama railroad after trial of various kinds of docks. An abstract of the report follows:

"There has been marked on the plan the 500-foot channel from the Canal to dock No. 12 and beyond, and the approximate amount of material to be dredged to obtain a depth of 33 feet below sea-level is marked on the map and also the additional amount required for a depth of 40 feet.

"The borings over the entire dredged area are incomplete. Coral is indicated in a number of places. For these reasons, the cost per cubic yard of material removed has been estimated at 50 cents. With these assumptions the approximate cost of dredging, resulting from the above, will be as follows:

Depth of channel, feet.....	33
Approach, cubic yards.....	777,000
In front P. R. R. wharves Nos. 11 and 12, cubic yards.....	483,000
In front I. C. C. wharf No. 13, cubic yards..	266,000
Total, cubic yards.....	1,526,000
Unit cost.....	\$0.50
Total cost.....	\$763,000

Additional quantities if depth is increased seven feet, giving a final depth of forty feet, referred to mean sea-level:

Depth of channel, feet.....	33-40
Approach, cubic yards.....	1,017,500
In front P. R. R. wharves Nos. 11 and 12, cubic yards.....	306,000
In front I. C. C. wharf No. 13, cubic yards..	409,000
Total, cubic yards.....	1,732,500
Unit cost.....	\$0.50
Total cost.....	\$866,250

NOTE—The above does not include 173,000 cubic yards of earth and 32,000 cubic yards of rock in the trench along the proposed P. R. R. dock No. 12, which should be removed before dock No. 12 is constructed.

"In giving the above quantities, the Board does not mean to fix them as the maximum that will be necessary, as possibly a greater width of channel may be found desirable. They should, therefore, be considered more as being the minimum that must be removed in carrying out this project.

"The Board recommends that the dredging be done by the Commission, the cost of all original dredging in front of Panama railroad wharves to be paid for from appropriations for 'Reconstruction and reequipment of Panama railroad; cost of all dredging in front of I. C. C. wharves to be defrayed from appropriations for the Department of Construction and Engineering; cost of dredging the channel between Cristobal Point and the Canal channel to be divided equally between the two appropriations; cost of maintenance to be divided between the Commission and Panama railroad on the same lines,

the portion for which the Panama railroad is liable to be paid from its earnings as operating expenses.'

"The Board understands that the plan of constructing dock No. 12 of permanent material on such an extensive scale and likewise the subsequent proposed conversion of dock No. 11 into a permanent wharf is with a view to providing suitable permanent terminal facilities at the Atlantic end of the Panama railroad, such facilities as will be required and can be conveniently and economically used after the completion of the Canal as well as during its construction. The Board does not understand that it is called upon to report on the location for the permanent Atlantic terminal of the Panama railroad.

"If the selection of a site for these terminal facilities is limited to Cristobal, while the proposed site—docks Nos. 11 and 12—is not an ideal one, will require extensive dredging, and does not afford as much room as might be desirable for the construction of the necessary tracks, the Board believes that there is no appreciably better location to be found in the immediate vicinity. The project, as it presents itself to the Board, therefore, is as follows:

"1. That additional adequate terminal facilities on the Atlantic side are required by the Panama railroad at the present time and that appropriations are now available for undertaking this work.

"2. That a site has been selected by the Panama railroad as being suitable and available to provide these facilities now at a reasonable cost, and without inconvenience to Canal construction work, at Cristobal between Fox River and Cristobal Point.

"3. This location at Cristobal possesses advantages for the immediate undertaking of additional docking facilities, and unless future developments should change conditions, may prove to be the best site for the permanent Atlantic terminal of the Panama railroad after the completion of the Canal, in which case any work done now should be in accordance with a general approved plan for the complete project, which should be prepared in advance of undertaking any construction. However, even if another site should be selected and adopted some time in the future for the permanent terminal, it would not be inconsistent at the present time to proceed with the construction at Cristobal of a reasonable amount of docking facilities, such as the proposed dock No. 12.

"The construction of an extension to dock No. 11 at the present time, therefore, appears advisable and desirable, whether it becomes a portion of the permanent Atlantic terminal or not.

"It is understood that the early construction of dock No. 12 is especially desirable and necessary inasmuch as dock No. 11 is deteriorating rapidly and would have to be renewed or abandoned by the time dock No. 12 can be completed. This fact alone, renders it desirable to consider the matter of constructing permanent docking facilities immediately.

"With dock No. 12 constructed at the present time, the Board believes that the arrangement proposed by Mr. Slifer, on Plan 'D' herewith, is preferable for the following reasons and recommends its approval:

"A—The dock as projected conforms to approved harbor lines.

"B—The system of dock tracks shown has

been found by the experience of the Panama railroad transportation department to be the most satisfactory one for handling cargoes.

"C—The dock is near the main line of the Panama railroad and easy of access to both Cristobal and Colon.

"D—It is in close proximity to dock No. 11, the cold storage plant and the existing quarters of Panama railroad and Commission employees.

"E—The construction will involve less cost and less interference with and obstruction to the free use of the present water front, including the coal docks, the dry dock, and the cement wharf now being constructed.

"Attention is invited to the layout of tracks on Plan 'D' from which it would seem that the available area is somewhat limited and that the construction of tracks as contemplated will leave little room for future development of the yard and tracks without encroaching on the present laborers' barracks at Camp Biedt, or interfering with other tracks and construction. The proposed site, however, seems to be the best available in this immediate locality.

"With reference to the form and method of construction to be adopted, the Board has examined the estimates and plans of different forms of construction submitted; also current literature on the general subject of dock construction. As a result the Board has reached the conclusion that, if the dock is to be constructed as a permanent structure, a reinforced concrete wharf will be entirely practicable and the most economical form to adopt, where the depth to hard bottom is not greater than will permit the safe use of concrete piles. This involves, in general, the use of concrete piles driven so as to support safely the maximum load to which they will be subjected. Where the foundation is coral and possibly in the argillaceous sandstone shown in the borings, it will not be necessary to pierce the strata, unless it is underlain by softer material projecting above the lowest part of the channel in front of the wharf. This matter, as well as the number and location of piles, cannot be decided until after further investigations and tests. The piles should be rigidly attached to the floor system and further stiffened by longitudinal and lateral webs or braces of reinforced concrete. The entire dock should be provided with back anchors at proper intervals and be protected in front by fenders of approved design.

"For a wharf of this character, the Board recommends that, exclusive of dredging, the entire substructure, consisting of concrete piles, anchorage, fenders and reinforced concrete floors, be let to contract, bids to be invited on general plans and specifications prescribing concrete piles and reinforced concrete floors, but in no wise restricting competition to any particular method or system. It is also recommended that general specifications giving loads, unit stresses, etc., be so prepared as to permit consideration of designs submitted on any alternate method of construction such as cylinder piles or quay wall. By this method bidders would be furnished with plan of site, general specifications and other necessary data. The design would be made by them. It would be desirable for the contractor to be given the option of furnishing all material himself either from the States

or the Isthmus, or of purchasing any or all of same delivered at the site from the Panama railroad or the Canal Commission. Each bidder should be required to submit complete plans and specifications and bill of material. The contractor should also be allowed to use any available plant of the Panama railroad.

"Prior to the construction of a dock, the dredging of the trench along its front should be carried to the final depth decided upon. In accordance with the attached letter, marked 'E,' from Maj. Edgar Jadwin, dated March 5, 1909, the dredge *Mindi* can probably be spared for this work, and for the additional excavation immediately in front of the wharf, to the extent of approximately 500,000 cubic yards. If more dredging than this is contemplated, steps should be taken to purchase an additional dredge with its attendant transportation.

"The Board believes that it is advisable to have all intending bidders visit the site and become familiar with the conditions before the opening of bids and that the interval between the issue of circulars inviting bids and the opening of same should be not less than three months; also that bids should not be invited before dredging is well started in front of dock No. 12, in order that there may be no chance or the contractor being delayed or interfered with by the noncompletion of the dredging.

"In regard to the length of the wharf to be constructed under the first contract, the Board believes that proposals should include under Item I, the entire length of wharf required, with deductions therefrom, under Items II, III, etc., for the portions at each end which it might not be found advisable to proceed with at this time. In other words, to defer decision until the receipt of bidders' proposals. The superstructure, tracks, grading, and other similar work in connection with the wharf should be built and installed by the Panama railroad, including cranes and other cargo-handling machinery. Meanwhile the filling behind the dock, by the Panama railroad, and the dredging in front of same by the Commission should be taken in hand at once."

#### Personal.

Major E. T. Wilson, Subsistence Officer, returned to the Isthmus on the *Magdalena* on April 25 from a visit to the States.

#### Obituary.

Frederick P. Waldron, of Boston, Mass., died at Colon Hospital on April 17. He was seventy years of age, was married, and had been on the Isthmus about five years, residing at Cristobal.

#### Missing Men.

Information is desired in regard to Antonio Aney, a Spanish subject, who was last heard from at Empire, Canal Zone, on December 20, 1907. Any one having knowledge concerning him is requested to communicate with C. A. McIlvane, Acting Assistant to the Chairman, Culebra, C. Z.

If Mr. Claude Stone of Texas, who sailed for the Isthmus on April 10, will send his address to Box "W," La Boca post-office, he will receive information to his advantage.

A meeting of the order of Isthmian Construction Foremen will be held at Culebra on Sunday, May 2, at 2.30 p. m. All members are requested to be present as business of importance will be transacted.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

At the meeting of the Cristobal Woman's Club on April 7, Miss Temple, vice-president of the Chicago Woman's Club, was the guest of honor and made informal addresses on "The Open Door," and "The School Children's Aid Society." Mrs. Watson, wife of Ensign Watson of the Salvation Army, gave a review of the work done by the corps in Colon.

The home department presented a program consisting of papers on "A Cup of Tea, a Cup of Coffee, and a Cup of Chocolate," at the regular meeting on April 21. Mrs. Arthur Luther and Mrs. Pierce T. Murphy were the speakers. On April 26 the art and literature department held its final meeting for the year, a paper on "Julius Caesar" being read by the chairman, Mrs. R. Lewis Baker. The department has held its meeting regularly on the fourth Monday of each month since October. Three of the Shakespeare plays have been studied, "Macbeth," "Merchant of Venice," and "Julius Caesar." The annual meeting of the Cristobal Club is scheduled to take place on May 1, at 10 a. m.

Mrs. John Dickinson Sherman, second vice-president of the General Federation of Women's Clubs, has recovered from her recent illness and left the Isthmus on April 13 on the steamer *Parismina*. Mrs. Sherman was accompanied by Miss Temple of Chicago.

Mrs. Chester Harding entertained the Gatun Woman's Club on April 16, the guest of honor being Mrs. Lorin C. Collins, president of the Canal Zone Federation and Cristobal Woman's Club. Mrs. Charles Stoddard was elected chairman pro tempore of the botanical committee. The kindergarten, under the patronage of the Woman's Club, was opened on April 12. The report of the teacher, Miss Hanna given before the club, was encouraging. This is the first kindergarten that has been attempted in the Zone, and its progress will be watched with interest.

The meeting of the Ancon Woman's Club on April 21, was well attended. Owing to the departure from the Isthmus of the president, Mrs. C. C. McCulloch, Jr., her resignation was presented at this meeting, and she was unanimously elected an honorary member of the club. Arrangements have been made for a farewell reception to Mrs. McCulloch to be held at the clubrooms on Wednesday, May 5, from 3.30 to 5 o'clock.

A gift of books for the club library has been forwarded by Mrs. W. B. Ruggles. Arrangements for keeping the clubrooms open during the summer are being discussed. The department work will continue, and it is expected that, in charge of the educational department, the library will be opened at stated periods for exchange of books during the regular recess, from June to October.

The same action for keeping open during the summer is being taken by the Empire Club. The regular program which was scheduled for a period of six months, closes with a symposium of the Canal Zone on May 27. A series of special meetings will be arranged during the summer recess.

The women of the Methodist Church, Panama, have arranged for an all-day missionary rally which will take place at the church on Thursday, May 6. Visitors will be specially

welcome. A lunch will be served in the church building.

### Church Notes.

Mr. Frank Hunter Potter will deliver an address at St. Luke's Church, Ancon, at the 10 o'clock service Sunday, May 2. Mr. Potter is the son of Bishop Alonzo Potter, of Pennsylvania, and accompanied his father on a visit to the Isthmus in 1865 when Christ Church, Colon, was consecrated.

A business meeting of the congregation of St. Luke's Church was held on Sunday morning, April 25, to consider the report of the committee on the memorial window to be placed in the church to those who died in the construction of the Panama Canal. The window will cost not to exceed \$250, and subscriptions have nearly reached that sum. The Woman's Guild at its Easter offering presented the sum of \$55 for the purchase of a baptismal font.

There will be a missionary rally at the Methodist Episcopal Church in Panama on Thursday, May 6. Morning and afternoon sessions will be held and a free luncheon will be served at the noon hour. A cordial invitation to attend is extended to all persons interested.

### Cristobal Union Sunday School.

The report for the first quarter of the Cristobal Union Sunday school is as follows:

Average attendance per Sunday .....	85
Highest attendance for one Sunday .....	91
Average collection .....	\$4.96
Amount of contributions sent to missions .....	\$18.89

### Anniversary Dinner.

May 4 will be the fifth anniversary of the commencement of Canal construction by the United States, and arrangements are being made for a dinner at the Hotel Tivoli, at 7.30 p. m. on that date, for the purpose of getting together all Americans on the Isthmus who were connected with the Canal Commission in 1904. There are nearly one hundred 1904-men still on the Isthmus, and it is probable that most of them will be present.

### Visit of Warships.

The U. S. S. *South Dakota* arrived in Panama Bay on Friday, April 23 and, after taking coal and supplies aboard, sailed for Amapala, Honduras, on April 26. The U. S. naval transport *Buffalo* arrived on Saturday, April 24. She will take 300 sailors to the Pacific fleet who were brought from the Atlantic coast on the U. S. naval transport *Prairie*, which arrived at Cristobal on Monday, April 26.

### I. O. O. F.

All Odd Fellows and ladies are requested to attend the memorial service in connection with the 90th anniversary of the order, conducted by the Rev. J. H. Sobey, for Canal Zone Lodge, No. 3, of Culebra, at Empire on Sunday, May 2, 1909, at 7.30 p. m. A special train will leave Culebra at 7 p. m.

### Basketball.

A basketball team has been organized at Cristobal, and has elected R. H. Luce, captain. Games are desired with teams along the Line. Communications in regard to games should be addressed to H. C. Helt, manager, care of Cristobal Y. M. C. A., Cristobal, C. Z.

The steamship *Haverly* arrived at Cristobal on April 17 with 1,500,000 pounds of pig iron for Gorgona foundry, and oak and yellow pine lumber for car repair work.

## MARCH SHOVEL RECORD.

## Best Monthly and Daily Records in the Three Construction Divisions.

The steam shovels at work on Canal excavation in March removed 2,352,903 cubic yards of material, all but 116,421 cubic yards of which were taken from the Canal prism.

The high record for the month was made by shovel No. 207 (90-ton) at work in the Empire district, which took out 54,127 cubic yards in 27 working days, an average of 2,005 cubic yards per day. The best record for shovels in the 70-ton class was made by No. 122 working in the Bas Obispo district, which removed 53,043 cubic yards, an average of 1,965 per day.

The highest daily record during the month, which was also the highest single day's excavation ever made by one shovel on the Canal work, was made by shovel No. 220 (90-ton) in the Empire district on March 2, when 3,941 cubic yards of rock and earth were removed in a working day of eight hours.

The highest daily record of excavation in the Central Division, since American occupation, was broken four times during March. The best record previous to March 1 was made on February 27, when 59 steam shovels excavated 77,064 cubic yards, an average of 1,306 cubic yards per shovel. That record was surpassed as follows:

DATE.	No. shovels at work.	Total yardage.	Average per shovel.
March 25 .....	57	77,533	1,360
March 30 .....	56	77,669	1,387
March 24 .....	58	77,857	1,342

## Panamanian Currency.

## THE CANAL RECORD:

Will you please answer through THE CANAL RECORD, the following questions?

Does the United States Government guarantee the parity or value of Panama silver? If so, to what extent?

Does the Isthmian Canal Commission reserve the right to pay gold employees in Panama silver?

A. B. CLARDY.

Empire, C. Z., March 18, 1909.

The above letter was referred to the Examiner of Accounts, who makes the following explanation:

The Government of the United States has not specifically guaranteed the value of Panamanian money, though it has agreed to make the coin of the Republic of Panama legal tender within the Canal Zone, and to cooperate with the Republic to maintain the parity of Panamanian silver by the sale of drafts upon the funds of the Commission.

By the General Conditions of Employment, effective July 1, 1907,

The Commission reserves the right to pay in any

money, the value or parity of which is guaranteed by the United States. Being on the gold roll will not in future confer any special privileges.

Contracts with employees engaged in the United States stipulate that payment shall be made in United States currency, and the Commission is bound by its contracts. In the absence of such agreements the Commission has the right to pay in Panamanian money.

It is a mistaken notion that Panamanian silver is a depreciated currency. The standard coin of the Republic is the gold Balboa, equal in value to the American dollar, and the silver coins are subsidiary to the Balboa, their parity being guaranteed by the Republic. The fact that the Balboa has not actually been coined does not affect the value of the silver coins.

## March Revenue Collections.

The report of the Collector of Revenues of the Canal Zone for the month of March shows the following amounts were collected during the month: Distillation licenses, \$226.42; burial permits, \$10; escheated estates, \$75; taxes, licenses, fees, and costs (Tax Collector), \$10,902.45; fees, costs, etc. (District Judges), \$2,857; total, \$14,070.87.

## Misdirected Letters.

## DIVISION OF POSTS, CUSTOMS AND REVENUES.

ANCON, C. Z., April 28, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

## LABOR FORCE FOR MARCH.

The report of the Chief Quartermaster for the month of March shows that the number of Isthmian Canal Commission employees actually at work on March 31, was 25,733, of whom 4,381 were "gold" employees, and the remainder were on the "silver" or labor roll. The Panama railroad force was 6,484, and the Panama railroad commissary force numbered 779. Thus the total number of persons at work on the Canal and railroad on the 31st day of March was 32,996. During the month 212 people were added to the "gold" roll and there were 235 separations, the net decrease in the force being 23. Five hundred and thirty laborers from Barbados were imported during the

month and assigned to the Panama Railroad Company for work on the relocated line.

The number of family quarters occupied by "gold" employees was 1,477, and the occupants numbered 4,516; bachelor quarters by "gold" employees, 2,029, and the occupants numbered 3,276. The family quarters occupied by West Indians numbered 964, and the occupants 3,205; bachelor quarters, 298; number of occupants, 4,619. The family quarters occupied by European laborers numbered 329, and the occupants 1,047; bachelor quarters, 142; number of occupants 5,360.

A statement of the force actually at work on March 31, 1909, follows:

## OFFICIAL CIRCULARS.

## Use of French Machinery -Form 209-C. E. Approved

CULEBRA, C. Z., April 21, 1909.

## TO ALL CONCERNED:

To carry out the requirements of Circular 73-revised, Form 209-C. E., has been approved for use. This form is carried in stock by the Stationer and Printer and a supply can be secured from him.

By direction of the Chairman.

C. A. MCILVAINE,  
*Acting Assistant to the Chairman.*

## Acting Division Engineer—Pacific Division

CULEBRA, C. Z., April 20, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Effective this date, Mr. John M. G. Watt will act as Division Engineer of the Pacific Division during the absence of Mr. S. B. Williamson.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## Taboga Sick Leave Certificate.

OFFICE OF DIRECTOR OF HOSPITALS.

ANCON, C. Z., April 23, 1909.

## CIRCULAR LETTER NO. 32.

All Stations—In accordance with letter of the Chairman of April 22, to the Chief Sanitary Officer, you are advised that effective after April 30, certificates of disability will not be issued to employes on account of treatment at Taboga Sanitarium, except when the patient has been sent to the Sanitarium from Ancon or Colon Hospitals, after treatment in said hospitals.

Those going as patients direct from line physicians must have the certificate as heretofore. Such employes will be cared for at Taboga Sanitarium free of charge, but certificate of disability covering their stay at Taboga cannot be issued by the Superintendent of the Sanitarium, and they will lose their pay while there.

The status of nonemployes and employes not going as patients will be as hitherto.

By direction of the Chief Sanitary Officer.

H. R. CARTER, *Director of Hospitals.*

## Changes in District Quartermasters

CULEBRA, C. Z., April 22, 1909.

## CIRCULAR.

Effective this date, Mr. John M. King, District Quartermaster, is transferred from Las Cascadas to Culebra, for station.

Mr. Mark D. Smith is transferred to Las Cascadas, as Acting District Quartermaster at that place.

C. A. DEVOL, *Chief Quartermaster.*

## Contract Houses.

Contract 2 type-18 houses, Gatun, C. Z. Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Friday, April 30, 1909, when they will be publicly opened, for the erection by contract of 2 type-18 houses at Gatun, C. Z. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$400 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. NIXON, Purchasing Agent on the Isthmus.

## LEGAL NOTICES.

United States of America, In the Circuit Court,  
Canal Zone, Third Judicial Circuit.

To all whom it may concern:

Notice is hereby given that on Thursday the first day of July, 1909, in the court house in Cristobal, Canal Zone, at 10 o'clock a. m., there will be an inquiry into the estates of:

Kendal Thomas, who died intestate on or about March the 3d, 1907 at Mount Hope, Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value; Isthmian Canal Commission pay certificates for \$156.67, and \$207.52, United States currency.

Robert Grattis, who died intestate on or about March the 16th, 1906, at Cristobal, Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value and 20 cents United States currency.

Unknown man, who died intestate on or about March the 7th, 1909, at Bohio, Canal Zone, leaving no heirs, possessed of the following personal prop-

erty: one small purse containing \$1.60 Panamanian currency.

Aristida Finkala, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: 80 cents Panamanian currency and one French copper coin.

Mekeil Zapatos, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: one English pound, 60 francs French and \$2.30 Panamanian currency.

Demetro Apostol, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: \$8.60 Panamanian currency, and one bank book showing deposit of \$25 United States currency.

Pursuant to the petitions praying that said property be escheated filed herein by Tom M. Cooke, Collector of Revenues, in accordance with Sections 779, 780 and 781 of the Code of Civil Procedure of the Canal Zone, at which time and place persons claiming the said estates may appear and be heard before the court.

NELSON R. JOHNSON,

*Clerk of Circuit Court, Third Judicial Circuit.*United States of America, In the Second Judicial  
Canal Zone, Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 190 hectares of the lands known as "Palenquilla and Frijol Grande," situated in the Canal Zone near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,900; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

*Clerk of the Circuit Court, Second Judicial Circuit.*  
Empire, C. Z., April 15, 1909.United States of America, In the Second Judicial  
Canal Zone, Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 74 hectares of the lands known as "Santa Cruz," situated in the Canal Zone, and being a part of the lands of the upper Chagres Valley, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$740; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

*Clerk of the Circuit Court, Second Judicial Circuit.*  
Empire, C. Z., April 15, 1909.United States of America, In the Second Judicial  
Canal Zone, Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 162.5 hectares of the land known as "Barro Colorado and Palenquilla," situated in the Canal Zone, near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,625; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

*Clerk of the Circuit Court, Second Judicial Circuit.*  
Empire, C. Z., April 15, 1909.United States of America, In the Second Judicial  
Canal Zone, Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 72.5 hectares of the lands known as "Barro Colorado and Frijol Grande," situated in the Canal Zone, near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$725; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

*Clerk of the Circuit Court, Second Judicial Circuit.*  
Empire, C. Z., April 15, 1909.

## Launch Service to Taboga.

The steamer *Sananda* leaves the dredge landing at La Boca at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at La Boca about 4.30 p. m. in time to make connections for the 5.30 train at Panama.

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending May 4, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	A. M.	P. M.	P. M.
April 28 .....		5.10	10.29	4.54	11.03
April 29 .....		5.21	11.45	6.08	
			P. M.		
April 30 .....	12.22	6.28	12.53	7.07	
May 1 .....	1.24	7.23	1.39	7.51	
May 2 .....	2.09	8.06	2.20	8.33	
May 3 .....	2.45	8.44	2.52	9.07	
May 4 .....	3.16	9.19	3.21	9.39	

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, April 24, 1909:

	STATIONS.

## Lidgerwood Unloaders in March.

The eleven Lidgerwood unloaders in the Central Division, during the month of March, unloaded a total of 3,332 trains composed of a total of 58,309 cars. Of this number, 1,613 trains composed of 27,421 cars were unloaded by five unloaders at Tabernilla; 758 trains composed of 13,590 cars, were unloaded by three unloaders at Miraflores dumps, and 961 trains, composed of 17,298 cars, were unloaded by three unloaders at La Boca. As all the cars were of 20-yard capacity, the material unloaded represented about 1,166,150 cubic yards.

Lost—A pair of nose glasses between the Commissary and top of hill at Empire. Finder is requested to leave them at the Empire post-office and receive reward.

Lost—A bunch of keys. Reward offered if returned to any ticket agent of Panama railroad.

## COMMISSION CLUBHOUSES.

## CULEBRA.

The Gorgona indoor baseball team defeated the Culebra team on Saturday evening, April 24, by a score of 18 to 16.

A dual track meet between teams from the Cristobal and Culebra Y. M. C. A. is being arranged for Decoration Day. The program will consist of regular track and field events and a baseball game.

The chess match between teams from the Cristobal

and Culebra Y. M. C. As. held at Culebra on April 24, resulted in a victory for the Culebra team by a score of 9½ to 8½.

## GORGONA.

An exhibition of moving pictures will be given in the clubhouse on Monday evening, May 3.

The second of the monthly Praise Services which are held on the last Sunday evening of each month took place at the Commission clubhouse on April 25. An address was made by Judge Thomas E. Brown, Jr., of Cristobal.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

Prinz Aug. Wilhelm.....H.-A.....Saturday.....Apr. 24  
Allianca.....P. R. R. Monday.....Apr. 26  
Orinoco.....R.-M.....Saturday.....May 1  
Colon.....P. R. R. Monday.....May 3  
Panama.....P. R. R. Saturday.....May 8  
Prinz Joachim.....H.-A.....Saturday.....May 8  
Advance.....P. R. R. Friday.....May 14  
Oruba.....R.-M.....Saturday.....May 15

Persons desiring to meet friends or relatives upon arrival of Panama Railroad steamers at Cristobal should apply in advance of arrival at the Customs office, room 8, building No. 1, Cristobal, for customs line permits, which are necessary to obtain admittance beyond waiting room on pier 11.

All the steamers of the Hamburg-American and Royal Mail lines call at Kingston enroute to Colon.

## COLON TO NEW YORK.

Panama.....P. R. R. Monday.....Apr. 26  
Prinz Joachim.....H.-A.....Tuesday.....Apr. 27  
Advance.....P. R. R. Sunday.....May 2

Abangarez.....U. F. C. Tuesday.....June 1

COLON TO BARBADOS, CALLING AT TRINIDAD.  
Orinoco.....R.-M.....Tuesday.....May 11

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 1.30 p. m. via Port Limon, for New Orleans.

## Port of Cristobal.

The following steamers arrived at the port of Cristobal during the week ending April 24:

April 17, *Haverly*, from Mobile, Ala., with 750 tons pig iron for Gorgona foundry; 27,543 feet white oak lumber, and 39,206 feet yellow pine lumber, for car repairs, Gorgona.

April 19, *Prinz Joachim*, from New York, with 9 packages material for cableways, Gatun Handling Plant, and 186 coils Manila rope for stock.

April 20, *Panama*, from New York, with 3,000 barrels of cement for Gatun Spillway; 6 churn drills, for Central Division; 12 rock drills, for Pacific Division; 3 Scotch marine boilers for La Boca claps; 9,000 rail braces for Gatun Locks and cableways; 10 flat cars, and other material, for electrical railway, handling plant, Gatun; 20 ton ingot copper for Gorgona foundry. This steamer also carried an assorted cargo of general stock, the total aggregating 1,100 tons.

April 23, *Parismina*, from New Orleans, with 12 reels of wire rope for Liddgerwood unloaders, for Mechanical Department; 3 packages of coral supplies; 1,334 boxes fire brick for stock, and 25 cows and 1 bull for Ancon dairy.

The following steamers have recently arrived at La Boca: April 19, *Menes*, from North, and *Chile* from South; April 20, *Chiriqui*, from Intermediate ports; April 21, *Baracota*, from Central America; April 23, U. S. S. *South Dakota*, from North. Departures were: April 20, *Merica*, for Southern ports; April 22, *Ecuador*, for Guayaquil; April 23, *Menes*, for Southern ports.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, MAY 5, 1909.

No. 36.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### "La Boca" Now "Balboa."

WAR DEPARTMENT, WASHINGTON,  
(CULEBRA, C. Z.,) April 29, 1909.

*My Dear Colonel Goethals:* The President, in a letter to me of April 6, 1909, has called to my attention a suggestion from the Peruvian Minister at Panama, which is as follows:

In conversation with Mr. Pardo he suggested to me that it would be becoming for the Peruvian Minister to Panama to agitate the question of changing the name of the Canal entrance at the Pacific from the meaningless La Boca (really "The Mouth") to "Balboa," in honor of the discoverer of the Pacific Ocean. Following upon this suggestion I respectfully beg to submit to you in my capacity of representative of Peru (the nation which Balboa's discovery most benefited) that as the Atlantic entrance of the Canal is named "Cristobal Colon" for the great navigator and discoverer of our Continent, so should the Pacific entrance be named after the intrepid Balboa its discoverer.

The President expresses no view in regard to a change. It seems to me that the idea is a good one. Will you please confer with me in regard to it? Sincerely yours,

(Sgd.) J. M. DICKINSON.

Col. Geo. W. Goethals, Chairman Isthmian Canal Commission, Culebra, C. Z.

CULEBRA, C. Z., April 30, 1909

CIRCULAR No. 245.

By direction of the President, it is ordered that the Pacific entrance of the Canal, heretofore known as "La Boca," shall hereafter be named "Balboa" in honor of the discoverer of the Pacific Ocean.

GEO. W. GOETHALS  
Chairman and Chief Engineer.

#### Another Rebuilt Clapet.

An old French single screw clapet or self-propelling barge, known as Clapet No. 2, which was raised from the bottom of Folks River last year, and which has since been at the Cristobal marine shops being rebuilt, will be put in commission about May 6. Many of the plates in the hull had to be replaced, but most of the frames were found to be in good condition. The machinery that was in the vessel was taken out, over-

hauled and replaced and, with the addition of new boilers the clapet is as good as ever. New towing bits, capstan, and steam steering gear have been added and electric lights will be installed on the vessel.

#### Open Hearth Steel Rails.

A shipment of 1,300 gross tons of open hearth steel rails manufactured by the Bethlehem Steel Company arrived at Cristobal last week for the Panama railroad. The consignment is composed of 1,000 gross tons of 70-pound rails and 300 gross tons of 90-pound rails. The 70-pound rails will be laid on the permanent line between Colon and Gatun and between Corozal and Panama. The old 70-pound rails now in use between these points will be used in construction work on the relocated line. The new 90-pound rails will be used on the sharp curves between Las Cascadas and Tabernilla to replace the 90-pound Bessemer steel rails that have been in use on these curves. Owing to the heavy traffic on this section of the railroad the 90-pound Bessemer rail has been worn out in from ten to twelve months. The chemical composition of the open hearth rail is as follows:

	70-pound, Per cent.	90-pound, Per cent.
Carbon.....	.65—.75	.70—.80
Phosphorus shall not exceed.....	.035—.04	.035—.04
Silicon, shall not exceed.....	.20	.20
Manganese.....	.80—1.05	.80—1.05

The uniformly high temperature of the climate on the Isthmus is especially favorable for the use of the high carbon rail and it will give excellent service on account of its hardness.

The Panama Railroad Company has also ordered 165 pairs of switch points, 600 sheared splice bars, 120 rigid frogs, 103 spring rail frogs, 4 double spring frogs, and 2 manganese frogs, all to be of open hearth steel and to be used at various points where the heavy traffic demands it. It is expected that they will be delivered on the Isthmus in the near future.

#### Work at Gatun.

There were 7,478 cubic yards of concrete laid in the Gatun spillway during the month of April, an average of 299 cubic yards per day for the 25 working days. This makes a total of 9,925 cubic yards laid to date. When completed the floor of the spillway, for its entire width of 285 feet, will be covered with concrete for a distance of 960 feet north of the spillway dam. The thickness of the floor will vary from four feet at the dam to one foot at its north end. The concrete is being laid in monoliths, 20 by 30 feet in horizontal dimensions. At present only one crane is being used for depositing the concrete in place, but another crane will be at work in the near future.

All the towers of the unloading cableways at Gatun are completed, one set of the du-

plex towers has a complete cableway and the main cable of the duplex line in place, and one of the unloading buckets has been hung. The framing of the cement dock shed is nearly completed and three-quarters of the structure has been roofed. The electric cranes for the cement shed are due to arrive on the Isthmus on May 7, and the shed is ready for their installation. The pit for burning cement barrels is 75 per cent completed, and the storage pile site is ready for the delivery of crushed rock and sand.

The roadbed for the automatic electric road is ready for the track, material for which is on the ground. The eight concrete mixers are all in place, and the mixer shed completed. Seven of the eight towers of the lock cableways are up and the last one is well under way.

#### Pedro Miguel Locks.

The five steam shovels working in the Pedro Miguel lock site took out nearly 100,000 cubic yards of rock and earth in April. They are loading on two tracks and working very close together. The excavation in the lock site is so far advanced as to permit of no doubt that it can be kept well ahead of the concrete laying which is expected to be begun in August.

In the north approach to the locks the west storage trestle is completed and ready for the laying of railroad tracks, and the work on the east storage trestle has advanced so far that practically all the concrete foundations are finished, and pile driving on the approach has begun. The contractor who has the order for the handling cranes will have a crane in operation in August, and the boilers for the power plant at Miraflores the part of the work which is now behind, will leave Baltimore for the Isthmus this week. The mixing plant will form part of the machinery on the two cranes which will operate between the storage piles.

Concrete will be hauled from the mixer cranes, a maximum distance of less than half a mile, to the chamber cranes which will place it in the lock chamber. A three-foot gauge railroad, with a maximum grade of three per cent, will be used in hauling the concrete from the mixing cranes to the placing cranes. Ten locomotives, each capable of handling loads of thirty tons, have arrived from the H. C. Porter Company of Pittsburg, having been delivered set up on the Isthmus. These locomotives are designed for burning oil as fuel, but can also use coal. They have cylinders 8 by 14 inches, weigh about 28,000 pounds, saddle water tanks with a capacity of 350 gallons, and tractive power of about 4,000 pounds. Each locomotive will haul a train of two cars and a maximum load of about 15 tons. They will be equipped with air brakes, and adapted to stopping and starting quickly.

## EX-PRESIDENT AMADOR.

### His Death—Various Manifestations of Honor.

The death of Dr. Manuel Amador Guerrero, ex-President of the Republic of Panama, occurred at his home in Panama City, Sunday afternoon, May 2. He had been in failing health for over a year past, and the end was not unexpected. Dr. Amador was nearly 77 years of age, and although a native of Cartagena, Colombia, his residence on the Isthmus covered a period of 60 years. He became prominently identified with the events leading up to the separation from Colombia, and was the unanimous choice of the National Assembly, as the first president of the new Republic. His term expired on September 30, 1908.

By decree, President Obaldia ordered that all flags be displayed at half mast for a period of three days, and that the funeral ceremonies be given presidential honors. The remains were borne from the family residence to the National Palace on Monday morning, May 3, where they laid in state until 4 p. m., when the funeral procession was formed and proceeded to the cemetery, where Dr. Eusebio A. Morales delivered the oration, and the national band played the national hymn.

The following message was received from President Taft:

WASHINGTON, D. C., May 2, 1909.

Mrs. Amador Guerrero, Panama:

Mrs. Taft and I extend to you our heartfelt sympathy in your great sorrow and deeply regret the passing away of a great friend.

WM. H. TAFT.

The Chairman of the Isthmian Canal Commission issued the following order:

CULEBRA, C. Z., May 3, 1909

CIRCULAR No. 286.

As a mark of respect to the Republic of Panama, it is ordered, by direction of the Secretary of War, that all work be suspended for five minutes on Monday, May 3, at 4 o'clock p. m., the hour fixed for the funeral of the late ex-President Amador.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

In his letter of condolence transmitted to the Panama Government, the Secretary of War of the United States, who is visiting the Isthmus, announced that in honor of the memory of ex-President Amador, the new fortifications that are to guard the Pacific entrance to the Canal would be named Fort Amador.

### Accident at Cucaracha.

An accident occurred in Culebra Cut, near the north end of the Cucaracha slide, at 7.30 a. m., on May 1, resulting in the death of two European laborers and the injury of nine others.

A gang of men were at work at the time in a deep trench at the bottom of the Cut, out of which an inclined track had been laid to a higher level. A train of loaded cars had just been made up on this incline, and as the engine backed down to make the connection, the coupling failed to work. The consequent jar loosened the train from its position and started it down the 5½ per cent grade. Gathering momentum rapidly the train entered the trench, and before the crew had time to scramble up the steep sides, the cars struck a switch and four of them left the track and were piled up among the men, killing Demetrio Mikethoros outright, and causing injuries to Antonio Gonzalez that led to his death soon afterwards. The seriously injured are: Juan Rodriguez, suffer-

ing from a compound fracture of both legs below the knee, and Michael Damdounelli, compound fracture of left leg below the knee. The injured were taken to Ancon Hospital for treatment.

### Visit of the Secretary of War.

The Honorable Jacob M. Dickinson, Secretary of War, accompanied by his wife, Major-General J. Franklin Bell, Chief of Staff, United States Army, and a party of seven people, sailed from Charleston, South Carolina, for Cristobal on the U. S. S. *Mayflower*, on April 21, stopped at Kingston, Jamaica, for two days, and arrived at Cristobal on April 28, where he was met by the Isthmian Canal Commission. The party accompanying Mr. Dickinson consists of: Miss Edna Owsley, of Chicago; Mr. and Mrs. James Ross Todd, of Louisville; Dr. and Mrs. W. G. Ewing, of Nashville; and Lincoln R. Clark, confidential clerk to the Secretary of War. Secretary and Mrs. Dickinson are the guests of Lieut.-Col. George W. Goethals at Culebra, and the other members of the party are at Hotel Tivoli.

### Fourth of July Celebration.

At a meeting held in Commissioner Blackburn's office on Saturday, May 1, to arrange for the celebration of the Fourth of July, it was decided to have the general celebration for the Isthmus at Ancon, and to assist as far as possible the committee having in charge the local celebration at Cristobal. Mr. Blackburn was elected chairman of the executive committee, and was authorized to name the various subcommittees to raise funds and arrange details.

### Gatun-Mount Hope Road.

A barge load of rock from Porto Bello was delivered at Mount Hope on April 24 for the Mount Hope-Gatun road. The subgrade of the road is finished throughout its entire length, and the rock will be distributed from Mount Hope and Mindi, as rock from Porto Bello is now being delivered at both points.

### Over a Ton of Quinine.

Over a ton and a quarter of quinine was issued by the Department of Sanitation in the calendar year 1908, in the effort to prevent malaria by administering prophylactic doses, in supplying quinine tonic to the silver employes on the work and to gold employes in the Line hotels, and in curing the 12,372

cases that were treated in the hospitals and the 23,000 cases that were treated in the sick camps. The drug costs about \$3.15 a pound. The average number of employes in 1908, was 43,890 and the average amount of quinine issued to each employe was therefore .975 ounces. The number of pounds issued in each month and the number of malaria cases in hospitals were as follows:

MONTH.	Pounds Avordupois.	No. malaria cases treated in hospitals.
January.....	601.416	646
February.....	122.157	574
March.....	32.353	533
April.....	150.655	407
May.....	106.312	397
June.....	80.241	630
July.....	446.031	1,728
August.....	165.539	1,525
September.....	110.250	1,410
October.....	686.184	1,822
November.....	122.449	1,460
December.....	51.350	1,213
Total.....	2,674.967	12,372

Quinine is dispensed free to any one who applies for it, whether he be an employe of the Commission or not, because the fight to keep the Canal force healthy is greatly aided by the decrease in malaria among the people living in the villages of the Canal Zone. In addition to the hospitals there are two regular channels of distribution, the dispensaries, at which all persons are served, and the quinine dispensers who visit the labor camps. The general advice to take at least three grains a day for prophylactic purposes is not heeded by every one, and the use of quinine is not urged upon people except when the malaria rate runs unusually high. It is probable that some of the quinine issued is not used, although the amounts issued are usually only enough for a week or ten days. The quinine dispensers visit the messes for European laborers once a day and offer the drug, but do not press it on the men unless there has been an unusually large number of cases of malaria in their camp. No quinine is offered to the negro laborers except in camps where the number of malaria cases is exceptionally high.

### Cristobal Court No. 8, I. O. P. K.

Cristobal Court, No. 8, Independent Order of Panamanian Kangaroos, will hereafter meet every Friday evening at 8 p. m., in the I. C. C. lodge hall at Cristobal. Visiting members cordially invited to attend.

### STATEMENT OF CLASSIFIED EXPENDITURES TO FEBRUARY 28, 1909.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1908. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Department of Civil Admin- istration.	Department of Sanitation.	Department of Construction and Engineering.	Municipal Improve- ments.	Plant Ac- count.	Total.
Prior to July 1, 1907. ....	\$1,446,407.73	\$4,636,630.37	\$13,410,795.01	\$4,296,732.98	\$19,345,697.87	\$43,136,263.96
Fiscal year 1908.....	704,610.15	2,310,212.01	16,680,660.46	1,494,956.41	11,684,215.15	32,874,654.18
Fiscal year 1909:						
July, 1908.....	84,898.15	197,963.07	1,482,698.88	91,901.17	544,083.23	2,371,544.50
August, 1908.....	77,019.80	145,870.37	1,599,556.90	60,798.76	517,046.09	2,400,291.92
September, 1908.....	69,867.03	129,725.40	1,636,253.17	52,809.20	703,633.09	2,592,287.89
October, 1908.....	59,612.51	155,676.68	1,448,614.64	67,696.17	727,544.14	2,459,144.14
November, 1908.....	59,374.12	147,957.24	1,369,805.86	77,406.64	480,139.10	2,134,682.96
December, 1908.....	65,526.32	166,321.70	1,500,404.77	70,936.43	893,337.24	2,696,526.46
January, 1909.....	51,416.82	164,605.80	1,550,843.72	65,209.51	1,418,185.90	3,250,261.75
February, 1909.....	60,782.04	139,368.18	1,453,781.43	54,105.63	596,564.67	2,304,601.95
Total. ....	2,679,514.67	8,194,330.82	42,103,414.84	6,332,552.90	36,910,446.48	96,220,259.71

## INTERLOCKING SIGNAL WORK.

## Controlling the Heavy Traffic Over the P. R. R. Main Line.

The first installation of an interlocking system of signal and switch operation on the Panama railroad was introduced at Miraflores on March 1, 1908, at the junction of the P. R. R. main tracks, Miraflores dump and Miraflores lock connecting tracks, where the number of trains averaged 240 for each eight hour service.

The interlocker or machine controlling the switches and signals was made on the Isthmus, and the plant was installed by the forces of the Telegraph and Telephone Department. Although rather crude, the machine demonstrated the value of this method of operation, and installations followed rapidly at important junctions. The old interlocking plant at Miraflores was eventually taken out, and a thoroughly modern system based upon the best signal practice in the States and consistent with the requirements on the Isthmus, was installed. Since April 30, 1908, interlocking plants have been installed at the Gorgona crossovers, near the south end of old Alligator curve; Matachin crossovers, at the junction of the Canal outlet and Matachin dump tracks; Las Cascadas crossovers, at the junction of the Canal inlet tracks; Paraiso crossovers, at the junction of the Canal outlet and inlet tracks; Miraflores crossovers, at the junction of Miraflores dump and lock tracks, and at the north leg of La Boca wye, at the junction of P. R. R. main tracks and La Boca wye.

The advantages in the operation of a number of switches and signals through an interlocker may be summarized as follows:

First—One man does the work of several, thereby avoiding the possibility of misunderstanding.

Second—The interlocker is so arranged that the setting up of conflicting routes is impossible; thus the danger of collision is almost entirely eliminated.

Third—The clearing of any signal by means of an interlocked lever secures or locks up all the switches in the route over which the train movement is to be made, thus preventing the possibility of running through interlocked switches where a signal is provided to protect the same.

Fourth—The control of all of the switches in the layout from one small building.

Fifth—The placing of the operator in actual contact with the dispatcher and other officials by telegraph and telephone.

The interlocking machines used on the Panama railroad are of the Saxby and Farmer improved type, and all machines are provided with preliminary latch locking. The raising of the latch upon any lever actuates the lock mechanism in connection with all other levers of the same machine, thus preventing the operation of any lever, excepting in proper order. Any lever being in the wrong position with reference to its lock or signal lever, will prevent the clearing of a signal, as it is impossible to raise the latch preliminary to the lever movement; thus a complete check is provided against clearing a signal unless route governed by such signal is properly set. When a signal is cleared, the locking actuated by the latch of the signal lever thoroughly locks all conflicting

routes, thus preventing the clearing of any signal for a conflicting movement. All levers and like parts of machines are interchangeable and are so arranged that they can be removed without interference with other levers.

The interlocking machines were made up on the Isthmus from parts ordered in the States, the interlocking layouts, including the peculiar design of the interlocking bed necessary for each particular layout, being designed and assembled on the Isthmus.

The switches, facing point locks and detector bars are connected to the levers operating them with 1-inch plugged pipe of extra good quality, the pipe lines being spaced at 2¾-inch centers and supported on antifriction pipe carrier foundations, spaced at 7-foot centers, the changes in direction being made by means of cranks securely mounted upon concrete foundations. The expansion and contraction of the pipe lines is compensated by means of standard compensators, properly spaced, so that the adjustment of any switch once properly made, will not require attention. All facing point switches on main tracks are locked in position by means of facing point plunger locks, which securely lock the switch when in proper adjustment, but immediately indicate any defect in the switch adjustment by preventing the reversal of the lock lever, thus preventing the clearing of all signals governing movements over the same until the trouble is removed.

The control of signals is usually effected by means of No. 8 double galvanized steel wires, the changes in direction being made around malleable iron wheels having an 8-inch sheave. Galvanized chain of ¼-inch cross section is provided in the signal control wires to operate around the wheels.

Detector bars are provided on all facing point switches on main tracks in connection with interlockings, their function being to prevent the operation of the switch under traffic. The detector bar consists of a steel strip ¾ inch by 2½ inches by 50 feet, supported by link clips attached to the outside of the rail. In its normal position, the detector bar is one-fourth inch below the top of the rail. This detector bar is connected to the same lever operating the facing point lock, so that the act of locking a switch also raises the detector bar to a point three-fourth inch above the rail. As the wheels of a train extend over the outer edge of the rail, it is at once apparent that the detector bar prevents the operation of the lock, and thus secures the switch point against improper operation under a train.

Distant switch signals have been installed at Mount Hope, Tabernilla, Mamei, and Pedro Miguel. In these installations the signal control is effected by means of a two-lever switch and signal arrangement, which provides a signal lever interlocked with the

switch lever. The arrangement is such that a signal may be cleared only when the switches over which the signal governs movements is set for the main track. This method necessitates the attention of a switch tender, and its value may be said to be in the advance indication of the position of the switch or of a conflicting movement over the same, which is given to approaching trains on main tracks.

Automatic and semi-automatic signals are now in use at Barbacoas Bridge and Black Swamp, where the double track merges into a gauntlet track. These signals are operated electrically, being controlled by track circuits with energy supplied at one end of each of the various track sections, and a relay in series with the track at the control or opposite end. A train entering a section thus energized will cause the signal to operate, for the well-known reason that the greater part of electric current will always take the path of lowest resistance. This shunts out the relay by providing a path for the current through the wheels and axle of the train; and as all the signal circuits are controlled by track relays, the principle of automatic control is very evident.

## Repairs to Dredge No. 82.

Dredge No. 82 which has been undergoing repairs at the Cristobal marine shops will be put back in commission within a few days. This was the first of the 20-inch pipe line suction dredges to be put in service on Canal construction and began work on the dam site at Gatun in the Atlantic Division about a year ago. It was almost continuously at work up to February 20, when it was taken to the Cristobal marine shops. Since that time it has been completely overhauled and is now in first class condition.

## At Balboa Shipways.

The Panama railroad tug *Bolivar* will be laid up for repairs within the next few days. New boilers are to be installed, and the boat will have a general overhauling. She has been in service almost continuously for the past 22 years, and has not undergone extensive repairs since 1900.

Work on the old French ladder dredge *Marmot*, recovered a short time ago from the bottom of the Canal, will be completed on Friday, May 7. She will be put to work at once dredging the channel alongside the new dock which is to have a depth of 15 feet at low tide. The *Marmot* is equipped with the small scratch type of buckets.

Six barges recently purchased by the Commission from the Panama railroad are undergoing repairs and remodeling of hatches at the Cristobal marine shops. They will be used in hauling cement from the docks at Cristobal up the old French canal to Gatun.

## DRAINING CULEBRA CUT.

## Diversion Channels, Gravity, and Pumping Systems.

The drainage of Culebra Cut presents two distinct tasks: (1) To keep the water of the surrounding country out of the channel; (2) to rid the channel of the water that collects in it from rainfall and seepage. A system of diversion channels solves the first, and the second is accomplished by gravity drains and pumping. So well is the dual system working that in the rainy season of 1908 but little inconvenience was caused by the great amount of rainfall along the Cut, from Bas Obispo to Pedro Miguel, a distance of nine miles.

It is the excessive rainfall that makes the problem one of consequence, for the territory that would naturally drain into Culebra Cut is only about 26 square miles in area, and the so-called rivers that carry the run-off of the region are only creeks under normal conditions, even in the rainy season. During rain storms, however, and for a short time after, they carry off a large amount of water. Likewise a large amount falls into the Cut during a storm and provision must be made against its collecting, and flooding the tracks and steam shovels. At three points along Culebra Cut in the rainy season of 1908-1909, from May 1 to January 30, the rainfall was:

	Inches.
Bas Obispo.....	67.68
Empire.....	69.20
Rio Grande.....	80.15

From its sources in the mountains of Darien the Chagres river runs in a southwesterly direction until it strikes the hills at Bas Obispo, where it turns at almost a right angle and flows in a northwesterly direction to the Caribbean Sea. The line of the Canal through Gatun Lake follows in general the channel of the Chagres to Bas Obispo, where in holding to its southeasterly direction across the Isthmus it encounters the hills of the Continental Divide. From this point to near the summit of the watershed, it makes use of the natural depression between the hills through which ran the Obispo River, which rises near the summit at Culebra and flows north into the Chagres at Bas Obispo. On the southern or Pacific side of the Divide the Canal utilizes a similar depression, the valley of a small stream called the Rio Grande.

The natural channels of these streams cross the line of the Canal several times, and present a considerable obstacle to dry excavation. From the very beginning of their work on the Cut the French contended with this obstacle. When the Americans assumed control in 1904 diversion channels, suitable for keeping the water of the Obispo and its tributaries out of the Canal as then planned, had been dug on both sides of the Cut.

On the east side a ditch took the water of the Obispo river and carried it to a point opposite Empire whence it was intended to carry it across the Cut on an aqueduct (K. 52) and turn it into the diversion channel on the west side. Another ditch took the water on the east side between Empire and Las Cascadas to a point opposite Haut Obispo, where it flowed through the natural channel of the Obispo River to the Chagres River, and during high water part of it flowed through a tunnel at Bas Obispo and a diver-

sion ditch into the Obispo River and thence into the Chagres River. This tunnel is now known as the Camacho diversion tunnel. It was the intention to build an aqueduct similar to that at Empire across the Cut at Las Cascadas (K. 48.5) to take the water collected from the east side of the Cut, from the region between Empire and Las Cascadas, and allow it to join the water in the Obispo river at Haut Obispo. On the west side of the Cut the water from the region between Culebra and Las Cascadas was collected in a ditch and allowed to flow into the Cut near Las Cascadas, to join the water in the Obispo River at Haut Obispo. On the southern slope the Rio Grande was entirely diverted by the French and not allowed to flow through the bottom of the Cut.

The greater width of the Canal as planned by the Americans made it necessary to build diversion channels farther away from the Cut than were the ditches dug by the French. There is one channel on each side—the Obispo Diversion on the east, and the Camacho on the west. Each takes the run-off from the summit of the Divide to the Chagres River, draining a region  $5\frac{1}{2}$  miles long and containing 9.8 square miles in the case of the Obispo, and  $6\frac{1}{2}$  square miles in the case of the Camacho. Surveys for this work were made in 1905 and the work of excavation was begun in September 1906.

The Camacho diversion was completed in 1908. Its course lies from Culebra along the west side of Culebra Cut to the Chagres River, into which it empties through the Obispo River at a point half a mile north of Bas Obispo. It is about four miles long. From Culebra the water is carried in a diversion ditch which follows part way the old course of the Camacho River to Haut Obispo. Haut Obispo is the point where the Obispo River, before its diversion, crossed Culebra Cut, and the Camacho diversion water flows into the old channel of the Obispo at this point. The old channel of the Obispo is utilized from Haut Obispo to Bas Obispo where the river was deflected sharply by a hill, and its course again crossed the line of the Canal. The prism of the Canal is so close to the hills at this point that a suitable diversion ditch could not be built around the face of the hill, and the French had therefore built a tunnel which at time of high water carried part of the water into a diversion ditch on the northerly side of the hill whence it flowed into the Obispo River and thence into the Chagres River.

The Americans utilized as much as possible of the old French diversion, including the tunnel which is 420 feet long, and 16 feet high from the floor to the crown of the arch, with a minimum cross-section of 170 square feet. The greater part of the work consisted in joining the diversion ditch dug by the French, which opened into the Cut at Las Cascadas, with the old channel of the Obispo River at Haut Obispo, revetting the sides of the ditch where it runs through Whitehouse yard, and cleaning out the old French tunnel and the ditch between the north end of the tunnel and Obispo River. About 85,000 cubic yards of material were excavated, and on March 26, 1908, the work was completed. No reliable data are available as to the amount of run-off through this channel, but it was enough to delay the work in the Cut several times, and would

have been more troublesome when the excavation had reached the lower levels. The principal streams diverted from the Cut by the Camacho diversion, are the Camacho, San Juan, and Mandinga rivers.

From an old French map based on surveys made before excavation was begun in Culebra Cut, it appears that the Obispo River crossed the line of the Canal ten times and touched the center line four other times without crossing between its source east of Gold Hill near Culebra and its mouth at the Chagres River, below Bas Obispo. The distance along the center line of the Cut is 5 miles. The Obispo's principal tributaries are the Massambi and Sardinilla rivers, and the area of the watershed on the east side of the Cut is 9.8 square miles.

The amount of run-off in the dry season is slight and, at the end of the dry season, 1909, there was no water at all in the river opposite Empire. The total flow in the rainy season is not known exactly, as the French records are somewhat mixed and their weirs at times were completely submerged. The largest recorded flow is that of September 21, 1894, when the water in the Upper Obispo River passed kilometer 53.2 between Culebra and Empire at the rate of 2,706 cubic feet per second and the discharge was 36,995,000 cubic feet in 48 hours. On this basis, the discharge of the river at Haut Obispo, where it crosses Culebra Cut, was 6,000 cubic feet per second. The Obispo Diversion, now in process of construction, is designed to carry that amount of water safely. To this end the minimum width of the channel is 50 feet. When completed the diversion will be 5.05 miles long.

The Obispo Diversion begins at a point on the east side of the Cut opposite Culebra near Gold Hill and runs along the east side of the Canal, and practically parallel to it, to a point opposite Haut Obispo, where the channel of the river crosses the line of the Canal. Here the hills lie so close to the Cut that the diversion could not be constructed between them and the Canal and, therefore, the channel has been carried behind these hills, and through a saddle between them and the hills farther east. When the diversion is completed, about June 1, the water collected in the channel on the east side of the Cut will flow into the Chagres River at a point half a mile above Gamboa and about a mile from where the Canal itself crosses the Chagres between Bas Obispo and Matachin.

The construction of the Obispo diversion involved about 1,078,000 cubic yards of excavation, the building of  $1\frac{1}{2}$  miles of dyke, the driving of sheet piling along 896 feet of dykes, and the driving of 1.6 miles of trestles, from which dirt was dumped to make the dykes. The work was begun in 1906, but was not pushed until October, 1908, and since that time not less than two steam shovels have been kept busy at this work. At present three steam shovels are operating in the last big cut that must be made before the channel will open into a ravine through which the water will flow to the Chagres. This cut is 97 feet deep and 250 wide at the top, and some of the most difficult work experienced in Canal construction, on account of the heavy grades encountered, has been on this part of the diversion.

On the southern slope the only stream that crosses the line of the Canal between the

summit on the Continental Divide and the end of Culebra Cut at Pedro Miguel is the Rio Grande. This stream has been dammed at a distance of half a mile from the Cut and its water is impounded in the Rio Grande reservoir, whence it is piped to the Canal Zone settlements between Culebra and Panama, and to the city of Panama. In the dry season all the water from this river is held in the reservoir, and in the rainy season the overflow is allowed to take the course of the French diversion. Up to the present time the excavation in the Cut has not gone below the point where the water may drain by gravity into the old French diversion channel just south of the Pedro Miguel lock site.

The Cut begins at Bas Obispo, where the Chagres River changes its course from southwest to northwest. At this point low water in the river is about 43 feet above mean sea-level, and high water is about 70 feet above mean sea-level. The bottom of the Canal through the Cut is to be at elevation 40 above mean sea-level. A steam shovel is now working at elevation 38 at Bas Obispo, two feet below the proposed bottom.

In draining this section of the Cut one pump at present suffices, but when the general level of the Cut is brought below the low water point of the river, more pumps will be necessary. The plan for draining the Cut is to place the summit as far north as Whitehouse and allow the surface water from Whitehouse to Pedro Miguel to drain through the locks at Pedro Miguel at approximately 20 feet above mean sea-level. This will give a grade of about 3 feet to a mile between Whitehouse and Pedro Miguel, sufficient to allow the water to run off by gravity. A steam shovel cut will be made through the center of the channel from Whitehouse to Pedro Miguel at an average depth of 9 feet below the floor of the channel. Lateral ditches will carry the surface water into this main ditch through which it will be drained through the lock site.

The culvert under the old line of the Panama railroad through which the French turned the water from their excavation for locks at Pedro Miguel is being lowered to elevation 40 to take the drainage from Culebra Cut and divert it into the channel of the Rio Grande west of the lock site, until the floor of the lock is finished, when the river will be turned through the lock itself.

Between Whitehouse and the Chagres River at the north end of the Cut, a distance of two miles, the water will flow by gravity into a sump near a dyke which has been built between the Cut and the channel of Chagres River. Through this barrier or dyke, two 24-inch pipes will be run at elevation 46 above mean sea-level, two at elevation 52, and two at elevation 60. Each pipe will be fitted with a valve and the greater part of the water that may collect in the Cut during a flood will flow into the Chagres through these pipes. What water remains below elevation 46 will be pumped out.

The water that collects in the north end of the Cut from rain, or that remains below elevation 46 as a result of a flood, will be collected in a sump near the barrier on the north end. The steam shovel that is now two feet below the bottom of the Cut will continue its excavation to elevation 30, making the sump referred to. It will then make a cut through the center of the Canal

rising gradually to grade 40 at the summit near Whitehouse. Lateral ditches will be run to this central drainage ditch and the water will thus be collected in the sump. During ten months of the year not over 1,000 gallons of water a minute will collect in this sump, and during periods of storm or floods the amount that collects will probably not be more than 8,000 gallons a minute and this only for a few hours at a time.

In view of this, three large pumps, which will discharge 12,000 gallons of water a minute under 80 pounds head of compressed air, will be installed. One of these, run at quarter speed, will do all the work under ordinary conditions. The pumps will be horizontal duplex, piston pattern, with a steam cylinder 16 inches in diameter, water cylinder 22 inches in diameter and stroke 18 inches. The intake will be 16 inches in diameter, the discharge pipe 14 inches, the steam pipe opening 2½ inches and the exhaust 3½ inches. These pumps will be of one size and all their parts will be interchangeable. They will be capable of withstanding 75 pounds pressure in the water cylinders at all times and of making 90 strokes per minute with each piston. The pumps will be run by compressed air from the mains along the Cut, but two auxiliary boilers for generating steam will be installed for an emergency.

#### Personal.

The resignation of Captain George R. Shanton, as Chief of Police of the Canal Zone, went into effect on May 1, at the expiration of his leave, and he was succeeded by Captain Grosvenor A. Porter. Captain Shanton was Chief of Police in the Canal Zone during the first five years of American occupation. He assumed his duties as Colonel and Chief of Insular Police at Porto Rico, with headquarters at San Juan, on April 1, 1909.

Miss Mary Gurley McCulloch, daughter of Major C. C. McCulloch, Jr., Medical Corps, U. S. A., was married to Dr. William McCully James, of Ancon Hospital, at St. Luke's Church, Ancon, on Saturday evening, May 1, by the Ven. Archdeacon Henry B. Bryan. A reception at the residence of the bride's parents followed the marriage ceremony.

Dr. A. E. Mayner, Acting Health Officer at Panama, sailed on Tuesday for the United States via Jamaica. During his leave he will visit San Diego and other Pacific coast points. Dr. John G. Evans has been detailed as Acting Health Officer during his absence.

#### Obituary.

William Lamb died at Colon Hospital on April 28. He was born in England 39 years ago, was a naturalized American citizen, and was married. He had been on the Isthmus twenty-eight months and resided at Cristobal. His death was the result of a hand-car accident. While sitting on the car his head came into contact with the moving handle, causing a fracture of the fourth vertebra.

#### Brotherhood of St. Andrew.

All members of the Brotherhood of St. Andrew living on the Isthmus, together with all men who desire to join the Brotherhood, are invited to meet at St. Luke's Chapel, Ancon, on Sunday morning, May 9, at 11.15, directly after the morning service, for the purpose of forming a chapter of the order.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The Empire Woman's Club held a reception on April 29 in honor of the president, Mrs. L. H. Ash, who is leaving the Isthmus for her home in the States. There was a large attendance. The reception was preceded by a business meeting, when it was decided to continue the work of the Club throughout the summer. Election of officers will be held during the present month.

The Women's Christian Temperance Union of Empire will hold a mother's meeting on May 6, when a program will be given. The public is cordially invited.

The following officers have been elected by the Pedro Miguel Woman's Club to serve for the ensuing six months: Mrs. H. W. Shick, president; Mrs. H. Girdner, vice-president; Mrs. H. E. Weber, secretary; Mrs. G. E. Brown, treasurer.

The social meeting of the Las Cascadas Woman's Club was held at the home of Mrs. Charles R. Lingo on Thursday, April 29, with a good attendance.

At the regular meeting, April 29, the Gorgona Woman's Club decided to abandon department work for the present. There has been a large increase in the membership recently, and as many strangers are included in the number it is considered wise to continue the social meetings until the members have familiarized themselves with the various phases of club activity.

The Daughters of Rebekah, Gorgona, have fixed May 22 for the date of their flower dance, which will be given in the Commission clubhouse. There will be no special train, but visitors from the Line will be cared for over night by special arrangement of the committee. Tickets to admit two will be sold at \$1.00. The dance is for the contingent fund which the order is obliged to carry.

The Paraiso District of the Canal Zone Branch of the American National Red Cross gave a dance in the lodge hall on April 24. Arrangements for the dance, including the decorations and supper were in the hands of the executive committee, Mr. R. C. Smith, chairman, Mrs. Wm. Lowe and Mr. A. C. Hobbler. A large number of guests were present from Pedro Miguel, a special train being run for their accommodation.

### Isthmian Sunday School Convention.

A convention of the Isthmian International Sunday School Association will be held at Gatun on Sunday, May 16, at 2 p. m. There will be a short song service, prayer and an address by Justice W. M. Owen on "The Modern Bible Class" at the opening of the meeting. Addresses by M. J. Stickel, Cristobal; H. K. Higgins, Gatun; J. C. Forman, Empire, and Judge J. K. March, Gorgona, will follow, after which there will be a "Round Table" discussion on Sunday school work, lasting thirty minutes, conducted by Rev. J. W. Holland. The meeting will close with an address by H. L. Stutz, Cristobal, followed by music and the benediction.

### Missing Man.

Information is desired in regard to Ellis J. Rogers, of West Nanticoke, Pa. He was last heard from in December, 1908. Any one having knowledge concerning him is requested to communicate with the American Minister, Panama.

## NAVIGATING CANALS.

## Relative Merits of Sea-level and Lock Canals.

Although the type of canal at Panama is probably definitely settled in favor of the lock system, there continues to be more or less agitation and discussion of the subject not only in the daily press, but to some extent in the technical press, though it must be said that the latter almost unanimously support the decision in favor of the lock type. The opposition to it comes chiefly from a few engineers whose opinions were not given the weight to which they seem to think they were entitled, and some of whom are interested in special methods of prosecuting such work.

So far the men who are to use the channel seem to have been overlooked, but it is they, and not the engineers, who will justify or confound the judgment of those who determined the type. We need not here discuss the arguments advanced by each side, but will consider both types as they affect navigation.

The total length of canal is approximately 50 miles; in the sea-level type about two-fifths of this is made up of curves, in the lock type about one-seventh. In the sea-level type these curves are sinuous; in the lock type they merely represent the center line of the canal at the intersection of straight portions, or ranges. In actual navigation the ship is kept steadily on one range until she closes the range on the next course, and where these shifts of wheel occur the channel is widened by the suppression of the interior angle to give abundant room to swing or pass another ship.

It is impossible to steady a ship on a constantly changing course, even in daylight, because there is nothing to steady her by, leaving out of the question the influence of bottom drag, of which we will speak later, and in this the army engineers who have had the benefit of long experience in laying out, constructing and maintaining ship channels as actually demanded by navigation, have evidenced the value of their experience. Navigation of such a channel at night, when even the bank is not visible is entirely impossible, whereas straight reaches with simple range lights are as easily negotiated by night as by day, so long as the lights can be picked up, even with a glass. Of course ranges on curves are not feasible and lighted buoys in a curving channel are altogether impracticable.

In width of channel the proposed sea-level type is little more than a continuous ditch, with a bottom width of 150 feet. The lock type has a least bottom width of 300 feet and this for only about eight miles; for about 22 miles, 500 feet width and for about 20 miles across Gatun Lake, it will be from 800 to 1,000 feet wide. These widths allow, even in the shallowest portions, of a considerable amount of swing, and human power has not yet been able to prevent this swing in narrow or shallow channels, even with no current. The narrower the channel the greater the tendency to swing, and as the ship always makes for the nearest bank, when "hunting" is once begun, it becomes increasingly more difficult to arrest because of the increased angle of helm necessary to steady her. Passing other ships

in such a channel is a matter of most serious difficulty, because the cross-section of the two ships in such a large proportion of the total channel section that violent disturbing eddies and currents are set up, chiefly by propeller action, and it is very doubtful indeed if two 60-foot beam ships, with the most careful and deliberate handling, could pass each other in a 150-foot channel without rubbing.

One of the advocates of the sea-level type in a letter to *Engineering News* gravely states that the tidal currents set up in the canal and reaching about 3 miles per hour, calculated on the entire area of cross-section of canal, would be no hindrance to navigation. He quotes instances of navigation in much higher currents, such as the lower Mississippi in flood, the North River at New York and some tropical streams navigated by flat-bottomed light draft boats.

It is almost a waste of space to point out that maneuvering or steering a ship in a current is almost entirely a question of the relative volumes of the ship and the stream. A ship which could be driven and steered at full speed up North River in any current could not be driven one foot at full speed (as actually suggested) in a canal or narrow stream. For that matter a ship of say 60-foot beam and 28 feet draft could not be driven 100 yards in the proposed sea-level canal at full speed, even with no current whatever. And as a ship can only be steered as she has motion relative to the surrounding water, a vessel travelling with a 3-mile current would necessarily have an actual speed of something over that in order to have steerage way, say, an additional 3 miles.

The control of such a ship in a sea-level canal under such conditions, to say nothing of meeting other ships, in a channel only 150 feet wide and at which point the current is consequently greatly accelerated, is something which only a man devoid of practical knowledge would consider without a shiver.

The author of the letter referred to quotes the Detroit River as an instance of navigating in a 4-mile current. There is no point in the Detroit River where such a current exists, but even admitting that it does it has no bearing on the case whatever. The Detroit River is wide, and except for a short distance at the lower end, relatively deep, so that speed is affected very little and except at one point steering not at all, and this point is always navigated at slow speed.

The time occupied in lockages is more than made up by the greater facility of navigation in the lock canal, but this time is not nearly so great as seems to be supposed. The average lockage at the Poe lock at the Soo, is about 40 minutes, and although the locks at Panama are slightly larger than the Poe, the arrangements for filling and emptying will doubtless be in proportion, and probably better, so that the three lockages should not consume over three hours at most. The author referred to also speaks of the experience with accidents to locks at the Soo, while as a matter of fact there have been none of any consequence in the entire 54 years, as we have had occasion to note in a previous issue. We question if a navigator can be found who, when he fully understands both plans, will not unhesitatingly declare for the

lock type, even though he may never have done any locking, while to those who have the problem has no terrors.—*Marine Review for April.*

## Canal Quarters and Their Occupants.

In order that it may be determined in advance just what building construction must be done during the coming fiscal year data have been compiled showing the number of gold bachelors and family quarters and the number of occupants on April 1, 1909. The statement as given below includes 6 one-family quarters at Ancon, two bachelor quarters, and 1 one-family house at Gatun authorized but not yet constructed:

PLACE.	BACHELOR QUARTERS.				FAMILY QUARTERS.	
	No. of houses.	No. of rooms.	No. of occupants.	No. of occupants per room.	No. of houses.	No. of quarters.
Ancon.....	10	154	153	1.00	84	136
Bas Obispo.....	6	69	95	1.37	32	43
Corozal.....	2	90	96	1.07	28	52

## Commission Clubhouses.

A smoker and reception was given at the Commission clubhouse on Thursday night, April 29, in honor of the new Y. M. C. A. secretary, Mr. E. R. Gobrecht. The program consisted of musical numbers, instrumental and vocal, speeches, readings, and refreshments consisting of punch, coffee, sandwiches and cigars. A large crowd was present.

Thirty men have entered a local handicap ten-pin tournament which was started at the Empire Y. M. C. A. Monday evening, May 3.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

ANCON, C. Z., May 5, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Bayne, Clarence W.	McRobert, W. W.
Chase, John D.	Mytton, Ed.
Clinch, James B.	Naylor, Michael
Courtney, Edgar	Newton, Frederic E. (2)
Dorr, Mrs. Henry (2)	Oyster, W. M.
Evans, Mrs. F. M.	Phillips, John M.
Fisher, Mrs. Elsie R.	Praeger, Norman W.
Garriott, Clyde	Riddick, W. M.
Heenan, Jim	Sutherland, Timothy
Kessler, Oscar	Walling, Loren A.
Logan, Chas. H.	Wright, G. F.

A concert will be given at Empire, Sunday, May 16.

## OFFICIAL CIRCULARS.

## Rules for Rendering Bills.

CULEBRA, C. Z., May 1, 1909.

CIRCULAR No. 246.

Effective, May 1, 1909: The following rules for rendering bills will be observed by the Heads of Departments and Divisions of the Isthmian Canal Commission, and by the Panama Railroad Company:

1. A bill rendered by one department or division, against another department or division of the Isthmian Canal Commission will include all charges for the job for which the bill is rendered, unless the work extends through more than three calendar months. In the latter case bills will be rendered at the end of the third month and quarterly thereafter. The accumulated charges in suspense will be reported to the Examiner of Accounts monthly, on Form 132-C. E., under their proper headings and by divisions.

2. A bill rendered by the Isthmian Canal Commission, against the Panama Railroad Company, or by the Panama Railroad Company against the Isthmian Canal Commission, will include all charges for the job for which the bill is rendered, unless it is estimated the work will extend through more than six calendar months. In the latter case bills will be rendered monthly. The accumulated charges in suspense, in the case of charges by the Isthmian Canal Commission against the Panama Railroad Company, will be reported to the Examiner of Accounts monthly, on Form 132-C. E., under their proper headings.

3. It is the purpose of this circular to require that, so far as practicable, bills shall be rendered only for completed jobs. When a bill does not include all charges and a second bill is necessary, the reasons making necessary the second bill should be fully stated.

4. The requiring of a specific written authority for work, and the preparation of bills in accordance with established rules, will avoid many of the difficulties heretofore encountered in having bills accepted.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Injured Contract Laborers.

CULEBRA, C. Z., April 30, 1909.

CIRCULAR No. 247.

Contract laborers injured in the performance of their duties and partially disabled, who are subsequently given light employment, may be paid at the rate of 20 cents gold an hour, although the work to which they are assigned may not ordinarily carry that rate of pay.

GEO. W. GOETHALS, Chairman

## Chief of Police.

ANCON, C. Z., April 29, 1909.

CIRCULAR No. 85.

Grosvenor A. Porter is, effective May 1, 1909, appointed Chief of Police of the Canal Zone, vice Geo. R. Shanton, resigned.

JO C. S. BLACKBURN,

Head of Department of Civil Administration.

Approved:  
GEO. W. GOETHALS, Chairman.

## Zone Liquor Licenses.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., April 30, 1909.

The Isthmian Canal Commission has authorized the issuance of liquor licenses in the Canal Zone for the year commencing July 1, 1909, at Rio Grande, Culebra, Empire, Las Cascadas, Bas Obispo, Matachin, Gorgona, Tabernilla, Bohio and Gatun.

The areas within which saloons may be located are as follows:

**Rio Grande**—On the west side of the old line of the Panama railroad, facing the railroad, in line with the saloons at present licensed there.

**Culebra**—On either side of the main street of the new town on the French dump east of the Panama railroad passenger station, and on lots 11 to 19, inclusive, block 1; lots 12 to 20, inclusive, block 2; lots 1 to 9, inclusive, block 4; lots 2 to 10, inclusive, block 5, as shown on the map of West Culebra prepared in the Resident Engineer's office at Empire, on October 5, 1908.

**Empire**—The area bounded by Second avenue, Main street, Seventh avenue and Front street.

**Las Cascadas**—The section known as the new town, where private houses are now located, on the west side of the Panama railroad.

**Bas Obispo**—On the west side of the Panama railroad, in line with the buildings in which four saloons are now located.

**Matachin**—On the main street of the town, on the east side of the Panama railroad, in line with the buildings in which saloons are now located.

**Gorgona**—Area bounded by Second street, Avenue

A. Fifth street and Central avenue, but no saloon will be permitted to face on Central avenue.

**Tabernilla**—On the front street of the town, east of the Panama railroad, facing the railroad and running a distance of about 500 feet in a northerly direction from the building in which a saloon is at present located, north of the Panama railroad passenger station.

**Bohio**—On the main street of the town, on the west side of the Panama railroad, fronting the railroad.

**Gatun**—Block 7 and 8 of the new town laid out by the Panama Railroad Company.

Owners of licensed saloons at present in operation in the towns of Empire, Las Cascadas and Gorgona, outside of the area prescribed herein, may make application for removal of licenses in present location, but this does not abridge the right of the Commission to cancel the licenses or require the removal of any such saloons under present regulations.

The areas prescribed are indicated on maps which may be seen at the offices of the Collector of Revenues, Ancon, and the Tax Collectors at Empire, Gorgona, and Cristobal.

Applicants for licenses are invited to submit their applications prior to June 1, 1909, in conformity with the regulations adopted by the Isthmian Canal Commission, April 27, 1907, and amendments.

TOM M. COOKE, Collector of Revenues.

## Assistant to the Vice-President.

PANAMA RAILROAD STEAMSHIP COMPANY,  
NEW YORK, April 26, 1909.

GENERAL ORDER No. 19.

Effective this day, T. H. Rossbottom, Secretary, is appointed Assistant to the Vice-president, with all the powers and authority associated with that position; his instructions will be respected accordingly by all officials and employees of the Company.

E. A. DRAKE, Vice-President.

## Attorney for Panama Railroad Company.

PANAMA RAILROAD COMPANY,  
COLON, R. P., April 28, 1909.

CIRCULAR LETTER No. 84.

Effective May 1, 1909, Dr. J. Cueva Garcia is appointed attorney for the Panama Railroad Company for practice in the Panamanian courts.

HIRAM J. SLIFER, General Manager.  
G. M. SHONTZ, Attorney on the Isthmus.

Approved:

GEO. W. GOETHALS,  
President, Panama Railroad Company.

## Proposals for Buildings.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z., until 2 p. m., Saturday, May 15, 1909, when they will be publicly opened, for the erection by contract of one type-17 house, and three type-27 houses, Ancon Hospital grounds, and one type-10 house, Ancon, C. Z. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash, or money order for \$50, as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$100 for each house for which he is awarded contract, conditional upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. Separate proposals will be received for the different type houses. C. NIXON, Purchasing Agent on the Isthmus.

## Auction Sale.

On Saturday, May 8, 1909, at 10.00 a. m., there will be sold at public sale at the Ancon hospital dairy, nine (9) bull calves, ranging in age from ten days to two months. The dairy is located near the insane asylum buildings, in the rear of the hospital grounds. The terms of the sale will be cash. JOHN L. PHILLIPS, Superintendent, Ancon Hospital.

## LEGAL NOTICES.

United States of America, } In the Circuit Court,  
Canal Zone. } Third Judicial Circuit.

To all whom it may concern:

Notice is hereby given that on Thursday the first day of July, 1909, in the court house in Cristobal, Canal Zone, at 10 o'clock a. m., there will be an auction into the estates of:

Kendal Thomas, who died intestate on or about March the 3d, 1907, at Mount Hope, Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value; Isthmian Canal Commission pay certificates for \$156.67, and \$207.52, United States currency.

Robert Grattis, who died intestate on or about March the 16th, 1906, at Cristobal, Canal Zone, leaving no heirs, possessed of the following personal

property: personal belonging of little value and 20 cents United States currency.

Unknown man, who died intestate on or about March the 7th, 1909, at Bohio, Canal Zone, leaving no heirs, possessed of the following personal property: one small purse containing \$1.60 Panamanian currency.

Aristida Fukala, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: 80 cents Panamanian currency and one French copper coin.

Mekell Zapatos, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: one English pound, 60 francs French and \$2.30 Panamanian currency.

Demetro Apostol, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: \$5.60 Panamanian currency and one bank book showing deposit of \$25 United States currency.

Pursuant to the petitions praying that said property be escheated filed herein by Tom M. Cooke, Collector of Revenues, in accordance with Sections 779, 780 and 781 of the Code of Civil Procedure of the Canal Zone, at which time and place persons claiming the said estates may appear and be heard before the court,

NELSON R. JOHNSON,

Clerk of Circuit Court, Third Judicial Circuit.

United States of America, } In the Second Judicial

Canal Zone. } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 190 hectares of the lands known as "Palenquilla and Frijol Grande," situated in the Canal Zone near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,900; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial

Canal Zone. } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 74 hectares of the lands known as "Santa Cruz," situated in the Canal Zone, and being a part of the lands of the upper Chagres Valley, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$740; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial

Canal Zone. } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 162.5 hectares of the land known as "Barro Colorado and Palenquilla," situated in the Canal Zone, near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,625; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial

Canal Zone. } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 72.5 hectares of the lands known as "Barro Colorado and Frijol Grande," situated in the Canal Zone near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$725; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herein filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

## COMMISSION ACTION.

## Medical Fees—Telegraph and Telephone Lines.

At a meeting of the Isthmian Canal Commission at Culebra on April 24, the following action was taken:

*Resolved*, That paragraph 2, section A of the regulations governing the treatment of persons by the physicians and in the hospitals of the Department of Sanitation, as amended by the Commission at its 14th meeting, be further amended to read as follows:

A charge of \$1 shall be made for each visit by a physician of the Health Department to an employee at his home or quarters, provided that if he is unable to go to the dispensary no charge shall be made for the first visit to such employee. Employees living with their families in Commission quarters, who, in the opinion of the visiting physician, cannot safely or conveniently report at the dispensary for treatment, shall, if they so desire, be treated at their homes without charge except when in the opinion of the District Physician (convenience will be unduly prolonged, thereby causing an increased expenditure by the Commission in payment of sick or injury leave.

The Chairman presented the report submitted by the Committee appointed to consider all questions connected with the ownership, operation and maintenance of the telegraph and telephone lines belonging to the Isthmian Canal Commission and the Panama Railroad Company. In accordance with the recommendation made by the Committee, the following agreement between the Isthmian Canal Commission and the Panama Railroad Company was approved:

On and after May 1, 1909, the Panama Railroad Company will construct, maintain and operate all telegraph and telephone lines and equipment that may be needed in the work of the said company and of the Isthmian Canal Commission; that said company will furnish to the Isthmian Canal Commission all such telegraph and telephone service and facilities as the Commission may require, and as may be requested by officers of the Commission with the approval of the Chairman and Chief Engineer.

In consideration of this agreement on the part of the Panama Railroad Company, the Commission agrees to pay to said company, monthly, an amount equal to seven and a half dollars for each telephone instrument used during the preceding month or fraction thereof, and the Commission further agrees that the Panama Railroad Company shall on and after May 1, 1909, have the use without charge, of the Commission's part of the telegraph and telephone plant and equipment then owned by the Commission, and shall not be liable for deterioration or necessary changes or destruction thereof; and that on the termination of this agreement the railroad company shall pay to the Commission the value at that time, then to be agreed on, of the Commission's interest on May 1, 1909, in the plant and equipment which is turned over to the company on said date.

The Commission also agrees to pay to the railroad company the sum of \$2 000 per month in full payment for all services rendered by the company in maintaining extra operators, signmen, and other employees made necessary by the operation of I. C. C. trains over the railroad company's tracks. The Commission will pay telegraph operators in its own offices as heretofore.

This agreement shall continue in effect till revoked by either party on sixty days' notice, and it is understood that the rate per telephone per month, herein agreed to be paid by the Commission, and the amount of \$2,400, shall be increased or diminished at the beginning of any month during the continuance of this agreement when the Chairman of the Isthmian Canal Commission shall determine such change is proper.

Steamship arrivals and departures at the port of Ancon in the week ending April 30, 1909, were as follows: Arrivals—April 24, U. S. S. *Buffalo*, from San Francisco; and *Acapulco*, from San Francisco; April 26, *Arica*, from Guayaquil; April 29, *Palena*, from South ports, and *Quito* from intermediate ports. Departures—April 24, *San Jose*, for San Francisco; April 25, *Chile*, for South ports, and *Chiriqui*, for intermediate ports; April 26, U. S. S. *South Dakota*, for Central America; April 28, U. S. S. *Buffalo*, for North ports; April 30, *Barraqueta*, for Central America.

**LOST.**—Either at Empire or Gatun, on April 27, a cardcase containing several important personal papers, including Masonic papers, with name of owner among them. The person finding this cardcase is requested to mail it to Mr. Charles Nygaard, U. S. S. *Buffalo*, care of the Postmaster, San Francisco, Cal.

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

Sailings of the French line (Cie. Generale Transatlantique) for Venezuela ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

## Port of Cristobal.

The following steamers arrived at the port of Cristobal during the week ending May 1:

*Magdalena*, April 25, from New York, with 109,831 pounds steel bars for stock.

*Hornstead*, April 26, from Brunswick, Ga., with 35,522 cross and switch ties for issue to all divisions.

*Advance*, April 27, from New York, with 1,000 barrels cement, Gatun spillway; 2,000 cases lubricating oil, 73,451 pounds iron bars, for stock; 206,489 pounds coke, Gorgona foundry; 243 packages material for electric railway and handling plant, Gatun; 13 rock drills for Pacific Division; 11,738 pounds cast steel gears for dredge *Chagres*; 22,372 pounds castings for steam shovels and cars, for Mechanical Division. This steamer also carried an assorted cargo of general stock, the total aggregating 550 tons.

*Sarnia*, April 28, from New York, with 130,616 pounds cableway material, Gatun handling plant.

*Cartago*, April 29, from New Orleans, with 183,161 pounds rice straw for corrals; 8 reels wire cable for Lidgerwood unloaders; 25 cases locomotive head lights for Mechanical Division; 22 cases filing cabinets for stock; 400 boxes fire brick for stock.

## NOTES OF PROGRESS.

### April Excavation.

The grand total of Canal excavation during the month of April was 3,454,649 cubic yards, which is 607,983 less than the total for March, 1909, the month in which the highest record since American occupation was made. Of the 3,454,649 cubic yards, 3,343,709 were chargeable to actual Canal construction and 110,940 to "Plant." The amount removed from the Canal prism was 2,985,134 cubic yards. There were taken out by steam shovels 2,137,861 cubic yards, and by dredges 1,316,788. The daily average excavation was 138,185 cubic yards. There were 25 working days during the month, against 27 in March. The mean rainfall for the month in the territory in which excavation was in progress was 4.36 inches as compared with 1.1 inches the previous month.

In the Atlantic Division the total excavation was 672,701 cubic yards. Of this amount 151,711 was removed by steam shovels and 520,990 by dredges. There were 294,498 cubic yards of material placed in Gatun Dam and 7,478 cubic yards of concrete were laid on the floor of the spillway during the month.

The total excavation in the Central Division was 1,782,766 cubic yards, 271,322 less than were removed in March. Of this total 1,217,442 cubic yards were taken from the Culebra Cut, 490,922 from the Canal prism, elsewhere than in the Cut, and 74,402 from the Obispo Diversion, which is outside the Canal prism.

In the Pacific Division the total excavation was 999,182 cubic yards, 203,384 of which were removed by steam shovels and 795,798 by dredges. There were 18,304 cubic yards placed in the dam at the Pedro Miguel locks and 16,101 cubic yards in the dam at Miraflores.

The detailed statement of excavation in the three divisions follows:

### ATLANTIC DIVISION.

LOCALITY.	"Work" Excavation. cu. yds.	"Plant" Excavation. cu. yds.	Total excavation cu. yds.
Dry excavation—			
Locks, Dam and Spillway.....	70,009	7,334	77,343
Mindi.....	74,368		74,368
Total.....	144,377	7,334	151,711
Wet excavation—			
Atlantic entrance.....	470,635		470,635
Locks, Dam and Spillway.....	17,938	32,417	50,355
Total.....	488,573	32,417	520,990
Total wet and dry excavation.....	632,950	39,751	672,701

### CENTRAL DIVISION.

All dry excavation—		
Chagres section.....	490,922	490,922
Obispo Diversion.....	74,402	74,402
Culebra Cut.....	1,217,442	1,217,442
Total.....	1,782,766	1,782,766

### PACIFIC DIVISION.

<i>Dry excavation—</i>			
Locks, Dams and Spillway.....	145,571	46,767	191,938
Diversions.....	10,846	600	11,446
Total.....	156,417	46,967	203,384
<i>Wet excavation—</i>			
Pacific entrance.....	731,767		731,767
Miraflores Locks.....	35,401	24,222	59,623
Diversions.....	4,408		4,408
Total.....	771,576	24,222	795,798
<i>Total wet and dry excavation.....</i>			
	927,993	71,189	999,182

### TOTAL CANAL EXCAVATION.

Dry excavation.....	2,083,560	54,301	2,137,861
Wet excavation.....	1,260,149	56,639	1,316,788
Total.....	3,343,709	110,940	3,454,649

Mean rainfall along Canal (eleven stations) 4.36 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

### Towing Machines.

A towing machine has been installed on the tug *Porto Bello*, while the tugs *M. E. Scully*, *Mariner*, *Gatun*, and *Bohio*, and seven of the fourteen rock barges in use by the Atlantic Division will be similarly equipped as soon as possible. The towing machine will do away with the present capstan and manila hawser arrangement, and will add both to speed and economy. During heavy weather on Limon Bay, and particularly in hauling material from *Porto Bello* and *Nombre de Dios*, considerable difficulty has been experienced in keeping the strain on the hawser short of the breaking point. Frequently the hawser parts, causing loss both in time and

material. The special feature of the new towing machine, which is built on the order of a large steam winch, is the automatic give-and-take arrangement, whereby the cable pays out when the tow puts too heavy a strain upon it, and takes the slack up when the tension relaxes. With this machine a 1-inch wire cable is used, whereas under the old method, a 3-inch manila rope was necessary.

### Operations at Atlantic Entrance.

Three dredges are now working in the channel at the Atlantic entrance to the Canal. Dredge No. 6 is excavating in rock about 300 yards from shore, and at some distance back of her dredge No. 1 is digging 14 feet into the mud bottom. The suction dredge Ancon is working close behind No. 1 deepening the channel nearly to the desired depth, which is 41 feet below mean sea-level. The work of the dredges is as nearly continuous as it is possible to make it, that is, only three hours are lost out of the twenty-four, due to changing the shifts, and cleaning the machinery. All the spoil taken out by these dredges is dumped on the site of the new breakwater.

Between the Mindi Hills and the present shore line the rock below the top covering of earth is being broken up, and when this has been completed the dredges can continue their operations up to where the steam shovels are cutting through the hills. Eleven drills are on this work. The method employed is to sink a hole 45 to 50 feet below the surface, case it with iron pipe, and then put in the charge. Only 60 per cent dynamite is used as it insures better results. The laborers are all West Indians, employed on a monthly basis, which has been found more profitable in this class of work than the hourly plan. At the present rate of progress the drilling operations at this point will be finished in a month or six weeks.

### Utilizing Old Cross Ties.

In the work of keeping the tracks of the Panama railroad and of the Isthmian Canal Commission in repair, many hundreds of cross ties no longer suited for use have been thrown aside. These are being collected and will be either condemned and sold, or used as fuel by the Commission. It has been the custom heretofore for persons living along the line of the railroad to use them either for fuel, or as supports for houses. The police have been instructed to watch all piles of ties carefully, and arrest any person taking them illegally.

### Sand Dredge for Nombre de Dios.

An old French suction dredge, recovered from the Canal near Chagrecito, is now undergoing repairs at Cristobal dry dock preparatory to being put in service at Nombre de Dios. The boilers and general machinery were found to be in unusually good condi-

## NOTES OF PROGRESS.

(Continued.)

tion. The only important change made in the machinery was the substitution of a larger winch in order to increase the working efficiency. The dredge will be in commission within two or three weeks, and will work in the sand beds at Nombre de Dios, relieving the *Chagres* now stationed there.

## Dredging in April.

The combined output of the dredges of the Atlantic and Pacific Divisions for April amounted to 1,461,989 cubic yards, as compared with 1,734,463 cubic yards for March, a decrease of 272,474 cubic yards. Of the amount for April, 666,191 cubic yards were taken out by the Atlantic Division, and 795,798 cubic yards by the Pacific Division. Operations in the Atlantic Division fell off 143,884 cubic yards, and in the Pacific Division 128,590 cubic yards, as compared with the preceding month, which was a record-breaker. Of the total April output, 1,255,741 cubic yards applied to Canal excavation, and 206,248 cubic yards to auxiliary works.

In the harbor and channel section of the Atlantic Division, the output for April was 505,452 cubic yards, as against 508,655 cubic yards for March. Work at dock 14 was continued, and during the month 2,400 cubic yards of earth were removed by the dredge *Mindi*. The dredging at this point was necessitated because of the accumulation of silt in the channel since it was last cleared out, and will greatly facilitate the unloading of coal vessels. In the approach channel to the handling plant at Gatun Locks, 10,243 cubic yards were taken out by the *Mindi*, after which the dredge was put to work in the French canal, removing 22,174 cubic yards from the shoals between Gatun and Cristobal. This work is being done to facilitate the passage of the sand and stone barges coming up the Canal with material for the concrete work at the spillway.

The ladder on dredge No. 6 was lowered to the lowest point permitted by her construction, and it was found that, in blasted rock, she left a depth behind her of a little more than 30 feet. This depth was increased at one place during the month to over 35 feet.

Dredge No. 85 excavated 17,938 cubic yards at the Gatun Locks, and dredge No. 83 pumped 142,801 cubic yards into Gatun Dam. The seaway and general weather conditions were more favorable during the month, and the dredge *Ancon* was able to work her way farther inshore. The detailed statement of dredging operations in the Atlantic Division follows:

DREDGE.	Type.	CUBIC YARDS.		
		In Prism	Auxiliary Works	Total.
Ancon .....	Suction..	348,230	.....	348,230
No. 1 .....	Ladder..	50,883	.....	50,883
No. 6 .....	Ladder..	41,522	.....	41,522
Mindi .....	Dipper..	34,817	.....	34,817
No. 83 .....	Suction..	142,801	.....	142,801
No. 85 .....	Suction..	17,938	.....	17,938
Total .....		488,573	177,218	666,191

The dredges in the Pacific Division were at work during the month at the Pacific entrance, with the exception of the ladder dredge *Badger*, and the suction dredge *Sandpiper*. The former completed the channel for the new sand dock at Balboa, which

is now more than 60 per cent finished. The *Sandpiper* continued excavating in the lower lock chamber at Miraflores. The suction dredge *Culebra* was laid up for one day during the month on account of repairs to her pump. A summary of dredging operations in the Pacific Division for April follows:

DREDGE.	Type.	CUBIC YARDS.		
		In prism	Auxiliary Works	Total.
Gopher.....	Ladder..	156,070	.....	156,070
Badger .....	Ladder..	89,825	24,222	114,047

Sandpiper ..	Suction..	35,401	.....	35,401
Total .....		767,163	28,630	795,798

## Death of Secretary Arango.

Mr. Jose Augustin Arango, Secretary of Foreign Affairs, and First Vice-President of the Republic of Panama, died about 11 a. m., Monday, May 10. He was born on the Isthmus, February 24, 1843, and has figured largely in its public life. He was a deputy in the Colombian Congress at the time the Canal treaty was under consideration, resigning before the vote was taken, foreseeing its defeat. He was a member of the original junta of separation in Panama, and the framer of its Declaration of Independence. He was Minister at Washington, when President Obaldia returned from that post early last year, and when the latter was elected president, accepted a cabinet portfolio. In respect to his memory flags were ordered at half mast on public buildings in Panama. The funeral took place Tuesday May 11.

## Special Trains.

The Chairman of the Isthmian Canal Commission announces the following regulation in regard to special trains:

Hereafter requests for permission to run Commission equipment over the main line of the Panama railroad must be submitted in writing to the office of the Chairman at least three days prior to the date on which the train is desired. This is necessary in order to allow sufficient time for forwarding the request to the Panama railroad, and receiving reply as to whether or not it is practicable to grant the permission for the date specified.

The requests should state whether permission has been secured for the use of Commission equipment; whether a qualified crew will man the train; the points between which the train is to run; time of leaving and arrival at terminals, and intermediate points at which train will stop, in order that the dispatcher of the Panama railroad may arrange a schedule accordingly.

## Riot at Colon.

A small riot occurred in Colon on Monday evening, May 10, in which two men were killed and several injured. Hubert Mira, a Jamaican, on Bolivar street, Colon, at about 6.20 p. m., broke away from Panamanian police officers who had arrested him, and ran across the Canal Zone boundary, to a vacant lot near the Commissary, followed by a large crowd of West Indians. A Panamanian plain clothes policeman drew a revolver and began firing which was answered by a shower of stones and other missiles from the West Indians. The affair lasted only a few minutes as the Zone police were promptly on the scene and stopped the disorder. The Governor of

Colon and the Lieutenant of Zone Police at Cristobal immediately took steps to safeguard the two cities, and no further trouble occurred.

The two men killed were: Charles M. Abbott, American, electrical foreman of the Colon district, instantly killed by being struck by a stone. He was passing the place at the time and was in no way connected with the affray. John Williams, an American negro, was shot and instantly killed, while on the second story veranda of a house some distance away. Two West Indians were wounded, one by a bullet, and the other by being struck with a stone. They were both taken to Colon Hospital.

## Pioneer Club's Second Annual Banquet.

Five years ago, on May 4, M. Renaudin, representing the New Panama Canal Company, formally turned over the French canal property to the United States, Lieut. Mark Brooke representing the latter Government in the brief ceremony of transfer. This marked the commencement of active operations on the part of the Americans in canal affairs. The event was celebrated last year, and again this year, by a banquet at Hotel Tivoli given by the pioneers of 1904, who are still in the employ of the Commission. Last year the attendance was limited to the men who came to the Isthmus during the months of May, June, and July, 1904, but as the number of these still with the Commission has considerably diminished during the past year, it was decided to extend the invitation to all who came prior to January 1, 1905. It is estimated that about 100 men who arrived on the Isthmus in 1904, are still in the Commission's employ, and about half this number accepted Tuesday night's invitation. Col. Gorgas presided, and as the banquet advanced called upon the guests, one by one, to contribute to the occasion, which they did by relating anecdotes and reminiscences, nearly all bearing on the early days of American occupancy. At the dinner a year ago, the matter of forming an association among the early comers was discussed, but beyond appointing a committee, no further action has since been taken. The subject came up again on May 4, 1909, but definite action was again deferred. The guests present were:

E. J. Banta, Geo. D. Brooke, H. R. Carter, Tom M. Cooke, Frank Cotton, John A. Coyne, Silas Davidson, L. E. DuBois, P. de Obarrio, Walter Emery, W. C. Gorgas, H. A. Gudger, Herman A. Gudger, W. H. Hall, A. B. Herrick, W. G. Hord, Patrick Kenealy, Ernest LaGarde, Jr., John LaRock, Harry Leonard, J. A. LePrince, T. C. Lyster, D. E. McDonald, E. C. McFarland, Mason E. Mitchell, Frank E. Moore, John J. Moran, A. B. Nichols, Lloyd Noland, E. F. Padgett, C. L. Parker, Claude C. Pierce, W. L. Power, H. D. Reed, J. J. Reidy, M. C. Rerdell, Hartley Rowe, Geo. H. Ruggles, J. M. Sinclair, C. L. Stockelberg, M. W. Tenny, Thos. J. Walsh, W. M. Wood, D. E. Wright, and Paul Wuttke.

A festival and chicken supper will be given at Santa Rita's Church, Gatun, Sunday evening, May 16, beginning at 5.30 o'clock.

Joaquin Segrera was hanged at Culebra penitentiary, Friday, May 7, for the murder of Enrique Vega on December 13, 1907. He was a Colombian, and arrived on the Isthmus January 1, 1906.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

Arrangements for the annual meeting of the Canal Zone Federation of Women's Clubs at Cristobal, May 15, have been completed. Delegates and alternates will take the morning train leaving Panama at 6.35. Chairmen of committees are requested to call their meetings at the clubhouse at 9.30. The business meeting, with nominations, will take place at 10.30 a. m., and the election of officers, followed by a program, at 2 p. m.

The business meeting of the Cristobal Woman's Club was held April 28, this being the final session before the annual meeting. Reports of committees were read, and other business connected with the close of the year transacted. On Saturday morning, May 1, the annual meeting was held. The officers elected were: Mrs. H. J. Slifer, president; Mrs. Frederick Mears, first vice-president; Mrs. Thomas E. Brown, Jr., second vice-president; Mrs. Otis Riddle, recording secretary; Mrs. Albert Herman, corresponding secretary; Mrs. Victor Fassett, treasurer. Mrs. Lorin C. Collins, president of the club since its organization, declined renomination. The president's annual address reviewed the work of the club during the two years of its existence. The club was organized under a set of by-laws adapted from the Chicago Woman's Club. It is divided into four departments: Art and literature, home, philanthropy, and education. The art and literature department took up the study of Japan for the first year, and Shakespeare for the second. Some work has also been done along the line of music study, and a Cecilian chorus was organized last November. The work of the home department served practical ends in meeting the questions that confront the housekeeper and homemaker, and also in collecting recipes for a cook book. The departments of philanthropy and education have been active in various ways. The club has entertained notable guests and speakers from the States, among these being Mrs. Mabel Loomis Todd, Mrs. Katherine Flagg, of the Massachusetts State Federation, Mrs. Philip N. Moore, and Mrs. John Dickinson Sherman, president and second vice-president respectively, of the General Federation. The membership of the club is about sixty.

There was a large attendance at the reception given to Mrs. C. C. McCulloch by the Ancon Woman's Club on Wednesday, May 5. At the close of the short business meeting, which preceded the social function, the club presented the retiring president with a painting of the old San Francisco Monastery in Panama, by Madame LePrince. The new books presented to the library by club women in the States have arrived and were in place at the meeting. They consist of reference books, students' editions, and some volumes of current literature. A proposition to open the club rooms one evening in the week to gentlemen known to club members, was received with favor. The next meeting of the club will be May 19. Madame LePrince will talk on the "Art of the Isthmus," with an exhibit of pictures.

The Pedro Miguel clubs will hold a bazar in the club rooms on Saturday, May 15, to secure funds for a piano. A special train

will leave Corozal at 7.30 p. m., stopping at Miraflores, and at Paraiso at 7.45 p. m., returning after the bazar.

## PERSONAL.

Maj. C. C. McCulloch, Jr., accompanied by Mrs. McCulloch and two children, sailed for the States on Tuesday, May 11, on the *Abangarez* of the United Fruit Company's Line. Major McCulloch has been relieved of his duties with the Isthmian Canal Commission and is under orders for the Philippines.

Maj. Charles F. Mason, Medical Corps, U. S. Army, accompanied by his family arrived on the Isthmus on the *Colon* on May 9. He will shortly assume the duty of General Inspector in the Department of Sanitation.

Mr. A. C. Parke, late of San Jose de Guatemala, has arrived on the Isthmus and will succeed Mr. J. V. C. Comfort as local agent for the Pacific Mail Steamship Company, the transfer to take effect on the 20th instant. Mr. Parke was formerly the Company's agent at the Guatemalan port.

## Obituary.

The death of H. H. Higgins, an American, employed in the Department of Construction and Engineering at Pedro Miguel, occurred at Ancon Hospital, April 30. He was 57 years of age, unmarried and had been on the Isthmus two years.

Robert Miller, an American, employed in the Department of Construction and Engineering was accidentally killed on the morning of May 5, by falling from the upper veranda of House 51 at Empire. He was about 28 years of age, unmarried and had been on the Isthmus four years. His father resides at Watertown, Wis.

## Decoration Day Exercises.

The Gen. Henry W. Lawton Garrison, No. 40, Regular Army and Navy Union of the United States of America, will observe Decoration Day by a commemorative service at Mount Hope cemetery. All secret organizations and schools in the Canal Zone are invited to attend in a body, and assist in decorating the graves of soldiers and sailors. All communications in regard to arrangements and formation of parade should be addressed to the commander, Mr. G. C. Bradford, Gorgona, C. Z.

## Steam Shovel and Dredge Men.

Local No. 19, I. B. of S. S. and D. M. will hold a special meeting on Sunday, May 16, at 2 p. m. in the I. C. C. lodge hall, Empire. All members are requested to attend.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., May 12, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Barker, Cecil (2d class)	Phillips, Joseph (2d class)
Brown, Mrs. Arthur	Quinn, Ed
Clayton, William E.	Reed, Lyman M.
Curtis, A. S.	Rorick, F. M.
Evans, W. A., Jr.	Shipper, Arthur B.
Fields, Percy	Stumpf, George
Green, Mrs. E.	Urch, Miss Lillian
Herbert, S. (pkg.)	Verder, Samuel P. (2)
Hynes, M. J.	Walker, Mrs. E. C.
James, E.	Webber, Mike
Jernsum, A., Jr.	Weiss, A. E.
Jones, Frank	Weller, Capt. A.olph
Kenny, Mrs. Marie	Whitney, Chas. A.
Kimmel, Fred, Jos.	Whyde, H. E.
Lindberg, A. W.	Wickham, Fred W.
Neufert, Louis	Willford, Chas. T.
Notton, F. G.	Woodman, Charles L.

## COMMISSION CLUBHOUSES

## Activities of the Young Men's Christian Association.

A contract has been awarded for reading room publications for the coming year. Each clubhouse will receive regularly 100 publications, as follows: Popular monthlies, 34; technical publications, 18; popular weeklies, 14; daily newspapers, 13; religious periodicals, 10; miscellaneons, 11. The reading rooms in each clubhouse have recently been furnished with a complete equipment of magazine binders. When the periodicals have served their purpose in the reading rooms, many of the technical ones are sold for clipping and file purposes, and others are distributed in the hospitals and penitentiary.

The Arizona Vaudeville Troupe will give entertainments in the clubhouses as follows: Empire, May 11; Culebra, May 14, and Gorgona, May 19. The program includes Unthan, the armless wonder; Miss Elvera, juggling and music; Will Percival, clog dancing; the Holbrooks variety music; Rice and Kent, an act "Bump the Bumpers"; the two Remomas, expert jugglers; the Shadow Fantomine, humorous act.

## CULEBRA.

Moving picture entertainments have attracted a good sized audience the past two Monday nights. Piano music between films was furnished by Master Arthur Howard.

Through the courtesy of Captain Snowden of the U. S. S. *Mayflower*, the ship's band of 16 pieces entertained the people of Culebra by a moonlight concert last Friday night.

The track team is in training for the dual meet with Cristobal V. M. C. A., to be held at Cristobal on May 21.

Seats for the entertainment by the Arizona Vaudeville Troupe, Friday, May 14, will be reserved and will be for sale at 11 a. m., on Thursday the 13th. No advance in price over regular admission.

The Isthmian Instrumental Orchestra will give a concert in the Y. M. C. A. hall on Monday night, May 17. The Culebra public is invited and no admission will be charged.

## EMPIRE.

Mr. Archie O. Ludwig of Newark, Ohio, arrived on the *Colon*, May 9, and has assumed his duties as assistant secretary of the Y. M. C. A. Mr. Ludwig will give special attention to the physical activities of the association.

Interest in indoor baseball has increased and regular practice is had on Friday night.

## GORGONA.

The following events are scheduled for the balance of the month of May:

May 10, concert by the Isthmian Instrumental Club; May 15, indoor baseball game, Gorgona against Empire; May 19, entertainment by the Arizona Vaudeville Troupe; May 22, dance under the auspices of the Rebekah Lodge, No. 1 I. O. O. F.; May 29, entertainment by the Edwin R. Weeks Company, from the States; May 30, memorial service; May 31, game room smoker.

## CRISTOBAL.

On Sunday, May 2, a concert was given by the band from the U. S. S. *Mayflower*, and on the evening of May 5 this band united with the I. C. C. band in a joint concert.

The second regular chess tournament was begun Saturday evening, May 8, with sixteen players.

A silver medal is offered as a prize for the highest score in two consecutive games of ten pins during the month of May.

Saturday night concluded the series of three indoor baseball games between the Y. M. C. A. and a picked team from U. S. S. *Mayflower*. The score of this final game was 26 to 19 in favor of the *Mayflower* team. The first game had been won by the Y. M. C. A. and the second by the *Mayflower*. On Friday night, May 7, the Y. M. C. A. defeated the *Mayflower* basketball team by a score of 26 to 6.

## Concert by I. C. C. Band.

## EMPIRE, C. Z.,

Sunday, May 16, 1909, at 6 p. m.

## PROGRAM.

- 1 March—*Sixth Massachusetts*.....Missud
- 2 Selection—*Ermine*.....Jacobowski
- 3 Waltz—*Hearts Murmurs*.....Rolie
- 4 Overture—*Pique Dame*.....Suppe
- 5 Idyl—*Evening Breeze*.....Langey
- 6 Medley Selection—*Hits of 1909*.....Remick
- 7 Intermezzo—*Kisses*.....Harris
- 8 Polka—*Golden Robin*.....Bonsquet
- 9 Selection—*The Prima Donna*.....Herbert
- 10 March—*Chateau Gantier*.....Fishlin

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Gorgona, Sunday, May 30.

There were also 172 cubic yards removed by steam shovels outside of the prism during October, 1908.

## FIVE YEARS OF CANAL WORK.

## Progress Made Under American Control, Since May 4, 1904.

I.  
Construction and Engineering—Cost of Canal Construction.

The United States Government formally took possession of all canal properties on the Isthmus of Panama, which it had purchased from the French Canal Company, on May 4, 1904. At that time the only work in progress on the Canal was in Culebra Cut where about 600 West Indian laborers were engaged, and a few side excavators and dump trains were in service. The work was continued with this force and equipment, but active canal construction did not begin until 1906.

It was perceived by the American Commission at the outset that the work divided itself naturally into two stages: First, that of preparation; and second, that of actual construction. The first covered a period of about two and a half years. All energies were devoted during that time to making the Isthmus healthy by thorough sanitation; to accumulating and organizing a working force and providing for it houses and a food supply; to assembling a plant with which to do the work of construction; to enlarging the existing railway system so as to make it adequate, and to establishing a system of civil government for the Zone.

There have been three Commissions in charge of Canal work. The first was in office from March 3, 1904, until April 3, 1905; the second was in office from April 3, 1905, till April 1, 1907, and the third, dating from April 1, 1907, is in office at the present time. There have been three Chief Engineers: John F. Wallace, who served from June 1, 1904, to June 28, 1905; John F. Stevens, July 1, 1905, to April 1, 1907, and Lieut.-Col. George W. Goethals, Corps of Engineers U. S. A., whose services began on April 1, 1907.

The question as to the type of canal to be constructed was decided in June, 1906, when an act was passed by Congress and approved by the President on June 29 of that year, decreeing the construction of a lock canal 85 feet above sea-level, with approaches at sea-level.

The plan of this Canal, with several changes which have since been ordered by the President and adopted by the Commission, provides:

A channel, 500 feet wide at sea level, will lead from deep water in Limon Bay to Gatun, a distance of 6.76 miles. At Gatun a dam  $1\frac{1}{2}$  miles long and 115 feet high will impound the waters of the Chagres River in a lake, the normal level of which will be 85 feet above mean sea-level. A flight of three twin locks, each 1,000 feet long, 110 feet wide, and allowing for  $41\frac{1}{3}$  feet of water over the sills, will raise vessels from sea-level to the lake, or lower them from the lake to the sea-level channel. From Gatun navigation will be through the lake in a channel from 1,000 feet to 500 feet wide for a distance of 23.59 miles, to Bas Obispo, where Culebra Cut begins. The channel through the Continental Divide, from Bas Obispo to Pedro Miguel, a distance of 8.11 miles, will be 300 feet wide, and the surface of the water will be at the lake level. At Pedro Miguel vessels will be lowered from

the 85-foot level to a small lake at 55 feet above sea-level, in twin locks of one flight. A channel 500 feet wide and 0.97 miles long will lead to Miraflores locks, where the descent to sea-level will be made in twin locks of two flights. The locks at Pedro Miguel and Miraflores will be of the same dimensions as those at Gatun. From Miraflores to deep water in Panama Bay, a distance of 8.31 miles, the channel will be 500 feet wide, and 45 feet deep at mean tide.

The total excavation from May 4 to December 31, 1904, was only 243,472 cubic yards; in the year 1905 it was only 1,799,227 cubic yards, and during 1906 it was only 4,948,497 cubic yards. There had been, therefore, excavated previous to January 1, 1907, only 7,000,000 cubic yards. Of the grand total of excavation to date, over 73,000,000 cubic yards, all except 7,000,000 cubic yards has been accomplished since January 1, 1907—two years and five months.

A total of 73,124,849 cubic yards had been taken out up to May 1, 1909, and it is estimated that there yet remain to be excavated 101,541,746 cubic yards. In the month of March, 1909, more material was excavated than during the first two years of work under American occupation. The rate at which the remainder will be done should be judged by the average for the year 1908, rather than by the average for the five years. Conditions as to equipment, labor, and experience will remain practically the same, until the completion of the Canal, as they were in 1908, but it will be more difficult to excavate in the lower levels of Culebra Cut, and for the dredges to take out the rock near the bottom of the Atlantic and Pacific entrances. Details of the excavation by steam shovels and dredges, done and to be done, will be found in the "Record of Excavation Since American Occupation," published elsewhere in this issue of THE CANAL RECORD.

## Culebra Cut and Lake Region.

All the construction work on the lake level is in the territory of the Central Division. It divides itself naturally into two parts—the Lake Region, and Culebra Cut. In what is referred to as the Lake Region, extending from Gatun to the beginning of Culebra Cut at Bas Obispo, a distance of 23 miles along the line of the Canal, the work consists of making a channel from 500 feet to 1,000 feet wide. The Canal follows in general the course of the Chagres River through this region and the work is chiefly in making small cuts through the peninsulas formed by the winding of the river, and cutting down small hills that rise above the 40-foot elevation in the course of the channel. Work was begun in August, 1907, and until December, 1908, was confined to steam shovel excavation at San Pablo, Caimito, and between Gorgona and Matachin. Since December, 1908, three shovels have been working between San Pablo and Tabernilla, and 69,722 cubic yards of hand excavation have been made near Bohio. The total amount of material taken from the prism in the Lake Region up to May 1, 1909, was 5,906,754 cubic yards and there remained to be removed 5,333,518 cubic yards. Of the amount yet to be excavated, about 4,500,000 cubic yards will prob-

ably be dredged. In addition to the excavation the work in the Lake Region includes clearing trees and vegetation from the channel, and the clearing of an anchorage basin immediately south of Gatun Dam. In the last three months about 500 acres have been cleared.

At a point 31 miles from deep water in Limon Bay along the line of the Canal, the channel leaves the course of the Chagres River and runs through the hills of the Continental Divide. A cut nine miles long, 300 feet wide at bottom, with the bottom at 40 feet above sea-level, is being made through these hills. Work was begun on this project by the French in 1881. The new French company was at work there on May 4, 1904, and since that date the excavation has not ceased. The material excavated each year from May 4, 1904, has been as follows:

	Cubic Yards.
1904 from May 4 .....	243,472
1905 .....	1,799,227
1906 .....	4,948,497
1907 .....	9,177,130
1908 .....	13,912,453
1909 to May 1 .....	5,147,944
Total .....	32,098,244

Work in Culebra Cut was continued from May 4, 1904, with the equipment taken over from the French. Steam shovels had been used by the French, but they had been abandoned, and the machine most depended upon was the side excavator. The first modern steam shovel arrived in November, 1904, and it was followed by others. In June, 1905, the last of the excavators was taken from the work. Improved equipment and a thorough system of hauling spoil from the Cut and handling it on the dumps are largely responsible for the unexpected progress made on this part of the work. In January, 1907, the efficiency of the new system first became marked. From that time there was a general increase in the monthly excavation until the million-yard point was reached in December, 1907. With the exception of May, 1908, there has been no month since 1907 when the excavation from Culebra Cut has not been at least one million cubic yards. The highest record was made in March of this year when over a million and a half cubic yards were excavated, a greater amount than was taken out of the Cut in the first twenty-two months of American occupation. The average monthly excavation in 1908, was 1,159,371 cubic yards. The monthly excavation was not affected appreciably by the heavy rains of eight months of the year, mainly because a drainage system had been perfected, and partly because experience made it possible to dispose of the spoil almost as rapidly as in dry weather.

A diagram on the next page shows the amount of work done in the Lake Region and Culebra Cut, the territory of the Central Division up to May 1, 1909, and the amount yet to be done.

## Locks and Dams.

The plan of Canal as decreed in June, 1906, and outlined above, included dams and locks near the Atlantic and Pacific entrances. On the Atlantic side the dam is at Gatun, nearly 8 miles from deep water in Limon Bay, and the locks are located in a hill, against which the east end of the dam abuts. Work on the dam was begun in 1907. Rock toes or walls between which the material for the dam will be pumped have been completed

over half the width of the valley. On December 24, 1908, a dredge began pumping clayey material into the dam. Over 20,000,000 cubic yards will be required to complete the fill. The dam will be  $1\frac{1}{2}$  miles long, 115 feet high, and 1,200 feet wide at bottom between the toes. A spillway to control the amount of water in the lake is in process of construction near the center of the dam. Most of the excavation in the spillway is completed and concrete is being laid.

Building the locks at Gatun involves an excavation of 5,139,304 cubic yards, and the laying of 2,095,000 cubic yards of concrete.

There will be three twin locks, each 1,000 feet long, 110 feet wide, and with  $41\frac{1}{2}$  feet of water over the sills. Excavation for the locks was begun in October, 1906. In the chamber of the upper or south locks it is almost completed, while it is in progress in the middle and lower or north chambers. Of the total to be excavated 3,435,932 cubic yards had been taken out up to May 1, 1909.

Sand from pits at Nombre de Dios, on the Caribbean Sea, about 20 miles east of Colon, and rock quarried and crushed at Porto Bello, near Nombre de Dios, are being delivered at Gatun, where the plant for handling materials, mixing, and laying concrete is nearing completion. The work of laying concrete will probably begin early in August.

The original plan for the locks and dams on the Pacific side was to have one lock located at Pedro Miguel, about 11 miles from deep water in Panama Bay, and two near Balboa (La Boca), about six miles from deep water in the bay. The location of the two southern locks was changed in December, 1907, to Miraflores, 8.31 miles from deep water, and the work is in progress at that point and at Pedro Miguel. The water held back at Gatun, on the northern or Atlantic side, will fill Gatun Lake and Culebra Cut, and will be kept from wasting down the Pacific slope by the dams and locks at Pedro Miguel, where Culebra Cut ends. At this point ships south bound will be dropped in twin locks of one flight from the 85-foot level of Gatun Lake and Culebra Cut to a small lake 55 feet above mean sea-level, and at Miraflores they will complete the descent to sea-level in twin locks of two flights.

At Pedro Miguel the lock chamber is being made in a narrow valley and dams extend from the north approach of the locks to the nearby hills. The east dam will be a concrete core wall about 550 feet long, four feet wide on top and ten feet at base, founded on rock, with only a small amount of earth fill. This dam will contain 3,600 cubic yards of concrete, and no work has yet been done on it. The west dam will be an earth fill of selected, packed material, with a short concrete core wall connecting it to the lock wall at one end and to the rock in the hill at the other. It requires a fill of about 947,000 cubic yards, and on May 1 contained 142,000 cubic yards. Excavation for the lock chamber was begun in June, 1908. It involves the removal of about 1,288,000 cubic yards, and a back fill of about 868,000 cubic yards will be made with the material excavated from the lock chambers. On May 1 there had been excavated about 588,000 cubic yards. About 1,100,000 cubic yards of concrete will be placed in the locks. It is expected that the laying of concrete will be begun at Pedro Miguel in August, the exact date depending upon the completion of the

# YARDAGE IN CENTRAL DIVISION AND CROSS SECTION OF CULEBRA CUT

2. Excavated by the French - 40,261,000 cubic yards.	b. 1905..... 914,254 cubic yards.
2A. By old French Company (1881-1889), 40,361,000 cubic yards.	c. 1906..... 2,673,948 cubic yards.
2B. By new French Company (1895-1904) 10,000,000 cubic yards.	d. 1907..... 9,162,341 cubic yards.
3. Excavated by Americans (May 4, 1904-April 30, 1909), 36,794,067 cubic yards.	e. 1908..... 17,128,043 cubic yards.
	f. 1909 (4 months)..... 6,672,009 cubic yards.
	4. Remaining to be excavated, 52,191,423 cubic yards.

TYPICAL CROSS SECTION OF CULEBRA CUT.

A. Excavated by French.	E. 45-foot berm at elevation 95 feet along mean sea-level 1.
B. French diversion excavation.	F. Surface of water at elevation 85 feet above mean sea-level.
C. Excavated by Americans	
D. Rock line.	

power plant at Miraflores and the erection of the cranes which will handle the materials and concrete.

At Miraflores two dams are to be constructed, one extending from the northeast end of the locks to an adjacent hill; the other, now under construction, being a fill which will close the mouth of the Cocli River, extends up the west side of the locks and holds the water in the small lake which will be formed between Pedro Miguel and Miraflores with surface at 55 feet above mean sea-level.

The east dam will be of concrete, with regulating gates, and will act as a spillway for surplus water in the lake. The west dam is an earth fill of selected, packed material, similar to that at Pedro Miguel. At its south end, it will be connected to rock in Cocli Hill by a short concrete core wall, and at its north end, to the north end of the lock walls, by a similar concrete core wall. This dam has already been thrown across the Cocli River and has begun to form the Miraflores lake. The elevation of the lake on May 1 was about 18.5 feet above mean sea-level, a rise of about ten feet. When it has risen to elevation 35 it will flow, for the present, through a diversion to the Rio Grande, a little distance above the north end of the Miraflores locks.

The construction of these dams will involve the excavation of over 220,000 cubic yards and a fill of over 1,000,000 cubic yards in the west dam, and the placing of 63,500 cubic yards of concrete in the east dam. The fill is made with material excavated from the lock chambers. A back fill of over 2,000,000 cubic yards for the locks is also being made of material excavated from the lock chambers. The estimated amount of

excavation from the lock chambers and approaches is 4,200,000 cubic yards, of which about one-third is rock. The work at Miraflores was begun in January, 1908, and 1,371,000 cubic yards of material have been excavated, and 266,000 cubic yards placed in the west dam. Work on the east dam has not yet begun, and the laying of concrete in the locks will not be started until the Pedro Miguel Locks have been completed.

Between the Pedro Miguel and the Miraflores Locks, the channel is to be 500 feet wide, and will involve about 1,000,000 cubic yards of excavation, none of which has yet been made.

## Dredging.

Most of the dredging is in the entrances to the Canal at sea-level on the Atlantic and Pacific sides. At the Atlantic entrance the channel is to be 500 feet wide and 41 feet deep. It begins at deep water in Limon Bay and extends to the Gatun Locks, a distance of 6.76 miles. In the bay a sea-going 20-inch suction dredge is doing most of the work. The remainder of the dredging comprises a section from the shore line to Mindi Hills, through which a steam shovel cut is being made, and a section from Mindi Hills to Gatun Locks. In the first section the material consists of rock and earth, and it is shattered by dynamite before the ladder and dipper dredges are set to work on it. The material in the second section consists largely of earth, which will be taken out by 20-inch pipe-line suction dredges. It is estimated that the total amount of material to be dredged between deep water in Limon Bay and Gatun Locks is about 22,000,000 cubic yards. Of this amount, 12,690,178 cubic yards have been excavated, and the average for the past year has been 556,594 cubic yards a month. One or more of the dredges of

the Atlantic Division are frequently diverted from their work in the channel to auxiliary work, and the average for the year is an indication of their capacity only when it is understood that the dredges are not constantly at work.

The dredging equipment of the Atlantic Division consists of one 20-inch sea-going suction dredge, three 20-inch pipe-line suction dredges, two modern dipper dredges, two ladder dredges left by the French and rebuilt, and a machine shop. Another ladder dredge left by the French will be put in service during the summer. One of the pipe-line suction dredges is excavating in the chamber for the lower locks at Gatun, and one is pumping material into the dam.

At the Pacific entrance the channel to be dredged is 500 feet wide and extends from deep water in Panama Bay to Miraflores locks, a distance of 8.31 miles. For three miles of this distance it follows the channel dug by the French, and the work consists of deepening and widening this channel. Up to the present time the material handled has been earth and small rock, but a layer of rock must be taken off the bottom before the required depth of 45 feet below mean sea-level is reached. It is estimated that over 30,000,000 cubic yards of excavation must be done before the channel is completed, and of this amount there have been taken out 12,400,000 cubic yards.

The dredging equipment of the Pacific Division consists of one sea-going 20-inch suction dredge, two sea-going ladder dredges (Scotch type) left by the French and rebuilt, one ladder dredge (Belgian type) left by the French and rebuilt, one modern dipper dredge, and one 20-inch pipe-line suction dredge. The last named dredge is excavating in the Miraflores lock entrance. An old French ladder dredge now at the shop at Balboa will be in commission in a few days. A machine shop is also part of the dredging equipment.

#### Cost of Canal Construction.

The total classified expenditures from appropriations for Canal construction up to February 1, 1909, amounted to \$93,915,657.76. These expenditures were made under the following heads:

Department of Civil Administration	\$2,618,732.63
Department of Sanitation	5,051,962.64
Department of Construction and Engineering	60,122,448.05
Buildings for Department of Construction and Engineering, including quarters	8,787,502.94
Buildings for Department of Civil Administration	347,873.97
Buildings for Department of Sanitation	1,254,192.84
Buildings for military protection	64,000.00
Construction of electric light plants	248,136.74
Purchase of steamers Panama and Colon	1,300,000.00
Double tracking Panama railroad	1,095,274.90
Relocation of Panama railroad	2,107,265.18
Docks and wharves, leased to Panama Railroad Company	577,931.84
Municipal improvements for benefit of cities of Panama and Colon, to be repaid to United States	2,272,673.75
Municipal improvements for benefit of Canal Zone settlements, paid from Congressional appropriations	4,007,497.33
Land purchased and appropriated	272,665.43
Buildings, tools and machinery, Cristobal shops, leased to Panama Railroad Company	174,000.00
Locomotives, cars, and equipment, loaned to and used by the Panama railroad	610,000.00
<b>Total</b>	<b>\$93,915,657.76</b>

Expenditures for construction and engineering were made under the heads of "Work," "Plant," and "General Administration." "Work" includes all direct charges, and all indirect charges not included under "General Administration." "Plant"

represents the total plant purchased to February 1, 1909. "General Administration" includes the expense of the office of the Chief Engineer, the Disbursing Officer, the Examiner of Accounts, the Secretary of the Commission, the Chief Quartermaster's Department, the Meteorological and River Hydraulics service, and the Y. M. C. A. work in the Commission clubhouses; as also the cost of general surveys, and of transportation of employees of the Commission by the Panama Railroad Company, and expenses of telephone and telegraph service. The expenditures under these three heads were:

	May 4, 1904, to Feb. 1, 1909.
Work	\$34,932,909.55
Plant	19,472,814.64
General Administration	5,816,723.86

Total.....\$60,122,448.05

The total expenditures and unit costs of construction and engineering work for the period May 4, 1904, to February 1, 1909, were as follows:

	Expenditures.	Cubic yards	Unit cost
<i>Dry excavation:</i>			
Work	\$30,750,376.02	38,927,664	0.79
Plant	12,439,811.99		0.32
Gen'l Administration	4,993,295.71		0.13
<b>Total</b>	<b>\$48,183,483.72</b>	<b>38,927,664</b>	<b>1.24</b>
<i>Wet excavation:</i>			
Work	2,895,126.90	23,824,260	0.12
Plant	5,161,226.58		0.21
Gen'l Administration	502,16.24		0.02
<b>Total</b>	<b>\$8,461,479.72</b>	<b>23,824,260</b>	<b>0.35</b>
<i>Total wet and dry:</i>			
Work	33,645,502.92	62,751,924	0.53
Plant	17,501,038.57		0.28
Gen'l Administration	5,495,421.95		0.09
<b>Total</b>	<b>\$56,641,963.44</b>	<b>62,751,924</b>	<b>0.90</b>
<i>Construction other than excavation:</i>			
Work	1,987,406.63		
Plant	1,968,776.07		
Gen'l Administration	321,301.91		
<b>Total</b>	<b>\$3,477,484.61</b>		
<b>Grand total</b>	<b>\$60,122,448.05</b>		

#### Railroads.

The railroad system built up on the Isthmus consists of the Panama railroad and the railroads of the Isthmian Canal Commission. In 1904 the Panama railroad was a single track line 47.65 miles long, from Colon to Panama, with 26.07 miles of siding. The equipment was old and much of it was not worth repairing. It included 24 road and 11 switching locomotives, 24 passenger cars, 908 freight cars, and about 50 cars for miscellaneous service. A machine shop capable of keeping the equipment in repair was located at Colon. New and heavy rails have been laid the whole length of the road; 50.11 miles of main track and 35.5 miles of double track are now operated, and the total trackage, including sidings, is about 160 miles. Over the 86.5 miles of main track 574 trains are operated daily. New equipment has been purchased, and there are now in service:

<b>Locomotives:</b>	<b>Conches and Cars:</b>
Switching.....10	New first class.....9
4-wheel Baldwin.....5	Old first class.....7
8-wheel Baldwin.....6	New second class.....10
6-wheel Hinkley.....2	Old second class.....12
8-wheel Hinkley.....1	New combination
6-wheel Rogers.....10	mail and baggage.....4
8-wheel Cooke.....12	Old baggage.....4
8-wheel Schenck.....24	Hospital.....2
10-wheel American Locomotive Mogul oil burning.....12	Special.....3
<b>Total</b> .....82	Ply coach.....1
	Freight cars.....883
	Miscellaneous.....280
	<b>Total</b> .....1,215

The work of building a new railroad to take the place of the present line, which

must be abandoned before the Canal is completed, is more than half finished.

The railroad equipment turned over to the United States by the New Panama Canal Company included 176.2 miles of track, 212 Belgian locomotives, 34 American locomotives, 14 Decauville locomotives, and a quantity of Decauville track. Practically all of the track has been discarded as unsuited to the heavy traffic, and although some of the rolling stock is kept in service, the bulk of the work is done with new equipment. A statement under the head of "Equipment" gives the amount of rolling stock in use on May 1, 1909.

#### Excavation Equipment.

The results obtained in the past five years would have been impossible without modern excavation equipment. A comparison of the equipment in use at the time of American occupation and at the present time is appended. It includes only the equipment used in dry excavation and does not include the dredges, which are mentioned under the head of "Dredging," or the auxiliary equipment at the Porto Bello quarries, and at Gatun, Pedro Miguel, and Miraflores.

The maintenance of this equipment is part of the duty of the Division of Motive Power and Machinery, and for this purpose two large mechanical shops have been built up, one at Gorgona and one at Empire, each employing over one thousand men. In addition to these large shops, field repair shops are maintained by each of the three construction divisions.

Steamship arrivals and departures at the port of Ancon in the week ending May 7, 1909, were as follows: Arrivals—May 2, *Limari*, from South ports; May 3, *Elia*, from North ports, lumber and machinery for the I. C. C.; May 4, *Tuboga*, from Pedregal; May 3, *Cambrin* and *Flora* from North, British Navy; May 3, *San Juan* from San Francisco; May 5, *Ecuador*, from Guayaquil. Departures—May 2, *Arica*, to Guayaquil; May 3, *Acapulco*, to San Francisco; May 4, *Palena*, to South ports; May 6, *Tuboga*, to intermediate ports.

## OFFICIAL CIRCULAR.

## A Correction.

In the official circular headed "Zone Liquor Licenses" printed in THE CANAL RECORD last week an error was made in the paragraph beginning "Owners of license saloons," etc. The paragraph should read as follows, the corrected word being in italics:

"Owners of licensed saloons at present in operation in the towns of Empire, Las Cascadas and Gorgona, outside of the area prescribed herein, may make application for *renewal* of licenses in present location, but this does not abridge the right of the Commission to cancel the licenses or require the removal of any such saloons under present regulations."

## LEGAL NOTICES.

United States of America, } In the Circuit Court,  
Canal Zone, } Third Judicial Circuit.

To all whom it may concern:

Notice is hereby given that on Thursday the first day of July 1909, in the court house in Cristobal, Canal Zone, at 10 o'clock a. m., there will be an inquiry into the estates of:

Kendall Thomas, who died intestate on or about March the 3d, 1907, at Mount Hope, Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value; Isthmian Canal Commission pay certificates for \$156.67, and \$207.52, United States currency.

Robert Grattis, who died intestate on or about March the 16th, 1906, at Cristobal Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value and 20 cents United States currency.

Unknown man, who died intestate on or about March the 7th, 1909, at Bohio, Canal Zone, leaving no heirs, possessed of the following personal property: one small purse containing \$1.60 Panamanian currency.

Aristida Fukala, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: 80 cents Panamanian currency and one French copper coin.

Meckel Zapatos, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: one English pound, 60 francs French and \$2.30 Panamanian currency.

Demetrio Apostol, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: \$8.60 Panamanian currency, and one bank book showing deposit of \$25 United States currency. Pursuant to the petitions praying that said property be escheated filed herin by Tom M. Cooke, Collector of Revenues, in accordance with Sections 779, 780 and 781 of the Code of Civil Procedure of the Canal Zone, at which time and place persons claiming the said estates may appear and be heard before the court.

NILSON R. JOHNSON,

Clerk of Circuit Court, Third Judicial Circuit.

United States of America, } In the Second Judicial  
Canal Zone, } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 190 hectares of the lands known as "Paloquillo and Frijol Grande," situated in the Canal Zone near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,900; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herin filed by the United States of America and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial  
Canal Zone, } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 74 hectares of the lands known as "Santa Cruz," situated in the Canal Zone, and being a part of the lands of the upper Chagres Valley, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$740; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herin filed by the United States of America and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial  
Canal Zone, } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 162.5 hectares of the land known as

"Barro Colorado and Palenquilla," situated in the Canal Zone, near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$1,625; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herin filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

United States of America, } In the Second Judicial  
Canal Zone, } Circuit, Empire.

To any and all persons whom it may concern:

Notice is hereby given to any person or persons having or claiming any interest of title or ownership in the tract of 72.5 hectares of the lands known as "Barro Colorado and Frijol Grande," situated in the Canal Zone, near the village of Frijoles, for which tract of land the Joint Commission by its findings filed August 8, 1908, made an award to the "unknown claimants" of \$725; that a petition for the expropriation of the said tract in accordance with the findings of the said Joint Commission has been herin filed by the United States of America, and any person claiming right of title or interest in or to the amount of the said award is directed to forthwith file in this court notice in writing of said claim.

E. M. GOOLSBY,

Clerk of the Circuit Court, Second Judicial Circuit,  
Empire, C. Z., April 15, 1909.

## Proposals for Buildings.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Saturday, May 22, 1909, when they will be publicly opened, for the erection by contract of one type 18 house, at Cristobal, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$200, conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. NIXON, Purchasing Agent on the Isthmus.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z., until 2 p. m., Saturday, May 15, 1909, when they will be publicly opened, for the erection by contract of one type-17 house, and three type-27 houses, Ancon Hospital grounds, and one type-10 house, Ancon, C. Z. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash, or money order for \$50, as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$100 for each house for which he is awarded contract, conditional upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. Separate proposals will be received for the different type houses. C. NIXON, Purchasing Agent on the Isthmus.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, May 8, 1909:

	STATIONS.					
	Vieja.	Alhajuela.	Cambo.	Bohio.	Gatun (Canal).	Gatun (W.D.)
Height of low water above mean sea-level, ft.	125	92	46	1	0	0
Maximum height above mean sea-level, feet						
Sunday, May 2	129.3	95.8	53.3	7.7	2.3	2.0
Monday, May 3	126.3	93.4	49.6	4.8	1.5	1.2
Tuesday, May 4	137.0	96.2	48.8	3.6	1.1	0.9
Wednesday, May 5	130.8	96.5	54.5	8.2	2.8	2.3
Thursday, May 6	129.2	94.4	52.1	7.3	2.6	2.3
Friday, May 7	126.4	93.6	50.7	6.9	1.7	1.4
Saturday, May 8	140.3	96.4	49.0	3.8	1.8	1.6

Will the person who made a mistake in taking the wrong suit case on K. of P. special leaving Colon on April 24, kindly return same to Tom Dickinson, Gatun, C. Z.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

Panama	P. R. R. Saturday	May 8

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending May 18, 1909 (75th meridian time):

DATE.	High	Low.	High.	Low.	High.
	A. M.	P. M.	A. M.	P. M.	P. M.
May 12	2:25	8:34	2:51	8:55	
May 13	3:27	9:34	4:07	10:16	
May 14	4:35	10:49	5:19	11:22	
May 15	5:46	11:53	6:25		
		P. M.			
May 16	12:33	6:49	1:00	7:24	
May 17	1:34	7:46	1:56	8:17	
May 18	2:28	8:38	2:46	9:06	

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of April is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed description of the progress of Canal work in all departments and divisions.

#### Ancon Quarry Operations.

Work is in progress on the new Ancon quarry, which is to furnish crushed rock for the Pacific Division in the construction of the Pedro Miguel and Miraflores Locks. The site is on the west side of Ancon Hill, 400 yards north of the old Quarantine Detention Station (Folie Dingler), and about 75 feet above the loading track. The necessary hand excavation is now being made to accommodate the machinery and auxiliary equipment. Five rock crushers, one principal and four secondary, will be housed in and further protected from possible slides down the abrupt side of the hill, by a heavy concrete retaining wall, 25 feet high and 20 feet wide at the base.

The main crusher is one of the heaviest types manufactured, and has a maximum capacity of 3,000 cubic yards daily, and a normal working capacity of 2,500 cubic yards daily, equivalent to 250 car loads. It is capable of taking care of rock ordinarily handled by steam shovels, and will break it into pieces of a maximum size, five inches in diameter. The material as it comes from this machine will pass through four secondary crushers, which will crush the rock to usable size. It will then fall into a belt conveyor and be carried into a series of 12 bins built over the loading track at the foot of the hill. From this point it will be transported to the Canal works.

Two steam shovels are at work on the hillside excavating three facings, or levels, upon which will be constructed a system of tracks

and switch backs reaching all parts of the quarry. The main track will pass above the crusher plant, enabling trains to dump into bins directly underneath. The crushers will be operated by electric power furnished by the Miraflores Locks power plant. It is estimated that 2,000,000 cubic yards of crushed rock will be required by the Pacific Division, equivalent to 200,000 car loads.

#### New Reservoir Completed.

The new concrete reservoir located on a terrace of Ancon Hill, adjacent to the 50,000-gallon high pressure water tank, was completed on May 14. It is designed as a water supply for Ancon, and can be used as an emergency supply for Panama and Balboa. It has an elevation of about 296 feet above sea-level. Work was begun in October, 1908, and in clearing the site 10,000 cubic yards of earth were removed. The reservoir is of reinforced concrete, and involved the use of 1,200 cubic yards of material. It is 125 feet long, 102 feet wide, and 13 feet deep, and is divided into two compartments of equal size each having a capacity of 500,000 gallons. One compartment is to serve as reserve while the other is undergoing repairs or is being cleaned out. The floor is seven inches thick and rests upon a solid rock foundation. The outside walls are 12 inches wide at the base, and 8 inches at the top, and the division wall 24 inches wide at the base and 12 inches at the top. The floor has a slight slant to facilitate draining. A gate house, also of concrete, 25 feet long, 13 feet wide, and 11 feet high at the eaves, juts out from the eastern wall.

Water is pumped into the reservoir through an 8-inch pipe, which also serves as the effluent. This pipe branches at the gate house, one branch going to each compartment. The clean-out pipes are 6 inches in diameter and so arranged that the reservoir is self draining.

#### Work Advancing at Gatun.

Steady progress is being made in all divisions of the work at Gatun. It is expected that excavation in the chamber of the upper or north locks will be completed by July 1, 1909, and that the ground will be ready for the concrete workers soon afterwards. In the middle chamber, the shovels still have ten feet to go, and in the chamber of the lower or south locks, there are approximately 1,000,000 cubic yards of material yet to be removed.

At the power plant, the concrete work is practically finished; three turbines have been set up, and installation of the boiler equipment has been begun. The unloading cableway has been completed and is being tried out. The cement shed is well under way. The building is 490 feet long, and 110 feet wide, inside measurement, and will have a capacity of 100,000 barrels. The

eave on the west, or water side projects, 35 feet affording shelter for the barges while discharging their loads. Ten cranes are to be installed to facilitate the rapid handling of material. Work at the mixing plant is also well advanced, the eight cube mixers having been put in place.

#### Extension of Telephone Service.

Telephone communication has been established with the Quarantine Station on Culebra Island by means of an old cable laid several years ago to Naos Island, by the Central and South American Cable Company. An agreement entered into between the Panama Railroad Company and the cable company on March 31, 1908, provides for the free use of this cable by the railroad company, but stipulates that the latter shall bear the maintenance expense. It is further agreed that in case the old cable fails to give satisfactory service, the cable company will provide additional facilities. When the cable ship *Relief* was here recently, the shore end of the cable at Naos Island was transferred to Culebra Island, and a few days ago the wire connection was made and the telephone installed in the Quarantine Station. The line is now working satisfactorily.

The Ancon police station is now connected with the station in Las Sabanas, through an arrangement made with the local telephone company at Panama.

#### April Record of Track Shifters.

The six track shifting machines in the Central Division moved a total of 656,946 feet, or 124.42 miles of track during April. In the Tabernilla District track shifter No. 5 moved 217,800 feet, or 41.25 miles, and No. 6 moved 133,613 feet, or 25.31 miles, a total of 351,413 feet, or 66.55 miles for the district. In the Bas Obispo District track shifter No. 7 moved 117,742 feet, or 22.30 miles, and No. 1 moved 54,095 feet or 10.25 miles, a total of 171,837 feet, or 32.55 miles for the district. In the Pedro Miguel District track shifter No. 8 moved 51,808 feet, or 9.82 miles, and No. 2 moved 81,828 feet, or 15.50 miles, a total of 133,696 feet, or 25.32 miles for the district.

#### Lidgerwood Unloaders in April.

The eleven Lidgerwood unloaders in the Central Division, during the month of April, unloaded 2,979 trains, aggregating 52,167 cars. Of this number 1,455 trains, composed of 24,735 cars, were unloaded by the five unloaders at Tabernilla; 621 trains, composed of 11,178 cars, were unloaded by three unloaders at the Miraflores dumps, and 903 trains, composed of 16,254 cars, were unloaded by three unloaders at Balboa. As all the cars were of 20-yard capacity, the material unloaded represented about 1,043,340 cubic yards.

## EMIGRATION OF LABORERS.

**Decree of President Obaldia of the Republic of Panama Regulating It.**

DECREE NUMBER 25, OF 1909. (12TH MAY).

By which the contracting of laborers for other countries within the territory of the Republic of Panama is regulated.

*The President of the Republic considering:*

1. That the Government is reliably informed that some persons constituting themselves employment agents, or labor contractors, especially in the cities of Panama and Colon, are inducing the laborers in the employ of the Isthmian Canal Commission to accept work in foreign countries, holding out to them for that purpose more or less flattering promises;

2. That such practice has the result that large numbers of laborers, listening to the promises of those who hire or contract them, emigrate from this country, thereby violating their contracts and obligations with the Isthmian Canal Commission constructing the Canal;

3. That the interests and aspirations of the Republic of Panama and the United States are closely allied with the works of excavation and construction of the Canal, a reason why the Governments of the Republic and the Zone in their character of immediate agents of their countries should mutually afford to each other such energetic and efficacious protection as will tend to preserve the uniformity and discipline of the Canal construction work at the theater of operations;

4. That the Government of the Republic of Panama considers it of vital importance for the future that the better element of laborers coming to the Isthmus, instead of leaving the country during the course of the Canal work, or at its conclusion—on account of lack of work—be stimulated to take up—if such be their wish—their residence in the Isthmian territory—a thing which may be considered as a substantial basis for the immigration of a desirable class and of little expense to the National treasury; and

5. That the Executive deems it urgent that immediate measures be adopted to stop the practice which motivates this decree in order to protect the interests of the two countries pledged to construct the Isthmian Canal;

### DECREES.

Art. 1. The contracting of laborers within the territory of the Republic and without previously obtained authorization from the Government, is hereby prohibited.

Art. 2. The authorization or permit referred to in the preceding article will be granted by the Government, provided the applicant states precisely the number of men he wishes to engage; that the men or laborers contracted be not in the employ of the Government of the Canal Zone or indebted to or under contract with the Canal Commission or any other enterprises located in this country; and that the applicant furnish a bond of not less than \$500 (gold) and in proportion to the number of laborers he engages, for his faithful compliance with each and all of the provisions of this decree. This bond will be released as soon as the Government declares that the aforesaid conditions have been complied with, or it shall be paid into the National Treasury in the character of a fine imposed upon

the offender if a violation is declared to have been committed by the agent of the Executive, without prejudice to other punishment or fines being imposed upon the offender, in accordance with the laws of the Republic, for his violation of other laws or regulations now in force.

The Government reserves to itself the right to, at its option, refuse any application for license to contract laborers as spoken of by Article 1.

Art. 3. The Governors of the respective provinces are required to give strict compliance to the provisions of this Decree and to punish all violations thereof correspondingly.

Be it communicated, published and brought before the National Assembly in its coming sessions.

Given at Panama, May 12, 1909.

J. D. DE OBALDIA.

The Secretary of Fomento,

J. E. LEFEVRE.

## EXECUTIVE ORDER.

**Amendment to Order of March 13, 1907.**

By authority of the President of the United States:

It is ordered that the Executive Order of March 13, 1907, effective April 15, dividing the Canal Zone into four administrative districts, be amended so that the last sentence of the 4th paragraph will read: "Fines and fees shall be paid into the treasury of the Canal Zone."

J. M. DICKINSON, *Secretary of War.*

Culebra, Canal Zone, May 14, 1909.

### Visit of the Secretary of War.

Secretary Dickinson, with Mrs. Dickinson and the party accompanying him, sailed for the States on the *Mayflower* on Saturday, May 15. During the period of eighteen days that the Secretary was on the Isthmus he visited all sections of the Canal work and made a thorough study, both of the work itself and of the several departments of Canal and Zone administration. It is his intention to visit the Canal at least once a year so long as he remains in office.

### Police Report for April.

The April report of the Chief of the Division of Police and Prisons shows that 457 arrests, representing 44 nationalities, were made in the Canal Zone. This is a decrease of 104 from March, and is a smaller number than in any previous month for over a year. Of this number, 417 were men and 40 were women, the offenses with which they were charged aggregating 52. The arrests are apportioned as follows: Ancon, 22; Las Sabanas, 2; Balboa, 18; Corozal, 1; Miraflores, 14; Pedro Miguel, 6; Paraiso, 16; Culebra, 26; Empire, 69; Las Cascadas, 25; Bas Obispo, 6; Gorgona, 54; San Pablo, 5; Tabernilla, 15; Bohio, 22; Gatun, 68; Cristobal, 82, and Porto Bello, 6. The effective police force on April 30 was 160, and the payroll for the month, \$20,073.57.

There were 120 criminal cases tried in the Circuit Courts, 30 of which were dismissed, 64 continued, and 25 in which convictions were secured. Of the 25 convicted, 9 were sentenced to the penitentiary, including one for life; 1 received jail sentence and fine, 6 received jail sentence only, and 5 were fined. Four forfeited bail. Zone prisoners on March 31, numbered 120; received during

month, 9; discharged, 11; total, April 30, 118. Prison payrolls for the month amounted to \$1,547.50; cost of prisoners' subsistence, \$833.25, a total expense of \$2,380.75. The value of work performed by prisoners on Zone roads was \$1,731.50. Seventy-seven civil cases were tried during the month. The sum of \$199.29 was collected from executions.

There were four deaths by violence requiring action by the Coroner, one of these being due to a railroad accident, and one to drowning. Ten deportations were made during the month.

### April Money Order Business.

During the month of April, 1909, the sixteen post-offices in the Canal Zone where a money order business is done, sold 15,403 money orders, aggregating \$438,580.99. This is a decrease in the number of orders from March of 681, but a decrease in value of only \$6,113.17. Of the April business, \$324,921.20 represented orders drawn payable in the United States and elsewhere; and \$113,659.79 in orders payable in the Canal Zone. The fees collected amounted to \$1,840.13. The orders paid and repaid amounted to \$153,405.38, including \$1,041 representing invalidated money orders, paid by the treasurer.

In the number of orders drawn, Cristobal was first, with 2,901; Empire second, with 1,727, and Ancon third, with 1,604. In the total value of orders, Cristobal was first, with \$80,139.82; Gorgona second, with \$46,796.28; Empire third, with \$44,580.14, and Ancon fourth, with \$35,651.50. Of the amount payable in the United States, Cristobal was first, with \$56,661.92; Empire second, with \$36,977.81, and Gorgona third, with \$32,505.52. In orders payable in the Canal Zone, Gorgona was first, with \$14,290.76; Cristobal second, with \$13,477.90, and Pedro Miguel third, with \$11,162.57. Of the amount paid and repaid, Cristobal was first, with \$20,069.41; Empire second, with \$17,433.04, and Gorgona third, with \$15,838.54.

The average of all orders issued was \$28.47, being 82 cents higher than for March. The highest average was at Corozal where 356 orders were issued, amounting to \$14,154.56, an average of \$39.76; the lowest at Matachin, where 292 orders were sold, aggregating \$6,430.90, an average of \$22.02.

### Circular No. 122.

THE CANAL RECORD:

Will you please publish Chairman's Circular No. 122, as there has been a question raised as to just what that is, and there is no copy of it at hand. AN EMPLOYEE.

Gorgona, C. Z., May 5, 1909.

CULEBRA, C. Z., May 17, 1909,

CIRCULAR No. 122.

The transfer of commissary and hotel books issued by the Isthmian Canal Commission for the benefit of of its employes, or the sale or the disposal of same is strictly prohibited. Any violation of this order should be reported to the Chairman, and will be considered cause for the employe's discharge.

GEO. W. GOETHALS, *Chairman.*

### Two Years for Larceny.

William Best, a Barbadian, living at Empire, was arrested by the Zone police on April 17, on complaint of Nathaniel Dunkley, a negro baker, charged with the larceny of \$10 United States currency from Dunkley's house. Defendant pleaded not guilty, but later changed his plea to guilty, and was sentenced to serve two years in the penitentiary at hard labor.

## SOCIAL LIFE OF THE ZONE.

### Meeting of Canal Zone Federation of Women's Clubs.

The meeting of the Canal Zone Federation of Women's Clubs was held at Cristobal on Saturday, May 15. The morning session was called to order by the president, Mrs. Lorin C. Collins, in the small assembly room of the Commission clubhouse, at 10.30. The meeting was devoted to the reports of club presidents, the standing and special committees, and other routine business.

Special features of the clubs are: Ancon, the development of the club library, philanthropic, and other department work; Pedro Miguel, library work and social meetings; Empire, study and department work. The Gorgona Club is trying to inaugurate the observance of Arbor Day in the public school, and also to promote social life in the community. The Gatun Club has increased its membership 50 per cent since the January convention. The class in manual training, a study course, and the establishment of a kindergarten have been given special attention during the past few months. Cristobal has completed its second study year, and continued its department work.

The botanical committee has received over one hundred specimens of leaves, ferns, grasses, and flowers from the members of the local committees. In response to the request of the forestry and waterways committees of the General Federation, a similar committee has been formed in the Zone Federation with Miss Marie G. LePrince as chairman. The work of this committee will be to investigate and report on the natural waterways of the Isthmus, and to keep up with the progress of Canal work. Instances have occurred when, by the intervention of club women, palms and coconut trees have been saved from injury by the natives and laborers, and it will be the duty of this committee to take general oversight of this and to recommend the saving of decorative and valuable trees where possible, within the limits of the Canal Zone.

The report of the philanthropy committee was supplemented with a recommendation to continue, as its special work, the care and interest in the patients in the leper colony at Palo Seco. A vote of thanks was tendered to Dr. H. R. Carter for his cooperation and assistance in the work of the committee during the past year.

The following resolution was presented by the Empire Woman's Club:

*Resolved*, That it is the sense of this club that we use our influence to secure seats at the depots for white women while waiting for the trains. To this end, we ask the cooperation of the Federation of Women's Clubs.

The resolution was endorsed by the Federation.

The Gatun Club presented the following:

WHEREAS, There are so many children in the Canal Zone too young to attend the primary schools, and yet need some profitable occupation; and

WHEREAS, In most of the Zone towns there are no playgrounds for such; be it

*Resolved*, By the Canal Zone Federation of Women's Clubs in session assembled May 15, 1909, to respectfully suggest to the Civil Administration of the Canal Zone the importance of conducting public kindergartens.

This resolution was adopted and referred to a committee consisting of the chairman of the educational departments of the various clubs, Mrs. J. L. Storla being appointed Federation chairman.

At noon the meeting adjourned for lunch

at the Commission hotel at Cristobal by special arrangement of the entertaining club.

The annual meeting took place at 2 o'clock in the clubhouse concert hall, which was decorated with flags, palms and cut flowers. The officers elected were: Mrs. Thomas E. Brown, Jr., president; Mrs. W. C. Gorgas, first vice-president; Mrs. William L. Sibert, second vice-president; Mrs. E. Lewis Baker, third vice-president; Mrs. Hiram J. Slifer, fourth vice-president; Miss J. Macklin Beattie, recording secretary; Mrs. Frederick Mears, corresponding secretary; Mrs. E. S. Calvit, treasurer; Mrs. Abbie B. Hillerman, General Federation secretary; Mrs. H. Gardner, auditor. The retiring president, Mrs. Lorin C. Collins, was elected second honorary president of the organization. Mrs. Geo. W. Goethals is first honorary president. At the close of the annual meeting the newly elected officers were presented.

A short musical program was given consisting of piano selections by Mrs. Frank Ulrich, a group of Danish songs by Mrs. Diaz, and two selections by the Cecilian chorus. During the informal reception refreshments were served.

Through the courtesy of the Panama railroad officials, transportation to Cristobal and return was given to the club women who attended the convention, a special car being placed at their disposal.

### Red Cross District Organizations.

Of the fourteen districts into which the Canal Zone Branch of the American National Red Cross Society is divided, seven have perfected their local organizations, the official roster being as follows:

Ancon—Dr. John L. Phillips, chairman; H. D. Reed, treasurer; Mrs. Henry B. Bryan, Mrs. T. C. Lyster, Robert Coe, executive committee. Corozal—Alfred P. Janies, chairman; A. P. Crary, secretary. Pedro Miguel—Ernest Bitely, chairman; Mrs. H. E. Weber, secretary; Mrs. G. W. Wales, Dr. F. R. Curney, D. F. Kerneally, executive committee. Paraiso—Harry Dundas, chairman; Miss J. Macklin Beattie, secretary; Mrs. Wm. Lowe, R. C. Smith, A. C. Hobler, executive committee. Culebra—Mrs. C. A. Devo, chairman; Mrs. A. Bruce Minnear, secretary; Mrs. J. F. Strong, Edward Schildhauer, D. W. MacCormick, C. L. Stockelberg, A. B. Tucker, executive committee. Gatun—Maj. Wm. L. Sibert, chairman, R. M. Gamble, secretary. Cristobal—Dr. M. E. Connor, chairman; M. J. Stickel, secretary; Mrs. Louis Broome, treasurer; Mrs. C. Nixon, Mrs. Lorin C. Collins, executive committee. In the remaining districts the acting chairmen are: Empire—W. M. Wood; Las Cascadas—Mrs. Frank I. McAllister; Bas Obispo—X. D. Holt; Camp Elliott—Mrs. B. F. Fuller; Gorgona—Mrs. Frank M. Morrison; San Pablo—V. L. Kearney; Tabernilla—C. D. Thaxton.

Entertainments for the benefit of the Red Cross fund have been given at Ancon, Corozal, Paraiso, Culebra, and Las Cascadas.

### Humane Society Affairs.

In the absence of Mr. Charles F. Fonday, general secretary of the Canal Zone Humane Society, Archdeacon Bryan will have charge. Mr. E. B. Fearon, manager of the International Bank, Panama, is treasurer, and dues and other remittances may be made to him.

In conjunction with the Panama Society, the Canal Zone organization proposes to place a watering trough at Santa Ana plaza.

### PERSONAL.

Lieut.-Col. H. F. Hodges, Assistant Chief Engineer, and Lieut.-Col. D. D. Gaillard, Division Engineer of the Central Division, and Mrs. Gaillard, sailed from Cristobal on the *Colon* on May 14, for their annual leave of absence in the States. Among the other passengers on the *Colon* were: W. W. Warwick and wife, of Empire; Tom M. Cooke, and Dr. S. T. Darling, of Ancon.

Among the passengers on the *Panama* which arrived at Cristobal on May 14 were: Maj. W. L. Simpson, Purchasing Agent at New York; E. J. Williams, Disbursing Officer; E. P. Beck, Treasurer of the Canal Zone, and Mrs. Beck, and Geo. T. Weitzel, Secretary of the American Legation at Panama.

### Obituary.

Daniel Kealy, American, employed in the Quartermaster's Department at Porto Bello, was accidentally drowned in the bay at that place May 7, 1909. The body had not been recovered up to May 17. Kealy was married, and had been on the Isthmus since July 28, 1906.

### Missing Man.

Information is desired in regard to Ellis J. Rogers, of West Nanticoke, Pa., who was last heard of in September, 1908. Any one having knowledge concerning him is requested to communicate with the American Minister at Panama.

### Order of Isthmian Conductors.

The next regular meeting of the Order of Isthmian Conductors will be held in Las Cascadas on the fourth Sunday in May, at 2.15 p. m., having been changed from the third Sunday in the forenoon, to the fourth Sunday in the afternoon.

### April Revenues.

The following collections were made by the Revenue Collector during April: Distillation licenses, \$302.23; taxes, licenses, etc. (Tax Collectors), \$10,189.76; fines, costs, fees, etc. (Judges), \$1,846.35; total, \$12,338.34.

### Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES.  
ANCON, C. Z., May 19, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Aarons, Harry	MacInnes, Miss Catherine
Amlaw, Bert	Major, John F.
Anstin, C. B.	McDonald, Mrs. E.
Barati, Joseph	Muir, Capt. Uriah
Barton, Edw.	Nelson, John O.
Blackman, Edson	Oberle, John C.
Blandhurst, John	Obair, Mr.
Bradberry, Samuel	Read, John
Cain, C.	Reilly, Herbert J.
Clifton, Geo. P.	Rosenstein, J. A.
Cuff, W. J.	Sapushnick, Leo
Cyrus, Jas.	Schuman, Miss Sarah (2)
Daniels, Miss Jessie	Schwartz, Henry
Daniels, W. L.	Steiner, Geo. W.
Falkner, W. H.	Stroobridge, Hattie
Gerund, Max	Taylor, W.
Griffith, J. C.	Thomas, Miss Naomi
Hall, Dave	Thompson, J. W.
Hamilton, Frank	Tubert, Mrs. William
Hocut, Herbert	Walker, E. C.
Hoffman, Dr. E.	Weiss, John
Kunze, O. H.	Weyler, Mrs. Adolph
Loring, J. G.	White Bros.

Woodards, Charles.

Lost—On May 11, 1909, either on train leaving Colon at 4.30 p. m., or in changing cars at Mudi Junction, a silver eyeglass case, marked "R. P. McC.", containing gold eyeglasses. Reward if returned to R. P. McCormick, care of Capt. Hoffman, Gatun, C. Z.

## FIVE YEARS OF CANAL WORK.

## Progress Made Under American Control, Since May 4, 1904.

## II.

## Health and Sanitation.

It was recognized at the outset that the Panama Canal could not be built by Americans unless the Canal Zone was first made healthy in order that Americans could live here with reasonable safety. So long as health conditions were bad it would be impossible to recruit a stable labor force, not only on account of actual conditions, but also because the Isthmus of Panama had been given a world-wide reputation for unhealthfulness during the construction of the Panama railroad and the work of the French on the canal.

The first Isthmian Canal Commission to take charge of the work of constructing the Canal was appointed by the President on February 29, 1904, and confirmed by the Senate on March 3. The Commission arrived on the Isthmus on April 5 on a visit of inspection, accompanied by Col. W. C. Gorgas, Medical Corps, U. S. A., John W. Ross, Medical Director, U. S. N., Capt. C. E. Gillette, Corps of Engineers, U. S. A., and Maj. Louis A. LaGarde, Medical Corps, U. S. A., as experts on sanitation. After a thorough examination of conditions on the Isthmus these experts returned to Washington and reported a plan for the sanitation of the Canal Zone and the cities of Panama and Colon, and on May 8, 1904, Col. Gorgas, as Chief Sanitary Officer, was authorized to proceed with the work. He returned to the Isthmus, arriving on June 28. Between May 19, 1904, and June 30, 1904, Dr. L. W. Spratling, U. S. N., was acting health officer. As the representative of the Commission on the Isthmus, Gen. George W. Davis, Governor of the Canal Zone, issued an order on June 30, 1904, announcing the organization of the Sanitary Department, with Colonel Gorgas as its head.

Under the authority conferred on the President by an Act of Congress, April 28, 1904, the Isthmian Canal Commission, on September 2, 1904, created the Executive Branch of the Canal Zone Government, including in it the Department of Public Health. By Executive Order issued on April 1, 1905, when the second Commission was appointed, three departments were provided for. The second of these was presided over by the Governor of the Canal Zone and its duties included civil government and sanitation. The Chief Sanitary Officer reported direct to the Governor. On November 17, 1906, the Department of Sanitation was separated from the Government of the Canal Zone and made an independent department with Colonel Gorgas at its head. Colonel Gorgas became a member of the Isthmian Canal Commission on February 28, 1907. In December, 1904, Dr. John W. Ross, U. S. N., resigned on account of ill health, and Dr. H. R. Carter was appointed Director of Hospitals. Maj. Louis A. LaGarde, U. S. A., resigned in July, 1905, and was succeeded by Maj. John L. Phillips, U. S. A., as Superintendent of Ancon Hospital. Dr. J. C. Perry, U. S. P. H. and M. H. S., succeeded Dr. Carter as Chief Quarantine Officer, when Dr. Carter became Director of Hospitals.

The public health work has included three branches peculiar to the tropics—eradicating yellow fever, controlling malaria, and, by means of rigid quarantine, keeping the Isth-

mus free from bubonic, yellow fever, cholera, and smallpox. Yellow fever and malaria are carried from one person to another by mosquitoes, and the conditions in the cities of Panama and Colon, and in the Canal Zone villages were favorable to the breeding of mosquitoes. Stagnant water stood in streets and yards, water for home use was peddled from house to house and was kept in barrels and other open containers, underbrush was allowed to grow unchecked, and there was no general understanding among the inhabitants that the breeding of mosquitoes was a menace to health.

No deaths from yellow fever had occurred among the employes of the French Company since 1897, although a few cases had been treated on the Isthmus in the year preceding the arrival of the Americans. A large part of the population of Panama was immune, and it was among the new arrivals that the disease first showed itself. In July, 1904, Charles Cunningham, a white employe of the Police Department, was taken ill with it and died. No other cases were reported for about a month. On November 21, a case developed in Santo Tomas Hospital in the city of Panama, and in December, 1904, seven cases developed in that city.

In the month of January, 1905, the disease broke out in Colon, and in the two cities 19 cases were recorded that month. In February, 14 cases developed; March, 11; April, 8; May, 33. The maximum was reached in June, when 62 cases were reported, and from that month there was a steady decrease, the number of cases that developed in July being 42; August, 27; September, 7, and October, 3. The last case in the city of Panama developed on November 11, and the last in Colon, on December 11, 1905. In all there were 246 cases in 1904 and 1905, and 84 deaths. Of this number 134 of the cases and 34 of the deaths were among Commission employes.

The disease had been confined to the cities of Panama and Colon. It was fought by preventing the introduction of more cases from the fever ports of nearby countries, keeping patients in screened rooms where mosquitoes could not gain access to them, and by an energetic campaign for the extermination of mosquitoes. The work was carried on at first without the cooperation of the people, but within a year they had been taught to assist in the destruction of the mosquito.

The first work against malaria was undertaken in Empire, Culebra, and Ancon in July, 1904, and by September it had been extended to Gorgona, Paraiso, and Balboa. The situation with regard to malaria in July, 1904, is accurately illustrated by the conditions at Ancon Hospital, and in the various villages. Anopheles and stegomyia mosquitoes were found in large numbers in the buildings and wards. Mosquito breeding took place within a few yards of the wards and none of the buildings were screened. The decorative plants and shrubs in the grounds were surrounded with clay vessels containing water and vegetation in which mosquitoes were breeding, and all ditches in the grounds were producing mosquito life. There is no doubt that many cases of malaria and yellow fever had been contracted in the hospital itself previous to this time. Examinations of blood taken from the inhabitants

of one town in the Canal Zone showed that 80 per cent of the people were infected with the malaria organism, and that Ancon was not an isolated instance was proved by the large percentage of cases from all the villages. In Colon one-sixth of the entire population was suffering from malarial attacks during each week, this deduction being based on the number of cases treated in the hospitals.

The permanent work for the prevention of malaria will be practically accomplished within a year, although certain measures such as grass and brush cutting, oiling pools, and similar routine work must necessarily be continued indefinitely. The effectiveness of the work is shown by the following data giving the number of employes treated for malaria in the hospitals and the rate per thousand of employes:

YEAR.	Number.	Rate per thousand
1904.....	*422	125
1905.....	8,496	514
1906.....	21,938	821
1907.....	16,709	424
1908.....	12,372	282

\*Front and including July, 1904.

Only two cases of bubonic plague have developed on the Isthmus since American occupation. On June 15, 1905, a negro longshoreman, at Balboa (formerly La Boca), was taken ill, and a microscopic examination showed that he was suffering with bubonic. He died eight days later. The village was cleaned and disinfected, and a crusade against rats, the common carriers of bubonic, was begun. On July 9, a "rat brigade" was set at work in Panama, and a systematic effort to exterminate the rats around the docks and throughout the city was made. Rat traps were issued free to all persons who wished them. Later a bounty was placed on each rat delivered to the health department, and this bounty is still in effect.

In January, 1904, Dr. C. C. Pierce, of the Public Health and Marine Hospital Service, took up the work on the Isthmus of despatching ships bound to San Francisco and also of making a sanitary survey of the Canal region. In May, by an arrangement between the State Department in Washington and the Government of Panama, he took charge of the quarantine work for the port of Panama, and since that time the quarantine on the Isthmus has been under American control. In spite of the fact that ports on both the Atlantic and Pacific sides of the Isthmus, north and south, have been infected with bubonic, smallpox, cholera, and yellow fever, the quarantine has been successfully maintained. In both of the stations, Panama and Colon, screened rooms are set aside for yellow fever suspects, and every precaution is taken to guard them from the bite of mosquitoes.

The effectiveness of the public health work during the five years of American occupation may be judged from the following statement of the sick rate based on the number of employes and the number admitted to hospitals, and the death rate based on the total number of employes and the number of deaths:

YEAR.	Number admitted	Rate per 1,000	Death rate per 1,000
1904.....	.....	.....	13.26
1905.....	11,936	723	25.86
1906.....	31,153	1,166	41.73
1907.....	28,927	735	28.74
1908.....	23,126	527	13.01

## CANAL WORK FOR APRIL.

## Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., May 12, 1909.

*The Honorable the Secretary of War,  
Washington, D. C.*

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of April, 1909:

## Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central, and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry.....	Cubic yards.....	144,377	1,782,766	156,417	2,083,560
Work excavation, wet.....	Cubic yards.....	488,573	.....	771,576	1,260,149
Total work excavation.....	Cubic yards.....	632,950	1,782,766	927,993	3,343,709
Plant excavation, dry.....	Cubic yards.....	7,334	.....	46,967	54,301
Plant excavation, wet.....	Cubic yards.....	32,417	.....	24,222	56,639
Total plant excavation.....	Cubic yards.....	39,751	.....	71,189	110,940
Total Canal excavation.....	Cubic yards.....	672,701	1,782,766	999,182	3,454,649
Explosives used.....	Tons (2240 lbs).....	53.06	243.05	27.00	323.11
Rock drilling.....	Feet.....	46,137	326,331	45,516	417,984
Track removed.....	Miles.....	.....	13.52	.....	13.52
New track laid.....	Miles.....	2.49	18.89	3.74	25.12
Material placed in dams.....	Cubic yards.....	294,488	.....	34,405	328,893
Rock crushed.....	Cubic yards.....	7,488	8,520	7,074	23,082
Cement used.....	Barrels.....	9,106	.....	922	10,028
Concrete placed.....	Cubic yards.....	7,923	.....	1,117	9,040
New roads built.....	Miles.....	1.68	1.70	1.75	5.13
Water mains laid.....	Feet.....	14,340	2,296	1,788	18,424
Sewers laid.....	Feet.....	800	927	1,475	3,202
Open drains and ditches dug.....	Feet.....	1,000	7,665	148	8,813
Daily average number of laborers.....	.....	4,232	8,793	3,450	16,475
Rainfall, average.....	Inches.....	3.85	4.65	2.57	4.36
Wash drilling.....	Feet.....	.....	.....	675	675

## Atlantic Division.

## GATUN LOCKS.

**Excavation**—Excavation in the Canal prism was continued during the month with two steam shovels, one locomotive crane and suction dredge No. 85, the latter excavating 17,938 cubic yards from the lower lock pit. The shovel excavation outside of the Canal prism consisted in excavating for the construction of the east tracks of the lock cableways to the south, and in excavating for a track leading north from the lock excavation and connecting with the new low line to Mindi. The channeling for the east curtain wall was 95 per cent completed during the month.

**Material Handling Plant**—Cement shed: Nine cantilever tresses and nine portal trusses were assembled and erected. This completes 85 per cent of all timber framing, and 75 per cent of the roofing was completed.

**Barrel Burning Plant**—The excavation for the fire pit for this plant was completed, 250 cubic yards of material being removed. The concrete foundations for the brick wall were completed, and 50 per cent of the brick laid.

**Automatic Electric Road**—The contractors for this road commenced the work of installing the track on April 20. At the end of the month 80 per cent of the track material had been distributed along the line of the roadbed.

**Industrial Electric Road**—During the month, the excavation and fill for the roadbed of this road was continued, 550 cubic yards of earth and loose rock being removed. At the end of the month the grading for 500 feet of single track roadbed north of the mixer building, and 1,500 feet of 4-track roadbed south of the building was completed. Ballast for 1,400 feet of 3-track roadbed was placed. The contractors for

this road during the month set up 14 flat cars.

**Mixer Building**—The main driving machinery was set up and automatic water tanks installed. During the month 350 linear feet of 24-inch concrete gutter and certain modifications a superhopper doors were completed. The construction of the 4-track approach trestle was completed, and 90 per cent of the roof over this trestle erected. The entire work on the mixer building and its approach trestle was 90 per cent completed.

**Cableway Towers**—The main cables on the duplex unloading cableway were strung. One of these cables was practically ready

for operation. The main concrete counterweights on one duplex unloading tower and the single head tower were placed. The erection of the head towers of the lock cableways was continued, and three towers at the end of the month were ready for riveting. During the month 75 per cent of the main operating machinery in two of the lock head towers was placed. The forms for the counterweights on the tail towers of the lock cableways were 75 per cent completed.

**Oil Tanks**—The excavation on the foundations for two 250,000-gallon oil tanks was completed, 450 cubic yards of earth being removed; 60 cubic yards of concrete were placed in the foundations.

**Power House**—All conduit work in the building was completed during the month. The pavement at the switchboard end of the engine room was completed. The pedestal for the standards for oil switches was completed and 70 per cent of the oil switches placed. The setting up of the turbines and generators was 60 per cent completed. The erection of two exciters was completed. The accumulator base and two accumulator pumps were set. The erection of the traveling crane was 95 per cent completed. The excavation for an open drainage ditch leading from the outlet of the discharge culvert of the power plant was commenced, and 1,000 cubic yards of earth were removed. An open drainage ditch leading from the mixer building for handling the run-off in that portion of the west side of the lock fill south of the mixer building was completed, and 700 cubic yards of material were removed.

**Drafting Room**—The design of miscellaneous details in connection with the mixer building, cement shed, approach trestle and barrel burning plant was continued. A de-

sign for forms for the cylindrical valve recesses in the lock wall was completed and requisition submitted. Studies for the "telltale" and drainage system under the floor of the upper locks were commenced.

## GATUN DAM AND SPILLWAY.

Construction during the month increased the total fill by 294,486 cubic yards, making the amount at the end of the month 1,945,648 cubic yards.

**Stripping**—Work was continued along the foot of the east slope of Spillway hill and near the old Panama railroad station. A section of 2.6 acres was prepared for the deposition of hydraulic fill. At the close of the month total stripping amounted to 191.2 acres.

**Clearing**—The area to be cleared in advance of the dredges pumping into the dam was extended by 35.4 acres, of which 12.6 acres were grubbed, making the total clearing for this purpose, at the end of the month 72.7 acres.

**Hydraulic Fill**—Dredge No. 83 worked the entire month pumping into the dam, depositing in the old Chagres channel 142,801 cubic yards of material; the total hydraulic fill at the end of the month was 399,727 cubic yards. Dredge No. 82 was being repaired at the drydock, and dredge No. 85 worked one week, dredging 17,938 cubic yards from the lock site, being laid up the balance of the month for repairs.

**Enrockments**—Material received from Bas Obispo, the locks, Mindi and the spillway, amounting to 150,979 cubic yards, was dumped on the north toe, east of the spillway to elevation plus 24, and on the south toe, east of the spillway, to full height, and west of the spillway to elevation plus 24. Total enrockments up to the end of the month, 1,545,921 cubic yards.

**Trestles**—The trestle crossing the old Chagres at head of west diversion, which was damaged in the flood of last February, was repaired, and this trestle was extended westward along the south toe, making a total of 520 linear feet constructed. The total length of trestles constructed at the end of the month was 13,657 linear feet.

**Excavation**—Excavation included cleaning up the floor by crane and clam shell bucket and work at head of spillway to prepare the south side of the hill for the concrete covering. Part of the material was used to construct a levee across the head of the cut, which it is contemplated to raise to elevation plus 18, in order that the concrete work in the spillway may proceed without interruption during the coming rainy season. The amount excavated was 13,411 yards.

**Concrete**—Work was continued on the floor below the spillway dam, 7,478 cubic yards of concrete being placed. To the end of the month 9,925 cubic yards were placed.

## PORTO BELLO.

The work of erection of certain plant and equipment was satisfactorily continued. Carpenter work and operations at the quarry were proceeded with, and at the end of the month 20,515 cubic yards of crushed rock had been produced, the crusher producing 12,495 cubic yards during April.

## NOMBRE DE DIOS.

The work of deepening the harbor and opening the channel to the sand zone was actively pushed. During the month, 2,679 cubic yards of sand were dredged, of which

323 cubic yards were shipped to Porto Bello and 2,356 cubic yards to Gatun.

#### HARBOR AND CHANNEL SECTION.

**Dry Excavation Below Sea Level—Mindí:** During the month, 20,630 cubic yards of earth and 53,738 cubic yards of rock were excavated by two 70-ton Bucyrus steam shovels and one Model-91 Marion, an average of 24,789 cubic yards per month of 25 working days.

**Dredging—Ocean to Mindí:** Three dredges removed from the prism 435,416 cubic yards of earth and 35,219 cubic yards of rock. In addition, the *Mindí* removed 2,400 cubic yards of earth at Dock 14, 22,417 cubic yards of earth from the French canal, and 6,243 cubic yards of earth and 4,000 cubic yards of rock from the approach channel to Gatun docks. On April 30, 40 feet of water could be carried from 0 to Mile 2 plus 4,950 feet; 30 feet to Mile 3 plus 1,100 feet; 20 feet to Mile 4 plus 1,850 feet, and 15 feet to Mile 4 plus 4,900 feet, the end of the cut.

#### Municipal Engineering.

The usual work of this subdivision was satisfactorily performed during the month, and included work on the Mount Hope-Gatun road, waterworks at Gatun and Mount Hope, and various maintenance work.

#### Building Construction.

The construction of a new commissary was commenced, and the new 4-room school-house was completed. Other building construction work was satisfactorily continued.

#### Central Division.

During the month of April the total amount of material excavated in the Central Division was 1,793,454 cubic yards, of which 726,453 cubic yards were classified as earth and 1,072,001 cubic yards as rock. Of this quantity, 1,777,856 cubic yards were removed by steam shovels and 20,598 cubic yards by hand.

The quantity of material removed from the Canal prism was 1,706,754 cubic yards, while 74,402 cubic yards were removed from the Obispo Diversion. In addition, 8,973 cubic yards excavated from the prism were dumped above elevation plus 40 at Point No. 2; 6,715 cubic yards above elevation plus 40 at Point No. 1, and 1,610 cubic yards were removed at the new incline track at Point No. 3.

The daily average number of steam shovels at work during the month was 55.40, as compared with 56.93 for the month of March. For comparison with the work done during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Total amount of material excavated by steam shovels	Classification of material.		Av. No. of steam shovels working during month	W'kg days in month	Av. amount excavated per shovel per 8-hour day.
		Rock	Earth			
1908:						
Apr. ....	cu. yds. 1,579,547	cu. yds. 854,602	cu. yds. 724,945	53.04	25	1,191
1909:						
Apr. ....	1,777,856	709,353	1,068,503	55.40	25	1,284

Rainfall at Empire: 1908, 1.36 ins.; 1909, 3.33 ins.

The above table shows that the average output per shovel day was over  $7\frac{1}{2}$  per cent greater in April, 1909, than in the corresponding month of the previous year.

During the month, 215,762 cubic yards of material excavated from the prism were transported to the relocation of the Panama

railroad at Caimito, Santa Cruz, and Corozal, and dumped as filling in the embankment for the new roadbed, the total for this purpose to the end of the month being 988,846 cubic yards. During the month, 33,942 cubic yards of rock from Bas Obispo were transported to Gatun and dumped in the toe of the dam, the total for this purpose at the end of the month being 342,491 cubic yards.

At the anchorage basin at Gatun trees were cut on 20 acres; timber cut and piled on 65 acres; timber cut, piled, burned and roots grubbed on 168 acres; in addition, 72 acres were grubbed and burnt over the completed area of the Alberts contract. In the channel clearing work at La Boca Trinidad, timber was cut on 100 acres, and timber was cut, piled and burned on 57 acres. In the contract work with Charles Alberts at Gatun, timber was cut on 149 acres, and timber was cut, piled and burned on 172 acres. In the Tabernilla district, 133 acres were cleared.

The daily average number of laborers at work was 8,793.

#### Pacific Division.

##### DISTRICT NO. 1.—LOCKS AND DAMS.

The total excavation during the month amounted to 238,785 cubic yards in this subdivision.

At Pedro Miguel, in addition to the regular operations, the driving of piling in the west storage trestle was completed, and the driving of piling in the approach to the east storage trestle was begun.

At Miraflores, excavation for the diversion of the Cocoli River was completed, as was the excavation for the cement storage shed. The excavation for the west dam core was practically completed, and the Cocoli River was successfully dammed. A steam shovel was installed in the point of the hill opposite Corozal, in the Rio Grande diversion. Work on the power house was continued.

At Ancon quarry, the preliminary work of clearing and grading site for crusher plant and installation of tracks was continued.

##### DISTRICT NO. 2.

**Dredging**—Six dredges were in operation during the month, excavating material as shown in the following table:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxil'y	
Culebra	Suction	260,879	.....	Scow measurement
Gopher	Ladder	156,070	.....	Place measurement
Mole...	Ladder	98,436	.....	Place measurement
Badger	Ladder	89,825	24,222	Place measurement
Dipper.	Dipper.	126,557	.....	Place measurement
O. P....	O. P.	.....	4,408	Place measurement
Total.	.....	731,767	28,630	

The necessary maintenance of floating equipment was taken care of, and a large amount of other mechanical work was performed at the shops.

During the month, 172,000 square feet of surface were grubbed and cleared on the Canal line between Corozal and the sea. The greater part of the clearing force, however, was engaged in clearing, grubbing and blasting in advance of the orange-peel dredge on the Rio Grande Diversion. In this latter work approximately 141,250 square feet were grubbed and cleared. About 46,000 square feet were grubbed and cleared in preparation for the extension of the shipways basin at La Boca [Palboa].

##### DISTRICT NO. 3.—MUNICIPAL AND BUILDING WORK.

A large number of jobs of building and municipal work were completed. The fil-

tration plant, Ancon steam plant, and Rio Grande crusher were successfully operated. Work was continued on the Ancon reservoir, Ancon corral, Ancon-Panama road and the Corozal-Pedro Miguel road. Certain maintenance work on the waterworks and sewers was performed, and ditches and drains necessary for sanitary work were constructed and maintained. Construction and maintenance work on buildings was satisfactorily performed.

#### Mechanical Division.

The manufacturing and repair work of this division was satisfactorily performed during the month.

#### Relocation of Panama Railroad.

Work on the Corozal line was continued. During the month, 5,610 cubic yards of material were excavated, making the total amount of excavation at the close of the month 22,604 cubic yards, 30,505 cubic yards of material were placed in embankment, making a total thus placed at the close of the month of 52,143 cubic yards. During the month, on the relocation work proper, 132,235 cubic yards of material were excavated and 305,133 cubic yards placed in embankment. At the close of the month, the total quantity of excavation accomplished was 1,119,449 cubic yards, and the total quantity placed in embankment was 4,165,153 cubic yards. The necessary work of constructing trestles for filling and the construction of bridges and culverts was continued.

The Miraflores tunnel proper was completed. The building of a drainage system at the slide over the tunnel and the laying of permanent track were commenced. During the month, 7,745 linear feet of permanent track was laid, making the total at the close of the month 91,636 linear feet. The force of laborers during the month averaged 1,990 men.

#### Quartermaster's Department.

During the month there were 251 additions to the gold force, and 203 separations, making a net increase of 48.

Agents have been at work recruiting European laborers on the Isthmus for service on railroad construction work in Brazil. During the month over 500 laborers were engaged and forwarded, 438 of this number having sailed on a specially chartered ship leaving Colon on April 23. It is anticipated that an attempt will be made to continue these operations, and such preventive steps as are practicable have been taken. Information from European laborers now on the Isthmus who have returned from the work, and from consular agents, is to the effect that conditions in Brazil, where this construction is in progress, are very unfavorable to laborers, and it is considered to be the duty of the Commission, as well as in line with its interests, to prevent such emigration if possible.

The printing plant of the Commission has been removed from the old Administration Building in Panama, which was an unsatisfactory location, to the new building constructed for it at Mount Hope. The printing plant of the Panama Railroad Company has been consolidated with it, and the whole placed under the direction of the Depot Quartermaster. The new building is well adapted to the purpose for which it was constructed. The consolidation of the two plants will result in economy, and the location of the combined plant on the Atlantic instead

of the Pacific side will also secure a saving, as it will render unnecessary the shipment of all material handled by the plant entirely across the Isthmus before distribution is made to consumers.

Heretofore, it has been the duty of the Quartermaster's Department to make repairs to buildings, provided the estimated cost did not exceed \$200. Effective April 10, all repairs, irrespective of the cost, and including plumbing and screening, were placed in charge of the Quartermaster's Department. The great volume of work in connection with buildings in the Canal Zone in the future will consist of repairs, as practically all buildings that will be required until the completion of the Canal, including quarters for employes, have now been constructed, and their maintenance only is to be considered.

#### Subsistence Department.

The operation of the Hotel Tivoli during the month showed a profit of \$1,721.22. There was a loss of \$1,365.13 on the line hotels, and a profit was made on the operation of the kitchens and mess halls. The net operations of the Subsistence Department for the month showed a profit.

#### Department of Civil Administration. COURTS.

The Supreme Court held two sessions in April, and one criminal case was disposed of. In the Circuit Courts 27 civil and 42 criminal cases were disposed of, and in the District Courts 94 civil and 456 criminal cases were disposed of.

#### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues of the Canal Zone in April aggregated \$21,030.29. The general revenues amounted to \$13,014.95.

The postal revenues were \$6,169 on account of stamp sales, \$6.21 on account of newspaper postage, and \$1,840.13 on account of money order fees. Money order sales during the month amounted to \$438,580.99, of which \$324,921.20 was payable in the United States and foreign countries, and \$113,559.79 in the Canal Zone. Sixty-seven dispatches of mail were made to foreign ports by the Cristobal exchange office.

Twenty vessels entered at and 23 cleared from the port of Ancon, and 18 vessels entered at and 21 cleared from the port of Cristobal.

#### DIVISION OF POLICE AND PRISONS.

The number of arrests during April was 457 as compared with 561 in March. The total effective strength of the police force on April 30 was 160 officers and men, and the total force of the division at the end of the month aggregated 243 officers and men. There were 109 prisoners in confinement at the close of the month. Nine convicts began penitentiary sentences during the month, 11 were discharged at the expiration of their sentences, and on April 30, 118 convicts were confined in the penitentiary.

#### DIVISION OF PUBLIC WORKS.

The usual business of this Division was conducted during the month. The amount of water consumed in Panama during April was 27,417,000 gallons, and in Colon the amount consumed during the month was 20,108,025 gallons.

#### DIVISION OF FIRE PROTECTION.

Sixteen alarms of fire were responded to by the Canal Zone Fire Department during the month; 12 in the Canal Zone, 2 in Colon and 2 in the city of Panama. The value of

Commission and Panama railroad property involved was \$5,125, and the estimated damage was \$1,110. Damage to the extent of \$1,000 was caused by a fire at Matachin on April 3.

#### DIVISION OF SCHOOLS.

The total enrollment in the white schools during the month was 656, and the average daily attendance 540. In the colored schools the total enrollment was 1,313, and the average daily attendance was 764.

#### Department of Sanitation.

The health conditions on the Isthmus continue to be very satisfactory. The death rate among employes was at the rate of 8.57 per thousand, and the death rate for the total population was the lowest reported since American occupation.

During the month, there was not a single death from typhoid fever on the Isthmus, which is unusual with such a large population. The malarial rate was excellent and showed a marked improvement over March. No case of smallpox, plague or yellow fever originated on the Isthmus during the month. The last case of yellow fever developed in May, 1906, and the last case of plague in August, 1905. Respectfully,

GEO. W. GOETHALS, *Chairman.*

#### P. R. R. Steam Shovels.

The steam shovels at work on relocation of the Panama railroad are handicapped, so far as making high records is concerned, because they are doing pioneer work, and also because the equipment for hauling away the spoil has not been sufficient to work the shovels at their full capacity. A statement of the work performed by the steam shovels during the past six months follows:

PERIOD.	Total output, Cubic yards.	Average No. steam shovels.	No. of working days.	Output per shovel.	
				Per day, Cubic yards.	Per month, Cubic yards.
November, 1908.....	37,625	2.92	24	537	12,885
December, 1908.....	43,187	2.77	26	600	15,591
January, 1909.....	57,756	3.45	25	665	16,625

#### Sentenced for Prize Fighting.

"Sandy" Odom, an American negro, and Arthur Best, a Barbadian, were arrested at Empire, April 13, for prize fighting. Odom was subsequently arraigned on three counts, charged with fighting at two other points in the Zone. Defendants pleaded not guilty, but at their trial on April 27, a verdict was found against them, and on May 4 Odom was sentenced to pay a fine of \$1,500 and to serve 18 months at hard labor. Best was fined \$1,000, and received a sentence of one year, execution being suspended for 12 months, pending good behavior.

#### Proposals for Buildings.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Saturday, May 22, 1909, when they will be publicly opened, for the erection by contract of one type-15 house, at Cristobal, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$200, conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to

accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. NIXON, Purchasing Agent on the Isthmus.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Saturday, May 29, 1909, when they will be publicly opened, for the erection by contract of 1 Type 21 House, Corozal, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$50 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$150, conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. C. NIXON, Purchasing Agent on the Isthmus.

#### Rainfall, May 1 to 15, 1909, Inclusive. (MIDNIGHT TO MIDNIGHT.)

Saturday, May 15.....	126.3	93.3	49.4	4.2	1.4	1.2

#### Tide Table.

The following table shows the time of high and low tides at Panama for the week ending May 25, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.	P. M.
May 19.....	3.17	9.27	3.32	9.52	.....
May 20.....	4.03	10.13	4.17	10.38	.....
May 21.....	4.47	10.59	5.01	11.23	.....
May 22.....	5.32	11.45	5.46	.....	.....
			A. M.		
May 23.....			12.08	6.18	12.32
May 24.....			12.56	7.05	1.22
May 25.....			1.46	7.57	1.55
					8.11

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

#### Launch Service to Taboga.

The steamer *Sanidad* leaves the dredge landing at La Boca at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at La Boca about 4.30 p. m. in time to make connections for the 5.30 train at Panama.

## OFFICIAL CIRCULAR.

## Percentage for Surcharges.

CULEBRA, C. Z., May 1, 1909.

CIRCULAR No. 169A.

Effective this date, the surcharge on labor charges for material manufactured by the Mechanical Division, and for shop work done for other departments and divisions of the Commission and for the Panama railroad, will be decreased from 30 per cent to 20 per cent. This applies only to work done by the Mechanical Division and is made possible by the reduction in overhead expenses effected in that division.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Transfers from I. C. C. to P. R. R.

CULEBRA, C. Z., May 7, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

I am in receipt of the following letter from the General Manager of the Panama Railroad Company:

"In some instances recently we have only received transfer slips in duplicate from I. C. C. Departments when employees are transferred from the Isthmian Canal Commission to the Panama railroad, whereas it is necessary that we receive them in triplicate, except in transfer of locomotive engineers we would like to receive the transfer slips in quadruplicate. Will you kindly see that this is done."

In preparing transfer slips, covering transfers of employees of the Commission to the service of the Panama Railroad Company, please be governed by Mr. Slifer's letter.

C. A. McILVAINE,  
Acting Assistant to the Chairman.

## Acting Assistant Chief Engineer.

CULEBRA, C. Z., May 13, 1909.

CIRCULAR No. 250.

Effective May 14, 1909, Mr. H. H. Rousseau, Assistant to the Chief Engineer, will in addition to his present duties, perform the duties of Assistant Chief Engineer during the absence of Lieut.-Col. H. F. Hodges, on leave.

GEO. W. GOETHALS, Chairman.

## Acting Division Engineer—Central Division.

CULEBRA, C. Z., May 13, 1909.

CIRCULAR No. 249.

Effective May 14, 1909, Mr. L. K. Rourke will act as Division Engineer of the Central Division during the absence of Lieut.-Col. D. D. Gaillard, on leave.

GEO. W. GOETHALS, Chairman.

## Acting Examiner of Accounts.

CULEBRA, C. Z., May 13, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Effective May 14, 1909, Mr. T. L. Clear will act as Examiner of Accounts during the absence of Mr. W. W. Warwick, on leave.

GEO. W. GOETHALS, Chairman.

## Acting Assistant to the Chairman.

CULEBRA, C. Z., May 13, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Effective May 14, 1909, Mr. William H. May, Secretary to the Chairman, will in addition to his present duties, perform the duties of Assistant to the Chairman during the absence of Mr. C. A. McIlvaine.

Mr. Benj. L. Jacobson will act as Chief Clerk.

GEO. W. GOETHALS, Chairman.

## Acting Collector of Revenues.

ANCON, C. Z., May 11, 1909.

CIRCULAR No. 86.

Mr. Herman A. Gudger is designated Acting Collector of Revenues during the absence on leave of Mr. Tom M. Cook.

JO C. S. BLACKBURN,  
Head of Department of Civil Administration.

## Requisitions for Stationery and Supplies.

CULEBRA, C. Z., May 4, 1909.

## TO ALL CONCERNED:

The printing plant of the Commission has been moved to Mount Hope and the printing plant of the Panama railroad has been consolidated with it.

The combined plant is under the direction of Capt. C. Nixon, Depot Quartermaster, to whom all requisitions for stationery and supplies should be sent, and all correspondence relating thereto addressed.

C. A. DEVOL, Chief Quartermaster.

## Tariff for Special Trains.

The Panama Railroad Company has issued the following tariff covering movement of special trains when authorized by the Chairman of the Isthmian

Canal Commission or the General Manager of the Panama railroad:

## WEEK DAYS.

Special train, consisting of engine, baggage or buffer car and one coach, seating not to exceed 60 passengers:

For eight hours or fraction thereof..... \$42.00  
For each additional hour, not to exceed  
four, per hour or fraction thereof..... 5.00

## SUNDAYS OR HOLIDAYS.

Special train, consisting of engine, baggage or buffer car and one coach, seating not to exceed 60 passengers:

For eight hours or fraction thereof..... \$60.00  
For each additional hour, not to exceed  
four, per hour or fraction thereof..... 7.50

Trains making round trip with midnight intervening and those consuming more than twelve hours will be charged as two trains. An additional charge of \$10 a coach will be made for all coaches over the original coach. Tickets will not be required on these trains, and none will be collected.

## WHEN NOT REGULARLY AUTHORIZED.

Irrespective of the number of coaches handled:

For every eight hours or fraction thereof.. \$100.00  
For each additional hour, not to exceed  
four, per hour or fraction thereof..... 12.50

Passes or tickets will be required on these trains for transportation. Trains making a round trip with midnight intervening, and those consuming more than twelve hours, will be charged as two trains.

## PRIVATE CARS.

Private cars or extra cars on regular trains will be charged at the rate of \$10 per car, and each passenger will be required to have either pass or ticket for transportation. No private or extra cars will be attached to regular trains unless at least fifteen passages are provided.

## SWITCHING—PANAMA AND BALBOA.

Special movement of cars between Panama and Balboa will be charged \$5 per car for switching.

Effective May 1, 1909.

H. J. SLIFER, General Manager, Colon, R. P.

C. C. VAN RIPER, Passenger Agent,

24 State Street, New York.

Approved:

GEO. W. GOETHALS, President, Culebra, C. Z.

E. A. DRAKE, Vice-President,

24 State Street, New York.

## LEGAL NOTICE.

United States of America, } In the Circuit Court,  
Canal Zone. } Third Judicial Circuit.

To all whom it may concern:

Notice is hereby given that on Thursday the first day of July, 1909, in the court house in Cristobal, Canal Zone, at 10 o'clock a. m., there will be an inquisition into the estates of:

Kendal Thomas, who died intestate on or about March the 3d, 1907, at Mount Hope, Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value; Isthmian Canal Commission pay certificates for \$156.67, and \$207.52, United States currency.

Robert Grattis, who died intestate on or about March the 16th, 1906, at Cristobal, Canal Zone, leaving no heirs, possessed of the following personal property: personal belongings of little value and 20 cents United States currency.

Unknown man, who died intestate on or about March the 7th, 1909, at Bohio, Canal Zone, leaving no heirs, possessed of the following personal property: one small purse containing \$1.60 Panamanian currency.

Aristida Fukala, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: 80 cents Panamanian currency and one French copper coin.

Mekeil Zapatos, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: one English pound, 60 francs French and \$2.30 Panamanian currency.

Demetrio Apostol, who died intestate on or about May the 16th, 1907, at Gatun, Canal Zone, leaving no heirs, possessed of the following personal property: \$8.60 Panamanian currency, and one bank book showing deposit of \$25 United States currency.

Pursuant to the petitions praying that said property be escheated filed herein by Tom M. Cooke, Collector of Revenues, in accordance with Sections 779, 780 and 781 of the Code of Civil Procedure of the Canal Zone, at which time and place persons claiming the said estates may appear and be heard before the court.

NELSON R. JOHNSON,

Clerk of Circuit Court, Third Judicial Circuit.

## Commissary Hours.

The hours during which commissaries are open are as follows:

Cristobal, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.  
Culebra, 8 a. m. to 12.30 p. m.; 2.30 p. m. to 7 p. m.  
All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## Supplies for Canal Work.

The following steamers arrived at the port of Cristobal during the week ended May 15, with supplies for the Isthmian Canal Commission.

Colon, May 9, from New York, with 2,500 bbls. cement for Gatun spillway; 776 bales hay for corral use; 68 cases electric fuses for all divisions; 1,100 cases lubricating oil for stock, and a quantity of other material aggregating 6,280 pieces, weighing 950 tons.

Sibiria, May 11, from New York, with 86 pkgs. cableway material for Gatun handling plant.

Talisman, May 12, from Mobile, with 7,662 creosoted cross ties for Gatun handling plant.

Parismina, May 13, from New Orleans, with 500 cases kerosine oil for stock; 6 horses for fire department; 65 pkgs. hoppers and screens for Gatun handling plant.

Hugin, May 14, from Philadelphia, with 2 boiler plants for Gatun and Miraflores.

Panama, May 14, from New York, with 2,500 bbls. cement for Gatun spillway; 1,500 bbls. cement for stock; 357 bales hay for corral use; 3,000 brake shoes, Empire and Gorgona shops; 5,000 lbs. lubricating grease; 50,000 lbs. cotton waste for stock; and a quantity of other material aggregating 6,566 pkgs., weighing 1,400 tons.

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### New Water Supply for Gatun.

Plans have been prepared and approved for a new water supply for Gatun. The reservoir will be located about one-half mile east of the native settlement, and about a mile and one-half from the new Panama railroad station. The basin is a natural one, and only a small amount of excavation will be necessary to prepare it. The lake area will be 94.65 acres, and the area of the watershed 676 acres. Most of the land comprising the watershed lies in the tract known as the San Jose de Bellavista, and is owned by the Panama Railroad Company. It will be cleared of habitations and guarded from contamination in the same manner as other Zone drainage areas.

The reservoir, which will be 73 feet above mean sea-level, will be fed by a perennial creek called the Quebrada los Guacas. The maximum flow of this stream on a single day in the rainy season was 20,000,000 gallons. On April 15, 1909, at the close of the dry period, a minimum flow of 233,280 gallons was recorded. The capacity of the basin will be 611,952,000 gallons, making it the second largest reservoir in the Zone, and this may be increased by elevating the dam. The maximum daily quantity of water which will be required at Gatun during the next five years for all purposes has been estimated at 2,000,000 gallons, and the reservoir will store enough water to last 200 days.

The waters of the lake will be impounded by the Agua Clara dam, which will have an elevation of 58 feet. The downstream face will be constructed of spoil from the Canal, and the upstream face of selected material taken from the reservoir site. The spillway will have a width of 100 feet, and will be 68 feet high at its crest. The floor and sides will be concreted, the latter to elevation 73. It is calculated that with two feet of water

over the sill, the spillway will safely pass a rainfall over the entire watershed corresponding to three inches per hour.

The plans also call for a filtration plant, a sedimentation basin, into which water from the lake will flow before passing through the filter, and a pumping station. A 16-inch main will lead to the sedimentation basin, and a 12-inch main from the pumping plant to the present tank at Gatun where it will be distributed. A spur track is being constructed from a siding on the relocated line of the Panama railroad, to the trestle at the site of the dam, which will be used in transporting material and supplies. This road crosses the Mount Hope-Gatun public highway, and will be operated to the reservoir by means of a switchback.

The Gatun reservoir will be the fifth in the Canal Zone, fed by streams. The list is as follows:

NAME.	Location.	Capacity.	Drainage area.	Lake area.
		Gallons.	Acres	Acres
Brazos Brook	Near Mt. Hope	641,000,000	640	120
Gatun	Near Gatun	611,952,000	676	95
Rio Grande	Rio Grande	496,670,000	2,015	65
Camacho	Camacho	295,867,000	592	38
Carabali	Near Gorgona.	80,000,000	1,552	20.5

#### Overtime and Longevity.

The Sundry Civil Bill, approved March 4, 1909, contains the following paragraph:

"No part of the foregoing appropriation for the Isthmian Canal shall be applied to the payment of allowances for longevity service or lay-over days other than such as may have accumulated under existing orders of the Commission prior to July 1, 1909."

Under this Act, after June 30, 1909, no lay-over days can be allowed for overtime by steam shovel crews, or construction train crews, and no additional longevity increases can be authorized. But the Act in nowise changes the provisions of the eight hour law under which hourly gold employes receive time and a half pay for work in excess of eight hours in any one working day, or for Sundays and holidays.

#### Canal Medals.

A list of the employes of the Isthmian Canal Commission and the Panama Railroad Company, who earned the Canal Medal prior to December 31, 1908, was sent to the States on May 20. The medals have been minted, and the engraving of the names, numbers, and years during which service was rendered, will begin immediately.

An additional list is being prepared at Culebra of employes entitled to the Medal who have left the service of the Commission, which will show the present address of those employes wherever the address is known. Medals for names on this list will be distributed from the Washington office. The Medals

of employes who are still in the service will be distributed on the Isthmus.

The first 100 names of employes entitled to Canal Medals, together with the order in which the Medals will be numbered, is printed elsewhere in this issue of THE CANAL RECORD. There are 2,264 names on the list, and any person desiring to know the number of his Medal can obtain the information by sending an addressed postal card to the office of THE CANAL RECORD, Ancon, C. Z., and stating the date of his arrival on the Isthmus.

#### Survey of the Chagres River Basin.

The survey of the watershed of the Chagres River which was begun last November is advancing steadily. Four parties are at work, and during the month of April the survey of the Esperanza River was finished by party No. 1. This river is a tributary of the Chagres and enters it about thirty-eight miles above Gamboa. The extreme point located on the divide at the head of the Esperanza is about fifty miles easterly from Gamboa. On April 23, party No. 1 began the survey up the main branch of the Chagres, starting at the mouth of the Esperanza.

Party No. 2 has completed the survey of the upper Indio River, which flows into the Chagres about twenty-five miles above Gamboa, and has established a point on the dividing ridge at an elevation of about 2,000 feet above sea-level. In running the last six miles of the line the party traveled light, taking no camp equipment except blankets and a few cooking utensils, and sleeping at the end of their day's run. On April 10, about two miles of line was run connecting the Indio River survey with points on the Chagres River line.

Party No. 3 was at work during the month on the Pequeni River, which enters the Chagres about twenty miles above Gamboa, and established points on the northeasterly divide, between the Chagres and the San Blas country. Their farthest point is about fifty miles northeast of Gamboa. This party will cross the divide and run to Nombre de Dios, about ten miles distant, and tie their line to an established point at that place. When the line to Nombre de Dios has been finished, party No. 3 will start at the mouth of the Piedras River, about thirty-five miles above Gamboa, and run a line to the divide between that river and the Mamoni River, a tributary of the Bayano River, which flows into the Pacific Ocean about twenty-five miles east of Panama.

The points located by parties Nos. 1 and 3 will be tied in by triangulation by parties working from the mountains in the Bayano basin, using Chepo as a base, and locating their points from the islands of Taboga and Chepillo in Panama Bay.

Party No. 4 has been working up the Boqueron River, a tributary of the Pequeni

## NOTES OF PROGRESS.

(Continued.)

River, about twenty-five miles above Gamboa, and has located points on the north-easterly divide about forty-two miles above Gamboa, and about eight miles southeasterly from Porto Bello. This party will run to Porto Bello and tie their line to an established point at that place, thus closing the circuit.

A description of the natural features encountered in the course of the survey shows that the Chagres River above the mouth of the Esperanza contains an exceptional number of high rapids, at one point rising 75 feet in a distance of 600 feet. The Indio River region is heavily wooded, but there is apparently no valuable timber. The rivers of the Boqueron region (toward Porto Bello) are very swift, rising rapidly toward the head waters, in one case rising nearly 3,000 feet in four miles. The greater part of this rise is taken up by sheer falls. On the Candaloso River there are two falls within a few feet of each other with a total height of over 500 feet. The work of the survey was seriously hindered during April by heavy rains which caused high water in the rivers and greatly delayed the transporting of supplies.

## Commission Gardens.

The past dry season has been unusually trying on the Commission truck gardens at Corozal, Pedro Miguel, and Empire, owing to unfavorable climatic conditions, and as a result the vegetable yield fell off about 40 per cent. The frequent rainfalls kept the ground too wet, while lack of sunshine delayed the ripening of vegetables, and the moisture settling on the foliage and fruits caused considerable decay. February and March were the most favorable months, but weather conditions during the greater part of April were particularly severe. Attacks by insects and fungus diseases contributed in a measure to the adverse showing, although depredations by ants are steadily diminishing, due to the unceasing warfare against them during the past two years. Among the vegetables, tomatoes and beans suffered the most from excessive moisture. Of the three gardens, Corozal and Empire made the best showing.

The total yield of fruits and vegetables during April was as follows:

Tomatoes, 3,101 pounds.	Beans, 1,855 pounds.
Egg plant, 138 pounds.	Okra, 307 pounds.
Cucumbers, 881 pounds.	Beets, 55 pounds.
Radishes, 5,100 bunches.	Pepper, sweet, 11 pounds.
Green onions, 378 bunches.	Collards, 25 pounds.
Parsley, 275 bunches.	Papayas, 33.
Lettuce, 660 heads.	

The value of produce for April was \$741.28, as compared with \$688.79 for March. The cucumber crop for March was ruined by an insect closely resembling the squash bug. A fine variety of white corn, imported last year from the island of Guam, matured during March at the Corozal garden, and the seed was saved for planting. It is superior to the native varieties, and through continued seed selection may be further improved. Experiments have shown that the collard, a vegetable grown extensively in the Southern States, is well adapted to local conditions, and its cultivation will be increased. The demand for vegetables during April was in excess of the supply with the

single exception of radishes, the price of which was temporarily reduced without affecting the call for them.

New landscape work was undertaken during April at Gatun and Culebra. At Ancon nursery there were about 25,000 ornamental plants in various stages of development. The advisability of moving the Ancon garden to Empire is being considered on account of the superior conditions there, both as to soil and location.

## Tides Give Trouble.

The principal obstacle encountered in clearing the ground in the channel section of the Pacific Division, preparatory to blasting for subaqueous excavation, is the daily submerging of a large part of the area by the tides. On certain days when the tides are higher than usual, the ground is almost completely covered, in some places to a considerable depth. Quite often the men are compelled to work up to their waists in water, and occasionally one will fall in a hole and be obliged to swim out. The men dislike to work under these conditions, and it is with difficulty that an adequate force is maintained. Blasting operations in this section have been somewhat retarded by lack of casing for the drill holes, but a supply of casing was received last week, and the work can be prosecuted. The brush clearing gang is working a mile or so south of the Miraflores lock site.

## Assistant Examiner of Accounts.

Mr. T. L. Clear, formerly chief clerk in the office of the Examiner of Accounts, has been appointed Assistant Examiner of Accounts, effective May 14, 1909. In addition to his new work, he will perform the duties of chief clerk, and continue to act as Deputy Auditor of the Canal Zone.

## EXECUTIVE ORDER.

## Office of Director of Hospitals Abolished.

By authority of the President, it is ordered: That so much of Act No. 8, enacted by the Isthmian Canal Commission, September 2, 1904, as provides that certain duties be performed by the Director of Hospitals, is hereby amended. The office of Director of Hospitals will be abolished on September 12, 1909, and the duties referred to will be performed on and after that date by any official of the Department of Sanitation of the Isthmian Canal Commission who may be designated.

J. M. DICKINSON,

Secretary of War.

WAR DEPARTMENT, Washington, D. C.,  
(Culebra, C. Z.), May 14, 1909.

## Sand from Taboguilla Island.

A barge load of sand was brought from the island of Taboguilla, in Panama Bay, on May 17, and placed in cars at Balboa for shipment to Miraflores, where it will be used in the concrete for the new power house. This sand, in common with all that found on the beaches near Panama, contains a large proportion of shells. No effort will probably be made to bring sand from the beds at Chamé until the completion of the new sand dock in course of construction near the shipways at Balboa. The piling for this dock, which will be 800 feet long, is nearly in place.

## Reading Matter for Convicts.

Old magazines and other reading matter are desired for distribution among the one hundred and twenty convicts in the Zone penitentiary. Any person who wishes to contribute reading matter of any kind is requested to notify either Rev. Moss Loveridge, the Deputy Warden, or Sergeant Seager at the Canal Zone penitentiary, Culebra, who will make arrangements for its collection.

## LABOR FORCE FOR APRIL.

The report of the Chief Quartermaster for the month of April shows that the number of Isthmian Canal Commission employees actually at work on April 28, was 26,835, of whom 4,355 were "gold" employees, and the remainder were on the "silver" or labor roll. The Panama railroad force was 6,078, and the Panama railroad commissary force numbered 786. Thus the total number of persons at work on the Canal and railroad on the 28th day of April was 33,699. During the month 251 people were added to the "gold" roll and there were 203 separations, the net increase in the force being 48. Seven hundred and fifty laborers from Barbados were imported during the month, 500 of which were assigned to the Panama Rail-

road Company for work on the relocated line, and 250 to the three construction divisions of Canal work.

The number of family quarters occupied by "gold" employees was 1,505, and the occupants numbered 4,506; bachelor quarters by "gold" employees, 2,095, and the occupants numbered 3,422. The family quarters occupied by West Indians numbered 941, and the occupants 3,237; bachelor quarters, 245; number of occupants, 5,081. The family quarters occupied by European laborers numbered 279, and the occupants 887; bachelor quarters, 141; number of occupants 4,657.

A statement of the force actually at work on April 28, 1909, follows:

DEPARTMENT.	Gold Men.	SILVER MEN.								Total Gold and Silver Men.
		Monthly.	Artisans.		European Laborers.		West Ind'n Laborers.		Total Silver.	
			32 cents and over.	26 cents.	40 cents.	32 cents.	26 cents.	20 cents.

Panama railroad force, 6,078; Panama railroad commissary force, 786.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The Ancon Woman's Club held its meeting in the club rooms on May 19, the acting president in the chair. There was a good attendance. The library question has been decided, and the room will be open every evening to gentlemen known to club members. A member of the club will be in attendance during certain hours. The general club room will be used for social purposes, card playing, reading, or conversation, the tea room for study, and the art room will be fitted up as a writing room. The new rule will not be in force until after the annual meeting. The last program for the year was presented by the art department, "Unwritten Notes" being the subject of an address by Madam LePrince. There was an exhibit of Isthmian pictures. The annual meeting of the club will be held on June 2, and the installation of officers on June 16, which closes the club year. The next season will open in October.

An election of officers by the Empire Women's Club was held on April 15, with the following result: Mrs. Abbie B. Miller, president; Mrs. Grace Mills, vice-president; Mrs. J. E. Westberg, treasurer. The office of secretary will be left open for the present. The last program meeting will be held on May 28, when the study for the year will close with a symposium of the Canal Zone. There will also be a social meeting on that date, together with a general reception to the ladies of Empire.

A meeting of the Gorgona Woman's Club was held on Thursday, May 20, the president in the chair. The informal action taken at a previous meeting, regarding the temporary discontinuance of the departments, was ratified at this meeting. The Club proposes to work on social lines at present. Representatives on the Federation committees will be appointed, visiting and sick committees will be continued, and other committees will be formed as occasion requires. An entertainment is being arranged, and regular program meetings will be features. The Club will hold open meetings for the residents of Gorgona.

The Gorgona Daughters of Rebekah gave a flower dance on Saturday evening, May 22. The ball room was decorated with the colors of the order, red and green, and the stage was draped with flags and the emblem of the order. The ladies appeared in flower costumes, and there was a large attendance.

The Woman's Club, the Sunday school and the Red Cross of Pedro Miguel combined in a bazaar, which was given at the club room on Saturday evening, May 15. There were eleven booths. Fancy articles and other attractions were offered and several hundred dollars were raised.

Mrs. Pierce T. Murphy, of Colon, spoke before the Gatun Woman's Club on Friday, May 21, on the "Discarded Baby," dealing with settlement work in New York. The club will give an evening social on Friday, May 28, the proceeds of which will be used to build a tennis court. There will be music and refreshments. Election of officers was held in April, with the following result: Mrs. Charles Stoddard, president; Mrs. E. L. Bandy, vice-president; Mrs. E. S. Waide, secretary; Mrs. C. D. Corp, treasurer. The year closes with the meeting June 4.

The Isthmian Sunday School Association

held a convention at Gatun on Sunday, May 16, the president of the association in the chair. About 250 persons attended. The meeting consisted of a service of song, addresses, and a short business meeting. The association was organized in January, 1908, and is affiliated with the International Sunday School Association. Conventions are held quarterly at different points in the Zone. A special train left Panama at noon and returning left Gatun at 5 p. m.

An entertainment was given by the pupils of the Ancon public school in the school house on the evening of Friday, May 21. The program consisted of songs, drills, and recitations. There was a large audience present and about \$70 was realized, which will be used to purchase books for the school library.

## PERSONAL.

Col. W. C. Gorgas, accompanied by Mrs. Gorgas, Miss Gorgas and Miss Devoil sailed on the *Panama* on May 20 for an eight weeks' leave of absence in the States. Among the other passengers on the *Panama* were: Maj. J. P. Jervey, Resident Engineer at Gatun, and family; Judge and Mrs. Thomas E. Brown, Jr., of Cristobal and A. B. Minear and wife of Culebra.

Dr. J. P. Perry, Chief Quarantine Officer, returned on Tuesday, May 18, from an inspection trip to ports on the north coast of South America and islands in the Antilles. He left the Isthmus on April 13, and during his travels visited Sabanilla in Colombia; Willemstadt, on the island of Curacao; La Guayra, Caracas, and Puerto Cabello in Venezuela, and the islands of Trinidad and Barbados.

Mr. Sylvester Deming, Treasurer of the Panama Railroad Steamship Company, returned to the States on the *Panama* on May 20, after a visit of six days on the Isthmus. Mr. Deming formerly spent some years on the Isthmus in the employ of the company.

P. S. McCormick, agent of the United Fruit Company at Colon, accompanied by Mrs. McCormick, sailed on the *Parissima*, May 18, for a visit of three weeks in Costa Rica.

## Obituary.

Dr. Wm. M. Weightman, Passed Assistant Surgeon, United States Public Health and Marine Hospital Service, died at Guayaquil, Ecuador, on the 16th instant, of yellow fever. Dr. Weightman was formerly stationed at San Francisco. He was afterwards detailed for duty at Callao, Peru, and about a year ago was transferred to Guayaquil, where he inspected all vessels clearing for ports of the United States and Panama. His family were on the Isthmus a few weeks ago on their way to join him.

John H. Barbour, an American, employed in the office of the Chief Engineer, was found dead in bed at his quarters in Culebra, Sunday morning, May 9. He had just returned for duty after a three months' vacation. Mr. Barbour was chief clerk in the old division of building and construction, was about 42 years of age, unmarried, and came to the Isthmus four and one-half years ago. His home was in New York city.

A. Y. McFarland, an American, formerly employed in the Quartermaster's Department, died at Ancon Hospital, Sunday, May 9. He was 38 years of age, unmarried, and had been on the Isthmus 42 months.

## COMMISSION CLUBHOUSES

## Activities of the Young Men's Christian Association.

## REPORT FOR APRIL, 1909.

Total membership .....	1,212
Number different tournaments: billiard, pool chess, etc. ....	8
Total number of tournament players .....	116
Total number of bowling games .....	4,792
Total number of pool and billiard games .....	12,068
Total income from soda fountain .....	\$2,152.94
Number different men using gymnasium .....	100
Total attendance of men using gymnasium .....	540
Number enrolled in chess and checker clubs ..	42
Number enrolled in glee clubs .....	10
Number enrolled in camera clubs .....	67
Number enrolled in bible clubs .....	53
Number enrolled in educational classes .....	30
Number of members of library .....	578
Total number of books withdrawn .....	1,322
Number of Sunday meetings .....	1
Attendance .....	125
Number of local entertainments .....	14
Attendance .....	2,620
Number of functions outside association management .....	9
Attendance .....	1,195
Number of afternoons for women .....	15
Attendance .....	100
Number evening functions to which women were invited .....	25
Attendance .....	1,025
Different men on committees .....	32
Number of men called on in hospitals .....	120
Number of letters written at public tables .....	3,440
Total attendance at building .....	46,359
Average attendance per day .....	1,545

## BOYS' DEPARTMENT (AGES 10-16).

Number of members .....	57
Number of afternoons open to boys .....	50
Total attendance .....	578
Attendance at gymnasium exercises .....	234

The initial dates of the Edwin R. Weeks Co. are as follows: Empire, May 28; Gorgona, May 29; Cristobal, May 31; Culebra, June 1; Las Cascadas, June 2; Gatun, June 3; Camp Elliott, June 4. On Saturday night, June 5, the Company will give an entertainment in the National Theater for the people of Ancon and Panama. Tickets will be on sale on June 1 at the Hotel Tivoli and Hotel Central. The return engagements at the clubhouses will be as follows: Gorgona, June 9; Empire, June 10; Culebra, June 11; Cristobal, June 12.

## EMPIRE.

Wednesday and Friday evenings will be devoted to gymnasium work under the direction of A. O. Ludwig, physical director. All members interested are requested to be present on these nights.

On Friday night, May 21, the Culebra Y. M. C. A. indoor baseball team defeated the Empire team at Empire by the score of 17 to 13.

## GORGONA.

On Friday night, May 21, an indoor baseball game was played between House 99 and the Y. M. C. A. team. The score was 28 to 24 in favor of the Y. M. C. A.

Judge Wesley M. Owen of Ancon will deliver a memorial address at the clubhouse, on Sunday, May 30, at 8 o'clock. Special music will be furnished by members of the Edwin R. Weeks Co. All the people of Gorgona are cordially invited to attend.

## CRISTOBAL.

A concert was given in the game room by the Isthmian Instrumental Club on Monday evening, May 24.

The Cristobal Y. M. C. A. baseball team will play the Culebra Y. M. C. A. team at Cristobal on May 31.

## Concert by I. C. C. Band.

## GORGONA, C. Z.,

Sunday, May 30, 1909, at 6 p. m.

## PROGRAM.

- 1 March—*The Moose*.....Flath
- 2 Selection—*The Three Twins*.....Hoschua
- 3 a Characteristic—*Kerry Mill's Barn Dance*.....Mills
- 3 b Indian Descriptive—*Trailing the Trail*.....Spaulding
- 4 Cornet Solo—*Columbia Polka*.....Rollinson
- 5 Medley Selection—*Hits of 1909*.....Remick
- 6 Waltz—*Idle Hours*.....Wood
- 7 Tone Poem—*In Lovers' Lane*.....Pryor
- 8 Fantasia—*Tone Pictures of North and South*.....Bendix
- 9 Idyl—*The Glow Worm*.....Lincke
- 10 March—*Sousa Swing*.....Brown

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Hotel Tivoli, Ancon, Sunday, June 6.

## FIVE YEARS OF CANAL WORK.

## Progress Made Under American Control, Since May 4, 1904.

## III.

## Recruiting and Maintaining the Working Force.

From the beginning of American occupation the problem with regard to a working force was not so much to obtain men as to keep them on the work after they had been brought here. This difficulty was experienced as well with white Americans recruited for the skilled trades and administrative positions as with the common labor force. Modern sanitation, systems of housing and feeding employes, and a uniformly high scale of wages have made the force permanent.

The actual number of employes of the New Panama Canal Company on May 4, 1904, was 746, about 700 of whom were laborers at work in Culebra Cut, and others employed as caretakers of the plants and machinery distributed along the line of the Canal between Colon and Panama. Most of this force was retained, and as the work developed it was increased. On November 1, 1904, the total force was about 3,500, of whom 600 were Americans. In spite of the great amount of illness among both white and negro employes during the first years of American occupation, the force grew steadily in numbers. It was not a permanent force, however, as it was made up largely of men who stayed on the Isthmus only a few months. On November 1, 1905, the total force was about 17,000 men, of whom 2,705 were "gold," or skilled employes.

The exact number of men in the Canal force cannot be stated for any given time, as only two force records are available. One of these gives the number of employes actually at work at a given time, and the other gives the number of payments made each month.

A statement giving the number of employes reported in the past five years follows. The actual number in the employ of the Commission is somewhere between the numbers of the two reports. The term *gold* refers to employes in skilled trades, technical, and administrative positions, most of whom are Americans. Silver employes are common laborers and include a few negro artisans.

YEAR.	FORCE REPORT.		PAYMENTS MADE.	
	Gold.	Silver.	Gold.	Silver.
*1904.....	600	2,900	**	**
*1905.....	2,705	14,295	2,784	13,685
*1906.....	3,700	13,300	4,823	16,979
*1907.....	4,404	18,923	5,615	24,268
†1908.....	4,587	20,991	5,487	31,000
†1909.....	4,295	20,583	4,962	28,524

\*Force on November 1. \*\*Figures not available.  
†Force on June 30. †Force on January 31.

Not included in the above figures are the employes of the Panama Railroad Company, who on December 31, 1908, numbered 5,342, and the employes of the Commissary who numbered 749, a total of 6,091.

By nationalities, the force at work on January 31, 1909, included 4,295 Americans; 4,913 Europeans, and 15,670 West Indian negroes. The skilled labor, technical and administrative forces, are recruited in the United States, and although the number of men who left the service each year up to 1908 was as great as the number actually at work, the supply has always been adequate.

The supply of common labor has not always been sufficient to meet the demand, and in the first three years was quite inadequate.

In 1905 labor agents were sent out to various foreign countries.

The following table shows the number of laborers recruited up to May 1, 1909, and the source of supply:

## EUROPEAN LABORERS.

Place of Origin.	1905.	1906.	1907.	1908.	1909.	Total.
Spain.....		1,204	5,291	1,750		8,245
Italy.....		909	1,032			1,941
Greece.....			1,101			1,101
France.....		19				19
Armenia.....		14				14
*Cuba.....		515				515
Total.....		2,661	7,424	1,750		11,835

## WEST INDIAN LABORERS.

Barbados.....	7,050	3,242	2,592	1,291	14,175	
Guadeloupe.....		2,039			2,039	
Martinique.....	565	2,224			2,789	
Jamaica.....	100				100	
Trinidad.....	1,079				1,079	
Curacao.....	23				23	
St. Kitts.....	1,346				1,346	
†Colombia.....	442	160			602	
†Chiriqui.....		13			13	
Not classified..	69				69	
Total.....	542	10,292	7,518	2,592	1,291	22,235
Grand total..	542	12,953	14,942	4,342	1,291	34,070

\*Spanish laborers recruited in Cuba.

†Colombian negroes.

†Panamanian negroes.

Recruiting in the West Indies and Spain induced independent immigration, and it is estimated that as many men have been added to the common labor force who came to the Isthmus of their own initiative as have been sent directly by the labor agents. At present the supply of common labor on the Isthmus is greater than the demand, although some recruiting has been necessary in 1909, because of the indisposition of the idle men to accept work at the established rate of 10 cents an hour for West Indian laborers.

## Quarters for Employes.

Most of the 2,149 buildings found in the Canal Zone when the Americans took possession were in poor condition. It was found profitable to repair 1,536 of them, chiefly for use as laborers' quarters or storehouses. They served a useful purpose in the preparatory years of Canal work, until the modern quarters constructed by the Americans were available. Over 1,500 buildings have been constructed by the Isthmian Canal Commission, of which 750 are for miscellaneous use; 200 as laborers' quarters, and the remainder as "gold" quarters.

Quarters for "gold" employes are located at the following places:

PLACE.	BACHELOR QUARTERS.			FAMILY QUARTERS.	
	No. of houses.	No. of rooms.	No. of occupants.	No. of houses.	No. of quarters.
Ancon.....	10	154	153	84	136
Bas Obispo.....	6	69	95	32	43
Corozal.....	2	90	96	28	52
Culebra.....	13	259	230	132	212
Cristobal.....	33	403	734	72	186
East La Boca.....	3	72	109	9	24
Empire.....	21	268	483	112	230
Gatun.....	15	184	314	45	110
Gorgona.....	20	279	378	83	171
Balboa.....	2	72	61	18	25
Las Cascadas.....	7	92	116	43	95
Miraflores.....	3	13	27	2	2
Paraiso.....	8	95	46	48	59
Pedro Miguel.....	10	95	166	36	63
Porto Bello.....	4	37	93	7	19
San Pablo.....	9	53	96	13	13
Tahemilla.....	6	61	69	22	35
Total.....	172	2,296	3,266	786	1,475

There are several types of "gold" family quarters, the employes being assigned quarters in accordance with their salary rating. All the houses are frame buildings without cellars, and are constructed as cheaply as possible, with the idea that they will be abandoned in a few years. The "types" differ from one another in size and arrangement of rooms rather than in style of construction, for the style is general. All the houses have screened porches in front and rear, are painted inside and outside, are supplied with electric lights, water connections, and toilet rooms, and are furnished with necessary pieces of furniture. The "gold" family quarters in most general use are known as type-14. A type-14 house is a two-story building with quarters for two families on each floor, each quarters having a screened veranda in front, with three doors entering directly into as many rooms, two of which are 12 feet square, and the third 8 by 12 feet. Back of these three rooms is a kitchen 8 by 10 feet, another screened veranda, and a toilet and bath room. Out of the total of 1,475 family quarters, 580 are of this type, while the majority of the remaining quarters afford practically the same accommodations.

Bachelor quarters for gold employes are in barracks containing from four to twenty-four rooms. The rooms are large enough to accommodate two men. The furniture consists of a bed, a case of drawers for each man, table and chairs. The quarters are lighted with electricity, and have toilet and bath rooms on each floor.

The family quarters for laborers are in screened barracks of two types, one containing eight quarters, and the other five, each quarters having two rooms. The laborers' barracks are buildings fitted with standee bunks in double rows of three tiers each. The ordinary barracks has 72 bunks.

A statement of the quarters occupied in April, 1909, follows:

The number of family quarters occupied by "gold" employes was 1,505, and the occupants numbered 4,506; bachelor quarters by "gold" employes, 2,095, and the occupants numbered 3,422. The family quarters occupied by West Indians numbered 941, and the occupants 3,237; bachelor quarters, 245; number of occupants, 5,081. The family quarters occupied by European laborers numbered 279, and the occupants 887; bachelor quarters, 141; number of occupants, 4,657.

In each of four large villages—Cristobal, Gorgona, Empire, and Culebra—the Isthmian Canal Commission has erected clubhouses for the entertainment of the "gold" employes. These clubhouses are conducted by secretaries trained in Y. M. C. A. work, and are similar to the railroad Y. M. C. A. houses in the United States. Four more will probably be erected during the coming fiscal year. In eight large villages along the line of the Canal the Commission has also erected buildings in which religious services and meetings of various organizations are held. The Commission hotels, in places where there is no regular clubhouse, have club rooms over the dining rooms. Thus there is not a village in the Canal Zone, having a considerable number of "gold" employes, in which provision has not been made for social diversion.

## Food and Clothing.

The Panama Railroad Commissary was established many years before American occupation of the Zone, and was maintained until

1904 as a general store in Colon. Since then it has been expanded in order to keep pace with the increase in population, until it has become the main source of food and clothing supply for 40,000 people. The commissary has storehouses, a bakery, a laundry, a cold storage and ice plant, and a general store in Cristobal and Colon, besides stores in twelve other villages. Cold storage supplies and ice are delivered in the Zone villages each morning by special train. Only Isthmian Canal Commission and Panama railroad employees are allowed to make purchases at the commissaries, and to insure this, no cash sales are made to residents of the Isthmus, all purchases being made with coupons issued by the Commission and charged against the employees' salary account.

A statement of the business transacted in the fiscal year ending June 30, 1908, follows:

Stock on hand June 30, 1907.. \$133,730.75

Food for employees living in bachelor quarters is supplied by the hotels and messes maintained for each class of employees—hotels for "gold" employees, messes for European laborers, and mess kitchens for negro laborers. The hotels and messes are practically self-supporting.

There are eighteen hotels at which meals are served at 30 cents each to employees, and at Hotel Tivoli in Ancon meals are served to employees at a reduced rate, and to transients at the rates charged by high class hotels in the United States. In the month of March, 1909 the receipts at the eighteen 30-cent hotels amounted to \$52,365.89, and 171,503 meals were served.

At the messes for European laborers the meals are served at the rate of forty cents a day for three meals. The food is placed on tables and the men sit down to it on benches. Twenty-one of these messes are maintained—one for each European labor camp. The meals served in March numbered 290,190, and the cost of maintaining the messes was \$36,084.05, a trifle less than the income.

In the mess kitchens for negroes food is cooked and is served in dishes to the men, to be eaten wherever they wish. The meals served to negro laborers in March at the twenty-four kitchens maintained for that purpose numbered 284,724, and cost \$25,196.17. The meals at the kitchens cost 30 cents a day for three meals.

#### New Record in Central Division.

All records for total output in the Empire District of the Central Division were broken on May 12, when 15 steam shovels excavated 25,454 cubic yards of rock and earth, an average of 1,697 cubic yards per shovel for an eight-hour day. The shovels were under steam 120 hours, and actually at work 97 hours and 55 minutes.

## STEAM SHOVELS IN APRIL.

Record for Single Day's Excavation Broken on April 8.

Steam shovels in April removed 2,137,861 cubic yards of which 2,083,560 cubic yards were "work," and 54,301 "plant," excavation. In the Central Division the shovels excavated a total of 1,798,454 cubic yards, comprising 1,687,766 cubic yards from the Canal prism, 74,402 from the Obispo Division, 15,688 taken from the prism and then dumped back for levee purposes, and 20,598 excavated by hand. The following table gives a comparison with other high monthly records in this division:

DATE.	Prism.	Prism and Outside.
March, 1908.....	1,540,497	1,615,118
October, 1908.....	1,551,409	1,598,981
February, 1909.....	1,546,008	1,644,636
March, 1909.....	1,966,294	2,065,827
April, 1909.....	1,722,442	1,798,454

The high record for the month was made by shovel No. 223 (90-ton) at work in the Culebra District, which took out 51,184 cubic yards of earth in 26 working days, an average of 1,969 cubic yards per day. The best record for shovels in the 70-ton class was made by No. 122 in the Bas Obispo District, which removed 35,053 cubic yards of rock and earth in 25 working days, an average of 1,402 cubic yards per day.

The record for a single day's excavation was broken on April 8, when 57 shovels took out 78,559 cubic yards, an average of 1,378 cubic yards per shovel. The best day's record for one shovel during the month was on April 12, when No. 266 in the Culebra District excavated 3,340 cubic yards.

On April 6, the 18 shovels working in the Culebra District broke all previous records for districts, removing 28,350 cubic yards, an average of 1,575 cubic yards per shovel.

The best monthly and daily records of steam shovels in the three divisions for the month of April are as follows:

#### Panama Episcopal Mission Work.

The annual report of the Panama Mission of the Protestant Episcopal Church of America has been issued. It covers the year 1907-1908, and shows that in the Canal Zone, Colon, and Panama, there are seventeen congregations, six for white persons and eleven for West Indians. The clergy number six, one being a West Indian in deacon's orders. There are seventeen catechists and lay-readers, four women's guilds, and three chapters of the Brotherhood of St. Andrew.

During the year the Commission erected a hospital chapel at Ancon, which was opened for service on Christmas Day. The congregation at Empire erected a church at a cost of \$2,000, which was opened the last Sunday in November. A rectory at this station, also built by the congregation, was occupied by the rector in February. The American Church Building Fund has contributed toward this work. Other congregations meet in the Commission chapels, or other suitable rooms. The West Indian congregations are provided with tents or any available buildings for the purpose of holding worship. Statistics for the year are: Communicants, 785; Sunday school scholars, 392; congregations, 17; contributions, \$4,054.75; baptisms, 150; marriages, 157; confirmations, 126.

#### Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., May 26, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Algeier, Martin	McCourtney, James W.
Blunt, Wm. T.	Miesch, John
Bogliolo, John	Sargent, Kenrick
Chapman, Arthur	Sawain, Salim
Clardy, A. B.	Stephenson, C. J.
Cleave, J. H.	Stockini, Mrs. T.
Clark, E. E.	Stone, Mrs. T. B.
Coster, Josef	Straw, George R.
Cundeff, I. B.	Sullivan, C. P.
Dockery, Mrs. Harry	Thompson, Newton Far-
Dow, Mrs. J. W. Gladys	man
Haynes, Harry A	Volman, P. J.
Hunter, C. D.	Winant, W. E.
Knowlton, Mr. & Mrs. C. F.	Workman, J. A.
Major, J. W.	Zulek, Fred.

The following steamers have recently arrived at Bulboa: May 15, *Saturn*, U. S. Collier from North; May 16, *Guatemala*, from South, *Arica*, from Guayaquil, and *Denderah*, from North; May 17, *Mexico*, from South; May 19, *Chiriqui*, from intermediate ports; May 20, *Taboga*, from intermediate ports; May 21, *Manavi*, from intermediate ports.

## SANITATION OF CITIES.

### Work to be Prosecuted in Panama and Colon During Next Dry Season.

By direction of the Chairman and Chief Engineer, the Division Engineers of the Atlantic and the Pacific Divisions are preparing plans covering the details of sanitary improvements in the cities of Panama and Colon. These improvements will be made under an appropriation contained in the Sundry Civil Act of March 4, 1909, providing for "Expenses incident to continuing the extension, grading, and paving of streets, building sewers, and extending water mains in the cities of Panama and Colon, \$800,000."

The improvements will be made under Article VII of the Treaty of February 26, 1904, in which

The Republic of Panama agrees that the cities of Panama and Colon shall comply in perpetuity with the sanitary ordinances whether of a preventive or curative character prescribed by the United States, and in case the Government of Panama is unable or fails in its duty to enforce this compliance by the cities of Panama and Colon with the sanitary ordinances of the United States the Republic of Panama grants to the United States the right and authority to enforce the same.

In directing that the estimates for this sanitation work be prepared, the Chairman and Chief Engineer says:

Before any such work is authorized by me I will secure its approval from a sanitary standpoint by the Chief Sanitary Officer, and through the head of the Department of Civil Administration, the approval of the Panamanian Government for the work in question, and its assent to defray the cost thereof in accordance with the procedure outlined in Article No. VII of the Treaty. \* \* \*

The original estimate forwarded to Congress was for \$1,200,000. This was cut down by Congress to \$800,000, but with due economy, I think the amount appropriated can be made to answer the present requirements, especially if construction work is done during the next dry season. \* \* \* You will please plan any such work therefore, so that no undue increase in expenditure will result in the performance of any of this work prior to the beginning of the next dry season. \* \* \*

For Panama, the plans and estimates should include the work between curb lines. In addition the approximate amount of fill required to bring the lots adjoining the improved streets up to grade, to comply with the requirements of the Sanitary Department should be stated. The fill outside of the curb lines will not be paid for out of the Congressional appropriation, and the approximate amount and cost of the necessary fill which will fall upon the property owners should be known in advance so that the matter can be presented to the Government of Panama at the time of the approval of the work is requested.

Likewise in Colon, in addition to the estimate of cost of improvements between curb lines, the approximate quantities and cost of fill required for lots should be estimated and submitted so that the matter can be taken up with the Panama railroad or other owners of property in Colon to be improved and arrangements made for the reimbursement of the cost of such fill.

The Chief Sanitary Officer has recommended that the work in Panama be attended to before that in Colon, because the district in which the improvements are to be made in Panama "are already closely occupied and would be very hard to sanitize in case of the introduction of plague." Continuing he recommends:

Of the districts mentioned I would recommend that they be attended to in the following order: First, Caledonia; second, Guachapali; third, Cocoa Grove; fourth, El Granillo; fifth, 16th Street district; sixth, Santa Cruz; seventh, San Miguel; eighth, Pueblo Nuevo; ninth, Trujillo; tenth, Maranon. These localities should be laid out in streets and lots. The streets should be graded, sewerage and paved, and water put in, and the drainage of the whole district looked after. Property owners should be required to drain and fill their own lots where draining and filling are necessary. When the streets have been laid off, and the lots staked, the municipality should require

the property owners to get their houses on the lot lines. The Sanitary Department can require the owners to do the necessary filling and draining as a sanitary measure.

Eleventh, intercepting sewers, etc., west of Central Avenue.

Twelfth, the land between Cocoa Grove and El Granillo line to the east of Ancon Boulevard should be laid out into streets and lots, should be graded, and water and sewer put in.

In Colon I would recommend:

First, the paving and sewerage of D street and caring for the D street ditch.

Second, the filling of the ground between D street and Hudson alley.

Third, improvement on the beach road, and the remainder to be spent upon filling in between Hudson alley and G street ditch.

I think the work should be done as soon as it advantageously can, but if any great saving can be made by waiting until next dry season, I do not think there is any serious objection to putting it off until that time.

## Church Notes.

The all-day missionary rally held by the ladies of the Methodist Church, Panama, Thursday, May 6, was attended by about forty persons, including representatives from almost every station on the Panama railroad. Mrs. W. W. Gray was elected chairman of the meeting, and Mrs. J. Leon Webster was chairman of the committee of arrangements. At the morning session addresses were made by Mrs. Abbie Hillerman, Dr. Dora Martin, Mrs. J. Stuntz of Cristobal, and Judge Wesley Owen. Lunch was served to the guests in the parsonage at 1 o'clock. At the afternoon meeting a district organization was effected and the following officers elected: Mrs. H. L. Stuntz of Colon, president; Mrs. J. L. Webster of Ancon, vice-president; Mrs. L. C. Vannah of Corozal, secretary; Mrs. A. R. Stroup of Paraiso, treasurer.

The local branch of the Women's Foreign Missionary Society was organized in November, 1908, and has about 25 members. Mrs. Gray is president and Mrs. Webster, secretary. The society meets the first Thursday in each month at the parsonage. Another organization has been established at Paraiso. The new district organization is intended to cover all the Methodist missionary work in the Canal Zone.

Sunday, May 9, was observed as Mother's Day in the Union Church, Cristobal, in connection with similar observance of the day in the churches in the States. The same evening the second service for the white congregation at Porto Bello was held, Rev. Carl Elliott of Cristobal, officiating.

## Memorial Day Services.

Memorial Day will be observed at St. Luke's Church, Ancon, on Sunday, May 30, at 10 a. m. A special service of patriotic character will be held. Representatives of the Army and Navy Union will attend. Rev. William Cross of Cristobal will preach.

## Convicted of Embezzlement.

William Pettit, an American, was convicted of embezzlement in the Circuit Court of the Third Judicial Circuit on May 10, and sentenced by Judge Gauder to two years in the Culebra penitentiary at hard labor. He was originally sentenced to three years, but the term was later reduced to two, with the information that an application for pardon would be considered at the expiration of a year, in the event of good behavior. Pettit arrived on the Isthmus August 31, 1905, and was employed as a clerk in the office of Dr. T. C. Lyster at Ancon Hospital, where the peculations occurred.

## OFFICIAL CIRCULARS.

## Decoration Day to be Observed May 31.

CULEBRA, C. Z., May 17, 1909.

CIRCULAR No. 251.

As May 30, 1909, Decoration Day, falls on Sunday, the following day, Monday, May 31, 1909, will be observed as a holiday in the Canal Zone, and, as far as practicable, all public business will be suspended on that day.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Changes in Department of Sanitation.

CULEBRA, C. Z., May 18, 1909.

CIRCULAR No. 252.

The following changes in the organization of the Department of Sanitation are announced, effective May 20, 1909:

The position of "Assistant Chief Sanitary Officer" is created, and the position of "Executive Officer" is abolished.

Lieut.-Col. John L. Phillips, Medical Corps, U. S. A., is appointed Assistant Chief Sanitary Officer.

Maj. Charles F. Mason, Medical Corps, U. S. A., is appointed Superintendent of Ancon Hospital.

Capt. Robert E. Noble, Medical Corps, U. S. A., is appointed General Inspector.

GEO. W. GOETHALS, Chairman.

## No Alterations to Commission Buildings.

CULEBRA, C. Z., May 21, 1909.

CIRCULAR No. 253.

Effective this date, no alterations to Commission buildings will be made without the specific approval of the Chairman and Chief Engineer.

Requests for alterations should not be presented unless it can be shown that there is some material short-coming in the present construction, or unless conditions have arisen requiring the building for other purposes than those for which it was originally intended.

Commission buildings are considered to be well planned and adapted for the general needs of the Isthmian service, and any expense for changes requested to suit individual preferences will not be authorized.

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Leave of Absence.

CULEBRA, C. Z., May 17, 1909.

HEADS OF DEPARTMENTS AND DIVISIONS:

Application for leave of absence should not be forwarded to this office more than thirty days before the leave requested will begin.

By direction of the Chairman.

W. H. MAY, Secretary to the Chairman.

## Acting Chief Sanitary Officer.

ANCON, C. Z., May 20, 1909.

SPECIAL ORDER.

Lieut.-Col. John L. Phillips, Medical Corps, U. S. Army, Assistant Chief Sanitary Officer, Department of Sanitation, is hereby appointed Acting Chief Sanitary Officer during my absence from the Isthmus.

W. C. GORGAS, Chief Sanitary Officer.

Approved:

GEO. W. GOETHALS,

Chairman and Chief Engineer.

## Money Transmitted to the Treasurer.

EMPIRE, C. Z., May 21, 1909.

ALL CONCERNED:

All checks and money orders for hunting license fees and other moneys transmitted to the Treasurer of the Canal Zone, should be made payable to "Treasurer of the Canal Zone" and not to an individual.

EUGENE H. ASHL,

Acting Treasurer of the Canal Zone.

Approved: JO C. S. BLACKBURN,

Head of Department of Civil Administration.

## Changes in District Quartermasters.

CULEBRA, C. Z., May 21, 1909.

TO ALL CONCERNED:

The following changes in District Quartermasters are announced, effective May 28, 1909:

Mr. J. B. Jeffries, District Quartermaster, will be in charge of the Las Cascadas District.

Mr. M. D. Smith, will act as District Quartermaster of the Porto Bello District, in the absence of Mr. M. R. Currie, on leave.

C. A. DEVOL,

Chief Quartermaster.

## Special Train Service.

PANAMA RAILROAD COMPANY,  
COLON, R. P., May 17, 1909.

Owing to the fact that all of our equipment is needed for regular passenger service on the Sundays following pay days, we will, in the future, endeavor to avoid

the running of any special trains on these particular Sundays. Parties getting up special trains will be requested to kindly select some other Sunday in the month.

HIRAM J. SLIFER,  
General Manager.

## Proposals for Buildings.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p.m., Saturday, May 29, 1909, when they will be publicly opened, for the erection by contract of 1 Type 21 House, Corozal, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$50 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money-order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$150, conditioned upon the faithful performance of the contract. The Commission reserve the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

C. NIXON,

Purchasing Agent on the Isthmus.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p.m., Saturday, June 5, 1909, when they will be publicly opened, for the erection by contract of 3 type-14 houses, and 2 type-27 houses, at Gatun, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidders will be required to deposit \$200 for the 2 type-27 houses and \$500 for the 3 type-14 houses when the contract is awarded, conditional upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. Separate proposals will be received for the different type houses.

C. NIXON,

Purchasing Agent on the Isthmus.

## Amended Water Rates.

The following amended water rates were adopted by the Isthmian Canal Commission on January 27, 1909:

The following rates shall be collected for the use of water drawn from the public mains in the Canal Zone through private connections:

For domestic purposes: Residences, boarding houses and rooming houses, not more than three fixtures, for each connection, \$1.50 per month.

For business purposes: General stores and shops, banks, bakeries, barber shops, and other similar establishments, not more than three fixtures, for each connection, \$1.50 per month. Bars, canteens, and restaurants, not more than three fixtures, for each connection, \$3 per month.

For each fixture in addition to those provided for above, 75 cents per month.

The above rates are subject to a discount of 33 1/3 per cent, if paid within fifteen days from date of bill.

For bottling establishments, laundries, stables, truck gardens, amusement parks, distilleries, hotels, and other similar establishments, meters shall be installed, under the provisions of section 5 of these regulations.

Water furnished through meters will be charged for at the following rates:

In the administrative districts of Cristobal, Gorgona, and Empire, 50 cents per thousand gallons, or any fraction thereof including and above 500 gallons, with a minimum rate per quarter of \$5, for which 10,000 gallons may be used. A discount of 20 cents per thousand gallons will be allowed if payment is made within fifteen days from date of bill.

In the administrative district of Ancon 20 cents per thousand gallons, or any fraction thereof including and above 500 gallons with a minimum rate per quarter of \$2, for which 10,000 gallons may be used. A discount of 5 cents per thousand gallons will be allowed if payment is made within fifteen days from date of bill.

All charges herein specified are in United States currency.

Water furnished the Panama Railroad Company shall be charged for as provided in the special contract between the railroad company and the Isthmian Canal Commission.

Rates for the use of water for purposes not enumerated in this schedule, and for all special purposes, shall be fixed by the Superintendent of Public Works, with the approval of the head of the Department of Civil Administration.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, May 22, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gamboua.	Bohio.	Gatun (Canal).	Gatun (W. D.).
Height of low water ab. m'an sea-level, ft.	125	92	46	1	0	0
Maximum height ab. mean sea-level, feet:						
Sunday, May 16....	125.6	92.8	48.5	3.3	1.1	0.9
Monday, May 17....	134.6	98.8	58.9	5.8	1.4	1.1
Tuesday, May 18....	130.0	96.2	59.0	11.8	4.8	3.6
Wednesday, May 19....	127.8	94.4	54.1	8.9	3.9	2.9
Thursday, May 20....	127.4	94.3	51.8	7.4	2.9	2.3
Friday, May 21....	126.0	93.1	49.2	4.5	2.6	1.4
Saturday, May 22....	130.0	95.7	52.9	4.2	1.2	0.7

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending June 1, 1909 (75th meridian time):

DATE.	High.		Low.		High.
	A. M.	P. M.	A. M.	P. M.	
May 26.....	.....	2.38	8.50	3.15	9.10
May 27.....	.....	3.37	9.51	4.17	10.18
May 28.....	.....	4.38	10.54	5.18	11.28
May 29.....	.....	5.37	11.52	6.17	.....
			P. M.		
May 30.....	12.28	6.31	12.43	7.05	.....
May 31.....	1.18	7.18	1.26	7.47	.....
June 1.....	1.58	7.59	2.03	8.25	.....

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Supplies for Canal Work.

The following steamers arrived at the port of Cristobal during the week ending May 22, with supplies for the Isthmian Canal Commission:

*Thelma*, May 15, from Mobile, with 75,000 feet oak lumber for car repairs; 250 tons pig iron for Gorgona foundry, and 2 marine boilers to provide steam for towing machines.

*Prince Joachim*, May 17, from New York, with 1,000 barrels cement for stock.

*Cartago*, May 20, from New Orleans, with 4 concrete mixers for Pacific Division; 1 water tank, 50,000 gallons for Pacific Division, and 800 cases kerosene oil for stock.

*Advance*, May 21, from New York, with 1,000 barrels cement for Gatun spillway; 200 drawbar castings; 830 steel knuckles, and 500 packages air brake equipment for Mechanical Division; 300 kegs wire nails for stock; 36 packages dredge machinery for dredge *Mindi*; 131 pieces castings for claps at Balboa, and a quantity of other material aggregating 3,540 packages, weighing 650 tons.

*The City of Sydney* arrived at Balboa, on May 23, from San Francisco, with 16 bales rubber sleeves for Pacific Division.

One dozen keys and a circular brass check No. 40107 were left in the office of the Cristobal Observatory on or about May 8. Owner please call, or send for them.

## NOTES OF PROGRESS.

### Operations at Porto Bello.

The rock crushing plant at Porto Bello is delivering crushed material as fast as the barges arrive to carry it away, but up to the present time there have not been enough barges to keep the plant running at its full capacity. A barge load is equivalent to about 680 cubic yards of crushed rock, and the normal working capacity of the two main No. 9 crushers, and of the four secondary No. 6 crushers is approximately 2,500 cubic yards per day. Since the completion of the unloading cableway at the Gatun handling plant, the barges have been making more trips, and with the cableway working steadily, it is expected that the crushers will shortly develop their full capacity. The present output amounts to about 1,200 cubic yards per day. The type of crusher used at Porto Bello will handle rock of a maximum size 22 by 26 inches. The No. 12 crusher, which will be installed at Ancon quarry, will take care of a rock 3 by 3 by 7 feet. To furnish rock in suitable size for the Porto Bello crushers, it is necessary to do a good deal of blasting, an average of 1,200 "doby" shots being fired in a day, involving the use of from three-fourths to a full ton of dynamite.

The motive equipment in handling rock to the crushers at Porto Bello consists of 10 Porter locomotives and 50 Oliver dump cars. Twenty-five additional cars have been asked for. There are seven steam shovels on the ground. Three 70-ton Bucyrus shovels are at work loading rock, a 45-ton Bucyrus and a Model-60 Marion shovel are doing pioneer work, and two shovels are idle. Thirty air drills are operated when the plant is running full capacity. An Ajax drill sharpener has recently been installed near the quarry site. This machine will do the work of from three to four men, and handle from 300 to 400 irons per day. A well-equipped machine shop is maintained in which repairs are

made to rock-crusher machinery, drills and locomotives, and practically all plant machinery. Two additional boilers are to be installed in the engine room, making a total of eight.

An extension to the type-18 bachelors' quarters is under construction, which will provide for 12 additional rooms. This was made necessary by the increase in the gold force, which now numbers 104 men. An engine shed for housing locomotives will be built in front of the police station. It will be a frame structure sheathed with galvanized iron. A large cement drain has been completed to carry the storm water from the hill back of the laborers' quarters into the bay. At the foot of this drain, over which a plank walk has been built, a small dock has been put in for use in loading garbage on boats for disposal in another part of the bay. A small temporary storehouse is maintained for the crusher plant and machine shop, and the erection of a permanent store near the dock is under consideration. The commissary facilities are confined to a small room under the hotel dining room, and the construction of a suitable commissary building is contemplated.

The 27,000,000-gallon reservoir on the hill back of the gold employees' quarters is furnishing an abundance of potable water. The last report of the physiologist shows that this water is excellent in quality, although a slight odor is noticeable due to the presence of algae in the streams that feed the reservoir.

### Steamships Shawmut and Tremont.

Dredging operations are being actively prosecuted in preparation for the docking of the *Shawmut* and *Tremont*, the two ships that are expected to bring most of the cement that will be used in the construction of the Locks for the Canal. The *Ancon* is at work in the old French canal near Cristobal dredging a channel to dock No. 13, and also in dredging a connecting channel from the old French canal to the present Canal channel. The dipper dredge *Mindi* was recently at work for about a week between docks Nos. 1 and 2 at Colon, and is now at dock No. 13. All the dredging is to a depth of 33 feet.

Recent advices from the offices of the Panama Railroad Steamship Company in New York are to the effect that the repairs to these vessels will be completed in time for them to be placed in commission in July, and that they will reach Cristobal on their first trip the last week of that month. The voyage from New York to Cristobal will consume eight days.

Several changes have been made in the captains of the ships of the Panama Railroad Steamship Company, owing to the addition of the *Shawmut* and *Tremont*. Captain Skillings has been transferred from the *Colon* to the *Shawmut*, Captain Sukeforth from the

*Allianca* to the *Colon*, and Captain Hammond from the *Advance* to the *Allianca*. Captain Corning remains on the *Panama* and Captain Mowbray will have command of the *Advance*. Captain Garlick, who has been in command of the *Tremont* ever since she was launched, will retain command of that vessel.

### Air Compressors to Work 24 Hours.

Owing to the increased use of compressed air, it has been found necessary to operate the air compressor plants at Empire and Rio Grande the full 24 hours of each working day. The plant at Las Cascadas is still operating in the day time only, but it is expected that the same schedule of hours will go into effect there shortly. There are 12 compressors in service, working to their full day time capacity, supplying air to the main pipe line, which extends from Corozal to Bas Obispo, about 14 miles, and by which all rock drills, rock crushers, drainage pumps, etc., are operated.

### Completed Section of Canal.

The last dipper load of earth was removed from the cut at Matachin on Tuesday, May 25, thereby completing the excavation at that point. The finished section consists of a cutting 500 feet wide, approximately 2,500 feet long, and with sides averaging about 45 feet in height. The Chagres River makes a deep bend at Matachin, forming what is known as Point No. 2, and crosses the Canal at both upper and lower ends of the completed section, the water being held back by earth dikes. As the present bed of the Chagres is desired for use as a dumping ground, it is proposed to blow up the dikes at the next reasonably high stage of water, and allow the river to occupy its permanent channel. The river was at the proper height one time during the past week, but the tracks at the bottom of the Canal had not then been removed. Five gangs were employed on this work during the past few days, and the Canal at this point is now entirely completed. The total amount of material excavated was 1,750,000 cubic yards.

### Completion of Miraflores Tunnel.

The Miraflores tunnel, which will carry the relocated line of the Panama railroad through the hill back of Miraflores village, was completed on May 8, and the work of laying and ballasting the track has been begun. The tunnel was originally intended to be 600 feet long, but on account of slides it has been lengthened so that the present total length between portals is 736 feet. The tunnel section is a semi-circular arch resting on vertical side walls, and provides a clearance of 15 feet laterally, and 21 feet 3 inches vertically, above top of rail. Through the rock section, the walls and roof are 2 feet 3 inches thick; through the earth section the walls vary from 3 feet 6 inches to 4 feet 6 inches thick, while the roof is 2 feet 6 inches

## NOTES OF PROGRESS.

(Continued.)

thick at the center. The floor is 3 feet thick through the earth section, no artificial floor being necessary in the rock portion. All concrete is heavily reinforced with  $\frac{3}{4}$ -inch Ransome twisted bars, or old French rails. There is a slight grade downward in each direction from the middle of the tunnel to provide drainage. Two lines of 6-inch porous tile along the side walls will carry off the water which percolates through weep-holes. Five recesses, 3 feet wide by 7 feet high, have been built in the side walls for the use of workmen, and others, who happen to be in the tunnel during the passage of trains. The track will be laid with 90-pound open hearth steel rails on creosoted ties. The bottom of these ties will be 17 inches above the floor of the tunnel to allow for ballast.

The tunnel excavation was begun July 1, 1907, and completed July 9, 1908, at which time, 12,800 cubic yards of material had been taken from the tunnel proper, and 40,500 cubic yards from the approaches. The laying of concrete was begun during August, 1908, and in the same month a slide developed in the south side of the hill through which the tunnel runs, the entire side hill and summit moving south and east for a distance of 50 feet, carrying with it 230 feet of tunnel, and completely demolishing the timber lining in that section of the hill. This stopped all work on the earth section until January, 1909, when the bore was again opened and the work carried to completion, the tunnel as finished being on the original alignment and grade. When the slide first developed, a heavy retaining wall was built at the south end, so located as to form an extension of the tunnel, as well as the south portal. This lengthened the tunnel 100 feet at its south end. The location of the north portal was also changed to permit a flatter slope on the north side of the hill. The total excavation from the tunnel proper was 21,100 cubic yards, and from the approaches, 42,400 cubic yards, 63,500 cubic yards in all.

## Cave-in at Gorgona.

A section of the west bank of the Canal near the southern extremity of the yards at Gorgona caved in on Thursday, May 20, and came near carrying with it a lot of old French material. The bank at that point is 40 or 50 feet high and is composed wholly of earth, which recent rains had loosened. A portion of switch track, which ran along the side of the Cut, was undermined and left suspended in the air. As there were indications that other sections of the bank might fall in at any time, it was decided to move the scrap material to a place of safety. There were over 50 carloads of car and locomotive parts, boilers, I-beams, etc., piled up at that place.

## Improving Panama Suburbs.

Notices have been sent to all lessees in the suburbs of Guachapali and Santa Cruz that, in order to put these sections of Panama city in a proper sanitary condition, certain buildings will be condemned and demolished, and that those found in good repair will be moved to conform to the new building lines. Property owners may inform themselves con-

cerning these changes by applying at the Health Office, Panama. Certificates will be granted in cases where it is not considered necessary to raze the property. This action is the first step in the general plan for the sanitary improvement of these localities, which is provided for in Sundry Civil Act of March 4, 1909.

## Panama Railroad Action.

At a meeting of the Board of Directors of the Panama Railroad Company, held in New York City on April 5, 1909, Lieut.-Col. H. F. Hodges of the Isthmian Canal Commission was elected second vice-president of the Company for the ensuing year.

At the same meeting a bid was accepted for a supply of 400,000 tons of coal for the Isthmus for the year beginning April 1, 1909; 200,000 tons at \$2.34, and 200,000 tons at \$2.44.

A contract was also approved for the shipment of the coal to the Isthmus by the Barn-Line Steamship Company at the rate of \$1.40 per gross ton.

## Reservations on P. R. R. Steamships.

Commencing June 7, 1909, reservations on the steamships of the Panama Railroad Company will be made for employes of the Isthmian Canal Commission and the Panama Railroad Company in accordance with the following rules:

No reservation will be made until the regular transportation request has been issued by the Chairman's office, or by the office of the General Manager of the Panama Railroad Company in the case of a Panama railroad employe.

Upon receipt of transportation request, the employe may secure a reservation on the steamship for which issued, either by presenting same in person to the ticket agent of the Panama Railroad Company in Colon, or by forwarding the request to the ticket agent, enclosing money order for the full amount shown thereon.

The ticket agent will at once acknowledge receipt of request and money order from employe, and notify him the number of stateroom and berth to which assignment has been made, if accommodations are available. If all accommodations have been sold on the steamship for which request is issued, the employe will be so notified, and reservation made on the next following steamer.

If no accommodations are available on the following steamer, a new application must be submitted, through Head of Department, for a steamer sailing at a later date.

On the arrival of each boat at Cristobal, steamer tickets will be immediately mailed to all employes who have forwarded money order and request by mail, and for whom reservations have been made, *but no tickets will be issued until the boat has docked.*

No reservation will be made by mail unless request and money order are in the hands of the ticket agent *at least three days before date of sailing.*

Local station agents will check baggage from stations along the line through to New York upon presentation of railroad transportation and steamer ticket.

When requesting reservation by mail, address letter: "Ticket Agent, Panama Railroad Steamship Company, Cristobal, C. Z.," and make money order payable to "Panama Railroad Company, Cristobal, C. Z."

*Do not fail to forward request with money order, and give post-office address on the Isthmus.*

Employes who, under existing rules, have secured reservations by mail for steamers scheduled to sail on or after June 14, and who are holding their transportation requests to be exchanged for steamer tickets on date of sailing, should forward same at once to the ticket agent, and upon the arrival of the boat for which issued, tickets will be mailed to such employes in accordance with the foregoing rules.

## New Oil House at Gorgona.

A new oil house, to be used in connection with the Quartermaster's store at Gorgona shops, is under construction, and will take the place of the old building, which was too small. It will be 40 feet wide, and 110 feet long, and a good deal of the lumber in the old building is utilized. The floor will be made of old car sills, covered with old French iron plates. The house will be used to store all inflammable materials, such as core compound, oils, paints, plumbago, cotton waste, etc., and suitable racks and bins for their proper disposal will be provided.

All B. of R. T. in the Canal Zone are requested to send their name and lodge number to B. T. Falkner (Genesee No. 289), Las Cascadas, C. Z.

## STATEMENT OF CLASSIFIED EXPENDITURES TO MARCH 31, 1909.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1908. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907. ....	\$1,446,407.73	\$4,636,630.37	\$13,410,795.01	\$4,296,732.98	\$19,345,697.87	\$43,136,263.96
Fiscal year 1908. ....	704,610.15	2,310,212.01	16,680,660.46	1,494,956.41	11,684,215.15	32,874,654.18
Fiscal year 1909:						
July, 1908. ....	84,898.15	197,963.07	1,452,698.88	91,901.17	544,083.23	2,371,544.50
August, 1908. ....	77,019.80	145,870.37	1,599,556.90	60,798.76	517,046.09	2,400,291.92
September, 1908. ....	69,867.03	129,725.40	1,636,253.17	52,809.20	703,633.09	2,592,287.89
October, 1908. ....	59,612.51	155,676.68	1,448,614.64	67,696.17	727,544.14	2,459,144.14
November, 1908. ....	59,374.12	147,957.24	1,369,805.86	77,406.64	480,139.10	2,134,682.96
December, 1908. ....	65,526.32	166,321.70	1,500,404.77	70,936.43	893,337.24	2,696,526.46
January, 1909. ....	51,416.82	164,605.80	1,550,843.72	65,209.51	1,418,185.90	3,250,261.75
February, 1909. ....	60,782.04	139,368.18	1,453,781.43	54,105.63	596,564.67	2,304,601.95
March, 1909. ....	60,130.85	127,669.50	1,611,343.85	39,267.70	776,821.41	2,615,233.31
Total. ....	2,739,645.52	8,322,000.32	42,714,758.69	6,371,820.60	37,687,267.89	98,835,493.02

## SOCIAL LIFE OF THE ZONE.

### Program of the Women's Club Movement.

The Women's Clubs in the Canal Zone were organized during the months of September and October, 1907, to promote social life among the wives and families of Canal and Panama railroad employes. Eight clubs were formed at that time and later another was added, but the closing of one of the clubs has brought the number down to the original eight.

As organized, departments were provided for in all the clubs, but some of them have found it necessary to make changes in the by-laws and devote their efforts to the promoting of social life, church work, and general public interests. They are active in the observance of national holidays and Christmas celebrations. Civic work has been taken up by the women, and the improvements recommended to the authorities have, in almost every case, been gladly received and acted upon. The women's rest room at the Cristobal station was erected by the Panama railroad at the suggestion of the local club. The room is furnished with wicker chairs, two reclining sofas, and a table, where reading matter is supplied. A toilet room with running water adjoins. The room is constantly used by women and the older girls from the Line who attend the Cristobal school. At the recommendation of this club certain improvements in the accommodations for women in the Colon prisons were made during the last year.

On the Line, shelters for hospital patients have been erected at the railway stations; canopies for protection from sun or rain in transporting patients from the local hospitals to the trains have been provided; unsafe bridges have been repaired or removed; and, at Gorgona, at the request of the women, a police officer is stationed at the railroad crossing for the protection of children going to and from school. At each town where the railroad station is situated at a distance from the married quarters, the Commission has supplied a conveyance for the accommodation of the women and children.

Certain philanthropic work has been done outside the Zone. Evenings of recreation have been instituted in Panama for the news boys, and gifts were made to them at Christmas. Visits to public institutions have resulted in the adoption of improvements suggested by the women. The Federation has had special interest in the leper colony at Palo Seco. Personal gifts were sent to the inmates at Christmas, fireworks provided for the celebration of national holidays and other occasions.

Numerically, the clubs are not so strong as they were during the first six months of their existence, but the organizations have been revised and are better adapted to conditions here, and the working force is still large. The formation of committees to work in conjunction with corresponding committees of the General Federation has enlarged the scope of the club work. Books for study, children's libraries, and donations to regular circulating libraries and portfolios of art works have been sent by States' organizations and private individuals; regular correspondence has been established between the Zone clubs and journals in the States devoted to club interests.

The following is a list of the federated

clubs, with the nature of organization, date of founding and other information:

Cristobal, Department Club—Meetings at the clubhouse on the first and third Wednesdays. Annual meeting and election of officers in April. Vacation April to October. Dues \$1, payable annually. Organized September 27, 1907. Mrs. Albert Herman, corresponding secretary.

Gatun, Department Club—Meetings in the Commission church building first and third Fridays. Election in November, February and May. Vacation June to October. Dues 25 cents, payable monthly. Organized October 4, 1907. Mrs. A. P. McCulloch, acting secretary.

Gorgona, Social and Civic Club—Meeting in the clubhouse every Thursday. Election annually in April. Dues payable monthly. No vacation period. Organized July, 1907. Mrs. J. F. Phillips, secretary.

Las Cascadas, Social Club—Meetings at the homes of members, first and third Thursdays. Election semiannually, January and June. Dues 40 cents, payable monthly. No vacation period. Organized October 17, 1907. Mrs. W. D. Stanton, secretary.

Empire, Department Club—Meetings at the clubhouse first and third Thursdays. Annual meeting and election of officers in April. Vacation at the discretion of the club. Dues \$1, payable annually. Organized October 3, 1907. Mrs. Abbie B. Hillerman, secretary.

Paraiso, Social Club—Meetings in the social hall, Commission hotel, first and third Thursdays. Annual meeting and election of officers, May. Vacation at the discretion of the club. Dues \$1, payable annually. Organized September, 1907. Mrs. T. C. McLaughlin, secretary.

Pedro Miguel, Department Club—Meetings in the social hall Commission hotel, first and third Wednesdays. Election semiannually, April and October. No vacation period. Dues, payable monthly. Organized October 2, 1907. Mrs. H. E. Weber, secretary.

Ancon, Department Club—Meetings in club rooms first and third Wednesdays. Annual meeting and election of officers in June. Vacation June to October. Dues \$1, payable annually. Organized October 9, 1907. Mrs. W. T. Dozier, corresponding secretary.

The Canal Zone Federation of Women's Clubs was organized October 12, 1907. Joined the General Federation of Women's Clubs in the States in June, 1908. Meetings are held in January, October and May. Annual meeting with election of officers in May. Mrs. Frederick Mears, Cristobal, corresponding secretary.

The Pedro Miguel Woman's Club held its semiannual election of officers in April. Mrs. H. Girdner is president, Mrs. Edward Brown, vice-president, and Mrs. H. E. Weber, secretary.

The Las Cascadas Woman's Club, at a meeting held last week at the residence of Mrs. W. D. Drysdale, voted to use the money in the club treasury to purchase books for the public school in that town.

The women at Porto Bello held a bazaar on the landing dock on Thursday evening, May 20, this being the first social entertainment attempted in the town. The dock was lighted with electricity, and decorated with flags and palms. Music was furnished by the local orchestra. Fancy articles, cakes, ice

cream and sweets were sold. The proceeds, which amounted to \$114, will be devoted to a piano fund. The committee of arrangements were: Mrs. W. D. Waltman, chairman, assisted by Madames Thomas, Werner, Barker, and Thompson. Mrs. Joseph Lawrence was treasurer.

A piano is needed for dances and other social entertainments, and for church services. The ladies will inaugurate another entertainment by which they hope to realize the remainder of the amount needed. A dance was given at Porto Bello on Saturday evening, May 29, music being furnished by the Marine band from Camp Elliott.

A lawn tennis club has been organized at Corozal, with A. R. James, president; A. P. Cray, secretary and treasurer, and F. T. Hamlin, M. B. Hostetter and R. P. Woodson, executive committee. A tennis court is being laid out in front of the Corozal hotel, and will be ready for use in a short time.

The Corozal Athletic Club is holding practice meets almost nightly, preparatory to taking part in the athletic program of the Fourth of July celebration at Ancon.

### PERSONAL.

Joseph Bucklin Bishop, accompanied by his wife and daughter, sailed from Cristobal on Tuesday, June 1, on the *Allianca* for two months' absence in the States. Among the other passengers on the *Allianca* were: Joseph A. LePrince, Madame LePrince, Miss LePrince and George F. Halsey.

The Jounkheer de Jong Van Beek, Governor of the Dutch West Indies, accompanied by his wife and aide, arrived on the Isthmus on May 25, and spent two days in sightseeing along the line of the Canal.

Mr. Lewis E. Willson and Miss Bertha Marie Knudtson Njös were married on Thursday evening, May 27, at the home of Mr. and Mrs. C. K. Lucas, Cristobal, C. Z., Rev. Carl H. Elliot officiating.

Mr. Elwood Paxton Sine and Miss Ethel Catharine Konshaw were married on Tuesday, May 25, at the home of Mr. and Mrs. W. H. McFarlane at Gatun, C. Z., Rev. J. Wesley Holland of Culebra officiating.

### Missing Man.

Information is desired in regard to Olley Brownell, who disappeared from Jacksonville, Fla., on April 1, 1909, and is supposed to be in the Canal Zone. Anyone having knowledge concerning him is requested to communicate with C. W. Bach, Bas Obispo, C. Z.

### Red Cross Buttons.

A supply of Red Cross buttons has been received by Maj. C. A. Devol, president of the Canal Zone Branch, and will be distributed by him among the chairmen of the various districts. The buttons will be furnished to members who call upon the chairmen for them.

All Red Cross members whose post-office addresses have been changed since enrolling are requested to notify the treasurer, H. D. Reed, Ancon, of their new address.

### Kangaroos' Dances.

Empire Court, No. 1, I. O. P. K. announces that their regular midweek dance, held every Tuesday evening at Kangaroo hall, Empire, which was heretofore for Kangaroos only, is now open to the public. All Kangaroos and their friends are cordially invited. Admission, 50 cents; ladies free. Refreshments are served; music by Talty.

## FIVE YEARS OF CANAL WORK.

## Progress Made Under American Control, Since May 4, 1904.

## IV.

## Civil Government of the Zone.

The Act of Congress approved April 28, 1904, authorized the President to take possession, on behalf of the United States, of the Canal Zone, acquired from Panama by the Treaty of February 26, 1904, and provided that until the expiration of the Fifty-eighth Congress all military, civil and judicial powers necessary for the government of the Zone, and for "maintaining and protecting the inhabitants thereof in the free enjoyment of their liberty, property and religion" should be vested in such persons and exercised in such manner as the President should direct. The President under this authority, in a letter addressed to the Secretary of War on May 9, 1904, authorized the Canal Commission "to make all needful rules and regulations for the government of the Zone and for the correct administration of the military, civil and judicial affairs of its possessions." The letter appointed Maj. Gen. George W. Davis, U. S. A., Governor of the Canal Zone.

General Davis arrived on the Isthmus May 17, 1904, and on May 19, issued a proclamation announcing to the inhabitants of the Zone that the government of the Zone had been assumed by him, acting for and in the name of the President of the United States. On June 16, an agreement of transfer of the Zone from Panama to the United States, containing a provisional delimitation of the Zone as described in the Canal Treaty, was signed by General Davis and officials of Panama.

On July 1, the Zone was divided by an order of the Governor into six municipal districts; four of them, in which the seat of government under Panama was in the Zone, retained their old names, and two, Ancon and Cristobal, were newly created. The Canal Commission, acting as the legislative branch of the Canal Zone Government, enacted laws on September 1, 1904, creating five municipal districts, each with a mayor, municipal council, secretary and treasurer, and, on September 2, creating the executive branch of the government, with the offices of governor, executive secretary, treasurer and auditor, the departments of public health, revenues, police and prisons, and justice, and the bureau of education.

On April 1, 1905, the President issued an order dividing the Commission into three departments. Under that order the second department was known as the department of government and sanitation. On November 17, 1906, another order was issued by the President, placing the government of the Zone (except the department of sanitation, which was made an independent department), together with the Commission's legal work, under the general counsel of the Commission. Under that order the department was known as the department of law and government.

Effective April 15, 1907, an order was issued by the President abolishing the municipal districts in the Zone created in 1904, and creating four administrative districts. On April 2, 1907, the Secretary of War, by direction of the President, issued an order abolishing the department of law and gov-

ernment, and vesting the authority of the chief executive of the Canal Zone in the Chairman of the Commission. The Chairman, on May 9, 1907, delegated that authority to a member of the Commission as head of the department of civil administration, and the President by the order of January 6, 1908, formally created "a department of civil administration charged with the duty of administering the civil government within the Canal Zone."

The work of the executive branch of the Zone Government as the Department of Civil Administration of the Canal Commission, is now divided among the Divisions of Posts, Customs and Revenues, Police and Prisons, Schools, Fire Protection, and Public Works, and the offices of Prosecuting Attorney, Treasurer, and Auditor of the Canal Zone. The judicial branch includes the Supreme, Circuit, and District Courts of the Zone.

The Division of Posts, Customs and Revenues includes the postal, customs and internal revenue services, the rental of public lands and custody of land records, and the administration of estates of Americans dying in the Zone in the service of the Commission, or the Panama Railroad Company.

On June 24, 1904, the Secretary of War, by direction of the President, issued an order establishing a postal service in the Zone, with nine post-offices. The service was placed by order of the Governor under the supervision of the Treasurer of the Zone, and Panama railroad station agents were appointed postmasters. From June 24 until July 17, 1904, Panama postage stamps (which were Colombian stamps surcharged "Panama") having the words "Canal Zone" overprinted with a rubber stamp, were used in the Zone. On July 17 a supply of United States stamps, surcharged "Canal Zone," was put into use.

Since December 12, 1904, under an agreement with the Republic of Panama, postage stamps purchased from Panama at 40 per cent of their face value, and surcharged with the words "Canal Zone," have been used. United States domestic rates of postage have always applied between the Zone and the United States. A registry system was established in August, 1905, and a money order system in June, 1906.

The number of post-offices in the Zone has been increased to 17 since the organization of the service, and mail is handled for employees of the Commission at Porto Bello through the Cristobal post-office. The following table shows the sales of stamps, the mail matter registered, and amount of money orders sold since the establishment of the service:

PERIOD.	Value of stamps sold.	No. of articles registered.	Value of money orders issued.
June 24, '04-June 30, '05	\$11,537.23	.....	.....
July 1, '05-June 30, '06	28,529.31	*43,623	1850,067.15
July 1, '06-June 30, '07	54,803.79	95,327	2,318,965.34
July 1, '07-June 30, '08	72,709.54	142,089	4,686,684.98
July 1, '08-Apr. 30, '09	62,031.84	192,047	4,321,478.80

\*Beginning August, 1905.

†To December 31, 1908.

While the table illustrates the growth of the service, it does not indicate the total

amount of mail matter handled, as the greater part, estimated at 70 per cent, is carried under the Government frank.

The total expenditures for the postal service during the fiscal year 1907-1908 were \$153,129.69, of which \$31,160 was paid to Panama for postage stamps. Deducting that amount, the expenditures were \$121,969.69, as against \$92,018.68, total revenues, leaving \$29,951.01, as the cost to the Government of handling official mail free.

The customs service of the Zone includes the entry and clearance of ships at the ports of Cristobal and Ancon, the signing and discharge of seamen, the enforcement of Panama tariff laws against merchandise arriving at Canal Zone ports destined for Panama, and the enforcement of the Panama Chinese exclusion law as applied to the Canal Zone. No customs duties are collected, as an Executive Order issued December 3, 1904, provides that no goods shall be imported at Ancon and Cristobal except those necessary and convenient for the construction of the Canal and for the use of employees of the Commission, fuel for sale to vessels, and goods in transit.

Originally the internal revenues of the Zone included only the tax on the distillation of liquor, the manufacture of rum from native sugar cane being one of the few industries of the Isthmus. The municipalities were authorized to tax the retail sale of liquor, the keeping of dogs, public conveyances, restaurants and hotels, various amusements, lands and buildings, and the sale of commercial commodities. The revenues of the municipalities were collected and disbursed by the municipal officials.

When the municipalities were abolished there was created in each administrative district the office of tax collector, charged with the assessment and collection of taxes. At the same time, the Canal Commission was authorized to enact ordinances respecting taxation. Taxes include at present a real estate rental tax, miscellaneous license fees, merchandise taxes, poll tax, distillation and retail liquor license taxes. At the time of the transfer of the Zone the retail liquor license tax varied from \$1 to \$5 a month. In 1905, it was increased to \$600 a year, with the effect of reducing the number of saloons from 327 to 60. In 1907, it was increased to \$1,200. The number of saloons is now 56. The taxes collected since the organization of the government are shown by the following table:

July 1, 1904, to June 30, 1905.....	\$32,716.90
July 1, 1905, to June 30, 1906.....	87,823.12
July 1, 1906, to June 30, 1907.....	121,296.46
July 1, 1907, to June 30, 1908.....	122,082.41
July 1, 1908, to April 30, 1909.....	143,564.78
Total.....	\$507,483.67

Zone funds collected from taxation and other local sources are expended for local purposes and disbursed and accounted for on the Isthmus. In addition to the principal sources of such funds—taxation, land rentals, the postal service, etc.—judicial fines and costs also constitute a considerable source of revenue. By authority of Congress, the revenues received from the postal service are applied to the maintenance of that service, and other funds are used for the support of the public school system, the payment of the expenses of the administrative districts, and the construction and maintenance of public works.

The Canal Zone is approximately 448

square miles in area. About 245 square miles are owned by the United States under the terms of the Treaty, and by purchase from the French Canal Company and other private owners. At the time the land was acquired from the French Canal Company much of it was under lease. The leases were continued in force by the Commission, and other leases have been executed from time to time under authority of an Act of Congress passed July 28, 1892. At the last session of Congress a bill was passed authorizing the leasing of public lands in the Zone for a term of 25 years. Lots for building purposes in towns are now rented by the Commission at rates varying from 5 to 30 cents per square meter per annum, while agricultural land is rented at \$3 a hectare (2.47 acres) per annum. The number of leases and the rentals collected since the organization of the Zone are indicated by the following table:

LEASES IN EFFECT.	Agricultural lands.	Building lots.	Rentals collected, preceding year.
June 30, 1905.....	372	478	\$13,296.12

\*Including collections from May 4, 1904.

On June 2, 1904, the Governor of the Canal Zone authorized the organization of a Zone police force, which has since been increased, from time to time, and at present consists of: 1 chief, 2 lieutenants, 12 sergeants, 20 corporals, 119 first-class policemen, and 96 policemen, a total of 250, all Americans, except the policemen who, for the most part, are natives of the British West Indies who have served in the British army, and who are of special value in the maintenance of order in the Zone among the people of their own race. In addition to the general maintenance of order and protection of property, the police have charge of the Zone penitentiary at Culebra and the local jails throughout the Zone (in which persons awaiting trial and serving misdemeanor sentences are held), and act as deputy marshals, court bailiffs and deputy coroners, as guards on passenger trains, pay cars and at pay offices, and in some instances as watchmen at shops, storehouses, railroad crossings, and hospitals. The following table shows arrests made, felony convicts received in the penitentiary, and coroner's cases investigated by the police since the organization of the force:

PERIOD.	Arrests.	Convicts.	Coroner's cases.
June 2, 1904, to June 30, 1905....	2,130	21	14
July 1, 1905, to June 30, 1906....	3,748	46	45
July 1, 1906, to June 30, 1907....	5,831	87	136
July 1, 1907, to June 30, 1908....	6,075	95	140
July 1, 1908, to April 30, 1909....	5,150	101	123

The Commission, by Act No. 8 of September, 1904, authorized the establishment of a school system in the Zone. In December, 1905, a Superintendent of Schools for the Zone was appointed. Seven schools conducted by the municipalities were taken over by him. The first school of the general Zone system was opened under his direction on January 2, 1906, at Corozal. Thereafter rapid progress was made in the establishment of schools; buildings were repaired, others were rented, and supplies were se-

cured. In 1907, high schools for white children were established at Culebra and Cristobal. Schools are now conducted for white children at 12 towns, and for colored children at 17 towns. Children living at towns where there are no schools are provided with railroad, wagon or boat transportation to the nearest school town. The following table indicates the enrolment and attendance at the schools:

	WHITE.		COLORED.		TOTAL.	
	Enrolment.	Attendance.	Enrolment.	Attendance.	Enrolment.	Attendance.
April, 1906.....	89	55	1,155	719	866	611

May, 1909.....	656	539	1,313	764	1,969	1,303

In October, 1905, the Commission authorized the establishment of a Fire Department for the Zone, and on December 1, a Fire Chief was appointed. His first work was the organization of volunteer companies, composed of Commission and Panama Railroad Company employes. In November, 1906, the first paid company, composed of experienced firemen from the States, was established at Cristobal. The organization now consists of six paid and 19 volunteer companies. Electric telegraph fire alarm systems have been installed at Cristobal (connecting with Commission and railroad property in Colon and with the docks and storehouses at Mount Hope), Gorgona, Empire, Culebra, and Ancon (connecting with Commission and railroad property in Panama and Balboa).

The equipment of the paid company at Cristobal consists of a steam fire engine, a chemical engine, a hook and ladder truck and a hose wagon. Each of the other paid companies is equipped with a two-horse hose wagon. The volunteer companies are equipped with hose reels.

The municipalities, before they were abolished, erected public markets at Empire, Gorgona, and Cristobal, and public slaughterhouses at Empire and Gorgona. Since then markets have been erected at Pedro Miguel, Paraiso, Culebra, Las Cascadas, and Tabernilla, and a new market has been built at Cristobal.

Little had been done to open roads throughout the Zone when Canal work began in 1904. The old paved trails built by the Spaniards were practically impassable, and a few trails leading from the railroad to interior villages of the Zone, from which the vegetation was cut from time to time were little used, except in the dry season. Since then about 60 miles of trail have been cleared, 20 miles of which were partially graded and drained and provided with light bridges. About 12 miles of macadam road have been constructed, and about 12 miles are in course of construction at present, and about 10 more have been surveyed, and work will be undertaken as soon as funds are available. In addition, the streets in the villages of Empire and Gorgona have been macadamized and provided with concrete curbs and drains, and systems of water works and sewers have been installed, and public latrines have been built, in those and many other towns. Both local (misdemeanor) and penitentiary (fel-

ony) prisoners are used on this work, and much of it has been done by them. All this work is in addition to the roads, waterworks and sewers constructed by the Commission from funds appropriated by Congress, for use directly in the construction of the Canal.

Commission legislation in 1904 provided that until the Zone Treasurer and Auditor were appointed, the duties of those offices should be performed by the Disbursing Officer and Auditor of the Commission. This arrangement was continued until October, 1908, when a separate treasurer of the Zone was appointed. Accounting regulations governing the receipt and disbursement of Zone funds were adopted in December, 1905, and were revised in October, 1908. They follow, as closely as conditions on the Isthmus permit, the laws and treasury regulations of the United States governing public moneys.

Two banks, one in the United States and one on the Isthmus, have been designated as depositories of Zone funds and all such funds not required for current use are deposited with them, interest being received on funds deposited in the United States.

The order of the President of May 9, 1904, which continued in force the laws of Panama, authorized the temporary appointment of a judge for the Canal Zone to have "authority equivalent to that usually exercised in Latin countries by a judge of a court of first instance." A judge was appointed under that authority in July, 1904. August 16, 1904, the Commission, by Act No. 1 of the Laws of the Canal Zone, created the judicial branch of the Zone government, consisting of a supreme court, three circuit courts, and five municipal courts, the first two being courts of record, the Supreme Court with a Chief Justice and two associate justices, who were also judges of the circuit courts.

The Executive Order effective April 15, 1907, abolishing the municipalities, created in each administrative district a District Judge to exercise the authority formerly exercised by municipal judges, with a senior District Judge to sit in the absence of the other judges and to preside at meetings of District Judges.

The office of Prosecuting Attorney was created by Act No. 8, passed by the Commission in September, 1904. Since then the Prosecuting Attorney and his assistants have represented the Government in all criminal prosecutions in the courts of the Canal Zone. While this work is distinct from the Commission's legal work of a civil nature, for the sake of convenience, the Prosecuting Attorney is also the attorney of the Commission on the Isthmus in charge of civil matters.

In addition to the laws and executive orders already referred to, the Canal Commission, before its authority to pass laws for the Zone expired, enacted, among other laws, a penal code, a code of criminal procedure, laws suppressing lotteries, prohibiting gambling, and respecting the exercise of the right of eminent domain; and since then the President has issued executive orders having the force of law amending the penal code, extending United States patent, trade mark, and copyright laws to the Zone, providing for marriage by Protestant clergymen, regulating insurance companies, providing for the registration of land titles, enacting a code of civil procedure and authorizing trial by jury in capital cases.

## CANAL ZONE ROADS.

## Opening Lands to Agriculture in Order to procure a Permanent Population.\*

The policy of constructing highways in the Canal Zone has the dual purpose of connecting the villages along the line of the Canal, and making a permanent population by opening the land to agriculture. A trunk line of highways will serve also to keep people and pack animals off the Panama railroad line, and thus prevent much loss of life and property. Neither the railroad nor the Canal would have much effect in promoting agriculture, if access from the lands now covered with jungle were not afforded by roads. A trunk line of roads parallel with the Canal is in process of construction, with the purpose of building lateral branches out from the trunk into the fertile territory five miles broad on either side of the Canal. These branches will connect with roads that the Government of Panama has projected into the interior of the Republic.

A glance at a map of the Canal Zone, containing the outlines of Gatun Lake, shows that this strip of land, 50 miles long and 10 miles wide, will be divided into two parts by the lake. The highway system will therefore consist of two distinct trunks with their branches; one running from Cristobal to Gatun on the north shore of Gatun Lake, and the other from Gorgona near the south end of the lake to Panama. Both are well advanced in construction. The lands to which the roads will give access comprise about 290,000 acres, and about half of this will be covered by Gatun Lake or used for Canal purposes. Three-fourths of the land is owned by the United States. The intention of the Government as expressed in the laws on the subject is to lease the land for agricultural purposes only, and to limit the term to not more than 25 years. The roads are paid for from funds collected by taxation under provisions in the appropriations act, as follows:

All funds hereafter collected \* \* \* or raised by taxation in whatever form under the laws of the government of the Canal Zone are hereby appropriated \* \* \* The revenues derived from the postal service to the maintenance of that service; the remaining revenues, after setting aside a miscellaneous and contingent fund of \$10,000; to the maintenance of the public school system in the Zone; to the construction and maintenance of public improvements within the Zone; to the maintenance of the administrative districts, including payment of salaries and wages incident thereto; to the maintenance of Canal Zone charity patients in the hospitals of the Isthmian Canal Commission, and to the maintenance of administrative district prisoners.

The amount of revenues from all sources since American occupation, and the amounts expended on roads, are shown in the following statement:

## REVENUES FROM MUNICIPALITIES.

Receipts—	
June 19, 1904, to June 30, 1905....	\$28,860.66
July 1, 1905, to June 30, 1906....	92,527.27
July 1, 1906, to April 14, 1907....	115,477.13
Total.....	\$236,865.06
EXPENDITURES FOR ROADS AND TRAILS.	
June 19, 1904, to June 30, 1905....	\$261.69
July 1, 1905, to June 30, 1906....	8,291.88
July 1, 1906, to April 14, 1907....	28,627.05
	\$37,180.62

## CANAL ZONE REVENUES.

Receipts—	
To June 30, 1905.....	\$10,274.80
Fiscal year, 1906.....	12,196.61
Fiscal year, 1907.....	124,179.80

\*In accounts prior to July 1, 1906, expenditures for roads and trails were not shown separately, but were included in public improvements, and these figures are approximate.

†The municipalities were abolished on April 15, 1907, and this amount includes \$82,611.86, balance of municipal revenues on hand on that date.

Fiscal year, 1908.....	223,695.18
July 1, 1908, to March 31, 1909....	184,641.35
Total.....	\$554,987.74
EXPENDITURES FOR ROADS AND TRAILS.	
Fiscal year, 1908.....	\$21,487.11
July 1, 1908, to March 3, 1909....	36,074.96
	\$57,562.07

Grand total of expenditures for roads and trails to March 31, 1909.....\$94,742.69

These amounts do not represent the total expenditures for highways. Streets and roads built to give access to Commission quarters, or to construction work on the Canal are paid for from Commission funds. The amounts given above represent only the expenditures from Canal Zone funds for roads in Zone villages and connecting them.

Little had been done to open roads throughout the Isthmus when the American occupation began in 1904. In fact a few ill kept trails leading from the more important villages of the interior, and almost impassable in the rainy season, represented the only attempt at road building. Then, as now, the chief avenue for travel of men and pack animals was the line of the Panama railroad, which acted as a trunk for the trails to the interior. Practically the only trails that represented a systematic attempt at permanent construction were those built by the Spaniards in the sixteenth century and later—the old pack roads from Nombre de Dios, Porto Bello, and Cruces to Panama. These trails have a surface of cobble-stone and are comparatively well preserved, but years of disuse have allowed trees to grow up between the stones, and the jungle to envelop the paths and the rains to wash out the stones. A road that had been graded by the French from Panama to Corozal, was washed out and almost impassable in 1904 because of the rapid growth of vegetation.

The first roads made by the Americans were those extending from the city of Panama westward to Balboa, formerly La Boca, a distance of about 2½ miles, and eastward through the Sabanas to the boundary of the Canal Zone, a distance of 3¾ miles. They were built in 1905 and were macadam roads of the best type. On account of the great cost of good macadam roads, experiments were made in the dry season of 1906 and 1907 to see if a cheaper class of highway would not serve all the necessary purposes for communication with the interior. A number of trails were cleared and surfaced with earth, one from Empire to the Zone boundary in the direction of Chorrera, another from Empire to Las Cascadas, a third from Bas Obispo to Cruces and still another from Corozal to Arraijan. In all about 35 miles were cleared and about twenty miles were constructed. The longest trail covered a distance of five miles, extending from Empire to the Zone line where it connected with the native trail to Chorrera. The route of the old trail along the low places was abandoned, and a path 6 feet broad was cut around the edge of the hills, fills were made, and light bridges built. The distance was greatly shortened. The trails were well made, but were not covered with rock. One rainy season showed the uselessness of building roads without surfacing them with rock and draining them. Many of the fills were washed out, the bridges were washed away or soon rotted, and the cuts along the edges of the hills were worn down so as to be impassable. Since this experiment was made nothing but well drained

\*Outstanding bills are not included in this total.

and crushed stone roads have been constructed.

The road from Cristobal to Gatun is eight miles long. The section that runs through Cristobal and Mount Hope was built in 1907, and is one mile long. The section from Mount Hope to Gatun has been graded the whole distance of seven miles and the work of surfacing it with crushed rock is now in progress. This section has been graded to a width of 24 feet and will be macadamized to a width of 16 feet. It runs from an elevation of about two feet above sea-level to 140 feet above, and the greatest grade is 6 per cent. The cuts made balanced the fills. Thirty-four culverts were built. A wire fence will be placed on either side the road for the whole distance from Mount Hope to Gatun. The work has been done by prisoners and paid for from Canal Zone funds.

The main highway between Panama and Gorgona is being built in seven sections as follows:

Panama to Corozal.....	3.3 miles
Corozal to Pedro Miguel.....	4.37 miles
Pedro Miguel to Paraiso.....	1.08 miles
Paraiso to suspension bridge near Empire.....	4.06 miles
East end of suspension bridge to Empire.....	0.19 miles
Empire to Las Cascadas.....	2.3 miles
Las Cascadas to Gorgona.....	3.14 miles

Total.....18.44 miles

The road from Panama to Corozal was built by the old French Canal Company in 1886, and in 1904 and 1905 it was cleared by the Isthmian Canal Commission and the culverts were repaired. It has been practically rebuilt, the old French culverts have been extended and new culverts constructed. This highway leaves the Sabanas road at a point about 4,000 feet from the Caledonia Bridge. From that point to the railroad station in Corozal is a distance of 17,500 feet. It is macadamized to a width of 16 feet, and has a 3-foot earth shoulder on either side, and ditches 4 feet wide. The maximum grade is 9 per cent, but this only for a short distance, and the controlling grade is less than 3 per cent. This section is in use and will be rolled during the wet season.

The road from Corozal to Pedro Miguel runs parallel to the Panama railroad tracks from Corozal station to the point near the hotel where it turns east across the savannas to the foot of the hills on the Hurtado estate. From the hotel to the summit of the road on Hurtado hill the maximum grade is 6 per cent and the governing grade about 4 per cent. From the summit one can see the site of the Miraflores Locks power house and the opening of the tunnel on the relocated line of the Panama railroad. When the Canal is completed Miraflores Lake will also be in plain view from this hill. From the summit the road drops to the crossing of the Cardenas River, where a wooden bridge of 60-foot span will be built. From this point it rises to the Miraflores dump and runs along the east side of the dump to the hill through which the Miraflores tunnel runs. The course is over the hill at the Miraflores tunnel, the maximum grade being about 7 per cent and the governing grade 4 per cent. From this point can be seen the site of Miraflores Locks, and a good view is obtained of Culebra Cut as far as Gold and Contractor's Hills. On the completion of the Canal, Miraflores Lake will also be visible from the summit at the tunnel. From the tunnel the road lies along the relocated line of the Panama railroad crossing the Caimito River on the railroad culvert and the Pedro Miguel River on a 15-foot extension of the railroad culvert. At present rock has been placed

on the section from Corozal to Cardenas River, a distance of about one mile, and this will be rolled during the coming wet season. All the subgrade has been completed from the Cardenas River over the Miraflores divide. No grading will be done on the dumps, or along the relocation of the Panama railroad, until the railroad grade is raised. Although the road is not completed beyond the Cardenas River there is an old ford at the point where the bridge will cross and the right of way may be followed on horseback almost the entire distance to Pedro Miguel. This road is of the same construction as that from Panama to Corozal.

Surveys have been made of the section that will connect Paraiso with Empire. It will run east of Gold Hill to the suspension bridge which will carry it across Culebra Cut. It will have a macadam surface 10 feet wide with 3-foot shoulders. The maximum grade will be about 5 per cent. The construction involves 13,500 cubic yards of crushed rock.

At Empire the highway will cross Culebra Cut on a suspension bridge with a 7-foot roadway. Work on the bridge is in progress. As the bridge is designed primarily to carry the air and water mains of the Central Division over the Cut, the expense will be borne jointly by the Department of Construction and Engineering and the Canal Zone treasury. This bridge is built only for temporary use, and as soon as the Canal is completed it will be torn down as the clearance above normal water level will be only 108 feet 6 inches, not sufficient to allow ships to pass.

From Empire to Las Cascadas the grading is almost completed, and a large amount of macadam has been laid. This section has a macadam surface 14 feet wide, and the maximum grade is 5 per cent. About 14,000 cubic yards of embankment have been made, of which nearly half was from side hill cuts. This work is paid for from Canal Zone funds, and prison labor is used.

The section from Las Cascadas to Gorgona has been surveyed, and the grading has been completed from Gorgona to the Mandinga River. This work will be completed by prison labor.

Only two of the lateral roads which will open up the interior of the country have been projected. One of these will run west from the main highway at Empire to the Canal Zone boundary where it will connect with a road projected by the Panama Government northeast from Chorrera to the Zone line. It will open up a desirable farming section. The other lateral road is already under construction. It will run east from the suspension bridge over Culebra Cut at Empire to Las Cascadas plantation, a distance of 3.07 miles. Ultimately it may be extended to Cruces on the Chagres River. It will also open up a good farming region and a section that will be traversed by the relocated Panama railroad.

#### Colon Riot Punishments.

As a result of the riot at Colon on the night of May 10, one lieutenant and three policemen, members of the Colon police force, have been found guilty of improper conduct in connection with the affair, and expelled from the force. In addition, the lieutenant was sentenced to confinement for two months, and the policemen each to one month.

## FOURTH OF JULY.

### Celebration to be Held at Ancon and Cristobal.

Since the meeting of May 1, preliminary plans for the celebration of the Fourth of July at Ancon have been made. Commissioner Blackburn, as chairman of the executive committee, has appointed the following chairmen of subcommittees, constituting together the executive committee:

Dance, H. H. Rousseau; decorations, B. C. Poole; amusements, F. C. Freeman; transportation, H. J. Slifer; finance, W. M. Wood; Marines, Maj. B. H. Fuller; fireworks, Lieut. R. E. Wood; music, C. E. Jennings; publicity, H. D. Reed. Each chairman has appointed the members of his subcommittee.

At a meeting held on May 12, the executive committee approved estimates for expenditures aggregating \$2,000, and subscription blanks are now being circulated to raise the necessary funds.

The program as arranged includes foot races, fire department exhibition, Marine contests, pony and mule races, bucking horse contests, and a tug-of-war, with fireworks and a dance at Hotel Tivoli at night.

At a recent meeting of representatives of the Ancon and Cristobal committees, arrangements were made for the two committees to cooperate. The I. C. C. band will play at Ancon, and the Marine band at Cristobal. All material on the Isthmus available for decoration will be divided equally between Ancon and Cristobal, and fireworks for both places will be ordered in one lot by Lieutenant Wood. Mr. Slifer, who is chairman of the transportation subcommittee at each place, has arranged a schedule of trains running at frequent intervals throughout the day, so that people at any place on the Line may attend either celebration.

#### Davis Pardoned

Thomas F. B. Davis, a colored journalist, who has been serving a term in the Culebra penitentiary for libel, was pardoned on June 1, 1909, by Governor Blackburn. Davis was arrested at Ancon on January 22, 1909, was tried in Empire Circuit Court, and found guilty on March 9, 1909, on three counts of libel and on one count of publishing false reports of a court. He was sentenced to serve 30 days on each conviction and to pay the costs.

There was not a delinquent tax payer in the town of Gorgona for the fiscal year 1907-1908. The last outstanding assessment was paid on May 26, 1909, the day before the date the property was advertised for sale.

#### Concert by I. C. C. Band.

HOTEL TIVOLI, ANCON, C. Z.,

Sunday, June 6, 1909, at 6 p. m.

#### PROGRAM.

- 1 March—*The Tivoli*.....Jennings  
First performance.
- 2 Selection—*The Prima Donna*.....Herbert  
{ a Characteristic—*Kerry Mill's Barn*
- 3 { Dance.....Mills  
b Indian Descriptive—*Trailing the Trail*.....Spaulding
- 4 Overture—*Poet and Peasant*.....Suppe
- 5 Concertstuck—*The First Heart Throbs*.....Ellenberg
- 6 Medley Selection—*Hits of 1909*.....Remick
- 7 Tone Poem—*In Lovers' Lane*.....Pryor
- 8 Suite de Ballet—*Antony and Cleopatra*.....Gruenwald
- 9 Intermezzo—*Kisses*.....Hubbell
- 10 March—*The Sousa Swing*.....Brown  
CHAS. E. JENNINGS, Musical Director.

A concert will be given at Cristobal, Wednesday June 16.

#### Tide Table.

The following table shows the time of high and low tides at Panama for the week ending June 8, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.	P. M.
June 2.....	2.34	8.39	2.41	9.03	.....
June 3.....	3.10	9.19	3.18	9.42	.....
June 4.....	3.47	9.58	3.55	10.21	.....
June 5.....	4.27	10.38	4.34	11.02	.....
June 6.....	5.07	11.21	5.18	11.43	.....
		P. M.			
June 7.....	5.49	12.05	6.02	.....	.....
		A. M.			
June 8.....		12.29	6.36	12.55	6.49

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

#### Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, May 29, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gamboboa.	Bohio.	Gatun (Canal).	Gatun (W. D.).
Height of low water ab. m. a. n. sea-level, ft.	125	92	46	1	0	0
Maximum height ab. mean sea-level, feet:						
Sunday, May 23....	128.2	95.1	53.4	6.9	1.9	1.4
Monday, May 24....	133.5	98.0	56.7	5.3	1.1	0.8
Tuesday, May 25....	131.8	96.8	56.5	11.5	4.4	3.4
Wednesday, May 26....	131.8	97.0	56.4	13.8	7.1	5.7
Thursday, May 27....	130.4	96.1	53.9	9.1	5.8	4.5
Friday, May 28....	123.6	95.5	54.5	9.3	4.0	3.2
Saturday, May 29....	131.8	96.9	55.1	5.9	2.3	1.8

#### Rainfall, May 1 to 29, 1909, Inclusive. (MIDNIGHT TO MIDNIGHT.)

Stations.	Maximum in one day.	Total for period.
<i>Atlantic Division—</i>		
Cristobal.....	1.60	7.20
Brazos Brook.....	1.35	7.30
Gatun.....	2.30	8.93
Bohio.....	4.19	13.69
<i>Central Division—</i>		
Tabernilla.....	2.36	10.06
San Pablo.....	2.65	9.00
Bas Obispo.....	2.42	12.97
Gamboboa.....	3.88	15.35
Empire.....	1.75	7.71
Camacho.....	1.23	9.34
Culebra.....	1.63	7.34
<i>Pacific Division—</i>		
Rio Grande.....	1.40	7.31
Pedro Miguel.....	1.34	8.48
Balboa.....	1.55	9.60
Ancon.....	1.58	8.74
<i>Atlantic Coast—</i>		
Porto Bello (to 5 p. m. May 27)....	2.64	8.49
Nomhre de Dios (to 5 p. m. May 22)	2.46	5.88
<i>Upper Chagres.</i>

#### Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,

ANCON, C. Z., June 2, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Ammanuel, Jo	Lees, Miss
Bardelson, Samuel	McCulloch, Wm.
Brady, Lucy	Morris, N. N.
Brown, Capt. R. D.	Navarro, Rosenda
Erion, C. M.	Prescott, Mr. & Mrs. Richard D.
Ford, Miss Ageryana	Pusey, Obadiah D.
Gilmore, Capt. S. F.	Reichard, James H.
Harper, O. Granville	Reisingler, Mrs. F.
Henry, Robert	Rodie, Alex. H.
Johnston, W. Caley	Rundle, R.
Jones, Frank	Strobridge, Fred
Kempton, C. W.	Whaler, Mrs. J. W.
Kenyon, Mrs. Mas	
Woodford, Earl.	

FOUND—A sum of money. Owner can recover same by applying to J. W. Lucey, room 17, house 45, Las Cascadas, C. Z., and proving ownership.

The following steamers have recently arrived at: Balboa: May 23, *City of Sidney* from San Francisco; May 24, *Costa Rica* from Central America; May 26, *Ecuador* from Guayaquil.

## OFFICIAL CIRCULARS.

## Employment of Hourly "Gold" Men.

CULEBRA, C. Z., May 24, 1909.

CIRCULAR No. 254.

Hereafter no hourly "gold" men shall be employed except at standard rates of pay which have been established and which do not exceed 65 cents base pay, except in the case of bricklayers for whom the rate of pay per hour is 72 cents, and patternmakers and plumbers, for whom the base rate of pay is 75 cents per hour. It is not intended to reduce, by the application of this order, the pay of any employee now on the rolls who was originally appointed at a higher base pay.

In addition to the above maximum base rates of pay, certain "special" rates have been authorized for machinists, boilermakers, blacksmiths, pipefitters, and moulders. These "special" rates of 70 and 75 cents per hour are for "leading men" exclusively, i. e., men who not only have silver employees under them but who also exercise supervision and have jurisdiction over the work of other white mechanics doing the same class of work. These "special" base rates of pay of 70 and 75 cents are to be granted exclusively to "leading men" permanently assigned to such duties, and when any employee receiving either of these "special" base rates of pay is relieved from permanent duty as "leading man" his pay shall be reduced to correspond to his new duties, not exceeding the maximum standard rate of pay for such work.

It is requested that the duties of all mechanics at present holding "special" ratings be scrutinized and their rates of pay reduced, if necessary, to comply with this order.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Construction and Repair of Buildings.

CULEBRA, C. Z., May 26, 1909.

CIRCULAR No. 255.

Effective July 1, 1909, all work in connection with the construction and repair of Commission buildings, and of wooden walks, will be transferred to the Quartermaster's Department. New construction work will, in general, be performed by contract, and repairs will be made by Commission forces.

Contracts to be entered into that will not expire until after July 1, and beginning with the construction of one type No. 17 and three type No. 27 buildings at Ancon, will be under the charge of the Quartermaster's Department. Contracts now in force will be completed under present supervision.

What are known as "division structures" will be repaired by the Quartermaster's Department. The method of initial construction of such buildings will be determined in each case by the Chief Engineer.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Hotel and Commissary Coupon Books.

CULEBRA, C. Z., May 28, 1909.

CIRCULAR No. 256.

Effective June 1, 1909, the order of December 13, 1907, regarding the issue of hotel and commissary books, is modified as follows:

Hotel books will be issued to gold employees only. Commissary books will be issued to all employees.

Coupon books will be issued at any time except on the last two days and the first four days of each month. Books may, however, be issued during these six days to new employees reporting for duty or to employees returning from vacation leave, sick leave or other authorized absence.

Employees are requested to obtain, as far as practicable, all hotel and commissary books required by them for the month at one time.

Commissary books of a value of less than \$5 will not be issued to gold employees and not more than one book of the \$5 denomination will be issued in any one month to a gold employee whose salary exceeds \$100 per month.

The subsistence officer will formulate a simple method whereby the time during which commissary books may be used will be extended upon the request of the owner.

The redemption of unused portions of commissary books will hereafter be made by the Panama Railroad Company in accordance with regulations which will be issued by the local auditor of the Panama Railroad Company and the Examiner of Accounts of the Isthmian Canal Commission.

The issue of commissary books to gold employees will be limited to two-thirds of the amount of their monthly pay. No change in the present limit for silver employees of \$15 is made.

The issue of hotel and commissary books must at no time exceed the amount of pay earned by an employee (except in the case of the special hotel meal book issued to new employees arriving from the United States), and deductions therefor will be made on

payrolls for the month in which the issue is made; provided, however, that coupon books may be sold for cash in amounts necessary for immediate needs to employees who have no pay due them by reason of their first assignment to duty or return from authorized absence, and to families in cases where the employee who usually provides the books is absent on account of illness or with proper authority.

GEO. W. GOETHALS, Chairman.

## Electric Lights.

CULEBRA, C. Z., May 27, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Greater economy should be exercised in the use of electric current for lighting. Night watchmen should be instructed to turn off lights in buildings where they are stationed at daylight, and to use no unnecessary lights at night. Lights in quarters shall not be left burning in the daytime on porches or in living rooms, and no lights shall be allowed to burn all night except in "dry rooms." Additional switches should be installed wherever necessary to effect a saving.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Telephone Service.

PANAMA RAILROAD COMPANY,  
COLON, R. P., May 27, 1909.

On and after June 1, 1909, the Panama Railroad Company will be prepared to furnish the use of its telephone system to any and all employees of either the Isthmian Canal Commission or the Panama Railroad Company, that may be occupying quarters owned by either organization.

Applications for the installation of a telephone will be made by letter to the employee's Head of Department who will refer same direct to General Manager's office.

Applicant will then be furnished with an estimate of the cost of installation which must be paid by the applicant. The cost of the instrument will not be included as it is the intention to have all telephones remain the property of the railroad company.

When estimate of cost of installation is accepted, the connection will be made.

The rate fixed as a monthly rental for local service is two dollars and fifty cents gold (\$2.50).

All bills will become due on the first day of the month and no fractional parts of month will be considered.

Outside or long distance calls will be charged for on monthly bills at toll rates for each three (3) minutes or fraction thereof, as per following schedule:

	Colon.	Mount Hope.	Gatun.	Gorgona.	Bas Obispo.	Las Cascadas.	Empire.	Culebra.	Paraiso.	Pedro Miguel.	Corozal.	Panama.
Colon.....	20	20	30	30	35	35	35	40	40	45	50	
Mount Hope.....	20	20	30	30	35	35	35	40	40	45	50

Las Cascadas.....	35	35	30	20	20	20	20	20	20	20	20	
Empire.....	35	35	30	20	20	20	20	20	20	20	20	
Culebra.....	35	35	30	20	20	20	20	20	20	20	20	
Paraiso.....	40	40	35	20	20	20	20	20	20	20	20	
Pedro Miguel.....	40	40	35	20	20	20	20	20	20	20	20	
Corozal.....	45	45	40	20	20	20	20	20	20	20	20	
Panama.....	50	50	45	25	20	20	20	20	20	20	20	

Full rates will apply between 7 a. m. and 6 p. m. Half rates will apply between 6 p. m. and 7 a. m. Central operators will keep and charge time consumed.

All bills must be paid promptly through nearest station agent monthly.

Parties desiring to discontinue the use of the service must notify the General Manager's office by letter.

H. J. SLIFER, General Manager.

Approved:

GEO. W. GOETHALS, President.

## Proposals for Buildings.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Saturday, June 5, 1909, when they will be publicly opened, for the erection by contract of 3 type-14 houses, and 2 type-27 houses, at Gatun, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidders will be required to deposit \$200 for the 2 type-27 houses and \$500 for the 3 type-14 houses when the contract is awarded, conditional upon the faithful performance of the contract. The Commission reserves the right

to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals. Separate proposals will be received for the different type houses.

C. NIXON,  
Purchasing Agent on the Isthmus.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line will be as follows: *Lousianian* on June 7, for New Orleans, via Kingston, Jamaica.

## Supplies for Canal Work.

The following steamers arrived at the port of Cristobal during the week ending May 29, with supplies for the Isthmian Canal Commission.

*Oruba*, May 23, from New York, with 225 cases sapollo for stock; 1 water cylinder for pump at Porto Bello.

*Sarnia*, May 25, from New York, with 2,000 barrels cement for stock; 20 tons material for Gatun cableways; 65 tons steel for stock; 11 tons material for Gatun handling plant.

*Allianca*, May 26, from New York, with 21 tons material for Gatun and Miraflores handling plants; 1,000 barrels cement for Gatun spillway; 2,000 gallons engine oil for stock; 5,500 gallons valve oil for stock; 22,750 electric fuses for stock; 16,000 pounds calcium carbide for Porto Bello, and a miscellaneous cargo aggregating 3,145 packages, weighing 383 tons.

*Abangarez*, May 27, from New Orleans, with 20,000 pounds colored cotton waste for stock; 11 tons castings for steam shovel repairs; 1 20-ton locomotive coaling crane for Mechanical Department; 21 packages electrical material for Gatun handling plant; 13 packages castings for car repairs.

*Vizcaina*, May 27, from Brunswick, Ga., with 395 switch ties for stock.

*Memphian*, May 27, from Liverpool, with 2 suction pipes for dredge *Culebra* at Balboa.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### May Excavation.

The grand total of Canal excavation during the month of May was 2,896,095 cubic yards, which is 558,554 cubic yards less than the total for April and 1,166,537 less than the highest record, that of March, 1909. Of the 2,896,095 cubic yards, 2,837,893 were chargeable to "Work" construction and 58,202 to "Plant." The amount removed from the Canal prism was 2,575,917 cubic yards. There were taken out by steam shovels 1,732,077, and by dredges 1,105,816, cubic yards. There were 25 working days during the month, the same as in April. The mean rainfall for the month in the territory in which excavation was in progress was 9.82 inches as compared with 4.36 inches the previous month.

In the Atlantic Division the total excavation was 522,622 cubic yards, 150,079 less than were removed in April. Of this total 129,395 cubic yards were removed by steam shovels and 393,227 by dredges. In addition to the latter amount the dredges in this division excavated 276,379 cubic yards in deepening the channel and approaches to the docks of the Panama Railroad Steamship Company at Cristobal, which is not counted as Canal excavation. If included it would bring the total amount excavated by the dredges in this division to 669,606 cubic yards, 148,616 more than were removed in April. There were 284,967 cubic yards of material placed in Gatun Dam and 10,722 cubic yards of concrete were laid on the floor of the spillway during the month.

The total excavation in the Central Division was 1,513,133 cubic yards, 269,633 less than were removed in April. Of this total 1,082,217 cubic yards were taken from the Culebra Cut, 386,170 from the Canal prism elsewhere than in the Cut, and 44,746 from the Obispo Diversion, which is outside the Canal prism.

In the Pacific Division the total excavation was 860,340 cubic yards, 138,842 less than

were removed in April. Of this total 121,905 were removed by steam shovels and 738,435 by dredges. There were 22,063 cubic yards placed in the dam at Pedro Miguel Locks and 59,647 cubic yards in the dams at Miraflores.

The detailed statement of excavation in the three divisions follows:

#### ATLANTIC DIVISION.

LOCALITY.	"Work." Excavation.	"Plant." Excavation.	Total excavation.
<i>Dry excavation—</i>	<i>cu. yds.</i>	<i>cu. yds.</i>	<i>cu. yds.</i>
Locks, Dam and Spillway.....	52,786	5,202	57,988
Miudi.....	71,407		71,407
Total.....	124,193	5,202	129,395
<i>Wet excavation—</i>			
Locks, Dam and Spillway.....	315,370		315,370
	52,011	25,846	77,857
Total.....	367,381	25,846	393,227
Total wet and dry excavation.....	491,574	31,048	522,622

#### CENTRAL DIVISION.

<i>All dry excavation—</i>			
Culebra Cut.....	1,082,217		1,082,217
Chagres section.....	386,170		386,170
Obispo Diversion.....	44,746		44,746
Total.....	1,513,133		1,513,133

#### PACIFIC DIVISION.

<i>Dry excavation—</i>			
Locks, Dams and Spillway.....	88,566	27,154	115,720
Diversions.....	6,185		6,185
Total.....	94,751	27,154	121,905

Diversions.....	10,360		10,360
Total.....	738,435		738,435
Total wet and dry excavation.....	833,186	27,154	860,340

#### TOTAL CANAL EXCAVATION.

Dry excavation.....	1,732,077	32,356	1,764,433
Wet excavation.....	1,105,816	25,846	1,131,662
Total.....	2,837,893	58,202	2,896,095

Mean rainfall along Canal (twelve stations) 9.82 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

#### Protecting Cristobal Sea Front.

A section of the shore front bordering on Roosevelt Avenue, Cristobal, is being filled in with large concrete blocks in order to break the force of the waves and to prevent inroads by the sea during "northers." In the time of the old French Canal Company a barrier of concrete blocks and large rocks was constructed along the beach from the east end of Roosevelt Avenue to Cristobal Point. The greater part of the old barrier is still

intact, although many of the concrete blocks have been honeycombed by the action of the waves, and at the point where the present work is being done there is a gap in the barrier.

It was at first planned to build a sea wall from Dock 11 to a point near the new Panama railroad station, but as this would necessitate removing most of the material now lining the shore front, it was abandoned as too costly, and it was decided to fill in the exposed portion with cement blocks after the method adopted by the French. Each block contains a cubic yard of material and 300 of them will be required. They are made on the spot, at an average cost of about \$4 each, and are placed in positions best calculated to resist the force of the waves.

#### Pacific Division Work.

The status of operations at the Pedro Miguel Locks indicates the probable completion of excavation in the west chamber by the first of July. There is still considerable excavation remaining to be done in the east chamber. Six steam shovels are busy at this point, working in the hardest kind of trap rock. The rock is so hard that drill operations are frequently impeded, and there have been instances where four drills have been dulled in making a foot of progress. The work of clearing the channel north of the locks, preparatory to installing the handling plant apparatus, has been started. The site of the plant will be between the east and west storage trestles, which will run parallel with the Canal for a distance of about 900 feet. The west storage trestle is completed, and the piling of the approach to the east trestle is being driven. These trestles will be used in dumping rock and sand for the handling plant.

At the Miraflores Locks, three steam shovels are excavating in gray and argillaceous sand stone. The shovels are down to grade in certain sections of the upper Locks. It is estimated that it will take about four months to remove all material from the upper lock site. The dredge *Sandpiper* is working a short distance away making a channel toward the site of the upper lock gates. It made but little progress during May, owing to its being laid up three weeks for repairs.

Excavation for the core wall of the west dam at Miraflores has been completed, and the laying of concrete has been begun. Some work has been done on the flume that will carry the pipe from the dredge *Sandpiper* to the middle portion of the dam. As soon as it is finished, the dredge will be able to begin pumping material into the dam.

The water in Cocoli lake, which is destined to be a receptacle for the Rio Grande and Cocoli rivers after the damming of the former, is rising steadily. The stage on May 29 was 21 feet 2 inches above mean sea-level, and the lake is rising at the rate of a

## NOTES OF PROGRESS.

(Continued.)

tenth of a foot per day. When the water reaches a stage of 35 feet, which will probably occur before the close of the rainy season, it will overflow into the Rio Grande River. The lake will cover an area of about six square miles and will submerge all that section between the Pedro Miguel and Miraflores Locks, west of Miraflores village, and also a considerable area to the west of the west dam.

The new cement shed located west of Miraflores Locks is about 50 per cent completed. It will consist of two sections, divided by the loading track which runs longitudinally directly through the center of the building. The outside dimensions are 400 feet long, and 140 feet wide. The east section is nearing completion, and the foundations have been laid for the west section. The storage capacity of the shed is 70,000 barrels.

The concrete foundations of the Miraflores power house are well under way. The concrete work in the boiler room section is practically completed, and the work of putting the six boilers in place began Tuesday, June 1, which was the date set for their installation some time ago. Very good results have been obtained from the concrete mixed with Taboguilla Island sand, which was used on this work, and the surface of the power house floor is as hard and smooth as slate. An effort will be made to have one turbo-generator ready for operation on August 1.

One steam shovel and two orange peel dredges are excavating in the Rio Grande diversion, which lies east of the canal between Miraflores and Corozal. This is designed to shut off the river which crosses the Canal several times between these points. A new track is being laid from Cardenas hill to the sand dock at Balboa, and is within half a mile of completion.

## Changes in Oil Pipe Line.

The Union Oil Company of California is preparing to rebuild two sections of its pipe line, one section between the plant at Petrolia and El Diablo Hill, near Corozal, and the other from Mindi Junction to Tiger Hill. The old pipe line between Petrolia and Corozal, followed the Panama railroad cut-off from the Balboa track to the wye, and then ran along the main track. It was laid three years ago, much of it in a swampy locality that is daily inundated by the tides, and the action of the salt water has deteriorated the pipe to such a degree that it has not been safe to subject it to a high pressure. The new line will follow one of the Commission dump tracks in a nearly direct line to El Diablo Hill.

The new section from Gatun to Tiger Hill will only be temporary for as soon as the relocated track of the Panama railroad is completed, the entire pipe line from Gatun to Bas Obispo will be changed to parallel it. At Bas Obispo, the pipe will probably cross the Canal, where it will again join the old line.

There has been a considerable increase during the past few months in the amount of oil supplied to the Commission. The April run was about 47,000 barrels, and the May

run about 43,000 barrels, the amount usually fluctuating in alternate months. Oil vessels are now arriving at the rate of one every two or three weeks, as the stock of the Isthmians until recently has been very low.

## Checking Baggage for Steamers.

The General Manager of the Panama Railroad Company wishes to call the attention of all persons interested to the following:

Passengers for Panama railroad steamships will avoid a great deal of confusion to themselves, and the probable loss of baggage, if they will see that their baggage, with full directions, is delivered to the agent on steamer sailing day, at least one hour before the train is due to leave their station; and they will also avoid a great deal of confusion, and possible loss of baggage, if they will check their baggage through to New York. Each agent is provided with blank tags for either the hold or the stateroom, and it is requested that all pieces of baggage be plainly marked with the person's name and final destination in the States.

## Ancon Pumping Plant Enlarged.

Two new Canton-Hughes steam pumps, each having a capacity of 500 gallons of water per minute, have been installed at the Ancon pumping station. The main equipment of the plant originally consisted of three Worthington pumps, and in putting in the new machines, one of the Worthington pumps was removed. The new pumps are designed primarily for emergency use in connection with the recently completed 1,000,000 gallon high pressure reservoir on Ancon Hill, the Worthington equipment being able to keep the reservoir supplied under normal conditions.

Each of the new pumps is fitted with a 5-inch discharge pipe, which unite in an 8-inch pipe, connecting a short distance from the plant with the main pipe line to the reservoir. The latter is now full of water and its use has cut down the operation of the pumping machinery to 8 or 10 hours daily, whereas when the 50,000 gallon high pressure tank was the sole storage supply, the pumps were kept running the entire 24 hours. This has effected a considerable saving in fuel. The new high pressure reservoir supplies the higher part of Ancon, and the upper floors of houses in the Tivoli section, a new 3-inch pipe line having been laid to the latter locality for that purpose. The daily consumption of water from this reservoir is approximately 300,000 gallons.

Two horizontal 125 horsepower boilers have also recently been installed at the plant in substitution of two of the three vertical Manning boilers of 78 horsepower each, which constituted the original boiler equipment. Only one is kept constantly in service. In addition, the plant has two

small pumps, one a boiler feed pump, and the other used for furnishing Hotel Tivoli with sterilized water. The exhaust from the two latter pumps is carried into the water feed tank for the boilers, and utilized to heat the water. It is planned to also utilize the exhaust of the larger pumps, at present going to waste, in the same manner, which will supply nearly the desired temperature of 212 degrees.

## Change in Time of Train No. 3.

Attention is directed to the time of train No. 3, on the Panama railroad which has been slightly changed on time table No. 4, effective June 1, 1909. The new schedule is a trifle faster and will cause the train to arrive at Culebra eight minutes earlier than formerly. There is no change between Colon and Bohio, and from the latter place to Panama the new schedule is as follows:

A. M.		A. M.	
Leave Bohio.....	6.10	Leave Las Cascadas..	6.59
Frijoles.....	6.17	Empire.....	7.07
Tabernilla.....	6.25	Culebra.....	7.11
San Pablo.....	6.30	Panaiso.....	7.19
Mamei.....	6.37	Pedro Miguel.....	7.22
Gorgona.....	6.44	Miraflores.....	7.26
Matichin.....	6.48	Corozal.....	7.31
Bas Obispo.....	6.53	Arrive Panama.....	7.40

## Lidgerwood Unloaders in May.

The fourteen Lidgerwood unloaders in the Central Division during the month of May unloaded 2,843 trains, aggregating 49,779 cars. Of this number 1,395 trains, composed of 23,715 cars, were unloaded by the five unloaders at Tabernilla; 615 trains, composed of 11,070 cars, were unloaded by six unloaders at the Miraflores dumps; and 833 trains, composed of 14,994 cars, were unloaded by three unloaders at Balboa. As all the cars were of 20-yard capacity the material unloaded represented about 995,980 cubic yards.

## SOCIAL LIFE OF THE ZONE.

## Decoration Day Services—Women's Clubs and Other Features.

Observances of Decoration Day were held at Ancon and Cristobal on Sunday, May 30, under the auspices of the Army and Navy Union, detachments of U. S. Marines stationed at Camp Elliott, members of friendly societies and others taking part.

At Ancon, memorial services were held in the Protestant chapel at ten o'clock, the Rev. William Cross of Cristobal, officiating. The chapel was decorated with flags and flowers, and special music was rendered. Thirty members of the George W. Goethals Garrison, No. 1, Regular Army and Navy Union, accompanied by a detachment of forty Marines and thirty members of the Uniformed Rank, Knights of Pythias, arrived in Panama on the morning train and marched to the chapel. The garrison flags were placed before the chancel steps by two sentinels. At the conclusion of the service, the party proceeded to Ancon cemetery where flags and flowers were placed on the graves. Earlier in the day, a detachment of twenty men visited Flamenco Island in Panama Bay, for the purpose of placing suitable decorations on the graves of the American and British soldiers and sailors who are buried there.

At Cristobal about 300 persons took part in the celebration arranged by the Gen. Henry W. Lawton Garrison, No. 40. The company assembled at the Union church and marched to the Cristobal station where a special train left for Mount Hope at 10.30. The parade was headed by the Marine band, followed by the members of the garrison, Kangaroos, Knights of Pythias, Red Men, the Daughters of Pocahontas, and a large number of American school children. At the close of the services in the cemetery, conducted by the garrison chaplain, the company proceeded to the Red Men's plot where the memorial services of that order were held.

Public observance of Decoration Day on the Isthmus was inaugurated by the Army and Navy Union in 1908. There are two garrisons with headquarters at Empire and Cristobal, and an Army and Navy Club has recently been organized at Porto Bello with 22 members.

The rooms of the Ancon Woman's Club are open every evening for those who wish to read or meet for social purposes. Books and magazines are furnished and a member of the club is in attendance. The last general meeting of the club will be held on June 16. The departments will continue their work during the vacation period. In response to a request for reading matter for the inmates of the Culebra penitentiary, the club is preparing a box of books and magazines which will be forwarded at once. A committee composed of Mrs. H. E. Bovay, Mrs. Boxer and Miss Beattie, was appointed to take charge of the work. Donations of books may be sent to Mrs. Charles H. Jewett, at the District Quartermaster's Office, Ancon.

Dr. Dora Martin, representing the National Anti-cigarette League was a recent visitor to the Isthmus, having been sent by Texas League boys and friends of the organization. The purpose of her visit was to look over the ground and to organize leagues among the American boys in the Zone public schools.

Several public addresses were given in the Commission clubhouses, and leagues were organized in Gorgona and Empire. The organizations are offered by the boys under a superintendent elected by them at a general meeting. Business meetings and rallies are held once a month, when addresses of an educational character are made.

The Las Cascadas district of the Canal Zone Red Cross effected its permanent organization on Saturday, May 30. Mrs. Frank I. McAllister was elected chairman, Mrs. Charles O. Snyder, treasurer, and Mrs. W. D. Stanton, secretary. Mr. and Mrs. J. C. Barnett, Mrs. W. L. Thompson and Mrs. Frank Walraven constitute the executive committee.

Children's Day was celebrated in the Empire and Gatun Sunday schools on June 6. Special programs were given, the pupils taking part in the music and recitations.

The Odd Fellows in the Canal Zone held their annual memorial service in the Commission chapel at Culebra on Sunday, June 6.

The Empire district of the W. C. T. U. held a mothers' meeting on June 3, there being a good attendance. A meeting of all the district organizations has been called for Thursday, June 17, at 2.15 p. m., at the Commission chapel, Empire, at which time a federation of the unions will be effected. All women who are interested in this movement are cordially invited to be present.

Children's Day exercises will be held on Sunday, June 13, at the Methodist Episcopal Church in Panama. Special music will be provided. All are cordially invited.

The Caribbean Conference of the Seventh-day Adventists is constructing a church and business building in Cristobal on land granted for the purpose by the Panama railroad, adjoining the Salvation Army Social Institution. The building, which is being erected at a cost of \$6,000, contains a church with seating capacity of 200; a printing plant where the literature of the church is published, including the two journals, *The Caribbean Watchword* and the Spanish quarterly, *El Centinela*; and two apartments occupied by the superintendent's family and the members of the editorial staff. A school will be established later. The Conference has been established on the Isthmus for about five years, the principal congregation being at Mount Hope, where services are held on Saturdays. There are also congregations at Bohio, Empire and Panama, the members numbering in all about three hundred. The Caribbean Conference includes Costa Rica, Nicaragua, New Providence and adjacent islands.

Chief Justice Gudger, of the Canal Zone Supreme Court, will address a meeting in St. Luke's Church, Ancon Hospital chapel, on Sunday evening, June 13, at 8 p. m. The Brotherhood of St. Andrew extends a cordial invitation to young men especially to attend.

On Sunday, June 13, at 3 p. m., the National Baptist Mission, which is now located in a building on Ancon Boulevard, will lay the four corner stones for the erection of their church in Guachapali, on land of the Panama railroad. The four corner stones will be laid by Mr. Hiram J. Slifer, General Manager of the Panama railroad, Master Domingo Obaldia, junior son of the President of the Republic of Panama, and Miss Lane, granddaughter of Governor Jo C. S. Blackburn of the Canal Zone, and friendly

societies. After the completion of the stone laying an address will be given by Mr. Slifer. Invitations have been issued to the various fraternal orders to participate.

The regular dance of the Tivoli Club will be given at Hotel Tivoli, on the evening of June 12.

## Personal.

Mr. Sydney B. Williamson, Division Engineer, and family returned to the Isthmus on the *Panama*, which arrived at Cristobal on June 8.

## Missing Men.

Information is desired in regard to the following:

James W. Peniston, colored American, who was employed in the Central Division as pit foreman, up to March, 1906, and whose last address was Las Cascadas. Any one having knowledge concerning him is requested to communicate with his sister, Mary E. Peniston, care of Snow Hill Institute, Snow Hill, Ala.

Logan Rush Weathers, 20 years old, who disappeared from his home at Columbus, Georgia, in October, 1908. Any one having knowledge concerning him is requested to communicate with the New York Life Insurance Company, New York City, N. Y.

D. A. Fuller of Cleveland, Ohio. Any one having knowledge concerning him is requested to communicate with the American Consol General, Panama.

Vigliani Michael Guiseppe di Stefano. Any person having knowledge concerning him is asked to communicate with the Italian Consul, Panama, Republic of Panama.

## Suicide of A. Bienkowski.

Apoliary Bienkowski, fatally shot himself in the mouth, Sunday night, June 6, in a coach on the road between Panama and Balboa. Mr. Bienkowski had recently complained of feeling mentally depressed, and this condition is believed to have been responsible for his suicide. He was 43 years of age, unmarried, and was a naturalized American citizen, having been born in Warsaw, Poland, where his relatives still reside. He emigrated to the United States in the 80's, and came to the Isthmus about seven years ago, where he engaged in business as a news-dealer, subsequently establishing the Panama Railroad News Agency. He was a member of Ancon court, No. 7, Independent Order of Panamanian Kangaroos and that order will have charge of the funeral ceremonies which will be held from the Ancon lodge hall on Sunday, June 13, at 3 p. m. The social session of Ancon court, No. 7, which was to be held on Friday evening, June 11, has been postponed as a mark of respect.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., June 9, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

## FIVE YEARS OF CANAL WORK.

## Progress Made Under American Control, Since May 4, 1904.

## V.

## Canal Funds and Method of Disbursement.

After taking over the Canal property on May 4, 1904, funds necessary for carrying on the work were temporarily disbursed by Lient. Mark Brooke, United States Army, from an amount borrowed from the Director-General of the French company, who was subsequently repaid. The monies thus expended were repaid from the appropriation "Canal Connecting the Atlantic and Pacific Oceans." The Disbursing Office was originally located on the first floor front of the old Administration Building in Panama, where former employes of the French company made up all the pay rolls and vouchers for the continuation of the work under American control. With but two or three exceptions, they spoke only French or Spanish, and the few American employes as a rule spoke only English.

The money of the country at this period was Colombian silver, the value of which fluctuated from day to day. An arrangement was reached whereby the laborers would, as a rule, be paid in the money of the country, and the American employes in United States currency, which arrangement practically obtains at the present day, except in the case of contracts made with Europeans and others on a gold basis. The Disbursing Officer secured a supply of Colombian silver from time to time by advertising for bids in the Panama papers for the sale of checks on the United States Subtreasury at New York. For instance, if the Disbursing Officer desired to purchase \$75,000 worth of silver, the advertisement would state that at 12 o'clock noon on a certain date, bids would be received for checks to this amount, payable in Colombian silver, with the privilege of rejecting any and all bids.

The bid or bids which gave the best returns were accepted in amounts sufficient to cover the amount advertised, the average price paid governing the expenditures made from this particular sale until the fund was exhausted. The premium paid varied from 117 on May 23, 1904, the date of the first sale, to 110 in August, 1904, and rose from then to 115 in January, 1905, the date of the last sale under this method. This made the Colombian peso vary from \$.4606 (expressed in United States values), to \$.4755, it being worth \$.464 at the time the last sale was made on January 23, 1905. The requirements of the Disbursing Office at that time were much more limited than now, a total of \$523,000 in round numbers sufficing for expenditure from May 23, 1904, up to the time that Panamanian money was introduced, the above amount meeting all the silver rolls, as well as many vouchers which were paid in silver.

The value of the Colombian peso expressed in United States money was so variable that it required a great deal of work to make payments and figure the credit due the Disbursing Officer when expenditures were made in silver.

The total transactions under the above

arrangement are shown in the following table:

DATE OF SALE.	*Premium.	Value of dollar has local currency in U. S. currency.	Silver received.
May 23, 1904.....	117.1082	0.4606	\$32,566.24

\*Rate would be 100+ premium, or in first case 217.1082 pesos for each \$100 U. S. exchange.

The situation was much simplified when the United States minted the money for the national currency of Panama, which was issued by that Republic during the month of March, 1905, the value of its peso having been fixed at the ratio of two for one. As there were no coins in the original mintage of less than five cents value, and as the rates of pay were figured to the cent, it was soon found necessary for Panama to issue additional fractional currency, which was done about one year later. The original silver 5-cent piece, which was practically out of circulation, the issue having been bought up by coin collectors and souvenir hunters, was replaced by a 5-cent nickel coin and in addition, a 1-cent nickel coin of the value of half a cent in United States currency was issued.

The gold payments were originally made in United States paper of the various denominations, but this was found to be rather expensive, as well as inconvenient, for the reason that merchants and others shipped these bills out of the country almost as fast as they were brought in. They made a cheap means of exchange, simply requiring postage and registry fee for their transmittal, and saved the merchants from paying exchange to the banks, thus placing the expense of furnishing this money on the Commission.

On May 1, 1905, an agreement, which had previously been made by the Secretary of War with bankers in the city of Panama, commonly known as the "Bankers' Agreement," became effective. The Commission, under its terms, secured from four banking firms of Panama, all the United States money necessary for the work on the Isthmus, upon the payment of a premium of  $\frac{3}{4}$  of 1 per cent. The agreement also stipulated that the bankers were to furnish all the silver required at the ratio of two dollars silver for one of gold, the payment for both the gold and silver thus received to be made through the Disbursing Officer by check on the Assistant Treasurer of the United States at New York, the bankers requiring the premium, however, to be paid in cash. This agreement expired by limitation on the last day of April, 1906, and was not renewed.

Meanwhile preparations had been made for securing future funds by the shipment of gold coin from the United States, using the accumulated silver on hand for the pay-

ment of sums less than \$10 silver (\$5 gold) only, the remainder being paid in gold coin. On account of the export tax imposed by the Republic of Panama on coin, either gold or silver, this money could not be shipped out to advantage as was done in the case of bills, so that the coin remained on the Isthmus. The bankers finally announced their willingness to receive Disbursing Officer's checks on the Sub-Treasury at New York at par, in exchange for gold and silver, so that the shipments of gold from the United States grew less and less, none having been shipped for about a year and a half past. As payments made on the gold rolls alone for the calendar year 1908 amounted in round numbers to \$9,000,000, and gold received from the sale of postal money orders, etc., was about \$2,000,000, under the bankers' agreement it would have been necessary to purchase about \$7,000,000, the premium on which at three-fourths of one per cent would be \$52,500. As the requirements for the payment of gold rolls alone have been between \$8,000,000 and \$9,000,000 per year since May 1, 1906, the date the agreement expired, it will be seen that a considerable saving has resulted.

At the beginning of the work, it was customary to issue checks to employes for such amounts as they required each month as an accommodation in forwarding money to the United States. The abuse of this privilege led to its abolition, as it was discovered that some employes were securing these checks for the purpose of selling them to merchants and others as New York exchange. Within the past few months this arrangement has again been put into effect, with the restriction, that a check for the entire amount due to an employe only will be given for each month upon request, and with the distinct understanding that it is only for purpose of transferring money to the United States, and that the privilege will be cut off if abused.

The accounts of the Disbursing Officer, under the regulations of the Treasury Department, were made up and transmitted at the close of each quarter up to and including December 31, 1904. At this time, because of the rapidly increasing disbursements, the Secretary of the Treasury directed that they be furnished monthly, which has since been done. Following is a statement of disbursements made by disbursing officers of the Commission on the Isthmus from the beginning of operations up to April, 1909, which shows a rise from about \$33,000 expended during May and June, 1904, to about \$2,000,000 monthly at the present time:

October 1, 1908, the last mentioned duties were transferred to the new Examiner of Accounts, and the office of Treasurer of the Canal Zone was made a separate position, so that the Disbursing Office now has more nearly disbursing office duties assigned to it than obtained before the change. In addition to the disbursement of funds, it also has charge of the stock, and the distribution of commissary and hotel books and meal tickets. The following statement shows the issue of books and tickets in the various denominations, by months, for one year, June, 1908, to May, 1909, inclusive:

MONTHS.	COMMISSARY BOOKS.			HOTEL BOOKS.		Meal tickets.

Grand total value.....	\$1,897,157.50					\$671,374.20

The payment to the Panama Railroad Company on account of commissary books furnished employees of the Commission now averages about \$180,000 monthly, while deductions made on account of hotel books averages about \$44,000 monthly.

At the outset some criticism developed over the lapse of time between the close of a month and the pay day for employees, which led to an investigation being made into the systems and practices in use by leading contractors in the United States, with the object of ascertaining if it might be practicable to improve the system and make payments more promptly. A thorough investigation showed that the systems in use by contractors could not be adopted by the Commission, because of their lack of protection, but that payments were being made as promptly on the Isthmus, as in the case of most large contractors. Later, when the work became better organized, it was found possible to reduce the time, and the payments now begin on the first of each month for the preceding month at the main office at Empire, and at Ancon and Cristobal, while the pay car visits every portion of the work where employees are engaged on the 12th, 13th, 14th and 15th of each month.

The method of pay-roll payment is somewhat different from that in vogue in the United States, the envelope system in common use there, not being practicable on the Isthmus from the fact that it is not certain where the employee will be found, or when he will present himself for payment, and for the additional reason that as payments are made in gold and silver coin, the envelopes would be easily worn through resulting in possible loss. The signature roll payment, which was in effect for about a month during the summer of 1905 on the Isthmus, was likewise found to be impracticable because of the scattered forces, and the fact that payments so made would require the actual use of the pay roll on each payment. The old system was then returned

to and with slight modification is in use at present.

The present arrangement consists in the use of certificates made out for each individual payment, which are checked and authenticated by the Examiner of Accounts and the Disbursing Officer, and returned by the latter to the timekeepers, who in turn deliver them to the individual employees. This certificate, when properly signed by the payee and witnessed by an employee who is bonded for that purpose, and presented by the payee on the pay car or at any of the pay offices with his brass check for identifi-

cation, is immediately paid the amount called for thereon. This system is working satisfactorily, as not only does an employee know what is claimed to be due him, but he can secure his money at any point where payments are made, regardless of the fact that the pay roll is in the Disbursing office.

The payment of silver at the present time amounting to about \$1,600,000 in Panama currency monthly, requires the constant services of five men in counting and rolling the money in packages convenient for payment, and weighing 55 pounds per \$1,000, requires a total of 44 tons per month.

## Order of Construction Foremen.

The order of Isthmian Construction Foremen was organized January 24, 1909, and its membership is composed of foremen in the employ of the Isthmian Canal Commission and Panama Railroad Company. There are 290 members in the order at present, of which number Gatun local has 45. The members of the grand lodge executive committee are: J. E. Curry, president; W. B. Green, secretary; J. E. Clarke, grand treasurer; C. C. Simonson, chairman; Chris. Kirchner, A. H. Stewart, and W. E. McCann, grievance committee. The officers of Gatun local, No. 1, are: D. W. Bass, president; J. Loyal Seward, secretary; Albert F. Gabler, treasurer; Locals No. 2, Tabernilla; No. 3, Gorgona. No. 4, Bas Obispo; No. 5, Empire; No. 6, Pedro Miguel, and No. 7, Ancon, will not elect their permanent officers until after the second session in June. The regular meeting of the grand lodge is the first Sunday of each month. Gatun local meets every Friday night at 8 o'clock.

## Liquor Licenses.

Sixty applications for liquor licenses in the Canal Zone were received up to May 29, the last day on which applications could be filed. Last year at the same date there were 72 applications, of which number 63 were favorably acted upon by the Commission. At the end of May, 1909, 58 of the 63 licenses were still in force.

Silver employees were paid semi-monthly up to and including September, 1907, the November, 1907 pay day being for the month of October, and constituting the first payment made monthly to gold and silver employees alike. At the beginning of the work, the question of monthly pay days for silver men was considered, but decided as impracticable at the time on account of the limited facilities for feeding the silver force, and the inability of the laborers to retain their money a sufficient length of time to provide themselves with the necessities of life from one month to the next. Moreover, the Chinese merchants with whom they dealt principally, refused to trust them longer than for the half-monthly period. Upon the opening of commissaries and laborers' kitchens, it became practicable to make monthly payments to silver employees. The total number of payments made to gold employees from June 1, 1905, to February 28, 1909, inclusive, was 211,374, amounting to \$25,598,697.87. The total to silver employees in the same period aggregated 1,510,438, payments amounting to \$25,985,688.28, United States currency. The grand total to both gold and silver employees in the above period was 1,721,812 payments, amounting to \$51,584,386.15.

Up to the spring of 1905, the Disbursing Officer had the responsibility for regulations governing the preparation of all vouchers and pay rolls, and the auditing for the Commission of all payments made on the Isthmus. At that time, a Local Auditor was sent from the United States, who subsequently died of yellow fever. His successor held the position until March, 1906, when the Disbursing Officer acted as Local Auditor until a new appointee arrived in October, 1906, the force of time inspectors, however, continuing in the Disbursing Officer's charge. In September, 1907, the title of Local Auditor was changed to Examiner of Accounts and the time inspection force transferred to his charge, while property accountability and the statistical work of the Commission reverted to the Disbursing Officer. On

## SOME SHOVEL RECORDS.

**Highest Excavation in Central Division.**

The highest steam shovel records in the Central Division up to the present time are:

**Highest Monthly Record, Entire Division.**

2,065,827 cubic yards in March, 1909, 27 working days; average per day, 76,512 cubic yards.

**Highest Daily Record, Entire Division.**

78,559 cubic yards, April 5, 1909, 57 shovels; average per shovel, 1,378 cubic yards.

**Highest Monthly Records.**

45-ton Bucyrus—25,713 cubic yards, July, 1908, shovel No. 59, 26 days; average per day, 989 cubic yards.

70-ton Bucyrus—53,043 cubic yards, March, 1909, shovel No. 122, 27 days; average per day, 1,965 cubic yards.

95-ton Bucyrus—58,483 cubic yards, October, 1908, shovel No. 230, 27 days; average per day, 2,166 cubic yards.

Model-60 Marion—41,219 cubic yards, March, 1908, shovel No. 152, 26 days; average per day, 1,585 cubic yards.

Model-91 Marion—55,419 cubic yards, August, 1908, shovel No. 256, 25 days; average per day, 2,217 cubic yards.

**Highest Daily Records.**

45-ton Bucyrus—1,356 cubic yards, February 5, 1908, shovel No. 58.

70-ton Bucyrus—2,300 cubic yards, February 9, 1908, shovel No. 131.

95-ton Bucyrus—3,941 cubic yards, March 2, 1909, shovel No. 220.

Model-60 Marion—1,704 cubic yards, April 18, 1908, shovel No. 152.

Model-91 Marion—3,485 cubic yards, January 21, 1909, shovel No. 265.

Monthly records are based on place measurement and daily records are based on car measurement.

Shovels in the one-hundred class are 75-ton Bucyrus and Model-60 Marions with dippers of a capacity of 2½ cubic yards. Shovels in the two hundred class are 95-ton Bucyrus and Model-91 Marions with dippers of a capacity of 5 cubic yards. Shovels in the fifty-class are 45-ton Bucyrus shovels with dippers of a capacity of 1¾ cubic yards. These shovels are under steam for eight hours per day, but are not actually worked during this entire period, time being lost by the necessity of moving the shovel forward, blasting stone too big for the shovel to handle, keeping the shovel supplied with cars, etc.

**Isthmian Baseball.**

The 1908-09 season of the Isthmian baseball leagues is drawing to a close. The series of games conducted by the Atlantic League have been successful, and the league leaders are already planning for next year. This league is composed of five clubs, viz.: Dry Dock, Panama Railroad Commissary, Panama Railroad Company, Colon, and Civil Administration. The members of the first three teams are drawn from employees at Colon and Cristobal, the players on the Colon team are made up of merchants and professional men of Colon, and the talent on the Civil Administration club is represented by employees of that department in Cristobal and elsewhere. The games are all played at Colon, and the attendance has been gratifying, varying from 600 to 1,200 each game. The Dry Dock team leads the league, with the

Commissary club a close second. It is proposed to put up a new park at Colon prior to the opening of the next league season. The Panama Railroad Company has granted the ground for the purpose, and the business men of Colon will contribute to a fund for the erection of enclosure and grand stand. The Civil Administration club will play a post series of games with the Gorgona team of the old league.

The season in the regular Isthmian League closes June 13. Empire took the lead early in the race, and is an easy pennant winner. Ancon won a double-header over the M. P. & M. team on the Ancon grounds, Sunday May 30, and Empire added another to its string of victories at Empire park. The Ancon-Empire game on Sunday June 6, was won by Empire, score 7 to 1. The Gorgona-M. P. & M. game was forfeited to Gorgona, the M. P. & M. failing to appear with a full nine. The standing of the clubs on June 7, was as follows:

	Played.	Won.	Lost.	Per cent.
Empire .....	28	21	7	.750
Gorgona .....	29	13	16	.448
M. P. & M. ....	28	12	16	.429
Ancon .....	29	11	18	.379

**Cristobal Fourth of July Celebration.**

The general committee having in charge the Fourth of July celebration at Cristobal is composed of E. C. Harington, chairman; C. R. Chisholm, secretary; A. Fechtig, treasurer, and the following chairmen of sub-committees: W. S. Perry, finance; Mr. Kilgour, fireworks; Lieutenant Barber, athletics; Capt. H. W. Stickle, aquatic; H. J. Slifer, transportation; Capt. C. Nixon, printing; John Burke, reception and music; H. C. Ragsdale, dance; Ira A. Giles, decorations; C. E. Weidman, fire department. In addition, the following are members of the general committee, representing the neighboring towns: Maj. J. P. Jervey and Capt. G. M. Hoffman, Gatun; Messrs. Waltman and Storm, Porto Bello; Messrs. Cochran and Booz, Gorgona, and Mr. Metcalf, Tabernilla. Major Jervey, Lieutenant Barber, and C. R. Chisholm have been appointed to sit with the three representatives from Ancon on the joint executive committee.

Arrangements for the program have been about completed, and will consist of aquatic races between tugs, launches and sail boats; swimming contests; running, jumping, potato and three-legged races; a wall scaling exhibition by the Marines; exhibition drill by the fire department; a practical illustration of the Pampier life-saving feat; volunteer hose company races, etc. The program will conclude with a display of fireworks in the evening, and a ball at Lincoln House. Music will be furnished throughout the day by the Marine band.

Subscription lists are being circulated to secure funds for the celebration of the Fourth of July at Ancon and Cristobal. The funds for the celebration at each place are being collected and handled separately, and each list indicates the place at which the money subscribed on it will be used. The committees at both places desire that each subscriber will see that his name is entered on the list for the place to which he desires his contribution to go.

**Order of Isthmian Conductors.**

The next regular meeting of the Order of Isthmian Conductors will be held in Cristobal lodge hall, on Sunday, June 13, at 3 p. m. Important business.

## COMMISSION CLUBHOUSES

## Activities of the Young Men's Christian Association.

## CULEBRA.

The local bowling tournament for the duck pin championship resulted in a tie between E. W. Palmer and B. C. Quinby, 17 games being won and 6 lost. Mr. Quinby won the roll off. P. L. Pierce had high average of 91 and W. L. Dalton, high score of 116.

The local pool tournament was won by W. L. Dalton, I. H. Fleischman, second, and Don H. Beaman, third.

The local chess tournament for the possession of the W. H. Baxley medal was won by Mr. Charles Wilson, having lost only two out of nine games. Messrs. Wm. Dubois, F. E. Sterns, and D. H. Beaman were tied for second place, each having lost three out of nine games. On Monday, June 7, Mr. Wilson will play a simultaneous match against all comers.

## EMPIRE.

A special bowling match was played on Thursday night, June 3, between the "Lonesomes" (single men) and the "Hen-Pecked" (married men) of the Empire Y. M. C. A., the latter team being defeated. The teams and scores were:

Married men—Gorham, Euerle, Shore, Shaughnessy, Mead, Drake; scores, 772, 692, 758, total 2,222. Single men—Hagan, Maloney, Johnson, Cohen, Edwards; score, 817, 755, 749, total 2,351.

The local handicap tournament, which has been in progress for the past month, will close on Wednesday, June 9. Mr. Potter leads with an average of 181 for 26 games and Barrett is second with 172.

## CRISTOBAL.

A local bowling league, consisting of teams from the Dry Dock, Commissary, Q. M. D. and P. R. R. has been organized.

## RESOLUTIONS OF SYMPATHY.

## Daniel Kealy.

At a meeting of Cholo Tribe, No. 5, Improved Order of Red Men, held at Gorgona, C. Z., on May 26, 1909, the following resolutions were passed:

WHEREAS, It has pleased the Great Spirit in His divine wisdom, to call from the hunting grounds here below to the happy hunting grounds above, the spirit of our late chief and senior sagamore, Daniel Kealy, and while we bow in humble submission to His divine commands, yet we deeply regret and deplore the loss of one who endeared himself to all who were privileged to become acquainted with him; therefore, be it

Resolved, That Cholo Tribe, No. 5, extends to the bereaved widow and family its heartfelt sympathy in this time of their affliction, and assures them that the tribe considers that it has a sacred charge to lighten their burden and help make smooth the rough places of the trail of life for them; be it further

Resolved, That the charter of Cholo Tribe, No. 5, and the stump of its senior sagamore be draped in mourning for a period of 90 days, and that a copy of these resolutions be suitably engrossed and presented to the family of the deceased, and that a copy be sent to THE CANAL RECORD, and that they be published therein; also that they be inserted in the record book of the tribe.

T. J. BRODERICK, J. E. TUCKER, H. SIMONS,  
Committee.

## Mrs. Elizabeth Arragaves.

WHEREAS, God, in His Supreme wisdom, has seen fit to remove from our number one of our most beloved fellow teachers, Mrs. Elizabeth Arragaves; and WHEREAS, We sincerely mourn the loss of her friendship and cooperation, therefore, be it

Resolved, That we, the teachers of the Canal Zone, extend to the bereaved husband and friends our deepest and most heartfelt sympathy; and be it further

Resolved, That a copy of these resolutions be sent to the husband and a copy be published in THE CANAL RECORD.

JESSIE J. HELLER, MAMIE MIRACLE, Committee.

LOST—A ribbon watch fob, locket seal pendant with initials "A. M. C." Attached to the ribbon was a pin of the Geological Society of American Universities with "A. M. C." on the back. Supposed to have been lost on Panama railroad train on Friday, May 28. Finder is requested to return it to Mr. Allen M. Chamberlain, care W. M. Wood, Empire, C. Z.

## Commissary Hours.

The hours during which commissaries are open are as follows:

Cristobal, 8 a. m. to 12.30 p. m., 2 p. m. to 7 p. m.  
Culebra, 8 a. m. to 12.30 p. m., 2.30 p. m. to 7 p. m.  
All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## OFFICIAL CIRCULARS.

## Reservations on Panama Steamships.

CULEBRA, C. Z., May 29, 1909.

CIRCULAR No. 257.

The following instructions with reference to securing reservations on the steamships of the Panama Railroad Company will appear on the new form of transportation request which will be issued on and after June 2, 1909, notice of which will appear in THE CANAL RECORD of that date:

## INSTRUCTIONS FOR SECURING RESERVATIONS.

Reservation may be secured either by presenting this request in person to the ticket agent of the Panama Railroad Steamship Company in Colon, or by forwarding same to the ticket agent, enclosing money order for the full amount shown thereon.

The ticket agent will at once acknowledge receipt of request and money order, and notify you the number of stateroom and berth to which you have been assigned, if accommodations are available. If all accommodations have been sold on the steamship for which this request is issued, you will be so notified, and reservation made on the next following steamer. If no accommodations are available on the following steamer, a new application must be submitted through the head of your department for a steamer sailing at a later date.

On the arrival of the boat for which reservation has been made, steamer ticket will be immediately forwarded by mail, or held at the ticket office, if so requested at the time of making reservation, but no tickets will be issued until the boat has docked.

No reservation will be made by mail for the steamship for which this request is issued unless request and money order are in the hands of the ticket agent at least three days before date of sailing.

Local station agents will check baggage from stations along the Line through to New York upon presentation of railroad transportation and steamer ticket. Excess baggage charged for at usual rates.

When requesting reservation by mail, address letter "Ticket Agent, Panama Railroad Steamship Company, Cristobal." Make money order payable to the Panama Railroad Company, Cristobal.

Do not fail to forward request with money order and give post-office address on the Isthmus.

No reservation will be made until the regular transportation request has been issued by the Chairman's office.

Employees, who under existing rules, have secured reservations by mail for steamers scheduled to sail on and after June 14, and who are holding their transportation requests to be exchanged for steamer tickets on date of sailing, should forward same at once to the ticket agent, and upon arrival of the boat for which issued, tickets will be mailed to such employees in accordance with the foregoing rules.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Board to Consider Rules Governing Locomotive Engineers.

CULEBRA, C. Z., June 7, 1909.

## TO ALL CONCERNED:

The following are hereby appointed members of a board for the purpose of considering and recommending changes, if any are deemed necessary, in the rules governing locomotive engineers in the care of their engines, adopted October 2, 1907:

Mr. L. K. Rourke, Acting Division Engineer, Central Division.

Mr. Arthur Sessions, Superintendent of Transportation, Central Division.

Mr. E. J. Banta, Mechanical Engineer, Mechanical Division.

Mr. W. O. Johnson, Master Mechanic, Empire Shops.

Mr. James G. Craig, Locomotive engineer, Central Division.

Mr. Arthur C. Stone, Locomotive engineer, Central Division.

Mr. Rourke is appointed chairman of the board, and will designate the time and place of all meetings.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Pay for Overtime.

DEPARTMENT OF EXAMINATION OF ACCOUNTS.  
EMPIRE, C. Z., May 29, 1909.

CIRCULAR No. 11.

To all Timekeepers—Paragraph No. 17, of the instructions governing pay rolls, timekeeping and inspection, provides:

"No overtime can be allowed a gold hourly man until he has completed 8 hours labor on the day in question; nor for silver employees until after 10 hours' labor, and no time in excess of 24 hours in any one day."

It is not intended to prevent payment for overtime to employees who are required to work continuously,

carrying them into the next calendar day. Such employees will be allowed constructive overtime for all time made in excess of 8 or 10 hours from the commencement of their day's service.

T. L. CLEAR, *Acting Examiner of Accounts.*  
Approved: GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Acting Surveying Officer.

CULEBRA, C. Z., June 4, 1909.

## HEADS OF DEPARTMENTS AND DIVISIONS:

Effective June 7, 1909, Mr. Charles L. Parker will act as Surveying Officer during the absence of Mr. H. S. Farish on leave. GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Office of District Tax Collector, Ancon.

DEPARTMENT OF CIVIL ADMINISTRATION,  
DIVISION OF POSTS, CUSTOMS AND REVENUES.

ANCON, C. Z., June 3, 1909.

Notice is hereby given that, effective June 15, 1909, the office of the District Tax Collector for the District of Ancon will be removed from Balboa, (formerly La Boca), to the office of the Collector of Revenues situated on the third floor of the new Administration Building in Ancon.

HERMAN A. GUDGER,  
Acting Collector of Revenues.

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending June 15, 1909 (75th meridian time):

DATE.	High	Low.	High.	Low.	High.
	A. M.	A. M.	A. M.	P. M.	P. M.
June 9.....	.....	1:18	7:27	1:51	7:43
June 10.....	.....	2:11	8:21	2:46	8:43
June 11.....	.....	3:09	9:21	3:48	9:47
June 12.....	.....	4:12	10:24	4:54	10:58
June 13.....	.....	5:18	11:28	5:58	.....
June 14.....	12:07	6:21	P. M.	12:30	6:57
June 15.....	1:09	7:19	1:29	7:53	.....

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, June 5, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Cum-ba.	Bohio.	Gatun (Canal).	Gatun (W.D.).
Height of low water above mean sea-level, ft.	125	92	46	1	0	0
Maximum height above mean sea-level, feet:						
Sunday, May 30.....	129.4	96.0	55.3	9.7	3.6	2.8
Monday, May 31.....	126.6	97.5	50.1	5.8	2.2	1.7
Tuesday, June 1.....	124.9	94.6	52.8	7.8	3.3	2.6
Wednesday, June 2.....	123.8	94.6	52.1	7.8	3.5	2.8
Thursday, June 3.....	126.5	93.5	49.8	4.8	1.8	1.4
Friday, June 4.....	126.2	93.4	49.6	4.3	1.2	1.0
Saturday, June 5.....	125.9	93.1	49.4	4.1	1.4	1.2

## Concert by L. C. C. Band.

CRISTOBAL, C. Z.

Wednesday, June 16, 1909, at 8.15 p. m.

## PROGRAM.

- 1 March—*The Tivoli*.....Jennings
- 2 Selection—*The Prima Donna*.....Herbert
- 3 Intermezzo—*Kisses*.....Hubbell
- 4 Overture—*Past and Present*.....Suppe
- 5 (a) Characteristic—*Kerry Mill's Barn Dance*.....Mills
- 5 (b) Indian Descriptive—*Trailing the Trail*.....Spaulding
- 6 Suite de Ballet—*Antony and Cleopatra*.....Gruenwald
- 7 Simple Air.....Thome
- 8 Medley Selection—*Hits of 1909*.....Remick
- 9 Tone Poem—*In Lovers' Lane*.....Pryor
- 10 March—*Stars and Stripes Forever*.....Sousa

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Culebra, Sunday June 20.

The following steamers have recently arrived at Balboa: May 29, *Lea* from Southern ports, and *Lausling* from Port Harford. May 31, *Pulva* from Southern ports, *Cuido* from intermediate ports, and *Fran* with lumber for the Commission. June 1, *City of Para* from San Francisco, and *U. S. S. South Dakota* from Annapolis. Departures were: May 30, *Lausling* for Port Harford; May 31, *City of Sydney* for San Francisco; June 1, *Ecuador* for Guayaquil, and *Lea* for Southern ports.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

Advance.....	P. R. R. Monday.....	June 7
Atrato.....	R. M. Saturday.....	June 12
Allianca.....	P. R. R. Saturday.....	June 12
Colon.....	P. R. R. Friday.....	June 18

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Magdalena.....	R. M. Tuesday.....	June 22
Orinoco.....	R. M. Tuesday.....	July 6

Sailings of the French line (Cie. Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 1.30 p. m., via Port Limon, for New Orleans.

## Supplies for Canal Work.

The following steamers arrived at the port of Cristobal during the week ending June 5, with supplies for the Isthmian Canal Commission.

*Prinz Aug. Wilhelm*, May 31, from New York, with 35 ranges for stock; 1,000 barrels cement for stock; 5 tons steel shafting for stock; 44 pieces boiler parts for Gatun and Miraflores boiler plants.

*Finnishbrook*, May 31, from Jacksonville, with 40,000 cross ties for stock; 150,303 feet yellow pine lumber for car repairs.

*Colon*, June 1, from New York, with 3,000 barrels cement for Gatun Spillway; 10 churn drills for Atlantic and Pacific Divisions; 80 tons steel plate for Gorgona shops; 1,000 kegs bolts and rivets for stock; 23 tons bar iron for stock; 26,000 electric fuses for stock; 36,000 feet tape fuse for stock, and a miscellaneous cargo aggregating 7,131 packages, weighing over 1,300 tons.

AT PORT OF BALBOA, *Erna*, May 31, from Seattle, with 11 spud timbers for dredges; 1,064,411 feet Douglas fir lumber for car repairs.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of May is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed description of the progress of Canal work in all departments and divisions.

#### Naos Island Breakwater.

A portion of the breakwater that is under construction to Naos Island gave way on Saturday night, June 5, at a point where it crosses the old French canal,  $1\frac{1}{4}$  miles from the mainland. The break was due to a sliding movement in the thick deposit of mud, 30 feet deep, that underlies the fill, and extended a distance of about 135 feet. Twelve bents in the trestle were moved 150 feet to one side. Minor slides have happened before causing temporary interruptions, but no extended delays have occurred since the dumping of material began in October, 1906. The work of redriving the piles was begun on Thursday, June 10, and with the broadening of the fill at this point no further trouble is expected.

The breakwater now extends into Panama Bay for a distance of two miles, and about one more mile of fill will complete it to Naos Island. Where the trestle now ends, the water is 15 feet deep at high tide, and the depth between this point and the island varies from 20 to 25 feet at high tide. The deepest water encountered was in the old French channel where it was 35 feet at high tide. The maximum amount of material dumped on the breakwater on days when no interruptions occur is about 2,500 cubic yards. The pile-driver which was recently damaged by fire while at work on the trestle, will shortly resume operations, supplanting the pile-driver now in use. The former machine is capable of driving four bents a day, as compared with three bents a day by the other.

The filling in of a 4-track yard at No. 5

dump, west of the trestle has been begun. This will enable the handling of material closer to the trestle, thereby making a shorter haul. Track-laying has also been started, preparatory to rapping the sea front from Balboa to the land end of the trestle, and from there along the seaward side of the trestle to the Island. Only selected rock will be used for this purpose.

#### Steamship "Tremont."

The steamship *Tremont*, one of the vessels that has been added to the fleet of the Panama Railroad Steamship Company, will sail from New York on June 23, and will be due at Cristobal about July 1. She will bring 25,000 barrels of cement for the Gatun Locks, and four knocked down barges, each of 400 cubic yards capacity, for use in hauling sand from Chamé to Balboa, in the Pacific Division. It has been decided that both the *Tremont* and *Shawmut* will carry passengers, but arrangements in that respect have not yet been completed.

#### Enlargement of Dock No. 1, Colon.

According to present plans, Dock No. 1, Colon, will be temporarily used by the new steamships *Shawmut* and *Tremont* in landing their cargoes of cement. The dock has been put in thorough repair, and enlarged by a 310-foot extension at its eastern end, supported by closely-driven piling. Some additional piling has also been placed under the old part to strengthen it. The platform of the extension is 36 feet wide where it joins the old part, and narrows to 27 feet 6 inches at the eastern end, its construction conforming to the bend in the railroad track alongside. The height from platform to roof plates is 17 feet, and to ridge, 23 feet. The roof overhangs the railroad track 12 inches, and the landing platform, 10 feet. The platform is 4 feet 6 inches above the track, and has a 15-inch clearance from cars. The roof supports are so placed as to permit the "spotting" of cars between them. The water alongside the dock is 33 feet in depth, and the distance between Docks 1 and 2 is sufficient to accommodate vessels of the *Shawmut* class, and a barge at the same time. A large proportion of the cement will be unloaded directly into barges for transportation to the Gatun handling plant.

#### Additions to Dry Dock Plant.

The boiler and machine shops at the Cristobal dry dock plant are being enlarged by extending each building 110 feet in length, and 50 feet in width. Both extensions are frame structures, sheathed with corrugated iron, and are about 40 per cent completed. The building in which the boiler room of the plant is located has been torn down, and a new frame structure is under construction in its place.

Additional machinery is to be installed in both boiler and machine shops. The more

important additions to the boiler department include a rotary splitting shear, a 60-inch throat combination punch and shear, and a horizontal punch pneumatic riveter. In the machine shop there will be installed a new vertical boring mill, horizontal boring mill, slotter, iron planer, three engine lathes, turret lathe, and brass lathe. The equipment of the wood-working establishment will also be increased by the addition of a boring and mortising machine. Another air compressor has been ordered for the plant, which, when installed, will furnish an equipment of two compressors, each having a capacity of 1,250 feet.

#### May Weather Report.

The meteorological report for May shows that the mean temperature for that month was higher on the Atlantic side of the Isthmus than on the Pacific side, the first time that such has been the case since observations were begun by the Commission. The mean temperature at Cristobal was 79.8 and at Ancon 79.4. The maximum temperature at each place was 90 degrees; the minimum at Cristobal was 72, and at Ancon, 70; the greatest daily range in temperature was the same in each town, 17 degrees. The temperature of the interior was about the average for that section. The highest temperature in the sun at Culebra was 105 degrees on May 15. The lowest temperature at Culebra was 68 degrees on May 18. The greatest daily range at that place was 22 degrees. The rainfall was below the average, except on the Pacific coast and along the Chagres River above Matachin.

#### Operations at Gatun.

One of the upper lock chambers at Gatun is nearly ready for the placing of concrete. The setting of anchorages is going forward at the rate of 25 anchors per day. Excavation for the curtain wall is in progress. All of the operating machinery in the head towers of the lock cableway has been installed and five of the eight main cables spanning the Locks have been swung. Two of the three unloading cableways are practically completed, and the north cableway, No. 3, is in use transferring rock from the barges to the storage pile. The towers on this cableway are equipped with electric lights for night work. The cableway is operated temporarily by power generated at the boiler house on the east side of the lock site. Approximately 10,000 cubic yards of rock were placed in the storage pile up to June 14.

On the industrial electric road, third rail system, about three quarters of the track has been laid, and one-half is ballasted and ready for the placing of the third rail. Twenty-four flat cars and 12 electric locomotives for use on this road have been set up, and are ready for operation. On the automatic electric road most of the four tracks have

## NOTES OF PROGRESS.

(Continued.)

been laid, and the placing of chairs for the two-current rails is in progress. The sand, stone, and cement valves for use under the storage piles are being placed in position.

In the mixer building the main driving motors and accessory machinery have been installed, the machines have been tested and adjusted and they are now ready for making concrete. The 100,000-barrel cement shed is finished, and the installation of ten 3-motor electric traveling cranes is under way. Two of the cranes will be ready for operation this week, while the other 8 will be completed within the next 30 days. The first shipment of cement, due at Cristobal about July 1, amounting to approximately 25,000 barrels, will be unloaded into the two south panels of the shed.

The power house building is finished, with the exception of placing glass in the windows. Work in the turbine room is nearly completed; the electrical apparatus for one of the turbo-generators will be ready for operation by July 1, and the installation of the main steam pipe lines and auxiliary apparatus is in progress. The work of installing the first boiler setting and induced draft apparatus in the boiler room is under way. The two boilers in this setting have been swung, a superheater placed, and the brick work is over half finished.

Construction is in progress on the two 250,000-gallon oil tanks to be used in supplying oil to the boilers. One tank is set up and the foundation and bottom plating for the second tank are finished.

## Statement of Cranes.

The following statement shows the number and distribution of locomotive cranes in the service of the Isthmian Canal Commission and Panama Railroad Company, as of May 31, 1909.

	4-ton.	10-ton.	12-ton.	15-ton.	20-ton.	25-ton.	70-ton.	100-ton.	Total.
Atlantic Division.....	..	..	..	1	7	1	..	..	9
Central Division.....	..	1	1	2	1	1	1	1	8
Pacific Division.....	2	..	1	..	..	..	..	..	4
Q. M. Department.....	..	1	..	1	2	..	..	..	4
Mechanical Department..	3	1	..	2	..	2	..	..	8
Panama Railroad Co....	1	1	..	3	..	..	..	..	5
Total.....	6	4	2	6	14	4	1	1	38

In addition to the above, the Pacific Division is using a derrick crane made at the Gorgona shops. Three more 20-ton cranes have been ordered from the States.

## May Money Order Business.

During the month of May, 1909, the sixteen post-offices in the Canal Zone where a money order business is done, sold 14,767 money orders, aggregating \$416,753.76. This is a decrease in the number of orders from April, of 663, and in value of \$21,827.23. Of the May business, \$307,177.54 represented orders drawn payable in the United States and elsewhere, and \$109,576.22 in orders payable in the Canal Zone. The fees collected amounted to \$1,752.56. The orders paid and repaid amounted to \$144,542.88, including \$1,269 representing invalidated money orders paid by the Treasurer.

In the number of orders drawn, Cristobal was first, with 2,982; Empire second, with

1,554, and Gatun third, with 1,497. In the total value of orders, Cristobal was first, with \$89,153.77; Gorgona second, with \$48,748.99, and Empire third, with \$39,830.49. Of the amounts payable in the United States, Cristobal was first, with \$76,398.01; Gorgona second, with \$33,333.98, and Empire third, with \$31,560.82. In orders payable in the Canal Zone, Gorgona was first, with \$15,415.01; Cristobal second, with \$12,755.76, and Pedro Miguel third, with \$9,186.77. Of the amount paid and repaid, Cristobal was first, with \$23,330.42; Gorgona second, with \$17,444.81, and Empire third, with \$15,691.34.

The average of all orders issued was \$28.22. The highest average was at Las Cascadas where 710 orders were issued, amounting to \$24,809.03, an average of \$34.98; the lowest at Ancon where 1,440 orders were sold, aggregating \$28,689.37, an average of \$18.53.

## Another French Vessel Recovered.

An old French tug, known as No. 18, has been raised from among the sunken hulks in Folks River and transported to the Cristobal dry dock, where it will be overhauled and put into condition for service. The name plate on the vessel shows that it was built in 1884 by the Lobnitz Shipbuilding Company, of Renfrew, Scotland, the makers of the rehabilitated hopper barge, now in use by the Pacific Division, which was described in *THE CANAL RECORD* of October 30, 1907. The tug was afloat about two and one-half years ago, when it filled during a period of heavy rains, and sank. It is 75 feet in length, has a 15-foot beam, and is in a fairly good state of preservation. The hull was reconstructed in 1897, and beyond scraping

and painting, few repairs will be necessary. It is equipped with a compound condensing engine, of approximately 150-horsepower, and both engine and boilers will be serviceable after overhauling, and the replacing of certain parts. The Folks River magazine contains a large quantity of spare machinery parts for vessels of this type, which will make the cost of refitting, in material, inconsiderable.

## Water Coolers on Locomotives.

The Chairman and Chief Engineer has issued a circular letter, dated June 9, 1909, to the division engineers of the three construction divisions of the Canal work, directing them to install water coolers, of suitable size, for drinking water on all locomotives that are moved outside the limits of the various railroad yards in the Canal Zone.

## Dikes at Matachin Blown Up.

The dikes in the Canal cut at Matachin were blown up on Sunday afternoon, June 6, but owing to the low stage of water in the Chagres River, the river maintained its old course until June 9, when there was a 14-foot rise in the river, which poured through the openings in the dikes and flooded the cut in the completed section. A fill is being made across the old bed of the river, which will turn the full flow of water into the new channel.

## A Record Walk Across the Isthmus.

Edward Silvey, a clerk in the Department of Civil Administration, walked across the Isthmus on Decoration Day in 12 hours and 15 minutes. He started at 1.25 a. m. from Panama and reached Cristobal at 1.40 p. m. He followed the line of the Panama railroad.

## LABOR FORCE FOR MAY.

The report of the Chief Quartermaster for the month of May shows that the number of Isthmian Canal Commission employes actually at work on May 26, was 26,294, of whom 4,262 were "gold" employes, and the remainder were on the "silver" or labor roll. The Panama railroad force was 5,600, and the Panama railroad commissary force numbered 765. Thus the total number of persons at work on the Canal and railroad on the 26th day of May was 32,699. This is a decrease of 1,040 from the total number reported on April 28, which was 33,669, the largest force ever at work in the history of the Panama Canal, either since American occupation or during the French régime. The combined Commission force alone on that date numbered 26,835, the largest number of persons ever at work for the Com-

mission. During May 303 people were added to the "gold" roll and there were 271 separations, the net increase in the force being 32.

The number of family quarters occupied by "gold" employes was 1,504, and the occupants numbered 4,487; bachelor quarters by "gold" employes, 2,060, and the occupants numbered 3,544, of whom 123 are women, and 173 are men living in fire stations, etc., which are not considered regular quarters. The family quarters occupied by West Indians numbered 957, and the occupants 3,233; bachelor quarters, 243; number of occupants, 4,613. The family quarters occupied by European laborers numbered 265, and the occupants 885; bachelor quarters, 125; number of occupants 4,625.

A statement of the force actually at work on May 26, 1909, follows:

DEPARTMENT.	Gold Men.	SILVER MEN.								Total Gold and Silver Men.
		Monthly.	Artisans.		European Laborers.		West Ind'n Laborers.		Total Silver.	
			32 cents and over.	26 cents.	40 cents.	32 cents.	26 cents.	20 cents.		
Construction and Engineering.....	3,155	2,522	3,387	590	3,533	331	2,660	4,684	17,707	20,862
Department of Civil Administration.....	341	170	2	.....	2	16	1	10	200	541
Department of Sanitation.....	359	598	81	.....	.....	.....	3	195	875	1,234

Totals.....	4,262	5,015	3,940	591	3,817	359	2,664	5,646	22,032	26,294

Panama railroad force, 5,600; Panama railroad commissary force, 765.

## TELEPHONE IMPROVEMENTS.

### Additional Facilities at Gatun and Culebra.

A new pole line has been constructed by the telephone and telegraph department of the Panama Railroad Company, between Mindi Junction and Tiger Hill, a distance of about  $4\frac{1}{2}$  miles, which includes 6 No. 9 and 18 No. 10 hard drawn B. and S. copper wires. It leaves the old line at the junction, runs through Gatun, and connects with the old line at Tiger Hill. The section from Gatun to Tiger Hill will be used only until the completion of the Panama railroad relocation, when the permanent telephone route will parallel that track. A new 100-drop common battery and a 20-drop Magneto combination switchboard is being installed at the Gatun exchange. The exchange is at present located in the office building of the Atlantic Division, but as soon as the improved equipment is ready, the cut-over will be made to the building formerly used as a fire station, on the east side of the railroad.

Additional facilities, consisting of a new 60-drop common battery and 60 drop Magneto combination switchboard, have been installed at the Culebra exchange, which will about double the present capacity. As Culebra is the main trunking point of the entire telephone and telegraph system, it has been decided to establish wire chief headquarters there, instead of at Colon, the change to be made at an early date. This will greatly facilitate making service tests and clearing troubles. About 1,000 feet of telephone line is being moved from the east to the west side of the track at Buenavista, to enable the Central Division to start excavation operations at that point.

A graphical statement has been prepared showing a comparison between the cost of telephone operation by the Panama railroad with the charge for service by standard systems in the United States. During the period of 24 hours, from 7 a. m., May 10, to 7 a. m., May 11, there was a total trunk line mileage of 135,180 miles transmitted through the various exchanges comprising the system. In addition, there were 7,804 local calls handled during the same period. The standard commercial rate charged for toll line service in the States is  $\frac{2}{3}$  cents per mile, while the cost covering all construction, maintenance and operating charges of the department on the Isthmus, shows a comparative rate of approximately \$.0015 per mile. Between the hours of 10 a. m., and 11 a. m., on May 10, approximately 18,000 trunk line miles were operated, and on the basis of  $\frac{2}{3}$  of a cent per mile the charge would be \$120. The actual cost upon the Isthmus, was but \$28. The average cost per local call was approximately \$.0075, the greatest number of local calls being between 4 and 5 p. m., when 925 were transmitted through the various exchanges.

### Piece-of-Eight.

Thomas Walsh, steward on the suction dredge *Culebra*, is the owner of an old seventeenth century Spanish coin called by the English of the time a "piece-of-eight." The histories of the buccaneering expeditions of three centuries ago make frequent mention of this coin, and in Panama, as elsewhere on the Spanish Main, it seems to have been the principal subsidiary piece of money

in circulation. The coin is of pure silver, octagonal-sided, from which shape it appears to have derived its name, and represented in value, during the period of its circulation, eight Spanish reals, about 40 cents United States currency. The coin owned by Mr. Walsh evidently has a history, for it was found lodged in a joint of the suction pipe of the *Culebra*, and was drawn up from the bottom of Panama Bay.

### Bolt Extracting Device.

A bolt extractor has recently been manufactured at the Gorgona shops for use in extracting bolts from the floor of Lidgerwood flat cars undergoing heavy repairs. The machine consists of a cylinder made of a 12-inch length of 8-inch wrought iron pipe, bored and turned true, with a head in each end; top head tapped for  $\frac{1}{2}$ -inch pipe connection and bottom head equipped with a stuffing box and tapped for  $\frac{3}{4}$ -inch pipe connection, heads being fitted to cylinder with 16 threads per inch by  $\frac{1}{2}$ -inch deep in cylinder. The piston head is made of wrought iron forging, faced and turned to fit cylinder, with a leather cup and follower of  $\frac{1}{2}$ -inch boiler plate attached, and is also threaded to fit piston rod. The piston rod is made of 2-inch round, cold rolled steel, 14 inches long, bored to  $1\frac{1}{2}$  inches,  $6\frac{1}{2}$  inches deep in each end, leaving a wall of 1 inch in the center, with a 5-16-inch hole through, and countersunk on top side for a steel ball, which is prevented from coming out by a cap placed in top of bore. This ball is necessary to keep the compression in the cylinder from interfering with the operation of the hammer in piston rod.

A  $1\frac{1}{2}$  by 5-inch hammer is contained in bottom of piston rod, operating automatically, with a  $1\frac{1}{2}$ -inch stroke, the rod being tapped for air connection,  $1\frac{1}{2}$  inches from bottom. The head for bottom of rod is made of  $2\frac{1}{2}$ -inch round machine steel 3 inches long, tapped in one end to fit piston rod, while in the other a T slot is cut and beveled out to slip over the head of bolts.

The piping from top of cylinder is arranged respectively as follows: A  $\frac{3}{8}$ -inch by  $\frac{1}{2}$ -inch bushing,  $\frac{3}{8}$ -inch street elbow,  $\frac{3}{8}$ -inch by  $1\frac{1}{4}$ -inch nipple,  $\frac{3}{8}$ -inch female elbow,  $\frac{3}{8}$ -inch by  $2\frac{1}{2}$ -inch nipple,  $\frac{3}{8}$ -inch female union,  $\frac{3}{8}$ -inch by  $1\frac{1}{2}$ -inch nipple, 3-way specially made valve, 2-inch reservoir,  $\frac{3}{4}$ -inch tee, with a nipple and street elbow connection to bottom of cylinder; a bushing and a hose, making connection at bottom of piston rod to operate the hammer.

The cylinder is supported by two pieces of T iron tied together at the top by T iron of the same size, and at the bottom with  $\frac{1}{2}$ -inch flange, made of boiler plate and cut out in center to clear piston rod. A flange of  $\frac{1}{2}$ -inch boiler plate is attached to bottom of cylinder and slotted a sliding fit on T iron, the cylinder resting on two triangles, which the flange on T iron is notched to fit at two places 10 inches apart, thus allowing the cylinder to be raised in frame, and making it possible to extract a bolt of twice the length of the stroke of the piston. The cylinder may be raised with piston resting on bolt by admitting air into the top of cylinder.

Suitable handles are attached to the T iron, low enough to clear the triangles when in lower notch. One man can extract one 10-inch bolt every two minutes; two men

one each minute. One of the time-saving features of this machine, over a jack, lies in the fact that it takes about the same length of time to raise the jack with a comparatively loose bolt as with a tight one, this machine pulling a loose bolt instantly. Another is that this machine pulls directly over the bolt, having a tendency to straighten and not to bend the bolt. The machine weighs 80 pounds complete, and is operated by compressed air at 80 pounds pressure.

### Obituary.

John R. Morris, a locomotive engineer, was killed in a railroad accident near San Pablo on June 9. He was a naturalized American citizen, had lived on the Isthmus ten months, was 38 years old, and married. His widow Mrs. Kate Morris, resides at No. 24 Front Street, Schenectady, N. Y.

F. C. Howland died at Ancon Hospital on June 9. He was an American, 28 years old, had lived on the Isthmus 18 months, was married and his widow resides at Paraiso, C. Z.

James W. Barbour of New Haven, Conn., was accidentally killed at the Panama Railroad machine shops, Cristobal, on June 11. He had lived on the Isthmus three years and three months, was 27 years old and unmarried. His brother, Charles E. Barbour, lives at No. 80 Kensington Heights, Meriden, Conn.

Ernest H. Kingsley of Rocky Grove, Pa., was killed at Empire, on Sunday evening, June 12. He had lived on the Isthmus four years, was 28 years old and married. His widow, Mrs. Annie Kingsley, and two children reside at Culebra.

### Missing Men.

Information is desired in regard to the following persons:

Fred O'Brien, of Philadelphia, Pa., who has been missing for two years and who has been heard of in Panama.

William Wehowort, of Chicago, Ill., who disappeared from New York City in February, 1908, and is thought to have come to the Isthmus.

Any one having knowledge concerning either of these men is requested to communicate with the American Minister at Panama.

D. A. Fuller: For whom there are several letters, in the office of the Director of Posts, Ancon, postmarked Cleveland, Ohio, and addressed to Gorgona, C. Z., on one of which is written "Try and locate as father is very sick."

George G. Glane: Any one having knowledge concerning him is requested to communicate with F. H. Gilmore, House No. 64, Gatun.

### Fireworks for Palo Seco.

Mr. H. V. Garland, Superintendent of the Palo Seco Leper Colony, asks for contributions of fireworks for the Fourth of July celebration at Palo Seco. They may be sent in care of Dr. H. R. Carter, Director of Hospitals, Ancon.

### Card of Thanks.

Mrs. Daniel Kealy of Gorgona wishes to express her gratitude and sincere appreciation for the kindness and assistance given her by the Kangaroos, Red Men, and many other friends in her recent bereavement on the death of her husband.

## CANAL WORK FOR MAY.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., June 12, 1909.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of May, 1909:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry.....	Cubic yards.....	124,193	1,513,133	94,751	1,732,077
Work excavation, wet.....	Cubic yards.....	367,381		738,435	1,105,816
Total work excavation.....	Cubic yards.....	491,574	1,513,133	833,186	2,837,893
Plant excavation, dry.....	Cubic yards.....	5,202		27,154	32,356
Plant excavation, wet.....	Cubic yards.....	25,846			25,846
Total plant excavation.....	Cubic yards.....	31,048		27,154	58,202
Total Canal excavation.....	Cubic yards.....	522,622	1,513,133	860,340	2,896,095
Explosives used.....	Tons (2240 lbs)	69.30	251.60	22.65	343.55
Rock drilling.....	Feet.....	80,846	294,428	55,844	431,118
Track removed.....	Miles.....	12.70			12.70
New track laid.....	Miles.....	4.35	12.70	3.37	20.42
Material placed in dams.....	Cubic yards.....	284,967		81,710	366,677
Rock crushed.....	Cubic yards.....	23,560	8,500	3,552	35,612
Cement used.....	Barrels.....	12,150		576	12,726
Concrete placed.....	Cubic yards.....	11,030		1,215.50	12,245.50
New roads built.....	Miles.....	0.07	3.60	0.75	4.42
Water mains laid.....	Feet.....	7,889		157	8,046
Sewers laid.....	Feet.....	1,500	164	412	2,076
Open drains and ditches dug.....	Feet.....	1,900	2,540	1,663	6,103
Average daily force.....		5,407	9,743	3,630	18,620
Rainfall, average.....	Inches.....	8.98	7.73	9.10	9.82
Wash drilling.....	Feet.....			245	245

## Atlantic Division.

## GATUN LOCKS.

**Cement Shed**—The construction of this building was continued, and the erection of the cantilever and portal trusses completed. All the cement hoppers, with their screens, were installed, and all of the runways for the ten electric traveling cranes were placed in position ready for bolting.

**Barrel Burning Plant**—During the month, the construction of this plant was completed, 10,000 fire bricks being laid.

**Industrial Electric Road**—The work on the subgrade of this road was continued, and 600 feet of roadbed completed. The contractor continued the work of laying track and, at the end of the month, 14,350 feet of single track were laid ready for ballast. Twelve electric locomotives were set up ready for operations. The contract, at the end of the month, was approximately 40 per cent completed.

**Automatic Electric Road**—Work was continued on the roof for covering the tracks of this road, 60 linear feet for two-track, and 100 linear feet for four-track roof, being completed during the month. The contractor on this road laid 6,100 linear feet of single track, and installed 8 cross-overs.

**Mixer Building**—During the month, the building proper was completed, and the work of lining up shafting was continued. Four 75-horsepower motors, and accessory apparatus, were installed. Other work consisted of the installation of belt shifters, adjustment of the mixers and installation of the water supply.

**Oil Tanks**—During the month, the concrete footings for two 250,000-gallon oil tanks were completed, and 176 cubic yards of concrete placed.

**Cableway Towers**—The installation of ma-

chinery in duplex unloading cableway No. 3 was completed, and unloading operations were commenced. During the month, six barges, approximating 3,900 cubic yards, were unloaded. Work was continued on unloading cableway No. 2, and during the month the installation of the main machinery was completed. The erection of the head and tail towers of the Lock cableways was completed during the month, with the exception of placing the counterweights on the head towers of cableways Nos. 3 and 4. The main operating machinery for these cableways was 90 per cent completed during the month.

**Lock Floor Anchorages**—The placing of the anchorages for the lock floor in the first chamber of the upper lock on the east side was commenced, and 15 anchors were set.

**Power House**—Work was continued on the installation of the turbine room machinery, and at the end of the month, turbine No. 1, was 97 per cent completed; turbine No. 2, 90 per cent completed; and accumulator, 85 per cent completed. The traveling crane was completed and operated during the month. Practically all of the material to be furnished on the boiler contract, with the exception of the piping, was received during the month.

**Drafting Room**—The designs of miscellaneous details in connection with the mixer building, cement shed, approach trestle, barrel burning plant, sawmill, forms for openings in Lock floors, were continued.

## GATUN DAM.

Construction during the month increased the total fill by 284,967 cubic yards, making the amount at the end of the month 2,577,122 cubic yards. The amount of fill reported represents the volume occupied by the material after it has been placed.

**Stripping**—Before flooding Gatun Islands, a number of patches of vegetation, which had grown up after the original stripping, were dug out. The stripped area, amounting to 191.2 acres, was not extended during the month.

**Clearing**—Clearing was continued ahead of dredges No. 82 and No. 83, amounting to 5.3 acres, of which 2.7 acres were grubbed. The total amount of clearing for this purpose amounted to 78 acres at the close of the month.

**Hydraulic Fill**—Dredge No. 82 was received from the drydock, where she was

undergoing repairs, on May 14. To the end of the month her output, through 2,000 feet of pipe with a lift of 28 feet, amounted to 55,645 cubic yards net, which was pumped from borrow pit No. 1 on the east of the Chagres River. Dredge No. 83 continued pumping into the Dam, the net output during the month being 72,160 cubic yards, which was discharged through 2,500 feet of pipe with a 28-foot lift. Nearly a week was lost by this dredge through the necessary installation of a new impeller and shaft. The total net hydraulic fill in the dam at the close of the month amounted to 487,559 cubic yards.

**Enrockments**—The material received from Bas Obispo, the Locks, and Mindi amounted to 157,162 cubic yards, which was placed on the north and south toes of the Dam. The total of dry fill at the close of the month was 2,089,563 cubic yards.

**Trestles**—The south toe trestle was extended 703 linear feet toward the west end of the dam. A new trestle on the north toe was begun on the northwest side of Spillway Hill, and extended 182 feet toward the West Diversion.

## GATUN SPILLWAY.

**Excavation**—Excavation included clearing up the floor by crane and by hand, and cutting the curtain trench at the south entrance by steam shovel. The material, amounting to 4,503 cubic yards in excavation and 5,629 cubic yards in embankment, was utilized for building the Spillway protection levee. The total excavation at the close of the month amounted to 1,290,545 cubic yards.

**Concrete**—Work was continued on the floor below the Spillway dam, 10,722 cubic yards of concrete being placed, the maximum daily output being 630 cubic yards.

## PORTO BELLO.

General miscellaneous mechanical, and repair work was performed during the month. Carpentry work and operations at the quarry were proceeded with, and the crusher produced 23,560 cubic yards of crushed rock during the month.

## NOMBRE DE DIOS.

The dredge *Chagres* continued the work of deepening the harbor and opening the channel to the sand zone for half the month, and the other half in deepening the entrance channel. During the month, 4,067 cubic yards of sand were shipped and delivered at the Gatun Spillway.

## Harbor and Channel Section.

**Dry Excavation Below Sea Level: Mindi**—During the month, 17,208 cubic yards of earth and 54,201 cubic yards of rock were excavated by two 70-ton Bucyrus and one Model 91 Marion steam shovels, an average of 23,802 cubic yards per shovel per month of 26 working days.

**Dredging: Ocean to Mindi**—Four dredges removed from the prism 278,886 cubic yards of earth and 36,484 cubic yards of rock. The dredge *Ancon* removed 2,910 cubic yards of earth at Pier No. 1, Colon, 158,588 cubic yards of earth from the approach channel to Cristobal Harbor, and 77,122 cubic yards of earth from in front of the Cristobal docks. The dredge *Mindi* removed 19,132 cubic yards of earth and 6,714 cubic yards of rock from the French canal, 15,519 cubic yards of earth from Pier No. 1, Colon, and 22,240 cubic yards of earth from in front of Pier No. 13, Cristobal. On May 31st, 40 feet of water

could be carried from 0 to Mile 2 plus 4,800 feet; 30 feet to Mile 3 plus 1,100 feet; 20 feet to Mile 4 plus 1,400 feet, and 10 feet to Mile 4 plus 4,900 feet, the end of the cut.

#### Municipal Engineering.

The usual work of this subdivision was satisfactorily performed during the month, and included work on the Mount Hope-Gatun Road, and water works at Gatun and Mount Hope. On May 7 the work of constructing a railroad to the reservoir site, which is to furnish a new water supply for Gatun, was commenced.

#### Building Construction.

The construction of the new commissary at Gatun was 60 per cent completed at the end of the month, and other building construction work was satisfactorily performed.

#### Central Division.

During the month of May, the total amount of material excavated in the Central Division was 1,513,133 cubic yards, of which 502,397 cubic yards were classified as earth and 1,010,736 cubic yards as rock. Of this quantity 1,499,946 cubic yards were removed by steam shovels, and 13,187 cubic yards by hand. The quantity of material removed from the Canal prism was 1,468,387 cubic yards, while 44,746 cubic yards were removed from the Obispo Diversion.

The daily average number of steam shovels at work during the month was 50.64, as compared with 55.40 for the month of April. For comparison with the work done by steam shovels during the corresponding month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Excavated by shovels	Classification of material.		Av. No. of steam shovels working during month	W'g. days in month	Av. amount excavated per shovel per 8-hour day.
	cu. yds.	Rock	Earth			
1908:						
May....	1,204,179	747,022	457,157	53.24	25	905
1909:						
May....	1,499,946	1,004,314	495,632	50.60	25	1,185

Rainfall at Empire: 1908, 12.91 ins.; 1909, 7.73 ins.

The above table shows that the average output per shovel day was nearly 31 per cent greater in May, 1909, than in the corresponding month of the previous year.

During the month 140,400 cubic yards of material excavated from the prism were transported to the relocation of the Panama Railroad at Caimito, Santa Cruz and Corozal, and dumped as filling in the embankment for the new roadbed, the total at the close of the month for this purpose being 1,129,246 cubic yards. During the month 27,790 cubic yards of rock from Bas Obispo were transported to Gatun and dumped on the toe of the Dam, the total for this purpose at the end of the month being 370,281 cubic yards.

At the Anchorage Basin at Gatun, trees were cut on 193 acres; timber cut, piled, burned and roots grubbed on 16 acres; and, in addition, 46 acres were grubbed and burnt over the completed area of the Alberts contract. In the channel clearing work at La Boca Trinidad, timber was cut, piled and burned on 76 acres. On the contract work with Charles Alberts, at Gatun, timber was cut on 94 acres, and timber was cut, piled and burned on 198 acres.

Work on the Empire suspension bridge

was continued during the month, the concrete anchorages and foundations of the towers being completed and work on the superstructure of the towers commenced.

The daily average number of laborers at work was 8,706.

#### Pacific Division.

##### DISTRICT NO 1—LOCKS AND DAMS.

The total excavation during the month amounted to 129,227 cubic yards in this subdivision.

At Pedro Miguel, in addition to the regular operations, work preparatory to the installation of the handling plant and of the concrete mixing plant for the lock floors was commenced.

At Miraflores, moderate progress was made in the work at the power house. Repairs to the suction dredge *Sandpiper* were not completed until May 18, and the operation of the dredge was seriously retarded after work was resumed, by the large percentage of rock boulders encountered.

##### DISTRICT NO. 2—DREDGING.

Seven dredges were in operation during the month, excavating material as shown in the following table:

Dredge	Type.	Cubic yards.		Remarks.
		In prim	Auxiliary	
Culebra	Suction	287,700	.....	Scow measurement
Gopher	Ladder	133,620	.....	Place measurement
Mole	Ladder	87,892	.....	Place measurement
Badger	Ladder	81,377	.....	Place measurement
Marmot	Ladder	66,910	.....	Place measurement
Dipper	Dipper	63,154	.....	Place measurement

The necessary maintenance of floating equipment was taken care of, and a large amount of other mechanical work was performed at the shops.

##### DISTRICT NO. 3—MUNICIPAL AND BUILDING WORK.

Municipal and building work was satisfactorily performed during the month, a large number of jobs being completed. The filtration plant, Ancon steam plant, and Rio Grande crusher were successfully operated. The Ancon reservoir was completed and work was continued on the Ancon corral, Corozal-Panama and Corozal-Miraflores roads. Certain maintenance work on waterworks and sewers was performed, and ditches and drains necessary for sanitary work were constructed and maintained.

#### Mechanical Division.

The manufacturing and repair work of this Division was satisfactorily performed during the month.

##### Relocation of Panama Railroad.

During the month, 161,414 cubic yards of material were excavated, and 332,527 cubic yards placed in embankment. At the close of the month, the total amount of excavation accomplished was 1,280,863 cubic yards, and the total amount of material placed in embankment was 4,497,680 cubic yards. The necessary work of constructing trestles for filling and the construction of bridges and culverts was continued.

Permanent track was laid in the Miraflores tunnel, 90-pound open hearth steel rails, creosoted cross-ties and crushed stone ballast being used.

During the month, 7,111 linear feet of permanent track were laid, making the total at the close of the month, 98,747 linear feet.

The force of laborers during the month averaged 1,862 men.

#### Quartermaster's Department.

During the month, there were 303 additions to the gold force, and 271 separations, making a net increase of 32. The combined force actually at work for the Isthmian Canal Commission and Panama Railroad Company on April 28, 1909, was 33,699, the largest in the history of Canal construction, under either the Americans or French. The force for the Commission alone on that date (26,835 men) was the largest number ever at work.

This increase was in West Indian employees. There was no corresponding increase in the gold force, but, on the contrary, a decrease. The gold force for the first four months of 1909 averaged almost 700 men less than for the same period in 1908. There has also been a decrease in the number of European employees. The employment of Europeans reached its maximum during the first six months of 1908, when the number constantly employed averaged over 5,000. Since that time there has been a steady decrease, and a marked decrease during the last sixty days. On May 19, 1909, there were 3,961 Europeans on the work, a less number than have been employed at any time since April, 1907, and over 1,000 less than the average during the early part of 1908.

Out of the total number of Commission gold employees not now occupying married quarters, only 13 per cent have signified their desire to secure such quarters by filing application for same, although the lists have been open to all without reference to date of entry into the service, since August, 1908. The relatively small number of applications appears to indicate that the change in the rules relieving the Commission of any obligation to supply family quarters to men employed on or after January 1, 1908, has apparently had the effect of confining employments since that date largely to bachelors.

Under the system of contracting for one year for all standard supplies, to apply on the fiscal year 1909-1910, advertisements have been issued covering all classes of material, and contracts have been made for a large proportion thereof. The prices obtained, and the cooperation manifested by all concerned, indicate that the plan will be a success, although, as was expected, its inauguration has developed minor difficulties. It is, however, apparent that the experience in this direction gained this year will be very valuable in contracting next year for material and supplies.

#### Subsistence Department.

The operation of the Hotel Tivoli during the month showed a loss of \$351.24. There was a loss of \$1,402.66 on the line hotels, and a profit was made on the operation of the kitchens and mess halls. The net operations of the Subsistence Department for the month showed a profit.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court was not in session during May. In the Circuit courts, 11 civil and 25 criminal cases were disposed of, and in the district courts, 81 civil and 577 criminal cases were disposed of.

#### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues of the Canal Zone in

May aggregated \$19,798.56. The general revenues (included in total revenues) amounted to \$12,278.59.

The postal revenues were \$5,756 on account of stamp sales, \$11.41 on account of newspaper postage, and \$1,752.56 on account of money order fees. Money order sales during the month amounted to \$416,753.76, of which \$307,177.54 was payable in the United States and foreign countries and \$109,576.22 in the Canal Zone. Sixty-nine dispatches of mail were made to foreign ports by the Cristobal exchange office.

Twenty-six vessels entered at and 23 cleared from the port of Ancon, and 15 vessels entered at and 15 cleared from the port of Cristobal.

#### DIVISION OF POLICE AND PRISONS.

On May 7 Joaquin Segrera, Colombian, was hanged at the Culebra penitentiary. Segrera was convicted on February 4, 1908, in the Circuit Court for the Second Judicial Circuit of the Canal Zone, of murder in the first degree, and was subsequently sentenced to be hanged on September 18, 1908, but by various reprieves, his execution was postponed until the date mentioned.

A riot occurred at Colon on May 10, in which two persons were killed and several injured. At about 6.20 p. m. Panamanian police arrested a Jamaican on Bolivar Street near the Zone boundary. The Jamaican broke away from the police and ran across the boundary into the Canal Zone. A large number of West Indians had gathered and followed the Jamaican into the Zone, when a Panamanian plain-clothes officer drew a revolver and fired several shots in the air; and a riot was precipitated. The Zone police were promptly on the scene and quelled the disturbance in a few minutes.

The number of arrests during May was 607, as compared with 457 in April. The total effective strength of the police force on May 31 was 173 officers and men, and the total force of the Division on that date aggregated 250 officers and men.

There were 149 prisoners confined in the district jails at the close of the month. Eight convicts began penitentiary sentences during the month, 9 were discharged at the expiration of their sentences, and on May 31st, 117 convicts were confined in the penitentiary.

#### DIVISION OF PUBLIC WORKS.

The usual business of this Division was conducted during the month. The amount of water consumed in Panama during May was 28,631,000 gallons, and in Colon the amount consumed during the month was 19,107,300 gallons.

#### DIVISION OF FIRE PROTECTION.

Three alarms of fire were responded to by the Canal Zone Fire Department during the month, one at Colon, one at Cristobal and one at Gorgona. The two fires at Colon and Cristobal involved Commission property valued at approximately \$40,000, the damage amounting to \$55. The fire at Gorgona occurred in a private building, practically no damage resulting.

#### DIVISION OF SCHOOLS.

The total enrollment in the white schools during the month was 647, and the average daily attendance 553. In the colored schools the total enrollment was 1,286, and the average daily attendance 716.

#### Department of Sanitation.

A comparison of the general statistics with those of any preceding May during American control indicates very satisfactory progress in sanitation. The annual death rate from all causes for white employes was 14.11 per thousand, and for colored employes the annual death rate was 7.87 per thousand. The death rate for all employes was 9.45 per thousand. The annual death rate for the total population of the Canal Zone and the cities of Panama and Colon was 15.77 per thousand. Among white employes for the month the number of deaths from all causes was 14; of these, 4 were from disease and 10 from violence, or an annual average per thousand of 4.03 from disease and 10.08 from violence. Among colored employes for the month, the total number of deaths from all causes was 23, 17 of which were due to disease and 6 from violence, or an annual average per thousand of 5.82 from disease and 2.05 from violence. Of the deaths from violence, 7 were from railroad accidents and 4 from accidental drowning.

No case of smallpox, plague or yellow fever originated on the Isthmus during the month. The last case of yellow fever developed in May, 1906, and the last case of plague in August, 1905.

Respectfully,  
GEO. W. GOETHALS, *Chairman.*

#### Ancon Dairy Operations.

The Ancon dairy produced a total of 63,160 quarts of fresh milk for the 12 months ending April 30, 1909, or an average of 173 quarts for each day of the year. This quantity of milk was obtained from about 50 cows. The herd at the present time numbers 73 milch cows, mostly Jerseys; one Jersey bull, and one bull of mixed breed, and 11 heifer calves.

The plant has recently been considerably enlarged by the erection of a new stable containing 59 ordinary stalls, four box stalls, one stall for the bulls, and one for the calves. The building also contains a feed room, quarters for two employes, and a bath room. The old French building formerly used as a cow barn, has been put in thorough repair, and provided with 32 modern stalls. The floors of both stables are of cement. Six men are employed at the dairy, their duties consisting of milking, looking after the animals and keeping the premises in good condition. The cow tick has proved a troublesome pest and has to be continually guarded against. Mosquito oil is principally used in its extermination.

The cattle are fed on cotton seed meal, hulls and bran in proper proportions, but no hay is given. They have the run of the pasture adjoining the dairy, but although they find fairly good grazing in the rainy season, no marked increase in the yield of milk is shown, the local grasses lacking milk-producing qualities. This is evidenced by the fact that during the four principal months of the dry season when the grazing was poor, and the animals depended almost wholly on imported feed, the output was 21,737 quarts, as compared with 20,778 quarts during the four principal rainy months. Very few of the cows at Ancon dairy are fancy milkers, the daily yield per cow varying from 8 to 18 quarts, the latter amount being the maximum. The mortality in the herd since the establishment of the dairy has been light,

only seven having died. The output for the year ended April 30, 1909, operative cost, and average cost per quart, by months, is as follows:

MONTH.	No. of quarts.	Cost of operation.	Cost per quart.
May, 1908.....	4,114	\$305.23	\$0.075
June, 1908.....	5,322	329.09	0.06
July, 1908.....	6,289	412.00	0.065
August, 1908.....	5,594	448.15	0.08
September, 1908.....	4,701	397.08	0.085
October, 1908.....	5,196	393.50	0.075
November, 1908.....	5,287	381.04	0.072
December, 1908.....	5,607	393.09	0.07
January, 1909.....	5,832	342.24	0.06
February, 1909.....	4,872	326.70	0.067
March, 1909.....	5,426	357.70	0.0659
April, 1909.....	4,920	399.66	0.0812
Total.....	63,160	\$4,485.48	0.071

#### Garden and Landscape Work.

Operations in the Commission truck gardens for the season of 1908-09 practically came to an end with the month of May. There is still a considerable quantity of produce maturing, but no new vegetable plantings were made, and the force was almost entirely engaged in landscape work. The continuance of excessive rains caused the output to fall below expectations, the value of the May crop amounting to \$615.65. Tomatoes suffered most from the wet weather. A greater variety of vegetables, however, was produced in May than in any previous month, including twelve kinds—tomato, eggplant, collard, bean, sweet pepper, green onion, lettuce, radish, okra, cucumber, parsley and papaya. The Empire garden recently produced a papaya weighing 16 pounds.

Eggplant has not done well, due largely to the depredations of the eel worm. A request has been made on the United States Agricultural Experiment Station of the Hawaiian Islands for seed of an Eastern species cultivated there, which it is claimed, the worm will not attack. The local Chinese gardeners are fairly successful in growing eggplant, but the soil in their gardens is of a clayey nature avoided by eel worms, which prefer light, porous soils. A clayey soil in this climate is not adapted to the use of modern garden implements, and for that reason is not regarded desirable.

The work of transferring the Ancon garden has been begun, 4,000 young plants having been transplanted. The task of accomplishing this transfer will take several months.

Landscape work, involving considerable hand grading, has been begun in front of the Disbursing Office at Empire. Filling and grading are also in progress at Mount Hope storehouse. The work at these places will be completed about the middle of June.

Landscape work continues at Mount Hope cemetery. A total of 1,829 plants were set out at Ancon, Corozal, Culebra, Gatun and Cristobal.

#### Murder Near Culebra.

Julio Hernandez, a Colombian living in the bush near Culebra was stabbed to death by José Ayala, a Panamanian ex-convict, on Wednesday, June 2. The affair occurred on a trail about two miles northeast of Culebra, and is supposed to have been due to jealousy. Information was furnished the Zone authorities by a boy who was an eye witness of the crime. Ayala was captured by the Canal Zone police on Wednesday, June 9, near the Black Swamp. He was headed for Colon where his wife resides.

## CENTRAL DIVISION.

## Steam Shovel Records for May.

During the month of May, the steam shovels at work in the Central Division excavated 1,455,200 cubic yards of material from the Canal prism, and 44,746 cubic yards from the Obispo Diversion. The following hand excavation was also accomplished: 12,844 cubic yards from the prism at Bohio, and 343 cubic yards from the prism at Gatun, making a grand total of 1,513,133 cubic yards for the whole Division. The total excavation for the same month in 1908 was 1,204,983 cubic yards, an increase of 308,150 cubic yards for May, 1909. For comparison with other high monthly records the following table is given:

DATE.	Prism.	Prism and Outside.
March, 1908 .....	1,540,497	1,615,118
October, 1908 .....	1,551,402	1,598,981
February, 1909 .....	1,546,008	1,644,636
March, 1909 .....	1,966,294	2,065,827
April, 1909 .....	1,722,442	1,798,454
May, 1909 .....	1,468,357	1,513,133

The high record for the month was made by shovel No. 265 (90-ton) working in the Empire District, which excavated 11,888 cubic yards of earth and 32,797 cubic yards of rock, a total of 44,685 cubic yards in 25 working days, an average of 1,784 cubic yards per day.

The best record for a shovel in the 70-ton class was made by shovel No. 122, working in the Bas Obispo District, which excavated 25,935 cubic yards of earth and 6,083 cubic yards of rock, a total of 32,018 cubic yards of material in 23 working days, an average of 1,392 cubic yards per day.

Shovel No. 262 (90-ton) in the Empire District made the high record for one day by excavating 2,903 cubic yards of rock and earth on May 8.

Shovel No. 128 (70-ton) working in the Bas Obispo District excavated 2,630 cubic

yards on May 7, the high record for one day for that class of shovel.

On May 12 the 15 shovels at work in the Empire District broke all previous records for districts by excavating 25,454 cubic yards, an average of 1,697 cubic yards per shovel.

Monthly records are computed by place measurement, while the daily records are based on car measurement. The best records for the month and for one day in each construction district are as follows:

## TABERNILLA DISTRICT.

Shovel No.	CUBIC YARDS.			No. of days at work
	Earth.	Rock.	Total.	
254 ....	38,725	5,281	44,006	25
131 ....	25,935	7,528	30,113	25

207	Empire .....	May 28.	Earth .....	2,540
213	Culebra .....	May 13.	Rock .....	2,520
227	Culebra .....	May 13.	Rock .....	2,440

## Baseball Season Closed.

The 1908-09 baseball season in the Isthmian League ended Sunday, June 13, with games at Gorgona and Ancon. Gorgona defeated Ancon in a featureless game by the score of 12 to 3, while Empire kept up its winning streak by beating the M. P. & M., 5 to 3. The game between Gorgona and M. P. & M. on June 6 has been declared a postponed, instead of a forfeited game. Official standing of the clubs is as follows:

	Played	Won	Lost	Percent
Empire .....	29	21	8	.724
M. P. & M. ....	28	13	15	.464
Gorgona .....	29	13	16	.448
Ancon .....	30	11	19	.367

## Concert by I. C. C. Band.

CULEBRA, C. Z.

Sunday, June 20, 1909, at 5.45 p. m.

## PROGRAM.

- 1 March—*Majestic*.....Braham
- 2 Selection—*The Prima Donna*.....Herbert
- 3 Characteristic—*Kerry Mill's Barn Dance*.....Mills
- 4 Overture—*Pot and Peasant*.....Suppe
- 5 Intermezzo—*Kisses*.....Hubbell
- 6 Suite de Ballet—*Antony and Cleopatra*.....Gruenwald
- 7 *Simple Aven*.....Thome
- 8 Tone Poem—*In Lovers' Lane*.....Pryor
- 9 Medley Selection—*Hits of 1909*.....Remick

CHAS. E. JENNINGS, Musical Director.

A concert will be given at Paraiso, Sunday June 27.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES, ANCON, C. Z., June 16, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Anderson, S. H.	Hernandez, Crucita
Andrews, Mrs. Geo. A.	Hudson, Florence A.
Bailey, C. C.	Hudson, Clara A.
Barnes, L.	Hudson, John E.
Bottner, John	Humphrey, J. H.
Cian, Campbell	Jenkins, Charles
Conrad, Miss Margaret	McGill, James (3)
Cornejo, J. O.	McNamara, James
Dorr, Mrs. Henry	Miller, C. O.
Dralston, Allman B.	Parker, M. O.
Fonesca, P.	Patterson, William
Fuller, D. A.	Rankin, A. M.
Fullerton, Alexander	Sharpe, Fred
Gavino, Castiglia	Sloan, Louis
	Woodsum, C. K.

## COMMISSION CLUBHOUSES

## Activities of the Young Men's Christian Association.

## REPORT FOR MAY, 1909.

Total membership	1,190
Total number of bowling games	4,898
Number different tournaments, billiard, pool, chess, etc.	6
Total number of tournament players	97
Total number of pool and billiard games	13,835
Total income from soda fountain	\$2,486.51
Number different men using gymnasium	106
Total attendance of men using gymnasium	605
Number enrolled in chess and checker clubs	45
Number enrolled in glee clubs	5
Number enrolled in camera clubs	80
Number enrolled in bible classes	52
Number enrolled in educational classes	18
Number of members in library	581
Total number of books withdrawn	1,474
Number of Sunday meetings	1
Attendance	150
Number of local entertainments	15
Attendance	2,950
Number of imported entertainments	3
Attendance	820
Number of functions outside association management	9
Attendance	950
Number of afternoons for women	12
Attendance	96
Number evening functions to which women were invited	29
Attendance	1,570
Different men on committees	32
Number of men called on in hospitals	180
Number of letters written at public tables	4,090
Total attendance at buildings	45,639
Average attendance per day	1,472

## BOYS' DEPARTMENT (AGES 10-16).

Number of members	63
Number of afternoons open to boys	46
Total attendance	535
Attendance at gymnasium exercises	352

The return engagements of the Weeks Entertainment Company at the clubhouses proved successful. The audiences were large and enthusiastic. Under the management of the Y. M. C. A., the Company appeared in the following towns where there are no clubhouses: Las Cascaidas, June 2; Gatun, June 3; Camp Elliott, June 4, and on June 5, through the courtesy of the Panamanian Government, an entertainment was given for the people of Panama and Ancon at the National Theater in Panama.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, June 12, 1909:

	STATIONS					
	Vigia.	Alhajuela.	Cannal.	Bohio.	Gatun (Canal).	Gatun (W. D.)
Height of low water above mean sea-level, ft.	125	92	46	1	0	0
Maximum height above mean sea-level, feet:						
Sunday, June 6	125.8	93.4	49.7	4.1	1.0	0.9
Monday, June 7	126.0	93.1	49.3	3.4	1.1	0.9
Tuesday, June 8	128.9	95.7	53.1	5.1	1.0	0.9
Wednesday, June 9	142.2	103.4	62.0	15.9	6.6	3.8
Thursday, June 10	129.1	95.6	55.0	16.2	7.7	6.2
Friday, June 11	134.6	98.6	50.1	7.9	4.6	4.0
Saturday, June 12	134.1	98.7	55.2	10.7	4.4	3.5

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending June 22, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.	P. M.
June 16	2.07	8.17	2.23	8.45	P. M.
June 17	2.58	9.08	3.13	9.34	P. M.
June 18	3.48	9.57	3.59	10.20	P. M.
June 19	4.34	10.44	4.46	11.07	P. M.
June 20	5.18	11.29	5.30	11.51	P. M.
June 21	6.02	12.16	6.16	12.36	P. M.
June 22	6.46	12.36	6.46	1.03	6.59

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## OFFICIAL CIRCULARS.

## Master Mechanic at Gorgona Shops.

CULEBRA C. Z., June 14, 1909.

Effective this date Mr. A. L. Robinson, in addition to his duties as Electrical Engineer, will perform the duties of Master Mechanic in charge of Gorgona shops and district, vice Mr. E. C. Cummings, resigned.

GEORGE D. BROOKE,  
Supt. M. P. and M.

Approved: GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Notice of Granting of Liquor Licenses.

In accordance with the resolution adopted by the Isthmian Canal Commission, the following applicants will be granted saloon licenses for the period July 1, 1909, to June 30, 1910.

## Rio Grande—

Kwong Chong.  
Yuen Lee.  
Kwong Chong Chang.  
Lee Hop.  
Wing Wo Yuen.  
Kwong Hing Jan.

## Culebra—

Pedro Colomar.  
Hip Woo.  
Wong You Kee.  
Sing On.  
Pow San Chong.  
Jean Murati.

HERMAN A. GUDGER,  
Acting Collector of Revenues.

## Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending June 12, with supplies for the Isthmian Canal Commission:

Tacuss, June 6, from New York, 6 churn drills for Central Division.

Sibiria, June 8, from New York, 3,500 barrels cement for stock.

Panama, June 8, from New York, 1,500 gallons lubricating oil for stock; 5,000 gallons dynamo oil for stock; 4,000 gallons hull paint for stock; 13 pumps for Balboa dredges; 1 garbage destructor for Empire; 48 tons material for Gatun and Miraflores handling plants; 17 tons copper wire and cable for Gatun handling plant; 10 flat cars, 3-foot gauge for Pedro Miguel locks; 23 packages, pumps and fittings for Central Division; 72 tons pipes and fittings for Central Division; 10 tons steel castings for Gorgona shops; 81 tons steel bolts and bars for Gorgona shops; 18 tons bolts for Empire and Gorgona shops; 2,000 barrels cement for Gatun Spillway; 5 tons rosin for manufacture of larvacide; and a miscellaneous cargo aggregating 11,501 packages, weighing over 1,800 tons.

Hirando, June 9, from Baltimore, 4,000 gallons linseed oil for stock; 10,000 gallons gasoline for stock; 3,000 gallons turpentine for stock; 4,000 gallons lard oil for stock; 698,000 pounds 45 per cent dynamite for stock; 320,000 pounds 60 per cent dynamite for stock; 453 tons wrought and cast iron pipe and fittings for stock; 55 tons vitrified sewer pipe and fittings for stock; 20,167 feet B. M. lumber for stock; 450 tons oats for stock; 16 tons castings for locomotive repairs, Gorgona shops; 5 tons axles, Empire and Gorgona shops; 1,000 car wheels, Gorgona shops; 59 tons castings for Mechanical Division; 19 motor cars for Gatun handling plant.

Cartago, June 10, from New Orleans, 333,785 feet B. M. Y. P. lumber for stock; 10,000 gallons kerosene oil for stock; 33,160 feet B. M. W. O. lumber for jack blocks for steam shovels, Central Division; 32,400 feet B. M. Y. P. lumber for Pacific Division, (sand bin, Balboa wharf); 5 tons castings for car repairs, Empire shops.

Gen. Henry W. Lawton Garrison, No. 40, Regular Army and Navy Union will hold a meeting, Tuesday night, June 22. Members are earnestly requested to be present, as matters of importance will be considered.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

Alii Iken	P. R. R. Saturday	June 12
Colon	P. R. R. Friday	June 18
Prinz Aug. Wilhelm	H. A. Saturday	June 19
Panama	P. R. R. Thursday	June 24
Magdalena	R. M. Saturday	June 26
Advance	P. R. R. Wednesday	June 30
Prinz Joachim	H. A. Saturday	July 3
Allianca	P. R. R. Tuesday	July 6
Orinoco	R. M. Saturday	July 10
Colon	P. R. R. Monday	July 12
Panama	P. R. R. Monday	July 19
Oruba	R. M. Saturday	July 24

Persons desiring to meet steamers at Cristobal should apply in advance of arrival at the Customs office, room 8, building No. 1, Cristobal, for customs line permits, which are necessary to obtain admittance beyond waiting room on pier 11.

All the steamers of the Hamburg-American and Royal Mail lines call at Kingston enroute to Colon.

## COLON TO NEW YORK.

Panama	P. R. R. Monday	June 14
Magdalena	R. M. Wednesday	June 16
Advance	P. R. R. Saturday	June 19
Prinz Joachim	H. A. Tuesday	June 22

Abangarez	U. F. C. Tuesday	July 13
Parismina	U. F. C. Tuesday	July 20
Cartago	U. F. C. Tuesday	July 27
Abangarez	U. F. C. Tuesday	Aug. 3

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Magdalena	R. M. Tuesday	June 22
Orinoco	R. M. Tuesday	July 6

Sailings of the French line (Cie. Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamer David of the National Navigation Company, will leave Panama, for David, province of Chiriqui, and intermediate points, on Thursday, June 17, and every alternate Thursday thereafter.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 1.30 p. m., via Port Limon for New Orleans.

## Proposals for Building.

Contract type-18 house. Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Monday, June 21, 1909, when they will be publicly opened, for the erection by contract of one type-18 house, Gatun, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$200 when contract is awarded, conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

C. NIXON,

Purchasing Agent on the Isthmus.

Lost—At Empire, a gold pin with a pearl in the middle. A reward will be given if returned to Mrs. J. E. Majott, House 163-B, Empire.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

**THE CANAL RECORD,**

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Obispo Diversion Completed.

The last steam shovel work on the Obispo Diversion was finished on June 1, and on June 3 the temporary outlet of the channel into Culebra Cut opposite Las Cascadas was closed. Since that time the water has been flowing into the Chagres river through the ravine half a mile above Gamboa Bridge. This makes a new permanent bed for the Obispo river and will keep the water on the east side of Culebra Cut, north of the divide at Culebra, from flowing into the Cut, both during the period of excavation and after the Canal is completed. It is  $5\frac{1}{2}$  miles long, not less than 50 feet wide at any point, and drains an area of 9.8 square miles, over which there are heavy rains during eight months of the year. This area was formerly drained by the Obispo River, and a discharge of 30,427,200 cubic feet was recorded in this stream on September 21, 1894.

The diversion begins at a point on the east side of the Cut, opposite Culebra near Gold Hill, and runs along the east side of the Canal, and practically parallel to it, to a point opposite Haut Obispo, where the channel of the river crosses the line of the Canal. Here the hills lie so close to the Cut that the diversion could not be constructed between them and the Canal, and therefore, the channel was carried through a saddle behind the hills.

The construction of the diversion involved about 1,078,000 cubic yards of excavation, the driving of sheet piling along 896 feet of dike, and the driving of 1.6 miles of trestles, from which dirt was dumped to make  $1\frac{1}{2}$  miles of dike. The work was begun in 1906, but was not pushed until October, 1908, and from that time not less than two steam shovels were on the excavation. To carry the channel behind the hill opposite Bas Obispo to the ravine above Gamboa required some heavy cutting. One cut is 97 feet deep and 250 feet wide at the top, and some of the most difficult work done in the

Canal construction, on account of the heavy grades encountered, was done on this part of the diversion.

An article on the drainage of Culebra Cut, which was published in THE CANAL RECORD of May 5, 1909, gives additional facts about the Obispo Diversion.

#### Rail for Reinforcing Lock Concrete.

In the construction of the locks, rail no longer fit for use on the railroads will be used as reinforcement for the concrete. About 7,000 tons of this rail, including old French track and American rail so badly bent that it is no longer useful as track, have been collected and stored at Empire shops. Some of the rails must be straightened before they can be used, and for this purpose a furnace for heating them is in process of construction near the shops.

The furnace is of brick with fire-brick lining, and the inside dimensions are 35 feet long, 10 feet wide and 3 feet high from the bed to the crown of the arch. In the back a large stack. Oil, delivered through eight burners using about 1,500 barrels a month, will be used as fuel. Steam for atomizing the oil will be supplied from the boiler of an old French locomotive. At one end of the furnace will be a bed of rails on which the bent rails will be delivered by a crane. From this bed they will be pushed into the furnace to be drawn out at the other end and deposited on a bench made of rails. They will then be hammered straight by laborers wielding heavy sledges.

An order has been placed at Empire shops by the Pacific Division for forty rails bent to various shapes for reinforcing the concrete in the locks at Pedro Miguel. This work will be done in the shop.

#### Gamboa Engine House and Yard.

An engine house and yard, for the accommodation of Central Division equipment used in hauling spoil from Culebra Cut to the dumps on the relocated line of the Panama railroad north of Gamboa Bridge, have been authorized and the plans have been approved. The location is Gamboa dump, about 1,100 feet east of the center line of the Canal, and 1,000 feet in the same general direction from Gamboa bridge. The new engine house will relieve the congestion at other points.

The building at Gamboa will be 180 feet long and 54 feet wide, and capable of housing 25 locomotives. The type of construction will be similar to the engine sheds at Las Cascadas and Pedro Miguel. The total trackage will amount to 7,660 feet, and will extend over 1,876 feet of the dump. The yard will consist of two repair tracks, with 28-foot centers; four main tracks, one outside and three inside the shed, a coaling track and coal incline. The middle or pit track in the shed will be laid over a pit 180

feet long, while a cinder pit, 40 feet long, will be located under the same track 250 feet away.

The plans also provide for an oil house, 16 by 16 feet, a combined office and storehouse, 11 feet 6 inches by 15 feet 6 inches, a sand house 10 by 20 feet, and a coaling platform 100 feet long, all of wooden construction. The coaling platform will occupy a natural gravity site on the side of a bluff just south of the engine house. It will be 10 feet above the loading track, the right height for easy coaling, and 6 feet below the unloading track, which will be in the form of a switch back up the side of the hill. The sand house will be similarly located.

The water supply will be pumped from water service lines already in operation into a 50,000-gallon tank connected with a stand-pipe in the yard by a 6-inch pipe. The work of grading and filling in the site of the yard has begun, and the erection of buildings will begin shortly.

#### High Water in the Chagres.

A freshet in the Chagres river on June 14 and 15 delayed work in the Central Division, where several steam shovels were flooded. The progress of the freshet from the time it passed Vigia, the first point of observation, until it passed Gatun is shown in the following table:

STATION.	Elevation of water above mean sea-level at beginning of rise.	Maximum rise—Feet.	Time crest passed.
Vigia .....	127.5	24.1	June 14, 8 p. m.
Alhajuela .....	94.8	14.8	June 14, 9 p. m.
Gamboa .....	49.9	17.5	June 15, 5 a. m.
Bohio .....	8.0	14.9	June 15, 2:30 p. m.
Gatun .....	4.4	7.0	June 15, 9 p. m.

The first warning of the flood was given to the Central Division at 4.30 p. m. on June 14, and to the Atlantic Division two hours later.

According to the French and American records there have been 26 freshets since 1885 whose crest at Gamboa was higher than that of the freshet of June 14-15. The highest water of record is that of December 3 and 4, 1906, when the crest of the flood at Gamboa was 35.6 feet above low water. The flood of November 6 and 7, 1904, rose to 18.7 feet above low water at Gamboa, and that of November, 1906, rose to 22.3 feet at the same point. The highest water recorded at Gamboa during the French occupation was 31.8 feet above low water on December 1 and 2, 1890.

At Bas Obispo on June 14, the water flowed over the dike into Culebra Cut and put steam shovels 210, 228, 229, and 263 out of service all day June 15. All the shovels except No. 228 were at work on June 16. No. 228 resumed digging a few days later.

## NOTES OF PROGRESS.

(Continued.)

The new pumps for the Cut at Bas Obispo have not been installed and the temporary pumping station has not the capacity to handle a large volume of water. It is expected that the new pumps will be in use in about three weeks.

It was expected that the water would rise above the top of the levee at the Santa Cruz cut, and as soon as the warning was received, the three 70-ton steam shovels at work there, together with the engines and cars, were moved to high ground. The water came within a foot of the top of the levee, but did not flow into the cut. The shovels will be left on high ground, however, and no further work will be done at Santa Cruz until the end of the rainy season. All the rock has been taken out and the remaining excavation is in earth, which is expensive to handle in the wet season. In the new channel at Matachin the water was 23 feet deep when the flood was at its height.

Excavation at Caimito is down to 39 feet above sea-level, and when the freshet was at its height six feet of water flowed through the cut. Four shovels were at work and all were obliged to suspend operations until the morning of June 16.

At Caño River, opposite Tabernilla, the water reached the loading tracks alongside the three shovels, and flooded the main tracks. All the shovels resumed work on the morning of the 16th.

## Steamships "Cristobal" and "Ancon."

The steamship *Shawmut* has been renamed the *Ancon*, and the *Tremont* is now the *Cristobal*. The *Cristobal* will leave New York on June 23 with passengers, 25,000 barrels of cement for Gatun Locks and Spillway, and miscellaneous cargo. It is expected that the trial trip will be made in seven days.

The passenger facilities of the *Cristobal* have been rearranged and those of the *Ancon* will be. The dining room for second class passengers has been turned into accommodations for first class passengers, and the capacity has been increased to 82 berths. On the bridge deck, forward, a social hall and seven staterooms with two berths in each room are located. On the same deck amidships are the dining room, smoking room, and fourteen staterooms, with two berths each. On the shelter deck are nine staterooms, with four berths each, and two staterooms, with two berths each.

## Pacific Division Sand Service.

The pile driving for the newsand dock at Balboa has been completed, with the exception of a few piles that are still lacking as supports for one of the sand bins. Two bins, each 16 feet wide, and 260 feet long, will be elevated above the floor of the dock to permit the discharge of sand, through hoppers, into cars. A traveling crane will operate on the outward side of the dock transferring the sand from barges to the bins. The ladder dredge *Gopher* will be put to work in the sand deposits at Chamé as soon as required. Six sand barges, each having a capacity of 500 cubic yards, have already been provided, and four more are expected about July 1. This service is expected to furnish four full barges of sand per day, and allow

of two being held constantly in reserve. A new tugboat for service between Chamé and Balboa has been requisitioned for. The sand deposits at Chamé have been thoroughly explored, and a practically inexhaustible supply of sand of good quality has been found.

## Gatun Hotel to be Enlarged.

Plans have been prepared and approved for an addition of 20 feet to the front of the first floor of the Commission hotel at Gatun, which faces the west, and of a 17-foot addition to the hotel kitchen. The addition to the front will run the entire length of the hotel, 101 feet. The front wall of the hotel will be removed, and the entire space converted into an open dining room, inclosed by screening only. The addition will increase the dining room floor space by about one-third. Additional improvements, including a new bake oven and ice box, will be made to the kitchen. Work will begin within the next two or three weeks.

## Extension to Gorgona Planing Mill.

The work of repairs to cars at the Gorgona shops has increased to such an extent that additional facilities were found necessary in getting out dressed lumber parts for repairs, such as end sills, longitudinal sills, etc. In order to handle this work, the planing mill has been extended 84 feet, which will afford protection to the employees who have heretofore been working in the sun and rain.

## Canal Medal Bars.

At a meeting of the Isthmian Canal Commission held on June 10, 1909, in deference to the wish expressed by a number of employees, the following order respecting the engraving of Canal medal bars was adopted: "That Canal medal bars be numbered consecutively to show the order in which each is earned, and that the years of service represented be also indicated thereon."

## Position of Pacific Division Dredges.

The ladder dredge *Marmot* on June 18 was working toward the locks about two miles above Balboa dock, cutting a channel 160 feet wide, and with a bottom depth of 25 feet below sea-level at mean tide. The ladder dredge *Badger* was at work 3,500 feet back of the *Marmot*, cutting to the line of the east side of the Canal, excavating a 33-foot face, and digging to the same depth as the *Marmot*. The dipper dredge *Cardenas* is working on the east side of the Canal 3,000 feet nearer the Balboa dock, and is accomplishing the same class of work as the ladder dredges, but making a narrower cut. The suction dredge *Culebra* is at work half a mile above the dock clearing out and completing the channel. The ladder dredge *Gopher* is excavating in the channel a mile out to sea, and will probably complete a section to a depth of 36 feet at mean tide, to Balboa dock by July 4. On June 1, the ladder dredge *Mole* was put to work two miles out, cutting off the berm on the east side of the channel, and in going over the bottom at low tide to clear off the ridges left by the *Culebra*. The dredge will then clean up the side and even up the bottom of the channel to the upper end of the dock. When this has been done, the *Culebra* will be able to begin excavating the remaining 9 feet to reach the bottom depth of the Canal. The three last miles of the channel at the

Pacific entrance are now 45 or more feet in depth, and but little dredging will have to be done in this section.

## First Panama Canal Concessionaire.

A dispatch from Toulon under date of June 15 tells of the death of Lient. Lucien Napoleon Bonaparte Wyse, the first concessionaire of the Panama Canal. After the Geographical Congress of 1876, an organization called the Société Civile Internationale du Canal Interocéanique was formed in Paris for the purpose of financing the proposed explorations and surveys for a canal across the American isthmus. Under the auspices of this Society, Lient. Wyse and Lient. Armand Reclus, both of the French Navy, went to the Isthmus in the latter part of 1876 or early in 1877 and for two years made extensive explorations and surveys. Besides his work in Panama, Lient. Wyse made reconnaissances in Darien, examining the routes from the Gulf of San Blas to Rio Bayano, and from the Bay of Acanti to the Bay of San Miguel. The project for a canal at Panama at sea level, submitted by MM. Wyse and Reclus to the Congress of 1879, was for a cut through the Chagres and Rio Grande valleys, and a tunnel through the continental divide from Las Cascadas to a point near Cucuracha. This plan was not adopted, but it was the one upon which the project adopted by the Congress was based.

In 1878 M. Wyse obtained a concession for a canal from the Colombian government in the name of the Société Civile, which after the organization of the Universal Interocéanic Canal Company (old French Company), was transferred to that company. After the failure of the old French company, M. Wyse went to Colombia for the Liquidateur, and obtained an extension of the concession. He also prepared a project for a canal with locks.

## Blasting Rock in "Patches."

Thirteen Star drills are at work preparatory to blasting the isolated patches of rock that occur in the Canal prism between Balboa, and a point one and one-half miles south of Miraflores Locks. These patches are found on both sides of the old French canal and vary in size, amounting in some places to 225,000 cubic yards. This rock varies in hardness. The French blasted through these smaller obstructions, but in the channel opposite Corozal, the limit of French dredging operations, the rock increases in quantity until it is almost a solid mass.

## Empire Incinerating Plant.

The site of the incinerating plant at Empire, which is in too close proximity to the living quarters, will be moved to a point between Lirio and Cerro. In addition, the plant will be enlarged by the installation of a new incinerator recently received from the United States. This machine was manufactured by the Moss-Bulger Destructor Company, of New York City, and has a capacity of 480 cubic feet of material per day. The old machine, which had a capacity of but 60 cubic-feet per day, will be put into service at another point in the Zone.

The new commissary building at Gatun is nearing completion, and work on installing the shelves and counters has begun. Work has also been started on one of the two type-18 married quarters recently authorized.

## SLUICING AND DREDGING.

## The Method of Excavating Below Miraflores Locks—Rock Excavation.

Excavation in that section of the Canal from the lower end of Miraflores Locks to a point about 1½ miles south will be done by two methods. The earth will be removed by dredge pumps, and the rock by steam shovels. To carry out this plan the Rio Grande will be diverted near Corozal and made to flow east of the present channel to a point about two miles south of the Locks, and a dam will be thrown across the channel of the river about 1½ miles below the Locks to keep tide water out of the excavation.

Bids have been requested for the dredging and accessory plant and it is expected that the materials will be delivered within six months. The dredging plan involves two operations, the first, that of sluicing the material into sumps, and the second, that of pumping it out of the sumps and discharging it outside the Canal prism. About 8,000,000 cubic yards of dark loam containing 15 per cent of sand and some gravel are to be handled by this process. The surface is about 8 feet above sea-level and the average depth to be excavated is 35 feet. The bottom of the Canal in this section will be 45 feet below mean sea-level, and the channel will be 500 feet wide.

Sluicing will be done by pumping water from below the dam and delivering it through a pipe line to any point along the section to be excavated. Branch lines will be run from the main, and from these branches the water will be forced through monitors on to the earth to be excavated, whence it will flow to the sumps. For this part of the plant a steam pumping station will be installed near the dam. The capacity of the pumps will be 30,000 gallons of water per minute delivered through 3,600 feet of main pipe line and 500 feet of branch line under 130 pounds pressure per square inch. The pumps will be arranged in two units so that repairs can be made without shutting down the whole plant. The specifications call for not less than four, nor more than eight multistage centrifugal pumps, or reciprocating steam pumps of equal capacity, or a pumping plant of equal capacity to be suggested by the bidders. Four or more boilers arranged in two units will furnish steam. It is the intention to use oil as fuel, but the boilers must be adapted to use coal. Power will be supplied by compound condensing engines.

The dredging plant will consist of three centrifugal pumps adapted to continuous service with salt water and run by motors driven by electricity from Miraflores power plant. Each pump must be able to deliver 300 cubic yards of solid matter an hour, and 10,000 gallons of water a minute through 1,200 feet of pipe to a height of 60 feet, exclusive of pipe losses and a suction head of 10 feet. At the beginning of the work two of the pumps will discharge into Cocoli Dam, making a fill of about one million cubic yards. As the crest of the dam will be at 70 feet above sea-level each pump will be assisted in making the lift by a relay pump. After the fill of the dam has been completed these pumps will discharge behind dikes on both sides of the Canal, as the third pump will from the time excavation is begun. The fill made on either side of the prism will reclaim a large tract of land at Corozal that is now under

water during spring tides, or is so low that the tide water keeps it saturated.

The pumps will be moved from place to place as the progress of the excavation requires. A sump will be dug in a locality and a pump placed over it. All the earth surrounding that sump will be washed into it until the grade is so slight that the water will no longer carry a sufficient quantity of solid matter. It is expected that the material can be sluiced down to a three per cent grade. Another sump will then be made, a pump installed over it, and the sluicing and dredging will be resumed.

After the earth is dredged from this section the rock will be taken out by steam shovels.

## Completion of Matachin Cut.

On Wednesday, June 9, the Chagres River was turned through the cut at Matachin, the first section of the 85-foot level of the Canal to be completed. Several hundred people had gathered on the west bank of the Canal to see the river flow into its new channel and when the first rush of the water was over, two employes of the Commission guided a native canoe through the completed section while the people on the bank cheered the event.

The cut at Matachin is only 2,700 feet long and is one of several similar cuts being made across small peninsulas formed by the Chagres as it winds between the hills north of Bas Obispo. The first steam shovel on this section began work in December 1907, and the last shovel work was done on May 25, 1909. A total of 1,775,000 cubic yards of material was removed. The channel is 500 feet wide. The bottom of the Canal at this point is below the bed of the Chagres and in order to keep the excavation free from water, dikes were built across the ends of the cut. These levees were blown up with dynamite and on June 9, a pick and shovel gang made openings to give the water a start. The river was 46 feet above sea-level and the head of 6 feet soon tore large gaps in the loosened material of the south levee and washed away the north levee, through which a small opening had been made. Within two hours the river had almost entirely left its old channel, which was not over 200 feet wide, and was flowing through the new one. The old channel offers a convenient dumping ground for excavation from the cuts through the peninsulas north

and south of Matachin and will be used for that purpose, thereby materially reducing the haul.

## Fined for Recruiting Laborers.

A resident of Colon, who has been recruiting European laborers from the Canal labor force, brought the steamship *Oleri* into Colon harbor on June 16, with the intention of loading on it about 200 laborers to whom he had sold transportation to Brazil. Holding that this action was contrary to the executive decree of May 18, 1909, requiring that a license be procured for recruiting laborers, the Panamanian Government notified the agent of the ship that clearance would not be granted until the recruiting agent had complied with the law. A fine of \$500, prescribed by the decree of May 18, was levied on the agent and he was notified that before the ship could take on its passengers and depart, he must file the application and bond required by the decree. He did so and the *Oleri* sailed for Brazil on June 22.

As the laborers were men brought here by the Isthmian Canal Commission for work on the Canal, the wishes of the Commission were consulted by the Panamanian Government, and no objection was made to the departure of the laborers. The labor force at work in the Canal during April, was the greatest since the beginning of the work, although the proportion of European laborers is decreasing.

## Dam and Locks in Miniature.

Gatun Dam and Locks in miniature will be on exhibition in the Administration Building in Culebra early in July. A model of plaster of paris and laminated cardboard is being made on a scale of one inch to one hundred feet, which is one twelve-hundredth of the actual size of the territory and objects represented.

## Pedro Miguel Sojourners' Club.

A meeting of Master Masons was held in the I. C. C. club rooms at Pedro Miguel on Tuesday evening, June 8, at which the Pedro Miguel Sojourners' Club, was organized. After adoption of by-laws, officers were elected as follows: Chas. A. Pendry, president; John H. Kane, vice-president; Gerald D. Bliss, secretary-treasurer; Walter S. Chidester, chaplain; J. R. Foley, J. E. Mansberger and F. R. Curney, board of directors.

## STATEMENT OF CLASSIFIED EXPENDITURES TO APRIL 30, 1909.

The following table shows expenditures for Canal work, classified monthly, since July 1, 1908. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907. ....	\$1,446,407.73	\$4,636,630.37	\$13,410,795.01	\$4,296,732.98	\$19,345,697.87	\$43,136,263.96
Fiscal year 1908. ....	704,610.15	2,310,212.01	16,680,660.46	1,494,956.41	11,684,215.15	32,874,654.18
Fiscal year 1909:						
July, 1908. ....	84,898.15	197,963.07	1,452,698.88	91,901.17	544,083.23	2,371,544.50
August, 1908. ....	77,019.80	145,870.37	1,599,556.90	60,798.76	517,046.09	2,400,291.92
September, 1908. ....	69,867.03	129,725.40	1,636,253.17	52,809.20	703,633.09	2,592,287.89
October, 1908. ....	59,612.51	155,676.68	1,448,614.64	67,696.17	727,544.14	2,459,144.14
November, 1908. ....	59,374.12	147,957.24	1,369,805.86	77,406.64	480,139.10	2,134,682.96
December, 1908. ....	65,526.32	166,321.70	1,500,404.77	70,936.43	893,337.24	2,696,526.46
January, 1909. ....	51,416.82	164,605.80	1,550,843.72	65,209.51	1,418,185.90	3,250,261.75
February, 1909. ....	60,782.04	139,368.18	1,453,781.43	54,105.63	596,564.67	2,304,601.95
March, 1909. ....	60,130.85	127,669.50	1,611,343.85	39,267.70	776,821.41	2,615,233.31
April, 1909. ....	66,846.14	146,515.18	1,480,566.68	56,617.86	1,072,221.29	2,822,767.15

## PROOF AGAINST ACCIDENT.

### Precautions That will be Taken in Panama Canal Locks.

On June 9, a vessel in the Canadian lock at Sault Ste. Marie collided with one of the lock gates. Lieut.-Col. H. F. Hodges, Assistant Chief Engineer and a member of the Isthmian Canal Commission, who was in Washington when the accident occurred, made the following statement with regard to the possibility of a similar accident in the Panama Canal:

"The accident which occurred yesterday at the Canadian lock at Sault Ste. Marie was indeed regrettable, but is not of such a nature as to impair confidence in the safety of the transportation facilities there and even less to cause doubt of the security of the locks planned for the Panama Canal. Apparently it occurred through collision with the lower lock gate by a vessel from the lower side, when the lock was full and the upper gates opened, there being at the time one vessel in the lock and another entering from above. All vessels were maneuvering under their own steam.

"Such an accident would be an impossibility at the locks of the Isthmian Canal. Vessels will not be allowed to approach the gates of these locks under their own power. Long piers are to be provided below and above the locks against which vessels will be obliged to moor before approaching within 300 feet of the lock gates. They will then be taken in charge by powerful towing appliances on the lock walls, and taken entirely through the locks without further use of their own power. Mistakes on the part of the vessel's master, or its engineer, can cause no danger in such an operation.

"In addition, above and below these gates, which are of vital importance, protecting chains are to be placed which, when in use, are stretched across the lock near the surface of the water and would receive the shock of any vessel coming too near the gates. The protective effect of these chains is calculated to be sufficient to resist the shock of a vessel weighing 10,000 tons and moving at the rate of about 3 miles per hour, and to bring that vessel to a stop before it could reach the gates.

"At the locks of the Panama Canal the gates are double at all important points, and even were it possible for a ship to ram the lower gates, as was the case at the Canadian lock yesterday, the result would be simply to damage one pair of the double gates, leaving the other pair intact and operative in holding back the water in the upper level.

"There is also to be provided above each lock an emergency dam, which can be closed in case of accidents, and will check any current which might otherwise flow through the lock.

"In connection with the accident at the Sault it should be remembered that nearly 20,000 vessels per annum pass through the canal there with safety. In the years 1890 to 1907 inclusive about 312,000 vessels passed the lock, all without serious accident. There has been a canal at therapids for more than 50 years and this is the first accident of serious moment. With such a record in locks where the gates are unprotected and where large vessels are allowed to maneu-

ver under their own steam, there need be no fear of a repetition of the occurrence in locks where the gates are protected as they will be on the Isthmian Canal and where the movement of the vessels are under the control of the lock force. With these and the other safeguards to be installed on the Isthmus, an accident of this description is impossible."

### Passengers for New Orleans.

A new arrangement for the benefit of passengers arriving at New Orleans has been put in effect by the officials of the United Fruit Company. The Company will furnish a tug to the quarantine officers, who will meet all ships of the Company some distance down the Mississippi River, so that the medical examination of the passengers may be finished by the time the vessel reaches the wharf. Baggage will be inspected under cover at the wharf instead of on the open dock as heretofore.

Beginning June 22 the steamers of this Company will sail from Colon, via Port Limon for New Orleans, every Tuesday at 3 p. m., instead of at 2 p. m. as heretofore. }

### Fish for Destroying Mosquito Larvæ.

A species of fish popularly known as "millions" (*girardinus poecilooides*) indigenous to the waters of the island of Barbados in the West Indies, has been brought to the Isthmus recently in connection with the work of mosquito extermination. These fish belong to the group broadly known as top minnows, so called from always feeding at or near the surface of the water, for which the structure of their mouth and habit of swimming with a large portion of their back out of water, adapts them. This habit in connection with their small size is of especial value as it enables them to secure their food by pursuing it across plants and masses of algae over which there is only a thin film of water. They derive their name from the great schools in which they are found, are very small, never over one and one-half inches long, and are found in stagnant, sluggish and running water, either fresh or brackish.

The group to which they belong is omnivorous, but it has been discovered that if mosquito larvæ are accessible the "millions" will eat it in preference to other food, and they are said to eat the adult mosquito also. They ascend streams against a swift current and penetrate into the smallest rivulets. The species is viviparous, that is, their young are born alive and not hatched from eggs. This aids in their rapid multiplication as the young rapidly moving fish are less exposed to enemies than they would be if hatched from eggs. They are very hardy and stand transportation well, which makes them especially valuable for stocking the waters of the Isthmus.

The absence of malaria in Barbados has been attributed to the presence of these fish, by their destruction of the larvæ of malaria-carrying mosquitoes. While there is some doubt as to this, they undoubtedly play a very important part in the control of mosquito breeding on that island. While there are species of fish on the Isthmus that are voracious eaters of mosquito larvæ, it has been found impossible to depend entirely upon them for mosquito destruction under all circumstances, and it is thought the in-

roduction of "millions" will be a very efficient aid.

About 200 fish will be placed temporarily in the tank in the court of the Administration Building at Ancon. When they are acclimated and breeding is well under way they will be distributed to the streams and reservoirs where their assistance may be needed. While of great value in the extermination of anopheles mosquitoes the "millions" are useless under natural conditions against stegomyia, which breed exclusively in artificial water containers, such as cisterns, rain barrels, old cans, etc. In many cases, however, they may be placed advantageously in tubs containing water plants to prevent the multiplication of mosquitoes.

### Mutilated Gold Coins.

Attention is called to the fact that a large number of gold coins that have had the edges trimmed or have been otherwise mutilated, are in circulation in the Canal Zone, and in Panama and Colon. The mutilation is usually very slight, causing a difference in value of from four to twelve cents in each coin, but the aggregate in a large number of coins is great enough to cause a serious discrepancy when the bullion is weighed at the office of the Treasurer of the Canal Zone, where mutilated money is accepted by weight only. The Treasurer has lately returned a number of 20, 10 and 5-dollar gold pieces to the Zone postmasters and tax collectors, amounting to \$480, during May, and \$760, from June 1 to June 11.

In order to warn paymasters, postmasters and tax collectors the following have been issued:

DISBURSING DEPARTMENT,  
EMPIRE, C. Z., June 14, 1909.

PAYMASTER AT ANCON AND CRISTOBAL.

In view of the fact that some one is busy trimming the edges of the gold coins used on the Isthmus, in verifying funds received for my account from the bankers extraordinary care should be exercised by you to detect mutilation of any kind. Any coins which give evidence of having been "sweated" or trimmed should, as in the past, be absolutely refused and good coins demanded in their place; but, as before stated, your vigilance should be doubled to detect and refuse such coins. Aside from examining the face of each coin when counting, the stacks should be taken up and the edges carefully noted, as in this manner any trimming of the edge or edges will at once be shown.

EDWARD J. WILLIAMS,  
Disbursing Officer.

DEPARTMENT OF CIVIL ADMINISTRATION,  
DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., June 10, 1909.

CIRCULAR No. 53.

To all Postmasters and District Tax Collectors: The Treasurer has recently refused a number of five, ten and twenty-dollar gold pieces remitted to him by Postmasters and others who make remittances, for the reason that the pieces were not of full weight.

Postmasters are therefore directed not to accept any gold pieces tendered them that have the edges worn or filed, or that are of light weight.

HERMAN A. GUDGER,  
Acting Collector of Revenues.

### Dredging Modeling Clay.

The dredges excavating the Pacific entrance to the Canal frequently encounter masses of a sticky, varicolored clay, which is very difficult to handle, even for a dipper dredge. When first brought to the surface this clay is of the consistency of putty in oil, but after exposure to the air for a short time, it becomes very hard. The clay has been modeled into forms, such as paperweights, and on account of the peculiar streakings, is very attractive. In coloring, blue predominates, with red next, and yellow last. In touch, the substance feels like soapstone.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The Ancon Woman's Club held the final meeting for the season on Wednesday, June 16. The educational department will continue its study course during the summer, the meeting on June 23, being held at the residence of Mrs. W. T. Dozier, Tivoli Hill. The open evenings at the clubrooms are proving an attraction. The number of visitors has increased during the past two weeks, and several new books have been donated to the library. The officers for the ensuing year are: Mrs. J. L. Storla, president; Mrs. J. Leon Webster, first vice-president; Mrs. R. W. Fenn, second vice-president; Mrs. Wesley M. Owens, recording secretary; Mrs. H. E. Bovay, corresponding secretary; Mrs. G. W. Green, librarian; Mrs. J. S. Walker, assistant librarian. The club has forty members. Regular meetings will be resumed the first Wednesday in October.

Meetings of the Gatun Woman's Club will be held on the first Friday in each month during July, August, September and October, when the club year opens. The organization realized over \$30 at the recent social held for the purpose of raising funds for the establishment of a lawn tennis court. The club is preparing another entertainment to take place in the near future.

The various social organizations in Pedro Miguel have purchased a piano which has arrived on the Isthmus and has been placed in the clubroom. An entertainment will be given shortly.

The Paraiso Social Club gave a minstrel performance followed by a dance at the clubroom on Saturday evening, June 19.

In connection with Christ Church, Colon, a Woman's Altar Guild has recently been organized. The rector, Rev. Edward J. Cooper, is honorary president, Mrs. Woolrich, president, and Mrs. Pierce T. Murphy, secretary. The Guild will have general charge of the altar and hangings for the various church seasons. The meetings will be held on the first and third Monday of each month.

The work of the Canal Zone Humane Society has been actively going forward. During the past few weeks a number of crippled and disabled cab horses have been ordered off the street at Cristobal at the recommendation of the Society, and a marked improvement in the condition of all the horses has been apparent. The Colon authorities also have cooperated with the representatives of the organization in several cases.

Efforts are being made to raise funds for the purchase of a library for the Zone penitentiary at Culebra. At the end of May the number of inmates was 117; of this number, 60 per cent read English, 25 per cent Spanish and about 10 per cent French and French patois. The prisoners are from all sections of the Canal Zone, and the interest taken in their welfare is therefore general. The Empire section of the W. C. T. U., and the Woman's Guild, St. Luke's, Ancon, have subscribed for the purpose, and collections of books and periodicals are being made through the Gatun, Ancon, and Pedro Miguel woman's clubs. Subscriptions may be made through any of these organizations or forwarded directly to the penitentiary chaplain, Rev. S. Moss Loveridge, Culebra. Individuals wishing to send books or maga-

zines should place them in the hands of the District Quartermaster, who will send the package to the Deputy Warden, of the penitentiary at Culebra. At Gatun, Mrs. C. A. Bath is in charge of the collections, and Mrs. H. E. Bovay, at Ancon. Mrs. H. E. Weber, secretary of the woman's club, will receive donations at Pedro Miguel.

A vaudeville entertainment, the entire proceeds of which will be donated to the above purpose, will be given at the Culebra clubhouse on Friday evening, July 9. The committee on arrangements includes Rev. S. Moss Loveridge, Rev. J. Wesley Holland, Messrs. Goodman, Hostetter and Pain. Mrs. C. A. Devol is chairman of the committee on refreshments. Tickets will be sold at fifty cents for adults, children under twelve half price.

### Red Cross President Honored.

The president of the Canal Zone branch of the National Red Cross has received the following letter from the President of the United States, who is also president of the American National Red Cross:

WASHINGTON, D. C., May 29, 1909.

Sir—In accordance with a resolution adopted by the Board of Incorporators of the American National Red Cross on December 8, 1908, I have the honor and pleasure of presenting to you the special medal referred to in the resolution as a token of the appreciation of the society of the very valuable services rendered by you.

Yours sincerely,  
WM. H. TAFT,  
President.

MAJ. C. A. DEVOL, U. S. A.,  
War Department,  
Washington, D. C.

The resolution referred to cites that Major Devol rendered important and unremunerated services to the Red Cross at Hattiesburg, Miss., in 1908, and that in accordance with the by-laws, the President is authorized and instructed to bestow the special medal.

### Isthmian Lawn Tennis Tournament.

Arrangements for a lawn tennis tournament, in singles and doubles, on July 4 and 5 were made at a meeting held at the Hotel Tivoli on June 20. Entries, which must be made by July 1, will be received by M. A. James, Empire, and are restricted to three members from each club. The tournament will be held on the courts of the Panama Tennis Club on Central Avenue, opposite the office of the Alcalde, and will begin at 9.30 a. m., July 4. Drawings will be made July 2 to determine which contestants will be matched in the preliminary round. All final matches will be played on the afternoon of July 5. W. H. Hall of Empire, has been appointed referee. Medals have been offered by the Fourth of July Entertainment Committee for the winners in both events.

### Fourth of July Celebration.

All persons who intend to subscribe to the Fourth of July celebrations this year and who have not done so, are requested to send in their subscriptions at once, to either W. M. Wood, Chairman, Finance Committee, Empire, or W. S. Perry, Chairman, Finance Committee, Cristobal, in order that the committees may know what amount can be depended upon for making the celebrations successful.

In order to increase the effectiveness of the grammar and high school courses in the Canal Zone schools, it has been decided to employ a supervisor of grammar grades and high schools for the school year beginning in September, 1909.

## PERSONAL.

Lieut.-Col. D. D. Gaillard, Division Engineer of the Central Division, and family, and Mr. Tom M. Cooke, Chief of the Division of Posts, Customs and Revenues, are passengers on the *Colon* which sailed from New York on June 18, due at Cristobal on June 24.

Dr. Wu Ting Fang, Chinese Minister to the United States, Mexico, Cuba and Peru, arrived on the Isthmus on Tuesday, June 8, on his way to Peru to present his credentials to President Leguia. While here he visited various points of interest on the Canal, and sailed for Callao on June 15.

W. D. Smith, 1st. Lieut. 14th Cavalry, U.S. Army, and wife, are passengers on the *Colon*, which sailed from New York on June 18, due at Cristobal, June 24. Lieut. Smith will have charge, under the Chief Quartermaster, of all building operations, including construction and repairs, in the Quartermaster's Department. He has recently been stationed at West Point in the office of the Quartermaster and Disbursing Officer.

Mr. Claude Earl Guyant, Vice-Consul General of the United States at Panama, and Miss Estela Amy Lang of San Jose, Costa Rica, were married at Christ Church, Colon, on Tuesday, June 15, at 4 p. m., Rev. Edward S. Cooper officiating. Mrs. Guyant is a sister of Mrs. H. O. Jeffries, of Panama.

### Cristobal Union Church.

In connection with the Cristobal Union Church, a ladies' aid society has been organized with Mrs. Jule Johnson as president. The society holds its meetings monthly. At the meeting held on Tuesday, June 8, a program was given consisting of papers on "The Defective Child," Mrs. Rerdell, "Troubles in Turkey," Mrs. Bennyhoff, and current topics, Miss Ferber.

On Sunday evening, June 6, the semi-annual meeting of the church was held when the following officers for the executive council were elected: Thomas E. Brown, Jr., president; H. L. Stuntz, vice-president; O. B. Riddle, secretary and treasurer; and J. A. Smith, H. P. Warren, C. Nixon and N. A. Becker, advisory committee.

### Independent Order of Panamanian Kangaroos

Cristobal Court, No. 8, Independent Order of Panamanian Kangaroos, installed January 31, 1909, with a membership of 24, has initiated 31 members to date and affiliated 3, making a present membership of 58. New paraphernalia has been ordered from the States, and is expected in a short time.

A supply of cards has been placed in Colon Hospital with which to notify this court of the sickness of any Kangaroo, regardless of what court he may belong to. These cards may be procured upon application to the nurse in charge. Cristobal court meets every Friday at 8 p. m., in the I. C. C. lodge hall in Cristobal. Visiting brethren in good standing are always welcome.

### Address by Judge Owen.

Judge Wesley M. Owen will deliver an address at Empire I. C. C. Chapel, Sunday evening, June 27, at 7.30 p. m. The service will be held under the auspices of the Empire W. C. T. U., and special music has been prepared. All are cordially invited to be present.

## ISTHMIAN SUNDAY SCHOOLS.

### Religious Instruction for White and Negro Children.

There are two classes of Sunday schools in the Canal Zone; one for negroes and one for white children, numbering in all about 50 schools. Of these, the schools for negroes are the older organizations, having been established in the beginning of Protestant Church work on the Isthmus, when the Anglican Church founded its mission in Colon for the benefit of the West Indian laborers employed in the construction of the Panama railroad. Following this the Wesleyan Methodist Church of England established its mission for negroes with a large membership. The organization of the schools for white children dates from 1905, the year following American occupation. Their membership includes representatives of all sects, creeds and classes from all over the United States, with a small percentage of aliens. Being purely an American institution, the Sunday schools for white children are conducted in accordance with the methods in use in the schools in the States, with minor differences in administration made necessary by local conditions. In the Zone stations where no regular church services are held, Sunday schools have been organized for the benefit of the white American children of the communities.

#### Schools for White Children.

The population from which the Sunday schools for white children draw their members numbers about 7,000. Of this number, about 4,600 are employed on the Canal and Panama railroad work, and 1,500 are women. Eliminating the number of children too young to attend school, the possible Sunday school population is less than 1,000. In the day schools for white children 722 pupils are enrolled. The total enrollment for Sunday schools for white children is 650. From these figures it is evident that about 75 per cent of the white children in the Canal Zone of age to attend, are actually enrolled in the Sunday schools.

There are 14 Sunday schools for white children in the Canal Zone, 12 of which are undenominational, one Episcopal and one Roman Catholic. The undenominational schools operate under the Isthmian Sunday School Association, a branch of the International Sunday School Association, which was established in the Zone in January, 1908, under the direction of a representative of that association for the West Indies and South America. Rev. Aquila Lucas met a number of representatives of the various schools at Culebra, January 27, at which time the Zone organization was effected. The objects of this association as stated in the constitution are:

(1) To federate the Sunday schools on the Isthmus; (2) to form a central point of contact between said schools and the International Sunday School Association; (3) to arrange for conferences, conventions and other joint action that may be desirable.

The officers are elected at regular meetings in January and July, for a period of six months. Each school is entitled to two members in the association, known as "regular" members, and the pastor, cooperating with affiliated schools, are known as honorary members. Quarterly meetings are provided for, and the Panama railroad grants free transportation to members in attendance at regular or special meetings. In every

community members of various churches and sects are found, and it is aimed to unite the forces in one central organization for the purpose of strengthening the work and maintaining interest. The expenses of the association are met by each school setting aside the offering of the first Sunday in March for that purpose.

Before the association was organized there were a number of schools for white American children doing independent work. The first four schools organized and the number of pupils enrolled at the time of organization were:

Cristobal, September, 1905, 12 members.  
Gorgona, Thanksgiving Day, 1905, 8 members.  
Culebra, September, 1906, 4 members.  
Emoire, January, 1907, 25 members.

The system of organization in each school is practically the same. It provides for a superintendent, assistant superintendent, secretary, treasurer, or both offices combined, and a corps of teachers. The standard literature, lesson leaflets and quarterly magazines are distributed. All the schools are self-supporting, and the larger ones are able in addition to subscribe to missionary projects. Meetings are held in the Commission chapels or other suitable buildings assigned or granted by the Commission for the purpose.

The Cristobal Union Sunday School has a membership of 100 and an average attendance of 88. The school is divided into two departments; the primary, with three teachers, and the advanced, with seven teachers. In the primary classes the kindergarten method of instruction has been introduced, including the use of sand boxes for maps. One Sunday in the month the collection is devoted to some missionary enterprise designated by the officers of the school. For the purpose of promoting social life among the pupils and members it is the custom to give a picnic or other excursion about once every three months.

The next oldest school, Gorgona, was started by a few young people, there being at that time no children of school age in the town. Meetings were held in the old mess hall. The total number of children in Gorgona is now 142 and the Sunday school membership is 80, and average attendance 60. Of recent organization are two branch societies, the Baraca, for young men, and the sister class, Philathea. The object of each is to promote the growth of Sunday school interest.

The Culebra school has a membership of 95 from a total population of about 124 children. The organization of a home department and cradle roll are efforts of the past few weeks. The activity of the former consists of visiting the young pupils in their homes, advising and helping them with the lessons, and promoting interest in Sunday school work among the parents and elders. The latter, under the director of the primary department of the school, proposes to enroll infants who may later attend the school.

Organized the first Sunday in January, 1907, the Empire Sunday school has doubled its membership in one year. The meetings were held in the circuit courthouse until the present chapel was erected. The membership is 100, and average attendance 75. There are seven officers, including an organist and assistant organist, chorister and five teachers. There is also a regularly organized kinder-

garten department. The bible class is organized with a full corps of officers. A name and a motto have been adopted, and the class is carrying on a vigorous campaign in securing members and promoting Sunday school interest. Back of this organization is the Empire Christian League, which was organized in 1908. The League is undenominational.

The number of children in Gatun between the ages of three and twenty is about 100. The Sunday school has a membership of 73. The average attendance for the first quarter in the present year was about 50. The school is divided into two primary classes, two classes for girls, one for boys, and one for adults. Sessions are held in the chapel recently dedicated.

The Las Cascadas Sunday school was organized in August, 1907, and has an enrollment of 30. Special features of interest are provided in the lesson leaflets and by the judicious introduction of a system of prize-giving for regular attendance. A silver star presented after regular attendance for six months, earns for the winner a gold star at the end of a year.

The date of organization of the Bas Obispo school is September, 1908, when 21 pupils were enrolled. There is at present a membership of about 27. The Pedro Miguel school was organized with seven members in February, 1908. Since that time the membership has increased. This school was specially successful in securing its literature free for the first quarter and after that, at a nominal subscription price. Organized in September, 1908, the Paraiso school met variously in the clubroom, the schoolhouse, and at private homes until the opening of the Commission chapel. Thirty-three members are now enrolled and the average attendance is about 28. Both this and the Pedro Miguel school was organized by resident women interested in Sunday school work.

The regular organization of a Sunday school at Tabernilla was effected on Easter of this year. This school is the outcome of a Sunday school which was organized by a little girl in January. The school was officered by the children, the organizer acting as superintendent, and had a membership of nine. The meetings were held at the home of the superintendent.

The first Sunday in January, 1909, a Sunday school was organized in Corozal at a meeting held in the dining room of the hotel. There are 68 children in the town, and 44 of these are enrolled on the Sunday school list. The school has no regular meeting place and holds its sessions in any available house at present.

The regular Methodist Sunday school in Panama was organized under the Isthmian Sunday School Association, its membership of 40 being drawn from the families belonging to the Methodist Church, in Panama, Balboa (La Boca) and Ancon. The school meets in the church building, Panama. A Commission wagonette meets the morning train on Sunday to convey the members from the Line to the church.

The Episcopal Sunday school in connection with St. Luke's Church, Ancon, was organized in November, 1907. There are 35 pupils. The chaplain acts as superintendent and there is a corps of three regular teachers and three substitutes. This school has a library of juvenile books, which had its begin-

ning in the presentation of the books contained in their own library by two young members of the church. A gift recently made by the Church Periodical Club, raises the number of volumes in the library to 150. The work of the library, which consists of the distribution and exchange of books on Sundays after the school session, is conducted by one of the older pupils appointed by the superintendent.

The rector of the Church of the Holy Redeemer, Roman Catholic, in Culebra, has a class in catechism on Sunday mornings, and also visits Las Cascadas on Saturday afternoon to give instruction to a class of 20 young men. These meetings are held in the Red Men's lodge hall.

#### Schools for Negro Children.

Sunday schools for negroes are confined to three denominations: Episcopal, Wesleyan Methodist, and Baptist. The membership of these schools is drawn from a population of 3,276 West Indians, this being the total number of this class of employes occupying Commission "married" quarters. Slightly over 75 per cent of this entire number are enrolled in the Sunday schools of the Episcopal and Wesleyan missions alone.

There are twelve Sunday schools connected with the Episcopal mission, the total enrollment being 392, with a corps of 51 teachers. The largest of these schools is at Christ Church in Colon, which has a membership of 175, and St. Paul's, Panama, is second, with 151 members. The mission Sunday school at Culebra has 70 members. The pupils are taught church history and doctrine, and classes in catechism are frequently held. A large number of Sunday school members have been confirmed during the year. The mission continues its Sunday school work in parochial schools, which are maintained at several stations. These schools have a total membership of 167.

The Wesleyan mission has eight Sunday schools, a total of 550 pupils and an average attendance of 400. The beginning of the Wesleyan organization on the Isthmus was in 1882, and some of the Sunday schools have been organized since that time.

The Baptist mission has Sunday schools connected with its work in several stations on the line of the Panama railroad.

The teachers in these schools are appointed by the official heads of the missions and are selected largely from the ranks of the teachers in the Zone public schools, instructors, catechists and laymen who are considered specially qualified for the work. They are all West Indians. There are few women teachers, and those only for the primary classes.

The larger missions have Sunday school rooms connected with the church buildings, which serve as parish house and social hall for entertainments given by the schools. Some of the Line missions hold their meetings in buildings constructed for them by the French. These are still maintained by the Commission. Several of the self-supporting missions have their own buildings; others meet in hired rooms. In some of the settlements where there was no suitable building, the Commission has assigned tents with a seating capacity of about 100. Sunday school services are held in these tents.

FOUND—On train No. 6, June 18, 1909, a pocket-book containing \$20 in gold and some papers. Owner can have same on proper identification. Apply at Superintendent's office, Panama railroad, Colon.

## DREDGING IN MAY.

### Record in Atlantic and Pacific Divisions.

The combined output of the dredges of the Atlantic and Pacific Divisions for May, amounted to 1,535,846 cubic yards, of which 1,095,456 cubic yards were taken from the Canal prism, and 440,390 cubic yards applied to works outside. In the Atlantic Division, 367,381 cubic yards were classified as canal excavation, and 430,030 as outside excavation. In the Pacific Division, all but 10,360 cubic yards belonged to Canal excavation. The output in the harbor and channel section of the Atlantic Division shows a considerable falling off from previous months, due largely to the fact that the suction dredge *Ancon* was used on other work. In the Pacific Division dredge operations proper fell off 39,093 cubic yards, as compared with April.

In the Colon dredging division, four dredges removed 278,886 cubic yards of earth, and 36,484 cubic yards of rock. In addition, the dredge *Ancon* removed 2,910 cubic yards of earth at dock No. 1, Colon, in preparing it for the temporary use of the steamers, *Ancon* and *Cristobal*; 158,588 cubic yards of earth from the approach channel to Cristobal harbor, and 77,122 cubic yards from the harbor itself. These items of work were done with the view of preparing a permanent channel and berth for the *Ancon* and *Cristobal*, and other deep draught vessels which may be used in carrying cement.

The total output of the dredge *Ancon* during May was 374,420 cubic yards, which is the record for this dredge. On account of the system of place measurement, the *Ancon* usually removes a considerable amount of material for which it is not given credit. The work is surveyed at the beginning of the month, and again at the close, so that the dredge is only credited with the net gain, and gets no credit for outside operations. This amount has heretofore been assumed to be at least 100,000 cubic yards. Additional data which were secured in May, shows that this amount totaled over 200,000 cubic yards.

The dipper dredge *Mindi* removed 19,132 cubic yards of earth, and 6,714 cubic yards of rock from the French canal in deepening it for the sand and stone service between Cristobal and Gatun. It also removed 15,519 cubic yards of earth at dock No. 1, Colon, and 22,240 cubic yards of earth from in front of Dock 13, Cristobal. Ladder dredge No. 5, an old French dredge, which was brought down from the Chagres River several months ago and rebuilt, was put into commission on May 24. It has been altered to permit of its digging deeper, the French ladder dredges ordinarily not having gone to a greater depth than 26 feet. Dredge No. 6 has been lowered to the limit and has done some dredging to a depth of a little more than 35 feet. Dredge No. 5, has dredged to 40 feet. The detailed statement of operations in the Atlantic Division follows:

DREDGE.	Type.	Cu. yds.
Ancon.....	Suction.....	374,420
No. 1.....	Ladder.....	143,086
No. 5.....	Ladder.....	11,535
No. 6.....	Ladder.....	24,949
Mindi.....	Dipper.....	63,605
No. 82.....	Suction.....	55,645
No. 83.....	Suction.....	72,160
No. 85.....	Suction.....	52,011
Total.....		797,411

The dredges of the Pacific Division con-

tinued work during the month in the harbor and channel section. The orange peel dredge excavated 10,360 cubic yards in the Rio Grande diversion. The *Cardenas* was laid up for repairs from the 7th to the 16th, while the *Sandpiper*, working at Miraflores Locks, was out of commission from the 1st to the 19th. The excavation statement is as follows:

DREDGE.	Type.	Cu. yds.
Marmot.....	Ladder.....	66,910
Gopher.....	Ladder.....	133,620
Badger.....	Ladder.....	81,377
Mole.....	Ladder.....	87,992
Cardenas.....	Dipper.....	63,154
Orange Peel.....	O. P.....	10,360
Culebra.....	Suction.....	287,700
Sandpiper.....	Suction.....	7,322
Total.....		738,435

### Police Report for May.

The May report of the Chief of the Division of Police and Prisons shows that 607 arrests, representing 44 nationalities, were made in the Canal Zone during the month. This is an increase of 150 over April. Of this number, 575 were men and 32 were women, the offenses with which they were charged aggregating 53. The arrests were made as follows: Ancon, 32; Las Sabanas, 4; Balboa, 16; Corozal, 4; Miraflores, 59; Pedro Miguel, 19; Paraiso, 13; Culebra, 35; Empire, 55; Las Cascadas, 20; Bas Obispo, 12; Gorgona, 63; San Pablo, 10; Tabernilla, 39; Bohio, 9; Gatun, 101; Cristobal, 110, and Porto Bello, 6. The effective police force on May 31, was 173, and the pay-roll for the month amounted to \$19,717.66.

There were 50 criminal cases tried in the Circuit courts, 11 of which were dismissed, 23 continued, 14 in which convictions were secured, and 2 cases in which deportation was ordered. Of the 14 persons convicted, 7 were sentenced to the penitentiary, one to the penitentiary with addition of a fine, one received a jail sentence, 4 were fined, and one case in which sentence was suspended. Zone convicts on April 30, numbered 118; received during May, 8; discharged 9; total on May 31, 117. The number of district prisoners on the same date was 149. Prison pay-rolls for the month amounted to \$1,501.64; cost of prisoners' subsistence, \$885; clothing and other property, \$46.40; a total expense of \$2,433.04. The value of work performed by prisoners on Zone roads was \$1,707.95. Forty-three civil cases were tried during the month. The sum of \$1,735.47 was collected from executions.

There were 13 deaths by violence, requiring action by the Coroner, one of these being due to a railroad accident, 2 to dynamite explosion, and 5 to drowning. Nine persons were deported during the month.

### Concert by L. C. C. Band.

PARAISO, C. Z.,

CHAS. E. JENNINGS, Musical Director.

## OFFICIAL CIRCULARS.

## Applications for Family Quarters.

CULEBRA, C. Z., June 17, 1909.

CIRCULAR No. 134A.

Effective on and after this date, applications for family quarters on the No. 2 list, from employees who are transferred to another point, either after tender of assignment or occupancy of quarters, will be placed above all applications on the No. 2 list and above those applications on the No. 1 list which have been filed subsequent to date of original tender of assignment to employees transferred.

Applicants on the No. 2 list, who are offered assignments, should consider, before accepting same and bringing their families to the Isthmus, that in the event of their transfer to some station where there is a list of No. 1 applicants, quarters at the new station can only be secured in accordance with the foregoing

GEO. W. GOETHALS, Chairman.

## Regulations Governing Longevity.

CULEBRA, C. Z., June 14, 1909.

CIRCULAR No. 258.

The following action of the Commission at its 153d meeting, held June 10, 1909, is published for the information and guidance of all concerned:

"Attention was called to the following provision in the Act making appropriations for Sandy Civil expenses of the Government approved March 4, 1909:

"No part of the foregoing appropriations for the Isthmian Canal shall be applied to the payment of allowances for longevity service or layover days other than such as may have accumulated under existing orders of the Commission, prior to July 1, 1909.

"It was thereupon

"Resolved, That effective July 1, 1909, the regulations governing longevity increases in pay to employees, adopted by the Commission at its 131st meeting, be rescinded, and that, effective the same date, all existing authority for the allowance of layover time to employees be revoked.

"Resolved further, That employees shall continue to draw the benefits of all increased allowances in pay for longevity service earned prior to July 1, 1909, and all layover time accumulated up to and including June 30, 1909, may be taken any time after that date on the Isthmus or added to annual vacation leave in accordance with existing rules."

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Holiday on July 5th.

CULEBRA, C. Z., June 21, 1909.

CIRCULAR No. 260.

As July 4, 1909, Independence Day, falls on Sunday, the following day, Monday, July 5, 1909, will be observed as a holiday in the Canal Zone, and, as far as practicable, all public business will be suspended on that day.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Auction Sale.

In order to recover freight and storage charges, the Panama railroad will dispose of the accumulation of "Over" and "Unclaimed" shipments now in its possession, by public auction, Wednesday, July 14, 1909, at 9 a. m., sale to be held on Dock 11, Cristobal, C. Z.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery and merchandise in general, all of which has been held six months and over in an effort to locate owner.

H. J. SLIFER,  
General Manager.

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending June 29, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	A. M.	P. M.	P. M.
June 23.....	1.21	7.31	1.50	7.47	
June 24.....	2.10	8.13	2.40	8.34	
June 25.....	2.57	9.05	3.32	9.23	
June 26.....	3.45	9.55	4.25	10.21	
June 27.....	4.40	10.43	5.18	11.18	
June 28.....	5.32	11.37	6.19		
June 29.....	12.15	6.24	12.26	6.59	

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, June 19, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gamboua.	Bohio.	Gatun (Canal).	Gatun (W. D.).

## Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending June 19, with supplies for the Isthmian Canal Commission:

*Advance*, June 14, from New York, with 100 car axles, Gorgona shops; 100 barrels cement, Gatun Spillway; 1 clamshell bucket, Gatun Locks; 11 motor cars for electric road, Gatun handling plant; 100 tower couplers for car repairs, Gorgona; 3,000 side opening levers for car repairs, Gorgona; 1,500 tower repair locks for car repairs, Gorgona; 10 anchor winches for sand barges, Balboa; 312,500 square feet wire cloth for stock; 32,588 electric fuses for stock; 100,000 feet triple tape fuse for stock; 20,000 quintuple caps for stock; and a miscellaneous cargo aggregating 2,900 packages, weighing over 1,216 tons.

*Prinz Joachim*, June 14, from New York, with 5,000 gallons cylinder oil for stock.

*Abangarez*, June 17, from New Orleans, 3,450 cable clips for stock; 401,351 feet Y. P. lumber for buildings.

*Allianca*, June 18, from New York, 10 flat cars, 3-ft gauge for Pedro Miguel Locks; 1,000 barrels cement for Gatun Spillway; 1,550 gallons alcohol for hospitals; 110 tons pig lead for new water service to Balboa; 228 packages turbine piping and fittings for Gatun and Miraflores boiler plants and generating stations; 718 iron castings for repairs to claps, Atlantic Division; 50 tons white lead for stock; 16,000 electric fuses for stock; 30,000 pounds wool waste for stock; and a miscellaneous cargo aggregating 5,361 packages, weighing over 1,200 tons.

The following steamers have recently arrived at Balboa: June 14, *U. S. S. Albany*, from Central America; June 15, *Ecuador*, from Guayaquil, and *Guatemala*, from southern ports; June 17, *Newport*, from San Francisco; June 18, *Manavi*, from intermediate ports. Departures were: June 11, *Arica*, for Guayaquil; June 15, *Chile*, for southern ports; June 17, *Peru*, for San Francisco; June 18, *Barraconda*, for Central America; June 16, *U. S. S. Albany*, for Central America and *Chiriqui*, for intermediate ports.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Orinoco.....R. M. Tuesday.....July 6

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamer *David* of the National Navigation Company, will leave Panama, for David, province of Chiriqui, and intermediate points, on Thursday, July 1, and every alternate Thursday thereafter.

The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 3 p. m., via Port Limon for New Orleans.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,

ANCON, C. Z., June 23, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Arza, Manuel	McKeown, Henry J.
Baumer, H. H.	Moore, Chas. A.
Bodle, Mrs. Helen (2)	Nichols, Mrs. Jewel
Buterbaugh, F.	Perry, J. E.
Chamberlain, Dan T.	Roberts, Dr. G. J.
Cruikshank, Dr. H. S.	Rose, Joseph
Debbs, William	Stone, H. L.
Latham, F. H.	Turner, L. C. (2)
Ligon, Louis Skelton	White, David H.
Lumby, G. W.	Wilking, George S.
Mack, Walter E.	Willsher, Albert E.

## Launch Service to Taboga.

The steamer *Sonklad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p. m. in time to make connections for the 5.30 train at Panama.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

### Address all Communications

THE CANAL RECORD,  
Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Another Dredge for Gatun.

A requisition was recently sent to the States for a 20-inch suction dredge for use at Gatun capable of dredging to a depth of 42 feet and delivering into a floating discharge pipe line. The estimated cost is \$125,000. The dimensions are as follows: Length of deck, 130 feet; breadth, 37 feet; depth, 11 feet; draft, 7½ feet. The hull will be built of steel throughout, framed transversely, and stiffened by two longitudinal and four transverse bulkheads.

The vessel will have an upper deck on the forward part of which will be the operating room. In addition to the machinery necessary for operating the vessel as a dredge, there will be a complete electric light plant for work at night. The dredge will be held in place while at work by two spuds 60 feet long and 28 inches in diameter. The main pumps will be of the side suction type and the dredge will be fitted for burning oil.

There will be two water tube boilers located in the hold where will also be placed the main pump and engine, fire, feed, and auxiliary pumps, condenser, and electric light plant. Trolleys and lifting gear will be provided capable of moving parts of the main engines, dredging pump, winding engine, and condenser heads, to a point where they can be easily placed on a barge alongside. The winding machinery will be placed on deck, the cutter engine on the ladder, and tools for minor repairs will be carried on the main deck.

#### Sale of Scrap Iron and Steel.

Old iron and steel left on the Isthmus by the French will be sold on competitive bid by the Isthmian Canal Commission. It is estimated that between 80,000 and 100,000 tons of this material, valuable chiefly as scrap, are lying along the line of the Canal, and about half of it in the territory that will be covered by the water of Gatun Lake. The advertisement for bids will be made far enough in advance of the date

of sale to permit a thorough inspection of the material by representatives of the bidders. The sale will be made in the near future for the threefold purpose of saving the material that lies in the lake region, furnishing ballast for the return trips of the cement ships *Cristobal* and *Ancon*, and utilizing tracks now available, that will be taken up as the construction work is finished at various points.

#### Passengers for Steamship *Cristobal*.

All Heads of Departments and Divisions have been notified that the steamship *Cristobal*, formerly the *Tremont*, one of the ships recently acquired for the Panama Railroad Steamship Company, sailed from New York on June 25, via Barbados, and is due to arrive at Cristobal about July 6. The date for the return trip to New York is not definitely fixed, but it is expected she will be able to sail July 14. The sailing time between Cristobal and New York has been estimated at seven days.

In order to relieve the serious congestion which prevails at the present time on the Panama railroad steamships, it is of the utmost importance that a sufficient number of leaves of absence be arranged to fill this boat on her return trip to New York. Eighty-two first cabin accommodations will be available for I. C. C. and P. R. R. employees, and their families.

All Heads of Departments and Divisions are directed to advise the office of the Chairman, at the earliest possible date, the approximate number of employees for whom they will be able to arrange leaves of absence commencing on or about July 14, and the members of their families who will accompany them to the States. Regular requests for leave of absence will be submitted for this sailing, and reservations secured in the usual way. Upon the arrival of the *Cristobal* notification will be given whether it will be necessary to change the date of sailing.

#### Drill Barge and Sounding Scow.

All the parts for the new drill barge to be used in connection with sub-aqueous rock excavation in the Pacific Division have arrived on the Isthmus and are being assembled in the marine shops at Balboa. The barge was furnished by the Maryland Steel Barge Company, and was shipped knocked down. The hull is 112 feet long, 36 feet wide and 8 feet deep. A complete description of the machinery, equipment, and method of operation will be found in THE CANAL RECORD of September 16, 1908. The barge will be ready for service within the next three or four months, and will be equipped with electric lights for night work.

A sounding scow, 45 feet long, for measuring and sweeping the rock area in the channel is under construction at the Balboa marine shops. It will be fitted with an iron bar suspended by two chains, to be lowered

over the sides of the scow for determining whether all rock has been removed to grade.

#### Cars for Pedro Miguel Handling Plant.

Delivery has been completed of the twenty cars to be used in hauling concrete from the mixers in the forebay of the Pedro Miguel Locks into the lock chambers. These cars are 12-ton flats, with double four-wheel trucks of 3-foot gauge, and are 18 feet long and 7 feet 2 inches wide. They are constructed all of metal excepting the floor, which is of creosoted white oak, three inches thick. The platform is 2 feet 4 inches above the rails. They are fitted with air and hand brakes, automatic couplers, and stake pockets.

#### Floods in the Chagres River.

##### THE CANAL RECORD:

In your issue of June 23, you state that the flood of December 3 and 4, 1906, in the Chagres River is the highest one of record. Please inform me whether there has been a greater flood than this, a fairly authentic record of which is to be found. Will you give me the height of the flood of June 14-15, 1909, above low water at Gamboa, in order that I may compare it with the floods mentioned in the third paragraph of the article referred to above?

"BAS OBISPO."

The height of low water above sea-level at the gauging stations along the Chagres is published under the heading "Stages of the Chagres," in each issue of THE CANAL RECORD. At Gamboa it is about 46 feet above sea-level. The comparison which you wish to make follows:

Date.	Height above low water.
1909, June 14-15.....	21.2 feet
1906, December 3-4.....	35.6 feet
1906, November 16-19.....	22.3 feet
1890, December 1-2.....	31.8 feet

The highest flood, of which there is any information, was that of November 18, 1879, and the records of the Isthmian Canal Commission do not go back beyond 1884. The General Superintendent of the Panama Railroad in his report for the year 1879 refers to this flood as follows:

The Chagres River rose 46 feet in three days and the freshest was without precedent on this Isthmus.\* \* The greatest damage done was the undermining of two of the stone piers of our long bridge over the Chagres River at Barbaecos, necessitating the driving of a large number of piles and the erection of trestle supports 40 feet high to carry the iron spans.

In the report for 1880 this flood is again referred to:

The work for the first quarter of the year 1880, was performed under very many disadvantages, caused by the disastrous floods of November 1879, which rendered the road impassable for six weeks.

The records of a Colombian engineer, Pedro J. Sosa, give the height of the flood at Bohio as 42 feet above sea-level, which would be 41 feet above low water at that point, and at Gamboa as 49 feet above low water. Col. George M. Totten, at one time

chief engineer of the Panama Railroad, records that he marked a stage of the flood on Barbacoas bridge at 63.5 feet above sea-level. M. Dingler, director of works under the old French company, gives the height of this flood at Matachin, two miles below Gamboa, as \$3.5 feet above sea-level. Gen. H. L. Abbott (Problems of the Panama Canal, page 144), says that the flood of 1879 reached 36.42 feet above low water at Gamboa, with a probable error of five inches.

None of the information procurable about the flood of 1879 assumes to be authentic, but all accounts agree that it was an unusually large freshet. Before the flood of December 3-4, 1906, the river had been given a better means of flowing off rapidly by the broad and straight channel of the French canal from Bohio to Limon Bay, so that the same conditions for a congestion of the water above Bohio did not exist in 1906 as in 1879.

#### New Police Map.

A special map of the Canal Zone has been prepared for the use of the Division of Police and Prisons showing the territory by police districts. With the exception of Ancon, Las Sabanas and Balboa, these districts all extend east and west to the Zone boundary. The districts and their boundaries are as follows:

Ancon—North to mile post one mile south of Corozal station, east to Panama railroad, south to city limits of Panama, west to an imaginary line running nearly north and south and intersecting the junction of railroads to Balboa docks. Balboa—North to Corozal line, east to Ancon line, south to the sea, and west to Zone line. Las Sabanas—North to Corozal line, east to Zone line, south to the sea, west to the Panama railroad. Corozal—From the mile post one mile south of Corozal station to Bridge 62 north. Miraflores—From Bridge 62 to Bridge 59 north. Pedro Miguel—From Bridge 59 to a line 70 feet north of stake 1,620, on the south boundary of the administrative district of Empire. Paraiso—From the last named point to a line just south of the new blacksmith shop and sheds on west side of the Canal. Culebra—From the last named point to a point just south of Camp Lirio. Empire—From Camp Lirio to the mile post one mile south of Las Cascadas. Las Cascadas—From mile post to Bridge 52 on the south line of the administrative district of Gorgona. Bas Obispo—From Bridge 52 to Matachin. Gorgona—From Matachin to Bridge 47. San Pablo—From Bridge 47 to mile post one mile north of San Pablo. Tabernilla—From mile post to Bridge 39 on the south line of the administrative district of Cristobal. Bohio—From Bridge 39 to Bridge 27. Gutun—From Bridge 27 to Bridge 7. Cristobal—From Bridge 7 to the sea, outside the city limits of Colon.

Bohio is the largest, and Ancon the smallest, of the police districts.

#### Visit of New York Chamber of Commerce.

On invitation of the Chairman of the Commission, the Panama Canal Committee of the Chamber of Commerce of New York State will visit the Canal Zone in July. The members are Mr. John R. Dunlap, Mr. William L. Saunders, Mr. Cornelius A. Pugsley and Mr. Julio F. Sarzano. They will leave New York on the *Colon* on July 12, and will return by the same ship scheduled to leave Cristobal on July 23. Messrs. Dunlap and Saunders will be accompanied, each by a daughter, and Mr. Pugsley by a son.

## FUNDS FOR CANAL WORK.

### Appropriation for 1910, and Total of Appropriations for Past Years.

Provision for carrying on the Canal work during the fiscal year beginning July 1, was made by Congress in the Sundry Civil Act of March 4, 1909. The appropriation amounts to \$33,638,000 divided into the following items:

Salaries of officers and employes in the United States.....	\$150,000
Incidental expenses in the United States.....	75,000
Salaries of Commission, officers, employes on the Isthmus other than skilled and unskilled labor in the departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts, and expenses incident to conducting hearings and examining estimates for appropriations on the Isthmus.....	3,871,000
Skilled and unskilled labor on the Isthmus in the departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts.....	12,000,000
Material, supplies, and equipment, and other expenses not in the United States for the departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts.....	10,517,000
Equipment and construction of Panama railroad.....	700,000
Miscellaneous expenditures, recruiting laborers, transporting laborers and other employes, and expenses not otherwise provided for in the Departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts.....	1,000,000
Salaries of officers and employes other than skilled and unskilled laborers, Department of Civil Administration.....	470,000
Skilled and unskilled labor, Department of Civil Administration.....	20,000
Material, supplies, etc., and contingent expenses, Department of Civil Administration.....	140,000
Salaries of officers and employes other than skilled and unskilled laborers, Department of Sanitation.....	725,000
Skilled and unskilled labor, Department of Sanitation.....	450,000
Material, supplies, etc., and contingent expenses, Department of Sanitation.....	740,000
Relocation of Panama railroad.....	1,980,000
All expenses for continuing the extension, grading, and paving of streets, building sewers, and extending water mains in the cities of Panama and Colon.....	800,000
Total.....	\$33,638,000

The entire appropriation is available until expended; ten per cent of each item may be used interchangeably, but not more than ten per cent added to any one item, and any surplus may be used for the Department of Construction and Engineering.

The appropriation law further provides:

No part of the foregoing appropriations for the Isthmian Canal shall be applied to the payment of allowances for longevity service or layover days other than such as may have accumulated under existing orders of the Commission, prior to July 1, 1909.

The foregoing appropriations shall be available to reimburse the Panama Railroad Company for marine losses, or for losses due to destruction of or damage to its plant, equipment, or commissary supplies by fire; *Provided, however*, That the Panama Railroad Company shall carry no insurance against loss from causes covered by this appropriation.

All funds hereafter collected by the government of the Canal Zone from rentals of public lands and buildings in the Canal Zone and the cities of Panama and Colon, and from the Zone postal service, and from court fees and fines, and collected or raised by taxation in whatever form under the laws of the government of the Canal Zone, are hereby appropriated until and including June 30, 1910, as follows: The revenues derived from the postal service to the maintenance of that service; the remaining revenues, after setting aside a miscellaneous and contingent fund of \$10,000, to the maintenance of the public school system in the Zone; to the construction and maintenance of public improvements within the Zone; to

the maintenance of the administrative districts; to the maintenance of Canal Zone charity patients in the hospitals of the Isthmian Canal Commission, and to the maintenance of administrative district prisoners. A detailed and classified statement of all receipts and expenditures without the duplication of items under this paragraph shall be submitted to Congress after the close of the fiscal year 1910.

All funds realized during the fiscal year 1910, by the Isthmian Canal Commission from the performance of services by the Commission, or from rentals, or from the sale of materials and supplies under the custody and control of the Commission, are hereby reappropriated for expenditure under any of the foregoing classified appropriations for the department of construction and engineering, and a full and separate report in detail of all transactions hereunder shall be made to Congress.

A statement follows showing the appropriations by Congress for the Isthmian Canal, separated by the different Acts, and showing the total amount appropriated up to the fiscal year ending June 30, 1909:

ACT OF CONGRESS APPROVED.	Appropriation.	Deficiency.
June 28, 1902.....	\$40,000,000.00	.....
May 28, 1904.....	10,000,000.00	.....
June 28, 1902.....	10,000,000.00	.....
December 21, 1905.....	11,000,000.00	.....
February 27, 1906.....	.....	\$5,990,786
June 30, 1906.....	25,456,415.08	.....
March 4, 1907.....	27,161,367.50	.....
February 15, 1908.....	.....	12,178,900
May 27, 1908.....	29,187,000.00	.....
March 4, 1909.....	.....	5,458,000
March 4, 1909.....	33,638,000.00	.....
Total.....	\$186,442,782.58	\$23,627,686
Grand total.....	\$210,070,468.58	.....

\*For purchase of Canal rights.

†For purchase of Canal Zone.

#### Commission Clubhouses.

A musical and reading will be given at the Empire Y. M. C. A., on Thursday evening July 1, by Mr. Bourke Sullivan, of Philadelphia, and Miss Mary Rebecca Slifer, assisted by Mrs. May Goolsby Shivers at the piano. The entertainment will be open to members of the association and their friends.

The local duck-pin tournament at the Gorgona Y. M. C. A., which was in progress for several weeks has been finished. Twenty-nine men participated, each rolling 81 games. The results were as follows:

Gold medal for highest pinfall, F. G. Swanson. Gold medal for highest number of games, Harvey McConaughey. Silver medal for second highest pinfall, Harvey McConaughey. Silver medal for second highest number of games, F. G. Swanson. Bronze medal for third highest pinfall, W. J. Humphrey. Bronze medal for highest three game average, Ray King.

#### Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

ANCON, C. Z., June 30, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The Gorgona Woman's Club has taken up the study of the history of Panama which will be continued at each meeting, with the exception of those for which special programs have been arranged. Mrs. C. H. Toberer was elected president of the club in place of Mrs. Frank Morrison, resigned, and Mrs. L. Gundy, secretary, vice Mrs. Phillips resigned. The club has extended an invitation to Mrs. H. J. Slifer, fourth vice-president of the Canal Zone Federation to make an address at one of its meetings in July.

Officers of the Gorgona District, Canal Zone Red Cross, elected in May are: Mrs. Frank M. Morrison, chairman; A. L. Hackenberg, vice-chairman; T. S. Booz, secretary; H. W. Otis, treasurer. Regular meetings of the District are held at the Commission clubhouse on the first Monday evening in each month. A dance will be given July 3, the object of which is to raise funds for a street carnival to be held Friday evening, July 19, for the benefit of the general Red Cross treasury.

The Gorgona Dramatic Club has begun rehearsals of a comedy, "Captain Racket," which will be produced in August.

The Grand International Auxiliary to the Brotherhood of Locomotive Engineers, Panama Division No. 405, was organized at Las Cascadas, March 19, with forty members. Mrs. George Brown, of Pedro Miguel, is president, and Mrs. Margaret Williamson of Las Cascadas, secretary. Meetings are held in the lodge hall Las Cascadas, on the second and fourth Fridays in each month.

The Empire and Gorgona divisions of the Woman's Christian Temperance Union held a meeting at the Commission chapel, Empire, June 16, for the purpose of discussing work and stimulating united effort. A program was given, consisting of music and readings. The reports of the local secretaries were read, in which a comprehensive outline of the work was brought before the meeting. The Gorgona Union is planning for a medal contest and sewing class in connection with the junior work. Mrs. H. E. Ball of Empire, and Miss Mattie Berry of Gorgona, were appointed organizers for the Union in the Canal Zone. Mrs. Abbie B. Hillerman was elected representative of the Zone Union at the National Convention of the W. C. T. U., to be held in Omaha, Nebraska, in October.

A directors' meeting of the Canal Zone Humane Society has been called for Sunday afternoon, July 11. The meeting will be held at the residence of Archdeacon Bryan, acting general secretary, at Ancon.

Owing to the celebration of the national holiday on July 5, the regular meeting of the Woman's Guild, Ancon, will be omitted. The next meeting will be held at the home of Mrs. G. W. Greene, Ancon hospital grounds, July 19.

Special services are held in the Ancon Protestant chapel for the Brotherhood of St. Andrew, on one Sunday evening in each month. Addresses are given by laymen. The members of the chapter are in charge of the arrangements, under the direction of the chaplain.

The quarterly meeting of the Methodist Episcopal Church will be held in the church at Panama on Sunday, July 4, at 10 a. m.

All persons interested are invited to attend, and a special invitation is extended to all Methodists living along the Line.

A basket picnic for the members of the Sunday school will be held on the beach near Panama on July 5. All members of the church from out of town, as well as members of the congregation, are invited.

### Personal.

Major J. P. Jervey and family of Gatun, and Judge Thos. E. Brown, Jr., and Mrs. Brown, of Cristobal, are passengers on the *Panama*, which sailed from New York on June 24, due at Cristobal, June 30.

Col. Tom M. Cooke, Chief of the Division of Posts, Customs and Revenues, and Miss Grace Frampton were married on Saturday, June 12, at Mercer Pa.

R. W. Hebard, Assistant Engineer at Gorgona, and Senorita Anna Alvarado, daughter of Don Francisco Alvarado of the city of Panama, were married at the Bishop's palace, Panama on Monday evening, June 28.

### Obituary.

M. V. Debardeleben of Tuskegee, Ala., died at Ancon Hospital on June 22. He had been on the Isthmus four years, was 31 years old and unmarried. His mother, Mrs. F. J. Debardeleben lives at Tuskegee, Ala.

### Examination for Stenographer.

An examination for the position of stenographer in the Federal Service in the United States will be held at Culebra on Sunday, August 1, 1909. It is possible that the number of applicants for this examination will exceed the number of papers forwarded to the Isthmus. In that event, preference will be given to those applicants whose completed applications were first received.

The Manual of Examinations, containing all necessary information, and the Application Form, may be obtained from John K. Baxter, Secretary of the Isthmian Civil Service Board, office of the Chairman, Culebra, Canal Zone.

## RESOLUTIONS OF SYMPATHY.

### James W. Barbour.

WHEREAS, It has pleased the Almighty God to take from our midst our friend and co-worker, James W. Barbour; be it

*Resolved*, That we, the representatives of the various departments of the Mechanical Division of the Panama railroad, extend our heartfelt sympathy to his relatives and friends, especially to his aged father and mother; and be it

*Resolved*, That he was a true friend and earnest worker, and is sincerely mourned by all with whom he came in contact; and be it further

*Resolved*, That a copy of these resolutions be sent to his bereaved parents, and a copy be published in THE CANAL RECORD, and *Meriden Daily Journal*.

ROBERT H. LUCE,  
Chairman of Committee.

### F. C. Howland.

WHEREAS, God has once more reminded us that "In the midst of life we are in death," by the removal of F. C. Howland, who was but in the morning of life, and

WHEREAS, in this the wife and child have lost a loving husband and father; therefore be it

*Resolved*, that we, the members of the Pedro Miguel Woman's Club, express to Mrs. Howland our keen sorrow and extend our heartfelt sympathy in her sad bereavement; and be it further

*Resolved*, that a copy of these resolutions be sent to the wife and a copy be published in THE CANAL RECORD.

MRS. G. E. BROWN, MRS. H. W. SHICK,  
Committee.

## EXECUTIVE ORDER.

### Railway Safety Appliances Law.

Under authority vested in me by law, it is ordered:

Paragraph 6 of Executive Order No. 1002, dated January 6, 1909, is hereby amended as follows:

6. This order shall take effect not later than six months from the date of the promulgation thereof, except for the use of old French dump cars in use on the Panama Canal, including also the couplers of locomotives necessary to operate them, until July 1, 1910, after which date it shall likewise apply to this equipment.

WM. H. TAFT.

THE WHITE HOUSE.

June 11, 1909.

[No. 1085.]

### Mutilated Gold Coins.

THE CANAL RECORD:

I have to return letter from F. G. Swanson, dated Gorgona, June 23, 1909, reading as follows:

Practically all money received by I. C. C. employees comes from the Pay Car and Disbursing Office. Will you please advise through the columns of THE CANAL RECORD, why shaved gold coins are given employees on pay day, and at the same time the Canal Zone Treasurer, the Disbursing Officer on Pay Car, and the Post-offices refuse to accept same?

I am, of course, able only to make answer for the Disbursing Office. At no time have I, as Disbursing Officer, personally or through the members of the pay force, paid out anything but good gold coins which would pass with any man having a knowledge of what constitutes a good gold coin at its par value. Further, no gold coins paid out by me have ever been refused upon presentation, and I am at all times ready to receive such coins in payment of any bills due to the Commission, or in exchange for funds in the usual course of business with the banks, so that there is no reason known to me why any money paid out by the Disbursing Office should not readily be received in the usual business on the Isthmus.

The only incident occurring on the pay car, of which I am aware, that might lead to Mr. Swanson making the statement that the Disbursing Officer on the pay car has refused to accept money paid out by him, would be that at Gorgona, where on last pay day I paid out some gold which had never been in circulation on the Isthmus since its receipt by me from the United States sub-treasury in New York and which I was later informed had been refused by the postmaster at Gorgona, and I stated that as I had no better money, nor knew of any better in existence, I failed to see what I could do in regard to it.

EDWARD J. WILLIAMS,  
Disbursing Officer.

Empire, C. Z., June 25, 1909.

### Independent Order of Odd Fellows.

The following installation of officers in the I. O. O. F. lodges on the Canal Zone will be made by B. F. Sisson, District Deputy Grand Sire, and suite:

Isthmian Canal Rebekah lodge, No. 1, Gorgona, Saturday evening, July 3; Isthmian Canal lodge, No. 1, Gorgona, Tuesday evening, July 6; Canal Zone lodge, No. 3, Culebra, Monday evening, July 12; Cristobal lodge, No. 2, Cristobal, Monday evening, July 19. All members of the Order in good standing are cordially invited to attend.

## FOURTH OF JULY.

## Programs for the Celebrations at Ancon and Cristobal on July 5.

The programs for the Fourth of July celebrations at Ancon and Cristobal areas follows:

## AMATEUR ATHLETIC EVENTS—ANCON PARK.

	a. m.
100-yard dash.....	9.00
880-yard run.....	9.45
Running high jump.....	9.45
50-yard dash, boys under 16 years.....	10.00
220-yard dash.....	10.15
1/4-mile run, boys under 16 years.....	10.30
440-yard run.....	10.45
1/2-mile relay, boys under 16, 220 yards each (only organized teams to compete).....	11.00
Relay race, 1 mile, four men, 1/4 mile each (only organized teams to compete).....	11.15
Tennis tournament, Panama tennis courts, commencing at.....	9.30

Gold, silver, and bronze medals of special design will be given for first, second and third prizes in each amateur event.

Concerts by I. C. C. Band, at Hotel Tivoli, at 1.00 and 5.30 p. m.

Pompier life saving exhibition, Ancon Fire Department, Hotel Tivoli—2.00 p. m.

## CASH PRIZE EVENTS—ANCON PARK.

Obstacle race—2.45 p. m. First prize \$10, second prize \$5.
Wall scaling contest (Marines)—2.45 p. m. First prize \$25, second prize \$10.
Sack race (50 yards)—3 p. m. First prize \$10, second prize \$5.
Exhibition tug of war (Marines and Police Department)—3 p. m. First prize \$25.
Pony race (1/4-mile, native ponies, for boys under 16 years)—3.15 p. m. First prize \$10, second prize \$5.
Three legged race (100 yards)—3.30 p. m. First prize \$20, second prize \$10.
Bucking contest (horses furnished contestants)—3.30 p. m. First prize \$25, second prize \$15.
Mule race (1/4-mile)—4 p. m. First prize \$10, second prize \$5.
Equipment race (Marines, 100 yards)—4.15 p. m. First prize \$10, second prize \$5.
Mounted race (100 yards, two men teams)—4.30 p. m. First prize \$20, second prize \$10.
In addition to the concerts, music will be furnished by the I. C. C. Band during the day at the Ancon Athletic Park.
Fireworks—In front of Hotel Tivoli at 8 p. m.
Dance—Hotel Tivoli at 9 p. m. Music furnished

by the Tivoli orchestra. Refreshments will be served at the dance.

There will be no admission fees or other charges. The cost of the celebration, except that of the special trains, will be paid by subscription of Americans of the Isthmus and merchants of Panama. Special trains (of which a detailed schedule has been posted in railroad stations) will be run without charge, through the courtesy of the Panama Railroad Company.

The celebration will be held on Monday, the fifth, which will be observed as a holiday in the Canal Zone, and all Americans of the Isthmus and their friends are invited to be present.

## Cristobal.

## AQUATIC EVENTS.

Sail boat race—8.30 a. m. Prizes \$15 and \$5.
U. S. Navy cutter race ( <i>Ruth</i> and <i>Mary S.</i> )—8.40 a. m. Prize, pennant.
Life boat race—8.50 a. m. Prizes \$20, \$10 and \$5.
Class 2 tugboat race ( <i>Balboa</i> and <i>Grace</i> )—9.15 a. m. Prize, pennant.
Dory race—9.30 a. m. Prizes \$15, \$10 and \$5.
Class 1 gasoline boat race—9.40 a. m. Prize, pennant.
Clapet race (Clapets Nos. 3, 4, 12 and 14)—10 a. m. Prize \$40.
Class 2 gasoline boat race—2 p. m. Prizes, \$15 and \$5.
Life raft race (ex-varsity men; distance, not too far. Time, less than 24 hours.)—2.10 p. m. Prizes, \$10 and \$5.
Swimming race—2.30 p. m. Prizes, \$20, \$10 and \$5.
Rowboat race—2.40 p. m. Prizes, \$15 and \$10.
Greased spar climbing—2.50 p. m. Prize, \$10.
Tugboat tug-of-war ( <i>Scully</i> vs. <i>Cristobal</i> )—3.15 p. m. Prize, \$40.

## ATHLETIC EVENTS.

120-yard hurdle—10.30 a. m. Trials.
Fat men's race—10.35 a. m. Prize, merchandise.
Mile run—10.35 a. m. Prize, gold, silver and bronze medals.
Boys' 50-yard dash (80-pound class)—10.50 a. m. Prizes, gold, silver and bronze medals.
120-yard hurdle—10.55 a. m. Finals. Prizes, gold, silver and bronze medals.
Boys' 50-yard dash (90-pound class)—11 a. m. Prizes, gold, silver and bronze medals.
100-yard dash—11.05 a. m. Trials.
Sack race—11.10 a. m. Prize, merchandise.
100-yard dash—11.15 a. m. Finals. Prizes, gold, silver and bronze medals.
Three legged race—11.20 a. m. Prize, merchandise.
440-yard run—11.20 a. m. Prizes, gold, silver and bronze medals.
Potato race—11.30 a. m. Prize, merchandise.
Boys' relay race—11.30 a. m. Prizes, gold, silver and bronze medals.

Relay race—11.35 a. m. Prizes, gold, silver and bronze medals.

Shot put (12-pound)—11.35 a. m. Prizes, gold, silver and bronze medals.

Wall scaling (competing Marine Corps teams)—Prizes, \$15 and \$10.

Running high jump—11.50 a. m. Prizes, gold, silver and bronze medals.

Running broad jump—11.50 a. m. Prizes, gold, silver and bronze medals.

Hop, step and jump—11.50 a. m. Prizes, gold, silver and bronze medals.

Volunteer Fire Companies' horse races—1 p. m. Prizes, \$75, \$50 and \$25, and \$25 to non-winning competitors.

## BASE BALL.

Picked team Isthmian League vs. picked team Atlantic League (nine-inning game)—3.30 p. m.

Fire Department exhibition, to consist of exhibition run to tower on Cristobal point; pompier ladder work, and life saving exhibition (non-competitive)—6.20 p. m.

Fireworks display from Cristobal Point—7.30 p. m. Illuminated boat parade—8 p. m. Prize, \$15 for best decorated boat.

Grand ball on Pier 11 (music by Panama railroad orchestra)—9.30 p. m.

NOTE—If at any time during the day rain interferes with the events scheduled, music will be furnished by the band on Pier 11.

## Acting Treasurer of Canal Zone Red Cross.

CULEBRA, June 28, 1909.

Sir—With the advice and consent of the Executive Committee of the Canal Zone Branch, American National Red Cross, I hereby appoint you as Acting Treasurer to relieve Mr. H. D. Reed, who has placed his resignation in my hands, due to the fact that he is about to leave the Canal Zone for the United States.

Respectfully,

C. A. DEVOL,  
President, Canal Zone Branch,  
American National Red Cross.

LIEUT.-COL. JNO. L. PHILLIPS,  
Member Executive Committee,  
Canal Zone Branch,  
American National Red Cross,  
Ancon, Canal Zone.

Lost—On Sunday June 20, the undersigned boarded passenger train No. 27 at Mamei, and in leaving the train at Gorgona left a small camera in seat. Will the gentleman with whom he was sitting please communicate with me with a view to returning the camera and receive reward. C. L. Prentiss, Gorgona, C. Z.

Train No. 122 will not stop between Gorgona and Colon except to let off passengers from points between Panama and Gorgona.

Train No. 123 will not stop between Gorgona and Panama except to let off passengers from points between Colon and Gorgona.

Train No. 132 will be held at Panama and train No. 133 at Colon until after the fireworks exhibition is completed.

Train No. 134 will be held at Panama and train No. 135 at Colon until after the dances. As these two trains are especially provided for accommodation of people attending dances, they will not handle any but first-class passengers, and the Panama Railroad reserves to itself the privilege of refusing transportation to any applicant. No form of transportation will be required on any train.

## NOMBRE DE DIOS.

History of the Port Where Sand is Obtained For the Atlantic Division.

The village of Nombre de Dios, where the Commission is obtaining sand for the concrete work in the Gatun Locks, is the oldest settlement on the Isthmus, within the limits of the Republic of Panama, and one of the oldest in the New World. In 1502, when Columbus was skirting the Caribbean coast of the Isthmus he entered and explored the harbors at Nombre de Dios and Porto Bello, but made no attempt to establish colonies. Eight years later, in 1510, Diego de Nicuesa, then Governor of Hispaniola (Santo Domingo), was sent by the Spanish Crown to take possession of the newly-discovered country. He started with about 700 colonists, but toward the end of his voyage a severe storm occurred, which wrecked several of his ships and caused the loss of many of his people. He sought shelter near the mouth of the Belen River, and when the storm subsided sailed eastwardly, and anchored in the harbor of Nombre de Dios. When Nicuesa landed, he raised the Spanish flag took possession of the country in the name of God, and of his sovereign, the King of Spain, hence the origin of the name the locality now bears.

After the settlement of old Panama in 1513, land communication was established between it and Nombre de Dios, at that time the principal port on the Atlantic side of the Isthmus. Later, vessels sailed from Nombre de Dios to the mouth of the Chagres, from where the cargoes were transported up that river to Cruces and overland to old Panama. The colony at Nombre de Dios sustained severe losses from fevers, and on account of the open roadstead, the shipping was exposed to storms, which led to the abandonment of the place as a port toward the close of the sixteenth century, in favor of the sheltered haven at Porto Bello.

The harbor at Nombre de Dios from Manzanillo Point on the west, to Playa de Damas on the east, is about 6 miles wide, and extends inland a distance of  $2\frac{1}{2}$  to 3 miles. The inner harbor is semi-circular and is surrounded by a flat alluvial plain extending back a mile or more before the foot hills are reached. To the southwest rises a high range of hills, which form the watershed between the Boqueron River, and other tributaries of the Chagres, and the three rivers, the Nombre de Dios, Fato, and Terraine, that empty into the bay at Nombre de Dios. The Nombre de Dios River enters the sea to the west of the village, while the Fato and Terraine now find a common entrance in the channel being made by the Commission to the sand deposits northeast of the town. The Fato and Nombre de Dios Rivers have about the same discharge, and are considerable streams, especially in the rainy season. The Fato is about 15 miles in length, and the Nombre de Dios about 20 miles. Both are subject to sudden freshets, the Fato River having been in flood recently five times within a week. This stream flows through the center of the site of the sand operations, and on this account precautions against freshets are taken.

The alluvial plain, part of which forms the sand zone acquired by the Commission, is a large deposit consisting of sand and gravel,

underlying a top soil of varying depth. The sand and gravel, as well as the earth, occur in strata throughout the deposit. The borings at some points indicated a sand and gravel formation, unmixed with earth, to a depth of 45 feet; in other places a few feet of top soil, then several feet of gravel, and successively more earth, and more gravel. Again, the borings showed an unusual depth of top soil, with gravel farther down.

According to old Spanish charts, the alluvial plain 300 years ago was much smaller than it is today, and was confined to a small strip of beach bordering the foothills, with an enlargement where the Nombre de Dios River entered the sea. The charts also show that this river did not then pursue a straight course to the bay. Instead, it made a deep curve to the east and flowed across the head of the harbor, entering it where the Fato River does now. It was a much larger stream at that time, and it is apparent that the Fato did not flow over its own bed to the bay but was a tributary of the Nombre de Dios. At the time when the village of Nombre de Dios was a port of some importance, history records that the Spanish caravels entered the river and discharged their cargoes at some distance up the stream. As evidence of the increase in the area of the alluvial deposit, there have been found, within recent years, parts of old Spanish vessels lying deeply imbedded in the mud and sand half a mile or more from the nearest navigable water, indicating that at one time this locality formed the coast line.

When the Commission took up the question of a sand supply for the concrete work at Gatun, several deposits were inspected. Samples from the deposit at Nombre de Dios were tested and proved satisfactory as to quality, and on May 3, 1908, a survey party was despatched to that point, which is 35 miles by water northeast of Colon, and 18 miles east of Porto Bello. A series of wash drill borings were made over a considerable area, with the result that a sand zone was mapped out estimated to contain about 2,700,000 cubic yards of usable material. It was further estimated that in developing the beds, it would be necessary to remove about 289,000 cubic yards of top soil. A sufficient supply of good sand having thus been located, negotiations were begun and concluded covering the purchase of 126 acres of this land. The tract is of irregular shape and includes a couple of small islands formed by the Fato and Terraine Rivers. It commences at the old mouth of the Fato, follows its channel for a considerable distance and extends inland about  $1\frac{3}{4}$  miles, practically encircling the village and going as far as the Nombre de Dios River, in a westerly direction.

Actual operations began early in October, 1908, when a 16-inch suction dredge was brought from Colon to open up the place and supply sand until a double-ended clam-shell dredge, under reconstruction at Cristobal drydock, could be sent to relieve it. On November 7, 1908, a few days after the suction dredge had been put to work, a sharp squall occurred during which the dredge filled and sank about 40 feet from the shore. About the same time, a barge loaded with iron rails drifted against the sunken dredge damaging both vessels. The barge afterward went ashore and was saved, but the dredge was a total wreck, except the ma-

chinery, which has been removed from the hull.

After this occurrence, the dipper dredge *Chagres* was sent to Nombre de Dios, and work was begun by opening the channel of the Fato River, the dredge digging and dumping on both sides until the channel was made wide enough for scows to come alongside, when the material was carried out to sea. Dredging operations began 400 feet out in the harbor, and between this point and the river's mouth, a coral reef was encountered, which was blasted out. At the present time there is a channel 150 feet wide with an average depth of 22 feet, which opens into a basin, dredged by the *Chagres*, 1,000 feet long, 600 feet wide, and 20 feet deep. Up to June 20, the excavation in opening up the sand beds amounted to 163,226 cubic yards; the amount of sand dredged, to 13,085 cubic yards, and the amount of top soil removed, to 5,964 cubic yards, a grand total of 182,275 cubic yards. Most of the sand dredging to date has been done by a stiff-legged derrick erected on a small barge, and operating a 1-yard clam-shell bucket, and by a Browning locomotive crane placed on a transfer barge, also operating a clam-shell bucket. The crane has been used for this purpose only when the derrick was out of order. On June 23, an old French suction dredge was put to work in the basin and it will do the sand dredging until another clam-shell dredge, now being rehabilitated at Cristobal dry dock, is ready for service. In getting the sand, it has been necessary to remove from 4 to 6 feet of top soil and the stratum of sand and gravel thus uncovered has averaged about 5 feet in thickness. Under it is a layer of blue clay.

Considerable track has already been laid to reach the different parts of the sand zone. Starting at the channel entrance, it extends to Nombre de Dios village, where it curves to a point  $\frac{3}{4}$  of a mile up the Fato River. Here it crosses the stream and continues to a point where the locomotive crane will shortly begin work stripping the top soil with an orange-peel bucket. To reach this locality, a fill has been made with top soil removed from island No. 1, inside the mouth of the river. A Belgian locomotive, and four Oliver dump cars are in use. A dock 94 feet long, has been built, with a railroad track on it for unloading heavy material from the barges and handling supplies.

The force employed at Nombre de Dios consists of 16 gold, and 81 silver employees, 46 of whom are Hindus, principally used in track building. The gold employees have been living in houseboats, one of which is tied up at the dock, and besides quarters, has furnished office room for the superintendent, and hotel and kitchen space. The other houseboat has been dismantled and set up on the beach, the space underneath being used as a storehouse for machinery parts, etc. A new type-5 house, located near the beach and a short distance away from the village, will be ready for occupancy by July 1, and will furnish accommodations for 28 gold men, and office room for the superintendent. An extension, one story high, 44 feet long, and 33 feet wide will be made to the east end of the type-5 building for hotel and kitchen purposes. The area in front of the house will be fenced in with poultry screening to keep out stray animals. Two tents are provided for the resident

nurse, one as quarters, and one as a dispensary. The West Indian laborers are assigned to a part of one of the houseboats, while the Hindus are quartered in two tents.

Water is supplied the camp from a reservoir located in a ravine a mile and a quarter distant. The dam is of concrete, 35 feet long and 12 feet high, and its crest is 37.5 feet above sea-level. The works were constructed by the resident force, and all the sand and cement used in their construction was carried in coal baskets on men's heads for a distance of half a mile over a trail which was partly under water. The reservoir is fed by a small stream known as La Gloria, and also contains a perennial spring. A 2-inch supply pipe leads through the village to an iron tank, from where it is distributed to points in the Commission camp. Water is furnished the village by three hydrants.

The village of Nombre de Dios is of the usual type of small Isthmian towns. It contains about 200 houses, mostly cane, with thatch roofs, with here and there a frame building. All of the houses are numbered after the manner of Commission buildings. A new stone church is under construction. The town borders on "Cocoanut Land," for, beginning here and extending for miles along the San Blas coast, the cocoanut is everywhere in evidence. In the vicinity of Playa de Damas, two miles from Nombre de Dios, manganese mines abound. The Caribbean Manganese Company operated a mine 11 miles inland from Playa de Damas up to 1901, but owing to the low price of the ore at that time, and to the export tax of \$1 per ton imposed by the Colombian Government, continued exploitation was unprofitable, and the mines and machinery were abandoned. Panama capitalists own a manganese mine on one of the cays from which considerable ore has been shipped. An American company has a large trading post at Playa de Damas, where trade is carried on with the San Blas Indians in cocoanuts, turtle shells, ivory nuts, rubber, and balata, the latter, the gum of the nispero tree, resembling rubber, but is more durable and commands a higher market price.

#### Change in Name of Vessels.

Application has been made by the Chairman of the Isthmian Canal Commission to the Commissioner of Navigation at Washington, for change in the name of the following vessels, owned by the Commission and Panama Railroad Company, that are engaged in Canal construction:

United States sea-going suction dredge *Ancon* to *Caribbean*.

Panama railroad tug *Cristobal* to *Phoenix*.

The changes are necessary by reason of the adoption of the names *Ancon* and *Cristobal* for the steamers *Shawmut* and *Tremont*.

#### Proposals for Buildings.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, Canal Zone, until 2 p. m., Thursday, July 1, 1909, when they will be publicly opened, for the erection by contract of four (4) Insane Asylum buildings at Ancon, Canal Zone. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Purchasing Agent. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$300 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposal as may be deemed to its interest, and to waive defects or informalities in proposals.

C. NIXON,  
Purchasing Agent on the Isthmus.

## OFFICIAL CIRCULARS.

### Rules Governing Locomotive Engineers.

CULEBRA, C. Z., June 21, 1909.

#### CIRCULAR NO. 259.

Effective July 1, 1909, the following rules will govern locomotive engineers in the care of their engines and will supersede those approved by me under date of October 2, 1907:

1. Keep sand pipes open from the sand box to the rail as far as practicable.
2. Adjust driver brake and front and back ends of main rod.
3. Engineers will see that their classification lamps and head lights are kept clean and in good order.
4. Report any defect of pump governor where the pressure of train line is more or less than 70 pounds and of the main reservoir more or less than 90 pounds.
5. Engines to be brought into round house at end of day's work with as light fires as possible. This is important.
6. Whenever necessary the front end to be sparked and ash pans cleaned while engine is in service. Engineers will be held responsible for the burning of ties.
7. Lubricators to be shut off at end of day's work.
8. Put in water gauge and lubricator glasses when necessary to complete day's work.
9. Blow out lubricators whenever required.
10. Clean tank hose and strainers.
11. See that the jacket is kept oiled in rainy weather.
12. See that the engine is kept clean.
13. Inspect engines and tenders and make out work reports for work to be done at shops, using Form MD-43-Revised.
14. Each locomotive engineer will be held responsible for delays caused by his failure to perform his work in a proper manner, or by his failure to report intelligently work to be done on his engine at the shops.
15. Engines should be ready for leaving when ordered.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

### Commission Carriages Curtailed.

CULEBRA, C. Z., June 23, 1909.

#### CIRCULAR NO. 261.

Effective July 1, 1909 with the approval of the Secretary of War, the furnishing of carriages to Commissioners and other officials, except as herein noted, will be discontinued, and the Chief Quartermaster will take the necessary steps to sell all transportation and equipment on hand, not required for official purposes.

The following exceptions are authorized, with the understanding that the transportation will be used exclusively for transaction of public business:

*At Ancon*—One two-seat wagon, for use of Division of Public Works; one single French surrey, for use of Resident Engineer, Pacific Division; one single buggy, for use of the Assistant Engineer in charge of Municipal Improvements, Pacific Division; one Dougherty wagon, for use of the Disbursing Officer, Police Division and other purposes; one single phaeton, for use of Chief Nurse; one single surrey, for use of physician in charge of Medical Clinic.

*At Cristobal*—One half-platform wagon, for use of Division of Public Works; one Democrat wagon, for use of Assistant Engineer in charge of Municipal Improvements, Atlantic Division; one single surrey, for use of Depot Quartermaster; one Quarantine wagon, for use of Quarantine Officer; one side-seated wagonette, for use of hospital staff when called from Colon to Cristobal.

GEO. W. GOETHALS, Chairman.

### Passenger Rates to New Orleans.

CULEBRA, C. Z., June 21, 1909.

#### HEADS OF DEPARTMENTS AND DIVISIONS:

The United Fruit Company has notified this office that effective June 29, 1909, passenger rates on its steamers, between Colon and New Orleans, in both directions, for employees of the Isthmian Canal Commission and dependent members of their families, will be as follows:

	One Round	way.	trip.
Adults, to or from New Orleans, . . . . .	\$40.00	\$75.00	
Children between ages of 8 and 12 years, . . . . .	20.00	37.50	
Children between ages of 3 and 8 years, . . . . .	12.50	25.00	

Children under 3 years not occupying seat at table or berth in stateroom, free, but this applies to not more than one child in one family. If more than one child under 3 years of age, \$12.50 for each additional child.

Rates on this line for employees of the Panama Railroad Company will be the same as charged heretofore.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

### Revised List of Liquor Licenses Granted.

OFFICE OF COLLECTOR OF REVENUES,  
ANCON, C. Z., June 24, 1909.

The following is a revised list of the applicants to whom saloon licenses will be issued for the period July 1, 1909, to June 30, 1910, in accordance with resolution of the Isthmian Canal Commission:

<i>Rio Grande:</i>	Sam Lee.
Kwong Chong.	<i>Bas Obispo:</i>
Yuen Lee.	Chee Chung Hing.
Kwong Chong Chang	J. J. Speer.
Lee Hop.	Kwong Chong Kee.
Wing Wo Yuen.	See Lee.
Kwong Hing Jan.	Tuck Chong.
<i>Culebra:</i>	<i>Matichin:</i>
Pedro Colomar.	Agapito Centeno.
Hip Woo.	Jose C. M. de la Puerta.
Wo Chan.	<i>Gorgona:</i>
Wong You Kee.	Antonio Guerra.
Sing On.	Isaac L. Maduro, Jr.
Pow San Chong.	George Andrade.
Jean Murati.	Jacob Kowalsky.
James McFarlane and	John G. Kutenacker.
Roger J. Coyne.	Tracy Small.
<i>Empire:</i>	Alejandro Ramos.
Jas. Ferguson and Jas.	<i>Tabernilla:</i>
Johnson.	Lee Fung Yuen.
Mezele Gustave.	Lam Hing Lung.
Juan A. Martinez.	Emelio Capurro.
Manuel Leones.	Chow Bing & Co.
Jose Sandi.	Henry Charles Wong.
Hop Hing.	<i>Bohio:</i>
Chee Hing.	Wing Lee.
Yuen Hing Chong.	Yee Shun.
Chas. R. Cantor.	Hing Lee.
Lai Hing.	<i>Gatun:</i>
Thomas Powers.	Yee Chong.
H. F. Younge.	Prudencio San Martin.
<i>Las Cascadas:</i>	Lam Hing.
Lai Wo.	Barney Duboski.
Justiniano Richefort.	John B. Schuetz.
Charles Bryant.	Yee Kee.

HERMAN A. GUDGER,  
Acting Collector of Revenues.

### Auction Sale.

In order to recover freight and storage charges, the Panama railroad will dispose of the accumulation of "Over" and "Unclaimed" shipments now in its possession, by public auction, Wednesday, July 14, 1909, at 9 a. m., sale to be held on Dock 11, Cristobal, C. Z.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery and merchandise in general, all of which has been held six months and over in an effort to locate owner.

H. J. SLIFER,  
General Manager.

### Sale of Carriages and Horses.

Auction: There will be offered for sale, at Ancon corral, July 20, 1909, at 2 p. m., the following Isthmian Canal Commission property: 9 Victorias, 2 double surreys, 4 single surreys, 1 station wagon, 3 horses, and an assortment of harness pertaining to this equipment. Any of the above articles may be seen by prospective bidders at Ancon corral after July 2. Address all inquiries to District Quartermaster, Ancon.

### Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending June 26, with supplies for the Isthmian Canal Commission:

*Atrato*, June 20, from New York, with 6 churn drills for Central Division.

*Parismina*, June 24, from New Orleans, with 33,000 pounds bran, Ancon dairy; 33,000 pounds cotton seed meal, Ancon dairy; 33,000 pounds hulls, Ancon dairy; 69,000 pounds hay for corrals; 7,280 feet Y. P. lumber for Atlantic Division; 19,200 feet creosoted lumber for Pacific Division; 50 creosoted piling for Pacific Division; 2,230 pieces soil pipe and fittings for stock; 36,561 pounds castings for steam shovel repairs; 2 crushers for rock crushing plant at Balboa; 264,694 pounds castings for repairs to all equipment.

*Colon*, June 24, from New York, with 2,500 barrels cement for Gatun Spillway; 16,550 electric fuses for stock; 72,000 feet tape fuse for stock; 40,000 detonators for stock; 18,669 pounds steel sheets for stock; 50 tons bar iron for stock; 15,000 sheets galvanized roofing for stock; 430 kago bolts for stock; 10,000 pounds coal spikes for stock; 1-25 ton locomotive crane for Porto Bello quarry; 114 pieces steel for collapsible forms for concrete, Pacific Division; and a miscellaneous cargo aggregating 6,773 packages, weighing over 1,150 tons.

*Nor*, June 25, from Mobile, with 400,000 pounds pig iron for Gorgona foundry; 119,642 feet Y. P. lumber for car repairs; 250 pounds sea coal facing for Gorgona foundry; 100 kitchen sinks for stock; 1,255 pieces soil pipe and fittings for stock; 5 marine boilers for rock and sand barges, Atlantic Division; 155,656 pounds grate bar castings for dredges and chipets, Atlantic Division.

## PERFORMANCE OF STEAM SHOVELS

MONTHLY RECORDS IN THE ATLANTIC, CENTRAL, AND PACIFIC DIVISIONS

## Regular Army and Navy Union.

All members of this organization and the General Henry W. Lawton Garrison No. 40, Cristobal, C. Z., are requested to send their name and address by postal to H. V. H. Monk, Acting Adjutant and Quartermaster, Gatun, C. Z., immediately, and learn something to their advantage.

## Notice to Steam Filtr.

All members of the I. A. of S., H. W., and P. P. F. and H. are requested to attend the regular meeting in hall over I. C. C. hotel at Gorgona at 12 o'clock, sharp, on Saturday, July 4. Important business.

The Canal Zone public schools close for the summer vacation on June 30, to reopen on October 1.

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending July 7, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.	
July 1.....	1.52	8.03	2.04	8.31	.....
July 2.....	2.38	8.49	2.48	9.13	.....
July 3.....	3.26	9.34	3.43	9.58	.....
July 4.....	4.06	10.29	4.18	10.42	.....
July 5.....	4.49	11.06	5.03	11.28	.....
July 6.....	5.36	11.53	5.50	12.14	.....
July 7.....	6.22	12.42	6.39	.....	.....

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, June 26, 1909:

	STATIONS.

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Orinoco.....	R. M. Tuesday.....	July 6
--------------	--------------------	--------

Sailings of the French line (Cie. Générale Trans-  
atlantique) for Venezuelan ports, Martinique and  
Guadeloupe on the 3d and 20th of each month  
The steamer *David* of the National Navigation  
Company, will leave Panama, for David, province of  
Chiriqui, and intermediate points, on Thursday, July  
1, and every alternate Thursday thereafter.

The Panama railroad steamships sail at 3 p. m.  
from dock at Cristobal direct to New York.

The steamers of the United Fruit Company's line  
sail from New Orleans at 10 a. m. for Colon, and from  
Colon at 3 p. m., via Port Limon for New Orleans.

All Royal Mail steamers mentioned above leave  
early in the morning from Colon via Kingston, Ja-  
maica, for New York. All mail and passengers  
should be on board early on day of sailing.

The Prinz steamers of the Hamburg-American line  
sail from Colon at 1 p. m. via Kingston, Jamaica, for  
New York.

The following steamers have recently arrived at  
Balboa: June 25, *Limari*, from southern ports; *Arica*,  
from Guayaquil, and *San Jose*, from San Francisco.  
Departures were: June 20, *Guatemala*, for southern  
ports; June 21, *Ecuador*, for Guayaquil; June 24, *Ma-  
navi*, for intermediate ports; June 25, *Newport*, for  
San Francisco.

### NOTES OF PROGRESS.

#### Excavation at Buena Vista.

A hill and some small hummocks of land lie in the route of the Canal at Buena Vista, near Bolio, about 10 miles south of Gatun. This is in the Gatun Lake region, and it is necessary to excavate to elevation 40 feet above sea-level in order to make the channel 45 feet deep at this point. The excavation was begun last week when a 90-ton steam shovel was set at work. In all about 412,000 cubic yards must be taken out in this locality. This is the largest piece of excavation between Gatun and Tabernilla, as the total to be excavated in this region when the work was begun was only 687,800 cubic yards.

#### June Excavation.

The total Canal excavation during the month of June was 2,895,793 cubic yards, an average of 111,376 per working day. This total is 302 cubic yards less than the total for May. Of the 2,895,793 cubic yards, 2,852,101 were chargeable to "Work" and 43,692 to "Plant." There were taken out by steam shovels 1,761,315, and by dredges 1,090,786, cubic yards. There were 26 working days during the month, one more than in May. The mean rainfall for the month in the territory in which excavation was in progress was 11.85 inches, as compared with 9.82 inches the previous month.

In the Atlantic Division the total excavation was 345,112 cubic yards, 177,510 less than for May. Of this total 123,708 cubic yards were removed by steam shovels and 221,404 by dredges. In addition to the latter amount the dredges in this division were excavating in the channel and approaches to the docks of the Panama Railroad Steamships Company at Cristobal, the figures for which are not yet available. There were 366,998 cubic yards of material placed in Gatun Dam and 10,668 cubic yards of concrete were laid in the floor of the Spillway during the month.

The total excavation in the Central Divi-

sion was 1,520,975 cubic yards, 7,842 more than for May. Of this total 1,241,550 cubic yards were taken from Culebra Cut and 1,351 from the Obispo Diversion, which was finished during the month.

In the Pacific Division the total excavation was 1,029,706 cubic yards, 169,366 more than for May. Of this total 160,324 were removed by steam shovels and 869,382 by dredges.

The detailed statement of excavation in the three divisions follows:

#### ATLANTIC DIVISION.

LOCALITY.	"Work." Excava- tion.	"Plant." Excava- tion.	Total excava- tion
<i>Dry excavation—</i>	<i>cu. yds.</i>	<i>cu. yds.</i>	<i>cu. yds.</i>

Wet excavation.....	1,090,786	.....	1,090,786
<b>Total.....</b>	<b>2,852,101</b>	<b>43,692</b>	<b>2,895,793</b>

Mean rainfall along Canal (twelve stations) 11.85 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

#### Operations at Ancon Quarry.

The foundations for the No. 6 rock crusher at Ancon quarry were practically completed during the month of June. The concrete work in the columns supporting the rock bin structure, and the preparatory work for the

concrete floor of the bins, were finished. This structure will be 145 feet long, and 19.2 feet wide, outside measurement, and will have a height from base of columns to top of bins of 40 feet. The supporting concrete columns are 19 feet high, reinforced with four rails in each column tied every 2 feet with ½ inch round hubs. The concrete in the bin floors will be 20 inches thick. Ten bins are provided for, with a combined capacity of about 2,000 cubic yards. A hopper, 20 by 20 inches, located in the center of each bin, will supply material to cars.

Work was continued during the month on the rubble masonry of the retaining wall, and an additional 70-ton steam shovel was put to work at the site, making three in operation there.

#### Thirty Two Feet Below Sea-level.

Thirty-two feet below sea-level is the elevation at which one of the steam shovels is excavating in the Mindi Hills, between Gatun and Limon Bay. This is only nine feet above the bottom of the channel, which is to be forty-one feet below sea-level from deep water in the Caribbean to Gatun Locks. The pit in which the shovels work is kept dry by four eight-inch pumps, and ordinarily these pumps are not run at their capacity. There has been surprisingly little seepage into the excavation since the work below sea-level was begun, when it is considered that only a dike a few feet thick keeps the water in the old French canal from flowing into the trench, and that the bay of Limon is within two miles, and the Mindi River within a few hundred yards of the pit. During the latter part of June the shovel on the lowest level was obliged to suspend for a few days on account of the inability of the pumps to throw out the water that was coming in, but this proved to be only a temporary condition and the shovels are again at work.

#### Section of Spillway Floor Completed.

The north section of the floor of Gatun Dam Spillway was completed on June 30, when the last of 480 concrete monoliths was laid. The laying of this concrete was begun on March 17, and 74 working days were spent on it, making no allowance for the frequent rains of June. In this time about 30,000 cubic yards of concrete were laid, an average of over 400 cubic yards a day.

The Spillway at Gatun is being constructed in three sections—the entrance or opening on the south side of the dam, the concrete dam which will close the month of the channel and on which the regulating works will be constructed, and the channel below the concrete dam, through which water will waste in the Chagres River. It is the floor of this channel below the concrete dam that has been completed. The

## NOTES OF PROGRESS.

(Continued.)

concrete was laid in monoliths, each 30 feet long and 20 feet wide, varying in thickness from four feet at the upstream or south end to one foot at the downstream end. To allow for shrinkage and prevent cracking, the monoliths were laid alternately, that is, each one was allowed to dry before another was laid against it. The section completed is 960 feet long and 300 feet wide.

Work on the walls has already been begun. They will rise 20 feet above the floor, into which they will be keyed by a mortise and tenon joint. They will be eight feet thick at the base and three feet at the top, the tapering being accomplished by a 1 to 10 slope on the face of the wall and by four steps at the back. Like the floor, the walls will be built in monoliths laid alternately.

Until the plans are completed for the dam and regulating works no concrete will be laid in the spillway dam. South of the dam, however, in the section referred to above as the entrance or opening, preparations are being made to lay the floor, and this work will be begun in a few days. The work in the Spillway has made better progress than was anticipated, due to the fact that the concrete mixing and handling plant has worked satisfactorily from the beginning.

## Work in the Pacific Division.

Progress was made at all points in the locks and dams section of the Pacific Division during the month of June. The pile approach to the east storage trestle, north of the Pedro Miguel Locks, was completed, and the construction of the deck on the west storage trestle was about half finished. These trestles extend along each side of the forebay, paralleling the site of the handling plant. Work on the track layout in the forebay is going forward, and ten Porter locomotives, which will be used in hauling concrete to the lock site, etc., have been delivered.

The excavation in the west chamber of the Pedro Miguel Locks is completed to the floor level, and the excavation for cross culverts in this section has been begun. Excavation in the east chamber is still in progress. About 70,000 cubic yards of material, mostly hard rock, were taken from the lock site during June, leaving approximately 90,000 cubic yards yet to be removed.

The dredge *Sandpiper* began pumping material into the core of the west dam at Miraflores about the middle of the month. The dredge has been working in the old bed of the Cocoli River, and removed several pockets of gravel. Later she will work south in the Canal prism toward Balboa.

Cocoli Lake is filled. On Monday, June 21, the water reached a stage of 37.9 feet, 2.9 feet above the level of the spillway. On May 29, the stage was 21.2 feet, thus showing a rise of 16.7 feet in the interval of 23 days. The rapid rise during this period is due to heavy rains along the Cocoli River. Observations made during the latter part of May showed an average rise in the lake of a tenth of a foot per day, while between May 29 and June 21, the average rise was over seven-tenths of a foot per day. As soon as the water reached a stage of 35 feet it began flowing over the spillway, the surplus emp-

tying into the Rio Grande. A part of the area submerged by the lake was planted in fruit trees several years ago. These are now about half out of water.

Work on the Miraflores power house is progressing favorably. The boilers have all been placed within the building, one battery erected and the two other batteries are in course of erection. Brick work was started on June 30. The bases for the turbo generators have been delivered and one of them placed in position. The wiring of the basement floor has been completed and wiring of the first floor begun.

The cement shed, which provides for housing 70,000 barrels of cement, is completed, with the exception of the floors and handling cranes. The steam shovel work in the Rio Grande diversion was completed in June. Two orange peel dredges are now at work finishing up.

## Conductor Barnett Discharged.

The findings of the Board of Inquiry appointed last December to investigate certain grievances reported as existing by C. C. Barnett, a conductor in the employ of the Commission, have been approved by the Secretary of War, who has commented and directed as follows:

The making of such serious charges without any justification whatever shows that Mr. Barnett is not a proper person to be employed there. Such charges tend to destroy discipline, create distrust, and bring the management into disrepute. Mr. Barnett had a perfect right to make charges in good faith, but good faith is negatived in respect to these charges by the entire absence of proof. The findings in regard to them were made by the entire Board. Therefore, you are directed to discharge Mr. Barnett from the service.

## Commission Clubhouse at Gatun.

A Commission clubhouse to be located at Gatun has been authorized, and construction will be begun as soon as the Quartermaster's Department can let the contract. Like the four other Commission clubhouses it will be under the direction of the Y. M. C. A. It will cost about \$25,000. The arrangement of the rooms in the new building will be different from that in the clubhouses already in use, and provides for a larger assembly or ball room on the second floor, four instead of two bowling alleys on the ground floor, a lobby from the end of which, instead of at one side, stairs will lead to the second floor, and a reading room opening directly into the lobby. There will be no posts in the center of the billiard room as in the present buildings, the ceiling being carried on two trusses.

The preliminary plans call for a building 133 feet long and 97 feet from front to rear, with screened verandas. The ground floor will be built around an open court which will divide the building into front and rear sections. The front section will be two stories high and the rear will be only one story. The front doors will open into a lobby, 19 feet 6 inches wide, which will run from the vestibule to the court, with stairs to the second story running up from the end of the lobby. On the right of the lobby will be the reading room, 36 feet 9 inches long and 28 feet wide, and opening from the reading room on the right will be a game room 11 feet 6 inches by 28 feet. On the left of the lobby a section enclosed by a railing will be used as an office, and to the left of this will be the billiard room, 41 feet 6 inches long and 28 feet wide. Refreshments will be served in a room opening onto the

court, and back of the refreshment room there will be a kitchen and pantry. Opposite the refreshment room on the left of the court will be a barber shop and storeroom. Back of the open court will be the four bowling alleys, with seats for spectators, toilet, bath and locker rooms, and a dark room.

The second floor will be divided into an assembly hall 103 feet 6 inches long and 28 feet wide, with a stage, and ladies' toilet and dressing room. The screened balcony will run entirely around the second story.

## Transportation from Cristobal to New York. THE CANAL RECORD:

Please inform the undersigned whether the Isthmian Canal Commission will furnish free transportation to employees having served four years, continuous service, to either New York, New Orleans, or San Francisco. J. B. C.

Cristobal, C. Z., June 27, 1909.

Circular No. 175A, published in THE CANAL RECORD of January 27, 1909, is as follows:

Transportation from Cristobal to New York on steamers of the Panama Railroad Company will be granted hereafter to employees upon the termination of their service, as follows:

## FREE TRANSPORTATION.

To employees appointed in the United States who resign or are discharged after two years' continuous service; to employees appointed in the United States whose employment is terminated by the Commission after less than two years' service for any reason other than inefficiency or misconduct; and to American employees appointed on the Isthmus who are discharged at the recommendation of a medical examining board.

## TWENTY-DOLLAR RATE.

To employees appointed in the United States prior to January 1, 1909, who resign after serving more than six months but less than two years, and to employees appointed on the Isthmus prior to January 1, 1909, who resign or are discharged after two years' continuous service, or whose services are terminated by the Commission after less than two years' service for any reason other than inefficiency or misconduct.

## THIRTY-DOLLAR RATE.

To employees appointed after December 31, 1908, separated from the service under circumstances identical with those described in the preceding paragraph.

## FORTY-FIVE-DOLLAR RATE.

To employees appointed on the Isthmus who resign or are discharged after serving more than six months but less than two years.

## TEN-DOLLAR STEERAGE RATE.

To all employees who may apply for it.

Employees entitled to free transportation to New York may be granted instead free transportation to New Orleans, if they so desire, or free transportation to San Francisco, provided they originally sailed from that port.

Employees originally appointed in the United States who resign or are discharged and are subsequently re-employed on the Isthmus will be granted no transportation privileges other than those accorded employees originally appointed on the Isthmus.

No special rates will be granted employees who fail to apply for transportation within thirty days after the termination of their employment.

## Rest-house for Negro Employees.

The construction of a rest-house at Culebra for negro employees has been authorized, at a cost of not over \$2,400, with \$200 added for furniture.

The committee from the New York Chamber of Commerce, which was to have visited the Isthmus from July 18, to July 23, has postponed its visit until September.

On the Canal medals only the initials of the holder's Christian name or names will appear, with the surname in full. The service bars will be numbered consecutively to show the order in which each has been earned.

## BUILDING CONSTRUCTION.

## Amounts Necessary for Coming Year for Building Construction and Repair.

The construction and repair of Commission buildings were taken over by the Quartermaster's Department on July 1. New construction work will, in general, be done by contract, and repairing by the Commission forces. The supervisory force will consist of a construction quartermaster and an inspector of construction and repairs. The position of architect will be abolished, and alterations in type plans will be made by the chief draughtsman of the Quartermaster's Department.

The period of new construction for the Canal work is practically over, the time when uncertainty in the delivery of materials and an insufficient supply of artisans characterized the erection of buildings has entirely passed, and from this time until the completion of the Canal, most of the building work will be in making repairs to the plant that is scattered along the line of the Canal, from Cristobal to Balboa. In this plant there are about 3,300 buildings, over half of which were left by the French and repaired, while about 1,500 larger buildings were erected by the Americans. There are 966 buildings used as quarters for gold employees, and the remainder as labor barracks, offices, shops, warehouses, and for miscellaneous purposes. The value of the buildings is estimated at \$10,000,000.

The Canal Zone is a construction camp, and on that account few of the buildings necessary for carrying on the work were put up with the idea of permanency; in fact, most of them will have passed the stage where it would be economical to repair them by the time the Canal is completed. Deterioration of light woods is rapid in this climate. Some of the beams in the floor of the hotel built at Culebra four years ago have entirely rotted away and have been replaced by new stringers. Wood ants, continued moisture, and light construction are the chief causes of rapid decay.

During the period of greatest activity in building, the delivery of lumber and other supplies on the Isthmus was uncertain, and no contractor would have made a bid for the work. Now, however, deliveries of materials and supplies are reasonably prompt, and the stock on hand is always sufficient to permit of constant work on the small amount of building being done. The method of letting a contract for a new building is to advertise for bids on the condition that "the Commission will furnish all materials at the site of the work and the contractor is required to provide all labor." There are at present under construction in the Canal Zone, under the contract system, three type-18, three type-14, and two type-27 houses at Gatun; one type-17, one type-10, three type-27 houses, and a corral at Ancon; a type-18 house at Cristobal; and a type-21 house at Corozal.

A comparison of the cost of buildings constructed by Commission employees and those constructed by contract shows that the contract system is the more economical. This comparison has been applied to three types of buildings—married quarters, bachelor quarters, and buildings for miscellaneous purposes. The majority of American families are quartered in type-14 and type-17

houses, and of bachelors in type-5 and type-18 quarters. Of the 577 type houses on the Canal Zone on June 1, 1909, there were 453 used as family quarters, and of this number 176 were type-14 houses. Of the 124 bachelor houses, 50 are type-18 buildings.

The type-14 house is a four family flat, each apartment of which consists of a screened veranda, front and rear, four living rooms, toilet and shower bath. The average cost of twelve of these houses constructed by Commission employees in 1908 and 1909, was \$5,106.81 for direct labor and material, and \$670.86 for indirect charges, such as superintendence, clerical work, stationery, vacation and sick leave, and transit time. The average cost of nine type-14 houses constructed by contract was \$4,987.71, as compared with \$5,777.67, the average cost of the twelve houses already referred to. The type-14 quarters have been constructed 13 per cent cheaper by contract than by Commission employees. The contract cost runs a little less than the direct material and labor charges, when the buildings are constructed by day labor.

For type-18 bachelor quarters a comparison has been made with only one building erected by contract, and this shows that the cost by contract exceeded that by Commission employees by about 8 per cent. One type-18 building erected by contract cost \$7,874.27, while four buildings of this type were erected by the Commission at an average cost of \$7,299.94, of which the direct charges were \$6,548.49, and all indirect charges \$751.45. This type of building is two stories high, and contains 12 rooms, each 12 feet 6 inches square, screened veranda, front and rear, and toilet and bath rooms on each floor.

In the comparison of the cost of miscellaneous buildings two type-A jails constructed by the Commission were contrasted with two type-A jails put up by contractors. The Commission buildings cost \$2,962.39 for all charges, and the contract buildings cost \$3,043.55.

All the buildings constructed by the Commission forces, used as a basis for the above comparison, were built in direct competition with buildings put up by contract, and the cost was considerably less than that of previous buildings of these types erected by the Commission forces without the stimulus of competition. The average cost of 167 type-14 houses built up to January 1, 1909, was \$8,000; of 46 type-18 houses, \$10,000.

It is estimated that \$375,000 will be required for repairs during the coming fiscal year, and this amount has been divided into \$200,000 for carpenter work, including \$50,000 for screening; \$125,000 for painting, and \$50,000 for plumbing. The allotment for plumbing covers repairs to stoves and roofs, both of which are handled by the plumbers.

The value of the various classes of buildings (excepting a number that are not occu-

pied and will not be repaired), and the percentage of the value of each class that has been allotted for repairs are shown in the following statement:

CLASS OF BUILDING.	Cost.	*Percentage of value allotted for repairs.
Office buildings.....	\$422,886.18	
Hotels.....	184,274.26	6
Quarters, gold employees.....	3,213,561.49	6
Kitchens, silver employees.....	106,089.40	2
Quarters, silver employees.....	460,745.77	2
Commissaries.....	75,609.06	4
Hospitals.....	546,788.81	6

Courthouses and jails.....	128,944.72	3
Clubhouses (Y. M. C. A.).....	124,683.70	3
Lodge halls.....	54,277.02	3
Miscellaneous.....	420,821.41	2
Old French.....	12,667,893.24	2

\*No percentages are given for the items "Repairs and alterations to new buildings," or for miscellaneous charges.

†The value of the Hotel Tivoli at Ancon, \$379,265 is subtracted from the value of the hotels, and repairs to that building are made under a special allotment to the Subsistence Department.

‡Amount expended in repairs and alterations.

## Recreation Hall at Porto Bello.

A recreation hall is to be constructed at Porto Bello at a cost of about \$5,000. The hall will be under the direction of a Y. M. C. A. secretary, and will include a game room, bowling alleys, a refreshment counter, reading room, and assembly hall.

## Rules Governing Shop Employees.

Attention is directed to Circular No. 262, and Rules Governing Shop Employees published elsewhere in this issue of THE CANAL RECORD.

There were also 172 cubic yards removed by steam shovels outside of the prism during October, 1908.

## CANAL ZONE SCHOOLS.

## Work of Past Year and Plans for Next Year.

The public schools of the Canal Zone closed on June 30, to reopen October 1. Thirty schools were maintained during the year, 13 for white children and 17 for negroes. In the schools for white children the highest enrollment was in the month of February, when 64 pupils were in attendance; and the lowest in June, when 564 were enrolled. The enrollment in the negro schools was highest in March, when 2,421 pupils were in attendance, and it was lowest in October, with 1,073. Thirty-two teachers were employed in the schools for white children, eight of whom were added to the force during the year. Twenty-one teachers were employed in the schools for negro children, three of whom were added to the force during the year.

Additions to the school equipment since October 1, 1908, include a one-story two-room building at Corozal, opened on February 15; a one-room building at Tabernilla, opened on April 12; and a one-story four-room building at Gatun, opened on April 13. All these buildings are used by white children. A two-room addition to the school for white children at Gorgona has been authorized, and when it is completed the rooms now occupied over the quartermaster's office will be vacated. The new building will consist of only two rooms, but it will so relieve the congestion in Gorgona school that the children who now go from Bas Obispo to the school at Cristobal will be sent to Gorgona.

The development in the school system during the year just closed has been largely along lines of improving the instruction, and inquiring into the health of the children. The work of providing buildings and organizing a teaching force, which had been the main concern of previous years, was practically completed in the fiscal year 1908. In the schools for white children the accommodations will be ample, when the additions already mentioned have been made, and it is no longer difficult to procure good teachers.

Inquiries into the health of the children took the form of medical care, and of physical culture. An epidemic of follicular conjunctivitis among the white children engaged attention in December, 1908. The eye, ear, and nose specialists of the Commission and the district physicians worked to such good effect that the disease is now under control and practically eradicated. Out of the 580 children examined 120 were treated for follicular conjunctivitis and 43 operations were performed. Skin diseases and diseases of the nose and ear were also treated.

In order to prevent a recurrence of the epidemic and to anticipate other diseases, an inspection of all school children is made once a month by the district physician; and as often in addition as the principal of any school may request. At the opening of school in October a thorough examination will be made, and any children with contagious diseases will be quarantined and placed under treatment. At present five cases of follicular conjunctivitis are yielding slowly to treatment, and the remainder are practically cured.

In the schools for white children at Cris-

tobal 48 boys were given a thorough physical examination, and only one of them was found normal. Forty-three boys had drooping shoulders, 19 had spinal curvature and 19 had flat feet. Exercises were devised to correct these defects as far as possible. The examinations will be carried into other schools next year and the proper exercises to correct defects will be taken up.

A big increase in the attendance on the high school classes at Culebra and Cristobal was one of the unexpected developments of the school year. In October, 1907, there were five pupils in these classes and in October, 1908, there were 20. A course was decided upon for the Culebra high school work as follows: First year—Algebra, botany, English, German, Latin, Spanish, physical geography. Second year—Geometry and general history, and languages as in first year. Third year—Languages as in first year with French added. In Cristobal high school the first-year class was offered algebra, English, history, Latin, and Spanish; and the second-year class the same languages, with geometry in place of algebra. In both schools the subjects were necessarily limited by the preparation of the teachers to instruct in them. The great predominance of languages in the course is due to the fact that some of the pupils wish to continue the Spanish begun in the primary schools; the desire of a few to take Latin because it is required for the college work they expect to take up later; and because there were no Latin text books in the Zone at the beginning of the year and some children who would have taken Latin, took up German rather than wait for the arrival of the Latin books. Next year the high school work will be strengthened by a supervisor of high school grades, a man of experience, who will direct the teachers and will also assist in teaching.

The organizing of the course of study, and the grading of the pupils were the main pedagogic problems of the year. Uniform examinations were given by the superintendent and sent out from his office, and the results of the examinations, together with the teachers' report on the work of each child were made the basis of regrading. It is believed that the children are now so classified that each one is doing as much work as it is good for him to do, or at least is in a class where he is capable of doing the work without overstudy. As the grading in each school was in progress the method of instruction graduated from the individual instruction of previous years to class instruction.

Along with the work of regrading was carried on the work of systematizing the course of study. During the second half of the year the children in a given grade in any school were doing practically the same grade of work as those in any other school. Transfers from one school to another are unusually frequent on account of the number of men on the Canal work who are obliged to change their residence according as the work progresses. One result of the systematizing of the course of study and grading of the pupils is that a child may now leave one school and enter another without any serious break in the continuity of his study.

Supervision of the instruction was extended, and yet even with the present force it is less than in the average school system

in the States. The problem was greater than in the States, as the schools are scattered along a line 50 miles in extent, and the teachers and children had no common ideas of instruction. A supervisor of primary grades was engaged in January, 1909. The less experienced teachers were given an opportunity to observe the work of other teachers, and were also given individual assistance. Teachers' meetings were held each month and the chief topics discussed were the grading of pupils and the course of study. During the coming year the supervisory force will consist of three persons, the superintendent, supervisor of high and grammar school work, and the supervisor of primary work. Among the new teachers already engaged for next year are one who can instruct in music, and one who can give lessons in drawing.

An effort to increase the standard of instruction in the school for colored children met with less success, because the problem there is entirely different. Whereas the home influences of the white children are such as to promote regular attendance at school, those of the negro children are either neutral or averse to regularity. The great problem in the negro schools in the Canal Zone is to get the children to attend school more than two days a week. It is a home rather than a school problem, and so long as the labor population is shifting and the location of the home uncertain, the problem will remain unsolved. Conditions may be bettered, however, and to this end the teachers (all negro men and chiefly from the West Indies) have been given examinations, on the result of which they must base their claims for reappointment. This does not mean that the intellectual test is the only one, but merely that a man who cannot make a certain mark on an examination will be disqualified. Most of the teachers have qualified and will be reappointed.

Two new school buildings have been authorized for negro children. One of them will be built at New Gatun and the other in Culebra. They will be of the type of the Empire school house, that is, one story frame structures with four rooms, each 25 feet by 36 feet. An addition of two rooms has also been authorized for the negro school at Cristobal, where only two rooms are now occupied.

## Sojourners' Lodge.

Sojourners' lodge, No. 874, A. F. and A. M., holding of the grand lodge of Scotland, celebrated the anniversary of St. John the Baptist at the lodge rooms in Colon on the night of June 26, by conferring the third degree on four candidates in the presence of eighty members. After the degree work a social session was held. This lodge meets the first Saturday after the full moon in each month, but informal sessions are held at the lodge rooms every Saturday night. Ninety per cent of the members are Americans and ninety-five per cent of these are employees of the Commission and the Panama railroad.

## Members, Phi Delta Theta Fraternity.

All members of Phi Delta Theta Fraternity residing on the Isthmus are requested to communicate their names, class, chapter and Isthmian address to S. M. Vance, San Pablo, Canal Zone.

Lost—Either in vicinity of Gatun, or between Gatun and Colon, a carved silver watch, and brass check No. 41351, attached to leather fob. Finder is requested to return to District Quartermaster at Gatun and receive reward.

## THE SALVATION ARMY.

Work Carried on With the Assistance of the Commission.

The work of the Salvation Army on the Isthmus is confined almost entirely to West Indian negroes brought here for the Canal labor force. It is divided into the institutional work at the rest-house in Colon, and evangelistic work in the city of Panama and Canal Zone villages.

The efforts of the Salvation Army in behalf of the laborers date from May 19, 1904, when a representative of the organization came here from Jamaica and submitted a plan of work to the Governor of the Canal Zone. On November 29 of that year a building in Cristobal, formerly occupied as a barrack by Colombian soldiers, was turned over to an officer of the organization, and evangelistic services were conducted there until the building was torn down some months later.

At a meeting of the Isthmian Canal Commission on February 14, 1905, a rest-house at Cristobal was authorized and \$3,250 were appropriated for a building and furniture. The building was erected two years later, and was opened in June, 1907. It was a one-story structure up to a few months ago when a second story was added. On the first floor are a restaurant, a kitchen, reading-room, dormitory, bath and toilet, and a large packing or trunk-room, where the lodgers may keep their clothing under lock and key. The second story contains the office and living apartments for its commander and his family, and such members of the local staff as are entitled to residence at headquarters. Electric light and janitor service are furnished by the Commission, as in the case of the various chapels and clubhouses in villages along the line of the Canal. The dormitory linen is laundered free. In short it is a Commission building, and the Salvation Army is merely allowed to conduct the work. In all \$6,650 have been spent on this rest-house.

The aim of the Salvation Army and of the Commission is to afford a place of shelter for negro and other laborers who come from other ports in search of work, men who have been disappointed in not finding work here, those who have dissipated their money, and those who, through fault of their own, have been discharged or have left the Commission service. During one week in May there were registered, Americans, English, Scotch, Welsh, Scandinavians, Russians, Bohemians, Jamaicans, Barbadians, Trinidadians, Chilians, Peruvians, and Demerarians. The length of the stay varies from one night to several months. In every case the men are made to understand that the help given them is in the nature of a loan, and those who receive assistance in money, food or lodging, are expected to pay when they are able. More than fifty per cent of the men who came to the home penniless, paid every cent they owed before leaving the Isthmus. For the past year the home has been virtually self-supporting.

No regular meals are prepared in the kitchen, but tea, coffee, bread and butter, eggs and canned meats are served at nominal cost. A lodging costs 25 cents a night. Some who apply for shelter are not able to pay even the small prices asked, and during the past year, 550 meals have been given, and

147 beds occupied free. Twenty-two meals a day are paid for on an average, and during the past year, 3,220 lodgings were paid for. About 100 men a week make use of the free reading-room. The home has no accommodations for women, although occasionally applicants have been sheltered for a short time.

All the work is directed from the headquarters in the rest-house at Colon, where the resident commander, Adjutant H. Filmer Watson and his wife make their home. Such work as is done at Montt Hope and Gatun is conducted by officers sent out from Colon, but on account of the rapid growth of Gatun, an independent post is projected for that place. Outposts are maintained at Gorgona, Empire and Panama, and two female officers are stationed at each place. Their duties are to spend 18 hours a week visiting, hold eleven open air meetings, and six indoor services with preaching, including three Sunday services. The lieutenant in charge of each post receives four dollars a week salary, and her assistant receives less. In March, 40 recruits were added to the Army, although not necessarily for active service.

The Gorgona outpost occupies a large hall for which a rental of \$24 a month is paid. Quarters for the station officers are partitioned off.

At Empire the building used was erected by the Army at a cost of \$600. The hall has a seating capacity of 200, and there are also rooms for the officers.

In Panama one large hall is rented for the meetings, near the Panama railroad, but the greater portion of the work is done in the open air meetings, and by officers in going about the streets.

In addition to the evangelistic and institutional work the Army acts as an employment bureau. Men who cannot work to advantage on the Isthmus are induced to save their earnings until they have enough money to pay their way to a country where there is a more favorable climate, or class of work.

## PERSONAL.

Mr. William V. Alford, Chief Engineer of the Amazon and Pacific Railway, a Peruvian enterprise, has been on the Isthmus for a short time on his way back to South America, from the United States. In 1901, Mr. Alford was in charge of one of the Isthmian Canal Commission field parties that surveyed the region north of the Gulf of San Blas, and subsequently was with the same Commission in Nicaragua. The Amazon and Pacific railway, with which Mr. Alford is now connected, is being built by an American syndicate, and extends from the port of Ancud, Peru, on the Pacific coast, to the Ucayali River, one of the chief tributaries of the Amazon.

Lieut.-Col. George B. Davis, U. S. A., deputy commissary general of the subsistence department of the United States Army, and assistant purchasing officer of the Commission at New Orleans, was a passenger on the United Fruit Company's steamship *Turrialba*, which arrived at Colon on Thursday, July 1.

A concert will be given by the I. C. C. band at Gorgona, on Sunday, July 11,\* at 6 p. m.

## SOCIAL LIFE OF THE ZONE.

Empire Christian League Elects Officers.

The Empire Christian League held its semiannual election of officers in the Commission chapel on Friday evening, June 11. George R. Gobrecht was elected president, J. C. Foreman first vice-president, J. W. Conner second vice-president, Mr. Anderson corresponding secretary, and Mr. Windes, financial secretary and treasurer.

The League was organized January 30, 1908, to promote religious work in the district of Empire, and on the Isthmus of Panama. All religious services held under the organization are, as far as possible, undenominational; the form, as well as the character of the doctrine taught, is left to the judgment of the minister conducting any particular service. Special ordinances in connection with the denomination which the minister represents may be administered at the close of the service. The resident chaplain has the privilege of choice of any one of the services conducted by the League on each Sunday. The Sunday school and Young People's Christian Union are under the supervision of the League, and the literature in circulation in both is, as far as is practicable, nondenominational.

The officers constitute a board of trustees to whom all legal and other transactions of the League are referred. In addition, there are four standing committees, visiting, sick, music and membership, and such others, specially appointed, as are required from time to time. The present membership is 60. Dues are \$3 annually or 25 cents a month.

The Bible class of the Empire Sunday school gave a social in honor of the retiring teacher, at the Commission chapel on Tuesday evening, June 29. There were 35 present. The class numbers 28. Mr. G. R. Gobrecht has been selected class president.

Sunday evening, June 27, a service was held in the chapel at Empire under the auspices of the Woman's Christian Temperance Union. Addresses were made by Judge Wesley M. Owen on the legal aspect of the temperance movement, the Rev. J. B. Sobey on the moral phases, and Mrs. A. B. Hillerman on the general work of the Union. A special program of music was given under the choir director of the Empire Christian League.

A complimentary entertainment was given at the Empire clubhouse on Thursday evening, July 1, when a program consisting of readings by Miss Mary Slifer and songs by Mr. Bonrke Sullivan was given. Mrs. Goolsby Shivers was accompanist.

Regular dances are held at the clubhouse by the Wizards on the first Saturday and the Empire Dancing Club on the fourth Saturday in each month.

The Gorgona W. T. C. U. held a social meeting on Thursday, June 30.

The Cristobal Camera Club will hold its first exhibit at the Commission clubhouse on July 22, 23, 24. The club was organized in January, 1909, and has a membership of 75. Mr. J. W. Debrill is secretary. Several excursions have been made, including visits to Fort Lorenzo, Porto Bello, and Old Panama. An excursion to Taboga has been arranged for Sunday, July 11. The exhibit will be held in the entertainment hall which will be open to the public during the three days. Mr. Frank E. Read has charge of the arrangements.

## OFFICIAL CIRCULARS.

## Sixty-Trip Tickets.

CULEBRA, C. Z., June 30, 1909.

CIRCULAR No. 150-A:

The impression seems to prevail in several departments and divisions that requests for new sixty-trip tickets must be accompanied by the tickets remaining in the book previously issued to an employee. This causes considerable inconvenience to employees whose duties compel them to travel frequently, and is not in accordance with Circular No. 150, issued December 23, 1907, paragraph 5 of which reads as follows:

"No employee should have more than one ticket in his possession, and the cover or partially used ticket previously issued should be returned to this office immediately upon receipt of new ticket."

Requests for sixty-trip tickets should be submitted by heads of departments or divisions several days before the employee's old ticket will be exhausted, but the new ticket should not be turned over to him until the old ticket is surrendered, which should be forwarded to this office for cancellation.

GEO. W. GOETHALS, *Chairman.*

## Requests for Work.

CULEBRA, C. Z., June 30, 1909.

CIRCULAR No. 197-C:

1. Effective July 1, 1909, or as soon thereafter as the new blank can be obtained from the Depot Quartermaster, Mt. Hope, Form 159 C. E. Revised shall be used in lieu of old Form 159 C. E., and requests for work made between departments or divisions of the Isthmian Canal Commission, or between the Isthmian Canal Commission and the Panama Railroad Company, covering manufacture, repairs, alterations and special services which cannot conveniently be executed by the department making the request, or which are the special function of the department on which the request is made, will be submitted on the new form, a copy of which is attached hereto, except as hereinafter noted. The old form, subject to the following requirements may be used until the new form is obtainable.

2. This form is intended to obviate requests or recommendations being made by letter covering work to be performed by another department or division, but in addition it will take the place of requests for special authority when the work is to be performed by the department or division making the request.

3. When the estimated cost of the work does not exceed \$50 the request may be made direct without the approval of the Chairman and Chief Engineer, in which case two copies of Form 159 C. E. Revised will be sent direct to the department or division performing the work, and two copies to this office. This shall not be construed, however, as giving authority to divide up work that would otherwise fall naturally under paragraph 4 of this circular into separate items, or to divide items themselves so that each one, amounting to less than \$50, may be forwarded direct.

4. When the estimated cost exceeds \$50, work must be authorized by the Chairman and Chief Engineer whether it is to be performed by the department or division making the request, or by another division. In this case five copies of the requisition will be forwarded to this office. For requests on the Panama Railroad Company forward nine copies.

5. Estimates will be prepared and charges rendered in accordance with directions contained in Circular No. 169 covering percentages of surcharges, or as it may be modified from time to time.

6. These requests must be numbered consecutively beginning with 1, in the upper right-hand corner, at the beginning of each fiscal year, and the following prefixes should be used to distinguish the departments and divisions indicated:

Chairman and Chief Engineer's Office, CE-1, CE-2, etc.	
Atlantic Division.....	A-1
Central Division.....	C-1
Pacific Division.....	P-1
Motive Power and Machinery.....	M-1
Civil Administration.....	CA-1
Sanitary Department.....	SAN-1
Quartermaster's Department.....	Q-1
Subsistence Department.....	SUB-1
Disbursing Officer.....	DO-1
Examiner of Accounts.....	EX-1
Law Department.....	L-1

Correspondence relating to any particular requisition should give the number and date of same.

7. All the requirements indicated on the form must be complied with when practicable.

8. Requisition should be made on the Depot Quartermaster, Mount Hope, for the necessary supply of forms.

9. The heads of the four respective divisions of the

office of the Chairman and Chief Engineer will sign, by my authority, such requests as may be referred to them for action by me.

10. Included in work which must receive my approval in advance of its performance, and covered by Form 159 C. E. Revised, are the following:

(a) *All New Building Construction*—This includes all work involving expenditures chargeable to the new classified subaccounts for "Construction of Buildings" for the Department of Civil Administration, for the Department of Sanitation, for the Department of Construction and Engineering (including buildings for the use of the Quartermaster's Department); all work charged by the three construction divisions of the Department of Construction and Engineering against "Division Structures," and all buildings paid for from appropriations—"Reconstruction and Reequipment, Panama Railroad" and "Relocation, Panama Railroad."

(b) *All Improvements and Alterations to Buildings*—This includes all Commission buildings as covered by Circular 253, of May 21, 1909, Division Structures; and also, work under this head paid from appropriations—"Relocation, Panama Railroad" and "Reconstruction and Reequipment, Panama Railroad" are included in this requirement. Ordinary repairs to the plumbing, painting, metal and wood work of buildings may be made without work request on Form 159 C. E. Revised, except when the estimated cost of the work is over \$500, when authority shall be obtained in the usual manner. For all ordinary repairs not covered by Form 159 C. E. Revised, a monthly statement shall be submitted to me for approval, showing each building repaired during the month, the nature of the repairs and the total cost for each building separately.

(c) *All New Construction for Zone Water Works, Sewers and Roads*—This includes all work involving expenditures chargeable to the following new classified subaccounts:

418-A—"New Construction Zone Water Works and Sewers."

421-A—"New Construction Zone Roadways and Walks."

421-C—"Miscellaneous Grading and other Municipal Work, Zone Roadways and Walks."

Ordinary maintenance and repairs to Zone water works, sewers, and roads may be made without request on Form 159 C. E. Revised, except when the estimated cost for any piece of work is over \$500, when authority shall be obtained in the usual manner. For all maintenance and repair work not thus covered, a monthly statement shall be submitted to me for approval showing the purpose and necessity of the expenditures.

(d) *All New Construction in Panama and Colon for Water Works, Sewers and Pavements*—This includes all work involving expenditures chargeable to the following new classified subaccounts:

416—Construction of Water Works and Sewers, Panama.

417—Construction of Water Works and Sewers, Colon.

419—Paving, Panama.

420—Paving, Colon.

This work is payable from a special appropriation, which can be used for no other purpose.

(e) All work at present covered by old Form 159 will likewise continue to be authorized in advance by new Form 159.

12. One copy of all approved work requests will be forwarded from this office to the Examiner of Accounts, who will be given additional duties in connection with handling same in separate letter.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

CULEBRA, C. Z., July 1, 1909.

CIRCULAR No. 197-D.

Effective July 1, 1909, monthly "blanket orders" or work requests, issued on Form 159 C. E., covering services, small repairs and manufacturing work of a minor nature and which are not required to be made separately by Circular 197-C., will be allowed to run for the entire fiscal year instead of for only one month as in the past, subject, of course, to termination or modification at any time on the part of the division or department making the work request.

Departments and divisions receiving these "blanket order" work requests for July will give them sub-numbers running consecutively through the year as follows:

Request No. 426, for example, for July, will be numbered 426-1; August, 426-2; September, 426-3, etc. In this way orders and bills for each month can be classified separately, and the necessity of making a separate work request each month will be obviated.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## Monthly Abstract of Expenditures.

CULEBRA, C. Z., June 30, 1909.

CIRCULAR No. 263.

Effective July 1, 1909, the monthly abstracts of expenditures, referred to on page 19 of Circular No. 1,

Office of the Chief Quartermaster, will be made on Form 132 C. E., Revised, one copy of which will be forwarded monthly to the Examiner of Accounts, and one copy to this office.

A supply of this form may be obtained by requisition on the Depot Quartermaster, Mount Hope.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## Rules Governing Shop Employees.

CULEBRA, C. Z., July 1, 1909.

CIRCULAR No. 262.

The enclosed rules governing shop employees are adopted, effective this date, for the Isthmian Canal Commission and Panama Railroad Company.

Copies of these rules, printed on cardboard, should be posted conspicuously in each shop where all employees will have an opportunity to see them.

The required number of printed copies may be obtained by requisition on the Depot Quartermaster, Mount Hope, Canal Zone.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

1. *Working Hours*—Regular working hours are: 7 a. m. to 11 a. m., 1 p. m. to 5 p. m.

Employees will assemble at their various places of work and be ready to start work on the signal.

All not otherwise assigned are expected to be on duty and work these hours regularly.

Employees will not be permitted to wash up or change their clothes during working hours of the shops, or prior to the signal to stop work.

2. *Manner of Checking In and Out*—Upon reporting for duty before time for commencing work at 7 a. m. or 1 p. m., each employee will regularly call for and obtain a work check from the timekeeper's check window.

Each one will deposit same where receipt is provided for within ten minutes after the completion of each work period.

Those coming in after signal to commence work will not be permitted to commence until 8 a. m. or 2 p. m., and not then until after reporting to the timekeeper in the Master Mechanic's office and obtaining with their work check a written notice which they will present to their foreman, advising him of their having been checked in late.

Those who for any cause quit prior to regular quitting time must obtain, in each case, from their foreman a written notice, which they will present to the timekeeper in the Master Mechanic's office with work check before leaving the shops.

3. *Penalty for Failure to Properly Check In and Out*—Employees calling for or depositing checks of any other employees, or any who fail to draw or deposit checks as provided in Rule 2, will be disciplined as follows: For the first offense the discipline will consist of a warning letter as a matter of record, and suspension of one day without pay. For the second and subsequent offenses the discipline will consist of suspension of five to ten days, or dismissal, as the governing circumstances may warrant.

All suspensions and warnings will be made a matter of record, and in applying discipline all circumstances in connection with employee's efficiency and past conduct and previous observance or disregard of rules will be taken into consideration.

4. *Absence Without Permission*—For absence of less than two days in succession without permission and not covered by a medical certificate of disability, discipline will be applied as outlined in Rule 3.

Absence of two or more days in succession without permission and not covered by a medical certificate of disability may result in dismissal, as provided by circular of the Chairman and Chief Engineer.

5. *Hotel and Commissary Coupon Books*—The issue of hotel and commissary coupon books will be in accordance with current instructions as now set forth in the Chairman's circular No. 256.

Employees desiring coupon books will place their orders with the coupon book clerk, foreman or assistant to foreman, as arranged locally in each shop.

Books ordered will be prepared and delivered as promptly as possible, usually within two days.

5a. Special attention of all concerned is directed to the necessity of complying with contract and instructions on inside of the covers of hotel and commissary coupon books, and also to the orders regarding use of 24-trip books and half rates, for the reason that violation of these contracts or instructions will result in financial loss or dismissal from the service.

6. *Personal Injuries to be Reported Promptly*—Employees injured in line of duty, unless too seriously injured to be able to do so, must report to their foreman before leaving the shop, in order that reports may be made of same properly, as required by law governing pay for time lost on account of injury.

7. *Employees Responsible for Tools and Material in Their Possession*—All employees are responsible for

tools or material issued to or used by them and will be required to pay, by deductions which will be entered against their wages on pay rolls, for any loss or damage to same through willful neglect or carelessness.

8. *Complaints and Requests*—Complaints or requests should be taken up through employee's immediate foreman for decision, and appeal, if made, must be in regular order through the general foreman and Master Mechanic before being carried to the Head of Division or Department or higher authority.

9. *Quality and Quantity of Work Performed to be Satisfactory to Foreman and Master Mechanic*—Each employee will be required to turn out a full day's work each day. An employee whose workmanship is not up to the standard, as regards quality or quantity, or both, will be warned verbally by his foreman. If there is no improvement within a reasonable time he will be so notified by a warning letter from the Master Mechanic, after which, if there is still no improvement, employee will be reduced to the grade and rate of pay called for by the quality or quantity of work he is turning out.

*Overtime*—Eight hours will constitute a day's work for American shop employees whether on day or on night duty. No time will be allowed shop employees except for services rendered at shops, unless they may be specifically detailed for temporary duty elsewhere. No allowance of pay is permitted to cover time going to or from work at place of regular employment either for day or night duty.

Overtime work will be permitted to cover only actual emergencies and pay for same will be in strict accordance with Circular No. 11, addressed to all Timekeepers by the Acting Examiner of Accounts.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

#### Manufacturing Account.

CULEBRA, C. Z., July 3, 1909.

#### CIRCULAR No. 264.

I have approved the recent report of the Committee appointed to outline a uniform plan of reporting the operations of all manufacturing units included in General Account No. 2—Manufacturing Account, and same will be effective July 1, 1909.

A copy of this report has been furnished all departments and divisions having in their charge plant engaged in manufacturing or repairs.

Blanks for the reports, as outlined therein, have been ordered and will be available, subject to requisition on the Stationer and Printer, in ample time for the July reports.

These monthly reports should be made to the Chairman and Chief Engineer promptly at the close of each month's accounts, a copy being also sent to the Examiner of Accounts, who will furnish any information desired relative to the reports not fully understood.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

#### Acting Superintendent of Public Works.

ANCON, C. Z., June 30, 1909.

#### CIRCULAR No. 87.

Mr. J. J. Reidy, Assistant Superintendent of Public Works, is designated as Acting Superintendent of Public Works, effective July 1, 1909, to continue during the absence on leave of Mr. George I. Campen.

JO C. S. BLACKBURN,  
Head of Department of Civil Administration.

#### Acting Master Mechanic, Empire Shops.

CULEBRA, C. Z., July 6, 1909.

#### HEADS OF DEPARTMENTS AND DIVISIONS:

Effective to-day, July 6, 1909, Mr. H. J. Moriarty will act as Master Mechanic at Empire shops during the absence on leave of Mr. W. O. Johnson.

GEO. D. BROOKE, Superintendent M. P. & M.

#### Auction Sale.

In order to recover freight and storage charges, the Panama railroad will dispose of the accumulation of "Over" and "Unclaimed" shipments now in its possession, by public auction, Wednesday, July 14, 1909, at 9 a. m., sale to be held on Dock 11, Cristobal, C. Z.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery and merchandise in general, all of which has been held six months and over in an effort to locate owner.

H. J. SLIFER,  
General Manager.

#### Sale of Carriages and Horses.

Auction: There will be offered for sale, at Ancon corral, July 20, 1909, at 2 p. m., the following Isthmian Canal Commission property: 9 Victorias, 2 double surreys, 4 single surreys, 1 station wagon, 3 horses, and an assortment of harness pertaining to this equipment. Any of the above articles may be seen by prospective bidders at Ancon corral after July 2. Address all inquiries to District Quartermaster, Ancon.

#### Tide Table.

The following table shows the time of high and low tides at Panama for the week ending July 14, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	A. M.	P. M.	P. M.
July 8.....		1.03	7.10	1.33	7.31
July 9.....		1.53	8.03	2.23	8.24
July 10.....		2.47	8.57	3.23	9.24
July 11.....		3.46	9.56	4.24	10.29
July 12.....		4.49	10.58	5.28	11.39
			P. M.		
July 13.....		5.54	12.04	6.32	
July 14.....	12.49	6.58	1.08	7.35	

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

Lost—On last train out of Panama on the night of July 5, a small valise. Finder will kindly return same to baggage room, Cristobal, C. Z.

#### MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

##### NEW YORK TO COLON.

Allianca.....	P. R. R. Tuesday.....	July 6
Orinoco.....	R. M. Saturday.....	July 10
Colon.....	P. R. R. Monday.....	July 12
Panama.....	P. R. R. Monday.....	July 19
Clyde.....	R. M. Saturday.....	July 24

Persons desiring to meet steamers at Cristobal should apply in advance of arrival at the Customs office, room 8, building No. 1, Cristobal, for customs line permits, which are necessary to obtain admittance beyond waiting room on pier 11.

All the steamers of the Hamburg-American and Royal Mail lines call at Kingston enroute to Colon.

##### COLON TO NEW YORK.

Panama.....	P. R. R. Tuesday.....	July 6
Advance.....	P. R. R. Monday.....	July 12
Clyde.....	R. M. Wednesday.....	July 14
Allianca.....	P. R. R. Saturday.....	July 17
Prinz Joachim.....	H. A. Tuesday.....	July 20
Colon.....	P. R. R. Friday.....	July 23
Tagus.....	R. M. Wednesday.....	July 28
Panama.....	P. R. R. Friday.....	July 30

##### NEW ORLEANS TO COLON.

Parismina.....	U. F. C. Saturday.....	July 10
Cartago.....	U. F. C. Saturday.....	July 17
Abangarez.....	U. F. C. Saturday.....	July 24

##### COLON TO NEW ORLEANS.

Cartago.....	U. F. C. Tuesday.....	July 6
Abangarez.....	U. F. C. Tuesday.....	July 13
Parismina.....	U. F. C. Tuesday.....	July 20
Cartago.....	U. F. C. Tuesday.....	July 27
Abangarez.....	U. F. C. Tuesday.....	Aug. 3

##### COLON TO BARBADOS, CALLING AT TRINIDAD.

Orinoco.....	R. M. Tuesday.....	July 20
--------------	--------------------	---------

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamer *David* of the National Navigation Company, will leave Panama, for David, province of Chiriqui, and intermediate points, on Thursday, July 8. The Panama railroad steamships sail at 3 p. m. from dock at Cristobal direct to New York.

The steamers of the United Fruit Company's line sail from New Orleans at 10 a. m. for Colon, and from Colon at 3 p. m. via Port Limon for New Orleans.

All Royal Mail steamers mentioned above leave early in the morning from Colon via Kingston, Jamaica, for New York. All mail and passengers should be on board early on day of sailing.

The Prinz steamers of the Hamburg-American line sail from Colon at 1 p. m. via Kingston, Jamaica, for New York.

#### Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending July 3, with supplies for the Isthmian Canal Commission:

*Prinz Aug. Wilhelm*, June 28, from New York, with 6 tons putty, 4 tons chloride lime for stock.

*Panama*, June 30, from New York, with 31 tons drift bolts for stock; 36,000 feet tape fuse for stock; 3,000 gallons lard oil for stock; 20,000 quintuple caps for stock; 24,000 electric fuses for stock; 20,000 pounds concentrated lye for stock; 30 tons sheet steel for stock; 23 tons bar steel for stock; 6 tons caustic soda for stock. And a miscellaneous cargo aggregating 3,200 packages, weighing 370 tons.

*Thorvald*, July 1, from New Orleans, with 190,000 pounds hay for corrals; 5 1/2-yard dippers for 70-ton Bucyrus shovels for Porto Bello; 2 swing circles for 70-ton Bucyrus shovels for Central Division; 16 tons cast iron washers for stock; 113,312 feet B. M. Y. P. lumber for Gatun; 542,253 feet B. M. Y. P. lumber for buildings; 5 tons black lubricating grease for stock. AT PORT OF BALBOA—*Sebra*, July 1, from Everett, Wash., with 325,959 feet B. M. Douglas fir lumber for Gatun and Porto Bello.

Arrivals and departures of vessels at Balboa during the week ending July 2, were as follows:

Arrivals—June 26, *Chiriqui*, from intermediate ports; June 26, *City of Panama*, from Central America; June 28, *Loa*, from South ports; June 30, *Sebra*, Kosmas Line, lumber, I. C. C., from North.

Departures—June 29, *Limari*, to South ports; July 1, *Arica*, to Guayaquil.

Lost—A gold medal watch fob on June 29, between nurses' quarters and post-office, Ancon. On the front of the medal was engraved O. J. Ruch, Empire Y. M. C. A.; on the back, member of the first basketball championship team of the Isthmus. Finder please return to Commission Clubhouse at Empire and receive reward.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, JULY 14, 1909.

No. 46.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD,  
Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Vacations in Boquete.

On recommendation of the Acting Chief Sanitary Officer, the Chairman of the Isthmian Canal Commission has decided that Boquete, in the Province of Chiriqui, Republic of Panama, is to be included in the list of places where employes may take their annual leave. This locality is above the altitude of 4,000 feet, and will afford the necessary change of climate required by Commission regulations.

#### Correct Designations of Rivers.

The Chairman of the Commission in a letter dated June 4, 1909, calls attention to a misapplication of the names Rio Gatun, and Rio Gatuncillo, the Frijol, Frijol Grande and Frijolito rivers, and sets forth how they shall be considered in future. The letter is as follows:

"The Harrison-Arosemena map of 1862 calls the upper portion of the Rio Gatun, Rio Gatuncillo. This is in error, and all maps and plans now in use by the Commission, and all land records, will, as far as practicable, be changed to show the entire length of this stream as the Rio Gatun. The Rio Gatuncillo is a distinct river that heads somewhere near the Rio Agua Sucia, and is tributary to the Chagres River near Alhajuela.

"As for the other three rivers mentioned above, the Harrison-Arosemena map of 1862 calls the lowest and smallest river, Rio Frijolito; the upper and largest, Rio Frijol, and the one between these two, Rio Frijol Grande. These are three distinct rivers and should be so maintained, with the designations shown on the map above referred to."

#### Lidgerwood Unloaders in June.

The twelve Lidgerwood unloaders in the Central Division during the month of June unloaded 2,950 trains, aggregating 51,873 cars. Of this number 1,427 trains, composed of a total of 24,259 cars, were unloaded by the five unloaders at Taberulla; 661 trains, composed of 12,098 cars, were unloaded by

four unloaders at the Miraflores dumps, and 862 trains, composed of 15,516 cars, were unloaded by three unloaders at Balboa. As all the cars were of 20-yard capacity the material unloaded represented about 1,037,460 cubic yards.

#### Relay Pumps for Gatun Dam Fill.

A relay pumping plant to assist the hydraulic dredges in making the fill of Gatun Dam has been ordered and will be delivered on the Isthmus before October 15. The contract was let on competitive bid to Manning, Maxwell and Moore.

The plant will be in three units, one for each of the three 20-inch suction dredges now pumping into the Dam. Each unit will consist of a 20-inch horizontal centrifugal single suction pump with bottom horizontal discharge, an induction motor of not less than 550-horsepower, and a hand-operated traveling crane. The pump and motor will be mounted on a gray cast iron frame, and the crane will travel parallel with the pumping outfit and will be capable of handling the heaviest part of it. Each pump will receive the discharge of one dredge at a distance not greater than 3,000 feet from the dredge and at an elevation not greater than 30 feet above the level of the water. About five hundred feet of the 20-inch pipe on the suction end of the relay pump will be air tight so that the pump will operate with a suction as well as a discharge effect. Electricity will be supplied from the Gatun power plant.

#### Recruiting Laborers in Barbados.

Eight hundred and fifteen negroes from Barbados for the Canal labor force were brought to the Isthmus by the *Cristobal*, which arrived at Colon on July 7, after a voyage of four days. The number of Barbadians recruited up to July 7, was 17,949, out of a total of 27,500 West Indians recruited for the Canal work.

A representative of the Quartermaster's Department recently visited Barbados to investigate the conditions of the recruiting service in that island. He found that the charges made against the local medical examiner of taking fees from laborers who wished to come to the Isthmus were well founded, and arrangements were made to prevent such extortions in the future. A contract will be made with a resident of Barbados whereby the Commission will pay him \$2 for every laborer shipped to the Isthmus on requisition by the Quartermaster's Department. Under the system of recruiting maintained up to July 1, the price per laborer was about \$6, so that the initial cost of recruiting will be reduced \$4 per man. Barbados is an island about 200 square miles in area, and has a population of about 1,000 persons to the square mile; most of these people being in agricultural communities. So far as the probable demands for Canal

work are concerned Barbados alone can supply all the new laborers necessary to keep the labor force full. The attitude of the government of the island and of the people is favorable to recruiting, on account of the density of the population, the fact that there are more laborers in the island than can comfortably be supported there, and because the laborers who come to the Isthmus send home a large amount of money.

#### Trial Orders for Native Lumber.

The Quartermaster's Department has placed two trial orders for native lumber with the Bayano River Lumber Company. The first order calls for 6,000 feet B. M., and the second for 142,043 feet B. M., delivery to be made at the Balboa dock. The price agreed upon was \$40 per 1,000 feet B. M., making the aggregate value of the two orders, \$5,921.72. The lumber is to be used principally for car and locomotive repairs at the Empire and Gorgona shops, but the lot also includes a number of samples for testing purposes, it being the desire of the Division of Motive Power and Machinery to ascertain the kind of native woods best suited for its purposes. The orders given the Bayano River Company include thirteen varieties, the name and number of feet called for being as follows:

	Feet B. M.
Alcovius Colorvie.....	72
Alfajilla.....	10,516
A. Nariay.....	26,651
Cedar.....	6,072
Cocquito.....	2,072
Espave.....	6,072
Espinosa.....	72
Guaso Colorvie.....	72
Madronia.....	148
Pali Coloron.....	2,148
Quilae Colorvie.....	94,004
Robles.....	72
Santa Maria.....	72
Total.....	148,043

The Alcovius Colorvie, Espinosa, Guaso Colorvie, Madronia, Roble or Isthmian oak, and Santa Maria varieties are to be used as samples in testing the quality of the timber. The Alfajilla will be used for car draft timbers and car deadwood; the A. Nariay for front and back end bumpers and front end tender bumpers for 301 class locomotives; also for front and back end bumpers for 201 class locomotives, tender back bumpers for 201 and 601 class locomotives, and car cross tie timbers; the Cedar and Espave for car flooring, and the Quilae Colorvie for front and back bumpers, car end sills, car extension side boards, and car side boards.

About 10,000 feet B. M. on the two orders was to have been shipped on June 15, and an additional shipment of 26,000 feet B. M. on July 1, but up to date no lumber has been received. The first shipment was to have been made by schooner, but owing to a delay in the delivery of the Company's logging equipment, and to a freshet in the Bayano River which damaged the plant operations were seriously impeded. A tug boat ordered from Seattle some time ago is expected daily at Panama, and shipment will begin as soon as it is put into service.

## FIRST WORK IN CULEBRA CUT.

Excavation was Begun on January 20, 1882.

The *Bulletin du Canal Interocéanique* of February 1, 1882, contains the following copy of a telegram sent from Panama to Paris on January 20, of that year:

"The first work on the great cut of the maritime canal was formally inaugurated to-day at Empire in the presence of the dignitaries of the state, the leading citizens of the city, and a great assemblage of the people. The first locomotive has arrived at the newly opened excavation. The city of Panama is celebrating the event with a grand fete."

Subsequent numbers of the *Bulletin* give details, extracts from which follow:

"This opening was effected by drilling and blasts of dynamite, so that the department of labor has there a plant quite sufficient in importance to allow it to make comparisons—while at the same time accomplishing a useful work—between the different systems of drilling in actual use, and to decide upon the apparatus which should receive preference by reason of the nature of the rock existing on the Isthmus, and upon the modifications which the nature of this rock may make advisable in some of this apparatus."

"Following up the same line of ideas, preparations have been made to open a second excavation a little above the first, going up towards the neck of Culebra gorge. In this portion there are found among two layers of trap some pockets that are peculiar to the Isthmian formation, and which are filled up mainly with argile or argillaceous mud. It is intended to put an excavator to work at this place." \* \* \*

A Panama newspaper is quoted:

"Among the invited guests may be mentioned the Right Reverend Bishop, the President of the State, General Reinales, the chief of the general staff of the division, his staff officers, the commanding officers of the two English frigates now lying in the harbor, representatives of the local press, business men, financiers, and politicians of our city, the officers of the garrison, the employees of the Panama Railroad Company and those of the Canal in a body, and finally the band of the pioneer battalion and a picket of troops. The crowd was so considerable that at the last moment it became necessary to attach another car in order to accommodate everybody. At 7.30 the train pulled out and an hour later it discharged its passengers at Empire."

"A magnificent view awaited the visitors. The buildings and workshops of the company had been dressed with flags and ornamented with exquisite taste, through the efforts of Mr. Jacquemin, chief of the section, Mr. Mercier, and the agents of the section. On descending from the train a procession was formed and immediately the guests started to visit the excavating plant situated behind the hill, on which the section house is built. There Messrs. Reclus and Dauzats explained to their visitors that the pit which they saw was located vertically over the axis of the Canal, but about ninety meters above its true position; that the cut would be opened by successive terraces, where tracks would be laid for removing the excavated material, and finally explained all the operations which would have to be made to penetrate the rock. Attention was called to

the fact that the staked line indicated the axis of the canal, which lies through the center of the great opening which will be about three hundred meters wide. These stakes had been driven in several hours from Paraiso to Matachin by the intelligent and active contractor, Mr. Muraccioli. At 11 o'clock, after the arrival of the train from Colon, the blasts which had been prepared were set off, and all repaired to the section house where they gathered around the table to drink a glass of champagne."

"Mr. Reclus, in a few words, thanked his guests for having come to attend the labor feast. He stated that the works properly speaking were opened from that moment on; that the period of study had virtually passed, and that the cut in truth had been commenced on that very day. Briefly he offered a toast to the health of several persons present, to the health of Mr. de Lesseps, and drank in honor of Colombia and the State of Panama, who had accorded such beautiful, complete, and cordial hospitality to the work and to those who had undertaken it. The many and unanimous manifestations of applause, which his words received, must have shown to the eminent director of the company that all persons present shared his sentiments."

"Mr. Cervera, the president of the State of Panama, responded with a few words to the speech of Mr. Reclus, and finally after several warmly applauded addresses, all started for the railroad station to return to Panama on the train which Mr. Woods, with his customary courtesy, had held in waiting there for an hour so that everybody might be brought back to Panama. At the moment when all were getting into the train at the station, there arrived from Colon a locomotive belonging to the Canal Company, in personal charge of engineer Razy, the chief of the works at Colon, who had had the honor to present the first engine, to show that while at Empire the terrace work was opened, at Colon, had been prepared and mounted the material which was to rapidly complete those terraces. It was a happy coincidence, showing to the persons present that from one end of the line to the other all action was well planned and the ideas of the chiefs perfectly understood and interpreted; how complete was the harmony and how perfect the machine, every wheel of which was to work in perfect accord."

"One may now judge with his own eyes the progress of the work. He can see on the spot the results of many years study; of patient and constant efforts made by those who have conceived and fathered this gigantic work." \* \* \*

"Before the ball, at 7.30, a table containing forty covers was laid for Mr. Dauzats and his guests, the principal agents of the Company. At the dessert, Mr. Dauzats, in language picturesque and far reaching in import, recounted in a few words the immense results that had been obtained during the year so rapidly coming to a close. \* \* \* He said that from Paris the government was jealously watching over its family on the Isthmus, and he announced the early arrival of one of the main promoters of the Canal, Mr. Hersent, and concluded by drinking the health of all his guests, whom he thanked for having accepted his invitation."

"Mr. Reclus immediately replied and re-

called in inspiring and choice terms the services rendered by Mr. Dauzats to the canal. He succinctly traced the work of Mr. Dauzats back to the International Congress, and referred to the great plea which had gained for the Panama Canal cause the support of those who had opposed it; the aid he had rendered to the Commission which the year before had come to the Isthmus with Mr. de Lesseps, and finally to the services which he had rendered the company in his capacity of consulting engineer. The warm and unanimous applause with which the words of Mr. Reclus were received must have shown Mr. Dauzats how well the superior agent of the company is regarded in the minds of all."

"Afterward other toasts were offered. Among those who spoke were Dr. Companyo and Mr. Antonio Ferro, the agent of the Canal Company at Bogota, who in the course of an elegant impromptu speech drank to that Universal Progress, of whom the agents of the company are the standard bearers; to Republican France, the beacon of liberty whose rays light the world and finally to the world republic. Among cries of 'long live Colombia,' the diners left the table."

"The ballroom was elegantly decorated, spacious, and cool, and the illuminations along the road to the site of the hospital did credit to the committee who had spent many hours on them. The beauty and gallantry of the city had responded to the invitations, and the dancing did not cease until an early hour of the following day. \* \* \*

"From this moment beyond a doubt the Canal is assured; the trench already made shows the line along which, in a few years, will pass ships carrying the commerce of the world. The axis of the Canal exists not alone on paper, for it is traced in the earth. In a few days a similar attack will be begun on the great cut at another point. At Mindi, the excavators are now ready to commence their work, the dredges are excavating at Colon, and during the approaching year Gatun will be connected with the sea."

### Health Inspection Service at La Guayra.

Advices have been received that Acting Assistant Surgeon W. H. Kellogg of the United States Public Health and Marine Hospital Service, has been stationed at La Guayra, with the consent of the Venezuelan authorities, and will examine all passengers, baggage and cargo destined for American ports, including those of the Isthmus. A rigid quarantine has been maintained by the Isthmian quarantine officials against La Guayra, which is the port of Caracas, ever since the presence of bubonic plague at those places became known. This has resulted in practically a complete cessation of passenger and freight traffic between infected points in Venezuela, and the Isthmus. Under the new arrangement, the examining official will inspect and fumigate all baggage and shipments to American ports, and certify to same, which insures their entry upon arrival at destination, although the passengers embarking from those ports will have to undergo quarantine to complete six days before they will be released. Dr. Kellogg was on duty at San Francisco during the plague outbreak there, and will use his experience to co-operate with the Venezuelan health authorities in instituting measures for the eradication of the disease at La Guayra, and other points."

## P. R. R. RELOCATION.

### Progress of the Work Up to July 1.

The track chart of the Panama Railroad Company, covering the relocated line between Gatun and Gamboa, shows the length of completed track at the time the chart was made, April 1, 1909, and the remainder divided into sections, with their probable dates of completion, extending from July 1, 1909, to June 1, 1910. There were three sections to be laid by July 1, 1909, one between Gatun and Monte Lirio, another between Frijoles and Bohio ridge, and the third between Caimeto and Frijoles. The actual progress of work in these localities indicates that the construction forces are practically up to the schedule.

From Gatun, track has been laid up the Gatun valley for a distance of about three miles, and to a point where a trestle is being built across a deep fill. A few hundred feet beyond this trestle, the track will make a long turn to the right crossing the Quebrancha and Gatun valleys, which will eventually be an arm of Gatun Lake. The schedule called for completion to the end of the trestle by July 1, 1909, and the work was actually finished on July 9.

There is an  $8\frac{1}{2}$  mile gap between the work here and the Frijoles connection, two miles of which, across the valleys above mentioned, will take longer than any other portion of relocation on account of the enormous embankment quantities involved. There are numerous cuts and fills to be made, some of the cuts requiring the removal of upwards of 250,000 cubic yards of material, which, however, can be used to advantage in building the large fills. The right of way has all been cleared, and between Frijoles and Bohio ridge, a pile driver will be started to work in a few days constructing trestles which will connect the cuts already excavated. It is expected that it will take from six weeks to two months to complete pile driving in this section. By the time trestling is finished to a point a little south of Bohio ridge, the road bed will have been graded through to the Rio Juan Gallegos, where another trestle will be put in. From here to Gatun River, the grade will be ready for track-laying as soon as this gap is closed. By October 1, it is expected that the permanent track will be completed from Gatun to the Quebrancha, a distance of about  $4\frac{1}{2}$  miles, and by January 1, from Frijoles to the Gatun River at Monte Lirio, a distance of 7 miles.

Much of the work in the Monte Lirio section will be done by hand, and one mile of the line, in the vicinity of Rio Juan Gallegos, has been let out by contract. There are six grading gangs of 70 men each, and two clearing gangs of 75 men each, working between the ends of track from Gatun to Frijoles. Some idea of the extent of pile driving operations may be gained from the fact that in the Frijoles section there is a stretch of trestle 3,500 feet long, and in the Caimeto section, one over 2,000 feet long.

Track has been laid about two miles north and one mile south from where the  $1\frac{1}{2}$  mile spur track connects the relocated line with the old line at Frijoles station, and there is a gap of only a mile on the south end to connect with the Caimeto section which is completed to Gamboa. This gap will probably be closed within the next 30 days.

From Gamboa to Paraiso, the track will be

laid on a berm on the east bank of the Canal, the excavation to be made by the Canal construction forces. From Paraiso to Corozal, there is about 2 miles of new construction which will be done during the present fiscal year. The new line occupies the Commission dumps in a large part of this territory. These dumps will be raised to grade by continued dumping of material from Culebra Cut. The track in the Miraflores tunnel has been laid, and at 3.30 p. m., on Monday, June 28, the first coaches passed through, consisting of the private car "La France," with General Manager Slifer and party on board, and a baggage car.

Track-laying on the new line between Corozal and a point a little north of the Balboa wye has been completed, and the work is now principally confined to the fill over the swamp near El Diablo Hill. This fill has given some trouble on account of slides, due to soft mud which overlies the rock in this vicinity, but this mud has been displaced by continued dumping of rock from Culebra Cut, and the slide is now practically overcome. The only other slide on the relocation that has given trouble is the heavy fill south of Gatun station. This has been remedied by counterweighting, or dumping material parallel with the base of the embankment, and traffic was resumed over this section of the road from Mindi Junction, to Tiger Hill, on Wednesday, June 16.

The average elevation of the relocated line from Gatun to Gamboa is 95 feet above sea-level. The minimum elevation through this section will be 92 feet above sea-level, or 7 feet above the water in Gatun Lake.

Up to date 19 temporary tracks have been built for construction purposes, 6 of which remain connecting the old and new lines, as follows: No. 1 leaves the old line just south of the bridge over the Pedro Miguel River and joins the relocated track near Miraflores tunnel. No. 2 extends from the old Gatun depot and joins the relocation near the high fill south of the new station. No. 6 leaves the old line south of the Miraflores power plant. No. 7 branches off from the old line just north of Barbacoas bridge and joins the relocation at Caimeto. No. 11 forms the Tiger Hill connection, extending from the new Gatun station to Tiger Hill on the old line. No. 19 leaves the old line at Frijoles station, and forms a wye at its junction with the relocation.

A track layout has been arranged for at proposed stations on the new line, consisting of house and passing tracks. The house tracks will be connected at both ends and pass behind the depots, while the passing tracks will be on the opposite side of the main line from the depots. The house tracks will be 1,500 feet in length, and the passing tracks 3,400 feet. The layout at stations so far considered, is as follows: Diablo—Depot and house tracks; Miraflores—Depot, house and passing tracks; Pedro Miguel—Depot, house and passing tracks; Gamboa—Depot, house and passing tracks; Caimeto—Depot and house track; Frijoles—Station to be located near the present wye, with house and passing tracks; Monte Lirio—Depot, house and passing tracks; Bohio—Depot and house track. There will also be an isolated passing track along the ridge line, about a mile south of Gatun.

The permanent track laid on the new line up to July 1, aggregated 108,120 linear

feet, or about  $20\frac{1}{2}$  miles. The number of permanent ties laid to July 1, exclusive of 605 extra size ties used in the Miraflores tunnel, was 59,333. Temporary piling to the amount of 552,294 linear feet, and permanent piling to the amount of 30,559 linear feet, were driven in the construction of trestles. Steel, aggregating 1,244.25 tons was used in bridges, and 30,115 B. M. feet of lumber in culverts. Concrete operations consisted of 904.83 cubic yards placed in the new Gatun depot; 5,665 cubic yards in the Miraflores tunnel, and 26,559.98 cubic yards in culverts. The amount of material excavated to July 1, consisted of 755,092 cubic yards of earth; 117,982 cubic yards of loose rock; 295,631 cubic yards of solid rock; 738 cubic yards of wet earth; 232,499 cubic yards of borrowed material, which, with 212,102 cubic yards allowed for swelling, makes a grand total of 1,614,044 cubic yards. Of this amount, 1,161,804 cubic yards were placed in embankment, and 452,240 cubic yards counted as waste. In addition, the amount placed in embankment by the Commission was 3,091,450 cubic yards.

### Police Report for June.

The June report of the Chief of the Division of Police and Prisons shows that 518 arrests, representing 44 nationalities, were made in the Canal Zone during the month. This is a decrease of 89 from May. Of this number 480 were men and 38 were women, the offenses with which they were charged aggregating 50. The arrests were made as follows: Ancon, 30; Las Sabanas, 0; Balboa, 26; Corozal, 0; Miraflores, 13; Pedro Miguel, 15; Paraiso, 24; Culebra, 34; Empire, 69; Las Cascadas, 21; Bas Obispo, 13; Gorgona, 53; San Pablo, 2; Tabernilla, 47; Bohio, 12; Gatun, 61; Cristobal, 80; and Porto Bello, 18. The effective police force on June 30 was 174, and the pay-roll for the month amounted to \$20,273.11.

There were 55 criminal cases tried in the Circuit courts, 15 of which were dismissed, 16 continued, and 24 in which convictions were secured. Of the 24 persons convicted, 13 were sentenced to the penitentiary, 2 to the common jail and had also a fine imposed, 1 received a jail sentence, 3 were fined, and 5 cases in which sentence was suspended. Zone convicts on April 30 numbered 117; received during June, 13; discharged, 13; total on June 30, 117. The number of district prisoners on the same date was 123. Prison pay-rolls for the month were \$1,473.76; cost of prisoners' subsistence, \$857.75; clothing and other property, \$378.80, a total expense of \$2,710.31. The value of work performed by prisoners on Zone roads was \$1,821.55. Twenty-seven civil cases were tried during the month. The sum of \$3,420.97 was collected from executions.

There were 11 deaths by violence, requiring action by the Coroner, four of these being due to railroad accidents, 2 to dynamite explosion, one to drowning, and there were two suicides. Seven persons were deported during the month.

### Acting Secretary Isthmian Civil Service Board

During the absence of Mr. John K. Baxter, Secretary of the Isthmian Civil Service Board, Mr. William F. Tragsdorf, office of the Chairman, Culebra, C. Z., will have charge of the work of the Board, as Acting Secretary.

## FLOOR OF GATUN LOCKS.]

### Extent of Curtain Walls, Method of Anchoring Concrete, and Thickness of Floor.

Excavation for the curtain walls in the upper lock chamber at Gatun is well advanced, the placing of anchorages for the floor of the east lock is under way, and the plant for mixing and handling concrete can be put in operation as soon as one unit of the power plant is completed. A board appointed to determine the plan to be followed in the construction of the floor of the locks, has made recommendations which have been approved. The board was composed of Commissioner H. F. Hodges, Assistant Chief Engineer and Chairman of the Board; Commissioner William L. Sibert, Division Engineer of the Atlantic Division; Commissioner H. H. Rousseau, Assistant to the Chief Engineer; Mr. S. B. Williamson, Division Engineer of the Pacific Division. Extracts from the report to the Chief Engineer follow:

"The Board appointed by your letter of January 3, 1909, to consider the plan for the floor and foundations of the upper portion of the Gatun lock flight, has met formally and informally at various times since the date of the letter appointing it, has given the subject laid before it due consideration and investigation, and has the honor to submit the following report:

"The first meeting of the Board was held at Gatun on January 22, at which time the Board inspected the lock excavation and the material available for the bed of the foundations, and discussed the matters before it. It then adjourned with the intention of completing its deliberations and making report before the 27th of the month, such being the instructions given in your letter. By a later letter from the Chairman of the Board, however, information was conveyed, by your direction, that the requirement as to the date of the Board's report was waived, and that the final meeting should be postponed until later. Understanding this to mean that the Board's conclusions should not be formulated until after the investigation of the works by the expert engineers who visited the Isthmus the latter part of January and the early part of February, the Board laid aside further official discussion of the matter. The individual members of the Board, however, continued their investigations, and especial light was thrown upon the problem by experiments conducted in the lock excavation, pursuant to directions from your office, to determine the effect of anchoring steel bars in the rock underlying the floor, with the purpose of ascertaining to what extent they could be trusted to hold the floor down against upward pressure.

"A number of experiments have been undertaken to this end, and results are shown in detail on the blue prints accompanying this report. Up to date five experiments have been made, the rails being anchored vertically in the soft sandstone layer which was penetrated distances of 5 and 10 feet by cylindrical holes 12 inches in diameter, in which the rails were fastened by concrete. In the first test on a rail put down five feet the rock began to crack under a pull of 98,250 pounds, and finally gave way under a pull of 136,800 pounds. The second rail anchored 10 feet deep, resisted all

efforts to pull it up, the apparatus used for the purpose breaking when the pull on the rail was 237,750 pounds; the rail itself was undisturbed, the concrete, however, showing a crack. The third test was with a rail which was anchored at a depth of five feet. The material began to show signs of failure under a strain of 114,816 pounds, and finally gave way without increase of load after this pull had been continued for about 15 minutes. In the fourth test, with a rail anchored 10 feet, the rock yielded under a load of 186,816 pounds. In the fifth test, with the rail set 5 feet deep, the top of the concrete in which the rail was embedded showed a slight crack under a strain of 113,976 pounds, but the anchor did not finally yield until the stress reached 206,080 pounds. In this test the compression of a timber in a certain part of the apparatus made the pull somewhat oblique and probably caused the indicated stress to be too great. In all these cases, the rails used were the larger size or old French rails, having cross section of 6 square inches. The elastic limit of the material is high and the stresses applied were borne with perfect safety by the steel. Other experiments in the same direction are in progress, but the Board considers that it already has sufficient information to enable it to attach proper value to anchorages similar to those described.

"The design of the floor of the forebay and upper lock of the Gatun flight has been under discussion for several months, and was especially the subject of investigation by a Board convened by your order last summer. The conditions governing the design are set forth in the transcript of proceedings of that Board in the files of your office. Various types of floors were discussed and the conclusion was reached that curtain walls should be introduced along the lock walls and across at the sill of the movable dam, it being the intention at the time that these curtain walls should penetrate not only through the stratum of soft sandstone but also through the underlying stratum of argillaceous sandstone below. If this was done, the area enclosed by these curtain walls would be protected to a considerable, but uncertain, extent against direct ground water head.

"In preparation for the construction of the floor, excavation in the lock pit and forebay has been carried to references about as follows: For the east wall of the forebay to about plus 4; for the west forebay to about plus 11; in the east lock to about sea-level, and in the west lock from plus 10 to plus 12.

"The material in the forebay is of such a nature that its removal in the west lock to a depth probably about the same as that in the east lock is a necessity in order to obtain a reliable foundation. In the east lock the upper portion of the floor must rest upon the soft sandstone for a distance of about 400 feet, measured from the south end. The excavation for the west lock has not uncovered the soft sandstone except in the southeast corner of the chamber. The stratification dips to the north and the layer of conglomerate is thin towards the south end of the excavation, and will be penetrated for a considerable distance if the foundation for the west wall is carried to the same depth as that for the middle wall. \* \* \*

"In its consideration the Board has assumed that the maximum thrust to be re-

sisted above the intermediate gate sill is that of 87 feet of water, this thrust being possible in case the lock and forebay should be pumped dry for examination and a full head should develop under the entire area of the floor. The Board considers that this pressure can be adequately resisted by a concrete floor of reasonable thickness anchored down at suitable intervals by French rails embedded 10 feet or more in the rock. In its calculations the Board has attributed to each such anchorage a resisting power of about 128,000 pounds. In fixing the thickness of concrete floor to be thus anchored down, the Board has taken into consideration the fact that the culvert system already adopted requires a depth of 13 feet from the top of the floor to the bottom of the portion containing the culvert, this distance being based on having  $3\frac{1}{2}$  feet of concrete under the cross section of the culvert itself and 3 feet over it, the total thickness being  $3\frac{1}{2}$  feet of floor,  $6\frac{1}{2}$  feet of culvert and 3 feet of roof.

"In the upper portion of the lock where the soft sandstone exists, the Board has considered that it would be inadvisable to trench this material for the culverts, it being ununiform and not at all hard in its character, as well as water-bearing; and, for security, has thought that this material, where it occurs, should be removed to such a depth as to give a concrete floor of very considerable and uniform thickness. For this thickness the Board has adopted 13 feet.

"Considering the weight of this concrete floor of 13 feet in thickness, as opposed to an upward pressure on its lower surface of 87 feet of water, it is found that, deducting the weight of the concrete at 145 pounds per cubic foot, there is a remaining upward pressure of 3,550 pounds per square foot of floor. Attributing to each anchorage a resistance of 128,000 pounds, one rail will hold down 36 square feet of floor, and a 13-foot floor with anchors at the corners of 6-foot squares, will, therefore, be safe against the extreme possible upward pressure, provided that the effect of the simultaneous pull on all the rails does not develop a horizontal fissure in the stone below the ends of the rails, causing an uplift of the concrete floor loaded with a 10-foot slab of underlying rock.

"If a strength in tension of only 20 pounds per square inch be possessed by the underlying rock, such a fissure cannot occur. Should it, however, develop there would be a combined floor of 13 feet of concrete and 10 feet of rock, which, acting as a flat arch, would take up the total pressure with a thrust in compression of only 310 pounds per square inch, this thrust occurring in the stone at the middle part and in the concrete at the ends. That such an upward pressure can develop is extremely improbable. In order to reduce the chances and also the amount of stress, should it develop, the Board considers that the anchorages in the middle part of the lock floor should be somewhat deeper than the 10 feet already assumed, and recommends for this portion of the floor anchorages at a depth of 15 feet or more. With this additional load in the middle part of the floor, the thrust in the combined stone and concrete would be considerably reduced, and brought down to about 120 pounds at the crown and 170 pounds at the haunches.

"As a precaution against the development

of the maximum head under the floor, except very gradually, and due to only a small quantity of water, the Board believes it advisable to retain the curtain wall, carrying the latter to a depth sufficient to pass entirely through the stratum of soft sandstone and penetrate to a reasonable depth the argillaceous sandstone with tufa lying underneath; and that this curtain wall should be continued down the lock back of the sidewalls for a distance sufficient materially to reduce the head of the ground water which may penetrate around it at its lower end. By this precaution the amount of water which can develop the full lake pressure in the upper portion of the floor, will be only that which can penetrate through the crevices of the stone under the curtain wall, and will be, it is thought, so small in amount that by a suitable system of sumps and telltales it can, if desired, be relieved at any time.

"The Board believes that the floor of the character described should be carried down both locks until the soft sandstone has dipped so far that there is found overlying it a layer of sound rock which, with the concrete floor to be put on it, will give an aggregate thickness sufficient to insure safety against any head which can develop in that portion of the floor. For this aggregate thickness the Board has assumed 20 feet. The borings show that the lower surface of the conglomerate rock is found at a depth 20 feet below sea-level at about the position of the intermediate sill in the upper lock, it being somewhat further upstream under the west wall than under the east wall. The Board believes that the entire portion of both upper locks from the sill of the upper pair of upper lock gates to the sill of the intermediate gate should be excavated to a surface 0.67 feet above sea-level, thus founding all this portion of both the locks at the same level. In deciding this, the Board has not lost sight of the fact that the conglomerate under the west portion of the west lock forms a reasonably good foundation. On account of the unreliable nature of the material underlying this conglomerate, however, the Board has considered it desirable that the floor should extend under the west wall at the same depth as it does under the middle wall, and has believed that greater security will result if the entire excavation for both locks in this upper portion be carried to the reference stated above. Below the intermediate gate sill the stratum overlying the soft sandstone is of sufficient thickness and soundness to be trenched for the culverts, the floor between the culvert trenches to be made relatively thin. For this portion of the floor the Board recommends that the culverts be placed in trenches under the walls and floor, and that the floor between the culverts be made 3 feet thick, all to be anchored to the underlying material with rails penetrating not more than 10 feet. It is the intention that the penetration of these anchoring rails shall be such that the hole developed in the stone will be approximately equal to that developed in the concrete of the floor, latter being increased by transverse bolts or otherwise.

"The floor in the forebay of the lock, i. e., in that portion between the sill of the upper pair of the upper lock gates and the sill of the movable dam, is exposed to up-

ward pressure which cannot be equal in amount to that in the lock pit, since, even when the movable dam is closed and the lock pit unwatered, the portion between the gate sill and the dam sill will be filled with water or other material to the reference of the top of these sills. In the general design prepared for this lock it had been the intention to make the floor in this portion of the structure relatively thin, i. e., with a thickness of 8 feet and to load this floor with large rock paved on the upper surface to the height of plus 35. It is thought, however, on account of the necessity of introducing special appliances to handle stone to be deposited here, that to put all this stone on the floor would cost more than to put in a considerable thickness of concrete, and for this part of the floor the Board recommends that the excavation throughout both forebays be carried to a depth of plus 4, and the walls on the floors founded at this reference, the floors to be given a thickness of 20 feet. \* \* \*

"The Board has considered also the advisability of introducing under the floors a system of sumps with telltales in the walls. While such a system is not absolutely necessary, since the floor is believed to be strong enough to withstand any head which can develop, yet the resulting expenditure will be very small, and will enable the pressure to be watched and relieved if necessary. On the whole the Board is inclined to recommend the adoption of such a system, the details to be left for subsequent determination. \* \* \*

"A summary of the conclusions of the Board is as follows:

"That the floor of all that part of the chamber lying below the sill of the upper pair of upper lock gates should be treated as belonging to the lock, and the portion above that sill as belonging to the forebay.

"That the floor and walls of the forebay from the sill of the movable dam to the sill of the upper duplicate lock gates should be founded at reference plus 4, and that the floor there should be made 20 feet thick.

"That from the upper surface of the sill of the upper duplicate lock gates to and including the sill of the intermediate gates, the excavation for the floor and walls should be carried to plus 0.67.

"That this part of the floor should be made of uniform thickness of 13 feet, and should be anchored down by rails spaced as nearly as practicable 6 feet apart, longitudinally and transversely.

"That the rails should be anchored by concrete to a least depth of 10 feet in the underlying material in the outer parts of each lock pit, and in the middle part the penetration should be from 15 to 20 feet, depending upon the material.

"That below the intermediate gate walls the foundations for the walls and floors should be trenched for the culverts, the floor between the culvert trenches being made three feet thick, and all floors anchored to the underlying material with rails penetrating not more than 10 feet.

"That a curtain wall 6 feet thick should be constructed along the sill of the emergency dam and the upper portion of the lock walls; the wall along the sill to be carried to reliable material, the least depth of the foundation to be minus 8, the walls along the lock walls to be founded at the depth of the foundation of the corresponding end of the cross curtain wall until the soft sandstone stratum is met, and thence at a depth of one or two feet below the surface dividing the soft sandstone and the argillaceous sandstone with tufa until the depth of minus 18 is reached.

"All portions of the lock floors may properly be provided with a suitable system of sumps and telltales, the latter to be placed in the lock walls.

"A sketch illustrating the floor proposed and an approximate estimate of cost are appended, marked B and C. Stenographic record of the first meeting of the Board, at which practically the entire discussion was carried on, is also appended, marked D.

The final meeting of the Board was not reported, it being merely a general deliberation and agreement upon points which had been previously discussed."

#### Severe Wind Storm on South Slope.

A wind storm of unusual severity blew from the southeast across the bay of Panama on the night of July 10, and caused some damage on the south slope of the Isthmus. The meteorological record for three stations on the south slope and for Culebra on the north slope shows:

*Ancon*—The storm began about 10 p. m.; the wind attained a maximum velocity of 59 miles per hour at 10.30 p. m. From 10.06 to 10.37 p. m., 1.40 inches of rain fell, the total for the shower being 1.49 inches. From 10.16 to 10.30 p. m. (14 minutes), 1 inch of rainfall occurred. The total rainfall from 8 a. m., July 10, to 8 a. m., July 11, was 3.25 inches.

*Balboa*—The storm struck Balboa a few minutes after the turning of the high tide, and the water was forced up 0.6 foot from this cause. The total rainfall for the 24 hours ending at 8 a. m., July 11, was 4.87 inches.

*Pedro Miguel*—The wind attained a maximum velocity of 27 miles from the southeast at 10.15 p. m. The rainfall from 10 to 11 was 0.16 inch. The total rainfall for the 24-hour period ending at 8 a. m., July 11, was 1.02 inches.

*Culebra*—The wind attained a velocity of 25 miles from the southeast at 10.30 p. m. The maximum velocity for the 24-hour period, ending at 8 a. m., July 11, was 36 miles from the east at 6 a. m. of the 11th. The rainfall from 10 to 11 p. m. was 0.12 inch. The total rainfall for the 24-hour period, ending at 8 a. m., July 11, was 0.92 inch.

Trees in the path of the storm were blown down, or stripped of their limbs, and in Panama city, at Corozal, and at Miraflores galvanized iron roofs were ripped off, or damaged. In many cases houses were flooded and some damage was done to the personal belongings of the occupants. Telephone, telegraph and electric wires were broken by falling limbs, and the services were temporarily cut off.

#### Independence Day in Panama.

Decree No. 79 of July 2, 1909, of the President of the Republic of Panama, by which the 5th of July, 1909, was declared a civic feast day for the cities of Panama and Colon, reads as follows:

*The President of the Republic*, in the exercise of the faculty conferred upon him by Article 2 of Law 22 of 1909, and

#### CONSIDERING:

1. That the Administrative Authority representing the Government of the United States in the Canal Zone has been every year declaring November 3 as a day of civic feast in the said territory;
2. That such declaration pleases the patriotic sentiment of the Isthmus;
3. That it is the Panamanian Government's duty to worthily respond to the expressions of courtesy and cordiality made by the Isthmian Canal Commission as the representative of the Government of the United States; and
4. That the Executive Authority of the Canal Zone, through a recent decree, has postponed the celebration of the anniversary of the independence of the United States to July 5, the 4th falling on a Sunday.

#### DECREES:

Be the 5th day of July of the current year declared a day of civic feast in the cities of Panama and Colon, commemorating this year the anniversary of the Independence of the United States of America.

Be it published and complied with.

Given at Panama on the 2d day of July, 1909.

J. D. DE ORALDIA.

The Secretary of Government and Justice,

RAMON M. VALDES.

## SOCIAL LIFE OF THE ZONE.

## Lodge and Club Meetings and Other Features.

At the meeting of the Isthmian Canal Rebekah lodge, No. 1, Gorgona, held July 3, the following officers were installed: Mrs. R. Varenkamp, noble grand; Mrs. Babbitt, vice-grand; Mrs. C. H. Beetham, secretary; Mrs. McCann, treasurer. The lodge was instituted by the district deputy grand sire, B. F. Sisson, October 10, 1909. There are 40 members.

The Gorgona Dancing Club gave a dance at the Commission clubhouse on July 10. This is one of the oldest social clubs in the Zone, having been organized in 1906. There are 45 members. Dances are given on the second and fourth Saturday in the month.

The Young People's Christian Endeavor Society, Gorgona branch, held an election of officers the last week in June. G. C. Mitchell was elected president, Mrs. George H. Lowe, vice-president, E. Orr, secretary, and William Harrison, treasurer. There are three committees of which Mr. McConaughey is chairman of the lookout committee, Mrs. Lowe of the social, and Mr. Orr, of the meeting committee. The society meets in the Commission chapel every Sunday evening at 7 o'clock. Once a month a social meeting is held. There are 25 members.

The Gorgona branch of the Woman's Christian Temperance Union has organized a sewing class for white children with three teachers. Meetings are held in the Commission chapel on Saturday afternoon. Members of the class furnish their own materials.

The Red Cross dance held by the Gorgona district at the Commission clubhouse on July 3, was well attended. The building was decorated with Red Cross emblems, flags and palms. Refreshments were served. Music was furnished by the Culebra orchestra.

The money realized at this entertainment will be used to defray the expenses of the carnival, to be held on July 16, the entire proceeds of which will be turned into the general treasury of the Canal Zone Branch. The Commission clubhouse will be thrown open for the occasion. Booths for the sale of homemade candies, cakes, ice cream, and lemonade will be erected. A ladies' bazaar for the sale of fancy articles, and a periodicals booth, will be attractions. Side-shows of various kinds will be placed at intervals through the building. The evening will close with a carnival dance. No admission will be charged. Sales will be made by coupons which will be purchased at the cashier's window. The entertainment is in charge of seven committees under one general chairman, F. W. Chelf. The divisions are: Mrs. F. M. Morrison, refreshments; Mrs. John Z. Bromley, periodicals; Mrs. George H. Potts, bazaar; A. C. Hackenburg, decorations; G. L. Emery, amusements and advertising; G. C. Mitchell, finance. A special train will be run from Gatun, but the committee has made arrangements to entertain all visitors who wish to remain over night in Gorgona.

A tennis court will shortly be opened at Gatun under the auspices of the Woman's Club. The club will give an entertainment shortly to raise funds to finish paying the expenses of building the court.

A party of 35 Gatun residents made an excursion to Chorrera last week. The trip was made in a chartered launch which left

Panama Sunday, July 3, and returned Monday evening.

The residents of Culebra gave an entertainment to raise funds for the purchase of a library for the Zone penitentiary, at the Commission clubhouse on Friday evening, July 9. The program consisted of songs by Mrs. Faure, and Messrs. Martin, Ham, and Flynn, piano selections by Master Howard, reading and monologues by Messrs. Holland and O'Reilly. The Manila Mandolin Club and the Culebra Male Quartet gave several numbers. At the close of the program refreshments were served in the game room. The net proceeds amounted to \$70.

The Culebra Bachelors' Club gave a dance at the clubhouse, Saturday, July 10. The Culebra Dancing Club will give its regular dance, Saturday, July 17.

## PERSONAL.

Mrs. Geo. W. Goethals, accompanied by her son Thomas Goethals, sailed for the States on the *Advance* on July 12.

Lieut. Col. H. F. Hodges, Assistant Chief Engineer, accompanied by his family, returned to the Isthmus on the *Alliance*, which arrived at Cristobal on July 13. Among the other passengers were Joseph A. Le Prince and family of Ancon, and A. Bruce Minear and wife of Culebra.

L. K. Rourke, Assistant Division Engineer, Central Division, sailed for the States on the *Cristobal*, on July 14, for a six weeks' leave of absence in the States.

Among the passengers on the *Panama*, which sailed from Cristobal for New York, on June 6, were W. H. May, Secretary to the Chairman; W. G. Comber, Resident Engineer at Balboa, and family; Geo. L. Campen, Superintendent of Public Works; H. L. Smith, Superintendent of Schools; Dr. Walter Brem, Jr., of Colon Hospital, and Dr. N. D. Brayton, of Ancon Hospital.

Mr. Charles Edward Kendall and Miss Alice Elizabeth Harriett Russell of Cristobal were married at the Ancon Chapel, 7.35 p. m., July 3, 1909, Archdeacon Bryan officiating.

Mr. Alfred J. Walker of Empire, C. Z., and Miss Charlotte H. Broadway of West Hoboken, N. J., were married on June 30, 1909, at the residence of the bride. Mr. and Mrs. Walker will reside at Empire.

## Entertainment at Ancon.

The College Girls, as three young lady entertainers now on the Isthmus giving entertainments in the Y. M. C. A. course are called, will give readings, songs, and instrumental selections in Ancon Hall on the night of July 24. They will appear under the auspices of the three organizations most active in Ancon, the Pacific Masonic Club, Ancon Court of Kangaroos, and Ancon Lodge of Knights of Pythias, through the courtesy of the Y. M. C. A. The money realized from the entertainment will be applied towards the purchase of a piano, which will remain permanently in Ancon Hall and be at the disposal of all persons using the hall.

## Kangaroos Dance.

Paraiso Court No. 5, I. O. P. K., will give a dance at their lodge hall in Paraiso, on Saturday evening, July 24, at 8 p. m. Train will leave Pedro Miguel at 7.30 p. m. All members of this court in good standing can obtain three invitations for their friends by applying to H. L. Bridges, comptroller.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

"A Lyceum Entertainment Company, known as the 'College Girls Trio' arrived from the States on the *Alliance* on July 13. This Company is under the management of the Y. M. C. A., and will appear twice at each Clubhouse, and also at the following towns where there are no clubhouses: Porto Bello, June 19; Camp Elliott, June 21; Pedro Miguel, June 22; Gatun, June 23; Ancon, June 24.

Mr. G. R. D. Kramer, a graduate of the Y. M. C. A. training school of Springfield, Mass., arrived on the *Alliance*, July 13, and has reported for duty as assistant secretary of the Culebra Y. M. C. A.

The Y. M. C. A. of the Canal Zone acknowledge with thanks the services rendered by Mr. Bourke Sullivan, of Philadelphia, who is visiting the Isthmus. Mr. Sullivan rendered gratuitous services at three recent "open house" entertainments. His songs were much appreciated.

## CULEBRA.

The "College Girls" will appear at Culebra, Friday, July 16.

The beginners chess Tournament, which has been running for the past month, ended last week. F. A. Brown won 6 games, C. E. Gage 5, B. F. Stewart 5, J. M. Weaver 4½, Victor Gronbeck 4, B. F. Ware 2½, George Holland 2, J. W. Holland none.

Baseball games have been arranged with Empire and Gorgona for the 13th and 24th.

An enjoyable program was rendered Tuesday evening by Miss Mary Slifer of Colon, Mr. W. Bourke Sullivan of Philadelphia, and Mrs. M. G. Shivers of Empire.

The benefit given Friday night for the prison library was very successful, and a good sized crowd enjoyed the program, which consisted of musical numbers, readings, quartet, solos, mandolin and guitar, monologue and coon songs. Refreshments were served. Several books have already been donated for this purpose, and any others will be gladly accepted. Leave word at the Y. M. C. A. and they will be called for.

## EMPIRE.

The "College Girls" will appear at Empire, Thursday night, July 15.

In the bowling match played at Empire Y. M. C. A., Saturday evening, July 10, between Empire and Gorgona, the former won two games out of three, although the latter had the greater pinfall. The scores were as follows: Empire 749, 764, 780; Gorgona 727, 762, 852.

The Empire Association has received the beautiful trophy won by its bowlers in the last Isthmian duck pin tournament.

The local duck pin tournament will close Friday night, July 16. Much interest is being manifested in the "alleys."

## Concert by I. C. C. Band.

EMPIRE, C. Z.,

Sunday, July 18, 1909, at 6 p. m.

## PROGRAM.

- 1 March—*Majestic*.....Braham
- 2 Selection—*Marcelle*.....Luders
- 3 { *a* Characteristic—*Dirie Twilight*.....Johnson
- { *b* Indian Descriptive—*Trailing the*
- Trail*.....Spanlding
- 4 Waltz—*Moonlight on the Hudson*.....Herman
- 5 Medley Overture—*Glow Worm*.....La Farge
- 6 Porto Rican Dance—*Rosita*.....Missud
- 7 { *a* Maple Leaf Rag (by request).....Joplin
- { *b* Popular March—*La, La, La*.....Scotto
- 8 Overture—*Schauspiel*.....Bach
- 9 Moreau Characteristic—*Dawn of Love*.....Bendix
- 10 March—*Stars and Stripes Forever*.....Souza

OLIVER KIMBALL, Assistant Director.

The next concert will be given at Bas Obispo, July 25

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

ANCON, C. Z., July 7, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Beynon, G. E.	Lowman, Miss Alice
Buchan, Mrs. Geo.	(2d class)
Cobban, H. H.	Mitchell, Arthur T.
Dannes, Linnal	Miller, Mrs. J. B.
Dennis, C. A.	Peck, Rev. A. S. (2)
Eason, John J.	Riemann, Richard
Englander, Mark	Taylor, Fred
Fitzgerald, J. P.	Valentine, Leon C.
Hanrahan, Thomas	Ward, Capt. R. P.
Krause, Arthur	Winquist, Mrs. C.
	Verkes, Arthur W.

## OFFICIAL CIRCULARS.

## Manufacturing Account.

The appended report was approved in Circular No. 264, published on page 360 of THE CANAL RECORD for July 7, 1909:

EMPIRE, C. Z., June 18, 1909.

LIEUT.-COL. GEO. W. GOETHALS,

*Chairman and Chief Engineer, Culebra, C. Z.*

Sir—The Committee appointed in your letter of May 29, to consider and recommend what reports shall be made after July 1, 1909, under General Account 2—Manufacturing Account, has the honor to submit the following report:

## MANUFACTURING ACCOUNT.

The reports heretofore made of manufacturing work have not furnished the Chairman with the information he desires for several reasons, among them being the fact that the manufacturing requests are made with certain estimates which he approves after taking into consideration the value to the work of the articles; compared with estimated cost of same; and when the work is completed it is found to have cost in some cases an amount which would, if stated on estimate, have led to disapproval of the request for proper regard of economical administration.

The manufacturing accounts and reports of same have not included the whole of the Commission's expense at all shops for manufacturing, inasmuch as all of the manufacturing in the Division shops has not been carried and reported as such, but has been charged into the work.

It is the opinion of the committee that all articles manufactured, except when their manufacture is required for a repair job under way, should be handled through the manufacturing account; such as spare parts manufactured in anticipation of the necessity for their use.

It is the opinion of the committee that no repair work should be included in "Manufacturing Account," and that said account should carry only transactions covering the conversion of material into another form.

## CONSTRUCTION AND REPAIRS

In addition to reports covering articles manufactured, it is recommended that the various shops furnish reports of construction and repairs done; such reports (including therein total figures for Manufacturing Account, shop superintendence, repairs and renewals of shop machinery and tools, and shop expense) to cover the total expenses of the shops for the month.

It is recommended that Chief Engineer's authority, Form 159-C, E., be submitted for all repairs to equipment, as follows: Locomotives, spreaders, unloaders, other construction equipment, when it is estimated that the job will exceed \$200, and steam shovels, when the estimate is over \$500.

For any additions to the plant, or improvement on any unit of floating equipment, other than repairs, when it is estimated that the expense will exceed \$5,000, and for repairs or rebuilding of any French floating equipment.

Each job performed under Chief Engineer's authority should be reported separately. The following items should be reported by number or units repaired and total cost of repairs:

Repairs to locomotives, costing less than \$200 for each job.

Repairs to spreaders, costing less than \$200 for each job.

Repairs to other construction equipment, costing less than \$200 for each job.

Repairs to steam shovels, costing less than \$500 for each job.

Repairs to cars.

Repairs to drills.

Repairs to shop machinery and tools.

New shop machinery and tools, including cost of erection, should be reported separately for each machine installed or tools supplied.

Repairs to steamers, tugs, barges and dredges should be reported by total for each unit, with explanation of any abnormal charge.

Repairs to other floating equipment should be by number of units repaired and total cost, with explanation of any abnormal charge.

Report should also be made of all work undertaken under Chief Engineer's authority, Form 159-C, E., such as repairs to buildings, construction of buildings, roads, sewers, drains, etc., and any other special construction feature, the cost of which may be desired by the Chief Engineer.

It is the sense of the committee that all work done during the month should be charged in that month's accounts, and that Circular No. 246, which provides for the rendition of bills only upon the completion of a job, should be recalled. Its operation results in carrying large amounts in suspense from month to

month and complicates the accounting in the division offices.

It has been found impracticable to devise one form to cover the above reports, and there are submitted four forms for your approval.

1. For reports of operations of rock crushers, sand plants, concrete block plants, truck gardens, electric light and power plants, air compressors, Lirio planing mill, printing plant, and field repair shops (such as Cocoli, Cucaracha, Cunette and Gatun).

Sand, crushed rock and cement blocks should be priced at an arbitrary figure, which would approximate the cost of operation and of the plant. It is not practicable to clear these accounts each month, as there will be, from time to time, heavy charges for additions and improvements, which should gradually be absorbed in the price of the product. The unit price should be changed as experience warrants. The output of these plants should be taken up as material, and distributed on Form 132-C, E., under column "Material."

The price at which these commodities are invoiced to individuals and companies should include an arbitrary to cover the cost of plant prior to July 1, 1909, which will not be absorbed in the operations. The difference in price charged to work and to individuals and companies to be credited to the original charge to plant.

Operations of truck gardens should be credited with the value of the products, and balance written off to Classified Expenditures from time to time. The value of the output should be taken up as "Material" and distributed on Form 132-C, E., under the column "Material."

*Operation of Electric Light and Power Plants*—The price per kilowatt, or per light, should be adjusted as to approximately clear the operating expenses, and plant items subsequent to July 1. For power and lights furnished individuals and companies there should be added to this price a sufficient amount to cover the cost of plant prior to July 1, which amount will be credited to the original cost of plant.

*Operation of Air Compressors*—Price at which the air is to be charged to the various units of the work should be based on the actual cost of operation during the month, including renewal.

*Lirio Planing Mill, and Printing Plant*—The credit should be the value of finished product, issued or placed in stock. The balance should represent the value of uncompleted orders.

The expenditures on this form should be carried as a total to Form 4.

2. *For Report of Manufactured Articles (other than castings)*—This form to be used in reporting all transactions involving the converting of material into another form. This account should carry the cost of new equipment, when set up on the Isthmus, including the original cost and expense of setting up. No repair work should be taken up in this account, but it should be included in report, Form 4. The expenditures on this form should be carried as a total to Form 4.

3. *For Foundry Operations*—Form 118-A should be used to report foundry operations at all shops. The finished product should be taken up as "Material," and charged out to the work when applied. The expenditures on this form should be carried as a total to Form 4.

4. *Report of Repair Jobs and Construction Work*—This report should cover all operations of the various shops, repairs to buildings and construction of buildings, roads, sewers, and drains constructed under Chief Engineer's authority, and any special construction feature, the cost of which may be desired by the Chief Engineer. It should include totals from Forms 1, 2, and 3, also for all shops, shipways, dry docks, field repair shops, shop superintendence and shop expenses. Definition of these accounts follows:

*Shop Superintendence*—Salaries of master mechanics, assistant master mechanics, shop superintendents, general foremen, shop clerical forces and timekeepers, their traveling expenses, the cost of furniture, fixtures, office supplies, stationery and printing, cost of lighting and care of office, etc.

*Shop Expense*—Salaries and wages of stationary engineers and firemen, and all fuel and supplies used in operating power plants for shops; miscellaneous labor that cannot be charged to any particular line of work, such as sweepers, cleaners and roustabouts, watchmen, cleaning yard about shops, cost of material and labor used in repairing shops, maintaining tracks, and otherwise arranging the yards in and about shops; the wages of engine-men and switchmen, together with fuel and supplies necessary with which to operate switch engines about shops, and incidental expenses for which no provision is otherwise made.

This account will be credited with percentages added to invoices for manufactured material. The balance remaining is the amount which should be taken up on this report.

For the purposes of comparison, it is recommended

that "Shop Superintendence" and "Shop Expenses," be handled uniformly at all shops, dry docks and shipways.

These reports have been made as simple as possible and, after consultation with the officers in charge, it is found that they will entail but little additional work, as the information is at present worked up in a slightly different form. Such reports will give information as to operations of the various shops, and a comparison of the estimates with the actual cost of any job, thus enabling the Chief Engineer to keep in close touch with the operations of all units of manufacturing plant.

Respectfully submitted,

T. L. CLEAR, *Chairman*, AD. FAURE, F. W. DOTY, C. S. TODD, C. H. ANDERSON, F. E. MOORE, R. M. ROUDEBUSH.

## Reimbursement for Coach Hire.

CULEBRA, C. Z., July 15, 1909.

CIRCULAR No. 265.

Effective this date, employees will not be reimbursed for coach fares, carriage hire, or any similar expense for transportation incurred in going to and from their regular or special work in Panama, Ancon, Balboa, East Balboa, or Corozal, Cristobal, Mount Hope and Gatun, without written authority in advance approved by me.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

## Compensation for Injured P. R. R. Employees.

PANAMA RAILROAD COMPANY,  
OFFICE OF PRESIDENT.  
CULEBRA, C. Z., June 30, 1909.

CIRCULAR:

Effective July 1, 1909, every person in the employ of the Panama Railroad Company on the Isthmus will, whenever injured in the course of such employment, be entitled to receive, for a period not to exceed one year thereafter, the same pay as if he continued to be employed, until, in the opinion of the President of the Company, such employee is able to resume work, such payment to be made on vouchers of the Panama Railroad Company in consideration of the execution of a release by the injured employee and upon submission by the employee of approved claim for compensation on Form No. A. 1. 652:

Provided, that no compensation shall be paid where the injury is, in the opinion of the President of the Company, due to the wilful misconduct of the employee injured.

Form No. A. 1. 652 will show, in addition to the employee's name, etc., the date of the injury, description of the injury, certificate of attending surgeon covering the period for which compensation is claimed, and approval of the claim by the President of the Panama Railroad Company, or official designated by him.

GEO. W. GOETHALS, *President.*

## Reduction of Ice Supply.

SUBSISTENCE DEPARTMENT.  
CRISTOBAL, C. Z., July 12, 1909.

Beginning July 20, and until further notice, ice supplied to purchasers will be reduced by the following quantities, and until further notice no orders for increases will be accepted after publication of this notice:

Present Delivery.	Will Receive.
10 pounds.....	10 pounds.
20 pounds.....	20 pounds.
30 pounds.....	20 pounds.
40 pounds.....	30 pounds.
50 pounds.....	40 pounds.
60 pounds.....	50 pounds.
65 pounds.....	50 pounds.
70 pounds.....	60 pounds.
75 pounds.....	60 pounds.
80 pounds.....	70 pounds.
100 pounds.....	80 pounds.
125 pounds.....	100 pounds.
150 pounds.....	125 pounds.
200 pounds.....	175 pounds.
250 pounds.....	225 pounds.
300 pounds.....	250 pounds.

This action is necessary in order to enable the department to overhaul the ammonia compressors.

JOHN BURKE, *Manager.*

Approved:  
EUGENE T. WILSON, *Subsistence Officer.*

## Auction Sale.

In order to recover freight and storage charges, the Panama railroad will dispose of the accumulation of "Over" and "Unclaimed" shipments now in its possession, by public auction, Wednesday, July 14, 1909, at 9 a. m., sale to be held on Dock 11, Cristobal, C. Z.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery and merchandise in general, all of which has been held six months and over in an effort to locate owner.

H. J. SLIFER,  
*General Manager.*

4TH OF JULY CELEBRATIONS.

Results at Ancon and Cristobal.

The Fourth of July celebrations at Ancon and Cristobal on Monday, July 5, were attended by large crowds from the Zone towns. The weather conditions at Ancon were all that could be desired, but at Cristobal it rained during the afternoon, interfering with the success of the program to some extent. It cleared up toward night, however, and the evening spectacle of fireworks and illuminated water pageant was an attractive feature. The winners in the athletic events at Ancon, and the athletic and aquatic events at Cristobal were as follows:

ANCON—ATHLETIC EVENTS.

100-yard dash—First heat, J. A. Tannehill, Ancon, first; E. W. Tupper, Culebra, second. Second heat, J. W. Belt, Ancon, first; Crawford, second. Finals, Tannehill, first; Tupper, second; Crawford, third. Time, 11:2 seconds.

880-yard run—D. T. Edwards, Ancon, first; W. S. Hartman, Culebra, second; S. C. Russell, Ancon, third. Time, 2:25.

Running high jump—G. C. Ferris, Gorgona, first, 5.4 feet; B. A. Fogg, Culebra, second, 5.3 feet; Fred A. Feld, Ancon, third, 4.6 feet.

Boys' 50-yard dash—First heat won by Leo McCourt, Gorgona; second heat by Arthur Howard, Culebra, third by Edwin Atkins, Culebra. Results in the finals were: McCourt, first; Howard, second; Atkins, third.

220-yard dash—D. T. Edwards, Ancon, first; C. T. Lindsay, Culebra, second; L. H. Williamson, Culebra, third.

Standing of towns according to points—Ancon, first three times; third twice; points, 17. Culebra, second five times; third twice; points, 17. Gorgona, first twice; points, 10.

MISCELLANEOUS EVENTS.

Obstacle race—S. S. Baumer, Culebra, first; C. T. Lindsay, Culebra, second. Time, 1:45.

Pony race—Lyle Womack, Ancon, first; Ethel Phipps, Ancon, second. Time, 1:25.

Three-legged race—Fred Piernan, Hugh S. Hunter, J. A. Tannehill, S. C. Russell, Ancon. Dead heat. Time, 1:01.

Bucking horse contest—Chas. Higley, Empire, first; Wm. H. Frazee, Paraiso, second.

Equipment race (Marines)—Michael Haugh, Camp Elliott, first; L. J. Hurst, Camp Elliott, second. Time, 1:35.

Mule Race—C. R. Harrington, Ancon, first; C. H. Bath, Ancon, second. Time, 1:35.

Wall scaling contest—Won by Co. C, Camp Elliott. Time, 3:50 2-5. Co. A, second. Time, 4:14 1-5.

Tug-of-war—Won by Corporal Pryor's team, Camp Elliott.

Mounted race—J. A. Tannehill, A. E. Rex, Ancon, first; Fred A. Feld, S. C. Russell, Ancon, second. Time, 11:2.

CRISTOBAL—ATHLETIC EVENTS.

120-yard hurdle—Hertz, first; Harragin, second, Grunewald, third. Time, 18 1-5 seconds.

100-yard dash—Hertz, first; Simka, second; Polson, third. Time, 4:57.

Boys' 50-yard dash (80 pound class)—Jadwin, first; Morrison, second; E. Sibert, third. Time, 7 seconds.

Boys' 50-yard dash—(90-pound class)—Levy, first; R. Short, second; Mendes, third. Time, 6 2-5 seconds.

100-yard dash—Harragin, first; Culbertson, second; Hertz, third. Time, 11 seconds.

Sack race—Bartlett, first; Simka, second; Humphreys, third.

440-yard dash—Weller, first; W. O. Sihert, second; Davis, third. Time, 55 1-5 seconds.

Potato race—Simka, first; Jost, second. Time, 1:49:02.

Boys' relay race—Gatun, first; P. R. R. second; Jennings, Y. M. C. A., Cristobal, third.

Relay race—Gatun, first; P. R. R. second. Time, 4:05.

12-pound shot put—Weller, first, 38.40 feet; Hertz second, 31.20 feet; Ruckert, third, 30.95 feet.

Running high jump, Fletcher, first, 5 feet; Hertz, second, 4 1/2 feet; Jost, third, 4 1/4 feet.

Running broad jump—Bailey, first, 18 40-100 feet, Bartlett, second, 17 65-100 feet; Harragin, third, 16 80-100 feet.

Running hop, step and jump—Fletcher, first, 37 feet; Bailey, second, 36 85-100 feet; Corathwaite, third, 35 95-100 feet.

A tie was declared as to points between the Panama Railroad and Gatun track teams, which will be run off on July 24.

Volunteer fire companies' hose race—Gatun, first, 44 seconds; Balboa, second, 44 4-5 seconds; Gorgona, third, 45 1-5 seconds; Pedro Miguel, fourth, 1:17. The time of the Las Cascadas company was 44 seconds, but the team was disqualified on account of outside interference. This decision has been protested by the Las Cascadas company. Requirements in this race were to run 150 yards, lay 150 feet of hose from hydrant, break connection at third section and turn on the water.

Run to Pomper life saving tower on Cristobal Point; time 47 seconds.

AQUATIC EVENTS

Sail boat race—Two starters. Won by Carl Friedenberg from the dredge *Caribbean*.

U. S. Navy steam cutter race, 5-mile course—Won by the *Ruth*, John Elsey, coxswain.

Life boat race—Five starters. Won by crew from the tug *Bohio*, captained by C. Gustafson.

Class 2, tug boat race between *Balboa* and *Grace*—Won by the *Balboa*.

Dory race—Three starters. Won by crew from the *Bohio*, captained by C. Gustafson.

Class 1 gasoline boat race, 5 miles—Three starters. Won by Capt. John Constantine's boat.

Clapet race, 5 miles, between clapets Nos. 2, 3, 12 and 14—No. 3, first; No. 12, second; No. 2, third. Neck and neck race.

Life raft race—Two starters. Won by crew from S. S. *Panama*.

Class 2 gasoline boat race—Four starters. Won by W. S. Perry's launch *Genevieve*.

Swimming race, 100 yards or over—Twelve starters. Won by Mr. Woodward, Gatun.

Rowboat race—Won by Gustaf Carlson from the tug *Mariner*.

Greased spar contest—Won by Gustaf Carlson from the tug *Mariner*.

Tug boat tug-of-war—Between tugs *M. E. Scully* and *Cristobal*. Won by the *Scully*.

Illuminated boat parade, participated in by the tugs *Gatun*, *M. E. Scully*, *Bohio*, *Cristobal*, *Mariner*, *Balboa*, Clapet No. 4, the navy cutters *Ruth* and *Mary S.*, launch *Genevieve*, and the clown boat *Dreadnought*. Prize for the best decorated boat won by W. S. Perry's *Genevieve*.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending July 21, 1909 (75th meridian time):

DATE.	High.		Low.		High.
	A. M.	A. M.	P. M.	P. M.	P. M.
July 15.....	1.52	7.59	2.08	8.28	.....
July 16.....	2.47	8.55	3.01	9.19	.....
July 17.....	3.38	9.45	3.51	10.08	.....
July 18.....	4.23	10.31	4.35	10.51	.....
July 19.....	5.04	11.16	5.18	11.34	.....
July 20.....	5.44	11.58	5.58	.....	.....
July 21.....	.....	12.14	6.23	12.38	6.37

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, July 10, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gamboua.	Bohio.	Gatun (Canal.)	Gatun (W. D.)
Height of low water above mean sea-level, ft.	125	92	46	1	0	0

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### New Passenger Station at Colon.

The new passenger station of the Panama Railroad Company at Colon will be used for the first time on the morning of July 23, when train No. 3, which leaves Colon at 5.30 a. m., will depart from the new station. The old stations at Colon and Cristobal will be abandoned, as all trains will use the new station beginning with July 23.

#### Municipal Pumping Plant at Gatun.

Authority has been granted for the purchase of a pumping plant to lift water from the reservoir in process of construction near Gatun, to the large tank on the hill in that village. The plant will consist of two three stage centrifugal pumps direct connected to a three phase 440-volt induction motor. Each pump will have a capacity of 1,400 gallons a minute with a suction lift of 12 feet, and will deliver against a head of 300 feet. The distance from the pumps to the water tank at Gatun will be about 6,800 feet, and delivery will be made through a 12-inch main. There will be two suction connections, one with the filtered water sump, and one direct with the reservoir. It is desired to have the pumps operated automatically by a float valve in the tank. A five ton hand-operated crane will be installed at the station to assist in making repairs.

#### Dockage for the Cement Ships.

Dredging in the approach channel to Dock 11 at Cristobal is practically completed to a depth of 33 feet and a width of 250 feet. This channel runs from the channel of the Canal in Limon Bay, to the end of Dock 11, near Cristobal Point, a distance of about 4,000 feet, and the work was done by the sea-going suction dredge *Caribbean*. The dipper dredge *Mindi* is continuing its work in front of Dock 11, deepening and making broader the channel at this point in order that the cement ships *Cristobal* and *Ancon* may turn in leaving the dock. A pile driver is at work placing the piles for the extension of the dock

toward Cristobal Point, and it is believed the addition will be completed in August. By that time the dredging will also be finished, and the cement ships, for which the work is being done, will be able to unload at Dock 11.

#### Dredge for Gatun Locks Sand Service.

The double clam-shell dredge, which will be used for excavating and loading sand at Nombre de Dios, has been completed by the Cristobal marine shops and turned over to the sand service. A test will be made and then the dredge will be towed to Nombre de Dios, relieving the dipper dredge *Chagres* which is at work on the sand deposits at that place. The new dredge is typical of a class of the Canal equipment, combining as it does material left here by the French, and new apparatus brought from the States. The hull is that of an old French dredge which was sluiced out of its berth in the mud on the banks of the Chagres River, near Frijoles, during the rainy season of 1908 and towed down to Cristobal. There its machinery was taken out and such repairs as were necessary to put it in serviceable condition were made. A boom was erected on each end, and from each of these booms a modern clam-shell bucket of three yards capacity has been hung. New boilers were put in, and two simple double cylinder engines, 11 by 15 inches, were installed, one for each bucket. The hull is fitted with spuds, and will be towed from place to place as required.

#### Rebuilding the *De Lesseps*.

*De Lesseps* is the name of a launch, or tug boat, that has lain unused in the marine graveyard in Folks River at Cristobal since the time when the French gave up the work at the Atlantic entrance of the Canal. A few weeks ago it was hauled out and towed to Cristobal marine shops, and now lies in the dry dock. The vessel is 75 feet long, 15 feet wide, and 9 feet deep. It was made by Lobnitz & Company of Scotland in 1884. Whether it came to the Isthmus under its own steam, or knocked down, is not known. Some of the plates on the hull were so badly rusted that new plates must be put on, but the frame is in good condition. The boiler will be taken out, and a renewed old French boiler will be installed to furnish steam for the engine which is in good condition. When rebuilt the *De Lesseps* will be used in shifting scows and boats, towing barges, changing crews for the dredges and clappers, and doing other general work for the Atlantic Division, in Limon Bay.

#### Lumber for Canal Work.

The Quartermaster's Department has on order about 18,000,000 feet of lumber for delivery on the Isthmus. This includes the present fiscal year estimate of 6,500,000 feet for the Mechanical Division, and 5,000,000 feet for the use of the Atlantic and Pacific

Divisions. Bids on the Mechanical Division's requisitions were opened at Washington on July 12 and 19, the specifications calling for Douglas fir and yellow pine lumber, which will be used largely in repairs to cars. The greater part of the order for the Atlantic and Pacific Divisions has already been placed.

#### June Money Order Business.

During the month of June, 1909, the sixteen post-offices in the Canal Zone where a money order business is done, sold 15,696 money orders, aggregating \$428,516.90. This is an increase in the number of orders over May of 929, and in value of \$11,763.14. Of the June business, \$316,004.44 represented orders drawn payable in the United States and elsewhere, and \$112,512.46 in orders drawn payable in the Canal Zone. The fees collected amounted to \$1,827.74. The orders paid and repaid amounted to \$149,921.40, which includes \$855 representing invalidated money orders paid by the Treasurer.

In the number of orders drawn, Cristobal was first with 3,101; Empire second with 1,730, and Ancon third with 1,661. In the total value of orders, Cristobal was first with \$88,061.53; Empire second with \$42,728.18, and Gorgona third with \$42,428.01. Of the amount payable in the United States and elsewhere, Cristobal was first with \$73,259; Empire second with \$34,548.92, and Gorgona third with \$30,488.95. In orders payable in the Canal Zone, Cristobal was first with \$14,802.53; Gorgona second with \$11,939.06, and Gatun third with \$9,903.32. Of the amount paid and repaid, Cristobal was first with \$28,335.34; Empire second with \$14,439.16, and Gorgona third with \$14,423.77.

The average of all the orders issued was \$27.30. The highest average was at San Pablo where 531 orders, amounting to \$18,034.19, were issued, an average of \$33.96; the lowest was at Matachin where 232 orders amounted to \$4,634.57, an average of \$19.98.

#### Eight New Cranes.

Two 20-ton cranes have recently arrived on the Isthmus, and six more are on order and will shortly be delivered. The two already here are being erected. One will be used by the Atlantic Division, and the other by the Mechanical Division at Empire in the work of preparing old French rails for reinforcing the concrete in the locks. Two of the cranes on order are for the use of the Central Division. They will have a 30-foot boom and will be equipped with orange peel buckets. Two cranes with 40-foot booms and equipped with orange peel buckets will be used by the Pacific Division. Two cranes with 30-foot booms and without buckets will be assigned, one to the Atlantic Division, and one to the Mechanical Division, to be used in place of broken and damaged cranes and for emergency work.

## DREDGING IN JUNE.

## Increased Output Over May—Details of the Work.

The combined output of the dredges of the Atlantic and Pacific Divisions for June amounted to 1,755,178 cubic yards, as compared with 1,535,846 cubic yards for May, an increase of 219,332 cubic yards. Of the June excavation, 1,085,176 cubic yards were taken from the Canal prism, and 670,002 cubic yards from outside works. In the Atlantic Division, 221,404 cubic yards belonged to Canal excavation, and 654,272 cubic yards to outside works. In the Pacific Division, 863,772 cubic yards were removed from the prism, and 15,730 from outside. Both divisions show an increase over May, the Atlantic Division by 78,265 cubic yards, and the Pacific Division, by 141,067 cubic yards.

The suction dredge *Caribbean*, and the dipper dredge *Mindi*, were wholly engaged on work outside the prism during June. The *Caribbean* removed 9,700 cubic yards of earth at Pier 1, Colon; 248,151 cubic yards of earth from the approach channel to Cristobal harbor, and 120,162 cubic yards of earth from in front of Cristobal docks, a total of 378,013 cubic yards. This exceeds the best previous record of the *Caribbean*, made in May, 1909, by 3,953 cubic yards. The *Mindi* removed 3,150 cubic yards of earth at Pier 1, Colon; 7,525 cubic yards of earth and 21,125 cubic yards of rock from the approach channel; 8,050 cubic yards of earth from in front of Pier 11, and 7,394 cubic yards of earth in front of Pier 13, Cristobal.

The other dredges at work in the harbor and channel section, removed from the prism, 153,886 cubic yards of earth and 28,689 cubic yards of rock.

Dredge No. 82 excavated 91,930 cubic yards from the borrow pit east of the Chagres River, and dredge No. 83 removed 106,360 cubic yards from the borrow pit west of the river, both dredges working the entire month pumping into Gatun Dam. Dredge No. 85 continued excavating in the lower chamber of the locks until June 19, removing 38,829 cubic yards. It was then transferred and began excavating the shoal in the Chagres River, and French canal channel, in front of the spillway dock, taking out 30,725 cubic yards to the end of the month.

Boats in dry dock during the month were: Tug *Phenix* on June 2; dredge No. 1, June 14 and 20; tug *Galun*, on June 20 and 21; dredge No. 3, on June 21; *Grace*, on June 21 and 25; claret No. 12, on June 21 and 25; U. S. barge No. 6, on June 26 and 30; claret No. 14, on June 26, and dredge No. 1, on June 30.

The detailed statement of operations in the Atlantic Division follows:

DREDGE.	Type.	Cu. yds.
<i>Caribbean</i> .....	Suction.....	378,013
No. 1.....	Ladder.....	68,376
No. 5.....	Ladder.....	98,249
No. 6.....	Ladder.....	15,950
<i>Mindi</i> .....	Dipper.....	47,244
No. 82.....	Suction.....	91,930
No. 83.....	Suction.....	106,360
No. 85.....	Suction.....	69,554
Total.....		875,676

In the Pacific Division the dredge *Gopher* was engaged in the new channel for the entire month, making a cut along the east bank toward the intersection of the French and American channels. This cut will be

continued until the rock point at the intersection of the channels is reached. The *Mole* worked in the upper French canal to June 6, when it was moved out in the bay. It remained at this place until June 30, when it was moved to a point opposite the Panama railroad wharf, to clean off a rock area. The *Marmot* was at work in the upper French canal, at a point about 900 feet above the intersection of the Rio Grande with the Canal, up to June 6, when it was moved to the position vacated by the *Mole*, continuing there for the remainder of the month. The dipper dredge *Cardenas*, was engaged the entire month, with the exception of two days, on the east bank of the Canal at a point a short distance below the intersection of the Rio Grande with the French canal. The total excavation of the *Badger* was confined to the south end of the new sand and storage wharf, and in front of the slipways. This dredging was done with a view of making the wharf available at all stages of the tide. Heretofore, owing to the presence of a sloping mud bank, it has been impossible to dock vessels at this point except at high tide. The orange peel dredge worked the entire month in the Cardenas diversion channel. The suction dredge *Culebra* spent all its time in deepening the channel from the intersection of the Rio Grande and the French canal, to a point a short distance below the end of the Panama railroad dock. The *Sandpiper* was kept at work nearly the whole month excavating in the lower lock chamber at Miraflores. The dredge began pumping into the dam about the middle of the month, the amount of hydraulic fill being 17,668 cubic yards. The detailed dredging statement follows:

DREDGE.	Type.	Cu. yds.
<i>Marmot</i> .....	Ladder.....	127,744
<i>Gopher</i> .....	Ladder.....	161,395
<i>Badger</i> .....	Ladder.....	5,610
<i>Mole</i> .....	Ladder.....	118,350
<i>Cardenas</i> .....	Dipper.....	101,802
Orange Peel.....	O. P.....	10,120
<i>Culebra</i> .....	Suction.....	329,784
<i>Sandpiper</i> .....	Suction.....	24,697
Total.....		879,502

## Thanks to Volunteers on Wrecking Car.

PANAMA RAILROAD COMPANY,  
Colon, R. P., July 13, 1909.

COL. GEO. W. GOETHALS,  
Chairman and Chief Engineer, Culebra, C. Z.

Dear Sir—On last Sunday there were a number of volunteers who manned the wrecking car at Pedro Miguel to come out to Diablo Curve, rendering very valuable assistance until the regular wrecking crew from Empire reached the ground.

On behalf of the Panama railroad, I should like to recognize this action and extend the thanks of the Company for this voluntary and valuable assistance. Yours truly,

HIRAM J. SLIFER, General Manager.

## June Record of Track Shifters.

The six track shifting machines in the Central Division moved a total of 625,663 feet, or 118.5 miles of track during June. At Tabernilla track shifter No. 5 moved 245,000 feet, or 46.4 miles; at San Pablo and Caimeto shifter No. 6 moved 113,824 feet, or 21.6 miles; at Gorgona and Santa Cruz relocation No. 7 moved 56,856 feet, or 10.8 miles; at Santa Cruz No. 1 moved 11,088 feet, or 2.1 miles; at Miraflores No. 8 moved 77,288 feet, or 14.6 miles; at Balboa No. 2 moved 121,607 feet, or 23 miles.

## CENTRAL DIVISION.

## Steam Shovel Records for June.

During the month of June, the total amount of material excavated in the Central Division was 1,520,975 cubic yards, of which 403,623 cubic yards were classified as earth and 1,117,352 cubic yards as rock. Of this quantity, 1,475,428 cubic yards were removed by steam shovels, 25,651 cubic yards by hand, and 19,896 cubic yards by sluicing action of the Chagres River. The quantity of material removed from the Canal prism was 1,516,683 cubic yards, while 1,351 cubic yards were removed from the Obispo Diversion, 2,174 cubic yards from inclines at Point No. 3, Santa Cruz, and 767 cubic yards from the engine house site at Gamboa. The total excavation for the same month in 1908 was 1,456,177 cubic yards, showing a gain of 64,798 cubic yards for June of the present year.

For comparison with high monthly records, the following table is given:

DATE.	Prism.	Prism and outside.
March, 1908.....	1,540,497	1,615,118
October, 1908.....	1,551,409	1,598,981
February, 1909.....	1,516,008	1,644,636
March, 1909.....	1,966,294	2,065,827
April, 1909.....	1,722,442	1,798,454

The high record for the month was made by shovel No. 204, working in the Culebra District, which excavated 49,767 cubic yards of earth in 25 working days. The best record for a shovel in the 70-ton class was made by shovel No. 132, working in the Tabernilla District, which excavated 30,021 cubic yards of earth in 25 working days. Shovel No. 223, in the Culebra District, made the high record for one day by excavating 3,268 cubic yards of rock on June 24. Shovel No. 132, working in the Tabernilla District, excavated 2,060 cubic yards on June 26, this being the high record for one day by a 70-ton shovel during the month.

Monthly records are computed by place measurement, while the daily records are based on car measurement. The best records for the month and for one day in each district are shown below:

TABERNILLA DISTRICT.				
Shovel No.	CUBIC YARDS.			No. of days at work.
	Earth.	Rock.	Total.	
254.....	32,271	5,253	37,524	25
132.....	30,021	.....	30,021	25
BAS OBISPO DISTRICT.				
263.....	.....	31,369	31,369	26
210.....	7,817	23,449	31,266	26
EMPIRE DISTRICT.				
207.....	220	46,013	46,233	26
265.....	15,092	28,028	43,120	26
CULEBRA DISTRICT.				
204.....	.....	49,767	49,767	25
266.....	.....	47,788	47,788	26

BEST RECORD FOR ONE DAY.				
Shovel No.	Location.	Date.	Character of material excavated.	Cubic yds. excavated.
254	Tabernilla.....	June 3.	Rock and earth	2,640
254	Tabernilla.....	June 2.	Rock and earth	2,460
201	Bas Obispo.....	June 17.	Rock.....	2,375
210	Bas Obispo.....	June 28.	Earth.....	2,204
207	Empire.....	June 16.	Earth.....	2,811
220	Empire.....	June 16.	Earth.....	2,569
223	Culebra.....	June 24.	Rock.....	3,268
203	Culebra.....	June 30.	Rock.....	2,888

Shovel No. 254 made the four highest daily excavations in the Tabernilla District during the month.

## SOCIAL LIFE OF THE ZONE.

### Meetings Past and to Come—The Methodist Missionary Society.

Maintaining a little Spanish girl in the Methodist College at Panama is one of the tangible results of the quarterly tea meetings held by the Panama Branch of the Woman's Foreign Missionary Society of the Methodist Episcopal Church. The purpose of these meetings is to raise funds for the work of the society, but they are also a delightful social diversion for the members and their friends. They are held in the parsonage in Panama on the evenings of days announced in advance. The business meetings are held each month, and the next one is set for August 3 in the parsonage. At the business meetings a prepared program is rendered and informal discussions are held. All members are urged to attend the next meeting. Auxiliaries of the society have been organized in Gorgona and Pedro Miguel.

According to arrangements made four months ago, the chapel services at Gorgona are held in the Commission clubhouse on the fourth Sunday evening in the month under the direction of the Y. M. C. A. secretary. Special speakers are invited to make the addresses at these meetings, and the attendance has been good.

The next meeting of the directors of the Canal Zone Humane Society will be held at the residence of Archdeacon Bryan at Ancon on Sunday, August 3. It is expected that the number of directors will be increased at this meeting. The Society is effectively active both in Colon and Panama.

A camera club, similar to that in Cristobal, is active in connection with the Culebra clubhouse. While there is no formal organization, the members work together. The clubhouse contains a dark room and equipment for developing and printing.

On June 27, the Gorgona Sunday School elected Mr. McConaughy superintendent, and George H. Wright, assistant superintendent.

The Pedro Miguel Woman's Club held a social meeting at the home of Mrs. Mark White on the afternoon of July 14. The club has arranged for a course of study in the history of Panama. Mrs. H. E. Weber has resigned as secretary on account of her departure for the States.

Mrs. Abbie B. Hillerman, organizer of the Canal Zone Branch of the Woman's Christian Temperance Union, left for her home in the States on July 20.

### Ancon Hall Remodeled.

The upper story of the building in Ancon occupied as a quartermaster's storehouse has been remodeled for the use of fraternal and other organizations. The formal opening will take place Saturday evening July 24, when an entertainment will be given by the College Trio, a lyceum company now touring the Commission clubhouses. The accommodations provided consist of a meeting hall, two committee rooms, and toilet rooms. The meeting hall is 100 feet long and 50 feet wide. At one end a stage 50 feet long and 15 feet deep has been erected, and will be equipped with footlights and curtains. Applications for the privilege of holding meetings in the new hall should be made to the District Quartermaster at An-

con. The Ancon Woman's Club, which now occupies quarters over the office of the District Quartermaster, will hold its meetings in the new hall, when it resumes its work in October. The hall has been assigned to the Knights of Pythias for Tuesday evening, Kangaroos, Friday, and the Masonic Club, Saturday evening of each week.

### Notice to Red Cross Members.

Members of the Canal Zone Branch of the American National Red Cross transferring from one district to another, are requested to notify the chairman of the district from which they are moving, giving the name of the station in which they will be located, and also to notify the chairman of the district to which they move. A complete list of the local officials was published in THE CANAL RECORD, on May 19, 1909.

### Fourth of July Celebration.

In the report of the results of the Fourth of July celebration at Ancon, published in THE CANAL RECORD of July 14, the result of the 440-yard run, the relay race and the tennis tournament were omitted. They were as follows:

440-yard run—D. T. Edwards, Ancon, first; H. E. Ham, Culebra, second; Fred A. Feld, Ancon, third.

Relay race—Two teams from Ancon entered. Ancon, first; Culebra, second; Ancon third.

Revised standing of towns according to points is as follows: Ancon, first, five times; third, four times; points 29. Culebra, second, seven times, third twice; points 23. Gorgona, first, twice; points 10.

In the tennis tournament held on the courts of the Panama Tennis club, the final matches in singles and doubles resulted as follows:

Singles—Brewster, Empire, beat Lindo, Panama, 6-1, 6-0.

Doubles—Lister and Ross, Ancon, beat Melhado and Matta, Panama, 11-9, 3-6, 6-4.

### Negro Mission in Guachapali.

A church for negroes, erected in the Guachapali district of the city of Panama by the National Baptist Missionary Society, was formally opened on the afternoon of July 16. Hon. Herbert G. Squiers, American Minister to Panama, turned the key and opened the door, after which a short dedication service was held. In the evening at a public meeting, addresses were delivered by Chief Justice H. A. Gudger, Judge Wesley M. Owen, and others. The corner stone of the building was laid some months ago by General Manager H. J. Slifer of the Panama railroad. The building is on land leased from the railroad company at a nominal rent. It is 60 feet long, 50 feet wide, and has a seating capacity of 450. An immersion font, and an organ recently donated to the mission, are part of the furnishings of the church. A mission house is in process of construction and a school house is projected. The mission was opened eighteen months ago and has a membership of about two hundred.

### Park Benches on Cristobal Water Front.

Twenty-five park benches have been brought from the States and will be placed along the water front in Cristobal, around the Columbus statue and in front of the De Lesseps house.

## PERSONAL.

Among the passengers on the *Colon*, which arrived at Cristobal on July 18, were Col. William C. Gorgas, Chief Sanitary Officer, and Mrs. Gorgas; and Mr. W. W. Warwick, Examiner of Accounts, and Mrs. Warwick.

Mr. J. A. Smith, Superintendent of the Panama Railroad, accompanied by his family, and Dr. F. M. Shook of Colon Hospital, were passengers on the *Cristobal* which sailed from Colon on July 15.

Mr. Frank Gause has been appointed Superintendent of Schools of the Canal Zone to succeed Mr. H. L. Smith, who has resigned. Mr. Gause graduated from the Indiana University in 1904, and has done graduate work at the Chicago University. He holds the degrees of A. B., and A. M., was superintendent of schools at Cicero, Indiana, for 7 years, and held the same position at Salem, Indiana, for 3 years. He is 34 years old, and married.

### Resolution of Thanks.

In view of the unprecedented enthusiasm which attended the celebration of the Fourth of July, 1909, at Cristobal, through the untiring efforts and active cooperation of the various divisions and participants, it is deemed appropriate that a resolution of appreciation be extended to all who contributed to the success of the occasion; therefore, be it

*Resolved*, That the thanks of the Cristobal celebration committee, and through them, the thanks of the residents of all participating towns be and are hereby extended to the Atlantic Division for its magnificent aquatic display; to the Engineering and Electrical Departments of the Panama railroad for very efficient assistance and interest; to the Fire Department for its instructive exhibitions, and to the Police Department and the Railroad Transportation Branch for official service which gave all an enjoyable day not marred by accident.

The results bespoke the ability and zeal of all concerned.

COMMITTEE, CRISTOBAL 4TH OF JULY CELEBRATION.  
Cristobal, C. Z., July 5, 1909.

### Odd Fellows.

Cristobal lodge No. 2, I. O. O. F., installed its officers on the night of July 19, at the lodge hall in Cristobal. The lodge gave a dance on the night of July 3 in the Commission clubhouse at Cristobal. The hall was decorated with palms and bunting, and music was furnished by the I. C. C. orchestra. In addition to residents of Cristobal and Colon, there were a number of guests from points along the line of the Canal.

### Rivalry Between Fire Departments.

In the firemen's tournament, held at Cristobal, on July 5, the Gatun company won the hose race over competing teams, going through the maneuvers in 44 seconds. The volunteer company at Tabernilla has now issued a challenge to the Gatun team for a contest to be held shortly, which has been accepted.

### Concert by I. C. C. Band.

BAS OBISPO, C. Z.,

Sunday, July 25, 1909, at 2:30 p. m.

#### PROGRAM.

- 1 March—*On Guard*..... Reeves
- 2 Selection—*Marcelle*..... Luders
- 3 Waltz—*Die Grafenberger*..... Gungl
- 4 { a Characteristic—*Dixie Twilight*..... Johnson
- b Indian Descriptive—*Trading the Trail*..... Spaulding
- 5 Popular Medley of Late Songs..... La Farge
- 6 Chilian Dance—*Manana*..... Missud
- 7 { a Persian Lamb Rag..... Weurich
- b Popular March—*La, La, La*..... Scott
- 8 Overture—*Lustspiel*..... Kelar Bela
- 9 Dance of the Nile Maidens..... Losey
- 10 March—*Festal Day*..... Roux

OLIVER KIMBALL, Assistant Director.

A concert will be given at Hotel Tivoli, August 1

## OFFICIAL CIRCULARS.

## Classified Expenditures and Manufacturing Accounts.

Circular No. 14 as revised to date is appended herewith:

EMPIRE, C. Z., July 6, 1909.

Circular No. 14:

The following revision of the Classified Expenditures and Manufacturing Accounts, of the Isthmian Canal Commission, is effective from July 1, 1909.

T. L. CLEAR,

*Acting Examiner of Accounts.*

Approved:

GEO. W. GOETHALS,

*Chairman and Chief Engineer.*

## General Account No. 1—Classified Expenditures.

This account will be charged for all expenditures located to any unit of the work and under the proper classified heading, and credited all collections made.

This account will be divided into the following sub-accounts:

## DEPARTMENT OF CIVIL ADMINISTRATION.

## 101. Administration.

To this account will be charged the salaries and allowances of the member of the Commission in charge of the Government of the Canal Zone, the salaries and wages of the Executive Secretary, their clerks and attendants, their traveling expenses, the cost of furniture and fixtures, stationery, printing and other office supplies, cost of lighting and care of offices, law books and other incidental expenses connected with the office.

## 102. Supreme and Circuit Courts.

To this account will be charged the salaries and allowances of the Chief Justice of the Supreme Court, Judges of the Circuit Courts, their assistants, clerks and attendants, bailiffs and other court officers, their traveling expenses, fees and salaries paid witnesses and jurors, the cost of court furniture and fixtures, law books, stationery, printing and supplies, cost of lighting and care of court rooms and other rooms and buildings occupied by court officials.

## 103. Prosecuting Attorney.

To this account will be charged the salaries and allowances of the prosecuting attorney, his assistants, clerks and attendants, their traveling expenses, cost of furniture and fixtures, stationery, printing and other office supplies, cost of lighting and care of offices, law books and other library expenses connected with the office.

## 104. Division of Revenues.

To this account will be charged a proportion of the salary of the Collector of Revenues and Director of Posts, the salaries of Deputy Collectors of Revenue, their clerks, collectors and attendants, their traveling expenses, the cost of office furniture and fixtures and stationery and printing, cost of lighting and care of offices.

## 105. Division of Posts.

To this account will be charged a proportion of the salary of the Collector of Revenues and Director of Posts, his clerks and attendants, the salaries of postmasters and their clerks, railway postal clerks, and other employees and attendants of the postal service, and any other expense not payable from the funds of the Government of the Canal Zone. This account will be credited with balances turned over to the Commission by the Government of the Canal Zone.

## 106. Division of Customs.

To this account will be charged a proportion of the salaries of the Collector of Revenues and Director of Posts, his clerks and attendants, and the salaries of all persons engaged in the customs service, their traveling expenses, the cost of furniture, fixtures, office supplies, stationery and printing, the cost of lighting and care of offices.

## 107. Division of Lands and Buildings.

To this account will be charged a proportion of the salaries of the Collector of Revenues and Director of Posts, his clerks and attendants, their traveling expenses, of the cost of furniture, fixtures, office supplies, stationery and printing, and other incidental expenses, the salaries and expenses of collectors engaged in the collection of rents, but does not include the salaries of collectors engaged in the collection of rent of property belonging to municipalities, which are payable from Canal Zone funds.

## 108. Division of Estates.

To this account will be charged a proportion of the salaries and wages of the Collector of Revenues and Director of Posts, of his clerks and attendants, of their traveling expenses, cost of furniture and fixtures, office supplies and stationery and printing.

## 109. Police and Prisons.

To this account will be charged the pay and al-

lowances of the Chief of Police, his lieutenants, sergeants, detectives, policemen, clerks and attendants, either at the headquarters or at stations in the Zone, of Wardens, guards and other employees in and about penal institutions, their traveling expenses, transportation and subsistence of prisoners awaiting trial and in penal institutions, all furniture, fixtures and supplies, including equipment, uniforms, sidlearms, handcuffs, proportion of expenses of corns, care of offices and buildings.

## 110. Fire Protection.

To this account will be charged the salaries and expenses of the Fire Chief and his personnel, allowances to volunteer firemen, the cost of fire apparatus, such as fire engines, horses, hook and ladder trucks, hose, hose carts, fire extinguishers, hand grenades, and all other equipment used as protection from fire.

## 111. Maintenance and Operation Water Works and Sewers.—Panama.

To this account will be charged a proportion of salaries of the Superintendent of Public Works, of his clerks and attendants, of their traveling expenses, of his office furniture, fixtures and supplies, including stationery and printing, and of other incidental expenses and expenditures for labor and material used in the maintenance and operation of the water works and sewers within the limits of the city of Panama.

## 112. Maintenance and Operation Water Works and Sewers.—Colon.

To this account will be charged a proportion of the salaries of the Superintendent of Public Works, his clerks and attendants, their traveling expenses, office furniture, fixtures and supplies, including stationery and printing, and of other incidental expenses, and all expenditures for labor and material used in the maintenance and operation of water works and sewers within the limits of the city of Colon.

## 113. Repairs and Maintenance of Pavements.—Panama.

To this account will be charged a proportion of the salaries of the Superintendent of Public Works, of his clerks and attendants, of their traveling expenses, of his office furniture, fixtures and supplies, including stationery and printing, and other incidental expenses, and all expenditures for labor and material used in the maintenance and repair of the pavements within the limits of the city of Panama.

## 114. Repairs and Maintenance of Pavements.—Colon.

To this account will be charged a proportion of the salaries of the Superintendent of Public Works, his clerks and attendants, their traveling expenses, office furniture, fixtures and supplies, including stationery and printing, and other incidental expenses, and all expenditures for labor and material used in the maintenance and repair of the pavements within the limits of the city of Colon.

## 115. Miscellaneous Zone Public Works.

To this account will be charged all expenditures payable by the Commission for labor and material used in the operation of miscellaneous Zone public works, such as slaughter houses, markets, lights, etc. This account will not be charged with expenditures in connection with Zone water works and sewers, or Zone roadways.

## 116. Treasurer of the Canal Zone.

To this account will be charged the expenses of the office of the Treasurer of the Canal Zone, including the salaries and wages of the Treasurer, Assistant Treasurer, clerks and attendants, their traveling expenses, office supplies, furniture and fixtures, stationery and printing, and lights and care of offices.

## 117. Construction of Buildings.

To this account will be charged the salaries and wages and traveling expenses of mechanics, laborers and other employees engaged in, and the value of material and supplies used in the construction of buildings for the Department of Civil Administration.

## 118. Repairs to Buildings.

To this account will be charged the salaries and wages and traveling expenses of mechanics, laborers and other employees engaged in, and the value of material and supplies used in repairs of buildings for the Department of Civil Administration.

## DEPARTMENT OF SANITATION.

## 201. Administration.

To this account will be charged the salaries and allowances of the member of the Commission in charge of the Department of Sanitation, and of his assistants, their clerks and attendants, and all employees whose salaries and wages are not directly chargeable to other accounts, their traveling expenses, office furniture, fixtures and supplies, including stationery and printing, lighting and care of offices, the expense of the hospital launch and

of hospital cars and other incidental expenses connected with the office.

## 202. Hospitals and Asylums.

## A. Medical Storehouse, Colon.

To this account will be charged the salaries and allowances of the storekeeper of the medical storehouse at Colon, his clerks and attendants, the material and supplies used in its operation, stationery, office furniture and fixtures.

## B. Ancon Hospital.

To this account will be charged the salaries and wages of the Superintendent, clerks, chaplains, physicians and pharmacists, all employees of the laboratory, nurses, maids, messengers and other employees in and about the hospital, their traveling expenses, expenses of carts owned or hired, ambulances, carriages and other vehicles necessary to the conduct of the hospital, cost of embalming fluid and of burying the dead and expenses of conducting the laundry, the cost of office furniture and fixtures, equipment, such as beds and bedding, mattresses, springs, cots, tables, chairs, surgical, laboratory and other scientific instruments, drugs and medicines, soap, fuel and disinfectants, medical books, the subsistence of employees and patients, the cost of lighting, care of Ancon cemetery, and of constructing roads and water and sewer systems, etc., within the hospital grounds, when such expenses are paid from appropriations for the Sanitary Department.

## C. Colon Hospital.

To this account will be charged the salaries and wages of the Superintendent, clerks, chaplains, physicians, pharmacists, nurses, maids, messengers and other employees in and about the hospital, their traveling expenses, expenses of carts owned or hired, ambulances, carriages and other vehicles necessary to the conduct of the hospital, cost of embalming fluid and of burying the dead, cost of laundry work, the cost of office furniture and fixtures, equipment such as beds and bedding, mattresses, springs, cots, tables, chairs, surgical and other scientific instruments, drugs and medicines, soap, fuel and disinfectants, medical books, the subsistence of employees and patients and the cost of lighting, and of constructing roads, and water and sewer systems, etc., within the hospital grounds, when such expenses are paid from appropriations for the Sanitary Department.

## D. Taboga and Sanitarium.

To this account will be charged the salaries and wages of the Superintendent, clerks, physicians, nurses, messengers, attendants and other persons employed in and about the Sanitarium, the cost of subsistence, medical and other supplies, furniture and fixtures.

## E. Santo Tomas Hospital.

To this account will be charged the salary of the Superintendent, physicians and nurses, and such other expenses as are payable from the funds of the Commission, as per agreement with the Republic of Panama.

## F. Other Hospitals, Dispensaries and Sick Camps.

To this account will be charged the salary and wages of the Superintendent, clerks, chaplains, physicians, pharmacists, nurses, messengers and other employees in and about the hospitals, their traveling expenses, expenses of carts owned or hired, ambulances, carriages and other vehicles necessary to the conduct of the hospitals, cost of laundry work, the cost of office furniture and fixtures, equipment such as beds and bedding, mattresses, springs, cots, tables, chairs, surgical and other scientific instruments, drugs and medicines, soap, fuel and disinfectants, and the cost of lighting.

## 203. Quarantine.

To this account will be charged the salaries and allowances of the Chief Quarantine Officer and his assistants, clerks and attendants, of the officers in charge of Quarantine stations (including Boas del Toro), their assistants, clerks and attendants, including the personnel of the quarantine stations, their traveling expenses, the salaries and allowances of the crews of launches and other craft in the quarantine service, the cost of office furniture and fixtures, office supplies, stationery and printing, instruments, drugs, medicines, etc., and the cost of lighting and care of offices and buildings, and of animal transportation used in this service.

## 204. Sanitation—Panama and Colon.

## A. Sanitation Proper, Panama.

To this account will be charged the salaries and expenses of the Health Officer at Panama, his assistants, clerks and attendants, and his office expenses, the salaries and expenses of officers and employees engaged in the work of preventing and eradicating contagious diseases, of disinfecting and fumigating, and all work pertaining to mosquito

extermination, and the cost of material and supplies used in such work.

**B. Disposal of Garbage, Street Cleaning, Etc., Panama.**

This account will be charged with the amount paid by the Department of Sanitation to the Republic of Panama for street cleaning and garbage removal in the city of Panama.

**C. Sanitation Proper, Colon.**

To this account will be charged a proportion of the salaries and expenses of the Health Officer at Colon, his assistants, clerks and attendants, and of his office expenses, the salaries and expenses of officers and employees engaged in the work of preventing and eradicating contagious diseases, of disinfecting and fumigating, and all work pertaining to mosquito extermination, the care of Mount Hope Cemetery, and the cost of material and supplies used in such work.

**D. Disposal of Garbage, Street Cleaning, Etc., Colon.**

To this account will be charged a proportion of the salaries and expenses of the Health Officer at Colon, his assistants, clerks and attendants, and of the office expenses, the salaries and wages of foremen and laborers engaged in street cleaning and removing garbage and other refuse, the cost of animal transportation, cart hire and material and supplies.

**205. Zone Sanitation.**

**A. Sanitation Proper.**

To this account will be charged a proportion of the salary of the Chief Sanitary Inspector, his assistants, inspectors, clerks and attendants, and of his office expenses, the salaries and expenses of officers and employees engaged in the work of preventing and eradicating contagious diseases, of disinfecting and fumigating, and all work pertaining to mosquito extermination, burial of the dead and care of cemeteries, excepting the cemetery at Ancon Hospital, and the cost of material and supplies used in such work.

**B. Disposal of Garbage, Street Cleaning, Etc.**

To this account will be charged a proportion of the salaries and expenses of the Chief Sanitary Inspector, his assistants, inspectors, clerks and attendants, and of his office expenses, the salaries and wages of foremen and laborers engaged in street cleaning and removing garbage and other refuse outside of the cities of Panama and Colon, the cost of animal transportation, cart hire and of material and supplies.

**206. Construction of Buildings.**

To this account will be charged the salaries and wages and traveling expenses of mechanics, laborers and other employees engaged in, and the value of material and supplies used in the construction of buildings for the Department of Sanitation.

**207. Repairs of Buildings.**

To this account will be charged the salaries and wages and traveling expenses of mechanics, laborers and other employees engaged in, and the value of material and supplies used in repairs of buildings for the Department of Sanitation.

**DEPARTMENT OF CONSTRUCTION AND ENGINEERING.**

**301. General Administrative Expenses.**

To this account will be charged a proper proportion of the salaries and expenses of the office of the Chairman and Chief Engineer, and all other officers and employees engaged in general supervision of Canal construction. The expenses of the first, second and third divisions of the office of the Chairman and Chief Engineer will be charged to this account, except such part as may be properly chargeable directly to one of the following accounts under the Department of Construction and Engineering. A proper proportion of the expenses of the fourth division of the office of the Chairman and Chief Engineer will be charged to Account No. 370, Miscellaneous General Expenses. A report will be made monthly showing the total expenditures of the office of the Chairman and Chief Engineer and the accounts properly chargeable therewith.

**ATLANTIC DIVISION.**

**310. Dry Excavation. (Prism).**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of excavating dry material, and the transportation and disposition of it; also all material and supplies used and expenses incurred, and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the

value of plant heretofore purchased for or used by this division in the work of dry excavation, and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions, and credited with plant transferred from this division.

**311. Dredging Excavation. (Prism).**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division and the salaries and expenses of all officers and employees while engaged directly in the work of excavating material by dredging, and the transportation and disposition of it; also all material and supplies used and expenses incurred, and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for or used by this division in the work of dredging excavation and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**312. Gatun Dam and Spillway.**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of constructing the Gatun Dam and Spillway; also all material and supplies used and expenses incurred, and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased or used by this division in the work of constructing the Gatun Dam and Spillway, and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**313. Gatun Locks.**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of constructing the Gatun Locks, and also all material and supplies used and expenses incurred, and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for or used by this division in the work of constructing the Gatun Locks, including labor and material used in construction of temporary power plant and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**314. Gatun Power Plant (Permanent).**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly on the construction of the permanent power plant, including all material, machinery, equipment and supplies used and entering into its construction, and expenses incurred thereby, including the value of any machinery, etc., transferred from the temporary power plant or any other portion of the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division and necessary for the erection and construction of the power plant, and of any such plant hereafter purchased or used therein. It is not intended to include any items of machinery or plant required for its operation after completion. This item will be charged with any plant transferred from other divisions or other portions of the work. It will be credited with plant transferred from this work.

**315. Rock and Sand Account.**

**A. Porto Bello Rock—Plant.**

This account will be opened with a charge of the value of plant heretofore purchased or used by this division in the operation of the crusher plant and in obtaining stone to be crushed; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**B. Nombre de Dios Sand—Plant.**

This account will be opened with a charge of the value of plant heretofore purchased or used in obtaining sand, including sand lands purchased, and

with plant transferred from other divisions and credited with plant transferred from this division.

**C. Transportation—Plant.**

This account will be opened with a charge of the value of all plant, including vessels, barges, etc., used in transportation heretofore purchased or used by this division in the transportation of rock and sand from Porto Bello and Nombre de Dios; also to be charged with all plant transferred from other divisions and credited with plant transferred from this division.

**316. Colon Breakwater.**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division and the salaries and expenses of all officers and employees while engaged directly in the work of constructing the breakwater; also all material and supplies used and expenses incurred, the repair of equipment used in the work, and the cost of transportation of material.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased or used in the construction of Colon Breakwater, and of plant hereafter purchased or used herein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**CENTRAL DIVISION.**

**325. Dry Excavation.**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of excavating dry material and the transportation and disposition of it; also all material and supplies used and expenses incurred, and the repair of the equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division in the work of dry excavation and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**326. Dredging Excavation.**

**A. Construction Work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of dredging excavation and the transportation and disposition of it; also all material and supplies used and expenses incurred, and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division in the work of dredging excavation and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**PACIFIC DIVISION.**

**335. Dry Excavation. (Prism).**

**A. Construction.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of excavating dry material, and the transportation and disposition of it; also all material and supplies used and expenses incurred and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division in the work of dry excavation and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

**336. Dredging Excavation. (Prism.)**

**A. Construction work.**

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employees while engaged directly in the work of dredging excavation, and the transportation and disposition of it; also all material and supplies used and expenses incurred and the repair of equipment used in the work.

**B. Plant.**

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division in the work of dredging excavation and of plant hereafter purchased for or used therein; also to be charged with plant transferred from

other divisions and credited with plant transferred from this division.

### 337. *Pedro Miguel Locks and Dams.*

#### A. Construction.

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employes while engaged directly in the work of constructing Pedro Miguel Locks and Dams; and also all material and supplies used and expenses incurred, and the repair of equipment used in the work.

#### B. Plant.

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division in the work of constructing the Pedro Miguel Locks and Dams and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

### 338. *Miraflores Locks and Dams.*

#### A. Construction.

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division and the salaries and expenses of all officers and employes while engaged directly in the work of constructing Miraflores Locks and Dams, and also all material and supplies used and expenses incurred and the repair of equipment used in the work.

#### B. Plant.

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division in the work of constructing the Miraflores Locks and Dams and of plant hereafter purchased or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

### 339. *Rock and Sand Account—Plant.*

This account will be opened with a charge to the several subheadings of the value of plant heretofore purchased by this division in the operation of rock and sand plants of this division or used therein; also to be charged with plant transferred from other divisions and credited with plant transferred from this division.

The following subdivisions will be made:

- A. Ancon Rock—Plant.
- B. Ancon Rock—Transportation Plant.
- C. Chamé Sand—Plant.
- D. Chamé Sand—Transportation Plant.

### 340. *Miraflores Power Plant.*

#### A. Construction Work.

To this account will be charged a proper proportion of the salaries and expenses of the supervisory force of the division, and the salaries and expenses of all officers and employes while engaged directly in the construction of the power plant, including all material, machinery, equipment and supplies used and entering into its construction, and expenses incurred thereby, including the value of any machinery, etc., transferred from any other portion of the work.

#### B. Plant.

This account will be opened with a charge of the value of plant heretofore purchased for, or used by this division and necessary for the erection and construction of the power plant, and of any such plant hereafter purchased or used therein. It is not intended to include any items of machinery or plant required for its operation after completion. This item will be charged with any plant transferred from other divisions or other portions of the work. It will be credited with plant transferred from this work.

#### GENERAL EXPENSES.

NOTE—The following accounts include expenses properly chargeable to all departments of the Isthmian Canal Commission, and will be prorated monthly to the Department of Civil Administration, the Department of Sanitation and the three divisions of the Department of Construction and Engineering.

### 370. *Miscellaneous General Expenses.*

#### A. On the Isthmus.

To this account will be charged the proper proportion of the salaries and expenses of the office of the Chairman and Chief Engineer, the expenses of any special committees of engineers, or special commission and committees of Congress, legal services, a proper proportion of the salary of the Secretary of the Commission, and all other incidentals and miscellaneous expenses on the Isthmus paid by the Commission and which are not directly chargeable to any department or division. A report will be made monthly showing the total expenditures of the office of the Chairman and Chief Engineer and the accounts properly chargeable therewith.

#### B. CANAL RECORD.

To this account will be charged a proper proportion

of the salary of the Secretary of the Commission and all salaries, wages and expenses in connection with the publication of THE CANAL RECORD. It will be credited with the receipts from the sale of THE CANAL RECORD.

#### C. Y. M. C. A. Clubhouses.

To this account will be charged the salaries and expenses of officers and employes connected with clubhouses, also the expenses of furniture, fixtures and supplies, and all other expenses paid by the Commission, except the cost of constructing and furnishing new buildings.

#### D. I. C. C. Band.

To this account will be charged all salaries and expenses of the band, including the purchase of instruments, music, etc.

#### E. In the United States.

To this account will be charged all miscellaneous general expenses of the Commission in the United States, including salaries, printing, traveling expenses, and other expenses of the office of Administration, telegraphs, telephones and cables, legal services, rent of office building, light, fuel, power, and custodian force, etc.

### 371. *Disbursing Officers.*

#### A. In Washington.

#### B. On the Isthmus.

To this account will be charged all expenses of the disbursing offices.

### 372. *Examiner of Accounts.*

#### A. In Washington.

#### B. On the Isthmus.

To this account will be charged all expenses of the offices of the Examiner of Accounts and Assistants.

### 373. *Transportation on the Isthmus.*

To this account will be charged the monthly payment for transportation of employes over the rail lines of the Panama Railroad Company, and of animal transportation to and from trains.

### 374. *Telegraph and Telephones.*

To this account will be charged all expenses in connection with telegraphing, telephoning and cabling.

### 375. *Purchasing Expenses in the United States.*

To this account will be charged all expenses in connection with purchasing, inspecting, and testing supplies obtained from the United States.

### 376. *Compensation to Injured Employes.*

To this account will be charged payments made as compensation to injured employes, under the Act of May 30, 1908. Payments made on account of "Meritorious Sick Leave" will not be charged to this account, being carried on the regular pay rolls of the several divisions. The charges to this account will be made by the Examiner of Accounts, from the vouchers and pay rolls prepared by the Claim Officer.

#### SUBSISTENCE DEPARTMENT.

### 377. *Hotels, Messes and Kitchens—Operations.*

To this account will be charged a proportion of the expenses of the supervisory force of this Department, the cost of operating the hotels (except Tivoli Hotel), messes and kitchens, the cost of supplies used in their operation, and other expenses incidental thereto.

This account will be credited with collections of every nature, from employes and other departments, for subsistence furnished.

### 378. *Hotel Equipment.*

To this account will be charged the cost of equipment used in the operation of hotels (except Tivoli Hotel), such as furniture and fixtures, crockery, glassware, kitchen utensils, and the cost of repairs and renewals thereof when payable from Congressional appropriations, and not from revenues derived from operations.

### 379. *Hotels—Incidental Expenses.*

To this account will be charged the cost of fuel, light and power furnished hotels (except Tivoli Hotel), and such other expenses as are to be paid from Congressional appropriations and not from revenues derived from operations.

### 380. *Tivoli Hotel.*

To this account will be charged a proportion of the expenses of the supervisory forces of this Department, the cost of operating the Tivoli Hotel, including care of grounds, charges for equipment and repairs thereof, renewals, cost of fuel, light, power, etc. The cost of construction of the hotel and alterations and repairs to the building are carried under Accounts No. 408 and No. 409 respectively.

This account will be credited with collections or revenues of every nature for service or subsistence rendered by Tivoli Hotel.

#### QUARTERMASTER'S DEPARTMENT.

### 385. *Operation of Stores.*

To this account will be charged a proportion of the expenses of the supervisory forces, the cost of

all salaries and wages and materials used in the operation of storehouses of the Quartermaster's Department and incidental expenses.

### 386. *Freight, Advertising and Miscellaneous Items.*

To this account will be charged the cost on the Isthmus of advertising in newspapers, freight, handling and miscellaneous items of expense in connection with the cost of purchasing, handling and transportation of material and supplies.

### 387. *Recruiting.*

To this account will be charged a proportion of the expenses of the supervisory forces, the transportation of employes from the United States and other countries to the Isthmus, the salaries, wages and expenses of labor agents, the cost of subsistence furnished recruits, and all expenses incidental to the securing of labor, as well as the cost of deportations. This account will be credited with collections for transportation.

### 388. *Quarters.*

To this account will be charged a proportion of expenses of the supervisory forces, the cost of furniture heretofore and hereafter used in quarters for employes, and the expense of repairing same, cost of supplies such as oil, electric light, fixtures therefor, and the salaries and wages of employes engaged in caring for and cleaning quarters.

### 389. *Corrals.*

#### A. Equipment.

To this account will be charged the cost of all animals, carriages, wagons, etc., for use in animal transportation on the Isthmus, and it will be credited with the proceeds of sale of property of this description.

#### B. Operation.

This account will be charged a proportion of the expenses of the supervisory forces, with all labor and material entering into the operation of all corrals, except for new equipment and will receive credit for services rendered other departments and individuals, for which bills are to be rendered in accordance with flat charges made for the keeping of animals.

#### GENERAL ITEMS.

NOTE—Expenditures under the following accounts are not yet being charged to any particular item of Canal construction:

### 401. *Lands Purchased.*

#### A. For Construction Work or to be flooded.

To this account will be charged all payments for lands acquired by the Commission for construction purposes or which are to be flooded, including all expenses in connection with their purchase or expropriation.

#### B. For other purposes.

To this account will be charged all payments for lands acquired for purposes other than actual Canal construction or to be flooded, including all expenses in connection with their purchase or expropriation.

### 402. *Cristobal Terminals.*

#### A. Docks and Wharves.

To this account will be charged all expenditures for labor and material used in the construction and repair of docks and wharves for permanent service, including the tracks laid thereon, together with all machinery, tools, supplies, etc., that may be used in construction and renewals of same.

#### B. Dredging.

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employes engaged in the dredging for approaches and docking purposes, all material and supplies used and expenses incurred and the repair of equipment used in the work.

### 403. *Balboa Terminals.*

#### A. Docks and Wharves.

To this account will be charged all expenditures for labor and material used in the construction and repair of docks and wharves for permanent service, including the tracks laid thereon, together with all machinery, tools, supplies, etc., that may be used in construction, and renewals of same.

#### B. Dredging.

To this account will be charged a proper proportion of the salaries and expenses of the supervising force of the division, and the salaries and expenses of all officers and employes engaged in the dredging for approaches and docking purposes; all material and supplies used and expenses incurred, and the repair of equipment used in the work.

NOTE—Docks H and Hat Cristobal and the Balboa dock are leased to the Panama Railroad Company, the Commission assuming the repairs of the *substructure only*. Any additions or improvements made to these docks should be charged

to the account to which they relate and statement rendered the Examiner of Accounts showing cost of the work, as by the terms of the lease an additional rental is to be collected to cover such expenditures.

**404. Panama Railroad Second Main Track.**

To this account will be charged the cost of building the second main track of the Panama railroad.

**405. Relocation of Panama Railroad.**

**A. Construction Work**

To this account will be charged the expenses incurred in relocating the Panama railroad.

**B. Maintenance.**

To this account will be charged all expenses in connection with the maintenance of the relocated line, under the agreement between the Commission and the Panama Railroad Company, to maintain the road for a certain period after the construction is completed.

**406. Panama Railroad Marine and Fire Losses.**

To this account will be charged all payments made to the Panama Railroad Company, on account of marine and fire losses sustained, so far as such losses may be paid from Commission funds, under authority of Act of Congress.

**407. Purchase, Improvement and Repair of Steamers.**

**A. Panama.**

**B. Colon.**

**C. Cristobal.**

**D. Ancon.**

To this account will be charged the purchase price of the vessel, and all expenses of repairs and improvements, and credit will be given for revenues derived from such vessels as may be chartered.

**408. Construction of Buildings, Department of Construction and Engineering.**

To this account will be charged the expense incurred in the construction of buildings for the Department of Construction and Engineering, Examination of Accounts, Disbursements, Quartermaster's and Subsistence. It does not include "Division Structures," the expense of which should be charged directly against the construction work benefited. This account will include buildings furnished for the use of the Panama Railroad Commissaries, and the buildings used by the Y. M. C. A. and the Tivoli Hotel. It will also include the construction of buildings used for quarters for employes.

**409. Alteration and Repair of Buildings, Department of Construction and Engineering.**

To this account will be charged all expenses of alteration and repair of buildings for the Department of Construction and Engineering, Examination of Accounts, Disbursements, Quartermaster's and Subsistence. It does not include repairs to "Division Structures," the expense of which should be charged directly to the Division or Department benefited. The account will include cost of repairs made to buildings furnished for the use of the Panama Railroad Commissaries, and buildings used by the Y. M. C. A. and the Tivoli Hotel. It will also include the repairs of buildings used for quarters for employes.

**410. Purchase from New Panama Canal Company.**

To this account will be charged the amount paid the New Panama Canal Company for property and rights acquired, and credited when an authorized distribution is made to other accounts.

**411. Payment to Republic of Panama.**

To this account will be charged the amount paid the Republic of Panama for rights acquired.

**412. Loans to Panama Railroad Company.**

To this account will be charged loans made the Panama Railroad Company, and credited with repayments of same.

**413. Purchase of Panama Railroad Stock.**

To this account will be charged payments made for purchase of Panama railroad stock, and credited amounts received from sale of same.

**414. Machine Shops and Other Manufacturing Plants.**

This account will be opened with a charge of the value of plant heretofore purchased for or used in the general manufacturing plants, including machine shops, electric light plants, planing mill, concrete block plant, etc. All expenditures for buildings and other improvements in connection with these plants should be included. This account is not to be increased. All payments for new plant and repairs will hereafter be charged to operations.

Separate accounts will be kept as follows:

- A. Empire Machine Shops.
- B. Gorgona Machine Shops.
- C. Electric Light Plants.
- D. Lirio Planing Mill.
- E. Concrete Block Plant.
- F. Printing Plant.
- G. Cristobal Dry Dock Shops.
- H. Balboa Ship Ways.

**J. Bas Obispo Shops Crusher.**

**K. Rio Grande Crusher.**

**415. Construction Water Works and Sewers, Panama.**

To this account will be charged the salaries, wages and allowances of officers, clerks, laborers, and their traveling expenses, the cost of all material, including water pipes, sewer pipes, cement, all plumbing materials, lumber, etc., cost of transportation of men and animals and material, the tools and supplies used and all other incidental expenses connected with the construction of water works and sewers within the limits of the city of Panama.

**416. Construction Water Works and Sewers, Colon.**

To this account will be charged the salaries, wages and allowances of officers, clerks and laborers, and their traveling expenses, the cost of all material, including water pipes, sewer pipe, cement, all plumbing material, lumber, etc., the cost of transportation of men and materials, the tools and supplies used, and all other incidental expenses connected with the construction of water works and sewers within the limits of the city of Colon.

**417. Zone Water Works and Sewers.**

**A. Construction.**

To this account will be charged all expenditures for labor and material used in the construction of water works and sewers in the Zone, including reservoirs, main pipe lines and connections to Commission buildings, but does not include the construction of water works and sewers in the cities of Panama and Colon, which is chargeable to Accounts Nos. 415 and 416, respectively, or in native villages and houses in the Zone, which expense is payable from Canal Zone funds, and should be charged to General Account No. 8—Individuals and Companies.

**B. Repairs and Maintenance.**

To this account will be charged all expenditures for labor and material used in the repair and maintenance of water works and sewers in the Zone, including reservoirs, main pipe lines and connections to Commission buildings, but does not include repairs and maintenance of water works and sewers within the cities of Panama and Colon, which are chargeable to Accounts Nos. 415 and 416, respectively, or in native villages or houses on the Zone, expenses for which are payable from Canal Zone Funds, and should be charged to General Account No. 8—Individuals and Companies.

**418. Paving, Panama.**

To this account will be charged all expenditures for labor and material used in paving the streets of Panama, such as paving, filling, and grading, and includes the wages of engineers directly in charge of the work, the cost of transportation of men and materials and incidental expenses. This account does not include repairs and maintenance of paved streets, which are chargeable to Account No. 113.

**419. Paving, Colon.**

To this account will be charged all expenditures for labor and material used in paving the streets of Colon, such as paving, filling, and grading, and includes the wages of engineers directly in charge of the work, the cost of transportation of men and materials and incidental expenses. This account does not include repairs and maintenance of paved streets, which are chargeable to Account No. 114.

**420. Zone Roadways.**

**A. Construction.**

To this account will be charged all expenditures for labor and material used in the construction of roads outside of the cities of Panama and Colon, including the cost of right-of-way, the transportation of men and material, the cost of tools, plant, and machinery used in the work and incidental expenses. This account will not be charged with the cost of constructing trails or roads which are to be paid from Canal Zone funds. When Commission labor or material is used in such work the amounts will be charged to General Account No. 8—Individuals and Companies.

**B. Repairs and Maintenance.**

To this account will be charged all expenditures for labor and material used in the repair and maintenance of roads outside of the cities of Panama and Colon, including the use of borrow pits, transportation of men and material, the cost of tools and machinery used in the work and incidental expenses. This account will not be charged with the cost of repairs or maintenance of roads or trails, which is to be paid from Canal Zone funds. When Commission labor or material is used in such work the amounts will be charged to General Account No. 8—Individuals and Companies.

**C. Miscellaneous, Grading and Other Municipal Work.**

To this account will be charged all expenditures for labor and material used in miscellaneous improvements, grading and other municipal work,

including the cost of recreation grounds and other miscellaneous municipal charges authorized by the Chairman and Chief Engineer and not otherwise provided for.

**421. Moving and Care of French Material and Equipment.**

To this account will be charged all expenditures for labor and material used in caring for French material and equipment, except such as may be necessary to prepare it for use or care for it after it is ready for issue. It includes wrecking and moving excavators, dredges, locomotives, etc., from the Canal site, merely to get them out of the way, or concentrate the material at central points, also the care of marine and other equipment to keep it afloat and watch it, and other incidental expenses of like character. This account will not be charged for any expenses incurred on account of the recovery, preparation or shipment of French scrap intended for sale. The transactions involved will be handled in General Account No. 6—Value of French Material Recovered.

**General Account No. 2—Manufacturing Account.**

This account is intended to care for the operations of the manufacturing plants on the Isthmus, and will be charged under the proper manufacturing unit with the value of all new equipment, replacements, additions and repairs, all material and supplies drawn from the Quartermaster's storehouses and intended for manufacturing purposes, the salaries and wages of all employes, and all other expenses of maintenance and operation which have entered into the cost of the finished product.

The account will be credited with the value of the manufactured product, by a monthly statement of charges to material and supplies, other divisions of the work, or individuals and companies, and will include the value of all material and labor used, with such added surcharge, to include superintendence and all other expenses as may be found sufficient. The balance remaining in the account to represent the value of manufacturing orders uncompleted.

The following subdivisions of the account will be maintained:

1. Empire Machine Shops.
2. Gorgona Machine Shops.
3. Electric Light Plants.
4. Air Compressor Plants.
5. Lirio Planing Mill.
6. Concrete Block Plant.
7. Printing Office.
8. Gardens and Truck Farms.
9. Porto Bello Rock Plant.
10. Nombre de Dios Sand Plant.
11. Porto Bello and Nombre de Dios, Transportation.
12. Cristobal Dry Dock Shops.
13. Bas Obispo Rock Crusher.
14. Rio Grande Rock Crusher.
15. Balboa Shipways Shops.
16. Ancon Rock Crusher.
17. Chamé Sand Plant.

**Percentages of Surcharges.**

CULEBRA, C. Z., July 1, 1909.

**CIRCULAR NO. 169-B:**

Effective this date, the following percentages of surcharges will be added in all cases where labor is furnished between departments and divisions, and where labor and material are furnished by the Isthmian Canal Commission to the Panama Railroad Company, or to individuals and companies:

**BETWEEN DEPARTMENTS AND DIVISIONS.**

Shop work (including work done by all shops, excepting regular repairs to equipment).....	30 per cent on labor.
All labor with machinery..	30 per cent on labor.
Mechanical shop labor, without machinery.....	30 per cent on labor.
Other labor, without machinery.....	10 per cent on labor.

**BETWEEN I. C. C. AND P. R. R.**

Shop work.....	30 per cent on labor.
All labor, with machinery..	30 per cent on labor.
Mechanical shop labor, without machinery.....	30 per cent on labor.
Other labor, without machinery.....	10 per cent on labor.
Material, with or without labor.....	20 per cent on material.

**FOR INDIVIDUALS AND COMPANIES.**

Shop work (including work done in all shops).....	50 per cent on labor.
All labor, with machinery..	50 per cent on labor.
Mechanical shop labor, without machinery.....	50 per cent on labor.

Other labor, without machinery..... 10 per cent on labor.  
Material, with or without labor..... 20 per cent on material.  
All other instructions, heretofore issued, regarding the percentages of surcharges, are hereby revoked.

GEO. W. GOETHALS, *Chairman.*

#### Transportation for Public Business.

CULEBRA, C. Z., July 14, 1909.

CIRCULAR No. 261-A:

The following transportation will be used exclusively for the transaction of public business, in addition to that authorized by Circular No. 261:

*At Ancon*—One single survey, for use of Superintendent of Ancon Hospital, when necessary in connection with inspection duties; one single survey, for use of Health Officer of the city of Panama.

*At Cristobal*—One single survey, for use of Health Officer at Cristobal.

The transportation enumerated in Circular No. 261 and 261-A may be used for any other official purpose than that specifically designated in these circulars on order from the Chairman or the Chief Quartermaster.

GEO. W. GOETHALS, *Chairman.*

#### Travelling Engineer.

CULEBRA, C. Z., July 15, 1909.

CIRCULAR No. 266:

The position of Supervisor of Road Engines in the Mechanical Division is hereby abolished.

The position of Travelling Engineer is hereby created.

Mr. James G. Craig is hereby appointed Travelling Engineer for duty under the immediate direction of the Assistant to the Chief Engineer.

Effective July 16, 1909.

GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

#### Instructions for Timekeeping.

DEPARTMENT OF EXAMINATION OF ACCOUNTS,  
EMPIRE, C. Z., July 14, 1909.

CIRCULAR No. 13:

*To all Timekeepers*—The following supplement to General Timekeeping Circular No. 1, dated April 1, 1907, is published for the guidance of all concerned:

Employees entering upon leave of absence will be paid up to, and including, the day preceding that on which they enter on leave.

In cases of discharge, the employe will be paid to and including, the day of discharge based on its regular hours of service, and notice of discharge should be issued stating "at close of business," giving the date of last service day.

In the case of an hourly man discharged during his service day, the certificate should show the time and date. Such employe will be paid up to the time of his discharge.

T. L. CLEAR, *Acting Examiner of Accounts.*

Approved: GEO. W. GOETHALS,  
*Chairman and Chief Engineer.*

#### Acting Superintendent, P. R. R.

PANAMA RAILROAD COMPANY,  
COLON, R. P., July 14, 1909.

CIRCULAR No. 129

*Heads of Departments and Divisions*—Effective July 11, 1909, Mr. F. R. Blunt will act as Superintendent, Panama railroad, during the absence of Mr. J. A. Smith on leave.

H. J. SLIFER, *General Manager.*

#### Proposals for Buildings.

Contract buildings. Sealed proposals will be received at the office of the Constructing Quartermaster, Isthmian Canal Commission, Culebra, C. Z., until 2 p. m., Wednesday, July 28, 1909, when they will be publicly opened, for the erection of four (4) buildings. One engine house, one oil house, one storehouse and office, one coaling platform and one cinder pit. The Commission will furnish all materials at the site of the work, and the contractor is required to provide all labor. Plans and specifications can be obtained upon application to the Constructing Quartermaster. A deposit of \$5 is required to insure their return. Each bidder must accompany his proposal with a check, cash or money order for \$50 as a guarantee that contract will be entered into, and the successful bidder will be required to deposit \$500 conditioned upon the faithful performance of the contract. The Commission reserves the right to reject any or all proposals, to accept any proposals as may be deemed to its interest, and to waive defects or informalities in proposals.

C. A. DEVOL,  
*Chief Quartermaster.*

#### Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, July 17, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gambou.	Bohio.	Gatun (Canal.)	Gatun (W. D.)
Height of low water ab. m. n. sea-level, ft.	125	92	46	1	0	0
Maximum height above mean sea-level, feet:						
Sunday, July 11.....	135.0	98.9	54.8	11.9	4.7	3.9
Monday, July 12.....	127.6	94.3	50.1	11.7	5.0	4.0
Tuesday, July 13.....	127.8	94.4	50.0	6.9	3.0	2.4
Wednesday, July 14.....	127.4	94.0	50.0	7.6	2.9	2.0
Thursday, July 15.....	128.7	94.7	52.4	6.4	3.7	2.2

#### Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., July 21, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Atkins, Sam	Kummers, A. P.
Billingslea, Loy E.	Lewis, Dr. John Waring
Blohm, Jno. F.	Lyng, John
Byrd, J. B.	Mann, C.
Cadman, Charles	McNaulty, Miss Ethel
Conway, Ed Zeut	Morgan, Geo. W.
Edwards, Newton	Plazell, Emanuel
Ernst, P. A.	Pugh, Robert G.
Henderson, Mrs. W. A.	Purcell, P.
Herring, Fred	S. uart, M. A.
Jones, Robert W.	Williams, Eglort G.

The camera club of the Cristobal Y. M. C. A. will give an exhibition of the photographs taken by members of the club, at the Commission clubhouse beginning Thursday, July 22.

#### MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

##### NEW YORK TO COLON.

##### COLON TO BARBADOS, CALLING AT TRINIDAD.

Clyde.....	R. M. Tuesday.....	Aug. 3
Thames.....	R. M. Tuesday.....	Aug. 17

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The steamer *David* of the National Navigation Company, will leave Panama, for David, province of Chiriqui, and intermediate points, on Thursday, July 22.

The next sailings of the Leyland Line will be as follows: *Mercian*, on or about July 31, for Tampa, Fla., via Kingston, Ja., and *Cuban* for New Orleans via Kingston on or about August 9.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

**THE CANAL RECORD,  
Ancon, Canal Zone,  
Isthmus of Panama.**

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of June is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed description of the progress of Canal work in all departments and divisions.

#### Improved Water System for Balboa and Ancon.

Work on the new water service extension to Balboa was begun on July 15. This system will increase the efficiency of the water supply at Ancon and Balboa and will furnish, through a connection with the new high pressure reservoir on Aucon Hill, adequate fire protection for these towns. Additional fire protection has already been provided for the city of Panama, as a connection between the city mains and the high pressure reservoir can be made at any time. The pressure for fire purposes will be from 75 to 80 pounds, sufficient to throw a stream of water from a hose over the highest building in Panama, and to afford adequate protection to the buildings on the higher slopes of Ancon Hill. About 12,500 feet of 8 and 10-inch pipe will be used to complete the extension and numerous connections and hydrants will be installed along the line.

The present system consists of a 6-inch pipe line, connected with the 16-inch main from the Rio Grande reservoir, near Balboa Junction, which follows the railroad track to the docks at Balboa. At Big Tree tank, a 3½-inch pipe line branches off from the 6-inch line and follows the dump tracks of the Central Division to a point a short distance beyond the commissary at East Balboa, and other lines extend to East Balboa, and to the electric light plant and the Union Oil Company's buildings at Petrolia. The pressure in the 6-inch line from the Rio Grandemain is frequently very low on working days, because of the demands for water made by steamers, dredges and other vessels at the Balboa docks.

The new extension provides for a 10-inch

cast iron pipe line from the Rio Grande main, near Balboa Junction, by way of the Zone boundary road and the old Balboa road to the dump tracks of the Central Division at East Balboa. From this point an 8-inch main will extend to the electric light plant, through the yards of the Union Oil Company to the beach, and thence to Balboa docks where it will be connected with the present 6-inch main, thus forming a loop and furnishing complete circulation.

To provide for the use of the high pressure reservoir in time of emergency, the new pipe line will be connected with the reservoir main near the filtration plant at Ancon, and a check valve will be placed in that part of the pipe nearest the Rio Grande connection, so that when the high pressure service is employed, the valve, operating automatically, will close, and when the pressure is relieved, it will be reopened by the pressure from the Rio Grande main.

#### Awards for Lock Materials.

The bids on Circular 513, for certain iron work to be embedded in the masonry of the locks, were opened on May 25. The lowest formal bids were as follows:

Class 1. Steel castings and structural material to be embedded in the masonry of all the locks, The United Engineering and Foundry Company of Pittsburg, \$528,124.70.

Class 2. Cylindrical valves for the upper locks at Gatun and the locks at Pedro Miguel, The Rosedale Foundry and Machine Company of Pittsburg, \$84,600.

Class 3. Thirty-six-inch gate valves for the upper locks at Gatun, and the locks at Pedro Miguel, The Chapman Valve Manufacturing Company of Indian Orchard, Mass., \$9,515.

Class 4. Copper ladders for all the locks, The Penn Bridge Company of Beaver Falls, Pa., \$2,058.40.

Class 5. Castings for movable dam, sills, and certain other parts for all locks, The United Engineering and Foundry Company of Pittsburg, \$46,683.57.

On each of classes two and five an irregular bid was submitted which was lower than the lowest regular bid. Under the specifications consideration could not be given to such bids.

Bids on Circular 515, for certain sample Stony valves for the main culverts of all the locks were opened on June 1. Award was made for two sets of the valves to the lowest bidder, The Penn Bridge Company of Beaver Falls, Pa., for \$24,527.42.

#### Gatun Locks Cableways.

A test of the cableways, that will convey concrete from the west bank of the lock site at Gatun and deliver it at any point desired in the lock chamber, was made last week. Each of the eight cableways was tested for two hours of continuous running by the

engineer in charge of the work for the contractor, in the presence of the men who are to operate the cables for the Commission. A test of ten days under working conditions will be made by the Commission before the cableways are accepted. Each of the eight cableways must be able to deliver 40 cubic yards of concrete an hour, and from the results of the tests so far made it is probable that the plant will exceed the required capacity.

#### Material in Slides.

Thirteen slides were in motion in the territory of the Central Division during the fiscal year 1909, and from them 884,530 cubic yards of material were removed. It is estimated that 993,000 cubic yards of material are now in motion and must be removed in the course of the Canal excavation. None of the slides has proved of serious detriment to the work. The largest two, those at Cucaracha and Whitehouse, are in Culebra Cut, and they are being handled without any difficulty. The amount of material taken from slides in the territory between Gatun and Pedro Miguel represents less than one-twentieth of the total amount excavated in that territory in the fiscal year, as the total excavation was 19,067,777 cubic yards.

#### Colon Harbor Breakwater.

During the month of June, a survey was made of the site of the proposed west breakwater at Toro Point, across the harbor from Cristobal, as well as the shore line and the coral reefs in the immediate vicinity. Soundings with loaded pipe were also made to determine the character of the bottom. On Toro Point, 7,270 linear feet were chained; 11,000 linear feet of levels were run; 257 linear feet drilled, and 33,165 linear feet of trocha cut, staked and measured by stadia, in addition to a large amount of miscellaneous survey work. The preliminary surveys for the breakwater were authorized some time ago, and are now nearly completed. No actual work on the breakwater itself will be commenced for the present, and probably not until after the Congressional Committee has visited the Isthmus and gone over the ground. The appropriation for the fiscal year 1911, includes an estimate on the breakwater construction. The dredges of the Atlantic Division have been dumping spoil on the seaward side of the breakwater site for some time past.

#### Dynamite for Canal Work.

A contract to supply 9,282,000 pounds of dynamite for the Canal work during the present fiscal year has been let to the lowest bidder, the Keystone Powder Company. The *Vitalia*, from Thompson's Point, arrived at Cristobal on July 13, with 1,018,000 pounds of dynamite from the Du Pont Powder Company, completing the delivery of the dynamite contracted for in the fiscal year 1909.

## NOTES OF PROGRESS.

(Continued.)

The dynamite now in store on the Isthmus is sufficient to last until December, and deliveries under the new contract will begin in September. The amount of dynamite by classes delivered each year since the beginning of the American regime on the Isthmus, and the amount on order for 1910, together with the price paid are shown in the appended table. No dynamite was delivered in 1905, as sufficient was left over from 1904 to last throughout the year.

AMOUNT AND PRICE BY YEARS.

## Clearing Channel in Gatun Lake.

The amount of clearing remaining to be performed in the Canal channel in Lake Gatun does not exceed from three to four hundred acres, and consists mostly of underbrush and small timber from three to six inches in diameter, in rather soft ground. The method of performing this work will

be by letting it to contract in separate sections of about 50 acres. However, this will not prevent one person from obtaining the contract for the entire area to be cleared if his proposal is advantageous.

## Young Officers for Canal Service.

In special orders issued by the War Department on July 12, 1909, the fifteen young men who were graduated from West Point Military Academy, in the class of 1909, and assigned to the Corps of Engineers, are ordered to duty on the Isthmus under the Chairman of the Isthmian Canal Commission, from November 30, 1909, to about May 10, 1910, "for instruction and duty." The men so assigned are Second Lieutenants Stuart C. Godfrey, Francis C. Harrington, Cleveland C. Gee, John R. D. Matheson, William H. Sage, jr., Charles J. Taylor, Edwin H. Marks, Earl North, John M. Wright, Albert H. Acher, Gilbert Van B. Wilkes, John C. H. Lee, Frank S. Besson, Lindsay C. Herkness, and Albert K. B. Lyman.

## Removal of District Quartermaster's Office.

The office of the District Quartermaster at Ancon, has been moved from house No. 74, near the fire station, to house No. 67 on the road leading to the Ancon gate. The office occupies the north end of the lower floor, the rest of this floor being used for store room purposes. Ancon Hall is located on the upper floor of the same building, and is undergoing extensive alterations and improvements. The building containing the former office of the District Quartermaster will be converted into family quarters.

## Fatal Dynamite Explosion.

In an explosion of dynamite on the relocation of the Panama railroad near Gatun on Sunday, July 25, four men were killed and nine were injured. The dead are: R. M. Preddie, Jamaican negro, timekeeper, check No. 37401, and negro laborers—Simeon Gor-

don, Barbadian, check No. 37456; Son Trotman, Barbadian, check No. 37467; and one unknown whose legs were found but are unidentified. Walter Mathewson, a negro laborer, is missing and it is believed he is the fourth dead. Nine men were slightly injured, among them C. G. Jones the white supervisor of the relocation work at Gatun. The accident occurred in the morning about a mile south of the new railway station at Gatun. A locomotive in coupling onto a flat car loaded with 550 cases of dynamite jarred some of the explosives off the car. While the men were putting the cases back on the car some of the dynamite exploded. The cause of the explosion is unknown.

## Immigrants from Barbados.

The sailing schooner *Viola*, from Barbados, arrived at Colon, Tuesday, July 13, with 106 passengers, mostly Barbadians, men, women and children, who have come to the Isthmus to better their condition. These people emigrated independently, paid their passage money, and had sufficient funds in their possession to enable them to enter the country. The immigration law of the Republic of Panama provides that each person, over 12 years of age, entering the country with the intention of locating, must be possessed of a sum of money equal to \$15 United States currency. During the past 30 days three sailing vessels have arrived at Colon from Barbados, each with a load of passengers, and there have been only a few instances where the immigrant did not have the required sum. Most of the men coming in this manner from Barbados find employment almost immediately with the Commission and prove to be good workmen, which is indicated by their thriftiness in getting a sufficient amount of money together to enable them to make the trip, and have enough to keep them for awhile after they land. The sailing craft from Barbados bring, besides passengers, yams, and other native products, which find a ready market here.

## LABOR FORCE FOR JUNE.

The report of the Chief Quartermaster for the month of June shows that the number of Isthmian Canal Commission employees actually at work on June 23, was 26,468, of whom 4,166 were "gold" employees, and the remainder were on the "silver" or labor roll. The Panama railroad force was 5,704, and the Panama railroad commissary force numbered 768. Thus the total number of persons at work on the Canal and railroad on the 23rd day of June was 32,940. During June 187 people were added to the "gold" roll and there were 175 separations, the net increase in the force being 12.

The number of family quarters occupied by "gold" employees was 1,497, and the occupants numbered 4,510; bachelor quarters by "gold" employees, 2,086, and the occupants numbered 3,419, of whom 113 are women, and 137 are men living in fire stations, police stations, etc., which are not considered regular quarters. The family quarters occupied by West Indians numbered 943, and the occupants 3,213; bachelor quarters, 226; number of occupants, 4,432. The family quarters occupied by European laborers numbered 273, and the occupants 896; bachelor quarters, 121; number of occupants 4,383.

A statement of the force actually at work on June 23, 1909, follows:

DEPARTMENT.	Monthly.	Artisans.					European Laborers.		West Indian Laborers.				Total Silver.	Total Gold.	Grand Total.

## RED CROSS FUNDS.

## How a Portion of Them Has Been Disbursed.

MAJ. C. A. DEVOL,  
President Canal Zone Branch, American National  
Red Cross, Culebra.

My Dear Major—Complying with your suggestion of a few days ago, I submit herewith a statement of the financial condition of the Canal Zone branch of the American National Red Cross Association up to date.

RECEIPTS.	
Membership dues.....	\$1,306.00
From entertainments.....	734.18
Loan repaid in part.....	15.00
Interest on deposits.....	9.02
Miscellaneous.....	4.80
	\$2,069
EXPENDITURES.	
Postage.....	\$42.51
Printing.....	20.69
First-aid books.....	12.00
Relief furnished.....	515.61
Miscellaneous.....	.40
Balance on hand.....	1,477.79
	\$2,069

The item "loan repaid in part" carried under receipts was a loan of \$50 authorized by the Executive Committee to enable an individual who was bitten by a rabid dog to go to the Pasteur Institute in the United States for treatment.

In connection with the balance on hand of \$1,477.79, it must be remembered that but \$824.79 of this is available for the use of the Canal Zone branch, as 50 per cent of the total receipts for membership dues goes to the headquarters of the association at Washington at its annual meeting in November next.

Relief has been given in ten instances, the amounts ranging from \$2.50 to \$150. In some instances a special amount has been asked for and given. The Executive Committee, with your approval, and having in mind that the resources of the branch were limited, and consequently the amounts to be given in individual cases would have to be limited to cover emergencies, felt compelled in several instances to scale the amounts asked for. In every instance, however, sufficient money has been given to cover the present needs of the individual in the way of food and clothing, as well as traveling expenses when the individual to be helped had to leave the Isthmus. As far as the latter item is concerned, however, the Isthmian Canal Commission has been as liberal as it was possible to be in all instances. It should be remembered by the members of the association that its funds, subject to the action of the Executive Committee and your approval, are available to all, irrespective of race, creed or nationality, and with the enormous work going on in the Zone and the many dangers incident to it, the association is running on a very narrow financial margin. It is incumbent on every member of the association, and particularly the entertainment committees of the various chapters, to bestir themselves and provide the association with funds that may within reason meet any emergency that may arise.

New members should be gotten, for, during the past four months we have not averaged a member a day.

Since June 1, the association has received from all sources \$35.02 and has expended \$184.86, of which latter amount, \$172.50 was for relief. Comment as to how long the branch will last under such conditions is unnecessary. Very truly yours,

JOHN L. PHILLIPS,  
Acting Treasurer.

Ancon, C. Z., July 19, 1909.

## Social Life of the Zone.

Over five hundred people attended the carnival given by the Gorgona Red Cross district on the evening of July 16. The Commission clubhouse was transformed into a miniature jungle scene with its decorations of giant palms, ferns and other plants, through which were passages leading to the booths and side shows. The attractions were numerous and included a German garden, a fortune-teller, a fishing pond, a mechanical checker-player, an art gallery, Japanese tea room, booths for the sale of ice cream, cakes, and lemonade, and a ladies' bazaar. During the evening a concert was given by the Marine Band from Camp Elliott, which also furnished music for the carnival dance at the close of the entertainment. Fifty Gorgona residents took active part in the entertainment. Special trains brought visitors from points along the Line between Gatun and Culebra. The net proceeds amounted to \$200. The carnival is the eighth entertainment that has been given by Red Cross districts since their organization in January. Corozal gave one on February 12; the Ancon district gave a dance at the Hotel Tivoli, February 20; the district of Las Cascadas held a cake sale in March; dances were given by the Culebra and Paraiso districts in April, by Paraiso in May, and at Gorgona on July 3. The aggregate amount raised by these entertainments is nearly \$1,000.

The Las Cascadas Palm Club gave a dance in the club rooms on Friday evening, July 23. A special train brought guests from Pedro Miguel and the attendance was large.

The Kangaroos, Paraiso Court No. 5, gave a dance in the lodge hall, Paraiso, on Saturday evening, July 24. A large number of invitations were issued by the members and the dance was unusually well attended.

Fifty books from the Cristohal clubhouse library have been lent to the American settlement at Porto Bello. These books are kept at the post-office, and are circulated upon payment of a subscription fee of \$1.50.

## Personal.

Mr. Joseph Bucklin Bishop, accompanied by Mrs. Bishop and Miss Bishop, returned to the Isthmus on the *Panama*, which arrived at Colon on Sunday, July 25.

Mr. H. D. Reed, accompanied by his sister, sailed on the *Turrialba* on July 27 for his annual leave of absence in the States.

## Obituary.

John Ryan died at Ancon Hospital on July 17, 1909. He came to the Isthmus from Pennsylvania, was thirty-three years of age, single, and had been on the Isthmus eleven months, residing at Empire.

## Missing Men.

Information is desired in regard to the following men:

John J. Hughes, who was last heard from at Tabernilla, C. Z.

John Thomas, hoisting engineer, who is supposed to have come to the Isthmus about three years ago.

Any one having knowledge concerning either of these men is requested to communicate with the American Minister at Panama.

LOST—On Sunday, July 25, at the Panama railroad station, a pocketbook containing a meal book, a 24-trip pass book, and several receipts from fraternal orders. Finder is requested to return to Arthur J. Goulstone, Paraiso, C. Z., and receive reward.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

## REPORT FOR JUNE, 1909.

Total membership.....	1,222
Total number of bowling games.....	4,182
Number different tournaments, billiard, pool, chess, etc.....	7
Total number of tournament players.....	116
Total number of pool and billiard games.....	12,151
Total income from soda fountains.....	\$2,060.85
Number different men using gymnasiums.....	83
Total attendance of men using gymnasiums.....	475
Number enrolled in chess and checker clubs.....	45
Number enrolled in glee clubs.....	10
Number enrolled in camera clubs.....	85
Number enrolled in bible classes.....	37
Number of members in library.....	567
Total number of books withdrawn.....	1,714
Number of Sunday meetings.....	1
Attendance.....	100
Number of local entertainments.....	10
Attendance.....	2,095
Number of imported entertainments.....	9
Attendance.....	2,205
Number of functions outside association management.....	6
Attendance.....	720
Number of afternoons for women.....	23
Attendance.....	164
Number evening functions to which women were invited.....	17
Attendance.....	1,055
Different men on committees.....	24
Number of men called on in hospitals.....	173
Number of letters written at public tables.....	4,090
Total attendance at buildings.....	42,761
Average attendance per day.....	1,425

## BOYS' DEPARTMENT (AGES 10-16).

Number of members.....	61
Number of afternoons open to boys.....	49
Total attendance.....	559
Attendance at gymnasium exercises.....	351

## CULEBRA.

Regular gymnasium classes will be started at the Culebra Y. M. C. A. next week under the instruction of G. R. D. Kramer. Tumbling, apparatus work and drills will be held as well as the indoor games. Boys' classes will also be started along the same lines.

On Sunday, July 25, at 3.30 p. m., the "College Girls" gave a concert at the Y. M. C. A. hall. This was the first of a series of Sunday afternoon concerts that have been arranged for, and it was greatly enjoyed by a large audience.

Saturday, July 24, the Culebra indoor baseball team defeated the Gorgona team by a score of 20 to 17.

## GORGONA.

Sunday evening, July 25, Judge H. A. Gudger gave an address at the Gorgona Y. M. C. A. His subject was "Universal Peace." Special music for the evening was furnished by Mrs. P. H. Pierson, Miss Berenice Hackenberg, and Mr. W. C. Catlin. The service was well attended.

The "College Girls" will make their only appearance at Gorgona on Wednesday evening, July 28. On account of the Red Cross carnival which was under way during the first week of their stay on the Isthmus, it was impossible to arrange for a second engagement.

## Concert by I. C. C. Baud.

## HOTEL TIVOLI, ANCON.

Sunday, August 1, 1909, at 7.30 p. m.

## PROGRAM.

- 1 March—*Festal Day*.....Roux
- 2 Selection—*A Stubborn Cinderella*.....Howard
- 3 Waltz—*Die Grafenberger*.....Gungl
- 4 (a)—*Dixie Twilight*.....Johnson
- 4 (b)—*La, La, La*.....Scotto
- 5 Popular Medley.....La Farge
- 6 Porto Rican Dance—*Rosita*.....Missud
- 7 (a) Texas Rag—*The Tarantula*.....Powell
- 7 (b) Medley Waltz—*Always Me*.....Harris
- 8 Overture—*Schauspiel*.....Bach
- 9 First Heart Throbs.....Eilenberg
- 10 March—*On Guard*.....Reeves

OLIVER KIMBALL, Director.

The next concert will be given at Culebra, Sunday, August 8.

The following steamers have recently arrived at Balboa: July 18, *Manavi*, from intermediate ports; July 22, *Aysen*, from Southern ports, and *San Juan*, from San Francisco; July 23, *Chiriqui*, from intermediate ports. Departures were: July 18, *Chile*, for Southern ports; July 21, *Arica*, for Guayaquil, and *Acapulco*, for San Francisco; July 23, *Foxton Hall*, for Southern ports, and *Manavi*, for intermediate ports.

## CANAL WORK FOR JUNE.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., July 15, 1909.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the fol-

lowing report of operations on the Isthmus for the month of June, 1909:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry.....	Cubic yards.....	116,657	1,518,034	126,624	1,761,315
Work excavation, wet.....	Cubic yards.....	221,404	.....	869,382	1,090,786
Total work excavation.....	Cubic yards.....	338,061	1,518,034	996,006	2,852,101
Plant excavation, dry.....	Cubic yards.....	7,051	2,941	33,700	43,692
Plant excavation, wet.....	Cubic yards.....	.....	.....	.....	.....
Total plant excavation.....	Cubic yards.....	7,051	2,941	33,700	43,692
Total Canal excavation.....	Cubic yards.....	345,112	1,520,975	1,029,706	2,895,793
Explosives used.....	Tons (2240 lbs)	28.30	235.90	23.60	287.80
Rock drilling.....	Feet.....	55,242	360,419	62,859	478,520
Track removed.....	Miles.....	.....	13.60	.....	13.60
New track laid.....	Miles.....	3.16	12.30	3.94	19.40
Material placed in dams.....	Cubic yards.....	370,183	.....	58,926	429,109
Rock crushed.....	Cubic yards.....	23,775	5,945	5,445	35,165
Cement used.....	Barrels.....	11,723	.....	2,353.50	14,076.50
Concrete placed.....	Cubic yards.....	10,602	.....	2,261.50	12,863.50
New roads built.....	Miles.....	.30	.88	.10	1.28
Water mains laid.....	Feet.....	12,215	1,100	3,011	16,326
Sewers laid.....	Feet.....	340	151	95	586
Open drains and ditches dug.....	Feet.....	524	1,601	150	2,275

Wash drilling.....	Feet.....	.....	.....	.....	.....

## Atlantic Division.

## GATUN LOCKS.

*Excavation*—Excavation was continued during the month with three steam shovels, suction dredge No. 85 and one crane. Excavation was nearly completed in the upper chamber; about 200,000 cubic yards remained to be removed in the middle chamber; and 1,200,000 cubic yards remained to be removed from the lower chamber at the close of the month. The total excavation during the month was 74,823 cubic yards.

*Cement Shed*—The cement shed storeroom and the cement walk and gutter along the east side of the cement shed were completed. Work on the barrel conveyor for the cement shed and a concrete division wall between the rock and sand piles were commenced during the month.

*Mixer Building*—Carpentry work on this building was completed, and the installation of machinery was nearly completed at the close of the month.

*Automatic and Industrial Railways*—The industrial road was 90 per cent completed, and about 50 per cent of power rail for this road had been placed at the close of the month. At the close of the month, 60 per cent of the automatic road had been ballasted and 50 per cent of power rail placed. The roof over the inclines on the automatic road was 95 per cent completed.

*Shed for Saw-mill and Form Construction*—Concrete footings for this structure were built and the sills placed during the month.

*Unloading Cableways*—Duplex towers 2 and 3 were ready for operation, excepting the propelling apparatus, and cableway No. 1 was 95 per cent completed, at the close of the month.

*Lock Cableways*—These cableways were 90 per cent completed, all cables being strung, all carriages in place and three buckets hung, at the end of the month.

*Lock Anchors*—The setting of floor anchors was continued and a total of 282 rails had been set on June 30.

*Power House*—The building for the power house was completed, except painting. The erection of machinery in the engine room was 90 per cent completed, the installation of

the electrical apparatus 85 per cent completed, and the erection of the boilers 65 per cent completed, at the close of the month.

During the month, eleven barges, containing 7,465 cubic yards of stone, were delivered at the lock site.

## GATUN DAM.

Construction during the month increased the total fill by 370,183 cubic yards, making the total at the end of the month 2,947,305 cubic yards.

*Stripping and Clearing*—The stripping area was extended by one acre, making the total area at the close of the month 192.2 acres. Some of the area already stripped was gone over again, owing to a new growth of vegetation. Clearing was continued ahead of the dredges, extending the area by 8.6 acres and making the total at the close of the month 90.9 acres. About 4.3 acres were grubbed.

*Hydraulic Fill*—Allowing 10 per cent for loss, the hydraulic fill was increased by 229,015 cubic yards during the month, making the total at the end of the month 716,574 cubic yards. Dredges No. 82 and 83 worked the entire month pumping into the dam, and dredge No. 85 worked from June 20 to the end of the month pumping into the dam.

*Emplacements*—The material received from Bas Obispo, the Spillway, Mindi and the stripped area of the dam, amounting to 141,168 cubic yards, was placed on the north and south toes of the dam. The total dry fill at the close of the month was 2,230,731 cubic yards.

*Trestles*—The south toe trestle was extended 434 linear feet toward the west end of the dam; the north toe trestle, west of the Spillway, was extended 84 linear feet to the V'est Diversion; a trestle 350 feet long was driven near New Gatun for the purpose of developing a dump for the storage of Bas Obispo rock to be used in paving the lake side of the dam; and a trestle 182 feet long was driven near New Gatun for the Municipal Engineering Department in connection with the construction of the new water works dam.

## GATUN SPILLWAY.

*Excavation*—During the month, the ma-

terial excavated by crane, by hand and by steam shovels amounted to 8,177 cubic yards, making the total Spillway excavation at the close of the month 1,298,722 cubic yards.

*Concrete*—The floor below the Spillway dam was completed and construction of the west side wall was started during the month. The total amount of concrete placed during the month was 9,817 cubic yards, making the total at the end of month 30,464 cubic yards.

## PORTO BELLO.

General miscellaneous mechanical and repair work was continued during the month. Five steam shovels were in operation at this point. The total yardage for the month was about 65,715 cubic yards, and the crusher produced 23,775 cubic yards of crushed rock.

## NOMBRE DE DIOS.

The work of deepening and widening the entrance channel and opening the channel to the sand zone was continued. The new 16-inch suction dredge worked six days and dredged 225 cubic yards of sand; and 2,390 cubic yards of sand were dredged by the clam shell dredge.

## HARBOR AND CHANNEL SECTION.

*Dry Excavation Below Sea Level*—Mindi: During the month, 25,730 cubic yards of earth and 54,371 cubic yards of rock were excavated by two 70-ton Bucyrus and one Model 91 Marion steam shovels.

*Dredging*—Ocean to Mindi: Four dredges removed from the prism 153,886 cubic yards of earth and 28,689 cubic yards of rock during the month. In addition, the dredge *Ancon* removed 9,700 cubic yards of earth at Pier No. 1, Colon, 248,151 cubic yards of earth from the approach channel to Cristobal harbor, and 120,162 cubic yards of earth from in front of the Cristobal docks. The dredge *Mindi* removed 3,150 cubic yards of earth at Pier No. 1, Colon, 7,525 cubic yards of earth and 21,175 cubic yards of rock from the approach channel, 8,050 cubic yards of earth in front of Pier No. 11, and 7,394 cubic yards of earth in front of Pier No. 13, Cristobal. On June 30, 40 feet of water could be carried from 0 to mile 2 plus 4,700 feet; 30 feet to mile 3 plus 1,150 feet; 20 feet to mile 4 plus 2,200 feet; and 10 feet to mile 4 plus 4,900 feet, the end of the cut.

## MUNICIPAL ENGINEERING AND BUILDING CONSTRUCTION.

The usual work of these sub-divisions was performed during the month, including work on the Mount Hope-Gatun road, and water works at Gatun and Mount Hope; and construction work was continued on the power plant, commissary at Gatun and machine and boiler shops at Cristobal.

## Central Division.

During the month of June, the total amount of material excavated in the Central Division was 1,520,975 cubic yards, of which 403,623 cubic yards were classified as earth and 1,117,352 cubic yards as rock. Of this quantity, 1,475,428 cubic yards were removed by steam shovels, 25,651 cubic yards by hand and 19,896 cubic yards by sluicing action of the Chagres River. The quantity of material removed from the Canal prism was 1,516,683 cubic yards, while 1,351 cubic yards were removed from the Obispo Diversion, 2,174 cubic yards from inclines at point No. 3 at Santa Cruz, and 767 cubic yards from engine house site at Gamboa.

The daily average number of steam shovels at work during the month was 45.65, as compared with 50.60 for the month of May.

For comparison with the work done by steam shovels during the corresponding

month of the previous year in the area embraced in the Central Division, the following table has been prepared:

Period.	Excavated by shovels	Classification of material.			Av. No. of steam shovels working during month	W'g days in m'th	Av. amount excavated per shovel per 8-hour day.
		Rock	Earth				
1908: cu. yds.	cu. yds.	cu. yds.					
June....	1,450,113	1,013,549	436,564	55.15	26		1,011
1909:							
June....	1,475,428	1,097,968	377,460	45.65	26		1,243

Rainfall at Empire: 1908, 8.20 ins.; 1909, 7.84 ins.

The above table shows that the average output per shovel day was nearly 23 per cent greater in June, 1909, than in the corresponding month of the previous year.

During the month, 185,538 cubic yards of material excavated from the prism were transported to the relocation of the Panama Railroad at Caimito, Santa Cruz and Corozal and dumped as filling in the embankment for the new roadbed, the total at the close of the month for this purpose being 1,314,784 cubic yards. During the month, 30,902 cubic yards of rock from Bas Obispo were transported to Gatun and dumped in the toe of the dam, making the total for this purpose at the close of the month 401,183 cubic yards.

Work on the Empire suspension bridge was continued during the month, the superstructure of the towers being completed, the cables placed and the attaching of hangers begun.

The daily average number of laborers at work was 7,780, while the average number of gold men working was 1,001.

#### Pacific Division.

##### DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 185,021 cubic yards.

At Pedro Miguel, excavation to the subgrade in the west lock chamber was practically completed and the work of excavating for the lateral culverts was begun. Work was continued on the storage trestles, on the construction of cement tracks, the removal of loose waste and excavation in the forebay.

At Miraflores, the dredge *Sandpiper* worked during the month within the limits of the lower locks, discharging during the greater part of the month into the core of the west dam. Work was continued at the power house during the month.

At Ancon Quarry, regular preliminary operations were continued and foundations were laid for four No. 6 rock crushers.

##### DISTRICT NO. 2—DREDGING.

Five dredges were in operation during the greater part of the month. During the last three days six dredges were at work. The material excavated by these dredges is shown in the following table:

Dredge	Type.	Cubic yards.		Remarks.
		In pr'm	Auxil'y	
Culebra	Suction	329,784	.....	Scow measurement
Gopher	Ladder	161,395	.....	Place measurement
Mole...	Ladder	118,350	.....	Place measurement
Badger.	Ladder	5,610	.....	Place measurement
Cardenas...	Dipper	101,802	.....	Place measurement
Marmot	Ladder	127,744	.....	Place measurement
Total.....		844,685	.....	

The necessary work in connection with maintenance of equipment was satisfactorily performed.

##### DISTRICT NO. 3—MUNICIPAL AND BUILDING WORK.

Building and municipal work was continued during the month, and the filtration plant,

Ancon steam plant and the Rio Grande rock crusher were successfully operated.

#### Mechanical Division.

The usual work of the division was satisfactorily performed during the month.

##### Relocation of Panama Railroad.

During the month, 121,079 cubic yards of material were excavated, making the total excavation at the close of the month 1,401,942 cubic yards, and 207,814 cubic yards of material were placed in embankment, making the total for this purpose at the end of the month 4,705,494 cubic yards. During the month, 1,462 linear feet of temporary trestle were driven, and numerous small culverts were completed. During the month, 9,373 linear feet of permanent track were laid, making the total at the close of the month 108,120 linear feet. The force of laborers during the month averaged 2,118 men.

##### Quartermaster's Department.

During the month, there were 187 additions to the gold force, and 175 separations, making the net increase 12. Lieut. W. D. Smith arrived on the Isthmus June 24, and assumed charge of the construction and repair division of this Department.

Lieut. R. E. Wood, Assistant Chief Quartermaster, returned from Barbados, British West Indies, on June 28. While in Barbados, he adjusted some difficulties that had arisen in connection with the recruitment of West Indian laborers, and made satisfactory arrangements in regard to future recruiting. The expense for recruiting has heretofore been \$6 per man, but under the new arrangement this expense will be reduced to about \$2 per man. The steamship *Cristobal*, sailing from New York June 25, was diverted to Barbados for the purpose of transporting eight hundred laborers to the Isthmus.

##### Subsistence Department.

The operation of the Hotel Tivoli during the month showed a loss of \$462.69. There was a loss of \$1,314.47 on the operation of the line hotels, and a profit was made on the operation of the kitchens and mess halls. The net operations of this Department for the month of June showed a profit.

##### Department of Civil Administration.

#### COURTS.

The Supreme Court held one session in June, and one civil case was disposed of. In the circuit courts 12 civil and 35 criminal cases were disposed of, and in the district courts 74 civil and 492 criminal cases were disposed of.

##### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues in June aggregated \$37,157.70. The general revenues amounted to \$28,801.86, as compared with \$12,278.59 for the month of May; this large increase in the general revenues was due to the collection of the real estate tax. The postal revenues were \$6,511 on account of stamp sales, \$17.15 on account of newspaper postage, and \$1,827.69 on account of money order fees. Money order sales during the month amounted to \$428,510.26, of which \$315,936.35 was payable in the United States and foreign countries and \$112,573.91 in the Canal Zone. Fifty-seven dispatches of mail were made to foreign ports by the *Cristobal* exchange office.

Seventeen vessels entered at and 17 cleared from the port of Ancon, and 17 vessels entered at and 17 cleared from the port of Cristobal.

##### DIVISION OF POLICE AND PRISONS.

The total effective strength of the police force on June 30 was 174 officers and men, and the total force of the Division on that

date aggregated 253 officers and men. The number of arrests during June was 518, as compared with 607 during the month of May. There were 123 prisoners confined in the district jails at the close of the month. Thirteen convicts began penitentiary sentences during the month; 13 were discharged at the expiration of their sentences, and on June 30, 117 convicts were confined in the penitentiary.

##### DIVISION OF PUBLIC WORKS.

The regular inspection and maintenance work of this division was performed during the month. In the city of Panama 28,183,000 gallons of water were consumed, and in the city of Colon 18,924,675 gallons were consumed. The revenue derived from rental of space in the public markets amounted to \$333.56.

##### DIVISION OF FIRE PROTECTION.

Two alarms of fire were responded to by the Canal Zone Fire Department during the month, one at Colon and one at Mount Hope. No damage resulted in either case.

##### DIVISION OF SCHOOLS.

The schools were closed on June 30, and will be reopened on October 1. Final examinations were held during the month. The total enrollment in the white schools during June was 585, and the average daily attendance was 486. In the colored schools the total enrollment was 1,170, and the average daily attendance was 576.

##### Department of Sanitation.

The annual death rates, per thousand, from all causes, for the months of June during American control, for white employees, black employees, all employees, and for the total population of the Canal Zone, including the cities of Panama and Colon, were as follows:

YEAR.	Annual death rate per thousand.			
	White.	Black.	All employees.	Total population.
June, 1905.....	29.29	13.02	16.44	50.57
June, 1906.....	7.23	48.96	41.55	51.89
June, 1907.....	21.05	29.96	27.53	33.45
June, 1908.....	19.54	9.46	12.35	29.17
June, 1909.....	9.44	9.32	9.34	16.42

The number, per thousand, of employees admitted to hospitals and sick camps, including those sick in quarters, were as follows:

June, 1907.....	116
June, 1908.....	61
June, 1909.....	69

(Rates for 1905 and 1906 are not available, as during these years the records for the sick camps and those sick in quarters were not included.)

The number of employees for Junes of preceding years, with deaths and annual percentages per thousand, were as follows:

YEAR.	Number.	Deaths.	Death rates.
June, 1904.....	4,782	2	5.02
June, 1905.....	17,517	24	16.44
June, 1906.....	28,010	97	41.55
June, 1907.....	39,659	91	27.53
June, 1908.....	45,662	47	12.35
June, 1909.....	47,193	37	9.34

For white employees, the number of deaths from all causes for the month of June was 9; from disease 6, with a death rate of 6.29, and from violence 3, with a death rate of 3.15. For black employees, the total deaths from all causes for the month were 28; 22 from disease, with a death rate of 7.32, and 6 from violence, with a death rate of 2.00. Among the employees during the month, one white employee died of haemoglobinuric fever, and one black employee from malarial

fever. Three deaths among black employes were from pulmonary tuberculosis, and two deaths, one white and one black, were from pneumonia. There were no deaths among employes from typhoid fever or dysentery.

The number of white employes from the United States on the Isthmus was 5,072. Of the five deaths among them, two were from disease and three from violence. The number of deaths among the families of white American employes on the Isthmus was three, all being children, the oldest of whom was two years, and the other two were less than a month old; all of the deaths being caused by diseases of infancy.

One case of plague was taken from a ship from Callao and died in quarantine station five days afterwards. No plague, smallpox or yellow fever originated on the Isthmus, or, with the exception of the case noted above, was brought to the Isthmus during the month.

Respectfully,  
GEO. W. GOETHALS,  
*Chairman.*

#### Status of Nonclassified Employes.

The petition of clerical employes of the Commission on the Isthmus, who are not in the classified executive civil service and who desire to be covered into that service upon passing a noncompetitive examination has been denied by the Civil Service Commission, in the following letter:

UNITED STATES CIVIL SERVICE COMMISSION,  
WASHINGTON, D. C., June 25, 1909.  
*Chief of Office, Isthmian Canal Commission,  
Washington, D. C.*

Sir: The Commission has given consideration to the petition of certain clerks now in the service of the Isthmian Canal Commission on the Isthmus of Panama, forwarded by Lieut.-Col. Geo. W. Goethals, Chairman and Chief Engineer of the Isthmian Canal Commission, through Mr. W. W. Warwick, Examiner of Accounts of the Commission, in which the request is made that the petitioners be made eligible for transfer to the classified service in the United States after a service of three years on the Isthmus, two years of which have been in competitive positions, and upon passing a noncompetitive examination if deemed necessary by the Civil Service Commission.

However, the Commission, after careful consideration of the matter, finds that the granting of the petition would not be proper, and requests that the petitioners be advised through the Isthmian Canal Commission that they, and other employes whose status is the same, should enter the open competitive examination which will be held on the Isthmus of Panama on the same dates that similar examinations are held throughout the United States, and that they should take their places upon the eligible lists in accordance with the ratings obtained through examination, and that when regularly certified and selected from the examination appropriate for the positions which they occupy, they may be given a regular competitive status at the rates of compensation then received by them. Thereafter they will be eligible for transfer, subject to the rules and regulations governing transfers. By direction of the Commission.

Very respectfully,

(Sgd.) JOHN C. BLACK, *President.*

Persons desiring to take the competitive examinations referred to in the above letter should write for information to Mr. Wm. E. Tragsdorf, Acting Secretary of the Isthmian Civil Service Board, Office of the Chairman, Culebra, C. Z.

#### Odd Fellows.

Members of the I. O. O. F. and others, interested in the formation of an Odd Fellows' lodge at Ancon, are requested to attend a meeting at Ancon hall on Monday night, August 2, at 8 o'clock.

The east bank of the lock site at Gatun is being extended southward in order that the tail towers of the concrete handling cableways may operate along the side of the forebay of the locks.

## OFFICIAL CIRCULARS.

### Wage Classification of Silver Employes.

CULEBRA, C. Z., July 15, 1909.

#### CIRCULAR No. 229-A:

The tables given hereinafter, showing ratings and rates of pay for employes on the "silver" roll, Isthmian Canal Commission, effective on and after August 1, 1909, have been prepared with a view to limiting the rates of pay for "silver" employes, both hourly and monthly to standard rates and to securing uniformity in pay in the different Departments and Divisions for the same class of work. A revision of and a reduction in the number of ratings have been made, and the minimum and maximum limits have been fixed.

The following are the standard "silver" rates, per hour, expressed in terms of U. S. Currency: 5 cents, 7 cents, 10 cents, 13 cents, 16 cents, 20 cents and 25 cents. In addition to these seven standard silver hourly rates of pay, the two special rates—32 cents and 44 cents per hour—have been continued under certain restrictions as described hereinafter. No other hourly rates will be paid.

For monthly "silver" employes, the maximum rate of pay, per month, is \$75 U. S. Currency, except where special authority has been obtained from the Chairman. Monthly silver rates of pay shall not exceed the pay which would be received for the number of hours worked at the hourly rate of pay established for that kind of work. The monthly silver roll is intended for employes whose hours of work are more or less irregular, or whose time it would be difficult to check up on an hourly basis. Wherever practicable, an hourly rate should be applied in preference to a monthly rate. The following table shows the corresponding monthly amount, at the different standard hourly rates of pay, based on eight, nine, ten and twelve hours of work, per day:

Standard rates per hour.	Monthly pay equivalent to different hourly rates. Sundays not included.			
	8 hours daily, 204 hrs. per month.	9 hours daily, 230 hrs. per month.	10 hours daily, 255 hrs. per month.	12 hours daily, 306 hrs. per month.
U. S. Currency				
5 cents.....	\$10.20	\$11.50	\$12.75	\$15.30
7 cents.....	14.28	16.10	17.85	21.42
10 cents.....	20.40	23.00	25.50	30.60
13 cents.....	26.52	29.90	33.15	39.78
16 cents.....	32.64	36.80	40.80	48.96
20 cents.....	40.80	46.00	51.00	61.20
25 cents.....	51.00	57.50	63.75	76.50
Special:				
32 cents.....	60.28	73.60	81.60	97.92
44 cents.....	89.76	101.20	112.20	134.64

No rating, in addition to those given hereinafter shall be authorized until after same has been approved by the Chairman, and his approval shall likewise be necessary for any new rates of pay, under any rating.

The standard rates of hourly pay, for silver employes, and description of duties, are as follows:

#### BOY "A," FIVE CENTS PER HOUR.

This rating is for the lighter and easier work. It is intended that all boys (including water, shop, and messenger) shall be taken on at this rating, and not promoted until qualified and required to perform work of Boy "B."

#### BOY "B," SEVEN CENTS PER HOUR.

This rating is for heavier and harder work. In addition to boys, it may be filled by men who have been injured in the service of the Commission, when the grade of work which they are capable of performing does not entitle them to be carried in the next higher rating.

#### LABORER "A"—TEN CENTS PER HOUR.

This is the standard rate for all West Indian common labor, and shall not be exceeded for such. Men who have been injured in Commission service performing the work of "Boy A" or "Boy B" may be rated "Laborer A," provided the circumstances in each particular case renders same desirable or necessary. Other men performing work of "Boy A" or "Boy B" should not be graded "Laborer A" unless boys cannot be obtained who can perform the work satisfactorily. Boys performing work of "Boy A" or "Boy B" cannot be rated "Laborer A."

#### LABORER "B"—THIRTEEN CENTS PER HOUR.

This is the maximum rate of pay for Panamanians, Colombians and similar Central and South American unskilled labor, and also for Hindoos. West Indians shall not be employed, as laborers at this rate. Length of service, however satisfactory, does not entitle a West Indian, "Laborer

A," to promotion to "Laborer B." Laborers, performing duties of helpers to shop and other mechanics, such as carpenters, etc., shall be known and graded as "Helper B," etc., with the designation "Carpenter" or "Machinist" prefixed, if desired.

#### LABORER "C," ARTISAN "C"—SIXTEEN CENTS PER HOUR.

This rating shall be applied to:

1. Laborer "C." This is the highest rate of pay at which a non-contract European or other white laborer or black American laborer can be employed. Laborers employed at this rating shall not be eligible for promotion to "Laborer D" until after three months' satisfactory continuous service.

2. Artisan "C," which shall be the standard rate of pay for shop, building construction and other mechanics and artisans, who shall be known as "Machinist C," etc.

#### LABORER "D," ARTISAN "D"—TWENTY CENTS PER HOUR.

This rating shall be applied to:

1. Laborer "D," which is intended to cover European contract labor. It may also be applied to such European non-contract labor and other white laborer or black American laborer, on responsible work, as may be found worthy of same, after not less than three months' continuous satisfactory service.

2. Artisan "D," which shall be applied to such shop and other mechanics and artisans, the quantity and quality of whose work is above the average and whose length of satisfactory service in grade "C" renders them worthy of promotion.

#### ARTISAN "E," TWENTY-FIVE CENTS PER HOUR.

This shall be the highest regular hourly rate of pay for silver employes and shall be applied only to those employes, the quality and quantity of whose work is most satisfactory.

#### ARTISAN "F," THIRTY-TWO CENTS PER HOUR; (SPECIAL.)

This is a special grade to cover such employes as were carried on the rolls prior to July 15, 1909, at thirty-two cents per hour, who, it is not recommended shall be reduced to grade "E," effective August 1st.

No new employe and no employe receiving at present less than 32 cents an hour, shall, hereafter, be given 32 cents per hour.

#### ARTISAN "G," FORTY-FOUR CENTS PER HOUR; (SPECIAL.)

This is a special grade to cover such employes as were carried on the rolls prior to July 15, 1909, at forty-four cents per hour, who, it is not recommended shall be reduced to grade "E" or grade "F," effective August 1st.

No new employe, and no employe receiving at present less than forty-four cents per hour shall be given grade "G," except for designation of "Diver," as provided hereinafter.

List of ratings eliminated on August 1, 1909, showing the new designations of employes at present carried thereunder to which they shall be transferred without increase in pay.

Dispensers: To be re-rated as druggists.  
Foremen, sub: To be re-rated as foremen.  
Foremen, assistants to: To be re-rated as clerks.  
Storekeepers: To be re-rated as storemen.  
Telephone operators: To be re-rated as messengers.

Timekeepers: To be re-rated as clerks or messengers.

Blue printers: To be re-rated as messengers.  
Boilerscalers: To be eliminated.  
Chambermaids: To be re-rated as maids.  
Cranemen: To be re-rated as crane operators.  
Engineers, locomotive: To be eliminated.  
Flagmen: To be re-rated as trainmen.  
Gravediggers: To be re-rated as cemeterymen.  
Levelmen: To be eliminated.  
Leadsmen: To be eliminated.  
Moneycounters: To be re-rated as clerks.  
Nightsolimen: To be re-rated as scavengers.  
Orderlies: To be re-rated as attendants.  
Pumpmen: To be re-rated as stationary engineers.

Scrubbers: To be re-rated as helpers.  
Scullions: To be re-rated as helpers.  
Seamstresses: To be re-rated as maids.  
Wardmaids: To be re-rated as maids.

#### Silver Roll.

#### DESIGNATIONS AND RATES OF PAY "OFFICERS AND EMPLOYES."

(Note: Rates of pay marked with an asterisk will be gradually eliminated as employes now carried at those rates leave the service, and no appointments or promotions shall be made to these rates.)

New employees shall be entered on the rolls at the lowest rate of pay authorized for the class of work which they are to perform, except when regularly transferred.

Employees shall not be promoted from a lower to a higher rate of pay until they have completed at least three months' service at the lower rate. Promotions shall always be to the next higher grade.

The existing regulations covering the furnish-

ing of subsistence for certain classes of work and certain positions will remain unchanged.

Employees' ratings shall in all cases correspond to their duties.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

#### Use of Fuel Oil.

CULEBRA, C. Z., July 22, 1909.

#### CIRCULAR No. 267:

The following regulations governing the supplying, gauging and use of fuel oil on the Isthmus are published for the guidance of all concerned:

1. Request to have fuel tanks filled must be telephoned to the Union Oil Company forty-eight (48) hours or more in advance of the time when it is desired to have same filled, and the Oil Company must be advised at the same time of amount of oil on hand. This telephone request must immediately be followed by a letter confirming same sent by the District Quartermaster of the Isthmian Canal Commission, or by the Storekeeper of the Panama Railroad Company. The various divisions requesting this oil should forward request in writing to the District Quartermaster, keeping the above time limits in mind. It is desired that as much notice, within reasonable limits, as possible be given the Union Oil Company, and that Company should be advised of the approximate amount of oil on hand so they can make final arrangements for filling the tank.

2. The various departments interested will, in case of emergency when requested by the Oil Company, arrange to have a representative on the ground from daylight to dark.

3. At the gauging, the representatives of the District Quartermaster, the division requesting the oil and the Oil Company will be present, and each will sign run tickets in quadruplicate. These tickets will be retained by the gauger of the Union Oil Company, two copies remaining in the hands of the Company permanently, and two copies, including the original, to be attached to the bill for the oil when rendered. Copies of the run tickets are to be made and retained by each of the other representatives.

4. Gaugings to be made with standard steel tape with plumb bob attached at one end.

5. Immediately after the last gauging the valve next to the tank in the supply line is to be closed and securely locked by the District Quartermaster.

6. When a break develops in the side line the Union Oil Company is to be reimbursed for the loss resulting therefrom, calculated by the capacity of that portion of the branch line which is emptied by the break.

7. Gasoline tests, as provided for in the Supplemental Agreement made between the Isthmian Canal Commission and the Union Oil Company of California, to be made at any time by the Mechanical Division upon request of parties desiring such test, a representative of the Oil Company being present at the test.

GEO. W. GOETHALS,  
Chairman Isthmian Canal Commission,  
President Panama Railroad Company.

#### Sale of Vehicles and Harness.

The vehicles named below will be sold to any person desiring to purchase at the prices mentioned:

One victoria, C-7	\$150
One victoria, C-9	200
One victoria, C-4	350
One victoria, C-24	200
One victoria, 39	250
One station wagon	125
One surrey	60
Harness, per set	25

By order of the Chairman.

C. A. McILVAINE,  
Acting Assistant to the Chairman.

#### Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending July 24, with supplies for the Isthmian Canal Commission:

*Colon*, July 18, from New York, with 316 tons bar iron and steel; 805 kegs bolts and rivets; 15 tons wire screening; 7,000 gallons linseed oil; 5,000 gallons valve oil, for stock; 56 tons alum for filtration plants; and a miscellaneous cargo aggregating 6,567 packages, weighing 990 tons.

*Sarnia*, July 20, from New York, with 5,600 pounds concentrated lye for stock.

*Turrialba*, July 22, from New Orleans, with 95 tons hay for corrals; 70,000 feet lumber for buildings; 4,850 gallons kerosene oil for stock.

Lost—Between the bathing beach, Panama, and Gorgona, on Sunday, July 25, a lady's size gold watch with open face, and with the monogram "G. H. P." engraved on the case. A reward will be paid for the return of this watch to Mrs. G. H. Pierson, Gorgona, Canal Zone.

#### Tide Table.

The following table shows the time of high and low tides at Panama for the week ending August 4, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.
	A. M.	A. M.	P. M.	P. M.
July 29	12.14	6.33	12.33	7.08
July 30	1.16	7.31	1.32	8.01
July 31	2.11	8.24	2.26	8.51
August 1	3.00	9.14	3.16	9.38
August 2	3.39	10.03	4.03	10.25
August 3	4.34	10.49	4.50	11.10
August 4	5.19	11.37	5.38	11.57

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

#### Rainfall, July 1 to 24, 1909, Inclusive. (MIDNIGHT TO MIDNIGHT.)

#### Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., July 28, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Barnes, Z.	Martin, Mrs. Chas.
Boyd, Dr. W. A.	Milan, Harry
Bridbury, R. T.	Miller, W.
Brocksby, Miss Leana	Pettyjohn, J. W.
Bromley, Mary B.	Sanchez, Alexander M.
(21 class)	Sheriden, P. L.
Coffin, Mrs. R. L. (3)	Smith, Clarence
Deaney, M. H. B.	Smith, Mark D.
Dunnville, B. B.	Stewart, Mrs. L.
Greeley, Miss Marjorie	Thelma, Miss Lorraine
Harrington, C. R.	Walton, W. J.
Hawkins, Cleveland	Williams, C. H.
Kincaid, Mrs. Geo.	Wolba, F. G.
	Woodford, R. T.

FOUND—Metal check No. 46,729. Owner can recover same by applying to H. E. Hele, Room 2, house No. 111, Ancon, C. Z., and proving property.

#### MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

#### NEW YORK TO COLON.

Ancon	P. R. R. Thursday	July 22
Clyde	R. M. Saturday	July 24
Advance	P. R. R. Saturday	July 24
Allianca	P. R. R. Friday	July 30
Prinz Joachim	H. A. Saturday	July 31
Colon	P. R. R. Thursday	Aug. 5
Cristobal	P. R. R. Saturday	Aug. 6
Thames	R. M. Saturday	Aug. 7
Panama	P. R. R. Wednesday	Aug. 11
Prinz Aug. Wilhelm	H. A. Saturday	Aug. 14
Advance	P. R. R. Tuesday	Aug. 17
Ancon	P. R. R. Thursday	Aug. 19
Magdalena	R. M. Saturday	Aug. 21
Allianca	P. R. R. Monday	Aug. 23
Prinz Joachim	H. A. Saturday	Aug. 28
Colon	P. R. R. Saturday	Aug. 28
Cristobal	P. R. R. Thursday	Sept. 2
Panama	P. R. R. Friday	Sept. 3
Orinoco	R. M. Saturday	Sept. 4
Advance	P. R. R. Thursday	Sept. 9
Prinz Aug. Wilhelm	H. A. Saturday	Sept. 11
Allianca	P. R. R. Wednesday	Sept. 15
Ancon	P. R. R. Thursday	Sept. 16
Oruba	R. M. Saturday	Sept. 18
Colon	P. R. R. Tuesday	Sept. 21
Prinz Joachim	H. A. Saturday	Sept. 25
Panama	P. R. R. Monday	Sept. 27
Cristobal	P. R. R. Thursday	Sept. 30

Persons desiring to meet steamers at Cristobal should apply in advance of arrival at the Customs office, room 8, building No. 1, Cristobal, for customs line permits, which are necessary to obtain admittance beyond waiting room on pier 11.

All the steamers of the Hamburg-American and Royal Mail lines call at Kingston enroute to Colon.

#### COLON TO NEW YORK.

Colon	P. R. R. Friday	July 23
Thames	R. M. Wednesday	July 28
Panama	P. R. R. Friday	July 30
Prinz Aug. Wilhelm	H. A. Tuesday	Aug. 3

Ancon	P. R. R. Thursday	Sept. 30

#### NEW ORLEANS TO COLON.

Parismina	U. F. C. Saturday	July 31
Turrialba	U. F. C. Saturday	Aug. 7
Abangarez	U. F. C. Saturday	Aug. 14
Parismina	U. F. C. Saturday	Aug. 21
Turrialba	U. F. C. Saturday	Aug. 28

#### COLON TO NEW ORLEANS.

Abangarez	U. F. C. Tuesday	Aug. 3
Parismina	U. F. C. Tuesday	Aug. 10
Turrialba	U. F. C. Tuesday	Aug. 17
Abangarez	U. F. C. Tuesday	Aug. 24
Parismina	U. F. C. Tuesday	Aug. 31

#### COLON TO BARBADOS, CALLING AT TRINIDAD.

Clyde	R. M. Tuesday	Aug. 3
Thames	R. M. Tuesday	Aug. 17

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailings of the Leyland Line will be as follows: *Mercian*, on or about July 31, for Tampa, Fla., via Kingston, Ja., and *Cuban* for New Orleans via Kingston on or about August 9.

The steamer *David* of the National Navigation Company, will leave Panama, for David, province of Chiriqui, and intermediate points, on Thursday, August 5.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

### Address all Communications

#### THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Pacific Division Sand Service.

The ladder dredge *Gopher*, of the Pacific Division, which was laid up during the greater part of July for general overhauling, was taken to Chamé on Monday, July 26, and will be used in sand dredging at that point. It will work into position within a few days, and as there is but little stripping to be done in any part of the sand zone, deliveries can begin without delay. Five barges, each of 500 cubic yards capacity, are ready for the service, and the four knocked down barges which arrived on the steamer *Cristobal*, July 7, are now in the yards at Balboa waiting to be put together. The piling for the sand dock has been completed, but work on the bins has not yet been started. Most of the sand used in concrete construction in the Pacific Division for several months past has come from the island of Taboguilla in Panama Bay, and has proved satisfactory.

#### Single Outlet for the Chagres.

The Chagres River now finds its way into Limon Bay through two outlets, one the river channel which opens into the bay at Fort Lorenzo, and the other the old French canal which begins at Cristobal. In the near future the outlet through the French canal will be closed, and all the water will be forced through the river channel past Fort Lorenzo. At present the floods that follow every heavy rain carry quantities of driftwood into the French canal, and this interferes with the operation of the stern wheel steamer *Exotic* which tows the sand and rock barges up to Gatun. The large amount of river water that flows into the canal also causes troublesome currents.

The original channel of the Chagres made a big open loop at Gatun,—that is, the river flowed south to a point near Gatun, then east, then south again, then west, and finally, within a mile of the bend from south to east, continued southward. The line of the French canal ran across the south and north parts of the loop, and in order to keep the exca-

vation dry a ditch was dug through which the water was diverted from the loop and made to flow directly south past Gatun. When the excavation was finished the river flowed partly through its own channel and partly through the canal. Gatun Dam has closed up the French canal, and the river now flows through the west diversion across the west end of the present dam site, as it did during construction by the French. A large quantity of water, however, backs through the old river channel north of Gatun Dam into the French canal, and in time of freshet there is a very large volume with a strong current. A dam will be built across the old channel south of the big dam and the river water will thus be kept out of the canal.

As soon as the dam closes the channel the only means of water communication between Cristobal and the Chagres, south of Gatun, will be by way of Fort Lorenzo.

#### Empire Suspension Bridge.

The suspension bridge over Culebra Cut at Empire was opened to the public at 5 o'clock on Saturday afternoon, July 31. The flags of Panama and the United States had been hung over the bridge at the point where the opening ceremony was held, and some red, white and blue bunting had been draped on the towers at either end. In the presence of a number of residents of Empire and Culebra, the Division Engineer of the Central Division, and the men who built the bridge, Mrs. A. S. Zinn, wife of the Resident Engineer, broke a bottle of champagne and declared the bridge open to traffic.

This is the first bridge to be constructed across Culebra Cut. Its primary purpose is to carry the compressed air and water mains over the Cut, and thus avoid moving them every time a steam shovel crosses their line. As a highway bridge it will give access to Las Cascadas plantation and the native farms on the east side of the Canal. It is a temporary structure and will be taken down as soon as the Canal is opened to navigation, as it is only 108.5 feet above the water line and would not clear the masts of larger vessels. The span is 600 feet, the length of cable from west to east anchorage 932 feet, and the roadway is broad enough for one wagon. The towers are made of creosoted timber and are 60 feet high. There are four 2½-inch steel cables anchored at the east end to old French rail embedded in 189 cubic yards of concrete, and at the west end to French rail in 270 cubic yards of concrete. Work was begun on March 11, 1909, and the manual labor was performed entirely by negroes.

#### Cristobal Sea Front.

A slight change has been made in the plan for protecting the shore front at Cristobal from inroads by the sea during the period of "northers." The new barrier of concrete blocks will extend practically all the way

from the dividing line between Cristobal and Colon, to Cristobal Point, and instead of being irregularly disposed along the beach, they are being placed in a symmetrical row, separated by spaces of about six inches which are half filled with concrete, with their sea face slightly higher than the land side to prevent the inrush of water. The extension of the barrier involves the use of about 100 additional blocks, making a total of 400 in all.

#### Ancon Quarry.

Steady progress was made on the Ancon Hill rock crushing plant of the Pacific Division during July. The heavy concrete retaining wall, which is to protect the crusher machinery from rock and earth slides, is practically completed. The foundations for the four secondary, or No. 6, crushers are in, the machinery is being put in place, while work on the foundation of the main, or No. 12, crusher will be started in a few days. The crushed material will be carried from the machines to the storage bins by a belt conveyor, and work has begun on the piers which will support the apparatus. The concrete floor of the bin structure has been completed, and the erection of the timber frames for the 12 bins commenced. A three-track yard is to be laid out just north of the crusher plant to be used by trains in hauling rock from the quarry, work on which has begun. Stripping was continued during July, and while there is considerable material still to be removed to uncover the rock surface in all parts of the quarry, enough is in sight to supply the crushers were they ready for operation. The steam shovels are continuing the work of excavating facings along the side of the hill to reach the different parts of the quarry. It is expected that the plant will be ready to start at the expiration of another month, or six weeks.

#### Gatun Dam.

A complete change was made during July in the appearance of the east portion of the territory that is to be included in Gatun Dam, due to the progress of the hydraulic fill. The surface of the pond in the dam is about six feet higher than at the beginning of July. The water so encroached on the old tracks of the Panama railroad, and the old office buildings along the tracks, that they were removed in order to make way for the labor gangs that are stripping the top soil from the land to be covered by the fill. The south rock toe has been broadened until it makes a connection with Spillway Hill, and the north toe is also steadily growing broader.

One of the 20-inch suction dredges that are making the hydraulic fill will be taken from the borrow pit north of the Dam during the next few days and set at work in the bed of the Chagres River and old French

## NOTES OF PROGRESS.

(Continued.)

canal south of the Dam. The work already done in pumping from the borrow pits north of the Dam shows that the Chagres River deposits sand almost as fast as the dredges pump it out. This sand combined with the fine clay found south of the Dam site forms the best class of material for the hydraulic fill. After the first week in August the fill will be continued, therefore, by pumping from both north and south sides, one of the methods found satisfactory in the experimental dams. The effect of this method is to deposit the coarser material along the toes of the Dam and to place the finer material along the axis, forming an impervious core.

## Additions to Compressed Air System.

On account of the heavy demand on the compressed air system made by the work in Culebra Cut, and at Pedro Miguel and Miraflores, twelve electric motors, eight forge fans, two compressed air reheaters and two 2,500 cubic foot air compressors have been ordered, and will be installed in the near future. The motors will be installed at the Rio Grande rock crushing plant and at the various small repair shops where compressed air is being used for motive power. They will range in capacity from five horsepower to thirty horse-power and will be driven by current supplied from the Empire electric light plant. The reheaters will be installed at Miraflores and Bas Obispo to increase the volume of air at those points. The motors and fans on order will have a capacity equal to the motive power from approximately two 2,500 cubic foot compressors.

The present system, which supplies air to the rock drills and for various motors along Culebra Cut, and at Miraflores and Pedro Miguel, extends from Bas Obispo to Miraflores Locks, a distance of about thirteen miles. The various mains aggregate about 70,000 feet of pipe, while the leads make a total of about 180,000 feet. Compressors are located at Rio Grande, Empire, and Las Cascadas. At each place there are two Rand and two Laidlaw-Dunn-Gordon compressors, with a total maximum rated capacity of 30,000 cubic feet of free air per minute. The two additional machines on order will increase the number to 14, and the rated capacity to 35,000 cubic feet of free air per minute.

On June 23, a test of the system was made and in the eight hours of work, 10,348,985 cubic feet (engine room readings) of free air were consumed. This air drove 17 engines; 175 piston drills, 3½ inches; 128 Star drills; 8 pumps, varying in size from 7 by 7 by 12 inches, to 16 by 9 by 14 inches; 52 forges; 2 boring machines; two air brake testing machines, one water aerator at the Culebra distilling plant; and, in addition, was used at the Pedro Miguel engine house for cleaning locomotives. The number of drills available for use in the Central and Pacific divisions is 275 piston drills, 3½ inches, and 115 Star drills. It is proposed to increase this number by 75 piston drills, and 37 Star drills. Considering the number of drills out of service owing to changing steel, resetting, repairs, and other causes, about

one-third of these drills will be in operation at one time, and they alone will require over 30,000 cubic feet of free air per minute. For economical operation the drills require a pressure of at least 85 pounds. In order to keep the excavating plant in continuous service it is necessary at present to operate the drills all day and part of the night in Culebra Cut. If this were not done the work of blasting rock in advance of the steam shovels could not be carried on rapidly enough to keep the shovels constantly at work.

## Spillway of Gatun Dam.

In the spillway of Gatun Dam, the work at present consists in placing concrete in the retaining walls below the site of the spillway dam, facing the rock sides, and laying the floor south of the spillway dam. The height of the walls below the dam has been increased from 20 to 25 feet and the base from 8 to 12 feet. The facing of the rock sides of the spillway cut, south of the dam, has been commenced and the placing of the floor is about half completed. The floor is about one foot thick, as it will be subjected to pressure only from above. At its south end, it follows the sloping rock down until stiff blue clay is encountered. When the concrete work is completed, the trench for uncovering the sloping rock will be filled with impervious material, level with the remainder of the floor. The plans for the spillway dam are nearing completion.

## Improvements at Gatun.

The new commissary, near the depot at Gatun, was opened on August 2. It was practically finished several days ago, with the exception of wiring the building, and com-

pleting the ice boxes. One of the two type-18, 24-room bachelor quarters is completed, and the other is well under way. A survey of the ground for the new Commission clubhouse was made on July 13. Landscape work is being done around the Gatun hotel, one of the features being the grouping of foliage plants to form, on a large scale, the letters "Q. M. D." The work of excavation at the site of the reservoir is in progress.

## Changes at Old Station Sites.

The completion of the new station at Colon has made the old passenger shed of no further use, and it has been torn down to give additional space for park purposes. The new Colon park, which is steadily being improved, adjoins the site of the old shed on the east, and will be considerably enlarged by the additional space thus afforded. The spur railroad track that entered the shed from the north has been removed, and the concrete floor will be displaced to make room for a new concrete walk which will be laid along the west side of the park. The site will be bedded with plants, and otherwise beautified.

The old station at Cristobal will not be removed, but the buildings will be used by the Panama Railroad commissary as a vegetable and fruit market. A lateral portion of the concrete platform will be cut away, in order that a third railroad track can be laid, which will give a double freight track at this point. The rest house, which is across the road from the old station, will not be moved, as in its present position it is convenient for the women going to and from Cristobal, and also for women employes of the Commissary.

## MAXIMUM RAINFALL.

The appended table shows the maximum rainfall for different periods of time, that has fallen on the Isthmus since observations began. It shows that the maximum rainfall for a period of five minutes is 0.75 inches, and that it occurred at Rio Grande, between 2.10 and 2.15 p. m., on July 24, 1908. The maximum for one hour is 5.86 inches, at Balboa, between 4 and 5 p. m., June 2, 1906. The maximum for one day is 8.82 inches, and occurred at Bobio, between 12.45 p. m., August 7, and 9.05 a. m., August 8, 1908.

STATION.	Period of observation—Years.	MAXIMUM RAINFALL.					
		For 5 minutes.		For 1 hour.		For 1 day.	
		Inches.	Date.	Inches.	Date.	Inches.	Date.
Ancon .....	4	.64 (5.40 to 5.45 p. m.)	Aug. 7, '08.	2.89 (5.35 to 6.35 p. m.)	Aug. 7, '08.	3.18 (9.30 p. m., 25, to 6.45 p. m., 26.)	June 25-26, '07.
Balboa .....	4	.63 (6.05 to 6.10 p. m.)	Aug. 7, '08.	5.86 (4 to 5 p. m.)	June 2, '06.	7.31 (12 m., 16, to 10 p. m., 17.)	Nov. 16-17, '06.
Pedro Miguel .....	1	.60 (11.45 to 11.50 a. m.)	Nov. 11, '08.	3.30 (1.28 to 2.26 p. m.)	Aug. 27, '08.	4.15 (1 to 6.20 p. m.)	Dec. 29, '08.
Rio Grande .....	3	.75 (2.10 to 2.15 p. m.)	July 24, '08.	2.57 (1.40 to 2.40 p. m.)	Oct. 16, '07.	5.58 (8.07 p. m., 2, to 10.17 a. m., 3.)	Dec. 2-3, '06.
Culebra .....	4	.64 (12.45 to 12.50 p. m.)	May 2, '08.	3.69 (1.15 to 2.15 p. m.)	Oct. 16, '07.	4.70 (9 a. m. to 4.45 p. m.)	June 21, '07.
Empire ....	4	.60 (2.45 to 2.50 p. m.)	July 25, '06.	2.79 (2.40 to 3.40 p. m.)	Oct. 17, '07.	6.15	Dec. 3, '06.
Bas Obispo .....	4	.53 (5.49 to 5.54 p. m.)	Nov. 14, '07.	3.14 (4.35 to 5.35 a. m.)	Aug. 27, '07.	4.53 (8 p. m., 26, to 2.20 p. m., 27.)	Aug. 26-27, '07.
San Pablo .....	1	.60 (1.33 to 1.35 p. m.)	Oct. 29, '08.	3.10 (1.20 to 2.20 p. m.)	Oct. 29, '08.	3.55 (1 to 8.20 p. m.)	Oct. 29, '08.
Tabernilla .....	1	.47 (2.05 to 2.10 p. m.)	Aug. 18, '08.	3.09 (2 to 3 p. m.)	Aug. 18, '08.	4.17 (1 to 7 p. m.)	Oct. 29, '08.
Bobio .....	4	.67 (1.53 to 1.58 p. m.)	June 16, '09.	4.51 (3.50 to 4.50 p. m.)	Aug. 7, '08.	8.52 (12.45 p. m., 7, to 9.05 a. m., 8.)	Aug. 7-8, '08.
Gatun .....	3	.61 (12.31 to 12.36 p. m.)	July 16, '08.	2.98 (12.16 to 1.16 p. m.)	July 16, '08.	10.48	Dec. 3, '06.
Cristobal .....	5	.44 (1.20 to 1.25 p. m.)	Aug. 10, '08.	4.59 (3.59 to 4.59 p. m.)	Nov. 3, '08.	8.47 (4.40 p. m., 2, to 8.24 a. m., 3.)	Dec. 2-3, '06.
Porto Bello .....	1	.64 (7.35 to 7.40 p. m.)	Aug. 7, '08.	3.77 (7.05 to 8.05 p. m.)	Aug. 7, '08.	6.78 (7.15 a. m. to 11 p. m.)	Nov. 20, '08.
Alhajuela .....	4	.50 (2.05 to 2.10 p. m.)	Oct. 24, '07.	2.98 (12.25 to 1.25 p. m.)	Aug. 10, '08.	8.19	Dec. 3, '06.

## PACIFIC DIVISION WORK.

**The Laying of Concrete at Pedro Miguel Locks Will Soon be Started.**

It is expected that concrete work in the west chamber of the Pedro Miguel Locks will be started before September 1, 1909. The excavation in the west chamber has been completed, with the exception of digging the trenches for the lateral culverts. The culvert forms used at these locks will be largely of wood, and, as they are manufactured on the Isthmus, will be available on short notice.

The west storage trestle extending along the forebay of the locks has been completed, with the exception of laying the rail for the track along the deck of the trestle. The piling of the east storage trestle has been extended the full distance, and the deck construction is now under way. The Porter engines, which are to be used in hauling material from the mixing plant to the lock site, are ready for use, but the dump cars have not yet been assembled, although they are on the spot. A steam shovel is now engaged in finishing the work of cleaning up the floor of the forebay. A cypress tank, with a capacity of 50,000 gallons, is under construction on the west bank of the Canal, in close proximity to the handling plant. It will furnish all the water to be used in the lock construction and will be supplied with water pumped from the Rio Grande, a short distance away.

Excavation was continued at the Miraflores Locks, and considerable progress was made during July. The *Sandpiper* is still engaged in pumping material into the core of the west dam, but was laid up for repairs at times during the month. In soft material, the dredge can make good progress, but where it is now working, patches of rock are frequently encountered, often causing a breakdown. On Cocoli Hill, trenches are being dug to enable the hydraulic fill in the dam core to obtain a good anchorage. The west toe of the dam was raised several feet during the past month by dry fill. Cocoli Lake, the waters of which this dam impounds, remains stationary at about 35 feet above sea level, the surplus continuing to waste into the Rio Grande. The surface of the lake has been oiled to prevent the incubation of mosquitoes, but owing to decay of the vast amount of vegetable growth left standing when the lake filled, an offensive odor is emitted.

The cement shed, west of the Miraflores Locks, will be entirely completed by August 15, and is far enough advanced to receive the cement shipments coming to the Pacific Division. The concrete floor is practically finished, and the work of installing the handling cranes is in progress. The 87,144 bags of cement brought to the Isthmus by the steamer *Ancon*, arriving at Colon, July 31, will be stored at the Miraflores cement shed. The bulk of the shipment in bags will be taken by the Pacific Division, and that in barrels by the Atlantic Division. This will obviate the necessity of a barrel-burning plant in the Pacific Division.

At the Miraflores power house, work on the superstructure is well advanced, and the foundations for the fan gallery have been completed. The switchboard has been set up, and one turbo-generator is practically in place. The brick work in the two batteries

of boilers has been completed as far as the superheater.

The transmission system will consist of two pole lines, one extending to the Pedro Miguel Locks, a distance of one mile and a half, and the other, to the Ancon quarry site, a distance of 4½ miles. Each poleline will carry two 4-0 copper wires, over which a current will be transmitted, equivalent to 2,200 volts. The Pedro Miguel line is about completed, while the Ancon quarry line has been finished as far as the Panama railroad track to Balboa.

**Sailing of Steamship "Ancon."**

The Panama railroad steamship *Ancon* will sail for New York, from Pier No. 1, Colon, on Sunday, August 8, at 1 p. m. The attention of persons expecting to leave by this boat is especially called to the fact that it will sail at 1 p. m., instead of at the usual hour of 3 p. m.

**Vacation Leave and Medal Service.**

THE CANAL RECORD:

Will you kindly answer these questions for me?

If a man wishes to resign his position at the end of his second vacation, while in the States, does his resignation take effect at the end of the six weeks while he is only paid for five weeks, or are the seven days consumed in returning taken from his time served as well as from his pay?

Is his vacation counted as time in earning a medal and can he receive his money and medal in the States? EMPLOYE.

Cristobal, July 25, 1909.

[If an employe desires to resign at the expiration of his second vacation, while in the United States, his resignation takes effect at the expiration of the full period of the six weeks granted him, but he is paid only for the period of his leave, minus 7 days. He is, however, given time for the full period of his leave in calculating his service for a Canal Medal. If, at the expiration of his leave, he has been in the service two years, he may be paid for the period of his leave, minus 7 days, in the United States, and his name will be entered on the list for a Canal Medal.]

**Launch Service to Taboga.**

The steamer *Sanidad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p. m. in time to make connections for the 5.30 train at Panama.

## EXECUTIVE ORDER.

**Administration of Estates.**

By authority of the President of the United States it is ordered:

That the authority of the Collector of Revenues under act No. 24 of the laws of the Canal Zone, entitled "An act providing for an inexpensive method of Administration upon the Estates of employees of the Government of the Canal Zone, or of the Isthmian Canal Commission, who are citizens of the United States and who die in the Canal Zone, Isthmus of Panama, leaving estates of small value upon which regular administration is deemed inadvisable," enacted by the Isthmian Canal Commission, March 1, 1905, be, and the same is hereby extended to include all estates of the character described in said act as amended by the Executive Order of June 22, 1907, which do not exceed in value the sum of \$1,000.

J. M. DICKINSON,  
Secretary of War.

WAR DEPARTMENT,  
WASHINGTON, D. C.,  
July 21, 1909.

**New Steamship Service of the United Fruit Company.**

The new steamship *Atenas* of the United Fruit Company is expected to sail from New Orleans on August 21. This ship, together with the *Abangarez* and *Turrialba*, will constitute a direct line of steamers between New Orleans and Colon, sailing from New Orleans every Saturday at 11 a. m., arriving at Colon on Thursdays at 7 a. m., sailing from Colon on Tuesdays at 3 p. m., arriving at Limon on Wednesdays at 6 a. m., whence they sail at 8 p. m. the same day, arriving at New Orleans on Mondays at 8 a. m.

Effective August 3, 1909, the United Fruit Company instituted a new service between New Orleans and Central American ports. The steamships *Cartago*, *Heredia* and *Parismina* will sail from New Orleans every Tuesday for Bocas del Toro via Belize, Porto Barrios and Limon, and will carry mail and passengers for Belize, Porto Barrios, Limon and Bocas del Toro, and freight for Limon and Bocas del Toro. Returning via Limon, Porto Barrios and Belize with mail and passengers from all points, and carrying any passengers left at Limon by steamers from Colon on Wednesdays for Porto Barrios and Belize.

**STATEMENT OF CLASSIFIED EXPENDITURES TO MAY 31, 1909.**

The following table shows expenditures for Canal work, classified monthly, since July 1, 1908. The figures give only expenditures which have been located. In addition, there have been some disbursements, such as purchasing material, etc., which it will not be possible to locate to a specified account until their use has been finally determined:

Period.	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	Municipal Improvements.	Plant Account.	Total.
Prior to July 1, 1907. ....	\$1,446,407.73	\$4,636,630.37	\$13,410,795.01	\$4,296,732.98	\$19,345,697.87	\$43,136,263.96
Fiscal year 1908. ....	704,610.15	2,310,212.01	16,680,660.46	1,494,956.41	11,684,215.15	32,874,654.18
Fiscal year 1909:

## COLON PASSENGER STATION.

New Concrete Terminal Building Recently Completed.

The new terminal passenger station of the Panama Railroad Company at Colon, was opened on Friday, July 23. It is located on Front street, between Seventh and Ninth streets, about midway between the old Colon and Cristobal stations, and extends over the greater part of two blocks, with the main entrance on Eighth street. The structure consists of the station proper, 19 feet by 442 feet, 22 feet high, with a tower at Eighth street, 20 feet by 40 feet, 43 feet high; a covered platform 20 feet by 720 feet, and an open platform 10 feet by 700 feet. Ten feet of the 20-foot covered platform for its entire length, 720 feet, and 420 feet of the 10-foot open platform, together with 1,140 feet of track, are enclosed by an 8-foot iron picket fence, providing room within the enclosure for a train consisting of an engine and fifteen 70-foot coaches. A picket gate at each end of this enclosed train yard controls the entrance and exit of trains. Passengers alighting from trains reach the station or street through turnstile exits in the fence, and passengers boarding trains enter from the station through four gates, where their tickets are punched by gate tenders.

In general, the style of architecture is old English, the type being pronounced in the castellated battlements which crown the cornice at both ends of the building, and in the center of the south and longest section. The construction is permanent throughout. The tower, including the interior arches, is of reinforced concrete. The walls of the main building are made of concrete blocks 9 inches high, 31 inches long, and 12 inches wide, resting on a concrete foundation and wall four feet high. The roof of the building proper is arched, being built of semicircular steel trusses and steel purlines. The dome in the tower consists of a half cylinder with axis parallel to that of the station and intersected at right angles at each end by a quarter cylinder of the same diameter. The cornice work and trimmings throughout are of concrete. The total floor space within the station proper, is 7,375 square feet. Lettered on the frieze of the main façade are the words "Panama Railroad Company," and in the center underneath, the year "1909."

The street entrance for passengers consists of two arched openings, 9 feet wide and 19 feet high, leading to the vestibule, 20 feet by 40 feet, located in the base of the tower. The south entrance is for first-class, and the north entrance for second-class passengers. In the vestibule, on the side next to the track, is the ticket office, the approach to which is guarded by iron railing regulating the movements of first and second-class passengers. In the southeast corner of the room is an office for the sale of steamship tickets. The news stand will occupy a space between the two main entrances.

Passenger trains are made up on the Panama Railroad with first-class coaches in front and second-class in the rear. On outgoing trains, this places the first-class coaches at the south end of the train. The waiting room for first-class passengers was therefore located south of the entrance, so as to be nearest to that part of the train,

while on incoming trains, passengers in the first-class coaches will detrain close to the carriage exits.

Both the first-class and second-class waiting rooms are connected with the vestibule by high arched entrances. Both waiting rooms are identical in size, 45 feet by 17 feet, and both have ample toilet accommodations. The first-class waiting room contains one single and three double high-backed seats, accommodating 40 persons, while the room for the second-class passengers contains one single and five double seats. The rooms are well lighted, there being eight windows on the street side in the first-class, and nine in the second-class. The walls in these rooms, as well as in the vestibule, are kalsomined a shade of blue, with a dark brown base border.

The baggage room is 197 feet 6 inches long, and occupies the south end of the depot. A commodious locker is located in one end for express and other valuable packages, and there is a long row of shelving on each side for hand baggage and parcels. Two double sliding doors open on the station platform. Business with the general public is transacted through a counter window, 15 feet long, about midway of the room. The baggage section is lighted by 20 windows on the street side, two at the south end, and 14 on the track side. The north portion of the station is occupied by the Central & South American Cable Company, who have a space 88 feet long.

The station platform is of concrete construction, 20 feet wide, and extends a distance of 720 feet, or from Seventh street to Ninth street. The roof of the platform is of "butterfly" type, commonly used in train shed construction, the eaves being uptilted at an angle of 21 degrees. This is to prevent dripping from the eaves, the water during rains wasting into a gutter in the center of the roof. From the south end of the station platform, a 10-foot concrete walk continues all the way to the Eleventh street crossing at Cristobal, and will serve to divert a portion of the foot traffic from the crowded east side of Front street. Entrance to the train shed is through four gates in the picket fence, directly opposite the Eighth street entrances, while exits are made through six turnstiles, three double turnstiles near the north end of the station opening on the carriage yard, one at the end of the passenger shed at Seventh street, one opening on Sixth street, and a single turnstile at the end of the picket fence enclosure near Fifth street.

The track space in the train yard is 14 feet wide, and is separated from the two freight tracks on the west by the 8-foot iron picket fence mentioned above, which also encloses 10 feet of the platform.

The space allotted to carriages occupies a recess in the curb lines at the north end of the station, near Seventh street, and is 28 by 183 feet. The cart yard is located at the south end, near Ninth street, convenient to the baggage room, and occupies a similar recess, 18 feet by 100 feet. An agreement has been reached between the municipal authorities of Colon and the Panama Railroad Company, whereby traffic on Front street will only be allowed to move northward. All carts and vehicles going southward must use Bolivar street, or Bottle Alley, and if they have business on Front

street they must reach their destination by one of the cross streets.

The station is lighted by 115 Tungsten electric lamps, 25-watt. On the outside, above the lettering on the main façade, there is a row of 26 lights, 18 inches apart, running along the cornice. Around the inside of the vestibule there is a similar row. The station platform is lighted by 23 lights, six of which burn all night.

### Aliens Going to the States.

The Department of Commerce and Labor has called the attention of the Panama Railroad Steamship Company to the circulars published herewith. The General Manager of the company has directed all ticket agents to be careful to see that the requirements of the Immigration Service are complied with. The circulars follow:

DEPARTMENT OF COMMERCE AND LABOR,  
IMMIGRATION SERVICE,  
OFFICE OF THE COMMISSIONER,  
NEW YORK, N. Y., June 10, 1909.  
TO ALL STEAMSHIP LINES BRINGING ALIENS TO THE  
PORT OF NEW YORK:

In certain rare instances the Department of Commerce and Labor may hold that special reasons exist why an alien afflicted with tuberculosis, or a loathsome or dangerous contagious disease, should be allowed to land solely for the purpose of receiving medical treatment in the United States. But any steamship company which contemplates bringing an alien to the port of New York for such purpose must, if it desires to avoid incurring the fine of \$100 referred to in section 9 of the Immigration Law, apply to the Department for permission in advance of its proposed action. Such application must be made through the Commissioner of Immigration at Ellis Island, and as a part thereof there must be stated with precision the precautions which will be taken to isolate the diseased alien on the voyage and to prevent the spread of contagion amongst the other passengers. Unless satisfactory assurances accompany the application, it will be futile to make it, and if assurances be given which are not carried out, the fine of \$100 will be imposed, even though the Department, for humanitarian reasons, may decide that the alien should be allowed to land and receive treatment.

WILLIAM WILLIAMS, Commissioner.

### NOTICE CONCERNING INDIGENT IMMIGRANTS.

NEW YORK, N. Y., June 28, 1909.

Certain steamship companies are bringing to this port many immigrants whose funds are manifestly inadequate for their proper support until such time as they are likely to obtain profitable employment. Such action is improper and must cease. In the absence of a statutory provision no hard and fast rule can be laid down as to the amount of money an immigrant must bring with him, but in most cases it will be unsafe for immigrants to arrive with less than \$25 (besides railroad ticket to destination), while in many instances they should have more. They must in addition, of course, satisfy the authorities that they will not become charges either on public or private charity.

Only in instances deemed by the Government to be of exceptional merit will gifts to destitute immigrants after arrival be considered in determining whether or not they are qualified to land, for, except where such gifts are to those legally entitled to support (as to wives, minor children, etc.), the recipients stand here as objects of private charity, and our statutes do not contemplate that such aliens shall enter the country.

WILLIAM WILLIAMS, Commissioner.

### Allen is Acquitted.

The trial of Charles P. Allen, of Empire, charged with the killing of Eugene H. Kingsley, on the night of June 12, 1909, was held in the court of the Second Judicial Circuit at Empire, before Judge Wesley M. Owen, on July 28 and 29. The case was given to the jury at 6.15 p. m., on the 29th, and at 11.50 p. m., a verdict of "not guilty" was returned.

LOST—In Empire, on Friday, July 30, a string of gold beads. A reward will be paid for its return to Miss Harriet Richardson, House 25, Empire, C. Z.

## ANCON INSANE ASYLUM.

## Additions to Ancon Hospital Wards for the Insane.

The steady increase in the number of inmates at the Ancon insane asylum has made an enlargement of the institution necessary. Plans have been prepared, approved, and the contract awarded, for two new wards for the male patients, a dining room, and attendants quarters. The asylum originally provided for 200 patients, but this number has been greatly exceeded. The supplementary wards will take care of 104 additional patients, making the total ward capacity of the institution, when the new improvements are completed, approximately 305.

The new buildings, with the exception of the attendants quarters, are to be located on the lower side of the Ancon road, opposite, but a little to the east of the present grounds, and only a few hundred feet distant from the new corral site. The attendants quarters will be built on the upper side of the road, adjacent to, and east of the fenced enclosure. Both ward buildings are to be of two stories, and in construction, the usual type of Commission architecture will be followed. Between the two buildings, and connected with them by a covered and screened passageway, will be a one-story building, part of which will be used as a dining room for the inmates, and the rest as an office and sleeping quarters for the head nurse.

Each of the ward buildings will be 78 feet long by 24 feet wide, and will have a 7½ foot veranda extending from both floors on the front and rear sides, and the outward end. There will be two stairways to each building, an end stairway for the ordinary use of patients and attendants, leading from the first to the second floor inside the veranda space, and an outside emergency stairway in front. Access to the latter stairway will be gained through doors opening on platforms extending from each floor. The upper dormitories will have 21 windows each, opening on the verandas, and two doors, one opening to the regular, and the other, to the emergency stairs. The lower dormitories have the same number of windows as the upper, with one door opening on the emergency stairs, and the other for passing out to the dining room. Each of the four dormitories will have room for 26 beds, and on each floor there will be a toilet room 10½ by 18¾ feet, containing two shower baths, and a linen room 10½ by 5½ feet, fitted with shelves.

The one-story building containing the dining room will be 60½ feet long, and 31½ feet wide, with a 7½ foot veranda in front. The dining room will be 40 feet long, 31½ feet wide, and will accommodate eight tables, around which 130 persons will be able to sit at one time. The office, and sleeping quarters for the head nurse, which will occupy one end of the building, will be identical in size, 15¾ by 14¾ feet. In addition, there will be a linen room, toilet, and shower bath, while a specially constructed drug cabinet will be installed on one side of the office.

The attendants quarters will be a one-story building, 95 feet long, and 20 feet wide, with a 5½ foot veranda in front. The

dormitory will have 16 windows, and provision has been made for 30 beds. There will also be two store rooms, each 7¾ by 8 feet in size, and a toilet room with shower baths in the rear. Entrance will be by a flight of steps at the end of the building looking toward the present grounds.

A type-17 house, for use of the physician in charge, located on a knoll in front of, and across the road from the asylum buildings, is now under construction, and will be completed within the next 10 days. The contract for erecting the new ward buildings, dining room, and attendants quarters was awarded, by the Quartermaster's Department, to Herman Bolten at \$5,484, the Commission furnishing all materials at the site, and the contractor providing all labor. The grounds surrounding the new ward buildings will be enclosed with a 9-foot wire fence, and it is contemplated to eventually construct a bridge over the road, thus connecting the old with the new reservation. The total number of buildings belonging to the institution, when the new ones are completed, will be 19.

On April 15, 1905, when the temporary hospital for the insane was opened at Miraflores, the list of patients numbered only 18. On October 24 and 25, 1907, when the transfer from Miraflores to the present site at Ancon took place, the number of the inmates had increased to 120. The greatest increase for any twelvemonth was during the fiscal year ending June 30, 1908, when an even 100 patients had been added. Of the 120 transferred from Miraflores, 73 were still at the asylum on June 30, 1909, while 47 had been discharged, or deported, or had died. Out of the number discharged, 10 recoveries were reported. The record of inmates at the close of each fiscal year since the asylum was organized, is as follows:

DATE.	Number.	Place.
June 30, 1905.....	28	Miraflores.
June 30, 1906.....	65	Miraflores.
June 30, 1907.....	79	Miraflores.
June 30, 1908.....	179	Ancon.
June 30, 1909.....	254	Ancon.

During the month of June, 1909, there were 21 admissions, and 10 discharges. The system of dividing the patients into classes, in vogue at the main hospital, is also employed at the asylum. These classes are known as 1, 2, 3, 4, and 7. Class 1 is confined to employes engaged for the Isthmian service in the United States, and there were none of these at the asylum on June 30. There were 29 patients belonging to Class 2, which included gold and silver men employed by the Commission on the Isthmus, both white and colored. There were 7 inmates included in Class 3, which applies to Panama railroad employes. Class 4 refers to pay patients, and included 142 inmates paid for by the Panama Government, 5 private pay cases, and 6 miscellaneous, a total of 153. Class 7 includes Zone charity patients, which numbered 65 at the end of June.

Under the "Taft Agreement," of December 3, 1904, the United States agreed to accept for treatment at hospitals to be established on the Isthmus, insane and leprosy persons, and the indigent sick of the Republic of Panama, when the request for admission was made through the proper official channel. Under this arrangement 142 persons were being cared for at the An-

con insane asylum on June 30, 1909, at the rate per day of 75 cents gold per capita. This amount covers medical treatment, care and subsistence, and the small quantity of clothing the patients require. A monthly report of these pay patients is made on a form furnished for the purpose by the Panama authorities, and settlement is made accordingly. Requests for admission of patients usually come only through the alcaldes of Panama and Colon, and the governors of the various provinces.

By far the greater number of the inmates are natives, either of the Republic of Panama, or of the West Indian islands. Some effort has been made to deport charity patients to the countries from which they came, but without much success. There was no difficulty in getting them off the Isthmus, but in most instances, the countries for which they were destined refused them entry. There have been some cases, however, where the countries have consented to the patient's return, even though domiciled here prior to February 26, 1904. Americans are sent back to the United States with as little delay as possible. The following table shows the nationality and sex of the asylum inmates, as of June 30, 1909:

Country.	Male.	Female.	Total.
Panama.....	26	30	56
Jamaica.....	51	35	86
Barbados.....	21	9	30
Martinique.....	9	7	16
Spain.....	14	1	15
Colombia.....	10	4	14
St. Lucia.....	3	4	7
St. Vincent.....	3		3
Venezuela.....		1	1

Greece.....	1		1
Ireland.....	1		1
Japan.....	1		1
Norway.....	1		1
United States.....	1		1
Total.....	157	97	254

There were 116 inmates that had been in the asylum for more than one year. Most of these cases show a chronic tendency, although some of the long-time patients eventually improve sufficiently to leave the asylum. The mildly insane are permitted to go about the grounds, the men being employed at cutting grass, and doing other odd jobs, while the women perform the rougher part of the laundry work. Last year the patients maintained a garden from which a fair crop of vegetables was raised. This year the climatic conditions have been unfavorable. The age of the inmates, according to decades, was as follows:

Age.	Number.
From 10 to 20 years.....	9
From 20 to 30 years.....	96
From 30 to 40 years.....	84
From 40 to 50 years.....	45
From 50 to 60 years.....	13
From 60 to 70 years.....	3
From 70 to 80 years.....	4
Total.....	254

The oldest inmate in the hospital, on June 30, was 80 years of age, and the youngest, 14.

## SOCIAL LIFE OF THE ZONE.

### Women's Clubs and Other Features.

The Gatun Woman's Club has received a gift of 64 books for a children's library, from the Woman's Club of San Antonio, Texas. Among them are books of essays, poems, and standard story books for the older children; biographies, stories of adventure, and a number of fairy books for smaller readers. The library will be kept in the schoolhouse and opened twice a week for exchange of books, under the supervision of the president of the club or her assistant.

This is the second children's library to be opened by the women's clubs, the first having been established in Cristobal in 1908. In May of the present year, the Las Cascadas club donated a sum of money for the purchase of a library for the benefit of the children of the town. Several of the public schools have libraries, the money for the purchase of which has been raised by entertainments given by the children; there are also libraries in connection with the Protestant Sunday schools in Ancon and Panama.

The Ancon Woman's Club has purchased a number of books from the nurses' library at Ancon Hospital. A number of books have been donated and these, together with the purchase just made, increase the number of volumes to 300.

At a special meeting of the Pedro Miguel Woman's Club on Wednesday July 28, the following officers were elected to fill vacancies caused by removals from the Isthmus: Mrs. Walter Jennings, vice-president; Mrs. E. L. Brown, secretary; Mrs. Mark White, treasurer. The business meeting of the club will take place on the afternoon of August 4, when a full attendance is desired. The next social meeting is scheduled for August 11.

A board meeting of the Cristobal club was held at the call of the president, Mrs. H. J. Slifer, on Monday afternoon, July 26, when the work for the year was outlined and discussed. A calendar committee was appointed to prepare the year-book. The home department will hold a Christmas bazaar, early in the season, for the sale of inexpensive novelties for the holidays.

The first exhibit of the Cristobal Camera Club was opened at the Commission clubhouse in Cristobal, on Friday evening, July 23, and continued several days. Between 250 and 300 photographs were exhibited, and included views of the Isthmus from Taboga to Porto Bello. The Camera Club was organized in April, 1909. The executive committee is composed of the following members: Leroy E. Burdge, instructor and director; J. W. Dibrill, secretary; Wm. J. Owens, treasurer; Mrs. J. D. Williamson, Mrs. L. E. Burdge, M. J. Stickel, and L. B. Cundiff. The club has a membership of 79. Women are admitted free. Excursions to historical and interesting points on the Isthmus form the social feature of the club.

The semiannual meeting of the Isthmian Sunday School Association, with election of officers, was held in the Gorgona clubhouse on the afternoon of Sunday, July 18. Representatives from the twelve Sunday schools operated under the organization were present. The following officers were chosen:

S. H. Harrison, Corozal, president, (re-elected); J. C. Foreman, Empire, vice-president; L. C. Vannah, Corozal, secretary; H. McConaughy, Gorgona, treasurer. A teachers' training course will be instituted, and Mr. J. F. Warner of Culebra was selected to organize and superintend the work.

Mr. J. Wesley Holland, monologist and impersonator, gave an entertainment at the Cristobal clubhouse on Tuesday evening, August 3. Mr. Holland recently gave an evening's program in the dining room of the Commission hotel at Corozal, under the auspices of the Sunday school, which was largely attended.

### PERSONAL.

Mr. Howard H. Jackson and Miss Aimee J. Moore were married at St. Luke's church, Ancon, at 4.30 p. m., on Saturday, July 31. The Rev. Wm. Cross officiated.

### Obituary.

Joseph Hague, of New York City, died of heart disease at Empire on Tuesday, July 27, 1909. He was unmarried, had been on the Isthmus two months, and lived at Empire. His sister, Mrs. N. DuBois lives on Sherman Avenue, Fort Wadsworth, New York City.

### Missing Men.

Information is desired in regard to the following men:

Anson A. Perley, of Troy, N. Y., who was last heard from at Hoboken, N. J.

George Edward Harvey, 20 years old, who left home March 10, 1909, stating he was going to Panama. His mother, Mrs. Francis Trip is anxious to locate him.

George J. Allen, who is believed to be employed on the Isthmus. His father has recently died, and his sister wishes to communicate with him.

Anyone having knowledge concerning any of these men is requested to communicate with the American Minister at Panama.

### Entertainment at Ancon Lodge Hall.

The Rev. J. H. Holland will give a reading at the Ancon lodge hall, on Saturday evening, August 7, under the auspices of the Pacific Masonic Club. There will be no charge for admission, and a cordial invitation is extended to residents of Ancon and vicinity.

### Independent Order of Panamanian Kangaroos.

Cristobal Court No. 8, Independent Order of Panamanian Kangaroos, held an entertainment and reception for its members, their families and friends, at the Cristobal Lodge Hall, on Friday evening, July 30. Entertainment was furnished by Mr. Richard Coleman, of Panama, assisted by various members and visitors. After refreshments had been served, the reception closed with an address on "Kangarooism," by L. D. Drake.

### Oil Company Moves Office.

The local office of the Union Oil Company has been moved from the building, corner of Avenue A and Sixth street in the city of Panama, to the company's plant at Petrolia. A section of a portable building formerly at the Mount Hope plant has been brought across the Isthmus, and will be the new office quarters.

## COMMISSION CLUBHOUSES.

### Activities of the Young Men's Christian Association.

The "College Girls Trio" a musical organization from Boston, brought to the Canal Zone by the Y. M. C. A., returned to the States on Friday, July 30. The company appeared before Isthmian audiences fourteen times, seven concerts being given in Commission clubhouses, and entertainments at Porto Bello, Gatun, Camp Elliott, Paraiso, Pedro Miguel, and Ancon. About three thousand people attended the concerts.

The next attraction that will be brought from the States will be the "Hearons Sisters." The company, consisting of four young ladies, will arrive about September 1, and will give a program made up of orchestra numbers, readings, violin solos, string quartet numbers, Japanese sketch, etc.

### EMPIRE.

The Gorgona Dramatic Club will present at the Empire Y. M. C. A., on Tuesday evening, August 17, the three act farce comedy entitled "Captain Racket." Members, admission complimentary; general admission, 50 cents. Reserved seats will be on sale, Tuesday, August 10.

The July duck pin tournament resulted as follows: First high average, George Herring, 92.25; second high average, Frank Cohen, 90.25. Winner of tournament, G. E. Gustafson, 15 games; second place, F. L. Gorham, 13 games. Sixteen players were entered in the tournament, and each man played sixteen games.

The boys' department of the Empire and Culebra Y. M. C. A. made a trip to the Mandinga River, on Monday, July 26, and spent the day in fishing, swimming, and other outdoor sports. About thirty boys constituted the party, in charge of Secretaries Ludwig and Kramer.

Will any person finding a gold bead necklace please return same to the secretary of the Empire Y. M. C. A.

### GORGONA.

The medals for the duck pin tournament have arrived and have been presented to the following:

First prizes—Gold medals: F. G. Swanson, H. A. McConaughy.

Second prizes—Silver medals: W. J. Humphreys, H. A. McConaughy.

Third prizes—Bronze medals: H. D. Burnham, Ray King.

The following medals has been presented to winners of the pool tournament: Gold medal—E. A. McInerny; silver medal—L. P. Robitoy; bronze medal—J. H. Reichard.

The game of indoor baseball between Culebra and Gorgona, Saturday night, July 31, resulted in a victory for Gorgona, the score being 16 to 21.

The Gorgona Dramatic Club will give a farce comedy in three acts entitled "Captain Racket," on August 14. The cast is as follows:

Capt. Robt. Racket, A. J. Sweet; Obadiah Dawson, D. E. Hayes; Timothy Tolman, F. M. Chelf; Mr. Dalroy, D. G. Hayes; Holson, Henry Snyder; Clarice, Mrs. Henry Snyder; Mrs. Tolman, Mrs. D. E. Hayes; Katy, Mrs. O. H. Kunce.

The Club will give entertainments as follows: Empire, August 17; Culebra, August 20; Camp Elliott, August 23; Cristobal, August 28. The Club expects to appear at Ancon also, but the date has not yet been decided on.

### Concert by I. C. C. Band.

CULEBRA, C. Z.,

Sunday, August 8, 1909, at 5.30 p. m.

#### PROGRAM.

- 1 March—*Second Conn.*.....Reeves
- 2 Selection—*A Stubborn Cinderella*.....Howard
- 3 Waltz—*Die Grafenberger*.....Gungl
- 4 Dance of the Nile Maidens.....Losey
- 5 Selection—*The Merry Widow*.....Lehar  
(By request.)
- 6 { *a—Anvil Chorus* (by request).....Verdi  
  *b—La, La, La*.....Scotto
- 7 Porto Rican Dance—*Rosita*.....Missud
- 8 Selection—*The Grand Mogul*.....Luders  
(By request.)
- 9 Medley—*Glow Worm*.....La Farge
- 10 March—*Festal Day*.....Roux

OLIVER KIMBALL, Director.

The next concert will be given at Cristobal, Wednesday, August 18.

### Commissary Hours.

The hours during which commissaries are open are as follows:

Cristobal, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.  
Culebra, 8 a. m. to 12.30 p. m.; 2.30 p. m. to 7 p. m.  
All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

## OLD AND NEW GATUN.

## Last Vestiges of Former Village Disappear as Operations Advance.

The last traces of the village of Gatun, as it existed when the Americans came to the Isthmus in 1904, are being wiped out, as the building of Gatun Dam advances. The office building along the old line of the Panama railroad was razed about the middle of July by the laborers who are stripping the ground in advance of the hydraulic fill, and the water in the fill is rapidly rising toward the houses in the negro settlement, between the storage piles and the old railroad station. This hamlet is within the limits of the Dam, and its site will eventually be covered. As the old village disappears, the new Gatun on the hills overlooking the site of the Dam and Locks grows larger. It is now one of the largest settlements in the Canal Zone.

The native village of Gatun was located on a peninsula formed by a big loop which the Chagres River formerly made at that place. It was a well known landing place for boats navigating the Chagres. At the time the surveys were made for the Harrison map, the village was protected by a fort located on the hill that rises to 120 feet above sea level just south of the spillway of Gatun Dam. On the Panama railroad map, published in 1855, Gatun is shown as a hamlet of about a hundred houses. The railroad station and a few shacks alongside it had also been erected at that time on the east bank of the river.

Dr. F. N. Otis in his Handbook of the Panama Railroad, written in 1861, says: "On the opposite shore of the river stands the ancient native town of Gatun, which is composed of forty or fifty huts of cane and palm, and situated on the edge of a broad savanna that extends back to a range of hills a mile or two distant. This place is worthy of mention as a point where, in the days by-gone, the bongo-loads of California travelers used to stop for refreshment on their way up the river; where 'eggs were then sold four for a dollar, and the rent for a hammock was two dollars a night.'"

In 1881, the French began operations at Gatun, setting dredges and excavators at work, and erecting a machine shop. A laborers' village was established, with quarters for five hundred men, and later, Gatun was made a residency.

When the Americans arrived in 1904, Gatun was the center of a comparatively large river trade. Bananas and other produce from the Gatun, Trinidad, and Chagres Rivers were brought there for transshipment by rail, and for sale. Once a week, a shipment of from seven to nine carloads of bananas was made, and on the shipping day, as many as a hundred cayucas would tie up at Gatun. The village on the island consisted of a dozen stores, a church, and seventy or more native huts. The negro settlement near the railroad station, known as the "Cite de Lesseps" numbered about 50 shacks, and there were nine other buildings near the station. The only vestiges of the French village were the negro shacks and one house constructed of French material, and later occupied as an office by the Americans.

The new Gatun commands a view of the Lock and Dam sites on the west, and on the north looks out toward Limon Bay, giving a glimpse of the shipping in the harbor and

the dredges at work in the north entrance to the Canal. In construction it is a typical Canal village. In addition to the hotel, post-office, office buildings, fire station, meeting hall, hospital, school and corral, it includes 25 family quarters for one family each; 24 quarters for four families; 11 bachelor quarters of 8 rooms each; 5 bachelor quarters of 24 rooms each; 33 barracks for laborers; 6 family quarters for laborers.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea-level for the week ending midnight Saturday, July 31, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gambosa.	Bohio.	Gatun (Canal).	Gatun (W. D.).
Height of low water ab. m. an sea-level, ft.	125	92	46	1	0	0
Maximum height ab. mean sea-level, feet:						
Sunday, July 25....	127.0	93.9	49.7	7.5	3.6	3.1
Monday, July 26....	128.6	94.9	50.4	6.7	3.0	2.5
Tuesday, July 27....	128.4	94.8	50.2	7.7	3.0	2.7
Wednesday, July 28..	127.2	94.2	50.0	8.3	3.5	3.1
Thursday, July 29....	127.5	94.1	49.3	7.2	3.5	3.1

The following steamers have recently arrived at Balboa: July 25, *Ecuador*, from Guayaquil; July 26, *Limari*, from Southern ports; July 28, *Quito*, from intermediate ports; July 29, *Washtenaw*, from Port Harford, Cal. Departures were: July 25, *Barracoula*, for Central America; July 27, *Aysen*, for Southern ports; July 30, *Washtenaw*, for Port Harford, Cal.

## OFFICIAL CIRCULARS.

## Shipments to Employees.

CULEBRA, C. Z., July 27, 1909.

CIRCULAR No. 186E:

In future, the instructions on Form 164 C. E., Revised, respecting the entry free of customs duty of shipments consigned to employees, will be strictly enforced.

Employees who receive shipments without having previously presented a formal request for their free admission on Form 164 C. E., may leave them in the hands of the transportation company until a request on that form is approved by the Panama Government, but if duty is paid on them, either by the employee or the transportation company, the Panama Government will not be asked to make a refund.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Longevity Increases.

CULEBRA, C. Z., July 26, 1909.

CIRCULAR No. 258A:

The rate per cent of longevity increases allowed to any employee of the Commission as of June 30, 1909, will be allowed him in any position to which he may after June 30, 1909, be assigned by change of status or transfer, so long as his service remains continuous in positions heretofore carrying longevity.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Acting Executive Secretary.

DEPARTMENT OF CIVIL ADMINISTRATION,

ANCON, C. Z., July 27, 1909..

EXECUTIVE OFFICE CIRCULAR No. 88:

During the absence on leave of Mr. H. D. Reed, Executive Secretary, Mr. George A. Ninas is designated Acting Executive Secretary.

JO C. S. BLACKBURN,  
Head of Department of Civil Administration.

## Proposals for Buildings.

Contract buildings. Sealed proposals, for labor only, will be received at the office of the Constructing Quartermaster, Culebra, until 3 p. m., August 4, 1909, and then opened, for the erection by contract of a schoolhouse and a market at Gatun. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of \$5. Fifty dollars must be deposited with the proposal and \$200 when the contract is signed.

C. A. DEVOL,  
Chief Quartermaster.

## Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending July 31, with supplies for the Isthmian Canal Commission:

*Panama*, July 25, from New York, with 180 kegs track bolts; 128 rolls wire netting; 170 kegs rivets; 56 ranges; 1,000 garbage cans; 3,000 barrels cement; for stock; 137 steel forms for Pacific Division; 200 tower knuckles for Division of Motive Power and Machinery; and a miscellaneous cargo aggregating 5,809 packages, weighing 940 tons.

*Prinz Aug. Wilhelm*, July 27, from New York, with 2,000 gallons cylinder oil, 100 barrels flour; 6,000 pounds sal soda, for stock; and a miscellaneous cargo aggregating 205 packages, weighing 23 tons.

*Mercian*, July 28, from Liverpool, with 250 barrels carbolic acid for manufacture of larvacide.

*Abangarez*, July 29, from New Orleans, with 12 cables for unloaders; 7 cables for steam shovels; 40 cases steel for drills at Porto Bello; 11,385 feet B. M. lumber for car repairs; 15,450 gallons kerosene oil; 18,603 feet B. M. lumber; 50 sets dump cart harness; 76½ tons hay; 55 reels wire rope; 2,500 gallons dynamo oil; 3 packages pipe fittings, for stock.

*Ancon*, July 31, from New York, with \$7,144 bags cement for Pacific Division; 21,348 barrels cement for Atlantic Division.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., August 4, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Bettley, Mrs. W. J.	Leonard, Corp'l Jos. J.
Brown, John	MacGiagan, Mr.
Corpus, John D.	Matthews, Robert
Downs, Sylvester	Miller, M. N.
Finley, Mrs. C. M.	Narcross, Dr. D. N.

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, AUGUST 11, 1909.

No. 50.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employees of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

## NOTES OF PROGRESS.

### Canal Medals.

A letter from the Washington office of the Commission states that the first of the Canal medals will be ready for distribution late in August, or early in September.

### Canal Work in July.

The grand total of Canal excavation during the month of July was 2,843,260 cubic yards, which is 52,533 cubic yards less than the total for June, and 1,037,077 less than the highest record, that of March, 1909. Of the 2,843,260 cubic yards, 2,792,477 were charged to "Work" construction and 50,783 to "Plant." The amount removed from the Canal prism was 2,779,559 cubic yards. There were taken out by steam shovels 1,684,663 and by dredges 1,107,814 cubic yards. There were 26 working days during the month, the same as in June. The mean rainfall for the month in the territory in which excavation was in progress was 10.66 inches as compared with 11.85 inches the previous month.

In the Atlantic Division the total excavation was 469,887 cubic yards, 124,775 more than were removed in June. Of this total 121,436 cubic yards were removed by steam shovels and 348,451 by dredges. In addition to the latter amount the dredges in this division worked in deepening the channel and approaches to the docks of the Panama Railroad Steamship Company at Cristobal, which is not counted as Canal excavation. There were 6,330 cubic yards of concrete laid in the spillway during the month.

The total excavation in the Central Division was 1,443,094 cubic yards, 77,881 less than were removed in June. Of this total 1,195,173 cubic yards were taken from the Culebra Cut, 233,897 from the Canal prism elsewhere than in the Cut, and 5,655 from the Obispo Diversion, which is outside the Canal prism.

In the Pacific Division the total excavation was 930,279 cubic yards, 99,427 less than were removed in June. Of this total

121,239 were removed by steam shovels and 759,363 by dredges.

The detailed statement of excavation in the three divisions follows:

### ATLANTIC DIVISION.

LOCALITY.	"Work." Excavation.	"Plant." Excavation.	Total excavation
	cu. yds.	cu. yds.	cu. yds.
Dry excavation—			
Locks, Dam and Spillway.....	39,058	.....	39,058
Mindi.....	82,378	.....	82,378
Total.....	121,436	.....	121,436
Wet excavation—			
Locks, Dam and Spillway.....	348,451	.....	348,451
Total.....	348,451	.....	348,451
Total wet and dry excavation.....	469,887	.....	469,887

### CENTRAL DIVISION.

All dry excavation—			
Culebra Cut.....	1,195,173	2,712	1,197,885
Chagres section.....	233,897	5,657	239,554
Obispo Diversion.....	5,655	.....	5,655
Total.....	1,434,725	8,369	1,443,094

### PACIFIC DIVISION.

Dry excavation—			
Locks, Dams and Spillway.....	121,239	42,414	163,653
Diversions.....	7,263	.....	7,263
Total.....	128,502	42,414	170,916
Wet excavation—			
Pacific entrance.....	733,181	.....	733,181
Miraflores Locks.....	26,182	.....	26,182
Diversions.....	.....	.....	.....
Total.....	759,363	42,414	759,363
Total wet and dry excavation.....	887,865	42,414	930,279

### TOTAL CANAL EXCAVATION.

Dry excavation.....	1,684,663	50,783	1,735,446
Wet excavation.....	1,107,814	.....	1,107,814
Total.....	2,792,477	50,783	2,843,260

Mean rainfall along Canal (twelve stations) 10.66 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

### New Bread Ovens at Cristobal Bakery.

The ovens recently installed at the Cristobal bakery for the baking of French, Vienna, or rye bread were built by the Duhirkop Oven Company, of New York City, and are being operated at their full daily capacity with satisfactory results. The brick-work is 17½ feet wide, 32½ feet long, 8½ feet high, and rests upon a solid concrete base level with the second floor of the bakery, supported by piers of reinforced concrete.

The ovens are faced with white enameled brick, the other sections being constructed of ordinary brick, painted white, and are equipped with two baking chambers, 12½ by 14 feet in size, surrounded by five air-

tight chambers, which furnish an even distribution of heat. These chambers are in turn heated by a system of hot air flues which radiate from the furnace to various parts of the ovens. Steam from the power plant, used to prevent undue drying of the bread, and to give the Vienna loaves their familiar glossy appearance, is conveyed into the baking compartments by means of pipes.

The capacity of the new ovens is 740 loaves of French, or Vienna bread, at one baking. They are also largely used in the making of the native style of bread, 1,215 loaves of which can be handled at one time. It requires about 25 minutes for the baking process, so that the capacity for the entire day of eight hours is approximately 12,000 loaves of French, or Vienna bread, and about 19,500 loaves of the native bread. The French and Vienna bread is supplied to the commissaries and Commission hotels, while the native bread is furnished to the mess kitchens for European and West Indian laborers.

In addition to the new ovens, the two reel ovens which were placed in the plant when it was first established, are still turning out their day's quota of pan bread. They each have a capacity of 816 loaves at one baking, or a combined total of about 25,000 loaves per day.

### New Public Market at Gatun.

A public market will be built at New Gatun, which will be practically of the same size and general appearance as the one at Cristobal. The building will be of lattice work construction, 16 feet long and 64 feet wide, surrounded by a cement walk, nine feet wide. There will be 16 stalls, each 8 by 8 feet in size. The openings will be provided with sliding doors, moving up and down. There are eight markets in the Canal Zone at the present time, the new one at Gatun making the ninth.

### Money for Canal Construction.

The tariff act, which was approved by the President on August 5, authorizes a bond issue of \$290,569,000, in addition to the \$84,631,900 heretofore issued for Canal construction. The Urgent Deficiency Act approved the same day authorizes the President to enter into such contracts, not exceeding the amount of the bond issue authorized, as may be necessary to complete the Canal and harbors.

The act of June 28, 1902, authorizing the construction of an Isthmian Canal, provided for the issue of \$130,000,000 worth of bonds, and also limited the amount that could be appropriated for the Panama Canal to \$135,000,000, in addition to \$10,000,000 for preparatory work, \$40,000,000 for the property of the New Panama Canal Company, and a sum to be agreed upon to be paid to the Republic of Colombia. Under this authority there had been expended for Canal

## NOTES OF PROGRESS.

(Continued.)

work up to May 31, 1909, \$104,177,884.86, and in addition, the \$40,000,000 had been paid to the New Panama Canal Company, and \$10,000,000 to the Republic of Panama, a total of \$154,177,884.86. The appropriations available up to June 30, 1909 amounted to \$176,332,468.58, and the amount appropriated for the current fiscal year is \$33,638,000. Expenditures for Canal work have been paid from bonds aggregating \$84,631,900, and money advanced from the miscellaneous funds of the Treasury.

The bond issue authorized by the law of August 5, 1909 brings the amount authorized for Canal work up to \$375,200,900. The amount estimated by the Commission in December, 1908, as necessary to complete the lock level canal, was \$375,201,000.

**Recreation Hall at Corozal.**

Plans have been prepared and approved for a recreation hall at Corozal, which will be a one-story building, 90 feet long, and 28 feet wide, with a small addition in the rear, 10 by 12 feet in size, to be used as a store room. The site has not been fully determined, but the committee in charge of the matter will recommend a location a short distance back of the Panama railroad station, on the Corozal-Panama wagon road.

The building will rest on wooden piers with concrete bases, and in order to secure more privacy, the floor will be five feet from the ground, instead of three feet, the regulation height. The hall plans follow the open pavilion style of construction, with walls extending only three feet from the floor, the rest of the space being merely screened in. There will be no veranda, and the roof will have a 10½-foot projection all around.

A section of the front end of the hall, 16 by 28 feet in size, will be partitioned off for use as a reception hall and sitting room. Two entrances, provided with folding doors, will open from this room into the assembly hall, at the far end of which will be a stage. The hall has a length of 55 feet to the stage and is 28 feet wide. The stage has a depth of 13 feet, and is three feet from the floor, with a row of footlights in front. Entrance to the hall from the outside will be through a doorway opening on a flight of steps. There will be a ladies' room at one side, back of the stage, and a kitchen on the opposite side. Entrance to these rooms will be gained either directly from the stage, or by steps leading up from the assembly hall to doors opening into them, one on each side of the stage. There will also be a doorway from the kitchen into the store room, which will have an outside entrance as well.

**Triangulation Survey.**

A triangulation survey of the Canal Zone has been authorized, and will be made by the Third Division of the Chief Engineer's office. The triangulation work already done at various points along the line of the Canal, will be utilized as far as possible. A series of triangles was run some time ago from Limon Bay to Gatun, another series from Panama Bay to Pedro Miguel, and some triangulation has been done in the territory of the Central Division. It is proposed to spread a primary net across the Isthmus, consisting of a series of triangles and quad-

rilaterals. From the lines thus established, a number of secondary points will be located at intervals along the Canal Zone.

Precise levels were run across the Isthmus in the summer of 1908. Final adjustment of these will be made about September 1, 1909, when a sufficient automatic tidal record will be available.

**Soap Making at Ancon Laundry.**

A soap making branch has been added to the Ancon laundry. Heretofore, the laundry has used white chipped soap imported in barrels, at a cost of about \$14.40 per barrel. Under the new arrangement tallow is produced from the meat scraps collected at the Ancon Hospital kitchen, to which is added caustic soda in the proportion of 30 pounds of soda to 90 pounds of grease. This mixture is placed in a vat over a steam coil and reduced to the proper gelatinous consistency. It is then run into other vats where water, double in quantity to that of the mixture, is added. The finished product when cooled becomes hard, and in color, perfectly white, making an excellent soap for white clothes. It has not yet been made into bars, but this will be done as soon as moulds are manufactured. The cost of installation was small, and with the present facilities it is possible to make 200 gallons of soap at one time, enough, not only to keep the laundry supplied, but to furnish the entire hospital demand as well. Concentrated lye can be used in lieu of caustic soda, but the latter is somewhat cheaper in price and better adapted to soap making. The value of the soap used at the laundry was formerly \$6 per day. Under the new arrangement, the quantity of soap used daily costs but \$1, representing a daily saving of \$5.

**Changes at Ancon Laundry Plant.**

The 90-horsepower locomotive type Nagel boiler, formerly a part of the motive equipment used by the old Division of Building Construction in the operation of its Ancon wood working plant, has been moved to the west side of Ancon laundry. In its former position, the boiler supplied steam for the laundry, but owing to loss in the pipes on account of condensation, a change in location was decided upon. The boiler also furnishes steam to the Ancon Laboratory, and for the operation of the Quartermaster's sawmill.

**Colored Young Men's Institute.**

The new rest house at Culebra for colored employes, mentioned in THE CANAL RECORD of July 7, will be known as the Colored Young Men's Institute, and is to be located on the west side of the Panama railroad, near the negro church. It will be a one-story frame building, 31½ feet long and 50 feet wide, and will contain a recreation room, 20 by 31½ feet in size, a billiard room, 15 by 20 feet, a reading room, 16 by 20 feet, and janitor's quarters consisting of two rooms with toilet. The furnishing of the building is provided for.

**Additional Dump Cars.**

One hundred new Western dump cars have arrived on the Isthmus, for use by the Atlantic and Pacific Divisions, and on the relocation of the Panama railroad. They will be erected at the Panama railroad shops in Cristobal. These cars are of the same type as the 200 recently delivered on the Isthmus, and embody the improvements

suggested by work on the Canal. Their rated capacity is 12 cubic yards, but for purposes of car measurement they are considered as 10-yard cars on the Canal work.

**A New Larvacide.**

In its work of destroying mosquito larvae the Department of Sanitation has begun the manufacture of a larvacide and disinfectant which can be made at less cost than the patent "oil" or larvacide that is now used, and by actual test has been found more uniform in results than the preparation purchased in the States. The equipment for manufacture consists of a mixing tank containing a steam coil, a boiler for supplying steam, and a storage for chemicals. Crude carbolic is the base and it is mixed with water, caustic, and other chemicals which are dissolved in the steam heated tank. The cost of production including materials, fuel, and labor is about 16½ cents a gallon, as compared with from 30 to 40 cents paid for the larvacide purchased in the States. The new larvacide is applied by sprinkling over the surface of the water. It has the same advantage over oil as the larvacide now used, in that it mixes with the water and so cannot be blown over the surface.

**Rise in Rio Grande Reservoir.**

The first notable rise in the Rio Grande reservoir during the present rainy season resulted from the heavy rain in the afternoon of July 20, which extended practically over the entire watershed. The elevation of the surface of the water in the reservoir was 220.79 feet above sea-level in the forenoon of July 20, and on July 21 the water was at an elevation of 223.37 feet, an increase of 2.58 feet and of approximately 26,000,000 gallons. Heretofore during the season, although there have been frequent showers over the watershed, they have not been of sufficient extent to add materially to the height of water in the reservoir. There has been a slow rise, however, since June 18, when the elevation was 218.08 feet above sea-level, the lowest stage of the year. The low stages of all years in this reservoir since 1906 are as follows:

Date.	Elevation.
June 10, 1907.....	213.95
May 1, 1908.....	223.97
June 18, 1909.....	218.08

**Removal of District Quartermaster's Office.**

The office of the District Quartermaster at Cristobal has been moved from building No. 12, opposite the commissary, to building No. 304, in the same building with the Quartermaster's storehouse, about 300 yards south of the Cristobal commissary on the main line of the Panama railroad. The building formerly used by the District Quartermaster will be converted into family quarters.

**Negro Laborers for Canal Work.**

An order has been sent to the recruiting agent in Barbados to have 1,200 negro laborers ready to sail for the Isthmus on the cement ship *Ancon* which is scheduled to leave New York on August 19.

**French Rail at Bohio.**

More than two thousand 60-pound French rails have been picked up and stored along the bank of the Chagres River at and near Bohio. They have been collected for use in reinforcing the concrete in Gatun Locks.

## COMMISSION ACTION.

## Questions Determined at the Meeting on August 6.

At the meeting of the Isthmian Canal Commission on August 6, the following action was taken:

## FAMILY QUARTERS OF EMPLOYEES ON LEAVE.

Family quarters may be held, with the approval of the Chairman, for the full period of any extended leave of absence with pay which may be granted to the employee to whom quarters are assigned; and that family quarters may be held for 56 days during the absence, either of the employee to whom they are assigned, or his family, or of both simultaneously, provided that this privilege shall not be granted for more than one period of 56 days in any service year. If vacated the second time during the service year either by the employee, his family, or both simultaneously, quarters will be held for not more than 42 days. This rule supersedes in part the rules governing the assignment of married quarters adopted by the Commission at its 130th meeting.

## RULES FOR LEAVE OF ABSENCE.

It was decided that any employee whose resignation is accepted to take effect at the expiration of a leave of absence with pay, and who shall have completed two years satisfactory service on that date, may be paid for such leave, less seven days, regardless of where such leave may be spent. The resolution of the Commission adopted at its 129th meeting was amended accordingly.

The case of a clerk, who had been granted leave of absence for 42 days, and was prevented from reporting for duty within 15 days after the expiration of his leave owing to the delayed departure from New York, change in route so as to stop at Barbados, and detention in quarantine of the steamer *Cristobal*, was considered. It was decided that the case was not one which warranted an exception to the regulations, which provide:

Employees are expected to report for duty on the expiration of their authorized leave; the additional fifteen days, return within which will preserve their right to pay during leave, being intended to cover all contingencies, and not to be considered additional leave without pay.

## PAY FOR OVERTIME WORK.

That, effective September 1, 1909, hourly employees who are citizens of the United States will be paid time and one-half for work over the eight hour day; all other hourly employees will be paid time and one-half for work over ten hours in one day. All hourly employees will be paid time and one-half for all work on Sundays and holidays.

## NO HOLIDAY PAY FOR SILVER EMPLOYEES.

The Chairman called attention to the fact that, by resolution adopted by the Commission at its 118th meeting, American employees in skilled trade occupations and paid on an hourly basis were allowed pay for certain holidays, in accordance with the practice prevailing in the Government service of the United States with respect to employees similarly employed. By resolutions adopted by the Commission at its 129th meeting, this gratuity pay was extended to all employees, including laborers, whose compensation is fixed on an hourly basis.

After discussion, in which it was pointed out that the gratuity pay to hourly men on the silver roll alone amounts to about two

hundred and twenty thousand dollars per annum, the following resolution was adopted:

That hereafter all hourly employees on the so-called silver rolls, who are not citizens of the United States, will not be allowed gratuity pay for holidays. The resolution of the Commission adopted at its 129th meeting is amended accordingly.

## Old Ruins in Cocoli Lake.

Standing out of the submerged area covered by Cocoli Lake, about 300 yards from the west toe of the Miraflores Dam, are the ruins of an old building, similar to the ruins of the church of Santo Domingo in Panama, and to those of the ancient cathedral in old Panama. The roof of the structure is entirely gone, but a portion of the walls still remains, reaching in some sections to a height of 15 or 18 feet. The building has the appearance outwardly of having been used as a monastery, and the people in the vicinity speak of it as such. Grape vines have been found on the lands adjacent to the ruins which have tended to this belief, as it is known that in the sixteenth century monks transplanted the vine from Spain, but with poor success. There is nothing in the ecclesiastical records of the bishopric of Panama to indicate that a monastery was ever established at this point, and Padre Antonio Sanguillen, the Presbyter, states that he never heard of it during his long period of service here. Within comparatively recent times, the lands surrounding the ruins became the property of a Scotchman named Mackenzie, who, it is stated, set out the extensive grove of mango, orange, and other fruit trees, which the waters of Cocoli Lake have now partly submerged.

## P. R. R. Steam Shovels.

The steam shovels at work on relocation of the Panama railroad are handicapped, so far as making high records is concerned, because they are doing pioneer work, and also because the equipment for hauling away the spoil has not been sufficient to work the shovels at their full capacity. A statement of the work performed by the steam shovels during the past nine months follows:

PERIOD.	Total output.		Average No. steam shovels.	No. of working days.	OUTPUT PER SHOVEL.	
	Cu. yds.	Cu. yd.			Per day.	Per month.
November, 1908....	37,625	2.92	24	537	12,885	
December, 1908....	43,187	2.77	26	600	15,591	
January, 1909.....	57,356	3.45	25	665	16,625

June, 1909.....	65,170	4.94	26	507	13,192	
July, 1909.....	108,017	4.92	26	844	21,955	

## Removal of Sunken Lighter.

Ash lighter No. 4, of the Pacific Mail Steamship Company, was sunk on June 15 last, in the Canal channel at Balboa, parallel to, and about 50 feet away from caisson No. 5 of the angle wharf. The vessel was lying in 17 feet of water at low tide with one end buried in the mud, forming an obstruction to the prosecution of operations in the Canal prism. Under the Act of Congress, 30 days are allowed shipowners to remove sunken vessels that may have become a menace to navigation. The time having elapsed in the present instance, the Pacific Division undertook the work of raising the boat, which was successfully accomplished

on Wednesday, July 28. The boat was about 60 feet long, and had been in use for many years. Her plates were so badly rusted that they came away when subjected to the strain of the hawser, and in one of the vessel's water compartments growing oysters were found. The lighter was disposed of by towing it about 200 yards, and again sinking it near the Naos Island breakwater.

## Col. J. R. Shaler.

## THE CANAL RECORD:

There are a large number of old-time employees with the Panama Railroad Company, who from time to time, ask after Col. J. R. Shaler, who for a number of years was General Superintendent of the railroad company. We have just received the following information from Colonel Shaler's brother, and I would be obliged if you will kindly print it for the information of the various people with whom Colonel Shaler was associated in the past.

H. J. SLIFER.

Colon, August 6.

I write to thank you for the information you sent me as to my brother's connection with the Panama Railroad Company, and also, for the kind inquiries about him. He generally lives near me in Indianapolis, Ind., but just now is staying in Ocean City where I make my summer home. He suffers from sclerosis of the arteries, another name, I suppose, for old age, as he is in his 79th year. He is unable to walk without assistance, but is up and dressed every day, has a good appetite, sleeps well and seems cheerful. His memory, except for events in his early life, is entirely gone. His wife died on December 29th last; he did not know it at the time, and does not realize it now. Fortunately he is cheerful and is able to communicate his wishes to us generally, although at times it is difficult for him to do so.

I am told that he may live some time, but might at any time yield to some ailment that, except for his age and condition, would be trifling.

## Postal Employees Meet.

The postal employees of the Canal Zone to the number of 46 held a reunion at Ancon on Sunday, August 8. All of the 17 Canal Zone postmasters and postmistresses were present, with one exception, that of the postmistress at Porto Bello. Before the gathering broke up the members of the party were grouped in front of the court of the new Administration building at Ancon and photographed.

## Gamboa Engine House and Yard.

Work was started on Monday, August 9, on the new engine house and yard to be located on the Gamboa dump, about 1,000 feet east of the Gamboa bridge. The contract for the construction of the engine house, oil house, cinder pit, and coaling platform has been awarded to James Wilson, who is to furnish all labor, and the Commission all material.

The steamer *Cristobal*, made its first voyage from Colon to New York in 6 days and 15 hours. It left Colon on July 15.

## Tug Service Porto Bello and Nombre de Dios

Effective, August 8, 1909: The following is the schedule for tug service between Cristobal, Porto Bello and Nombre de Dios:

Sunday: Leave Dock 13, Cristobal, 6.30 p. m. for Porto Bello only; returning same day.

Monday: Leave Dock 13, Cristobal, after arrival of Train 2, for Porto Bello and Nombre de Dios; returning same day.

Tuesday: Leave Dock 13, Cristobal, after arrival of Train 2, without tow, for Porto Bello only; returning, leave Porto Bello 2.15 p. m., without tow.

Wednesday: Leave Dock 13, Cristobal, after arrival of Train 2, for Porto Bello and Nombre de Dios; returning same day.

Friday: Leave Dock 13, Cristobal, after arrival of Train 2, for Porto Bello and Nombre de Dios; returning same day.

Saturday: Leave Dock 13, Cristobal, after arrival of Train 2, for Porto Bello only; returning, leave Porto Bello 5.30 p. m.

There were also 172 cubic yards removed by steam shovels outside of the prism during October, 1908.

## MEAT FOR CANAL WORKERS.

## Amount Used—Nature of Contract, Storage and Distribution.

Meats of various classes were delivered on the Isthmus in the fiscal year, 1909, for Canal workers and their families in the following amounts:

	Pounds.
Fresh meats.....	5,167,627
Cured and pickled meats.....	963,633
Poultry.....	399,562
Canned meats.....	437,842
Total.....	6,968,664

This does not represent the total amount of meat consumed, because the Panamanian and Canal Zone markets supply a small amount to the laborers not in Commission quarters. A small part of the whole was used by United States naval vessels on the Central American station, and by the battalion of marines at Camp Elliott. On the basis of 40,000 people supplied by the Subsistence Department, the average daily amount of meat consumed per person in 1909 by Canal and Panama railroad workers and their families was about one half a pound. About 30 per cent was sold to families, and the remainder was served at the hotels for gold employes, messes for European laborers, and kitchens for negro laborers.

Fresh meats are bought under an annual contract entered into after competitive proposals have been received. The contractor agrees to furnish beef, veal, lamb and mutton at a certain percentage above or below a base price. This base price is the average of the prices paid for the ten lots of cattle that bring the highest prices on the Chicago market on the Monday of the week in which the purchase is made, or if Monday is a holiday, on the next market day. Monday is made the standard because it is the day on which the largest sales are made on the Chicago exchange. None of the ten lots used as a basis may consist of less than ten animals, and the minimum number of animals in the ten lots may be not less than 125. The price is obtained by averaging the prices for the ten lots. Fresh pork and sausage are bought in the open market.

The carcasses are inspected by agents of the Department of Agriculture and then are placed in refrigerator cars and transferred in New York to the cold storage rooms of the Panama railroad steamships. They are unloaded at Cristobal into refrigerator cars and delivered at the cold storage plant. Except when the meat is transferred to and from the ships it is in rooms where the temperature is never higher than 30 degrees Fahrenheit. During more than four years transporting meat in this way no considerable quantity has reached the Isthmus unfit for use as food. At present the contract for fresh meat is held by Swift & Company, and Armour & Company. This contract expires on September 30. The contract was held for three years and a half by Morris & Company.

Six hundred carcasses can be stored in the Cristobal cold storage plant at one time. Each morning meat is sent along the line of the Canal in refrigerator cars. Meat for the hotels, messes and labor kitchens, and for the commissaries at Gorgona, Empire, Culebra, and Balboa, is delivered in quarters; and that for other points is cut at Cristobal and delivered ready for cooking.

The relative quantities of fresh meat used

is shown by the following statement of importation for the year ending December 31, 1908:

Kind.	Pounds.
Beef, No. 1.....	802,719
Beef, No. 2.....	3,737,395
Lamb.....	62,115
Veal.....	275,565
Mutton.....	238,794
Beef ribs.....	124,129
Pork loins.....	240,527
Beef tenderloins.....	6,045
Beef livers.....	27,673
Sirloin butts.....	53,921
Hog carcasses.....	3,533
Calves livers.....	243
Calves sweet bread.....	100
Beef sweet breads.....	1,000
Veal sweet breads.....	200
Suckling pigs.....	357
Total.....	5,574,316

Canned, cured, and pickled meats are contracted for quarterly. Poultry is brought to the Isthmus frozen and kept in that state until delivered. Chicken comprises the greater part, but turkey, duck, goose and squab are also imported.

## Special Staterooms on "Ancon," "Cristobal" and "Allianca."

The officials of the Panama Railroad Steamship Company announce that an extra charge will be made for staterooms Nos. 1 and 2 on the *Ancon* and *Cristobal*. These staterooms have private bath and toilet attached. Number 1 is the forward stateroom on the starboard side and Number 2 is the forward stateroom on the port side. An extra charge of \$25 for employes, and \$50 for non-employes, will be made for these staterooms in addition to the regular fare to and from New York.

An extra charge of \$20 will also be made for suites A, B, C, D, and of \$10 for suite E on the *Allianca*, all of which have private bath and toilet.

## Special Rates for Voyage to David.

The following rates have been made by the National Navigation Company of Panama for employes of the Isthmian Canal Commission or Panama railroad between Panama and David.

These rates will be given only to employes presenting authority issued by the office of the Chairman. The trip takes four days during which several ports are entered.

Ticket for one person—one way \$30, less 10 per cent.....	\$27 silver.
Ticket for one person—both ways \$60 less 25 per cent.....	\$45 silver.
Tickets for a family of four to occupy one stateroom of four berths. To go and return—each person.....	\$40 silver.
Children of 3 years of age and less.....	Free.
Children of 4 years of age to 8 years, each.....	½ fare.
Children of 9 years of age to 12 years; each.....	½ fare.
Children over 12 years of age.....	Full fare.

## Storage Charges.

The General Manager of the Panama Railroad Company wishes to call the attention of employes and other persons interested, to the fact that a charge of five cents gold per day per package is made for each package that remains in the care of the transportation company over forty-eight hours after receipt; and all persons are notified that if they neglect to claim their shipments when they receive notice that such are ready for delivery, they will be charged storage.

## Money Order Convention with Martinique.

Money orders may now be purchased at Canal Zone post-offices for transmission to Martinique, under a convention entered into by the United States and France, effective August 1, 1909. The administrative details are not perfected, but the orders

will be issued if demand is made for them. A list of the offices at which orders will be made out and paid has been sent to Martinique, and a similar list will probably be received in the Canal Zone in September.

Under the terms of the convention the orders issued in Martinique must be made out in French, with the amounts expressed in terms of American currency, at the rate of 19 4-10 cents to one franc. No order for less than one cent or five centimes nor for more than \$100, or 500 francs will be issued. Orders sold in the Canal Zone will be made out in English with the amount expressed in terms of American currency. The fees to be charged will be fixed and kept by the administration issuing the order.

## Little Damage to the "Colon."

The Panama railroad steamship *Colon* caught fire at 3 p. m., on August 3, while alongside her dock at New York. The cause is thought to have been a hot rivet falling into a bale of oakum. The fire was out at 4.30 o'clock the same afternoon. The ship was uninjured and sailed from New York at 3 p. m., on August 5 for Cristobal.

## Ancon Odd Fellows.

Ancon Hall has been assigned to Ancon Club I. O. O. F., for Thursday evening of each week. The next meeting will be held August 12 at 8 p. m. All members and others interested in the formation of an Odd Fellows lodge in Ancon are invited and requested to attend.

## Missing Men.

Information is desired in regard to A. W. Hood and G. C. Hood of Atlanta, Ga. They left home in October, 1908, and nothing has since been heard from them. Anyone having knowledge concerning either of these men is requested to communicate with their mother, Mrs. G. W. Hood, 85 Central Avenue, Atlanta, Ga.

## Shovel and Dredgemen.

The I. B. of S. S. and D. M. will hold their monthly meeting in the I. C. C. lodge hall, Empire, on Sunday, August 15, at 2 p. m. All members are requested to attend.

S. I. LYONS,  
Secretary and Treasurer.

## Fire Station at Bas Obispo.

Sealed proposals, for labor only, will be received at the office of the Constructing Quartermaster, Culebra, until 3 p. m., August 21, 1909, and then opened, for the erection by contract of a Fire Station at Bas Obispo. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of \$5. Fifty dollars must be deposited with the proposal and \$50 when the contract is signed.

C. A. DEVOL,  
Chief Quartermaster.

## Concert by I. C. C. Band.

CRISTOBAL, C. Z.,  
Wednesday, August 18, 1909, at 8.15 p. m.

## PROGRAM.

- 1 March—*Second Conn.*.....Reeves
- 2 Selection—*Florodora*.....Stuart  
(By request.)
- 3 Waltz—*Gaile*.....Waldteufel
- 4 Dance of the Nile Maidens.....Eosey
- 5 Selection—*The Grand Mogul*.....Luders  
(By request.)
- 6 Chilian Dance—*Manana*.....Missud
- 7 Medley Overture—*Haviland's Harmonies*.....Halle
- 8 { *a*—*Moonlight in Dixie*.....Clement  
  { *b*—*La, La, La*.....Scotto
- 9 Selection—*Erminie*.....Jakobowski  
(By request.)
- 10 March—*Festal Day*.....Roux  
OLIVER KIMBALL, Director.

The next concert will be given at Las Cascadas, Sunday, August 29.

## BUENA VISTA AND BOHIO.

## Steam Shovel and Hand Excavation—Task Work.

The farthest north of the steam shovels of the Central Division is excavating at Buena Vista about a mile and a half south of Bohio. At present the excavation is confined to two hills that jut into the prism of the Canal east of the Panama railroad tracks, containing 93,164 and 59,326 cubic yards of earth and rock, respectively. Where the shovel is now operating the material is clay and conglomerate, and heavy blasting is necessary to prepare it for handling. Three locomotives and 67 ten-yard dump cars serve the shovel and haul the spoil to Gatun Dam, a distance of ten miles. Two well drills are kept constantly at work preparing the ground for blasting. About 3,000 feet of loading and running tracks have been laid. The force consists of about eighty men, and includes a grading gang.

Between the railroad track and the Chagres River is a low ridge of earth that must be cut down to 40 feet above mean sea-level. The excavation will amount to about 3,000 cubic yards and will be by hand. In order to do this work it will be necessary to move eight native shacks that are in the prism and located on the ridge. As it will be several years before the water of Gatun Lake covers this locality, no effort will be made to move the settlers to permanent homes.

On the west bank of the river at Buena Vista a hill containing about 105,000 cubic yards, almost wholly rock, lies partly within the prism of the Canal and above the 40-foot level. To take out this material it will be necessary to build a trestle across the river and over part of the lowland on the west bank. A steam shovel will do the excavating and the material will be dumped on the toes of Gatun Dam.

By substituting a 3-degree curve for the angle on the east line of the Canal prism at Bohio, about 11,000 cubic yards of excavation have been avoided. At this point the channel will be 1,194 feet wide in the turning basin.

At Bohio the work is also divided by the river, on the east bank of which about 65,000 cubic yards of material remain to be excavated and on the west side about 230,000 cubic yards. Of the 65,000 cubic yards on the east bank about 28,000 cubic yards are rock, and will probably be excavated by steam shovel and wasted at Gatun Dam. The ridge on the west bank of the river is opposite the fluviograph and is almost wholly rock. A trestle will be built across the stream and a steam shovel will be set at work. This spoil also will probably be placed in Gatun Dam.

The remainder of the work at Bohio, and between there and Gatun, is being done by hand. About  $\frac{3}{4}$  mile north of the village at the end of the French canal, and at Peña Blanca, a half mile farther north, a gang of 200 laborers is excavating low ridges by pick and shovel and using eighty Decauville cars. At Bohio the material is largely from an old dump made by the French, and the track and cars used were left there when the old French Company suspended work in 1888. The spoil is dumped into the old canal and a diversion ditch a few hundred feet east of it. This work is done on the task system at the rate of 9 cents a car of about 18 cubic feet each. There remain to be excavated

by hand at Bohio about 37,000 cubic yards. At Peña Blanca the work is also done by the task system and there remain to be taken out 8,400 cubic yards, out of a total of 10,000 cubic yards.

At Mile 10, opposite Tiger Hill, a small knoll which contained 437 cubic yards of material has been excavated. There now remains between Gatun and Peña Blanca only one piece of excavation, and that is a small amount near Mile 15, a short distance north of Bohio.

## Horse and Carriage Sale.

At the horse and carriage sale held at Ancon Corral, on Tuesday, July 20, four Victorias, two surreys, three horses, and four sets of harness were auctioned to private parties. The four Victorias brought \$855; the two surreys \$170; the horses \$352.50, and the harness \$95, a total of \$1,472.50 being realized from the sale, from which \$11.04 is to be deducted for advertising expense, leaving \$1,461.46, net proceeds. There were still remaining to be sold at some later date, five carriages, one surrey, and nine sets of harness.

## Tug Boat Overdue.

The tug boat, which the Bayano River Lumber Company ordered from Seattle some time ago to be used in towing the shipments of native lumber, mention of which was made in THE CANAL RECORD of July 14, is thought to be lost, as the boat is now several weeks overdue. The last heard from the vessel was shortly before it left San Francisco to start south under its own steam. The secretary of the company has advised the Quartermaster's Department, that the first shipment of lumber on the recent orders will be made at once by sailing schooner.

## Funeral of Mrs. W. S. Grant.

The remains of Mrs. Wm. S. Grant who died at Gatun on August 6, 1908, were buried in the cemetery at Ancon on Sunday, July 25, 1909. She was the wife of Wm. S. Grant, of Covington, Kentucky, who is employed as a carpenter in the Atlantic Division at Gatun, where he has resided for the past three years. The burial services were conducted by Archdeacon Bryan. A number of Mr. Grant's friends at Gatun accompanied him to Ancon for the funeral.

## Cards of Thanks.

Mrs. F. C. Howland, of Paraiso, wishes to express her gratitude and sincere appreciation for the kindness and assistance given by the Brotherhood of Railroad Trainmen, and other friends, in her recent bereavement on the death of her husband.

I wish through THE CANAL RECORD, to thank the kind friends and all who helped me with their words of sympathy and kind acts in my recent bereavement in the loss of

my beloved husband, William Lamb, who died April 28, at Colon hospital.

MRS. WM. LAMB,

34 Buffalo Ave., Brooklyn, N. Y.

July 10, 1909.

## Personal.

Mr. H. H. Rousseau, accompanied by Mrs. Rousseau, sailed on the *Ancon* from Colon on Sunday, August 8, for vacation in the States.

## LEGAL NOTICE.

United States of America, } In the Circuit Court,  
Canal Zone, } First Judicial Circuit.  
A petition having been filed by the Collector of Revenues for the escheat of the estate of Richard Prince, who died intestate at La Boca, on or about the 17th of November, 1908, leaving property to the value of \$18.25 gold, notice is hereby given to all heirs, creditors, or other claimants of the said estate to appear at the courthouse at Ancon on or before the 6th day of October, 1909, for the purpose of filing their claims.

WALTER EMERY,  
Circuit Court Clerk.

Ancon, C. Z., August 6, 1909.

## Misdirected Letters.

DIVISION OF POSTS, CUSTOMS AND REVENUES,  
ANCON, C. Z., August 11, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured on request of addressee:

Amos, Hugh P.	Knight, Francis
Anderson, Miss Lucille	McAlpine, Mrs. Kate
Barnett, James C.	McCormick, Leo P.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs and Other Features.

The bi-monthly business meeting of the Pedro Miguel Woman's Club was held in the clubrooms on Wednesday, August 4, with a good attendance. The club will give a social evening for members and their husbands at the home of the president, Mrs. H. Girdner, on the evening of August 14. A committee on refreshments was appointed consisting of Mrs. S. W. Jennings, chairman, Mrs. Mark White, and Mrs. W. E. Smith. Prizes will be awarded for games, Mrs. T. T. Curran and Mrs. Ed. Bitley being chosen as the committee for their purchase. The social meeting of the club, with study hour preceding the games, will be held on August 11, at the home of Mrs. W. W. Hurley. Mrs. Frank Roberts, formerly of Pedro Miguel, entertained the club at her home in Empire on July 28. The president and members are collecting books and periodicals for the penitentiary library.

The Sojourners Club of Pedro Miguel will give a dance at the clubrooms on Saturday evening, August 14.

An informal reception was held on Thursday evening, August 5, at the Commission clubhouse, Empire, in honor of Mrs. Archie O. Ludwig, wife of the assistant Y. M. C. A. secretary, who arrived on the Isthmus on the *Allianca* on that day.

There was an unusually large attendance at the meeting of St. Luke's Woman's Guild at the home of Mrs. R. E. Noble, on Monday afternoon, August 3, the occasion being a farewell to the vice-president, Miss Laura Carter, and her mother, Mrs. H. R. Carter. Both retiring members were elected honorary members of the guild and were presented with a testimonial signed by the chaplain and their associates. Mrs. H. B. Bryan was elected vice-president. The next meeting of the guild will be held at the residence of the chaplain on August 16.

The regular dance of the Tivoli Club will be held at the Hotel Tivoli in Ancon on the night of August 14.

## Church Notes.

The Woman's Guild of St. Luke's church has authorized the purchase of a number of bibles to be presented to Ancon Hospital for the use of the patients in the wards.

The Protestant Episcopal mission has established regular services for the marines at Camp Elliott. They will be held in the camp library on the third Sunday in each month at 3 p. m.

Mission work has been established by the Methodist Episcopal church among the Spanish laborers who are not Roman Catholics. Services are held in the camps at New Balboa, Corozal, Pedro Miguel, Culebra, Gatun and Porto Bello. It is estimated that 500 laborers attend. The services are conducted in Spanish. Bibles and other literature are distributed.

## Sigma Nu Fraternity.

All members of Sigma Nu fraternity on the Isthmus are requested to send their names and addresses together with chapter and number, to Rene Granger, Alhajuela, Bas Obispo, Canal Zone.

## Marriages.

Beverly T. Isgrig and Julia M. Sarne of Tabernilla, were married at Culebra on July

11, by the Rev. Father Collins, a Commission chaplain.

Mr. Murray N. Lenham and Miss Sylvia C. Kingman were married at the chapel in Culebra, at 3.30 p. m., on Thursday, July 29, 1909, the Rev. J. Wesley Holland officiating.

## Childrens' Playground at Colon.

The first public playground on the Isthmus of Panama will be opened and presented to the city of Colon by the Cristobal Woman's Club the middle of this month. The playground is the result of the effort of the educational department of the club, which has had the cooperation of the Panama railroad, the Canal Commission, and Colon officials. The Panama railroad permits the use of a lot about one acre in size, back of the Wasbington Hotel, at the corner of Second and Bolivar streets, and has also given the lumber for the equipment. The equipment was selected from photographs submitted by the National Playground Association, New York, and will consist of a shelter, 12 by 40 feet, 6 swings, 2 ladders, 2 horizontal ladders, 2 seesaws, 1 trapeze, 1 spring-board, 1 Maypole, and 2 sand gardens, one 2 by 10 feet, and the other 6 by 10 feet. A picket fence will enclose the grounds, with the entrance on Second street.

The Colon government will maintain the playground and will appoint a play director, probably of the rank of teacher. The age limit for the use of the ground has been fixed at 14 years. It is estimated that the population of children from which the playground will draw is about 500. These children are of all classes, and the older ones are pupils of the city schools. The Cristobal Woman's Club will pay for the labor, about \$250. To meet the expense the club will give a fancy dress cotillion at the Lincoln House on Saturday, August 14. The music will be furnished by the Colon Municipal Band, and preparations are being made to insure a successful evening. Single admission tickets cost one dollar. The club is also considering the placing of playground equipment in the yard of the American school at Colon beach.

## Sunday School Picnic.

The annual picnic of St. Luke's Sunday School, Ancon, will take place at Naos Island on Thursday, August 12. The students and teachers will assemble at the church at 7.30 a. m., and proceed to the Panama railroad station to take the train for Balboa at 8 o'clock. The trip will be made on the steamer *Sanidad* leaving Balboa at 9 o'clock. Students that reside in Balboa may go direct to the wharf and meet the school on arrival of the train from Panama.

## Prize Compositions at Cristobal School.

Cash prizes amounting to \$15 have been awarded to four members of the Cristobal school for compositions on topics chosen by the competitors. The prizes were given by Wm. McAdam, Esq., of the British Vice Consulate in Colon, and they were won by Miss Maria Elise Johnson of Gatun, and Miss Myrtle Lindersmith of Cristobal, \$5 each; Charles Palmer of Colon, \$3, and Miss Emma Stubner of Cristobal, \$2.

LOST—At Miraflores power station, or between that point and Culebra, an "A. F. M. E." emblem, four leaf clover shape. Finder returning the above to E. E. Lee, Administration Building, Culebra, will be rewarded.

## COMMISSION CLUBHOUSES.

## Activities of the Young Men's Christian Association.

## CULEBRA.

Regular gymnasium classes are being conducted twice a week—Monday and Wednesday evenings. Musical drills, calisthenics and games vary the program of regular apparatus and class work.

A hand ball court is being constructed for the hall and will soon be installed. Owing to the adaptability of this game to the climate, a big demand for it has been felt and its popularity is assured.

Plans for the annual big pin bowling tournament will be perfected at a meeting of representatives called for Culebra in the near future. The trophy cup belongs permanently to the Association winning two tournaments. Cristobal and Empire has each won once. The advance interest in this year's tournament is good.

Sunday services have been planned for the next two weeks as follows: On Sunday, August 15, Rev. J. Wesley Holland will give a reading from Elizabeth Stuart Phelps' story, "A Singular Life". As this will be Chaplain Holland's last service on the Isthmus it will also be in the nature of a farewell to him. It will be held in the Y. M. C. A. hall at 8 p. m. Special music will be on the program.

On Sunday, August 22, Judge Thos. E. Brown of Cristobal will address the people of Culebra at 4 o'clock. There will be special music also at this service.

A meeting has been called for Tuesday, August 10, to organize a Camera Club in more permanent form than it is at present, and to plan for an exhibit of prints in the near future. The dark room is being used a good deal and a regular club will be of advantage to all.

## EMPIRE.

The sale of seats for "Captain Racket" has begun. The performance will be given Tuesday, August 17.

For the convenience of library members all books have been catalogued, both by numbers and by authors.

During the rest of the school vacation period the boys' department will have regular use of privileges on Monday, Wednesday and Saturday forenoons from 9 to 11 o'clock, instead of in the afternoons as formerly.

Mr. D. F. Rabbitt will have charge of the bowling alleys during the absence of Mr. Gustavson.

Members of the Pressing Club will be able to get more prompt service by giving requests for work as early in the week as convenient.

## GORGONA.

A two-man team bowling tournament has been started with the following entries: C. L. Prentiss and H. D. Burnham; H. McConaughey and Charles O'Connor; D. G. Hayes and Wm. Kenyon; F. G. Swanson and Harry Otis; F. Lasker and S. Lasker; E. R. Hall and T. S. Booz; W. J. Humphrey and R. Arthur; E. Halderman and F. King; W. J. Wright and R. Varenkamp; L. P. Robitoy and E. L. Emery.

The team having the highest pinfall will be presented with silver medals. The highest individual pinfall will also win a silver medal.

Monday, August 9, the German Orchestra from the Hamburg-American boat will give a complimentary concert to the people of Gorgona.

Saturday night, the 14th, "Captain Racket", a farce comedy in three acts will be presented by the Gorgona Y. M. C. A. Dramatic Club. Reserved seats will be on sale Wednesday forenoon.

## CRISTOBAL.

The local ten-pin bowling tournament which has been in progress for some weeks closed on Thursday night, August 5, with the following results:

	Won	Lost
1st—Miscellaneous team.....	18	9
2nd—Commissary team.....	16	11
3rd—Quartermaster team.....	12	15
4th—Dry Dock team.....	8	19
Single high score made by Bullard—224		
Three game average made by Barte—192½		
High team score made by miscellaneous team—917.		

Cristobal defeated Gorgona in a bowling contest on Saturday night, August 7, on the Cristobal alleys.

Score:			
Cristobal.....	815	813	836
Gorgona.....	761	631	820

The steamer *Hornet*, which sailed from Port Townsend, Wash., for Balboa, on August 4, carries 1,114,000 feet of lumber for the Canal work.

LOST—A diamond set out of ring on August 2, between house No. 104, Ancon, and Dr. Herrick's. Finder is requested to return to Mrs. Hy. Montgomery, Ancon, and receive reward.

## OFFICIAL CIRCULARS.

## Traveling Engineers.

CULEBRA, C. Z., August 6, 1909.

CIRCULAR No. 266A:

Mr. Arthur C. Stone is hereby appointed Traveling Engineer for duty under the immediate direction of the Assistant to the Chief Engineer.

Mr. James G. Craig will hereafter be the Senior Traveling Engineer.  
Effective August 6, 1909.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Rules Governing Car Repairs.

CULEBRA, C. Z., July 28, 1909.

CIRCULAR No. 268:

Rules governing the handling of all classes of cars needing repairs, the oiling of same, the handling of lost and damaged material of rolling stock, and the disposition in case of accident:

1. All classes of cars that can be safely and economically repaired in the field, must not be marked out for yard or shop repairs.

2. All cars that require setting out for repairs will be designated as "Shop," and "Bad Order." Cars for the shop will be designated by a white linen tag attached to the body of the car in a conspicuous place, reading: "Shop. Send to.....shop. M. D. 51 (form.)" The name of the shop to which car is to be sent must be written on the tag, the date car is set out, and the name of the inspector or foreman filling out same.

Cars for the repair or rip track will be designated by a white linen tag attached to the body of the car in a conspicuous place, reading: "Bad Order. Set on rip track. M. D. 50 (form.)" The date the car is tagged must be written on the tag, together with the inspector's or foreman's name setting the car out.

3. All inspectors or foremen applying either of the above tags should keep a record of same in a book provided for that purpose and the numbers of the cars so tagged must be reported to the Master Car Builder at Empire daily, on Form M. D. 62 Revised.

4. All cars of wooden construction should be sent to Gorgona shop, and all cars of steel construction should be sent to Empire shop for repairs.

5. Cars set out for shops must not be allowed to stand more than two (2) days before being forwarded.

6. Yardmasters or trainmen will not be allowed to forward cars to any shop unless the same shall have been properly tagged, and they must confer with inspectors and foremen in this regard.

7. Cars from the Atlantic and Pacific Divisions may be billed over the Panama railroad or forwarded by a crew from the originating division.

8. In each division or department certain persons are now authorized to forward or receive freight. These designated persons shall bill cars properly tagged to the Master Mechanic at Gorgona, or Empire shop in accordance with the above instructions. These persons must also furnish immediate notice to the heads of their respective departments or divisions so that Form M. D. 109 can be made out and forwarded the same or the next day after cars are billed or forwarded.

Cars used in Panama railroad relocation service will also be handled as above. It will be understood that cars cannot be repaired until the receipt of Form M. D. 109.

## OILING.

9. Entirely too much oil waste, or dope, is being put into journal boxes. Inspectors and foremen will see that car oilers use proper care in this direction. In no case should the packing in a journal box extend above the center line of the journal, nor should it be packed too hard.

Car oilers must mark the date on the side of each box when it was last oiled or any portion of the packing removed, stirred up, or new applied.

The use of oil cans is strictly prohibited. Foremen and inspectors will be held personally responsible for the proper execution of these instructions.

## ACCIDENTS.

10. Cars of wooden construction broken in two or otherwise badly damaged, must not be destroyed, but the car complete must be picked up and sent to Gorgona shop for rebuilding. Cars of steel construction should be handled in the same manner, but be sent to Empire shop.

All accidents coming under the observation of the foremen or the inspectors should be fully investigated, and complete reports sent to the Master Car Builder as soon as possible. Said reports to state definitely whether the damage was done by the I. C. C., or the P. R. R.

## LOST, DAMAGED OR BROKEN MATERIAL.

11. Light material, such as air hose, angle cocks, brake rods, etc., for all classes of cars must be picked up and turned over to the nearest car inspector or car repair station. Heavy material, such as draw bars, side doors for steel dump cars, aprons, etc.,

must be put in a place of safety, to be picked up by wrecking crews. This material, when picked up, is to be delivered to the nearest shop.

12. The foregoing rules are to govern on the Panama railroad, excepting that the reports on all cars in their commercial service are to be sent direct to the Master Mechanic at Cristobal; broken or damaged cars being sent to Cristobal shops.

GEO. W. GOETHALS,  
Chairman and Chief Engineer of the I. C. C.,  
President Panama Railroad Company.

## Deductions for Meal Tickets.

EMPIRE, C. Z., August 9, 1909.

CIRCULAR No. 15:

To All Concerned:

The practice of stating one amount on deduction sheets covering meal ticket issues for the current month, together with adjustments on account of issues for a prior month, is confusing in the check made in this office, and results in delay and correspondence that can be avoided by a separation of the items.

Effective with the month of August, 1909, please show all "back deductions" on rolls and deduction sheets for meal tickets issued in a prior month as a separate amount, with such explanation as will allow the adjustment to be at once located and proper credit allowed.

Foremen or others delivering meal tickets to laborers should be instructed to state the denomination (30 or 40) opposite each name on the time book.

W. W. WARWICK,  
Examiner of Accounts.

Approved:

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Requests for Work.

CULEBRA, C. Z., July 31, 1909.

CIRCULAR No. 197-D:

Paragraph 4 of Circular No. 197-c, in which it is directed that requests for work estimated to cost more than \$50 must be forwarded for the approval of the Chairman and Chief Engineer, will not be considered to apply to work covered by the report of the Committee on Manufacturing Accounts, which was approved and issued as Circular No. 264.

In accordance therewith it will not be necessary to forward Form 159 for repairs to steam shovels, except in cases where the cost thereof exceeds \$500, nor for repairs to unloaders, spreaders, etc., except when the estimated cost of same exceeds \$200. "Repairs" in the sense above used refers to cases where the equipment, either as a whole or in part, is sent to the shops.

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Wage Classification of Silver Employees.

CULEBRA, C. Z., July 31, 1909.

CIRCULAR No. 229-B:

Add the following note under "Cooks," as published in Circular No. 229-A:

The entrance salary for cooks on marine equipment in the Atlantic and Pacific Divisions shall not be more than \$40.

It is the intention of Circular No. 229-A that all employees performing the duties of messengers at a salary of less than \$15 per month shall be rated as "Boys."

GEO. W. GOETHALS,  
Chairman and Chief Engineer.

## Veterinary Service for Private Animals.

CULEBRA, C. Z., August 6, 1909.

TO ALL CONCERNED:

Effective September 1, a charge will be made for veterinary attendance and medicine furnished all private animals. The fee will be \$1 per visit, which will include attendance and medicine.

Persons desiring the services of a veterinarian will submit their applications in writing, to the District Quartermaster at the point where the corral is located.

C. A. DEVOL,  
Chief Quartermaster.

## Acting Mechanical Engineer.

CULEBRA, C. Z., August 5, 1909.

TO ALL CONCERNED:

Effective this date, Mr. J. H. Flynn, Jr., is appointed Acting Mechanical Engineer during the absence of the Mechanical Engineer on vacation leave.

GEO. D. BROOKE,  
Supt. M. P. and M.

## Superintendent of Public Works.

ANCON, C. Z., August 9, 1909.

EXECUTIVE OFFICE CIRCULAR No. 89:

Mr. Geo. H. Ruggles is appointed Superintendent of Public Works, effective to-day, vice Mr. Geo. L. Campen, resigned.

JO C. S. BLACKBURN,  
Head of Dept. of Civil Administration.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Thames.....	R. M. Tuesday	Aug. 17
Atrato.....	R. M. Tuesday	Aug. 31

Sailings of the French line (Cie. Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line will be as follows: *Lousianian* for New Orleans, via Kingston, Ja., on or about August 31.

The steamers *David* of the National Navigation Company, and the *Taboga* of the Pacific Steam Navigation Company, leave Panama, for David, province of Chiriqui, and intermediate points, the first and third weeks of each month.

The following vessels arrived or departed at the port of Balboa during the week ending August 6, 1909: Arrivals—July 31, *City of Sydney*, from San Francisco; August 4, *Arica*, from Guayaquil; August 5, *Lansing*, Union Oil Company's steamer, from Port Harford, Cal. Departures—July 31, *San Juan*, for San Francisco; *Ecuador*, for Guayaquil, and *Limari*, for South ports; August 4, *Chiriqui*, for intermediate ports.

# CANAL

# RECORD

Volume II.

ANCON, CANAL ZONE, WEDNESDAY, AUGUST 18, 1909.

No. 51.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD,  
Ancon, Canal Zone,  
Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Accident at Naos Island Breakwater.

During the night of Monday, August 9, clapet No. 8 of the Pacific Division ran into the Naos Island breakwater trestle about 250 feet from the outer end, doing considerable damage. The impact destroyed three bents, carried away about 1,900 feet of track, including rails and ties and tumbled a pile-driver and tender, which were located 21 bents back from the end of the trestle, into the bay on the west side of the breakwater. The clapet escaped without injury. Ralph Baugh, check No. 63,345, the watchman for the pile-driver, is supposed to have been killed, or drowned, as he has not been seen since the night of the accident. The pile-driver will be recovered.

#### Agricultural Development in Canal Zone.

Soil and plant experts from the Department of Agriculture will visit the Canal Zone in October for the purpose of investigating agricultural possibilities. The investigation will be conducted by request of the Secretary of War at the instance of the Commission.

#### Wireless Station at Porto Bello.

The wireless station at Porto Bello is to be installed solely for the benefit of the Isthmian Canal Commission, for communication with the Colon station, but to be under the control of, and to be equipped and manned by the Bureau of Equipment, Navy Department. With this understanding the Commission has built a house containing the office and condenser room, besides living quarters for three operators, enlisted men of the Navy. This house is from a special design drawn in the Chief Engineer's office, and is situated on the hillside just below the eastern end of the reservoir dam. The mast will be erected on the hill east of the reservoir at a sufficient distance for the aerial wires to reach from its upper end to the office. The "ground" will be obtained by large copper plates sunk in the shore of the reservoir. The

house is about finished, and the aerial and guys for the mast have been received, but until the mast, instruments, and ground plates are sent by the Navy Department no further progress can be made. These are expected soon. The mast will be about 150 feet high, set on a hill 135 feet above sea level, making the extreme height 285 feet, sufficient for the waves to clear the intervening hills. The power will be carried to the station from the Commission's power plant at Porto Bello.

When completed the station will probably be under the immediate charge of Electrician Edgar Rennard, U.S. Navy, at present on duty at the Colon station.

#### Shipment of Native Lumber.

The schooner *Almirante* arrived at Panama on Thursday, August 12, with a cargo of about 14,000 feet of native lumber from the Bayano River Lumber Company. A portion of this shipment, about 6,000 feet, was consigned to the Isthmian Canal Commission, forming a part of the trial orders, an account of which appeared in THE CANAL RECORD of July 14, 1909. It was unloaded at the American wharf and shipped to Empire, where it will be given a thorough trial in connection with repairs to cars and locomotives. The shipment was principally of timber size and consisted of several varieties of Isthmian hard and semi-hardwoods.

#### Brazos Brook Reservoir.

The low point of the year in the Brazos Brook reservoir, which supplies water to Cristobal and Colon, was reached on June 8, when the surface of the lake was at an elevation of 38 feet above sea level. From that date until the present time there has been a slow, but steady rise, the surface of the water attaining an elevation of about 45 feet above sea level on August 13. The greatest consumption from the reservoir for any one day since January 1, 1909, was approximately 2,275,000 gallons on July 26. Another rise of two feet was recorded in the Rio Grande reservoir on Friday, August 13.

#### Additional Schoolhouse Facilities.

Plans have been prepared and approved for two new school buildings for colored children, one at New Gatun and one at Culebra; also, for additions to the white schools at Cristobal and Gorgona, and to the colored school at Cristobal.

The New Gatun schoolhouse will consist of a four-room frame building, 50 feet long and 73 feet wide, without verandas, and the contract for its erection has been let. The other colored schoolhouse will be built at Culebra under practically the same specifications as the one at Gatun.

A two-story frame addition will be made to the schoolhouse for white children, opposite the Y. M. C. A. clubhouse at Cristobal. It will be 24 feet wide and 37½ feet long,

with one room on each floor. A two-story frame annex will also be made to the rear of the white school at Gorgona, 25 feet long and 37 feet wide, with a 6½ foot veranda separating the old from the new part, connected by a bridge both upstairs and down. The annex will provide two additional rooms, one on each floor.

A one-story two-room frame addition will be built to the rear of the colored school at Cristobal, which is located near the Salvation Army Institution. The new part will be 22 feet long and 55 feet wide, with a space between the old and new buildings for a 6½ foot veranda.

#### New Train Schedule.

On another page of this issue of THE CANAL RECORD will be found the new schedule of passenger trains, effective on the Panama railroad beginning August 15, 1909.

#### Fossils in Canal Excavation.

A request has been made by the Smithsonian Institution to have specimens of fossils and other natural history objects uncovered in excavating the Canal, preserved and sent to the National Museum in Washington. The Chairman has issued orders that this request be complied with, and the matter has been referred to one of the assistant engineers for action and report.

#### Houses on Slide at New Culebra.

Six two-story and nine one-story frame buildings situated on the old French dump at New Culebra, have been appraised and will be purchased and razed by the Commission. The old dump forms the slide at New Culebra, and the houses are in danger of being wrecked.

#### Canal Zone Roads.

The new Mount Hope-Gatun wagon road has been completed, with the exception of a top dressing of sand, and will probably be ready for traffic within the next two weeks. The present road from Mount Hope to Cristobal is in poor condition owing to heavy travel over it, and will be regraded and rolled as soon as the work on the Mount Hope-Gatun road is finished.

Progress is being made on the road which extends from the Empire suspension bridge to the Las Cascadas plantation. It is cut out of the side of the hills, and follows the valley of the Massambi River for quite a distance, crossing the stream over a bridge with a 100-foot span, about a mile and a half from Empire. A 6-foot berm was originally excavated along the side of the hills to make the route immediately available for traffic, and this cutting has since been enlarged to the permanent width of eight feet. The grading of the road is now completed for a distance of 6,800 feet out of Empire, and is nearly finished 1,000 feet farther. Very little grading has been done for the rest of the distance, and some excavation

## NOTES OF PROGRESS.

(Continued.)

still remains to be accomplished toward the plantation end of the road. The highway will be 13,600 feet long, measuring from the Obispo Diversion bridge to the plantation, and will open up a valuable agricultural territory, which steadily improves on nearer approach to Cruces, where the road may ultimately extend.

The survey of the Empire-Paraiso road has been completed, and the work of excavation and grading will commence as soon as a stockade for prisoners, who will be employed on this section, is located.

On the Las Cascadas-Gorgona extension, the subgrade has been completed, with the exception of about a mile. The grading gangs have been working from both directions.

Operations on the Corozal-Panama road, which are completed, with the exception of rolling, were resumed this week, two road rollers being set at work, one at each end.

## Applications for Married Quarters.

The number of applications for "gold" married quarters on file on the first of each month since May was as follows:

Month.	No. 1 List.	No. 2 List.
May.....	85	249
June.....	94	281
July.....	115	305
August.....	82	332

Applicants on the No. 1 List are employees who entered the service prior to January 1, 1908, and they are given prior consideration. The number of applications on the No. 2 List is steadily increasing, while the applications on the No. 1 List show a tendency to decrease in number. When married quarters in process of construction are completed they will provide for 54 additional families.

## Money Order Business in July.

During the month of July, 1909, the sixteen post-offices of the Canal Zone where a money order business is done, sold 15,434 money orders, aggregating \$417,378.10. This is a decrease of 262 in the number of orders issued in June, and of \$11,138.80 in value. Of the July business, \$306,131.63 represented orders drawn payable in the United States and elsewhere, and \$111,246.47 in orders drawn payable in the Canal Zone. The fees collected amounted to \$1,790.08. The orders paid and repaid amounted to \$138,637.14, which includes \$1,419.50 representing invalidated money orders paid by the Treasurer.

In the number of orders drawn, Cristobal was first with 2,980; Empire second with 1,779, and Gatun third with 1,640. In the total value of orders, Cristobal was first with \$84,100.83; Empire second with \$41,729.75, and Gorgona third with \$41,504.73. Of the amount payable in the United States and elsewhere, Cristobal was first with \$73,419.14; Empire second with \$32,549.68, and Gatun third with \$29,388.24. In orders payable in the Canal Zone, Gorgona was first with \$13,185.93; Cristobal second with \$10,681.69, and Pedro Miguel third with \$9,878.78. Of the amount paid and repaid, Cristobal was first with \$24,214.62; Empire second with \$17,656.51, and Ancon third with \$14,045.61.

The average of all the orders issued was \$27.04. The highest average was at San Pablo where 504 orders, amounting to \$17,895.25, were issued, an average of \$35.50;

the lowest was at Matachin where 240 orders amounted to \$4,788.83, an average of \$19.95.

## Central Division Unloaders.

Lidgerwood unloading crews accomplished the following work on the Central Division dumps in July:

Dump.	Number of unloaders.	Number of Trains.	Number of Cars.
Balboa.....	3	808	14,544
Miraflores.....	3	676	12,168
Tabernilla.....	5	1,381	24,523
Total.....	11	2,865	51,235

## Relocated Line at Corozal in Use.

The relocated line of the Panama railroad from the station at Corozal, to a point about  $\frac{3}{4}$  of a mile north of the Balboa wye has been completed, and was placed in service on Sunday, August 15, when passenger train No. 26, leaving Panama at 4 p.m., passed over it. The relocated track practically eliminates the long curve opposite El Diablo hill.

## Questions Answered.

## THE CANAL RECORD:

Please answer the following questions:

1. Can employees desiring to resign after two years' service while on vacation do so through the office at Washington without sending the resignation to the Canal Zone?
  2. Will employees having fractional parts of their yearly longevity earned prior to July 1 have same added to their salary?
  3. When will the Canal medal be delivered?
  4. Will you receive yearly subscription for THE CANAL RECORD and deliver it in the States?
- WM. BODETTE.  
Empire, C. Z., August 6.

1. When an employee desires to resign in the United States, while on vacation leave, and after having completed two years' satisfactory service, his resignation should be addressed to the head of his department on the Isthmus, and not to the Washington office of the Commission.

2. Longevity increases, prior to July 1, 1909, were given only for each full year's service. An employee will not be entitled to longevity for the fractional part of a year, up to July 1, 1909.

3. About September 1.

4. There is no subscription price to THE CANAL RECORD. See announcement on first page.

## Homicide at Paraiso.

Manuel Manlabro, a Colombian, was struck on the head by a blunt instrument in the hands of Seccondino Pineda, also a Colombian, at Paraiso, about 9 p.m. Saturday, August 14, causing injuries from which he died at Ancon Hospital, Monday afternoon, August 16. Pineda is in jail at Paraiso.

## Accident at Miraflores.

At 11.07 a. m., Saturday, August 14, as the labor train at Miraflores had come to a stop opposite the lock site, several "doby" shots went off about a car's length ahead of the locomotive. Fragments of rock struck five or six men, three of whom were taken to Ancon Hospital. All will probably recover.

Work of tearing down the buildings on the old station site in Colon has been about completed.

## CENTRAL DIVISION.

## Steam Shovel Records Made in July.

During the month of July, the total amount of material excavated in the Central Division was 1,443,094 cubic yards, of which 377,701 cubic yards were classified as earth and 1,065,393 cubic yards as rock. Of this quantity, 1,414,552 cubic yards were removed by steam shovels, 22,887 cubic yards by hand, and 5,655 cubic yards by sluicing in the Obispo Diversion. The quantity of material removed from the Canal prism was 1,429,070 cubic yards, while 5,655 cubic yards were removed from the Obispo Diversion, 5,657 cubic yards from inclines at Point No. 3, Santa Cruz, 266 cubic yards from the engine house site at Gamboa, and 2,446 cubic yards from the road at the east end of the Empire suspension bridge. The total excavation for the same month in 1908 was 1,467,082 cubic yards, showing a decrease of 23,988 cubic yards for July of the present year.

For comparison with previous high monthly records, the following table is given:

DATE.	Prism.	Prism and outside.
March, 1908.....	1,540,497	1,615,118
October, 1908.....	1,551,409	1,598,981
February, 1909.....	1,546,008	1,614,636
March, 1909.....	1,966,294	2,065,827
April, 1909.....	1,722,442	1,798,454

The high record for the month was made by shovel No. 204 working in the Culebra District, which excavated 45,331 cubic yards of earth in 25 working days.

The best record for a shovel in the 70-ton class was made by shovel No. 127 working in the Tabernilla District, which excavated 27,933 cubic yards of earth in 25 working days.

Shovel No. 203 in the Culebra District, made the high record for one day by excavating 2,964 cubic yards of rock on July 3.

Shovel No. 125 working in the Tabernilla District excavated 2,190 cubic yards on July 2, and this is the high record for one day by a 70-ton shovel during the month.

## Best Records for the Month.

## SALE OF FRENCH JUNK.

Terms Under Which Old Iron and Steel will be Sold.

Proposals have been invited for the purchase of all the old iron and steel along the line of the Canal, excepting such parts or portions as may be reserved for Canal work. The amount of this material has been variously estimated from 45,000 to 120,000 tons, and it includes old locomotives, dump cars, tanks, barges, boilers, girders, dredges, sheet iron, parts of old machinery, and other miscellaneous junk left on the Isthmus by the French, or accumulated here since the beginning of operations by the Americans. A part of the copper, brass, white metal, rails and cast iron will be reserved, as many uses are found for the rails, and the metals specified can be utilized to advantage at Gorgona foundry. The bids will be opened on September 16, and as soon as a satisfactory contract can be entered into the shipment of the junk will be begun. For the present it is probable that about 700 tons will be taken to the States every two weeks by the *Ancon* and *Cristobal* on their return voyages, although delivery can be made in such amounts and in whatever vessels the Commission may deem advisable. It is thought that all the material can be delivered within three years.

As this material is principally of foreign manufacture it is subject to a duty on entry into the United States, under the new tariff law, of \$1 a short ton. Under a provision made in the Sundry Civil Act of May 27, 1908, this duty will be returned to the funds for Canal construction, if the material is sold by the Commission in the United States. In order that the amount of the duty may be returned to the Canal funds without special appropriation each year, the material will not be sold until after it has passed through the customs house at New York. Payment will be made by the contractor immediately after each delivery, and he will be under a bond of not less than \$75,000, or under a deposit of cash or securities amounting to \$50,000. After all the scrap shipped within 18 months from the date of the award has been paid for by the contractor, the amount of the bond or other securities may be reduced 50 per cent, and after an additional period of 9 months, may be reduced 25 per cent more at the option of the Chairman.

The sale is made at this time for the dual purpose of procuring ballast for the cement ships *Ancon* and *Cristobal*, on their return voyages to New York, and of getting the material which lies in the basin of Gatun Lake out of the way before the lake is filled. There are large amounts of this junk at Bohio, Tabernilla and Gorgona, all in the lake region. Quantities of it are found all along the line of the Canal, but the greater portion is stored between Cristobal and Pedro Miguel. Orders were sent out to the Division Engineers several weeks ago that tracks in the vicinity of the places where the junk has been collected must not be removed, because they would be needed in hauling the material to Cristobal.

Although much of the equipment is on trucks, it cannot be moved on its own wheels as the metrical gauge of the old French rolling stock is about  $\frac{3}{4}$  of an inch short of the 5-foot gauge of the Panama railroad. The material will therefore be scrapped where it lies,

under the direction of a representative of the Mechanical Division, and in the presence of a representative of the contractor, whose wishes will be complied with in so far as they do not conflict with economy in the handling. No pieces of more than 20 tons weight will be shipped, but this limitation will permit of the shipping of locomotive boilers with fire boxes and flues. The material will be sent in single shipload quantities to Cristobal or assembled at the seaboard in large piles, according as the Commission may find it advisable. As far as possible the material will be unloaded directly from the cars into the ships. Delivery will be made in New York Harbor at any dock requested by the contractor and consented to by the customs officials. It will be weighed by the customs officials, and sold at the basic rate of 2,000 pounds.

The great amount of machinery and equipment that was left on the Isthmus by the French has been so thoroughly utilized that, after the reservations indicated above are made, what is left will be valuable chiefly as scrap. At Gorgona foundry, a large quantity of brass, copper, white metal, and tons of cast iron have been made over into articles useful in the Canal work. Several hundred pounds of copper and brass have been sent to the Philadelphia mint to be made into Canal Medals. Such cast iron, brass, copper, and white metal as has not been used, because it was not needed or because the "scrapping" of it in small amounts would not have been profitable as an isolated operation, will be taken to the foundry. In the locomotives left by the French the fire boxes, flues, and staybolts are usually of copper, and it is estimated that there is from \$400 to \$600 worth of the metal in each locomotive.

Old rail will be saved, because it has proved of value as reinforcement for concrete, in repairing dump cars, as telephone and telegraph poles, and in various other ways. Some of the 60-pound French rail is being used in anchoring the floor of Gatun Locks to the earth, and 7,000 tons have been collected

at Empire to be straightened or bent, as the engineers require, for use in the locks. All structural I-beams, channels, angles, and parts that can be used in repairing the French equipment now in service will also be reserved. Decauville cars, track, and locomotives will also be retained because they are used in all the construction divisions on hand excavation and municipal work.

Whatever profit there may be in the sale of the old material will be small compared with the value the French equipment has already been in the Canal work. For two years the locomotives left by the French were the only ones owned by the Isthmian Canal Commission, and on June 30, 1906, there were 106 of them in service and only 15 American locomotives. A year ago 134 were in service, but since that time the number has decreased. French dump and work cars were the only ones used on the Canal work in 1904, when 308 of them were in service. On June 30, 1905, over 2,000 of them were in service, as compared with about 300 American built cars. Shop tools, stationary engines, repair parts, and materials and supplies of all kinds were found on the Isthmus by the Americans. Seven ladder dredges have been rebuilt and are now engaged in Canal excavation, and the parts of many others have been utilized.

Much of the work done in the two years of preparation, 1904 and 1905, would have been impossible without the French supplies and equipment, as waiting for supplies from the States would have involved long delays. The money value that has been assigned to the French equipment and supplies so far utilized is over \$1,000,000, but this estimate is inadequate because much material was used before the system of crediting the old French account was begun.

The following statement of the Isthmian Canal equipment in service each year since the beginning of the work shows what a large part the French rolling stock played in the first years of the work, and how it has gradually been displaced:

## PUBLIC WORKS.

## Operations Under the Agreements Between the United States and Panama.

Under the agreements between the United States, and the Republic of Panama, which were signed on September 20, 1907, and made effective as of July 1, 1907, it was provided that if at the expiration of two years from the latter date, it appeared that the United States could reimburse itself for the water, sewer and paving expenditures in the cities of Panama and Colon at lower water rates than now exist, within the next 50 years, the rates could be decreased, and if on the contrary, it did not appear that the United States could reimburse itself at the present rates within the time stated, they could be raised.

The time for making the first revision of the water rates fell due on July 1, 1909, while, according to the agreements, the next revision will take place five years later, or on July 1, 1914. In a letter dated April 16, 1909, the Superintendent of Public Works recommended that in view of the fact that \$800,000 had been appropriated by the Congress of the United States for new installations, an amended agreement be drawn postponing the adjustment of water rates for a further period of two years from July 1, 1909, as by that time the new work will probably have been finished, and the figures of cost known, so that an equitable readjustment can be made. It was further set forth that there was no present necessity for a change in the water rates, as the quarterly amounts collected from private consumers were about equal to the quarterly payments agreed upon by the two Governments for the amortization of the principal and interest of the water, sewer and paving cost.

The substance of this recommendation was communicated to the Panama Government by the Department of Civil Administration, with a request for an expression of its views on the subject. No official reply has yet been received, but in speaking of the matter, Mr. Samuel Lewis, Secretary of State for Panama, said that the Panama Government would certainly have no objection to the postponement of the revision of rates, at least, until it could be ascertained what the expenditures in connection with the proposed improvements and extensions in Cocoa Grove, Guachapali, and other sections of the city of Panama, and at Colon, would actually amount to.

Under the agreements referred to above, the Isthmian Canal Commission, acting for the United States, binds itself to maintain and operate the water and sewer systems of the cities of Panama and Colon for a period of 50 years, and to maintain and repair the pavements for a period of 10 years. At the time these agreements were entered into, it was estimated that the cost of installation, operation and maintenance of the water and sewer system, and the construction, maintenance and repair of the pavements in the city of Panama for these periods would be \$3,276,250, United States currency, equivalent to \$65,625 per year for the full fifty years. In the city of Colon, the estimated amount was \$3,492,500, or \$69,850 per year for the entire period. These figures form the basis for the existing water rates.

Under the above arrangement the amount that must be collected at the expiration of

each quarter in Panama, is \$16,400, and in Colon \$17,500, and the agreements stipulate that when a deficit occurs between the aggregate of water rents collected and the agreed payment, the Panama Government shall adjust the difference. There have been but three quarterly periods in the city of Panama, since the agreements went into effect, that the Panama Government has not been called upon to make up a deficiency, and but one period in the city of Colon. In the quarter ending June 30, 1909, for the first time the collections from private water consumers at both Panama and Colon exceeded the required amount. In Panama, the quarters ending June 30, 1908, and December 31, 1908, also showed surplusages. The greatest deficit for any one quarter was that ending September 30, 1907, the amount in Panama being \$3,142.75, and in Colon, \$9,073.95.

The total amount paid by the Panama Government on account of deficits in the water collections to July 1, 1909, was \$39,429.53, of which sum \$12,720.30 was paid on account of insufficient water collections in

the city of Panama, and \$26,709.23 in the city of Colon. The total surplusage to July 1, 1909 amounts to \$2,571.10, of which excess sum \$1,213.50 is credited to Panama, and \$1,357.60 to Colon. The deficits have been gradually diminishing, due in a large measure to the increased number of new installations, which have shown a steady growth. Under the present plan, the collections in excess of the required amounts in the cities of Panama and Colon are turned over to the Disbursing Officer to be credited to the principal and interest of the debt. From June 30, 1906, the date on which the water rates became effective in Panama, until June 30, 1909, the record in the Public Works' office shows but seven bills remaining unpaid for the entire period, the amount involved being \$133.20.

A statement showing the water consumption, both public and private, water collections, collections of deficits, and excess amounts in the city of Panama, from the beginning of operations to July 1, 1909, is given herewith:

For quarter ending.	No. paying	CONSUMPTION.		COLLECTIONS.		In excess of \$16,400.
		Private.	Public.	Private.	Republic of Panama.	
		Gallons.	Gallons.			
*June 30, 1906.....	432			\$915.75

June 30, 1909.....	1,292	67,802,750	17,740,500	\$17,127.40		727.40
Total.....		592,811,804	179,234,478	\$153,602.30	\$12,720.30	\$1,213.50

\*On account of absence of water meters only the minimum charge was collected. The charge by meter commenced December 1, 1905. The Republic of Panama was charged at the same rate as private consumers for the difference between the total amount of water that entered the city, as shown by the Venturi meter, and the amount used by private consumers for all quarters up to and including the quarter ended June 30, 1907. Since then it has paid the difference between the amount collected each quarter, if any, and \$16,400.

†On account of errors, the following refundments were made by the Disbursing Officer: June 30, 1906, \$3; September 30, 1906, \$34.95; December 31, 1906, \$112.50; March 31, 1907, \$37.50; June 30, 1907, \$25.05.

‡Includes \$16,249 collected by July 15, and \$875.40 outstanding after the close of the discount period.

In Colon, the water users are divided into three classes, viz., private, Panama Railroad Company, and Isthmian Canal Commission. In 1906, the old water system of the railroad company was transferred to the Commission, with the understanding that the latter was to supply the railroad with water free of charge. On September 6, 1906, the Commission passed a resolution charging the railroad company 11 cents gold per 1,000 gallons for water used by it, and on January 21, 1907, the arrangement was again changed, and a rate of 40 cents gold per 1,000 gallons established, which was the same as the net rate at which water was furnished to private consumers. The railroad company objected to the latter rate as excessive, and in the meantime had commenced work on a new water works system of its own known as the Mindi Diversion plant, with a new pipe line from Dock No. 14 to the Cristobal tank.

An agreement between the railroad company and the Commission was finally reached on March 21, 1908, approved by the Secretary of War April 23, 1908, whereby the railroad company agreed to transfer to the Commission its then existing water system, except the water pipes on docks Nos. 1, 2, 3 and 4, and to grant a perpetual easement to all lands occupied by the Min-

di water works system, in consideration of the supply to the railroad company free of charge, of all water consumed by it outside of the city of Colon, in its shops and locomotives, and all water necessary to supply docks Nos. 11 and 14, and the Cristobal supply tank. It stipulated, however, that no water should be sold to foreign ships from any docks outside of the city of Colon unless notice of such sale was given to the Superintendent of Public Works, and the amount so delivered for resale to foreign ships was measured and paid for by the railroad company at the rates charged it for water in the city of Colon.

In consideration of the above, and also of the fact that the Panama Railroad Company does not use the sewer system of the city of Colon, a rate of 30 cents gold per 1,000 gallons was established and is now operative.

The purchase of water by foreign ships outside the city of Colon for the period March 1, 1909, to June 30, 1909, amounted to 37,037 gallons, and the water collection on account thereof, \$11.10. The customary charge to foreign ships by the Panama Railroad Company is one-half cent gold per gallon. The Panama Railroad Company's water bills are settled in cash, or by draft, while the I. C. C. bills in Colon are made a

bookkeeping transaction only. The amount of the bills are, however, credited in full to water collections in the quarterly accounting with the Panama Government. A state-

ment showing water consumption, number of private connections, collections, deficits, etc., at Colon, from the beginning of operations to July 1, 1909, follows:

For quarter ending.	Private connections.	CONSUMPTION.				COLLECTIONS.				In excess of \$17,500.
		Private.	P. R. R.	I. C. C.	Public.	Private.	P. R. R.	I. C. C.	R. of P.	
		Gallons.	Gallons.	Gallons.	Gallons.					
Sept. 30, 1906....	2	298,000				\$121.20				
Dec. 31, 1906....	2	1,153,027				465.20

March 31, 1909....	436	32,967,330	8,887,500	4,127,250	21,020,320	13,285.60	2,666.40	1,238.10	309.90	
June 30, 1909....	464	36,968,250	9,579,750	3,541,575	9,669,250	\$14,921.00	2,874.30	1,062.30		\$1,357.60
Total.....		194,029,538	96,107,727	50,712,935	270,546,185	\$78,553.35	\$25,373.85	\$13,292.12	\$26,709.23	\$1,357.60

\*Includes 443 bills collected up to close of business July 15, and 21 bills for \$736.20 outstanding at close of discount period.

The expenditures during the fiscal year 1908-09 on water works, sewers and pavements in the cities of Panama and Colon, have been principally confined to maintenance of the existing plant, new water installations being classed as maintenance. There was a small construction expense at Colon on account of new water pipes and sewers, and the emergency reservoir on Ancon Hill was completed. No part of the

reservoir expense will, however, be charged to the amount to be amortized by the Panama Government, as it is for reserve fire protection.

The Panama Government has not yet accepted the figures of cost as prepared and presented for the period up to and including June 30, 1908. A report on the subject is now in course of preparation in the office of the Hacienda, and will be ready for issue shortly.

## DREDGING IN JULY.

Operations in the Atlantic and Pacific Divisions Show an Increase Over June.

The combined output of the dredges of the Atlantic and Pacific Divisions for July amounted to 1,775,077 cubic yards, as compared with 1,755,178 cubic yards for June, an increase of 19,899 cubic yards. Of the July excavation, 1,107,814 cubic yards were removed from the Canal prism, and 667,263 from outside works. In the Atlantic Division, 348,451 cubic yards belonged to Canal excavation and 660,275 cubic yards to outside works. In the Pacific Division, 759,363 cubic yards were taken from the prism and 6,988 cubic yards from outside. The dredging output in the Atlantic Division shows an increase over June of 133,050 cubic yards, while in the Pacific Division there was a decrease of 113,151 cubic yards.

The suction dredge *Caribbean* of the Atlantic Division excavated a total of 393,102 cubic yards, exceeding its best previous record, made in June, 1909, by 15,089 cubic yards. This dredge has broken its record in three successive months. A mark of 374,060 cubic yards was established in May of this year; in June, the record was raised to 378,013 cubic yards, while the output of the dredge for June nearly reached the 400,000 figure. Of the amount taken out by the *Caribbean* during July, 219,618 cubic yards were removed from the approach channel to Cristobal Harbor, and 53,965 cubic yards from in front of Pier No. 11, Cristobal. The remainder of the *Caribbean's* output, 119,519 cubic yards, was taken from the Canal prism.

The dipper dredge *Mindi* took out 37,975 cubic yards of rock from in front of Pier No. 11, and 1,200 cubic yards of earth and 2,000 cubic yards of rock from the dry dock slip. Dredges Nos. 1, 5 and 6 worked the entire month in the Canal prism removing 200,894 cubic yards of earth and 28,038 cubic yards of rock. In taking out 176,082 cubic yards

of material, dredge No. 5 established a new Isthmian record for old French ladder dredges.

In the Gatun section, dredge No. 82 excavated 156,049 cubic yards from the borrow pit east of the Chagres River, and dredge No. 83 removed 102,600 cubic yards from the borrow pit west of the river, both dredges pumping the entire month into Gatun Dam. Dredge No. 82 was laid up for seven working days in July, during which new thrust bearings were installed on the main pump, and new lower pump casing, lined throughout, was substituted for the worn-out casing. Dredge No. 85 excavated 86,868 cubic yards from the channel in front of the spillway dock, and northward in the old French canal and Chagres River. On the morning of July 30, the upper bank caved in on the dredge's ladder, buckling and wrecking the supporting "A" frame, necessitating dry dock repairs.

The detailed statement of operations in the Atlantic Division follows:

DREDGE.	Type.	Cu. yds.
Caribbean.....	Suction.....	393,102
No. 1.....	Ladder.....	24,812
No. 5.....	Ladder.....	176,082
No. 6.....	Ladder.....	28,038
Mindi.....	Dipper.....	41,175
No. 82.....	Suction.....	156,049
No. 83.....	Suction.....	102,600
No. 85.....	Suction.....	86,868
Total.....		1,008,726

In the Pacific Division, the dredge *Culebra* was engaged during the entire month in deepening the channel from the intersection of the Rio Grande and the French canal, seaward, removing 309,100 cubic yards. The dredge *Gopher* worked up to and including July 9 in the new channel, continuing the cut along the east bank toward the intersection of the French and American channels. On July 10 the dredge was laid up and overhauled preparatory to working in the sand beds at Chamé. It was taken to Chamé on July 26, and brought back again on July 29,

after having dredged about 1,000 cubic yards of sand. The *Mole* worked on the west bank of the Canal, opposite the Panama railroad wharf, up to July 9, when it was removed to the *Gopher's* former position in the new channel, continuing at that point until July 25 when it was taken to buoy No. 15 in the new channel, where it remained the balance of the month. The total output of the *Mole* was 101,130 cubic yards. The *Badger* worked during the entire month in the upper French canal, a short distance above the intersection of the Rio Grande and the Canal, and removed 109,761 cubic yards. The dredge *Cardenas* worked from July 1 to 7 near Station 2,225 removing rock broken by the *Vulcan* during its ten-day test, and for the rest of the month was engaged in stripping material from the top of the rock area at this point. The dredge's output was 30,800 cubic yards. The *Marmot* was at work the entire month in the extreme upper end of the French canal, and took out 147,894 cubic yards.

The orange peel dredge continued excavating in the Rio Grande Diversion, between Miraflores and the Rio Grande River, taking out 6,988 cubic yards. The suction dredge *Sandpiper*, working in the lower lock chamber at Miraflores removed 26,182 cubic yards, of which 14,670 cubic yards constituted hydraulic fill in the core of the west dam. The detailed statement of operations in the Pacific Division follows:

DREDGE.	Type.	Cu. yds.
Culebra.....	Suction.....	309,100
Marmot.....	Ladder.....	147,894
Gopher.....	Ladder.....	34,496
Badger.....	Ladder.....	109,761
Mole.....	Ladder.....	101,130
Cardenas.....	Dipper.....	30,800
Orange Peel.....	O. P.....	6,988
Sandpiper.....	Suction.....	26,182
Total.....		766,351

## Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending August 14, with supplies for the Isthmian Canal Commission:

*Prinz Joachim*, August 9, from New York—100 water closets for buildings; 8 fuel oil tanks for oil storage.

*Sheppy Allison*, August 10, from Baltimore—100 dump cars for Mechanical Division, for stock; 92 tons galvanized pipe, 199 tons C. I. pipe and specials; 63 tons steel plates; 28 tons steel bars; 200,000 pounds track spikes; 14,000 pounds drift bolts; 25,000 pounds boat spikes; 50 tons rivets and nuts; 1,000 drums gasoline; 50,000 building brick; 200 tons blacksmith's coal; 206 tons coke; 200 pieces drain tile; 8,152 pieces sewer pipe; 1,200 bundles angle bars, for stock; 150 tons structural steel for culvert forms, Gatun; 82,447 feet B. M. white oak lumber, for car repairs; 10,000 pounds dynamite, for Porto Bello.

*Colon*, August 11, from New York—1,000 barrels cement; 30,000 electric fuses; 212 bundles crow bars; 20 boxes R. R. picks; 382 boxes window glass; 605 kegs wire nails; 150 cases yellow grease for stock; and a miscellaneous cargo aggregating 3,377 packages weighing 400 tons.

*Turrialba*, August 12, from New Orleans—30 tons rock crushing machinery, for Balboa; 39 creosoted piles for Balboa; 233 bales cotton waste; 35 reels wire rope; 2,500 gallons dynamo oil; 9,390 gallons kerosene; 25 sets split switches, for stock; 588 pieces castings, for car repairs.

*Cristobal*, August 13, from New York—51,408 bags and 12,043 barrels cement, for Gatun and Miraflores; 3,493 pieces sewer pipe; 23 reels copper wire; 370 pieces wrought pipe, for stock.

## Proposals for Repairs to Building.

Proposals will be received by the Assistant Quartermaster, U. S. Marine Corps, for furnishing the necessary labor and supervision to make certain repairs to building No. 297 at Camp Elliott, including a roof over the structure. All materials will be delivered to the contractor at the site. For information and blank forms address, Assistant Quartermaster, U. S. Marine Corps, Camp Elliott, Bas Obispo, Canal Zone.

## SOCIAL LIFE OF THE ZONE.

## Women's Clubs Federation Meeting—Other Features.

A meeting of the executive board of the Canal Zone Federation of Women's Clubs and conference of club presidents was held at the Commission clubhouse, Cristobal, on the afternoon of August 12, the president, Mrs. Thomas E. Brown, Jr., presiding. The Federation committees for the year will be: Art and Literature, Library Extension, Forestry and Waterways, Education, Botany, Home, and Philanthropy. At a meeting of the executive board in May, 1909, the Reciprocity committee was abolished, and its work will be divided between the Art and Literature, and Library Extension committees.

The Art and Literature committee will assist in outlining programs, forward upon request the books and portfolios of art which have been presented to the Federation by the Eighth District art committee, of St. Louis, and give the various clubs such other assistance as may be required. The club year books and calendars will be in the hands of the Library Extension committee. A gift of books has been received from club women in Marshalltown, Ia. The present arrangement is to keep these books in Cristobal. The Cristobal children's library is to be removed from the Commission chapel to the rest house, where suitable provision for their care will be made. Mrs. Charles W. Boxer, of Ancon, is chairman of the Library Extension committee, and Mrs. Ralph Blunt, of Cristobal, was elected vice-chairman. The committee will organize for active work, and it is expected that the traveling library will become a feature of Federation activity.

The Federation is interested in securing kindergarten teachers and equipment for the Zone public schools, and to this end, the education committee will canvass the stations and a report on the number of children eligible for kindergarten will be made at the next meeting.

The ordering of the Federation pin, which was chosen from designs submitted at the last meeting, is in the hands of the chairman, Mrs. H. C. Ball, of Empire. Individual club members who wish to secure pins are urged to forward their orders, with the money, \$2.50, to Mrs. Ball at once, without waiting for their clubs to convene. A number of General Federation pins has been ordered, and will be on sale at the October meeting.

Invitations for the October meeting were extended by the Pedro Miguel and Gatun clubs, through their presidents, and that of the Gatun club was accepted by the board. The convention will be held at the Commission chapel, Gatun, on Tuesday, October 12, the second anniversary of the organization of the Federation. There will be but one session, beginning at 2 o'clock. For their guidance in electing delegates, the chairman of the credentials committee desires to call attention of club presidents to the following sections of the by-laws:

SECTION 1. Each club shall be represented at the annual election and at the regular meetings of the Federation by its president and three delegates, who shall have the power to vote on all questions coming before the Federation.

SEC. 2. When the president of any club is a member of the executive board of the Federation, her club shall send a substitute to represent her as a delegate.

SEC. 3. Members of clubs belonging to the Canal Zone Federation of Clubs may be present at regular

meetings of the Federation and may take part in the discussions upon all measures brought forward, but, unless otherwise entitled, shall not introduce motions or vote.

The Cristobal Woman's Club has purchased a drinking trough for horses which will be presented to the town of Cristobal. The trough will be placed near the Commission clubhouse. The club gave a complimentary concert to members and their friends on Thursday evening, August 5. The program consisted of piano solos by Mrs. Ullrich and Miss Burkhalter; violin solos by Dr. Hill, and readings by Miss Mary Rebecca Slifer. The attendance was large.

Work is going forward on the tennis courts to be opened under the patronage of the Gatun Woman's Club. The court is being made on land assigned by the Commission. The expense of the labor is met by the club. The court will be open to residents of Gatun on subscription of \$5.00. It is expected that a tennis club will be formed, independently of the woman's club. The club kindergarten closed some weeks ago, the properties of the school being sold to club members. It is expected to reopen the kindergarten in the fall, unless arrangements are made for the pupils in the Gatun school.

The Gorgona Woman's Club held a business meeting on Thursday, August 5. Plans for an entertainment are under way.

An entertainment under the auspices of the Pedro Miguel Woman's Club was given at the clubrooms on Monday evening, August 16, Mr. J. Wesley Holland presenting a program of monologues and readings.

Under the auspices of Kangaroo Court No. 1, Empire, a vaudeville entertainment was given at the lodge hall on Saturday evening, August 7. Miss Marie Kenny, a professional entertainer, was assisted by Messrs. Jacobs, Moore, Flynn, Peaslack, and the Manila Mandolin Quartette. The dance announced for that evening was postponed and took place on Saturday evening, August 14.

A meeting of the board of directors of the Canal Zone Humane Society was held at Ancon on Sunday afternoon, August 8, the president, Col. W. C. Gorgas, presiding. In response to a recommendation of the officers in Cristobal, the Panama Railroad Company will place a drinking fountain for horses at Colon in the vicinity of the old Colon station. A recommendation has been forwarded to the Governor of Colon to organize a humane society in that city, similar to that in Panama, to cooperate in the work of the Canal Zone society. The society has forwarded an offer to the president of the Panama Humane Society to defray one-half the expense of placing two drinking troughs in the city of Panama, each organization to appropriate a sum not to exceed \$50 gold for the purpose. The board elected Mrs. Lorin A. Clark of Gatun to fill the vacancy in its numbers left by the resignation of Mr. Geo. L. Campen. A badge, similar to that worn by the members of the New York Humane Society, was ordered.

## Ancon Club, I. O. O. F.

The next regular meeting of Ancon Club, I. O. O. F. will be held Thursday evening, August 19, at 8 o'clock. There will be a special meeting Saturday evening, August 21, at which Mr. B. F. Sisson, D. D. G. S. will be present.

## COMMISSION CLUBHOUSES

## Activities of the Young Men's Christian Association.

## CULEBRA.

At the regular meeting of the chess club held last week, Mr. C. M. Wilson, the present champion of the club, played a simultaneous game against all the other members of the club, winning all but one match, which ended in a draw.

The new indoor hand ball court is completed and is proving a popular feature.

The farce comedy "Captain Racket" will be presented by the Gorgona Y. M. C. A. Dramatic Club on Friday night, August 20.

Sunday evening, August 15, Rev. J. W. Holland held his farewell service at the clubhouse. After a few remarks regarding his year spent on the Zone, Mr. Holland read by request, Elizabeth Stuart Phelps' story, "The Singular Life." Special music consisted of a piano solo by Mrs. Ernest E. Lee and two vocal solos by Mr. George R. D. Kramer. Mr. Holland left for the States on August 17.

Judge Thos. E. Brown will speak at the Y. M. C. A. Sunday evening, August 22. This will be a union meeting of the Culebra Union League, and the Y. M. C. A. Special music will be furnished.

## EMPIRE.

A bowling match between the men from the Empire shop offices, and the men from the Division Engineer's office resulted as follows: Shop office—846, 732, 787. Engineer's office—750, 781, 826.

Every Tuesday and Friday, night classes are held in the gymnasium. Calisthenics, apparatus work and recreative games are features.

The Junior Department of the Empire Y. M. C. A. is planning a trip to the bathing beach in Panama.

All members interested in the organization of a basket ball team are requested to leave their names with Assistant Secretary Ludwig.

## GORGONA.

The following members of the Gorgona Y. M. C. A. have entered the handicap pool and billiard tournament which will be started at once:

Pool entries—E. L. Emery, Frank Lasker, W. H. Keenan, J. M. Warrick, M. J. Miller, E. R. Hall, Dan Kenney, J. D. Deavours, E. A. McInerney, L. E. Clark. Billiard entries—Frank Lasker, G. Grosse, C. L. Prentiss, W. J. Wright, U. L. Hill, Thos. Bailey.

The bowling alleys are being repaired and will be in good shape Thursday. Come out and practice up for the league tournament and try for a place on the association team.

The attractiveness of the lobby has been greatly increased by the installation of Tungsten lights.

The Gorgona Y. M. C. A. Dramatic Club presented the farce comedy "Captain Racket" to a crowded house on August 14. The residents of Gorgona showed their interest and appreciation by their presence and hearty applause.

## CRISTOBAL.

Saturday night, August 14, the Empire team bowled a match of three games with the team representing the local association, with the following result: Empire—795, 891, 836. Cristobal—903, 812, 895.

A shipment of new books has recently been received from the States as an addition to the library. All the books in the library are being renumbered, and recatalogued according to authors and titles.

## The Union Christian League of Culebra.

Rev. John Wesley Holland, Commission Chaplain at Culebra, who has had charge of the regular services of the Union Christian League, has resigned to re-enter the regular ministry of the Methodist Episcopal Church in Illinois. During his ten months service at Culebra there has been an average attendance of 70 at the Sunday evening services, and an average of 17 at the Bible class on Thursday evenings. There also have been eight additional gatherings under the auspices of the League, consisting of receptions, musicales, and special religious meetings. Awaiting the appointment of a regular Chaplain, the League will continue all its usual services, securing lay speakers principally to give addresses.

## Gorgona Athletic Park Association.

A special meeting of the stockholders of the Gorgona Athletic Park Association, will be held in the hall over the I. C. C. Hotel, at 8 p.m., Friday, August 20, 1909.

## OFFICIAL CIRCULARS.

## Overtime Pay for Hourly Employees.

CULEBRA, C. Z., August 9, 1909.

CIRCULAR No. 132-F:

The following resolution, adopted by the Commission at its 154th meeting, is published for the information and guidance of all concerned:

*Resolved*, That, effective September 1, 1909, all hourly employees who are citizens of the United States will be paid time and one-half for work over the eight-hour day, all other hourly employees will be paid time and one-half for work over ten hours in one day. All hourly employees will be paid time and one-half for all work on Sundays and holidays.

Attention is called to the fact that the length of the working day for mechanics and laborers, as now established by the United States Statutes, is not changed by the above resolution. It is merely intended that when alien mechanics are required to perform emergency work after the close of the eight-hour day, they shall be paid straight time until they have worked ten hours; and that laborers, when required to work more than nine hours per day, shall not be paid time and one-half until after ten hours' work.

GEO. W. GOETHALS, *Chairman*.

## Family Quarters.

CULEBRA, C. Z., August 10, 1909.

CIRCULAR No. 134-B:

The following resolution, adopted by the Commission at its 154th meeting, is published for the information and guidance of all concerned:

*Resolved*, That family quarters may be held, with the approval of the Chairman, for the full period of any extended leave of absence with pay which may be granted to the employee to whom quarters are assigned.

That family quarters may be held for 56 days during the absence either of the employee to whom they are assigned, or of his family, or of both simultaneously, provided that this privilege shall not be granted for more than one period of 56 days in any service year.

If vacated the second time during the service year either by the employee, his family, or both simultaneously, quarters will be held for not more than 42 days.

This rule supersedes in part the rules governing the assignment of married quarters adopted by the Commission at its 130th meeting.

GEO. W. GOETHALS, *Chairman*.

## No Holiday Pay for Silver Employees.

CULEBRA, C. Z., August 9, 1909.

CIRCULAR No. 133-A. (Amending, also, Circular No. 132):

The following resolution, adopted by the Commission at its 154th meeting, is published for the information and guidance of all concerned:

*Resolved*, That hereafter hourly employees on the so-called silver rolls, who are not citizens of the United States, will not be allowed gratuity pay for holidays.

GEO. W. GOETHALS, *Chairman*.

## Corral Charges for Private Work.

CULEBRA, C. Z., August 12, 1909.

In future, corral charges covering shoeing of private animals and repairs to private equipment will be collected by deductions from pay-rolls. Any information in regard to details of charges may be obtained from the District Quartermaster of the district in which the service is rendered.

C. A. DEVOL, *Chief Quartermaster*.

## Steamship Baggage.

The General Manager of the Panama Railroad Company wishes to call attention to the following rules printed in THE CANAL RECORD of June 9, 1909:

Passengers for Panama railroad steamships will avoid a great deal of confusion to themselves, and the probable loss of baggage, if they will kindly see that their baggage, with full directions, is delivered to the agent on steamer sailing day, at least one hour before the train is due to leave their station; and they will also avoid a great deal of confusion, and possible loss of baggage, if they will check their baggage through to New York. Each agent is provided with blank tags for either the hold or the stateroom, and it is requested that all pieces of baggage be plainly marked with the person's name and final destination in the States.

LOST—A brown suit of clothes wrapped up in a parcel, from the train that was wrecked at Corozal on July 11. Please return to the owner, Clyde Cecil, Empire, Canal Zone.

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending August 18, 1909 (75th meridian time):

DATE.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.
August 19 .....		5.52	12.08	6.08
August 20 .....	12.21	6.24	12.43	6.43
August 21 .....	12.55	6.55	1.18	7.10
August 22 .....	1.28	7.28	1.55	7.43
August 23 .....	2.05	8.03	2.35	8.23
August 24 .....	2.46	8.43	3.23	9.24
August 25 .....	3.36	9.35	4.23	10.18

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea level for the week ending midnight Saturday, August 14, 1909:

	STATIONS.					
	Vigia.	Alhajuela.	Gamboua.	Bohio.	Gatun (Canal.)	Gatun (W. D.)
Height of low water above mean sea-level, ft.	125	92	46	1	0	0

## Proposals for Building.

Contract building. Sealed proposals, for labor only, will be received at the office of the Constructing Quartermaster, Culebra, until 3 p. m., August 30, 1909, and then opened, for the erection by contract of a Fire Station at Porto Bello. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of \$5. Fifty dollars must be deposited with the proposal and \$50 when the contract is signed.

C. A. DEVOL, *Chief Quartermaster*.

## Contract Schoolhouse and Colored Institute.

Contract buildings. Sealed proposals, for labor only, will be received at the office of the Constructing Quartermaster, Culebra, until 3 p. m., August 23, 1909, and then opened, for the erection by contract of a schoolhouse and a colored institute at Culebra. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of \$5. Fifty dollars must be deposited with the proposal, and \$200 when the contract is signed.

C. A. DEVOL, *Chief Quartermaster*.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

Advance .....	P. R. R. Tuesday .....	Aug. 17
Ancon .....	P. R. R. Thursday .....	Aug. 19
Atrato .....	R. M. Saturday .....	Aug. 21
Allianca .....	P. R. R. Monday .....	Aug. 23

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Atrato .....	R. M. Tuesday .....	Aug. 31
--------------	---------------------	---------

Sailings of the French line (Cie. Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailing of the Leyland Line will be as follows: *Louisianian* for New Orleans, via Kingston, Ja., on or about August 31.

The steamers *David* of the National Navigation Company, and the *Taboga* of the Pacific Steam Navigation Company, leave Panama, for David, province of Chiriqui, and intermediate points, the first and third weeks of each month.

## Fire Station at Bas Obispo.

Sealed proposals, for labor only, will be received at the office of the Constructing Quartermaster, Culebra, until 3 p. m., August 21, 1909, and then opened, for the erection by contract of a Fire Station at Bas Obispo. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of \$5. Fifty dollars must be deposited with the proposal and \$50 when the contract is signed.

C. A. DEVOL, *Chief Quartermaster*.

## The Canal Record

*Published weekly under the authority and supervision of the Isthmian Canal Commission.*

*The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.*

Address all Communications

THE CANAL RECORD,

Ancon, Canal Zone,

Isthmus of Panama.

*No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.*

### NOTES OF PROGRESS.

#### Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of July is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed description of the progress of Canal work in all departments and divisions.

#### Dredge for Gatun Dam Fill.

Authority has been granted for the purchase in open market, for use in making the hydraulic fill at Gatun Dam, of a 20-inch pipe-line suction dredge which is now at Baltimore, Md., having been made by the Ellicott Machine Company of that city and never put in service. It will be delivered on the Isthmus before the close of the present calendar year. When it is added to the fleet making the hydraulic fill there will be four 20-inch suction dredges in that service, and it is probable that another will be added during the coming year. It is proposed to keep all the dredges at work on the Dam until the fill is nearly completed, when two of them will be withdrawn and set at work on the excavation in the Central Division that can be done more economically by suction dredge than by steam shovel. It is estimated that about 4,000,000 cubic yards of material between Gatun and the beginning of Culebra Cut at Bas Obispo can be handled in this manner, as soon as the water in Gatun Lake has reached a high enough level to permit of dredging. The dredging and the fill in the Dam will thus be completed at the same time.

The hull of the new dredge is of open hearth steel, 150 feet long, 40 feet moulded beam, 10½ feet deep, well 30 feet long and 11½ feet wide. There are four boilers of the Scotch marine type, inside diameter 10½ feet, length inside heads 11 feet 4 inches, Morrison suspension furnaces of 40 inches inside diameter, 156 tubes 7 feet 11¼ inches long and 3 inches in diameter; working pressure 200 pounds. The engine is of the vertical triple expansion type with cylinders

14 inches, 22½ inches, and 40 inches, stroke 20 inches, revolutions 200 a minute. The ladder for the suction pipe, cutter, shaft and gearing is 70 feet long from the hinge to the center of the cutter. The cutter is of the spiral type, adapted for sand and mud. The pump is a 20-inch centrifugal, single suction, disc-lined, Volute pump, with inclosed runner of six blades 94 inches in diameter. Two manholes give access to the parts for making repairs. Quarters and toilet accommodations are provided for a crew of 35 men, and there are electric lights throughout. The dredge will dig to a depth of forty feet, and has a capacity of 600 cubic yards of material an hour through 5,000 feet of pipe line.

#### Mechanical Cement Unloader.

Plans are in preparation for a mechanical unloader to be used on the cement dock at Cristobal Point in unloading cement from the ships *Ancon* and *Cristobal*. The conditions to be met are the rising of the ship in the water as the cement is taken out of the hold, the sinking of the lighters as they are loaded, and a rate of unloading rapid enough to enable the ships to keep to their bi-weekly schedule.

#### Gatun Fire Protection.

A paid fire department was instituted at Gatun on August 3, displacing the volunteer department that had served up to that time. The company at present consists of four men, but five have been authorized. The station is a two-story frame building 22 by 50 feet, with quarters on the second floor for five men. The equipment consists of one hose wagon and 1,000 feet of hose, two fire extinguishers, one 20-foot extension ladder and one 12-foot roof ladder. A Gamewell fire alarm system has been installed with ten street boxes convenient to Commission property.

#### Rock Breaker at Work.

The rock breaker *Vulcan* began active operations on Saturday, August 21, in the Canal channel, opposite the Panama railroad wharf at Balboa, where there is a considerable area of rock to be broken up before the dredges can resume work. The barge on which the rock-breaking machinery is placed, is strongly anchored in the channel by means of chains drawn perfectly taut, and progress and location are determined by ranges stationed on the bank. The crushing of the rock bottom is accomplished by a huge steel ram, weighing 15 tons, which is raised by a heavy winch, and by releasing a clutch is allowed to drop through a well in the middle of the barge. The mode of operation is in a measure similar to that of a pile-driver, except the lift of the ram is usually not more than from four to six feet from the bottom. One complete operation occupies but 15 seconds when the machinery is working steadily. The area of rock broken while

the barge is in one location, is a circular space about five feet in diameter. The ram crushes the rock to a depth of three feet, and when the area is completed, a dredge will clean out the loose material, after which the process will be repeated until the required depth is reached. The breaker is now working in about 30 feet of water at low tide, crushing rock which is mostly hard trap, with here and there a softer streak. The barge is manned by seven men, three white operators, and four colored employes, and the work at present is carried on in the daytime only.

#### New District Quartermaster's Office.

A new one-story building, about 16 by 20 feet in size, has been completed at East Balboa for use as an office by the Assistant District Quartermaster, whose territory comprises both Old Balboa and East Balboa, and is under the jurisdiction of the District Quartermaster, Ancon. The building is located on the Old Balboa road, a few steps west of the Commissary, and contains but one room. The removal of the office, which has heretofore occupied building No. 106 at East Balboa, formerly used as office quarters by Resident Engineer Comber, took place on Thursday, August 19.

#### The Chame in Commission.

The work of converting the *Chame* into a supply tender for the Pacific Division dredging fleet and sand service has been completed, and the vessel is now in commission. The *Chame* was formerly the *Riversdale*, an English-built steam trawler, launched at Hull in 1899, and having a gross tonnage of 180.36 tons, a registered tonnage of 58.61 tons, and a rated speed of 10 knots. The boat arrived at Panama early in 1908 on her way to Cocos Island, off the coast of Costa Rica, where buried treasure has been rumored to exist, but the trip was abandoned at this point, and the vessel was purchased by the Commission. It has been equipped with oil-burning apparatus, and a refrigerating plant of the same type as the plants installed on the suction dredges *Culebra* and *Caribbean*, which have a daily capacity each of 400 pounds.

#### Additions to Cold Storage Plant.

An addition of a new refrigerating unit has been authorized for the cold storage plant at Cristobal. This unit will have a refrigerating capacity in 24 hours equal to that obtained by melting three hundred tons of ice, and so, will increase the capacity of the plant by more than one hundred per cent, as the unit now in use has a capacity of 250 tons. This addition is necessary because of the increased demand on the present refrigerating unit, which is constantly running beyond its normal capacity, and as a precaution against the loss of the meats and other foods in cold storage.

The new plant will consist of a 300-ton

## NOTES OF PROGRESS.

(Continued.)

ice machine, an Ideal engine, circulating pump, reboiler, and boiler feed pump. The engine will be a horizontal cross-compound Corliss, with cylinders 20 and 40 inches with 42 inch stroke, and it will be direct connected to two horizontal double-acting ammonia compressors. It will operate at approximately 60 rotations per minute with steam pressure at the throttle (saturated) of one hundred and thirty pounds gauge; back pressure of ammonia at compressor of 15.67 pounds gauge; condensing pressure of ammonia of 185 pounds gauge; temperature of cooling water 85 degrees Fahrenheit. The compressors will be double-acting, horizontal, water jacketed, with two cylinders each 16½ inches in diameter by 42-inch stroke, one connecting to each end of the engine crank shaft by the engine crank pin. There will be 19,200 linear feet of 2-inch pipe in the atmospheric condenser.

In order to utilize the additional refrigerating capacity a reinforced concrete building 135 feet long, 35 feet wide, and two stories high will be added to the present plant at the north end. The ground floor will consist of a meat storage room, which will be finished for cold storage, and a loading corridor. The corridor now in use is 122 feet long and accommodates three cars. With the extension the corridor will be 257 feet long and will accommodate seven cars. The part of the present cold storage house in which ice is kept will also be used for meats, and the total increase in storage capacity for meats will be 800 quarters of beef a day. The second floor will be used as a vegetable storeroom, but will be so constructed that it can be changed into cold storage space at little cost of time or money. Removing the ice room from the cold storage building will do away with a large part of the dampness that interferes with perfect storage.

An ice storage house will be built across the loading track near Dock No. 11. The present output of 75 tons of ice a day will be increased by five or ten tons when the new refrigerating unit, and new brine and ice tanks have been installed. The 16 refrigerator cars that are now cooled by ice will be cooled by a brine circulating system. Cracked ice for the system will be carried from the ice house and dumped into the car by a tip conveyor.

## Labor Train Between Gatun and Culebra.

At the request of employees of the Atlantic Division, who occupy married quarters at various places between Bohio and Culebra and whose work is at Gatun, a labor train will be run between Gatun and Culebra each working day, and the service was begun on August 18. The schedule approved follows:

P. M.	A. M.
6.00 (Leave).....Gatun (Arrive).....	6.45
6.06.....Tiger Hill.....	6.39
6.09.....Lion Hill.....	6.35
6.23.....Bohio.....	6.22
6.38.....Tabernilla.....	6.05
6.44.....San Pablo.....	6.00
6.52.....Mamei.....	5.52
6.59.....Gorgona.....	5.45
7.03.....Matichin.....	5.40
7.08.....Bas Obispo.....	5.36
7.12.....Las Cascadas.....	5.31
7.20.....Empire.....	5.22
7.25 (Arrive).....Culebra (Leave).....	5.15 a. m.

This arrangement is made because there

are not enough family quarters at Gatun to accommodate the married men employed there. The train and fuel are supplied by the Commission, but the men have agreed to furnish a qualified train crew.

## Operations at Balboa.

Suction dredge *Culebra*, which was laid up at Flamenco Island for several days undergoing repairs, resumed work in the Canal channel on Wednesday, August 18. The hull of the vessel was cleaned and repainted, and two tail-end hushings, and a new propeller were fitted. A wash-out system was also installed in its hold to clean out any mud deposits that may stick to the bottom of the bin.

Ladder dredge *Gopher* is at the shipways undergoing a thorough overhauling preparatory to being set steadily at work in the sand beds at *Chame*. A number of plates will be renewed, and a wash-out system will be installed. It is probable that the repairs will take several weeks, and in the meantime, if found necessary, ladder dredge *Mole* will be taken to *Chame* temporarily.

The preparatory work has been begun for the erection of the four 400-cubic yard knocked-down dump scows, which were brought to the Isthmus on the first trip of the cement ship *Cristobal*. When ready for service, two of these scows will probably be used in the Canal dredging operations, and two in sand transportation.

Work on the bins at the sand dock is about 30 per cent completed. The sand track from Miraflores is almost finished to the dock.

The work of reconstructing an old French barge at the shipways, which will be used in carrying a wrecking crane, is well under way.

## Improving Telephone Service.

An improvement will be made in the telephone service at Cristobal and Colon by moving the switchboard for those places from the general offices of the Panama Railroad Company in Colon to the building in Cristobal, formerly occupied by the Commissary printing plant. This building is more centrally located than the general offices are. Two sets of Number 9D, Western Electric telephone switchboards will be installed in the new office making it possible to handle 280 common battery and 70 magneto lines.

In the 24 hours from 7 a. m., August 10 to 7 a. m., August 11, the telephone system handled 118,000 trunk line miles of calls, and 7,729 local calls. These figures represent actual conversation, and take no account of requests for connections when the answer "Busy" was given by the switchboard operators.

## Old French Scrap to the States.

The cement ships *Ancon* and *Cristobal* are taking scrap iron and steel to the States on their return voyages, using it as ballast. Five hundred tons were taken by each ship on its most recent return voyage. This scrap comes from Gorgona where it is loaded on the cars and sent to Colon. At Colon the cars are run out on the dock next to that at which the cement ships are temporarily tying up. The material is transferred from the cars to the deck of the crane boat, whence the ship's tackle lifts it upon the ship and places it in the hold. This scrap is sold in the open market as no contract has yet been made for the sale of the whole amount now on the Isthmus.

## NAVIGATION IN THE CANAL.

## Directions for Ships Using the Five Miles at the Pacific Entrance.

The attention of the shipping interests of all the maritime nations has been called to directions for navigation in the Pacific entrance to the Canal, as contained in a report made by the Division Engineer of the Pacific Division under date of August 16. The report says:

"The new channel at the Pacific entrance to the Canal has been dredged from the Balboa wharf to the minus 45 curve at mean tide in the bay of Panama, to its full width but not entirely to the full depth. For the benefit of the shipping, both foreign and domestic, it has been marked and described as follows:"

The center of the channel at the sea end is about 6,000 feet distant from San Jose Rock, the outer one of the cluster of five islands immediately south of Panama and about four miles distant from the city of Panama. The azimuth from this center of channel point to the triangulation station on San Jose Rock is 240 degrees.

The channel is open from this point to Balboa wharf, a distance of about five miles, to its full 500-foot bottom width, although not to its full depth, and the azimuth of the center line is 151 degrees, 44 minutes, and 35 seconds.

The sides of the channel are marked by parallel lines of buoys, red on the starboard and black on the port hand side going up the channel; these buoys are numbered beginning at the sea end of the channel. The buoys on the starboard side have even numbers running 2, 4, 6,.....24, and those on the port side have odd numbers, running 1, 3, 5, 7,.....17. Marks 19, 21, and 23 are target tripods which take the place of the buoys over the shoaler water, and are placed in lieu of same.

These buoys and targets are 2,000 feet from each other in the line going up the channel, and 600 feet from each other in the cross-section. They are moored on top of the channel bank to avoid interference with the dredging, and shipping should clear the buoys by at least 100 feet in passing them. These buoys willall be lighted at night.

A set of three rectangular range targets mark the prolongation of the center channel line, on its shore end, and shipping should keep these ranges in one while coming in or going out, thus assuring them of being in the channel center; these ranges have a white light on each which should merge in one three-light tower at night.

The depths of the channel that are available at this time are as follows:

Buoys 1 and 2 to buoys 13 and 14.....	50 feet.
Buoys 13 and 14 to buoys 17 and 18.....	40 feet.
Buoys 17 and 18 to target 21 and buoy 22 in east half of channel.....	35 feet.
Buoys 17 and 18 to target 21 and buoy 22 in west half of channel.....	30 feet.
Target 21 and buoy 22 to upper end Balboa wharf.....	32 feet.

These depths are mean tide data; add 10 feet for spring high, subtract 10 feet for spring low tide.

The azimuths given are true meridian azimuths, and ship captains can apply their individual corrections for their compasses.

## Revenue Operations for July.

During the month of July, 1909, fifty-seven liquor licenses were issued in the Canal Zone, the revenue therefrom aggregating \$34,200, an amount somewhat less than the aggregate of collections from this source in July a year ago. Nine licenses were issued in the Cristobal district; 30 in the Empire district, and 18 in the Gorgona district. None were issued in the Ancon district. The total revenue collections for July were as follows: Distillation licenses \$717.30; burial permits \$3; retail liquor licenses \$34,200; escheated estates \$23; taxes, licenses, etc., from tax collectors \$10,570.95, a total of \$45,514.25.

The District Quartermaster at Cristobal has been authorized to issue requests on the Panama railroad for half rate tickets to employees returning from their leave in the States.

## COLORS OF P. R. R. EQUIPMENT.

Standard Colors for Coaches, Freight Cars and Locomotives.

Canary yellow has been adopted as the standard color for the coaches, refrigerator cars and all other box cars used in the passenger service on the Panama railroad. Tests to ascertain the color best suited to withstand the local climatic conditions, which are unusually hard on exterior paints, have been made with the result that yellow has demonstrated a superior lasting quality over the other colors tried. In response to a letter from the General Manager setting forth the desirability of such a test, the President of the Panama Railroad Company on October 22, 1907, sanctioned it, and subsequently three passenger coaches were taken into the shops and each painted a different color. The results appear in the following statement from the Master Mechanic, which also shows the date the coaches were turned out of shop, the cost of labor and material expended on them since, and their condition at the time the report was made:

Pullman color coach No. 1.—Turned out of shop December 24, 1907. Taken into shop again in June, 1908. Rubbed down, touched up and two coats of varnish given the outside. Inside renovated and floor and roof painted. Total expense, \$53.38. At present in good condition.

Yellow coach No. 4.—Turned out of shop December 24, 1907. Taken into shop in June, 1908. Rubbed down, touched up outside and given two coats of varnish. Cleaned and rubbed up inside. Total expense, \$57.42. At present in good condition, ahead of No. 1.

Red coach No. 8.—Turned out of shop in June, 1908. No repairs made since. Present condition fair, but not as good as Nos. 1 and 4. Shows more perished condition, but can be touched up.

On November 17, 1908, the President of the Panama Railroad Company appointed a committee, consisting of S. D. Morgan, formerly superintendent of painting in the old Division of Building Construction, A. C. Everist, foreman painter in the Gorgona shops, and E. W. Leeds, foreman painter in the Panama railroad shops at Cristobal, to consider the painting of Panama railroad equipment, and report their recommendations, which were in substance as follows:

All cars in the passenger service should be painted a canary yellow, on the A. B. C., or 1, 2, 3, system, with the lettering boards a light olive green, and the name "Panama Railroad," and the numbers of the coaches in gold leaf. The sides of the refrigerator and other box cars in the passenger service should be painted yellow, with the ends some dark color, and the trucks of both coaches and cars with standard truck enamel. The roofs and decks should be painted with two coats of Princess Mineral. The special private cars should still be painted the standard Pullman color.

Cars that are used in the maintenance of way department should be painted a light steel gray, using lead and oil material. Cars that are set off at stations and which become a part of the station should be treated to harmonize with the station color. Trucks of maintenance of way cars should be painted black.

The bodies of freight cars should be painted with Princess Mineral paint, the roofs with coal tar paint, and the trucks, black. The sides of steel cars should receive one coat of graphite, two, if time permits, and the underneath frames, ends and trucks should have one coat of coal tar paint.

On locomotives, black jacket enamel should be used for the jackets, steam chest cylinders, and parts that become extremely heated. The metal surfaces of the cabs, tanks, and upper parts of the locomotive should be primed with a mineral primer, given two coats of primer stone No. 1, dark, or some other surfacer, two coats of locomotive black, and a coat of engine finishing varnish, lettered and numbered with aluminum. The stack and front end should be painted with front and stack black; the rods and drivers with rod and tire color, and the top of tank, top of cab, coal space, and bottom of tank where it is lifted from the frame, with graphite. The cab sash should be painted a tan color, the tank trucks with

engine truck black, and the tank frames underneath, with coal tar paint.

The report and recommendations of the committee were approved by the President of the Panama Railroad Company on July 3, 1909, and on July 7, the General Manager issued an order making them effective in the shops of the Company.

Among the trunk lines in the United States that have made yellow the standard color for passenger equipment, are the Chicago & Northwestern, the Chesapeake & Ohio, the "Big Four," and the Chicago, Milwaukee & St. Paul, the latter company using light orange. The Chicago, Burlington & Quincy also uses yellow on its branch lines west of the Missouri River.

### Police Report for July.

The July report of the Chief of the Division of Police and Prisons shows that 529 arrests, representing 43 nationalities, were made in the Canal Zone during the month, as compared with 518 in June, an increase of 11. Of the July arrests, 492 were men, and 37 were women, the offenses with which they were charged aggregating 55. The arrests were distributed as follows: Ancon, 26; Las Sabanas, 3; Balboa, 22; Corozal, 4; Miraflores, 11; Pedro Miguel, 3; Paraiso, 21; Culebra, 44; Empire, 86; Las Cascadas, 24; Bas Obispo, 20; Gorgona, 71; San Pablo, 10; Tabernilla, 27; Bohio, 3; Gatun, 59; Cristobal, 84; Porto Bello, 11.

The police force numbered 249 men on July 31, including 93 men on special duty, while the pay-roll for the month amounted to \$19,234.77. There were 50 criminal cases tried in the Circuit courts, 11 of which were dismissed, one resulting in acquittal, 22 continued, and 16 in which convictions were secured. Of the 16 persons convicted, 11 were sentenced to the penitentiary; one to the common jail who also had a fine imposed, and one convicted of desertion who was ordered back to his ship.

The Zone convicts on June 30 numbered 117; received during July, 11; discharged, 9; total on July 31, 119. The number of district prisoners on the same date was 121. The prison pay-rolls for the month amounted to \$1,546.32; cost of prisoners' subsistence \$982.75; clothing \$340.50, a total expense of \$2,869.57. The value of work performed by prisoners on Zone roads was \$1,782.90. Seventy-three civil cases were tried during the month, and the sum of \$170.03 was collected in executions.

### Obituary.

Major Lewis Balch, U. S. A., the first American Health Officer of the city of Panama, died in New York City on August 11, from a complication of diseases. He was born in 1847, was graduated from the college of Physicians and Surgeons in New York, served a term as secretary of the New York State Board of Health, and later was the Health Officer of the city of Albany. At the outbreak of the Spanish-American war he went to Cuba as surgeon of the Second Regiment, New York Volunteers, and a year afterwards accompanied Col. Hardin to the Philippines, where he nearly lost his life from fever. He was in charge of the Health Department in Panama from July 11, 1904, until April 1, 1905, resigning May 15, 1905. Major Balch left a widow and a son, Lewis Balch, who reside at Wakefield, R. I.

Gordon Burton Smith, of Atlanta, Ga., a

civil engineer in the employ of the Panama railroad, was drowned in the Chagres River near Gamboa bridge on the afternoon of August 20. He was crossing the river in a native canoe which was swamped. Two laborers who were in the boat with him escaped. Mr. Smith came to the Isthmus on January 30, 1908, and was employed in the Pacific Division until January 18, 1909, when he transferred to the relocation of the Panama railroad. He was 20 years of age. The body was recovered near San Pablo shortly after midnight Sunday, and was shipped to Atlanta, Tuesday, August 24.

Edward R. Williams, an American, employed in the Pacific Division, was drowned in the Canal channel at Balboa, about 11.50 a. m., Saturday, August 21. He was working as a rodman on subaqueous rock excavation, and at the time of the accident was standing on a sandbar. His foot suddenly slipped and he slid down the steep slope of the bar into deep water, and sank before assistance could reach him. He was a native of Boston, Mass., 23 years of age, unmarried, and had been on the Isthmus a little over four months.

William D. Green, a foreman of the Central Division, with quarters at Las Cascadas, died at Ancon Hospital, on August 21, after an illness of four months. He was born on January 20, 1868, at Maysville, Ky., and his home at the time of his death was at Danville, in that state.

### A Card of Thanks.

As friends of the late Gordon Burton Smith, and on behalf of his family, we wish to thank all those who assisted in the search for his body, from the time of his drowning in the Chagres River at Gamboa, on August 20, until the body was recovered at San Pablo on the night of August 22.

LOUIS B. WILCOX,  
A. R. JAMES.

Corozal, August 23, 1909.

### Premature Explosions.

A premature explosion occurred in Culebra Cut, near Culebra, about 6 a. m., Monday, August 23. Some workmen were engaged in loading a hole when the charge went off, seriously wounding two Barbadian laborers, who were brought to Ancon Hospital.

A dynamite blast was prematurely discharged at 9.25 a. m., Thursday, August 19, at the lock site at Miraflores. In placing the charge it became clogged, and while tamping a little harder than usual to get it in position, the blast exploded. Six colored laborers engaged on the work, three Jamaicans and three Barbadians, were slightly hurt, the injuries consisting principally of powder burns and contusions about the faces and hands.

Oil is no longer used as fuel in the cold storage plant at Cristobal. All of the six boilers have been reconverted for coal.

The following steamers arrived at or departed from Balboa during the week ending August 20, 1909:

Arrived—August 8, *City of Para*, from San Francisco; August 9, *Mexico*, from South ports; August 14, *Ecuador*, from Guayaquil; August 15, *Guardian*, from Callao, (Cable ship); August 17, *Manavi*, from intermediate ports; August 19, *Peru*, from San Francisco; August 20, *Loa*, from South ports. Departures—August 8, *City of Para*, for San Francisco; August 9, *Mexico*, for South ports; August 14, *Ecuador*, for Guayaquil; August 15, *Guardian*, (Cable ship), for Callao; August 17, *Manavi*, for intermediate ports.

## CANAL WORK FOR JULY.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., August 19, 1909.

The Honorable the Secretary of War,  
Washington, D. C.

Sir: I have the honor to submit the fol-

lowing report of operations on the Isthmus for the month of July, 1909:

Department of Construction and Engineering.  
The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry.....	Cubic yards.....	121,436	1,434,725	128,502	1,684,663
Work excavation, wet.....	Cubic yards.....	348,451		759,363	1,107,814
Total work excavation.....	Cubic yards.....	469,887	1,434,725	887,865	2,792,477
Plant excavation, dry.....	Cubic yards.....		8,369	42,414	50,783
Plant excavation, wet.....	Cubic yards.....				
Total plant excavation.....	Cubic yards.....		8,369	42,414	50,783
Total Canal excavation.....	Cubic yards.....	469,887	1,443,094	930,279	2,843,260
Explosives used.....	Tons (2240 lbs)	38.40	305.50	26.57	370.47
Rock drilling.....	Feet.....	52,729	367,580	84,171	504,480
Track removed.....	Miles.....		9.50		9.50
New track laid.....	Miles.....	2.30	17.48	3.25	23.03
Material placed in dams.....	Cubic yards.....	513,076		45,316	558,392
Rock crushed.....	Cubic yards.....	20,327	10,140	5,285	35,752
Cement used.....	Barrels.....	6,900		1,608.50	8,508.50
Concrete placed.....	Cubic yards.....	6,749		1,553	8,302
New roads built.....	Miles.....	3	.05		3.05
Water mains laid.....	Feet.....	5,570	2,003	5,557	13,130
Sewers laid.....	Feet.....	724	1,404		2,128
New drains and ditches dug.....	Feet.....	605	3,523	2,400	6,528
Average daily force.....		5,329	9,538	3,983	18,850
Rainfall, average.....	Inches.....	11.46	8.27	14.92	10.66

## Atlantic Division.

## GATUN LOCKS.

*Excavation*—Excavation was continued during the month with four steam shovels and two cranes. The excavation in the upper locks was completed, excepting the curtain wall south of the emergency dam, and on the west side of the lock excavation, and the cleaning up of loose material.

*Receiving Material*—During the month 22 barges, containing 13,300 cubic yards of stone, and two barges, containing 1,109 cubic yards of sand were delivered at the lock site. Thirty thousand, five hundred and eighty-four barrels of cement were received.

*Cement Shed*—Work on the barrel conveyor at the cement shed was 95 per cent completed, and one track of the automatic railroad was completed, with the exception of the permanent crossovers and paper insulation between porcelain insulators.

*Industrial Railroad*—The two west tracks of this road were completed between a crossover at the south end of the track and a crossover at the north end of the mixer building. The entire road was about 95 per cent completed at the end of the month.

*Saw Mill*—The saw mill was completed during the month.

*Anchorage*—Six hundred and five French rails were set in the east chamber of the upper locks, making a total of 939 at the end of the month.

*Power House*—Excavation was finished at the power house for ditches around the building, 830 cubic yards being removed. The building was completed with the exception of finishing floors in the boiler and engine rooms.

*Cableways*—With the exception of power lines and anchorages for head towers, the unloading cableways and the lock cableways were completed during the month.

## GATUN DAM.

Construction during the month increased the total fill by 513,076 cubic yards, making

the total at the end of the month 3,476,745 cubic yards.

*Stripping*—The stripping of the low area east of the old Panama railroad was continued with the wheel scrapers. The railroad tracks within the limits of the dam were taken up and the old roadbeds cleaned out by steam shovel. The stripped area was extended in this locality by 2.1 acres, and on the east side of Spillway Hill by 1.4 acres. The total area stripped at the end of the month was 195.7 acres. Immediately after the stripping was completed, the hydraulic fill lake was raised and at the close of the month the water stood at elevation +19.3, the lake extending from the lock hills to Spillway Hill.

*Hydraulic Fill*—The hydraulic fill in the dam was increased by 310,965 cubic yards, making the total at the end of the month 1,031,012 cubic yards.

*Enrockments*—The material received from Bas Obispo, Buena Vista, the lock site, Mindi, the Spillway and the stripped area of the dam, amounting to 202,111 cubic yards, was placed on the north and south toes of the dam. The total dry fill at the close of the month was 2,445,734 cubic yards.

*Trestles*—A short connecting trestle, 65 feet in length, was driven on the south toe across the site of the old Panama railroad, 20 piles being used. It having been decided to cut off the flow from the Chagres into the old French canal, north of the dam, arrangements were made for constructing the necessary trestles and tracks to the site near the foot of the west diversion.

## GATUN SPILLWAY.

Excavation was continued clearing up the floor in preparation for the concrete and cutting a curtain trench across the south end of the spillway. During the month material excavated by crane, by hand and by steam shovel, amounted to 1,558 cubic yards, making the total spillway excavation at the close of the month 1,300,280 cubic yards.

*Concrete*—Work was continued on the west

retaining wall, north of the dam, the west face wall south of the dam, and the floor south of the dam, and into the curtain trench. The total amount of concrete placed during the month was 6,330 cubic yards, making the total at the end of the month 36,794 cubic yards.

## PORTO BELLO.

General miscellaneous mechanical and repair work was continued during the month. Five steam shovels were in operation at this point. Twenty-four thousand, three hundred and sixty cubic yards of rock were loaded into cars for crushers and fills. Twenty-six thousand, one hundred and thirty-three cubic yards of earth were removed hydraulically from the quarry. The total yardage for the month was about 60,888 cubic yards.

## NOMBRE DE DIOS.

The work of deepening and widening the entrance channel and opening the channel to the sand zone was continued. Other necessary work at this point progressed satisfactorily.

## HARBOR AND CHANNEL SECTION.

*Dry Excavation Below Sea Level at Mindi*—During the month 17,217 cubic yards of earth and 65,161 cubic yards of rock were excavated.

*Dredging from the Ocean to Mindi*—Four dredges removed from the prism 320,413 cubic yards of earth and 28,038 cubic yards of rock during the month. In addition, the dredge *Caribbean* removed 219,618 cubic yards of earth from the approach channel to Cristobal Harbor, and 53,965 cubic yards of earth in front of Pier No. 11. The dredge *Mindi* removed 37,975 cubic yards of rock from in front of Pier No. 11, and 1,200 cubic yards of earth and 2,000 cubic yards of rock from the dry dock slip. On July 31, 40 feet of water could be carried from 0 to mile 2 plus 4,200 feet; 30 feet to mile 3 plus 800 feet; 20 feet to mile 4 plus 2,600 feet; and 10 feet to mile 4 plus 5,000 feet, the end of the cut.

## MUNICIPAL ENGINEERING AND BUILDING CONSTRUCTION.

The usual work of these sub-divisions was performed during the month, including work on the Mount Hope-Gatun road, and the new water supply for Gatun. Construction work was continued on the commissary at Gatun, the power plant at Gatun, and the boiler and machine shops at Cristobal.

## Central Division.

During the month of July, the total amount of material excavated in the Central Division was 1,443,094 cubic yards, of which 377,701 cubic yards were classified as earth, and 1,065,393 cubic yards as rock.

Of this quantity, 1,414,552 cubic yards were removed by steam shovels, 22,887 cubic yards by hand, and 5,655 by sluicing in the Obispo Diversion.

The quantity of material removed from the Canal prism was 1,429,070 cubic yards, while 5,655 cubic yards were sluiced at the Obispo Diversion; 5,657 yards cast over for track inclines at point No. 3, Santa Cruz; 2,446 yards removed for the plantation road at Empire, and 266 yards at the new engine house site at Gamboa.

The daily average number of steam shovels at work during the month was 45.08, as compared with 45.65 for the month of June. For comparison with the work done by steam shovels during the corresponding month of

the previous year, in the Central Division, the following table has been prepared:

Period.	Excavated by shovels	Classification of material.		Av. No. of steam shovels working during month	W'kg days in month	Av. amount excavated per shovel per 8-hour day.
		Rock	Earth			
1908:	cu. yds.	cu. yds.	cu. yds.			cu. yds.
July....	1,463,970	992,232	471,738	52.58	26	1,071
1909:						
July....	1,414,552	1,046,772	367,780	45.08	26	1,207

Rainfall at Empire: 1908, 10.50 ins.; 1909, 8.27 ins.

The above table shows that the average output per shovel day was over 12½ per cent greater in July, 1909, than in the corresponding month of the previous year.

During the month, 181,003 cubic yards of material excavated from the prism were transported to the relocation of the Panama railroad at Caimito, Santa Cruz and Corozal and dumped as filling in the embankment for the new roadbed, the total at the close of the month for this purpose being 1,495,787 cubic yards.

During the month, 42,160 cubic yards of earth from Buena Vista, and 43,335 cubic yards of rock from Bas Obispo, were transported to Gatun for use in construction of the dam. At the close of the month 42,160 cubic yards of earth and 444,518 cubic yards of rock had been transported for this purpose.

Work on the Empire suspension bridge was continued during the month, the supporting structures being completed and the floor structure nearly finished.

The daily average number of laborers at work was 8,545, while the average number of gold men working was 993.

#### Pacific Division.

##### DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 197,098 cubic yards. No material was added to the prism of the west dam at Pedro Miguel during the month. Thirty thousand, six hundred and forty-six cubic yards of dry filling were added to the toe and 14,670 cubic yards of hydraulic filling to the prism of the west dam at Miraflores, making a total at the close of the month of 426,402 cubic yards.

At Pedro Miguel, Miraflores, and Ancon quarry, work was satisfactorily continued. No unfinished work was completed.

##### DISTRICT NO. 2—DREDGING.

Six dredges were in operation during the month, the amount of material excavated by each being shown in the following table:

Dredge	Type.	Cubic yards.		Remarks.
		Work.	Plant.	
Culebra	Suction	309,100	.....	Scow measurement
Gopher	Ladder	34,496	.....	Place measurement
Mole...	Ladder	101,130	.....	Place measurement
Badger.	Ladder	109,761	.....	Place measurement
Cardenas...	Dipper	30,800	.....	Place measurement
Marmot	Ladder	147,894	.....	Place measurement
Total.....		733,181	.....	

The necessary work in connection with maintenance of equipment was satisfactorily performed.

##### DISTRICT NO. 3—MUNICIPAL AND BUILDING WORK.

Building and municipal work were continued during the month, and the filtration plant, Ancon steam plant, and the Rio

Grande rock crusher were successfully operated. The construction of the powder magazine and detonator house at Ancon quarry was completed.

#### Mechanical Division.

The usual work of this division was satisfactorily performed during the month.

#### Relocation Panama Railroad.

During the month, 167,657 cubic yards of material were excavated, making the total excavation at the close of the month 1,569,599 cubic yards, and 225,737 cubic yards of material were placed in embankment, making the total for this purpose at the end of the month 4,931,231 cubic yards. During the month 1,290 linear feet of temporary trestle were driven, and numerous small culverts were completed. During the month, 5,451 linear feet of permanent track were laid, making the total at the close of the month 113,571 linear feet.

The force of laborers during the month averaged 2,171 men.

#### Quartermaster's Department.

During the month, there were 284 additions to the gold force, and 264 separations, making the net increase 20. The silver force remained practically stationary, the increase being 227. The force of European laborers was decreased by 175 men.

The arrangement referred to in the report for June, whereby the expense of recruiting laborers in Barbados would be reduced from \$6 to \$2 per man, was definitely effected. The steamship *Cristobal*, which sailed from New York June 25, was diverted to Barbados, and reached the Isthmus July 7, with 816 laborers. The steamship *Ancon*, sailing from New York August 19, will also be diverted to Barbados for the purpose of bringing to the Isthmus approximately 1,200 laborers. Under the new arrangement, the expense of recruiting will not only be reduced, but it is anticipated that it will also result in securing men more apt to give satisfactory and continuous service as common laborers than those previously recruited, as, with this end in view, plans have been made to exercise greater care in their selection.

#### Subsistence Department.

The operation of the Hotel Tivoli during the month showed a loss of \$341.72. There was a loss of \$1,349.86 on the operation of the line hotels, and a profit was made on the operation of the kitchens and mess halls. The net operations of this department for the month showed a profit of \$2,335.86.

#### Department of Civil Administration.

##### COURTS.

The Supreme Court held one session in July. No cases were disposed of. In the Circuit Courts 33 civil and 30 criminal cases were disposed of, and in the District Courts 76 civil and 526 criminal cases were disposed of.

#### DIVISION OF POSTS, CUSTOMS AND REVENUES.

The total revenues in July aggregated \$53,454.23. The general revenues amounted to \$47,954.25, as compared with \$28,801.86 collected in June. Included in the general revenues is \$34,200, representing the revenues derived from the issue of retail liquor licenses for the present semi-annual period.

The postal revenues were \$6,161, on account of stamp sales; \$13.30 on account of newspaper postage, and \$1,790.08 on account of money order fees. Money order

sales during the month amounted to \$417,378.10, of which \$306,131.63 was payable in the United States and foreign countries, and \$111,246.47 in the Canal Zone.

Twenty vessels entered at, and 24 cleared from the port of Ancon, and 22 vessels entered at, and 20 cleared from the port of Cristobal.

#### DIVISION OF POLICE AND PRISONS.

The total effective strength of the police force on July 31, was 162 officers and men, and the total force of the division on that date aggregated 249 officers and men.

There were 121 prisoners confined in the district jails at the close of the month. Eleven convicts began penitentiary sentences during the month; 9 were discharged at the expiration of their sentences, and on July 31, 119 convicts were confined in the penitentiary.

#### DIVISION OF PUBLIC WORKS.

The regular inspection and maintenance work of this division was performed during the month. In the city of Panama 28,964,000 gallons of water were consumed, and in the city of Colon 20,682,550 gallons were consumed.

#### DIVISION OF FIRE PROTECTION.

Five alarms of fire were responded to by the Canal Zone Fire Department, four of which involved Commission property. No damage resulted to Commission property; private property was damaged to the extent of \$245.

#### DIVISION OF SCHOOLS.

The schools were closed during July.

#### Department of Sanitation.

Among employes, the death rate was smaller than in any July since American occupation:

YEAR.	Force.	No. of deaths.	Rate.
July, 1905.....	11,277	45	46.11
July, 1906.....	28,041	151	64.71
July, 1907.....	38,298	112	35.19
July, 1908.....	44,938	55	14.65
July, 1909.....	45,875	31	8.10

For the total population, the rates were equally gratifying:

YEAR.	Total population.	No. of deaths.	Rate.
July, 1905.....	41,084	237	69.22
July, 1906.....	74,777	422	67.72
July, 1907.....	103,333	357	41.46
July, 1908.....	121,607	295	29.11
July, 1909.....	135,871	207	15.29

In July, 1905, there were 14 deaths from malarial fever among employes; in July, 1906, 26 deaths; July, 1907, 22 deaths; July, 1908, 8 deaths; and July, 1909, 1 death.

While during the past two months there was an increase in typhoid fever at Gatun, considering this disease as a whole, and considering all stations, but little typhoid fever exists in the Canal Zone. In July, 1905, there was one death from this disease; in July, 1906, 7 deaths; in July, 1907, 14 deaths; in July, 1908, 5 deaths; in July, 1909, 4 deaths.

No cases of yellow fever or plague occurred on the Isthmus during the month.

Upon the whole the health of the force was excellent, and better than at any previous period.

Respectfully,

GEO. W. GOETHALS,

Chairman.

## EXECUTIVE ORDERS.

## Penalties for Murder in First and Second Degree.

Under authority vested in me by law, it is ordered: That Section 149 of Act No. 14 of the Laws of the Canal Zone is amended to read as follows:

Sec. 149. Every person guilty of murder in the first degree shall suffer death, or if there be extenuating circumstances, confinement in the penitentiary for life; and every person guilty of murder in the second degree is punishable by imprisonment in the penitentiary not less than ten years.

WM. H. TAFT.

The White House,  
July 30, 1909.

## Good Behavior Allowance to Prisoners.

Under authority vested in me by law, it is ordered:

That every convict who is now or who may hereafter be confined in the Canal Zone penitentiary under sentence for a definite time, and who shall have no infraction of the rules and regulations of the penitentiary or laws of the Canal Zone recorded against him, and who performs the duties assigned to him in a faithful, orderly and peaceable manner, shall be entitled to the diminution of time from his sentence as follows: For the first year, one month; for the second year, two months; for the third year, three months; for the fourth year, four months; for the fifth year, five months; for the sixth and each succeeding year, six months; and pro rata for any part of a year, where the sentence is for more or less than a year.

In case any convict shall be guilty of the violation of any of the rules or regulations of the penitentiary or laws of the Canal Zone as above provided, and has become entitled to any diminution of his sentence by the provisions aforesaid, he shall for the first offense forfeit, if he has made so much, two days; for the second offense, four days; for the third offense, eight days; for the fourth offense, sixteen days; and in addition thereto, whatever number of days, more than one, that he is in punishment, shall also be forfeited; for more than four offenses, the warden shall have power to deprive him, at his discretion, of any portion or all of the diminution of sentence that he may have earned, but not less than as provided for the fourth offense: *Provided*, That the Chief Executive of the Canal Zone shall have the power to restore to any convict any diminution of sentence forfeited by him.

Whenever any convict is or has been committed under several convictions, with separate sentences, they shall be construed as one continuous sentence, in the granting or forfeiting of diminution of sentence.

The warden, in computing the diminution of sentence of any convict now in the penitentiary, shall allow him for the unexpired portion of his sentence, the same as if this order had been in effect at the commencement of his sentence, but shall not allow him for the portion of his sentence already served.

WM. H. TAFT.

The White House,  
July 30, 1909.

## Ancon Woman's Club and Library.

The Ancon Woman's Club has transferred from the rooms over the old offices of the District Quartermaster to Ancon Hall, where one of the ante-rooms has been equipped for the library. Two book cases have been

added to the one already in use, and the library table is supplied with magazines and periodicals. The librarian is in attendance on Monday evenings at 8 o'clock, when books may be exchanged. The donation of a book, or periodical forwarded regularly, constitutes membership in the library. The case containing a few reference books and students' editions of classic works is open at all hours. These books are not to be taken from the clubrooms. The reading room is open to club women from the line at any time during the hours that the building is open. The club has been assigned the use of the hall for the first and third Wednesdays in the month, the regular meeting days, and Monday evenings. Ancon Hall is open daily from 10 a. m. to 2 p. m., and from 4 p. m. to 10 p. m. On Saturdays the evening hour is extended to 11 p. m. The building is open on Sundays between the hours of 8 a. m. and 12 m.

## Woman's Guild at Ancon.

At the meeting of the Woman's Guild, St. Luke's church, Ancon, on Monday, August 16, Mrs. A. Jacobs de Konstein, one of the members, presented a gift of money for the purchase of a lectern for the church. Miss Ethel Mason was elected treasurer in place of Mrs. George Green, who is leaving the Isthmus. The guild has a membership of 31 active and 9 honorary members. The next meeting will be held at the home of Mrs. W. C. Gorgas, on Monday, September 6. The annual meeting with election of officers will be held on Monday, October 1. St. Luke's Guild was organized in November, 1907.

## The Children's Playground at Colon.

A total of three hundred dollars was realized from the sale of tickets for the fancy dress ball, given at Lincoln House in Colon on the night of August 14, and from donations. This is sufficient to pay the expense of fitting up the playground guaranteed, by the educational committee of the Cristobal Woman's Club. The playground will be

presented to the municipality of Colon on Wednesday, August 25, at 4 o'clock in the afternoon, and all persons in sympathy with the movement are invited to be present. The Governor of the province of Colon, the Alcalde of the city, and the school children, headed by the municipal band, will march from the municipal building to the playground to assist in the formal exercises. Through the chairman of the educational committee, Mrs. Pierce T. Murphy, the Cristobal Woman's Club wishes to thank all who made the playground possible, by their contributions of money and help, and by attending the recent ball.

## Personal.

Capt. F. C. Boggs, Mrs. Boggs, and their daughter arrived on the Isthmus on August 23.

Mr. L. K. Rourke, Assistant Division Engineer of the Central Division, returned from his leave in the States on August 23.

## Culebra Lawn Tennis Club.

Permission has been granted to the Culebra Lawn Tennis Club to construct two tennis courts on the lawn in front of the Culebra hotel. The land is granted free with the understanding that it will be vacated whenever its occupation by the Commission may be deemed necessary. The work will be paid for by assessment on the members of the club.

## Concert by I. C. C. Band.

LAS CASCADAS, C. Z.,

Sunday, August 29, 1909, at 5.30 p. m.

## PROGRAM.

- 1 March—*The Sixth Massachusetts*.....Missud
- 2 Selection—*A Waltz Dream*.....Oscar Strauss
- 3 Waltz—*Gaite*.....Waldteufel
- 4 { *a—Moonlight in Dixie*.....Clement
- { *b—La, La, La*.....Scotto
- 5 Intermezzo—*Eldorey*.....Von der Mehden
- 6 Medley Overture—*Haviland's Harmonies*...Halle
- 7 *Among the Lilies*.....Frey
- 8 { *a Bolero—Isolina*.....Labory
- { *b Canzonetta—Felice*.....Langey
- 9 Selection—*A Stubborn Cinderella*.....Howard
- 10 March—*Festal Day*.....Roux

OLIVER KIMBALL, Director.

The next concert will be given at Hotel Tivoli, Sunday, September 5.

## LABOR FORCE AND QUARTERS IN JULY.

The report of the Chief Quartermaster for the month of July shows that the number of Isthmian Canal Commission employes actually at work on July 28, was 26,938, of whom 4,198 were "gold" employes, and the remainder were on the "silver" or labor roll. The Panama railroad force was 6,163, and the Panama railroad commissary force numbered 800. Thus the total number of persons at work on the Canal and railroad on the 28th day of July was 33,901. During July 284 people were added to the "gold" roll and there were 264 separations, the net increase in the force being 20.

The number of family quarters occupied by "gold" employes was 1,468, and the occupants numbered 4,389; bachelor quarters by "gold" employes, 2,041, and the occupants numbered 3,429, of whom 105 are women. The family quarters occupied by West Indians numbered 938, and the occupants 3,229; bachelor quarters, 243; number of occupants, 4,859. The family quarters occupied by European laborers numbered 275, and the occupants 864; bachelor quarters, 122; number of occupants 4,452.

A statement of the force actually at work on July 28, 1909, follows:

Panama railroad force, 6,163; Panama railroad commissary force, 800.

## BREAD FOR CANAL WORKERS.

Bread, Pastry, Cake and Biscuit Consumed in Fiscal Year.

Over 120 pounds of flour were supplied in the fiscal year 1909 to each of the persons engaged directly or indirectly in Canal construction. This is on the basis of 40,000 people drawing their food supplies from the commissaries, a number which includes the employes and their families. The commissaries imported 4,809,124 pounds of wheat flour, or 24,536 barrels in the fiscal year. This flour is purchased on the open market in the States and sent to the Isthmus in small shipments. A surplus of about 1,000 barrels is kept in the storehouse in Cristobal, enough to supply the demand for about two weeks.

The flour is distributed by the Subsistence Department principally in the form of bread, rolls, pies and cakes, but also as raw flour. In the year under consideration 16,832 barrels out of a total of 24,536 were used in the bakery at Cristobal, and from this flour the output was:

Loaves of bread (14 oz. loaves) number 4,992,778  
Rolls (2 pounds to a dozen) number 615,782  
Cake, pounds..... 135,279  
Pies, number..... 129,414  
This product sold for \$249,276.73.

The general equipment of the bakery includes two reel ovens and two Duhrkop continuous baking ovens. The equipment used exclusively in bread making includes two mixers, two dividing machines, and two molding machines. It is possible to make 38,000 loaves of bread, 14 ounces to the baked loaf, in one day, but the plant is not run at its capacity, the average for the fiscal year 1909 being only 13,680 loaves a day. The average number of loaves of bread supplied a day to the hotels, messes, and labor kitchens is 11,000, leaving about 2,500 loaves to be disposed of through the commissaries. It is turned out in pan, Vienna, and French loaves. Two dividing and two molding machines form the machinery used especially in making rolls. The capacity is 8,000 rolls a day, but the average number turned out daily is about 2,000.

In the pastry division of the bakery are made the pies and cake sold at the commissaries. Very little pastry made at the bakery is used in the hotels and messes, because each hotel is equipped with an oven in which to do the pastry cooking for the hotel, and the messes under the control of the hotel steward. The machinery in the pastry division of the bakery consists of one cake mixer, one automatic cake molding and dropping machine, one egg-beating machine, and one pie-making machine. The capacity is 5,000 pounds of cake, and 10,000 pies daily, but the average output is about 370 pounds of cake and 350 pies daily. Owing to the uniformly even warmth of the Isthmus the pies are not so good on delivery as when they leave the bakery, the conditions being much the same as they are in the States during the summer.

The flour that was distributed in a raw state to the hotels and messes, and through the commissaries to families, amounted in the fiscal year 1909, to 7,704 barrels. At the hotels and messes it was made into hot bread, pies and cake, and used in general cooking. About 8,500 people living in married quarters buy a portion of the flour for their bread at the commissaries. In the

bakery at Ancon Hospital between 1,100 and 1,300 loaves of bread are made daily.

Another form in which flour is distributed by the Subsistence Department is in biscuits of various kinds. In the fiscal year, 198,000 pounds of soda biscuits, 99,000 pounds of pilot bread, and 35,000 pounds of fancy biscuits were sold to Canal workers. All biscuits for consumption on the Isthmus come in hermetically sealed tins, because only such packing would keep them dry in this humid climate. Pilot bread comes in 25-pound tins and soda biscuits in 5-pound, but they may be purchased in pound lots at the commissaries. The pilot bread is used almost exclusively by the West Indians. Fancy biscuits come in 1-pound tins, and are purchased largely by the "gold" employes.

## Tide Table.

The following table shows the time of high and low tides at Panama for the week ending September 1, 1909 (75th meridian time):

DATE.	High.	Low.	High.	Low.	High.
	A. M.	A. M.	A. M.	P. M.	P. M.
August 26 .....		4.44	10.43	5.30	11.33
August 27 .....		5.58	11.58	6.36	.....
			P. M.		
August 28 .....	12.45	7.05	1.07	7.38	.....
August 29 .....	1.47	8.04	2.06	8.30	.....
August 30 .....	2.41	8.56	3.00	9.20	.....
August 31 .....	3.28	9.45	3.48	10.06	.....
Sept. 1.....	4.15	10.30	4.35	10.51	.....

The variation of high and low tide at Cristobal is so slight that a tide table for the Atlantic side is not necessary.

## Stages of the Chagres.

Maximum height of Chagres River above mean sea level for the week ending midnight Saturday, August 21, 1909:

	STATIONS.

## COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

A reorganization of the Isthmian Y. M. C. A. Bowling League has been effected and the following officers have been elected:

F. H. Dougherty, Culebra, president; C. M. Bullard, Cristobal, secretary and treasurer; E. J. Lamster, Culebra, official scorer. A tournament of thirty-six games will be begun on September 4, with the following schedule:

TEAMS	Abroad	Cristobal	Gorgona	Empire	Culebra
At Home					
Cristobal .....			Sept. 18 Oct. 16	Oct. 2 Nov. 6	Sept. 11 Nov. 20
Gorgona .....		Sept. 25 Oct. 23	.....	Sept. 11 Nov. 20	Oct. 2 Oct. 30
Empire .....		Sept. 4 Oct. 30	Oct. 9 Nov. 13	.....	Sept. 29 Oct. 27
Culebra .....		Oct. 9 Nov. 13	Sept. 4 Nov. 6	Sept. 22 Oct. 20	.....

The Association whose team wins the tournament will hold the trophy cup for one year. Should either Cristobal or Empire win, the cup will become its property permanently, as each has already won a tournament. Solid gold medals will be awarded the individual members of the winning team, and the individuals making highest average and highest score. A player must roll at least 24 of the 36 games to be eligible to an individual prize. Rules of the American Bowling Congress will govern the tournament.

## CULEBRA.

The Gorgona Dramatic Club presented the farce-comedy "Capt Racket" at the Y. M. C. A., Friday night to a good sized audience.

The bowling team is practicing regularly each Tuesday night for the coming big pin bowling tournament. F. H. Dougherty has been elected captain of the local bowling team.

The Bible Club has finished its regular sessions having completed the course of study. This class met for fifteen weeks with an average attendance of 10 men.

## EMPIRE.

On Saturday evening, August 21, the Empire Camera Club was organized. A constitution was adopted and the following officers were elected: President, E. L. Upsen; vice-president, E. C. Mil's; secretary, Wm. Bodde; treasurer, J. L. Bewick; librarian, Carl Anderson. Membership is restricted to members of the Y. M. C. A. in good standing. Persons interested may obtain further information from Secretary Gobrecht.

Twenty-four new books have been received from the States and are now ready for circulation. Mr. F. M. Hill has been appointed librarian to succeed Mr. Smith, who has become office secretary, succeeding Mr. Windes, who has been transferred to Gatun.

A crescent pin, containing 11 garnets, has been lost by Miss Clark of Empire. Anyone returning it to the Y. M. C. A. office will receive a reward.

On Friday night, a game of ten pins between the "Pen Pushers" of the Master Mechanic's office and Shaughnessy's "Nut Splitters" from the machine shops, resulted in a victory for the "Nut Splitters," who won two out of the three games, although the "Pen Pushers" had the largest pinfall. Following are the scores: Pen Pushers, 822, 813, 728. Nut Splitters, 840, 727, 739.

## GORGONA.

A popular praise service will be held Sunday night, August 29, at 8 o'clock. Mr. A. Bruce Minear of Culebra will address the meeting. There will be special music by a male quartet and a mixed double quartet.

Mr. Louis DePoerter gave an exhibition of expert pool playing Saturday night before a large audience.

The bowling alleys are in good shape since the repairs have been completed.

The following scores were bowled Saturday night in a match game between Gorgona and Cristobal: Gorgona, 832, 720, 708. Cristobal, 715, 763, 743.

## CRISTOBAL.

"Captain Racket" will be played Saturday night by the Gorgona Dramatic Club. Reserved seats will be on sale Thursday morning.

Association members living at Gatun have organized a bowling team, and a series of match games on Cristobal alleys last Saturday night resulted as follows: Cristobal, 729, 834, 781. Gatun, 788, 695, 746.

## COMMISSARY DEPARTMENT.

## Increased Supply of Ice—Cold Storage Price List.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

All purchasers of ice who were, prior to July 30, receiving thirty (30) pounds of ice per day, and which was reduced to twenty (20) pounds per day, may upon application and remittance of sufficient fines have thirty (30) pounds delivered on and after this date.

This notice does not apply to purchasers now receiving thirty (30) pounds of ice, or more, per day.

JOHN BURKE, *Manager.*

Approved:

EUGENE T. WILSON,  
*Subsistence Officer.*

The ham and bacon now being supplied by the commissaries is especially cured for tropical trade, that is, it is highly smoked, but not heavily salted. It should be kept in the refrigerator.

The cantaloupes that will be on sale three days in the week, from this time until frost begins in the States, will come from Colorado, and are of the class known as Rocky Ford melons.

Retail prices of cold storage provisions for the week beginning August 21:

## Supplies for Canal Work.

The following steamers arrived at the ports of Cristobal and Colon during the week ending August 21, with supplies for the Isthmian Canal Commission:

*Thames*, August 15, from New York, with 46 reels electric wire; 17 cases packing; 10 barrels graphite paint, for stock.

*Sarnia*, August 17, from New York, with 10 tons rock crushing machinery, for Balboa; 238 barrels coal tar, for stock; 3 dipper bails, for steam shovels.

*Panama*, August 17, from New York, with 168 tons steel angles, bars, channels and plates; 70 bales water hose; 10,000 pounds soap; 13,000 pounds sheet coppers; 464 kegs bolts, nuts and rivets; 69 tons wrought pipe; 455 bundles lining bars, pinch bars and track wrenches; 1,000 barrels cement; 400 kegs wire nails, for stock; 7,200 feet steel cable, for steam shovel repairs; 12 steel wire cables, for unloaders; 2 swivel joints for dredge *Culebra*; 1 wood planing machine, for Gatun locks; 60,784 feet copper cable, for Pedro Miguel power house; 5 submarine rock drills, for Balboa, and a miscellaneous cargo aggregating 6,429 packages weighing 765 tons.

*Abangarez*, August 19, from New Orleans, with 2,500 gallons dynamo oil, for stock; 41 tons castings for car repairs; 1 locomotive coaling crane, for Mechanical Division; 121 creosoted piling, for sand wharf, Balboa; 10,000 feet yellow pine lumber, for car repairs.

## Misdirected Letters.

ANCON, C. Z., August 25, 1909.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured upon request of the addressee:

Bowdry, J. S.	Loulan, Frank
Brown, J. J.	Mason, A. P.
Burson, W. B.	Miami, Mr.
Bush, E. (2d. class)	Moore, Wade
Christian, W. F.	Pentz, A. W.
Crasswell, Miss Ethel	Reese, P. W.
Denny, John L.	Seaton, Homer
Eder, Louis M. (2d. class)	Stowell, Ellery Cory
Fuller, Major B. H.	(2 packages)
Grant, Freeman	Surtis, Henry
Grosvenor, Mrs. F. S.	Taylor, J. E. S.
Hart, Franklin W.	Tull, Capt. R. E.
Johnson, Nicolas	Van Fleet, Wilfred H.
Kirby, Mrs. Chapman M.	Woodford, E. T.
Kuapp, George D.	Woods, Miss Louisa
Worthing, James A.	Kulher, B. F.
	Younge, Jack

The delivery of distilled water in Cristobal was discontinued August 12, because the quality of water from Brazos Brook, as filtered through the Mount Hope filtration plant, is now so high as to make distillation superfluous. The action was taken on recommendation of the Department of Sanitation.

## MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

## NEW YORK TO COLON.

## COLON TO BARBADOS, CALLING AT TRINIDAD.

Atrato.....R. M. Tuesday.....Aug. 31	
--------------------------------------	--

Sailings of the French line (Cie. Générale Transatlantique) for Venezuela ports, Martinique and Guadeloupe on the 3d and 20th of each month.

The next sailings of the Leyland Line will be as follows: *Louisianian* for New Orleans, via Kingston, Ja., on or about August 31; *Californian* on or about September 10.

The steamers *David* of the National Navigation Company, and the *Taboga* of the Pacific Steam Navigation Company, leave Panama, for David, province of Chiriqui, and intermediate points, the first and third weeks of each month.

Lost—On June 2, 1909, a South African War Medal, in the shape of a watch fob, on train No. 24, between Panama and Empire. The fob consisted of three bars and a round gold piece suspended from a black silk ribbon, and on the rim of the gold piece were the words, "Arthur E. Rex, Marshall Horse." Finder please communicate with A. E. Rex, Ancon, Canal Zone.

## Proposals for Fire Station at Porto Bello.

Contract building. Sealed proposals, for labor only, will be received at the office of the Constructing Quartermaster, Culebra, until 3 p. m., August 30, 1909, and then opened, for the erection by contract of a Fire Station at Porto Bello. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of \$5. Fifty dollars must be deposited with the proposal and \$50 when the contract is signed.

C. A. DEVOL, *Chief Quartermaster.*
